FEDERAL REGISTER

Vol. 89 Tuesday,

No. 242 December 17, 2024

Pages 101837–102672

OFFICE OF THE FEDERAL REGISTER

The **FEDERAL REGISTER** (ISSN 0097–6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Publishing Office, is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The **FEDERAL REGISTER** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see *www.federalregister.gov.*

The seal of the National Archives and Records Administration authenticates the Federal Register as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge at *www.govinfo.gov*, a service of the U.S. Government Publishing Office.

The online edition of the **Federal Register** is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6:00 a.m. each day the **Federal Register** is published and includes both text and graphics from Volume 1, 1 (March 14, 1936) forward. For more information, contact the GPO Customer Contact Center, U.S. Government Publishing Office. Phone 202-512-1800 or 866-512-1800 (toll free). E-mail, *gpocusthelp.com.*

The annual subscription price for the **Federal Register** paper edition is $860 plus postage, or $929, for a combined **Federal Register, Federal Register** Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the **Federal Register** Index and LSA is $330, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily **Federal Register,** including postage, is based on the number of pages: $11 for an issue containing less than 200 pages; $22 for an issue containing 200 to 400 pages; and $33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for $3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: U.S. Government Publishing Office—New Orders, P.O. Box 979050, St. Louis, MO 63197-9000; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, see *bookstore.gpo.gov.*

There are no restrictions on the republication of material appearing in the **Federal Register.**

How To Cite This Publication: Use the volume number and the page number. Example: 89 FR 12345.

Postmaster: Send address changes to the Superintendent of Documents, Federal Register, U.S. Government Publishing Office, Washington, DC 20402, along with the entire mailing label from the last issue received.

The Federal Register Printing Savings Act of 2017 (Pub. L. 115-120) placed restrictions on distribution of official printed copies of the daily **Federal Register** to members of Congress and Federal offices. Under this Act, the Director of the Government Publishing Office may not provide printed copies of the daily **Federal Register** unless a Member or other Federal office requests a specific issue or a subscription to the print edition. For more information on how to subscribe use the following website link: *https://www.gpo.gov/frsubs.*

Printed on recycled paper.

Rules and Regulations

Federal Register
Vol. 89, No. 242
Tuesday, December 17, 2024

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.

The Code of Federal Regulations is sold by the Superintendent of Documents.

ELECTION ASSISTANCE COMMISSION

2 CFR Part 5801

Adoption of Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards

AGENCY: Election Assistance Commission.

ACTION: Final rule.

SUMMARY: The U.S. Election Assistance Commission (EAC) is publishing this final rule to formally adopt the Office of Management & Budget's Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards regulations for EAC grants management, which is already included in the EAC's agreements with its grant recipients.

DATES: This final rule is effective December 20, 2024.

FOR FURTHER INFORMATION CONTACT: Camden Kelliher, EAC General Counsel. Phone: 202–360–3160, email: *ckelliher@eac.gov.*

SUPPLEMENTARY INFORMATION: Through its terms and conditions of its grant awards, the EAC requires grant award recipients and sub-recipients to abide by all federal financial assistance requirements, including 2 CFR part 200. The EAC already has regulations adopting 2 CFR part 180, which can be found at 2 CFR part 5800.

On April 4, 2024, the Office of Management & Budget (OMB) issued memorandum M–24–11, Reducing Burden in the Administration of Federal Financial Assistance in effort to provide government-wide direction to federal agencies on improving the management of federal financial assistance and to ensure the consistent management of such assistance. On April 22, 2024, OMB issued a final rule officially revising its regulations pertaining to federal financial assistance management in title 2 of the CFR and requiring agencies to implement the newly revised regulations as quickly as possible by taking appropriate steps to ensure the regulations apply to all federal financial awards issued on or after October 1, 2024.

The Help America Vote Act of 2002 limits the EAC's rulemaking authority to only to the extent permitted under Section 9(a) of the National Voter Registration Act. However, the EAC in this instance is ''adopting'' 2 CFR part 200—the EAC is not ''making'' rules. Furthermore, 2 CFR 200.106 states agencies awarding federal funds must implement the OMB guidance in 2 CFR in codified regulations.

Waiver of Proposed Rulemaking

The rule issued by the EAC concerns matters relating to ''grants, benefits, or contracts,'' 5 U.S.C. 553(a)(2), and is therefore exempt from the requirement of prior notice and comment.

Waiver of Delayed Effective Date

Under 5 U.S.C. 553(d), agencies may waive the delayed effective date requirement if they find good cause and explain the basis for the waiver in the final rulemaking document or if the regulations grant or recognize an exemption or relieve a restriction.

OMB informed the public on April 4, 2024, that agencies would be required to adopt the Uniform Guidance and make it effective by October 1, 2024. The public has had significant time to prepare for the promulgation of these final regulations. As such, the EAC has determined there is good cause to waive the delayed effective date.

List of Subjects in 2 CFR Part 5081

Accounting, administrative practice and procedure, federal financial assistance, grant programs, grants administration, state and local governments, state-federal relations.

■ For the reasons stated, Part 5801 is established in Chapter LVIII of Title 2 of the Code of Federal Regulations to read as follows:

PART 5801—UNIFORM ADMINISTRATIVE REQUIREMENTS, COST PRINCIPLES, AND AUDIT REQUIREMENTS FOR FEDERAL AWARDS

Sec.

5801.10 Adoption of 2 CFR part 200
5801.20 through 5801.99 [Reserved].

Authority: 2 CFR part 200.

§ 5801.10 Adoption of 2 CFR Part 200.

The U.S. Election Assistance Commission adopts the Office of Management and Budget (OMB) Guidance in 2 CFR part 200. Thus, this part gives regulatory effect to the OMB guidance.

§§ 5801.20 through 5801.99 [Reserved].

Camden Kelliher,

General Counsel, U.S. Election Assistance Commission.

RIN 0579–AE52

Agricultural Bioterrorism Protection Act of 2002; Biennial Review and Republication of the Select Agent and Toxin List

AGENCY: Animal and Plant Health Inspection Service, Department of Agriculture (USDA).

ACTION: Final rule.

SUMMARY: In accordance with Title II, Subtitle B of the Public Health Security and Bioterrorism Preparedness and Response Act of 2002 (which is cited as the ''Agricultural Bioterrorism Protection Act of 2002'' and referred to as the Act), we are amending and republishing the list of select agents and toxins that have the potential to pose a severe threat to animal or plant health, or to animal or plant products. The Act requires the biennial review and republication of the list of select agents and toxins (the list) and the revision of the list as necessary. This action implements the findings from the biennial review of the list. The biennial review was initiated within 2 years of the completion of the previous biennial review. This final rule will focus solely on removing from the select agent list the following pathogens: *Peronosclerospora philippinensis (Peronosclerospora sacchari)* (Plant

Protection and Quarantine select agent), African horse sickness virus (Veterinary Services select agent), and *Brucella abortus, Brucella suis,* and *Brucella melitensis* (overlap select agents).

DATES: Effective January 16, 2025.

FOR FURTHER INFORMATION CONTACT: Dr. Jacek Taniewski, DVM, Director, Division of Agricultural Select Agents and Toxins, ERCS, APHIS, 4700 River Road, Riverdale, MD 20737; (301) 851–3352; *jacek.taniewski@usda.gov.*

SUPPLEMENTARY INFORMATION:

Background

The Public Health Security and Bioterrorism Preparedness and Response Act of 2002, as amended (referred to below as the Bioterrorism Response Act or the Act) provides for the regulation of certain biological agents and toxins that have the potential to pose a severe threat to human, animal, and plant health, or to animal and plant products. The Animal and Plant Health Inspection Service (APHIS) has the responsibility for implementing the provisions of the Bioterrorism Response Act within the U.S. Department of Agriculture (USDA). Veterinary Services (VS) select agents and toxins, listed in 9 CFR 121.3, are those that have been determined to have the potential to pose a severe threat to animal health or animal products. Plant Protection and Quarantine (PPQ) select agents and toxins, listed in 7 CFR 331.3, are those that have been determined to have the potential to pose a severe threat to plant health or plant products. Overlap select agents and toxins, listed in 9 CFR 121.4, are those that have been determined to pose a severe threat to public health and safety, to animal health, or to animal products. Overlap select agents are subject to regulation by both APHIS and the Centers for Disease Control and Prevention (CDC), which has the primary responsibility for implementing the provisions of the Act for the U.S. Department of Health and Human Services (HHS). Together, APHIS and CDC comprise the Federal Select Agent Program (FSAP).

Title II, Subtitle B of The Public Health Security and Bioterrorism Preparedness and Response Act of 2002, as amended, (which is cited as the ''Agricultural Bioterrorism Protection Act of 2002,'' and referred to below as the Act), section 212(a)(1)(A) (7 U.S.C. 8401(a)(1)(A)), provides, in part, that the Secretary of Agriculture (the Secretary) ''shall by regulation establish and maintain a list of each biological agent and each toxin that the Secretary determines has the potential to pose a severe threat to animal or plant health, or to animal or plant products.''

In determining whether to include an agent or toxin in the list, the Secretary shall consider the following criteria stated in the Act (7 U.S.C. 8401(a)(1)(B)):

- ''[T]he effect of exposure to the agent or toxin on animal or plant health, and on the production and marketability of animal or plant products;''
- ''[T]he pathogenicity of the agent or the toxicity of the toxin and the methods by which the agent or toxin is transferred to animals or plants;''
- ''[T]he availability and effectiveness of pharmacotherapies and prophylaxis to treat and prevent any illness caused by the agent or toxin;''
- ''[W]hether such inclusion would have a substantial negative impact on the research and development of solutions for the animal or plant disease caused by the agent or toxin; and whether the negative impact [on research and development] would substantially outweigh the risk posed by the agent or toxin to animal or plant health if it is not included on the list'' (added by the 2018 Farm Bill); and
- ''[A]ny other criteria that the Secretary considers appropriate to protect animal or plant health, or animal or plant products.''

Paragraph (a)(2) of section 212 of the Act (7 U.S.C. 8401(a)(2)) requires the Secretary to review and republish the list of select agents and toxins every 2 years and to otherwise revise the list as necessary. To fulfill this statutory mandate, APHIS convenes separate interagency working groups in order to review the lists of PPQ and VS select agents and toxins, as well as any overlap select agents and toxins, and develop recommendations regarding possible changes to the list using the five criteria for listing, stated above, found in the Act. APHIS and CDC coordinate on the biennial review for overlap select agents and toxins that have been determined to pose a severe threat to human and animal health or animal products.

On March 17, 2020, we published in the **Federal Register** (85 FR 15078–01, Docket No. APHIS–2019–0018) an advance notice of proposed rulemaking (ANPR) [1] and request for comments in which we solicited public comment on the possible delisting of one PPQ select agent, *Peronosclerospora philippinensis (P. sacchari),* one VS select agent, African horse sickness virus, and five overlap select agents, *Bacillus anthracis* (Pasteur strain), *Brucella abortus, B. suis,* and *B. melitensis,* and Venezuelan equine encephalitis virus. We discussed the comments received on the ANPR in the proposed rule that followed. On January 30, 2024, we published in the **Federal Register** (89 FR 5795–5819, Docket No. APHIS–2019–0018) a proposal [2] to amend and republish the list of select agents and toxins that have the potential to pose a severe threat to animal or plant health, or to animal or plant products. We proposed to delist P. philippinensis (*sacchari),* African horse sickness virus, *B. abortus, B. suis,* and *B. melitensis.*

In the proposed rule, we also proposed additional changes to the regulations beyond those discussed in the ANPR. Certain of these changes were, in our assessment, codifications of existing operational policy. These included provisions related to: Discovery of a select agent or toxin, disposal of select agent waste after conclusion of patient care, the exclusion of animals naturally infected with select agents from the requirements of the regulations, allowing individuals other than the responsible official (*e.g.,* principal investigators) to revise inactivation procedure documentation, removal procedures, and the content of annual internal inspections.

Other changes were intended as clarifications of existing provisions of the regulations. These included proposed definitions of loss, release, and theft, clarifying reporting requirements for ''discovered'' select agents or toxins, a clarification regarding what constitutes an acceptable ''validated inactivation procedure,'' clarifications related to the existing reporting requirements, clarifying that certificates must accompany transfers of a select agent or toxin, including intra-entity transfers, clarifying that the documentation in the IT system for the FSAP program serves as official records required by the regulations, clarifying the documentation that may be needed for the issuance of a certificate of registration, clarifying that a responsible official cannot be approved as the responsible official at more than one registered entity and cannot be the sole alternate responsible official at another registered entity, clarifying requirements related to restricted experiments, clarifying the notification requirements for changes to the application for registration, and clarifying the scope of pre-access suitability assessments.

[1] To view the ANPR and the comments we received, go to *www.regulations.gov.* Enter APHIS–2019–0018 in the Search field.

[2] To view the proposed rule and the comments we received, go to *www.regulations.gov.* Enter APHIS–2019–0018 in the Search field.

Finally, certain proposed provisions would have been new, including provisions regarding effluent decontamination system, biosafety provisions for facility verification requirements for registered biosafety level 3 and animal biosafety level 3 laboratories, and a new requirement related to restricted experiments.

We solicited comments concerning our proposal for 60 days, ending April 1, 2024. We received 69 comments by that date. The comments were from private citizens, research institutions, organizations representing research institutions, organizations representing the domestic cattle, bison, and equine industries, representatives from State fish and wildlife departments, and representatives from State departments of agriculture.

While commenters largely supported our proposed amendments to the list of select agents and toxins, commenters raised legal, operational, and policy concerns about many of our proposed codifications, clarifications, and additions to the regulations.

We proposed to delist *P. philippinensis,* African horse sickness virus, *B. abortus, B. suis,* and *B. melitensis* as select agents, and the comments we received regarding these select agents are discussed below.

P. philippinensis

We received one comment specifically addressing *P. philippinensis.* The commenter supported delisting *P. philippinensis,* citing cultivation characteristics that would make propagation difficult and unlikely to produce a dangerous agent. We did not receive any comments stating an opposition to delisting. Accordingly, we are delisting *P. philippinensis* as proposed.

African Horse Sickness (AHS) Virus

We received two comments specifically addressing AHS virus.

One commenter agreed with delisting, citing limited communicability and the existence of countermeasures. Another commenter opposed delisting, citing the widespread presence of the disease's vectors in the United States, the high mortality rate for animals associated with the disease, and the absence of available vaccines for AHS virus within the United States. The commenter did acknowledge that vaccines were available internationally but stated that there were no guidelines for their use within the United States, nor did they think APHIS would authorize their use in the event of an outbreak. The commenter further stated that, even if APHIS were to authorize their use in the event of a domestic outbreak of AHS virus, the specific serotype would need to be identified, and a monovalent vaccine procured from a foreign source, which could take months.

We agree that AHS virus causes a life-threatening, hemorrhagic, noncontagious, nonzoonotic, arthropod-borne viral disease of equines. However, the Act's aim is not solely to determine whether a pathogen causes deadly disease, but whether it is likely to be used as a bioterrorism agent, and if used, what the potential impacts would be. In that regard, in deciding whether an agent or toxin should be included on the select agent and toxin list, the Act requires us to take into consideration not only the pathogenicity of the agent, but also the methods by which it is disseminated, and the availability and effectiveness of prophylaxis as well as treatments, such as vaccines and pharmaceuticals.

AHS virus must use arthropod vectors in order to be transmitted. While the commenter is correct that arthropod vectors for the disease do exist within the United States, both the AHS virus and its vector must be present in an environment for transmission to equines to occur, making the virus difficult to effectively disseminate in equine populations. Therefore, we concluded that the AHS virus will unlikely be used as a bioterrorism agent. Additionally, while the commenter is correct that currently there are no vaccines available in the United States for AHS, and, accordingly, no guidelines yet established for use of AHS vaccines within the United States, vaccines are available internationally and in the event of foreign animal disease outbreak, USDA can implement emergency response plans. USDA's manual for response to an introduction of a foreign animal diseases, such as AHS, is found at *https://www.aphis.usda.gov/sites/default/files/fadprep_manual_1.pdf.*

The difficulty in disseminating and transmitting AHS virus and the availability of vaccines played a significant role in the Agricultural Interagency Select Agents and Toxins Technical Advisory Committee, or Ag-ISATTAC's, recommendation to delist AHS virus as a select agent.

Based on the foregoing considerations, we are delisting AHS virus as a select agent, as proposed.

Brucella Species

We received 44 comments supporting delisting of all three species of *Brucella* (*B. abortus, B. suis,* and *B. melitensis*). These commenters supported delisting for one or more of the following reasons:

- State animal health officials, researchers, and industry stakeholder groups stated that these species are unlikely to be intentionally used as an agent of bioterrorism. They commented that *Brucella* has a limited to negligible rate as a bioterrorism weapon and the benefits (*e.g.,* research, testing, etc.) outweigh the risks. Also, they stated that these organisms are effectively contained within appropriate biosafety and biosecurity facilities, limiting access to unauthorized individuals.
- Private citizens and animal health groups stated that existing regulatory burden prevents ongoing research into vaccine development specifically in the areas of vaccine efficacy and vaccine delivery in wildlife. We agree regarding the burden to the research community, and that more robust studies can help limit the spread of disease.
- Private citizens commented that brucellosis in humans is rarely fatal and easily treatable in the early stages.
- Stakeholders and private citizens, also, said intervention strategies to reduce the disease in animal populations exist: There are already nationally recognized biosafety measures used by U.S. researchers in handling these agents. For instance, there are effective and well-established antibiotic treatment regimens for brucellosis due to infections with *B. abortus, B. melitensis,* or *B. suis.*

We received an additional 11 comments that only addressed *B. abortus* and supported delisting it. In addition to the above considerations, these commenters supported delisting *B. abortus* to facilitate research and development of more effective vaccines for wildlife reservoirs of the agent.

We received two comments opposing delisting of one or more of the *Brucella* spp. One commenter opposed delisting *Brucella* spp. pending vaccine development, citing an incident where the commenter claimed more than 300 veterinary medical professionals in a foreign country were exposed to *B. abortus* while vaccinating cattle, with multiple mortalities.

While human health considerations generally fall outside of APHIS' administration of the Act, and are instead under the purview of CDC, because the commenter raised concerns related to transmissibility due to human interaction with livestock, we wish to provide context for the incident cited by the commenter and respond to the stated concerns.

The above-cited incident did not occur in the United States. While misuse of vaccines, and improper vaccination protocols have, on rare occasion, resulted in transmission of the

vaccine strain of *B. abortus* to humans domestically, antibiotics are widely available within the United States to treat incidents of brucellosis in humans, and mortality is rare. The Act also directs us to consider not only the availability of prophylaxis, such as vaccines, but also pharmacotherapies, such as antibiotics. For these reasons, we disagree with the commenter that *B. abortus* should not be delisted pending vaccine development. The commenter also did not contest our reasons in the proposed rule for delisting *B. abortus:* The agent is unlikely to be used as an agent of bioterrorism for a large-scale population introduction due to the high concentration of the agent necessary to produce disease as well as modern cattle production processes that limit animal-to-animal transmission routes; there is an efficacious vaccine; there is moderate immunity status within vulnerable populations; there is limited farm-to-farm transmission risk; and there are effective quarantine procedures. In this regard, we note that several of the commenters who supported delisting *B. abortus* provided scientific research or articles that buttressed these considerations.

Another commenter claimed, without evidence, that *B. abortus* was not a real disease, and being used as a pretext to kill bison.

The commenter is incorrect. *B. abortus* is a documented disease of cattle and bison.

Multiple commenters supportive of delisting *Brucella* spp. stated that *B. abortus* is a serious human health risk, and supported delisting insofar as it would, among other things, facilitate vaccine development in cattle and bison that could reduce rancher exposure to the disease.

As we noted above, human health considerations generally fall outside of APHIS' administration of the Act. However, we disagree with the commenters' characterization of the human health risk presented by brucellosis. While it can be fatal, the case fatality rate and person-to-person transmission for *B. abortus* continues to be very low. In addition, the human illnesses caused by *B. abortus* are readily recognized and can be treated with widely available antibiotics.

One commenter requested clarification that the diseases would still be reportable, even if delisted as select agents, and that the domestic brucellosis eradication program would still remain.

Brucellosis is a livestock disease that is reportable to State and Federal animal health authorities in the United States when an outbreak occurs. Our domestic brucellosis eradication program is administered by APHIS and State animal health authorities under a different statute, the Animal Health Protection Act (7 U.S.C. 8301–8317), and will remain in effect.[3]

One commenter stated that it was the commenter's understanding that CDC biosafety level 3 (BSL 3) requirements will still be in effect for *Brucella* spp. even if all three agents are delisted.

Delisting of an agent neither reduces nor affects the recommended biosafety level for laboratory work. BSL 3 laboratory safety and containment is currently recommended for laboratory work with *Brucella* spp. The current BSL 3 laboratory safety and containment recommendations for *Brucella* spp. are outlined in the Biosafety in Microbiological and Biomedical Laboratories (BMBL), available at: *https://www.cdc.gov/labs/bmbl/index.html.*

Finally, several commenters stated that research facilities registered with FSAP and currently conducting ongoing research on *Brucella* spp. will need guidance regarding the impacts of delisting on their work. FSAP will provide such guidance.

Accordingly, we are delisting *B. abortus, B. melitensis,* and *B. suis* as select agents, as proposed.

CDC Agents

Finally, we received a few comments on CDC's list of select agents and toxins. These comments are outside of the scope of this rulemaking, and APHIS has routed them to CDC for consideration.

Nipah Virus

In its January 30, 2024, proposed rule (89 FR 5823–1), CDC proposed designating Nipah virus, an overlap select agent, as a Tier 1 select agent because of its human transmissibility, high case fatality rate, high severity of illness, and severe long-term effects. However, due to an inadvertent oversight in our proposed rule, APHIS did not propose parallel changes. In its final rule published elsewhere in this issue of the **Federal Register**, CDC is designating Nipah virus as a Tier 1 select agent as proposed based on consideration of the comments received. As a result of CDC's decision, because Nipah virus is an overlap select agent, in this final rule, we are amending 9 CFR 121.3(b) to add an asterisk before ''Nipah virus,'' thus indicating its designation as a Tier 1 select agent. We are doing this to ensure harmonization between our regulations and CDC's regulations regarding this designation.

Therefore, for the reasons given, we are adopting the proposed revisions to the lists of select agents and toxin set forth in 7 CFR 331.3(b) and 9 CFR 121.3(b) and (b) that arose out of the biennial review of the list as final, with the change discussed immediately above. Executive Orders 12866 and 13563 and Regulatory Flexibility Act

This final rule has been determined to be significant for the purposes of Executive Order 12866 as amended by Executive Order 14094, ''Modernizing Regulatory Review,'' and, therefore, has been reviewed by the Office of Management and Budget.

We have prepared an economic analysis for this final rule. The economic analysis provides a cost-benefit analysis, as required by Executive Orders 12866 and 13563, which direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, and equity). Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. The economic analysis also examines the potential economic effects of this rulemaking on small entities, as required by the Regulatory Flexibility Act.

Summary

The Public Health Security and Bioterrorism Preparedness and Response Act of 2002 (Pub. L. 107–188), as amended (referred to below as the Bioterrorism Response Act), provides for the regulation of certain biological agents and toxins that have the potential to pose a severe threat to human, animal, or plant health, or to animal or plant products. APHIS, Emergency & Regulatory Compliance Services (ERCS), and the Division of Agricultural Select Agents and Toxins (DASAT) have the primary responsibility for implementing the provisions of the Bioterrorism Response Act with the USDA. Within APHIS, VS select agents and toxins, listed in 9 CFR 121.3, are those that have been determined to have the potential to pose a severe threat to animal health or animal products, and PPQ select agents and toxins, listed in 7 CFR 331.3, are those that have been determined to have the potential to pose a severe threat to plant health or plant products. Overlap select agents and toxins, listed in 9 CFR 121.4, are those

[3] 9 CFR part 78 (Brucellosis; Domestic Brucellosis Regulations).

that have been determined to pose a severe threat to public health and safety, to animal health, or to animal products. Overlap select agents and toxins are subject to regulation by both APHIS, ERCS, DASAT, and the CDC's Division of Regulatory Science and Compliance (DRSC), which has the primary responsibility for implementing the provisions of the Bioterrorism Response Act for the U.S. Department of Health and Human Services (HHS). Together, APHIS, ERCS, DASAT, and CDC's DRSC comprise the Federal Select Agent Program (FSAP).

Title II, Subtitle B of the Bioterrorism Response Act (which is cited as the ''Agricultural Bioterrorism Protection Act of 2002,'' as amended, and referred to below as the Act), section 212(a)(1) (7 U.S.C. 8401(a)(1)), provides, in part, that the Secretary of Agriculture (the Secretary) must establish and maintain, by regulation, a list of each biological agent and each toxin that the Secretary determines has the potential to pose a severe threat to animal or plant health, or to animal or plant products. Paragraph (a)(2) of section 212 of the Act (7 U.S.C. 8401(a)(2)) requires the Secretary to review and republish the list of select agents and toxins every two years and to otherwise revise the list as necessary. To fulfill this statutory mandate, APHIS convenes separate interagency working groups to review the list of PPQ and VS select agents and toxins, as well as any overlap select agents and toxins, and develop recommendations regarding possible changes to the list using the five criteria for listing found in the Act. APHIS and CDC coordinate on the biennial review for overlap select agents and toxins that have been determined to pose a severe threat to human and animal health or animal products.

APHIS is delisting three overlap select agents: *Brucella abortus, Brucella suis,* and *Brucella melitensis.* CDC has made parallel regulatory changes with respect to these *Brucella* spp. APHIS is also delisting one PPQ select agent, *Peronosclerospora philippinensis* (*Peronosclerospora sacchari*), and one VS select agent, African horse sickness (AHS) virus. These delisting changes will economically benefit producers, research and reference laboratories, and State and Federal oversight agencies, while also maintaining adequate program oversight of delisted select agents and toxins through HHS CDC and National Institutes of Health guidelines along with USDA–APHIS permits for movement.

Previous regulatory restrictions had effectively prohibited vaccine trials using natural transmission models, limited the opportunity for large animal studies, inhibited available surveillance, and prohibited studies that would evaluate vaccine or diagnostic product efficacy through comingling vaccinated and naturally infected animals. Delisting these five agents could decrease disease management costs for State and Federal governments as well as livestock producers. Additionally, delisting will remove restrictions that limited courier availability for these five agents, a factor that previously resulted in prohibitive shipment costs for many laboratories. Previous shipment costs had inhibited isolate sharing between reference and research laboratories, thus leading to decreased advancements from researchers and laboratories involved in diagnostic improvements and disease eradication efforts. Delisting the three *Brucella* agents (*B. abortus, B. suis,* and *B. melitensis*) as overlap select agents and one VS agent, AHS virus, along with one plant agent, *Peronosclerospora philippinensis,* from the list of select agents and toxins will economically benefit producers, research and reference laboratories, and State and Federal oversight agencies.

B. abortus presents little economic or animal health risk as a bioterrorism agent as it is unlikely to result in large-scale population introduction due to the high concentration of the agent necessary to produce disease as well as modern cattle production processes that limit animal-to-animal transmission routes. There is an efficacious vaccine, moderate immunity status within vulnerable populations, limited farm-to-farm transmission risk, and effective quarantine procedures. (Center for Food Security and Public Health, 2009; Moreno, E., 2014; Olsen, S.C., 2011.) *B. melitensis* primarily affects goats and sheep and is of lesser concern because the low farm-to-farm transmission risk due to modern production practices limits the chance of introduction on a scale large enough to impact domestic production. (The Center for Food Security and Public Health, 2009; Moreno, E., 2014; Olsen, S.C., 2011.) *B. suis* also presents a low to moderate animal health risk due to limited farm-to-farm transmission risk because of modern production practices, which reduce the risk of a large-scale introduction. (The Center for Food Security and Public Health, 2009; Stoffregen, W.C., 2006; World Organizsation for Animal Health (OIE), 2017; Zhu, L., et al., 2016.) For these reasons and due to the overwhelming public support, APHIS, in conjunction with CDC, is delisting these three *Brucella* species.

Peronosclerospora philippinensis (*Peronosclerospora sacchari*) is only able to survive and reproduce in the host plant and requires specific environmental conditions to become infectious, for which mitigations exist. The production characteristics for large volume production and subsequent dissemination require extensive specialization and reflect high degree of difficulty for dissemination of the agent. Thus, the economic impact of possible misuse of this agent was deemed a low impact. We are delisting the agent based upon affirmative responses to proposed delisting.

AHS virus causes a life-threatening, hemorrhagic, noncontagious, nonzoonotic, arthropod-borne viral disease of equines. However, the Act's aim is not solely to determine whether a pathogen causes deadly disease, but whether it is likely to be used as a bioterrorism agent, and if used, what the potential impacts would be. In that regard, in deciding whether an agent or toxin should be included on the select agent and toxin list, the Act requires us to take into consideration not only the pathogenicity of the agent, but also the methods by which it is disseminated, and the availability and effectiveness of prophylaxis as well as treatments, such as vaccines and pharmaceuticals. AHS is an arthropod-borne illness that must be vectored to be transmitted. Because both the disease and its vector must be present in an environment for transmission to equines to occur, we considered AHS unlikely to be used as an agent of bioterrorism. Vaccines are also available internationally and in the event of foreign animal disease outbreak, we can implement emergency response plans. Based on the foregoing considerations, we are delisting AHS virus as a select agent.

Currently, there are 236 entities registered with APHIS and CDC. Of these entities, 13 are private entities, 30 are Federal entities, 42 are commercial entities, 84 are academic entities, and 67 are State entities. Less than 32 percent of all firms operating within these North American Industry Classification (NAICS) categories are considered to be small entities.

This document provides a cost-benefit analysis, as required by Executive Orders 12866, 13563, and 14094 which direct Federal agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, and equity). Executive Order 13563 emphasizes the importance of

quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. This document also examines the potential economic effects of this rulemaking on small entities, as required by the Regulatory Flexibility Act.

Description of Final Rule

Pursuant to the Agricultural Bioterrorism Protection Act of 2002, as amended (7 U.S.C. 8401(a)(2)) (Act), APHIS has completed its required biennial review of the current list of select agents and toxins in 7 CFR 331.3 (PPQ select agents) and 9 CFR 121.3 (VS select agents) and 121.4 (overlap select agents overseen jointly with CDC). This final rule implements the recommendations of the interagency working groups with respect to the list of select agents and toxins. APHIS, in conjunction with CDC, is removing the following overlap select agents from the list of select agents and toxins: *Brucella abortus, Brucella suis,* and *Brucella melitensis.* Public response showed overwhelming support for delisting all three *Brucella* species. Therefore, we consider it appropriate to delist these three *Brucella* spp.

We are also delisting *Peronosclerospora philippinensis* (*Peronosclerospora sacchari*). We received only supportive comments for this proposed delisting.

Finally, we are delisting AHS virus. While we received a comment opposed to this delisting, it did not call into question our considerations in proposing delisting.

Overview of the Action and Affected Entities

As previously discussed, there are 236 entities registered with APHIS and CDC. Of these entities,13 are private entities, 30 are Federal entities, 42 are commercial entities, 84 are academic entities, and 67 are State entities. Of these, less than 32 percent of all entities within these NAICS categories are considered to be small entities. The delisting of *B. abortus, B. suis,* and *B. melitensis* is anticipated to economically benefit producers, research and reference laboratories, and State and Federal oversight agencies, while also maintaining adequate program oversight of delisted select agents and toxins through HHS CDC and National Institutes of Health guidelines along with USDA–APHIS permits for movement. Below we provide a cost-benefit analysis, as required by Executive Orders 12866, 13563, and 14094 to examine the potential economic effects of delisting *B. abortus, B. suis, B. melitensis, Peronosclerospora philippinensis* (*Peronosclerospora sacchari*), and AHS virus on small entities.

Expected Costs and Benefits of the Final Rule

There are currently costs associated with registration of the select agents that we are delisting. There are no direct costs for regulated entities associated with the delisting of *Brucella species,* only benefits to facilities to participate in *Brucella* research. If *Brucella* species are delisted, APHIS regulations requiring permits for their movement pursuant to 9 CFR part 122 will be operative, however; new permits cost $150 and permitting information is found here: *https://www.aphis.usda.gov/animal-product-import/organisms-vectors.* Many entities have been requesting the delisting of the *Brucella* spp. for years. State Veterinarians have expressed concern regarding the limitation on brucellosis research because of the designation of *Brucella* as a select agent.[4]

Livestock producer organizations and the United States Animal Health Association have voiced their support and the need for the development of a *B. suis* vaccine, as well as improved diagnostics for *Brucella* spp.[5] Similarly, *Peronosclerospora philippinensis* (*Peronosclerospora sacchari*) has received public support for delisting as the agent is only able to survive and reproduce in the host plant, and AHS, while a life-threatening viral disease of equines, is unlikely to be used as a bioterrorism agent. Previous regulatory restrictions had effectively prohibited vaccine trials using natural transmission models, limited the opportunity for large animal studies, inhibited available surveillance, and prohibited studies that would evaluate vaccine or diagnostic product efficacy through comingling vaccinated and naturally infected animals. These limitations increase disease management costs for State and Federal governments as well as livestock producers.

One previous example of the public requesting delisting of a select agent for research purposes was Valley Fever or *Coccidiodes spp.* Until October 2012, Valley Fever or *Coccidiodes* spp. had been listed as a select agent by both APHIS and CDC. Since delisting, additional research has taken place, resulting in enhanced outreach to inform potential infected citizens. Doctors and medical personnel also are more familiar with it and understand that climate change is contributing to this disease in California. Like Valley Fever, the high cost to work with *Brucella* spp. has prevented appropriate research and field studies to take place, thus hampering new information and research to limit or stop the spread of the disease or at least inform the public of its method of infection. Very few laboratories currently have the resources or ability to do *Brucella* spp. research due to the facility needs required by its current listing as a select agent under the regulations.

Due to the stringent transfer requirements in 9 CFR 121.16 for select agents, currently, there is limited courier availability for *Brucella* spp., *Peronosclerospora philippinensis* (*Peronosclerospora sacchari*), and AHS virus shipments. The lack of available couriers has resulted in prohibitive shipment costs for many laboratories. The increased shipment costs have inhibited isolate sharing between reference and research laboratories, thus leading to decreased advancements from researchers and laboratories involved in diagnostic improvements and disease eradication efforts. Removing the three *Brucella species* (*B. abortus, B. suis,* and *B. melitensis*) as overlap select agents and one VS agent, AHS virus, along with one plant agent, *Peronosclerospora philippinensis,* from the list of select agents and toxins will thus economically benefit producers, research and reference laboratories, and, for *Brucella abortus* delisting, State and Federal oversight agencies.

As described, any impacts of delisting these agents from the list of select agents and toxins are expected to be beneficial for the affected industries.

Small-Entity Prevalence

Entities that possess, use, or transfer *B. abortus, B. suis,* and *B. melitensis* along with *Peronosclerospora philippinensis* (*Peronosclerospora sacchari*) and AHS virus would either benefit or be unaffected by this final rule. Potentially affected entities include laboratories, other research institutions, and related entities in possession of the *Brucella* spp. Affected entities (other than Federal and State governmental entities) are likely found within the following NAICS categories:

- 541714, Research and Development in Biotechnology;

[4] State Veterinarian Notes, March 2020: Limitations on brucellosis research due to being listed as a select agent. (*https://liv.mt.gov/_docs/Animal-Health/Newsletters/1st%20%20Quarter%20Newsletter%20Vol%2013%20Iss%201%20C%20Final.pdf*).

[5] United States Animal Health Association (USAHA) Committee on Cattle and Bison, 2020, page 8: AgSAS Delisting Update: *https://www.usaha.org/upload/Committee/2020Reports/Cattle_Bison_Report_2020.pdf.*

• 541715, Research and Development in the Physical, Engineering, and Life Sciences (except Biotechnology);
• 325412, Pharmaceutical Preparation Manufacturing;
• 325413, In-Vitro Diagnostic Substance Manufacturing;
• 325414, Biological Product (except Diagnostic) Manufacturing;
• 541940, Veterinary Services;
• 611310, Colleges, Universities and Professional Schools;
• 621511, Medical Laboratories;
• 622110, General Medical and Surgical Hospitals.

The Small Business Administration (SBA) has established small-entity size standards based on the NAICS categories. An entity classified within NAICS 541714 and NAICS 541715 is considered small with 1,000 or fewer employees, and one within NAICS, 325413, and 325414 is considered small with 1,250 or fewer employees and one with NAICS 325124 is considered small with 1,300 or fewer employees. An entity within NAICS 541940 is considered small with annual receipts of $10 million or less, and an entity within NAICS 611310 is considered small with annual receipts of not more than $34.5 million. Entities classified within NAICS 621511 are considered to be small if they have annual receipts of not more than $41.5 million. An entity classified within NAICS 622110 is considered to be small with annual receipts of not more than $47 million.

Potential Impact on Small Entities

As described above, entities that possess, use, or transfer the delisted agents are not expected to be significantly affected by this final rule and will benefit from the enhanced ability to further perform research on the relevant agent.

Currently, there are 236 entities registered with APHIS and CDC. Of these entities, 13 are private entities, 30 are Federal entities, 42 are commercial entities, 84 are academic entities, and 67 are State entities. Approximately 32 percent of all entities within these NAICS categories of laboratories are considered to be small entities and 68 percent are considered large entities.

Of these 236 registered entities, potentially affected entities include laboratories, other research institutions, and related entities in possession of select agents. Potentially affected entities (other than Federal and State governmental entities) are likely found within the following NAICS categories:
• 541714, Research and Development in Biotechnology;
• 541715, Research and Development in the Physical, Engineering, and Life Sciences (except Biotechnology);
• 325412, Pharmaceutical Preparation Manufacturing;
• 325413, In-Vitro Diagnostic Substance Manufacturing;
• 325414, Biological Product (except Diagnostic) Manufacturing;
• 541940, Veterinary Services;
• 611310, Colleges, Universities and Professional Schools;
• 621511, Medical Laboratories; or
• 622110, General Medical and Surgical Hospitals.

The SBA has established small-entity size standards based on the NAICS categories. An entity classified within NAICS 541714 and NAICS 541715 is considered small with 1,000 or less employees, and an entity classified within NAICS 325412 is considered small with 1,300 or less employees, 325413, and 325414 is considered small with 1,250 or less employees. An entity in NAICS 541940 is considered small with annual receipts of $10 million or less, and an entity in NAICS 611310 is considered small with annual receipts of not more than $34.5 million. Entities classified within NAICS 621511 are considered to be small if they have annual receipts of not more than $41.5 million. An entity classified within NAICS 622110 is considered to be small with annual receipts of not more than $47 million.

While the breakdown of the size of the entities, as reported by the 2017 Economic Census (updated subset of 2021 County Business Patterns released on July 3, 2024), does not precisely fit the SBA guidelines, the data indicates that the majority (68 percent) of the entities in industries potentially affected by this final rule, other than post-secondary institutions, can be considered large entities. In other words, over 68 percent of all entities included in the above mentioned NAICS codes are large entities meaning only approximately 32 percent of these entities are small entities [6] (see table 1 below). According to the 2017 Economic Census and 2021 subset, the most recent census data available for all entities, 98 percent of entities in NAICS 541714 and 96 percent 541715, 93 percent of entities in NAICS 325412, 86 percent of entities in NAICS 325413, 86 percent of entities in NAICS 325414, 0 percent of entities in NAICS 541940, 13 percent of entities in NAICS 621511, 7 percent of entities in NAICS 611310, and 3 percent of entities in NAICS 622110 can be classified as small entities.[7]

TABLE 1—PREVALENCE OF SMALL/LARGE ENTITIES WITHIN AFFECTED INDUSTRIES

NAICS code	Number of firms in each SBA size class		Percentage of small firms
SBA Small-entity Standard based on Employment	<1,000 Employees small entities.	1,000 + Employees large entities.	
541714 Research and Development (R&D) in Biotechnology (commercial and non-profit) 4,714 firms.	4,638	76	98
541715 R&D in the Life Sciences (commercial and non-profit) 9,824 firms	9,399	425	96
	<1,250 Employees small entities.	1,250 + Employees large entities.	
325413 In-vitro Diagnostic Substance 194 firms	167	27	86
325414 Biological Product (except Diagnostic) 288 firms	247	41	86
	<1,300 Employees	1,300 + Employees large entities.	
325412 Pharmaceutical Preparation 1,172 firms	1,092	80	93
SBA Small-entity Standard based on Annual Receipts	<$10 million in Receipts small firms.	$10 million + in Receipts large firms.	

[6] NAICS codes included for all firms totaled 50,281. Of that total, 16,149 were considered small and 34,132 were considered large. Overall percent was 32 percent small firms and 68 percent large firms.

[7] Based on the small business size standards matched to industries described in NAICS, as modified by the Office of Management and Budget in 2017, and reported in the SBA's Small Business Size regulations contained in 13 CFR part 121 (*https://www.ecfr.gov/current/title-13/chapter-I/part-121*) and data by enterprise receipt size (*https://www.census.gov/data/tables/2021/econ/susb/2021-susb-annual.html*) and also when not available in sub 2021 (*https://www.census.gov/data/tables/2017/econ/susb/2017-susb-annual.html*).

TABLE 1—PREVALENCE OF SMALL/LARGE ENTITIES WITHIN AFFECTED INDUSTRIES—Continued

NAICS code	Number of firms in each SBA size class		Percentage of small firms
541940 Veterinary Services 42 b receipts 28,291 firms	0	28,291	0
SBA Small-entity Standard based on Annual Receipts	<$34.5 million in Receipts small firms.	$34.5 million + in Receipts large firms.	
611310 Colleges, Universities, and Professional Schools 2,433 firms	168	2,265	7
SBA Small-entity Standard based on Annual Receipts	<$41.5 million in Receipts small firms.	$41.5 million + in Receipts large firms.	
621511 Medical Laboratories 3,365 firms	438	2,927	13
SBA Small-entity Standard based on Annual Receipts	<$47 million in Receipts small firms.	$47 million + in Receipts large firms.	
622110 General Medical and Surgical Hospitals 2,560	65	2,495	3

The analysis above shows the potential costs of the final rule to be slight as permits would be required for movement. While an interstate transport permit of organisms and vectors will be required, delisted agents will incur less cost than prior to delisting. Prior to delisting, entities had to pay a few thousand dollars in shipping costs alone to move select agent's interstate, due to heightened security measures to move select agent's interstate. The organism and vector permit will cost $150 to move these delisted agents interstate, which is significantly less than the thousands of dollars required to ship select agents interstate. The benefits of the final rule will accrue to all firms conducting research with *Brucella* spp., *Peronosclerospora philippinensis* (*Peronosclerospora sacchari*), and AHS as most of which (68 percent) included in the above mentioned NAICS codes are large entities, meaning only approximately 32 percent of these firms are small entities. Following delisting, they will have the option to purchase a permit for movement only if they decide the benefits of the permit outweigh the cost of $150 per permit. Receipts are in the millions to billions of dollars for these entities; the cost of the permit will be insignificant based upon receipts shown in the Census of Agriculture data. In addition, this is a significant reduction in the cost of shipping select agents interstate which is in the magnitude of a few thousand dollars to move a single select agent interstate. Finally, these entities as mentioned above have already been incurring these shipping costs for interstate movement of delisted and select agents.

Alternatives to the Final Rule

APHIS convenes separate interagency working groups in order to review the list of PPQ and VS select agents and toxins, as well as any overlap select agents and toxins, and develop recommendations regarding possible changes to the list using the five criteria for listing found in the Act. APHIS and CDC coordinate on the biennial review for overlap select agents and toxins that have been determined to pose a severe threat to human and animal health or animal products. The delisting of the three *Brucella* spp., AHS virus, and *P. philippinensis* (*P. sacchari*) is based on the recommendations of the interagency working groups.

The most significant impact of this final rule is the delisting of *Brucella* spp., AHS virus, and *P. philippinensis* (*P. sacchari*), and APHIS and HHS/CDC has carefully considered the alternative of delisting the agents, which would be retaining the agents on the list and continuing regulating these agents.

Retaining the *Brucella* species on the list has several economic, agricultural, and economic effects with little biosecurity benefit. Most notably, retaining *Brucella* species on the list prevents researchers from progressing advancement of science with regards to study of the agents and development of countermeasures for this agent by subjecting these laboratories to Federal Select Agent regulatory authority.

Continuing regulation of *Brucella melitensis, suis,* and *abortus* has a one-time cost of approximately $29,000 to an entity that wishes to register with FSAP for work with these agents. This cost to the regulated community represents a regulatory burden to entities that wish to advance understanding of the agent and research medical countermeasures.

An alternative to the final rule is to not delist these select agents. Retaining *Brucella* spp., AHS virus, and *P. philippinensis* (*P. sacchari*) would maintain the current status quo; it does not consider that these agents no longer pose a severe threat to public health and safety, does not promote better research and vaccine development, and does not align with USDA's decision to delist these agents. In addition, this option is not consistent with the public comment received to support amending the select agent list.

Maintaining the status quo would mean foregoing continued research on an improved *B. abortus* vaccine and development of a *B. suis* vaccine, as well as improved diagnostics for both agents. Similarly, *Peronosclerospora philippinensis* (*Peronosclerospora sacchari*) has received public support for delisting as the agent is only able to survive and reproduce in the host plant, and AHS, while a life-threatening viral disease of equines, is unlikely to be used as a bioterrorism agent. Previous regulatory restrictions had effectively prohibited vaccine trials using natural transmission models, limited the opportunity for large animal studies, inhibited available surveillance, and prohibited studies that would evaluate vaccine or diagnostic product efficacy through comingling vaccinated and naturally infected animals. These limitations also increase disease management costs for State and Federal governments as well as livestock producers.

After carefully considering the technical input of subject matter experts, both within the Federal Government and from public comments, and recommendations from Federal advisory groups, APHIS and HHS/CDC is finalizing the changes to delist agents.

Reasons Action Is Being Considered

APHIS and CDC are delisting *B. abortus, B. suis,* and *B. melitensis* from the select agents and toxins list to reduce costs and enhance opportunities for research on *B. abortus* vaccine and development of a *B. suis* vaccine, as well as improved diagnostics for both agents. The delisting of *Brucella* spp., AHS virus, and *P. philippinensis* (*P. sacchari*) is also based on the recommendations of interagency working groups. *P. philippinensis* (*P. sacchari*) is only able to survive and reproduce in the host plant and requires specific environmental conditions to become infectious, for which mitigations exist. Thus, the economic impact of possible misuse of this agent was deemed a low impact. We are delisting this agent based upon affirmative responses to proposed delisting. With regard to AHS, because both the disease and its vector must be present in an environment for transmission to equines to occur, we considered AHS unlikely to be used as an agent of bioterrorism. Vaccines are available internationally and in the event of foreign animal disease outbreak, we can implement emergency response plans. Based on the foregoing considerations, we are delisting AHS virus as a select agent.

Objectives of and Legal Basis for the Final Rule

Pursuant to the Agricultural Bioterrorism Protection Act of 2002, as amended (7 U.S.C. 8401(a)(2)), APHIS has completed its required biennial review of the current list of select agents and toxins in 7 CFR 331.3 (PPQ select agents) and 9 CFR 121.3 (VS select agents) and 121.4 (overlap select agents overseen jointly with CDC). This final rule will implement the recommendations of the interagency working groups with respect to the list of select agents and toxins. APHIS, in conjunction with CDC, is removing the following overlap select agents: *B. abortus, B. suis,* and *B. melitensis.* APHIS is also removing one VS select agent, AHS virus. APHIS is also removing one PPQ select agent, *P. philippinensis* (*P. sacchari*).

Projected Reporting, Recordkeeping, and Other Compliance Requirements

Delisting *Brucella* spp., AHS virus, and *P. philippinensis* (*P. sacchari*) will not result in additional reporting, recordkeeping, or other compliance requirements.

Duplication, Overlap, or Conflict With Existing Rules and Regulations

APHIS has not identified any duplication, overlap, or conflict of the final rule with other Federal rules or regulations.

Executive Order 13175

This final rule has been reviewed in accordance with the requirements of Executive Order 13175, ''Consultation and Coordination with Indian Tribal Governments.'' Executive Order 13175 requires Federal agencies to consult and coordinate with Tribes on a government-to-government basis on policies that have Tribal implications, including regulations, legislative comments or legislation, and other policy statements or actions that have substantial direct effects on one or more Indian Tribes, on the relationship between the Federal Government and Indian Tribes or on the distribution of power and responsibilities between the Federal Government and Indian Tribes. What follows is a summary of such coordination to date. APHIS has assessed the impact of this rulemaking on Indian Tribes by soliciting Tribal feedback on its provisions. On April 8, 2022, APHIS sent Tribal nations a letter outlining the provisions of the proposed rule and soliciting their feedback. On May 5, 2022, the Sac and Fox Tribe of the Mississippi in Iowa submitted a response expressing concerns regarding whether possible *Brucella abortus* delisting would materially adversely impact APHIS' domestic quarantine program for the control and eradication of brucellosis in cattle and bison. In response, APHIS clarified that the two issues were distinct, and no adverse operational impacts were anticipated. On June 6, 2022, the Tribe indicated that they have no further comments or concerns. To date, no other Tribes have expressed concerns regarding this rulemaking, nor did Tribes submit comments on the proposed rule during its comment period. Therefore, the Agency has determined that this final rule does not, to our knowledge, have Tribal implications that require formal Tribal consultation under Executive Order 13175.

If a Tribe requests consultation, the Animal and Plant Health Inspection Service will work with the Office of Tribal Relations to ensure meaningful consultation is provided where changes, additions, and modifications identified herein are not expressly mandated by Congress.

Executive Order 12988

This final rule has been reviewed under Executive Order 12988, Civil Justice Reform. This rule (1) preempts all State and local laws and regulations that are in conflict with this rule; (2) has no retroactive effect; and (3) does not require administrative proceedings before parties may file suit in court challenging this rule.

Paperwork Reduction Act

This final rule contains no new information collection or recordkeeping requirements under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*).

List of Subjects

7 CFR Part 331

Agricultural research, Laboratories, Plant diseases and pests, Reporting and recordkeeping requirements.

9 CFR Part 121

Agricultural research, Animal diseases, Laboratories, Medical research, Reporting and recordkeeping requirements.

Accordingly, we are amending 7 CFR part 331 and 9 CFR part 121 as follows:

Title 7—Agriculture

PART 331—POSSESSION, USE, AND TRANSFER OF SELECT AGENTS AND TOXINS

■ 1. The authority citation for part 331 continues to read as follows:

Authority: 7 U.S.C. 8401; 7 CFR 2.22, 2.80, and 371.3.

■ 2. Amend § 331.3 by revising paragraph (b) to read as follows:

§ 331.3 PPQ select agents and toxins.

* * * * *

(b) PPQ select agents and toxins are:

(1) *Coniothyrium glycines,* (formerly *Phoma glycinicola, Pyrenochaeta glycines*);

(2) *Ralstonia solanacearum;*

(3) *Rathayibacter toxicus;*

(4) *Sclerophthora rayssiae;*

(5) *Synchytrium endobioticum;* and

(6) *Xanthomonas oryzae.*

* * * * *

Title 9—Animals and Animal Products

PART 121—POSSESSION, USE, AND TRANSFER OF SELECT AGENTS AND TOXINS

■ 3. The authority citation for part 121 continues to read as follows:

Authority: 7 U.S.C. 8401; 7 CFR 2.22, 2.80, and 371.4.

■ 4. Amend § 121.3 by revising paragraph (b) to read as follows:

§ 121.3 VS select agents and toxins.

* * * * *

(b) VS select agents and toxins are:

(1) African swine fever virus;

(2) Avian influenza virus;

(3) Classical swine fever virus;

(4) * Foot-and-mouth disease virus;

(5) Goat pox virus;

(6) Lumpy skin disease virus;

(7) *Mycoplasma capricolum;*

(8) *Mycoplasma mycoides;*

(9) Newcastle disease virus; [1]

(10) Peste des petits ruminants virus;

(11) * Rinderpest virus;

(12) Sheep pox virus; and

(13) Swine vesicular disease virus.

* * * * *

[1] A virulent Newcastle disease virus (avian paramyxovirus type 1) has an intracerebral pathogenicity index in day-old chicks (Gallus gallus) of 0.7 or greater, or has an amino acid sequence at the fusion (F) protein cleavage that is consistent with virulent strains of Newcastle disease virus and phenylalanine at residue 117 of the F1 protein N-terminus, except for genotype VI viruses from columbid birds.

■ 5. Amend § 121.4 by revising paragraph (b) to read as follows:

§ 121.4 Overlap select agents and toxins.

* * * * *

(b) Overlap select agents and toxins are:

(1) ** Bacillus anthracis;*

(2) *Bacillus anthracis* (Pasteur strain);

(3) ** Burkholderia mallei;*

(4) ** Burkholderia pseudomallei;*

(5) Hendra virus;

(6) * Nipah virus;

(7) Rift Valley fever virus; and

(8) Venezuelan equine encephalitis virus.

* * * * *

Done in Washington, DC.

Jennifer Moffitt,

Undersecretary, Marketing and Regulatory Programs, USDA.

DEPARTMENT OF ENERGY

10 CFR Part 1008

[DOE–HQ–2024–0085]

RIN 1903–AA18

Privacy Act of 1974: Implementation of Exemptions

AGENCY: U.S. Department of Energy.

ACTION: Final rule.

SUMMARY: The Department of Energy (DOE or Department) is revising its regulations to exempt certain records maintained under a newly established system of records—DOE–85, Research, Technology, and Economic Security Due Diligence Review Records—from the notification and access provisions of the Privacy Act of 1974. The Department is exempting portions of this system of records from these subsections of the Privacy Act because of requirements related to classified information.

DATES: This final rule is effective on January 16, 2025.

FOR FURTHER INFORMATION CONTACT: Kyle David, U.S. Department of Energy, 1000 Independence Avenue SW, Office 8H–085, Washington, DC, 20585; facsimile: (202) 586–8151; email: *kyle.david@hq.doe.gov,* telephone: (240) 686–9485.

I. Authority and Background

A. Authority

DOE has broad authority to manage the agency's collection, use, processing, maintenance, storage, and disclosure of Personally Identifiable Information (PII) pursuant to the following authorities: 42 United States Code (U.S.C.) 7101 *et seq.,* 50 U.S.C. 2401 *et seq.,* 5 U.S.C. 1104, 5 U.S.C. 552, 5 U.S.C. 552a, 42 U.S.C. 7254, 5 U.S.C. 301, and 42 U.S.C. 405 note.

B. Background

The Privacy Act of 1974 (the Act) (5 U.S.C. 552a) embodies fair information practice principles in a statutory framework governing the means by which the U.S. Government collects, maintains, uses, and disseminates personally identifiable information. The Privacy Act applies to information that is maintained in a ''system of records.'' A ''system of records'' is a group of any records under the control of an agency from which information is retrieved by the name of the individual or by some identifying number, symbol, or other identifying particular assigned to the individual. In the Privacy Act, an individual is defined to encompass U.S. citizens and lawful permanent residents.

The Privacy Act includes two sets of provisions that allow agencies to claim exemptions from certain requirements in the statute. These provisions allow agencies in certain circumstances to promulgate rules to exempt a system of records from certain provisions of the Privacy Act. For this system of records, pursuant to 5 U.S.C. 552a(k)(1), the Department exempts this system of records from subsections (c)(3); (d); (e)(1), (e)(4)(G), (4)(H), and (4)(I); and (f) of the Privacy Act. This exemption is needed to protect information relating to DOE activities from disclosure to subjects or others related to these activities. Specifically, the exemption is required to safeguard classified information. Pursuant to the Privacy Act and Office of Management and Budget (OMB) Circular A–108, *Federal Agency Responsibilities for Review, Reporting, and Publication under the Privacy Act,* DOE is issuing this Rule to make clear to the public the reasons why this particular exemption is being applied.

II. Discussion

The Department is exempting portions of a newly established system of records—DOE–85, Research, Technology, and Economic Security Due Diligence Review Records—from subsections (c)(3); (d); (e)(1), (e)(4)(G), (4)(H), and (4)(I); and (f) of the Privacy Act of 1974. To claim this exemption, DOE is amending 10 CFR 1008.12 by adding a new paragraph, (b)(1)(ii)(N). The Department exempts portions of this system of records from these subsections of the Privacy Act because of requirements related to classified information.

The purpose of this system is to enhance DOE's capabilities to aggregate, link, analyze, and maintain information used by the Department to assess research, technology, and economic security (RTES) risk. RTES risks may include risk of foreign government interference and exploitation, intellectual property (IP) loss, national

security risk, conflicts of interest, and conflicts of commitment, and other parameters defined in DOE/National Nuclear Security Administration (NNSA) policy. The RTES analysis builds on pre-existing information provided by individuals and organizations that interact with DOE/NNSA, paired with public records, and in some cases, classified information. Consistent with National Security Presidential Memorandum–33 [1] (NSPM–33), applicable law, and existing DOE/NNSA policies, the system records may be shared as appropriate with other Federal funding agencies and internally within DOE/NNSA to help ensure a coordinated and consistent approach to risk assessment.

For this system of records, the system is exempted from subsections (c)(3); (d); (e)(1), (e)(4)(G), (4)(H), and (4)(I); and (f) of the Privacy Act pursuant to 5 U.S.C. 552a(k)(1). This exemption is needed to protect information relating to DOE activities from disclosure to subjects or others related to these activities. Specifically, the exemption is required to safeguard classified information.

This exemption is a standard national security exemption exercised by many Federal intelligence agencies. Although the RTES Office is not an intelligence agency, the system of records utilized by the RTES Office may include classified information obtained from Federal intelligence sources.

Exemptions for DOE–85 Research, Technology, and Economic Security Due Diligence Review Records from this particular subsection of the Privacy Act are justified on a case-by-case basis to be determined at the time a request is made for the following reasons:

From 5 U.S.C. 552a subsection (k)(1) because providing individuals access to classified information could cause serious damage to the national defense or foreign policy.

On September 10, 2024, DOE published a notice of proposed rulemaking (NOPR) (89 FR 73312). This NOPR claimed the 5 U.S.C. 552a(k)(1) exemption listed in the preceding paragraph. As a result of this NOPR, DOE received one comment, discussed in section III of this document.

III. Summary of Public Comments

As mentioned in previously, DOE received one comment in response to the NOPR (DOE–HQ–2023–0058–0005). The commenter requested a clearer explanation of how conflicts of interest and commitment necessitate exemptions from the Privacy Act and for DOE to consider narrowing the scope of Privacy Act exemptions, particularly the exemption from 5 U.S.C. 552a(e)(1). The commenter points out that the exemption from 5 U.S.C. 522a(e)(1) is too broad and could result in the accumulation of unnecessary information, creating unintended consequences such as the misuse of personal information. Finally, the commenter also stated that Freedom of Information Act (FOIA) liability may also be triggered from people trying to get information they believe is held under exemption.

As to the issue regarding conflicts of interest and commitment, DOE would like to clarify that the justification for exempting the system is based on the extent to which the system contains classified information. This is consistent with 10 CFR 1008.12(b)(1), where 5 U.S.C. 552a(k)(1) applies to the system only ''to the extent [that the system] contain[s] classified information, in order to prevent serious damage to the national defense or foreign policy that could arise from providing individuals access to classified information.'' Determining if something is exempt will be done on a case-by-case basis, and if there is no classified information or national security information, then included information under 5 U.S.C. 552a(k)(1) would not be exempt.

As to the commenters concerns that the exemption from 5 U.S.C. 522a(e)(1) is too broad and could result in collection of irrelevant information, risking misuse of personal information, as well as concerns that the regulation could lead to legal challenges to withholding such information under FOIA, DOE respectfully disagrees. DOE makes clear in the NOPR and restates here, information within the system that meets the criteria of 5 U.S.C. 552a(k)(1) is exempted from disclosure from 5 U.S.C. 552a(e)(1) and the other identified provisions. Information that fails to meet such criteria is not exempted from the provision. Therefore, the exemption from 5 U.S.C. 552a(e)(1) is sufficiently tailored for consistency with 10 CFR 1008.12(b)(1), and determinations will be made on a case-by-case basis.

IV. Section 1008.12 Analysis

This final rule amends 10 CFR 1008.12(b)(1)(ii), by adding paragraph (b)(1)(ii)(N), referencing line item ''(N) Research, Technology, and Economic Security Due Diligence Review Records (DOE–85)'' to paragraph (b)(1)(ii). This addition will demonstrate that SORN DOE–85 is included among the other SORNs taking a 5 U.S.C. 552a (k)(1) exemption under the Privacy Act of 1974. This exemption allows DOE to ''prevent serious damage to the national defense or foreign policy that could arise from providing individuals access to classified information.''

V. Procedural Issues and Regulatory Review

A. Review Under Executive Orders 12866, 13563, and 14094

Executive Order (''E.O.'') 12866, ''Regulatory Planning and Review,'' 58 FR 51735 (Oct. 4, 1993), as supplemented and reaffirmed by E.O. 13563, ''Improving Regulation and Regulatory Review,'' 76 FR 3821 (Jan. 21, 2011) and amended by E.O. 14094, ''Modernizing Regulatory Review,'' 88 FR 21879 (April 11, 2023), requires agencies, to the extent permitted by law, to (1) propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs (recognizing that some benefits and costs are difficult to quantify); (2) tailor regulations to impose the least burden on society, consistent with obtaining regulatory objectives, taking into account, among other things, and to the extent practicable, the costs of cumulative regulations; (3) select, in choosing among alternative regulatory approaches, those approaches that maximize net benefits (including potential economic, environmental, public health and safety, and other advantages; distributive impacts; and equity); (4) to the extent feasible, specify performance objectives, rather than specifying the behavior or manner of compliance that regulated entities must adopt; and (5) identify and assess available alternatives to direct regulation, including providing economic incentives to encourage the desired behavior, such as user fees or marketable permits, or providing information upon which choices can be made by the public. DOE emphasizes as well that E.O. 13563 requires agencies to use the best available techniques to quantify anticipated present and future benefits and costs as accurately as possible. In its guidance, the Office of Information and Regulatory Affairs (OIRA) has emphasized that such techniques may include identifying changing future compliance costs that might result from technological innovation or anticipated behavioral changes. For the reasons stated in this preamble, this final rule is consistent with these principles.

Section 6(a) of E.O. 12866 requires agencies to submit ''significant regulatory actions'' to OIRA for review.

[1] National Security Presidential Memorandum on United States Government-Supported Research and Development National Security Policy 33, issued January 14, 2021.

OIRA has determined that this final rule is not a ''significant regulatory action'' within the scope of E.O. 12866. Accordingly, this action is not subject to review under E.O. 12866 by OIRA of the Office of Management and Budget (OMB).

B. Review Under the Regulatory Flexibility Act

The Regulatory Flexibility Act of 1980 (5 U.S.C. 601 *et seq.*) requires that an agency prepare an initial regulatory flexibility analysis for any regulation for which a final rule is required, unless the agency certifies that the rule, if promulgated, will not have a significant economic impact on a substantial number of small entities (5 U.S.C. 605(b)). As required by Executive Order 13272, *Proper Consideration of Small Entities in Agency Rulemaking,* 67 FR 53461 (Aug. 16, 2002), DOE published procedures and policies on February 19, 2003, to ensure that the potential impacts of its rules on small entities are properly considered during the rulemaking process. 68 FR 7990. DOE has made its procedures and policies available on the Office of the General Counsel's website (*www.energy.gov/gc/office-general-counsel*).

DOE reviewed this final rule under the provisions of the Regulatory Flexibility Act and the procedures and policies published on February 19, 2003. DOE certifies that the final rule will not have significant economic impact on a substantial number of small entities. The factual basis for this certification is set forth below.

This final rule will update DOE's policies and procedures concerning the disclosure of records held within a system of records pursuant to the Privacy Act of 1974. This final rule will apply only to activities conducted by DOE's Federal employees and contractors, who would be responsible for implementing the rule requirements. DOE does not expect there to be any potential economic impact of this final rule on small businesses. Small businesses, therefore, should not be adversely impacted by the requirements in this final rule. For these reasons, DOE certifies that this final rule will not have a significant economic impact on a substantial number of small entities, and therefore, no regulatory flexibility analysis has been prepared.

C. Review Under the Paperwork Reduction Act of 1995

This final rule does not impose a collection of information requirement subject to review and approval by OMB under the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*).

D. Review Under the National Environmental Policy Act of 1969

Pursuant to the National Environmental Policy Act of 1969 (NEPA), DOE has analyzed this action in accordance with NEPA and DOE's NEPA implementing regulations (10 CFR part 1021). DOE's regulations include a categorical exclusion (CX) for rulemakings interpreting or amending an existing rule or regulation that does not change the environmental effect of the rule or regulation being amended. 10 CFR part 1021, subpart D, appendix A, paragraph A5. DOE has determined that this final rule is covered under the CX found in DOE's NEPA regulations at paragraph A5 of appendix A to subpart D, 10 CFR part 1021, because it is an amendment to an existing regulation that does not change the environmental effect of the amended regulation and, therefore, meets the requirements for the application of this CX. *See* 10 CFR 1021.410. Therefore, DOE has determined that this final rule is not a major Federal action significantly affecting the quality of the human environment within the meaning of NEPA and does not require an Environmental Assessment or an Environmental Impact Statement.

E. Review Under Executive Order 12988

With respect to the review of existing regulations and the promulgation of new regulations, Section 3(a) of Executive Order 12988, ''Civil Justice Reform,'' 61 FR 4729 (February 7, 1996), imposes on Federal agencies the general duty to adhere to the following requirements: (1) eliminate drafting errors and ambiguity; (2) write regulations to minimize litigation; (3) provide a clear legal standard for affected conduct rather than a general standard; and (4) promote simplification and burden reduction. Section 3(b) of Executive Order 12988 specifically requires that executive agencies make every reasonable effort to ensure the regulation: (1) clearly specifies the preemptive effect, if any; (2) clearly specifies any effect on existing Federal law or regulation; (3) provides a clear legal standard for the affected conduct while promoting simplification and burden reduction; (4) specifies the retroactive effect, if any; (5) adequately defines key terms; (6) specifies whether administrative proceedings are to be required before parties may file suit in court and, if so, describes those proceedings and requires the exhaustion of administrative remedies; and (7) addresses other important issues affecting clarity and general draftsmanship under any guidelines issued by the Attorney General. Section 3(c) of Executive Order 12988 requires Executive agencies to review regulations in light of applicable standards in section 3(a) and section 3(b) to determine whether they are met or it is unreasonable to meet one or more of the standards. DOE has completed the required review and determined that, to the extent permitted by law, this final rule meets the relevant standards of Executive Order 12988.

F. Review Under Executive Order 13132

Executive Order 13132, ''Federalism,'' 64 FR 43255 (August 10, 1999), imposes certain requirements on agencies formulating and implementing policies or regulations that preempt State law or that have federalism implications. Agencies are required to examine the constitutional and statutory authority supporting any action that would limit the policymaking discretion of the States and carefully assess the necessity for such actions. The Executive order also requires agencies to have an accountable process to ensure meaningful and timely input by State and local officials in the development of regulatory policies that have federalism implications. On March 14, 2000, DOE published a statement of policy describing the intergovernmental consultation process it will follow in the development of such regulations. 65 FR 13735. DOE has examined this final rule and has tentatively determined that it would not preempt State law and would not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. No further action is required by Executive Order 13132.

G. Review Under Executive Order 13175

Under Executive Order 13175 (65 FR 67249, November 6, 2000) on ''Consultation and Coordination with Indian Tribal Governments,'' DOE may not issue a discretionary rule that has ''Tribal'' implications and imposes substantial direct compliance costs on Indian Tribal governments. DOE has determined that this final rule will not have such effects and concluded that Executive Order 13175 does not apply to this final rule.

H. Review Under the Unfunded Mandates Reform Act of 1995

Title II of the Unfunded Mandates Reform Act (UMRA) of 1995 (Pub. L. 104–4) requires each Federal agency to assess the effects of a Federal regulatory action on State, local, and Tribal governments, and the private sector.

(Pub. L. 104–4, sec. 201 *et seq.* (codified at 2 U.S.C. 1531 *et seq.*)). For a regulatory action likely to result in a rule that may cause the expenditure by State, local, and Tribal governments, in the aggregate, or by the private sector of $100 million or more in any one year (adjusted annually for inflation), section 202 of UMRA requires a Federal agency to publish a written statement that estimates the resulting costs, benefits, and other effects on the national economy. (2 U.S.C. 1532(a), (b)) UMRA also requires a Federal agency to develop an effective process to permit timely input by elected officers of State, local, and Tribal governments on a ''significant Federal intergovernmental mandate,'' and requires an agency plan for giving notice and opportunity for timely input to potentially affected small governments before establishing any requirements that might significantly or uniquely affect them. On March 18, 1997, DOE published a statement of policy on its process for intergovernmental consultation under UMRA. (62 FR 12820) (This policy is also available at: *www.energy.gov/gc/guidance-opinions* under ''Guidance & Opinions'' (Rulemaking).) DOE examined this final rule according to UMRA and its statement of policy and has determined that this final rule contains neither an intergovernmental mandate, nor a mandate that may result in the expenditure by State, local, and Tribal governments, in the aggregate, or by the private sector, of $100 million or more in any year. Accordingly, no further assessment or analysis is required under UMRA.

I. Review Under Executive Order 12630

DOE has determined, under Executive Order 12630, ''Governmental Actions and Interference with Constitutionally Protected Property Rights'' 53 FR 8859 (March 18, 1988), that this regulation would not result in any takings that might require compensation under the Fifth Amendment to the U.S. Constitution.

J. Review Under Executive Order 13211

Executive Order 13211, ''Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use,'' 66 FR 28355 (May 22, 2001), requires Federal agencies to prepare and submit to the OIRA, which is part of OMB, a Statement of Energy Effects for any significant energy action. A ''significant energy action'' is defined as any action by an agency that promulgates or is expected to lead to promulgation of a final rule, and that: (1)(i) is a significant regulatory action under Executive Order 12866, or any successor order; and (ii) is likely to have a significant adverse effect on the supply, distribution, or use of energy, or (2) is designated by the Administrator of OIRA as a significant energy action. For any significant energy action, the agency must give a detailed statement of any adverse effects on energy supply, distribution, or use should the proposal be implemented, and of reasonable alternatives to the action and their expected benefits on energy supply, distribution, and use. This regulatory action is not a significant energy action. Accordingly, DOE has not prepared a Statement of Energy Effects.

K. Review Under the Treasury and General Government Appropriations Act, 1999

Section 654 of the Treasury and General Government Appropriations Act, 1999 (Pub. L. 105–277) requires Federal agencies to issue a Family Policymaking Assessment for any final rule that may affect family well-being. This final rule would not have any impact on the autonomy or integrity of the family as an institution. Accordingly, DOE has concluded that it is not necessary to prepare a Family Policymaking Assessment.

L. Review Under the Treasury and General Government Appropriations Act, 2001

Section 515 of the Treasury and General Government Appropriations Act, 2001 (44 U.S.C. 3516) provides for Federal agencies to review most disseminations of information to the public under guidelines established by each agency pursuant to general guidelines issued by OMB. OMB's guidelines were published at 67 FR 8452 (February 22, 2002), and DOE's guidelines were published at 67 FR 62446 (October 7, 2002). Pursuant to OMB Memorandum M–19–15, *Improving Implementation of the Information Quality Act* (April 24, 2019), DOE published updated guidelines which are available at: *www.energy.gov/sites/prod/files/2019/12/f70/DOE%20Final%20Updated%20IQA%20Guidelines%20Dec%202019.pdf.*

DOE has reviewed this final rule and will ensure that information produced under this regulation remains consistent with the applicable OMB and DOE guidelines.

M. Congressional Review

As required by 5 U.S.C. 801, DOE will report to Congress on the promulgation of this rule prior to its effective date. The report will state that the rule does not, meet the criteria set forth in 5 U.S.C. 804(2).

VI. Approval by the Office of the Secretary of Energy

The Secretary of Energy has approved publication of this Final rule.

List of Subjects in 10 CFR Part 1008

Administration practice and procedure, Freedom of information, Privacy, Reporting and recordkeeping requirements.

Signing Authority

This document of the Department of Energy was signed on December 11, 2024, by Ann Dunkin, Senior Agency Official for Privacy, pursuant to delegated authority from the Secretary of Energy. That document with the original signature and date is maintained by DOE. For administrative purposes only, and in compliance with requirements of the Office of the Federal Register, the undersigned DOE Federal Register Liaison Officer has been authorized to sign and submit the document in electronic format for publication, as an official document of the Department of Energy. This administrative process in no way alters the legal effect of this document upon publication in the **Federal Register**.

Signed in Washington, DC, on December 12, 2024.

Treena V. Garrett,

Federal Register Liaison Officer, U.S. Department of Energy.

For the reasons set forth in the preamble, the Department of Energy amends part 1008 of chapter X of title 10 of the Code of Federal Regulations as set forth below:

PART 1008—RECORDS MAINTAINED ON INDIVIDUALS (PRIVACY ACT)

■ 1. The authority citation for part 1008 continues to read as follows:

Authority: 42 U.S.C. 7101 *et seq.;* 50 U.S.C. 2401 *et seq.;* 5 U.S.C. 552; 5 U.S.C. 552a; 42 U.S.C. 7254; and 5 U.S.C. 301. Section 1008.22(c) also issued under 42 U.S.C. 405 note.

■ 2. Amend § 1008.12 by adding paragraph (b)(1)(ii)(N) to read as follows:

§ 1008.12 Exemptions.

* * * * *

(b) * * *

(1) * * *

(ii) * * *

(N) Research, Technology, and Economic Security Due Diligence Review Records (DOE–85).

* * * * *

BILLING CODE 6450–01–P

DEPARTMENT OF ENERGY

10 CFR Part 1008

[DOE–HQ–2024–0084]

RIN 1903–AA16

Privacy Act of 1974: Implementation of Exemptions

AGENCY: U.S. Department of Energy.

ACTION: Final rule.

SUMMARY: The Department of Energy (DOE or Department) is revising its regulations to exempt certain records maintained under a newly established system of records—DOE–42 Nondiscrimination in Federally Assisted Programs Files—from the notification and access provisions of the Privacy Act of 1974. The Department is exempting portions of this system of records from these subsections of the Privacy Act because of requirements related to investigatory material compiled for law enforcement purposes.

DATES: This final rule is effective on January 16, 2025.

FOR FURTHER INFORMATION CONTACT: Kyle David, U.S. Department of Energy, 1000 Independence Avenue SW, Office 8H–085, Washington, DC, 20585; facsimile: (202) 586–8151; email: *kyle.david@hq.doe.gov;* telephone: (240) 686–9485.

I. Authority and Background

A. Authority

DOE has broad authority to manage the agency's collection, use, processing, maintenance, storage, and disclosure of Personally Identifiable Information (PII) pursuant to the following authorities: 42 United States Code (U.S.C.) 7101 *et seq.,* 50 U.S.C. 2401 *et seq.,* 5 U.S.C. 1104, 5 U.S.C. 552, 5 U.S.C. 552a, 42 U.S.C. 7254, 5 U.S.C. 301, and 42 U.S.C. 405 note.

B. Background

The Privacy Act of 1974 (the Act) (5 U.S.C. 552a) embodies fair information practice principles in a statutory framework governing the means by which the U.S. Government collects, maintains, uses, and disseminates personally identifiable information. The Privacy Act applies to information that is maintained in a ''system of records.'' A ''system of records'' is a group of any records under the control of an agency from which information is retrieved by the name of the individual or by some identifying number, symbol, or other identifying particular assigned to the individual. In the Privacy Act, an individual is defined to encompass U.S. citizens and lawful permanent residents.

The Privacy Act includes two sets of provisions that allow agencies to claim exemptions from certain requirements in the statute. These provisions allow agencies in certain circumstances to promulgate rules to exempt a system of records from certain provisions of the Privacy Act. For this system of records, pursuant to 5 U.S.C. 552a(k)(2), the Department exempts this system of records from subsections (c)(3); (d); and (e)(1) of the Privacy Act. This exemption is needed to protect from disclosure investigatory material compiled for law enforcement purposes. Pursuant to the Privacy Act and Office of Management and Budget (OMB) Circular A–108, *Federal Agency Responsibilities for Review, Reporting, and Publication under the Privacy Act,* DOE is issuing this final rule to make clear to the public the reasons why this particular exemption is being applied.

II. Discussion

DOE is claiming an exemption from certain requirements of the Privacy Act for a new system of records: DOE–42 Nondiscrimination in Federally Assisted Programs Files.

The Department is exempting portions of a newly established system of records—DOE–42 Nondiscrimination in Federally Assisted Programs Files—from subsections (c)(3); (d); and (e)(1) of the Privacy Act of 1974. To claim this exemption, DOE is amending 10 CFR 1008.12 by adding a new paragraph, (b)(2)(ii)(R). The Department exempts portions of this system of records from these subsections of the Privacy Act because of requirements related to the compilation of investigatory material for law enforcement purposes.

DOE–42 Nondiscrimination in Federally Assisted Programs Files will provide a central electronic repository to: (i) maintain all records used by OCR–EEO personnel in making Federal civil rights compliance determinations with accuracy, relevance, timeliness, and completeness to assure fairness to the individual(s) in the determination; (ii) create appropriate administrative, technical, and physical safeguards that ensure the security and confidentiality of records and protect against any anticipated threats to their security or integrity and; (iii) create rules of conduct for authorized OCR–EEO personnel involved in the operation, maintenance, and routine uses for this system records.

For this system of records, DOE is claiming the Privacy exemption from requirements in subsections (c)(3); (d); and (e)(1) of the Privacy Act. In addition, the system has been exempted from the Privacy Act, pursuant to 5 U.S.C. 552a(k)(2). These exemptions are needed to protect information relating to DOE activities from disclosure to subjects or others related to these activities. Specifically, these exemptions from the Privacy Act are necessary in order to preclude subjects of these activities from frustrating these processes; to avoid disclosure of activity techniques; to protect the identities and physical safety of confidential informants and law enforcement personnel; to ensure DOE's ability to obtain information from third parties and other sources; and to protect the privacy of third parties. Disclosure of information to the subject of the inquiry could also permit the subject to avoid detection or apprehension.

Exemption from these Privacy Act requirements is standard for law enforcement and national security matters and are often exercised by many Federal law enforcement and intelligence agencies. In appropriate circumstances, where compliance would not appear to interfere with or adversely affect the law enforcement purposes of this system and overall law enforcement process, the applicable exemption of these requirements may be waived on a case-by-case basis.

Exemption from these particular Privacy Act requirements for DOE–42 Nondiscrimination in Federally Assisted Programs Files is justified, on a case-by-case basis to be determined at the time a request is made for the following reasons:

In particular, exemption from the Privacy Act's requirement in subsections (c)(3) (Accounting for Disclosures) is necessary because release of the accounting of disclosures could alert the subject of an investigation of an actual or potential criminal, civil, or regulatory violation to the existence of that investigation and reveal investigative interest on the part of DOE as well as the recipient agency. Disclosure of the accounting would, therefore, present a serious impediment to law enforcement efforts or efforts to preserve national security. Disclosure of the accounting would also permit the individual who is the subject of a record to impede the investigation, to tamper with witnesses or evidence, and to avoid detection or apprehension, which would undermine the entire investigative process.

Exemption from the Privacy Act's requirement in subsection (d) (Access to Records) is necessary because access to the records contained in this system of records could inform the subject of an investigation of an actual or potential criminal, civil, or regulatory violation to the existence of that investigation and reveal investigative interest on the part of DOE or another agency. Access to the records could permit the individual who is the subject of a record to impede the investigation, to tamper with witnesses or evidence, and to avoid detection or apprehension. Amendment of the records could interfere with ongoing investigations and law enforcement activities and would impose an unreasonable administrative burden by requiring investigations to be continually reinvestigated. In addition, permitting access and amendment to such information could disclose security-sensitive information that could be detrimental to nuclear or energy sector security.

Exemption from the Privacy Act's requirements in subsection (e)(1) (Relevancy and Necessity of Information) is necessary because in the course of investigations into potential violations of Federal law, the accuracy of information obtained or introduced occasionally may be unclear, or the information may not be strictly relevant or necessary to a specific investigation. In the interests of effective law enforcement, it is appropriate to retain all information that may aid in establishing patterns of unlawful activity.

On September 20, 2024, DOE published a notice of proposed rulemaking (NOPR) (89 FR 77040), and received one comment, discussed in detail below.

III. Summary of Public Comments

DOE received one public comment in response to its NOPR, and while the commenter was generally supportive of the rule, it raised the following concerns:

1. *Concerns about exemption from subsection (c)(3):* According to the commenter, the exemption from 5 U.S.C. 552a(c)(3) could lead to unauthorized disclosure or misuse of sensitive data, and result in abuse or information leaks. In lieu of this exemption, the commenter recommended the creation of partial exemptions or delayed disclosures.

DOE respectfully disagrees with the commenter regarding the exemption from 5 U.S.C. 552a(c)(3). The record itself is protected from unauthorized disclosure and misuse pursuant to subsection (e)(9) of the Privacy Act, which requires the agency to establish appropriate administrative, technical, and physical safeguards to ensure the security and confidentiality of records. Additionally, the Privacy Act governs records about individuals, not about entities that are subject to the Federal civil rights laws that OCR–EEO enforces. Where such information does constitute a record about an individual, this system of records allows the exemption from 5 U.S.C. 552a(c)(3) to be waived on a case-by-case basis in appropriate circumstances where accounting for disclosures would not interfere with or otherwise adversely affect the law enforcement purposes of this system of records or the overall law enforcement process. Finally, this exemption protects against misuses of sensitive data by preventing an accounting for disclosures from being used to alter or destroy evidence, improperly influence or intimidate witnesses, or further other evasive actions that could impede or compromise an investigation. DOE does not agree with the commenter's recommendation to create partial exemptions or delayed disclosures, as this exemption prevents a record subject from using an accounting to retaliate against investigation witnesses or invade the privacy of victims or other persons who engaged in protected activity, including confidential sources who otherwise would be unwilling to come forward or participate in an OCR–EEO investigation.

2. *Concerns about the exemption from subsection (d):* The commenter also asserted that the exemption from 5 U.S.C. 552a(d) raises serious fairness and due process concerns. In lieu of this exemption, the commenter recommended a tiered approach allowing individuals to request access to their records under certain conditions, such as when the information no longer poses a threat to law enforcement, or portions of the record are non-sensitive, or based on the record's relevance to the investigation.

DOE respectfully disagrees with the commenter, and believes this exemption accords with the fairness and due process protections of subsection (k)(2) of the Privacy Act, which expressly provides that any individual who would be denied any right, privilege, or benefit that such person would otherwise be entitled by Federal law, or to which such individual would otherwise be eligible as a result of the maintenance of material within a system of records shall be provided such material, except to the extent that the disclosure of such material would reveal the identity of a source who furnished information to the Government under an express or implied promise that the identity of the source would be held in confidence. Additionally, subsection (e)(5) of the Privacy Act requires OCR–EEO to maintain all records used in making any determination about any individual with such accuracy, relevance, timeliness, and completeness as is reasonably necessary to assure fairness to the individual in the determination.

3. *Concerns about the exemption from (e)(1):* The commenter additionally asserted that the exemption from 5 U.S.C. 552a (e)(1) raises concerns that DOE may retain information that is outdated, irrelevant, or unnecessarily harmful to individuals, which the commentor believes may lead to individuals being unfairly scrutinized or targeted based on information that is no longer accurate or relevant to the investigation. In relation to this exemption, the commenter recommended that DOE implement a regular review process based on a well-defined and publicly justifiable review standard, and also implement a central electronic repository to keep this system of records.

For the following reasons, DOE respectfully disagrees with the commenter regarding the exemption from 5 U.S.C. 552a(e)(1). First, it is often impossible to determine the relevance and necessity of information in the early stages of collection, investigation, or adjudication. Second, the DOE regulations implementing Federal civil

rights laws define a federally assisted program or activity to mean all of the operations of any entity, any part of which is a recipient of Federal financial assistance from DOE. Third, information obtained during an OCR–EEO investigation may be relevant and necessary to the civil or criminal law enforcement activities of other Federal agencies, or concern a matter before Congress or a court of competent jurisdiction. Fourth, in furtherance of the administrative, technical, and physical safeguards delineated in the NOPR, the security and privacy controls applicable to this system of records are reviewed on an ongoing basis and updated in accordance with well-defined Federal government standards and DOE directives.

In response to the commenter's conclusion that DOE should provide a more complete description of this system of records, DOE brings the commenter's attention to the ample description provided by the NOPR regarding the administrative, technical, and physical safeguards applicable to this system of records.

IV. Section 1008.12 Analysis

This final rule adds line-item paragraph (b)(2)(ii)(Q), referencing ''Nondiscrimination in Federally Assisted Program Files (DOE–42)''. This addition demonstrates that SORN DOE–42 is included among the other SORNs taking a subsection (k)(2) exemption under the Privacy Act of 1974. Per current regulations located at 10 CFR 1008.12(b)(2)(ii), this exemption allows DOE to ''prevent subjects of investigation from frustrating the investigatory process through access to records about themselves or as a result of learning the identities of confidential informants; to prevent disclosure of investigative techniques; to maintain the ability to obtain necessary information; and thereby to insure the proper functioning and integrity of law enforcement activities.''

V. Procedural Issues and Regulatory Review

A. Review Under Executive Orders 12866, 13563, and 14094

Executive Order (''E.O.'') 12866, ''Regulatory Planning and Review,'' 58 FR 51735 (Oct. 4, 1993), as supplemented and reaffirmed by E.O. 13563, ''Improving Regulation and Regulatory Review,'' 76 FR 3821 (Jan. 21, 2011) and amended by E.O. 14094, ''Modernizing Regulatory Review,'' 88 FR 21879 (April 11, 2023), requires agencies, to the extent permitted by law, to (1) propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs (recognizing that some benefits and costs are difficult to quantify); (2) tailor regulations to impose the least burden on society, consistent with obtaining regulatory objectives, taking into account, among other things, and to the extent practicable, the costs of cumulative regulations; (3) select, in choosing among alternative regulatory approaches, those approaches that maximize net benefits (including potential economic, environmental, public health and safety, and other advantages; distributive impacts; and equity); (4) to the extent feasible, specify performance objectives, rather than specifying the behavior or manner of compliance that regulated entities must adopt; and (5) identify and assess available alternatives to direct regulation, including providing economic incentives to encourage the desired behavior, such as user fees or marketable permits, or providing information upon which choices can be made by the public. DOE emphasizes as well that E.O. 13563 requires agencies to use the best available techniques to quantify anticipated present and future benefits and costs as accurately as possible. In its guidance, the Office of Information and Regulatory Affairs (OIRA) has emphasized that such techniques may include identifying changing future compliance costs that might result from technological innovation or anticipated behavioral changes. For the reasons stated in this preamble, this regulatory action is consistent with these principles.

Section 6(a) of E.O. 12866 requires agencies to submit ''significant regulatory actions'' to OIRA for review. OIRA has determined that this regulatory action is not a ''significant regulatory action'' within the scope of E.O. 12866. Accordingly, this action is not subject to review under E.O. 12866 by OIRA of the Office of Management and Budget (OMB).

B. Review Under the Regulatory Flexibility Act

The Regulatory Flexibility Act of 1980 (5 U.S.C. 601 *et seq.*) requires that an agency prepare an initial regulatory flexibility analysis for any regulation for which a final rule is required, unless the agency certifies that the rule, if promulgated, will not have a significant economic impact on a substantial number of small entities (5 U.S.C. 605(b)). As required by Executive Order 13272, *Proper Consideration of Small Entities in Agency Rulemaking,* 67 FR 53461 (Aug. 16, 2002), DOE published procedures and policies on February 19, 2003, to ensure that the potential impacts of its rules on small entities are properly considered during the rulemaking process. 68 FR 7990. DOE has made its procedures and policies available on the Office of the General Counsel's website (*www.energy.gov/gc/office-general-counsel*).

DOE reviewed this final rule under the provisions of the Regulatory Flexibility Act and the procedures and policies published on February 19, 2003. DOE certifies that the final rule, if adopted, would not have significant economic impact on a substantial number of small entities. The factual basis for this certification is set forth below.

This final rule would update DOE's policies and procedures concerning the disclosure of records held within a system of records pursuant to the Privacy Act of 1974. This final rule would apply only to activities conducted by DOE's Federal employees and contractors, who would be responsible for implementing the rule requirements. DOE does not expect there to be any potential economic impact of this final rule on small businesses. Small businesses, therefore, should not be adversely impacted by the requirements in this final rule. For these reasons, DOE certifies that this final rule will not have a significant economic impact on a substantial number of small entities, and therefore, no regulatory flexibility analysis has been prepared.

C. Review Under the Paperwork Reduction Act of 1995

This final rule does not impose a collection of information requirement subject to review and approval by OMB under the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*).

D. Review Under the National Environmental Policy Act of 1969

Pursuant to the National Environmental Policy Act of 1969 (NEPA), DOE has analyzed this action in accordance with NEPA and DOE's NEPA implementing regulations (10 CFR part 1021). DOE's regulations include a categorical exclusion (CX) for rulemakings interpreting or amending an existing rule or regulation that does not change the environmental effect of the rule or regulation being amended. 10 CFR part 1021, subpart D, appendix A5. DOE has determined that this final rule is covered under the CX found in DOE's NEPA regulations at paragraph A.5 of appendix A to subpart D, 10 CFR part 1021, because it is an amendment to an existing regulation that does not change the environmental effect of the amended regulation and, therefore, meets the

requirements for the application of this CX. *See* 10 CFR 1021.410. Therefore, DOE has determined that this final rule is not a major Federal action significantly affecting the quality of the human environment within the meaning of NEPA and does not require an Environmental Assessment or an Environmental Impact Statement.

E. Review Under Executive Order 12988

With respect to the review of existing regulations and the promulgation of new regulations, section 3(a) of Executive Order 12988, ''Civil Justice Reform,'' 61 FR 4729 (February 7, 1996), imposes on Federal agencies the general duty to adhere to the following requirements: (1) eliminate drafting errors and ambiguity; (2) write regulations to minimize litigation; (3) provide a clear legal standard for affected conduct rather than a general standard; and (4) promote simplification and burden reduction. Section 3(b) of Executive Order 12988 specifically requires that Executive agencies make every reasonable effort to ensure the regulation: (1) clearly specifies the preemptive effect, if any; (2) clearly specifies any effect on existing Federal law or regulation; (3) provides a clear legal standard for the affected conduct while promoting simplification and burden reduction; (4) specifies the retroactive effect, if any; (5) adequately defines key terms; (6) specifies whether administrative proceedings are to be required before parties may file suit in court and, if so, describes those proceedings and requires the exhaustion of administrative remedies; and (7) addresses other important issues affecting clarity and general draftsmanship under any guidelines issued by the Attorney General. Section 3(c) of Executive Order 12988 requires Executive agencies to review regulations in light of applicable standards in section 3(a) and section 3(b) to determine whether they are met or it is unreasonable to meet one or more of the standards. DOE has completed the required review and determined that, to the extent permitted by law, this final rule meets the relevant standards of Executive Order 12988.

F. Review Under Executive Order 13132

Executive Order 13132, ''Federalism,'' 64 FR 43255 (August 10, 1999) imposes certain requirements on agencies formulating and implementing policies or regulations that preempt State law or that have federalism implications. Agencies are required to examine the constitutional and statutory authority supporting any action that would limit the policymaking discretion of the States and carefully assess the necessity for such actions. The Executive order also requires agencies to have an accountable process to ensure meaningful and timely input by State and local officials in the development of regulatory policies that have federalism implications. On March 14, 2000, DOE published a statement of policy describing the intergovernmental consultation process it will follow in the development of such regulations. 65 FR 13735. DOE has examined this final rule and has tentatively determined that it would not preempt State law and would not have a substantial direct effect on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. No further action is required by Executive Order 13132.

G. Review Under Executive Order 13175

Under Executive Order 13175 (65 FR 67249, November 6, 2000) on ''Consultation and Coordination with Indian Tribal Governments,'' DOE may not issue a discretionary rule that has ''Tribal'' implications and imposes substantial direct compliance costs on Indian Tribal governments. DOE has determined that this final rule would not have such effects and concluded that Executive Order 13175 does not apply to this final rule.

H. Review Under the Unfunded Mandates Reform Act of 1995

Title II of the Unfunded Mandates Reform Act (UMRA) of 1995 (Pub. L. 104–4) requires each Federal agency to assess the effects of a Federal regulatory action on State, local, and Tribal governments, and the private sector. (Pub. L. 104–4, sec. 201 *et seq.* (codified at 2 U.S.C. 1531 *et seq.*)). For a regulatory action likely to result in a rule that may cause the expenditure by State, local, and Tribal governments, in the aggregate, or by the private sector of $100 million or more in any one year (adjusted annually for inflation), section 202 of UMRA requires a Federal agency to publish a written statement that estimates the resulting costs, benefits, and other effects on the national economy. (2 U.S.C. 1532(a), (b)) UMRA also requires a Federal agency to develop an effective process to permit timely input by elected officers of State, local, and Tribal governments on a ''significant Federal intergovernmental mandate,'' and requires an agency plan for giving notice and opportunity for timely input to potentially affected small governments before establishing any requirements that might significantly or uniquely affect them. On March 18, 1997, DOE published a statement of policy on its process for intergovernmental consultation under UMRA. (62 FR 12820) (This policy is also available at: *www.energy.gov/gc/guidance-opinions* under ''Guidance & Opinions'' (Rulemaking)). DOE examined the final rule according to UMRA and its statement of policy and has determined that the rule contains neither an intergovernmental mandate, nor a mandate that may result in the expenditure by State, local, and Tribal governments, in the aggregate, or by the private sector, of $100 million or more in any year. Accordingly, no further assessment or analysis is required under UMRA.

I. Review Under Executive Order 12630

DOE has determined, under Executive Order 12630, ''Governmental Actions and Interference with Constitutionally Protected Property Rights'' 53 FR 8859 (March 18, 1988), that this regulation would not result in any takings that might require compensation under the Fifth Amendment to the U.S. Constitution.

J. Review Under Executive Order 13211

Executive Order 13211, ''Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use,'' 66 FR 28355 (May 22, 2001) requires Federal agencies to prepare and submit to the OIRA, which is part of OMB, a Statement of Energy Effects for any significant energy action. A ''significant energy action'' is defined as any action by an agency that promulgates or is expected to lead to promulgation of a final rule, and that: (1)(i) is a significant regulatory action under Executive Order 12866, or any successor order; and (ii) is likely to have a significant adverse effect on the supply, distribution, or use of energy, or (2) is designated by the Administrator of OIRA as a significant energy action. For any significant energy action, the agency must give a detailed statement of any adverse effects on energy supply, distribution, or use, and of reasonable alternatives to the action and their expected benefits on energy supply, distribution, and use. This regulatory action is not a significant energy action. Accordingly, DOE has not prepared a Statement of Energy Effects.

K. Review Under the Treasury and General Government Appropriations Act, 1999

Section 654 of the Treasury and General Government Appropriations Act, 1999 (Pub. L. 105–277) requires Federal agencies to issue a Family Policymaking Assessment for any final

rule that may affect family well-being. This final rule would not have any impact on the autonomy or integrity of the family as an institution. Accordingly, DOE has concluded that it is not necessary to prepare a Family Policymaking Assessment.

L. Review Under the Treasury and General Government Appropriations Act, 2001

Section 515 of the Treasury and General Government Appropriations Act, 2001 (44 U.S.C. 3516) provides for Federal agencies to review most disseminations of information to the public under guidelines established by each agency pursuant to general guidelines issued by OMB. OMB's guidelines were published at 67 FR 8452 (February 22, 2002), and DOE's guidelines were published at 67 FR 62446 (October 7, 2002). Pursuant to OMB Memorandum M–19–15, *Improving Implementation of the Information Quality Act* (April 24, 2019), DOE published updated guidelines which are available at: *www.energy.gov/sites/prod/files/2019/12/f70/DOE%20Final%20Updated%20IQA%20Guidelines%20Dec%202019.pdf.*

DOE has reviewed this final rule and will ensure that information produced under this regulation remains consistent with the applicable OMB and DOE guidelines.

M. Congressional Review

As required by 5 U.S.C. 801, DOE will report to Congress on the promulgation of this rule prior to its effective date. The report will state that the rule does not, meet the criteria set forth in 5 U.S.C. 804(2).

V. Approval by the Office of the Secretary of Energy

The Secretary of Energy has approved publication of this final rule.

List of Subjects in 10 CFR Part 1008

Administration practice and procedure, Freedom of information, Privacy, Reporting and recordkeeping requirements.

Signing Authority

This document of the Department of Energy was signed on [December 11, 2024, by Ann Dunkin, Senior Agency Official for Privacy, pursuant to delegated authority from the Secretary of Energy. That document with the original signature and date is maintained by DOE. For administrative purposes only, and in compliance with requirements of the Office of the Federal Register, the undersigned DOE Federal Register Liaison Officer has been authorized to sign and submit the document in electronic format for publication, as an official document of the Department of Energy. This administrative process in no way alters the legal effect of this document upon publication in the **Federal Register**.

Signed in Washington, DC, on December 12, 2024.

Treena V. Garrett,

Federal Register Liaison Officer, U.S. Department of Energy.

For the reasons set forth in the preamble, the Department of Energy amends part 1008 of chapter X of title 10 of the Code of Federal Regulations as set forth below:

PART 1008—RECORDS MAINTAINED ON INDIVIDUALS (PRIVACY ACT)

■ 1. The authority citation for part 1008 continues to read as follows:

Authority: 42 U.S.C. 7101 *et seq.;* 50 U.S.C. 2401 *et seq.;* 5 U.S.C. 552; 5 U.S.C. 552a; 42 U.S.C. 7254; and 5 U.S.C. 301. Section 1008.22(c) also issued under 42 U.S.C. 405 note.

■ 2. Amend § 1008.12 by adding paragraph (b)(2)(ii)(Q) to read as follows:

§ 1008.12 Exemptions.

BILLING CODE 6450–01–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 33

[Docket No. FAA–2022–1641; Special Conditions No. 33–028–SC]

Special Conditions: BETA Technologies Inc. Model H500A Electric Engines

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final special conditions.

SUMMARY: These special conditions are issued for BETA Technologies Inc. (BETA) Model H500A electric engines that operate using electrical technology installed on the aircraft, for use as an aircraft engine. These engines will have a novel or unusual design feature when compared to the state of technology envisioned in the airworthiness standards applicable to aircraft engines. This design feature is the use of an electric motor, motor controller, and high-voltage systems as the primary source of propulsion for an aircraft. The applicable airworthiness regulations do not contain adequate or appropriate safety standards for this design feature. These special conditions contain the additional safety standards that the Administrator considers necessary to establish a level of safety equivalent to that established by the existing airworthiness standards.

DATES: Effective January 16, 2025.

FOR FURTHER INFORMATION CONTACT: Mark Bouyer, Engine and Propulsion Standards Section, AIR–625, Technical Policy Branch, Policy and Standards Division, Aircraft Certification Service, 1200 District Avenue, Burlington, Massachusetts 01803; telephone (781) 238–7755; *mark.bouyer@faa.gov.*

SUPPLEMENTARY INFORMATION:

Background

On January 27, 2022, BETA applied for a type certificate for its Model H500A electric engines. The BETA Model H500A electric engine initially will be used as a ''pusher'' electric engine in a single-engine airplane that will be certified separately from the engine. A typical normal category general aviation aircraft locates the engine at the front of the fuselage. In this configuration, the propeller attached to the engine pulls the airplane along its flightpath. A pusher engine is located at the rear of the fuselage, so the propeller attached to the engine pushes the aircraft instead of pulling the aircraft.

The BETA Model H500A electric engine is comprised of a direct drive, radial-flux, permanent-magnet motor, divided in two sections, each section having a three-phase motor, and one electric power inverter controlling each three-phase motor. The magnets are arranged in a Halbach magnet array, and the stator is a concentrated, tooth-wound configuration. A stator is the stationary component in the electric engine that surrounds the rotating hardware; for example: the BETA propeller shaft, which consists of a bonded core with coils of insulated wire, known as the windings. When alternating current is applied to the coils of insulated wire in a stator, a rotating magnetic field is created, which provides the motive force for the rotating components.

Type Certification Basis

Under the provisions of 14 CFR 21.17(a)(1), generally, BETA must show that Model H500A electric engines meet the applicable provisions of 14 CFR part 33 in effect on the date of application for a type certificate.

If the Administrator finds that the applicable airworthiness regulations (*e.g.,* part 33) do not contain adequate or appropriate safety standards for the BETA Model H500A electric engines because of a novel or unusual design feature, special conditions may be prescribed under the provisions of § 21.16.

Special conditions are initially applicable to the model for which they are issued. Should the type certificate for that model be amended later to include any other engine model that incorporates the same novel or unusual design feature, these special conditions would also apply to the other engine model under § 21.101.

The FAA issues special conditions, as defined in § 11.19, in accordance with § 11.38, and they become part of the type certification basis under § 21.17(a)(2).

Novel or Unusual Design Features

The BETA Model H500A electric engines will incorporate the following novel or unusual design features:

An electric motor, motor controller, and high-voltage electrical systems that are used as the primary source of propulsion for an aircraft.

Discussion

Electric propulsion technology is substantially different from the technology used in previously certificated turbine and reciprocating engines. Therefore, these engines introduce new safety concerns that need to be addressed in the certification basis.

BETA's Electric Engines Are Novel or Unusual

The BETA Model H500A electric engines have a novel or unusual design feature, which is the use of electrical sources of energy instead of fuel to drive the mechanical systems that provide propulsion for aircraft. Therefore, part 33 does not contain adequate or appropriate safety standards for the BETA Model H500A electric engine's novel or unusual design feature.

BETA's aircraft engines will operate using electrical power instead of air and fuel combustion to propel the aircraft. These electric engines will be designed, manufactured, and controlled differently than turbine or reciprocating aircraft engines. They will be built with an electric motor, motor controller, and high-voltage electrical systems that draw energy from electrical storage or electrical energy generating systems. The electric motor is a device that converts electrical energy into mechanical energy by electric current flowing through windings (wire coils) in the motor, producing a magnetic field that interacts with permanent magnets mounted on the engine's main rotor. The controller is a system that consists of two main functional elements: the motor controller and an electric power inverter to drive the motor.[1] The high-voltage electrical system is a combination of wires and connectors that integrate the motor and controller.

In addition, the technology comprising these high-voltage and high-current electronic components introduces potential hazards that do not exist in turbine and reciprocating aircraft engines. For example, high-voltage transmission lines, electromagnetic shields, magnetic materials, and high-speed electrical switches are necessary to use the physical properties of an electric engine for propelling an aircraft.

BETA's Electric Engines Require a Mix of Part 33 Standards and Special Conditions

The requirements in part 33 ensure that the design and construction of aircraft engines, including the engine control systems, are proper for the type of aircraft engines considered for certification. However, part 33 does not fully address aircraft engines like the BETA Model H500A, which operates using electrical technology as the primary means of propelling the aircraft.

The requirements in part 33, subpart B, are applicable to reciprocating and turbine aircraft engines. Subparts C and D are applicable to reciprocating aircraft engines. Subparts E through G are applicable to turbine aircraft engines. As such, subparts B through G do not adequately address the use of aircraft engines that operate using electrical technology. Special conditions are needed to ensure a level of safety for electric engines that is commensurate with these subparts, as those regulatory requirements do not contain adequate or appropriate safety standards for electric aircraft engines that are used to propel aircraft.

The FAA proposed special conditions and received comments from many commenters. Some comments resulted in changes to the special conditions. These changes are explained in the Discussion of Comments.

FAA Special Conditions for the BETA Engine Design

Applicability: Special condition no. 1 requires BETA to comply with part 33, except for those airworthiness standards specifically and explicitly applicable only to reciprocating and turbine aircraft engines.

Engine Ratings and Operating Limitations: Special condition no. 2, in addition to compliance with § 33.7(a), requires BETA to establish engine operating limits related to the power, torque, speed, and duty cycles specific to BETA Model H500A electric engines. The duty or duty cycle is a statement of the load(s) to which the engine is subjected, including, if applicable, starting, no-load and rest, and de-energized periods, including their durations or cycles and sequence in time. This special condition also requires BETA to declare cooling fluid grade or specification, power supply requirements, and to establish any additional ratings that are necessary to define the BETA Model H500A electric engine capabilities required for safe operation of the engine.

Materials: Special condition no. 3 requires BETA to comply with § 33.15, which sets requirements for the suitability and durability of materials used in the engine, and which would otherwise be applicable only to reciprocating and turbine aircraft engines.

Fire Protection: Special condition no. 4 requires BETA to comply with § 33.17, which sets requirements to protect the engine and certain parts and components of the airplane against fire, and which would otherwise be applicable only to reciprocating and turbine aircraft engines. Additionally, this special condition requires BETA to ensure that the high-voltage electrical wiring interconnect systems that connect the controller to the motor are protected against arc faults. An arc fault is a high-power discharge of electricity between two or more conductors. This discharge generates heat, which can break down the wire's insulation and trigger an electrical fire. Arc faults can range in power from a few amps up to thousands of amps and are highly variable in strength and duration.

Durability: Special condition no. 5 requires the design and construction of BETA Model H500A electric engines to minimize the development of an unsafe condition between maintenance intervals, overhaul periods, and mandatory actions described in the

[1] Sometimes the entire system is referred to as an inverter. Throughout this document, it is referred to as the controller.

Instructions for Continued Airworthiness (ICA).

Engine Cooling: Special condition no. 6 requires BETA to comply with § 33.21, which requires the engine design and construction to provide necessary cooling, and which would otherwise be applicable only to reciprocating and turbine aircraft engines. Additionally, this special condition requires BETA to document the cooling system monitoring features and usage in the engine installation manual (see § 33.5) if cooling is required to satisfy the safety analysis described in special condition no. 17. Loss of cooling to an aircraft engine that operates using electrical technology can result in rapid overheating and abrupt engine failure, with critical consequences to safety.

Engine Mounting Attachments and Structure: Special condition no. 7 requires BETA and the design to comply with § 33.23, which requires the applicant to define, and the design to withstand, certain load limits for the engine mounting attachments and related engine structure. These requirements would otherwise be applicable only to reciprocating and turbine aircraft engines.

Accessory Attachments: Special condition no. 8 requires the design to comply with § 33.25, which sets certain design, operational, and maintenance requirements for the engine's accessory drive and mounting attachments, and which would otherwise be applicable only to reciprocating and turbine aircraft engines.

Rotor Overspeed: Special condition no. 9 requires BETA to establish by test, validated analysis, or a combination of both, that—

(1) the rotor overspeed must not result in a burst, rotor growth, or damage that results in a hazardous engine effect;

(2) rotors must possess sufficient strength margin to prevent burst; and

(3) operating limits must not be exceeded in service.

The special condition associated with rotor overspeed is necessary because of the differences between turbine engine technology and the technology of these electric engines. Turbine rotor speed is driven by expanding gas and aerodynamic loads on rotor blades. Therefore, the rotor speed or overspeed results from interactions between thermodynamic and aerodynamic engine properties. The speed of an electric engine is directly controlled by electric current, and an electromagnetic field created by the controller. Consequently, electric engine rotor response to power demand and overspeed-protection systems is quicker and more precise. Also, the failure modes that can lead to overspeed between turbine engines and electric engines are vastly different, and therefore this special condition is necessary.

Engine Control Systems: Special condition no. 10(b) requires BETA to ensure that these engines do not experience any unacceptable operating characteristics, such as unstable speed or torque control, or exceed any of their operating limitations.

The FAA originally issued § 33.28 at amendment 33–15 to address the evolution of the means of controlling the fuel supplied to the engine, from carburetors and hydro-mechanical controls to electronic control systems. These electronic control systems grew in complexity over the years, and as a result, the FAA amended § 33.28 at amendment 33–26 to address these increasing complexities. The controller that forms the controlling system for these electric engines is significantly simpler than the complex control systems used in modern turbine engines. The current regulations for engine control are inappropriate for electric engine control systems; therefore, special condition no. 10(b) associated with controlling these engines is necessary.

Special condition no. 10(c) requires BETA to develop and verify the software and complex electronic hardware used in programmable logic devices, using proven methods that ensure that the devices can provide the accuracy, precision, functionality, and reliability commensurate with the hazard that is being mitigated by the logic. RTCA DO–254, ''Design Assurance Guidance for Airborne Electronic Hardware,'' dated April 19, 2000,[2] distinguishes between complex and simple electronic hardware.

Special condition no. 10(d) requires data from assessments of all functional aspects of the control system to prevent errors that could exist in software programs that are not readily observable by inspection of the code. Also, BETA must use methods that will result in the expected quality that ensures the engine control system performs the intended functions throughout the declared operational envelope.

The environmental limits referred to in special condition no. 10(e) include temperature, vibration, high-intensity radiated fields (HIRF), and all others addressed in RTCA DO–160G, ''Environmental Conditions and Test Procedures for Airborne Electronic/Electrical Equipment and Instruments,'' dated December 8, 2010, which includes RTCA DO–160G, Change 1—''Environmental Conditions and Test Procedures for Airborne Equipment,'' dated December, 16, 2014, and DO–357, ''User Guide: Supplement to DO–160G,'' dated December 16, 2014.[3] Special condition 10(e) requires BETA to demonstrate by system or component tests in special condition no. 27 any environmental limits that cannot be adequately substantiated by the endurance demonstration, validated analysis, or a combination thereof.

Special condition no. 10(f) requires BETA to evaluate various control system failures to ensure that such failures will not lead to unsafe engine conditions. The FAA issued Advisory Circular (AC) 33.28–3, ''Guidance Material for 14 CFR 33.28, Engine Control Systems,'' on May 23, 2014 (AC 33.28–3), for reciprocating and turbine engines.[4] This AC provides guidance for defining an engine control system failure when showing compliance with the requirements of § 33.28. AC 33.28–3 also includes objectives for control system integrity requirements, criteria for a loss of thrust control (LOTC) and loss of power control (LOPC) event, and an acceptable LOTC/LOPC rate. The electrical and electronic failures and failure rates did not account for electric engines when the FAA issued this AC, and therefore performance-based special conditions are established to allow fault accommodation criteria to be developed for electric engines.

The phrase ''in the full-up configuration'' used in special condition no. 10(f)(2) refers to a system without any fault conditions present. The electronic control system must, when in the full-up configuration, be single-fault tolerant, as determined by the Administrator, for electrical, electrically detectable, and electronic failures involving LOPC events.

The term ''local'' in the context of ''local events'' used in special condition no. 10(f)(4) means failures or malfunctions leading to events in the intended aircraft installation such as fire, overheat, or failures leading to damage to engine control system components. These ''local events'' must not result in a hazardous engine effect due to engine control system failures or malfunctions.

Special condition no. 10(g) requires BETA to conduct a safety assessment of the control system to support the safety analysis in special condition no. 17. This control system safety assessment

[2] *https://standards.rtca.org/XanHrK.*

[3] *https://my.rtca.org/NC__Product?id=a1B36000001IcnSEAS.*

[4] *https://www.faa.gov/documentLibrary/media/Advisory_Circular/AC_33_28-3.pdf.*

provides engine response to failures, and rates of these failures that can be used at the aircraft-level safety assessment.

Special condition no. 10(h) requires BETA to provide appropriate protection devices or systems to ensure that engine operating limits will not be exceeded in service.

Special condition no. 10(i) is necessary to ensure that the controllers are self-sufficient and isolated from other aircraft systems. The aircraft-supplied data supports the analysis at the aircraft level to protect the aircraft from common mode failures that could lead to major propulsion power loss. The exception ''other than power command signals from the aircraft,'' noted in special condition no. 10(i), is based on the FAA's determination that the engine controller has no reasonable means to determine the validity of any in-range signals from the electrical power system. In many cases, the engine control system can detect a faulty signal from the aircraft, but the engine control system typically accepts the power command signal as a valid value.

The term ''independent'' in the context of ''fully independent engine systems'' referenced in special condition no. 10(i) means the controllers should be self-sufficient and isolated from other aircraft systems or provide redundancy that enables the engine control system to accommodate aircraft data system failures. In the case of loss, interruption, or corruption of aircraft-supplied data, the engine must continue to function in a safe and acceptable manner without hazardous engine effects.

The term ''accommodated,'' in the context of ''detected and accommodated,'' referenced in special condition 10(i)(2) is to assure that, upon detecting a fault, the system continues to function safely.

Special condition no. 10(j) requires BETA to show that the loss of electric power from the aircraft will not cause the electric engine to malfunction in a manner hazardous to the aircraft. The total loss of electric power to the electric engine may result in an engine shutdown.

Instrument Connection: Special condition no. 11 requires BETA to comply with § 33.29(a), (e), and (g), which set certain requirements for the connection and installation of instruments to monitor engine performance. The remaining requirements in § 33.29 apply only to technologies used in reciprocating and turbine aircraft engines.

Instrument connections (wires, wire insulation, potting, grounding, connector designs, etc.) must not introduce unsafe features or characteristics to the aircraft. Special condition no. 11 requires the safety analysis to include potential hazardous effects from failures of instrument connections to function properly. The outcome of this analysis might identify the need for design enhancements or additional ICA to ensure safety.

Stress Analysis: Section 33.62 requires applicants to perform a stress analysis on each turbine engine. This regulation is explicitly applicable only to turbine engines and turbine engine components, and it is not appropriate for the BETA Model H500A electric engines. However, a stress analysis particular to these electric engines is necessary to account for stresses resulting from electric technology used in the engine.

Special condition no. 12 requires a mechanical, thermal, and electrical stress analysis to show that the engine has a sufficient design margin to prevent unacceptable operating characteristics. Also, the applicant must determine the maximum stresses in the engine by tests, validated analysis, or a combination thereof, and show that they do not exceed minimum material properties.

Critical and Life-Limited Parts: Special condition no. 13 requires BETA to show whether rotating or moving components, bearings, shafts, static parts, and non-redundant mount components should be classified, designed, manufactured, and managed throughout their service life as critical or life-limited parts.

The term ''low-cycle fatigue,'' referenced in special condition no. 13(a)(2), is a decline in material strength from exposure to cyclic stress at levels beyond the stress threshold the material can sustain indefinitely. This threshold is known as the ''material endurance limit.'' Low-cycle fatigue typically causes a part to sustain plastic or permanent deformation during the cyclic loading and can lead to cracks, crack growth, and fracture. Engine parts that operate at high temperatures and high mechanical stresses simultaneously can experience low-cycle fatigue coupled with creep. Creep is the tendency of a metallic material to permanently move or deform when it is exposed to the extreme thermal conditions created by hot combustion gasses, and substantial physical loads such as high rotational speeds and maximum thrust. Conversely, high-cycle fatigue is caused by elastic deformation, small strains caused by alternating stress, and a much higher number of load cycles compared to the number of cycles that cause low-cycle fatigue.

The engineering plan referenced in special condition no. 13(b)(1) informs the manufacturing and service management processes of essential information that ensures the life limit of a part is valid. The engineering plan provides methods for verifying the characteristics and qualities assumed in the design data using methods that are suitable for the part criticality. The engineering plan informs the manufacturing process of the attributes that affect the life of the part. The engineering plan, manufacturing plan, and service management plan are related in that assumptions made in the engineering plan are linked to how a part is manufactured and how that part is maintained in service. For example, environmental effects on life limited electric engine parts, such as humidity, might not be consistent with the assumptions used to design the part. BETA must ensure that the engineering plan is complete, available, and acceptable to the Administrator.

The term ''manufacturing plan,'' referenced in special condition no. 13(b)(2), is the collection of data required to translate documented engineering design criteria into physical parts, and to verify that the parts comply with the properties established by the design data. Because engines are not intentionally tested to failure during a certification program, documents and processes used to execute production and quality systems required by § 21.137 guarantee inherent expectations for performance and durability. These systems limit the potential manufacturing outcomes to parts that are consistently produced within design constraints.

The manufacturing plan and service management plan ensure that essential information from the engineering plan, such as the design characteristics that safeguard the integrity of critical and life-limited parts, is consistently produced and preserved over the lifetime of those parts. The manufacturing plan includes special processes and production controls to prevent inclusion of manufacturing-induced anomalies, which can degrade the part's structural integrity. Examples of manufacturing-induced anomalies are material contamination, unacceptable grain growth, heat-affected areas, and residual stresses.

The service-management plan ensures the method and assumptions used in the engineering plan to determine the part's life remain valid by enabling corrections identified from in-service experience, such as service-induced anomalies and

unforeseen environmental effects, to be incorporated into the design process. The service-management plan also becomes the ICA for maintenance, overhaul, and repairs of the part.

Lubrication System: Special condition no. 14 requires BETA to ensure that the lubrication system is designed to function properly between scheduled maintenance intervals and to prevent contamination of the engine bearings. This special condition also requires BETA to demonstrate the unique lubrication attributes and functional capability of the BETA Model H500A electric engine design.

The corresponding part 33 regulations include provisions for lubrication systems used in reciprocating and turbine engines. The part 33 requirements account for safety issues associated with specific reciprocating and turbine engine system configurations. These regulations are not appropriate for the BETA Model H500A electric engines. For example, electric engines do not have a crankcase or lubrication oil sump. Electric engine bearings are sealed, so they do not require an oil circulation system. The lubrication system in these engines is also independent of the propeller pitch control system. Therefore, special condition no. 14 incorporates only certain requirements from the part 33 regulations.

Power Response: Special condition no. 15 requires the design and construction of the BETA Model H500A electric engines to enable an increase from the minimum—

(1) power setting to the highest rated power without detrimental engine effects, and

(2) within a time interval appropriate for the intended aircraft application.

The engine control system governs the increase or decrease in power in combustion engines to prevent too much (or too little) fuel from being mixed with air before combustion. Due to the lag in rotor response time, improper fuel/air mixtures can result in engine surges, stalls, and exceedances above rated limits and durations. Failure of the combustion engine to provide thrust, maintain rotor speeds below rotor burst thresholds, and keep temperatures below limits can have engine effects detrimental to the aircraft. Similar detrimental effects are possible in the BETA Model H500A electric engines, but the causes are different. Electric engines with reduced power response time can experience insufficient thrust to the aircraft, shaft over-torque, and over-stressed rotating components, propellers, and critical propeller parts. Therefore, this special condition is necessary.

Continued Rotation: Special condition no. 16 requires BETA to design the Model H500A electric engines such that, if the main rotating systems continue to rotate after the engine is shut down while in-flight, this continued rotation will not result in any hazardous engine effects.

The main rotating system of the BETA Model H500A electric engines consists of the rotors, shafts, magnets, bearings, and wire windings that convert electrical energy to shaft torque. For the initial aircraft application, this rotating system must continue to rotate after the power source to the engine is shut down. The safety concerns associated with this special condition are substantial asymmetric aerodynamic drag that can cause aircraft instability, loss of control, and reduced efficiency; and may result in a forced landing or inability to continue safe flight.

Safety Analysis: Special condition no. 17 requires BETA to comply with § 33.75(a)(1) and (a)(2), which require the applicant to conduct a safety analysis of the engine, and which would otherwise be applicable only to turbine aircraft engines. Additionally, this special condition requires BETA to assess its engine design to determine the likely consequences of failures that can reasonably be expected to occur. The failure of such elements, and associated prescribed integrity requirements, must be stated in the safety analysis.

A primary failure mode is the manner in which a part is most likely going to fail. Engine parts that have a primary failure mode, a predictable life to the failure, and a failure consequence that results in a hazardous effect, are life-limited or critical parts. Some life-limited or critical engine parts can fail suddenly in their primary failure mode, from prolonged exposure to normal engine environments such as temperature, vibration, and stress, if those engine parts are not removed from service before the damage mechanisms progress to a failure. Due to the consequence of failure, these parts are not allowed to be managed by on-condition or probabilistic means because the probability of failure cannot be sensibly estimated in numerical terms. Therefore, the parts are managed by compliance with integrity requirements, such as mandatory maintenance (life limits, inspections, inspection techniques), to ensure the qualities, features, and other attributes that prevent the part from failing in its primary failure mode are preserved throughout its service life. For example, if the number of engine cycles to failure are predictable and can be associated with specific design characteristics, such as material properties, then the applicant can manage the engine part with life limits.

Complete or total power loss is not assumed to be a minor engine event, as it is in the turbine engine regulation § 33.75, to account for experience data showing a potential for higher hazard levels from power loss events in single-engine general aviation aircraft. The criteria in these special conditions apply to an engine that continues to operate at partial power after a single electrical or electronic fault or failure. Total loss of power is classified at the aircraft level using special condition nos. 10(g) and 33(h).

Ingestion: Special condition no. 18 requires BETA to ensure that these engines will not experience unacceptable power loss or hazardous engine effects from ingestion. The associated regulations for turbine engines, §§ 33.76, 33.77, and 33.78, are based on potential performance impacts and damage from birds, ice, rain, and hail being ingested into a turbine engine that has an inlet duct, which directs air into the engine for combustion, cooling, and thrust. By contrast, the BETA electric engines are not configured with inlet ducts.

An ''unacceptable'' power loss, as used in special condition no. 18(b), is such that the power or thrust required for safe flight of the aircraft becomes unavailable to the pilot. The specific amount of power loss that is required for safe flight depends on the aircraft configuration, speed, altitude, attitude, atmospheric conditions, phase of flight, and other circumstances where the demand for thrust is critical to safe operation of the aircraft.

Liquid and Gas Systems: Special condition no. 19 requires BETA to ensure that systems used for lubrication or cooling of engine components are designed and constructed to function properly. Also, if a system is not self-contained, the interfaces to that system would be required to be defined in the engine installation manual. Systems for the lubrication or cooling of engine components can include heat exchangers, pumps, fluids, tubing, connectors, electronic devices, temperature sensors and pressure switches, fasteners and brackets, bypass valves, and metallic chip detectors. These systems allow the electric engine to perform at extreme speeds and temperatures for durations up to the maintenance intervals without exceeding temperature limits or predicted deterioration rates.

Vibration Demonstration: Special condition no. 20 requires BETA to ensure the engine—

(1) is designed and constructed to function throughout its normal operating range of rotor speeds and engine output power without inducing excessive stress caused by engine vibration, and

(2) design undergoes a vibration survey.

The vibration demonstration is a survey that characterizes the vibratory attributes of the engine. It verifies that the stresses from vibration do not impose excessive force or result in natural frequency responses on the aircraft structure. The vibration demonstration also ensures internal vibrations will not cause engine components to fail. Excessive vibration force occurs at magnitudes and forcing functions or frequencies, which may result in damage to the aircraft. Stress margins to failure add conservatism to the highest values predicted by analysis for additional protection from failure caused by influences beyond those quantified in the analysis. The result of the additional design margin is improved engine reliability that meets prescribed thresholds based on the failure classification. The amount of margin needed to achieve the prescribed reliability rates depends on an applicant's experience with a product. The FAA considers the reliability rates when deciding how much vibration is ''excessive.''

Overtorque: Special condition no. 21 requires BETA to demonstrate that the engine is capable of continued operation without the need for maintenance if it experiences a certain amount of overtorque.

BETA's electric engine converts electrical energy to shaft torque, which is used for propulsion. The electric motor, controller, and high-voltage systems control the engine torque. When the pilot commands power or thrust, the engine responds to the command and adjusts the shaft torque to meet the demand. During the transition from one power or thrust setting to another, a small delay, or latency, occurs in the engine response time. While the engine dwells in this time interval, it can continue to apply torque until the command to change the torque is applied by the engine control. The allowable amount of overtorque during operation depends on the engine's response to changes in the torque command throughout its operating range.

Calibration Assurance: Special condition no. 22 requires BETA to subject the engine to calibration tests to establish its power characteristics and the conditions both before and after the endurance and durability demonstrations specified in special condition nos. 23 and 26. The calibration test requirements specified in § 33.85 only apply to the endurance test specified in § 33.87, which is applicable only to turbine engines. The FAA determined that the methods used for accomplishing those tests for turbine engines are not appropriate for electric engines. The calibration tests in § 33.85 have provisions applicable to ratings that are not relevant to the BETA Model H500A electric engines. Special condition no. 22 allows BETA to demonstrate the endurance and durability of the electric engine either together or independently, whichever is most appropriate for the engine qualities being assessed. Consequently, the special condition applies the calibration requirement to both the endurance and durability tests.

Endurance Demonstration: Special condition no. 23 requires BETA to perform an endurance demonstration test that is acceptable to the Administrator. The Administrator will evaluate the extent to which the test exposes the engine to failures that could occur when the engine is operated at up to its rated values, and determine if the test is sufficient to show that the engine design will not exhibit unacceptable effects in service, such as significant performance deterioration, operability restrictions, and engine power loss or instability, when it is run repetitively at rated limits and durations in conditions that represent extreme operating environments.

Temperature Limit: Special condition no. 24 requires BETA to ensure the engine can endure operation at its temperature limits plus an acceptable margin. An ''acceptable margin,'' as used in the special condition, is the amount of temperature above that required to prevent the least capable engine allowed by the type design, as determined by § 33.8, from failing due to temperature-related causes when operating at the most extreme engine and environmental thermal conditions.

Operation Demonstration: Special condition no. 25 requires the engine to demonstrate safe operating characteristics throughout its declared flight envelope and operating range. Engine operating characteristics define the range of functional and performance values the BETA Model H500A electric engines can achieve without incurring hazardous effects. The characteristics are requisite capabilities of the type design that qualify the engine for installation into aircraft and that determine aircraft installation requirements. The primary engine operating characteristics are assessed by the tests and demonstrations that would be required by these special conditions. Some of these characteristics are shaft output torque, rotor speed, power consumption, and engine thrust response. The engine performance data BETA will use to certify the engine must account for installation loads and effects. These are aircraft-level effects that could affect the engine characteristics that are measured when the engine is tested on a stand or in a test cell. These effects could result from elevated inlet cowl temperatures, aircraft maneuvers, flowstream distortion, and hard landings. For example, an engine that is run in a sea-level, static test facility could demonstrate more capability for some operating characteristics than it will have when operating on an aircraft in certain flight conditions. Discoveries like this during certification could affect engine ratings and operating limits. Therefore, the installed performance defines the engine performance capabilities.

Durability Demonstration: Special condition no. 26 requires BETA to subject the engine to a durability demonstration. The durability demonstration must show that the engine is designed and constructed to minimize the development of any unsafe condition between maintenance intervals or between engine replacement intervals if maintenance or overhaul is not defined. The durability demonstration also verifies that the ICA is adequate to ensure the engine, in its fully deteriorated state, continues to generate rated power or thrust, while retaining operating margins and sufficient efficiency, to support the aircraft safety objectives. The amount of deterioration an engine can experience is restricted by operating limitations and managed by the engine ICA. Section 33.90 specifies how maintenance intervals are established; it does not include provisions for an engine replacement. Electric engines and turbine engines deteriorate differently; therefore, BETA will use different test effects to develop maintenance, overhaul, or engine replacement information for their electric engine.

System and Component Tests: Special condition no. 27 requires BETA to show that the systems and components of the engine perform their intended functions in all declared engine environments and operating conditions.

Sections 33.87 and 33.91, which are specifically applicable to turbine engines, have conditional criteria to

decide if additional tests will be required after the engine tests. The criteria are not suitable for electric engines. Part 33 associates the need for additional testing with the outcome of the § 33.87 endurance test because it is designed to address safety concerns in combustion engines. For example, § 33.91(b) requires the establishment of temperature limits for components that require temperature-controlling provisions, and § 33.91(a) requires additional testing of engine systems and components where the endurance test does not fully expose internal systems and components to thermal conditions that verify the desired operating limits. Exceeding temperature limits is a safety concern for electric engines. The FAA determined that the § 33.87 endurance test is not appropriate for testing the electronic components of electric engines because mechanical energy is generated differently by electronic systems than it is by the thermal conditions in turbine engines. Additional safety considerations also need to be addressed in the test. Therefore, special condition no. 27 is a performance-based requirement that allows BETA to determine when engine systems and component tests are necessary and to determine the appropriate limitations of those systems and components used in the BETA Model H500A electric engine.

Rotor Locking Demonstration: Special condition no. 28 requires the engine to demonstrate reliable rotor locking performance and that no hazardous effects will occur if the engine uses a rotor locking device to prevent shaft rotation.

Some engine designs enable the pilot to prevent a propeller shaft or main rotor shaft from turning while the engine is running, or the aircraft is in-flight. This capability is needed for some installations that require the pilot to confirm the functionality of certain flight systems before takeoff. The BETA engine installations are not limited to aircraft that will not require rotor locking. Section 33.92 prescribes a test that may not include the appropriate criteria to demonstrate sufficient rotor locking capability for these engines. Therefore, this special condition is necessary.

The special condition does not define ''reliable'' rotor locking but allows BETA to classify the hazard as major or minor and assign the appropriate quantitative criteria that meet the safety objectives required by special condition no. 17 and the applicable portions of § 33.75.

Teardown Inspection: Special condition no. 29 requires BETA to perform a teardown or non-teardown evaluation after the endurance, durability, and overtorque demonstrations, based on the criteria in special condition no. 29(a) or (b).

Special condition no. 29(b) includes restrictive criteria for ''non-teardown evaluations'' to account for electric engines, sub-assemblies, and components that cannot be disassembled without destroying them. Some electrical and electronic components like BETA's are constructed in an integrated fashion that precludes the possibility of tearing them down without destroying them. The special condition indicates that, if a teardown cannot be performed in a non-destructive manner, then the inspection or replacement intervals must be established based on the endurance and durability demonstrations. The procedure for establishing maintenance should be agreed upon between the applicant and the FAA prior to running the relevant tests. Data from the endurance and durability tests may provide information that can be used to determine maintenance intervals and life limits for parts. However, if life limits are required, the lifing procedure is established by special condition no. 13, Critical and Life-Limited Parts, which corresponds to § 33.70. Therefore, the procedure used to determine which parts are life-limited, and how the life limits are established, requires FAA approval, as it does for § 33.70. Sections 33.55 and 33.93 do not contain similar requirements because reciprocating and turbine engines can be completely disassembled for inspection.

Containment: Special condition no. 30 requires the engine to have containment features that protect against likely hazards from rotating components unless BETA can show the margin to rotor burst does not justify the need for containment features. Rotating components in electric engines are typically disks, shafts, bearings, seals, orbiting magnetic components, and the assembled rotor core. However, if the margin to rotor burst does not unconditionally rule out the possibility of a rotor burst, then the special condition requires BETA to assume a rotor burst could occur and design the stator case to contain the failed rotors, and any components attached to the rotor that are released during the failure. In addition, BETA must also determine the effects of subsequent damage precipitated by a main rotor failure and characterize any fragments that are released forward or aft of the containment features. Further, decisions about whether the BETA engine requires containment features, and the effects of any subsequent damage following a rotor burst, should be based on test or validated analysis. The fragment energy levels, trajectories, and size are typically documented in the installation manual because the aircraft will need to account for the effects of a rotor failure in the aircraft design. The intent of this special condition is to prevent hazardous engine effects from structural failure of rotating components and parts that are built into the rotor assembly.

General Conduct of Tests: Special condition no. 32 requires BETA to—

(1) Include any scheduled maintenance.

(2) Include any maintenance, in addition to the scheduled maintenance, which was needed during the test to satisfy the applicable test requirements; and

(3) Conduct any additional tests that the Administrator finds necessary, as warranted by the test results.

For example, certification endurance test shortfalls might be caused by omitting some prescribed engine test conditions, or from accelerated deterioration of individual parts arising from the need to force the engine to operating conditions that drive the engine above the engine cycle values of the type design. If an engine part fails during a certification test, the entire engine might be subjected to penalty runs, with a replacement or newer part design installed on the engine, to meet the test requirements. Also, the maintenance performed to replace the part, so that the engine could complete the test, would be included in the engine ICA. In another example, if the applicant replaces a part before completing an engine certification test because of a test facility failure and can substantiate the part to the Administrator through bench testing, they might not need to substantiate the part design using penalty runs with the entire engine.

The term ''excessive'' is used to describe the frequency of unplanned engine maintenance, and the frequency of unplanned test stoppages, to address engine issues that prevent the engine from completing the tests in special condition nos. 32(b)(1) and (2), respectively. Excessive frequency is an objective assessment from the FAA's analysis of the amount of unplanned maintenance needed for an engine to complete a certification test. The FAA's assessment may include the reasons for the unplanned maintenance, such as the effects test facility equipment may have on the engine, the inability to simulate a realistic engine operating environment, and the extent to which an engine requires modifications to

complete a certification test. In some cases, the applicant may be able to show that unplanned maintenance has no effect on the certification test results, or they might be able to attribute the problem to the facility or test-enabling equipment that is not part of the type design. In these cases, the ICA will not be affected. However, if BETA cannot reconcile the amount of unplanned service, then the FAA may consider the unplanned maintenance required during the certification test to be ''excessive,'' prompting the need to add the unplanned maintenance to mandatory ICA to comply with the certification requirements.

Engine electrical systems: The current requirements in part 33 for electronic engine control systems were developed to maintain an equivalent level of safety demonstrated by engines that operate with hydromechanical engine control systems. At the time § 33.28 was codified, the only electrical systems used on turbine engines were low-voltage, electronic engine control systems (EEC) and high-energy spark-ignition systems. Electric aircraft engines use high-voltage, high-current electrical systems and components that are physically located in the motor and motor controller. Therefore, the existing part 33 control system requirements do not adequately address all the electrical systems used in electric aircraft engines. Special condition no. 33 is established using the existing engine control systems requirement as a basis. It applies applicable airworthiness criteria from § 33.28 and incorporates airworthiness criteria that recognize and focus on the electrical power system used in the engine.

Special condition no. 33(b) ensures that all aspects of an electrical system, including generation, distribution, and usage, do not experience any unacceptable operating characteristics.

Special condition no. 33(c) requires the electrical power distribution aspects of the electrical system to provide the safe transfer of electrical energy throughout the electric engine.

The term ''abnormal conditions'' used in special condition no. 33(c)(2) is based on the term ''abnormal operation'' used in MIL–STD–704F ''Aircraft Electric Power Characteristics'' which defines normal operation and abnormal operation. MIL–STD–704F is a standard that ensures compatibility between power sources that provide power to the aircraft's electrical systems and airborne equipment that receive power from the power source. This standard also establishes technical criteria for aircraft electric power. The term ''abnormal conditions'' refers to various engine operating conditions such as:

- System or component characteristics outside of normal statistical variation from circumstances such as systems degradation, installation error, and engine response to fault conditions;
- Unusual environmental conditions from extreme temperature, humidity, vibration, lightning, high-intensity radiated field (HIRF), atmospheric neutron radiation; and
- Unusual and infrequent events such as landing on icy runways, rejected take-offs or go-arounds, extended ground idling or taxiing in a hot environment, and abrupt load changes from foreign object damage or engine contamination.

The phrase ''safe transmission of electric energy'' used in special condition no. 33(c)(3) refers to the transmission of electrical energy in a manner that supports the operation of the electric engine(s) and the aircraft safety objectives without detrimental effects such as uncontrolled fire or structural failure due to severe overheating.

Special condition no. 33(d) requires the engine electrical system to be designed such that the loss, malfunction, or interruption of the electrical power source, or power conditions that exceed design limits, will not result in a hazardous engine effect.

Special condition no. 33(e) requires BETA to identify and declare, in the engine installation manual, the characteristics of any electrical power supplied from the aircraft to the engine, or electrical power supplied from the engine to the aircraft via energy regeneration, and any other characteristics necessary for safe operation of the engine.

Special condition no. 33(f) requires BETA to demonstrate that systems and components will operate properly up to environmental limits, using special conditions, when such limits cannot be adequately substantiated by the endurance demonstration, validated analysis, or a combination thereof. The environmental limits referred to in this special condition include temperature, vibration, HIRF, and all others addressed in RTCA DO–160G, ''Environmental Conditions and Test Procedures for Airborne Electronic/Electrical Equipment and Instruments.''

Special condition 33(g) requires BETA to evaluate various electric engine system failures to ensure that these failures will not lead to unsafe engine conditions. The evaluation includes single-fault tolerance, ensures no single electrical or electronic fault or failure would result in hazardous engine effects, and ensures that any failure or malfunction leading to local events in the intended aircraft application does not result in certain hazardous engine effects. The special condition also implements integrity requirements, criteria for LOTC/LOPC events, and an acceptable LOTC/LOPC rate.

Special condition 33(h) requires BETA to conduct a safety assessment of the engine electrical system to support the safety analysis in special condition no. 17. This safety assessment provides engine response to failures, and rates of these failures, which can be used at the aircraft safety assessment level.

Discussion of Comments

The FAA issued a notice of proposed special conditions (NPSC) Docket No. FAA–2022–1641 for the BETA Model H500A electric engines, which was published in the **Federal Register** on March 7, 2024 (89 FR 16474).

The FAA Received Comments From Eight Commenters

The FAA received comments from Transport Canada (TC), Transport Canada Civil Aviation (TCCA), United Parcel Service Flight Forward (UPSFF), Association for Uncrewed Vehicle Systems International (AUVSI), magniX USA, Inc. (magniX), General Aviation Manufacturers Association (GAMA), an individual, and an anonymous commenter.

The FAA received comments from TCCA.

TCCA indicated the discussion of proposed special condition no.10(e), Environmental limits of engine cooling systems, in the preamble states that the environmental limits referred to in this special condition are addressed in RTCA DO–160G. However, TCCA explained that some of the existing RTCA DO–160G test specifications, methods, and categories may not be adequate for high voltage systems, such as the high voltage components of this engine. Accordingly, TCCA recommended adding the language ''or other appropriate industry standards'' at the end of the discussion of special condition no. 10(e) in the preamble.

The FAA does not agree with the recommended change. Although RTCA DO–160G is not sufficient for the high voltage systems used in the BETA Model H500A electric engine motor and inverter/controller, tests that are appropriate for the BETA engine will be developed in accordance with special condition nos. 1(b) and 1(c) using the testing techniques in RTCA DO–160G and other aerospace environmental

documents. Independent tests are done for radiated and conducted susceptibility and compared to the RTCA DO–160G HIRF spectrum for susceptibility to ensure all electric engine radio frequency energy emissions inherent to the engine design are addressed. If the equipment under test passes the emission test in RTCA–DO–160 the susceptibility spectrum is covered by RTCA DO–160G. The applicant can use the RTCA DO–160G test. If not, the spectrum from the emission test would be analyzed and could be adjusted for the applicant's design and applied during the susceptibility test with FAA concurrence. No changes were made to these special conditions as a result of this comment.

TCCA also indicated special condition no. 2, Engine ratings and operating limits, should require that component life be considered when establishing the engine operating limits. They explained, the engine system or the electrical motor design may have components or parts that require a life limit. For example, the insulation on the high voltage system wiring may degrade with time and operating conditions. TCCA requested the FAA add ''(f) Component life'' to special condition no. 2, Engine Ratings and Operating Limits, and explained that component life should be considered when establishing the engine operating limits, similar to § 33.07(b)(7).

The FAA does not concur with TCCA's request. Component life is an expected outcome of special conditions nos. 13 (Critical and life-limited parts) and 17 (Safety analysis). Special condition no. 17 determines whether special condition no. 13 applies to the engine part. Special condition no 13 determines the mandatory replacement times (component life) and implements a maintenance program to manage these parts composed of an engineering plan, manufacturing plan, and service management plan. No changes were made to these special conditions as a result of this comment.

TCCA requested the FAA confirm that special condition no. 33(a), applicability for engine electrical systems, is not applicable to energy storage systems (ESS) but it does include the interface between the electric engine and the propulsion power source. TCCA further explained this comment is a request for clarification, rather than modification, of this special condition.

Special condition no. 33 does not apply to ESS but does apply to the interface between the engine and ESS. No changes were made to these special conditions as a result of this comment.

TCCA stated that proposed special condition no. 33(b), Electrical systems, is written in a way that implies electrical load shedding is mandatory even when not needed and explained electrical load shedding should only be implemented if required. TCCA recommended adding ''if required'' between parenthesis like the following: ''. . . , and electrical load shedding (if required), . . .'' to special condition no. 33(b).

The FAA concurs with TCCA's recommendation and has revised special condition no. 33(b) accordingly. Load shedding is a capability of the electric engine's power distribution system.

TCCA requested the FAA define the term ''abnormal condition,'' which is used in special condition 33(c)(2), Electrical power distribution, and offered several potential interpretations of the term. They also asked if an abnormal condition is any failure condition not considered extremely improbable, and if it is equivalent to the definition from MIL–STD–704F. The FAA's use of the term ''abnormal conditions'' does not refer to internal malfunctions or failures. It refers to operating conditions such as:

- System or components outside of normal statistical variation due to degradation, or installation error
- Unusual environmental conditions such as extreme temperature, humidity, FOD impact, severe lightning, HIRF, or atmospheric radiation
- Infrequent scenarios such as landing on icy runways, rejected take-offs or balked landings, extended ground idling, or taxiing in hot environments.

TCCA also requested the FAA provide a definition for ''safe transmission,'' which is used in special condition 33(c)(3).

The FAA concurs with TCCA's requests and has added definitions of the terms ''abnormal condition'' and ''safe transmission'' to the preamble discussion for special condition no. 33.

TCCA observed that proposed special condition nos. 33(e)(1) and (e)(2), Electrical power characteristics, were linked with an ''or'' indicating that either condition could be applied, but not both. TCCA stated both (e)(1) and (e)(2) are applicable, and therefore recommended the FAA revise special condition no. 33(e) to replace the ''or'' with an ''and.''

The FAA concurs with TCCA's recommendation and has revised special condition no. 33(e) accordingly.

TCCA indicated that noise certification requirements are applicable at the airframe level and not at the engine level. TCCA explained the NPSC implies that an engine applicant demonstration of compliance to 14 CFR part 36 is part of the special conditions. However, TCCA stated there is no definition of requirements within the special conditions other than the preamble section titled the Type Certification Basis. TCCA requested that the FAA remove the statement ''In addition to the applicable airworthiness regulations and special conditions, the BETA Model H500A electric engines must comply with the noise certification requirements of 14 CFR part 36'' from the preamble. GAMA also commented on this issue and stated the noise certification requirements do not apply to engines and requested the FAA remove this statement from the preamble.

The FAA concurs with TCCA's and GAMA's requests and has updated the preamble of these special conditions accordingly.

TCCA suggested that the reference to ''consensus standards'' in proposed special condition 1(b), Applicability, may not be necessary. TCCA stated that consensus standards are not a means of compliance but instead, they are derived/alternate requirements (*i.e.,* ASTM) that are formulated by industry to be used in lieu of published regulatory guidance material. TCCA further suggested that the use of derived/alternate requirements in lieu of the published standards is to be accepted by the Administrator as being equivalent to the published standards. Then, the means of compliance to the consensus standards are to be accepted by the Administrator. TCCA recommended reducing the text in special condition no. 1(b) to the following: ''(b) the applicant must comply with this part using a means of compliance accepted by the administrator.''

The FAA does not concur with TCCA's suggested change. The reference to consensus standards provides clarification about potential sources of information that may be used to determine a means of compliance. The comment indicates a need to clarify how consensus standards are used. For example, consensus standards developed by the standards development organizations (SDOs) typically function as a method of compliance to 14 CFR requirements or special conditions. Published FAA guidance can function either as a means of compliance, method of compliance, or both. Special condition 1(b) permits consensus standards to be used for showing compliance to certification requirements, but they are not a

requirement of that special condition. Therefore, special condition 1(b) supplements the performance-based special conditions by requiring a means of compliance, which could include consensus standards developed by SDOs. Further, special condition 1(b) is intended to be equivalent to § 23.2010(a), which also refers to consensus standards as a potential means of compliance. No changes were made to the special conditions as a result of this comment.

TCCA observed the BETA proposed special condition no. 17 does not include a reference to § 33.75(a)(3) which appears in the magniX special conditions and recommended that the FAA explain this difference in the discussion for that special condition in the preamble to avoid ambiguity between the relative project requirements.

The FAA does not concur with TCCA's recommendation. The NPSC for the magniX magni350 and magni650 model electric engines originally proposed to incorporate § 33.75(a)(3) into special condition no. 17. The FAA received a comment suggesting that § 33.75(a)(3) may not be needed for those engines. In the final special conditions (Docket No. FAA–2020–0894, Special Conditions No. 33–022–SC), the FAA agreed with the comment and removed the reference to § 33.75(a)(3). No changes were made to these special conditions as a result of this comment.

The FAA received comments from TC.

TC disagreed with the text in proposed special condition nos. 17(a) and 17(c) which say, ''The applicant must comply . . .'' TC stated that the onus to show compliance with the applicable requirements with the intent to obtain a type certificate is on the applicant and that the elements that comply with the requirements themselves are those objects of the type certificate, such as the engine and its systems. TC further explained it is not clear to state that the applicant must comply, where it is in fact the engine/systems which must comply with the requirements. Instead, the applicant shows compliance. TC suggested changing the phrase to read ''The applicant must show compliance . . .''

TC's proposed change is not necessary. Section 21.20, ''Compliance with Applicable Requirements'' contains an example that supports the language used in special conditions nos. 17(a) and (c). Specifically, § 21.20(b) specifies the applicant must ''provide a statement certifying that the applicant has complied with the applicable requirements,'' which indicates the applicant complies with the applicable requirements. . No changes were made as a result of this comment.

TC observed the text in proposed special condition no. 17(d)(1), Safety Analysis, does not include special condition no. 31, Operation with Variable Pitch Propeller. TC recommended that the FAA either add a reference to special condition no. 31 in special condition no. 17(d)(1) because BETA's electric engine may be installed with a variable pitch propeller or provide a rationale for not including it.

The FAA does not concur with TC's suggestion to add a reference to special condition no. 31. Adding special condition no. 31 is not necessary because the specific engine model BETA intends to certify is not designed to use a variable pitch propeller. No changes were made to the special conditions as a result of this comment.

TC indicated there is a similar electrical engine special condition in the magniX special conditions (Special Conditions No. 33–022–SC) that contains an ingestion requirement that does not appear in the BETA special conditions. TC referred to special condition no. 18(d) in the magniX special conditions, which requires ingestion sources that are not evaluated must be declared in the engine installation manual. TC recommended that the FAA either revise the BETA special conditions to add this requirement or provide the rationale for not including it.

The FAA does not concur with TC's request to revise the BETA special conditions to include special condition no. 18(d) from the magniX special conditions. Special condition no. 18(d) was intended to ensure ingestion sources that are not applicable to an electric engine are enunciated in the engine documentation. The list of required ingestion sources in BETA special condition nos. 18(a) and (b) are more prescriptive compared to the ingestion requirements in the published magniX special condition no. 18(a). Therefore, the FAA has determined special condition no. 18(d) is not necessary to include in the BETA special conditions because exceptions to the ingestion requirement would be specified and managed using special condition no. 18(c), which is similar to how exceptions are managed by the existing part 33 ingestion requirements. No changes were made to the special conditions as a result of this comment.

TC noted that proposed special condition no. 33(c)(1) introduces the term ''electrical power plant'' and recommended that the FAA update the preamble to describe an electrical power plant.

The FAA disagrees with TC's recommendation to define ''electrical power plant'' because the FAA revised special condition no. 33(c)(1) in these final special conditions to change the term ''electrical power plant'' to ''powerplant,'' as that term is defined in part 23, subpart E, in § 23.2400(a) powerplant installation, to include each component necessary for propulsion, which affects propulsion safety, or provides auxiliary power to the airplane, and in the installation requirements in subpart E of parts 25, 27, and 29.

TC observed that the proposed system safety assessments in proposed special condition no. 33(h), and proposed special condition no.10(g) are different in that special condition no. 10(g) requires the rates of hazardous and major faults to be declared in the engine installation manual and special condition no. 33(h) does not. TC recommended that the FAA either revise special condition no. 33(h) to match special condition no. 10(g) or provide a rationale for why they are different.

The FAA agrees with TC's recommendation and has revised final special condition no. 33(h) to match special condition no. 10(g).

The FAA received comments from GAMA.

GAMA recommended that the FAA align the special conditions for the H500A electric engine with the electric engine requirements included in the certification basis for special class powered lift aircraft that certify an electric engine as part of the aircraft type certification. GAMA stated that there are technical variations between the H500A proposed special conditions and the electric engine airworthiness criteria outlined in the Special Class Airworthiness Criteria for the powered-lift and cited special condition no. 17(c) and special condition no. 33(c) as examples of these technical differences. GAMA further stated these variations could lead to two electric engines used in the same aircraft having different requirements based solely on whether the engine is certified as part of the aircraft or under part 33. AUVSI also commented on the importance of applying consistent requirements across projects and requested the FAA substantiate any inconsistencies introduced to the electric engine requirements.

There are no intended technical differences between the proposed special class airworthiness criteria for the powered lift in draft Advisory

Circular 21.17–4 (AC 21.17–4) and the BETA special conditions. For example, the corresponding criteria to BETA special condition nos. 17(c) and 33(c) are PL.3375(f) and PL.3326(c) respectively. The engine requirements are documented differently between the BETA special conditions and powered-lift airworthiness criteria proposed in draft AC 21.17–4 because special conditions are written in accordance with the requirements of § 21.16, and the powered-lift airworthiness criteria in draft AC 21.17–4 are not specific to one applicant. There are also some minor differences in the documentation requirements because engines are approved with the special class aircraft, so some engine details may be included in the aircraft manuals. No changes were made to the special conditions as a result of this comment.

GAMA indicated proposed special condition no. 9, Overspeed, lacks clarity regarding whether ''rotor'' refers to an internal electric engine component or an actual propulsive propeller. GAMA recommended the FAA provide the necessary clarification to address this ambiguity.

The FAA agrees with GAMA's recommendation. The term ''rotor'' in the proposed special conditions is intended to refer to an engine component and not a propulsive propeller. A rotor in an electric engine may consist of a circular disk and magnets fixed at the outer circumference that rotates inside a stationary casing configured with electrical windings (or coils), or a rotating cylindrical casing with magnets fixed on the inside surface that rotates around a stationary set of windings (or coils). Each configuration is attached to a rotating shaft that drives a propulsive device, such as a propeller. Project-specific decisions will be made regarding which engine parts are applicable to the overspeed requirement. No changes were made to the special conditions as a result of this comment.

GAMA stated that proposed special condition nos. 30(a) and (b), Containment, utilize language tailored to an engine design featuring a non-rotating stator situated outside the rotor. GAMA recommended the FAA explore a rule version that is less design-specific. GAMA advised against presuming that all rotating components possess a case, particularly that the rotor is contained within the stator.

The FAA does not concur with GAMA's recommendation Special condition 30(a) is intended to account for rotor designs with exceedingly large margins to a rotor burst. The special condition does not specify a particular rotor design. However, the amount of margin needed to satisfy the requirement would be determined based on the engine's design. Special condition 30(b) is intended to account for rotors located inside a static stator case. No changes were made to the special conditions as a result of this comment.

GAMA commented proposed special condition nos. 33(c)(1) and (c)(3), Electrical power distribution for engine electrical systems, set forth distinct criteria for the automatic measures needed when electrical-energy generation encounters faults, which diverges from the corresponding requirements in the special class airworthiness criteria for powered-lift. GAMA indicated there are no evident variations in electric engine configurations that warrant this inconsistency. GAMA recommended that the FAA align these regulations to ensure that electric engines certified as part of an aircraft or under part 33 adhere to uniform standards.

Proposed special condition nos. 33(c)(1) and (c)(3) are not the same as the corresponding engine requirements in the powered-lift airworthiness criteria used in another project. Proposed special condition no. 33(c)(1) protects engine electrical systems from faulted electrical energy generation or storage devices. Proposed special condition no. 33(c)(3) prescribes a means of compliance (fault isolation) to address (c)(1), but the means of compliance should be tied to the safety assessment required in special condition no. 33(g), which accounts for aircraft-level effects from faulted electrical-energy generation or storage devices. The aircraft effects should not be assumed in the engine requirements, and therefore the FAA revised special condition no. 33(c)(3) to accommodate other potential protection systems that might be more appropriate. Accordingly, final special condition no. 33(c)(3) is changed to, ''The system must provide mechanical or automatic means of isolating a faulted electrical energy generation or storage device from leading to hazardous engine effects, as defined in special condition no. 17(d)(2) of these special conditions, or detrimental effects in the intended aircraft application.''

The phrase, ''or detrimental engine effects in the intended aircraft application'' was relocated to special condition no. 33(c)(3) to maintain the connection with special condition no. 33(g).

GAMA commented proposed special condition no. 33(g), Electrical system failures of engine electrical systems, extends beyond the comparable part 33 regulation § 33.28(d), which is originally limited to the engine control system. GAMA suggested that expanding this special condition to encompass the engine electrical system instead of solely the engine control system entails subjecting electrical components within the engine, such as windings, to failure requirements historically not applied to engine mechanical components. GAMA also stated that field experience indicates that component failures are unpredictable based on wear and susceptible to random failures. Electric engine components, like windings and insulation, are better addressed using methods akin to those applied to traditional engines to address mechanical failure aspects. GAMA recommended the FAA revise this special condition to align with the existing regulatory framework. The FAA does not concur with GAMA's recommendation. By their nature, FAA special conditions are issued when the ''existing regulatory framework'' is inadequate or insufficient. 14 CFR 21.16; see also Amdt. 21–51. The existing requirements for engine control systems were developed to address the failure characteristics of electrical systems. For combustion engines, the only electrical system is the engine control, but this is not the case for electric engines where electrical systems extend beyond those addressed by § 33.28(d). Special condition no. 33(g) for the BETA electric engine provides the same level of safety as § 33.28(d) by applying the safety criteria for electrical systems to all the electrical systems in the engine. This includes the high-voltage systems used in the electric engine. No changes were made to the special conditions as a result of this comment.

The FAA received several comments from an individual commenter and received similar comments from magniX (although these commenters provided separate comments).

An individual and magniX commented proposed special condition nos. 1(b) and (c) state that a means of compliance, which may include consensus standards, must be ''accepted by the Administrator'' and ''in a form and manner acceptable to the Administrator.'' The individual and magniX stated that these paragraphs are directly out of § 23.2010, which contains performance-based language. The individual and magniX considered the BETA electric engine special conditions to be largely prescriptive and not performance-based, which they stated would make special condition

nos. 1(b) and (c) superfluous. The individual suggested these requirements introduce a new regulatory layer to prescriptive requirements and may lead to inadvertent consequences, while magniX stated that requiring a performance-based process for establishing means of compliance with prescriptive regulations is unnecessary and overly burdensome to applicants and regulators. The individual and magniX recommended the FAA not adopt proposed special condition nos. 1(b) and (c), and the individual also recommended holding public consultations with stakeholders as was done when part 23 was being reworked into a performance-based form.

The FAA does not concur with the individual's and magniX's recommendation. While special conditions are rules of particular, not general applicability, the FAA expects that special condition nos. 1(b) and (c) support the FAA's transition to a performance-based approach for developing new requirements. Although the BETA special conditions are not prescriptive, they provide safety criteria that address hazards presented by the new electric engine technology used in the BETA H500A engine. Special condition nos. 1(b) and (c) will be used to incorporate the additional details that apply to the BETA H500A engine design using accepted means of compliance. No changes were made to these special conditions as a result of this comment.

GAMA and magniX commented that special condition nos. 10(g), 15(b), and 17(f) would require applicants to declare proprietary information in the engine installation manual, these documentation requirements establish a precedent beyond that required of their existing reciprocating or turbine counterparts, and these requirements increase the risk that sensitive information is disclosed. MagniX stated that while it is understood this information is used during aircraft-level certification efforts, traditional data sharing agreements sufficiently provide the integrator with the required information while respecting the proprietary nature of the data. MagniX also stated requiring additional data in the engine installation manual overly constrains the means whereby this information is shared when compared with established means, introducing additional commercial risk. GAMA also stated proposed special condition nos. 10(g), 15(b), and 17(f) are a requirement for a manufacturer to disclose sensitive proprietary safety analysis in the engine installation manual, a requirement not currently imposed on part 33 engines. Additionally, GAMA stated the FAA has not provided adequate justification for why an electric engine necessitates this information in a manual. An individual provided a similar comment regarding proposed special condition nos. 10(g) and 17(f), and stated that historically such information was captured in other documents such as the engine control systems interface control document and systems safety assessment, that were only provided to the installer.

MagniX requested the FAA not adopt the documentation requirements in proposed special conditions 10(g), 15(b), and 17(f), and proposed that these data be provided to integrators through generic ''installation instructions'' in lieu of the engine installation manual. GAMA also requested the FAA reconsider its approach and/or provide justification for the added requirement of disclosing sensitive proprietary safety analysis in the engine installation manual. An individual requested the FAA preserve the engine OEM's flexibility to document and protect proprietary data by changing ''installation manual'' to the more generic ''installation instructions,'' which consist of other documents such as interface control drawings, technical memorandums, or other installer requested documentation. The individual further stated that this change would harmonize the special condition with § 23.2400(e) which uses the verbiage of ''installation instructions,'' and this change could be promulgated to other special condition paragraphs which refer to the engine installation manual.

The FAA does not concur with magniX's and GAMA's comments that special conditions 10(g), 15(b), and 17(f) require disclosing sensitive information. The requirements cited in their comment do not require disclosure of sensitive information. As discussed in the NPSC, the documentation requirements in special conditions nos. 10(g), 15(b), and 17(f) are expected to ensure that the engine is used safely and properly by constraining the installation of electric engines to only aircraft types (configurations, flight capabilities, etc.) that were used by the engine manufacturer to determine the engine ratings, limits, performance characteristics, as well as the reliability and criticality of engine systems and parts.

These documentation requirements are intended, and the FAA finds necessary, to ensure enough information is included to safeguard compatibility between the electric engine and aircraft, and to prevent the engine from being used in an aircraft type that requires safety features or performance characteristics that are not available from a type certificated engine. For example, electric engines designed for vertical lift in distributed propulsion tilt-wing aircraft provide propulsion and act as flight control surfaces, and therefore these engines have different performance requirements than those used in conventional normal category airplanes. In addition, the FAA agrees with the commenters' suggestion to remove the requirement that specifies the information must be located in the engine installation manual. These special conditions do not need to specify the document that must have the information, but only that the information must be provided to the installer in accordance with the engine installation instructions under § 33.5, ''Instruction manual for installing and operating the engine.''. The proposed special conditions are modified to incorporate this change.

The FAA received a comment from UPSFF.

UPSFF requested that the FAA align these special conditions with the electric engine requirements included in the certification basis for special class powered lift aircraft that certify an electric engine as part of the aircraft type certification.

As stated previously, the engine requirements in the BETA special conditions are documented differently from proposed powered lift airworthiness criteria in draft AC 21.17–4 because special conditions are written in accordance with the requirements of § 21.16, and the proposed powered-lift airworthiness criteria in draft AC 21.17–4 are not specific to one applicant. Special conditions are project-specific rules of particular applicability, and the special conditions for this electric engine are based on certain novel or unusual design features. Special conditions may evolve to a general standard as more experience is gained with certifying the new technology (see Amdt. 21–51). No changes were made to these special conditions as a result of this comment.

The FAA received an anonymous comment. The commenter stated the reference to § 21.17(a) in the preamble of the NPSC seems contradictory to the language in § 21.17(b). The commenter explained that since § 21.17(b) applies to ''special classes of aircraft, including the engines and propellers installed thereon (*e.g.,* gliders, airships, and other nonconventional aircraft) . . .'' an electric engine would be installed on a special class of aircraft as described in § 21.17(b) and referring to § 21.17(a) seems to contradict the language in paragraph (b) of that section.

The FAA does not concur with the comment that indicates the reference to § 21.17(a) is contradictory to the language in § 21.17(b). Section 21.17(a) provides requirements for developing a certification basis for an established aviation product, which includes aircraft, engines, and propellers. The BETA electric engine is an aircraft engine, which falls under § 21.17(a), and therefore § 21.17(a) is the appropriate reference for this project. Section 21.17(b) provides requirements for developing a certification basis for special classes of aircraft, such as powered-lift. No changes were made as a result of this comment.

The FAA also determined that the following changes were necessary. The phrase, ''In addition'' is added to special condition no. 4, Fire protection, to connect the introduction sentence to (a) and (b) and avoid confusion. The FAA also revised the special conditions to use consistent references to hazardous engine effects. Therefore, the phrase ''as defined in special condition no. 17 of these special conditions'' was added wherever ''hazardous engine effects'' is mentioned.

The FAA recognizes energy regeneration might not be a feature for some electric engines that operate at their limits, so special condition no. 23 was changed to specify that ''The endurance demonstration must include increases and decreases of the engine's power settings, energy regeneration, and dwellings at the power settings and energy regeneration for sufficient durations that produce the extreme physical conditions the engine experiences at rated performance levels, operational limits, and at any other conditions or power settings, including energy regeneration that are required to verify the limit capabilities of the engine.''

In addition, proposed special condition no. 31 was not adopted because the specific engine model BETA intends to certify is not designed to use a variable pitch propeller. Except as discussed above, these special conditions are adopted as proposed.

Applicability

As discussed above, these special conditions are applicable to BETA Model H500A electric engines. Should BETA apply at a later date for a change to the type certificate to include another model on the same type certificate, incorporating the same novel or unusual design feature, these special conditions would apply to that model as well.

Conclusion

This action affects only BETA Model H500A electric engines. It is not a rule of general applicability and affects only the applicant who applied to the FAA for approval of these features on the airplane.

List of Subjects in 14 CFR Part 33

Aircraft, Aviation safety, Reporting and recordkeeping requirements.

Authority Citation

The authority citation for these special conditions is as follows:

Authority: 49 U.S.C. 106(f), 106(g), 40113, 44701, 44702, 44704.

The Special Conditions

■ Accordingly, pursuant to the authority delegated to me by the Administrator, the following special conditions are issued as part of the type certification basis for BETA Technologies Inc. Model H500A electric engines. The applicant must also comply with the certification procedures set forth in part 21.

(1) Applicability

(a) Unless otherwise noted in these special conditions, the engine design must comply with the airworthiness standards for aircraft engines set forth in part 33, except for those airworthiness standards that are specifically and explicitly applicable only to reciprocating and turbine aircraft engines or as specified herein.

(b) The applicant must comply with this part using a means of compliance, which may include consensus standards, accepted by the Administrator.

(c) The applicant requesting acceptance of a means of compliance must provide the means of compliance to the FAA in a form and manner acceptable to the Administrator.

(2) Engine Ratings and Operating Limits

In addition to § 33.7(a), the engine ratings and operating limits must be established and included in the type certificate data sheet based on:

(a) Shaft power, torque, rotational speed, and temperature for:

(1) Rated takeoff power;

(2) Rated maximum continuous power; and

(3) Rated maximum temporary power and associated time limit.

(b) Duty cycle and the rating at that duty cycle. The duty cycle must be declared in the engine type certificate data sheet.

(c) Cooling fluid grade or specification.

(d) Power-supply requirements.

(e) Any other ratings or limitations that are necessary for the safe operation of the engine.

(3) Materials

The engine design must comply with § 33.15.

(4) Fire Protection

The engine design must comply with § 33.17(b) through (g). In addition—

(a) The design and construction of the engine and the materials used must minimize the probability of the occurrence and spread of fire during normal operation and failure conditions and must minimize the effect of such a fire.

(b) High-voltage electrical wiring interconnect systems must be protected against arc faults that can lead to hazardous engine effects as defined in special condition no. 17(d)(2) of these special conditions. Any non-protected electrical wiring interconnects must be analyzed to show that arc faults do not cause a hazardous engine effect.

(5) Durability

The engine design and construction must minimize the development of an unsafe condition of the engine between maintenance intervals, overhaul periods, or mandatory actions described in the applicable ICA.

(6) Engine Cooling

The engine design and construction must comply with § 33.21. In addition, if cooling is required to satisfy the safety analysis as described in special condition no. 17 of these special conditions, the cooling system monitoring features and usage must be documented and provided to the installer as part of the requirements in § 33.5.

(7) Engine Mounting Attachments and Structure

The engine mounting attachments and related engine structures must comply with § 33.23.

(8) Accessory Attachments

The engine must comply with § 33.25.

(9) Overspeed

(a) A rotor overspeed must not result in a burst, rotor growth, or damage that results in a hazardous engine effect, as defined in special condition no. 17(d)(2) of these special conditions. Compliance with this paragraph must be shown by test, validated analysis, or a combination of both. Applicable assumed rotor speeds must be declared and justified.

(b) Rotors must possess sufficient strength with a margin to burst above

certified operating conditions and above failure conditions leading to rotor overspeed. The margin to burst must be shown by test, validated analysis, or a combination thereof.

(c) The engine must not exceed the rotor speed operational limitations that could affect rotor structural integrity.

(10) Engine Control Systems

(a) *Applicability.* The requirements of this special condition apply to any system or device that is part of the engine type design that controls, limits, monitors, or protects engine operation, and is necessary for the continued airworthiness of the engine.

(b) *Engine control.* The engine control system must ensure that the engine does not experience any unacceptable operating characteristics or exceed its operating limits, including in failure conditions where the fault or failure results in a change from one control mode to another, from one channel to another, or from the primary system to the back-up system, if applicable.

(c) *Design Assurance.* The software and complex electronic hardware, including programmable logic devices, must be—

(1) Designed and developed using a structured and systematic approach that provides a level of assurance for the logic commensurate with the hazard associated with the failure or malfunction of the systems in which the devices are located; and

(2) Substantiated by a verification methodology acceptable to the Administrator.

(d) *Validation.* All functional aspects of the control system must be substantiated by test, analysis, or a combination thereof, to show that the engine control system performs the intended functions throughout the declared operational envelope.

(e) *Environmental Limits.* Environmental limits that cannot be adequately substantiated by endurance demonstration, validated analysis, or a combination thereof must be demonstrated by the system and component tests in special condition no. 27 of these special conditions.

(f) *Engine control system failures.* The engine control system must—

(1) Have a maximum rate of loss of power control (LOPC) that is suitable for the intended aircraft application. The estimated LOPC rate must be documented and provided to the installer as part of the requirements in § 33.5;

(2) When in the full-up configuration, be single-fault tolerant, as determined by the Administrator, for electrical, electrically detectable, and electronic failures involving LOPC events;

(3) Not have any single failure that results in hazardous engine effects as defined in special condition no. 17(d)(2) of these special conditions; and

(4) Ensure failures or malfunctions that lead to local events in the aircraft do not result in hazardous engine effects, as defined in special condition no. 17(d)(2) of these special conditions, due to engine control system failures or malfunctions.

(g) *System safety assessment.* The applicant must perform a system safety assessment. This assessment must identify faults or failures that affect normal operation, together with the predicted frequency of occurrence of these faults or failures. The intended aircraft application must be taken into account to assure that the assessment of the engine control system safety is valid. The rates of hazardous and major faults must be documented and provided to the installer as part of the requirements in § 33.5.

(h) *Protection systems.* The engine control devices and systems' design and function, together with engine instruments, operating instructions, and maintenance instructions, must ensure that engine operating limits that can lead to a hazard will not be exceeded in service.

(i) *Aircraft supplied data.* Any single failure leading to loss, interruption, or corruption of aircraft-supplied data (other than power-command signals from the aircraft), or aircraft-supplied data shared between engine systems within a single engine or between fully independent engine systems, must—

(1) Not result in a hazardous engine effect, as defined in special condition no. 17(d)(2) of these special conditions, for any engine installed on the aircraft; and

(2) Be able to be detected and accommodated by the control system.

(j) *Engine control system electrical power.*

(1) The engine control system must be designed such that the loss, malfunction, or interruption of the control system electrical power source will not result in a hazardous engine effect, unacceptable transmission of erroneous data, or continued engine operation in the absence of the control function. Hazardous engine effects are defined in special condition no. 17(d)(2) of these special conditions. The engine control system must be capable of resuming normal operation when aircraft-supplied power returns to within the declared limits.

(2) The applicant must identify, document, and provide to the installer as part of the requirements in § 33.5, the characteristics of any electrical power supplied from the aircraft to the engine control system, including transient and steady-state voltage limits, and any other characteristics necessary for safe operation of the engine.

(11) Instrument Connection

The applicant must comply with § 33.29(a), (e), and (g).

(a) In addition, as part of the system safety assessment of special condition nos. 10(g) and 33(h) of these special conditions, the applicant must assess the possibility and subsequent effect of incorrect fit of instruments, sensors, or connectors. Where practicable, the applicant must take design precautions to prevent incorrect configuration of the system.

(b) The applicant must provide instrumentation enabling the flight crew to monitor the functioning of the engine cooling system unless evidence shows that:

(1) Other existing instrumentation provides adequate warning of failure or impending failure;

(2) Failure of the cooling system would not lead to hazardous engine effects before detection; or

(3) The probability of failure of the cooling system is extremely remote.

(12) Stress Analysis

(a) A mechanical and thermal stress analysis, as well as an analysis of the stress caused by electromagnetic forces, must show a sufficient design margin to prevent unacceptable operating characteristics and hazardous engine effects as defined in special condition no. 17(d)(2) of these special conditions.

(b) Maximum stresses in the engine must be determined by test, validated analysis, or a combination thereof, and must be shown not to exceed minimum material properties.

(13) Critical and Life-Limited Parts

(a) The applicant must show, by a safety analysis or means acceptable to the Administrator, whether rotating or moving components, bearings, shafts, static parts, and non-redundant mount components should be classified, designed, manufactured, and managed throughout their service life as critical or life-limited parts.

(1) Critical part means a part that must meet prescribed integrity specifications to avoid its primary failure, which is likely to result in a hazardous engine effect as defined in special condition no. 17(d)(2) of these special conditions.

(2) Life-limited parts may include but are not limited to a rotor or major

structural static part, the failure of which can result in a hazardous engine effect, as defined in special condition no. 17(d)(2) of these special conditions, due to a low-cycle fatigue (LCF) mechanism. A life limit is an operational limitation that specifies the maximum allowable number of flight cycles that a part can endure before the applicant must remove it from the engine.

(b) In establishing the integrity of each critical part or life-limited part, the applicant must provide to the Administrator the following three plans for approval:

(1) an engineering plan, as defined in § 33.70(a);

(2) a manufacturing plan, as defined in § 33.70(b); and

(3) a service-management plan, as defined in § 33.70(c).

(14) Lubrication System

(a) The lubrication system must be designed and constructed to function properly between scheduled maintenance intervals in all flight attitudes and atmospheric conditions in which the engine is expected to operate.

(b) The lubrication system must be designed to prevent contamination of the engine bearings and lubrication system components.

(c) The applicant must demonstrate by test, validated analysis, or a combination thereof, the unique lubrication attributes and functional capability of (a) and (b).

(15) Power Response

(a) The design and construction of the engine, including its control system, must enable an increase—

(1) From the minimum power setting to the highest rated power without detrimental engine effects;

(2) From the minimum obtainable power while in-flight and while on the ground to the highest rated power within a time interval determined to be appropriate for the intended aircraft application; and

(3) From the minimum torque to the highest rated torque without detrimental engine effects in the intended aircraft application.

(b) The results of (a)(1), (a)(2), and (a)(3) of this special condition must be documented and provided to the installer as part of the requirements in § 33.5.

(16) Continued Rotation

If the design allows any of the engine main rotating systems to continue to rotate after the engine is shut down while in-flight, this continued rotation must not result in any hazardous engine effects, as defined in special condition no. 17(d)(2) of these special conditions.

(17) Safety Analysis

(a) The applicant must comply with § 33.75(a)(1) and (a)(2) using the failure definitions in special condition no. 17(d) of these special conditions.

(b) The primary failure of certain single elements cannot be sensibly estimated in numerical terms. If the failure of such elements is likely to result in hazardous engine effects, then compliance may be shown by reliance on the prescribed integrity requirements of § 33.15 and special condition nos. 9 and 13 of these special conditions, as applicable. These instances must be stated in the safety analysis.

(c) The applicant must comply with § 33.75(d) and (e) using the failure definitions in special condition no. 17(d) of these special conditions, and the ICA in § 33.4.

(d) Unless otherwise approved by the Administrator, the following definitions apply to the engine effects when showing compliance with this condition:

(1) A minor engine effect does not prohibit the engine from performing its intended functions in a manner consistent with § 33.28(b)(1)(i), (b)(1)(iii), and (b)(1)(iv), and the engine complies with the operability requirements of special condition no. 15 and special condition no. 25 of these special conditions, as appropriate.

(2) The engine effects in § 33.75(g)(2) are hazardous engine effects with the addition of:

(i) Electrocution of the crew, passengers, operators, maintainers, or others; and

(ii) Blockage of cooling systems that could cause the engine effects described in § 33.75(g)(2) and special condition 17(d)(2)(i) of these special conditions.

(3) Any other engine effect is a major engine effect.

(e) The intended aircraft application must be taken into account when performing the safety analysis.

(f) The results of the safety analysis, and the assumptions about the aircraft application used in the safety analysis, must be documented and provided to the installer as part of the requirements in § 33.5.

(18) Ingestion

(a) Rain, ice, and hail ingestion must not result in an abnormal operation such as shutdown, power loss, erratic operation, or power oscillations throughout the engine operating range.

(b) Ingestion from other likely sources (birds, induction system ice, foreign objects—ice slabs) must not result in hazardous engine effects defined by special condition no. 17(d)(2) of these special conditions, or unacceptable power loss.

(c) If the design of the engine relies on features, attachments, or systems that the installer may supply, for the prevention of unacceptable power loss or hazardous engine effects, as defined in special condition no. 17(d)(2) of these special conditions, following potential ingestion, then the features, attachments, or systems must be documented and provided to the installer as part of the requirements in § 33.5.

(19) Liquid and Gas Systems

(a) Each system used for lubrication or cooling of engine components must be designed and constructed to function properly in all flight attitudes and atmospheric conditions in which the engine is expected to operate.

(b) If a system used for lubrication or cooling of engine components is not self-contained, the interfaces to that system must be defined, documented and provided to the installer as part of the requirements in § 33.5.

(c) The applicant must establish by test, validated analysis, or a combination of both that all static parts subject to significant pressure loads will not:

(1) Exhibit permanent distortion beyond serviceable limits, or exhibit leakage that could create a hazardous condition when subjected to normal and maximum working pressure with margin;

(2) Exhibit fracture or burst when subjected to the greater of maximum possible pressures with margin.

(d) Compliance with special condition no. 19(c) of these special conditions must take into account:

(1) The operating temperature of the part;

(2) Any other significant static loads in addition to pressure loads;

(3) Minimum properties representative of both the material and the processes used in the construction of the part; and

(4) Any adverse physical geometry conditions allowed by the type design, such as minimum material and minimum radii.

(e) Approved coolants and lubricants must be listed, documented, and provided to the installer as part of the requirements in § 33.5.

(20) Vibration Demonstration

(a) The engine must be designed and constructed to function throughout its normal operating range of rotor speeds and engine output power, including

defined exceedances, without inducing excessive stress in any of the engine parts because of vibration and without imparting excessive vibration forces to the aircraft structure.

(b) Each engine design must undergo a vibration survey to establish that the vibration characteristics of those components subject to induced vibration are acceptable throughout the declared flight envelope and engine operating range for the specific installation configuration. The possible sources of the induced vibration that the survey must assess are mechanical, aerodynamic, acoustical, internally induced electromagnetic, installation induced effects that can affect the engine vibration characteristics, and likely environmental effects. This survey must be shown by test, validated analysis, or a combination thereof.

(21) Overtorque

When approval is sought for a transient maximum engine overtorque, the applicant must demonstrate by test, validated analysis, or a combination thereof, that the engine can continue operation after operating at the maximum engine overtorque condition without maintenance action. Upon conclusion of overtorque tests conducted to show compliance with this special condition, or any other tests that are conducted in combination with the overtorque test, each engine part or individual groups of components must meet the requirements of special condition no. 29 of these special conditions.

(22) Calibration Assurance

Each engine must be subjected to calibration tests to establish its power characteristics, and the conditions both before and after the endurance and durability demonstrations specified in special conditions nos. 23 and 26 of these special conditions.

(23) Endurance Demonstration

The applicant must subject the engine to an endurance demonstration, acceptable to the Administrator, to demonstrate the engine's limit capabilities. The endurance demonstration must include increases and decreases of the engine's power settings, energy regeneration, and dwellings at the power settings and energy regeneration for sufficient durations that produce the extreme physical conditions the engine experiences at rated performance levels, operational limits, and at any other conditions or power settings, including energy regeneration that are required to verify the limit capabilities of the engine.

(24) Temperature Limit

The engine design must demonstrate its capability to endure operation at its temperature limits plus an acceptable margin. The applicant must quantify and justify the margin to the Administrator. The demonstration must be repeated for all declared duty cycles and ratings, and operating environments, which would impact temperature limits.

(25) Operation Demonstration

The engine design must demonstrate safe operating characteristics, including but not limited to power cycling, starting, acceleration, and overspeeding throughout its declared flight envelope and operating range. The declared engine operational characteristics must account for installation loads and effects.

(26) Durability Demonstration

The engine must be subjected to a durability demonstration to show that each part of the engine has been designed and constructed to minimize any unsafe condition of the system between overhaul periods, or between engine replacement intervals if the overhaul is not defined. This test must simulate the conditions in which the engine is expected to operate in service, including typical start-stop cycles, to establish when the initial maintenance is required.

(27) System and Component Tests

The applicant must show that systems and components that cannot be adequately substantiated in accordance with the endurance demonstration or other demonstrations will perform their intended functions in all declared environmental and operating conditions.

(28) Rotor Locking Demonstration

If shaft rotation is prevented by locking the rotor(s), the engine must demonstrate:

(a) Reliable rotor locking performance;

(b) Reliable rotor unlocking performance; and

(c) That no hazardous engine effects, as specified in special condition no. 17(d)(2) of these special conditions, will occur.

(29) Teardown Inspection

(a) Teardown evaluation.

(1) After the endurance and durability demonstrations have been completed, the engine must be completely disassembled. Each engine component and lubricant must be eligible for continued operation in accordance with the information submitted for showing compliance with § 33.4.

(2) Each engine component, having an adjustment setting and a functioning characteristic that can be established independent of installation on or in the engine, must retain each setting and functioning characteristic within the established and recorded limits at the beginning of the endurance and durability demonstrations.

(b) Non-Teardown evaluation. If a teardown cannot be performed for all engine components in a non-destructive manner, then the inspection or replacement intervals for these components and lubricants must be established based on the endurance and durability demonstrations and must be documented in the ICA in accordance with § 33.4.

(30) Containment

The engine must be designed and constructed to protect against likely hazards from rotating components as follows—

(a) The design of the stator case surrounding rotating components must provide for the containment of the rotating components in the event of failure, unless the applicant shows that the margin to rotor burst precludes the possibility of a rotor burst.

(b) If the margin to burst shows that the stator case must have containment features in the event of failure, then the stator case must provide for the containment of the failed rotating components. The applicant must define by test, validated analysis, or a combination thereof, and document and provide to the installer as part of the requirements in § 33.5, the energy level, trajectory, and size of fragments released from damage caused by the main-rotor failure, and that pass forward or aft of the surrounding stator case.

(32) General Conduct of Tests

(a) Maintenance of the engine may be made during the tests in accordance with the service and maintenance instructions submitted in compliance with § 33.4.

(b) The applicant must subject the engine or its parts to any additional tests that the Administrator finds necessary if—

(1) The frequency of engine service is excessive;

(2) The number of stops due to engine malfunction is excessive;

(3) Major engine repairs are needed; or

(4) Replacement of an engine part is found necessary during the tests, or due to the teardown inspection findings.

(c) Upon completion of all demonstrations and testing specified in these special conditions, the engine and its components must be—

(1) Within serviceable limits;

(2) Safe for continued operation; and

(3) Capable of operating at declared ratings while remaining within limits.

(33) Engine Electrical Systems

(a) *Applicability.* Any system or device that provides, uses, conditions, or distributes electrical power, and is part of the engine type design, must provide for the continued airworthiness of the engine, and must maintain electric engine ratings.

(b) *Electrical systems.* The electrical system must ensure the safe generation and transmission of power, and electrical load shedding if required, and that the engine does not experience any unacceptable operating characteristics or exceed its operating limits.

(c) *Electrical power distribution.*

(1) The engine electrical power distribution system must be designed to provide the safe transfer of electrical energy throughout the powerplant. The system must be designed to provide electrical power so that the loss, malfunction, or interruption of the electrical power source will not result in a hazardous engine effect, as defined in special condition no. 17(d)(2) of these special conditions.

(2) The system must be designed and maintained to withstand normal and abnormal conditions during all ground and flight operations.

(3) The system must provide mechanical or automatic means of isolating a faulted electrical energy generation or storage device from leading to hazardous engine effects, as defined in special condition no. 17(d)(2) of these special conditions, or detrimental effects in the intended aircraft application.

(d) *Protection systems.* The engine electrical system must be designed such that the loss, malfunction, interruption of the electrical power source, or power conditions that exceed design limits, will not result in a hazardous engine effect, as defined in special condition no. 17(d)(2) of these special conditions.

(e) *Electrical power characteristics.* The applicant must identify, declare, document, and provide to the installer as part of the requirements in § 33.5, the characteristics of any electrical power supplied from—

(1) the aircraft to the engine electrical system, for starting and operating the engine, including transient and steady-state voltage limits, and

(2) the engine to the aircraft via energy regeneration, and any other characteristics necessary for safe operation of the engine.

(f) *Environmental limits.* Environmental limits that cannot adequately be substantiated by endurance demonstration, validated analysis, or a combination thereof must be demonstrated by the system and component tests in special condition no. 27 of these special conditions.

(g) *Electrical system failures.* The engine electrical system must—

(1) Have a maximum rate of loss of power control (LOPC) that is suitable for the intended aircraft application;

(2) When in the full-up configuration, be single-fault tolerant, as determined by the Administrator, for electrical, electrically detectable, and electronic failures involving LOPC events;

(3) Not have any single failure that results in hazardous engine effects; and

(4) Ensure failures or malfunctions that lead to local events in the intended aircraft application do not result in hazardous engine effects, as defined in special condition no. 17(d)(2) of these special conditions, due to electrical system failures or malfunctions.

(h) *System safety assessment.* The applicant must perform a system safety assessment. This assessment must identify faults or failures that affect normal operation, together with the predicted frequency of occurrence of these faults or failures. The intended aircraft application must be taken into account to assure the assessment of the engine system safety is valid. The rates of hazardous and major faults must be declared, documented, and provided to the installer as part of the requirements in § 33.5.

Issued in Kansas City, Missouri, on December 10, 2024.

Patrick R. Mullen,

Manager, Technical Policy Branch, Policy and Standards Division, Aircraft Certification Service.

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 129

[Docket No.: FAA–2024–0176; Amdt. No. 129–55]

RIN 2120–AL93

Foreign Air Operator Certificates Issued by a Regional Safety Oversight Organization

AGENCY: Federal Aviation Administration (FAA), Department of Transportation (DOT).

ACTION: Final rule.

SUMMARY: This amendment will allow the FAA to review and, if acceptable to the Administrator, recognize as valid air operator certificates issued by a Regional Safety Oversight Organization to foreign air carriers when the State of the Operator is a member of that Regional Safety Oversight Organization, for purposes of evaluating foreign applicants for operating specifications.

DATES: Effective January 16, 2025.

ADDRESSES: For information on where to obtain copies of rulemaking documents and other information related to this final rule, see ''Additional Information'' in the **SUPPLEMENTARY INFORMATION** section of this document.

FOR FURTHER INFORMATION CONTACT: Tim Shaver, International Program Division/ International Operations Branch, Federal Aviation Administration, 800 Independence Avenue SW, Washington, DC, 20591; telephone (202) 267–1704; email *tim.shaver@faa.gov*.

SUPPLEMENTARY INFORMATION:

I. Authority for This Rulemaking

The FAA's authority to issue rules on aviation safety is found in title 49 of the United States Code. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the FAA's authority.

This rulemaking is issued under the authority described in subtitle VII, part A, subpart III, section 44701(a)(5). Under that section, the FAA is charged with promoting safe flight of civil aircraft in air commerce by prescribing regulations and minimum standards for practices, methods, and procedures the Administrator finds necessary to ensure safety in air commerce. This regulation is within the scope of that authority. Amending the regulations for applications for operations specifications under part 129 submitted by foreign air carriers or foreign persons, and the related standards for denial of

such an application for operations specifications authorizations, improves the FAA's ability to manage these authorizations. These operations specifications are issued to foreign air carriers operating within the United States and to foreign air carriers or foreign persons conducting operations of U.S.-registered aircraft solely outside the United States.

II. Executive Summary

A. Purpose of the Regulatory Action

Prior to this action, FAA regulations required that foreign applicants for operations specifications must hold a valid air operator certificate (AOC) issued by the State of the Operator. See 14 CFR 129.7(c)(5). Requiring the operator to hold an AOC issued by the State of the Operator is consistent with the standard in Annex 6, Volume 1 to the Convention on International Civil Aviation, which directs that an operator shall not engage in commercial transport operations unless in possession of a valid AOC issued by the State of the Operator.[1]

Some International Civil Aviation Organization (ICAO) Contracting States have joined together to form Regional Safety Oversight Organizations (RSOO). These organizations may provide a uniform regulatory structure for safety oversight and provide technical assistance and the execution of safety oversight functions for their member States. RSOOs have been established in many parts of the world. These organizations may be formed based on a variety of differing arrangements among member States. The institutional structures of these organizations range from highly formalized intergovernmental organizations established on the basis of formal legal agreements to less formalized organizations established under the ICAO Cooperative Development of Operational Safety and Continuing Airworthiness Program.[2]

As stated in ICAO guidance, ''under the Chicago Convention, only the State has responsibility for safety oversight, and this responsibility may not be transferred.'' [3] The guidance further states that, although the State may delegate specific safety oversight tasks and functions to an RSOO, such as inspections for the certification of an operator, the State must still retain the minimum capability required to carry out its responsibilities under the Chicago Convention. States must always be able to properly and effectively monitor the safety oversight functions delegated to the RSOO.[4]

States participating in RSOOs may delegate or transfer various functions or tasks to these organizations as stipulated in the RSOO's formation documentation. As provided in ICAO guidance, one of the functions member States may delegate or transfer to a highly formalized and more fully resourced RSOO is the issuance of AOCs for the State of the Operator.[5]

In those instances where an AOC is issued by an RSOO rather than the member State, this regulation change now allows the FAA to review supporting documentation for applications for foreign air carrier operation specifications and, if acceptable to the Administrator, recognize as valid (*i.e.,* ensure that it conforms to ICAO standards) AOCs issued by an RSOO to foreign air carriers if the State of the Operator is a member State of that RSOO.

B. Changes Made in This Final Rule

This rule amends the regulations for applications by foreign air carriers and foreign persons for operations specifications under 14 CFR part 129 and amends regulations for the denial of applications for operations specifications. This rule amends three sections in subpart A of part 129: § 129.1, Applicability and definitions; § 129.7, Application, issuance, or denial of operations specifications; and § 129.9, Contents of operations specifications. Based on the comments received in response to the notice of proposed rulemaking, the FAA has revised the rule language to clarify the requirements and remove any ambiguity regarding the intent of the amendments. See section III.C. of this preamble.

III. Background

A. Summary of the NPRM

On May 22, 2024, the FAA published the notice of proposed rulemaking (NPRM) titled ''Foreign Air Operator Certificates issued by a Regional Safety Oversight Organization'' (89 FR 44935). The FAA also posted draft guidance material for the proposal, ''FAA Order 8900.1, Volume 12, Chapter 2, Section 2,'' for comment in the NPRM docket. The NPRM proposed to amend the regulations for applications by foreign air carriers and foreign persons for operations specifications under 14 CFR part 129 and the regulations for the denial of applications for operations specifications.

B. General Overview of Comments

The FAA received four comments.[6] The agency received comments from one individual and three associations representing industry and labor constituencies. One of the associations supported the rule. Two of the associations opposed the rule, as discussed more fully in section IV. The FAA received comments on the proposal that addressed: support for the rule change; International Aviation Safety Assessments (IASA) for RSOOs; the number of IASAs needed; legal basis concerns; validation of Safety Management Systems (SMS) in IASAs for RSOO member States; and safety concerns.

In addition, on September 17, 2024, after the comment period closed, representatives of the Department of Transportation, Department of State, Department of Commerce, and Federal Aviation Administration met with representatives from Directorate-General Mobility and Transport (DG MOVE), European Aviation Safety Agency (EASA), and European Union (EU) Member States for a special meeting of the Joint Committee established by the U.S.—EU Air Transport Agreement. During the meeting, DG MOVE raised concerns with this rulemaking effort. A summary of the meeting has been posted to the docket for this rulemaking.

C. Differences Between the NPRM and the Final Rule

In the NPRM, the FAA proposed to establish new definitions in 14 CFR 129.1 for ''Regional Safety Oversight Organization'' and ''State of the Operator.'' As discussed more fully later in the preamble, the final rule revises the RSOO definition to clarify the relationship between a member State and an RSOO and the transfer of responsibilities between the entities to fully address the Air Line Pilots Association's (ALPA's) comment, which expressed concerns about a ''legal fiction.'' The FAA is finalizing the

[1] Annex 6, Volume 1, 4.2.1.1.

[2] Information for ICAO Cooperative Development of Operational Safety and Continuing Airworthiness Program (COSCAP) is contained in the ICAO Safety Oversight Manual, Part B, The Establishment and Management of a Regional Safety Oversight Organization, Doc. 9734, 2011.

[3] *Safety Oversight Manual, Part B, The Establishment and Management of a Regional Safety Oversight Organization,* Doc. 9734, 2011.

[4] Id. at 2.1.8.

[5] See id. at 4.1.10, which indicates that issuance of certificates may be delegated but states that ''the day-to-day surveillance of service providers remains the responsibility of the civil aviation authority (CAA) of member States.'' In addition, see Sections IV.D, IV.F., and V.C. for discussion of the FAA's intent to file a difference as the standard under the Chicago Convention directs issuance of an AOC by the State of the Operator.

[6] One comment concerning Boeing employment practices was outside the scope of this rulemaking.

definition of ''State of the Operator'' as proposed.

As proposed in the NPRM, the FAA is amending § 129.7 to accommodate the recognition as valid by the FAA of AOCs issued by an RSOO on behalf of the State of the Operator. Based on the comments received, the FAA is revising § 129.7(c)(5) in the final rule to eliminate the term ''on behalf of'' to clarify the relationship between, and responsibilities of, the State of the Operator and an RSOO. This final rule also clarifies the FAA will accept an AOC only ''*if* acceptable to the Administrator,'' whereas the NPRM limited this to the RSOO-issued AOCs and used the phrase ''*as* acceptable to the Administrator'' (emphasis added). The final rule adds ''if acceptable to the Administrator'' to § 129.7(c)(5) and adds paragraphs (c)(5)(i) and (ii) to stipulate the FAA may accept an AOC issued by (i) the State of the Operator, or (ii) an RSOO if the State of the Operator is a member State of that RSOO.

In the NPRM, the FAA proposed an additional amendment to § 129.7(d) to align the conditions for the FAA's denial of an application for operations specifications with the conditions for eligibility for issuance of operations specifications. This amendment is adopted as proposed.

The FAA also proposed to amend § 129.9(a)(3) to reflect the possible acceptance and recognition as valid by the FAA of AOCs issued by an RSOO on behalf of the State of the Operator. The final rule simplifies the regulatory text in § 129.9(a)(3) and (b)(3) by removing the specification that an AOC may be issued by the State of the Operator or an RSOO. The FAA determined that the regulatory text in § 129.7(c)(5) establishes the basis for the FAA to accept a valid AOC, if acceptable to the Administrator, issued by (i) the State of the Operator; or (ii) an RSOO if the State of the Operator is a member State of that RSOO. Repeating this language in § 129.9 is unnecessary and redundant.

D. Related Actions

Section 369 of the FAA Reauthorization Act of 2024 amended chapter 447 of title 49 U.S.C. by adding section 44747, titled ''Aviation safety oversight measures carried out by foreign countries.'' [7] This amendment codified the FAA's IASA program. The IASA program is the means by which the FAA determines whether another country's oversight of its air carriers that (1) operate, or seek to operate, services to/from the United States using their own aircraft and crews, or (2) seek to display the code of a U.S. air carrier on any services, complies with safety standards established by ICAO. The published IASA results of a country's placement in Category 1 or Category 2 is the notification to the U.S. traveling public as to whether a foreign air carrier's State civil aviation authority (CAA) meets ICAO safety standards. A Category 1 rating indicates that the CAA meets ICAO safety standards for these operations, and a Category 2 rating indicates that the CAA does not meet ICAO safety standards.

On August 16, 2024, the FAA published a notice in the **Federal Register** (89 FR 66546) announcing the agency's suspension of policy changes to the IASA program that had been announced in a September 28, 2022,[8] Policy Statement, and a second notice in the **Federal Register** on the same day inviting public comments on proposed changes to the FAA IASA program policy (89 FR 66645). The comment period for the proposed policy closed on September 16, 2024, and the FAA is currently considering the comments received.

IV. Discussion of Comments and the Final Rule

A. Support for the Rule Change

The National Business Aviation Association (NBAA) expressed support for the FAA's proposed changes to part 129 that would recognize AOCs issued by an RSOO. NBAA cited as an example the EASA, which has developed competency across a growing range of aviation capabilities, and with the further growth of mutual recognition of capabilities between FAA and EASA, the acceptance of certificates issued by EASA will greatly enhance process efficiency and approval consistency for European commercial operators seeking to access the United States. NBAA also stated that RSOOs meeting the requirements set forth in the proposed changes will benefit from this recognition along with commercial operators.

NBAA stated that as regulators seek to improve safety oversight efficiency and reduce process redundancies for operators and government agencies, efforts like this rulemaking will allow governments and industry to more efficiently deploy safety resources to operate in a global environment.

Allied Pilots Association (APA), while not supporting the rulemaking, acknowledged in its comment that it recognizes the vital importance of collaboration and cooperation when it comes to global aviation safety. As a result, APA indicated it understands the value that RSOOs can provide in promoting aviation safety oversight and stated APA's position on the proposed rule change should not be viewed as a criticism of RSOOs in general or the desire for ICAO member States to collaborate in the name of aviation safety.

The FAA acknowledges the support of the rulemaking expressed by NBAA and the overall support of RSOOs and their contribution to safety oversight expressed by APA.

B. International Aviation Safety Assessments (IASA) for RSOOs

ALPA commented the FAA must conduct a detailed inquiry of the level of participation of a State's CAA in the activities of the RSOO and all associated safety activities but stated the NPRM is unclear on whether the FAA would conduct an IASA of the RSOO itself.

ALPA stated it is unclear whether any RSOO is currently equipped with the correct process, procedure, personnel, and financial stability to serve in the role as a permanent regulatory oversight agency ''on behalf of'' the State of the Operator. ALPA believed the FAA should ensure that the regional oversight entity has sufficient ''boots on the ground'' (auditors and line inspectors with the right skillsets and training, funded by adequate resources, and backed by management with the requisite will to ensure compliance) to be fit for the purpose of satisfying each of those States' treaty obligations.

ALPA contended the FAA could determine all eleven of the ICAO-recognized RSOOs to be IASA Category 1, by default, which would generate unacceptable safety risks.

ALPA asserted the FAA must first complete an IASA for each RSOO before approving or renewing any new AOC from an RSOO. Then, once a specific AOC application is received by the FAA that invokes an RSOO/State AOC arrangement, ALPA believed the FAA should conduct a separate IASA review of the RSOO/State plan for AOC oversight of the air carriers applying to operate under part 129.

Although APA did not specifically suggest the FAA conduct IASAs on RSOOs, APA stated that due to the varying levels of formality in structure among the currently existing RSOOs, each AOC issued by an RSOO would have to be reviewed and analyzed for validity and appropriateness before being recognized by the Administrator. APA asserted this would require the Administrator to review and understand the approval and issuance process of

[7] Public Law 118–63 (May 16, 2024).

[8] 87 FR 58725.

each RSOO to be able to determine if the applicant's operator certificate should be recognized as valid. As a result, APA believed the proposal makes the application review process more cumbersome and complex.

The FAA generally disagrees with the concern expressed by APA about this rule change, adding complexity and additional burden to the FAA's IASA program. However, the FAA agrees with APA that each AOC issued by an RSOO must be reviewed for validity before being recognized by the Administrator.

The responsibility for ensuring compliance with international standards established under the Chicago Convention falls to the member States as parties to the Convention. As such, the FAA IASA program assesses the CAA for the State of the Operator. Specifically, the IASA program assesses and determines the State of the Operator's compliance with the standards in ICAO Annex 1 (Personnel Licensing), Annex 6—Part 1 and Part 3 (Operation of Aircraft), and Annex 8 (Airworthiness of Aircraft). The FAA reviews the CAA's compliance by assessing ICAO's eight critical elements of effective aviation safety oversight in the ICAO Document 9734, Safety Oversight Manual. Those eight critical elements include:

1. Primary aviation legislation
2. Specific operating regulations
3. State civil aviation system and safety oversight functions
4. Technical personnel qualification and training
5. Technical guidance, tools, and the provision of safety-critical information
6. Licensing, certification, authorization, and approval obligations
7. Surveillance obligations
8. Resolution of safety concerns

When a CAA, as a member of an RSOO, transfers a task or function to the RSOO, the FAA expects the transfer to be documented in an agreement, treaty, or informal written record of the parties' understanding that is available for review by the Administrator.[9] This includes filings with ICAO outlining the arrangement between the RSOO and its member States.

While the State of the Operator may transfer responsibility for certain tasks and functions to an RSOO, it cannot transfer its responsibility under the Chicago Convention. The FAA will continue to assess the State of the Operator as the responsible party for compliance with the ICAO standards. This assessment will ensure the State maintains the responsibility for the issuance and continued oversight of the AOC by the RSOO. When the State transfers the function of issuance of an AOC to an RSOO, the transfer documentation established by the State and the RSOO will be used by the FAA to determine which organization has responsibility for each task and function associated with issuance of an AOC. The FAA will use existing IASA procedures to assess the State to ensure the correct process, procedure, personnel, and financial stability necessary to accomplish transferred tasks or functions meet ICAO standards. The FAA does not believe the nuance of determining if the transferred task or functions is accomplished by the RSOO or retained by the State of the Operator adds a significant level of complexity to the process.

As such, the FAA does not anticipate an IASA on an RSOO will be required to determine whether the CAA complies with the ICAO standards. For AOCs issued by the RSOO, however, the FAA will review the formation documentation for each RSOO and each RSOO-issued AOC for validity and consistency with ICAO standards. In the case of AOC issuance, the specific requirements that must be validated are only a small subset of ICAO standards. In most cases, the FAA expects that RSOO-issued AOCs will have been issued for States that have been assessed by the FAA, already resulting in an IASA Category 1 rating. Therefore, with the transfer of functions and duties to an RSOO, the FAA would conduct a more focused evaluation of the specific requirements associated with AOC issuance for the country in question. As a party to the Chicago Convention, the State remains the accountable organization to be assessed by the FAA under an IASA, and the RSOO is expected to participate in the IASA assessment as an observer for transferred functions.

For all RSOO member States that have not had an IASA conducted by the FAA previously, an assessment of compliance with the ICAO standards for issuance of an AOC (including any functions or tasks transferred to an RSOO) will be done as part of the initial IASA for that State. An initial IASA of the State of the Operator must be completed before the FAA may accept an RSOO-issued AOC for that State. The RSOO may observe and support the State during the IASA to provide information about the RSOO's roles and responsibilities for the tasks and functions as transferred by the State.

C. Increased Number of IASAs

ALPA stated that the FAA has incorrectly assumed that it will not need to increase the number of IASA assessments. ALPA contended the FAA will need to assess each RSOO at issue, which has never been assessed before. ALPA stated the FAA will need to conduct specific reviews of the national CAAs to which an RSOO may delegate certain functions. ALPA was concerned that if more assessments are needed, the FAA ''will simply subtract one'' from its average number of five IASAs typically completed per year. ALPA contended that doing fewer assessments, not more, does not represent an equivalent level of safety and that a foreign entity's desire for an assessment must not overwhelm the FAA's obligation to determine what is in the U.S. public interest.

The FAA understands ALPA's concern but does not expect the number of IASA assessments to increase in the near term, given the FAA is aware of only one RSOO issuing AOCs for member States, to date. The FAA also does not expect a decrease in the number of IASAs conducted on average, historically.

As indicated previously, the FAA will continue to conduct IASAs for States that seek to initiate service to the United States, or for those States that have been identified as requiring a reassessment based on risk factors, whether the operator's AOC is issued by the State of the Operator or an RSOO. During an initial IASA evaluation of the State, the transferred functions will be assessed by the FAA to determine compliance with ICAO standards.

If a State previously assessed by the FAA as IASA Category 1 subsequently transfers the function of AOC issuance to an RSOO, the FAA's regulatory process for AOC validation includes ensuring the ICAO standards and eight critical elements for those standards are still being met for that specific function without conducting a full IASA. If the FAA's evaluation of the transferred function cannot establish ICAO compliance using the established validation process, the AOC will not be accepted by the FAA. The FAA does not anticipate conducting a complete IASA reassessment solely based on transfer of the function of issuance of an AOC to an RSOO. The lack of confirmation of compliance with ICAO AOC standards due to the transfer of the function to an RSOO would, however, be included as a risk consideration when the FAA is reviewing a State for IASA reassessment.

[9] See ICAO Doc. 9734, Part B, 3.3.4, which states ''[w]hat is the most important consideration here is that the legal status of the RSOO, the scope of its functions and the extent of delegated legal authority are clearly determined and stipulated in the agreement document.''

The FAA uses a risk analysis process to identify IASA Category 1 countries for reassessment. The risk analysis is performed at least annually and whenever new safety information is obtained on each country on the IASA Category Rating list to determine countries of highest risk to the U.S. National Airspace System (NAS) and the U.S. traveling public. The risk analysis was developed by FAA experts and is comprised of individual risk elements and grouped into the following five major IASA risk categories:

(1) Department of Transportation Economic Authority—New or existing U.S. DOT economic authority; own-metal U.S. service under part 129; new or current codeshare involving display of U.S. air carrier code on foreign operator flights; and any U.S. DOT administrative emphasis items and initiatives.

(2) Governance and Safety Culture—Areas of interest include: contracting of safety oversight functions; carrier wet lease to airlines of other countries; safety items identified by the CAA remain unresolved or not addressed; complaints received by FAA from other CAAs, operators, manufacturers, and the traveling public.

(3) IASA Information—Time passed since the last IASA, and other factors that indicate the Category 1 rating may no longer be valid.

(4) ICAO Requirements—Risk concerns include: negative ICAO Universal Safety Oversight Audit Program (USOAP) findings indicating noncompliance with one or more of the eight critical elements of safety oversight; ICAO reports indicating noncompliance with Standards and Recommended Practices (SARPs); inaction with respect to ICAO action plans; ICAO USOAP information over two years old thus limiting its value.

(5) FAA Information—FAA has safety concerns about the oversight provided by the CAA, which include the areas of: FAA and foreign ramp inspections; safety-related complaints about carrier(s) from other CAAs; active technical assistance activities; compliance issues are present in FAA certificated or approved entities in the country; Congressional inquiries; and existing bilateral agreement implementation procedures.

The risk associated with the FAA's inability to validate ICAO compliance due to a transfer of tasks or functions would be included in the ICAO requirements category of risks.

The FAA mitigates identified State safety oversight risks by placing all carriers from that State, authorized to operate to the United States, under heightened surveillance until the IASA reassessment is completed.[10] In extreme cases where safety or oversight risks cannot be mitigated, the FAA has regulatory authority to remove the authorization from any or all carriers authorized to operate from that State.[11]

D. Legal Basis Concerns

ALPA and APA expressed concerns about the legal basis and compliance with ICAO standards associated with the proposed rulemaking. ALPA stated the proposal seems contradictory. ALPA commented that on one hand, the FAA's proposal seeks to overcome the Chicago Convention's clear instruction by stating that the regional oversight entity would be acting ''on behalf of'' a State and thus would purportedly comply with the treaty. ALPA contended that as a result, the proposal would hold the State to account, even though the State would designate the regional entity as the responsible authority. ALPA stated, on the other hand, the proposal recognizes the regional entity would be responsible, and U.S. recognition of operating licenses would be at odds with U.S. obligations under the treaty, such that a ''difference'' would have to be filed by the United States with ICAO.

ALPA asserted the FAA's regulatory language ''on behalf of,'' as in ''on behalf of the State of the Operator,'' introduces ambiguity because the entity doing the acting (on behalf of) is the one with actual responsibility. ALPA commented that this ''legal fiction is to be a workaround from what ICAO admits being the role of the RSOO . . .''

ALPA commented that the Chicago Convention recognizes the value in a clear line of responsibility from a national government authority to an air carrier and that only States are deemed the valid issuers of such a license, in accordance with ICAO Guidance on RSOOs.[12] ALPA had significant concerns about how an RSOO's relationship with the State of the Operator will work in practice, including a concern that an RSOO often delegates responsibilities for AOC oversight back to the State of the Operator. ALPA urged the FAA to deem the RSOO, not the State of the Operator, to be ''ultimately responsible for the IASA'' assessment.

For an existing IASA Category 1 State, the FAA's assessment has already established the State complies with ICAO standards for the issuance of an AOC. The FAA Order 8900.1, volume 12, chapter 2, section 2 procedure for the evaluation of AOC issuance and subsequent transfer of the tasks and functions then focuses on ensuring all the required tasks and functions for AOC oversight are addressed, and the responsibility for each of those tasks or functions is clearly defined. The FAA procedure also ensures that there is evidence in the transfer documentation that covers the roles and responsibilities necessary for the continued compliance of the AOC holder with the ICAO AOC standards during the life cycle of the AOC. If the FAA cannot determine compliance, the AOC will not be accepted by the FAA until compliance with the required ICAO standards can be confirmed by the FAA.

To the extent that ALPA suggests that, to act in compliance with the Chicago Convention, an AOC may only be issued by the State of the Operator, the FAA disagrees. The Chicago Convention does not speak directly to the issuance of AOCs. Rather, there is a standard in Annex 6, Volume 1 that prohibits an operator from engaging in commercial air transport operations unless the operator possesses a valid AOC issued by the State of the Operator. While a member State must comply with its obligations under the Chicago Convention, Article 38 allows a State to file a difference with ICAO to acknowledge differences between the State's own practices and those standards established in the Annexes to the Convention. Consistent with the obligation to provide notice of a difference, the FAA will file a difference to 4.2.1.1 of Annex 6, Volume 1, acknowledging the FAA's acceptance of RSOO-issued AOCs when the Administrator determines they are acceptable (*i.e.,* issued in conformance with ICAO standards for AOCs).

To the extent the commenters suggest the characterization that an RSOO issues AOCs ''on behalf of'' a member state is in conflict with the FAA's determination that a difference must be filed, the FAA finds that the two concepts are not irreconcilable. However, the FAA has determined that certain clarifying changes, identified in

[10] The FAA notes that, in addition to the heightened surveillance, the FAA proposed changes to the IASA program in the **Federal Register** (89 FR 66645, August 16, 2024). In that NPRM, the FAA proposed to establish a Category 1* rating to be applied when the FAA has determined through the FAA risk assessment process that a Category 1 country should be reassessed based on identified risks of possible noncompliance. The comment period closed on September 16, 2024, and the FAA is considering the public comments and developing a final policy notice.

[11] See 14 CFR 129.11(b) and (g).

[12] See ICAO Doc. 9734, Part B, 7.5.12, which states that ''where a harmonized regulatory framework prevails in a region, the civil aviation authorities of member States will remain the sole authority for the issuance of licences and operator certificates, approval of aircraft maintenance organizations, approval of design and production organizations, and approval of training centres.''

the following discussion, should be made to the regulatory text in this final rule.

ICAO acknowledges in its guidance that existing RSOOs have taken a variety of forms, ranging from a relatively loose association of CAAs that have agreed to cooperate in the development and implementation of requirements and procedures, to an intergovernmental organization with regulatory and, to some extent, enforcement authority. According to ICAO, the form that an RSOO takes will primarily be determined by the needs of its members, the level of available resources, the scope of activities, the level of authority delegated by member States, and, in certain cases, the legislative framework already established by the group or community of States creating the RSOO.[13]

Given the varying frameworks that RSOOs may take, the FAA agrees that it is critical for States to maintain and demonstrate clear lines of responsibility [14] in order for the FAA to properly assess the acceptability of an AOC issued by an RSOO in place of the State of the Operator. The final rule enables FAA review of the RSOO and State of the Operator formation documentation to ensure the transferred tasks and functions associated with the issuance and continued surveillance of the AOC holder are clearly defined and that the ICAO standards for assessing the AOC applicant have been met. See definition of RSOO in § 129.1 of the final rule. This final rule further ensures the FAA review of all ICAO Standards related to AOC issuance that are assessed during an IASA.

The transferred function affected by this rulemaking, which the FAA has determined would necessitate filing a difference from ICAO standards, is limited to the transfer of responsibility for issuing the AOC from a member State to an RSOO. However, the FAA recognizes there could be significant variability between the responsibilities of RSOOs and which AOC issuance functions are transferred to them by member States. When a CAA transfers functions related to AOC issuance or the conduct of oversight-related tasks in conjunction with AOC issuance to an RSOO, the State of the Operator is still responsible for ensuring that the transferred functions continue to comply with ICAO standards. Therefore, the FAA disagrees with ALPA's assertion the FAA should hold the RSOO ultimately responsible for the IASA.

Nevertheless, the FAA agrees with ALPA that the language ''on behalf of'' included in the NPRM introduces unnecessary ambiguity and an apparent, though unintended, conflict with the FAA's position that a difference must be filed with ICAO as a result of this rulemaking.

Therefore, the FAA revised the text of the final rule in § 129.7 to remove this qualifier. This final rule also clarifies the FAA will only accept an AOC issued by the State of the Operator or an RSOO ''*if* acceptable to the Administrator'' (emphasis added). In addition, the FAA is making corresponding changes to the definition of RSOO in § 129.1 to reflect that authority may either be formally delegated between the member States and the RSOO or tasks and functions may be less formally transferred or assigned. The changes to §§ 129.1 and 129.7 are otherwise adopted as proposed.

As for the concerns about transfer of tasks and functions related to the issuance of an AOC from the State of the Operator to the RSOO and subsequent transfer of oversight-related tasks or functions pertaining to AOC issuance back to the State of the Operator, the FAA agrees these roles and responsibilities must be clearly defined, documented, and understood. The final rule ensures the FAA must review the documented transfer of all tasks and functions related to the issuance of an AOC from the State of the Operator to the RSOO.

Consistent with the FAA's proposal for accepting an AOC from an RSOO, the RSOO must meet the FAA's definition of RSOO in 14 CFR 129.1, which, as updated for this final rule, is an association or organization that comprises a group of member States, which—(i) Has provided notification to ICAO of the scope of tasks and functions delegated or transferred to the RSOO, including but not limited to: sharing common or harmonized aviation regulations, licensing, certification, authorization, approval, and surveillance of civil aviation activities, and any legal authority delegated or transferred by a member State to the RSOO; and (ii) Has stipulated the specific tasks, functions, delegations, and transfers by member States discussed in paragraph (c)(2)(i) of § 129.1, and any other collective understandings of member States in RSOO formation documentation, such as an agreement, treaty, or informal record, that is available for review by the Administrator.

The FAA will verify that each task or function required by ICAO Annex 6 standards is included in the transfer and formation documentation and the organizational responsibility for each is clearly defined. Consistent with the definition of RSOO, the RSOO formation documentation should outline not only the roles and responsibilities for tasks and functions necessary for the issuance of the AOC but also for the tasks and functions for continued oversight of the AOC during its full life cycle, for the FAA to fully evaluate an RSOO-issued AOC. The FAA acknowledges that there may be a transfer of tasks and functions back to the State of the Operator. This is not an unusual practice and could be a result of the RSOO leveraging the member State's availability of trained and qualified personnel needed for the evaluation of the carrier for initial certification.

The FAA uses a similar practice for certification of United States part 121 air carriers. The part 121 certification process is a cooperative effort between the Certification and Evaluation Program Office (CEPO) of the Safety Analysis and Promotion Division and the Office of Air Carrier Safety Assurance (ACSA). The CEPO is a dedicated group of aviation safety inspectors (ASIs) with experience in the details and nuances of initial Air Carrier certification. The CEPO assigns an assistant manager as the Certification Front Line Manager (CFLM) and a qualified CEPO team leader as the certification project manager (CPM). The CEPO initiates the certification and directs the project through all phases of the certification process. The ACSA assigns the certificate management office (CMO) and establishes a Certificate Management Team (CMT) to perform Continued Operational Safety (COS) oversight after certification. The Certification Project Team (CPT) will include ASIs from the CEPO and the ACSA. These dedicated inspectors then turn the continued surveillance of the operator to the CMO to perform the oversight functions for the carrier. This is done to ensure standardization of air carrier certification.

Transfer of tasks or functions from the State of the Operator to an RSOO may provide a similar benefit of targeting resources with detailed experience in the initial certification of air carrier, working in concert with those

[13] ICAO Doc. 9734, Part B, 2.2.6.

[14] See ICAO Doc. 9734, Part B 2.1.8, which states ''Under the Chicago Convention, only the State has responsibility for safety oversight, and this responsibility may not be transferred to a regional body. Thus, although the State may delegate specific safety oversight tasks and functions to an RSOO, such as inspections for the certification of an operator, the State must still retain the minimum capability required to carry out its responsibilities under the Chicago Convention. States must always be able to properly and effectively monitor the safety oversight functions delegated to the RSOO.''

responsible for continued oversight of the air carrier.

E. Validation of SMS in IASAs for RSOO Member States

ALPA recommended the FAA take the opportunity to expand its own IASA program by ensuring the novel regional safety organization requires its licensees to fully comply with SMS, a critical element that ICAO has implemented to address a root cause of accidents and incidents. ALPA asserted the FAA has the discretionary power, as well as an obligation to flight crews, the traveling public, and the international community, to evaluate RSOO member State implementation of SMS. Moreover, ALPA noted one such RSOO, EASA, appears headed toward conducting such SMS audits, which ALPA stated is a welcome development.

The FAA's current IASA program includes evaluation of a State's aviation oversight program for compliance with ICAO Annex 1, Annex 6, and Annex 8. Neither the current IASA Notice of Policy Statement [15] nor section 369 of the FAA Reauthorization Act of 2024 codifying the IASA program in 49 U.S.C. 44747 include Annex 19 Safety Management requirements for this program. The inclusion of these requirements was not contemplated in the NPRM and is therefore beyond the scope of this rulemaking.

F. Safety Concerns

ALPA contended the proposed rule would create significant safety concerns that were not addressed in the NPRM. Specifically, ALPA contended an RSOO that has aircraft certification oversight, and oversees AOCs, could determine that when using certain aircraft certified by the RSOO, airline flights could be conducted with only a single pilot on the flight deck while the second pilot is resting or otherwise unavailable to serve as the second pilot. ALPA commented that the RSOO's certification and AOC approval combined would potentially allow a significant safety threat to occur in airspace managed by the United States, unraveling many of the advances in airline safety that have been achieved in the United States. ALPA urged the FAA to be extremely vigilant and consider unintended safety consequences of allowing RSOOs to simultaneously operate as an aircraft certification organization and AOC oversight organization.

APA stated that delegating the authority to determine whether a carrier or person has satisfied those standards to a regional organization, which may have competing political or industrial influences, allows for the possibility the standards will be unintentionally deteriorated or altered. To eliminate the possibility for such deterioration or alteration, the FAA should not amend the current regulations to allow the acceptance of an RSOO-issued operator certificate in lieu of one issued directly by the State of the Operator.

Finally, APA contended even where a member State has elected to delegate the authority to issue operator certificates to an RSOO, the member State must still retain the ability to issue operator certificates on its own. Accordingly, maintaining the regulatory status quo would not adversely impact a foreign applicant's ability to obtain operating specifications from the FAA because they remain able to obtain an operator certificate issued by the State of the Operator.

The FAA understands this concern but disagrees with the premise that the role of an RSOO in the issuance of an AOC alone, as promulgated in this rulemaking, could introduce risks such as foreign air carrier single pilot operations in the United States. The cited concern would not be the result of this rulemaking allowing the FAA to accept an RSOO-issued AOC. This could similarly be an issue for AOCs issued by the State of the Operator should that State apply a risk-based approach allowing one pilot to fly while the other rests. In either case, foreign air carriers approved for operations into the United States must still comply with all applicable FAA rules and regulations, including the conditions and limitations set forth in their operations specifications. The FAA notes that, to date, no part 121 or 129 air carriers have been authorized by the FAA to operate with a single pilot at the controls.

While not directly subject of this rulemaking, the FAA will consider the risk of single pilot operations identified by ALPA for all foreign AOC applicants and adjust our policy as required to ensure these risks are properly mitigated or prohibited during our evaluation of the proposed operation to ensure the operator is properly and adequately equipped to conduct the operations described in the operations specifications.

The FAA notes ICAO Annex 6, Part 1, paragraph 9.1.1 addresses composition of flight crews. It states:

> The number and composition of the flight crew shall not be less than that specified in the operations manual. The flight crews shall include flight crew members in addition to the minimum numbers specified in the flight manual or other documents associated with the certificate of airworthiness, when necessitated by considerations related to the type of aeroplane used, the type of operation involved and the duration of flight between points where flight crews are changed.

The number of crew required not only drives the type certification requirements listed in the operations manual but also the type of operation. This standard allows the FAA to ensure the risks of any operation have been identified, assessed, and properly mitigated.

The FAA agrees the State of the Operator is responsible for establishing requirements for issuing AOCs that are compliant with the ICAO standards. The FAA's IASA program validates the State's compliance with these ICAO standards. When the tasks or functions related to AOC issuance or oversight activities pertaining to AOC issuance are transferred to an RSOO, the State of the Operator is still responsible for ensuring the transferred functions continue to comply with ICAO standards even if the State of the Operator did not issue the AOC. This remains true whether States transfer all or part of the AOC issuance tasks or functions for a specific carrier or retain the ability to issue other AOCs in their State.

The FAA also agrees that vigilance is needed when issuing part 129 operation specifications. As such, there are additional regulatory requirements, and a valid AOC is only one part of the requirements for issuing a foreign operator a part 129 authorization. Section 129.7(c) lists all the requirements for issuance of operations specifications for authorization to conduct service to the United States.

Introduction of risks when authorizing part 129 operations is addressed through the evaluation of the carrier to ensure they are properly and adequately equipped to conduct the operations described in the operations specifications and are in compliance with the requirements of part 129. Also, 14 CFR 129.5(b) states ''Each foreign air carrier conducting operations within the United States must conduct its operations in accordance with the Standards contained in Annex 1 (Personnel Licensing), Annex 6 (Operation of Aircraft), Part I (International Commercial Air Transport—Aeroplanes) or Part III (International Operations—Helicopters), as appropriate, and in Annex 8 (Airworthiness of Aircraft) to the Convention on International Civil Aviation.''

These steps ensure all foreign commercial operations are properly

[15] *International Aviation Safety Assessment (IASA) Program Change,* Policy Statement (78 FR 14912, March 8, 2013).

assessed, and any associated risks are appropriately mitigated. This is true not only for carriers issued AOCs by RSOO but all carriers requesting authorization to operate to the United States.

The FAA intends to file a difference with ICAO because the acceptance of RSOO-issued AOCs reflects a departure from the international standard in ICAO Annex 6, paragraph 4.2.1.1 to the extent the means of compliance in this final rule is different from the corresponding standard in Annex 6. However, the FAA's assessment of the formation documentation between the member State and RSOO to validate the ICAO standards for issuing an AOC have been met will ensure an equivalent level of safety.

G. Miscellaneous Amendments

As previously noted, the FAA proposed to amend § 129.9(a)(3) to reflect the possible acceptance and recognition as valid by the FAA of AOCs issued by an RSOO on behalf of the State of the Operator. In this final rule, the FAA has revised the regulatory text proposed for 14 CFR 129.9(a)(3) and (b)(3) by removing the reference that an AOC may be issued by the State of the Operator or an RSOO. This language is unnecessary in this context since the application requirements in 14 CFR 129.7(c)(5) specify the issuing entities from which the FAA may accept AOCs. Removal of this duplicative language is a technical amendment and not a substantive change.

H. Effective Date

The FAA determined to apply a 30-day effective date to this final rule. Therefore, this final rule will take effect 30 days after publication in the **Federal Register**. The FAA generally applies a longer effective date to final rules to allow time for the impacted regulated community to prepare to come into compliance with the requirements of a final rule. However, this final rule is considered to be enabling to the extent the FAA is expanding the options for AOC acceptance by the FAA for purposes of applications for part 129 operations specifications. The FAA expects the effective date of this final rule to benefit the impacted community of operators seeking to apply for part 129 operations specifications based on an RSOO-issued AOC by allowing for the earlier submission of an application. The FAA notes that no such applications are currently considered pending before the FAA. Once this final rule takes effect, operators may submit an application to the FAA consistent with revised 14 CFR 129.7, and the FAA will be prepared to begin the review process. During this process, the FAA will ascertain if sufficient information has been provided to validate continued compliance with the required ICAO standards or if an IASA of the State will be required before the AOC can be considered acceptable to the Administrator. The FAA further notes that consistent with § 129.7(a)(2), the application must be submitted to the FAA at least 90 days before the intended date of operation.

V. Regulatory Notices and Analyses

Federal agencies consider the impacts of regulatory actions under a variety of executive orders and other requirements. First, Executive Orders 12866, 13563, and 14094 direct that each Federal agency shall propose or adopt a regulation only upon a reasoned determination that the benefits of the intended regulation justify the costs. Second, the Regulatory Flexibility Act of 1980 (Pub. L. 96–354) requires agencies to analyze the economic impact of regulatory changes on small entities. Third, the Trade Agreements Act (Pub. L. 96–39) prohibits agencies from setting standards that create unnecessary obstacles to the foreign commerce of the United States. Fourth, the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4) requires agencies to prepare a written assessment of the costs, benefits, and other effects of proposed or final rules that include a Federal mandate that may result in the expenditure by State, local, and Tribal governments, in the aggregate, or by the private sector, of $100 million or more (adjusted annually for inflation) in any one year. The current threshold after adjustment for inflation is $183,000,000 using the most current (2023) Implicit Price Deflator for the Gross Domestic Product.

In conducting these analyses, the FAA has determined that this rule: will result in benefits that justify costs; is not significant under section 3(f)(1) of Executive Order 12866, as amended; will not have a significant economic impact on a substantial number of small entities; will not create unnecessary obstacles to the foreign commerce of the United States; and will not impose an unfunded mandate on State, local, or Tribal governments, or on the private sector.

A. Regulatory Impact Analysis

This rule will allow for the FAA's acceptance of AOCs issued by RSOOs, and it will update the regulatory basis for denial of applications for operations specifications. There are no changes to the analysis of this final rule as it was presented in the proposed rule.

Update the Process for Accepting AOCs Issued by RSOOs

Prior to this action, a foreign air carrier applying for operations within the United States or applying to operate U.S.-registered aircraft solely outside of the United States must hold a valid AOC issued by the State of the Operator. The existing regulations do not provide for acceptance of an AOC issued by any other entity other than the State of the Operator. This final rule will allow the FAA to recognize AOCs issued by an RSOO if the State of the Operator is a member State of that RSOO. This allows foreign air carriers with a valid AOC issued by an RSOO, if acceptable to the Administrator, to be issued authorization to operate to and from the United States, providing travel services to citizens of the United States and the foreign countries, economic opportunities for U.S. airlines through code share agreements with these operators, and expanded route structures for these code share partners. This final rule is consistent with ICAO resolutions and guidance, which address the development and use of RSOOs.

Under current practice for operations within the United States, before acceptance of the AOC, the FAA conducts an IASA of the State of the Operator.[16] These assessments involve pre-work and document review in the United States lasting several weeks, followed by an on-site assessment in the State of the Operator lasting five business days. When the State of the Operator is a member of an RSOO, and that State has delegated functions or tasks to the RSOO, this prework would include a review of functions or tasks that are delegated by the State to an RSOO, the scope and level of those delegations, and the need for RSOO participation in assessing the State's compliance with the ICAO standards. The assessments involve two to four inspectors and an attorney. An FAA IASA team incurs traveling costs, such as airfare, lodging, and per diem associated with the travel destination. However, these assessments, including the prework, are not expected to represent an additional cost of the rule because the FAA currently conducts them, and the FAA does not expect any increase in the number of assessments as a result of this rulemaking. Currently, when accomplishing an IASA on a State that has delegated functions or tasks to an RSOO, the FAA reviews that delegation to ensure that the State's and the RSOO's functions and tasks are in

[16] 87 FR 58725 (September 28, 2022).

compliance with the ICAO requirements. Historically, the FAA has conducted, on average, five IASAs each year. As stated previously, there are many factors that determine the number of IASAs that will be accomplished in any given year. These include application for own metal service to the United States by a carrier from a State that has not been assessed where a risk assessment has identified concerns over the State's safety oversight functions which warrant a reassessment. Any risks identified in the course of the FAA's review of an RSOO-issued AOC for acceptance will be included as one factor in the risk assessment for the respective member State.

If the FAA has previously assessed a State of the Operator and that State subsequently delegated functions or tasks, such as issuance of AOCs by the RSOO, the FAA will review the RSOO formation documentation to determine if further assessment to evaluate the continued compliance with ICAO standards is required. If the FAA determines it needs to do further assessment, the State of the Operator's compliance with ICAO standards for issuance of AOCs will be reviewed as part of the annual risk assessment for all IASA-categorized States. Based on the result of the risk assessment, an IASA of that State may be accomplished as one of that year's or future year's IASAs. The FAA does not anticipate requiring an IASA reassessment based solely on the inability to determine compliance with ICAO standards for the transferred function of AOC issuance and the conduct of oversight-related tasks pertaining to AOC issuance between an RSOO and member States. The FAA has many means to reach out to the RSOO and the member State to obtain information concerning questions on compliance. This can involve sending letters for clarification and direct discussions to clarify issues. However, until the State's ICAO compliance can be validated, the RSOO-issued AOC of the operator will not be considered acceptable, and no authorization will be granted.

Update the Regulatory Basis for Denial of Applications for Operations Specifications

The FAA is also amending the conditions under which the FAA can deny the application for operations specifications in subpart A of part 129. Prior to this action, § 129.7(c) specifies that an applicant must meet five conditions to be issued operations specifications. These conditions require that the applicant meets the applicable requirements of part 129; holds the economic or exemption authority required by the Department of Transportation, applicable to the operations to be conducted; complies with the applicable security requirements of 49 CFR chapter XII; is properly and adequately equipped to conduct the operations described in the operations specifications; and holds a valid AOC issued by the State of the Operator. However, § 129.7(d) states that the application may be denied if the applicant is not properly and adequately equipped to conduct the operations described in the operations specifications. The change will expand the basis for denial to any of the five conditions listed in § 129.7(c). The updates to the regulatory basis for denial of applications for operations specifications will not result in any costs. The change will align the basis for denial of an application to the conditions that must be met for issuance of operations specifications. This will allow the FAA to formally deny applications that do not meet the requirements of § 129.7(c) instead of the FAA's current practice of holding the approval of ineligible applications in abeyance until the conditions are met or the applicant withdraws the application. There are no specific costs associated with holding an application in abeyance. The benefit of allowing denial of an application based on not meeting the regulatory criteria is reduction of applications in process and ensuring currency of information provided with an application.

B. Regulatory Flexibility Act

The Regulatory Flexibility Act (RFA) of 1980, Public Law 96–354, 94 Stat. 1164 (5 U.S.C. 601–612), as amended by the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121, 110 Stat. 857, Mar. 29, 1996) and the Small Business Jobs Act of 2010 (Pub. L. 111–240, 124 Stat. 2504, Sept. 27, 2010), requires Federal agencies to consider the effects of the regulatory action on small business and other small entities and to minimize any significant economic impact. The term ''small entities'' comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000.

This final rule will update the regulations for applications by foreign air carriers and foreign persons for operations specifications under part 129. The final rule will apply to foreign air carrier operations within the United States and to U.S.-registered aircraft in common carriage solely outside the United States. Since this final rule only impacts foreign applicants, this rule has no impact on U.S. small entities. If an agency determines that a rulemaking will not result in a significant economic impact on a substantial number of small entities, the head of the agency may so certify under section 605(b) of the RFA. Therefore, as provided in section 605(b) and based on the foregoing, the head of FAA certifies that this rulemaking will not result in a significant economic impact on a substantial number of small entities.

C. International Trade Impact Assessment

The Trade Agreements Act of 1979 (Pub. L. 96–39), as amended by the Uruguay Round Agreements Act (Pub. L. 103–465), prohibits Federal agencies from establishing standards or engaging in related activities that create unnecessary obstacles to the foreign commerce of the United States. Pursuant to these Acts, the establishment of standards is not considered an unnecessary obstacle to the foreign commerce of the United States, so long as the standard has a legitimate domestic objective, such as the protection of safety, and does not operate in a manner that excludes imports that meet this objective. The statute also requires consideration of international standards and, where appropriate, that they be the basis for U.S. standards.

The FAA has assessed the potential effect of this final rule and determined that it ensures the safety of the American public by allowing the acceptance of AOCs issued by an RSOO when reviewed and found acceptable to the Administrator. While this action will result in the United States' filing a difference with ICAO regarding compliance with ICAO Annex 6, paragraph 4.2.1.1, this rule change results in an equivalent action to the standard and is in the public's interest. As a result, the FAA does not consider this rule as creating an unnecessary obstacle to foreign commerce.

D. Unfunded Mandates Assessment

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) governs the issuance of Federal regulations that require unfunded mandates. An unfunded mandate is a regulation that requires a State, local, or Tribal government or the private sector to incur direct costs without the Federal Government having first provided the funds to pay those costs. The FAA determined that the final rule will not result in the expenditure of $183,000,000 or more by State, local, or

Tribal governments, in the aggregate, or the private sector, in any one year.

E. Paperwork Reduction Act

The Paperwork Reduction Act of 1995 (44 U.S.C. 3507(d)) requires that the FAA consider the impact of paperwork and other information collection burdens imposed on the public. According to the 1995 amendments to the Paperwork Reduction Act (5 CFR 1320.8(b)(2)(vi)), an agency may not collect or sponsor the collection of information, nor may it impose an information collection requirement unless it displays a currently valid Office of Management and Budget (OMB) control number.

The FAA has determined that there is no new information collection associated with the requirement for application for foreign air carrier authorization under 14 CFR part 129. In order to apply for operation specifications, the applicant is required to provide a copy of their AOC to the FAA. Under the final rule, the FAA intends to rely on cooperation of RSOOs to obtain the necessary formation documentation referred to in the § 129.1 definition of RSOO. No new information is required from the applicant operator if the AOC is issued by an RSOO. The burden of validation of the AOC remains with the FAA in conjunction with the State of the Operator. Approval to collect such information previously was approved by OMB under the provisions of the Paperwork Reduction Act of 1995 (44 U.S.C. 3507(d)) and was assigned OMB Control Number 2120–0749.

F. International Compatibility

In keeping with U.S. obligations under the Convention on International Civil Aviation, it is FAA policy to conform to ICAO Standards and Recommended Practices to the maximum extent practicable.

The FAA has reviewed the corresponding ICAO Standards and Recommended Practices and has identified the following differences with this final rule. ICAO Annex 6, Part 1, Paragraph 4.2.1.1 requires:

> The operator shall not engage in commercial air transport operations unless in possession of a valid AOC issued by the State of the Operator.

This regulatory change to allow the FAA acceptance of RSOO-issued AOCs for a member State does not comply with this standard.

The FAA has determined this regulatory change results in a different means of compliance to that of the standard in ICAO Annex 6, Part 1, paragraph 4.2.1.1. The FAA intends to notify ICAO of this difference.

G. Environmental Analysis

FAA Order 1050.1F identifies FAA actions that are categorically excluded from preparation of an environmental assessment or environmental impact statement under the National Environmental Policy Act (NEPA) in the absence of extraordinary circumstances. The FAA has determined this rulemaking action qualifies for the categorical exclusion identified in paragraph 5–6.6f for regulations and involves no extraordinary circumstances.

VI. Executive Order Determinations

A. Executive Order 13132, Federalism

The FAA has analyzed this final rule under the principles and criteria of Executive Order 13132, Federalism. The FAA has determined that this action will not have a substantial direct effect on the States, or the relationship between the Federal Government and the States, or on the distribution of power and responsibilities among the various levels of government, and, therefore, will not have federalism implications.

B. Executive Order 13175, Consultation and Coordination With Indian Tribal Governments

Consistent with Executive Order 13175, Consultation and Coordination with Indian Tribal Governments,[17] and FAA Order 1210.20, American Indian and Alaska Native Tribal Consultation Policy and Procedures,[18] the FAA ensures that Federally Recognized Tribes (Tribes) are given the opportunity to provide meaningful and timely input regarding proposed Federal actions that have the potential to have substantial direct effects on one or more Indian Tribes, on the relationship between the Federal Government and Indian Tribes, or on the distribution of power and responsibilities between the Federal Government and Indian Tribes; or to affect uniquely or significantly their respective Tribes. At this point, the FAA has not identified any unique or significant effects, environmental or otherwise, on Tribes resulting from this final rule.

[17] 65 FR 67249 (November 6, 2000).

[18] FAA Order No. 1210.20 (Jan. 28, 2004), available at *www.faa.gov/documentLibrary/media/1210.pdf.*

C. Executive Order 13211, Regulations That Significantly Affect Energy Supply, Distribution, or Use

The FAA analyzed this final rule under Executive Order 13211, Actions Concerning Regulations that Significantly Affect Energy Supply, Distribution, or Use (May 18, 2001). The FAA has determined that it is not a ''significant energy action'' under the Executive order and is not likely to have a significant adverse effect on the supply, distribution, or use of energy.

D. Executive Order 13609, Promoting International Regulatory Cooperation

Executive Order 13609, Promoting International Regulatory Cooperation, promotes international regulatory cooperation to meet shared challenges involving health, safety, labor, security, environmental, and other issues and reduce, eliminate, or prevent unnecessary differences in regulatory requirements. The FAA has analyzed this action under the policy and agency responsibilities of Executive Order 13609. The FAA has determined that this action will eliminate differences between U.S. aviation standards and those of other civil aviation authorities in States where delegation or transfer of the responsibility for issuance of AOCs to an RSOO is permitted.

VII. Additional Information

A. Electronic Access and Filing

A copy of the NPRM, all comments received, this final rule, and all background material may be viewed online at *www.regulations.gov* using the docket number listed above. Electronic retrieval help and guidelines are available on the website. It is available 24 hours each day, 365 days each year. An electronic copy of this document may also be downloaded from the Office of the Federal Register's website at *www.federalregister.gov* and the Government Publishing Office's website at *www.govinfo.gov*. A copy may also be found on the FAA's Regulations and Policies website at *www.faa.gov/regulations_policies*.

Copies may also be obtained by sending a request to the Federal Aviation Administration, Office of Rulemaking, ARM–1, 800 Independence Avenue SW, Washington, DC 20591, or by calling (202) 267–9677. Commenters must identify the docket or notice number of this rulemaking.

All documents the FAA considered in developing this final rule, including economic analyses and technical reports, may be accessed in the electronic docket for this rulemaking.

B. Small Business Regulatory Enforcement Fairness Act

The Small Business Regulatory Enforcement Fairness Act (SBREFA) of 1996 requires the FAA to comply with small entity requests for information or advice about compliance with statutes and regulations within its jurisdiction. A small entity with questions regarding this document may contact its local FAA official or the person listed under the **FOR FURTHER INFORMATION CONTACT** heading at the beginning of the preamble. To find out more about SBREFA on the internet, visit *www.faa.gov/regulations_policies/rulemaking/sbre_act/*.

List of Subjects in 14 CFR Part 129

Administrative practice and procedure, Air carriers, Aircraft, Aviation safety, Reporting and recordkeeping requirements, Security measures, Smoking.

The Amendments

For the reasons discussed in the preamble, the Federal Aviation Administration amends 14 CFR part 129 as follows:

PART 129—OPERATIONS: FOREIGN AIR CARRIERS AND FOREIGN OPERATORS OF U.S.-REGISTERED AIRCRAFT ENGAGED IN COMMON CARRIAGE

■ 1. The authority citation for part 129 continues to read as follows:

Authority: 49 U.S.C. 1372, 40113, 40119, 44101, 44701–44702, 44705, 44709–44711, 44713, 44716–44717, 44722, 44901–44904, 44906, 44912, 46105, Pub. L. 107–71 sec. 104.

■ 2. Amend § 129.1 by:
■ a. Redesignating paragraph (c)(2) as paragraph (c)(4); and
■ b. Adding a new paragraph (c)(2) and paragraph (c)(3).

The additions read as follows:

§ 129.1 Applicability and definitions.

* * * * *

(c) * * *

(2) *Regional Safety Oversight Organization* means an association or organization that comprises a group of member States, which—

(i) Has provided notification to the International Civil Aviation Organization of the scope of tasks and functions delegated or transferred to the Regional Safety Oversight Organization, including but not limited to: sharing common or harmonized aviation regulations, licensing, certification, authorization, approval, and surveillance of civil aviation activities, and any legal authority delegated or transferred by a member State to the Regional Safety Oversight Organization; and

(ii) Has stipulated the specific tasks, functions, delegations, and transfers by member States discussed in paragraph (c)(2)(i) of this section, and any other collective understandings of member States in Regional Safety Oversight Organization formation documentation, such as an agreement, treaty, or informal record, that is available for review by the Administrator.

(3) *State of the Operator* means the State in which the operator's principal place of business is located or, if there is no such place of business, the operator's permanent residence.

* * * * *

■ 3. Amend § 129.7 by revising paragraphs (c)(5) and (d) to read as follows:

§ 129.7 Application, issuance, or denial of operations specifications.

* * * * *

(c) * * *

(5) Holds a valid air operator certificate, if acceptable to the Administrator, issued by:

(i) The State of the Operator; or

(ii) A Regional Safety Oversight Organization (RSOO) if the State of the Operator is a member State of that RSOO.

(d) An application may be denied if the Administrator finds that the applicant does not meet one or more of the criteria listed in paragraph (c) of this section.

■ 4. Amend § 129.9 by revising paragraphs (a)(3) and (b)(3) to read as follows:

§ 129.9 Contents of operations specifications.

(a) * * *

(3) The certificate number and validity of the foreign air carrier's air operator certificate;

* * * * *

(b) * * *

(3) In the case of a foreign air carrier, the certificate number and validity of the foreign air carrier's air operator certificate;

* * * * *

Issued under authority provided by 49 U.S.C. 106(f) and 44701(a) in Washington, DC.

Michael Gordon Whitaker,

Administrator.

BILLING CODE 4910–13–P

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

24 CFR Part 5

[Docket No. FR–6464–C–03]

RIN 2501–AE11

Adoption of 2020 Core Based Statistical Area Standards; Correction

AGENCY: Office of the Secretary, U.S. Department of Housing and Urban Development.

ACTION: Final rule; correction.

SUMMARY: The Department of Housing and Urban Development (HUD) is correcting a final rule entitled, ''Adoption of 2020 Core Based Statistical Area Standards'' that published in the **Federal Register** on December 6, 2024.

DATES: Effective January 6, 2025.

FOR FURTHER INFORMATION CONTACT: With respect to this technical correction, contact Allison Lack, Assistant General Counsel for Regulations, Department of Housing and Urban Development, 451 7th Street SW, Room 10238, Washington, DC 20410; telephone number 202–708–1793 (this is not a toll-free number). HUD welcomes and is prepared to receive calls from individuals who are deaf or hard of hearing, as well as individuals with speech or communication disabilities. To learn more about how to make an accessible telephone call, please visit *https://www.fcc.gov/consumers/guides/telecommunications-relay-service-trs.*

SUPPLEMENTARY INFORMATION: On December 6, 2024 (89 FR 96898), HUD published a final rule that adopts the 2020 Core Based Statistical Area (CBSA) standards as determined by the Office of Management and Budget's July 16, 2021, **Federal Register** notice for all HUD uses of CBSAs. The rule amended 24 CFR part 5 by adding a new subpart M. In reviewing the December 6, 2024, final rule, HUD identified an inadvertent error in § 5.3001. Specifically, HUD incorrectly designated two paragraphs as paragraph (e) and two paragraphs as paragraph (f). This document corrects these errors.

Correction

In FR Doc. 2024–28450, published December 6, 2024, at 89 FR 96898, the following corrections are made:

§ 5.3001 [Corrected]

■ 1. On page 96901, in the first column, the second paragraph (e) is redesignated as paragraph (g), the second paragraph (f) is redesignated as paragraph (h), and

paragraphs (g) and (h) are redesignated as paragraph (i) and (j), respectively.

Aaron Santa Anna,

Associate General Counsel, Office of Legislation and Regulations.

DEPARTMENT OF THE TREASURY

Internal Revenue Service

26 CFR Part 1

[TD 10012]

RIN 1545–BR09

Election To Exclude Certain Unincorporated Organizations Owned by Applicable Entities From Application of the Rules on Partners and Partnerships; Correction

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Final regulations; correction.

SUMMARY: This document contains a correction to TD 10012, which was published in the **Federal Register** on Wednesday, November 20, 2024. TD 10012 contains final regulations that modify existing regulations to allow certain unincorporated organizations that are owned in whole or in part by applicable entities to be excluded from the application of partnership tax rules.

DATES: This correction is effective on January 19, 2025. For the date of applicability, see § 1.761–2(f).

FOR FURTHER INFORMATION CONTACT: Concerning the final regulations, contact Cameron Williamson at (202) 317–6684 (not a toll-free number).

SUPPLEMENTARY INFORMATION:

Background

The final regulations (TD 10012) that are the subject of this correction are under sections 761(a), 6031(a), 6417(d) and (h), and 7805(a) of the Internal Revenue Code.

Correction of Publication

Accordingly, FR Doc. 2024–26944 (TD 10012), appearing on page 91552 in the **Federal Register** on Wednesday, November 20, 2024, is corrected as follows:

§ 1.761–2 [Corrected]

■ 1. On page 91562, in the first column, in paragraph (a)(5)(ii), in the third line down from the top of the paragraph, the language ''§ 1.6417–1(c)'' is corrected to read ''§ 1.6417–1(k)''.

Kalle L. Wardlow,

Federal Register Liaison, Publications & Regulations Section, Associate Chief Counsel, (Procedure and Administration).

RIN 1120–AB80

Federal Tort Claims Act—Technical Changes

AGENCY: Bureau of Prisons, Justice.

ACTION: Final rule.

SUMMARY: In this document, the Bureau of Prisons (Bureau) finalizes minor revisions to our regulations regarding the Federal Tort Claims Act that clarify requirements for presenting claims and correct obsolete and/or incorrect references to Bureau offices.

DATES: This rule is effective December 17, 2024.

FOR FURTHER INFORMATION CONTACT: Daniel J. Crooks III, Assistant General Counsel/Rules Administrator, Federal Bureau of Prisons at (202) 353–4885.

SUPPLEMENTARY INFORMATION:

I. Discussion

This rule outlines how an individual (inmate, staff member, or civilian) presents an administrative claim under the Federal Tort Claims Act to the Bureau of Prisons and explains the Bureau's procedures for processing such claims. After consideration of the one public comment, the Bureau finalizes the provisions of the interim rule and correcting amendment, while making minor edits to section 543.32(h).

A. Procedural History

On November 7, 2023, the Bureau published an interim final rule at 88 FR 76656 making minor revisions to regulations in 28 CFR part 543, subpart C—Federal Tort Claims Act, to clarify requirements for presenting claims and correct obsolete and/or correcting incorrect references to Bureau offices. On December 20, 2023, the Bureau published a correcting amendment at 88 FR 87903 to correct inadvertent errors and omissions in the interim rule. The correction was required for two reasons. First, we neglected to revise the headings of three paragraphs in § 543.31 to conform with the statement-like form of other paragraph headings we amended in the interim rule. Thus, the correction changed the headings of paragraphs (a), (b), and (e) in § 543.31 so that they are declarative rather than interrogative. Second, the third instruction in the interim rule omitted paragraphs (g) and (h) in § 543.32, so the regulatory text was not updated. Accordingly, the correction revised the instructions to include those missing paragraphs, thereby appropriately updating the Code of Federal Regulations.

Before, the comment period for the rule closed on January 8, 2024, we received one comment.

B. Discussion of Single Comment Received

Comment: The commenter writes primarily about one of his own tort claims and argues in support of settlement of his claim. However, he makes two observations about the rule. First, he notes that the six-month investigatory period ''might be a long time to let some problems fester.'' Second, he suggests we add the following language in § 543.32: ''The Associate General Counsel shall attempt to optimize any long-term benefits to prison operations and the public interest in reaching a settlement.''

Response: No response is required as to individualized disagreements with the general FTCA claim system, which are outside the scope of this rulemaking action, nor will the Bureau address the merits of any particular FTCA claim in this context.

The Bureau needs six months to fully investigate claims and to make informed decisions on whether to deny the claim or pursue settlement. This six-month period is provided by statute, 28 U.S.C. 2675(a), and applies to all FTCA administrative claims presented to the required appropriate federal agency, no matter the agency involved. We decline to amend the rule based on this first suggestion.

Regarding the second suggestion, we note that Bureau legal staff already consider many factors in the settlement of administrative FTCA claims, including factors not specifically included in the regulations. For example, in evaluating each claim individually for settlement, the Bureau considers all information provided by the claimant, the investigation, relevant records, and applicable policy and legal authority. We also decline to amend the rule based on this second suggestion.

C. Discussion of Minor Edits to Section 543.32(h)

Upon further review of § 543.32(h), we decided to make two changes to that section to clarify the language and ensure it more closely aligns with the FTCA. The language of the second sentence to that section currently in effect via the interim final rule reads: ''If you have not received a letter either proposing a settlement or denying your claim within six months after the date your claim was presented, you may assume your claim is denied.'' The revised language included in the final rule reads: ''If you have not received a letter denying your claim within six months after the date your claim was presented, you may deem the absence of a response to your claim as a denial.''

The first change is to the first clause of the second sentence in section § 543.32(h). We changed the language by removing the phrase ''either proposing a settlement or'' because we do not want to imply the Bureau's proposal of a settlement within six months precludes the option of the claimant deeming a claim denied. As discussed more in the next paragraph, what triggers the option for the claimant to deem a claim denied and to file suit is the failure of an agency to make a final disposition of a claim within six months. Since a settlement offer is not a ''final disposition,'' it cannot serve to preclude the claimant from filing suit.

The second change is to the second clause of the second sentence in § 543.32(h). In reviewing our draft of the final rule, we determined that use of the word ''assume'' in the second sentence to § 543.32(h) was unnecessary and confusing inasmuch as the statute itself, 28 U.S.C. 2675(a), does not mention ''assumptions.'' That language confers upon the claimant the ''option'' to deem their claim finally denied; the claimant is not required to ''assume'' that the sending of a settlement proposal means they are not entitled to file suit if six months have elapsed since presentment. Instead, the claimant retains the option to continue negotiating with no statute of limitations penalty, or they may opt instead to ''deem'' the claim denied and pursue a lawsuit in federal court.

II. Regulatory Analyses

Executive Orders 12866, 13563 and 14094. This rule does not fall within a category of actions that the Office of Management and Budget (OMB) has determined constitutes a ''significant regulatory action'' under section 3(f) of Executive Order 12866 and, accordingly, it was not reviewed by OMB. The economic impact of this final rule is limited to inmates in the custody of the Federal Bureau of Prisons.

Executive Order 13132. This rule will not have substantial direct effect on the States, on the relationship between the National Government and the States, or on distribution of power and responsibilities among the various levels of government. Therefore, under Executive Order 13132, the Bureau determines that this rule does not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

Regulatory Flexibility Act. The Director of the Bureau of Prisons, under the Regulatory Flexibility Act (5 U.S.C. 605(b)), reviewed this rule and by approving it certifies that it will not have a significant economic impact upon a substantial number of small entities for the following reasons: This rule pertains to the correctional management of offenders committed to the custody of the Attorney General or the Director of the Bureau of Prisons, and its economic impact is limited to the Bureau's appropriated funds.

Unfunded Mandates Reform Act of 1995. This rule will not result in the expenditure by State, local and tribal governments, in the aggregate, or by the private sector, of $100,000,000 or more in any one year, and it will not significantly or uniquely affect small governments. Therefore, no actions were deemed necessary under the provisions of the Unfunded Mandates Reform Act of 1995.

Congressional Review Act. This rule is a not major rule as defined by the Congressional Review Act, 5 U.S.C. 804.

List of Subjects in 28 CFR Part 543

Prisoners.

Colette S. Peters,

Director, Federal Bureau of Prisons.

Under rulemaking authority vested in the Attorney General in 5 U.S.C 301; 28 U.S.C. 509, 510 and delegated to the Director of the Bureau of Prisons in 28 CFR 0.96, the Bureau finalizes with minor changes, the interim rule published on November 7, 2023, (88 FR 76657) and the correction published on December 20, 2023 (88 FR 87903).

PART 543—LEGAL MATTERS

■ 1. The authority citation for 28 CFR part 543 continues to read as follows:

Authority: 5 U.S.C. 301; 18 U.S.C. 3621, 3622, 3624, 4001, 4042, 4081, 4082 (Repealed in part as to offenses committed on or after November 1, 1987), 5006–5024 (Repealed October 12, 1984 as to Offenses committed after that date), 5039; 28 U.S.C. 509, 510, 1346(b), 2671–80; 28 CFR 0.95–0.99, 0.172, 14.1–11.

Subpart C—Federal Tort Claims Act

■ 2. Revise § 543.32(h) to read as follows:

§ 543.32 Processing the claim.

* * * * *

(h) *Response timeline.* Generally, you will receive a decision regarding your claim within six months of when you properly present the claim. If you have not received a letter denying your claim within six months after the date your claim was presented, you may deem the absence of a response to your claim as a denial. You may then proceed to file a lawsuit in the appropriate United States District Court.

28 CFR Part 543

[BOP–1175–F]

RIN 1120–AB75

Inmate Legal Activities: Visits by Attorneys

AGENCY: Bureau of Prisons, Justice.

ACTION: Final rule.

SUMMARY: In this document, the Bureau of Prisons (''Bureau'' or ''BOP'') finalizes revisions to regulations related to attorney-client visits at BOP institutions.

DATES: Effective December 17, 2024, BOP adopts the interim final rule published at 89 FR 8330 on Feb. 7, 2024, as final without change.

FOR FURTHER INFORMATION CONTACT: Daniel J. Crooks III, Assistant General Counsel/Rules Administrator, Federal Bureau of Prisons, at (202) 353–4885.

SUPPLEMENTARY INFORMATION:

I. Background

On February 7, 2024, BOP published an interim final rule that amended regulations related to attorney visits. 89 FR 8330 (Feb. 7, 2024). The comment period closed on April 8, 2024, and we received six comments. Of those six comments, only two were related to the rule; each of those comments is discussed more fully below. Of the four unrelated comments, one noted generally that BOP should review its regulations annually for improvement; one was mistakenly posted to this docket instead of to the docket for another BOP rulemaking; another laments the general treatment of January

6 defendants; and the last advocates for revised regulations regarding clergy visits to BOP facilities. After consideration of the two relevant public comments, BOP is adopting the interim final rule on this subject without change.

II. Discussion

We received two relevant, substantive comments after publication of the interim final rule. Each comment is addressed below.

Comment 1: The commenter states that the revised rule does not go far enough to address other means that facilitate attorney-client communications, emphasizing that the availability of private telephone calls is essential to facilitate attorney-client communications. The commenter gave several examples where inmates and their attorneys encountered difficulties obtaining approval from officials at BOP institutions for unmonitored telephone calls. However, the commenter did not address the specific changes to the regulation addressing in-person visits by attorneys.

Response: BOP agrees that meaningful access to counsel includes reasonable access to unmonitored telephone calls to facilitate attorney-client communications. Through separate procedures, BOP enables confidential communications between an inmate and their attorney through legal visits, unmonitored telephone calls, and unmonitored legal correspondence. Title 28 CFR 540.102 and 540.103 address unmonitored telephone calls, while 28 CFR 540.18 and 540.19 address unmonitored legal correspondence.

However, the comment is out of scope as the interim final rule only addressed the procedures for in-person, confidential attorney visits as provided in Part 543, and did not address the different issue of rules applicable to telephone calls between inmates and their attorneys, which are in separate regulations at 28 CFR 540.102–540.103. To the extent the commenter's suggestion is intended to be construed as a petition for rulemaking pursuant to 5 U.S.C. 553(e), a comment to a rule pertaining to a different issue in a different set of regulations is not the proper mechanism to effectuate that provision. Individuals in BOP custody with individualized concerns or questions regarding the implementation of applicable regulations or policy are reminded of their rights to address such issues through the agency's Administrative Remedy Program, as outlined at 28 CFR part 542 and in BOP Program Statement 1330.18 (available at *www.bop.gov/policy*). Thus, BOP concludes that no changes are needed in the final rule in light of this comment.

Comment 2: The commenter states that the rule should address attorney visits for individuals located at administrative facilities in holdover status; that the rule does not address circumstances where a pretrial or unsentenced individual is in holdover status at a BOP institution that houses convicted individuals; that BOP's explanation for the rule indicates that attorneys can visit a client in BOP custody like social visitors during normal visiting hours without advanced notice; that many attorneys are unwilling to be added to their client's regular social visiting list and that some attorneys are unwilling to provide personally identifying information on the social visit application forms; and that BOP should clarify if attorneys can show up at an institution during normal social visiting hours for a visit in the common area (*i.e.,* not in a private setting) without providing sensitive personal information.

Response: As background, BOP is responsible for the custody and care of sentenced federal inmates, felony offenders convicted and sentenced to a term of imprisonment under the DC criminal code a number of state and military offenders who are housed on a contractual basis, and pretrial detainees and pre-sentenced offenders housed in BOP facilities on behalf of the United States Marshals Service (USMS).

The USMS is responsible for the care and custody of individuals charged with a federal offense. Responsible for housing approximately 63,000 detainees, the USMS acquires detention bedspace through agreements with state and local governments in addition to available BOP pretrial cells. Approximately 75 percent of the detainees in the custody of the USMS are detained in state, local, and private facilities; the remainder are housed in BOP facilities. Ordinarily, pretrial inmates in BOP custody are housed in administrative institutions including Metropolitan Detention Centers (MDCs), Federal Detention Centers (FDCs), and Metropolitan Correctional Centers (MCCs). These institutions may also house convicted inmates awaiting sentencing or movement to designated institutions, or sentenced inmates who require further court appearances. A small number of other BOP institutions also house pretrial inmates in specific units within the main facility or in jail units located in satellite buildings separate from the main facility.

As explained in the preamble to the interim final rule, the prior version of § 543.13(c) provided that, to schedule any legal visit at any BOP institution, an attorney must make an advance appointment for a visit through the warden, and that the warden must make every effort to accommodate a legal visit when prior notification is not practicable. That prior rule was promulgated on June 27, 1979.

To clarify, the interim final rule updated § 543.13(c) to allow both scheduled and unscheduled attorney visits during designated attorney visitation hours at BOP institutions whose mission is to house pretrial detainees and unsentenced individuals. However, the rule retains the requirement that attorneys seeking to visit clients at BOP institutions whose mission is to house convicted individuals must make an advance appointment for a legal visit and that the warden must make every effort to accommodate a legal visit when prior notification is not practicable.

Attorney visits for holdover inmates. The term ''holdover'' refers to individuals in BOP custody who are transferring from one BOP institution to another. These individuals are categorized as being in holdover status until they arrive at the institution to which they are officially designated. The interim final rule did nothing more than allow both scheduled and unscheduled attorney visits during designated attorney visitation hours at BOP institutions that have a pretrial mission housing pretrial and unsentenced individuals, and it retains the requirement for an advanced appointment for attorney visits at all other BOP institutions. Accordingly, attorney visits with any individual in holdover status housed at an institution that does not have a pretrial mission must ordinarily make an advance appointment for a legal visit. Individuals in holdover status and their attorneys may coordinate legal visits in the same manner as the offender population at the particular facility in which the individual is temporarily housed en route to their designated institution. To clarify, it is the type of institution and its specific mission that are determinative for purposes of scheduling attorney visits; an individual's temporary status as a ''holdover'' is not determinative. Further changes to the rule addressing attorney visits for pretrial and unsentenced individuals on holdover status are unnecessary.

Adding attorneys to client's social visiting list. The commenter urges that this rule address the option for attorneys to be added to their client's social visiting list, but that subject is addressed by separate rules applicable

to regular visitors at 28 CFR part 540, subpart D. In coordination with their client, attorneys may seek to be added to their client's regular social visiting list and visit under the same conditions as other visitors in accordance with part 540, subpart D.

Again, this comment is out of scope of what was addressed in the interim final rule. Such social visits are conducted in an open setting, not a confidential setting for attorneys to meet with their clients privately. By contrast, confidential attorney visits, which are the subject of this rule, are governed by part 543. To the extent the commenter's suggestion is intended to be construed as a petition for rulemaking pursuant to 5 U.S.C. 553(e), a comment to a rule pertaining to a different issue in a different set of regulations is not the proper mechanism to present such a petition. Thus, the BOP concludes that no changes are needed in the final rule in light of this comment.

The commenter also urges that the rule clarify whether attorneys are required to submit the same personal information as other visitors to be added to the inmate's approved social visitor list. As noted, attorneys may seek to be added to their client's regular social visiting list and visit under the same conditions as other visitors pursuant to separate rules applicable to regular visitors at 28 CFR part 540, subpart D, and the more granular details regarding the processing of social visits are addressed in the BOP policy implementing those provisions. The BOP declines to make changes to Part 543 in response to this comment.

For the foregoing reasons, we conclude that no changes are needed in the regulatory language in § 543.13(c) and (e) as adopted in the interim final rule, and that no other changes are needed in BOP's regulations in connection with this specific rulemaking action. Accordingly, this rule finalizes the interim final rule without change.

IV. Regulatory Certifications

Executive Orders 12866, 13563 and 14094. This rule does not fall within a category of actions that the Office of Management and Budget (OMB) has determined constitutes a ''significant regulatory action'' under section 3(f) of Executive Order 12866 and, accordingly, it was not reviewed by OMB. The economic impact of this final rule is limited to inmates in the custody of the Bureau of Prisons and their attorneys.

Executive Order 13132. This rule will not have substantial direct effect on the States, on the relationship between the National Government and the States, or on distribution of power and responsibilities among the various levels of government. Therefore, under Executive Order 13132, BOP determines that this rule does not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

Executive Order 12988—Civil Justice Reform (Plain Language). This final rule meets the applicable standards set forth in sections 3(a) and 3(b)(2) of Executive Order 12988 to specify provisions in clear language. Pursuant to section 3(b)(1)(I) of the Executive Order, nothing in this final rule or any previous rule (or in any administrative policy, directive, ruling, notice, guideline, guidance, or writing) directly relating to the Program that is the subject of this final rule is intended to create any legal or procedural rights enforceable against the United States.

Regulatory Flexibility Act. The Director of the Bureau of Prisons, under the Regulatory Flexibility Act (5 U.S.C. 605(b)), reviewed this rule and by approving it certifies that it will not have a significant economic impact upon a substantial number of small entities for the following reasons: This rule pertains to the correctional management of offenders and detainees committed to the custody of the Attorney General or the Director of the Bureau of Prisons, and its economic impact is limited to BOP's appropriated funds.

Unfunded Mandates Reform Act of 1995. This rule will not result in the expenditure by State, local and tribal governments, in the aggregate, or by the private sector, of $100,000,000 or more (as adjusted for inflation) in any one year, and it will not significantly or uniquely affect small governments. Therefore, no actions were deemed necessary under the provisions of the Unfunded Mandates Reform Act of 1995.

Congressional Review Act. This rule is a not major rule as defined by the Congressional Review Act, 5 U.S.C. 804.

List of Subjects in 28 CFR Part 543

Prisoners, Legal Activities.

PART 543—LEGAL MATTERS

■ Accordingly, under rulemaking authority vested in the Attorney General in 5 U.S.C 301; 28 U.S.C. 509, 510 and delegated to the Director of the Bureau of Prisons in 28 CFR 0.96, BOP adopts the interim final rule on this subject, published at 89 FR 8330 on Feb. 7, 2024, as a final rule, without change.

Colette S. Peters,

Director, Federal Bureau of Prisons.

BILLING CODE 4410–05–P

DEPARTMENT OF LABOR

Wage and Hour Division

29 CFR Part 531

RIN 1235–AA44

Tip Regulations Under the Fair Labor Standards Act (FLSA); Restoration of Regulatory Language

AGENCY: Wage and Hour Division, Department of Labor.

ACTION: Final rule; technical amendment.

SUMMARY: On October 29, 2021, the U.S. Department of Labor (Department) published a final rule (2021 Dual Jobs Rule) addressing the determination of when a tipped employee is employed in dual jobs under the Fair Labor Standards Act (FLSA or the Act). The 2021 Dual Jobs Rule took effect on December 28, 2021.On October 29, 2024, a federal appeals court issued an order vacating regulatory text from the Department's 2021 Dual Jobs Rule, with the effect of reinstating the Department's original FLSA regulation on the topic. In accordance with that court order, the Department is issuing this final rule to remove from the Code of Federal Regulations (CFR) the corresponding regulatory text that the Department promulgated through the 2021 Dual Jobs Rule and reinstate regulatory text as it existed in the CFR prior to the effective date of the 2021 Dual Jobs Rule. This action is a technical amendment accounting for changes in the law which have already occurred.

DATES: This rule is effective December 17, 2024.

FOR FURTHER INFORMATION CONTACT: Daniel Navarrete, Director of Division of Regulations, Legislation, and Interpretation, Wage and Hour Division, U.S. Department of Labor, Room S–3502, 200 Constitution Avenue NW, Washington, DC 20210, telephone: (202) 693–0406 (this is not a toll-free number). Alternative formats are available upon request by calling 1–866–487–9243. If you are deaf, hard of hearing, or have a speech disability, please dial 7–1–1 to access telecommunications relay services.

SUPPLEMENTARY INFORMATION:

I. Background and Basis for the Restoration of Regulatory Text

Section 6(a) of the FLSA requires covered employers to pay nonexempt employees a minimum wage of at least $7.25 per hour. *See* 29 U.S.C. 206(a). Since 1966, section 3(m) of the FLSA has permitted employers that meet certain requirements to satisfy a portion of their minimum wage obligation to a ''tipped employee'' by taking a partial credit, commonly known as a ''tip credit,'' toward the minimum wage based on the amount of tips that the tipped employee receives.[1] An employer that elects to take a tip credit cannot satisfy the entirety of the minimum wage requirement with tips because the employer must pay the tipped employee a direct cash wage of at least $2.13 per hour.[2] Based on the current Federal minimum wage of $7.25 per hour, the employer may claim a tip credit against its wage obligation of up to $5.12 per hour towards its minimum wage obligation for a tipped employee, provided—among other criteria—that the employee actually receives sufficient tips to earn not less than the FLSA minimum wage.

Section 3(t) of the FLSA defines a ''tipped employee'' as ''any employee engaged in an occupation in which [the employee] customarily and regularly receives more than $30 a month in tips.'' [3] The Department promulgated the original FLSA regulations for tipped employees in 1967, the year after Congress first created the tip credit provision.[4] As part of that rulemaking, the Department included a ''dual jobs'' provision, recognizing that an employee may be employed by the same employer both in a tipped occupation and in a non-tipped occupation, for example, ''where a maintenance man in a hotel also serves as a waiter.'' 29 CFR 531.56(e) (1967).[5] This provision explained that an employee is a ''tipped employee'' for the purposes of section 3(t) only while the employee is engaged in the tipped occupation, and their employer may take a tip credit against its minimum wage obligation only for the time the employee spends in that tipped occupation. *Id.* At the same time, the regulation recognized that tipped employees may perform ''related'' duties that are not ''themselves . . . directed toward producing tips,'' and used the example of a server who ''spends part of her time'' performing non-tipped duties, such as ''cleaning and setting tables, toasting bread, making coffee and occasionally washing dishes or glasses.'' *Id.*[6]

On December 30, 2020, the Department published *Tip Regulations Under the Fair Labor Standards Act (FLSA),* 85 FR 86756 (2020 Tip Rule), a final rule revising various regulatory requirements related to the treatment of tipped employees under the FLSA. Among other changes, the 2020 Tip Rule would have revised the Department's original dual jobs regulation at 29 CFR 531.56(e) consistent with subregulatory guidance issued by the Department in 2018 and 2019,[7] but the dual jobs provisions in the 2020 Tip Rule never took effect.

The 2020 Tip Rule was published with a scheduled effective date of March 1, 2021.[8] However, on February 26, 2021, the Department delayed the effective date of the 2020 Tip Rule until April 30, 2021.[9] On March 25, 2021, the Department proposed to further delay the effective date of three portions of the 2020 Tip Rule, including the portion of the rule that would have amended the Department's dual jobs regulation, until December 31, 2021.[10] On April 29, 2021, the Department finalized the proposed partial delay.[11]

On October 29, 2021, the Department published *Tip Regulations Under the Fair Labor Standards Act (FLSA); Partial Withdrawal,* 86 FR 60114 (2021 Dual Jobs Rule), which withdrew the dual jobs provisions of the 2020 Tip Rule.[12] Separately, the 2021 Dual Jobs Rule adopted at 29 CFR 531.56(e)–(f) a new dual jobs regulation, which—among other changes—set specific limits on the amount of time that tipped employees who are paid a direct cash wage which is less than the Federal minimum wage can spend performing ''work that is not tip-producing, but directly supports tip-producing work.'' [13] The 2021 Dual Jobs Rule took effect on December 28, 2021.

On October 29, 2024, the United States Court of Appeals for the Fifth Circuit issued a decision in *Restaurant Law Center* v. *U.S. Department of Labor,* vacating regulatory text codified at 29 CFR 531.56(e)–(f) from the Department's 2021 Dual Jobs Rule, with the effect of reinstating the Department's original dual jobs regulation. 115 F.4th 396 (5th Cir. 2024), *superseded on reh'g* (5th Cir. Oct. 29, 2024) (vacating the 2021 Dual Jobs Rule ''insofar as it modifies 29 CFR 531.56 as promulgated in 1967''). Since the Fifth Circuit's mandate issued on October 29, 2024, the operative version of 29 CFR 531.56(e) is thus the dual jobs regulation that was in place on December 27, 2021, prior to the effective date of the 2021 Dual Jobs Rule.

Consistent with the Fifth Circuit's mandate, this rule amends 29 CFR 531.56 to reinstate the regulatory text as it appeared prior to the effective date of the 2021 Dual Jobs Rule. This action is a technical correction accounting for changes in the law which have already occurred.

II. Procedural and Other Matters

A. Administrative Procedure Act

Section 553(b)(B) of the Administrative Procedure Act (APA) provides that an agency is not required to publish a notice of proposed rulemaking in the **Federal Register** and solicit public comments when the agency has good cause to find that doing so would be ''impracticable, unnecessary, or contrary to the public interest.'' 5 U.S.C. 553(b)(B). The Department finds that good cause exists to dispense with public notice-and-comment rulemaking procedures in this final rule because such procedures are unnecessary. The final rule accounts for the effects of the Fifth Circuit's order in *RLC,* which already changed the operative regulatory provisions by vacating regulatory text codified at 29 CFR 531.56(e)–(f) from the Department's 2021 Dual Jobs Rule, with the effect of

[1] *See* Fair Labor Standards Amendments of 1966, Public Law 89–601, sec. 101, 80 Stat. 830, 830 (1966); *see also* 29 U.S.C. 203(m)(2)(A).

[2] *See* Fair Labor Standards Amendments of 1989, Public Law 101–157, sec. 5, 103 Stat. 938, 941 (1989) (requiring employers to pay a cash wage of at least ''50 percent of the [$4.25 per hour] minimum wage rate after March 31, 1991''). Although subsequent FLSA Amendments have increased the federal minimum wage, those amendments did not change the $2.13 per hour minimum cash wage for tipped employees, which has been in effect since April 1, 1991.

[3] 29 U.S.C. 203(t).

[4] *See* 32 FR 13575 (Sept. 28, 1967).

[5] *See* 32 FR 13580–81 (codified at 29 CFR 531.56(e)).

[6] In 2011, the Department issued a technical correction to its original dual jobs regulation by updating the amount of tips needed to qualify as a tipped employee under section 3(t) of the FLSA from $20 per month to $30 per month, *see* 76 FR 18855, accounting for the increase of that statutory threshold effectuated by the 1977 FLSA Amendments. *See* Fair Labor Standards Amendments of 1977, Public Law 95–151, sec. 3, 91 Stat. 1245, 1249 (1977). The 2011 rule did not otherwise change the Department's original dual jobs regulation.

[7] *See* 85 FR 86767–72, 86790.

[8] *Id.* at 86756.

[9] *See* 86 FR 11632.

[10] *See* 86 FR 15811.

[11] *See* 86 FR 22597.

[12] *See* 86 FR 60138.

[13] 86 FR 60158 (codified at 29 CFR 531.56(f)(4)). Specifically, the 2021 Dual Jobs Rule provided that tipped employees must receive the full minimum wage from their employer whenever untipped support work exceeds 20 percent of their workweek or 30 continuous minutes. *Id.* The 2021 Dual Job Rule also provided examples of tasks that fall into the following three categories: (1) tip-producing work; (2) work that directly supports tip-producing work; and (3) work that is not part of a tipped occupation. 86 FR 60157–58 (codified at 29 CFR 531.56(f)(2)–(3) and (5)).

reinstating the Department's earlier original dual jobs regulation. The final rule makes technical non-substantive revisions to correct the CFR to reflect the court's mandate. These amendments ensure the accuracy of the CFR, but do not alter any regulatory obligations.

Section 553(d) of the APA provides that substantive rules should take effect not less than 30 days after the date they are published in the **Federal Register** unless ''otherwise provided by the agency for good cause found[.]'' 5 U.S.C. 553(d)(3). The Department finds that good cause also exists to make this final rule immediately effective because a delayed effective date is unnecessary and contrary to the public interest. A delayed effective date is unnecessary because the Fifth Circuit's order vacating regulatory text codified at 29 CFR 531.56(e)–(f) from the Department's 2021 Dual Jobs Rule has already taken effect. Delaying the ministerial act of removing the regulatory text of the vacated rule and restoring the operative regulatory text in the **Federal Register** would also be contrary to the public interest in light of the Department's need to expediently implement the court's final judgment, and because it could lead to confusion, particularly among employers and tipped employees, about the FLSA's requirements for the payment of minimum wages to tipped employees. The Department concludes that a delayed effective date is both unnecessary and is contrary to the public interest, providing good cause to bypass a delayed effective date.

B. Regulatory Flexibility Act

The Regulatory Flexibility Act of 1980 (RFA) as amended by the Small Business Regulatory Enforcement Fairness Act of 1996 (SBREFA), hereafter jointly referred to as the RFA, requires that an agency prepare an initial regulatory flexibility analysis (IRFA) when proposing, and a final regulatory flexibility analysis (FRFA) when issuing, rules that will have a significant economic impact on a substantial number of small entities. However, the RFA only applies to ''rule[s] for which the agency publishes a general notice of proposed rulemaking pursuant to section 553(b) of this title, or any other law.'' [14] Because the Department has determined for good cause that public notice and comment is not required, the Department is not publishing a notice of proposed rulemaking for this final rule to comply with the court's order. Therefore, the RFA and its procedural requirements do not apply.

C. Executive Orders 12866 and 13563

Under Executive Order 12866 (as amended by Executive Order 14094), OMB's Office of Information and Regulatory Affairs (OIRA) determines whether a regulatory action is significant and, therefore, subject to the requirements of the Executive order and OMB review. As amended by Executive Order 14094, section 3(f) of Executive Order 12866 defines a ''significant regulatory action'' as a regulatory action that is likely to result in a rule that may: (1) have an annual effect on the economy of $200 million or more; or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or state, local, territorial, or Tribal governments or communities; (2) create a serious inconsistency or otherwise interfere with an action taken or planned by another agency; (3) materially alter the budgetary impact of entitlements, grants, user fees or loan programs or the rights and obligations of recipients thereof; or (4) raise legal or policy issues for which centralized review would meaningfully further the President's priorities or the principles set forth in the Executive order.

Executive Order 13563 directs agencies to, among other things, propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs; that it is tailored to impose the least burden on society, consistent with obtaining the regulatory objectives; and that, in choosing among alternative regulatory approaches, the agency has selected those approaches that maximize net benefits. Executive Order 13563 recognizes that some costs and benefits are difficult to quantify and provides that, when appropriate and permitted by law, agencies may consider and discuss qualitatively values that are difficult or impossible to quantify, including equity, human dignity, fairness, and distributive impacts. OIRA has determined that this final rule is not significant for the purpose of Executive Orders 12866 and 13563.

D. Congressional Review Act

Before a rule can take effect, 5 U.S.C. 801, the Congressional Review Act (CRA) requires agencies to submit the rule and a report indicating whether it is a major rule to Congress and the Comptroller General. This final rule does not qualify as a major rule for purposes of the CRA and is therefore not subject to the timing requirements provided in 5 U.S.C. 801(a)(3).

E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995, 2 U.S.C. 1531–38, requires agencies to consider whether a rule will result in the expenditure of $100,000,000 or more (adjusted annually for inflation) in any one year by State, local, and Tribal governments, in the aggregate, or by the private sector. This technical amendment will not result in such an expenditure.

F. Executive Order 13132, Federalism

The Department has (1) reviewed this proposed rule in accordance with Executive Order 13132 regarding federalism and (2) determined that it does not have federalism implications. The proposed rule would not have substantial direct effects on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government.

G. Paperwork Reduction Act

The Paperwork Reduction Act of 1995 (PRA), 44 U.S.C. 3501 *et seq.,* and its attendant regulations, 5 CFR part 1320, require the Department to consider the agency's need for its information collections, their practical utility, the impact of paperwork and other information collection burdens imposed on the public, and how to minimize those burdens. The PRA typically requires an agency to provide notice and seek public comments on any proposed collection of information contained in a proposed rule. *See* 44 U.S.C. 3506(c)(2)(B); 5 CFR 1320.8. The final rule is also not subject to the requirements of the PRA because it does not contain a collection of information as defined in 44 U.S.C. 3502(3).

List of Subjects 29 CFR Part 531

Wages.

PART 531—WAGE PAYMENTS UNDER THE FAIR LABOR STANDARDS ACT OF 1938

■ 1. The authority citation for part 531 continues to read as follows:

Authority: 29 U.S.C. 203(m) and (t), as amended by sec. 3(m), Pub. L. 75–718, 52 Stat. 1060; sec. 2, Pub. L. 87–30, 75 Stat. 65; sec. 101, sec. 602, Pub. L. 89–601, 80 Stat. 830; sec. 29(B), Pub. L. 93–259, 88 Stat. 55 sec. 3, sec. 15(c), Pub. L. 95–151, 91 Stat 1245; sec. 2105(b), Pub. L. 104–188, 110 Stat 1755; sec. 8102, Pub. L. 110–28, 121 Stat. 112; and sec. 1201, Div. S., Tit. XII, Pub. L. 115–141, 132 Stat. 348.

[14] *See* 5 U.S.C. 601(2); *see also id.* at 604(a) (requiring a FRFA for rules where the agency was ''required . . . to publish a general notice of proposed rulemaking'').

■ 2. Amend § 531.56 by revising paragraph (e) and removing paragraph (f) to read as follows:

§ 531.56 "More than $30 a month in tips."

* * * * *

(e) *Dual jobs.* In some situations an employee is employed in a dual job, as for example, where a maintenance man in a hotel also serves as a waiter. In such a situation the employee, if he customarily and regularly receives at least $30 a month in tips for his work as a waiter, is a tipped employee only with respect to his employment as a waiter. He is employed in two occupations, and no tip credit can be taken for his hours of employment in his occupation of maintenance man. Such a situation is distinguishable from that of a waitress who spends part of her time cleaning and setting tables, toasting bread, making coffee and occasionally washing dishes or glasses. It is likewise distinguishable from the counterman who also prepares his own short orders or who, as part of a group of countermen, takes a turn as a short order cook for the group. Such related duties in an occupation that is a tipped occupation need not by themselves be directed toward producing tips.

Signed this 12th day of December, 2024.

Jessica Looman,

Administrator, Wage and Hour Division.

BILLING CODE 4510–27–P

DEPARTMENT OF THE TREASURY

Office of the Secretary

31 CFR Part 1

RIN 1505–AC32

Privacy Act Exemptions

AGENCY: Departmental Offices, Department of the Treasury.

ACTION: Final rule.

SUMMARY: In accordance with the Privacy Act of 1974, as amended (Privacy Act), the Department of the Treasury, Departmental Offices is issuing a final rule, exempting a new system of records entitled ''Department of the Treasury, Departmental Offices .413—Outbound Investment Security Program Notification System'' from certain provisions of the Privacy Act. The Outbound Investment Security Program Notification System is being established for information collected in connection with the implementation of Executive Order 14105 of August 9, 2023. The exemption is intended to comply with the legal prohibitions against the disclosure of certain kinds of information and to protect certain information maintained in this system of records.

DATES: This rule is effective on January 16, 2025.

FOR FURTHER INFORMATION CONTACT: For general questions and questions regarding privacy issues, please contact: Ryan Law, Deputy Assistant Secretary for Privacy, Transparency, and Records, Department of the Treasury, 1500 Pennsylvania Avenue NW, Washington, DC 20220; telephone: (202) 622–5710.

SUPPLEMENTARY INFORMATION:

Background

The Department of the Treasury (Treasury) published a notice of proposed rulemaking (Systems Exemption NPRM) in the **Federal Register**, 89 FR 76783 (published September 19, 2024), proposing to exempt portions of the system of records from one or more provisions of the Privacy Act.

As background, on August 9, 2023, the President issued Executive Order 14105, 88 FR 54867 (the Outbound Order), which declares a national emergency to address the threat to the United States posed by countries of concern, which seek to develop and exploit sensitive technologies or products critical for military, intelligence, surveillance, or cyber-enabled capabilities. Among other things, the Outbound Order directs the Secretary of the Treasury to issue regulations that require U.S. persons to provide notification of information to Treasury regarding certain transactions involving a person of a country of concern that is engaged in certain activities involving covered national security technologies and products that may contribute to the threat to the national security of the United States as identified in the Outbound Order. The Outbound Order also directs the Secretary of the Treasury to issue regulations that prohibit certain transactions by a U.S. person involving a person of a country of concern that is engaged in certain activities involving covered national security technologies and products that pose a particularly acute national security threat to the United States. The Outbound Order authorizes the Secretary of the Treasury to exempt from applicable prohibitions or notification requirements any transaction determined to be in the national interest of the United States. On August 9, 2023, Treasury issued an advance notice of proposed rulemaking, 88 FR 54961 (published August 14, 2023), to explain initial considerations and seek public comment on implementation of the Outbound Order.

On June 21, 2024, Treasury issued a notice of proposed rulemaking to seek public comment on the proposed rule, 89 FR 55846 (published July 5, 2024). On October 28, 2024, Treasury issued a final rule, [89 FR 90398] (published November 15, 2024) (the Outbound Rule), setting forth the regulations that implement the Outbound Order. The Outbound Rule requires U.S. persons to provide notification of certain transactions. This information will include relevant details on the U.S. person(s) involved in the transaction as well as information on the transaction and the foreign person(s) involved. These notifications will increase the U.S. Government's visibility into transactions by U.S. persons or their controlled foreign entities and involving technologies and products relevant to the threat to the national security of the United States due to the policies and actions of countries of concern. These notifications would also be helpful in highlighting aggregate sector trends and related capital flows as well as informing future policy development. The Outbound Rule also requires any U.S. person seeking a national interest exemption for a particular transaction to submit information to Treasury regarding the scope of that transaction including, as applicable, the information that would be required for a notification under the Outbound Rule.

Treasury's Departmental Offices published separately the notice of a new system of records, 89 FR 76917 (published September 19, 2024), for information collected in connection with the implementation of the Outbound Order.

Public Comments

Treasury received five comments on the Systems Exemption NPRM. Four commenters support the proposed exemptions because of their importance to protect national security. One commenter urged Treasury to consider the importance of transparency and accountability in government, as well as the impact exemptions to the Privacy Act could have on public trust. The commenter expressed concern that the Systems Exemption NPRM was too broad and noted that exemptions to the Privacy Act should be clearly defined and limited to situations implicating national security. The commenter also questioned whether there were any checks and balances in place to ensure that data is only collected in the interest of national security and public safety.

Treasury notes the importance of transparency and accountability and the role of the Privacy Act in supporting those goals. As noted in the Systems Exemption NPRM, notification is limited to those transactions that may contribute to the threat to the national security of the United States identified in the Outbound Order, and the scope of notifiable transactions is linked to subsets of technologies and products and based on specific descriptions and technical thresholds provided in the Outbound Rule. In addition, the specific information required to be submitted to Treasury in the notifications is a limited universe of information related to the relevant transaction. Furthermore, as noted in the Outbound Rule, Treasury recognizes the importance of safeguarding sensitive information and has included specific confidentiality provisions in the regulations. Among the checks and balances in place, the Outbound Order requires annual reports be submitted to the President with an assessment of the effectiveness of the measures imposed under the Outbound Order in addressing threats to the national security of the United States, among other things. Treasury makes no changes to this final rule in response to these comments.

Privacy Act

Treasury is hereby promulgating a final rule to exempt the Outbound Investment Security Program Notification System from certain provisions of the Privacy Act pursuant to 5 U.S.C. 552a(k)(1) and (k)(2) and the authority vested in the Secretary of the Treasury by 31 CFR 1.23(c).

Under 5 U.S.C. 552a(k)(1), the head of a Federal agency may promulgate rules to exempt a system of records from certain provisions of 5 U.S.C. 552a if the system of records is subject to the exemption contained in section 552(b)(1) of this title. (Freedom of Information Act, exemption (b)(1) protects from disclosure information that has been deemed classified ''under criteria established by an Executive order to be kept secret in the interest of national defense or foreign policy'' and is ''in fact properly classified pursuant to such Executive order.'')

Under 5 U.S.C. 552a(k)(2), the head of a Federal agency may promulgate rules to exempt a system of records from certain provisions of 5 U.S.C. 552a if the system of records contains investigatory materials compiled for law enforcement purposes that are not within the scope of subsection (j)(2) of the Privacy Act (which applies to agencies and components thereof that perform as their principal function any activity pertaining to the enforcement of criminal laws).

To the extent that this system of records contains classified information protected by 5 U.S.C. 552a(k)(1) or investigatory materials compiled for law enforcement purposes protected by 5 U.S.C. 552a(k)(2), Treasury exempts the following system of records from various provisions of the Privacy Act:

DO .413—Outbound Investment Security Program Notification System

Under 5 U.S.C. 552a(k)(1) and (k)(2), Treasury exempts certain records in the above-referenced system of records be exempt from 5 U.S.C. 552a(c)(3), (d)(1) through (4), (e)(1), (e)(4)(G) through (I), and (f) of the Privacy Act. See 31 CFR 1.36.

The following are the reasons why the classified records and investigatory materials contained in the above-referenced system of records may be exempted from various provisions of the Privacy Act pursuant to 5 U.S.C. 552a(k)(1) and (k)(2).

1. 5 U.S.C. 552a(c)(3) requires an agency to make any accounting of disclosures of records required by 5 U.S.C. 552a(c)(1) available to the individual named in the record upon his or her request. Exemption from this requirement is appropriate because release of the accounting of disclosures of the records in this system could alert individuals whether they have been identified as the subject of an analysis related to the national security interests of the United States, to the existence of the analysis, and reveal the interest on the part of Treasury as well as the recipient agency. Disclosure of the accounting would present a serious impediment to efforts to protect national security interests by giving individuals an opportunity to learn whether they have been identified as subjects of a national security-related analysis. As further described in the following paragraph, access to such knowledge would impair Treasury's ability to carry out its mission, since individuals could:

i. Take steps to avoid analysis;

ii. inform associates that a national security analysis is in progress;

iii. learn the nature of the national security analysis;

iv. learn the scope of the national security analysis;

v. begin, continue, or resume conduct that may pose a threat to national security upon inferring they may not be part of a national security analysis because their records were not disclosed; or

vi. destroy information relevant to the national security analysis.

2. 5 U.S.C. 552a(d)(1) through (4) grant individuals access to records containing information about them and permit them to request amendment of a record pertaining to them and require the agency either to amend the record or note the disputed portion of the record and, if the agency refuses to amend the record, to provide a copy of the individual's statement of disagreement with the agency's refusal, to persons or other agencies to whom the record is thereafter disclosed. Exemption from this requirement is appropriate because access to a portion of the records contained in this system of records could inform individuals whether they have been identified as the subject of an analysis related to the national security interests of the United States, to the existence of the analysis and reveal the interest on the part of Treasury or another agency. Access to the records would present a serious impediment to efforts to protect national security interests by permitting the individual who is the subject of a record to learn whether they have been identified as a subject of a national security-related analysis. Access to such knowledge would impair Treasury's ability to carry out its mission, since individuals could take steps to impede the analysis and avoid detection, including the steps described in paragraph 1.i–through vi of this section. Amendment of the records would interfere with ongoing analysis and impose an impossible administrative burden. The information contained in the system may also include classified information, the release of which would pose a threat to the national security of the United States. In addition, permitting access and amendment to such information could disclose sensitive security information that could be detrimental to Treasury.

3. 5 U.S.C. 552a(e)(1) requires an agency to maintain in its records only such information about an individual as is relevant and necessary to accomplish a purpose of the agency required to be accomplished by statute or Executive order. Exemption from this requirement is appropriate because what information is relevant and necessary may not always be apparent at the time of collection. In the interests of national security, it is appropriate to include a broad range of information that may aid in identifying and assessing the nature and scope of national security threats to the United States. Additionally, the accuracy of information obtained or introduced occasionally may be unclear, or the information may not be strictly relevant or necessary to a specific analysis. In the interests of national security, it is appropriate to retain all

information that may aid in establishing patterns of suspicious activity.

4. 5 U.S.C. 552a(e)(4)(G) through (I) and 5 U.S.C. 552a(f) require an agency to publish the agency procedures whereby individuals can be notified if the system of records pertains to them, how they can gain access to any record pertaining to them in the system of records and contest its content, and the categories of sources of records in the system. Exemption from these requirements is appropriate because, as noted above, this system is exempt from the access and amendment provisions of subsection (d).

Any records from another Treasury system of records or another Executive Branch agency's system of records for which an exemption is claimed under 5 U.S.C. 552a(j) or (k) that may also be included in this system of records retains the same exempt status as such records have in the system for which such exemption is claimed.

Regulatory Analysis

This rule is not a ''significant regulatory action'' under Executive Order 12866. Pursuant to the requirements of the Regulatory Flexibility Act (RFA), 5 U.S.C. 601 *et seq.,* it is hereby certified that this rule will not have a significant economic impact on a substantial number of small entities. This rule, issued pursuant to 5 U.S.C. 552a(k), exempts certain information maintained by Treasury in the above-referenced systems of records from certain provisions of the Privacy Act. Small entities, as defined in the RFA, are not provided rights under the Privacy Act and are outside the scope of this regulation.

The related information collections have been submitted to the Office of Management and Budget on July 8, 2024 under control number: 1505–0282.

List of Subjects in 31 CFR Part 1

Coast Guard

33 CFR Part 165

[Docket Number USCG–2024–0559]

RIN 1625–AA00

Safety Zone; West Passage Narragansett Bay, Jamestown, RI

AGENCY: Coast Guard, DHS.

ACTION: Temporary interim rule and request for comments.

SUMMARY: The Coast Guard is amending the current temporary safety zone in the vicinity of the West Passage Narragansett Bay, Jamestown, RI, in two ways. First, we are extending the effective period by 30 days to January 31, 2025. Second, by updating the name of the cable laying vessel. The temporary safety zone is needed to protect personnel, vessels, and the marine environment from potential hazards created by cable laying operations being conducted. When enforced, entry of vessels or persons into this zone is prohibited unless specifically authorized by the Captain of the Port, Sector Southeastern New England.

DATES:

Effective date: This temporary interim rule is effective from December 17, 2024

through 11:59 p.m. on January 31, 2025. The rule will only be subject to enforcement while the Cable Laying Vessel SKAGERRAK or the J.F. Brennan construction barge #4132 are engaged in cable preparation and cable laying operations.

Comments due date: Comments and related material must be received by the Coast Guard on or before January 16, 2025.

ADDRESSES: To view documents mentioned in this preamble as being available in the docket, go to *https://www.regulations.gov,* type USCG–2024–0559 in the search box and click ''Search.'' Next, in the Document Type column, select ''Supporting & Related Material.''

FOR FURTHER INFORMATION CONTACT: If you have questions about this rule, call or email MST2 Nicholas Easley, Sector Southeastern New England, U.S. Coast Guard; telephone 206–827–4160, email *Nicholas.S.Easley@uscg.mil.*

SUPPLEMENTARY INFORMATION:

I. Table of Abbreviations

CFR Code of Federal Regulations
COTP Captain of the Port Sector Southeastern New England
DHS Department of Homeland Security
FR Federal Register
NPRM Notice of proposed rulemaking
§ Section
TIR Temporary interim rule
U.S.C. United States Code

II. Background Information and Regulatory History

This temporary interim rule (TIR) amends the current temporary safety zone in the vicinity of the West Passage Narraganset Bay, Jamestown, RI. An earlier TIR published on August 29, 2024, established the first safety zone regulation for that waterway in 33 CFR 165.T01–0559 (89 FR 70100).

The Coast Guard is issuing this temporary rule under the authority in 5 U.S.C. 553(b)(B). This statutory provision authorizes an agency to issue a rule without prior notice and opportunity to comment when the agency for good cause finds that those procedures are ''impracticable, unnecessary, or contrary to the public interest.'' The Coast Guard finds that good cause exists for not publishing a notice of proposed rulemaking (NPRM) with respect to this rule because doing so would be impracticable and contrary to the public interest. The recently changed details of the project were not known to the Coast Guard in sufficient time to publish an NPRM. Delaying the effective date of this rule to wait for a comment period to run would be impracticable and contrary to the public interest because it would inhibit the Coast Guard's ability to protect the public and vessels from the hazards associated with the cable laying process. The expeditious implementation of this rule is in the public interest because it will help ensure the safety of personnel, waterway users, and the marine environment.

Also, under 5 U.S.C. 553(d)(3), the Coast Guard finds that good cause exists for making this rule effective less than 30 days after publication in the **Federal Register**. Delaying the effective date of this rule would be impracticable because prompt action is needed to respond to the potential safety hazards associated with the cable installation being conducted by the cable laying vessel SKAGERRAK and the J.F. Brennan construction barge #4132.

Although the first regulation was published as an interim rule without prior notice, public comment was nevertheless desirable to ensure that the regulation is both workable and reasonable. No comments were received during a 30-day comment period that ended September 30, 2024. Accordingly, an additional 30-day comment period for this temporary interim rule will allow persons wishing to comment to do so by submitting written comments as set out under **ADDRESSES** in this preamble. Commenters should include their names and addresses, identify the docket number for the regulation, and give reasons for their comments. If the Coast Guard determines that changes to the temporary interim rule are necessary, we will publish a temporary final rule or other appropriate document.

III. Legal Authority and Need for Rule

The Coast Guard is issuing this rule under the authority in 46 U.S.C. 70034. The Captain of the Port Sector Southeastern New England (COTP) has determined that potential hazards associated with the cable installation that started on September 1, 2024, will be a safety concern for anyone within a 250-yard radius of the cable laying vessel SKAGERRAK and the J.F. Brennan construction barge #4132. This rule is needed to protect personnel, vessels, and the marine environment in the navigable waters within the safety zone while the cable installation is being conducted.

IV. Discussion of the Rule

The Coast Guard is making the following amendments to the current temporary safety zone in the vicinity of the West Passage Narraganset Bay, Jamestown, RI, for cable laying operations:

i. We are extending the rule for an additional 30 days to allow for delays and a change to the process to the cable laying operations. The existing safety zone was effective until 11:59 p.m. December 31, 2024. The 30-day extension will now be effective until 11:59 p.m. on January 31, 2024. While the safety zone will be effective through this period, it will only be enforced during active submerged cable laying operations or other instances which may create a hazard to navigation.

ii. We are changing the name of the vessel that will be engaged in the cable laying operations. The existing safety zone was for the MARMAC 306 cable laying barge. The Coast Guard is establishing a safety zone that will cover all navigable waters within 250 yards of the barge cable laying vessel SKAGERRAK and the J.F. Brennan construction barge #4132 while they are engaged in cable laying operations in the vicinity of the West Passage Narraganset Bay, Jamestown, RI, between the Jamestown Verrazzano Bridge (41°31′43.7″ N 71°24′18.2″ W) and south to Dutch Island (41°29′47.3″ N, 71°24′16.5″ W). During times of enforcement, all persons or vessels would be prohibited from entering the safety zone without permission from the COTP or a designated representative. If cable laying operations and associated operations are completed before 11:59 p.m. on January 31, 2025, enforcement of the safety zone will be suspended, and notice given via Broadcast Notice to Mariners.

These amendments are being made to maintain safe navigation in the project area and to prevent accidental or intentional damage to persons or property on the work site.

V. Regulatory Analyses

We developed this rule after considering numerous statutes and Executive orders related to rulemaking. Below we summarize our analyses based on a number of these statutes and Executive orders, and we discuss First Amendment rights of protestors.

A. Regulatory Planning and Review

Executive Orders 12866 and 13563 direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. This rule has not been designated a ''significant regulatory action,'' under section 3(f) of Executive Order 12866, as amended by Executive Order 14094 (Modernizing Regulatory Review). Accordingly, this rule has not been

reviewed by the Office of Management and Budget (OMB).

This regulatory action determination is based on the size, location, duration, and time-of-day of the safety zone. Vessel traffic will be able to safely transit around the safety zone which would impact a 250-yard radius around the cable laying vessel SKAGERRAK and the J.F. Brennan construction barge #4132 while engaged in cable laying operations. The Coast Guard will issue a Broadcast Notice to Mariners via VHF–FM marine channel 16 about the zone, and the rule would allow vessels to seek permission to enter the zone.

B. Impact on Small Entities

The Regulatory Flexibility Act of 1980, 5 U.S.C. 601–612, as amended, requires Federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term ''small entities'' comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard certifies under 5 U.S.C. 605(b) that this rule will not have a significant economic impact on a substantial number of small entities.

While some owners or operators of vessels intending to transit the safety zone may be small entities, for the reasons stated in section V.A above, this rule will not have a significant economic impact on any vessel owner or operator.

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this rule. If the rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The Ombudsman evaluates these actions annually and rates each agency's responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1–888–REG–FAIR (1–888–734–3247). The Coast Guard will not retaliate against small entities that question or complain about this rule or any policy or action of the Coast Guard.

C. Collection of Information

This rule will not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

D. Federalism and Indian Tribal Governments

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this rule under that Order and have determined that it is consistent with the fundamental federalism principles and preemption requirements described in Executive Order 13132.

Also, this rule does not have tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it does not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of $100,000,000 (adjusted for inflation) or more in any one year. Though this rule will not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble.

F. Environment

We have analyzed this rule under Department of Homeland Security Directive 023–01, Rev. 1, associated implementing instructions, and Environmental Planning COMDTINST 5090.1 (series), which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (42 U.S.C. 4321–4370f), and have determined that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This rule involves a safety zone, lasting only during the hours of operation of the cable laying vessel SKAGERRAK and J.F. Brennan construction barge #4132, that will prohibit entry within 250 yards of vessels and machinery being used by personnel to install the cable. It is categorically excluded from further review under paragraph L60a of Appendix A, Table 1 of DHS Instruction Manual 023–01–001–01, Rev. 1. A Record of Environmental Consideration supporting this determination is available in the docket. For instructions on locating the docket, see the **ADDRESSES** section of this preamble.

G. Protest Activities

The Coast Guard respects the First Amendment rights of protesters. Protesters are asked to call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section to coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places, or vessels.

VI. Public Participation and Request for Comments

We view public participation as essential to effective rulemaking and will consider all comments and material received during the comment period. If we determine that changes to the temporary interim rule are necessary, the Coast Guard will publish a temporary final rule or other appropriate document. If you submit a comment, please include the docket number for this rulemaking, indicate the specific section of this document to which each comment applies, and provide a reason for each suggestion or recommendation.

Submitting comments. We encourage you to submit comments through the Federal Decision-Making Portal at *https://www.regulations.gov.* To do so, go to *https://www.regulations.gov,* type USCG–2024–0559 in the search box and click ''Search.'' Next, look for this document in the Search Results column, and click on it. Then click on the Comment option. If you cannot submit your material by using *https://www.regulations.gov,* call or email the person in the **FOR FURTHER INFORMATION CONTACT** section of this proposed rule for alternate instructions.

Viewing material in docket. To view documents mentioned in this proposed rule as being available in the docket, find the docket as described in the previous paragraph, and then select ''Supporting & Related Material'' in the Document Type column. Public comments will also be placed in our online docket and can be viewed by following instructions on the *https://www.regulations.gov* Frequently Asked Questions web page. Also, if you click

on the Dockets tab and then the proposed rule, you should see a ''Subscribe'' option for email alerts. The option will notify you when comments are posted, or a final rule is published.

We review all comments received, but we will only post comments that address the topic of the proposed rule. We may choose not to post off-topic, inappropriate, or duplicate comments that we receive.

Personal information. We accept anonymous comments. Comments we post to *https://www.regulations.gov* will include any personal information you have provided. For more about privacy and submissions to the docket in response to this document, see DHS's eRulemaking System of Records notice (85 FR 14226, March 11, 2020).

List of Subjects in 33 CFR Part 165

Harbors, Marine safety, Navigation (water), Reporting and recordkeeping requirements, Security measures, Waterways.

For the reasons discussed in the preamble, the Coast Guard amends 33 CFR part 165 as follows:

PART 165—REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREAS

■ 1. The authority citation for part 165 continues to read as follows:

Authority: 46 U.S.C. 70034, 70051, 70124; 33 CFR 1.05–1, 6.04–1, 6.04–6, and 160.5; Department of Homeland Security Delegation No. 00170.1, Revision No. 01.3.

■ 2. Revise and republish § 165.T01–0559 to read as follows:

§ 165.T01–0559 Safety Zone; West Passage Narragansett Bay, Jamestown, RI.

(a) *Location.* The following area is a safety zone: All waters within a 250-yard radius of cable laying vessel *Skagerrak* and the J.F. Brennan construction barge #4132 while operating in West Passage Narragansett Bay, Jamestown, RI, between Jamestown Verrazzano Bridge (41°31′43.7″ N 71°24′18.2″ W) and Dutch Island (41°29′47.3″ N, 71°24′16.5″ W).

(b) *Definitions.* As used in this section, *Designated representative* means a Coast Guard Patrol Commander, including a Coast Guard coxswain, petty officer, or other officer operating a Coast Guard vessel and a Federal, State, and local officer designated by or assisting the Captain of the Port Sector Southeastern New England (COTP) in the enforcement of the safety zone.

(c) *Regulations.* (1) Under the general safety zone regulations in subpart C of this part, you may not enter the safety zone described in paragraph (a) of this section unless authorized by the COTP or the COTP's designated representative.

(2) To seek permission to enter, contact the COTP or the COTP's representative by VHF–FM radio channel 16 or phone at 508–457–3211. Those in the safety zone must comply with all lawful orders or directions given to them by the COTP or the COTP's designated representative.

(d) *Enforcement period.* This section is effective from 12:01 a.m. on December 17, 2024, through 11:59 p.m. on Friday, January 31, 2025. The safety zone described in paragraph (a) of this section will only be subject to enforcement while the cable laying vessel SKAGERRAK and the J.F. Brennan construction barge #4132 are engaged in cable laying operations in West Passage Narragansett Bay, Jamestown, RI, between Jamestown Verrazzano Bridge (41°31′43.7″ N 71°24′18.2″ W) and Dutch Island (41°29′47.3″ N, 71°24′16.5″ W).

Y. Moon,

Captain, U.S. Coast Guard, Captain of the Port Sector Southeastern New England.

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 165

[Docket Number USCG–2024–0500]

RIN 1625–AA00

Safety and Security Zones: Pilgrim Nuclear Power Plant, Plymouth Massachusetts

AGENCY: Coast Guard, Department of Homeland Security (DHS).

ACTION: Final rule.

SUMMARY: The Coast Guard is disestablishing the existing safety and security zone for Pilgrim Nuclear Power Plant, Plymouth, Massachusetts. Since the implementation of the regulation, the facility has permanently ceased power operations making the provisions of the security zone no longer applicable. The waterfront facility's safety and security zone will be removed from all charts, publications, and other navigational references. All related private aids to navigational marking the boundaries of the security zone will also be removed.

DATES: This rule is effective January 16, 2025.

ADDRESSES: To view the documents mentioned in the preamble as being available in the docket, go to *https://www.regulations.gov,* type USCG–2024–0500 in the search box and click ''Search'' in the Document Type column, select ''Supporting & Related Material.''

FOR FURTHER INFORMATION CONTACT: If you have questions about this rule, call, or email Mr. Timothy Chase. Sector Boston, Waterways Management Division, U.S. Coast Guard; telephone 617–447–1620, email: *Timothy.w.chase@uscg.mil.*

SUPPLEMENTARY INFORMATION:

I. Table of Abbreviations

CFR Code of Federal Regulations
DHS Department of Homeland Security
FR Federal Register
NPRM Notice of proposed rulemaking
§ Section
U.S.C. United States Code

II. Background Information and Regulatory History

On January 9, 2024, Entergy Nuclear Operation, Inc, notified the Coast Guard that they had provided all the required documentation for disestablishment to the U.S. Nuclear Regulatory Commission as per 10 CFR 50.82(a)(1)(i). Power operations have ceased at the Pilgrim Nuclear Power Station.

In response, on August 30, 2024, the Coast Guard published a NPRM titled ''Safety and Security Zones; Pilgrim Nuclear Power Plant, Plymouth Massachusetts'' in the **Federal Register** (89 FR 70587). There we stated why we issued the NPRM and invited comments on our proposed regulatory action related to Safety and Security Zones: Pilgrim Nuclear Power Plant, Plymouth, Massachusetts. During the comment period that ended September 30, 2024, we received three written submissions.

III. Legal Authority and Need for Rule

The Coast Guard is issuing this rule under the authority in 46 U.S.C. 70034, 70051, and 70124. The Captain of the Port Sector Boston Massachusetts (COTP) has determined that disestablishing the safety and security zone cited in 33 CFR 165.115, Safety and Security Zones: Pilgrim Nuclear Power Plant, Plymouth Massachusetts, by removing that section.

IV. Discussion of Comments, Changes, and the Rule

As noted above the Coast Guard received three written submissions on our NPRM published on August 30, 2024. All three commenters were in favor of our proposal, no Public Meetings were requested or held. There are no changes in the regulatory text of

this rule from the proposed rule in the NPRM. The Coast Guard is disestablishing the safety and security zone cited in 33 CFR 165.115, Safety and Security Zones: Pilgrim Nuclear Power Plant, Plymouth, Massachusetts, by removing that section.

V. Regulatory Analyses

We developed this rule after considering numerous statutes and Executive orders related to rulemaking. Below we summarize our analyses based on a number of these statutes and Executive orders, and we discuss First Amendment rights of protestors.

A. Regulatory Planning and Review

Executive Orders 12866 and 13563 direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. This rule has not been designated a ''significant regulatory action'' under section 3(f) of Executive Order 12866, as amended by Executive Order 12866 as amended by Executive Order 14094 (Modernizing Regulatory review). Accordingly, this rule has not been reviewed by the Office of Management and Budget (OMB).

This regulatory action determination is based on the need to align the regulations with the current arrangements of the port as the waterfront facility safety and security zone is no longer required. The Captain of the Port of Boston Massachusetts is removing 33 CFR 165.115.

B. Impact on Small Entities

The Regulatory Flexibility Act of 1980, 5 U.S.C. 601–612, as amended, requires Federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term ''small entities'' comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard received no comments from the Small Business Administration on this rulemaking. The Coast Guard certifies under 5 U.S.C. 605(b) that this rule would not have a significant economic impact on a substantial number of small entities.

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this rule. If the rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The Ombudsman evaluates these actions annually and rates each agency's responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1–888–REG–FAIR (1–888–734–3247). The Coast Guard will not retaliate against small entities that question or complain about this rule or any policy or action of the Coast Guard.

C. Collection of Information

This rule will not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

D. Federalism and Indian Tribal Governments

A rule has implications for federalism under Executive Order 13132 (Federalism), if it has a substantial direct effect on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this rule under that order and have determined that it is consistent with the fundamental federalism principles and preemption requirements described in Executive Order 13132.

Also, this rule does not have tribal implications under Executive Order 13175 (Consultation and Coordination with Indian Tribal Governments) because it does not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of $100,000,000 (adjusted for inflation) or more in any one year. Though this rule would not result in such an expenditure, we do discuss the potential effects of this rule elsewhere in this preamble.

F. Environment

We have analyzed this rule under Department of Homeland Security Directive 023–01, Rev. 1, associated implementing instructions, and Environmental Planning COMDTINST 5090.1 (series), which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (42 U.S.C. 4321–4370f), and have made a preliminary determination that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This rule involves the disestablishment of a security zone. Normally such actions are categorically excluded from further review under paragraph L60(b) of Appendix A, Table 1 of DHS Instruction Manual 023–01–001–01, Rev. 1. A Record of Environmental Consideration supporting this determination is available in the docket. For instructions on locating the docket, see the **ADDRESSES** section of this preamble.

G. Protest Activities

The Coast Guard respects the First Amendment rights of protesters. Protesters are asked to call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section to coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places, or vessels.

List of Subjects in 33 CFR Part 165

Harbors, Marine safety, Navigation (water), Reporting and recordkeeping requirements, Security measures, Waterways.

For the reasons discussed in the preamble, the Coast Guard amends 33 CFR part 165 as follows:

PART 165—REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREAS

■ 1. The authority citation for part 165 continues to read as follows:

Authority: 46 U.S.C. 70034, 70051, 70124; 33 CFR 1.05–1, 6.04–1, 6.04–6, and 160.5; Department of Homeland Security Delegation No. 00170.1, Revision No. 01.3.

§ 165.115 [Removed]

■ 2. Remove § 165.115.

J.C. Frederick,

Captain, U.S. Coast Guard, Captain of the Port Sector Boston.

[FR Doc. 2024–29803 Filed 12–16–24; 8:45 am]

BILLING CODE 9110–04–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA–R06–OAR–2022–0311; FRL–12123–02–R6]

Finding of Failure To Attain the Primary 2010 One-Hour Sulfur Dioxide Standard; Texas; Rusk and Panola Counties Nonattainment Area

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: The Environmental Protection Agency (EPA) is making a determination that the Rusk and Panola Counties, Texas nonattainment area (Rusk-Panola area) [1] failed to attain the 2010 one-hour primary sulfur dioxide (SO_2) national ambient air quality standard (NAAQS) by the Clean Air Act (CAA or the Act) applicable attainment date of January 12, 2022. This determination is based upon consideration of and review of air quality information for the Rusk-Panola area leading up to the area's attainment date of January 12, 2022. The EPA proposed this finding of failure to attain on August 2, 2024, as part of a larger action that included proposed action on the attainment plan. EPA will be taking final action on our proposed limited approval and limited disapproval of Texas' attainment plan for the Rusk-Panola area in a separate action.

DATES: This rule is effective on January 16, 2025.

ADDRESSES: The EPA has established a docket for this action under Docket ID No. EPA–R06–OAR–2022–0311. All documents in the docket are listed on the *https://www.regulations.gov* website. Although listed in the index, some information is not publicly available, *e.g.,* Confidential Business Information or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the internet. Publicly available docket materials are available electronically through *https://www.regulations.gov.*

FOR FURTHER INFORMATION CONTACT: Andrew Lee, EPA Region 6 Office, Air and Radiation Division, Ozone and Infrastructure section, tel. 214–665–6750, *lee.andrew.c@epa.gov.* Please call or email the contact listed if you need alternative access to material indexed but not provided in the docket. Modeling files and other files related to the alternative model review are available upon request. Copyrighted materials are available for review in person at EPA Region 6 office located at 1201 Elm Street, Suite 500, Dallas, Texas 75270.

SUPPLEMENTARY INFORMATION: Throughout this document ''we,'' ''us,'' and ''our'' means the EPA.

I. Background

The background for this action is discussed in detail in our August 2, 2024, proposal.[2] In that document, we proposed to determine that the Rusk-Panola area failed to attain the 2010 1-hour SO_2 NAAQS by the statutory attainment date of January 12, 2022. This proposed determination is based on the air quality, as evidenced by emissions and monitoring data, in the Rusk-Panola nonattainment area as of the January 12, 2022, attainment date.

In response to the August 2, 2024, proposal, we received several comments concerning our proposed finding of failure to attain by the January 12, 2022, attainment date. This final notification will only address comments on the finding of failure to attain by the attainment date portion of the proposal. Other comments on the August 2, 2024, proposal, including comments addressing the limited approval and limited disapproval, will be addressed in a future document. After careful consideration of public comments, the EPA is finalizing our proposed finding that the Rusk-Panola area has failed to attain the 2010 1-hour SO_2 NAAQS by the January 12, 2022, attainment date. In the following section, the EPA is providing responses to the relevant comments received on the proposal pertaining to the finding of failure to attain for the Rusk-Panola area.

II. Response to Comments

Comment: The commenter, Texas Commission on Environmental Quality, requested that, upon finalization of the EPA's finding of failure to attain for the Rusk-Panola area, the deadline for the resulting SIP submittal requirement should be no earlier than 18 months from the effective date of the finding.

Response: CAA section 179(d)(1) explicitly states that if the EPA determines that an area did not attain the NAAQS by the applicable attainment date, ''[w]ithin 1 year after the Administrator publishes the notice . . . relating to notice of failure to attain,'' the responsible State ''shall submit a revision to the applicable implementation plan'' that meets the requirements of CAA section 179(d)(2) (*i.e.,* a SIP for the area that demonstrates attainment and shall include any additional measures that the EPA may reasonably prescribe, including all measures that can be feasibly implemented in the area in light of technological achievability, costs, and any non-air quality and other air quality-related health and environmental impacts as required).

The request from the commenter to extend the 12-month deadline for Texas to submit a revised SIP for the Rusk-Panola area is not permissible under the plain text of the CAA.

Comment: The commenter, Luminant Generation Company LLC, owner of the major source—Martin Lake facility (Luminant), claims that the EPA's proposed finding of failure to attain the 2010 1-hour SO_2 NAAQS is unsupported and should not be finalized. The commenter states that the Agreed Order containing the emissions limitations for the Martin Lake facility requires compliance by the attainment date and ''simply phases in one additional control measure after the attainment date.'' The commenter states that the EPA provided no evidence that the provisions implemented by the attainment date were insufficient to provide for attainment.

Another commenter, Sierra Club, offered support for EPA's finding and supporting evidence, stating that the EPA must determine attainment based on the area's design value as of the attainment date, and whether the area attained the standard by that date. The commenter references support for the EPA's finding in Texas's own monitoring data for 2019–2021—the time period with three full calendar years of data before the January 12, 2022, attainment date. The commenter then references EPA's proposal for this action, arguing the data in that proposal makes clear that the Martin Lake area did not meet the 2010 1-hour SO_2 NAAQS by the January 12, 2022, statutory attainment date.

Response: We disagree with the commenter Luminant on the claim that the finding of failure to attain is unsupported, and we agree with commenter Sierra Club that monitoring showing a violating design value for this area as of the attainment date is a sufficient basis for the EPA to find that the area failed to attain by its attainment date. The attainment date for the area was January 12, 2022. The EPA may only determine an area attained based on air quality monitoring data when the design value, based on complete, quality assured monitored air quality data from three consecutive calendar years (here, 2019–2021), at each eligible monitoring site is equal or less than the 75 ppb

[1] The Rusk-Panola nonattainment area encompasses portions of Rusk and Panola County in the vicinity of the Martin Lake Power Station.

[2] *See* 89 FR 63117.

NAAQS. The Martin Creek monitoring site located within the Rusk-Panola area shows a 2019–2021 design value of 93 ppb in violation of the 2010 1-hour SO_2 NAAQS, and thus, the EPA is making the determination that the Rusk-Panola area did not attain by its statutory attainment date of January 12, 2022.[3] We also note that the 2020–2022 monitoring period (which goes beyond the attainment date) produced a design value of 81 ppb, also a violation of the 2010 1-hour SO_2 NAAQS.

The commenter Luminant's claims regarding the timing of the controls in the Agreed Order are therefore irrelevant to EPA's finding that the Rusk-Panola area failed to attain by the attainment date. The monitoring data evaluated prior to the attainment date is sufficient to support a finding of failure to attain.

While not determinative in light of the ambient monitoring data discussed above, we note that, regardless of the text of the Agreed Order, the Order was not entered into by the parties or enforceable until one month after the attainment date of January 12, 2022.[4] In fact, one provision of the Agreed Order included a compliance deadline set for six months after the attainment date.

Commenter Luminant claims that a delay in compliance past the attainment date for the ''additional control measure'' (*i.e.* the lb/MMBtu limits discussed in the preceding paragraph) established in the Agreed Order would not have a negative effect on the area attaining the standard. However, the modeling demonstration and statements made by TCEQ in the SIP refute Luminant's contention; both the modeling demonstration and TCEQ's statements establish that meeting these limits is necessary to ensure no modeled exceedances of the NAAQS.[5] Further, the commenter offers no evidence, modeling, or demonstration to support their claims that compliance with all of the SIP requirements (as provided for in the attainment demonstration modeling) was not necessary, and, monitoring data from the time period in question directly refutes commenter's position. Between January 12, 2022, and July 11, 2022, four exceedances of the standard were measured at the Martin Creek monitor in Rusk County,[6] suggesting that the area could not attain without the limits that had not yet taken effect.

Comment: One commenter, Sierra Club, stated that in addition to the EPA's finding of failure to attain by the attainment date for the Rusk-Panola area, the EPA should also prescribe additional measures that Texas must implement as expeditiously as practicable for the area to attain the standard.

Response: In accordance with CAA section 179(d), issuance of this finding of failure to attain triggers the requirement for the State of Texas to submit a SIP revision for the Rusk-Panola area within one year of the publication date of this document. The required SIP revision for the area must, among other elements, demonstrate attainment of the SO_2 NAAQS as expeditiously as practicable, but no later than 5 years from the date of this document. CAA section 179(d) also grants authority to the Administrator to reasonably prescribe additional measures that must be addressed, including all measures that can be feasibly implemented in the area in light of technological achievability, costs, and any non-air quality and other air quality-related health and environmental impacts. We are not prescribing additional measures for the SO_2 SIP revisions under CAA section 179(d)(2) in this document.

III. Final Action

Under CAA section 179(c)(1)–(2), the EPA is making a determination that the Rusk-Panola area has failed to attain the 2010 1-hour SO_2 NAAQS of 75 ppb by the applicable statutory attainment date of January 12, 2022. In accordance with CAA section 179(d), issuance of this finding of failure to attain triggers the requirement for the State of Texas to submit a SIP revision for the Rusk-Panola area within one year of the publication date of this document. The required SIP revision for the area must, among other elements, demonstrate attainment of the 2010 1-hour SO_2 NAAQS as expeditiously as practicable, but no later than 5 years from the date of this document and shall include such additional measures as the Administrator may reasonably prescribe, including all measures that can be feasibly implemented in the area in light of technological achievability, costs, and any non-air quality and other air quality-related health and environmental impacts. At this time, we are not prescribing additional measures for the SO_2 SIP revisions under CAA section 179(d)(2). In addition to triggering requirements for a new SIP submittal, a final determination that a nonattainment area failed to attain the NAAQS by the attainment date triggers the implementation of contingency measures adopted under 172(c)(9).

IV. Environmental Justice Considerations

Information on Executive Order 12898 (Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations, 59 FR 7629, February 16, 1994) and how EPA defines environmental justice (EJ) can be found in the section titled ''V. Statutory and Executive Order Reviews.'' EPA provided analysis of environmental justice associated with this action solely for informational purposes, and the results of this analysis were presented in our proposal.

In accordance with section 179(c)(1)–(2) of the CAA, this final action formalizes EPA's determination that the Rusk and Panola Counties, Texas SO_2 nonattainment area has failed to attain the 2010 one-hour SO_2 NAAQS of 75 ppb by the applicable attainment date of January 12, 2022. This action provides notice to the public that the area has failed to attain the NAAQS and informs the State of Texas of CAA requirements the State needs to meet. After publishing this final rule, the State of Texas is required under CAA section 179(d) to submit revisions to the SIP for the Rusk-Panola area within one year of the publication of this document. The required SIP revision for the area must, among other elements, demonstrate attainment of the 2010 1-hour SO_2 NAAQS as expeditiously as practicable, but no later than 5 years. This final rule is not anticipated to have disproportionately high or adverse human health or environmental effects on communities with environmental justice concerns.

V. Statutory and Executive Order Reviews

This action finds that an area has failed to attain the NAAQS by the relevant attainment date and does not impose additional or modify existing requirements. For that reason, this action:

- Is not a significant regulatory action subject to review by the Office of Management and Budget under Executive Orders 12866 (58 FR 51735,

[3] As discussed in the proposed action, the monitoring site is not located in the area of maximum concentration; however, if any monitors were located in the area of maximum concentration, they would likely show concentrations greater than or equal to those recorded at the existing monitor at the Martin Creek site (EPA AQS Site ID 48–401–1082).

[4] The Agreed Order between Luminant and Texas was entered on February 14, 2022.

[5] See page 3–2 of Texas' Rusk-Panola Attainment Demonstration State Implementation Plan Revision for the 2010 SO_2 National Ambient Air Quality Standard.

[6] On February 5, March 29, March 30, and April 13, the Martin Creek Monitor measured values at 119 ppb, 109 ppb, 95 ppb, and 77 ppb, respectively.

October 4, 1993) and 14094 (88 FR 21879, April 11, 2023);

- Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
- Does not have federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- Is not subject to Executive Order 13045 (62 FR 19885, April 23, 1997) because it approves a State program;
- Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001); and
- Is not subject to requirements of section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the Clean Air Act.

In addition, the SIP is not approved to apply on any Indian reservation land or in any other area where EPA or an Indian Tribe has demonstrated that a Tribe has jurisdiction. In those areas of Indian country, the rule does not have Tribal implications and will not impose substantial direct costs on Tribal governments or preempt Tribal law as specified by Executive Order 13175 (65 FR 67249, November 9, 2000). Executive Order 12898 (Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations, 59 FR 7629, Feb. 16, 1994) directs Federal agencies to identify and address ''disproportionately high and adverse human health or environmental effects'' of their actions on communities with environmental justice (EJ) concerns to the greatest extent practicable and permitted by law. Executive Order 14096 (Revitalizing Our Nation's Commitment to Environmental Justice for All, 88 FR 25251, April 26, 2023) builds on and supplements E.O. 12898 and defines EJ as, among other things, the just treatment and meaningful involvement of all people, regardless of income, race, color, national origin, or Tribal affiliation, or disability in agency decision-making and other Federal activities that affect human health and the environment.

TCEQ did not evaluate EJ considerations as part of its SIP submittal; the CAA and applicable implementing regulations neither prohibit nor require such an evaluation. Consistent with EPA's discretion under the CAA, EPA has evaluated the EJ considerations of this action, as is described in the proposed action at 89 FR 63117 (August 2, 2024) in the section titled, ''EJ Considerations.'' Due to the nature of the action being taken here, this action is expected to have a neutral to positive impact on the air quality of the affected area. In addition, there is no information in the record inconsistent with the stated goal of E.O. 12898/14096 of achieving EJ for communities with EJ concerns.

This action is exempt from the Congressional Review Act because it is a rule of particular applicability. The rule makes factual determinations for an identified entity (the Rusk-Panola area of Texas), based on facts and circumstances specific to that entity. The determination of failure to attain the 2010 SO_2 NAAQS does not in itself create any new requirements beyond what is mandated by the CAA.

Under section 307(b)(1) of the Clean Air Act, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by February 18, 2025. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this action for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed, and shall not postpone the effectiveness of such rule or action. This action may not be challenged later in proceedings to enforce its requirements. (See section 307(b)(2).)

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Incorporation by reference, Intergovernmental relations, Reporting and recordkeeping requirements, Sulfur oxides.

Dated: December 9, 2024.

Earthea Nance,

Regional Administrator, Region 6.

For the reasons stated in the preamble, the Environmental Protection Agency amends 40 CFR part 52 as follows:

PART 52—APPROVAL AND PROMULGATION OF IMPLEMENTATION PLANS

■ 1. The authority citation for part 52 continues to read as follows:

Authority: 42 U.S.C. 7401 *et seq.*

Subpart SS—Texas

■ 2. Amend § 52.2277 by adding paragraph (c) to read as follows:

§ 52.2277 Control strategy and regulations: Sulfur Dioxide.

* * * * *

(c) *Determination of failure to attain.* Effective January 16, 2025, the EPA has determined that the Rusk and Panola Counties, Texas nonattainment area failed to attain the 2010 1-hour primary sulfur dioxide (SO_2) national ambient air quality standards (NAAQS) by the applicable attainment date of January 12, 2022. This determination triggers the requirements of CAA section 179(d) for the State of Texas to submit a revision to the Texas SIP for the Rusk and Panola Counties nonattainment area to the EPA by December 17, 2025. The SIP revision must, among other elements, provide for attainment of the 1-hour primary SO_2 NAAQS in the Rusk and Panola Counties, Texas SO_2 nonattainment area as expeditiously as practicable but no later than December 17, 2029.

Designation of Areas for Air Quality Planning Purposes; Redesignation Request and Associated Maintenance Plan for Whatcom County, WA 2010 SO_2 Nonattainment Area

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: On July 25, 2024, the State of Washington (WA) submitted a request for the Environmental Protection Agency (EPA) to redesignate to attainment a portion of Whatcom County immediately surrounding the now permanently closed aluminum smelter, Intalco Aluminum LLC, which the EPA designated nonattainment for the 2010 1-hour primary sulfur dioxide (SO_2) National Ambient Air Quality Standard (NAAQS). Washington also submitted a request for the EPA to approve a State Implementation Plan (SIP) revision containing a maintenance plan for the area. The EPA is taking the following final actions: we have determined that the Whatcom County (partial) SO_2 nonattainment area (Whatcom County area or area) is

attaining the 2010 1-hour primary SO_2 NAAQS; we are approving Washington's plan for maintaining attainment of the 2010 1-hour primary SO_2 NAAQS in the area; and we are redesignating the Whatcom County area to attainment for the 2010 1-hour primary SO_2 NAAQS.

DATES: This final rule is effective January 16, 2025.

ADDRESSES: The EPA has established a docket for this action under Docket ID No. EPA–R10–OAR–2024–0371. All documents in the docket are listed on the *https://www.regulations.gov* website. Although listed in the index, some information is not publicly available, *e.g.,* Confidential Business Information or other information the disclosure of which is restricted by statute. Certain other material, such as copyrighted material, is not placed on the internet and will be publicly available only in hard copy form. Publicly available docket materials are available at *https://www.regulations.gov,* or please contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section for additional availability information.

FOR FURTHER INFORMATION CONTACT: Jeff Hunt, EPA Region 10, 1200 Sixth Avenue, Suite 155, Seattle, WA 98101, at (206) 553–0256 or *hunt.jeff@epa.gov.*

SUPPLEMENTARY INFORMATION: Throughout this document, wherever ''we'' or ''our'' is used, it means the EPA.

I. Background

On September 27, 2024 (89 FR 79195), The EPA proposed to take the following four separate but related actions: (1) determine that the Whatcom County area is attaining the 2010 1-hour SO_2 NAAQS; (2) approve Washington's plan for maintaining the 2010 1-hour SO_2 NAAQS (maintenance plan), including proposed approval of a ''reproducible approach'' to representing the air quality of the affected area; (3) redesignate the Whatcom County area to attainment for the 2010 1-hour SO_2 NAAQS; and (4) determine that the Whatcom County area has clean monitoring data.

The public comment period for the proposed actions closed on October 28, 2024. We received two anonymous comments, document EPA–R10–OAR–2024–0371–0014 (comment #1) and EPA–R10–OAR–2024–0371–0015 (comment #2). Both comments expressed support for the EPA's approval of Washington's redesignation request and maintenance plan. However, comment #1 and comment #2 raised concerns about Washington's ability to verify continued attainment. In addition, comment #2 suggested the contingency measures contain more specificity and that Washington should include a public accessibility plan in its Maintenance Plan. The full text of the comments may be found in the docket for this action, and we have responded to the relevant comments in section II. of this preamble. Under the Clean Air Act (CAA), the Administrator is required to approve a SIP submission that complies with the provisions of the CAA and applicable Federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, the EPA's role is to approve State choices, provided that they meet the criteria of the CAA.

II. EPA Responses to Comments Received

A. Monitoring Network and Verification of Continued Attainment

Comment: The EPA's proposed rulemaking provided a synopsis of Washington's strategy for verification of continued attainment in the area as part of the State's maintenance plan.[1] A more detailed explanation of Washington's ''reproducible approach'' to representing air quality, submitted to allow future monitor system modification under 40 CFR 58.14(c)(3), was provided in the maintenance plan itself.[2] With respect to this issue, comment #1 contains the statement, ''although this has well solidified evidence, it is necessary to continue monitoring the nonattainment and attainment areas of Whatcom County to ensure the air quality stays in line with the EPA's NAAQS. If the EPA did approve the request from Washington State it would further confirm the EPA's dedication to implementing their own policies.'' Comment #2 states, ''while the plan allows for flexibility in adjusting SO_2 monitoring sites, it is crucial to consider that SO_2 impacts often disproportionately affect vulnerable communities. Could the EPA establish clearer criteria or a more rigorous review process before relocating or decommissioning monitors? This would ensure that communities previously affected by emissions from the Intalco facility continue to have adequate air quality protections, even in the absence of a large point source.''

Response: We agree that Washington's maintenance plan should contain provisions for monitoring air quality in the area and verifying continued attainment. As discussed in the preamble to the proposed rulemaking, the maintenance plan contains these provisions and otherwise meets the maintenance plan requirements in CAA section 175A and the EPA's associated guidance.[3] Neither comment directly addresses the EPA's evaluation of these provisions in the preamble to the proposed rulemaking nor provides a basis for disapproving Washington's maintenance plan. To the extent the comments imply that the maintenance plan is inadequate to monitor and verify continued attainment or lacks specificity in this regard, we disagree. The following discussion summarizes Washington's approach to monitoring air quality in the area post-redesignation and verifying continued attainment.

In the EPA's December 2020 technical support document for the nonattainment designation, we determined the region of violation was most likely due to plume downwash at the Intalco facility during certain wind conditions, that the modeled area of violation did not extend far from the Intalco facility fence line, that the gradient of concentration near the areas of violation was steep, quickly dropping with distance from the Intalco facility fence line, and that other nearby industrial facilities did not sufficiently contribute to violations of the 1-hour primary SO_2 NAAQS to warrant inclusion in the nonattainment area boundary.[4] In our final nonattainment boundary determination, we concurred with the Washington Department of Ecology (Ecology) and Northwest Clean Air Agency (NWCAA) that the boundary should be drawn to encompass the cause of the SO_2 violations, the Intalco facility.

With the permanent closure of the Intalco facility, Washington's comprehensive emissions inventory, prepared as part of the maintenance plan, shows no remaining significant sources of SO_2, including mobile or area source emissions.[5] Therefore, in the absence of any current SO_2 emission sources, Washington's monitoring network and verification of continued attainment strategy focused on potential

[3] 42 U.S.C. 7505a and the September 4, 1992, Memorandum from John Calcagni titled ''Procedures for Processing Requests to Redesignate Areas to Attainment.''

[4] See 201_Appendix A Whatcom County SO_2 Area Designation.pdf, included in the docket for this action.

[5] See Chapter 5, Emissions Inventory, at pages 25–34.

future emission sources that may be located within the area.[6]

As described in our proposed rulemaking and the State's maintenance plan, the new source review (NSR) program ensures that any single facility applying for a permit to locate within the area complies with the NAAQS and other regulatory requirements.[7] In addition, Washington's maintenance plan included a stepwise process for assessing the cumulative impacts of new sources constructed in the area and triggering deployment of SO_2 monitors. This process ensures that cumulative impacts remain below the NAAQS should multiple facilities move to the area. Under the maintenance plan verification of continued attainment provisions, Washington, with NWCAA as the lead agency for the jurisdiction in coordination with Ecology, will evaluate the cumulative impacts of the new source or modifications using three sequential ''Action Levels.''

Under Action Level 1, Washington will conduct cumulative dispersion modeling using potential emissions if two conditions are met: (1) the cumulative potential SO_2 emissions in the area are greater than or equal to 250 tons per year of SO_2 and (2) the proposed new source or modification has the potential to emit 40 tons per year of SO_2 (the significant emission rate under the major NSR program). Washington will use the EPA's preferred screening and dispersion modeling tools identified in 40 CFR part 51 appendix W (''Appendix W'') as normally applicable for any source seeking a construction permit under the NSR program. If the results of the modeling under Action Level 1 indicate a design concentration of greater than or equal to 90% of the 1-hour NAAQS, then Washington will proceed to Action Level 2.

Under Action Level 2, Washington will conduct refined dispersion modeling that uses actual emissions from existing sources and potential emissions from the new source or modification. If the results of that modeling indicate a design concentration of greater than or equal to 50% of the 1-hour SO_2 NAAQS, then Washington will proceed to Action Level 3.

Under Action Level 3, Washington will deploy SO_2 ambient monitors within 1 year of the initial startup of the new source or modification. Any new monitors established for verification of continued attainment will be operated as State and Local Air Monitoring Stations (SLAMS) as part of Ecology's Primary Quality Assurance Organization (PQAO). Ecology will verify that monitor siting complies with 40 CFR part 58 appendix E (Probe and Monitoring Path Siting Criteria for Ambient Air Quality Monitoring) and will include any new site proposals in its annual Ambient Air Monitoring Network Plan. This plan is available for public inspection and comment for at least 30 days before its submission to the EPA by July 1 of each year. Any such proposal will be subject to review and approval by the EPA Regional Administrator, following the process described in 40 CFR 58.10.

Therefore, we disagree with the implication in comment #2 that the verification of continued attainment framework described in the State's maintenance plan lacked clear criteria or a rigorous review process. The commenter provided no details for improving the methodology or raising specific concerns with the presented framework.

With respect to the broader issue of protecting ''communities previously affected by emissions from the Intalco facility'' we agree with the commenter that these communities should be protected against future violations of health-based air quality standards. Washington's maintenance plan does so, and the commenter did not provide any specific reasons why the EPA should find to the contrary. We note that during the operation of the Intalco facility, the areas impacted by the elevated levels of SO_2 were very close to the facility's fence line and did not reach the nearby city of Ferndale.[8] More importantly, there are no current SO_2 sources in the area or SO_2 exposure risks. Current 2021–2023 design value SO_2 concentrations in the area are 3 parts per billion (ppb), much lower than the EPA's health-based NAAQS of 75 ppb.

With respect to monitoring, we reiterate that the current monitors were sited for the specific purpose of measuring building downwash impacts immediately surrounding the Intalco facility and thus are not necessarily suitable to assessing impacts to the surrounding community.[9] Accordingly, Washington included in its maintenance plan its reproducible approach to assessing future impacts on the community from new sources. This approach—coupled with NWCAA and Washington's NSR program—is adequate to ensure future development does not cause or contribute to a violation of the SO_2 NAAQS.

B. Contingency Measures

Comment: Comment #2 stated ''while the contingency measures are well-defined, additional detail about specific control measures and response timelines would help reassure the public of the plan's robustness. Particularly, if SO_2 levels approach the National Ambient Air Quality Standards (NAAQS) threshold, having a more explicit list of immediate actions the EPA or the Northwest Clean Air Agency (NWCAA) would take would demonstrate the agency's commitment to rapid response in the event of future exceedances.''

Response: We disagree that Washington's contingency measures should be more specific. As discussed in the preamble of our proposed rulemaking, the only significant source of SO_2 in the area has permanently shut down, thus the cause of any potential future NAAQS exceedance is unknown. Therefore, Washington cannot develop specific contingency measures as part of its maintenance plan.[10] Rather, Washington committed to concrete trigger levels and timelines for determining the appropriate contingency measures, but did not include specific measures in its maintenance plan. Therefore, our position remains that Washington's maintenance plan contains such contingency provisions as the Administrator deems necessary to assure that the State will promptly correct any violation of the standard which occurs after the redesignation of the area as an attainment area.[11]

C. Impacts of Future Sources

Comment: Comment #2 stated ''while I understand that the Clean Air Act may not require environmental justice analysis for this action, it would be prudent to consider the impacts of future sources or monitoring changes on historically marginalized communities. The inclusion of a public accessibility plan to provide real-time air quality data would support EPA's goals under Executive Order 12898, ensuring fair treatment and meaningful involvement of all residents in air quality decisions.''

Response: The EPA responded to the commenter's concern regarding

[11] CAA section 175A(d).

monitoring changes in section II.A of this preamble. With respect to impacts of future sources, our proposed rulemaking discussed how the NSR permitting program is the mechanism the EPA, States, and local clean air agencies use to assess the impacts of future sources. Washington's SIP includes NWCAA Rule 300 which establishes the minor NSR program applicable to sources constructed or modified in the Ferndale Area. Under Rule 300, save for certain limited exemptions, sources with a potential to emit more than 2.0 tons per year (tpy) of SO_2 must obtain approval prior to construction.[12] NWCAA may not approve construction or modification unless, among other things, the source will employ best available control technology and allowable emissions will not cause or contribute to a violation of any NAAQS.[13] As to the latter, NWCAA may require modeling using the EPA guidelines in appendix W of 40 CFR part 51 to determine whether construction and operation of the source will cause or contribute to a violation of any NAAQS.

Washington's SIP also includes a major new source review program to regulate the construction and modification of major sources constructed or modified in the Ferndale Area.[14] In general, Washington's major NSR program incorporates by reference the Federal major NSR program at 40 CFR 52.21. The major NSR program applies to sources with a potential to emit of 100 tpy of any regulated NSR pollutant for certain listed source categories, and 250 tpy of any regulated NSR pollutant for unlisted sources. Regulated NSR pollutant includes pollutants for which the EPA has established a NAAQS. Similar to the minor NSR program, all sources subject to the major NSR program must obtain a permit before commencing construction. In order to obtain a permit, the source must, among other things, demonstrate the source will apply best available control technologies for each regulated NSR pollutant that the source has the potential to emit in significant amounts. In the case of SO_2, the significant emissions rate is 40 tpy. In addition, the source must demonstrate through dispersion modeling that construction and operation of the source will not cause or contribute to a violation of any NAAQS or violate any prevention of significant deterioration increment. We believe the NSR permitting programs described above provide the best tools available for assessing impacts to communities from future sources.

III. Final Action

For the reasons stated in our proposed rulemaking (89 FR 79195, September 27, 2024) and in section II. of this preamble, we are taking the following three separate but related final actions: (1) determining that the Whatcom County area is attaining the 2010 1-hour SO_2 NAAQS; (2) approving Washington's plan for maintaining the 2010 1-hour SO_2 NAAQS, including approval of a ''reproducible approach'' to representing the air quality of the affected area; and (3) redesignating the Whatcom County area to attainment for the 2010 1-hour SO_2 NAAQS.

Specifically, as described in our proposed rulemaking, the EPA has determined that the Whatcom County area is attaining the 2010 1-hour primary SO_2 NAAQS based on the most recent complete monitoring data for the three-year (2021–2023) design value period.

The EPA is approving the maintenance plan under the 2010 1-hour SO_2 NAAQS for the Whatcom County area into the Washington SIP (under CAA section 175A). The maintenance plan demonstrates that the area will continue to maintain the 2010 1-hour SO_2 NAAQS and includes a process to develop and implement contingency measures to remedy any future violations of the 2010 1-hour SO_2 NAAQS and procedures for evaluating potential violations.

The EPA has determined that the Whatcom County area has met the criteria under CAA section 107(d)(3)(E) for redesignation from nonattainment to attainment for the 2010 1-hour SO_2 NAAQS. On this basis, the EPA is approving Washington's redesignation request for the area. Accordingly, the EPA is revising the legal designation of the portion of Whatcom County designated nonattainment at 40 CFR 81.348 to attainment for the 2010 1-hour SO_2 NAAQS.

The EPA is not finalizing a Clean Data Determination for the Whatcom County area. As noted in our proposed rulemaking, the EPA proposed the option to finalize a clean data determination in the event that the EPA did not finalize the proposed redesignation. However, because the EPA is finalizing the redesignation of the area to attainment, it is not finalizing this portion of the proposal.

IV. Statutory and Executive Order Reviews

Under the CAA, redesignation of an area to attainment is an action that affects the status of a geographical area and does not impose any additional regulatory requirements on sources beyond those imposed by State law. A redesignation to attainment does not in and of itself create any new requirements, but rather results in the applicability of requirements contained in the CAA for areas that have been redesignated to attainment.

In addition, the Administrator is required to approve a SIP submission that complies with the provisions of the Clean Air Act and applicable Federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, the EPA's role is to approve State choices, provided that they meet the criteria of the Clean Air Act.

Accordingly, this action merely approves State law as meeting Federal requirements and does not impose additional requirements beyond those imposed by State law. For these reasons, this final action:

- Is not a significant regulatory action subject to review by the Office of Management and Budget under Executive Orders 12866 (58 FR 51735, October 4, 1993) and 14094 (88 FR 21879, April 11, 2023);
- Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
- Does not have federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- Is not subject to Executive Order 13045 (62 FR 19885, April 23, 1997) because it approves a state program;
- Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001); and
- Is not subject to requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the Clean Air Act.

Executive Order 12898 (Federal Actions to Address Environmental

Justice in Minority Populations and Low-Income Populations, 59 FR 7629, February 16, 1994) directs Federal agencies to identify and address ''disproportionately high and adverse human health or environmental effects'' of their actions on communities with environmental justice (EJ) concerns to the greatest extent practicable and permitted by law. The EPA defines EJ as ''the fair treatment and meaningful involvement of all people regardless of race, color, national origin, or income with respect to the development, implementation, and enforcement of environmental laws, regulations, and policies.'' The EPA further defines the term fair treatment to mean that ''no group of people should bear a disproportionate burden of environmental harms and risks, including those resulting from the negative environmental consequences of industrial, governmental, and commercial operations or programs and policies.'' The Washington Department of Ecology did evaluate environmental justice considerations as part of its SIP submittal; the CAA and applicable implementing regulations neither prohibit nor require such an evaluation. The EPA did not perform an EJ analysis and did not consider EJ in this action. Consideration of EJ is not required as part of this action, and there is no information in the record inconsistent with the stated goal of Executive Order 12898 of achieving environmental justice for communities with EJ concerns.

In addition, this final action, pertaining to redesignation of the Whatcom County area and approval of a maintenance plan for the area, would not be approved to apply on any Indian reservation land or in any other area where the EPA or an Indian Tribe has demonstrated that a Tribe has jurisdiction. In those areas of Indian country, the rule would not have Tribal implications and would not impose substantial direct costs on tribal governments or preempt Tribal law as specified by Executive Order 13175 (65 FR 67249, November 9, 2000). Consistent with EPA policy, the EPA provided a consultation opportunity to Tribes located near the Whatcom County area, in letters dated July 25, 2024 and July 29, 2024, included in the docket for this action.

This action is subject to the Congressional Review Act, and the EPA will submit a rule report to each House of the Congress and to the Comptroller General of the United States. This action is not a ''major rule'' as defined by 5 U.S.C. 804(2).

Under section 307(b)(1) of the Clean Air Act, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by February 18, 2025. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this action for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed and shall not postpone the effectiveness of such rule or action. This action may not be challenged later in proceedings to enforce its requirements. See section 307(b)(2).

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 81

[EPA–R05–OAR–2024–0546; FRL–12410–01–R5]

Findings of Failure To Attain and Reclassification of Areas in Illinois, Indiana, Michigan, Ohio, and Wisconsin as Serious for the 2015 Ozone National Ambient Air Quality Standards

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final determination.

SUMMARY: The Environmental Protection Agency (EPA) is determining that the Allegan County, MI; Berrien County, MI; Chicago, IL-IN-WI; Cleveland, OH; Milwaukee, WI; Muskegon County, MI; Sheboygan County, WI; and Illinois portion of the St. Louis, MO-IL areas failed to attain the 2015 ozone National Ambient Air Quality Standards (NAAQS) by the applicable attainment date. The effect of failing to attain by the applicable attainment date is that the areas will be reclassified by operation of law to ''Serious'' nonattainment for the 2015 ozone NAAQS on January 16, 2025, the effective date of this final rule. This action fulfills EPA's obligation under the Clean Air Act (CAA) to determine whether ozone nonattainment areas attained the NAAQS by the attainment date and to publish a document in the **Federal Register** identifying each area that is determined as having failed to attain and identifying the reclassification.

DATES: This final rule is effective on January 16, 2025.

ADDRESSES: EPA has established a docket for this action under Docket ID No. EPA–R05–OAR–2024–0546. All documents in the docket are listed on the *https://www.regulations.gov* website. Although listed in the index, some information is not publicly available, *i.e.,* Confidential Business Information (CBI), Proprietary Business Information (PBI), or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the internet and will be publicly available only in hard copy form. Publicly available docket materials are available either through *https://www.regulations.gov* or at the Environmental Protection Agency, Region 5, Air and Radiation Division, 77 West Jackson Boulevard, Chicago, Illinois 60604. This facility is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding Federal holidays. We recommend that you telephone Eric Svingen, Environmental Engineer, at (312) 353–4489 before visiting the Region 5 office.

FOR FURTHER INFORMATION CONTACT: Eric Svingen, Air and Radiation Division (AR–18J), Environmental Protection Agency, Region 5, 77 West Jackson Boulevard, Chicago, Illinois 60604, (312) 353–4489, *svingen.eric@epa.gov.*

SUPPLEMENTARY INFORMATION:

I. Overview of Action

EPA is required to determine whether areas designated nonattainment for an ozone NAAQS attained the standard by the applicable attainment date, and to take certain steps for areas that failed to attain (see CAA section 181(b)(2)). EPA's determination of attainment for the 2015 ozone NAAQS is based on a nonattainment area's design value (DV) as of the attainment date.[1]

The 2015 ozone NAAQS is met at an EPA regulatory monitoring site when the DV does not exceed 0.070 parts per million (ppm). For the Moderate nonattainment areas for the 2015 ozone NAAQS addressed in this action, the attainment date was August 3, 2024. Because the DV is based on the three most recent, complete calendar years of data, attainment must occur no later than December 31 of the year prior to the attainment date (*i.e.,* December 31, 2023, in the case of Moderate nonattainment areas for the 2015 ozone NAAQS). As such, EPA's determinations for each area are based upon the complete, quality-assured, and certified ozone monitoring data from calendar years 2021, 2022, and 2023.

This action addresses eight areas in Illinois, Indiana, Michigan, Missouri, Ohio, and Wisconsin that were classified as Moderate for the 2015 ozone NAAQS as of the Moderate area attainment date of August 3, 2024. EPA is addressing the remaining areas, including the Missouri portion of the St. Louis area, in separate actions. Table 1 provides a summary of the DVs and the EPA's air quality-based determinations

[1] A DV is a statistic used to compare data collected at an ambient air quality monitoring site to the applicable NAAQS to determine compliance with the standard. The data handling conventions for calculating DVs for the 2015 ozone NAAQS are specified in appendix U to 40 CFR part 50. The DV for the 2015 ozone NAAQS is the 3-year average of the annual fourth highest daily maximum 8-hour average ozone concentration. The DV is calculated for each air quality monitor in an area, and the DV for an area is the highest DV among the individual monitoring sites located in the area.

for the eight Moderate areas addressed in this action.

TABLE 1—SUMMARY OF NONATTAINMENT AREAS IN ILLINOIS, INDIANA, MICHIGAN, MISSOURI, OHIO, AND WISCONSIN CLASSIFIED AS MODERATE FOR THE 2015 OZONE NAAQS

Nonattainment area	2021–2023 design value (DV) (ppm)	Attainment by the attainment date
Allegan County, MI	0.075	Failed to attain.
Berrien County, MI	0.073	Failed to attain.
Chicago, IL-IN-WI	0.077	Failed to attain.
Cleveland, OH	0.073	Failed to attain.
Milwaukee, WI	0.074	Failed to attain.
Muskegon County, MI	0.077	Failed to attain.
Sheboygan County, WI	0.077	Failed to attain.
St. Louis, MO-IL	0.074	Failed to attain.

EPA is finding that the eight Moderate areas in Table 1 did not attain by their attainment dates, because their 2021–2023 DVs are greater than 0.070 ppm. If EPA determines that a nonattainment area classified as Moderate failed to attain by the attainment date, CAA section 181(b)(2)(B) requires EPA to publish a determination in the **Federal Register**, no later than 6 months following the attainment date, identifying each such area and identifying the applicable reclassification.

Under CAA section 181(b)(2)(A), the effect of this determination is that these eight areas will be reclassified by operation of law as Serious on the effective date of this final rule. The reclassified areas will then be subject to the Serious area requirement to attain the 2015 ozone NAAQS as expeditiously as practicable, but not later than August 3, 2027.

Once reclassified as Serious, the relevant States must submit to EPA the SIP revisions for these areas that satisfy the statutory and regulatory requirements applicable to Serious areas established in CAA section 182(c) and in the 2015 Ozone NAAQS SIP Requirements Rule (see 83 FR 62998, December 6, 2018). EPA is establishing deadlines for submitting SIP revisions for these reclassified areas in a separate action.

II. What is the background for this action?

On October 26, 2015, EPA issued its final action to revise the NAAQS for ozone to establish a new 8-hour standard (*see* 80 FR 65452, October 26, 2015). In that action, EPA promulgated identical tighter primary and secondary ozone standards designed to protect public health and welfare that specified an 8-hour ozone level of 0.070 ppm. Specifically, the standards require that the 3-year average of the annual fourth highest daily maximum 8-hour average ozone concentration may not exceed 0.070 ppm.

Effective on August 3, 2018, EPA designated 52 areas throughout the country as nonattainment for the 2015 ozone NAAQS (see 83 FR 25776, June 4, 2018). In a separate action, EPA assigned classification thresholds and attainment dates based on the severity of an area's ozone problem, determined by the area's DV (see 83 FR 10376, May 8, 2018). EPA established the attainment date for Marginal, Moderate, and Serious nonattainment areas as 3 years, 6 years, and 9 years, respectively, from the effective date of the final designations. Thus, the attainment date for Marginal nonattainment areas for the 2015 ozone NAAQS was August 3, 2021, the attainment date for Moderate areas was August 3, 2024, and the attainment date for Serious areas is August 3, 2027. On October 7, 2022 (87 FR 60897), EPA determined that 22 areas, including the eight areas addressed in this action, did not attain the standards by the Marginal attainment date, and these areas were reclassified as Moderate by operation of law.

III. What is the statutory authority for this action?

The statutory authority for these determinations is provided by the CAA, as amended (42 U.S.C. 7401 *et seq.*). Relevant portions of the CAA include, but are not necessarily limited to, sections 181 and 182.

CAA section 107(d) provides that when the EPA establishes or revises a NAAQS, the agency must designate areas of the country as nonattainment, attainment, or unclassifiable based on whether an area is not meeting (or is contributing to air quality in a nearby area that is not meeting) the NAAQS, meeting the NAAQS, or cannot be classified as meeting or not meeting the NAAQS, respectively. Subpart 2 of part D of title I of the CAA governs the classification, State planning, and emissions control requirements for any areas designated as nonattainment for a revised primary ozone NAAQS. In particular, CAA section 181(a)(1) requires each area designated as nonattainment for a revised ozone NAAQS to be classified at the same time as the area is designated based on the extent of the ozone problem in the area (as determined based on the area's DV). Classifications for ozone nonattainment areas are ''Marginal,'' ''Moderate,'' ''Serious,'' ''Severe,'' and ''Extreme,'' in order of stringency. CAA section 182 provides the specific attainment planning and additional requirements that apply to each ozone nonattainment area based on its classification.

Section 181(b)(2)(A) of the CAA requires that within 6 months following the applicable attainment date, EPA shall determine whether an ozone nonattainment area attained the ozone standard based on the area's DV as of that date. Under CAA section 181(a)(5) as interpreted by EPA in 40 CFR 51.1307, upon application by any State, EPA may grant a 1-year extension to the attainment date when certain criteria are met. One criterion for a first attainment date extension is that an area's fourth highest daily maximum 8-hour value for the attainment year must not exceed the level of the standard.

In the event an area fails to attain the ozone NAAQS by the applicable attainment date and is not granted a 1-year attainment date extension, CAA section 181(b)(2)(A) requires the EPA to make the determination that an ozone nonattainment area failed to attain the ozone standard by the applicable attainment date, and requires the area to be reclassified by operation of law to the

higher of: (1) The next higher classification for the area, or (2) the classification applicable to the area's DV as of the determination of failure to attain.[2] Section 181(b)(2)(B) of the CAA requires EPA to publish the determination of failure to attain and accompanying reclassification in the **Federal Register** no later than 6 months after the attainment date, which in the case of the Moderate nonattainment areas considered in this determination is February 3, 2025.

Once an area is reclassified, each State that contains a reclassified area is required to submit certain SIP revisions in accordance with its more stringent classification. The SIP revisions are intended to, among other things, demonstrate how the area will attain the NAAQS as expeditiously as practicable, but no later than August 3, 2027, the Serious area attainment date for the 2015 ozone NAAQS. Per CAA section 182(i), a State with a reclassified ozone nonattainment area must submit the applicable attainment plan requirements ''according to the schedules prescribed in connection with such requirements'' in CAA section 182(c) for Serious areas, but EPA ''may adjust applicable deadlines (other than attainment dates) to the extent such adjustment is necessary or appropriate to assure consistency among the required submissions.'' EPA is addressing the SIP revision and implementation deadlines for newly reclassified Serious areas, as well as the continued applicability of Moderate area requirements that these areas may not yet have met, in a separate rulemaking.

IV. How does EPA determine whether an area has attained the standard?

The level of the 2015 ozone NAAQS is 0.070 ppm.[3] Under EPA regulations at 40 CFR part 50, appendix U, the 2015 ozone NAAQS is attained at a site when the 3-year average of the annual fourth highest daily maximum 8-hour average ambient ozone concentration (*i.e.,* DV) does not exceed 0.070 ppm. When the DV does not exceed 0.070 ppm at each ambient air quality monitoring site within the area, the area is deemed to be attaining the ozone NAAQS. Each area's DV is determined by the highest DV among monitors with valid DVs.[4] The data handling convention in appendix P dictates that concentrations shall be reported in ''ppm'' to the third decimal place, with additional digits to the right being truncated. Thus, a computed 3-year average ozone concentration of 0.071 ppm is greater than 0.070 ppm and would exceed the standard, but a computed 3-year average ozone concentration of 0.0709 ppm is truncated to 0.070 ppm and attains the 2015 ozone NAAQS.

EPA's determination of attainment is based upon hourly ozone concentration data for calendar years 2021, 2022 and 2023 that have been collected and quality-assured in accordance with 40 CFR part 58 and reported to EPA's Air Quality System (AQS) database.[5]

State and local monitoring network plans are subject to approval by EPA on an annual basis and any interim modifications to those plans must also be approved by EPA.[6] The annual monitoring network plan process is provided in 40 CFR 58.10 and the requirements governing system modifications and monitor discontinuations are laid out in 40 CFR 58.14. Where State or local agencies seek to modify the ambient air quality monitoring networks by discontinuing a monitor station, EPA may approve such modifications subject to the criteria established in 40 CFR 58.14(c). EPA may not approve such discontinuation if doing so would compromise data collection needed for implementation of a NAAQS. If a monitor has been discontinued subject to 40 CFR 58.14 such that the discontinuation results in insufficient data to calculate a valid DV according to appendix U to 40 CFR part 50, EPA will determine the applicable area's attainment status based on the remaining monitors in the area.

V. What is EPA's determination for the areas?

EPA is determining that the eight Moderate nonattainment areas addressed in this action failed to attain the 2015 ozone NAAQS by the attainment date of August 3, 2024. The eight areas are: Allegan County, MI; Berrien County, MI; Chicago, IL-IN-WI; Cleveland, OH; Milwaukee, WI; Muskegon County, MI; Sheboygan County, WI; and the Illinois portion of the St. Louis, MO-IL area. As shown in Table 1, at least one monitor in each of these areas had a 2021–2023 DV greater than 0.070 ppm. EPA has further determined that these areas did not meet the requirement under section 181(a)(5)(B) and 40 CFR 51.1307 necessary to grant a 1-year extension of the attainment date, because at least one monitor in each area had a 2023 fourth highest daily maximum 8-hour average that was greater than 0.070 ppm. Table 2 through Table 9 show the annual fourth highest daily maximum 8-hour average ozone concentration and 2021–2023 DV for each monitor in the eight areas.

[2] All nonattainment areas named in this action that failed to attain by the attainment date would be classified to the next higher classification, Serious. None of the affected areas has a DV that would otherwise place an area in a higher classification.

[3] See 40 CFR 50.19.

[4] According to appendix U to 40 CFR part 50, ambient monitoring sites with a DV of 0.070 ppm or less must meet minimum data completeness requirements in order to be considered valid. These requirements are met for a 3-year period at a site if daily maximum 8-hour average ozone concentrations are available for at least 90% of the days within the ozone monitoring season, on average, for the 3-year period, with a minimum of at least 75% of the days within the ozone monitoring season in any one year. Ozone monitoring seasons are defined for each State in appendix D to 40 CFR part 58. DVs greater than 0.070 ppm are considered to be valid regardless of the data completeness.

[5] EPA maintains the AQS, a database that contains ambient air pollution data collected by EPA, State, local, and tribal air pollution control agencies. The AQS also contains meteorological data, descriptive information about each monitoring station (including its geographic location and its operator) and data quality assurance/quality control information. The AQS data is used to (1) assess air quality, (2) assist in attainment/non-attainment designations, (3) evaluate SIPs for non-attainment areas, (4) perform modeling for permit review analysis, and (5) prepare reports for Congress as mandated by the CAA. Access is through the website at *https://www.epa.gov/aqs.*

[6] Annual monitoring network plans for each State are available at *https://www.epa.gov/amtic/state-monitoring-agency-annual-air-monitoring-plans-and-network-assessments.*

29–510–0085	St. Louis City	Missouri	0.068	0.068	0.077	0.071

VI. What action is EPA taking?

Pursuant to CAA section 181(b)(2), EPA is determining that the Allegan County, MI; Berrien County, MI; Chicago, IL-IN-WI; Cleveland, OH; Milwaukee, WI; Muskegon County, MI; Sheboygan County, WI; and Illinois portion of the St. Louis, MO-IL areas failed to attain the 2015 ozone NAAQS by the applicable attainment date of August 3, 2024. Therefore, upon the effective date of this final action, these areas will be reclassified, by operation of law, to Serious for the 2015 ozone NAAQS. Once reclassified as Serious, these areas will be required to attain the standard ''as expeditiously as practicable'' but no later than 9 years after the initial designation as nonattainment, which in this case would be no later than August 3, 2027.

Section 553 of the APA, 5 U.S.C. 553(b)(B), provides that, when an agency for good cause finds that notice and public procedures are impracticable, unnecessary or contrary to the public interest, the agency may issue a rule without providing notice and an opportunity for public comment. EPA has determined that there is good cause for making this final agency action without prior proposal and opportunity for comment because our action to determine whether these areas have attained the NAAQS by the attainment date is governed, per CAA section 181(b)(2)(A), solely by area design values as of that date. The area design values relied upon in this determination are calculations based on the certified air quality monitoring data governed by EPA's regulations and

involve no judgment or discretion. Thus, notice and public procedures are unnecessary to take this action. EPA finds that this constitutes good cause under 5 U.S.C. 553(b)(B).

VII. Statutory and Executive Order Reviews

A. Executive Order 12866: Regulatory Planning and Review, and Executive Order 14094: Modernizing Regulatory Review

This action is not a ''significant regulatory action'' under the terms of Executive Order 12866 (58 FR 51735, October 4, 1993) and is therefore not subject to review under Executive Order 14094 (88 FR 21879, April 11, 2023).

B. Paperwork Reduction Act (PRA)

This rule does not impose an information collection burden under the provisions of the PRA of 1995 (44 U.S.C. 3501 *et seq.*). This action does not contain any information collection activities and serves only to make final determinations that the Allegan County, MI; Berrien County, MI; Chicago, IL–IN–WI; Cleveland, OH; Milwaukee, WI; Muskegon County, MI; Sheboygan County, WI; and Illinois portion of the St. Louis, MO–IL nonattainment areas failed to attain the 2015 ozone standards by the August 3, 2024, attainment date where such areas will be reclassified as Serious nonattainment for the 2015 ozone standards by operation of law upon the effective date of the final reclassification action.

C. Regulatory Flexibility Act (RFA)

I certify that this action will not have a significant economic impact on a substantial number of small entities under the RFA (5 U.S.C. 601 *et seq.*). This action will not impose any requirements on small entities. The determination of failure to attain the 2015 ozone standards (and resulting reclassifications), do not in and of themselves create any new requirements beyond what is mandated by the CAA. This final action would require the State to adopt and submit SIP revisions to satisfy CAA requirements and would not itself directly regulate any small entities.

D. Unfunded Mandates Reform Act (UMRA)

This action does not contain any unfunded mandate as described in UMRA, 2 U.S.C. 1531–1538 and does not significantly or uniquely affect small governments. The action imposes no enforceable duty on any State, local or Tribal governments or the private sector.

E. Executive Order 13132: Federalism

This action does not have federalism implications. It will not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. The division of responsibility between the Federal government and the States for purposes of implementing the NAAQS is established under the CAA.

F. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

This action has Tribal implications. However, it will neither impose substantial direct compliance costs on federally recognized Tribal governments, nor preempt Tribal law.

EPA has identified one Tribal area within the nonattainment areas covered by this rulemaking, that would be potentially affected by this final action. Specifically, the boundaries of the Berrien County, MI area contains the Pokagon Band of Potawatomi Indians.

EPA has concluded that the final rule may have Tribal implications for this Tribe for the purposes of Executive Order 13175 but would not impose substantial direct costs upon the Tribe, nor would it preempt Tribal law. A Tribe that is part of an area that is reclassified from Moderate to Serious nonattainment is not required to submit a Tribal implementation plan revision to address new Moderate area requirements.

However, certain permitting requirements will change for stationary sources seeking preconstruction permits in any nonattainment areas newly reclassified as Serious, including on Tribal lands within these nonattainment areas.

EPA has communicated or intends to communicate with the potentially affected Tribe located within the boundaries of the nonattainment areas addressed in this final action, including offering government-to-government consultation, as appropriate.

G. Executive Order 13045: Protection of Children From Environmental Health and Safety Risks

EPA interprets Executive Order 13045 (62 FR 19885, April 23, 1997) as applying to those regulatory actions that concern environmental health or safety risks that EPA has reason to believe may disproportionately affect children, per the definition of ''covered regulatory action'' in section 2–202 of the Executive Order. This action is not subject to Executive Order 13045 because it does not establish an environmental standard intended to mitigate health or safety risks.

H. Executive Order 13211: Actions That Significantly Affect Energy Supply, Distribution, or Use

This action is not subject to Executive Order 13211 (66 FR 28355, May 22, 2001) because it is not a significant regulatory action under Executive Order 12866.

I. National Technology Transfer and Advancement Act (NTTAA)

This rulemaking does not involve technical standards. Therefore, EPA is not considering the use of any voluntary consensus standards.

J. Executive Order 12898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations

Executive Order 12898 (Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations, 59 FR 7629, February 16, 1994) directs Federal agencies to identify and address ''disproportionately high and adverse human health or environmental effects'' of their actions on communities with environmental justice (EJ) concerns to the greatest extent practicable and permitted by law. Executive Order 14096 (Revitalizing Our Nation's Commitment to Environmental Justice for All, 88 FR 25251, April 26, 2023) builds on and supplements E.O. 12898 and defines EJ as, among other things, the just treatment and meaningful involvement of all people, regardless of income, race, color, national origin, Tribal affiliation, or disability in agency decision-making and other Federal activities that affect human health and the environment.

EPA did not perform an EJ analysis and did not consider EJ in this action. Due to the nature of the action being taken here, this action is expected to have a neutral to positive impact on the air quality of the affected area. Consideration of EJ is not required as part of this action, and there is no information in the record inconsistent with the stated goal of E.O. 12898/14096 of achieving EJ for communities with EJ concerns.

K. Congressional Review Act

This rule is exempt from the CRA because it is a rule of particular applicability. The rule makes factual determinations for identified entities (the Allegan County, MI; Berrien County, MI; Chicago, IL–IN–WI;

Cleveland, OH; Milwaukee, WI; Muskegon County, MI; Sheboygan County, WI; and Illinois portion of the St. Louis, MO–IL areas), based on facts and circumstances specific to those entities. The determinations of attainment and failure to attain the 2015 ozone NAAQS do not in themselves create any new requirements beyond what is mandated by the CAA.

L. Judicial Review

Under section 307(b)(1) of the CAA, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by February 18, 2025. Filing a petition for reconsideration by the Administrator of this action does not affect the finality of this action for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed, and shall not postpone the effectiveness of this action. This action may not be challenged later in proceedings to enforce its requirements. (See section 307(b)(2).)

List of Subjects in 40 CFR Part 81

Environmental protection, Administrative practice and procedure, Air pollution control, Intergovernmental relations, Nitrogen dioxide, Ozone, Reporting and recordkeeping requirements, Volatile organic compounds.

Dated: December 6, 2024.

Debra Shore,

Regional Administrator, Region 5.

For the reasons stated in the preamble the Environmental Protection Agency amends title 40 CFR part 81 as follows:

PART 81—DESIGNATION OF AREAS FOR AIR QUALITY PLANNING PURPOSES

■ 1. The authority citation for part 81 continues to read as follows:

Authority: 42 U.S.C. 7401 *et seq.*

■ 2. Section 81.314 is amended in the table for ''Illinois—2015 8-Hour Ozone NAAQS [Primary and Secondary]'' by revising the entry for ''Chicago, IL-IN-WI'' to read as follows:

§ 81.314 Illinois.

* * * * *

ILLINOIS—2015 8-HOUR OZONE NAAQS

[Primary and Secondary]

Designated area [1]	Designation		Classification	
	Date [2]	Type	Date [2]	Type
Chicago, IL-IN-WI:	[3] 7/14/2021	Nonattainment	1/16/2025	Serious.
Cook County.				
DuPage County.				
Grundy County (part):				
Aux Sable Township and Goose Lake Township.				
Kane County.				
Kendall County (part):				
Oswego Township.				
Lake County.				
McHenry County.				
Will County.				
* * *	*	*	*	*

[1] Includes any Indian country in each county or area, unless otherwise specified. EPA is not determining the boundaries of any area of Indian country in this table, including any area of Indian country located in the larger designation area. The inclusion of any Indian country in the designation area is not a determination that the State has regulatory authority under the Clean Air Act for such Indian country.

[2] This date is August 3, 2018, unless otherwise noted.

[3] EPA revised the nonattainment boundary in response to a court decision, which did not vacate any designations for the 2015 ozone NAAQS, but which remanded the designation for the identified county. Because this additional area is part of a previously designated nonattainment area, the implementation dates for the overall nonattainment area (*e.g.,* the August 3, 2021 attainment date) remain unchanged regardless of this later designation date.

* * * * *

■ 3. Section 81.315 is amended in the table for ''Indiana—2015 8-Hour Ozone NAAQS [Primary and Secondary]'' by revising the entry for ''Chicago, IL-IN-WI'' to read as follows:

§ 81.315 Indiana.

* * * * *

INDIANA—2015 8-HOUR OZONE NAAQS

[Primary and Secondary]

Designated area [1]	Designation		Classification	
	Date [2]	Type	Date [2]	Type
Chicago, IL-IN-WI:	[3] 7/14/2021	Nonattainment	1/16/2025	Serious.
Lake County (part):				
Calumet Township, Hobart Township, North Township, Ross Township, and St. John Township.				
Porter County (part):

[FR Doc. 2024–29137 Filed 12–16–24; 8:45 am]

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 81

[EPA–R03–OAR–2023–0419; FRL–11736–02–R3]

Redesignation of Portions of Westmoreland and Cambria Counties, Pennsylvania for the 2010 Sulfur Dioxide (SO_2) National Ambient Air Quality Standards (NAAQS)

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: The Environmental Protection Agency (the EPA or the Agency) is finalizing the redesignation of portions of Cambria County and Westmoreland County, Pennsylvania, to ''nonattainment'' for the 2010 1-hour primary sulfur dioxide (SO_2) national ambient air quality standard (NAAQS or standard). Westmoreland County was previously designated ''attainment/unclassifiable,'' and Cambria County was designated ''unclassifiable.'' The EPA notified the Commonwealth of Pennsylvania of its intended redesignation of portions of Cambria and Westmoreland counties on February 17, 2023, and published a Notice of Availability (NOA) for this action on February 12, 2024. The EPA's redesignation of portions of these counties is based on modeled violations of the 2010 1-hour primary SO_2 NAAQS.

DATES: This final rule is effective on January 16, 2025.

ADDRESSES: The EPA has established a docket for this redesignation under Docket ID Number EPA–R03–OAR–2023–0419. All documents in the docket are listed on the *www.regulations.gov website.* Although listed in the index, some information is not publicly available, *e.g.,* confidential business information (CBI) or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the internet and will be publicly available only in hard copy form. Publicly available docket materials are available through *www.regulations.gov, o*r please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section for additional availability information.

The EPA has established a website for the designations for the 2010 SO_2 NAAQS at *www.epa.gov/sulfur-dioxide-designations/sulfurdioxide-designations-regulatory-actions.* This final redesignation action, associated technical support documents, and other related information will be added to this website.

FOR FURTHER INFORMATION CONTACT: Ellen Schmitt, Planning & Implementation Branch (3AD30), Air & Radiation Division, U.S. Environmental Protection Agency, Region III, 1600 John F. Kennedy Boulevard, Philadelphia, Pennsylvania 19103. The telephone number is (215) 814–5787. Ms. Schmitt can also be reached via electronic mail at *schmitt.ellen@epa.gov.*

SUPPLEMENTARY INFORMATION:

I. Background and Purpose of the EPA's Final Action

The EPA is required by Clean Air Act (CAA) section 107(d) to designate all areas throughout the nation as attaining or not attaining the NAAQS within two years of the promulgation of any new or revised NAAQS. Pursuant to CAA section 107(d), the EPA must designate as ''nonattainment'' those areas that violate the NAAQS and those nearby areas that contribute to violations. Once an area has been designated, the EPA Administrator, under CAA section 107(d)(3), may at any time notify a state that a designation should be revised.

Under section 109 of the CAA, the EPA has established primary and secondary NAAQS for certain pervasive air pollutants and conducts periodic reviews of the NAAQS to determine whether they should be revised or whether new NAAQS should be established. The primary NAAQS represent ambient air quality standards, the attainment and maintenance of which the EPA has determined, including a margin of safety, are requisite to protect the public health. The secondary NAAQS represent ambient air quality standards, the attainment and maintenance of which the EPA has determined are requisite to protect the public welfare from any known or anticipated adverse effects associated with the presence of such air pollutant in the ambient air.

On June 22, 2010 (75 FR 35520), the EPA finalized the revision of the 1-hour primary SO_2 NAAQS, codified at 40 Code of Federal Regulations (CFR) 50.17, which became effective on August 23, 2010 (hereafter referred to as the 2010 SO_2 NAAQS). The 2010 SO_2 NAAQS is met at an ambient air quality

monitoring site (or in the case of dispersion modeling, at an ambient air quality receptor location) when the 3-year average of the annual 99th percentile of daily maximum 1-hour average concentrations is less than or equal to 75 parts per billion (ppb), as determined in accordance with appendix T of 40 CFR part 50. 40 CFR 50.17(a) and (b).

The EPA was required to designate areas throughout the country for the 2010 SO_2 NAAQS by June 3, 2012. The EPA invoked a 1-year extension of the deadline to designate areas for the 2010 SO_2 NAAQS, as provided for under CAA section 107, after which the Agency completed an initial round of SO_2 designations for certain areas of the country on August 5, 2013 (referred to as ''Round 1'').[1] In Round 1, the EPA designated Indiana County, Pennsylvania and a portion of Armstrong County, Pennsylvania as nonattainment (hereafter referred collectively as the ''Indiana Area''). On January 9, 2018,[2] in a subsequent round of designations for the 2010 SO_2 NAAQS, Westmoreland County, Pennsylvania was designated as attainment/unclassifiable, and Cambria County, Pennsylvania was designated as unclassifiable.

In 2018, during the public comment period for the proposed approval of the SO_2 attainment SIP for the Indiana Area (83 FR 32606, July 13, 2018), the Sierra Club submitted a modeling analysis which claimed to also show violations of the SO_2 NAAQS within portions of Westmoreland and Cambria counties due to SO_2 emissions from sources located within the Indiana Area.[3] In 2022, during the public comment period for the proposed partial disapproval and partial approval of the Indiana Area's attainment SIP (87 FR 15166, March 17, 2022), the EPA received additional dispersion modeling from the Sierra Club, and from Keystone-Conemaugh Projects, LLC (KEY–CON),[4] focused on the Westmoreland and Cambria areas. The EPA also conducted its own modeling of those areas. Based on review of all modeling analyses, the EPA made the determination that there are modeled SO_2 NAAQS violations outside of the existing Indiana Area, in portions of Westmoreland and Cambria counties, and accordingly notified the Governor of Pennsylvania in a letter dated February 17, 2023, of our intent to redesignate portions of Westmoreland and Cambria counties as nonattainment for the 2010 1-hour primary SO_2 NAAQS, consistent with CAA section 107(d)(3)(A).[5] On June 22, 2023, Acting Secretary for the Pennsylvania Department of Environmental Protection (PA DEP), Richard Negrin, responded to the EPA's letter but did not specify whether the Commonwealth agreed or disagreed with the EPA's determination to redesignate portions of Westmoreland and Cambria counties as nonattainment for the 2010 1-hour primary SO_2 NAAQS. Instead, Pennsylvania's response included several comments questioning certain aspects of the Technical Support Document (TSD) that the EPA had developed and submitted to PA DEP with the February 17, 2023 redesignation letter. The EPA responded to the Commonwealth's comments in a January 2024 response to comments (RTC) document, which is in the docket associated with this action.[6]

The EPA is not required under CAA section 107(d)(3) to seek public comment during the redesignations process, but we elected to do so for this area to provide the public with an opportunity to give input for the EPA's consideration before promulgating any final redesignation. The EPA published a NOA for this action in the **Federal Register** on February 12, 2024 (89 FR 9815). Upon publication of the NOA in the **Federal Register**, a 45-day public comment period began. This comment period closed on March 28, 2024, and yielded comments from seven commenters. A copy of the EPA's responses to the comments received from the public is also located in the docket for this action.

II. EPA's Redesignation Decision and Supporting Air Quality Information

A. SO_2 Monitoring and Modeling Considerations

The 1-hour primary SO_2 standard is violated at an ambient air quality monitoring site (or in the case of dispersion modeling, at an ambient air quality receptor location) when the 3-year average of the annual 99th percentile of the daily maximum 1-hour average concentrations exceeds 75 ppb, as determined in accordance with appendix T of 40 CFR part 50. The EPA also believes that in certain cases, including when SO_2 monitors are lacking, air dispersion modeling is an appropriate tool to determine whether an area is in attainment, as discussed in the EPA's document titled, ''SO_2 NAAQS Designations Modeling Technical Assistance Document'' (Modeling TAD).[7] The Modeling TAD provides nonbinding recommendations on how to appropriately and sufficiently model ambient air in proximity to an SO_2 emission source to establish air quality data for comparison to the 2010 primary SO_2 NAAQS for the purposes of designations. For a short-term 1-hour standard, dispersion modeling of stationary sources can be the most technically appropriate, efficient, and effective because it accounts for fairly infrequent combinations of meteorological and source operating conditions that can contribute to peak ground-level concentrations of SO_2. The EPA's Guideline on Air Quality Models, found at appendix W to 40 CFR part 51, provides recommendations on modeling techniques and guidance for estimating pollutant concentrations to assess control strategies and determine emission limits.

B. The Basis of Redesignating Portions of Cambria and Westmoreland Counties, Pennsylvania to Nonattainment for the 2010 SO_2 NAAQS

Information and data providing the basis for this action are provided in a designations TSD included in the docket for this action[8] and can also be found online at *www.epa.gov/sulfur-dioxide-designations/sulfur-dioxide-designations-regulatory-actions.* Additionally, other relevant documents and files regarding this SO_2 redesignation, including PA DEP's comments on the EPA's TSD, the EPA's RTC replying to these comments, and public comments are available for review in the public docket for this action. The information can also be reviewed online at *www.epa.gov/sulfur-dioxide-designations/sulfur-dioxide-designations-regulatory-actions.*

C. Factors Considered in Determining Nonattainment Area Boundary

The EPA has issued multiple guidance documents for performing SO_2 designations, the most recent of which is a September 5, 2019 guidance from Peter Tsirigotis, Director, U.S. EPA,

[1] 78 FR 47191. Effective date October 4, 2013.

[2] 83 FR 1098. Effective date April 9, 2018.

[3] Explained further in the NOA associated with this redesignation. See 89 FR 9817 (February 12, 2024).

[4] KEY–CON, licensee for the Keystone Generating Station located in Armstrong County and the Conemaugh Generating station located in Indiana County, provided modeling to support its comments rebutting modeling and views presented by the Sierra Club and the EPA.

[5] Located in the public docket for this redesignation at *www.regulations.gov* under Docket ID No. EPA–R03–OAR–2023–0419.

[6] A copy of PA DEP's comments on the EPA's intended redesignation TSD and also the EPA's RTC replying to these comments, can be found in Docket No. EPA–R03–OAR–2023–0419 via *www.regulations.gov.*

[7] A copy is located in the docket via *www.regulations.gov,* Docket ID No. EPA–R03–OAR–2023–0419.

[8] Docket ID No. EPA–HQ–OAR–2023–0419 at *www.regulations.gov.*

Office of Air Quality Planning and Standards, to Regional Air Division Directors, U.S. EPA Regions 1–10.[9] This memorandum supplements, where necessary, prior designations guidance documents on area designations for the 2010 1-hour primary SO_2 NAAQS issued on March 24, 2011, March 20, 2015, and July 22, 2016. The September 2019 memorandum identifies evaluation factors in determining whether areas are in violation of the 2010 SO_2 NAAQS and factors that the EPA intends to assess in determining the boundaries for such areas. These factors include: (1) air quality characterization via ambient monitoring or dispersion modeling results; (2) emissions-related data; (3) meteorology; (4) geography and topography; and (5) jurisdictional boundaries.

The EPA's modeling indicates that portions of Westmoreland and Cambria counties are violating the 2010 1-hour SO_2 NAAQS, and the Agency's detailed evaluation of the modeled violations, contributing sources, and intended area boundaries based on the weight of evidence of the previously identified factors are included in the TSD, which is located in the docket for this action. The EPA's boundaries of the relevant area encompass Lower Yoder Township in Cambria County, Pennsylvania and St. Clair Township, Seward Borough, and New Florence Borough in Westmoreland County, Pennsylvania.[10] A map showing these boundaries is included in the final TSD.[11]

The purpose of this final action is to announce and promulgate EPA's area redesignation of a portion of Westmoreland County, Pennsylvania from attainment/unclassifiable to nonattainment and a portion of Cambria County, Pennsylvania from unclassifiable to nonattainment for the 2010 1-hour primary SO_2 NAAQS, creating a new area called the ''Cambria-Westmoreland Area.''

The issuance of this final redesignation will require the Commonwealth of Pennsylvania to undertake certain planning requirements to reduce SO_2 concentrations within this newly redesignated nonattainment area, including, but not limited to, the requirement to submit within 18 months of redesignation, a revision to the Pennsylvania SIP that provides for attainment of the 2010 1-hour primary SO_2 NAAQS as expeditiously as practicable, but no later than five years after the effective date of redesignation to nonattainment.

III. Environmental Justice Concerns

When the EPA establishes a new or revised NAAQS, the CAA requires the EPA to designate all areas of the U.S. as either nonattainment, attainment, or unclassifiable. This action addresses designation determinations for certain areas for the 2010 SO_2 NAAQS. Area designations address environmental justice concerns by ensuring that the public is properly informed about the air quality in an area. In locations where air quality does not meet the NAAQS, the CAA requires relevant state authorities to initiate appropriate air quality management actions to ensure that all those residing, working, attending school, or otherwise present in those areas are protected, regardless of minority and economic status.

IV. Statutory and Executive Order Reviews

A. Executive Order 12866: Regulatory Planning and Review and Executive Order 13563: Improving Regulation and Regulatory Review

Under Executive Orders 12866 (58 FR 51735, October 4, 1993) and 13563 (76 FR 3821, January 21, 2011), this action is exempt and, therefore, is not subject to review by the Office of Management and Budget.

B. Paperwork Reduction Act (PRA)

This action does not impose an information collection burden under the PRA. This action is a redesignation of portions of two counties to nonattainment and does not contain any information collection activities.

C. Regulatory Flexibility Act (RFA)

This action is not subject to the RFA. The RFA applies only to rules subject to notice and comment rulemaking requirements under the Administrative Procedure Act (APA), 5 U.S.C. 553, or any other statute. Section 107(d)(2)(B) of the CAA explicitly provides that designations are exempt from the notice-and-comment provisions of the APA. In addition, designations under CAA section 107(d) are not among the list of actions that are subject to the notice-and-comment rulemaking requirements of CAA section 307(d).

D. Unfunded Mandates Reform Act (UMRA)

This action does not contain any unfunded mandate as described in UMRA, 2 U.S.C. 1531–1538, and does not significantly or uniquely affect small governments. The action imposes no enforceable duty on any state, local or tribal governments or the private sector.

E. Executive Order 13132: Federalism

This action also does not have federalism implications. It will not have substantial direct effects on the states, on the relationship between the national government and the states, or on the distribution of power and responsibilities among the various levels of government. The division of responsibility between the Federal Government and the states for purposes of implementing the NAAQS is established under the CAA.

F. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

This action does not have tribal implications. It will neither impose substantial direct compliance costs on Federally recognized tribal governments, nor preempt tribal law. Thus, Executive Order 13175 does not apply to this action.

G. Executive Order 13045: Protection of Children From Environmental Health and Safety Risks

The EPA interprets Executive Order 13045 as applying to those regulatory actions that concern environmental health or safety risks that the EPA has reason to believe may disproportionately affect children, per the definition of ''covered regulatory action'' in section 2–202 of the Executive Order. This action is not subject to Executive Order 13045 because it does not establish an environmental standard intended to mitigate health or safety risks.

H. Executive Order 13211: Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use

This action is not subject to Executive Order 13211 because it is not a significant regulatory action under Executive Order 12866.

I. National Technology Transfer and Advancement Act (NTTAA)

This rule does not involve technical standards.

[9] ''Area Designations for the 2010 Primary Sulfur Dioxide National Ambient Air Quality Standard—Round 4,'' memorandum to Regional Air Division Directors, Regions 1–10, from Peter Tsirigotis, dated September 5, 2019, available at: *www.epa.gov/sites/production/files/2019–09/documents/round_4_so2_designations_memo_09–05–2019_final.pdf.*

[10] The remaining portions of Cambria County and Westmoreland County will retain the current designations.

[11] The final boundaries are the same as the EPA's initial intended boundaries.

J. Executive Order 12898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations

Executive Order 12898 (59 FR 7629, February 16, 1994) directs Federal agencies, to the greatest extent practicable and permitted by law, to make environmental justice part of their mission by identifying and addressing, as appropriate, disproportionately high and adverse human health or environmental effects of their programs, policies, and activities on minority populations (people of color and/or Indigenous peoples) and low-income populations. The EPA believes that this action does not have disproportionately high and adverse human health or environmental effects on minority populations, low income populations and/or indigenous peoples, as specified in Executive Order 12898 (59 FR 7629, February 16, 1994). This action, on which the EPA offered public notice and comment, changes the air quality designation of an area and triggers an obligation on the part of the Commonwealth to develop an implementation plan to improve air quality in the area so that it meets the 2010 SO_2 NAAQS. A forthcoming implementation plan by the Commonwealth will also be available for public notice and comment.

K. Congressional Review Act (CRA)

This action is subject to the CRA, and the EPA will submit a rule report to each House of the Congress and to the Comptroller General of the United States. This action is not a ''major rule'' as defined by 5 U.S.C. 804(2).

L. Judicial Review

Under section 307(b)(1) of the CAA, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by February 18, 2025. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this action for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed, and shall not postpone the effectiveness of such rule or action. This action may not be challenged later in proceedings to enforce its requirements. See CAA section 307(b)(2).

V. Statutory Authority

The statutory authority for this action is provided by 42 U.S.C. 7401, *et seq.*

List of Subjects in 40 CFR Part 81

Environmental protection, Air pollution control, Carbon monoxide, Intergovernmental relations, Nitrogen dioxide, Ozone, Particulate matter, Reporting and recordkeeping requirements, Sulfur oxides, Volatile organic compounds.

Michael S. Regan,

Administrator.

For the reasons stated in the preamble the Environmental Protection Agency amends title 40 CFR part 81 as follows:

PART 81—DESIGNATION OF AREAS FOR AIR QUALITY PLANNING PURPOSES

■ 1. The authority citation for part 81 continues to read as follows:

Authority: 42 U.S.C. 7401, *et. seq.*

Subpart C—Section 107 Attainment Status Designations

■ 2. Amend § 81.339, in the table titled ''Pennsylvania-2010 Sulfur Dioxide NAAQS [Primary]'' by:

■ a. Removing the entry ''Cambria County'' and adding in its place the entry ''Cambria (part)'';

■ b. Adding the entry ''Cambria-Westmoreland Area Lower Yoder Township in Cambria County and St. Clair Township, Seward Borough, and New Florence Borough in Westmoreland County'' immediately before the entry ''Indiana, PA.''; and

■ c. Revising the entry ''Westmoreland County;''.

The revisions and additions read as follows:

* * * * *

PENNSYLVANIA—2010 SULFUR DIOXIDE NAAQS

[Primary]

Designated area	Designation	
	Date	Type
* * * * *	*	*
Cambria (part)	1/16/2025	Unclassifiable.
* * * * *	*	*
Cambria-Westmoreland Area Lower Yoder Township in Cambria County and St. Clair Township, Seward Borough, and New Florence Borough in Westmoreland County.	1/16/2025	Nonattainment.
* * * * *	*	*
Westmoreland County (part)	1/16/2025	Attainment/Unclassifiable
* * * * *	*	*

* * * * *

RIN 2040–AF79

Water Quality Standards; Establishment of a Numeric Criterion for Selenium for the State of California

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: The Environmental Protection Agency (the EPA or the Agency) is amending a Federal Clean Water Act (CWA) rule, the California Toxics Rule, to promulgate a final, revised statewide chronic freshwater selenium water quality criterion applicable to certain California waters to protect aquatic life and aquatic-dependent wildlife from exposure to toxic levels of selenium. This revised criterion builds upon the science underlying the EPA's current national CWA section 304(a) recommended aquatic life freshwater criterion for selenium.

DATES: This rule is effective on January 16, 2025. The incorporation by reference of certain publications listed in the rule is approved by the Director of the **Federal Register** as of January 16, 2025.

ADDRESSES: The EPA has established a docket for this action under Docket ID No. EPA–HQ–OW–2018–0056. All documents in the docket are listed on the *https://www.regulations.gov* website. Although listed in the index, some information is not publicly available, *e.g.,* confidential business information (CBI) or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, will be publicly available only in hard copy. Publicly available docket materials are available electronically through *www.regulations.gov.*

FOR FURTHER INFORMATION CONTACT: Maria Letourneau, Office of Water, Standards and Health Protection Division (4305T), Environmental Protection Agency, 1200 Pennsylvania Avenue NW, Washington, DC 20460; telephone number: (202) 566–2700; email address: *letourneau.maria@epa.gov;* or Diane Fleck, Water Division (WTR–2–1), Environmental Protection Agency Region 9, 75 Hawthorne Street, San Francisco, CA 94105; telephone number: (213) 244–1836; email address: *fleck.diane@epa.gov.*

SUPPLEMENTARY INFORMATION: This final rule is organized as follows:

I. General Information
A. Applicability
B. The EPA's Development of the Final Rule
II. Background
A. Statutory and Regulatory Authority
B. Applicable Selenium Criteria in California
C. California Toxics Rule and Endangered Species Act Consultation
D. Litigation
E. Selenium and Sources of Selenium
III. Final Freshwater Chronic Selenium Criterion
A. The EPA's Approach
B. Administrator's Determination of Necessity
C. Final Chronic Selenium Criterion for California's Fresh Waters
D. Implementation of the Final Chronic Selenium Criterion in California
E. Incorporation by Reference
IV. Endangered Species Act
V. Applicability of the EPA-Promulgated Water Quality Standards
VI. Conditions When Federal Standards Would Be Withdrawn
VII. Alternative Regulatory Approaches
VIII. Economic Analysis
IX. Statutory and Executive Orders
A. Executive Order 12866 (Regulatory Planning and Review) and Executive Order 14094 (Modernizing Regulatory Review)
B. Paperwork Reduction Act (PRA)
C. Regulatory Flexibility Act (RFA)
D. Unfunded Mandates Reform Act (UMRA)
E. Executive Order 13132 (Federalism)
F. Executive Order 13175 (Consultation and Coordination With Indian Tribal Governments)
G. Executive Order 13045 (Protection of Children From Environmental Health and Safety Risks)
H. Executive Order 13211 (Actions That Significantly Affect Energy Supply, Distribution, or Use)
I. National Technology Transfer and Advancement Act of 1995
J. Executive Order 12898 (Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations) and Executive Order 14096 (Revitalizing Our Nation's Commitment to Environmental Justice for All)
K. Congressional Review Act (CRA)

I. General Information

A. Applicability

Federal water quality standards (WQS) promulgated by the EPA in this rule will be the applicable WQS for certain waters in California for Clean Water Act (CWA) purposes after the effective date of this rule. Specifically, the chronic freshwater selenium criterion in the final rule will apply to California waters in a manner consistent with the California Toxics Rule (CTR) and the EPA's proposed rulemaking for this action (83 FR 64059, December 13, 2018). The freshwater and saltwater aquatic life criteria listed in the CTR apply as follows: (1) the freshwater criteria apply at salinities of 1 part per thousand and below at locations where this occurs 95% or more of the time; (2) saltwater criteria apply at salinities of 10 parts per thousand and above at locations where this occurs 95% or more of the time; and (3) the more stringent of the two apply at salinities between 1 and 10 parts per thousand. As a result, many estuarine waters will be covered by this rule.

WQS serve as the basis for CWA programs, such as National Pollutant Discharge Elimination System (NPDES) permitting and identifying impaired waters under CWA section 303(d). Categories and entities that could potentially be affected by this rule include the following:

Category	Examples of potentially affected entities
Industry	Industries discharging pollutants to certain waters of California.
Municipalities	Publicly owned treatment works or other facilities discharging pollutants to certain waters of California.
Stormwater Management Districts	Entities responsible for managing stormwater discharges to certain waters of California.
Agriculture	Agricultural entities discharging to certain waters of California.

This table is not exhaustive but, rather, it provides a guide that identifies entities that could be affected by this action. If you have questions regarding the effect of this action on a particular entity, please consult the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

B. The EPA's Development of the Final Rule

On November 29, 2018, the Administrator of the EPA signed a proposed rulemaking to establish a

selenium water quality criterion applicable to California that protects aquatic life and aquatic-dependent wildlife in certain waters of California. The proposal was published in the **Federal Register** at 83 FR 64059 on December 13, 2018. For the proposed rulemaking, the EPA provided a 60-day public comment period with a 45-day extension and held two public hearings on March 19 and March 20, 2019, to accept verbal public comments. By the end of the public comment period on March 28, 2019, the EPA received a total of 32 comments on a range of issues submitted by organizations and individuals to the docket for the rule and during the two public hearings.

For the final rule, the EPA carefully considered the public comments and feedback the Agency received on the proposed rulemaking. In relevant sections of the preamble below, the EPA provides brief summaries of certain comments. Some comments addressed issues beyond the scope of this rule. For all the comments the EPA received and the EPA's responses, see the EPA's Response to Comments document in the public docket for this rule: Docket ID No. EPA–HQ–OW–2018–0056.

II. Background

A. Statutory and Regulatory Authority

The CWA establishes the basic structure for regulating pollutant discharges from point sources into the waters of the United States. In the CWA, Congress established the national objective to restore and maintain the chemical, physical, and biological integrity of the Nation's waters. The CWA also sets forth the interim goal of achieving water quality, wherever attainable, that provides for both: (1) the protection and propagation of fish, shellfish, and wildlife; and (2) recreation in and on the water (sections 101(a) and 101(a)(2)). 33 U.S.C. 1251(a), (a)(2). To help achieve these goals, the CWA created two complementary structures for regulating discharges in CWA section 402 NPDES permits: first, technology-based effluent limitations (TBELs) that set a floor for the performance for categories of regulated dischargers; and second, water quality-based effluent limitations (WQBELs) that are established where TBELs are insufficient to meet applicable WQS or site-specific water quality goals. *See* 33 U.S.C. 1342(a). TBELs in NPDES permits are derived from secondary treatment standards (for publicly owned treatment works), effluent limitations guidelines (CWA sections 301 and 304, 33 U.S.C. 1311 and 1314), new source performance standards (CWA section 306, 33 U.S.C. 1316) promulgated by the EPA, and/or established on a case-by-case basis under section 402(a)(1) of the Act (to the extent that EPA-promulgated effluent limitations are inapplicable). If TBELs are not sufficient to achieve the WQS in the receiving water, the CWA (section 301(b)(1)(c), 33 U.S.C. 1311(b)(1)(c)) and the EPA's NPDES regulation, 40 CFR 122.44(d), require that the permit writer develop more stringent WQBELs.

WQS are the foundation of the water quality-based pollution control programs required by the CWA. Such standards serve as a description of the desired water quality condition for particular waterbodies. In addition, WQS serve as the basis for several CWA programs, including:

- WQBELs in NPDES permits under section 402, 33 U.S.C. 1342;
- Waterbody assessments and establishment of total maximum daily loads (TMDLs) under section 303(d), 33 U.S.C. 1313(d);
- Certifications of Federal licenses and permits under section 401, 33 U.S.C., 1341.

CWA section 303(c) directs states to adopt WQS for their waters subject to the CWA. WQS consist of designated uses of the waters, water quality criteria to protect those uses, and an antidegradation policy to maintain water quality (CWA section 303(c)(2)(A) and (d)(4)(B)). The EPA's regulation at 40 CFR 131.11(a)(1) provides that ''[s]uch criteria must be based on sound scientific rationale and must contain sufficient parameters or constituents to protect the designated use [and] [f]or waters with multiple use designations, the criteria shall support the most sensitive use.''

States are required to review applicable WQS at least once every three years and, if appropriate, revise or adopt new WQS (CWA section 303(c)(1) and 40 CFR 131.20). Any new or revised WQS must be submitted to the EPA for review and approval or disapproval (CWA section 303(c)(2)(A) and (c)(3) and 40 CFR 131.20 and 131.21). Under CWA section 303(c)(4)(B), the Administrator is authorized to determine that a new or revised standard is necessary to meet CWA requirements.

Under CWA section 304(a), the EPA is required to periodically publish national water quality criteria recommendations for states to consider when adopting water quality criteria for particular pollutants to meet the CWA section 101(a)(2) goals. In establishing numeric criteria, states should adopt water quality criteria based on the EPA's CWA section 304(a) criteria, section 304(a) criteria modified to reflect site-specific conditions, or other scientifically defensible methods (40 CFR 131.11(b)(1)). CWA section 303(c)(2)(B) requires states to adopt numeric criteria for all toxic pollutants listed pursuant to CWA section 307(a)(1) for which the EPA has published CWA section 304(a) criteria, where the presence or discharge of those pollutants could reasonably be expected to interfere with maintaining designated uses.

B. Applicable Selenium Criteria in California

The EPA has promulgated selenium water quality criteria for various waterbodies in California. First, in 1992, the EPA promulgated selenium criteria for certain California waters as part of the *Water Quality Standards; Establishment of Numeric Criteria for Priority Toxic Pollutants; States' Compliance* at 57 FR 60848, December 22, 1992, (hereafter referred to as the National Toxics Rule or NTR),[1] and then again in 2000, as part of the *Water Quality Standards; Establishment of Numeric Criteria for Priority Toxic Pollutants for the State of California* at 65 FR 31681, May 18, 2000, (hereafter referred to as the California Toxics Rule or CTR).[2] In each case, the EPA promulgated the EPA's recommended aquatic life criteria values at the time. In addition to the NTR and CTR selenium criteria, California has also adopted site-specific acute and chronic selenium criteria (California uses the term ''objectives'' instead of criteria). The criteria that the EPA previously promulgated for California in the NTR,[3] together with the criteria promulgated in the CTR and California's site-specific objectives, established WQS for priority toxic pollutants for inland surface waters and enclosed bays and estuaries in California.

For a full summary of the applicable selenium criteria covered by the NTR, the CTR, and California site-specific selenium objectives, please refer to the preamble of the EPA's proposed rulemaking for this action, sections II.B and II.C (83 FR 64059, December 13, 2018). For a discussion on the scope of

[1] The NTR is codified at 40 CFR 131.36. *https://www.ecfr.gov/current/title-40/chapter-I/subchapter-D/part-131#131.36*.

[2] The CTR is codified at 40 CFR 131.38. *https://www.ecfr.gov/current/title-40/chapter-I/subchapter-D/part-131/subpart-D/section-131.38*.

[3] The CTR Criteria Table at 40 CFR 131.38(b)(1) includes all water quality criteria previously promulgated in the NTR, so that readers can find all Federally promulgated water quality criteria for California in one place. All criteria previously promulgated in the NTR are footnoted as such in the CTR.

California waters covered by this rule, please see section V. of this preamble.

C. California Toxics Rule and Endangered Species Act Consultation

As required by section 7 of the Endangered Species Act (ESA) (16 U.S.C. 1531 *et seq.*), the EPA consulted with the U.S. Fish and Wildlife Service (FWS) and the U.S. National Marine Fisheries Service (NMFS) (collectively, the Services) concerning the EPA's proposed and final CTR. The EPA initiated consultation with the Services in 1994. In March 2000, the Services issued a final Joint Biological Opinion. The final Joint Biological Opinion [4] recorded commitments by the EPA to: (1) withhold promulgation of (*i.e.,* reserve) the EPA's proposed acute [5] freshwater aquatic life criterion for selenium in the final CTR; (2) revise the national CWA section 304(a) recommended acute and chronic aquatic life criteria for selenium; and (3) later update the acute and chronic aquatic life criteria for California consistent with the revised national CWA section 304(a) recommendations. As a result, in the May 2000 CTR, the EPA finalized the chronic freshwater selenium criterion [6] and the acute and chronic saltwater selenium criteria but did not finalize the acute freshwater selenium criterion.

D. Litigation

Section 303(c)(4)(B) of the CWA gives the EPA Administrator authority to promulgate water quality standards for a state where necessary to meet the requirements of CWA section 303. The EPA made an Administrator's determination under section 303(c)(4)(B) of the CWA, included in the 1997 proposed [7] and 2000 final CTR, that numeric criteria are necessary in California to meet the requirements of section 303(c)(2)(B) to protect the State's designated uses.[8] In 2013, two organizations filed a complaint against the EPA in the United States District Court for the Northern District of California. The complaint was based in part on the fact that the EPA had previously determined, in the CTR, that selenium criteria were necessary to implement section 303(c)(2)(B) of the CWA (62 FR 42160, August 5, 1997) and the work to update the reserved freshwater acute selenium criterion from the 2000 CTR had not yet been completed. In 2014, the EPA entered into a consent decree to resolve these claims (*Our Children's Earth Foundation and Ecological Rights Foundation* v. *U.S. Environmental Protection Agency, et al.,* 13-cv-2857 (N.D. Cal, August 22, 2014)).

Under the terms of the consent decree, the EPA committed to proposing selenium criteria for California fresh waters covered by the original CTR to protect aquatic life and aquatic-dependent wildlife by November 30, 2018. On November 29, 2018, the EPA satisfied this commitment when the Administrator of the EPA signed the proposed rulemaking to establish a selenium water quality criterion applicable to California that protects aquatic life and aquatic-dependent wildlife in certain waters of California. The consent decree also required that the EPA request to initiation of any necessary ESA section 7(a)(2) consultation with the Services on the proposed selenium criteria no later than nine months after the date the EPA proposed the criteria. The EPA satisfied this commitment by initiating ESA consultation with the Services on the proposed selenium criterion on August 12, 2019.

Further, under the consent decree, the EPA is required to finalize its proposed selenium criteria within six months of the later of the following: (1) the date of the EPA's conclusion (if any) that it will not seek ESA section 7(a)(2) consultation because some or all of the proposed selenium criteria have ''no effect'' on any listed ESA species or designated critical habitat; (2) the date of written concurrence from the Services with any EPA conclusion that some or all of the proposed selenium criteria are ''not likely to adversely affect'' listed ESA species or designated critical habitat; or (3) the date of the Services' Biological Opinion(s) concluding any formal consultation on the proposed selenium criteria.

E. Selenium and Sources of Selenium

Selenium is a naturally occurring, but relatively rare, element present in sedimentary rocks and soils. It is also present in the atmosphere as methyl derivatives of selenium. There are around 40 known selenium-containing minerals, some of which can have as much as 30% selenium, but all are rare and generally occur together with sulfides of metals such as copper, zinc, and lead.[9] The distribution of organic-enriched sedimentary rocks, black shales, petroleum source rocks, ore deposits, phosphorites, and coals, in which selenium typically co-occurs, is well characterized in the United States.[10] Two major anthropogenic (*i.e.,* human-caused) activities can cause selenium to become mobilized and introduced into aquatic systems. The first is extracting metals, minerals, and fossil fuels; the second is irrigation of selenium-rich soils. Once inorganic selenium is converted into a bioavailable form (*i.e.,* a form that can be absorbed into the body following skin contact, ingestion, or inhalation), it enters the food chain and can bioaccumulate (*i.e.,* can be taken up and retained by an aquatic organism from any surrounding media, *e.g.,* water, food, sediment).

Elevated selenium levels above what is nutritionally required in fish and other wildlife inhibit normal growth and reduce reproductive success through effects that lower embryo survival, most notably teratogenesis (*i.e.,* embryo/larval deformities) (see *2021 Revision to: Final Aquatic Life Ambient Water Quality Criteria for Selenium—Freshwater 2016,* US EPA, Office of Water, EPA 822–R–21–006, August 2021). The deformities associated with exposures to elevated selenium in fish may include skeletal, craniofacial, and fin deformities, and various forms of edema that result in mortality. Elevated selenium exposure in birds can reduce reproductive success including decreased fertility, reduced egg hatchability (embryo mortality), and increased incidence of deformities in embryos.

Scientific studies [11] indicate that selenium toxicity to aquatic life and

[4] Final Joint Biological Opinion dated March 24, 2000, from the National Marine Fisheries Service, Long Beach, California, and the U.S. Fish and Wildlife Service, Sacramento, California, concerning EPA's final rule for the Promulgation of Water Quality Standards: Establishment of Numeric Criteria for Priority Toxic Pollutants for the State of California (CTR).

[5] The proposed freshwater acute selenium criterion in the CTR was as follows: The CMC = l/[(f1/CMC1) + (f2/CMC2)] where f1 and f2 are the fractions of total selenium that are treated as selenite and selenate respectively, and f1 + f2 = 1. CMC1 and CMC2 are the CMCs for selenite and selenate, respectively, or 185.9 µg/L and 12.83 µg/L, respectively. This criterion was in the total recoverable form. CMC is the continuous maximum concentration.

[6] The final chronic criterion was based on the EPA's 1987 national CWA section 304(a) recommended criterion.

[7] Proposed California Toxics Rule, 62 FR 42160 (August 5, 1997).

[8] See the CTR preamble at section E.1., ''EPA is using section 303(c)(4)(B) as the legal basis for today's final rule.'' 65 FR 31687 (May 18, 2000).

[11] Scientific studies used in the development of this rulemaking can be found in this rule's docket,

aquatic-dependent wildlife is driven by diet (*i.e.,* the consumption of selenium-contaminated prey) rather than by direct exposure to dissolved selenium in the water column. Unlike other bioaccumulative contaminants, such as mercury, the single largest step in selenium accumulation in aquatic environments occurs at the base of the food web when algae and other particulate material take up selenium from water. The vulnerability of a species to selenium toxicity is determined by a number of factors, in addition to the amount of contaminated prey consumed. Those factors include a species' sensitivity to selenium, its population status, and the duration, timing, and life stage of exposure. In addition, the hydrologic conditions and water chemistry of a waterbody affect bioaccumulation; in general, slow-moving, calm waters or lentic waters enhance the production of bioavailable forms of selenium (selenite), while faster-moving waters or lotic waters limit selenium uptake by aquatic life and aquatic-dependent wildlife given the rapid movement and predominant form of selenium (selenate). The EPA considered these and other factors in determining the selenium criterion for California.

III. Final Freshwater Chronic Selenium Criterion

A. The EPA's Approach

In 2016, the EPA published a revised national CWA section 304(a) recommended chronic freshwater aquatic life criterion for selenium to better account for bioaccumulation through the food chain in different ecosystems, and published an erratum in 2021, *2021 Revision to: Final Aquatic Life Ambient Water Quality Criterion for Selenium—Freshwater 2016,* US EPA, Office of Water, EPA 822–R–21–006, August 2021.[12] For purposes of clarity in this preamble, all subsequent references to the EPA's current national CWA section 304(a) recommended chronic freshwater criterion for selenium refers to its 2021 published version. The recommended chronic freshwater criterion is comprised of four criterion elements, two of which are fish tissue concentrations and two of which are water column concentrations. The recommended elements are: (1) a fish egg-ovary element of 15.1 milligram per kilogram (mg/kg) dry weight; (2) a fish whole-body element of 8.5 mg/kg dry weight or a muscle element of 11.3 mg/kg dry weight; (3) a water column element of 3.1 µg/L in lotic aquatic systems and 1.5 µg/L in lentic aquatic systems; and (4) a water column intermittent exposure element derived from the chronic water column element to account for potential chronic effects from short-term exposures (one value for lentic and one value for lotic aquatic systems).

As stated previously, on November 29, 2018, the EPA Administrator signed the proposed rulemaking to establish a selenium water quality criterion that protects aquatic life and aquatic-dependent wildlife in certain fresh waters of California. The EPA proposed its recommended 2016 CWA section 304(a) selenium criterion for freshwater with two modifications to the criterion. First, the EPA proposed adding a bird tissue criterion element derived to protect aquatic-dependent wildlife to the EPA's national CWA section 304(a) selenium criterion. Second, the EPA proposed replacing the EPA's national CWA section 304(a) selenium monthly average exposure water column (lentic or lotic) criterion element (referred to as the default water column criterion element) with a performance-based approach (PBA) for translating a tissue criterion element into a corresponding water column criterion element on a site-specific basis and took comment on whether to keep the default water column criterion element, in addition to the PBA, in the final rule.

In this rule, the EPA considered the methodology and information used to derive the current national CWA section 304(a) recommended selenium criterion, additional information specific to aquatic-dependent wildlife in California, and the public comments and feedback the EPA received on the proposed rulemaking in order to ensure broad protection for both aquatic and aquatic-dependent species. The final freshwater chronic selenium criterion for certain waters in California adds a bird tissue criterion element to the national CWA section 304(a) selenium criterion, consistent with the proposed rulemaking, in addition to the PBA. The EPA also included the default water column criterion element from the EPA's national CWA section 304(a) selenium criterion, in addition to the PBA in the final rule. The PBA will allow the State to develop a site-specific water column element to be used instead of the default water column criterion element. For a further discussion of the EPA's final chronic freshwater selenium criterion and what the EPA considered in finalizing this rule, see section III.C of this preamble and also refer to the EPA's Response to Comments document in the public docket for this rule.

As mentioned previously, the chronic freshwater selenium criterion in this final rule will apply to California waters in a manner consistent with the CTR and the EPA's proposed rulemaking for this action (83 FR 64059, December 13, 2018).

The promulgated criterion establishes levels of selenium that protect California's aquatic life and aquatic-dependent wildlife designated uses (California uses the term ''beneficial uses'' instead of designated uses) for certain waters of California consistent with California's implementation of the CTR. California's applicable designated (beneficial) uses for the protection of aquatic life and aquatic-dependent wildlife are listed in table 1 of this preamble.

TABLE 1—APPLICABLE DESIGNATED (BENEFICIAL) USES FOR CALIFORNIA[13]

Use	Abbreviation	Definition
Warm Freshwater Habitat	WARM	Uses of water that support warm water ecosystems including, but not limited to, preservation or enhancement of aquatic habitats, vegetation, fish, or wildlife, including invertebrates.
Cold Freshwater Habitat	COLD	Uses of water that support cold water ecosystems including, but not limited to, preservation or enhancement of aquatic habitats, vegetation, fish, or wildlife, including invertebrates.
Migration of Aquatic Organisms	MIGR	Uses of water that support habitats necessary for migration or other temporary activities by aquatic organisms, such as anadromous fish.

as well as dockets EPA–HQ–OW–2004–0019 and EPA–HQ–OW–2015–0392.

[12] In 2021, the EPA identified that the following text was missing from the second sentence in footnote 4 in the selenium criterion table: ''When selenium inputs are increasing'' and issued an erratum. The EPA corrected footnote 4 to state: ''4. Water column values are based on dissolved total selenium in water and are derived from fish tissue values via bioaccumulation modeling. When selenium inputs are increasing, water column values are the applicable criterion element in the absence of steady-state condition fish tissue data.''

TABLE 1—APPLICABLE DESIGNATED (BENEFICIAL) USES FOR CALIFORNIA [13]—Continued

Use	Abbreviation	Definition
Spawning, Reproduction, and/or Early Development.	SPWN	Uses of water that support high quality aquatic habitats suitable for reproduction and early development of fish.
Estuarine Habitat	EST	Uses of water that support estuarine ecosystems including, but not limited to, preservation or enhancement of estuarine habitats, vegetation, fish, shellfish, or wildlife (*e.g.*, estuarine mammals, waterfowl, shorebirds).
Wildlife Habitat	WILD	Uses of water that support terrestrial ecosystems including, but not limited to, preservation or enhancement of terrestrial habitats, vegetation, wildlife (*e.g.*, mammals, birds, reptiles, amphibians, invertebrates), or wildlife water and food sources.
Rare, Threatened, or Endangered Species.	RARE	Uses of water that support habitats necessary, at least in part, for the survival and successful maintenance of plant or animal species established under state or Federal law as rare, threatened or endangered.

B. Administrator's Determination of Necessity

As previously noted, in the 1997 proposed and 2000 final CTR, the EPA Administrator determined under CWA section 303(c)(4)(B) that selenium criteria were necessary in California. In the 1997 proposed CTR, the EPA proposed both acute and chronic freshwater selenium criteria. In the 2000 final CTR, the EPA promulgated a chronic freshwater selenium criterion; withheld promulgation of (*i.e.,* reserved) an acute freshwater selenium criterion; and committed to revising the national CWA section 304(a) recommended acute and chronic aquatic life criteria for selenium and later updating the acute and chronic aquatic life criteria for California consistent with the revised national CWA section 304(a) recommendations. The Services incorporated the EPA's commitments as Terms and Conditions in the final Joint Biological Opinion for the CTR.

In November 2018, the EPA proposed a revised chronic selenium criterion based on the EPA's current national CWA section 304(a) recommended criterion for selenium, which only includes a chronic criterion. The EPA's current national CWA section 304(a) recommendation does not include a separate acute criterion because selenium is bioaccumulative and toxicity primarily occurs through dietary exposure. Although selenium may cause acute toxicity at high concentrations, the most harmful effect on aquatic organisms is due to its bioaccumulative properties; these chronic effects occur at lower concentrations of selenium in aquatic organisms than acute effects. In addition, as discussed further in section III.C of this preamble, application of the intermittent exposure criterion element (that the EPA is promulgating as part of the chronic criterion) to single day, high exposure events will provide protection from the most important selenium toxicity effect, reproductive toxicity, by protecting against selenium bioaccumulation in the aquatic ecosystem resulting from short-term, high exposure events. Since the time of the EPA's proposed rulemaking in November 2018, the EPA is not aware of any significant scientific updates to alter the scientific basis underlying the EPA's current national CWA section 304(a) recommended freshwater chronic selenium criterion. As a result, the EPA is not including a separate freshwater acute selenium criterion.

Accordingly, promulgation of the freshwater chronic selenium criterion in this rule completes the EPA's action pursuant to the Administrator's Determination as it pertains to selenium criteria, as provided in the 1997 and 2000 preambles to the CTR.

In addition, this promulgation satisfies the Services' Term and Condition included in the final Joint Biological Opinion for the CTR to update the selenium criterion for California consistent with the current national CWA section 304(a) recommendations (see section II.C. of this preamble). For more information about the ESA consultation completed for this final rule, see section IV. of this preamble.

C. Final Chronic Selenium Criterion for California's Fresh Waters

In this final rule, the EPA is promulgating its current national CWA section 304(a) recommended chronic selenium criterion for certain fresh waters in California (including the default water column criterion element), with the addition of a bird tissue criterion element and a performance-based approach (PBA) [14] for translating a tissue criterion element into a corresponding water column criterion element on a site-specific basis. In its proposed rulemaking, the EPA solicited comment on whether to replace the default water column criterion element from the Agency's 2016 CWA section 304(a) selenium criterion with the PBA, replace the PBA with the default water column criterion element from the Agency's 2016 CWA section 304(a) selenium criterion, or include both. As discussed further in this section and in the EPA's Response to Comments document in the public docket for this rule, the EPA is including both the default water column criterion element and the PBA in its promulgation of the chronic criterion; a site-specific water column value developed using the PBA may be used in place of the default (lentic or lotic) water column criterion element.

The final freshwater chronic selenium criterion for California is depicted in table 2 of this preamble.

In the proposed rulemaking, the EPA solicited comment on two potential criteria structures: (1) one criterion that protects both the applicable aquatic life and aquatic-dependent wildlife designated uses; and (2) two separate criteria with one intended to protect the applicable aquatic life designated uses and one intended to protect the applicable aquatic-dependent wildlife designated uses. Most commenters requested that the EPA keep the proposed option of one criterion.

[13] Refer to document titled ''Applicable Designated (Beneficial) Uses for California,'' in the docket associated with this rulemaking, to find designated uses captured in the California Regional Water Quality Control Boards' Water Quality Control Plans (*i.e.,* Regional Boards' Basin Plans).

[14] A *performance-based approach* relies on the state or authorized Tribe adopting a process (*i.e.,* a criterion derivation methodology, with associated implementation procedures) rather than a specific outcome (*e.g.,* numeric criterion or concentration of a pollutant) in its water quality standards regulation. In instances where the EPA promulgates a water quality standard (including a performance-based approach) for a state or authorized Tribe, the EPA is held to the same policies, procedures, analyses, and public participation requirements for that water quality standard as the state or authorized Tribe. See 40 CFR 131.22(c). The concept of a *performance-based approach* was first described in the **Federal Register** document *EPA Review and Approval of State and Tribal Water Quality Standards—Final Rule* (65 FR 24641–24653; April 27, 2000).

After considering comments, the EPA is finalizing the rule as proposed, meaning that one criterion (with multiple criterion elements as shown in table 2 of this preamble) will be used to protect both aquatic life and aquatic-dependent wildlife designated uses in the waters covered by this rule. The one criterion consists of the following criterion elements: fish egg-ovary tissue, fish muscle or whole-body tissue, bird egg tissue, default water column (lentic and lotic), intermittent exposure water column, and a PBA for translating the tissue criterion elements into corresponding water column criterion elements on a site-specific basis.

The tissue criterion elements consist of (1) a fish egg-ovary criterion element of 15.1 mg/kg dry weight, (2) a fish whole-body criterion element of 8.5 mg/kg dry weight or a fish muscle criterion element of 11.3 mg/kg dry weight, and (3) a bird egg criterion element of 11.2 mg/kg dry weight. The fish egg-ovary tissue (from which all other fish tissue elements were derived) and bird egg tissue criterion elements were developed to protect aquatic and aquatic-dependent wildlife populations from impacts caused by selenium: they reflect biological uptake of selenium through diet, which is the predominant pathway for selenium toxicity, and are most predictive of the observed biological endpoint of concern, reproductive toxicity.

The water column criterion elements consist of (1) the default water column criterion element for lentic waters, 1.5 µg/L, or for lotic waters, 3.1 µg/L and (2) the intermittent exposure water column criterion element. In addition to the default water column criterion element, EPA is also promulgating the PBA *Method for Translating Selenium Tissue Criterion Elements into Site-specific Water Column Criterion Elements for California, Version 2, December 2024,* which is available in the docket for this rulemaking and incorporated by reference as part of this rule.

The chronic selenium criterion applies to the entire aquatic community, including aquatic-dependent wildlife. Based on the analysis in the accompanying Technical Support Document (TSD) to this rule (*FINAL Aquatic Life and Aquatic-Dependent Wildlife Selenium Water Quality Criterion for Freshwaters of California (December 2024)*) and the EPA's previous work (*2021 Revision to: Final Aquatic Life Ambient Water Quality Criterion for Selenium—Freshwater 2016,* US EPA, Office of Water, EPA 822–R–21–006, August 2021), as well as currently available data, fish and birds are considered the most sensitive aquatic and aquatic-dependent taxa to selenium effects, respectively.

The available data indicate that applying the criterion in table 2 of this preamble would protect aquatic life and aquatic-dependent wildlife from the toxic effects of selenium, recognizing that the bird tissue criterion element is independently applicable from and equivalent to the fish tissue criterion elements; the fish egg-ovary criterion element supersedes all other fish tissue elements; the fish tissue criterion elements (egg-ovary, whole-body, and/or muscle) supersede water column criterion elements for aquatic life when fish tissue is measured; and the bird tissue criterion element supersedes water column criterion elements for aquatic-dependent wildlife when bird egg tissue is measured. This hierarchy reflects the fact that fish and bird tissue concentrations provide the most robust and direct information on potential selenium effects in fish and birds. See section III.D Implementation of the Final Chronic Selenium Criterion in California of this preamble for the discussion regarding implementation of the final chronic selenium criterion and one exception to the hierarchy described above when selenium inputs are increasing.

The EPA is promulgating the following chronic criterion in new paragraph (b)(1)(i) of 40 CFR 131.38. The EPA is also making revisions to footnote q in the criteria table in paragraph (b)(1) and clarifying edits regarding the applicability of this criterion in paragraphs (c)(3)(ii) and (iii). The EPA is not amending or revising the contents of the table in (b)(1) and language in 40 CFR 131.38, except as specified in the preceding two sentences.

Table 2: California Freshwater Selenium Ambient Chronic Water Quality Criterion for Protection of Aquatic Life and Aquatic-Dependent Wildlife

Media Type	Bird Tissue	Fish Tissue[1]		Water Column[4]	
Criterion Element	**Bird Egg[2]**	**Egg-Ovary[2]**	**Fish Whole-Body or Muscle[3]**	**Monthly Average Exposure[5]**	**Intermittent Exposure[6]**
Magnitude	11.2 mg/kg dw	15.1 mg/kg dw	8.5 mg/kg dw whole-body or 11.3 mg/kg dw muscle (skinless, boneless filet)	1.5 µg/L in lentic aquatic systems 3.1 µg/L in lotic aquatic systems	$WQC_{int} = \frac{WQC_{30-day} - C_{bkgrnd}(1 - f_{int})}{f_{int}}$
Duration	Instantaneous measurement[7]	Instantaneous measurement[7]	Instantaneous measurement[7]	30 days	Number of days/month with an elevated concentration
Frequency	Not to be exceeded	Not to be exceeded	Not to be exceeded	Not more than once in three years on average	Not more than once in three years on average

1. Fish tissue criterion elements are expressed as steady-state.
2. Fish egg-ovary supersedes any whole-body, muscle, or water column criterion elements for aquatic life when fish egg-ovary are measured, except as noted in footnote 4. Bird egg supersedes water column criterion elements for aquatic-dependent wildlife when bird eggs are measured, except as noted in footnote 4. The bird tissue criterion element is independently applicable from and equivalent to the fish tissue criterion elements.
3. Fish whole-body or muscle tissue supersedes the water column criterion elements when both fish tissue and water concentrations are measured, except as noted in footnote 4.
4. Water column criterion elements are based on dissolved total selenium in water and are derived from fish tissue and bird tissue criterion elements via bioaccumulation modeling. When selenium inputs are increasing, water column criterion elements are the applicable criterion elements in the absence of steady-state condition fish tissue or bird tissue data.
5. The water column criterion element, which applies independently to the respective aquatic life and aquatic-dependent wildlife uses, is applicable for all CWA purposes and consists of a water column value of 1.5 µg/L in lentic aquatic systems and 3.1 µg/L in lotic aquatic systems unless or until a site-specific water column criterion element is derived for a particular waterbody following the methodology described in *Method for Translating Selenium Tissue Criterion Elements into Site-specific Water Column Criterion Elements for California, Version 2, December 2024*. This publication is incorporated by reference into this section with the approval of the Director of the *Federal Register* under 5 U.S.C. 552(a) and 1 CFR part 51. All approved material is available at EPA, OW Docket, EPA West, Room 3334, 1301 Constitution Ave., NW, Washington, DC, 20004; phone: (202) 566-2426; website: *https://www.epa.gov/wqs-tech/water-quality-standards-establishment-numeric-criterion-selenium-fresh-waters-california*. It is also available for inspection at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, visit www.archives.gov/federal-register/cfr/ibr-locations or email fr.inspection@nara.gov.
6. Where $WQC_{30\text{-}day}$ is the applicable water column monthly criterion element, C_{bkgrnd} is the average background selenium concentration, and f_{int} is the fraction of any 30-day period during which elevated selenium concentrations occur, with f_{int} assigned a value ≥ 0.033 (corresponding to 1 day).
7. Fish tissue and bird tissue data provide instantaneous point measurements that reflect integrative accumulation of selenium over time and space in bird or fish population(s) at a given site.

Performance-Based Approach (PBA) for Translating Tissue Criterion Elements to Site-Specific Water Column Criterion Elements

As part of the criterion depicted in table 2 of this preamble, the EPA is incorporating by reference the PBA, *Method for Translating Selenium Tissue Criterion Elements into Site-specific Water Column Criterion Elements for California, Version 2, December 2024.* The PBA is a methodology that the State may use to translate the bird and fish tissue criterion elements into water column criterion elements on a site-specific basis.

If the State chooses to use the PBA, the State will coordinate with the EPA at the beginning of the process. The PBA is itself incorporated by reference into this rule and thus is part of the applicable WQS that the EPA is promulgating. As such, California is not required to adopt and submit the outcomes that result from using the PBA (*i.e.,* water column criterion elements for site-specific waterbodies) to the EPA for CWA section 303(c) review. In this rule, the EPA is promulgating the PBA as a scientifically defensible methodology that is sufficiently detailed and has suitable safeguards to ensure predictable, repeatable outcomes that will protect California's applicable beneficial uses. If California chooses to use the PBA for a particular site, each resulting site-specific water column criterion element would be applicable for CWA purposes, without the need for separate EPA approval under CWA section 303(c).

The PBA provides two methodologies for deriving a site-specific water column criterion element: (1) the mechanistic modeling approach; and (2) the empirical bioaccumulation factor (BAF) approach:

(1) The mechanistic modeling approach uses scientific knowledge of the physical and chemical processes underlying bioaccumulation to establish a relationship between the concentrations of selenium in the water column and the concentration of selenium in the tissue of aquatic and aquatic-dependent organisms. This approach enables formulation of site-specific models of trophic transfer of selenium through aquatic food webs and translation of the tissue elements into an equivalent site-specific water column element. It is also the approach the EPA used to develop the national CWA section 304(a) recommended selenium water column criterion elements.

(2) The empirical BAF approach establishes a site-specific relationship between water column selenium concentrations and fish or bird tissue selenium concentrations by measuring both directly and using the relationship between the concentrations to determine a site-specific water column criterion element.

As stated in footnote 5 of criterion, the default water column criterion element, consisting of a water column value of 1.5 µg/L dissolved total selenium in lentic aquatic systems and 3.1 µg/L dissolved total selenium in lotic aquatic systems, applies for all CWA purposes according to the hierarchy of the criterion, unless a site-specific water column criterion element is derived following the PBA.

If California decides to use the PBA to translate the applicable fish tissue or bird tissue criterion elements into site-specific water column criterion elements, those translated values would be applicable for, and protective of, the use for which the translation was completed. For example, if California used the PBA to translate the fish tissue criterion element into a water column criterion element, that water column criterion element would protect aquatic life; if California used the PBA to translate the bird tissue criterion element into a water column criterion element, that water column criterion element would protect aquatic-dependent wildlife.

The EPA looks forward to coordinating and working with the State to ensure consistency with the PBA methodology before implementation in other CWA programs. Importantly, for public transparency, the EPA recommends California maintain a list of the resulting site-specific water column criterion elements. The EPA also recommends that California make its analyses and the underlying data used for each site-specific water column derivation available on a publicly accessible State website.

As with other criteria, the State maintains discretion to adopt new or revised site-specific criteria and submit them to the EPA in accordance with CWA section 303(c) and EPA's implementing regulations at 40 CFR part 131. This could arise in the context of an entirely different criterion, an alternative water column criterion element, or an alternative tissue to water column derivation methodology. Please refer to section VI, Conditions When Federal Standards Would Be Withdrawn of this preamble for a discussion regarding the applicability of California-adopted, EPA-approved WQS in light of this Federal promulgation.

If the State chooses not to follow the PBA as prescribed, the State would need to adopt and submit site-specific water column criterion elements to the EPA for CWA section 303(c) review and approval in accordance with the procedures at 40 CFR part 131 in order to rely on them as applicable WQS for other CWA programs such as the TMDL and NPDES permitting programs. This is because the new value would not derive from or comply with applicable WQS (see 40 CFR 122.44(d)).[15]

In the proposed rulemaking, the EPA took comment on whether the national CWA section 304(a) recommended water column criterion element (lentic and lotic) should be included as a default, in addition to or in place of the PBA, in the final selenium criterion. Most commenters supported including the PBA in the final rule, and some requested that the default water column criterion element not be included in the final rule. However, several comments highlighted implementation concerns, such as gaps in protection before the PBA can be used to develop site-specific water column criterion elements, anticipated burdens on industry to rely on the PBA to derive site-specific water column criterion elements, and new discharger considerations that could be mitigated by including the default water column criterion element, in addition to the PBA.

In consideration of these public comments and to maintain consistency with the EPA's latest scientific recommendation to ensure protection of aquatic life and aquatic-dependent wildlife from exposure to toxic levels of selenium, as articulated in the EPA's current national CWA section 304(a) recommended freshwater aquatic life criterion for selenium and the TSD accompanying this final rule, the EPA decided to include the default water column criterion element as part of the California selenium criterion for the final rule, in addition to the PBA. This will ensure protection from excessive selenium in certain waters in California when tissue data are unavailable. Specifically, water column data and criterion elements can be applied for CWA implementation purposes when tissue data are unavailable. When all of the criterion elements are applied together, the tissue and water column criterion elements protect aquatic life and aquatic-dependent wildlife from the chronic effects of exposure to selenium in waterbodies. This will also help ensure that California is able to implement the Federally promulgated selenium criterion as soon as it is effective under the CWA.

The EPA also specifically solicited comment on whether it would be

[15] 82 FR 25628, April 27, 2000.

appropriate to include a method for a larger scale (*e.g.,* ecoregional or statewide) water column translation from fish or bird egg tissue in the PBA, and if so, what methods are available and appropriate for this large-scale translation. Most commenters agreed that a larger-scale translation method was not appropriate, finding the PBA was more appropriate and scientifically defensible on a waterbody site-specific scale, given the highly localized conditions that affect selenium bioaccumulation. After taking into consideration all comments, EPA decided to keep the allowable application of the PBA limited to an individual waterbody or waterbody segment. Developing a water column translation for a larger geographic area involves additional considerations that are not included in the PBA. These additional considerations are likely unique to the geographic area and would be better addressed through an individual site-specific criteria process by the State. California retains the ability to develop a site-specific criterion for a larger site, such as a watershed or ecoregion. Any such state-adopted, site-specific criterion must be submitted to the EPA for review and approval pursuant to CWA section 303(c) and the EPA's implementing regulations at 40 CFR part 131 to be effective for CWA purposes.

The EPA intends for the PBA to be severable from the remainder of the final selenium criterion in this rule. As explained above, the EPA has chosen to promulgate the PBA as part of the criterion, providing one means for the State to translate the bird and fish tissue criterion elements into water column criterion elements on a site-specific basis. The EPA included the PBA in this final rule to provide an efficient means to account for site-specific information to inform the applicable water column criterion element. The removal of the PBA would not change how the overall rule functions. The final selenium criterion protects aquatic life and aquatic-dependent wildlife through the applicable tissue and water column criterion elements for all the specified waters in California. In contrast, as discussed above, California's use of the PBA in the final rule is optional and not mandatory. As such, the tissue and water column criterion elements apply independently of the PBA and function separately to meet the requirements of CWA section 303(c). In the absence of the PBA, the other criterion elements of the final selenium criterion will still protect the designated uses for aquatic life and aquatic-dependent wildlife in accordance with CWA section 303(c) and the EPA's implementing regulations. In other words, the final selenium criterion, with the criterion elements absent the PBA, still functions as the applicable criterion to protect the designated uses. Further, California could pursue other options in lieu of using the PBA to adopt site-specific selenium criteria. For example, as with other criteria, the State maintains discretion to adopt new or revised site-specific criteria and submit them to the EPA in accordance with CWA section 303(c) and the EPA's implementing regulations at 40 CFR part 131. Accordingly, the EPA intends this portion of the rule to be severable from the remainder of the rule.

Intermittent Exposure Criterion Element

Although selenium may cause acute toxicity at high concentrations (*i.e.,* toxicity from a brief but highly elevated concentration of selenium in the water), chronic dietary exposure poses the highest risk to aquatic life and aquatic-dependent wildlife. Chronic toxicity occurs primarily through maternal transfer of selenium to eggs and causes subsequent reproductive effects, such as larval and embryo structural deformity, edema, and mortality. Because chronic effects of selenium are observed at lower concentrations than acute effects, the chronic criterion is expected to protect aquatic and aquatic-dependent communities from any potential acute effects of selenium. However, some high concentration, short-term exposures could be detrimental by causing significant long-term, residual, bioaccumulative effects (*i.e.,* by the introduction of elevated selenium load into the system). Therefore, the EPA is also promulgating the intermittent exposure criterion element within the chronic criterion to prevent long-term detrimental effects from these high concentration, short-term exposures.

The EPA's intermittent exposure criterion element is derived mathematically from either the default water column criterion element or the performance-based, site-specific monthly water column criterion element, using the equation shown in Table 2 of this preamble. The equation expresses the intermittent exposure water column criterion element in terms of the 30-day default water column criterion element, as appropriate, while accounting for the fraction in days of any 30-day period the intermittent spikes occur and for the background concentration occurring during the remaining time. The intermittent exposure criterion element calculation is consistent with the EPA's current national CWA section 304(a) recommended chronic freshwater aquatic life criterion for selenium. It is meant to be used in situations where a noncontinuous discharge containing selenium is present in the waterbody of interest.

D. Implementation of the Final Chronic Selenium Criterion in California

Identification of Impaired Waters and TMDL Development

WQS provide the basis for identifying impaired waters (waters not attaining the applicable WQS) and developing TMDLs pursuant to CWA section 303(d). With the promulgation of this multi-element criterion, all criterion elements will be available for assessment purposes. If multiple types of data are collected at a site, they will be used for implementation purposes according to the hierarchical structure of the selenium criterion. For purposes of assessing attainment of the WQS based on the criterion and as mentioned in section III.C of this preamble, the bird tissue criterion element is independently applicable from the fish tissue criterion elements. Specifically, if the bird tissue criterion element is exceeded, the criterion is not being attained for the applicable aquatic-dependent wildlife designated uses, and if the fish tissue criterion element is exceeded (using the hierarchy for fish tissue), the criterion is not being attained for the applicable aquatic life designated uses. For aquatic-dependent wildlife, the bird egg tissue element supersedes the water column elements if both are measured. For aquatic life, the fish egg-ovary tissue criterion element supersedes the muscle or whole-body criterion elements and all fish tissue criterion elements supersede water column criterion elements. However, there is one exception to this hierarchy. When selenium is increasing due to new inputs, footnote 4 of the criterion specifies that the water column criterion elements must be used when steady-state fish or bird tissue data are not available for each respective use, as discussed further below. Also, the default water column criterion element applies for CWA purposes for each respective designated use unless site-specific water column criterion elements are derived following the methodology described in the PBA, or site-specific water column criterion elements that do not follow the methodology prescribed by the PBA are adopted by California and approved by the EPA pursuant to CWA section 303(c) and the EPA's implementing regulations.

Selenium concentrations in fish and bird tissue are primarily a result of selenium bioaccumulation via dietary exposure. In both the EPA's current national CWA section 304(a) recommended aquatic life criterion for selenium and this California selenium rulemaking, steady-state refers to conditions where sufficient time has passed after the introduction of a new or increased input of selenium into a waterbody or watershed of a waterbody such that fish tissue concentrations of selenium are no longer increasing in the long-term average or multi-year average. For a tissue measurement to be meaningful, the water from which the sample is taken should not be experiencing or have recently experienced new inputs of selenium. When there are new selenium inputs to a waterbody, fish tissue data and bird tissue data may not fully represent the potential effects on the aquatic ecosystem, making the use of the water column criterion elements more appropriate to protect the entire aquatic ecosystem. New inputs are defined as new anthropogenic activities resulting in the release of selenium into a lentic or lotic aquatic system.[16] These ''new inputs'' are both new and increased inputs of selenium and are referring to the release of a substantial amount of additional selenium from either anthropogenic point or nonpoint sources into a waterbody or watershed. New inputs do not refer to seasonal variability of selenium that occurs naturally within a system (*e.g.,* spring run-off events or precipitation-driven pulses) or *de minimis* inputs to a watershed or waterbody.[17]

The water column criterion elements take precedence over the fish tissue criterion elements and the bird egg tissue criterion element until tissue data have returned to a steady-state condition after a new input of selenium. In the interim, in systems with new inputs, the EPA recommends California sample tissue and water and use site-specific data to gain a better understanding of the selenium bioaccumulation dynamics in a receiving water and to determine if and when steady-state conditions have been reached.

California has flexibility to determine how to evaluate individual and composite samples for each taxon. Tissue data provide instantaneous point measurements that reflect integrative accumulation of selenium over time and space in fish or birds at a given site. This final selenium criterion provides California with flexibility in how the State can interpret a discrete bird egg or fish tissue sample to represent a given species' population at a site. Generally, fish and bird egg tissue samples collected to calculate average tissue concentrations (often in composites) for a species at a site are collected during one sampling event, or over a short interval due to logistical constraints and the cost for obtaining samples. The State should clearly describe its decision-making process in its assessment methodology.

NPDES Permitting

Under the CWA, WQS are used to derive WQBELs in NPDES permits for point source discharges, thereby limiting the amount of pollutants that may be discharged into a waterbody to attain and maintain its designated uses. The EPA is promulgating the default water column criterion element and the option for California to use the PBA to translate tissue criterion elements into site-specific water column criterion elements, which can be used to facilitate implementation, *e.g.,* NPDES permitting. However, these water column criterion elements would not prevent California from also using the tissue criterion elements for monitoring and regulating pollutant discharges where appropriate.

As with assessments, all criterion elements are available for NPDES permitting. When multiple data types are available for making permitting decisions, the hierarchy of the criterion will determine which data type will take precedence. In addition, as described above, when selenium is increasing due to new inputs, footnote 4 of the criterion specifies that the water column criterion elements must be used when steady-state fish or bird tissue data are not available.

When implementing the selenium criterion under the NPDES permits program, California may need to establish additional implementation procedures due to the unique components of the selenium criterion. Where California uses a water column criterion element only (as opposed to using both the water column and fish tissue or bird tissue criterion elements) for conducting reasonable potential determinations and establishing WQBELs per 40 CFR 122.44(d), it may be appropriate for the State to evaluate existing implementation procedures for other water column aquatic life criteria. However, if California also decides to use the selenium fish tissue criterion elements and bird tissue criterion elements for NPDES permitting purposes, additional State WQS implementation procedures will likely be needed to determine the need for and development of WQBELs necessary to ensure that the tissue criterion element(s) are met.

E. Incorporation by Reference

The regulatory text incorporates one EPA document by reference, specifically, the EPA's *Method for Translating Selenium Tissue Criterion Elements into Site-specific Water Column Criterion Elements for California, Version 2, December 2024,* discussed in section III.C of this preamble. The EPA has made, and will continue to make, this document available electronically at its website (*https://www.epa.gov/wqs-tech/water-quality-standards-establishment-numeric-criterion-selenium-fresh-waters-california*) and through *www.regulations.gov* at the docket associated with this rulemaking.

IV. Endangered Species Act

Section 7(a)(2) of the ESA requires that each Federal agency ensure that any action authorized, funded, or carried out by such agency is not likely to jeopardize the continued existence of any endangered or threatened species or result in the destruction or adverse modification of critical habitat. For this rule, the EPA transmitted a Biological Evaluation to NMFS and FWS on November 23, 2022.

On June 21, 2024, the EPA received a final Biological Opinion from FWS that determined that the EPA's action is likely to adversely affect but will not jeopardize the continued existence of bonytail, razorback sucker, Santa Ana sucker, tidewater goby, unarmored threespine stickleback, arroyo toad, California red-legged frog, foothill yellow-legged frog, light-footed Ridgway's rail, Yuma Ridgway's rail, and California least tern. FWS also concurred with the EPA that the action may affect but is not likely to adversely affect the other Federally listed species and designated critical habitats for all species that were included in the consultation, including the longfin smelt for which the FWS provided supplemental concurrence with the EPA on October 29, 2024, that the action may

[16] USEPA. 2021. 2021 Revision to: Aquatic Life Ambient Water Quality Criterion for Selenium–Freshwater 2016. EPA 822–R–21–006. U.S. Environmental Protection Agency, Office of Water, Washington, DC. *https://www.epa.gov/system/files/documents/2021-08/selenium-freshwater2016-2021-revision.pdf.*

[17] USEPA. 2024. Technical Support for Adopting and Implementing the EPA's 2016 Selenium Criterion in Water Quality Standards. EPA–820–R–24–001. U.S. Environmental Protection Agency, Office of Water, Washington, DC. *https://www.epa.gov/system/files/documents/2024-03/selenium-adopting-tsd.pdf.*

affect but is not likely to adversely affect that species.[18]

On August 28, 2024, the EPA received a final Biological Opinion from NMFS that determined that the EPA's action is likely to adversely affect but will not jeopardize the continued existence of Central California Coast coho salmon, Southern Oregon/Northern California Coast coho salmon, Southern California steelhead, Central Valley steelhead, Northern California steelhead, Central California Coast steelhead, South-Central California Coast steelhead, Sacramento River winter-run Chinook salmon, Central Valley spring-run Chinook salmon, Central California Coast Chinook salmon, the Southern distinct population segment of North American green sturgeon, nor is the proposed action likely to result in the destruction or adverse modification of critical habitat for these species. NMFS also concurred with the EPA that the action may affect but is not likely to adversely affect the other Federally listed species and the designated critical habitat for the other species that were included in the consultation.

The EPA's receipt of these final Biological Opinions and concurrences from the Services concludes the consultation for this rule under ESA section 7(a)(2). Documents associated with this ESA consultation are available in the docket associated with this rule (Docket ID: EPA–HQ–OW–2018–0056).

V. Applicability of the EPA-Promulgated Water Quality Standards

This final rule for a chronic selenium freshwater criterion applies to certain waters of California in a manner consistent with the CTR where the protection of aquatic life and aquatic-dependent wildlife are designated uses, which includes the waters of the San Luis National Wildlife Refuge and the Los Banos State Wildlife Refuge.

The final rule does not apply to California waters where site-specific selenium criteria have been adopted, nor does it apply to California waters where selenium criteria have been promulgated in the NTR. In other words, this final rule does not apply to waters of the San Francisco Bay upstream to and including Suisun Bay and the Sacramento-San Joaquin Delta, the San Joaquin River from Sack Dam to Vernalis, Mud Slough (north), Salt Slough, or constructed and reconstructed water supply channels in the Grassland watershed listed in Appendix 40 of the Central Valley Regional Water Quality Control Board's Basin Plan because these waters have applicable selenium criteria from the NTR and/or approved Central Valley Regional Water Quality Control Board site-specific objectives.

Lastly, the final rule does not apply to surface waters that are tributaries to the Salton Sea because California adopted, and EPA-approved, site-specific water quality objectives for these waters.

As noted previously, this action adds clarifying language to the regulatory provisions regarding applicability of the CTR based on the salinity level of the waterbody in paragraphs (c)(3)(ii) and (iii) of 40 CFR 131.38. The added language is not intended to affect the substance of those applicability provisions.

The State of California has nine Regional Water Quality Control Boards (Regional Boards), each located in and overseeing different areas of the State. Each Regional Board has a regional water quality control plan (Basin Plan) that sets forth EPA-approved designated (beneficial) uses for the waterbodies it oversees. The criterion will become the applicable CWA-effective criterion for CWA implementation purposes by each of the Regional Boards after the effective date of this rule (*i.e.,* 30 days after the date of publication of this rule in the **Federal Register**).

VI. Conditions When Federal Standards Would Be Withdrawn

Under the CWA, Congress gave states the primary responsibility for developing and adopting WQS for their waters (CWA section 303(a) through (c)). Although the EPA is promulgating a selenium criterion for the protection of aquatic life and aquatic-dependent wildlife for certain waters of California, California continues to have the option to adopt and submit to the EPA selenium criteria for the State's waters consistent with CWA section 303(c) and the EPA's implementing regulations at 40 CFR part 131.

If California adopts and submits selenium criteria for the protection of aquatic and aquatic-dependent wildlife for California (fresh water and/or salt water), the EPA will approve California's criteria if those criteria meet the requirements of section 303(c) of the CWA and the EPA's implementing regulation at 40 CFR part 131. If the EPA's Federally promulgated criteria are more stringent than the State's criteria, the EPA's Federally promulgated criteria are and will be the applicable water quality standard for purposes of the CWA until the EPA withdraws those Federally promulgated standards. The EPA would expeditiously undertake such a rulemaking to withdraw the Federal criteria if and when California adopts and the EPA approves corresponding criteria. After the EPA's withdrawal of Federally promulgated criteria, the State's EPA-approved criteria would become the applicable criteria for CWA purposes. If the State's adopted criteria are as stringent or more stringent than the Federally promulgated criteria, then the State's criteria would become the CWA applicable WQS upon the EPA's approval (40 CFR 131.21(c)).

VII. Alternative Regulatory Approaches

The EPA's WQS regulation at 40 CFR part 131 provides several tools that California has available to use at its discretion when implementing or deciding how to implement this selenium criterion. Among other things, the EPA's regulation: (1) specifies how states and authorized Tribes[19] establish, modify or remove designated uses; (2) specifies the requirements for establishing criteria to protect designated uses, including criteria modified to reflect site-specific conditions; (3) specifies the requirements for states and authorized Tribes to adopt WQS variances that provide time to achieve the applicable WQS; and (4) allows states and authorized Tribes to authorize the use of compliance schedules in NPDES permits to meet WQBELs derived from the applicable WQS. Each of these approaches are discussed in more detail in the next sections of this preamble.

Designated Uses

The EPA's action applies to certain waters of California where the protection of aquatic life and aquatic-dependent wildlife are designated uses. The regulation at 40 CFR 131.10 provides information on establishing, modifying, and removing designated uses. If California removes designated uses such that no aquatic life or aquatic-dependent wildlife uses apply to any particular waterbody or waterbody segment affected by this rule and adopts the highest attainable use,[20] the State

[18] FWS proposed to list the San Francisco Bay-Delta distinct population segment of longfin smelt as an endangered species on October 7, 2022 (87 FR 60957) and finalized the rule on July 30, 2024 (89 FR 61029) with an effective date of August 29, 2024. The San Francisco Bay-Delta distinct population segment of longfin smelt had not been identified as part of the consultation in the EPA's biological evaluation or the FWS's Biological Opinion that the EPA received on June 21,2024, before the final rule was signed. As such, the EPA worked with FWS to address this species listing prior to signing the final rule.

[19] For purposes of this rule, an Indian Tribe that obtains EPA approval to administer a WQS program under CWA section 303(c) for its reservation is referred to as an ''authorized Tribe.''

[20] If a state or authorized Tribe adopts a new or revised WQS based on a use attainability analysis,

must also adopt criteria to protect the newly designated highest attainable use consistent with 40 CFR 131.11. It is possible that criteria other than the Federally promulgated criteria would protect the highest attainable use. If the EPA were to find removal or modification of the designated use and the adoption of the highest attainable use and criteria to protect that use is consistent with CWA section 303(c) and the implementing regulations at 40 CFR part 131, the EPA would approve the revised WQS. The EPA would then undertake a rulemaking to withdraw the corresponding Federally promulgated WQS for the relevant water(s).

Site-Specific Criteria

The regulation at 40 CFR 131.11 specifies requirements for modifying water quality criteria to reflect site-specific conditions. In the context of this rulemaking, a site-specific criterion (SSC) is an alternative value to the Federal selenium criterion that would be applied on an area-wide or waterbody-specific basis that meets the regulatory test of protecting the designated uses, being scientifically defensible, and ensuring the protection and maintenance of downstream WQS. In this context, as discussed in section III.C of this preamble, SSC are different than a site-specific water column criterion element developed through the PBA incorporated by reference in this final rule. A SSC may be more or less stringent than the otherwise applicable Federal criterion. A SSC may be called for when further scientific data and analyses indicate that a different selenium concentration (*e.g.,* a different fish tissue or bird tissue criterion element) may be needed to protect the aquatic life and aquatic-dependent wildlife-related designated uses in a particular waterbody or portion of a waterbody. Any such state-adopted SSC will need to be submitted to the EPA for review and approval pursuant to CWA section 303(c) and the EPA's implementing regulation at 40 CFR part 131.

WQS Variances

California's WQS provide sufficient authority to apply WQS variances when implementing a Federally promulgated criterion for selenium, as long as such WQS variances are adopted consistent with 40 CFR 131.14 and submitted to the EPA for review and approval under CWA section 303(c). The EPA's regulation at 40 CFR 131.3(o) defines a WQS variance as a time-limited designated use and criterion, for a specific pollutant or water quality parameter, that reflects the highest attainable condition during the term of the WQS variance. WQS variances adopted in accordance with 40 CFR 131.14 (including a public hearing consistent with 40 CFR 131.20(b)) provide a flexible but defined pathway for states and authorized Tribes to meet their NPDES permit obligations by allowing dischargers the time they need (as demonstrated by the state or authorized Tribe) to make incremental progress toward meeting WQS that are not immediately attainable but may be in the future. When adopting a WQS variance, states and authorized Tribes specify the interim requirements of the WQS variance by identifying a quantitative expression that reflects the highest attainable condition during the term of the WQS variance, establishing the term of the WQS variance, and describing the pollutant control activities expected to occur over the specified term of the WQS variance.

WQS variances help states and authorized Tribes focus on improving water quality, rather than pursuing a downgrade of the underlying water quality goals through modification or removal of a designated use, as a WQS variance cannot lower currently attained water quality. NPDES permit limits can be written to comply with the WQS variance rather than the underlying WQS for the specified term of the WQS variance. If dischargers are still unable to meet the WQBELs derived from the applicable WQS once a WQS variance term is complete, the state or authorized Tribe may adopt a subsequent WQS variance if adopted consistent with 40 CFR 131.14.

Compliance Schedules

The EPA's regulation at 40 CFR 122.47 allows permitting authorities to include compliance schedules in their NPDES permits, when appropriate and where authorized by the state or authorized Tribe. The EPA's regulation at 40 CFR 131.15 requires that states and authorized Tribes that choose to allow the use of NPDES permit compliance schedules adopt specific provisions authorizing their use and obtain EPA approval under CWA section 303(c) to ensure that a decision to allow permit compliance schedules is transparent and allows for public input (80 FR 51022, August 21, 2015). The EPA's approval of a state or authorized Tribe's permit compliance schedule authorizing provision as a WQS pursuant to 40 CFR 131.15 ensures that any NPDES permit that contains a compliance schedule meets the requirement that the level of water quality to be achieved by the WQBEL derive from and comply with all applicable WQS (40 CFR 122.44(d)(1)(vii)(A)).

California is authorized to administer the NPDES program and has adopted several mechanisms to specify compliance schedules in NPDES permits. In 2008, California adopted a statewide compliance schedule authorizing provision that the EPA subsequently approved under CWA section 303(c), the *Policy for Compliance Schedules in National Pollutant Discharge Elimination System Permits,* State Water Resources Control Board Resolution No. 2008–0025, April 15, 2008. This EPA-approved regulation authorizes the use of permit compliance schedules consistent with 40 CFR 131.15, and is not affected by this rule. The compliance schedule authorizing provision will allow California, as the permitting authority, to specify compliance schedules in permits, as appropriate, for the purpose of achieving compliance with a WQBEL based on the selenium criterion promulgated in this final rule, which is more stringent than the existing criteria for California, as soon as possible.

VIII. Economic Analysis

To best inform the public of the potential impacts of this rule, the EPA evaluated the potential costs associated with State implementation of the EPA's selenium criterion based on available information. This analysis is documented in *Economic Analysis for the Final Selenium Water Quality Criterion for the State of California,* which can be found in the docket for this rule. For this analysis, the EPA assumed that California fully implements its existing selenium criteria (*i.e.,* ''baseline criteria'') and estimated the incremental impacts for compliance with the selenium criterion in this rule. To facilitate this analysis, the EPA interpreted the criterion as the default water column criterion element (*i.e.,* a lentic and lotic value) from the EPA's current CWA section 304(a) selenium criterion for fresh water. For point source costs, the EPA assumed any NPDES-permitted facility that

then it must also adopt the highest attainable use (40 CFR 131.10(g)). Highest attainable use is the modified aquatic life, wildlife, or recreation use that is both closest to the uses specified in section 101(a)(2) of the Act and attainable, based on the evaluation of the factor(s) in 40 CFR 131.10(g) that preclude(s) attainment of the use and any other information or analyses that were used to evaluate attainability. There is no required highest attainable use where the state demonstrates the relevant use specified in section 101(a)(2) of the Act and sub-categories of such a use are not attainable (see 40 CFR 131.3(m)).

discharges selenium would have reasonable potential and would be subject to effluent limits and would incur compliance costs if it chose to continue discharging. The EPA also evaluated nonpoint sources that contribute selenium loadings to waters that would be considered impaired for selenium under the final criterion and evaluated whether they would incur incremental costs for additional best management practices. The total annualized cost of this final rule was estimated to range from $28.34 million to $44.84 million at a 2% discount rate. See *Economic Analysis for the Final Selenium Water Quality Criterion for the State of California* for a detailed summary of the information and assumptions the EPA relied on to estimate potential costs to implement the final rule.

IX. Statutory and Executive Orders

A. Executive Order 12866 (Regulatory Planning and Review) and Executive Order 14094 (Modernizing Regulatory Review)

This action is not a significant regulatory action as defined in Executive Order 12866, as amended by Executive Order 14094, and was therefore not subject to a requirement for Executive Order 12866 review.

B. Paperwork Reduction Act (PRA)

This action does not impose any new information-collection burden under the PRA. This action does not directly contain any information collection, reporting, or record-keeping requirements. The Office of Management and Budget (OMB) has previously approved the information collection requirements contained in the existing regulations at 40 CFR part 131 and has assigned OMB control number 2040–0049.

C. Regulatory Flexibility Act (RFA)

I certify that this action will not have a significant economic impact on a substantial number of small entities under the RFA. This action will not impose any requirements on small entities.

The EPA-promulgated WQS are implemented through various water quality control programs, including the NPDES program, which limits discharges to navigable waters except in compliance with a NPDES permit. CWA section 301(b)(1)(C) [21] and the EPA's implementing regulations at 40 CFR 122.44(d)(1) introductory text and (d)(1)(i) provide that all NPDES permits shall include any limits on discharges that are necessary to meet applicable WQS. Thus, under the CWA, the EPA's promulgation of WQS establishes standards that the State implements through the NPDES permit process. While the State has discretion in developing discharge limits, as needed, to meet the WQS, those limits, per the regulation at 40 CFR 122.44(d)(1)(i), ''must control all pollutants or pollutant parameters (either conventional, nonconventional, or toxic pollutants) which the Director determines are or may be discharged at a level that will cause, have the reasonable potential to cause, or contribute to an excursion above any [s]tate water quality standard, including [s]tate narrative criteria for water quality.''

As a result of this action, the State of California must ensure that NPDES permits it issues include any limitations on discharges necessary to comply with the WQS established in the final rule. While California's implementation of the rule may ultimately result in new or revised permit conditions for some dischargers, including small entities, the EPA's action, by itself, does not impose any of these requirements on small entities; that is, these requirements are not self-implementing.

D. Unfunded Mandates Reform Act (UMRA)

This action does not contain an unfunded mandate as described in UMRA, 2 U.S.C. 1531–1538, and does not significantly or uniquely affect small governments. The action imposes no enforceable duty on any state, local, or Tribal governments or the private sector.

E. Executive Order 13132 (Federalism)

This action does not have federalism implications. The EPA believes, however, that this action may be of significant interest to state governments. Consistent with the EPA's policy to promote communications between the EPA and state and local governments, the EPA consulted with California early in the process of developing this rulemaking to provide the State with an opportunity to provide meaningful and timely input.

On several occasions starting in February 2018, the EPA discussed the development of this rule with the California State Water Resources Control Board and several Regional Water Quality Control Boards. Early in this process, the EPA clarified that if and when the State decides to develop and establish its own selenium standards, the EPA would assist the State in its process. During these discussions, the EPA also explained: the scientific basis for the fish and bird tissue elements of the selenium criterion and the methodologies for translating the tissue elements to water column values; the external peer review process and the comments the EPA received on the derivation of the criterion; the EPA's consideration of those comments and responses; possible alternatives for criteria or a criterion matrix; the assumptions and data being used in the economic analysis associated with the rule; and the overall timing of the Federal rulemaking effort. The EPA took these discussions with the State into account during the drafting of this final rule.

F. Executive Order 13175 (Consultation and Coordination With Indian Tribal Governments)

This action does not have Tribal implications as specified in Executive Order 13175. This rule does not impose substantial direct compliance costs on federally recognized Tribal governments, nor does it substantially affect the relationship between the Federal Government and Tribes, or the distribution of power and responsibilities between the Federal Government and Tribes. Thus, Executive Order 13175 does not apply to this action.

Consistent with the EPA Policy on Consultation and Coordination with Indian Tribes, during the development of this action, the EPA offered Tribal leaders of potentially affected Tribes in California government-to-government consultation on the proposed selenium rulemaking. The Torres Martinez Desert Cahuilla Indian Tribe responded, with questions and concerns about selenium monitoring in the tributaries to the Salton Sea. The tributaries to the Salton Sea have State-adopted and EPA-approved site-specific water quality criteria (objectives) in place that are not affected by this rule.

G. Executive Order 13045 (Protection of Children From Environmental Health and Safety Risks)

The EPA interprets Executive Order 13045 as applying only to those regulatory actions that concern environmental health or safety risks that the EPA has reason to believe may disproportionately affect children, per

[21] 301(b), *Timetable for achievement of objectives:* In order to carry out the objective of the chapter there shall be achieved not later than July 1, 1977, any more stringent limitation, including those necessary to meet water quality standards, treatment standards, or schedules of compliance, established pursuant to any State law or regulations (under authority preserved by section 1370 of the title) or any other Federal law or regulation, or required to implement any applicable water quality standard established pursuant to the chapter.

the definition of ''covered regulatory action'' in section 2–202 of the Executive order. Therefore, this action is not subject to Executive Order 13045 because it does not concern an environmental health risk or safety risk. This rule relates to protection of aquatic life and aquatic-dependent wildlife. Since this action does not concern human health, the EPA's Policy on Children's Health also does not apply.

H. Executive Order 13211 (Actions That Significantly Affect Energy Supply, Distribution, or Use)

This action is not a ''significant energy action'' because it is not likely to have a significant adverse effect on the supply, distribution, or use of energy. This action impacts water quality standards, which do not regulate the supply, distribution, or use of energy.

I. National Technology Transfer and Advancement Act of 1995

This rule does not involve technical standards.

J. Executive Order 12898 (Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations) and Executive Order 14096 (Revitalizing Our Nation's Commitment to Environmental Justice for All)

The EPA believes that the human health and environmental conditions that exist prior to this action do not result in disproportionate and adverse effects on communities with environmental justice concerns. In the EPA's *Economic Analysis for the Final Selenium Water Quality Criterion for the State of California* (economic analysis document), which can be found in the docket for this rule, Exhibit 5–2 illustrates the geographic distribution of waters where available data indicate elevated levels of selenium. These waters are located throughout the State. An analysis of proximity to minority and low-income populations might or might not reveal patterns of association that differ from waters that are not impaired. However, making definitive connections between waters monitored for water quality and the effects of selenium from the use of these resources would likely depend on many other local factors, such as accessibility to and availability of alternative water sources.

The EPA believes that this action is not likely to result in new disproportionate and adverse effects on communities with environmental justice concerns. The freshwater criterion for selenium in California does not address human health impacts, and only applies to aquatic life and aquatic-dependent wildlife uses. This rule will support the health and abundance of aquatic life and aquatic-dependent wildlife in California and will, therefore, not only benefit those species but also benefit all communities that rely on or use these ecosystems. The EPA finds that, as compared to higher-income populations, low-income populations tend to rely more on fishing as a food source,[22] and therefore, this rule may benefit low-income communities. This and other EPA actions with goals of protecting fishing resources are a high priority for the EPA. The potential benefits associated with this final rule are also addressed in the economic analysis document.

To achieve the benefits associated with a final rule, the EPA recognizes that some facilities may need to add pollution control measures and incur additional compliance costs over time to meet any WQBELs needed to achieve the promulgated selenium criterion. The EPA used the California Communities Environmental Health Screening Tool: CalEnviroScreen 4.0 tool developed by California Office of Environmental Health Hazard Assessment and determined that none of the facilities identified in the EPA's *Economic Analysis for the Final Selenium Water Quality Criterion for the State of California* that would incur additional annual costs, are located in communities with elevated environmental justice concerns. This is one line of evidence that these communities would not bear a disproportionate share of the burden with promulgation of this rule. To further explore the anticipated impacts, the EPA analyzed two facilities identified in the EPA's economic analysis that may incur additional compliance costs over time to meet any WQBELs needed to achieve the promulgated selenium criterion. For illustrative purposes, the EPA first analyzed the Michelson Water Reclamation Plant (WRP), which serves an area located in parts of Orange County. Using CalEnviroScreen 4.0, the EPA examined education level, poverty level, and unemployment level within the service area. Some areas showed low environmental justice concerns (high education, low poverty, and low unemployment), whereas other areas in the county had slightly higher environmental justice concerns (moderate education levels, poverty, and unemployment). There did not appear to be a clear pattern of disproportionate impacts to specific communities. As presented in the economic analysis document, the EPA estimates that pollution control upgrades to the Michelson WRP could potentially result in a total cost of $4,856,000. The population served by Michelson WRP is 331,500 people, which would result in a per-person increased cost of $14.65 per year. The average household size in Orange County (the area served by Michaelson WRP) is 3.01 [23] people per household, resulting in an estimated additional average household cost of $44.09 per year, or $3.67 per month. This potentially modest increase in monthly sewerage bill of $3.67 per household per month appears unlikely to disproportionally impact low-income populations, populations with low education levels, and/or communities with low employment rates.

The second facility that the EPA has included in this analysis for illustrative purposes may incur annual costs due to implementing pollution control upgrades is the Auburn Wastewater Treatment Plant (WWTP). The Auburn WWTP serves 13,800 people in the city of Auburn in Placer County. Using the CalEnviroScreen 4.0 tool, the EPA examined education level, poverty level, and unemployment level within the service area. Auburn showed relatively high education levels, moderate poverty levels, and moderate unemployment levels. There did not appear to be a clear pattern of disproportionate impacts to specific communities. As presented in the economic analysis document, the EPA estimates that pollution control upgrades to the Auburn WWTP could potentially result in a total cost of $491,000. The population served by the Auburn WWTP is 13,800 people, which would result in a per-person increased cost of $35.58 per year. The average household size in Auburn is 2.15 [24] people per household, resulting in an estimated additional average household cost of $76.50 per year, or $6.37 per month. This potentially modest increase in monthly sewerage bill of $6.37 per household per month appears unlikely to disproportionally impact low-income populations, populations with low education levels, and/or communities with low employment rates.

These examples show that while these communities only have moderate environmental justice concerns

[22] Von Stackelberg, K., et al. (2017). Results of a national survey of high-frequency fish consumers in the United States. *Environmental Research* 158, 126–136. *https://bgc.seas.harvard.edu/assets/vonstackelberg2017.pdf.*

[23] *https://www.census.gov/quickfacts/orangecountycalifornia.*

[24] *https://www.census.gov/quickfacts/auburncitycalifornia.*

(according to CalEnviroScreen), the low-income portions of these communities would not incur a significant burden as a result of this final rule. Overall, the EPA anticipates that the abovementioned benefits will ultimately outweigh these potential pass-through sewerage costs and that this rule will help address any environmental justice concerns by benefitting aquatic species and the communities that may rely on or use them.

In addition to Executive Order 12898, and in accordance with Title VI of the Civil Rights Act of 1964, each Federal agency shall ensure that all programs or activities receiving Federal financial assistance that affect human health or the environment do not directly, or through contractual or other arrangements, use criteria, methods, or practices that discriminate on the basis of race, color, or national origin. With that directive in mind, in August 2011 the Environmental Justice Interagency Working Group established a Title VI Committee to address the intersection of agencies' environmental justice efforts with their Title VI enforcement and compliance responsibilities. While the EPA only has an oversight role for CWA implementation, if California receives Federal funds for CWA implementation, the State is legally prohibited from discriminating on the basis of race, color, or national origin under Title VI when engaging in CWA implementation activities. Additionally, and in compliance with Executive Order 12898, the EPA expects that California will consider disproportionately high and adverse human health and environmental effects on minority and low-income populations when implementing this rulemaking under the CWA.

The information supporting this Executive Order review is contained in the EPA's *Economic Analysis for the Final Selenium Water Quality Criterion for the State of California,* the California Communities Environmental Health Screening Tool: CalEnviroScreen 4.0 tool developed by California Office of Environmental Health Hazard Assessment, and the 2022 United States census data for Orange County, California and Auburn, California.

K. Congressional Review Act (CRA)

This action is subject to the CRA, and the EPA will submit a rule report to each House of Congress and to the Comptroller General of the United States. This action is not a ''major rule'' as defined by 5 U.S.C. 804(2).

List of Subjects in 40 CFR Part 131

Environmental protection, Incorporation by reference, Indians-lands, Intergovernmental relations, Reporting and recordkeeping requirements, Water pollution control.

Michael S. Regan,

Administrator.

For the reasons set forth in the preamble, the EPA amends 40 CFR part 131 as follows:

PART 131—WATER QUALITY STANDARDS

■ 1. The authority citation for part 131 continues to read as follows:

Authority: 33 U.S.C. 1251 *et seq.*

■ 2. Amend § 131.38 by adding a heading for paragraph (b) and revising paragraphs (b)(1) and (c)(3)(ii) and (iii) to read as follows:

§ 131.38 Establishment of numeric criteria for priority toxic pollutants for the State of California.

* * * * *

(b) *Criteria.* (1) Criteria for priority toxic pollutants in the State of California as described in table 1 to this paragraph (b)(1):

Table 1 to Paragraph (b)(1)

BILLING CODE 6560–50–P

Total Number of Criteria [h]		22	21	22	20	92	90

a. Criteria revised to reflect the Agency q1* or RfD, as contained in the Integrated Risk Information System (IRIS) as of October 1, 1996. The fish tissue bioconcentration factor (BCF) from the 1980 documents was retained in each case.

b. Criteria apply to California waters except for those waters subject to objectives in Tables III-2A and III-2B of the San Francisco Regional Water Quality Control Board's (SFRWQCB) 1986 Basin Plan that were adopted by the SFRWQCB and the State Water Resources Control Board, approved by the EPA, and which continue to apply. For copper and nickel, criteria apply to California waters except for waters south of Dumbarton Bridge in San Francisco Bay that are subject to the objectives in the SFRWQCB's Basin Plan as amended by SFRWQCB Resolution R2-2002-0061, dated May 22, 2002, and approved by the State Water Resources Control Board. The EPA approved the aquatic life site-specific objectives on January 21, 2003. The copper and nickel aquatic life site-specific objectives contained in the amended Basin Plan apply instead.

c. Criteria are based on carcinogenicity of 10 (-6) risk.

d. Criteria Maximum Concentration (CMC) equals the highest concentration of a pollutant to which aquatic life can be exposed for a short period of time without deleterious effects. Criteria Continuous Concentration (CCC) equals the highest concentration of a pollutant to which aquatic life can be exposed for an extended period of time (4 days) without deleterious effects. ug/L equals micrograms per liter.

e. Freshwater aquatic life criteria for metals are expressed as a function of total hardness (mg/L) in the water body. The equations are provided in matrix at paragraph (b)(2) of this section. Values displayed above in the matrix correspond to a total hardness of 100 mg/l.

f. Freshwater aquatic life criteria for pentachlorophenol are expressed as a function of pH, and are calculated as follows: Values displayed above in the matrix correspond to a pH of 7.8. CMC = exp(1.005(pH)−4.869). CCC = exp(1.005(pH)−5.134).

g. This criterion is based on 304(a) aquatic life criterion issued in 1980, and was issued in one of the following documents: Aldrin/Dieldrin (EPA 440/5-80-019), Chlordane (EPA 440/5-80-027), DDT (EPA 440/5-80-038), Endosulfan (EPA 440/5-80-046), Endrin (EPA 440/5-80-047), Heptachlor (440/5-80-052), Hexachlorocyclohexane (EPA 440/5-80-054), Silver (EPA 440/5-80-071). The Minimum Data Requirements and derivation procedures were different in the 1980 Guidelines than in the 1985 Guidelines. For example, a "CMC" derived using the 1980 Guidelines was derived to be used as an instantaneous maximum. If assessment is to be done using an averaging period, the values given should be divided by 2 to obtain a value that is more comparable to a CMC derived using the 1985 Guidelines.

h. These totals simply sum the criteria in each column. For aquatic life, there are 23 priority toxic pollutants with some type of freshwater or saltwater, acute or chronic criteria. For human health, there are 92 priority toxic pollutants with either "water + organism" or "organism only" criteria. Note that these totals count chromium as one pollutant even though the EPA has developed criteria based on two valence states. In the matrix, the EPA has assigned numbers 5a and 5b to the criteria for chromium to reflect the fact that the list of 126 priority pollutants includes only a single listing for chromium.

i. Criteria for these metals are expressed as a function of the water-effect ratio, WER, as defined in paragraph (c) of this section. CMC = column B1 or C1 value × WER; CCC = column B2 or C2 value × WER.

j. No criterion for protection of human health from consumption of aquatic organisms (excluding water) was presented in the 1980 criteria document or in the 1986 Quality Criteria for Water. Nevertheless, sufficient information was presented in the 1980 document to allow a calculation of a criterion, even though the results of such a calculation were not shown in the document.

k. The CWA 304(a) criterion for asbestos is the MCL.

l. See paragraph (b)(1)(i) of this section.

m. These freshwater and saltwater criteria for metals are expressed in terms of the dissolved fraction of the metal in the water column. Criterion values were calculated by using the EPA's Clean Water Act 304(a) guidance values (described in the total recoverable fraction) and then applying the conversion factors in § 131.36(b)(1) and (2).

n. The EPA is not promulgating human health criteria for these contaminants. However, permit authorities should address these contaminants in NPDES permit actions using the State's existing narrative criteria for toxics.

o. These criteria were promulgated for specific waters in California in the National Toxics Rule ("NTR"), at § 131.36. The specific waters to which the NTR criteria apply include: Waters of the State defined as bays or estuaries and waters of the State defined as inland, i.e., all surface waters of the State not ocean waters. These waters specifically include the San Francisco Bay upstream to and including Suisun Bay and the Sacramento-San Joaquin Delta. This section does not apply instead of the NTR for this criterion.

p. No acute criterion applies except as follows. A criterion of 20 µg/L was promulgated for specific waters in California in the NTR in the total recoverable form and still applies to waters of the San Francisco Bay upstream to and including Suisun Bay and the Sacramento-San Joaquin Delta; waters of Salt Slough; Mud Slough (north); and the San Joaquin River, Sack Dam to the mouth of Merced River. The State of California adopted and the EPA approved site-specific acute criteria that still apply to the San Joaquin River, mouth of Merced to Vernalis; Salt Slough; constructed and reconstructed water supply channels in the Grassland watershed listed in Appendix 40 of the State of California Central Valley Regional Water Quality Control Board Basin Plan; and all surface waters that are tributaries to the Salton Sea.

q. The chronic criterion specified in paragraph (b)(1)(i) of this section applies except as follows. A chronic criterion of 5 µg/L was promulgated for specific waters in California in the NTR in the total recoverable form and still applies to waters of the San Francisco Bay upstream to and including Suisun Bay and the Sacramento-San Joaquin Delta; waters of Salt Slough; Mud Slough (north); and the San Joaquin River, Sack Dam to Vernalis. Paragraph (b)(1)(i) does not apply instead of the NTR for these waters. The State of California adopted and the EPA approved a site-specific criterion for the Salt Slough, constructed and reconstructed water supply channels in the Grassland watershed listed in Appendix 40 of the State of California Central Valley Regional Water Quality Control Board Basin Plan, and all surface waters that are tributaries to the Salton Sea; therefore, paragraph (b)(1)(i) does not apply to these waters.

r. These criteria were promulgated for specific waters in California in the NTR. The specific waters to which the NTR criteria apply include: Waters of the State defined as bays or estuaries including the Sacramento-San Joaquin Delta within California Regional Water Board 5, but excluding the San Francisco Bay. This section does not apply instead of the NTR for these criteria.

s. These criteria were promulgated for specific waters in California in the NTR. The specific

waters to which the NTR criteria apply include: Waters of the Sacramento-San Joaquin Delta and waters of the State defined as inland (i.e., all surface waters of the State not bays or estuaries or ocean) that include a MUN use designation. This section does not apply instead of the NTR for these criteria.

t. These criteria were promulgated for specific waters in California in the NTR. The specific waters to which the NTR criteria apply include: Waters of the State defined as bays and estuaries including San Francisco Bay upstream to and including Suisun Bay and the Sacramento-San Joaquin Delta; and waters of the State defined as inland (i.e., all surface waters of the State not bays or estuaries or ocean) without a MUN use designation. This section does not apply instead of the NTR for these criteria.

u. PCBs are a class of chemicals which include aroclors 1242, 1254, 1221, 1232, 1248, 1260, and 1016, CAS numbers 53469219, 11097691, 11104282, 11141165, 12672296, 11096825, and 12674112, respectively. The aquatic life criteria apply to the sum of this set of seven aroclors.

v. This criterion applies to total PCBs, e.g., the sum of all congener or isomer or homolog or aroclor analyses.

w. This criterion has been recalculated pursuant to the 1995 Updates: Water Quality Criteria Documents for the Protection of Aquatic Life in Ambient Water, Office of Water, EPA-820-B-96-001, September 1996. See also Great Lakes Water Quality Initiative Criteria Documents for the Protection of Aquatic Life in Ambient Water, Office of Water, EPA-80-B-95-004, March 1995.

x. The State of California has adopted and the EPA has approved site specific criteria for the Sacramento River (and tributaries) above Hamilton City; therefore, these criteria do not apply to these waters.

y. The State of California adopted and the EPA approved a site-specific criterion for New Alamo Creek from Old Alamo Creek to Ulatis Creek and for Ulatis Creek from Alamo Creek to Cache Slough; therefore, this criterion does not apply to these waters.

z. The State of California adopted and the EPA approved a site-specific criterion for the Los Angeles River and its tributaries; therefore, this criterion does not apply to these waters.

(i) *California Freshwater Selenium Ambient Chronic Water Quality Criterion for Protection of Aquatic Life and Aquatic-Dependent Wildlife.*

Table 2 to Paragraph (b)(1)(i)

Media Type	Bird Tissue	Fish Tissue[1]		Water Column[4]	
Criterion Element	**Bird Egg[2]**	**Egg-Ovary[2]**	**Fish Whole-Body or Muscle[3]**	**Monthly Average Exposure[5]**	**Intermittent Exposure[6]**
Magnitude	11.2 mg/kg dw	15.1 mg/kg dw	8.5 mg/kg dw whole-body or 11.3 mg/kg dw muscle (skinless, boneless filet)	1.5 µg/L in lentic aquatic systems 3.1 µg/L in lotic aquatic systems	$WQC_{int} = \frac{WQC_{30-day} - C_{bkgrnd}(1 - f_{int})}{f_{int}}$
Duration	Instantaneous measurement[7]	Instantaneous measurement[7]	Instantaneous measurement[7]	30 days	Number of days/month with an elevated concentration
Frequency	Not to be exceeded	Not to be exceeded	Not to be exceeded	Not more than once in three years on average	Not more than once in three years on average

1. Fish tissue criterion elements are expressed as steady-state.
2. Fish egg-ovary supersedes any whole-body, muscle, or water column criterion elements for aquatic life when fish egg-ovary are measured, except as noted in footnote 4. Bird egg supersedes water column criterion elements for aquatic-dependent wildlife when bird eggs are measured, except as noted in footnote 4. The bird tissue criterion element is independently applicable from and equivalent to the fish tissue criterion elements.
3. Fish whole-body or muscle tissue supersedes the water column criterion elements when both fish tissue and water concentrations are measured, except as noted in footnote 4.
4. Water column criterion elements are based on dissolved total selenium in water and are derived from fish tissue and bird tissue criterion elements via bioaccumulation modeling. When selenium inputs are increasing, water column criterion elements are the applicable criterion elements in the absence of steady-state condition fish tissue or bird tissue data.
5. The water column criterion element, which applies independently to the respective aquatic life and aquatic-dependent wildlife uses, is applicable for all CWA purposes and consists of a water column value of 1.5 µg/L in lentic aquatic systems and 3.1 µg/L in lotic aquatic systems unless or until a site-specific water column criterion element is derived for a particular waterbody following the methodology described in *Method for Translating Selenium Tissue Criterion Elements into Site-specific Water Column Criterion Elements for California, Version 2, December 2024*. This publication is incorporated by reference into this section with the approval of the Director of the *Federal Register* under 5 U.S.C. 552(a) and 1 CFR part 51. All approved material is available at EPA, OW Docket, EPA West, Room 3334, 1301 Constitution Ave., NW, Washington, DC, 20004; phone: (202) 566-2426; website: *https://www.epa.gov/wqs-tech/water-quality-standards-establishment-numeric-criterion-selenium-fresh-waters-california*. It is also available for inspection at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, visit *www.archives.gov/federal-register/cfr/ibr-locations* or email *fr.inspection@nara.gov*.
6. Where $WQC_{30\text{-}day}$ is the applicable water column monthly criterion element, C_{bkgrnd} is the average background selenium concentration, and f_{int} is the fraction of any 30-day period during which elevated selenium concentrations occur, with f_{int} assigned a value ≥0.033 (corresponding to 1 day).
7. Fish tissue and bird tissue data provide instantaneous point measurements that reflect integrative accumulation of selenium over time and space in bird or fish population(s) at a given site.

BILLING CODE 6560–50–C

(ii) *Priority toxic pollutants.* Table 1 to this paragraph (b)(1) lists all of the EPA's priority toxic pollutants whether or not criteria guidance are available. Blank spaces indicate the absence of national criteria guidance under CWA section 304(a). Because of variations in chemical nomenclature systems, this listing of toxic pollutants does not duplicate the listing in appendix A to 40 CFR part 423. The EPA has added the Chemical Abstracts Service (CAS) registry numbers, which provide a unique identification for each chemical.

(iii) *Criteria recommendations not included in table 1 to this paragraph (b)(1).* The following chemicals have organoleptic-based criteria recommendations that are not included

in table 1: zinc, 3-methyl-4-chlorophenol.

(iv) *Freshwater and saltwater aquatic life criteria.* Freshwater and saltwater aquatic life criteria apply as specified in paragraph (c)(3) of this section.

* * * * *

(c) * * *

(3) * * *

(ii) For waters in which the salinity is equal to or greater than 10 parts per thousand 95% or more of the time, the applicable criteria are the saltwater criteria in column C, except for selenium in waters of the San Francisco Bay upstream to and including Suisun Bay and the Sacramento-San Joaquin Delta where the applicable criteria are the freshwater criteria in column B of the National Toxic Rule (''NTR'') at § 131.36.

(iii) For waters in which the salinity is between 1 and 10 parts per thousand as defined in paragraphs (c)(3)(i) and (ii) of this section, the applicable criteria are the more stringent of the freshwater or saltwater criteria, except for selenium in waters of the San Francisco Bay upstream to and including Suisun Bay and the Sacramento-San Joaquin Delta where the applicable criteria are the freshwater criteria in column B of the NTR. However, the Regional Administrator may approve the use of the alternative freshwater or saltwater criteria if scientifically defensible information and data demonstrate that on a site-specific basis the biology of the water body is dominated by freshwater aquatic life and that freshwater criteria are more appropriate; or conversely, the biology of the water body is dominated by saltwater aquatic life and that saltwater criteria are more appropriate. Before approving any change, the EPA will publish for public comment a document proposing the change.

[FR Doc. 2024–29483 Filed 12–16–24; 8:45 am]

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 174

[EPA–HQ–OPP–2022–0231; FRL–12399–01–OCSPP]

Brevibacillus Laterosporus Mpp75Aa1.1 and Bacillus Thuringiensis Vpb4Da2 Proteins; Exemptions From the Requirement of a Tolerance

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: This regulation establishes exemptions from the requirement of a tolerance for residues of the *Brevibacillus laterosporus* Mpp75Aa1.1 and *Bacillus thuringiensis* Vpb4Da2 proteins (hereafter Mpp75Aa1.1 and Vpb4Da2 proteins) in or on the food and feed commodities of corn: corn, field; corn, sweet, and corn, pop when used as plant-incorporated protectants (PIP) in corn. Bayer CropScience LP., submitted a petition to EPA under the Federal Food, Drug, and Cosmetic Act (FFDCA), requesting these exemptions. These regulations eliminate the need to establish maximum permissible levels for residues of Mpp75Aa1.1 and Vpb4Da2 proteins.

DATES: This regulation is effective December 17, 2024. Objections and requests for hearings must be received on or before February 18, 2025, and must be filed in accordance with the instructions provided in 40 CFR part 178 (see also Unit I.C. of the **SUPPLEMENTARY INFORMATION**).

ADDRESSES: The docket for this action, identified by docket identification (ID) number EPA–HQ–OPP–2022–0231, is available at *https://www.regulations.gov*. Please review the visitor instructions and additional information about the docket available at *https://www.epa.gov/dockets.*

FOR FURTHER INFORMATION CONTACT: Madison Le, Biopesticides and Pollution Prevention Division (7511M), Office of Pesticide Programs, Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460–0001; main telephone number: (202) 564–5754; email address: *BPPDFRNotices@epa.gov.*

SUPPLEMENTARY INFORMATION:

I. General Information

A. Does this action apply to me?

You may be potentially affected by this action if you are an agricultural producer, food manufacturer, or pesticide manufacturer. The following list of North American Industrial Classification System (NAICS) codes is not intended to be exhaustive, but rather provides a guide to help readers determine whether this document applies to them. Potentially affected entities may include:

- Crop production (NAICS code 111).
- Animal production (NAICS code 112).
- Food manufacturing (NAICS code 311).
- Pesticide manufacturing (NAICS code 32532).

B. How can I get electronic access to other related information?

You may access a frequently updated electronic version of 40 CFR part 174 through the Office of the Federal Register's e-CFR site at *https://www.ecfr.gov/current/title-40/chapter-I/subchapter-E/part-174.*

C. How can I file an objection or hearing request?

Under FFDCA section 408(g), 21 U.S.C. 346a(g), any person may file an objection to any aspect of this regulation and may also request a hearing on those objections. You must file your objection or request a hearing on this regulation in accordance with the instructions provided in 40 CFR part 178. To ensure proper receipt by EPA, you must identify docket ID number EPA–HQ–OPP–2022–0231, in the subject line on the first page of your submission. All objections and requests for a hearing must be in writing and must be received by the Hearing Clerk on or before February 18, 2025. Addresses for mail and hand delivery of objections and hearing requests are provided in 40 CFR 178.25(b).

In addition to filing an objection or hearing request with the Hearing Clerk as described in 40 CFR part 178, please submit a copy of the filing (excluding any Confidential Business Information (CBI)) for inclusion in the public docket. Information not marked confidential pursuant to 40 CFR part 2 may be disclosed publicly by EPA without prior notice. Submit the non-CBI copy of your objection or hearing request, identified by docket ID number EPA–HQ–OPP–2022–0231, by one of the following methods:

Federal eRulemaking Portal: https://www.regulations.gov. Follow the online instructions for submitting comments. Do not submit electronically any information you consider to be CBI or other information whose disclosure is restricted by statute.

Mail: OPP Docket, Environmental Protection Agency Docket Center (EPA/DC), (28221T), 1200 Pennsylvania Ave. NW, Washington, DC 20460–0001.

Hand Delivery: To make special arrangements for hand delivery or delivery of boxed information, please follow the instructions at *https://www.epa.gov/dockets/where-send-comments-epa-dockets.*

Additional instructions on commenting or visiting the docket, along with more information about dockets generally, is available at *https://www.epa.gov/dockets.*

II. Background and Statutory Findings

In the **Federal Register** of December 19, 2023 (88 FR 87733) (FRL–10579–11–OCSPP), EPA issued a document pursuant to FFDCA section 408(d)(3), 21 U.S.C. 346a(d)(3), announcing the filing of a pesticide tolerance petition (PP 3F9076) by Bayer CropScience LP, 800 N. Lindbergh Blvd., St. Louis, Missouri 63167. The petition requested that 40 CFR part 174 be amended by establishing an exemption from the requirement of a tolerance for residues of the plant-incorporated protectants (PIPs) *Brevibacillus laterosporus* Mpp75Aa1.1 and *Bacillus thuringienisis* Vpb4Da2 in or on corn. That document referenced a summary of the petition prepared by the petitioner Bayer Crop Science LP, which is available in the docket at *https://www.regulations.gov.* There was one comment received in response to the notice of filing.

III. Final Rule

A. EPA's Safety Determination

Section 408(c)(2)(A)(i) of FFDCA allows EPA to establish an exemption from the requirement for a tolerance (the legal limit for a pesticide chemical residue in or on a food) only if EPA determines that the exemption is ''safe.'' Section 408(c)(2)(A)(ii) of FFDCA defines ''safe'' to mean that ''there is a reasonable certainty that no harm will result from aggregate exposure to the pesticide chemical residue, including all anticipated dietary exposures and all other exposures for which there is reliable information.'' This includes exposure through drinking water and in residential settings, but it does not include occupational exposure. Pursuant to FFDCA section 408(c)(2)(B), in establishing or maintaining in effect an exemption from the requirement of a tolerance, EPA must take into account the factors set forth in FFDCA section 408(b)(2)(C), which require EPA to give special consideration to exposure of infants and children to the pesticide chemical residue in establishing a tolerance and to ''ensure that there is a reasonable certainty that no harm will result to infants and children from aggregate exposure to the pesticide chemical residue.'' Additionally, FFDCA section 408(b)(2)(D) requires that the Agency consider ''available information concerning the cumulative effects of a particular pesticide's residues'' and ''other substances that have a common mechanism of toxicity.''

EPA evaluated the available toxicity and exposure data on Mpp75Aa1.1 and Vpb4Da2 proteins and considered their validity, completeness, and reliability, as well as the relationship of this information to human risk. EPA has also considered available information concerning the variability of the sensitivities of major identifiable subgroups of consumers, including infants and children. A summary of the data upon which EPA relied and its risk assessment based on those data can be found within the document entitled ''Review of the Application for an Experimental Use Permit to Test MON 95275 Corn (OECD Unique Identifier MON–95275–7) Expressing Transgenic Plant-Incorporated Protectants Mpp75Aa1.1, Vpb4Da2, and Double Stranded RNA DvSnf7.1 and the Genetic Material Necessary for their Production (Vector PV–ZMIR525664)'' (hereafter Human Health Risk Assessment). This document, as well as other relevant information, is available in the docket for this action EPA–HQ–OPP–2022–0231.

Mpp75Aa1.1 is a modified protein derived from the bacterium *Brevibacillus laterosporus* and is active against certain coleopteran pests of corn. Available data demonstrated that, with regard to humans, the Mpp75Aa1.1 protein does not pose a toxic or allergenic risk. An acute oral toxicity study using purified Mpp75Aa1.1 protein shows that the protein is not toxic to mammals via the oral route of exposure at levels well above those that are reasonably anticipated through normal dietary consumption of the crop. In addition, a bioinformatics analysis of the primary protein sequence did not identify any significant homologies of the Mpp75Aa1.1 protein to known mammalian toxins. Likewise, the potential for allergenicity is low because: (1) the bacterial source of the Mpp75Aa1.1 protein, *Brevibacillus laterosporus,* is ubiquitous in the environment, which implies widespread human and animal exposure, and a scientific literature search of the bacterium did not indicate any allergenic history; (2) bioinformatic analyses indicate no biologically relevant similarity between the Mpp75Aa1.1 protein and any known allergens; (3) the Mpp75Aa1.1 protein degrades rapidly when exposed to digestive enzymes (gastric proteases) present in the human gastrointestinal tract; (4) the Mpp75Aa1.1 protein shows loss of function under high temperatures (≥75 °C), indicating that it is heat labile and will likely denature in the course of normal thermal treatment during food preparation; and (5) the Mpp75Aa1.1 protein is not glycosylated, which further reduces its allergenicity potential. Glycosylation is an enzymatic post-translational process in which carbohydrates (glycans) link to proteins, creating structures which could lead to an immune response in humans.

The most likely route of exposure to this plant-incorporated protectant is dietary, via products produced from corn expressing the Mpp75Aa1.1 protein. Oral exposure from ingestion of drinking water is unlikely because the Mpp75Aa1.1 protein is present at very low levels within the plant cells, and the amounts likely to enter the water column from leaves, pollen or plant detritus are low. Further, if Mpp75Aa1.1 protein were to enter the water column, it is expected to break down rapidly through natural processes (*e.g.,* microbial or UV degradation) or normal communal water-treatment procedures. Even if there may be dietary exposure to residues of the Mpp75Aa1.1 protein, such exposure presents no concern for adverse effects based on the available toxicity and allergenicity analysis mentioned above.

Non-dietary non-occupational exposure via dermal or ocular routes is not likely since the Mpp75Aa1.1 protein is contained within plant cells. The most likely non-dietary route of exposure to the Mpp75Aa1.1 protein may be through inhalation of corn pollen. However, exposure to the Mpp75Aa1.1 protein through this route of exposure is expected to be negligible for several reasons: (1) its presence in pollen was demonstrated to be very low (below the limit of quantification), and (2) corn pollen is not respirable, as it consists of spherical particles ranging in size from 80 to 125 µm, in contrast with respirable particles that are less than 10 µm. Even if inhalation of dust-like particles were to occur, the Mpp75Aa1.1 protein is contained within plant cells, which essentially eliminates pulmonary exposure to the proteins. Further, as described above, such exposure would not be expected to present any risk due to the lack of toxicity or allergenicity observed for the Mpp75Aa1.1 protein. These findings are discussed in more detail in the Human Health Risk Assessment.

Vpb4Da2 is derived from the bacterium *Bacillus thuringiensis* (*Bt*) and is active against certain coleopteran pests of corn. Available data demonstrated that, with regard to humans, the Vpb4Da2 protein does not pose a toxic or allergenic risk. An acute oral toxicity study using purified Vpb4Da2 protein shows that the protein is not toxic to mammals via the oral route of exposure at levels well above those that are reasonably anticipated through normal dietary consumption of the crop. In addition, a bioinformatics analysis of the primary protein sequence

did not identify any significant homologies of the Vpb4Da2 protein to known mammalian toxins. Likewise, the potential for allergenicity is low because: (1) the bacterial source of the Vpb4Da2 protein, *Bacillus thuringiensis,* has a long history of safe use, including use as a pesticide, and is not considered to be a source of allergenic proteins; (2) bioinformatic analyses indicate no biologically relevant similarity between the Vpb4Da2 protein and any known allergens; (3) the Vpb4Da2 protein degrades rapidly when exposed to digestive enzymes (gastric proteases) present in the human gastrointestinal tract; (4) the Vpb4Da2 protein shows loss of function under high temperatures (≥55 °C), indicating that it is heat labile and will likely denature in the course of normal thermal treatment during food preparation; and (5) the Vpb4Da2 protein is not glycosylated, which further reduces its allergenicity potential. Glycosylation is an enzymatic post-translational process in which carbohydrates (glycans) link to proteins, creating structures which could lead to an immune response in humans.

The most likely route of exposure to this plant-incorporated protectant is dietary, via products produced from corn expressing the protein. Oral exposure from ingestion of drinking water is unlikely because the Vpb4Da2 protein is present at very low levels within the plant cells and the amounts likely to enter the water column from leaves, pollen or plant detritus are low. Further, if protein were to enter the water column, it is expected to break down rapidly through natural processes (*e.g.,* microbial or UV degradation) or normal communal water-treatment procedures. Even if there may be dietary exposure to residues of the Vpb4Da2 protein, such exposure presents no concern for adverse effects based on the toxicity and allergenicity discussion above.

Non-dietary non-occupational exposure via dermal or ocular routes is not likely since the Vpb4Da2 protein is contained within plant cells. The most likely non-dietary route of exposure to the Vpb4Da2 protein may be through inhalation of corn pollen. However, exposure to the Vpb4Da2 protein through this route of exposure is expected to be negligible for several reasons: (1) its presence in pollen was demonstrated to be very low (below the limit of quantification), and (2) corn pollen is not respirable, as it consists of spherical particles ranging in size from 80 to 125 µm, in contrast with respirable particles that are less than 10 µm. Even if inhalation of dust-like particles were to occur, the Vpb4Da2 protein is contained within plant cells, which essentially eliminates pulmonary exposure to the proteins. Further, as described above, such exposure would not be expected to present any risk due to the lack of toxicity or allergenicity observed for the Vpb4Da2 protein These findings are discussed in more detail in the Human Health Risk Assessment.

Section 408(b)(2)(D)(v) of FFDCA requires that, when considering whether to establish, modify, or revoke a tolerance, the Agency consider ''available information'' concerning the cumulative effects of a particular pesticide's residues and ''other substances that have a common mechanism of toxicity.'' No risk of cumulative toxicity or effects from the Mpp75Aa1.1 protein has been identified as no toxicity or allergenicity has been shown for this protein in the submitted studies. Therefore, EPA has concluded that the Mpp75Aa1.1 protein does not have a common mechanism of toxicity with other substances. Similarly, no risk of cumulative toxicity or effects from the Vpb4Da2 protein has been identified as no toxicity or allergenicity has been shown for this protein in the submitted studies. Therefore, EPA has concluded that the Vpb4Da2 protein does not have a common mechanism of toxicity with other substances.

Although FFDCA section 408(b)(2)(C) provides for an additional tenfold margin of safety for infants and children in the case of threshold effects, EPA has determined that there are no such effects due to the lack of toxicity of the Mpp75Aa1.1 protein. As a result, an additional margin of safety for the protection of infants and children is unnecessary. Similarly, EPA has determined that there are no such effects due to the lack of toxicity of the Vpb4Da2 protein. As a result, an additional margin of safety for the protection of infants and children is unnecessary.

Based upon its evaluation described above and in the Human Health Risk Assessment, EPA concludes that there is a reasonable certainty that no harm will result to the U.S. population, including infants and children, from aggregate exposure to residues of the Mpp75Aa1.1 protein derived from the bacterium *Brevibacillus laterosporus.* Therefore, an exemption from the requirement of a tolerance is established for residues of the Mpp75Aa1.1 protein in or on the food and feed commodities of corn: corn, field; corn, sweet; and corn, pop when used as a plant-incorporated protectant in corn.

Similarly, based upon its evaluation described above and in the Human Health Risk Assessment, EPA concludes that there is a reasonable certainty that no harm will result to the U.S. population, including infants and children, from aggregate exposure to residues of the Vpb4Da2 protein derived from the bacterium *Bacillus thuringiensis* (*Bt*). Therefore, an exemption from the requirement of a tolerance is established for residues of the Vpb4Da2 protein in or on the food and feed commodities of corn: corn, field; corn, sweet; and corn, pop when used as a plant-incorporated protectant in corn.

B. Analytical Enforcement Methodology

EPA has determined that validated Enzyme-Linked Immunosorbent Assays (ELISA) are available for the detection of Mpp75Aa1.1 and Vpb4Da2 proteins. These assays have been demonstrated to reliably detect the levels of the Mpp75Aa1.1 and Vpb4Da2 proteins in the tissues of corn.

C. Response to Comment

One comment was received during the public comment period for the notice of filing. The commentor provided general objections to EPA establishing exemptions from tolerances for pesticides but did not provide any specific or substantive objections to the petition to exempt the Mpp75Aa1.1 and Vpb4Da2 proteins when used as plant-incorporated protectants. Based on its review of the data and other information submitted in support of the tolerance exemption petition (as described above in Unit III.A), EPA has determined that a tolerance exemption for Mpp75Aa1.1 and Vpb4Da2 proteins, when used as plant-incorporated protectants, is safe under the FFDCA. Therefore, EPA is establishing an exemption from the requirement of a tolerance for residues of Mpp75Aa1.1 and Vpb4Da2 proteins in or on the food and feed commodities of corn.

IV. Statutory and Executive Order Reviews

This action establishes exemptions from the requirement of a tolerance under FFDCA section 408(d) in response to a petition submitted to the Agency. The Office of Management and Budget (OMB) has exempted these types of actions from review under Executive Order 12866, entitled ''Regulatory Planning and Review'' (58 FR 51735, October 4, 1993). Because this action has been exempted from review under Executive Order 12866, this action is not subject to Executive Order 13211, entitled ''Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use'' (66 FR 28355, May 22, 2001), or Executive

Order 13045, entitled ''Protection of Children from Environmental Health Risks and Safety Risks'' (62 FR 19885, April 23, 1997). This action does not contain any information collections subject to OMB approval under the Paperwork Reduction Act (PRA), 44 U.S.C. 3501 *et seq.,* nor does it require any special considerations under Executive Order 12898, entitled ''Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations'' (59 FR 7629, February 16, 1994).

Since tolerances and exemptions that are established on the basis of a petition under FFDCA section 408(d), such as the exemptions from the requirement of a tolerance in this final rule, do not require the issuance of a proposed rule, the requirements of the Regulatory Flexibility Act (RFA) (5 U.S.C. 601 *et seq.*), do not apply.

This action directly regulates growers, food processors, food handlers, and food retailers, not States or Tribes, nor does this action alter the relationships or distribution of power and responsibilities established by Congress in the preemption provisions of FFDCA section 408(n)(4). As such, the Agency has determined that this action will not have a substantial direct effect on States or Tribal governments, on the relationship between the National Government and the States or Tribal governments, or on the distribution of power and responsibilities among the various levels of government or between the Federal Government and Indian tribes. Thus, the Agency has determined that Executive Order 13132, entitled ''Federalism'' (64 FR 43255, August 10, 1999), and Executive Order 13175, entitled ''Consultation and Coordination with Indian Tribal Governments'' (65 FR 67249, November 9, 2000), do not apply to this action. In addition, this action does not impose any enforceable duty or contain any unfunded mandate as described under title II of the Unfunded Mandates Reform Act (UMRA) (2 U.S.C. 1501 *et seq.*).

This action does not involve any technical standards that would require Agency consideration of voluntary consensus standards pursuant to section 12(d) of the National Technology Transfer and Advancement Act (NTTAA) (15 U.S.C. 272 note).

V. Congressional Review Act

Pursuant to the Congressional Review Act (5 U.S.C. 801 *et seq.*), EPA will submit a report containing this rule and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the **Federal Register**. This action is not a ''major rule'' as defined by 5 U.S.C. 804(2).

List of Subjects in 40 CFR Part 174

Environmental protection, Administrative practice and procedure, Agricultural commodities, Pesticides and pests, Reporting and recordkeeping requirements.

Dated: December 4, 2024.

Edward Messina,

Director, Office of Pesticide Programs.

Therefore, for the reasons stated in the preamble, EPA is amending 40 CFR chapter I as follows:

PART 174—PROCEDURES AND REQUIREMENTS FOR PLANT-INCORPORATED PROTECTANTS

■ 1. The authority citation for part 174 continues to read as follows:

Authority: 7 U.S.C. 136–136y; 21 U.S.C. 321(q), 346a and 371.

■ 2. Add §§ 174.551 and 174.552 to subpart W to read as follows:

Subpart W—Tolerances and Tolerance Exemptions

* * * * *

§ 174.551 *Brevibacillus laterosporus* Mpp75Aa1.1 protein; exemption from the requirement of a tolerance.

Residues of *Brevibacillus laterosporus* Mpp75Aa1.1 protein in or on the food and feed commodities of corn: corn, field; corn, sweet; and corn, pop are exempt from the requirement of a tolerance when used as a plant-incorporated protectant in corn.

§ 174.552 *Bacillus thuringiensis* Vpb4Da2 protein; exemption from the requirement of a tolerance.

Residues of *Bacillus thuringiensis* Vpb4Da2 protein in or on the food and feed commodities of corn: corn, field; corn, sweet; and corn, pop are exempt from the requirement of a tolerance when used as a plant-incorporated protectant in corn.

BILLING CODE 6560–50–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

42 CFR Part 73

[Docket No. CDC–2020–0024]

RIN 0920–AA71

Possession, Use, and Transfer of Select Agents and Toxins; Biennial Review of the List of Select Agents and Toxins

AGENCY: Centers for Disease Control and Prevention (CDC), Department of Health and Human Services (HHS).

ACTION: Final rule.

SUMMARY: This rule finalizes updates to the HHS list of select agents and toxins that could pose a severe threat to public health and safety. These updates were proposed along with other changes to the select agent and toxin regulations, which will be addressed in a separate regulatory action. In a companion document published in this issue of the **Federal Register**, the U.S. Department of Agriculture (USDA) is making parallel regulatory changes.

DATES: This final rule is effective January 16, 2025.

FOR FURTHER INFORMATION CONTACT: Daniel A. Singer, MD, Acting Director, Division of Regulatory Science and Compliance, Centers for Disease Control and Prevention, 1600 Clifton Road NE, Mailstop H21–4, Atlanta, Georgia 30329. Telephone: (404) 553–8266.

SUPPLEMENTARY INFORMATION: The final rule is organized as follows:

I. Background
- A. Legal Authority
- B. 2024 Proposed Rule

II. Responses to Comments and Provisions of the Proposed Rule
- A. Removal of *Brucella abortus, Brucella melitensis,* and *Brucella suis*
- B. Nomenclature and Other Changes in the Select Agent and Toxin List
- C. Additional Comments Received
- D. Retaining Tier 1 Designation of Botulinum Neurotoxin Producing Species of *Clostridium*
- E. No Addition of Hantaviruses
- F. Toxin Review: Changes to Exclusion Limits for Short, Paralytic Alpha Conotoxins
- G. Designation of Nipah Virus as a Tier 1 Select Agent
- H. Addition of a Footnote to the HHS Select Agent and Overlap Select Agent List
- I. Summary of Final Rule Provisions

III. Alternatives Considered

IV. Required Regulatory Analyses
- A. Executive Orders 12866, 13563, and 14094
- B. The Regulatory Flexibility Act (RFA), as Amended by the Small Business Regulatory Enforcement Fairness Act (SBREFA)

C. Paperwork Reduction Act of 1995
D. E.O. 12988: Civil Justice Reform
E. E.O. 13132: Federalism
F. Plain Language Act of 2010
V. References

I. Background

A. Legal Authority

Under the Public Health Security and Bioterrorism Preparedness and Response Act of 2002 (Bioterrorism Response Act), the HHS Secretary must, by regulation, establish and maintain a list of biological agents and toxins that have the potential to pose a severe threat to public health and safety (42 U.S.C. 262a(a)(1)). In determining whether to include a biological agent or toxin on the list, the Bioterrorism Response Act requires that the HHS Secretary consider the following criteria:

- the effect on human health of exposure to an agent or toxin;
- the degree of contagiousness of the agent and the methods by which the agent or toxin is transferred to humans;
- the availability and effectiveness of pharmacotherapies and immunizations to treat and prevent illnesses resulting from an agent or toxin; and
- any other criteria, including the needs of children and other vulnerable populations, that the HHS Secretary considers appropriate (42 U.S.C. 262a(a)(1)(B)).

Under 42 U.S.C. 262a(a)(2), the HHS Secretary must review and republish the list of HHS select agents and toxins at least biennially.

In the preparation of this rulemaking, HHS/CDC considered the statutory criteria and evaluated each agent and toxin based on the following:

- *Effect on human health:*
  - the degree of pathogenicity (ability of an organism to cause disease);
  - long-term health effects;
  - severity of illness;
  - case fatality rate;
  - status of host immunity (*e.g.,* whether an individual has already been exposed to the agent and generated an immune response);
  - vulnerability of special populations;
- *Degree of contagiousness:*
  - dissemination efficacy;
  - aerosol stability;
  - rate of transmission;
- *Availability and effectiveness of pharmacotherapies:*
  - available treatment;
- *Other Criteria:*
  - decontamination and restoration (the extent remediation efforts are needed due to agent persistence in the environment and population);
  - matrix stability;
  - ease of production;
  - ability to genetically manipulate or alter;
  - the burden or impact on the health care system.

The Federal Select Agent Program (FSAP) is the collaboration of the CDC, Division of Regulatory Science and Compliance (previously known as the Division of Select Agents and Toxins), and the USDA Animal and Plant Health Inspection Service (APHIS), Division of Agricultural Select Agents and Toxins. These two agencies administer the HHS and USDA select agent and toxin regulations and coordinate Federal oversight of select agents and toxins in a manner to minimize the administrative burden on the regulated community.

The list of HHS select agents and toxins is divided into two sections—agents and toxins regulated solely by HHS and agents that are regulated by both HHS and USDA. The biological agents and toxins listed in 42 CFR 73.3 (HHS select agents and toxins) have the potential to pose a severe threat to human health and safety and are regulated only by HHS. The biological agents listed in § 73.4 (overlap select agents and toxins) have the potential to pose a severe threat to human health and safety, as determined by HHS, and a severe threat to animals and animal products, as determined by the USDA, pursuant to USDA's authority under the Agriculture Bioterrorism Protection Act of 2002 (7 U.S.C. 8401). Accordingly, these biological agents are jointly regulated by HHS and USDA as ''overlap'' select agents. The Bioterrorism Response Act defines the term ''overlap agents and toxins'' to mean biological agents and toxins that are listed pursuant to 42 U.S.C. 262a(a)(1) and listed pursuant to 7 U.S.C. 8401(a)(1). If HHS/CDC removes any overlap select agents from its list, these agents might still be regulated as USDA select agents dependent on the outcome of the USDA biennial review.

B. 2024 Proposed Rule

On March 17, 2020, CDC published an advance notice of proposed rulemaking (ANPRM) (85 FR 15087) seeking public comments on potential changes to the current list of HHS and overlap select agents and toxins that are regulated by both HHS and USDA. The received comments broadly supported removal of the *Brucella* species—of the 335 comments received, 325 supported removal of one or more species of *Brucella.* Only two commenters were in favor of retaining the *Brucella* species.

HHS/CDC engaged the Intragovernmental Select Agents and Toxins Technical Advisory Committee (ISATTAC) to review and consider the public comments. The committee reviewed the public comments over a series of seven meetings held between June 12, 2020, and December 11, 2020. Other Federal subject-matter experts were invited to the meetings to address questions from the committee. The ANPRM also requested input on removal of other agents from the list (*e.g., Coxiella burnetii, Rickettsia prowazekii, Bacillus anthracis* [Pasteur strain]). After considering public comments, ISATTAC advisory input, and Federal subject-matter experts' input, CDC proposed changes to the select agent and toxin list and removal of three species of *Brucella.*

On January 30, 2024, HHS issued a proposed rule entitled ''Possession, Use, and Transfer of Select Agents and Toxins; Biennial Review of the List of Select Agents and Toxins'' (89 FR 5823). The proposed rule included two sets of proposals: (1) regulatory changes related to the select agents and toxins on the list (*i.e.,* remove three species of *Brucella* from the list of overlap select agents and toxins, raise one toxin's exclusion amounts, rename three viruses, designate a current agent as a Tier 1 agent, and remove the designation of Tier 1 status from one agent), and (2) regulatory changes related to the administration of FSAP. This second set of proposals included adding definitions and provisions to clarify inactivation of select agents, adding requirements to report discoveries of select agents and toxins, and codifying policies regarding effluent decontamination systems and biosafety provisions for facility verification requirements for registered biosafety level 3 and animal biosafety level 3 laboratories.

HHS/CDC has elected to finalize the January 30, 2024, proposed rule in two separate rulemakings—one final rule focused on changes to the select agents and toxins list (this final rule), and a second final rule focused on regulatory changes to the administration of the FSAP discussed above. This final rule will focus solely on removing three select agents, raising one toxin's exclusion limit, updating nomenclature, and designating an agent as Tier 1. HHS/CDC is proceeding with two final rules for clarity and to avoid any unnecessary delay in finalizing the revised select agents and toxins list. HHS/CDC will publish another regulatory action focused on the proposed rule's administrative and programmatic changes at a later date. Like HHS/CDC, USDA/APHIS is also

proceeding with two separate final rules for this rulemaking.

Interested persons or organizations were invited to participate by submitting written views, recommendations, and data. HHS/CDC invited general comments as to whether there are additional biological agents or toxins that should be added or removed from the HHS list of select agents and toxins based on the following criteria outlined under 42 U.S.C. 262a(a)(1)(B):

(1) ''the effect on human health of exposure to the agent or toxin;''

(2) ''the degree of contagiousness of the agent or toxin and the methods by which the agent or toxin is transferred to humans;''

(3) ''the availability and effectiveness of pharmacotherapies and immunizations to treat and prevent any illness resulting from infection by the agent or toxin;'' and

(4) ''any other criteria, including the needs of children and other vulnerable populations, that the Secretary considers appropriate''.

Comments were also requested on the following specific proposed changes to the list of HHS select agents and toxins:

- Removal of *Brucella abortus, Brucella melitensis,* and *Brucella suis:* Proposal to remove *Brucella abortus, Brucella melitensis,* and *Brucella suis* from the select agent list.
- Updates to nomenclature of select agents: To change ''SARS coronavirus (SARS–CoV)'' to ''Severe acute respiratory syndrome coronavirus (SARS–CoV)'' to correct the nomenclature; to remove the exclusion regarding South American genotype of Eastern Equine Encephalitis virus as this terminology is no longer the correct nomenclature; and to rename Ebola virus to *Ebolavirus* in accordance with the recent taxonomic change by the International Committee on Taxonomy of Viruses (ICTV) (this was initially included as its own section in the proposed rule but moved under this section for nomenclature changes).
- Updates to nomenclature of monkeypox virus: Proposal to update the terminology of ''monkeypox virus,'' which was initially proposed to be updated to ''Mpox Clade I.''
- Removal of the Designation of Botulinum neurotoxin producing species of *Clostridium* as a Tier 1 Agent: Proposal to retain botulinum neurotoxin producing species of *Clostridium* as an HHS select agent, but no longer list it as a Tier 1 agent.
- No Addition of Hantaviruses: Proposal to not add Sin Nombre virus (SNV), Andes virus (ANDV), Hantaan virus (HTNV), and Dobrava virus (DOBV) to the select agent list.
- Toxin Review: Changes to Exclusion Limits for Short, Paralytic Alpha Conotoxins: Proposal to increase the exclusion amount for short, paralytic alpha conotoxins from 100 mg to 200 mg.
- Designation of Nipah virus as a Tier 1 Select Agent: Proposal to designate Nipah virus as a Tier 1 select agent.
- Addition of a Footnote to the HHS Select Agent List on the FSAP website: Proposal to add a footnote to the list for HHS and Overlap select agents indicating that the current nomenclature will be available on the FSAP website (*https://www.selectagents.gov*) to harmonize the list of select agent viruses with ICTV nomenclature.

The public comment period for the proposed rule ended on April 1, 2024. HHS/CDC received 44 unique comments from individuals, stakeholders, and groups and carefully reviewed and considered the comments in this preparation of the final rule. Of these 44 comments, 37 include discussion of the list of select agents discussed in this final rule. A summary of the comments relevant to the content of this final rule and responses to those comments are found at section II, below. Public comments addressing other topics from the proposed rule will be addressed in a separate regulatory action.

II. Responses to Comments and Provisions of the Proposed Rule

The following is a section-by-section discussion of the changes HHS/CDC is making to the list of select agents and toxins in 42 CFR 73.3 and 73.4 after consideration of public comments. As previously stated, the changes proposed in the proposed rule will be finalized in two separate rules. This final rule addresses changes to the list of select agents and toxins in 42 CFR 73.3 and 73.4. All other revisions to definitions, policies, and regulatory requirements addressed in the proposed rule will be addressed in a separate final rule.

A. Removal of Brucella abortus, Brucella melitensis, and Brucella suis

Regarding the request for comment on whether to remove three species of *Brucella* (*B. abortus, B. melitensis, and B. suis*) from the select agent and toxins list, HHS/CDC received 37 comments from individuals, animal health groups, regulated entities, and public health associations that fully supported removing the three agents. No public comments proposed maintaining these agents on the select agent and toxins list.

Individuals and animal health groups stated that they support removing *B. abortus, B. melitensis,* and *B. suis* to allow for more robust studies on alternative methods of surveillance, effective delivery mechanisms for wildlife vaccination, and techniques to limit disease spread, such as contraception and novel sustained-release antibiotics in conjunction with immuno-contraception. Commenters stated the etiology and pathophysiology of the *Brucella* species make it poorly suited to cause a severe threat to human health. Commenters further noted that the disease is extremely rare in North America and has limited capacity for human-to-human transmission. The same commenters stated maintaining the *Brucella* species as select agents causes considerable burden to the research community, impairing necessary scientific developments of diagnostic tools and vaccine delivery methods. Regulatory constraints on *Brucella* species were further correlated to fewer individuals entering the field of *Brucella* research. The commenters agreed removal of these agents would not affect the nationally recognized biosafety measures used by U.S. researchers in handling these agents. Commenters also noted that, regardless of the FSAP's regulation of these agents, *Brucella* species remain endemic worldwide. This change would, however, enhance proactive measures for research and diagnostics.

State veterinarians, state agriculture departments, and livestock associations also support the removal of the *Brucella* species and believe delisting these agents will allow for faster production of improved diagnostics. These groups believe delisting ultimately will reduce the cost for ranching families and other taxpayers when performing the required testing on domestic livestock. These groups stated that current tests often cross-react or result in false positives that threaten animal agribusinesses; the benefits to delist the *Brucella* species are numerous; and the perceived risk to national security is not supported by peer-reviewed science. One group stated removal of these agents is a step toward using a modernized risk-based approach for biosafety and security.

Regulated entities (*i.e.,* entities registered with FSAP under 42 CFR 73.7) reported similar support for removing *B. abortus, B. melitensis,* and *B. suis* and included that they have no concerns with maintaining work using BSL–3/ABSL–3 practices. Commenters stated that guidance will be needed for the regulated community currently registered for these agents on how to remove registered space and/or removal of *Brucella* species from registration while active work is ongoing with *Brucella.*

Public health associations commented that *B. abortus, B. melitensis,* and *B. suis* should be removed because of the low mortality rate and because current molecular and diagnostic methods allow for the effective detection of the agents. Comments stated delisting these agents will remove substantial regulatory requirements on individuals, specifically the Responsible Official and Alternate Responsible Official, and allow for an expanded work staff to contribute to testing. Further, antibiotic treatment regimens are effective and well-established for treating brucellosis due to infections with *B. abortus, B. melitensis,* or *B. suis.*

In accordance with the proposed rule and public comments, HHS/CDC is removing *B. abortus, B. melitensis,* and *B. suis* from the select agent and toxins list upon publication of the final rule. This decision is based on the criteria and considerations outlined in 42 U.S.C. 262a, including the low mortality rate, rare human-to-human transmission, and availability of therapeutics, and is supported by the strong and unanimous support received through public comments in favor of removing these agents (Olsen et al., 2018). Please note that all entities currently working with *B. abortus, B. melitensis,* or *B. suis* will need to remove these agents from their APHIS/CDC Form 1 (registration), including Sections 3, 7A/C (and associated attachments), and 7B. FSAP will be reaching out to affected entities upon publication of this final rule. Further guidance can be found at *https://www.selectagents.gov/efsap/using/form1/docs/eFSAP_Form_1_Amendments_Guidance_508.pdf.*

For brucellosis case reporting and national notification, please visit *https://www.cdc.gov/brucellosis/hcp/surveillance/index.html.*

Additionally, BSL–3/ABSL–3 laboratory safety and containment recommendations for *Brucella* species are outlined in the Biosafety in Microbiological and Biomedical Laboratories (BMBL) found at *https://www.cdc.gov/labs/bmbl/index.html.*

B. Nomenclature and Other Changes in the Select Agent and Toxin List

HHS/CDC proposed to amend the select agent list by updating ''monkeypox virus'' to the regulated virus variant ''Mpox virus (clade I).'' Initially, HHS/CDC based this change on the World Health Organization (WHO) recommendation to adopt a new disease name from monkeypox to mpox (*https://www.who.int/news/item/28-11-2022-who-recommends-new-name-for-monkeypox-disease*). This was updated in the International Classification of Diseases (ICD) system (*https://icd.who.int/browse/2024-01/mms/en#160886685*).

Global experts, including the International Committee on the Taxonomy of Viruses, assigned new names to the monkeypox virus variants but not to the virus itself. The virus variants became known as monkeypox virus Clade I (formerly Congo Basin, Central African clade) and Clade II (formerly West African Clade) (*https://www.who.int/news/item/12-08-2022-monkeypox--experts-give-virus-variants-new-names*). These efforts were in part to align the disease name and virus variants with current best naming practices.

FSAP issued guidance during the 2022 mpox outbreak to assist individuals and entities to comply with select agent and toxin regulations after they identified monkeypox virus in diagnostic samples. The guidance clarified that when materials are identified as being or containing monkeypox virus, and the clade is unknown, the materials are considered select agents. The guidance also explained when regulatory exemptions and exclusions would apply. This guidance was issued based on current diagnostic assays not being specific to the monkeypox virus clade.

Based on these considerations and recognition that this change would have implications beyond a change in nomenclature, HHS/CDC will not change the listed agent from ''monkeypox virus'' to ''Mpox virus (clade I).'' The decision to retain the existing listing is to ensure consistency in nomenclature and the regulation of select agent material. FSAP does not include clade-specific designations for other select agents, but the regulations provide exclusions when appropriate. This ensures select agent material is possessed, used, and transferred in accordance with the regulations, which is critically important when clade-specific assays are generally used. Therefore, HHS/CDC is retaining the current listing and monkeypox virus, meaning monkeypox virus with clade unknown is a select agent. Likewise, monkeypox virus identified as clade I is a select agent. The decision to retain the current listing means no changes are made to the regulation of this select agent or the applicable exclusions and exemptions.

As mentioned above, monkeypox virus contains two virus variants, or clades. In 2012, HHS/CDC excluded the West African Clade of monkeypox virus from the select agent regulatory requirements (*https://www.selectagents.gov/sat/exclusions/hhs.htm*). Excluded select agents have been determined to not pose a severe threat to public health and safety and are not regulated as select agents. Though not explicitly proposed in the proposed rule, HHS/CDC has decided to rename the excluded West African Clade monkeypox virus to clade II monkeypox virus. This nomenclature change aligns with WHO recommendations (Ulaeto et al., 2023, *https://www.who.int/news/item/28-11-2022-who-recommends-new-name-for-monkeypox-disease*). This change promotes consistent terminology in global and public health and will not impact regulated entities.

Additionally, HHS/CDC proposed to change SARS coronavirus (SARS–CoV) to ''Severe acute respiratory syndrome coronavirus (SARS–CoV),'' which is the correct nomenclature. This nomenclature change was also supported by two comments and is finalized as proposed.

Though ''Eastern equine encephalitis virus'' is an HHS select agent, the regulations exclude any South American genotype of Eastern Equine Encephalitis Virus from the requirements. HHS/CDC proposed to remove the exclusion regarding South American genotype of Eastern Equine Encephalitis virus as this no longer reflected the appropriate nomenclature, but did not provide the updated virus name. The updated nomenclature of the South American genotype of Eastern Equine Encephalitis virus is ''Madariaga virus.'' HHS/CDC received two comments requesting clarification on whether Madariaga virus would be excluded from regulatory requirements and one comment in favor of this exclusion. The nomenclature of the excluded South American genotype of Eastern Equine Encephalitis virus is finalized as ''Madariaga virus.'' For clarity, 42 CFR 73.3(d)(12) will now read as excluding ''Madariaga virus'' from the regulatory requirements.

Lastly, HHS/CDC proposed the renaming of Ebola virus to the genus *Ebolavirus.* HHS/CDC received 10 public comments that supported renaming Ebola virus to the genus *Ebolavirus* to align with the International Committee on Taxonomy of Viruses (ICTV). None of the commenters provided evidence or rationale for their support of this change. One commenter stated that HHS/CDC should also make it clear that any strain that is similar enough to this genus, whether naturally discovered or artificially derived, should be regarded as a select agent. HHS/CDC will not make any changes based on this comment but does note that any virus

(including separate strains or species) that is classified as being a member of the genus *Ebolavirus* would be subject to the requirements of this part. The renaming of *Ebolavirus* is finalized as proposed.

C. Additional Comments Received

HHS/CDC also received three public comments recommending the removal of monkeypox virus (clade I) from the HHS list of select agents and toxins. One commenter stated that given the virulence and transmission patterns of circulating strains of clade I combined with the similarity of prophylaxis and treatment measures for both clade I and II, they did not feel it should be regarded as a select agent any longer. Another commenter stated that the risk of a severe monkeypox virus (clade I) outbreak in the United States is likely minimal, given the low risk of casual human-to-human transmission; mild clinical symptoms for immunocompetent people; low mortality rate; an FDA-approved, effective vaccine; availability of pharmacotherapy treatment; and a robust healthcare infrastructure and public health response. The final commenter recommended removal of monkeypox virus (clade I), as its status as a select agent could potentially restrict early detection via wastewater surveillance and may lead to unnecessary burdens on healthcare facilities, particularly in under-resourced communities. This commenter stated that removing monkeypox virus (clade I) from the select agent list would remove barriers to rapid diagnosis, ensure equitable access to care, and streamline public health response efforts by increasing accessibility to testing in the event monkeypox virus (clade I) begins to circulate in the United States. The select agent regulations include provisions that exempt diagnostic laboratories from the requirements, as long as these laboratories secure, destroy, and report positive samples. This exemption allows for continued rapid diagnosis, equitable access to care, and a robust public health response effort. As new data from current outbreaks are collected and analyzed, HHS/CDC will take these comments along with future data into consideration during the next biennial review. The review process considers how the agent affects human health, the degree of transmissibility, if there are effective medical countermeasures available, and the needs of vulnerable populations. Appropriate departments and agencies with scientific experts will also be consulted. At present, more data would be needed to support the removal of monkeypox virus from the select agent list, so monkeypox virus will remain on the list as an HHS-only select agent, and monkeypox virus (clade I) will remain a regulated variant.

Additionally, one commenter stated that they do not support the addition of SARS–CoV/SARS–CoV–2 chimeric viruses, which were previously added as a select agent on November 17, 2021. HHS/CDC is not making changes to the final rule based on this comment. A final rule published on March 3, 2023 (88 FR 13322), outlines the basis for adding SARS–CoV/SARS–CoV–2 chimeric viruses resulting from any deliberate manipulation of SARS–CoV–2 to incorporate nucleic acids coding for SARS–CoV virulence factors as an HHS select agent.

One commenter inquired why H2N2 (a subtype of Influenza A virus) was not considered a select agent, especially since NIAID's Laboratory of Infectious Diseases published that the 1957 pandemic strain of H2N2 would most likely cause a pandemic. As mentioned above, changes to the list of select agents and toxins are carefully considered using specific criteria and in consultation with appropriate departments, agencies, and scientific experts. This review also takes into account current data to support changes to the list. FSAP will continue assessing changes to the select agent and toxin list as part of its ongoing biennial review process, but HHS/CDC is not making any changes based on this comment at this time.

Another commenter stated that, given the further development of reverse genetics systems, FSAP should consider oversight of the nucleic acids, in part or in whole, that could be used to create select agents. HHS/CDC is not making any changes based on this comment but does understand that the ability to synthetically create agents capable of posing a severe threat to public health and safety is becoming less difficult because of newer technologies. HHS/CDC will further review the risks posed by these technologies.

One additional public commenter thanked the Federal Government for transparency regarding the criteria for adding/delisting agents and toxins and strongly supported the continued use of these criteria and processes. Another commenter stated that a list-based approach no longer adequately addresses the current biological threat landscape, which includes unknown, accidental, engineered, and naturally occurring hazardous biological agents and toxins. To address the current biological threat landscape, the commenter stated that FSAP should take into account transmissibility, not just pathogenicity, and should move toward a ''tiered, risk-based program'' and away from a ''list-based program.'' HHS/CDC thanks these commenters for their thoughts. HHS/CDC does evaluate transmissibility in the assessments of whether to include an agent in our list, specifically under the direction of the statute that includes contagiousness as a criterion for inclusion. Also, FSAP derives its regulatory authority from section 351A(a)(1) of the Public Health Service Act (42 U.S.C. 262a(a)(1)), which states that HHS/CDC must maintain a list of select agents and toxins. HHS/CDC may consider additional tiering to the list of select agents and toxins at the next biennial review.

D. Retaining Tier 1 Designation of Botulinum Neurotoxin Producing Species of Clostridium

Botulinum neurotoxin, which causes botulism, is a Tier 1 select toxin, and botulinum neurotoxin producing species of *Clostridium* are a Tier 1 select agent, regulated by HHS/CDC. In the 2024 proposed rule, HHS/CDC requested comment on the proposal to retain botulinum neurotoxin producing species of *Clostridium* as an HHS select agent, but no longer designate it as a Tier 1 agent because the organism itself does not normally cause disease. Botulinum neurotoxin would still be designated as a Tier 1 toxin. HHS/CDC received mixed reactions and a total of 14 comments on whether to downgrade botulinum neurotoxin producing species of *Clostridium* from a Tier 1 agent, while keeping it as an HHS select agent.

Nine commenters supported downgrading the agent from Tier 1, three opposed the change, and two comments requested clarification of when nucleic acids that encode for toxic forms of botulinum neurotoxin would be considered Tier 1 or non-Tier 1. One commenter stated the most compelling rationale for no longer designating the agent as Tier 1 is that public health outbreaks with this organism are not likely or projected to be particularly disruptive.

Three commenters did not support the change. They stated that no longer designating botulinum neurotoxin producing species of *Clostridium* as a Tier 1 select agent—while keeping botulinum neurotoxin as a Tier 1 toxin—would introduce ambiguity to procedures related to storage, possession, use, and in the event of an accidental release. One commenter stated that if the neurotoxin remains as

a Tier 1 agent and regulatory requirements are only reduced for the organism, it could potentially cause violations relating to an entity producing the toxin in an unregulated manner.

One commenter recommended that if botulinum neurotoxin remains a Tier 1 agent, then botulinum neurotoxin producing species of *Clostridium* should also remain as Tier 1. Another commenter pointed out that HHS/CDC would need to provide extensive guidance regarding differentiating between experiments or steps in experiments that include both the agent and toxin that require Tier 1 personnel and practices versus non-Tier 1 personnel and practices if this change were to take effect. Both commenters recommended that the agent, toxin, and regulated nucleic acids all be regulated as either non-Tier 1 or Tier 1 because regulating the related materials differently would create a substantial administrative burden to registered entities.

HHS/CDC agrees that public health outbreaks are unlikely to occur with botulinum neurotoxin producing species of *Clostridium.* Per Executive Order 13546, ''Optimizing the Security of Biological Select Agents and Toxins in the United States,'' botulinum neurotoxin producing species of *Clostridium* do not pose a great risk of deliberate misuse with the most significant potential for mass casualties, and therefore do not meet the standard of Tier 1. However, in accordance with several other comments, HHS/CDC agrees that downgrading the agent (or nucleic acids encoding for toxic forms of botulinum neurotoxin) from Tier 1, while continuing to regulate botulinum neurotoxin as a Tier 1 toxin would require registered entities to differentiate between the applicable regulatory requirements, which may cause confusion. Likewise, establishing different regulatory standards for the select agent and related toxin would create challenges for HHS/CDC in assessing compliance. The agent has the inherent ability to produce Tier 1 toxin. In consideration of the logistical challenges raised in the comments referenced above, HHS/CDC will continue to regulate botulinum neurotoxin producing species of *Clostridium* as a Tier 1 select agent.

E. No Addition of Hantaviruses

In response to the 2024 proposed rule, HHS/CDC received nine public comments that unanimously supported the proposal to not add Hantaviruses [Sin Nombre virus (SNV), Andes virus (ANDV), Hantaan virus (HTNV), and Dobrava virus (DOBV)] to the select agent and toxins list. Eight commenters did not offer a rationale or evidence for their stance; however, one commenter stated that because there is no evidence of sustained person-to-person transmission of SNV, ANDV, HTNV, or DOBV, they concurred with the proposal not to add these viruses to the select agent list. Given the limited direct person-to-person transmission and difficulty propagating in a laboratory setting, it is unclear whether Hantaviruses would pose a severe threat to public health and safety. In accordance with the criteria and considerations for determining whether to include an agent or toxin on the list as articulated in 42 U.S.C. 262a, as proposed and in addition to the unanimous support for not adding these agents via public comment, HHS/CDC will not be adding SNV, ANDV, HTNV, and DOBV as HHS select agents.

F. Toxin Review: Changes to Exclusion Limits for Short, Paralytic Alpha Conotoxins

In response to the 2024 proposed rule, HHS/CDC received eight public comments that unanimously supported the proposal to increase the exclusion amount for short, paralytic alpha conotoxins from 100 mg to 200 mg. HHS/CDC proposed this change based on assessments of lethal doses of conotoxin compared to other regulated toxins and the amount of the toxin that would be needed if a bad actor sought to weaponize it. To assess the amount necessary to weaponize a biological toxin, the Department of Homeland Security (DHS) developed toxin parameters and attack scenarios for potential inhalation and ingestion exposures to select toxins. The DHS models determined the impact of the dissemination of varying concentrations of toxins on public health. HHS/CDC reviewed the DHS models, and the lethal doses of conotoxins are comparable to other regulated toxins with a much higher permissible amount. Based on the DHS model and the public comments mentioned above, HHS/CDC is raising the exclusion limit for conotoxin from 100 mg to 200 mg as proposed.

G. Designation of Nipah virus as a Tier 1 Select Agent

In the 2024 proposed rule, HHS/CDC sought public comment on whether Nipah virus should be identified as a Tier 1 select agent because of its human transmissibility, high case fatality rate, low infectious dose, high severity of illness, and severity of long-term effects.

HHS/CDC received a total of 10 comments on this proposal. One commenter was in favor of designating Nipah virus as a Tier 1 select agent, especially given the known person-to-person transmissibility of the virus. There were nine commenters against this change. Eight of these commenters stated the justification is not sufficient support for designating Nipah virus as a Tier 1 select agent over other agents on the select agent list that are Risk Group 4 pathogens. One commenter thought it was unclear what value the Tier 1 designation would have for Nipah virus.

CDC disagrees with these commenters. Executive Order 13546, ''Optimizing the Security of Biological Select Agents and Toxins in the United States,'' directs the HHS Secretary to designate a subset of select agents and toxins as Tier 1 that present the greatest risk of deliberate misuse with the most significant potential for mass casualties or devastating effects to the economy, critical infrastructure, or public confidence. Nipah virus has high human transmissibility; a high case fatality rate (estimated between 40–100%); a low infectious dose (ranging from $10^1 - 10^7$ plaque forming units depending on route of infection); high severity of illness; and severe long-term effects, including neurological complications including encephalopathy, cranial nerve palsies, and dystonia (Sejvar et al., 2007 and Lo et al., 2008).

For these reasons, HHS/CDC is designating Nipah virus as a Tier 1 select agent.

H. Addition of a Footnote to the HHS Select Agent and Overlap Select Agent List

In the 2024 proposed rule, HHS/CDC received one public comment that supported the proposal to add a footnote to the list of HHS and Overlap select agents indicating that the current ICTV nomenclature for select agent viruses, if different from that published in the HHS regulations, will be available on the FSAP website (*https://www.selectagents.gov*). This commenter stated that the FSAP website is a good place to provide this information. As proposed, HHS/CDC will proceed with adding a footnote to the list for HHS and Overlap select agents for this purpose.

I. Summary of Final Rule Provisions

In summary of the discussions in section II. of this rule, HHS/CDC is finalizing these revisions to the Federal Select Agent Program at 42 CFR part 73:

- Remove *Brucella abortus, Brucella melitensis,* and *Brucella suis* from the select agent list.
- Update the nomenclature of select agents:
  - Change ''SARS coronavirus (SARS–CoV)'' to ''Severe acute respiratory syndrome coronavirus (SARS–CoV)'' to correct the nomenclature;
  - Rename the exclusion of ''South American genotype of Eastern Equine Encephalitis virus'' to ''Madariaga virus'';
  - Rename the exclusion of ''West African Clade of Monkeypox virus'' to ''clade II monkeypox virus'';
  - Rename Ebola virus to *Ebolavirus* in accordance with the recent taxonomic change by the International Committee on Taxonomy of Viruses (ICTV);
- Retain nomenclature of monkeypox virus;
- Retain designation of botulinum neurotoxin producing species of *Clostridium* as a Tier 1 agent;
- No addition of Hantaviruses: specifically not adding Sin Nombre virus (SNV), Andes virus (ANDV), Hantaan virus (HTNV), and Dobrava virus (DOBV) to the select agent list;
- Increase the exclusion amount for short, paralytic alpha conotoxins from 100 mg to 200 mg;
- Designate Nipah virus as a Tier 1 Select agent;
- Add a footnote to the list for HHS and Overlap select agents indicating that the current nomenclature will be available on the FSAP website (*https://www.selectagents.gov*).

III. Alternatives Considered

Under 42 U.S.C. 262a(a)(2), the HHS Secretary must review and republish the list of HHS select agents and toxins at least biennially. This ensures scientific advancements and gained knowledge are applied to each agent and toxin on the list.

Below are reasonable regulatory alternatives considered regarding key individual provisions listed in this final rule.

This final rule contains several updates to outdated nomenclature of agents, including monkeypox virus, Severe acute respiratory syndrome coronavirus (SARS–CoV), and Ebolavirus. Retaining outdated nomenclature is not scientifically accurate and causes confusion when organizations seek to be in compliance with the regulations. Retaining outdated nomenclature can also cause discrepancies between HHS/CDC and other global health organizations. There is a low, one-time cost associated with updating nomenclature. The alternative of finalizing the rule without the proposed changes, *i.e.,* retaining outdated nomenclature, is not feasible or accurate.

Several changes in this final rule also ensure continued compliance with E.O. 13546.

If HHS/CDC were to retain Nipah virus without a Tier 1 designation, the select agent and toxin list would have an agent that has a great risk of deliberate misuse with the potential for mass casualties, like other Tier 1 select agents, but without the additional provisions outlined for Tier 1 select agents and toxins. These additional provisions include advanced security even compared to non-Tier 1 agents, laboratory personnel enrollment in an entity-specific Occupational Health Program, and that entity-specific risk assessments include Nipah virus as a Tier 1 agent. Not having Nipah virus designated as Tier 1 select agent could potentially result in entities or personnel handling the agent incorrectly, causing public health, biosafety, and biosecurity concerns. It also would not enable FSAP to ensure and require compliance with the enhanced Tier 1 biosafety and biosecurity requirements provided for in the regulations.

All entities currently registered with FSAP for Nipah virus are also registered for other Tier 1 select agents and toxins. Therefore, these entities have Tier 1 provisions in place already that can be applied to Nipah virus. If HHS/CDC were to retain Nipah virus as a select agent without Tier 1 designation, the department and agency would be out of compliance with E.O. 13546. It could also potentially cause public health and biosecurity concerns in that the agent is not handled appropriately. Nipah virus has high human transmissibility; a high case fatality rate (estimated between 40–100%); a low infectious dose; high severity of illness; and severe long-term effects.

Along similar reasoning, new models from DHS illustrate the lethal doses of conotoxins are comparable to other regulated toxins with a much higher permissible amount. The alternative to not raising the permissible toxin limit for short, paralytic alpha conotoxins would lead to irregularities of regulatory application as it pertains to select toxins. Keeping the permissible toxin limit at 100 mg for short, paralytic alpha conotoxins could prevent research and advancement of understanding the select toxin, with no advancement on biosafety and biosecurity. The raised permissible toxin limit of 200 mg will allow more research to occur with the select toxin with no effect on public health and safety. It is important that HHS/CDC considers new data while reviewing the select agent and toxin list to ensure the list is in accordance with criteria and considerations as articulated in 42 U.S.C. 262a.

Similarly, the final rule does not include adding Hantaviruses (*i.e.,* Sin Nombre virus (SNV), Andes virus (ANDV), Hantaan virus (HTNV), and Dobrava virus (DOBV)) to the list as was initially proposed in the ANPRM. Adding Hantaviruses to the list would lead to the agency regulating agents that are not proven to pose a severe threat to public health and safety. Hantaviruses have limited direct person-to-person transmission and are difficult to propagate in a laboratory setting. At this time, research shows it is not certain that Hantaviruses require any regulation in accordance with the criteria and considerations as articulated in 42 U.S.C. 262a. If FSAP were to begin regulating Hantaviruses, there would be costs associated with onboarding, inspecting, and managing those entities that would be required to register with FSAP, with no current need to regulate the agents.

The most significant impact of this rule is the delisting of *Brucella* species, and HHS/CDC has carefully considered the alternative of delisting the agents, which would be retaining the agents on the list and continuing regulating these agents.

Retaining the *Brucella* species on the list has several economic, agricultural, and economic effects with little biosecurity benefit. Most notably, retaining *Brucella* species on the list prevents researchers from progressing advancement of science with regards to study of the agents and development of countermeasures for this agent by subjecting these laboratories to FSAP's regulatory authority. These agents are designated as Risk Group 3 agents, meaning entities and organizations will continue working with these agents at the appropriate biosafety level (Biosafety Level 3), as outlined in the national standard Biosafety in Microbiological and Biomedical Laboratories, 6th edition.

Continuing regulation of *Brucella melitensis, suis,* and *abortus* has a one-time cost of approximately $29k to an entity that wishes to register with FSAP for work with these agents. This cost to the regulated community, due to the reasons listed above, does not enhance biosafety and biosecurity, and may be a regulatory burden to entities that wish to advance understanding of the agent and research medical countermeasures.

There is no alternative to foregoing review of the select agent and toxin list.

This rulemaking is intended to meet the regulatory mandate under 42 U.S.C. 262a(a)(2) where the HHS Secretary must review and republish the list of HHS select agents and toxins at least biennially. CDC conducts the biennial review in consultation with CDC's Intragovernmental Select Agents and Toxins Technical Advisory Committee (ISATTAC). An alternative to the rule was to not delist three select agents, not raise the exclusion amount of a regulated toxin, not update nomenclature, and not add the Tier 1 designation to a select agent. Retaining the *Brucella* species would maintain the current status quo; it does not consider that these agents no longer pose a severe threat to public health and safety, does not promote better research and vaccine development, and does not align with USDA's decision to delist the *Brucella* agents. Additionally, the alternative to not amend the select agent list is inconsistent with USDA's rule, creating regulatory conflict. In addition, this option is not consistent with the public comment received to support amending the select agent list.

After carefully considering the technical input of subject-matter experts, both within the Federal Government and from public comments, and recommendations from Federal advisory groups, HHS/CDC is finalizing the changes listed in section II, part I (Summary of Final Rule Provisions) above to the list of select agents and toxins.

IV. Required Regulatory Analyses

The HHS/CDC modifications to the list of select agents and toxins addressed in this rule will benefit producers, research and reference laboratories, and state and Federal oversight agencies, while also maintaining adequate program oversight of select agents and toxins. Specifically, HHS/CDC is removing *Brucella abortus, Brucella melitensis,* and *Brucella suis* from the select agent and toxin list; updating the nomenclature for several select agents (''SARS coronavirus (SARS–CoV),'' removing the exclusion regarding ''South American genotype of Eastern Equine Encephalitis virus,'' renaming the exclusion regarding ''West African Clade of Monkeypox virus,'' and ''Ebola virus''); retaining the nomenclature of Monkeypox virus; retain the Tier 1 designation of Botulinum neurotoxin producing species of *Clostridium;* no addition of Hantaviruses to the current select agent and toxin list; increase the exclusion amount for short, paralytic alpha conotoxins from 100 mg to 200 mg; and designating Nipah virus as a Tier 1 Select Agent. HHS/CDC is also adding a footnote to the list for HHS and Overlap select agents indicating that the current nomenclature will be available on the website (*www.selectagents.gov*).

Currently, 236 entities are registered with the Federal Select Agent Program (FSAP). Of these entities, there are 13 private entities, 30 Federal entities, 42 commercial entities, 84 academic entities, and 67 state entities (registered with either APHIS or CDC, depending on the select agents and toxins they work with). Less than 4 percent of all firms operating within these North American Industry Classification categories are considered to be small entities. This final rule will not have a significant economic impact on a substantial number of small entities.

The benefits of strengthened safeguards against the unintentional or deliberate release of a select agent or toxin greatly exceed the costs of complying with the regulatory requirements. As an example of losses that can occur due to a select agent release, the October 2001 anthrax attacks caused 5 fatalities and 17 illnesses, disrupted business and government activities (including $2 billion in lost revenues for the U.S. Postal Service) and required more than $23 million to decontaminate one Senate office building and $3 billion to decontaminate postal facilities and procure mail-sanitizing equipment. Deliberate introduction greatly increases the probability of a select agent becoming established and causing wide-ranging and devastating impacts to the economy, other disruptions to society, and diminished confidence in public and private institutions.

HHS has examined the impacts of this rule as required by Executive Order 12866 on Regulatory Planning and Review (September 30, 1993), Executive Order 13563 on Improving Regulation and Regulatory Review (January 18, 2011), Executive Order 14094, entitled ''Modernizing Regulatory Review'' (April 6, 2023), the Regulatory Flexibility Act (RFA) (September 19, 1980, Pub. L. 96–354), section 1102(b) of the Social Security Act, section 202 of the Unfunded Mandates Reform Act of 1995 (March 22, 1995; Pub. L. 104–4), and Executive Order 13132 on Federalism (August 4, 1999). This final rule does not meet the criteria set forth in 5 U.S.C. 804(2) under the Congressional Review Act.

A. Executive Orders 12866, 13563, and 14094

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Executive Order 14094 (the Modernizing E.O.) amends section 3(f) of Executive Order 12866 (Regulatory Planning and Review). The amended section 3(f) of Executive Order 12866 defines a ''significant regulatory action'' as an action that is likely to result in a rule: (1) having an annual effect on the economy of $200 million or more in any 1 year (adjusted every 3 years by the Administrator of Office of Information and Regulatory Affairs (OIRA) for changes in gross domestic product), or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, territorial, or Tribal governments or communities; (2) creating a serious inconsistency or otherwise interfering with an action taken or planned by another agency; (3) materially altering the budgetary impacts of entitlement grants, user fees, or loan programs or the rights and obligations of recipients thereof; or (4) raise legal or policy issues for which centralized review would meaningfully further the President's priorities or the principles set forth in this Executive order, as specifically authorized in a timely manner by the Administrator of OIRA in each case. OIRA has determined that this rule is significant.

Statement of Need

As discussed above, HHS/CDC is removing *Brucella abortus, Brucella melitensis,* and *Brucella suis* from the select agent list; updating the nomenclature for several select agents (''SARS coronavirus (SARS–CoV),'' the exclusion regarding ''South American genotype of Eastern Equine Encephalitis virus,'' the exclusion regarding ''West African Clade of Monkeypox virus,'' and ''Ebola virus''); retaining the nomenclature of Monkeypox virus; retaining the Tier 1 designation of Botulinum neurotoxin producing species of *Clostridium;* not adding Hantaviruses to the current select agent list; increasing the exclusion amount for short, paralytic alpha conotoxins from 100 mg to 200 mg; and designating Nipah virus as a Tier 1 Select Agent. HHS/CDC is also adding a footnote to the list for HHS and Overlap select agents indicating that the current nomenclature will be available on the website (*www.selectagents.gov*).

Some of the regulatory changes described in the preamble and reported below are a minor in nature, and as

such, are expected to have minimal impact on the costs and benefits of current regulations, except for the one-time costs of updating official documents for CDC. These regulatory changes are the updates to the nomenclature for several select agents (''SARS coronavirus [SARS–CoV],'' the exclusion regarding ''South American genotype of Eastern Equine Encephalitis virus,'' the exclusion regarding ''West African Clade of Monkeypox virus.'' and ''Ebola virus); retaining the nomenclature of *Monkeypox virus,* retaining the Tier 1 designation of Botulinum neurotoxin producing species of *Clostridium;* no addition of Hantaviruses to the current select agent list*;* increasing the exclusion amount for short, paralytic alpha conotoxins from 100 mg to 200 mg; and designating Nipah virus as a Tier 1 Select Agent.

This final rule changes the regulatory baseline by removing *Brucella abortus, Brucella melitensis,* and *Brucella suis* from the select agent list. As of July 2024, of the 236 registered entities with FSAP, 112 were registered for select agents and toxins including *Brucella abortus, melitensis,* and/or *suis,* and three of those entities were registered for only *Brucella* species. CDC expects the three entities registered for only *Brucella* species will deregister from FSAP, which HHS/CDC expects will cause minimal savings for these laboratories, as well as CDC. The remaining 109 entities will likely submit amendments to their registrations to remove the delisted agents while maintaining the rest of their registration. Therefore, HHS/CDC expects no change in the costs for these entities; there is no cost to deregister with FSAP. Because of the small number of entities that will deregister due to the delisting of *Brucella* species, the cost-savings to the government will be minimal, roughly a net value (benefits-costs) of $8,795.78 in one-time cost savings.

Costs

This final rule does not impose any mandatory costs on the public and benefits laboratories who choose to develop research using *Brucella abortus, Brucella melitensis,* and *Brucella suis.* Nonetheless, the changes in this rule will have a minimal economic impact on CDC due to the process of updating official documentation for the implementation of the changes listed in this final rule.

To estimate the cost to CDC of including the changes listed in this final rule in official documents, HHS/CDC assumed that 1 GS–14, step 5 employee and one GS–15, step 5 employee each spend 40 hours (*i.e.,* 80 hours in total) for any updates to cite the language in this final rule. The hourly wage rates for two employees based in Washington-Baltimore-Arlington, DC-MD-VA-WV-PA are $75.70 (GS–14) and $89.03 (GS–15).[1] To account for the non-wage benefits, we multiplied the wage cost by two to result in a total cost estimate of $13,178 (table 1).

TABLE 1—SUMMARY OF THE ONE-TIME COSTS IN 2024 USD TO UPDATE OFFICIAL DOCUMENTS FOR DEPARTMENT OF STATE (DOS), CENTERS FOR DISEASE CONTROL AND PREVENTION (CDC) COSTS FROM UPDATING OFFICIAL DOCUMENTS WITH THE CHANGES IN THIS FINAL RULE

Agency	Cost components	Hourly wage rate[2]	Multiplier non-wage benefits and overhead	Total
CDC	80 hours split between GS–14, step 5, and GS–15, step 5 levels.	$82.4	2	$13,178
Total				13,178

The changes in this final rule that are minor in nature and should not result in an additional regulatory burden to regulated entities. Instead, they should help reduce costs by reducing confusion regarding the requirements for the possession, use, and transfer of biological select agents and toxins.

The elimination of *Brucella abortus, Brucella melitensis,* and *Brucella suis* from the select agents and toxins list should not result in additional regulatory burden for CDC or regulated entities as this change would imply less regulatory burden. However, one concern about this reduction in regulatory burden is that it could cause costs or losses to the general public by increasing the risk of *Brucella abortus, Brucella melitensis,* and *Brucella suis* being accessed without authorization, stolen, lost, or released. Although this cost cannot be measured until after the regulation has been applied, HHS/CDC expects that the risk of *Brucella abortus, Brucella melitensis,* and *Brucella suis* being accessed without authorization, stolen, lost, or released would be minimal as the current recommended best practices in place to mitigate these biosafety and biosecurity risks (*Biosafety in Microbiological and Biomedical Laboratories*) will remain in place. USDA's prevention and eradication efforts against Brucellosis from livestock in the United States through the National Bovine Brucellosis Surveillance Plan and the National Brucellosis Eradication program will continue even with the changes in this rule.

Another concern linked to the reduction in regulatory burden to agencies and laboratories is that it could increase cost to the general public by increasing the risk of *Brucella abortus, Brucella melitensis,* and *Brucella suis* becoming an agent of interest to be used as a bioweapon. Although this risk cannot be measured by HHS/CDC currently, HHS/CDC expects this risk to be minimal as recent literature indicates that *Brucella*'s ''minimal mortality, availability of treatment options, protracted inoculation period and the emergence of new, more virulent potential weapons means that its inclusion among agents of bioterrorism is nowadays mainly of historical significance.'' [3]

Increasing the exclusion limits for short paralytic alpha conotoxins will have a negligible impact on costs for regulated entities. There are only four registered entities currently working with these conotoxins, and increasing

[1] U.S. Office of Personnel and Management. *https://www.opm.gov/policy-data-oversight/pay-leave/salaries-wages/2024/general-schedule-gs-salary-calculator/* accessed on September 4, 2024.

[2] U S Office of Personnel Management: General Schedule (*opm.gov*).

[3] Pappas, G., Panagopoulou, P., Christou, L., & Akritidis, N. (2006). Biological weapons: Brucella as a biological weapon. *Cellular and molecular life sciences CMLS, 63,* 2229–2236.

the exclusion limit will allow for additional research and testing without the additional burden of select agent and toxin regulatory requirements.

Change to the designation of Nipah virus as a Tier 1 select agent will have a negligible impact on costs for regulated entities. All eight of the entities that are currently registered for Nipah virus are already registered for other Tier 1 select agents; therefore they are already complying with the additional Tier 1 requirements and will not incur additional costs with this change.

Benefits

HHS found the benefits of this rulemaking to outweigh the costs to regulated entities as all the changes described in this final rule have a zero cost to regulated entities. Furthermore, these changes are likely to reduce regulated entities' costs by simplifying their processes and reducing some of the regulatory burden. HHS/CDC is unable to quantify the cost reductions to regulated entities due to the minor changes but expects this final rule will potentially simplify processes for them. Nonetheless, at a minimum, costs of these changes are zero for regulated entities, thus any simplification of processes coming out of this change implies a gain.

As of July 2024, of the 236 registered entities with APHIS and CDC, 112 were registered for select agents and toxins including *Brucella abortus, melitensis,* and/or *suis,* and three of those entities are registered for only *Brucella* species. CDC expects the three entities registered for only *Brucella* species will deregister from FSAP, which HHS/CDC expects to cause small savings for these entities. Although FSAP registration does not have a direct cost for regulated entities, HHS/CDC estimates that it takes 12 hours of labor a week for eight months to perform the registration processes required to get an FSAP registration. These activities are usually performed by a Responsible Official/Biosafety Officer or an Alternate Responsible Official/Biosafety Officer. The GS scale for these professionals typically ranges from GS–9 to GS–14. Assuming a GS–14 scale, the hourly wage rate based in Washington-Baltimore-Arlington, DC-MD-VA-WV-PA is $75.70. Thus, the estimated one-time cost of registration with FSAP for an entity is $29,069. This estimated one-time cost savings will apply to any entities not registered with FSAP that wish to work with *Brucella* species. Renewal of registration with FSAP is a negligible cost as the process takes less than 10 minutes. Because three entities are currently registered solely for *Brucella* species, the exclusion of *Brucella abortus, Brucella melitensis,* and *Brucella suis* from the select agent list means they will not need to participate in the registration renewal process, which is a negligible cost.

HHS/CDC expects that the deregistration of the three entities registered only for *Brucella* species with FSAP will also cause small one-time cost-savings to CDC, as CDC personnel will no longer follow these entities throughout the registration process. HHS/CDC estimates that CDC personnel spend about three hours a week for six months reviewing laboratories' Standard Operating Procedures (SOPs) for entity's registration applications to FSAP. Assuming that the CDC staff reviewing SOPs is GS–13 step 5, the hourly salary in 2024 dollars would be $64.06, thus the one-time cost savings to CDC of reviewing the SOPs required for one entity's registration is $1,153.08, and this implies a total of $3,459.24 in cost savings for CDC of not going through the registration process of the three entities that would deregister after the publication of this rule.

In addition to these cost savings CDC will also have cost savings from not having to perform inspections on the three entities that are ending their FSAP registrations as a result of the exclusion of *Brucella abortus, Brucella melitensis,* and *Brucella suis* from the select agent list. Assuming that the personnel performing the inspections are a GS–12 step 5, and a GS–13 step 5 inspectors, the hourly wage is $53.87, and $64.06, respectively. Using an overhead multiplier of 2 to take into account non-wage benefits, and considering the travel costs of inspections, HHS/CDC estimates one-time costs savings of $10,564.18 per inspection not performed per entity (table 2). Since each entity goes through at least one inspection during registration, HHS/CDC estimates CDC will have a cost savings of at least $31,692.54 due to inspections not performed for the three entities deregistering from FSAP.

TABLE 2—ESTIMATED ANNUAL CDC COST-SAVINGS IN 2024 USD FOR INSPECTION OF EACH FACILITY ONLY WORKING WITH BRUCELLA

Type of CDC staff	Number of staff	Number of inspections per year	Number of hours spent per inspection	Average hourly wage rate [4]	Overhead multiplier	One-time annual benefit
GS–12 (step 5)	1	0.5	40	$53.87	2	$4,309.6
GS–13 (step 5)	1	0.5	40	64.06	2	5,124.8
Total						9,438.4
Travel costs	Airfare [5]	417.79/per person	Hotel, food, lodging [6]	145.10/per person		1125.78
Total (Personnel + Travel).						10,564.18

Executive Order 14094 reaffirms the principles of E.O. 12866 and E.O. 13563 and states that regulatory analysis should facilitate agency efforts to develop regulations that serve the public interest, advance statutory objectives, and are consistent with E.O. 12866, E.O. 13563, and the Presidential Memorandum of January 20, 2021 (Modernizing Regulatory Review). Regulatory analysis, as practicable and appropriate, should recognize distributive impacts and equity, to the extent permitted by law. HHS/CDC developed this final rule in a manner consistent with these requirements. E.O. 13563 emphasizes further that regulations must be based on the best available science and that the rulemaking process must allow for public participation and an open

[4] U.S. Office of Personnel Management: General Schedule (opm.gov).

[5] Bureau of Transportation Statistics: Air Fares √ Bureau of Transportation Statistics (bts.gov).

[6] FY 2024 Federal Per Diem Rates: FY 2024 Federal Per Diem Rates (federalpay.org).

exchange of ideas. HHS/CDC developed this final rule in a manner consistent with these requirements. In administering FSAP, HHS, along with USDA, regularly interact with the affected registered entities via email, phone, online webinars, through the eFSAP information system, and through designated points of contact at registered entities. All changes result from entity questions received or interaction with registered entities who have contacted FSAP when they had questions or regulatory interpretation requests. Therefore, HHS/CDC believes this final rule serves the public interest. Additionally, HHS/CDC encouraged public participation and informed registered entities of the proposed rule via a Select Agent (SA) Gram and a GovD message to ensure they were aware and had a chance to provide public comments. The FSAP website (*www.selectagents.gov*) was updated to share the proposed changes and provided a link to web visitors so that they could review and provide comments on the proposed rule. Lastly, HHS/CDC emailed outreach notes summarizing the proposed rule directly to national partner organizations (*e.g.,* the Association of Public Health Laboratories, American Society for Microbiology, American Biological Safety Association) so that they could share among their constituents. As discussed above, HHS/CDC carefully reviewed and considered public comments in the development of this final rule.

B. The Regulatory Flexibility Act (RFA), as Amended by the Small Business Regulatory Enforcement Fairness Act (SBREFA)

HHS/CDC examined the impacts of this final rule under the Regulatory Flexibility Act (5 U.S.C. 601–612). Unless HHS/CDC certifies that the final rule is not expected to have a significant economic impact on a substantial number of small entities, the RFA, as amended by SBREFA, requires agencies to analyze regulatory options that would minimize any significant economic impact of a rule on small entities. Currently, 236 entities are registered with FSAP. Of these entities, there are 13 private entities, 30 Federal entities, 42 commercial entities, 84 academic entities, and 67 state entities (registered with either APHIS or CDC, depending on the select agents and toxins they work with). Less than 4 percent of all firms operating within these North American Industry Classification System (NAICS) categories are considered to be small entities. HHS/CDC estimates that 13 entities will be impacted by the changes in this rule. Of these 13 entities, which are not considered small, 4 are associated with colleges, universities, and professional schools; 2 are categorized as research and development in biotechnology; and 7 are part of research and development in the physical, engineering, and life sciences. Applying NAICS' estimation of less than 4 percent of entities classified as small, we find that not even one small entity will be affected by the changes in this rule. Based on our analysis as described above, we certify that this final rule will not have a significant economic impact on a substantial number of small entities within the meaning of the RFA. In addition, no public comments were received from any small entities on the RFA section.

Based on the information above, this regulatory action is not a major rule as defined by sec. 804 of the Small Business Regulatory Enforcement Fairness Act of 1996. This final rule will not result in an annual effect on the economy of $100,000,000 or more; a major increase in cost or prices; or significant adverse effects on competition, employment, investment, productivity, innovation, or on the ability of U.S.-based companies to compete with foreign-based companies in domestic and export markets.

C. Paperwork Reduction Act of 1995

In accordance with section 3507(d) of the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*), HHS/CDC determined that the Paperwork Reduction Act does apply to information collection and recordkeeping requirements included in this rule. This final rule focuses on the select agent and toxins list. Any changes to burden hours caused by the removal of *Brucella abortus, Brucella suis,* and *Brucella melitensis* from the list of select agents and toxins will be submitted for consideration by OMB under the existing approved PRA package (Possession, Use, and Transfer of Select Agents and Toxins (42 CFR part 73)). Other changes put forth in this final rule, *i.e.,* updating entity registrations to reflect the nomenclature updates to the list, will be instituted by FSAP, resulting in no additional paperwork for the regulated community.

D. E.O. 12988: Civil Justice Reform

This rule has been reviewed under E.O. 12988, Civil Justice Reform. Once the final rule is in effect, HHS/CDC notes that (1) All state and local laws and regulations that are inconsistent with this rule will be preempted; (2) no retroactive effect will be given to this rule; and (3) administrative proceedings will not be required before parties may file suit in court challenging this rule.

E. E.O. 13132: Federalism

HHS/CDC reviewed this final rule in accordance with Executive Order 13132 regarding federalism and determined that it does not have federalism implications. The rule does not ''have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.''

In accordance with section 361(e) of the PHSA [42 U.S.C. 264(e)], nothing in this rule would supersede any provisions of state or local law except to the extent that such a provision conflicts with this rule.

F. Plain Language Act of 2010

Under the Plain Language Act of 2010 (Pub. L. 111–274, October 13, 2010), executive departments and agencies are required to use plain language in documents that explain to the public how to comply with a requirement the Federal Government administers or enforces. HHS/CDC has attempted to use plain language in issuing this rule consistent with the Federal Plain Writing Act guidelines.

List of Subjects in 42 CFR Part 73

Biologics, Packaging and containers, Penalties, Reporting and recordkeeping requirements, Transportation.

For the reasons discussed in the preamble, HHS amends 42 CFR part 73 as follows:

PART 73—SELECT AGENTS AND TOXINS

■ 1. The authority citation for part 73 is revised to read as follows:

Authority: 42 U.S.C. 262a.

■ 2. Section 73.3 is amended by:
■ a. Revising paragraph (b);
■ b. In paragraph (d)(7), removing the text ''100 mg of Conotoxins'' and adding in its place the text ''200 mg of Conotoxins''; and
■ c. Revising paragraph (d)(12).

The revisions read as follows:

§ 73.3 HHS select agents and toxins.

* * * * *

(b) HHS select agents and toxins [1] are:

(1) Abrin.

(2) *Bacillus cereus* Biovar *anthracis.**

(3) Botulinum neurotoxins.*

(4) Botulinum neurotoxin producing species of *Clostridium.**

(5) Conotoxins (Short, paralytic alpha conotoxins containing the following amino acid sequence $X_1CCX_2PACGX_3X_4X_5X_6CX_7$).[2]

(6) *Coxiella burnetii.*

(7) Crimean-Congo hemorrhagic fever virus.

(8) Diacetoxyscirpenol.

(9) Eastern equine encephalitis virus.

(10) *Ebolavirus* *

(11) *Francisella tularensis.**

(12) Lassa fever virus.

(13) Lujo virus.

(14) Marburg virus.*

(15) Monkeypox virus.

(16) Reconstructed replication competent forms of the 1918 pandemic influenza A virus containing any portion of the coding regions of all eight gene segments (Reconstructed 1918 influenza A virus).

(17) Ricin.

(18) *Rickettsia prowazekii.*

(19) Severe acute respiratory syndrome coronavirus (SARS–CoV).

(20) SARS–CoV/SARS–CoV–2 chimeric viruses resulting from any deliberate manipulation of SARS–CoV–2 to incorporate nucleic acids coding for SARS–CoV virulence factors.

(21) Saxitoxin.

(22) South American hemorrhagic fever virus: Chapare.

(23) South American hemorrhagic fever virus: Guanarito.

(24) South American hemorrhagic fever virus: Junin.

(25) South American hemorrhagic fever virus: Machupo.

(26) South American hemorrhagic fever virus: Sabia.

(27) Staphylococcal enterotoxins (subtypes A,B,C,D,E).

(28) T–2 toxin.

(29) Tetrodotoxin.

(30) Tick-borne encephalitis virus: Far Eastern subtype.

(31) Tick-borne encephalitis virus: Siberian subtype.

(32) Kyasanur Forest disease virus.

(33) Omsk haemorrhagic fever virus.

(34) Variola major virus (Smallpox virus).*

(35) Variola minor virus (Alastrim).*

(36) *Yersinia pestis.**

[1] Please refer to *https://www.selectagents.gov* for current information on historical or proposed nomenclature for the HHS select agents on the list.

[2] C = Cysteine residues are all present as disulfides, with the 1st and 3rd Cysteine, and the 2nd and 4th Cysteine forming specific disulfide bridges; The consensus sequence includes known toxins a-MI and a-GI (shown above) as well as a-GIA, Ac1.1a, a-CnIA, a-CnIB; X1 = any amino acid(s) or Des-X; X2 = Asparagine or Histidine; P = Proline; A = Alanine; G = Glycine; X3 = Arginine or Lysine; X4 = Asparagine, Histidine, Lysine, Arginine, Tyrosine, Phenylalanine or Tryptophan; X5 = Tyrosine, Phenylalanine, or Tryptophan; X6 = Serine, Threonine, Glutamate, Aspartate, Glutamine, or Asparagine; X7 = Any amino acid(s) or Des X and; ''Des X'' = ''an amino acid does not have to be present at this position.'' For example, if a peptide sequence were XCCHPA then the related peptide CCHPA would be designated as Des-X.

(12) Madariaga virus and any Clade II Monkeypox provided that the individual or entity can identify that the agent is within the exclusion category.

* * * * *

■ 3. Section 73.4 is amended by revising paragraph (b) to read as follows:

§ 73.4 Overlap select agents and toxins.

* * * * *

(b) Overlap select agents and toxins [1] are:

(1) *Bacillus anthracis.**

(2) *Bacillus anthracis* Pasteur strain.

(3) *Burkholderia mallei.**

(4) *Burkholderia pseudomallei.**

(5) Hendra virus.

(6) Nipah virus.*

(7) Rift Valley fever virus.

(8) Venezuelan equine encephalitis virus.

[1] Please refer to *https://www.selectagents.gov* for current information on historical or proposed nomenclature for the Overlap select agents on the list.

* * * * *

Dated: December 11, 2024.

Xavier Becerra,

Secretary, Department of Health and Human Services.

[FR Doc. 2024–29583 Filed 12–16–24; 8:45 am]

BILLING CODE 4163–18–P

DEPARTMENT OF TRANSPORTATION

National Highway Traffic Safety Administration

49 CFR Part 513

[Docket No. NHTSA–2023–0014]

RIN 2127–AL85

Implementing the Whistleblower Provisions of the Vehicle Safety Act

AGENCY: National Highway Traffic Safety Administration (NHTSA), Department of Transportation (DOT).

ACTION: Final rule.

SUMMARY: This final rule addresses an important source of motor vehicle safety information and fulfills a requirement in the Motor Vehicle Safety Whistleblower Act (Whistleblower Act) that NHTSA promulgate regulations on the requirements of the Act, in complement to NHTSA's existing whistleblower program. The Whistleblower Act authorizes the Secretary of Transportation to pay an award, subject to certain limitations, to eligible whistleblowers who voluntarily provide original information relating to any motor vehicle defect, noncompliance, or any violation or alleged violation of any notification or reporting requirement, which is likely to cause unreasonable risk of death or serious physical injury, if the information provided leads to the successful resolution of a covered action. This final rule defines certain terms important to the operation of the whistleblower program, outlines the procedures for submitting original information to NHTSA and applying for awards, discusses NHTSA's procedures for making decisions on award applications, and generally explains the scope of the whistleblower program to the public and potential whistleblowers.

DATES:

Effective date: This rule is effective January 16, 2025.

Petitions for Reconsideration: If you wish to submit a petition for reconsideration of this rule, your petition must be received by January 31, 2025.

ADDRESSES: Any petitions for reconsideration should refer to the docket number set forth above (NHTSA–2023–0014) and be submitted to the

Administrator, National Highway Traffic Safety Administration, 1200 New Jersey Avenue SE, West Building, Washington, DC 20590.

FOR FURTHER INFORMATION CONTACT: Dylan Voneiff, Office of the Chief Counsel, National Highway Traffic Safety Administration (telephone: (202) 763–8536), email: *dylan.voneiff@dot.gov*; or Daniel Rabinovitz, Office of the Chief Counsel, National Highway Traffic Safety Administration (telephone: (202) 366–5263), email: *daniel.rabinovitz@dot.gov*. The mailing address for these officials is: National Highway Traffic Safety Administration, 1200 New Jersey Avenue SE, Washington, DC 20590.

III. Regulatory Analyses and Notices

I. Executive Summary

The Fixing America's Surface Transportation Act (FAST Act), Public Law 114–94, established important protections and incentives for motor vehicle safety whistleblowers. The Motor Vehicle Safety Whistleblower Act (Whistleblower Act), Sections 24351–25352 of the FAST Act, amended the National Traffic and Motor Vehicle Safety Act of 1966 (Safety Act) to authorize the Secretary of Transportation (the Secretary) to pay an award, subject to certain limitations, to eligible whistleblowers who voluntarily provide original information relating to any motor vehicle defect, noncompliance, or any violation or alleged violation of any notification or reporting requirement of 49 U.S.C. Chapter 301, which is likely to cause unreasonable risk of death or serious physical injury, if that information leads to the successful resolution of a covered action. Public Law 114–94, § 24351–52, 129 Stat. 1716 (2015) (codifying ''Whistleblower incentives and protections'' at 49 U.S.C. 30172).

In addition to the statutory whistleblower protections and incentives added by the FAST Act, Congress required NHTSA to promulgate whistleblower regulations.[1] NHTSA's notice of proposed rulemaking (NPRM), published on April 14, 2023,[2] proposed definitions of certain terms important to the operation of the whistleblower program, outlined the procedures for submitting original information to NHTSA and applying for awards, discussed NHTSA's procedures for making decisions on award applications, and generally explained the scope of the whistleblower program to the public and potential whistleblowers.

NHTSA received 14 comments on the NPRM. The proposal garnered comments from whistleblower counsel and advocates, vehicle manufacturers, industry associations, and individuals. These comments are available in the docket for this rulemaking.[3] After considering the public comments, the Agency is issuing this final rule and generally adopting the proposal without significant change.

II. Final Rule and Responses to Comments

In the NPRM, NHTSA proposed adding a new part to its regulations, 49 CFR part 513, to further implement the whistleblower program established by the Whistleblower Act and codified at 49 U.S.C. 30172. The proposal defined certain terms important to the operation of the whistleblower program, outlined the procedures for submitting original information to NHTSA and applying for awards, discussed the Agency's procedures for making decisions on award applications, and generally explained the scope of the whistleblower program to the public and potential whistleblowers. The proposed rule sought to help facilitate the Agency's identification of information provided by whistleblowers to ensure that whistleblowers receive the protections accorded under the statute and to inform the public of those limited circumstances where information that could reasonably be expected to reveal the identity of the whistleblower may be disclosed. NHTSA sought comments on all aspects of the NPRM.

In response to the NPRM, NHTSA received comments from whistleblower counsel and advocates, vehicle manufacturers, industry associations, and members of the general public. Whistleblower counsel and advocates submitting comments were Cohen Milstein Sellers & Toll PLLC (Cohen Milstein); Constantine Cannon LLP (Constantine Cannon); Kohn, Kohn, and Colapinto (Kohn); and the National Whistleblower Center. The individual vehicle manufacturers that commented were Ford Motor Company (Ford) and Hyundai Motor America (Hyundai). The industry associations that submitted comments were the Alliance for Automotive Innovation (Auto Innovators) and the vehicle supplier industry association Motor & Equipment Manufacturers Association (MEMA). NHTSA also received comments from some individuals.

Generally, most commenters shared their support for the creation of a new part to NHTSA's regulations governing NHTSA's whistleblower program. Commenters addressed many aspects of the rule, including the definitions of certain terms, procedures for submitting information and making a claim for an award, eligibility requirements for an award and award determinations. The order of the topics or comments discussed in this document is not intended to reflect the significance of the comment raised or the standing of the commenter. Additionally, this summary of the comments is intended to provide both a general understanding of the overall scope and themes raised by the commenters, as well as give some specific descriptions to provide context.

Whistleblower counsel and advocates generally commented in support of broadening the definition of ''whistleblower,'' ''independent knowledge or analysis,'' and ''covered action.'' These commenters proposed relaxing internal reporting requirements and more specifically defining protections against retaliation. Additionally, these commenters proposed removing agency discretion for granting an award.

Generally, vehicle manufacturers and industry associations commented in support of restricting the definition of whistleblower and the definition of independent knowledge or analysis. Additionally, these commenters suggested broadening disqualifications for an award. Specifically, these

[1] *See* 49 U.S.C. 30172(i).

[2] 88 FR 23276 (Apr. 14, 2023).

[3] *https://www.regulations.gov/document/NHTSA-2023-0014-0001.*

commenters proposed stricter internal reporting requirements and proposed eliminating exceptions to these requirements.

Finally, most individual commenters expressed general support for the goals and content of the proposed rule. Individual commenters focused on the definition of whistleblower and the definition of employee. Additionally, individual commenters expressed concerns about the formalized process to be eligible for an award and the Agency's discretion in granting an award.

This final rule generally adopts the proposal without substantive change. In response to comments, NHTSA has clarified in this final rule the timing for submitting an award claim. In the NPRM, NHTSA proposed a potential whistleblower must file a claim for a whistleblower award by completing the WB–AWARD form and submitting it to NHTSA no later than ninety (90) calendar days from the date of the Notice of Covered Action. This final rule specifies that if the ninetieth day falls on a weekend or federal holiday, the claim deadline is the next business day. NHTSA has also clarified in this final rule that the criminal exclusion is limited to criminal violations decided by a United States federal or state court—not by a foreign tribunal.

While NHTSA also agreed with many other issues raised by commenters, for the reasons discussed below, it does not believe those issues warrant additional or changed regulatory text. After consideration of the comments, NHTSA believes this final rule appropriately balances the need to provide additional guidance on aspects of the statute and Agency's processes, while leaving room for flexibility and case-by-case considerations. As NHTSA has learned through working with numerous whistleblowers since enactment of the FAST Act in 2015, each matter involves unique circumstances. NHTSA will continue to consider these issues as it implements its whistleblower program with the benefit of these new rules and will make future refinements through rulemaking or guidance as necessary and appropriate.

NHTSA maintains information about its whistleblower program on its website, *https://www.nhtsa.gov/laws-regulations/whistleblower-program,* which it will continue to update with additional information and developments.

A. General (§ 513.1)

Proposed rule § 513.1 provided a general description of NHTSA's whistleblower program. Specifically, it stated that Part 513 describes the whistleblower program that the Agency has established to implement the Motor Vehicle Safety Whistleblower Act, 49 U.S.C. 30172; explained the procedures that the potential whistleblower will need to follow to be eligible for an award; and discusses the circumstances under which information that may reasonably be expected to reveal the identity of a whistleblower may be disclosed by NHTSA. Additionally, it cautioned potential whistleblowers to read the procedures carefully because failure to take required steps within the time frames described could result in disqualification from receiving an award.

NHTSA received no comments on proposed § 513.1. NHTSA is adopting § 513.1 as proposed.

B. Definitions (§ 513.2(b))

i. Collected Monetary Sanctions

The NPRM contained a proposed definition clarifying that the term ''collected monetary sanctions'' means monies, including penalties and interest, ordered or agreed to be paid and that have been collected by the United States pursuant to the authority in 49 U.S.C. 30165 or under the authority of 49 U.S.C. 30170. This proposed definition sought consistency with the express terms of the statute, which provides: ''Any amount payable [to a whistleblower] . . . shall be paid from the monetary sanctions collected, and any monetary sanctions so collected shall be available for such payment.'' 49 U.S.C. 30172(b)(2).

Prior to publication of the NPRM, stakeholders advocated for court ordered restitution to parties other than the United States to be considered monetary sanctions under the regulation. The NPRM proposed that ''collected monetary sanctions'' cannot reasonably be construed to include such restitution intended to directly compensate victims and other affected third parties (as opposed to penalties paid to the United States).

Commenters Kohn and Constantine Cannon proposed that Congress intended for ''collected monetary sanctions'' to include restitution intended to directly compensate victims or other third parties. Kohn suggested that restitution required by statute is congressional allocation of monies owed to the United States and thus should be considered money collected and allocated by the United States. Kohn proposed that Congress could have decided to allocate those funds in a different way and thus any sanction paid as the result of an enforcement action must be considered a ''collected monetary sanction.''

NHTSA declines to change its proposed definition. The FAST Act, section 31202, appropriates to the Highway Trust Fund amounts equivalent to ''covered motor vehicle safety penalty collections.'' The section defines ''covered motor vehicle safety penalty collections'' as any amount collected in connection with a civil penalty under 49 U.S.C. 30165, ''reduced by any award authorized by the Secretary of Transportation to be paid to any person in connection with information provided by such person related to a violation of Chapter 301 of such title which is a predicate to such civil penalty.'' Based on this section of the FAST Act, it is NHTSA's view that whistleblowers are paid out of the money collected from a paid Safety Act penalty or fine, which is further discussed below with respect to the definition of ''covered action.'' The Safety Act does not give NHTSA authority to reallocate money collected as restitution intended to directly compensate victims or other third parties. Additionally, Congress neither created a victim allocation fund like that created by the Dodd-Frank Act nor did Congress include restitution in its definition of ''monetary sanctions'' as it did in the Dodd-Frank Act.[4] It is NHTSA's view that ''collected monetary sanctions'' does not include restitution intended to directly compensate victims or other third parties because those funds are not ''collected'' by NHTSA.

Additionally, Kohn proposed that any monetary performance obligations, including agreements to pay a certain amount towards a performance obligation,[5] should be included in the definition of collected monetary sanctions. Kohn suggested that exclusion of money used to satisfy performance obligations would give discretion to NHTSA to manipulate a whistleblower's eligibility and the amount of an award. Kohn asserted that this exclusion sends the wrong message and is counter to legislative intent because it gives money back to the

[4] *See* 7 U.S.C. 26(a)(3); 12 U.S.C. 5497(b)(d)(1).

[5] *See In re Hyundai Motor America, Inc. RQ17–004, NHTSA Recall No. 15V–568, NHTSA Recall No. 17V–226, Consent Order, Para. 21,* available at *https://www.nhtsa.gov/sites/nhtsa.dot.gov/files/documents/rq17-004_hyundai_consent_order_executed_11272020.pdf* (consent order including performance obligations to invest in safety data analytics and development of a testing laboratory); *see also In Re Daimler Trucks North America LLC, AQ18–002 Consent Order, Para. 12(c),* available at *https://www.nhtsa.gov/sites/nhtsa.dot.gov/files/documents/aq18-002_consent_order_executed.pdf* (consent order including performance obligations to invest in safety data analytics infrastructure).

wrongdoer and blocks a whistleblower from obtaining a larger award.

NHTSA does not find this suggestion persuasive. NHTSA does not view performance obligations as constituting a ''collected'' monetary sanction. Additionally, NHTSA disagrees that exclusion of money used to satisfy performance obligations is in any way a pretext for allowing NHTSA to block whistleblowers from receiving a larger award. Unlike ''collected'' monetary sanctions, money used to satisfy performance obligations may be an important component of a resolution, helping to ensure that a regulated entity sufficiently addresses ongoing and sustainable compliance with the Safety Act and NHTSA's safety regulations. If there is a collection of the performance obligation amounts in the form of a monetary payment to the United States government as a result of a violation of a consent order, NHTSA agrees that amount is then considered a ''collected'' monetary sanction. Likewise, in those cases where the agreement specifies that if the total performance amount is not spent and the company is liable for a payment to NHTSA for the balance of the unspent performance amount,[6] and the company pays such amount to NHTSA, that is considered a ''collected'' monetary sanction.

Similarly, ''deferred penalties'' or ''abeyance amounts'' agreed to be paid as a monetary penalty in the event that the company violates the consent order, the Safety Act, or the regulations thereunder are ''collected monetary sanctions'' if and when the deferred penalty or abeyance amount is actually paid to the United States government.

These views are consistent with the statutory requirement that: ''Any amount payable [to a whistleblower] . . . shall be paid from the monetary sanctions collected, and any monetary sanctions so collected shall be available for such payment.'' 49 U.S.C. 30172(b)(2). Penalties allocated to performance obligations and deferred penalties that have not been paid to the United States government are neither ''collected'' nor ''available for [ ] payment.''

ii. Contractor

The NPRM contained a proposed definition of ''contractor'' as an individual presently or formerly providing goods or services to a motor vehicle manufacturer, part supplier, or dealership pursuant to a contract.

[6] *See In re Kia Motors America, RQ17–003, NHTSA Recall 17V–224, Consent Order, Para. 26,* available at *https://www.nhtsa.gov/sites/nhtsa.dot.gov/files/documents/rq17-003_kia_consent_order_executed_11272020.pdf.*

NHTSA continues to believe that the definition must include both present and former contractors to maximize the reach and effectiveness of the whistleblower program. For example, if a company terminates a contractor after the contractor reports safety issues, it would not serve the purpose of the Whistleblower Act to bar such a contractor from an award simply because the contractor no longer works for the company. Additionally, whether a contractor is currently or formerly employed has no bearing on whether the contractor has information that might assist NHTSA's vehicle safety work.

One commenter asked if the above definition of ''contractor'' includes independent contractors. The definition is inclusive of independent contractors and there is no restriction or minimum on how long they worked for or with the motor vehicle manufacturer, part supplier, or dealership.

iii. Covered Action and Related Administrative or Judicial Action

NHTSA's proposed definitions of ''covered action'' and ''related administrative or judicial action'' are based on the definition found in 49 U.S.C. 30172(a)(1). The proposed definition of ''covered action'' includes any administrative or judicial action, including any related administrative or judicial action brought by the Secretary, NHTSA, or the U.S. Attorney General (Attorney General) under 49 U.S.C. Chapter 301, or the regulations in Chapter 301 that in the aggregate results in monetary sanctions exceeding $1,000,000. Additionally, the proposed rule explains that the more than $1,000,000 threshold can be satisfied if the total amount of monetary sanctions paid by multiple defendants or parties and collected by the United States totals more than $1,000,000 from the covered action. The proposed definition of ''related administrative or judicial action'' includes ''an action that was brought under 49 U.S.C. Chapter 301 by the U.S. Department of Justice, the U.S. Department of Transportation, or the Agency, and is based on the original information provided by the whistleblower.''

NHTSA explained in the NPRM that since the statute specifies that an action is brought by the Secretary or Attorney General ''under this chapter,'' the statute is referring solely to 49 U.S.C. Chapter 301 and the regulatory obligations promulgated under 49 U.S.C. Chapter 301, as the Whistleblower Act was codified as part of 49 U.S.C. Chapter 301.

Some commenters supported NHTSA's proposed definition. Hyundai agreed that covered actions and related administrative and judicial actions should arise directly under Chapter 301 and the parenthetical phrase ''including any related administrative and judicial action'' does not encompass actions outside of Chapter 301.

Conversely, some commenters disagreed with this definition and proposed ''related administrative and judicial action'' to include *any* related administrative or judicial action, even those not under Chapter 301. Constantine Cannon asserted that interpreting ''related'' action to mean a subset of ''any administrative or judicial action'' makes the phrase superfluous and pointed to other areas of the statute that define related action to include actions taken outside of Chapter 301.

NHTSA disagrees that its reading of the statute renders the word ''related'' superfluous. An example of related actions under the Vehicle Safety Act might be a civil penalty action for a reporting violation of 49 U.S.C. 30166 and a criminal action with respect to the same reporting, pursuant to 49 U.S.C. 30170(a). Moreover, as stated in the NPRM, despite 49 U.S.C. 30172(c)(2)(A)'s mandate that no award shall be made to any whistleblower who is convicted of a criminal violation ''related to the covered action'' for which the whistleblower would otherwise receive an award, NHTSA does not believe the use of the word ''related'' in that context is relevant to the scope of a related action under 49 U.S.C. 30172(a)(1). The purpose of the criminal conviction provision in section 30172(c)(2)(A) is to ensure that a whistleblower cannot benefit from their own wrongdoing. That provision is not limited to a related action ''under this chapter'' and thus has a different (broader) scope based on the plain text of the statute.

The National Whistleblower Center proposed regulatory language that covered actions under the Whistleblower Act include federal enforcement actions outside of Chapter 301. The National Whistleblower Center also proposed a requirement that NHTSA work and coordinate with the U.S. Department of Labor, the U.S. Securities and Exchange Commission (SEC), the Internal Revenue Service, the U.S Commodity Futures Trading Commission (CFTC), the U.S. Environmental Protection Agency, the Federal Trade Commission, and/or the U.S. Department of Justice on any matters related to the Whistleblower Act that may also implicate the violation of laws enforced by these agencies. To

further support these proposals, a few commenters pointed to the SEC and CFTC's ability to include actions brought by other agencies under their definitions of ''covered action.'' NHTSA does not find these proposals persuasive.

Unlike the Whistleblower Act, the SEC and CFTC's governing statutes include a definition of ''related action.'' [7] Both of these definitions of ''related action'' specifically incorporate by reference actions brought by other specified, federal agencies. The Whistleblower Act does not contain a definition of related action or any reference to actions other than those brought under Chapter 301.[8] ''[R]elated action'' under 49 U.S.C. Chapter 301 is given effect by considering two actions under 49 U.S.C. Chapter 301. For example, if NHTSA pursues two separate enforcement actions for violations of 49 U.S.C. Chapter 301, or regulations thereunder, against two different companies (for example, a supplier and a vehicle manufacturer) based on the same facts provided by a whistleblower, in that case, the two separate actions would be related.[9]

NHTSA continues to believe that the plain language of the statute is clear and that NHTSA does not have discretion under the statute to consider actions taken under other statutes (such as separate criminal statutes) as part of a ''covered action,'' even if such actions involve vehicle safety issues and/or are based on facts common to an action taken under 49 U.S.C. Chapter 301.

Kohn outlined concerns that the Department of Justice has a historical preference for bringing actions under Title 18 and the exclusion of monetary sanctions from actions brought under Title 18 will dissuade whistleblowers from coming forward. Similarly, Cohen Milstein, along with other commenters, voiced concerns that a whistleblower would lose incentive to report if an award is dependent on how the government chooses to pursue a wrongdoer. Although NHTSA acknowledges these concerns, the plain language of the statute does not allow NHTSA to include every action under Title 18 or otherwise broaden the reach of the statute.

Additionally, a few commenters argued the specific fund from which NHTSA is obligated to pay a whistleblower should not constrict the definition of ''covered action.'' However, NHTSA does not believe that the existence of a particular fund is what is restricting the definition of ''covered action.'' Rather, NHTSA continues to believe that a whistleblower cannot be issued an award percentage of monies paid by a company for criminal violations of statutes other than the Safety Act. Such a reading would be inconsistent with the requirement of the statute that the action be brought ''under this chapter.'' For example, a criminal action for wire fraud under 18 U.S.C. 1343 is not an action under the Safety Act (49 U.S.C. Chapter 301). However, a criminal action brought under 49 U.S.C. 30170, the criminal penalties provision of the Safety Act, would constitute an action ''under this chapter.'' [10]

In sum, a covered action does not include any action brought by the U.S. Department of Justice under any statute other 49 U.S.C. Chapter 301.

iv. Dealership

NHTSA proposed to define ''dealership'' using a broader definition than the statutory definition of ''dealer'' found in 49 U.S.C. 30102(a)(2). Specifically, NHTSA proposed a ''dealership'' means a person selling and distributing motor vehicles or motor vehicle equipment primarily to purchasers that in good faith purchase the vehicles or equipment other than for resale. The definition is not limited to a dealership selling new motor vehicles, as in the statutory definition of ''dealer.'' For example, an employee of a used car dealer could identify and bring to the Agency's attention a safety defect in a vehicle that has not been timely recalled.

Auto Innovators proposed that dealership should only include those with a franchise relationship to the manufacturer and whose products are being reported to NHTSA. Auto Innovators stated it does not believe dealerships without a franchise relationship will likely possess original information.

NHTSA disagrees. A dealership without a franchise relationship can obtain information gained from experiences, communications, and observations. For example, individuals who work at a dealership without a franchise relationship work with motor vehicles and motor vehicle equipment on daily basis and receive purchaser complaints and ready vehicles and vehicle parts for sale. Additionally, some of these dealerships specialize in a particular make and model of a car and would be able to detect issues with the motor vehicles or motor vehicle parts that are likely to cause a risk to motor vehicle safety. Therefore, NHTSA disagrees with Auto Innovators' proposal and believes a limited definition of dealership would not serve the purpose of the Whistleblower Act and would inhibit the reporting of potential safety defects that are likely to cause unreasonable risk of death or serious physical injury.

v. Employee

The proposed definition of ''employee'' defined ''employee'' as an individual presently or formerly employed by a motor vehicle manufacturer, part supplier, or dealership. The proposed definition included both present and former employees to maximize the reach and effectiveness of the whistleblower program. As noted above, it would not serve the purpose of the Whistleblower Act to bar a former employee from an award simply because he or she no longer works for the motor vehicle manufacturer, part supplier, or dealership.

The comments all favored the proposed definition of employee to include owners of a motor vehicle manufacturer, part supplier, or dealership. However, Auto Innovators proposed owners of these businesses should not be allowed to benefit if they are reporting their own misconduct or the misconduct of the business enterprise that they own. Constantine Cannon addressed Auto Innovators concern by pointing to proposed § 513.7, on whistleblower ineligibility, which bars whistleblowers who deliberately or substantially contribute to the alleged violation. NHTSA agrees with this view. Further, Auto Innovators

[7] *See* 7 U.S.C. 26(a)(5); 15 U.S.C. 78u–6(a)(5).

[8] Similarly, a few commenters also proposed that the barriers to NHTSA's acquisition of information from other agencies, such as information regarding whether whistleblower information was used to bring an administrative action, cannot restrict the definition of ''covered action.'' Again, commenters point to the SEC and CFTC's ability to obtain information from other agencies to support this assertion. NHTSA believes the plain language of its governing statute is determinative of the definition of ''covered action'' and, as described, unlike the Dodd-Frank Act, the Whistleblower Act does not mandate coordination with agencies other than DOJ, when necessary.

[9] NHTSA's first whistleblower award was given to a whistleblower who provided information that led to enforcement actions resulting in consent orders with two companies (Hyundai Motor America, Inc. and Kia Motors America, Inc.). *See https://www.nhtsa.gov/sites/nhtsa.gov/files/2022-02/whistleblower-decision-letter-RQ17-003-Kia-RQ17-004-Hyundai_web.pdf.*

[10] Section 30170(a)(1) provides for criminal liability for falsifying or withholding information. It states: ''A person who violates section 1001 of title 18 with respect to the reporting requirements of section 30166, with the specific intention of misleading the Secretary with respect to motor vehicle or motor vehicle equipment safety related defects that have caused death or serious bodily injury to an individual (as defined in section 1365(g)(3)[1] of title 18), shall be subject to criminal penalties of a fine under title 18, or imprisoned for not more than 15 years, or both.''

proposed a definition of owner that specifies whether the term owner includes anyone with an ownership interest in a business regardless of the size of their interest or the size of their share of a publicly traded company. NHTSA disagrees with a need to define ''owner.'' Rather, it is NHTSA's position that an owner in this context is generally someone who both owns at least part of a company and holds a permanent employment position or manages at least one employee (*e.g.,* an owner does not need to be involved in a company's day-to-day operations, but instead can have some sort of limited managerial relationship with the person who manages a company's day-to-day operations).

For example, as proposed by Kohn, owners of dealerships are in an excellent position to gather customer complaints that have a significant impact on public safety. Similarly, NHTSA believes partial owners of businesses who manage employees and oversee operations can learn about and witness safety defects within the supply chain that were not otherwise reported to NHTSA.

Constantine Cannon also proposed the definition of employee should include employees of an automaker's foreign parent company. NHTSA agrees but does not find a need to change the proposed definition to encompass these individuals. The definition of whistleblower under 49 U.S.C. 30172(a)(6) is not limited to those in the United States. The definition in 49 U.S.C. 30172(a)(6) specifies that a whistleblower is an individual who, among other requirements, is an ''employee or contractor of a motor vehicle manufacturer, part supplier, or dealership.'' The definitions of motor vehicle manufacturer, part supplier, and dealership found in 49 U.S.C. 30102 are also not restricted to only businesses based in the United States. Thousands of motor vehicles and motor vehicle parts are imported and used in the United States every year. Potential whistleblowers who are currently or formerly employed outside the United States might possess vital information related to potential safety defects which are likely to cause unreasonable risk of death or serious physical injury. For example, NHTSA relied upon information from and issued an award to a whistleblower working in South Korea who supplied NHTSA with information in connection to Hyundai Motor America, Inc. and Kia Motors America, Inc.'s violations of the Safety Act.[11] Therefore, it is imperative for NHTSA's safety mission to include those employed outside the United States within the scope of the definition of ''employee.'' NHTSA has not limited the definition of employee to individuals within the United States and does not find a change to be necessary.

Finally, individual commenters proposed including relatives of employees and contractors and specifying whether there is a minimum time requirement to be considered an employee. NHTSA does not believe that relatives of employees and contractors meet the definition of ''whistleblower'' found in 49 U.S.C. 30172(a)(6). Congress specifically and unambiguously defined a ''whistleblower'' as an employee or contractor and made no mention of those related to an employee or contractor. NHTSA also does not believe that there needs to be a minimum time requirement that an individual worked at a motor vehicle manufacturer, part supplier, or dealership for that individual to be considered an employee. Since no time limitation was specified in the definition, NHTSA finds a change to be unnecessary.

vi. Independent Knowledge or Analysis

NHTSA proposed a definition of ''independent knowledge or analysis'' because Section 30172(a)(3)(A) states that original information is information that ''is derived from *independent knowledge or analysis* of an individual'' (emphasis added). The proposed definition defines ''independent knowledge'' as factual information in the potential whistleblower's possession that is not generally known or available to the public and is not already known to NHTSA. Publicly available sources include both sources that are widely disseminated, such as corporate press releases and filings, and media reports, as well as sources that, while not widely disseminated, are generally available to the public, such as court filings and documents obtained through Freedom of Information Act requests.

The proposed definition does not require that a potential whistleblower have direct, first-hand knowledge of potential violations. The proposed definition states that the potential whistleblower may gain independent knowledge from the potential whistleblower's experiences, communications and observations in the potential whistleblower's business or social interactions.

MEMA disagreed with the proposed definition's inclusion of those without direct, first-hand knowledge of potential violations. MEMA proposed that those without first-hand knowledge would be unable to assess a potential safety violation resulting in the circumvention of internal processes and communications between part manufacturers and original equipment manufacturers (OEMs). NHTSA disagrees. Those without ''first-hand'' knowledge, such as an employee of a used-car dealership, may still have the requisite expertise to conduct their own personal analysis and identify a potential safety violation. They might get regular complaints about a particular issue or conduct repairs related to a particular issue on a regular basis. However, only those individuals who are employees or contactors of a motor vehicle manufacturer, part supplier, or dealership could be eligible for an award if they meet the other requirements of 49 U.S.C. 30172 and regulations thereunder.

The proposed definition of ''independent knowledge or analysis'' further provided that information will not be considered to have been derived from an individual's ''independent knowledge or analysis'' in some situations.

The first proposed exclusion was for information that was obtained solely through a communication that is subject to attorney-client privilege or the work product doctrine. When describing the proposed exclusion, the NPRM recognized that there are some exceptions to various privileges, such as Federal Rule of Civil Procedure 26(b)(3) (providing that materials prepared in anticipation of litigation may be discovered by an adverse party if the party shows ''substantial need'' and ''undue hardship''), and the crime-fraud exception to the attorney-client privilege.

Several commenters proposed that all information that would be admissible in an administrative, civil, or criminal proceeding should be considered information upon which a reward can be based. Kohn supported this by stating NHTSA's proposed exclusion will encourage corporations to abuse attorney-client privilege. Auto Innovators proposed that NHTSA should establish a process to isolate information while a privileged information determination is made. The National Whistleblower Center

[11] *See* Yang, Heekyong, *Hyundai Motor whistleblower, $24 mln in hand, plans to help others speak up,* Reuters, Nov. 14, 2021, *https://www.reuters.com/business/autos-transportation/hyundai-motor-whistleblower-24-mln-hand-plans-help-others-speak-up-2021-11-12/; see also* NHTSA Makes Its First Ever Whistleblower Award, Nov. 9, 2021, *https://www.nhtsa.gov/press-releases/first-whistleblower-award.*

proposed a definition excluding information subject to attorney-client or work-product privilege unless it would otherwise be permitted by applicable state attorney conduct rules or rules approved by the Secretary. Similarly, Constantine Cannon proposed that NHTSA use the same definition used by the SEC and CFTC, which includes exclusions for communications subject to attorney-client privilege or in connection with the legal representation that a putative whistleblower has been providing to an employer or firm, unless disclosure is authorized by the applicable federal or state attorney conduct rules.

NHTSA has determined that, pursuant to the District of Columbia Rules of Professional Conduct, attorneys in its Office of the Chief Counsel may not review materials protected by attorney-client privilege. This determination is based on our understanding of the District of Columbia Bar's Ethics Opinion 318: Disclosure of Privileged Material by Third Party.[12] The exclusion is not intended to preclude an individual who has independent knowledge or analysis of potential Safety Act violations from becoming a whistleblower if that person chooses to consult with an attorney or is an attorney. Rather, this exclusion prohibits an employee or contractor from revealing attorney-client privileged or work product information that they learned of solely through a privileged communication. Thus, NHTSA believes the proposed definition remains appropriate and is adopting it in this final rule.

The second proposed exclusion is for information that was obtained in a means or manner that is determined by a United States federal court or state court to violate applicable federal or state criminal law.

Some commenters disagreed with excluding information if the information was obtained in a means or manner found to be illegal by a state court. The National Whistleblower Center proposed language that limits excluded information to information obtained by means or in a manner determined by a United States federal court to violate federal or state criminal law. Kohn proposed removing the exclusion of information obtained in violation of state law because of the possibility of preemption and the differences between state and federal law.

NHTSA disagrees with this proposal. NHTSA believes information obtained in violation of state law should be excluded. NHTSA does not want to encourage employees to obtain information for NHTSA by any means or manner. For example, theft is generally a charge brought under state law rather than federal law. NHTSA does not want to encourage potential whistleblowers to illegally obtain information. In these cases, preemption would generally not be at issue.

In the NPRM, NHTSA urged potential whistleblowers to use caution when providing NHTSA with information covered by a legally binding order or a confidentiality agreement. NHTSA's NPRM recommended that those potential whistleblowers consult with private counsel before submitting such information to NHTSA.

Kohn disagreed with the Agency's proposed suggestion for potential whistleblowers under binding nondisclosure agreements to consult private counsel before providing NHTSA with information. Kohn proposed this suggestion will make whistleblowers think that they are forced to hire private counsel. Similarly, Kohn proposed that the regulations should prohibit private contracts, employment agreements or settlement agreements from interfering with a whistleblower's disclosure to NHTSA. NHTSA disagrees with Kohn on these issues.

NHTSA is obligated to adhere to and support a whistleblower's statutory protections, but NHTSA's attorneys do not represent whistleblowers. Whistleblowers should be aware that ''[t]o the extent protective orders, settlement agreements, or other confidentiality provisions prohibit motor vehicle safety-related information from being transmitted to NHTSA, such limitations are contrary to established principles of public policy and law, including Rule 26 of the Federal Rules of Civil Procedure and its state corollaries which require a showing of good cause to impose confidentiality.'' [13] However, NHTSA cannot advise a whistleblower that the agreement they are bound by lacks good cause to impose confidentiality. Therefore, if a whistleblower needs legal advice, they should obtain their own private legal counsel. NHTSA continues to suggest that potential whistleblowers who are aware of material protected by a protective order should not provide the documents subject to the order to NHTSA; whistleblowers should inform NHTSA about the existence of such documents without revealing the substance of the material under the protective order.

The NPRM also asked if commenters had suggestions for additional exclusions, including those similar to the exclusions under ''independent knowledge'' or ''independent analysis'' within the SEC and CFTC whistleblower programs. One example of a potential exclusion mentioned in the NPRM was excluding information obtained solely because the potential whistleblower is an officer, director, trustee or partner of an entity or a person whose principal duties involve compliance or internal audit responsibilities. The National Whistleblower Center (NWC) proposed that an officer, director, trustee, partner of an entity, or auditor of or within an entity who learns about information from another individual within the entity should generally be excluded from the rule because they lack original information from independent knowledge. Specifically, the NWC proposed that these individuals should be excluded from the rule if they learned about the subject information via an entity's normal processes for identifying, reporting, and addressing potential violations. Additionally, the NWC proposed that individuals whose duties include audits and internal investigations into possible violations also be excluded from the rule.

Conversely, Kohn agreed with NHTSA's proposal to not exclude a potential whistleblower solely because the potential whistleblower was or is an officer, director, trustee or partner. Additionally, Kohn supported NHTSA's proposal to include those participating in or observing internal audit processes. Kohn reasoned that auditors can be pressured to water down reports and this allowance would deter companies from enforcing this pressure. After consideration of the comments, NHTSA has decided it should not exclude officers, directors, trustees or partners. NHTSA believes officers, directors, trustees, partners, and persons whose principal duties involve compliance or internal audit responsibilities all have the potential to learn important information concerning vehicle safety. Furthermore, NHTSA disagrees with the NWC's proposed exclusion because NHTSA believes such individuals may have information that is not generally known or available to the public and is not already known to NHTSA. Excluding such individuals could prevent such valuable safety information from reaching the Agency. Consequently, NHTSA will not exclude such individuals.

[13] *NHTSA Enforcement Guidance Bulletin 2015–01: Recommended Best Practices for Protective Orders and Settlement Agreements in Civil Litigation,* 81 FR 13026 (Mar. 11, 2016).

However, as discussed above, any illegal action by these persons to obtain the information excludes them from receiving a whistleblower award.

vii. Original Information

Proposed § 513.2(b) defined ''original information'' as information that is derived from the independent knowledge or analysis of an individual, is not known to the Secretary or Agency from any other source, unless the individual is the original source of the information; and is not exclusively derived from an allegation made in a judicial or an administrative action, in a governmental report, a hearing, an audit, or an investigation, or from the news media, unless the individual is a source of the information. Proposed § 513.2(b) required that original information be provided to the Agency for the first time after December 4, 2015.

Thomas Kowalick commented, disagreeing with the Agency's proposed prohibition on information provided to the Agency prior to December 4, 2015. However, December 4, 2015 is the date on which Congress enacted the FAST Act. Consequently, this limitation in 513.2(b) is based on the rule of construction contained in Section 24352(b) of the FAST Act. Other commenters supported NHTSA's proposed limitation.[14]

The Agency also is making minor edits to the definition of ''original information that leads to a successful resolution'' for clarity.

viii. Potential Whistleblower

To differentiate from the statutory definition of ''whistleblower'' that contains a number of prerequisites that need to be met to fall under the definition, NHTSA proposed the term ''potential whistleblower'' for the sake of clarity. The proposed definition of potential whistleblower refers to an employee or contractor of a motor vehicle manufacturer, part supplier, or dealership submitting information to the Agency in accordance with and pursuant to Part 513. Potential whistleblowers will be treated as receiving the whistleblower protections set forth in 49 U.S.C. 30172(f).

Commenters agreed with NHTSA's proposal to treat potential whistleblowers as subject to the protections in 49 U.S.C. 30172(f). Kohn disagreed with limiting a potential whistleblower to an employee or contractor of a motor vehicle manufacturer, part supplier, or dealership. Kohn proposed that anyone who submits information to NHTSA should be considered a potential whistleblower and NHTSA's determination with respect to whether or not a potential whistleblower is eligible should be a separate analysis. NHTSA disagrees with this proposal. NHTSA will not be able to determine whether a person is a ''whistleblower'' until, at the very least, that person submits information to the Agency and it is evaluated. 49 U.S.C. 30172 limits whistleblower protections to ''any employee or contractor of a motor vehicle manufacturer, part supplier, or dealership.'' NHTSA does not have the authority to broaden that definition and does not want to encourage people who do not qualify to submit information to NHTSA's whistleblower program. For example, a significant quantity of information that NHTSA receives on vehicle safety issues comes from ordinary vehicle owners and that information is not appropriate for handling under the whistleblower program. NHTSA cannot reasonably consider anyone who submits information to the agency to be a whistleblower, and doing so would divert resources from and adversely impact legitimate whistleblowers. The definition of potential whistleblower as requiring someone to meet the basic requirement of being an employee or contractor of a motor vehicle manufacturer, part supplier, or dealership, in accordance with the statutory definition, appropriately protects those individuals for whom the statutory protections were designed.

ix. Whistleblower

Proposed § 513.2(b) defined ''whistleblower'' as any employee or contractor of a motor vehicle manufacturer, part supplier, or dealership who voluntarily provides to the Agency original information relating to any motor vehicle defect, noncompliance, or any violation or alleged violation of any notification or reporting requirement set forth in 49 U.S.C. Chapter 301 or regulations thereunder, which is likely to cause unreasonable risk of death or serious physical injury.[15]

Commenters generally supported NHTSA's proposed definition of whistleblower. Auto Innovators proposed that the regulatory definition should not include entities not covered by the statutory definition of whistleblower such as advocacy groups, media reporters, industry trade associations, or third parties. NHTSA has concluded that the proposed scope was appropriate and consistent with the statute. While NHTSA requested comment on whether employees of trade groups should be included in the definition, after consideration of the comments, NHTSA believes that such an expansion would not be consistent with the statutory definition. However, as NHTSA explained in the NPRM, employees and contractors working for companies within a trade group's membership are eligible to be whistleblowers, provided that they fall into the definition of motor vehicle manufacturer, part supplier, or dealership.

Thomas Kowalick proposed that the definition should only include individuals and not entities. NHTSA agrees. The proposed definition and statutory definition uses the word ''employee,'' which denotes a single person, and based on this context it would likewise be anomalous to interpret ''contractor'' to encompass multi-person entities. Therefore, NHTSA does not believe this comment warrants a change.

In the NPRM, NHTSA specifically requested comment on whether a whistleblower must provide original information related to the company that employed or contracted with the whistleblower or whether the employee or contractor of any motor vehicle manufacturer, part supplier, or dealership can report original information regarding any motor vehicle manufacturer, part supplier or dealership (not just the one that employed them or that they were contractors of). Kohn supported NHTSA's proposal that competitors, partners, employees of another separate corporate entity should be entitled to an award under the plain meaning of the statute. NHTSA received no other comments in response to this question.

C. Procedures for Submitting Original Information (§ 513.4)

NHTSA proposed requiring potential whistleblowers to submit information on a standardized form—the proposed WB–INFO form. Proposed § 513.4(a) stated that the standard form must be submitted either by email to NHTSA's established account (*NHTSAWhistleblower@dot.gov*), which is monitored by NHTSA's Office of the Chief Counsel, or by any such method that the Agency may expressly designate

[14] Kohn, again, noted their disagreement with the Agency's proposed definition of independent knowledge. *See* NHTSA's analysis of this comment under the discussion of ''Independent Knowledge or Analysis.''

[15] This definition of whistleblower follows the definition found in 49 U.S.C. 30172(a)(6) except that the proposed rule uses the term ''Agency'' and clarifies that ''any violation or alleged violation of any notification or reporting requirements of this chapter'' refers to 49 U.S.C. Chapter 301 and regulations promulgated thereunder for clarity.

on its website. On the WB–INFO form, a potential whistleblower must declare, under penalty of perjury, at the time the potential whistleblower submits information on the WB–INFO form that the information is true and correct to the best of the potential whistleblower's knowledge and belief.[16]

Proposed § 513.4(c) provided that a potential whistleblower may submit original information to the Agency anonymously through use of a legal representative. The legal representative must submit the information on behalf of the potential whistleblower pursuant to the procedures specified in 513.4(a).

Kohn commented in support of NHTSA's proposed procedures but objected to requiring that the timing of the submission of a WB–INFO form be determinative of qualification for an award. However, NHTSA's proposed regulations do not specify when the WB–INFO form must be submitted to NHTSA.[17] Therefore, NHTSA agrees with Kohn and will not require the timing of the WB–INFO form to be determinative of qualification for an award, subject to other provisions of the statute and regulations. For example, if a whistleblower initially reaches out to NHTSA without submitting a form (because the person is unaware of the Agency's regulation), the whistleblower can still be eligible for an award if they subsequently submit the WB–INFO form to NHTSA.

In the NPRM, NHTSA proposed that a whistleblower or the whistleblower's legal representative must be the one to directly provide the information to NHTSA. This proposal was based on the statutory requirement that a whistleblower voluntarily provide information to the Secretary. NHTSA also requested comments on whether it should allow non-attorneys to submit information on behalf of a potential whistleblower. Kohn disagreed with requiring the whistleblower or their legal representative to make the submission. Kohn proposed that the statutory definition of original information implies that third parties who learned the information from a whistleblower can report the information to NHTSA, and those whistleblowers should be eligible for an award. Kohn proposed that NHTSA allow whistleblowers to submit information through third parties such as ''news media, referrals from Congress or other investigatory agencies, civil society organizations, [or] international anti-corruption or law enforcement authorities.'' Further, Kohn proposed that whistleblowers in countries outside the United States, especially in countries with no whistleblower protections, should not be ineligible for a whistleblower award because they used a third party, such as an advocacy group, to relay the information to NHTSA. NHTSA agrees with Kohn with respect to a whistleblower not being disqualified if the whistleblower is initially represented by an advocacy group. Rather, as long as it is clear that an advocacy group is making a submission on behalf of an individual, a whistleblower's eligibility will not be affected. However, to be eligible for an award, NHTSA believes it is important that a whistleblower subsequently contact NHTSA directly about the subject information (in other words, the whistleblower must submit the WB–INFO form). That will help ensure that the Agency can follow up on issues and has the direct, unfiltered perspective of that person.

Similarly, Kohn commented that NHTSA should not require that a whistleblower submit a WB–INFO form to be eligible for a whistleblower award. Kohn pointed to news sources and congressional testimony regarding whistleblowers who shared original information with news media and non-governmental safety organizations rather than directly to NHTSA. Kohn argued that NHTSA will likely continue to obtain useful, original information from these third-party sources where a whistleblower did not go through NHTSA's formal procedures. To support this proposal, Kohn pointed to a whistleblower in the Takata case's interaction with the press alongside that individual's reports to the Department of Justice and the Federal Bureau of Investigation (FBI).

NHTSA disagrees with this proposal. 49 U.S.C. 30172(a)(6) defines a ''whistleblower'' as someone who ''voluntarily *provides to the Secretary* original information.'' (emphasis added). Congress mandated that a whistleblower provide the information to NHTSA to receive a whistleblower award. Further, if a whistleblower provides information to a news source, there is no guarantee that NHTSA will be able to obtain that person's contact information. This is especially true if the source is anonymous. Nothing in this rule prevents a whistleblower from going to the press, the Department of Justice, the FBI, or other authorities in conjunction with a report to NHTSA. If a potential whistleblower goes to one of these other entities first, NHTSA hopes that the other entity would direct the whistleblower to submit information directly to NHTSA. If NHTSA receives a potential whistleblower's contact information from another government agency, news organization, law enforcement authorities, advocacy organizations, or a similar third-party, NHTSA intends to attempt to contact the potential whistleblower and provide them information about how to submit a WB–INFO form.

D. Confidentiality (§ 513.5)

Consistent with the protections for whistleblowers in 49 U.S.C. 30172(f), NHTSA's proposed § 513.5(a) explained that notwithstanding 49 U.S.C. 30167, the Secretary and any officer or employee of the U.S. Department of Transportation shall not disclose any information, including information provided by a whistleblower to the Secretary, that could reasonably be expected to reveal the identity of a whistleblower, except in accordance with the provisions of 5 U.S.C. 552a, with certain exceptions as provided by statute.

In the NPRM, NHTSA stated it is the Agency's view that if an individual is not a whistleblower, as defined by the statute, the Agency is not bound by the limitations contained in 49 U.S.C. 30172(f). However, it is the Agency's intent to generally afford potential whistleblowers confidential protections, unless otherwise waived or permitted or required by law. NHTSA recognizes that potential whistleblowers often put themselves at risk of significant consequences, and thus maintaining their confidentiality is of the utmost importance.

In the NPRM, NHTSA proposed that an individual discloses information relating to a motor vehicle defect, noncompliance, or violation of notification or reporting requirement that is not likely to cause unreasonable risk of death or serious physical injury, then that person is not a whistleblower and is not entitled to the statutory protection contained in 49 U.S.C. 30172.[18]

[16] As stated in the NPRM, the purpose of requiring a sworn declaration on the WB–INFO form is to help deter the submission of false and misleading information and mitigate the potential harm to companies and individuals that may be caused by false or spurious allegations of wrongdoing.

[17] Kohn proposed that NHTSA take into consideration the case *Whistleblower 21276–13W* v. *Commissioner,* where the United States Tax Court held IRS regulations do not require Form 211 to be filed prior to providing information to the IRS to qualify for an award under 26 U.S.C. 7623. 144 T.C. 290 (2015), United States Tax Court, Docket Nos. 21276–13W, 21277–13W (June 2, 2015). However, NHTSA's final rule does not require that a potential whistleblower submit a WB–INFO form to NHTSA prior providing NHTSA any information.

[18] This includes a reporting individual who is an employee or contractor of a motor vehicle manufacturer.

Commenters disagreed with NHTSA's proposal to not afford the protections of 49 U.S.C. 30172(f) to whistleblowers whose information relates to a motor vehicle defect, noncompliance, or violation of notification or reporting requirement that is not likely to cause unreasonable risk of death or injury. Commenters argue this exclusion is too subjective and will prevent potential whistleblowers from coming forward with information. Commenters argue potential whistleblowers will fear losing protections following an agency determination that submitted information is not likely to cause unreasonable risk of death or injury. Kohn claims this policy is also counter to the Whistleblower Act and will result in whistleblowers choosing not to report information to NHTSA for fear of exposure.

NHTSA disagrees with these commenters. Under 49 U.S.C. 30172(a)(6), Congress defined a whistleblower, in section 30172, among other specifications, as someone who submits original information ''relating to any motor vehicle defect, noncompliance, or any violation or alleged violation of any notification or reporting requirement of this chapter, *which is likely to cause unreasonable risk of death or serious physical injury*'' (emphasis added). Further, under 49 U.S.C. 30172(f), Congress limited confidentiality protections to persons who meet the definition of whistleblower. Therefore, NHTSA is only authorized to afford those legal protections to those who submit information ''relating to any motor vehicle defect, noncompliance, or any violation or alleged violation of any notification or reporting requirement of this chapter, *which is likely to cause unreasonable risk of death or serious physical injury.*'' *See* 49 U.S.C. 30172(a)(6) (emphasis added).

As discussed in the NPRM, unlike other entities that have a policy and practice to treat all information obtained during an investigation as confidential and nonpublic,[19] NHTSA generally makes information on safety-related defect investigations for which it has not received a request for confidential treatment under 49 CFR part 512 publicly available. The Agency posts materials such as Information Requests, Special Orders, and answers thereto on its website, *www.nhtsa.gov*. Further, NHTSA also makes publicly available various consumer complaints that it receives through a variety of sources, including calls to its vehicle safety hotline, which are transcribed, and submissions of Vehicle Owner Questionnaires (VOQs) through its website.[20] Further, if an employee is worried about sharing information with NHTSA for fear of retaliation, 49 U.S.C. 30171 put in place protections for employees of motor vehicle manufacturers, part suppliers, and dealerships to protect the employees from discrimination or discharge for, among other things, providing to the employer or the Secretary information relating to any motor vehicle defect, noncompliance, or any violation or alleged violation of any notification or reporting requirement of 49 U.S.C. Chapter 301. The language in 49 U.S.C. 30171 does not restrict these protections only to those submitting information of a violation ''*which is likely to cause unreasonable risk of death or serious physical injury.*'' [21] Finally, § 513.6(b) gives the agency the ability to waive this requirement for good cause shown. NHTSA will therefore consider these issues on a case-by-case basis.

Commenters either supported or did not comment on the remainder of the proposed provisions related to confidentiality.

E. Prerequisites to the Consideration of an Award (§ 513.6)

Proposed § 513.6 summarized the general prerequisites for persons to be considered for the payment of an award, based on the statutory language of 49 U.S.C. 30172(b)(1) and the definition of a whistleblower under 49 U.S.C. 30172(a)(6), but added the word ''potential'' in front of the terms ''motor vehicle defect'' and ''noncompliance.'' Under proposed § 513.6(a), subject to the eligibility requirements in these rules, NHTSA may, but is not required to, authorize payment of an award to one or more persons who provide a voluntary submission to the Agency that contains original information relating to any potential motor vehicle defect, potential noncompliance, or any violation or alleged violation of any notification or reporting requirement of 49 U.S.C. Chapter 301 or a regulation thereunder, which is likely to cause unreasonable risk of death or serious physical injury, and the original information in that submission leads to the successful resolution of a covered action. In the NPRM, NHTSA asked for proposals of any other prerequisites for an award.

Kohn commented on Hyundai's proposed definition of ''voluntary'' submitted to NHTSA prior to the publication of the NPRM. Specifically, Kohn agreed a person should not be considered voluntarily providing information if that person previously received a subpoena or a demand that relates to the same subject matter. However, Kohn proposed exceptions to the exclusion including ''friendly'' subpoenas, subpoenas after the whistleblower's information ''is published in the news media, presented to Congress or another federal or state agency, provided to the victims of an auto accident, set forth in testimony in any proceeding, or otherwise voluntarily presented prior to obtaining a subpoena,'' and subpoenas after voluntarily providing ''information to an organizations compliance program, legal organization and/or supervisory personnel within the company.'' The National Whistleblower Center also proposed language that defines a voluntary submission as information provided before a request, inquiry, or demand that relates to the inquiry is directed at the potential whistleblower or anyone representing the potential whistleblower.

NHTSA believes that whether information submitted after the potential whistleblower receives a subpoena or a demand related to the subject matter is ''voluntarily provide[d]'' to NHTSA depends on the particular circumstances. Like the SEC, NHTSA believes a whistleblower award should not be made available to an individual who makes a whistleblower submission after being asked to provide information on a matter during the course of an investigation or inquiry by that agency.[22] Similar to the SEC, NHTSA believes ''[o]nly a request that is directed to the individual involved (or the individual's representative) will preclude that individual from subsequently making a 'voluntary' submission of the requested information or closely related information.'' [23] If an individual is part of a group or division within a company that receives a request, they are not precluded from

[19] The SEC and CFTC both have this practice. *See, e.g., Final Rule, Securities Whistleblower Incentives and Protections,* 76 FR 34300, 34332 (June 13, 2011); *Final Rule, Whistleblower Incentives and Protection,* 76 FR 53172, 53184 (Aug. 25, 2011).

[20] NHTSA redacts Personally Identifiable Information (PII) from publicly available documents.

[21] Employees may file a complaint with the Secretary of Labor alleging such discharge or discrimination. The Secretary of Labor is required to notify in writing the person named in the complaint of the filing of the complaint, of the allegations contained in the complaint, of the substance of evidence supporting the complaint, and of the opportunities that will be afforded to such person. 49 U.S.C. 30171(b).

[22] *See* Securities Whistleblower Incentives and Protections, 76 FR 34307 (June 13, 2011).

[23] *See* Proposed Rules for Implementing the Whistleblower Provisions of Section 21 F of the Securities Exchange Act of 1934, 75 FR 70490 (Nov. 17, 2010).

making a whistleblower submission so long as the information they are providing to NHTSA meets the definition of ''original information.'' The prohibition on those who receive direct, individual requests for information is restricted to requests from NHTSA. NHTSA considers a potential whistleblower who gave information to another government agency, by compulsion or voluntarily, as generally not relevant to whether that individual voluntarily shared information with NHTSA.[24]

Additionally, Kohn proposed a mandatory payment of an award if all the proposed requirements are met. NHTSA disagrees and believes there may be instances when a person who meets the requirements of § 513.6 is disqualified from an award or otherwise should not receive an award. *See* 49 U.S.C. 30172(c)(1)(A), (2).[25] Related issues are further discussed with respect to the provisions on award determinations in § 513.10.

F. Whistleblowers Ineligible for an Award (§ 513.7)

The NPRM recited the categories of individuals who are ineligible for an award. Proposed § 513.7 was based on statutory construction as well as the statutory provisions contained in 49 U.S.C. 30172(c)(2) and (g).

Of the categories of individuals who are ineligible for an award proposed by the NPRM, commenters only discussed whistleblowers who are convicted of a criminal violation related to the covered action and those who failed to internally report a violation through a company's internal reporting mechanism. Commenters disagreed about the scope of criminal violations included in proposed § 513.7(a). Additionally, commenters disagreed about whether a potential whistleblower should be required to use a company's internal reporting mechanisms before reporting information to NHTSA to be eligible for an award.

Proposed § 513.7 stated a whistleblower is ineligible for an award if the whistleblower is ''convicted of a criminal violation related to the covered action for which the whistleblower otherwise could receive an award.'' In the NPRM, NHTSA asked for comment regarding whether it should limit the criminal conviction bar to only those cases decided by a U.S. federal or state court or whether it should consider convictions issued by courts in other countries. Commenters disagreed about whether to include convictions issued by courts or tribunals in other countries.

Hyundai proposed a broadening of the definition of criminal violations in the proposed rule. Hyundai's proposal includes disqualifying those convicted in foreign tribunals and those who obtained information by a means or manner that is determined by a foreign court to be in violation of laws in the appropriate jurisdiction. Conversely, Constantine Cannon and Kohn propose the exclusion be limited to cases decided by U.S. federal or state courts. Both commenters point to NHTSA's unfamiliarity with foreign laws and the markedly different procedures and rights afforded to those in foreign countries. After considering these comments NHTSA believes the exclusion should be limited to those criminal violations decided by a U.S. federal or state court and will add clarifying language to the final rule.[26] Congress did not expressly state the scope of the exclusion. Therefore, the most logical reading of the statute is that it is referring to the United States. Moreover, expanding the exclusion to those criminal convictions decided by tribunals outside of the United States would potentially discourage whistleblowers by creating legal uncertainty.

Additionally, Constantine Cannon proposed the removal of the requirement for a whistleblower to disclose on proposed WB–AWARD form information about whether the potential whistleblower is currently the subject or target of a criminal investigation connected to the information at issue. Constantine Cannon asserted that this requirement departs from congressional intent to only bar individuals who are convicted of criminal violations rather than those investigated. Constantine Cannon adds that a whistleblower may be unaware if there is an investigation and be unable to provide that information. NHTSA disagrees. As stated in the NPRM, NHTSA understands some potential whistleblowers might not know if they are under investigation. However, NHTSA continues to believe this information, to the extent known, would benefit the agency. Filling in that portion of the WB–AWARD form does not automatically disqualify a potential whistleblower from receiving an award. NHTSA generally anticipates waiting until those disclosed, applicable investigations are closed before issuing a decision on an award. If a potential whistleblower discloses an investigation or some other piece of information that is not related to a criminal investigation connected to the information at issue, NHTSA will determine on a case-by-case basis whether that information disqualifies a potential whistleblower from being eligible for an award.

Finally, Hyundai requested to expand the exclusion of information obtained by unlawful means to include civil unlawful conduct to account for prosecutorial discretion. NHTSA disagrees. In 49 U.S.C. 30172(c)(2), Congress explicitly directs NHTSA to make no award to whistleblowers who are ''convicted of a criminal violation related to the covered action for which the whistleblower otherwise could receive an award.'' In light of the plain text reference to a criminal conviction, the provision as proposed is appropriate and would avoid incentivizing companies from suing potential whistleblowers.

Commenters were also split on whether a whistleblower should be required to use a motor vehicle manufacturer, parts supplier, or dealership's internal reporting mechanism. Commenters also proposed different assurances that a motor vehicle manufacturer, parts supplier, or dealership's internal reporting mechanism contains protections against retaliation and the adequacy of those protections.

Kohn commented that written protections from retaliation for internal reporting are not enough. Rather, Kohn proposed a requirement for confidential internal reporting mechanisms that prohibit corporate attorneys from learning the identity of a whistleblower—to guarantee complete confidentiality of a whistleblower. Additionally, Kohn argues a whistleblower who works with the government for many years on a successful enforcement action should not be barred from an award because they did not abide by internal reporting requirements.

NHTSA believes that these comments are largely outside the scope of this rulemaking. 49 U.S.C. 30172(c)(2)(E) does not address requirements for internal reporting mechanisms. Rather, it describes the circumstances when a whistleblower can use reporting mechanisms that are in place. NHTSA's

[24] This includes those who receive a subpoena from the Department of Justice. NHTSA notes that the receipt of a subpoena is indicative that a person may have relevant information, and not whether that person is a target of an investigation or otherwise suspected of wrongdoing. Other provisions of this final rule adequately inhibit wrongdoers from receiving a whistleblower award.

[25] Other comments related to § 513.6 are addressed in the discussion of the definition of original information.

[26] In 49 U.S.C. 30172(c)(2), Congress used very similar language as in 7 U.S.C. 26(c)(2). The CFTC interpreted this language to mean only criminal violations determined by a United States court. *See* Whistleblower Incentives and Protection, 76 FR 53172 (Aug. 25, 2011).

rule is consistent with the statute and NHTSA reiterates that the statute and associated regulatory provision allow for circumstances when internal reporting is not required, including for good cause shown. NHTSA believes these provisions strike the appropriate balance that the statute intended by incentivizing the use of internal reporting mechanisms in appropriate circumstances.

MEMA and Hyundai both proposed that internal reporting should always be required for a potential whistleblower to be eligible for an award. MEMA proposed a broader internal reporting requirement that would require whistleblowers to report the information to the manufacturer prior to providing the information to NHTSA. MEMA explained that this requirement would give manufacturers the opportunity to rectify an issue without having to burden NHTSA. Hyundai proposed a similar broadening of the reporting requirement and proposed a waiting period requiring a whistleblower to give a manufacturer a discrete amount of time to report an issue to NHTSA before the whistleblower can contact NHTSA. Hyundai argued that this waiting period will give a manufacturer the opportunity to assess if a safety issue exists and, if appropriate, issue a recall. This waiting period, Hyundai comments, would prevent a whistleblower from internally reporting an issue and reporting it to NHTSA in quick succession. If a company does not have a formal requirement, Ford proposed the burden should be on the whistleblower to show NHTSA in writing a reasonable attempt was made to bring the information to persons in the company.

Conversely, the National Whistleblower Center proposed language that further restricts the internal reporting requirement, excluding the internal reporting requirement if no such mechanism exists or, like in the proposed regulation, the whistleblower reasonably believes an internal report would result in retaliation.

NHTSA disagrees with expanding the internal reporting requirement. The proposed requirement in the NPRM comes from the statutory language used in 49 U.S.C. 30172(c)(2)(E). That statutory language requires potential whistleblowers to use internal reporting requirements only when they are in place and have mechanisms to protect employees from retaliation. Therefore, NHTSA disagrees with proposals expanding this internal reporting requirement outside the statutory language and requiring internal reporting when no mechanism is in place. Congress carved out an exception to this requirement for potential whistleblowers who have a reasonable belief that an internal report would lead to retaliation. Therefore, it would be contrary to this exception to always require internal reporting even when no mechanism is in place to protect whistleblowers from retaliation.

Additionally, NHTSA disagrees with Hyundai's proposed, discrete waiting period for manufacturers to report an issue to NHTSA before a potential whistleblower may contact the Agency. The fact that NHTSA is also aware of a potential safety issue does not impact a manufacturer's ability to expeditiously address it.

Further, Kohn, Ford, and the National Whistleblower Center proposed more specifically defining an internal report. Kohn proposed that NHTSA include more specifications on what an internal report must include. For example, Kohn proposed that NHTSA clarify whether the information internally reported must match what is reported to NHTSA. Ford proposed a requirement that internal reporting must be in writing so that the whistleblower can provide documentation of internal reporting to NHTSA. The National Whistleblower Center proposed a specific definition for ''internal reporting mechanism'' that includes a program widely publicized to employees that is independent of any legal department of the employer that can provide investigatory procedures, burdens of proof, and relief consistent with the Moving Ahead for Progress in the 21st Century Act, Public Law 112–141, 49 U.S.C. 30171. Additionally, Ford proposed that NHTSA should clarify how it will consider whether an internal reporting mechanism has protections against retaliation.

NHTSA believes that these issues are best suited to case-by-case evaluations and declines to further define these issues in the final rule. NHTSA agrees that the issue internally reported must generally match what is reported to NHTSA. It is likely that the information reported will not be identical, however, since additional context may be needed to explain the issue to the Agency. Additionally, the potential whistleblower may have additional information to report to the Agency based on how the internal report was handled. Whether or not a whistleblower has a reasonable belief that retaliation could occur or that the issue was already known to the company will likewise be handled on a case-by-case basis, given the fact-specific nature of those issues. Additionally, NHTSA disagrees that a specific format for an internal report should be required. Although written documentation would be helpful for evaluating whether or not a potential whistleblower complied with internal reporting requirements, NHTSA does not believe such a requirement is necessary. For example, NHTSA is aware that some companies provide a telephone hotline for reporting potential safety issues. Use of such a provided mechanism would generally be sufficient to constitute an internal report.

In addition, Kohn proposed that NHTSA adopt a number of blanket exemptions to the internal reporting requirement including: (1) if the whistleblower is not an employee of the entity at issue; (2) if the entity does not have an internal reporting program that guarantees confidentiality, is not independent from line-management, is not managed by an arm of the Office of General Counsel, and has independent authority to report to the company's Chief Executive Office, Board of Directors, or Audit Committee; and (3) if the whistleblower is located in a country that lacks legal protections for internal whistleblowers at least as effective as 49 U.S.C. 30171 and 29 CFR 1988. Further, Kohn proposed that NHTSA create requirements that lawyer-managed compliance programs be managed in an ethical manner.

Similarly, the National Whistleblower Center proposed a subjective test to determine if a whistleblower has a reasonable belief of retaliation. Additionally, the National Whistleblower Center proposed language that exempts the internal reporting requirement when: (1) the employer has been found to have obstructed justice within the last five years prior to the whistleblower report; (2) the whistleblower reasonably believes the information was already internally reported or subject of an internal investigation, or was otherwise already known to the employer, or constitutes an immediate threat to public safety, or the violation was willfully committed; and (3) if the disclosure of the whistleblower is covered under the obstruction of justice laws, including 18 U.S.C. 1513(e), or if the whistleblower first provides the information to any law enforcement officer as a result of voluntary testimony in a grand jury or federal court proceeding concerning a potential criminal violation of an auto safety law.

After consideration of these comments, NHTSA again believes these issues are best suited for case-by-case evaluation. While these types of considerations may support a potential

whistleblower's reasonable belief that an internal report would have resulted in retaliation, was not necessary because it was already reported or known to the company, or otherwise constitute good cause for not requiring an internal report, NHTSA believes the proposed regulatory language appropriately balances providing guidance on these considerations with flexibility to consider the unique circumstances of each matter. Every situation is different and NHTSA does not want to discourage potential whistleblowers from reporting if their particular situation does not neatly fit into one of the proposed blanket exceptions, or to incentivize companies to take a ''check the box'' approach to designing an appropriate internal reporting mechanism and safeguards against retaliation.

Ford proposed creating a presumption that an internal reporting mechanism protecting a whistleblower's confidentiality protects whistleblowers against retaliation. Additionally, Ford proposed clarification that a whistleblower's submitted information based on independent analysis should be subject to the internal reporting requirement. NHTSA declines to adopt these changes. Protecting confidentiality does not necessarily mean that a company is protecting a potential whistleblower from retaliation. For example, a potential whistleblower might be assured their name will not be reported, but the information they provide might indicate who reported that information. In that situation, assurance of confidentiality does not ensure that individual will not be retaliated against. Moreover, a potential whistleblower should not have to keep their identity confidential to be protected from retaliation and the ability of employees to openly speak up about potential safety issues advances vehicle safety.

NHTSA also believes the proposed regulation adequately addresses all types of information, including independent analysis. For example, independent analysis logically would not be already known to the company unless reported. However, a potential whistleblower that has conducted independent analysis may have a reasonable belief that disclosure would result in retaliation. These issues are best addressed by a case-by-case consideration of the circumstances.

NHTSA also wants to note that if retaliation does take place, a potential whistleblower should file a claim with the Occupational Safety and Health Administration (OSHA).[27] Retaliation includes such actions as firing or laying off, demoting, denying overtime or promotion, or reducing pay or hours.[28]

G. Provision of False Information (§ 513.8)

Proposed § 513.8 tracked the language of 49 U.S.C. 30172(g), which states that a person who knowingly and intentionally makes any false, fictitious, or fraudulent statement or representation, or who makes or uses any writing or document knowing it to contain any false, fictitious, or fraudulent statement or entry, shall not be entitled to an award and shall be subject to prosecution under 18 U.S.C. 1001.

NHTSA received no comments on proposed § 513.8. NHTSA is adopting this rule as proposed.

H. Procedures for Making a Claim for a Whistleblower Award (§ 513.9)

Proposed § 513.9 included a description of steps a whistleblower is required to follow to make an application for an award. The proposed process would begin with the Agency posting a ''Notice of Covered Action'' (Notice) on NHTSA's website whenever any administrative or judicial action, including any related administrative or judicial action, brought by the U.S. Department of Transportation, NHTSA, or U.S. Department of Justice under 49 U.S.C. Chapter 301 in the aggregate results in collected monetary sanctions exceeding $1,000,000. The proposed Notice is published subsequent to a final judgment, order, or agreement that alone, or in the aggregate, results in collected monetary sanctions exceeding $1,000,000. For clarity, NHTSA will only post a Notice of Covered Action for any such action after the effective date of this rule.[29]

Hyundai commented generally in support of the procedures in proposed § 513.9. Kohn proposed an agency obligation to notify known whistleblowers about a ''Notice of Covered Action'' that is related to the information provided by that whistleblower. Additionally, Kohn proposed an agency requirement, like that of the IRS, whereby NHTSA must submit a form stating whether or not the investigators relied on information from an individual resulting in an enforcement action. Kohn and the National Whistleblower Center proposed a deadline for NHTSA to make a preliminary award determination within 180 days of the posting of the notice and a final decision within one year of the publication of the Notice.

NHTSA intends to inform known whistleblowers or their counsel of the Notice, but does not believe that it is necessary to codify. NHTSA disagrees with submitting a form stating whether or not the investigators relied on information from an individual resulting in an enforcement action. NHTSA is a much smaller organization than the IRS and does not believe that the burden of preparing such a form is outweighed by the benefit.

Also, NHTSA disagrees with the proposed requirement to impose a particular deadline on issuing an award decision after the Notice. The length of time to complete the Agency's assessment may depend on multiple factors, including whether follow-up is needed to clarify issues raised by the award claim and the complexity of the legal and factual issues involved, as well as agency resources and priorities. Additionally, due to its size, NHTSA does not have a dedicated whistleblower office.

Kohn supported the allowance of emailed filings and the proposed WB–AWARD form. Kohn also agrees that all persons meeting the requirements should be eligible for an award regardless of citizenship. These comments are consistent with the rule as proposed.

The NPRM proposed that a claimant will have ninety (90) days from the date of the Notice of Covered Action to file a claim, including any attachments, for an award based on that action, or the claim will be barred. However, Kohn proposed that if the 90th day falls on a weekend or federal holiday, the deadline should be the next business day. NHTSA agrees and has changed the regulatory text to ensure clarity on this issue.

I. Award Determinations (§ 513.10)

Proposed § 513.10 described the award determination process. 513.10(b) implements 49 U.S.C. 30172(c), as delegated to the NHTSA Administrator, and provides that the determination of whether, to whom, or in what amount to make an award shall be in the discretion of the Administrator. NHTSA requested comment regarding whether the Agency should limit its discretion and, if so, in what way.

Although 49 U.S.C. 3017(c) provides the Secretary with discretion as to

[27] *See https://www.dol.gov/general/topics/whistleblower.*

[28] *See* 15 U.S.C. 2087. If a claim is filed under 15 U.S.C. 2087, it needs to be filed within 180 days of the occurrence of the discriminatory action.

[29] NHTSA also posts information on civil penalties collected on its website at *https://www.nhtsa.gov/laws-regulations/civil-penalty-settlements.*

whether to make an award, Constantine Cannon, Cohen Milstein, and Kohn commented that § 513.10 should make awards mandatory. Commenters pointed to a few mandatory award programs and their success to support this proposal. Commenters proposed a mandatory award program is needed because it will incentivize whistleblowers who fear losing their livelihood to report information. Additionally, commenters suggested mandatory financial incentives help potential whistleblowers partner with counsel they would not otherwise be able to afford to represent them through the legal process. Constantine Cannon claimed the rare and unusual circumstances presented by NHTSA in the NPRM where an award would be denied have never occurred and should not be used as reason to retain discretion. Similarly, Cohen Milstein argues the occurrences listed by NHTSA in the NPRM are already contemplated and addressed by 49 U.S.C. 30172(c)(2)(A) and (B), which expressly limit award disqualification to situations where a whistleblower's own violations relate to the violations that are subject of the enforcement action. Cohen Milstein also proposed the statutory floor of a whistleblower award at 10% would be redundant if the Administrator had discretion to award no award at all. Additionally, Kohn argued judicial review is not enough to prevent the abuse of discretion to deny rewards for any reason because courts will not overturn denials.

After consideration of the comments, NHTSA believes that it is important to retain discretion. The reward mandates found in the False Claims Act and the Dodd-Frank Act use different language from that found in 49 U.S.C. 30172(c). 49 U.S.C. 30172(c) explicitly provides discretion to determine ''*whether,* to whom, or in what amount to'' make a whistleblower award (emphasis added). Congress explicitly gave NHTSA discretion it gave neither under the False Claims Act nor under the Dodd-Frank Act.[30] Therefore, a complete elimination of that discretion, as proposed by commenters, would be inconsistent with the language of the Whistleblower Act. Further, NHTSA does not believe the statutory floor of 10% is redundant if NHTSA has the discretion to not make an award. NHTSA believes the 10% is a statutory floor if NHTSA decides to make an award. As described in the NPRM, this discretion would allow NHTSA to retain the ability to address rare circumstances. NHTSA does not believe this discretion should be a meaningful consideration for prospective whistleblowers. NHTSA likewise has discretion as to whether or not to pursue an enforcement action, and if so, the appropriate penalty.

One individual commenter and Ford suggested the Agency develop a well-defined award matrix and include in § 513.10(a) the factors considered when determining whether, to whom, and in what amount to make an award. The National Whistleblower Center proposed such language that specifically outlines when the Secretary may increase or decrease the percentage of the award paid to the whistleblower. Proposed factors to consider that may lead to an increase in percentage include (1) the significance of the information, (2) assistance provided by the whistleblower, (3) law enforcement interest, (4) participation in internal compliance systems and reporting mechanisms, (5) whether the whistleblower resides outside the United States, (6) the extent to which the award will encourage non-US citizens to provide information, and (7) whether the whistleblower promptly contacted federal or state law enforcement. Proposed factors to consider that may decrease a whistleblower award include (1) culpability, (2) an unreasonable reporting delay, and (3) interference with internal compliance and reporting mechanisms. These factors are similar to those found in the False Claims Act and the Dodd-Frank Act.

NHTSA disagrees that adopting a formalized matrix or factors beyond those already proposed is necessary or appropriate at this time. 49 U.S.C. 30172(c) already contains some of the factors proposed by the National Whistleblower Center, including the significance of information,[31] assistance provided by the whistleblower,[32] and participation in internal compliance systems and reporting mechanisms.[33] These factors give guidance both to NHTSA and stakeholders, while retaining flexibility to consider the unique circumstances of each case. NHTSA also specifically disagrees with adding an award factor that directs NHTSA to consider law enforcement interest. This is a factor found in the CFTC's regulations, 17 CFR 165.9(3)(b), which states, ''the Commission will assess its programmatic interest in deterring violations of the Commodity Exchange Act by making awards to whistleblowers who provide information that leads to the successful enforcement of such laws.'' NHTSA believes this is goal is already encompassed in consideration of the ''public interest'' found in proposed § 513.10(b)(5). Further, NHTSA disagrees with considering whether the whistleblower resides outside the United States and the extent to which the award will encourage non-U.S. citizens to provide information. Non-U.S. citizens are eligible for whistleblower awards and NHTSA does not believe that this is relevant to the amount of the award. Many vehicles and parts are manufactured outside the United States and many companies that sell in the United States also conduct business around the world. Thus, whistleblowers outside the United States have information highly relevant to NHTSA's vehicle safety work. As explained above, NHTSA has already made a whistleblower award to an individual who was employed in South Korea, which led to one of the largest enforcement actions in NHTSA's history. Additionally, the NPRM already included a factor regarding the statutory purpose of incentivizing whistleblowers. NHTSA does not believe there is a need to bifurcate that factor into incentivizing U.S. citizens specifically. Finally, NHTSA disagrees with enumerating factors for decreasing a whistleblower award. Many of these factors already will lead to disqualification of a whistleblower from receiving an award as mentioned in the above discussion of proposed § 513.7. Each whistleblower award application will contain a unique set of facts and circumstances that NHTSA will consider.

In the NPRM, NHTSA noted, in making a determination of a whistleblower award, the Agency anticipates reviewing relevant materials such as the claimant's WB–AWARD

[30] *See* 31 U.S.C. 3730(d) (''If the Government proceeds with an action brought by a person under [the False Claims Act], such person *shall,* subject to the second sentence of this paragraph, receive at least 15 percent but not more than 25 percent of the proceeds of the action or settlement of the claim'') (emphasis added); *see also* 7 U.S.C. 26 (''[T]he Commission . . . *shall* pay an award or awards to 1 or more whistleblowers who voluntarily provided original information to the Commission that led to the successful enforcement of the covered judicial or administrative action, or related action, in an aggregate amount equal to—(A) not less than 10 percent, in total, of what has been collected of the monetary sanctions imposed in the action or related actions; and (B) not more than 30 percent, in total, of what has been collected of the monetary sanctions imposed in the action or related actions.'') (emphasis added); *see also* 29 U.S.C. 7623(b)(1) (''If the Secretary proceeds with any administrative or judicial action described in subsection (a) based on information brought to the Secretary's attention by an individual, such individual *shall* . . . receive as an award . . .'' (emphasis added)).

[31] *See* 49 U.S.C. 30172(c)(1)(B)(ii).

[32] *See id.* 30172(c)(1)(B)(iii).

[33] *See id.* 30172(c)(1)(B)(i).

form, other filings or submissions from the potential whistleblower, materials from NHTSA staff, sworn declarations, and any other materials that may be relevant to the determination. In the NPRM, NHTSA requested comment on whether it should review information from outside persons, such as the company that was liable for the civil penalties. In the NPRM, NHTSA stated its tentative view that outside parties should not be able to insert themselves into the award process and submit information during the award determination.

Commenters generally agreed with NHTSA's tentative view that the Agency should not review information from outside persons, such as the company that was liable for the civil penalties. Commenters agreed that NHTSA's confidentiality obligations prohibit sharing with third parties a whistleblower's contribution to a successful action. Additionally, Constantine Cannon and Kohn suggested it would be unfair to a whistleblower to have to litigate with a third party whether the whistleblower deserved an award. Further, Kohn proposed that allowing information from outside persons would offer a company an opportunity to submit derogatory information about the whistleblower. NHTSA agrees with commenters and therefore will not generally consider submissions of information from outside persons or third parties when making an award determination. This determination does not preclude the Agency from considering investigative material, much of which likely came from the company liable from the civil penalty or other outside sources. Moreover, this determination does not preclude the Agency from following up, as appropriate, should it need additional information to consider the award claim.

J. Appeals of Award Determinations (§ 513.11)

In accordance with 49 U.S.C. 30172(h)(2), the proposed § 513.11 outlined the procedures for a claimant to appeal any award determination made by the Administrator under § 513.10. Proposed § 513.11(a)(2) provided that if any claimant appeals within 30 days after a final award determination is issued by the Administrator, no payments with respect to the covered action will be made to any whistleblower in the action until the appealed award determination action is concluded. NHTSA requested comment on this position.

Most commenters supported or had no comments regarding the proposed § 513.11. However, Cohen Milstein commented that § 513.11 is too broad and NHTSA should not withhold uncontested portions of a whistleblower award during an appeal. Cohen Milstein proposed that even with multiple whistleblowers contesting an award amount, there is no reason to withhold a minimum uncontested amount to each whistleblower.

However, NHTSA disagrees and believes that finality is important before initiating payment. As stated in the NPRM, NHTSA is constrained by the statute as to what percentage of the collected monetary sanctions in a covered action it may award to all whistleblowers. Any appeal could affect the amount paid. For example, if a court found that the Agency erroneously determined an individual eligible, it is possible even the uncontested portion of an award would be invalidated.

K. Form WB–INFO (Appendix A)

The Agency proposed to include form WB–INFO in Appendix A to part 513 to capture basic information about a potential whistleblower, the potential whistleblower's legal representative (if applicable), the motor vehicle manufacturer, part supplier or dealership about whom the concern is raised, the potential whistleblower's current employer and address, and the potential whistleblower's relationship to the company about which the concern is raised.

Auto Innovators proposed a new field on the form explaining why the information relates to a matter that is likely to cause unreasonable risk of death or serious injury. Auto Innovators reasoned this proposal will allow NHTSA to quickly determine whether the submitted information is appropriate for the whistleblower program.

NHTSA disagrees, as this determination is more appropriately made by NHTSA and the information already required by the form will inform that issue.

L. Form WB–RELEASE (Appendix B)

In the NPRM, NHTSA proposed form WB–RELEASE in Appendix B for those whistleblowers who wish to provide prior written consent for the Agency to disclose information that could reasonably be expected to reveal the whistleblower's identity. NHTSA requested comment on whether the form WB–RELEASE should be prescribed by regulation, whether it would be better to specify the content of the form (and not the form itself), or whether the Agency should take a different approach.

Kohn objected to the release form because of concerns that a potential whistleblower may interpret the release form as something that must be done to please investigators and investigators may use the form without considering specific circumstances. Kohn proposed any waiver of confidentiality should be done on a case-by-case basis and points to the IRS, SEC, and CFTC programs that do not use a similar form.

Due to the way NHTSA investigates, in the course of an inquiry or analysis surrounding a whistleblower's allegations, it may become necessary for NHTSA to reveal information that reasonably could be expected to reveal the whistleblower's identity to persons or their counsel or agents at the organization or institution against whom such allegations are made. Such information could also be revealed to other entities if necessary for NHTSA to gather needed information on the alleged safety issue or misconduct that the whistleblower has brought to the Agency's attention. The WB–RELEASE form provides whistleblowers a way to provide such consent. Consent is voluntary, as expressly indicated on the form. The Agency may request that a whistleblower provide such consent, as such consent may facilitate NHTSA's review of the information.

M. Form WB–AWARD (Appendix C)

The NPRM also proposed WB–AWARD in Appendix C to part 513. Proposed form WB–AWARD, and the instructions thereto, requested basic information about a claimant and the claimant's legal representative (if applicable), the issue/information submitted by the claimant, information regarding the Notice of Covered Action, information on how the claimant acquired the original information, as well as other information relevant to the claimant's eligibility for an award. Specifically, the form asks whether the potential whistleblower is the subject or target of a criminal investigation connected to the information at issue.

Constantine Cannon proposed the removal of the requirement for a whistleblower to disclose on proposed WB–AWARD form information about whether the potential whistleblower is currently the subject or target of a criminal investigation connected to the information at issue. Constantine Cannon suggested the disclosure is contrary to Congress's intent because Congress mandated a bar for those convicted of criminal violations, not individuals being investigated for a criminal violation. Similarly,

Constantine Cannon proposed that a person might not know if they are the subject of a criminal investigation and therefore be unable to honestly respond to the question on the WB–AWARD form.

NHTSA disagrees. The requirement makes the Agency aware of criminal investigations, to the extent known to the claimant. The regulations still only bar a person from receiving an award if they are convicted rather than if they are only investigated. A potential whistleblower will not be barred from receiving an award because they did not disclose a criminal investigation of which they were unaware. NHTSA is adopting the form as proposed, without substantive change.

III. Regulatory Analyses and Notices

Executive Order 12866, Executive Order 13563, Executive Order 14094, and DOT Regulatory Policies and Procedures

NHTSA has considered the impact of this rulemaking action under Executive Order 12866, Executive Order 13563, Executive Order 14094, and the Department of Transportation's regulatory policies and procedures. This final rule is nonsignificant under E.O. 12866 and E.O. 14094 and was not reviewed by the Office of Management and Budget (OMB). It is also not considered ''of special note to the Department'' under DOT Order 2100.6A, Rulemaking and Guidance Procedures.

This action adds part 513 to implement the whistleblower program. This is a program for whistleblowers to voluntarily submit information to NHTSA and potentially receive monetary awards. The rule formalizes certain procedures for the whistleblower program, including through the use of forms to help provide guidance to whistleblowers, organize information submitted to the Agency, and ensure the Agency receives the information needed to make determinations on whistleblower awards. Because the Agency expects any costs, benefits, or savings associated with this rulemaking to be minimal, we have not prepared a separate economic analysis for this rulemaking.

Regulatory Flexibility Act

In compliance with the Regulatory Flexibility Act, 5 U.S.C. 601, *et seq.,* NHTSA has evaluated the effects of this action on small entities. I certify that this final rule is not expected to have a significant economic impact on a substantial number of small entities. The rules apply only to those employees and contractors of motor vehicle manufacturers, part suppliers, or dealerships who provide information to the Agency relating a potential motor vehicle defect, potential noncompliance, or any violation or alleged violation of any notification or reporting requirement of 49 U.S.C. Chapter 301 (or regulation thereunder), which is likely to cause unreasonable risk of death or serious physical injury. Companies and other entities are not eligible to participate in the program as whistleblowers. Consequently, the persons that are subject to this final rule are not ''small entities'' for the purposes to the Regulatory Flexibility Act. Therefore, a regulatory flexibility analysis is not required for this action.

National Environmental Policy Act

NHTSA has analyzed this rule for the purposes of the National Environmental Policy Act. In accordance with 49 CFR 1.81, 42 U.S.C. 4336, and DOT NEPA Order 5610.1C, NHTSA has determined that this rule is categorically excluded pursuant to 23 CFR 771.118(c)(4) (planning and administrative activities, such as promulgation of rules, that do not involve or lead directly to construction). This rule is not anticipated to result in any environmental impacts and there are no extraordinary circumstances present in connection with this rulemaking.

This rule defines certain terms important to the operation of the whistleblower program, outlines the procedures for submitting original information to NHTSA and applying for awards, discusses NHTSA's procedures for making decisions on award applications, and generally explains the scope of the whistleblower program to the public and potential whistleblowers. NHTSA's decisions on who qualifies as a whistleblower and who is eligible to receive a whistleblower award would constitute separate agency actions that are independent of this final rule. Similarly, the information that NHTSA will receive from whistleblowers under this final rule will already exist, and therefore, will be independent of this final rule. Finally, all current and former employees or contractors who are potential whistleblowers under this rule will choose to submit information voluntarily to NHTSA. Consequently, this rule is not expected to significantly affect the quality of the human environment.

Executive Order 13132 (Federalism)

NHTSA has examined this final rule pursuant to Executive Order 13132 (64 FR 43255, August 10, 1999) and concluded that no additional consultation with states, local governments, or their representatives is mandated beyond the rulemaking process. The Agency has concluded that this action would not have ''federalism implications'' because it would not have ''substantial direct effects on States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government,'' as specified in section 1 of the Executive Order. This rule generally applies to employees and contractors of motor vehicle manufacturers, part suppliers, or dealerships. Thus, Executive Order 13132 is not implicated and consultation with state and local officials is not required.

Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 requires agencies to prepare a written assessment of the costs, benefits and other effects of proposed or final rules that include a federal mandate likely to result in the expenditure by state, local or tribal governments, in the aggregate, or by the private sector, of more than $100 million annually (adjusted for inflation with base year of 1995). This final rule does not result in the expenditure by state, local or tribal governments, in the aggregate, or by the private sector, of more than $100 million annually.

Executive Order 12988 (Civil Justice Reform)

With respect to the review of the promulgation of a new regulation, section 3(b) of Executive Order 12988, ''Civil Justice Reform'' (61 FR 4729, February 7, 1996) requires that Executive agencies make every reasonable effort to ensure that the regulation: (1) clearly specifies the preemptive effect, if any; (2) clearly specifies any effect on existing federal law or regulation; (3) provides a clear legal standard for affected conduct while promoting simplification and burden reduction; (4) specifies the retroactive effect, if any; (5) adequately defines key terms; and (6) addresses other important issues affecting clarity and general draftsmanship under any guidelines issued by the Attorney General.

Pursuant to this Order, NHTSA notes as follows: This final rule implements the whistleblower program, including outlining the procedures for submitting original information, applying for awards, the Agency's procedures for making decisions on the claims, appeals of such decisions, and payment of the award. It discusses communications with individuals reporting safety

information and protections afforded related to the whistleblowers' identity. The statute was effective upon enactment.

The rule will not have retroactive effect. Under the rule of construction contained in Section 24352(b) of the FAST Act, information submitted by a whistleblower in accordance with the requirements at 49 U.S.C. 30172 does not lose its status as original information solely because the whistleblower submitted the information prior to the effective date of these regulations if that information was submitted after the date of enactment of the FAST Act. In accordance with section 24352(b) of the FAST Act, the statute does not retroactively qualify information submitted prior to the enactment of the FAST Act as original information eligible for whistleblower protection or monetary award. The rule likewise does not have retroactive application to information submitted prior to enactment of the FAST Act.

Congressional Review Act

The Congressional Review Act, 5 U.S.C. 801 *et seq.,* as added by the Small Business Regulatory Enforcement Fairness Act of 1996, generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of the Congress and to the Comptroller General of the United States. NHTSA will submit a report containing this rule and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the **Federal Register**. This rule does not meet the criteria in 5 U.S.C. 804(2) to be considered a major rule.

Regulation Identifier Number

The DOT assigns a regulation identifier number (RIN) to each regulatory action listed in the Unified Agenda of Federal Regulations. The Regulatory Information Service Center publishes the Unified Agenda in April and October of each year. You may use the RIN contained in the heading at the beginning of this document to find this action in the Unified Agenda.

Paperwork Reduction Act

Under the procedures established by the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501, *et seq.*), federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct, sponsor, or require through regulations. A person is not required to respond to a collection of information by a federal agency unless the collection displays a valid OMB control number. The Information Collection Request (ICR) for a proposed new information collection described below has been forwarded to OMB for review and comment.

NHTSA did not receive any comments that directly addressed its PRA analysis or its burden estimates discussed in the NPRM. As described above, this final rule requires the same information to be collected as was proposed in the NPRM. However, NHTSA did receive one comment about a voluntary potential burden that is separate from NHTSA's three required forms. This comment addressed the Agency's proposed suggestion for potential whistleblowers under binding nondisclosure agreements to consult private counsel before providing information to NHTSA. We discuss that comment and potential burden below.

The titles for the collection of information are forms: (1) WB–INFO, (2) WB–RELEASE, and (3) WB–AWARD. Under § 513.4 and § 513.9, these forms are necessary to implement section 30172 of the Safety Act.

The WB–INFO form allows a whistleblower to provide information to the Agency and its staff relating to general information about the whistleblower, information about the motor vehicle manufacturer, part supplier, or dealership about whom the concern is raised, the type and source of information being reported, the individual's legal representative (if applicable), the information about any potential motor vehicle defect, potential noncompliance, or violation or alleged violation of any notification or reporting requirement of Chapter 301 or regulation thereunder, which is likely to cause unreasonable risk of death or serious physical injury, and additional information.

Form WB–RELEASE provides a means for a whistleblower to provide prior written consent for the Agency to disclose information which could reasonably be expected to reveal the whistleblower's identity.

The WB–AWARD form allows the claimant to provide information related to the claimant's eligibility for an award.

Summary of the Collection of Information:

Form WB–INFO, which would be submitted pursuant to § 513.4, requests the following information:

(1) Background information regarding the person submitting the form, including the person's name, contact information and occupation and the person's relationship to the company about whom the concern is raised;

(2) Information about the motor vehicle manufacturer, part supplier or dealership about which the concern is raised;

(3) If the person is represented by a legal representative, the name and contact information for the person's legal representative (in cases of anonymous submissions the person must be represented by a legal representative);

(4) Information regarding the issue involving a motor vehicle manufacturer, part supplier, or dealership, including the date of the alleged issue, whether the conduct is on-going, and whether the person or their counsel had any prior communication with NHTSA;

(5) Whether the allegation is related to a potential safety-related defect or noncompliance with an applicable Federal Motor Vehicle Safety Standard, and if so a detailed description of the allegation and how the allegation affects vehicle/system/component performance and/or compliance, and the make, model, model year, part number, component number, etc., if known;

(6) Whether the allegation is related to any violation or alleged violation of any notification or reporting requirement of the Safety Act, and if so, a description of the notification or reporting issue, including all facts pertinent to the alleged violation;

(7) A description of supporting materials in the whistleblower's possession and the availability and location of other additional supporting materials;

(8) A description of how the person learned about or obtained the information submitted, and, if any information was obtained from a public source, a description of that source;

(9) Identification of documents or other information in the submission that the person believes could reasonably be expected to reveal the person's identity and the basis for that belief;

(10) Whether the person or legal representative of the person has taken any other action regarding the issue, and if so, a description;

(11) Whether the person acquired the information through a means or manner that has been determined by a United States federal court or a state court to violate applicable federal or state criminal law, and if so, details regarding that determination;

(12) Whether the person acquired the information solely through a communication that was subject to a privilege, such as the attorney-client privilege or attorney work product doctrine;

(13) Any other relevant information;

(14) A declaration, signed under penalty of perjury under the laws of the United States, that the information provided to NHTSA is true and correct to the best of the person's knowledge, information and belief and acknowledgement from the person that they may be subject to prosecution and ineligible for a whistleblower award if, in their submission of information, their other dealings with NHTSA, or their dealings with another authority in connection with a related action, they knowingly and willfully make any false, fictitious or fraudulent statements or representations, or use any false writing or document knowing that the writing or document contains any false, fictitious or fraudulent statement or entry; and

(15) If represented by a legal representative, the legal representative's certification certifying that the legal representative has verified the identity of the individual who completed form WB–INFO by viewing that individual's valid, unexpired government issued identification, reviewed the individual's WB–INFO form for accuracy, and that the information contained therein is true and correct to the best of the legal representative's knowledge, information and belief; that the legal representative will retain an original, signed copy of the form with section F filled out by their client in their file; and that the legal representative has obtained the whistleblower's non-waivable consent to provide NHTSA with the whistleblower's original signed WB–INFO form in the event that NHTSA requests it.

Form WB–RELEASE requests the following information:

(1) Background information regarding the whistleblower submitting the WB–RELEASE form, including the person's name and address;

(2) The name of the motor vehicle manufacturer, part supplier and/or dealership to which the whistleblower's issue or information relates;

(3) An acknowledgment that the person consents to disclosure of information that could reasonably be expected to reveal the person's identity; and

(4) Signature of the whistleblower and date.

Form WB–AWARD, which would be submitted pursuant to § 513.9 requires the following information:

(1) The claimant's name, address and contact information;

(2) If the person is represented by a legal representative, the name and contact information for the legal representative;

(3) Details concerning the issue, including the manner in which the information was submitted to NHTSA, the date when the information was submitted, the form in which it was submitted, and the name of the motor vehicle manufacturer, part supplier and/or dealership to which the issue or information relates;

(4) Information concerning the Notice of Covered Action to which the claim relates, including the date of the Notice, the Notice Number, and the Case name and number; and information regarding related actions, if applicable;

(5) Information relating to the claimant's eligibility for an award, including whether the person acquired the information solely through a communication that was subject to the attorney-client privilege or attorney work product doctrine; whether the person acquired the original information by a means or manner that was determined by a United States federal court or state court to violate applicable federal or state criminal law; and whether the person is currently a subject or target of a United States federal or state criminal investigation or has been convicted of a criminal violation by a United States federal or state court in connection with the allegations or conduct the person submitted to NHTSA. If any of the circumstances noted above were applicable, the person is requested to provide an explanation;

(6) An explanation of the reasons that the person believes an award in connection with the person's submission of information to NHTSA is warranted, including any information that might be relevant in light of the criteria for determining the amount of an award set forth in 49 U.S.C. 30172 and 49 CFR part 513; and

(7) A declaration by the claimant under penalty of perjury under the laws of the United States that the information provided in the WB–AWARD form is true and correct to the best of the person's knowledge, information and belief and acknowledgement from the person that they may be subject to prosecution and ineligible for a whistleblower award if, in their submission of information, their other dealings with NHTSA, or their dealings with another authority in connection with a related action, they knowingly and willfully make any false, fictitious or fraudulent statements or representations, or use any false writing or document knowing that the writing or document contains any false, fictitious or fraudulent statement or entry.

Description of the Need for the Information and Use of the Information:

The collection of information on form WB–INFO will be used to permit the Agency and its staff to collect information from whistleblowers regarding any potential motor vehicle defect, potential noncompliance, or any violation or alleged violation of any notification or reporting requirement of the Safety Act or regulation thereunder for which NHTSA has enforcement authority. NHTSA investigators consider information provided by whistleblowers, which may lead to formal actions like an investigation, recall, or civil penalty enforcement action. If this information leads to a successful resolution of a covered action resulting in monetary sanctions collected by the United States in excess of $1,000,000, a whistleblower would be eligible for an award.

The WB–RELEASE form will provide a means for the whistleblower to provide consent for the Agency to disclose information that could reasonably be expected to reveal the identity of the whistleblower. Being able to disclose this information may allow the Agency to open a public investigation or proceed more efficiently with an investigation into the whistleblower's allegations. This form is not required.

The WB–AWARD form will permit the Agency to collect information relating to a claimant's eligibility for an award, the claimant's position on why they should receive an award, and the claimant's view on the criteria for determining the amount of an award. This information would allow the Administrator to determine claims for whistleblower awards.

Finally, there is a potential limited number of respondents who may need to consult with private counsel about a binding nondisclosure agreement prior to the potential whistleblower submitting a WB–INFO form to NHTSA. This is an optional, voluntary step that some potential whistleblowers may choose to take so they can receive legal advice with respect to whether a confidentiality agreement with their employer prohibits them from submitting information to NHTSA.

Affected Public:

The likely respondents to form WB–INFO are those employees or contractors of motor vehicle manufacturers, part suppliers, and dealerships who wish to provide the Agency staff with information relating to any potential motor vehicle defect, potential noncompliance, or any violation or alleged violation of any notification or reporting requirement of the Safety Act

or regulation thereunder that is likely to cause unreasonable risk of death or serious physical injury.

The likely respondents to form WB–RELEASE are those individuals who wish to provide prior written consent to NHTSA for disclosure of information that could reasonably be expected to reveal that individual's identity.

The likely respondents to form WB–AWARD will be those individuals who have provided the Agency with original information by filing a WB–INFO form, and who believe they are eligible for an award under 49 CFR part 513.

The potential likely respondents who may need to consult with private counsel prior to submitting a WB–INFO form to NHTSA are those individuals who signed a binding nondisclosure agreement.

Estimated Number of Respondents for Form WB–INFO:

Since the enactment of the FAST Act in 2015, NHTSA has received approximately 300 submissions that it has considered potential whistleblower submissions.[34] The Agency estimates that there will be approximately 50 individuals per fiscal year who may wish to file such form. The Agency estimated the number of individuals based on the current number of whistleblower submissions and the Agency's view that submissions will increase once the whistleblower reward program is more widely known, after the rules are promulgated and additional whistleblower awards are made.

Frequency of Form WB–INFO:

The Agency expects that the individual will complete one form detailing all potential issues they are aware of.

Number of Responses for Form WB–INFO:

The Agency anticipates there will be approximately 50 individuals per fiscal year who may wish to file such a form. NHTSA assumes half of this number will have a legal representative.

Estimated Total Annual Burden Hours for Form WB–INFO:

NHTSA estimates an average of 10 burden hours per individual who completes the WB–INFO form, and 20 hours per individual who has a legal representative complete the WB–INFO form. The completion time will depend largely on the complexity of the alleged violation and the amount of information the whistleblower possesses in support of the allegations. The Agency estimates that the total annual PRA burden of form WB–INFO is 750 hours per year (25 respondents who use a legal representative × 20 hours) plus (25 respondents who fill out their own form × 10 hours).

Estimated Total Annual Burden Cost for Form WB–INFO:

NHTSA estimates the total annual burden cost for the Form WB–INFO to be $266,000. NHTSA bases the estimate on the following:

Costs for Legal Representatives to Fill out the Form WB–INFO:

Under the final rule, a potential whistleblower who discloses their identity may elect to retain a legal representative, while an anonymous potential whistleblower is required to retain a legal representative. The Agency expects that in most of those instances where a legal representative is retained, the whistleblower/claimant's legal representative will complete or assist in the completion of some or all of the required forms on the client's behalf. The Agency also expects that in the vast majority of cases in which a whistleblower/claimant is represented by a legal representative, such person will enter into a contingency fee arrangement with such legal representative, providing that the legal representative will provide representation in exchange for a fixed percentage of any recovery under the whistleblower award program. Therefore, the Agency believes that most persons will not incur any direct expenses for attorneys' fees for the completion of required forms. The Agency also anticipates that a very small number of people will enter into hourly fee arrangements with counsel. The Agency believes that approximately half of potential whistleblowers will have a legal representative submit the forms. The Agency has estimated the cost of using a legal representative regardless of whether the fee is contingent or hourly.

To estimate those expenses, the Agency makes the following assumptions:

(i) The Agency will receive approximately 50 WB–INFO forms annually;

(ii) Of these approximately 50 WB–INFO forms, potential whistleblowers will have a legal representative submit approximately 25 WB–INFO forms;

(iii) Legal representative cost will be on average $532 [35] per hour; and

(iv) Legal representatives will bill on average 20 hours to review materials and complete form WB–INFO.[36]

Based on those assumptions, the Agency estimates that each year the cost of legal representative time for completion of the forms will be $266,000 for the completion of form WB–INFO (($532 × 20 hours) × 25 respondents).

Costs of Submission

The Agency anticipates that the vast majority of whistleblowers/claimants will submit the forms using electronic means rather than mail. Therefore, the expected cost of submission of the forms is $0.00.

Estimated Number of Respondents for Form WB–RELEASE:

The Agency estimates that it will receive 45 WB–RELEASE forms per year.

Frequency of Form WB–RELEASE:

The Agency expects that an individual will complete one form per year.

Number of Responses for Form WB–RELEASE:

The Agency anticipates there will be approximately 45 individuals per fiscal year who may wish to file a form WB–RELEASE.

Estimated Total Annual Burden Hours for Form WB–RELEASE:

The Agency estimates that it will take 15 minutes per individual to complete the form, and the Agency estimates that it would receive 45 WB–RELEASE forms per year. The Agency anticipates that potential whistleblowers will complete and submit for themselves 20 WB–RELEASE forms annually and that legal representatives will submit on their client's behalf 25 WB–RELEASE forms annually. Thus, the Agency estimates that that estimated annual PRA burden of form WB–RELEASE is 11.25 hours per fiscal year (45 respondents × 15 minutes/60).

Estimated Total Annual Burden Cost for Form WB–RELEASE:

NHTSA estimates the total annual burden cost for the Form WB–RELEASE to be $3,325. The Agency bases the estimate on the following:

Involvement and Cost of Legal Representatives:

[34] Because there has not been a required method or form of submission, NHTSA has taken a broad view of what is considered whistleblower information. Such information comes from a variety of sources, such as Vehicle Owner Questionnaires (''VOQ''), information provided by telephone, and information submitted by letter or email to the Agency. NHTSA has taken this broad view not only to review and track the information submitted, but also to better protect the confidentiality of those who have provided whistleblower information to the Agency.

[35] This amount is based on the U.S Attorney's Office for the District of Columbia Fees Matrix for 2015–2021, assuming that an attorney with 11–15 years of experience assists the whistleblower. *See https://www.justice.gov/file/1461316/download.*

[36] The Agency expects that counsel will need to expend additional time to gather information from the whistleblower or review sources of information needed to complete the forms, which is why this estimate is higher than the estimate to just complete the form.

Under the Final Rule, a potential whistleblower who discloses their identity may elect to retain a legal representative, while an anonymous potential whistleblower is required to retain a legal representative. The Agency expects that in most of those instances where a legal representative is retained, the potential whistleblower's legal representative will complete or assist in the completion of some or all of the required forms on the client's behalf. The Agency also expects that in the vast majority of cases in which a potential whistleblower is represented by a legal representative, such person will enter into a contingency fee arrangement with such legal representative, providing that the legal representative will provide representation in exchange for a fixed percentage of any recovery under the whistleblower award program. Therefore, the Agency believes that most persons will not incur any direct expenses for attorneys' fees for the completion of required forms. The Agency also anticipates that a very small number of people will enter into hourly fee arrangements with counsel. The Agency has estimated the cost of using a legal representative regardless of whether the fee is contingent or hourly.

To estimate those expenses, the Agency makes the following assumptions:

(i) The Agency will receive 45 WB–RELEASE forms annually;

(ii) Potential whistleblowers will have a legal representative submit approximately 25 WB–RELEASE forms annually;

(iii) Attorney cost will be on average $532 [37] per hour; and

(iv) Attorneys will bill on average 15 minutes to complete form WB–RELEASE.

Based on those assumptions, the Agency estimates that each year the cost of attorney time for completion of the forms will be $3,325 for the completion of form WB–RELEASE (($532 × 15 minutes/60) × 25 respondents).

Costs of Submission

The Agency anticipates that the vast majority of potential whistleblowers will submit the forms using electronic means rather than mail. Therefore, the expected cost of submission of the forms is $0.00.

Estimated Number of Respondents for Form WB–AWARD:

Each individual who has submitted a form WB–INFO and wishes to be considered for an award under the program would be required to provide a WB–AWARD form to the Agency. A claimant could only submit a WB–AWARD form after there has been a ''Notice of Covered Action'' published on the Agency's website pursuant to § 513.9. The Agency estimates that it will post approximately 1–2 such Notices each year. The Agency bases this estimate by looking at the enforcement actions resulting in civil penalties exceeding $1,000,000 over the last several years, not including deferred penalties not collected or performance amounts. In some years, the Agency did not collect any civil penalties exceeding $1,000,000. In another year, the Agency had several instances where it collected more than $1,000,000 in civil penalties in connection with an enforcement action. The Agency believes that as this whistleblower program grows, more actionable submissions will be made and, as a consequence, the Agency will have more actions resulting in collected monetary sanctions exceeding $1,000,000.

Considering the estimate of the anticipated yearly covered actions, and the Agency's experience to date, the Agency estimates that it would receive approximately 2 WB–AWARD forms each year.[38]

Frequency of Form WB–AWARD:

The Agency expects that the individual will complete one form.

Number of Responses for Form WB–AWARD:

The Agency anticipates there will be approximately 2 individuals per fiscal year who may wish to file such.

Estimated Total Annual Burden Hours for Form WB–AWARD:

The collection is estimated to involve approximately 10 burden hours per individual seeking to be considered for an award under the Agency's whistleblower program. The Agency estimates that the estimated annual PRA burden of form WB–AWARD is 20 hours per fiscal year (2 respondents × 10 hours).

Estimated Total Annual Burden Cost for Form WB–AWARD:

The Agency estimates the total annual burden cost for the Form WB–AWARD to be $10,640. The Agency bases the estimate on the following:

Involvement and Cost of Legal Representatives

Under the final rule, a potential whistleblower who discloses their identity may elect to retain a legal representative, while an anonymous potential whistleblower is required to retain a legal representative. The Agency expects that in most of those instances where a legal representative is retained, the potential whistleblower/claimant's legal representative will complete or assist in the completion of some or all of the required forms on the client's behalf. The Agency also expects that in the vast majority of cases in which a potential whistleblower/claimant is represented by a legal representative, such person will enter into a contingency fee arrangement with such legal representative, providing that the legal representative will provide representation in exchange for a fixed percentage of any recovery under the whistleblower award program. Therefore, the Agency believes that most persons will not incur any direct expenses for legal representatives' fees for the completion of required forms. The Agency also anticipates that a very small number of people will enter into hourly fee arrangements with counsel. However, the Agency does believe that all individuals submitting a WB–AWARD form will use a legal representative. The Agency has estimated the cost of using a legal representative regardless of whether the fee is contingent or hourly.

To estimate those expenses, the Agency makes the following assumptions:

(i) The Agency will receive approximately 2 WB–AWARD forms annually;

(ii) Claimants will have a legal representative submit 2 WB–AWARD forms annually;

(iii) Legal representative cost will be on average $532 [39] per hour; and

(iv) Legal representatives will bill on average 10 hours to complete a form WB–AWARD.

Based on those assumptions, the Agency estimates that each year the cost of legal representatives' time for completion of the forms will be $10,640 for the completion of form WB–AWARD (($532 × 10 hours) × 2 respondents).

Costs of Submission

The Agency anticipates that the vast majority of claimants will submit the

[37] This amount is based on the U.S Attorney's Office for the District of Columbia Fees Matrix for 2015–2021, assuming that an attorney with 11–15 years of experience assists the whistleblower. *See https://www.justice.gov/file/1461316/download.*

[38] While it is unlikely that there will be whistleblower information provided in connection with every Notice of Covered Action posted by the Agency, this estimate calculates burden hours as if there were one claim for each Covered Action.

[39] This amount is based on the U.S Attorney's Office for the District of Columbia Fees Matrix for 2015–2021, assuming that an attorney with 11–15 years of experience assists the whistleblower. *See https://www.justice.gov/file/1461316/download.*

forms using electronic means rather than mail. Therefore, the expected cost of submission of the forms is $0.00.

Mandatory Collection of Information

As proposed in the NPRM, a person will be required to complete and submit a WB–INFO form and to submit a WB–AWARD form to qualify for a whistleblower award.

Optional Annual Burden Cost Associated With Collection of a WB–INFO Form

Consulting with private counsel about a nonbinding disclosure agreement is a voluntary, optional burden cost; however, it is a voluntary burden cost that some potential whistleblowers might need to take prior to submitting a WB–INFO form to NHTSA.

As discussed above, NHTSA received a comment from Kohn that disagreed with NHTSA's suggestion in the NPRM that potential whistleblowers under binding nondisclosure agreements consult private counsel before submitting a WB–INFO form to NHTSA. As noted above, NHTSA is obligated to adhere to and support a whistleblower's statutory protections, but NHTSA's attorneys do not represent whistleblowers. Therefore, if a whistleblower needs legal advice, they should obtain their own private legal counsel.

Estimated Number of Respondents Consulting Private Counsel About a Binding Nondisclosure Agreement:

The Agency estimates that five potential whistleblowers per year will consult private counsel about a binding nondisclosure agreement with their employer. This estimate is based on the approximately 50 individuals per year who may submit whistleblower information to the Agency. This estimate is also based on potential whistleblowers who consider submitting information to the Agency but choose not to submit information to the Agency after consulting with private counsel about a binding nondisclosure agreement with their employer.

Estimated Total Annual Burden Hours for Respondents Consulting Private Counsel About a Binding Nondisclosure Agreement:

The Agency estimates that each private counsel will take approximately two hours to review a binding nondisclosure agreement, and the Agency estimates that five potential whistleblowers may consult with private counsel about a binding nondisclosure agreement per year. Thus, the Agency estimates that the estimated annual PRA burden of consulting with private counsel about a binding nondisclosure agreement is 10 hours per fiscal year (five respondents × two hours).

Estimated Annual Cost of Respondents Consulting Private Counsel About a Binding Nondisclosure Agreement:

NHTSA estimates the total annual burden cost for respondents consulting with private counsel about a binding nondisclosure agreement to be $5,320. The Agency bases the estimate on the following:

Involvement and Cost of Legal Representatives:

To estimate those expenses, the Agency makes the following assumptions:

(i) The Agency will receive 50 whistleblower submissions annually;

(ii) Five potential whistleblowers will consult with private counsel about a binding nondisclosure agreement annually;

(iii) Attorney costs will be on average $532 per hour; and

(iv) Attorneys will bill on average two hours to review a binding nondisclosure agreement.

Based on those assumptions, the Agency estimates that each year the cost of attorney time for consultation about a binding nondisclosure agreement will be $5,320 (($532 × two hours) × five respondents).

List of Subjects in 49 CFR Part 513

Administrative procedure and practice, Appeal procedures, Claims, Investigations, Imports, Lawyers, Motor vehicle safety, Privacy, Reporting and record keeping requirements, Tires, Whistleblowing.

■ For the reasons discussed in the preamble, NHTSA adds 49 CFR part 513 to read as follows:

PART 513—WHISTLEBLOWER PROGRAM

Sec.

513.1 General.
513.2 Definitions
513.3 Representation.
513.4 Procedures for submitting original information.
513.5 Confidentiality.
513.6 Prerequisites to the consideration of an award.
513.7 Whistleblowers ineligible for an award.
513.8 Provision of false information.
513.9 Procedures for making a claim for a whistleblower award.
513.10 Award determinations.
513.11 Appeals of award determinations.
513.12 Procedures applicable to the payment of awards.
Appendix A to Part 513—Form WB–INFO
Appendix B to Part 513—Form WB–RELEASE
Appendix C to Part 513—Form WB–AWARD

Authority: 49 U.S.C. 322 and 49 U.S.C. 30172; delegation of authority at 49 CFR 1.95.

§ 513.1 General.

This part 513 describes the whistleblower program established by the Agency to implement the Motor Vehicle Safety Whistleblower Act, 49 U.S.C. 30172, explains procedures that a potential whistleblower must follow to be eligible for an award, and the circumstances under which information that may reasonably be expected to reveal the identity of a whistleblower may be disclosed by the National Highway Traffic Safety Administration (NHTSA). Potential whistleblowers should read these procedures carefully because failure to take required steps in a timely fashion in conformance with these rules may result in disqualification from receiving an award. Questions about the whistleblower program or these rules should be directed to the NHTSA Office of the Chief Counsel at *NHTSAWhistleblower@dot.gov*. Unless expressly provided for in this part, no person is authorized to make any offer or promise, or otherwise bind the Agency with respect to the payment of any award or the amount thereof, and any such offer or promise will not be honored.

§ 513.2 Definitions.

(a) *Statutory definitions.* All terms used in this part have the same meaning as in 49 U.S.C. 30102(a) or (b), unless otherwise defined in this part.

(b) *Other terms.* As used in this part:

Administrative action. The term ''administrative action'' means all or a portion of an action, other than a judicial action, brought by the NHTSA or the U.S. Department of Transportation under 49 U.S.C. Chapter 301 that may result in civil penalties or other monetary payment paid to and collected by the United States government. It specifically includes settlement agreements and consent orders that are entered into by the Agency.

Agency. The term ''Agency'' refers to the National Highway Traffic Safety Administration (NHTSA).

Collected monetary sanctions. The term ''collected monetary sanctions'' means monies, including penalties and interest, ordered or agreed to be paid and that have been collected by the United States, pursuant to the authority in 49 U.S.C. 30165 or under the authority of 49 U.S.C. 30170.

Contractor. The term ''contractor'' means an individual presently or formerly providing goods or services to

a motor vehicle manufacturer, part supplier, or dealership pursuant to a contract.

Covered action. The term ''covered action'' means any administrative or judicial action, including any related administrative or judicial action brought by the Secretary, NHTSA, or the Attorney General under 49 U.S.C. Chapter 301, or a regulation thereunder, that in the aggregate results in monetary sanctions exceeding $1,000,000. The over $1,000,000 threshold can be satisfied if the total amount of monetary sanctions paid by multiple defendants or parties and collected by the United States totals more than $1,000,000 in the covered action.

Dealership. The term ''dealership'' means a person selling and distributing motor vehicles or motor vehicle equipment primarily to purchasers that in good faith purchase the vehicles or equipment other than for resale.

Employee. The term ''employee'' means an individual presently or formerly employed by a motor vehicle manufacturer, part supplier, or dealership.

Independent knowledge or analysis. The term ''knowledge'' as used in this part means factual information in the potential whistleblower's possession that is not generally known or available to the public and is not already known to NHTSA. The potential whistleblower may gain independent knowledge from the potential whistleblower's experiences, communications, and observations in the potential whistleblower's business or social interactions. As used in this part, ''analysis'' means the potential whistleblower's examination and evaluation of information that may be generally or publicly available, but which reveals information that is not generally known or available to the public. This analysis must be the potential whistleblower's own analysis, whether done alone or in combination with others.

NHTSA will not consider the potential whistleblower's information to be derived from the potential whistleblower's independent knowledge or analysis if the potential whistleblower obtained the information:

(i) Solely through a communication that was subject to the attorney-client privilege or work product doctrine; or

(ii) By a means or in a manner that has been determined by a United States federal court or state court to violate applicable federal or state criminal law.

Motor vehicle defect. The term ''motor vehicle defect'' means a defect in a motor vehicle or item of motor vehicle equipment.

Noncompliance. A ''noncompliance'' occurs when a motor vehicle or item of motor vehicle equipment does not comply with an applicable Federal Motor Vehicle Safety Standard.

Original information. The term ''original information'' means information that—

(i) Is derived from the independent knowledge or analysis of an individual;

(ii) Is not known to the Secretary or Agency from any other source, unless the individual is the original source of the information;

(iii) Is not exclusively derived from an allegation made in a judicial or an administrative action, in a governmental report, a hearing, an audit, or an investigation, or from the news media, unless the individual is a source of the information; and

(iv) Is provided to the Agency for the first time after December 4, 2015.

Original information that leads to a successful resolution. The Agency will consider that the potential whistleblower provided original information that ''leads to'' a successful resolution of a covered action in the following circumstances:

(i) The potential whistleblower gave the Agency original information that was sufficiently specific, credible and timely to cause the Agency to open an investigation, reopen an investigation that the Agency had closed, continue an investigation the Agency would not have continued but for the information, or to inquire concerning a different potential violation of Chapter 301, or a regulation thereunder, as part of a current investigation, and the U.S. Department of Transportation, Agency, or U.S Department of Justice brought a successful judicial or administrative action based in whole or in part on conduct that was the subject of the potential whistleblower's original information; or

(ii) The potential whistleblower gave the Agency original information about conduct that was already under investigation by the Agency and the potential whistleblower's information significantly contributed to the success of the covered action and the U.S. Department of Transportation, Agency, or U.S. Department of Justice brought a judicial or administrative action that achieves a successful resolution based in whole or in part on conduct that was the subject of the potential whistleblower's original information.

Part supplier. The term ''part supplier'' means a manufacturer of motor vehicle equipment.

Potential whistleblower. The term ''potential whistleblower'' refers to an employee or contractor of a motor vehicle manufacturer, part supplier, or dealership submitting information to the Agency in accordance with and pursuant to this part.

Related administrative or judicial action. The term ''related administrative or judicial action'' means an action that was brought under 49 U.S.C. Chapter 301 by the U.S. Department of Justice, the U.S Department of Transportation, or the Agency and is based on the original information provided by the whistleblower.

Secretary. The term ''Secretary'' means the Secretary of Transportation.

Successful resolution. A successful resolution, when referring to any administrative or judicial action brought by the Secretary, Agency, or the Attorney General relating to any potential motor vehicle defect, potential noncompliance, or any violation or alleged violation of any notification or reporting requirement under 49 U.S.C. Chapter 301, or a regulation thereunder, which is likely to cause unreasonable risk of death or serious physical injury, includes any settlement of the action by the U.S. Department of Transportation, Agency or the U.S. Department of Justice or final decision or judgment in whole or in partial favor of the Agency, the U.S. Department of Transportation, or the U.S. Department of Justice.

Whistleblower. The term ''whistleblower'' means any employee or contractor of a motor vehicle manufacturer, part supplier, or dealership who voluntarily provides to the Agency original information relating to any motor vehicle defect, noncompliance, or any violation or alleged violation of any notification or reporting requirement of 49 U.S.C. Chapter 301, or a regulation thereunder, which is likely to cause unreasonable risk of death or serious physical injury.

§ 513.3 Representation.

A whistleblower or potential whistleblower may be represented by a legal representative.

§ 513.4 Procedures for submitting original information.

(a) A potential whistleblower's submission must be made by completing a WB–INFO form and submitting it to the Office of the Chief Counsel, National Highway Traffic Safety Administration, by email to *NHTSAWhistleblower@dot.gov* or other submission method expressly designated on NHTSA's website for such submissions.

(b) By completing the WB–INFO form, the potential whistleblower must declare under penalty of perjury at the time the whistleblower submits

information pursuant to paragraph (a) of this section that the information is true and correct to the best of the potential whistleblower's knowledge and belief.

(c) A potential whistleblower may provide original information to the Agency anonymously through use of a legal representative. The legal representative must submit the information on behalf of the potential whistleblower pursuant to the procedures specified in paragraph (a) of this section. Prior to the legal representative's submission, the potential whistleblower must provide the legal representative with a completed WB–INFO form that the potential whistleblower has signed under the penalty of perjury. When the legal representative makes the submission on behalf of the potential whistleblower, the legal representative must certify that the legal representative:

(1) Has verified the potential whistleblower's identity;

(2) Has verified that the potential whistleblower is an employee or contractor of a motor vehicle manufacturer, part supplier, or dealership;

(3) Has reviewed the potential whistleblower's signed WB–INFO form for accuracy and that the information contained therein is true and correct to the best of the legal representative's knowledge, information and belief; and

(4) Has obtained the potential whistleblower's non-waivable consent to provide the Agency with the original WB–INFO form for the potential whistleblower in the event that the Agency requests it.

(d) If a potential whistleblower submitted original information to the Agency after December 4, 2015 but before January 16, 2025, the submission will be deemed to satisfy the requirements set forth in paragraphs (a) and (b) of this section.

§ 513.5 Confidentiality.

(a) *In General.* Notwithstanding 49 U.S.C. 30167, the Secretary and any officer or employee of the U.S. Department of Transportation shall not disclose any information, including information provided by a whistleblower to the Secretary, that could reasonably be expected to reveal the identity of a whistleblower, except in accordance with the provisions of 5 U.S.C. 552a, unless:

(1) Disclosure is required to a defendant or respondent in connection with a public proceeding instituted by the Secretary, the Agency, or any entity described in paragraph (c);

(2) The whistleblower provides prior written consent for the information to be disclosed; or

(3) The Secretary, or other officer or employee of the U.S. Department of Transportation, receives the information through another source, such as during an inspection or investigation under 49 U.S.C. 30166, and has the authority under other law to release the information.

(b) *Use by Attorney General.* Notwithstanding paragraph (a) of this section, nothing in this section is intended to limit the ability of the Attorney General to present such evidence to a grand jury or to share such evidence with potential witnesses or defendants in the course of an ongoing criminal investigation.

(c) *Availability to Federal Government Agencies.* Notwithstanding paragraph (a) of this section, without the loss of its status as confidential in the hands of the Administrator, all information referred to in paragraph (a) of this section may, in the discretion of the Administrator, when determined by the Administrator to be necessary or appropriate to accomplish the purposes of 49 U.S.C. Chapter 301, be made available to the U.S. Department of Justice or an appropriate department or agency of the federal government, acting within the scope of its jurisdiction, provided that each entity shall maintain information as confidential in accordance with the requirements of paragraph (a).

(d) *Redaction.* When disclosing any information under paragraph (a) of this section, the Secretary and any officer or employee of the U.S. Department of Transportation shall take reasonable measures not to reveal the identity of the whistleblower by taking measures not to reveal the whistleblower's name, and redacting the whistleblower's name when information is disclosed under paragraph (a).

(e) *Section 552(b)(3)(B).* The identity of the whistleblower and the information provided to Secretary by the whistleblower shall be considered exempt from disclosure under the provisions of 5 U.S.C. 552 to the fullest extent permitted by law.

(f) *The whistleblower.* The person should self-identify as a whistleblower at the time the person first submits original information relating to any potential motor vehicle defect, potential noncompliance, or any violation or alleged violation of any notification or reporting requirements under 49 U.S.C. Chapter 301 or a regulation thereunder by submitting a WB–INFO form. If the person is represented by a legal representative, that legal representative should identify the client as a whistleblower at the time the legal representative first submits original information relating to any potential motor vehicle defect, potential noncompliance, or any violation or alleged violation of any notification or reporting requirements under 49 U.S.C. Chapter 301 or regulation thereunder on behalf of the legal representative's client in the WB–INFO form.

§ 513.6 Prerequisites to the consideration of an award.

(a) Subject to the eligibility requirements described in this part, NHTSA may, but is not required to, authorize payment of an award to one or more persons who:

(1) Provide a voluntary submission to the Agency;

(2) Provide in that submission original information relating to any potential motor vehicle defect, potential noncompliance, or any violation or alleged violation of any notification or reporting requirement of 49 U.S.C. Chapter 301 or a regulation thereunder, which is likely to cause unreasonable risk of death or serious physical injury; and

(3) The original information provided in that submission leads to the successful resolution of a covered action.

(b) To be eligible, the person must have given the Agency original information in the form and manner that the Agency requires in § 513.4. The Agency may, for good cause, waive this requirement.

§ 513.7 Whistleblowers ineligible for an award.

No award under § 513.10 shall be made:

(a) If the amount of monetary sanctions collected in a covered action does not exceed $1,000,000;

(b) To any whistleblower who is convicted of a criminal violation by a United States federal or state court related to the covered action for which the whistleblower otherwise could receive an award under this part;

(c) To any whistleblower who, acting without direction from an applicable motor vehicle manufacturer, part supplier, or dealership, or agent thereof, deliberately causes or substantially contributes to the alleged violation of a requirement of 49 U.S.C. Chapter 301 or a regulation thereunder;

(d) To any whistleblower who submits information to the Agency that is based on the facts underlying the covered action submitted previously by another whistleblower;

(e) To any whistleblower who fails to provide the original information to the

Agency in the form required by § 513.4 without good cause shown;

(f) To any whistleblower who knowingly and intentionally makes any false, fictitious, or fraudulent statement or representation, or who makes or uses any false writing or document knowing the same to contain any false, fictitious, or fraudulent statement or entry; or

(g) If the applicable motor vehicle manufacturer, parts supplier, or dealership has an internal reporting mechanism in place to protect employees from retaliation, to any whistleblower who fails to report or attempt to report the information through such mechanism, unless:

(1) The whistleblower reasonably believed that such an internal report would have resulted in retaliation, notwithstanding 49 U.S.C. 30171(a);

(2) The whistleblower reasonably believed that the information:

(A) was already internally reported;

(B) was already subject to or part of an internal inquiry or investigation; or

(C) was otherwise already known to the motor vehicle manufacturer, part supplier, or dealership; or

(3) The Agency has good cause to waive this requirement.

§ 513.8 Provision of false information.

A person who knowingly and intentionally makes any false, fictitious, or fraudulent statement or representation, or who makes or uses any false writing or document knowing the same to contain any false, fictitious, or fraudulent statement or entry, shall not be entitled to an award under this section and shall be subject to prosecution under section 1001 of title 18.

§ 513.9 Procedures for making a claim for a whistleblower award.

(a) Whenever any administrative or judicial action, including any related administrative or judicial action, brought by the U.S. Department of Transportation, Agency, or U.S. Department of Justice under 49 U.S.C. Chapter 301 in the aggregate results in collected monetary sanctions exceeding $1,000,000, the Agency will publish on the Agency's website a ''Notice of Covered Action.'' Such Notice will be published subsequent to a final judgment, order, or agreement that alone, or in the aggregate, results in collected monetary sanctions exceeding $1,000,000. A claimant will have ninety (90) days from the date of the Notice of Covered Action to file a claim, including any attachments, for an award based on that action, or the claim will be barred. The claim is deemed filed on the date that it is received by the Agency.

(b) To file a claim for a whistleblower award, the claimant must complete the WB–AWARD form and submit it no later than ninety (90) calendar days from the date of the Notice of Covered Action to NHTSA's Office of the Chief Counsel by email to *NHTSAWhistleblower@dot.gov* or another method expressly designated on NHTSA's website. If the ninetieth day falls on a weekend or federal holiday, the claim deadline is the next business day.

(c) If the claimant provided original information anonymously pursuant to § 513.4, the claimant must disclose the claimant's identity on the WB–AWARD form and the claimant's identity must be verified in a form and manner that is acceptable to the Agency prior to the authorization of payment of any award to such claimant.

(d) If a claimant filed a claim for a whistleblower award after December 4, 2015 (the date of the enactment of the FAST Act) but before January 16, 2025, the claim submission will be deemed to meet the requirements of § 513.9.

§ 513.10 Award determinations.

(a) Once the time for filing any appeals of the covered action (and all related actions) has expired, or where an appeal has been filed, after all appeals in the covered action and related actions have concluded, and over $1,000,000 in monetary sanctions have been collected, the Agency will evaluate all timely whistleblower award claims submitted on a WB–AWARD form in accordance with the criteria set forth in this part. The Agency may require the claimant to provide additional information relating to the claimant's eligibility for an award or satisfaction of any of the conditions for an award.

(b) The determination of whether, to whom, or in what amount to make an award shall be in the discretion of the Administrator. In determining whether to grant an award to a whistleblower eligible for an award and the amount of an award, the Administrator shall take into consideration, as appropriate:

(1) Whether a whistleblower reported or attempted to report the information internally to an applicable motor vehicle manufacturer, part supplier, or dealership;

(2) The significance of the original information provided by the whistleblower to the successful resolution of the covered action;

(3) The degree of assistance provided by the whistleblower and any legal representative of the whistleblower in the covered action;

(4) The statutory purpose of incentivizing whistleblowers; and

(5) The public interest or such additional factors as the Administrator considers relevant.

(c) If the Administrator determines that an award is warranted, the Administrator shall determine the amount of such award or awards to one or more whistleblowers. Whistleblower awards shall be in an aggregate amount equal to—

(1) Not less than 10 percent, in total, of monetary sanctions collected in the covered action; and

(2) Not more than 30 percent, in total, of monetary sanctions collected in the covered action.

(d) Following the Administrator's determination, the Agency will send each whistleblower claimant an Order setting forth whether the claim is granted or denied, and if granted, setting forth the award amount. If the Administrator determines that an award is warranted, in no event will the total amount awarded to all whistleblowers in the aggregate be less than 10 percent or greater than 30 percent of the amount of monetary sanctions collected in the covered action.

(e) No contract with the Agency is necessary for a whistleblower to receive an award.

§ 513.11 Appeals of award determinations.

(a) A claimant may appeal any determination made by the Administrator under § 513.10 to an appropriate court of appeals of the United States not later than 30 days after the Order is issued by the Administrator.

(1) If no claimant files an appeal within 30 days after the Order is issued by the Administrator, no appeals are permitted with respect to the claim that is the subject of the Order.

(2) If any claimant appeals within 30 days after the Order is issued by the Administrator, no payments with respect to the covered action will be made until the appealed award determination action is concluded.

(b) These rules do not entitle claimants to obtain from the Agency any privileged materials such as pre-decisional, attorney-client privileged, attorney work product privileged, or internal deliberative process materials related to the Administrator's Order and/or any privileged material relating to whether, to whom, and in what amount to make a whistleblower award.

(c) The Agency may make redactions to the materials constituting the record as necessary, including but not limited to making redactions to comply with statutory restrictions, the Agency's enforcement and regulatory functions and regulations, and to comply with

requests for confidential treatment from law enforcement, regulatory authorities, or persons submitting information to the Agency pursuant to 49 CFR part 512.

(d) Pursuant to 49 U.S.C. 30172(h)(3), the court shall review the determination made by the Administrator in accordance with 5 U.S.C. 706.

§ 513.12 Procedures applicable to the payment of awards.

(a) A recipient of a whistleblower award is entitled to payment on the award only to the extent that a monetary sanction upon which the award is based is collected in the covered action.

(b) Payment of a whistleblower award for a monetary sanction collected in connection with a covered action shall be made within a reasonable time following the later of:

(1) The date on which the monetary sanction totaling over $1,000,000 is collected; or

(2) The completion of the appeals process for all award determination claims arising from the Administrator's Order relating to the covered action.

Appendix A to Part 513—Form WB–INFO

FORM WB-INFO
WHISTLEBLOWER SUBMISSION

See Privacy Act Statement, Submission Procedures, and Completion Instructions below.

A. INFORMATION ABOUT YOURSELF			
1. Last Name		2. First Name	3. M.I.
4. Street Address			5. Apartment/Unit #
6. City	7. State/Province	8. ZIP/Postal Code	9. Country
10. Telephone	11. Alt. Phone	12. Email Address	13. Preferred Method of Communication
14. Occupation			
15. Current Employer Name			
16. Current Employer Address			
17. Your relationship to the company about whom the concern is raised:			
B. INFORMATION ABOUT THE MOTOR VEHICLE MANUFACTURER, PART SUPPLIER, OR DEALERSHIP ABOUT WHICH THE CONCERN IS RAISED			
1. Company Name			
2. Street Address			

3. City	4. State/Province	5. ZIP/Postal Code	6. Country

7. Do you or did you work for the motor vehicle manufacturer, part supplier or dealership about which the concern is raised?

[] Yes [] No
If yes, please provide dates.
If no, please identify what motor vehicle manufacturer, part supplier or dealership you work or worked for:

8. Does this motor vehicle manufacturer, part supplier or dealership have an internal reporting mechanism?

[] Yes [] No [] I Don't Know

9. If the answer to number 8 above is yes, did you report this issue through the internal reporting mechanism?

[] Yes. Date Reported: _____

[] No. Reason for not reporting_____

C. LEGAL REPRESENTATIVE INFORMATION (IF APPLICABLE – SEE INSTRUCTIONS)

1. Legal representative's Name			
2. Firm Name			
3. Street Address			
4. City	5. State/Province	6. ZIP/Postal Code	7. Country
8. Telephone	9. Email address		

D. TELL US ABOUT THE ISSUE INVOLVING THE MOTOR VEHICLE MANUFACTURER, PART SUPPLIER, OR DEALERSHIP	
1. Date(s) of alleged conduct:	2. Is the conduct ongoing? [] Yes [] No [] I Don't Know
3a. Have you or your legal representative had any prior communication with the NHTSA concerning this matter? [] Yes [] No 3b. If yes, provide the name of the NHTSA staff member(s) with whom you or your legal representative communicated and date of such communication:	
4a. Is your allegation related to a potential safety-related defect or a noncompliance with an applicable Federal Motor Vehicle Safety Standard? [] Yes [] No 4b. If yes, please provide a detailed description of allegation and a detailed description of how the allegation affects vehicle/system/component performance and/or compliance. Please include the make, model, model year, part number, component number, etc. if known	
5a. Is your allegation related to any violation or alleged violation of any notification or reporting requirement of the Safety Act? [] Yes [] No 5b. Provide a description of the notification or reporting issue. State in detail all facts pertinent to the alleged violation.	
6. Describe all supporting materials in your possession and the availability and location of any additional supporting materials not in your possession. If necessary, please use additional sheets.	

E. ADDITIONAL INFORMATION (USE ADDITIONAL SHEETS IF NECESSARY)
1. Describe how you learned about or obtained the information that supports your allegations. In addition, if any information was obtained from a public source, identify the source with as much particularity as possible.
2. Identify with particularity any documents or other information in your submission that you believe could reasonably be expected to reveal your identity and explain the basis for your belief that your identity could be reasonably expected to be revealed if the documents or information were disclosed to a third party.
3a. Have you or your legal representative taken any other action regarding the issue or your allegations? [] Yes [] No 3b. If "Yes," please provide details. Use additional sheets, if necessary.
4. Did you acquire the information through a means or manner that has been determined by a United States federal court or a state court to violate applicable federal or state criminal law? [] Yes [] No **If the answer to this question is yes, please contact NHTSA's Office of the Chief Counsel before you submit this form.**
5. Did you acquire the original information that you are submitting to NHTSA solely through a communication that was subject to a privilege, such as the attorney-client privilege or attorney work product doctrine? [] Yes [] No **If the answer to this question is yes, please contact NHTSA's Office of the Chief Counsel before you submit this form.**
6. Provide any additional information that you think may be relevant. Attach additional sheets if necessary.

F. PROSPECTIVE WHISTLEBLOWER'S DECLARATION	
I declare under penalty of perjury under the laws of the United States that the information contained herein is true and correct to the best of my knowledge, information and belief. I fully understand that I may be subject to prosecution and ineligible for a whistleblower award if, in my submission of information, my other dealings with the National Highway Traffic Safety Administration, or my dealings with another authority in connection with a related action, I knowingly and willfully make any false, fictitious or fraudulent statements or representations, or use any false writing or document knowing that the writing or document contains any false, fictitious or fraudulent statement or entry.

G. CERTIFICATION OF LEGAL REPRESENTATIVE OF ANONYMOUS WHISTLEBLOWER (IF APPLICABLE)	
I certify that I have reviewed this form for accuracy and that the information contained herein is true and correct to the best of my knowledge, information and belief. I further certify that I have verified the identity of the person on whose behalf this form is being submitted by viewing the person's valid, unexpired government issued identification (*e.g.*, driver's license, passport) and will retain an original, signed copy of this form, with Section F signed by the person, in my records. I further certify that I have obtained the person's non-waivable consent to provide the National Highway Traffic Safety Administration with the original signed WB-INFO form in the event that the National Highway Traffic Safety Administration requests it.	
Print Name of Legal representative and Law Firm, if Applicable	
Signature	Date

Privacy Act Statement

The Privacy Act of 1974 requires that the National Highway Traffic Safety Administration (NHTSA) inform individuals of the following when asking for information. This form may be used by an employee or contractor of a motor vehicle manufacturer, part supplier, or dealership, or a legal representative acting on such person's behalf, who wishes to provide NHTSA with information relating to any potential motor vehicle defect, potential noncompliance, or any violation or alleged violation of any notification or reporting requirements of 49 U.S.C. Chapter 301 or regulation thereunder, which is likely to cause unreasonable risk of death or serious physical injury. The information provided will allow the Agency to evaluate the claim and elicit information relevant to whistleblower eligibility requirements. This information may be disclosed to the U.S. Department of Justice or an appropriate department or agency of the Federal Government, acting within the scope of its jurisdiction, consistent with the confidentiality requirements set forth in 49 U.S.C. 30172(f). NHTSA may also disclose information that could reasonably be expected to reveal the identity of a whistleblower in certain limited situations, including when the whistleblower provides prior written consent. *Id.*

Furnishing the information contained in this form is voluntary but a decision not to do so will result in you not being eligible for award consideration.

Questions concerning this form may be directed to the National Highway Traffic Safety Administration, Office of the Chief Counsel by email to NHTSAWhistleblower@dot.gov.

Notice of Whistleblower Rights and Protections

This brief description will provide you with an overview of the whistleblower rights and protections.

Whistleblowers, as that term is defined in 49 U.S.C. 30172(a)(6), have a right to keep their identity confidential in most situations. 49 U.S.C. 30172(f). Generally speaking, any information which reasonably could be expected to reveal the identity of a whistleblower may be disclosed only under limited circumstances. One circumstance where NHTSA could reveal such information is if the whistleblower gives prior written consent. 49 U.S.C. 30172(f)(1)(B).

The Freedom of Information Act (FOIA), 5 U.S.C. 552, gives the public access to records of the Federal Government. Individuals can obtain information from many categories of records of the Government--not just materials that apply to them personally. NHTSA must honor requests under the FOIA, with some exceptions. Information that could reasonably be expected to reveal the identity of a whistleblower is exempted from FOIA disclosure by statute. *See* 49 U.S.C. 30172(f)(3); 5 U.S.C. 552(b)(3)(B).

NHTSA may disclose information that could reasonably be expected to reveal the identity of a whistleblower if it follows the provisions of 5 U.S.C. 552a (the Privacy Act of 1974). 49 U.S.C. 30172(f)(1). The Privacy Act prohibits the disclosure of information from a system of records (where information is retrieved by the name of the individual or by some identifying number, symbol, or other identifying particular assigned to the individual) absent the written consent of the subject individual, unless the disclosure is pursuant to one of the twelve statutory conditions.

Furthermore, under 49 U.S.C. 30171, employees providing certain motor vehicle safety information have protections from discrimination. Under 49 U.S.C. 30171(a)(1), a motor vehicle manufacturer, parts supplier or dealership may not discharge an employee or otherwise discriminate against the employee because the employee provided, caused to be provided, or is about to provide (with knowledge of the employer) or cause to be provided to the employer or the Secretary of Transportation information relating to any motor vehicle defect, noncompliance, or any violation or alleged violation of any notification or reporting requirement of the Safety Act (49 U.S.C. Chapter 301).

General Information

- To be eligible for an award under NHTSA's whistleblower program, you must first provide us with your information through one of two ways. After completing this WB-INFO form, send it to NHTSA electronically to NHTSAWhistleblower@dot.gov, or submit it by any such method that the Agency may expressly designate on its website (https://www.nhtsa.gov/laws-regulations/whistleblower-program).

- Submitting your information is the first step. If the information you submit leads to the successful resolution of a covered action that in the aggregate results in collected monetary sanctions exceeding $1,000,000, you will have an opportunity at a later date to submit a claim for an award. That is a separate process and is described in our

whistleblower rules at 49 CFR Part 513.

- You have the right to submit information anonymously. If you are submitting information anonymously, you must be represented by a legal representative in this matter and Sections C and G of this form must be completed. Otherwise, you may, but are not required to, have a legal representative. If you are submitting information anonymously, please skip Part I of these instructions and proceed directly to Part II. Otherwise, please begin by following the instructions in Part I.

Part I: Instructions for filers who are disclosing their identity to NHTSA

- You are required to complete Sections A, B, D, E, and F of this form. If you are represented by a legal representative in this matter, you must also complete section C. Specific instructions for answering these questions can be found in Part IV below.
- If you are represented, your legal representative does not need to complete Section G.
- You will need to submit the WB-INFO form in accordance with the Submission Procedures in 49 CFR Part 513.

Part II: Instructions for anonymous filers

- If you are submitting information anonymously, you must be represented by a legal representative on this matter.
- You are required to complete Sections A, B, C, D, E, and F of this form and give the signed original to your legal representative. Specific instructions for answering these questions can be found in Part IV below.
- Your legal representative must retain your signed original WB-INFO form.

Part III. Instructions for legal representatives representing anonymous filers

- Obtain a completed and signed original WB-INFO form, filled out in accordance with the Part II above. You must retain this signed original in your records.
- You must prepare a WB-INFO form, completing Sections B, C, D, and E with your client's information. You must also sign the declaration in Section G.
- You will need to submit the WB-INFO form you completed in accordance with submission procedures in 49 CFR Part 513.

Part IV. Instructions for Completing Form WB-INFO

Section A: Information About Yourself

Questions 1-16: Please provide the following information about yourself:

- Last name, first mame, and middle initial;
- Complete address, including city, state/province, zip/postal code, and country;
- Your telephone number, and if available, an alternate number where you can be reached;
- Your email address (to facilitate communications, you are strongly encouraged to provide your email address);
- Your preferred method of communication;
- Your occupation;
- Your current employer;
- Your current employer's address; and

- Your relationship to the company about whom the concern is raised.

Section B: Information About the Motor Vehicle Manufacturer, Part Supplier, or Dealership About Which the Concern is Raised

Questions 1-7: Please provide the following information about the motor vehicle manufacturer, part supplier, or dealership about which the concern is raised:

- Company name of the motor vehicle manufacturer, part supplier or dealership;
- Complete address of the motor vehicle manufacturer, part supplier, or dealership, including city, state/province, zip/postal code, and country; and
- Complete whether you work or worked for the motor vehicle manufacturer, part supplier, or dealership about whom the concern is raised. If yes, please provide dates that you work or worked for the company. If no, provide the name of the motor vehicle manufacturer, part supplier, or dealership you work or worked for.

Question 8: Please check the correct box stating whether the motor vehicle manufacturer, part supplier, or dealership about which the concern was raised has or had an internal reporting mechanism. The choices are yes, no, and I don't know.

Question 9: If you checked the "yes" box in response to the question of whether the motor vehicle manufacturer, part supplier or dealership had an internal reporting mechanism, please provide the following information:

- If you reported the issue through your company's internal reporting mechanism, check the box "yes" and provide the date that you reported to the internal reporting mechanism.
- If you did not report the issue through your company's internal reporting mechanism, check the box "no" and provide your reason for not reporting to the internal reporting mechanism.

Section C: Legal representative Information. Complete this section only if you are represented by a legal representative in this matter. If you are submitting your information anonymously and you want to be considered for an award under NHTSA's whistleblower program, you must be represented by a legal representative, and this section must be completed.

Questions 1-9: Provide the following information about the legal representative representing you in this matter:

- Legal representative's name;
- The legal representative's firm's name;
- The firm's complete address, including city, state, and zip code;
- Your legal representative's telephone number; and
- Your legal representative's email address.

Section D: Tell Us About the Issue Involving the Motor Vehicle Manufacturer, Part Supplier, or Dealership:

Question 1: Please provide the date that the alleged conduct began.

Question 2: Check the option that best describes whether the alleged conduct is ongoing.

Question 3a: Indicate whether you or your legal representative have had any prior communication with the National Highway Traffic Safety Administration ("NHTSA") concerning this matter.

Question 3b: If you answered "yes" to Question 3a, provide the name of the NHTSA staff member(s) with whom you or your counsel communicated and date of such communication.

Question 4a: Check the option that best describes whether your allegation is related to a potential safety-related defect or noncompliance with an applicable Federal Motor Vehicle Safety Standard (FMVSS).

Question 4b: If you answered "yes" to Question 4a, provide a detailed description of the allegation and a detailed description of how the allegation affects vehicle/system/component performance and/or compliance. Please include the make, model, model year, part number, component number, etc. if known.

Question 5a: Check the option that best describes whether your allegation is related to any violation or alleged violation of any notification or reporting requirement of the Safety Act.

Question 5b: If you answered "yes" to Question 5a, provide a description of the notification or reporting issue. State in detail all facts pertinent to the alleged violation.

Question 6: Describe all supporting materials in your possession and the availability and location of additional supporting materials not in your possession. Attach additional sheets if necessary.

Section E: Additional Information

Question 1: Describe how you learned about or obtained the information that supports your allegations. In addition, if any information was obtained from a public source, identify the source with as much particularity as possible. Attach additional sheets if necessary.

Question 2: Identify with particularity any documents or information in your submission that you believe could reasonably be expected to reveal your identity, and explain the basis for your belief that your identity could be reasonably expected to be revealed if the documents or information are disclosed to a third party.

Question 3a: Check the option that best describes whether you or your legal representative have taken any other action regarding the issue or your allegations.

Question 3b: If your answer to Question 3a was "Yes," provide details. Use additional sheets if necessary.

Question 4: Check the option that best describes whether you acquired information through a means or manner that has been determined by a United States federal court or a state court to violate applicable federal or state criminal law. The question also contains a statement that if the answer to this question is yes, to please contact NHTSA's Office of the Chief Counsel before you submit this form.

Question 5: Check the option that best describes whether you acquired the original information that you are submitting to NHTSA solely through a communication that was subject to a privilege, such as the attorney-client privilege or attorney work product doctrine. The question also contains a statement that if the answer to this question is yes, to please contact NHTSA's Office of the Chief Counsel before you submit this form.

Question 6: Provide any additional information that you think may be relevant. Attach additional sheets if necessary.

Section F: Prospective Whistleblower's Declaration

This is to be completed and signed by the person submitting the information.

Section G: Legal representative Certification

This is to be completed and signed by a legal representative for an anonymous person submitting information. If you have a legal representative and are not submitting this form anonymously, this section does not need to be completed.

B. Release

I understand that in the course of an inquiry or analysis surrounding my allegations, it may become necessary for NHTSA to reveal information that reasonably could be expected to reveal my identity to persons or their counsel or agents at the organization or institution against which such allegations are made or other entities.

☐ **CONSENT** - I have read and understand the above information and authorize NHTSA to reveal any information that could reasonably be expected to reveal my identity to persons at the organization or institution against which my allegations are made, or their agents or counsel, to governmental entities outside the United States and to other persons or entities that NHTSA determines should have access to this information to assist in NHTSA's analysis, inquiry or investigation. **I further understand that I am not required to consent to this release, and do so voluntarily.**

C. Prospective Whistleblower's Signature	
Signature	Date

Notice of Whistleblower Rights and Protections

This brief description will provide you with an overview of the whistleblower rights and protections.

Whistleblowers, as that term is defined in 49 U.S.C. 30172(a)(6), have a right to keep their identity confidential in most situations. 49 U.S.C. 30172(f). Generally speaking, any information which reasonably could be expected to reveal the identity of a whistleblower can be disclosed only under limited circumstances. One circumstance where NHTSA could reveal such information is if the whistleblower gives prior written consent. 49 U.S.C. 30172(f)(1)(B).

The Freedom of Information Act (FOIA), 5 U.S.C. 552, gives the public access to records of the Federal Government. Individuals can obtain information from many categories of records of the Government--not just materials that apply to them personally. NHTSA must honor requests under the FOIA, with some exceptions. Information that could reasonably be expected to reveal the identity of a whistleblower is exempted from FOIA disclosure by statute. *See* 49 U.S.C. 30172(f)(3); 5 U.S.C. 552(b)(3)(B).

NHTSA may disclose information that could reasonably be expected to reveal the identity of a whistleblower if it follows the provisions of 5 U.S.C. 552a (the Privacy Act of 1974). 49 U.S.C. 30172(f)(1). The Privacy Act prohibits the disclosure of information from a system of records (where information is retrieved by the name of the individual or by some identifying number, symbol, or other identifying particular assigned to the individual) absent the written consent of the subject individual, unless the disclosure is pursuant to one of twelve statutory conditions.

Furthermore, under 49 U.S.C. 30171, employees providing certain motor vehicle safety information have protections from discrimination. Under 49 U.S.C. 30171(a)(1), a motor vehicle manufacturer, parts supplier or dealership may not discharge an employee or otherwise discriminate against the employee because the employee provided, caused to be provided, or is about to provide (with knowledge of the employer) or cause to be provided to the employer or the Secretary of Transportation information relating to any motor vehicle defect, noncompliance, or any violation or alleged violation of any notification or reporting requirement of the Safety Act (49 U.S.C. 30101 et. seq.).

Privacy Act Statement

The Privacy Act of 1974 requires that the National Highway Traffic Safety Administration ("NHTSA") inform individuals of the following when asking for information. This form may be used by an employee or contractor of a motor vehicle manufacturer, part supplier, or dealership who wishes to provide prior written consent for the Agency to disclose information which could reasonably be expected to reveal their identity. Furnishing this form is voluntary.

Questions concerning this form may be directed to the National Highway Traffic Safety Administration, Office of the Chief Counsel by email at NHTSAWhistleblower@dot.gov, or a NHTSA attorney with whom you have previously been in contact.

General Information and Submission Procedures

- This form should be used by persons that want to provide prior written consent to the Agency to disclose information which could reasonably be expected to reveal their identity.
- You must sign the WB-RELEASE form as the prospective whistleblower.
- You must submit your form to NHTSA in one of following ways: by emailing it to NHTSAWhistleblower@dot.gov or by any such method that the Agency may expressly designate on its website (https://www.nhtsa.gov/laws-regulations/whistleblower-program).

Instructions for Completing Form WB-RELEASE

Section A: Information

Questions 1-9: Please provide the following information about yourself:

- last name, first name, and middle initial; and
- Complete address, including city, state/province, zip/postal code, and country.

Question 10: Please provide the name of motor vehicle manufacturer, part supplier and/or dealership to which the issue relates.

Section B: Release

Check the box before the word "**CONSENT"** to indicate your consent to allow the Agency to reveal any information that could reasonably be expected to reveal your identity to persons at the organization or institution against which your allegations are made, or their agents or counsel, to governmental entities outside the United States and to other persons or entities that NHTSA determines should have access to this information to assist in NHTSA's analysis, inquiry or investigation.

This section also informs you that you are not required to consent to this release and that you do so voluntarily.

Section C: Prospective Whistleblower's Signature

This section must be signed and dated by the prospective whistleblower.

Appendix C to Part 513—Form WB–AWARD

OMB Number: 2127-0767
Exp. [DATE]

NHTSA Form 1684

UNITED STATES DEPARTMENT OF TRANSPORTATION
NATIONAL HIGHWAY TRAFFIC SAFETY ADMINISTRATION (NHTSA)

FORM WB-AWARD
WHISTLEBLOWER AWARD APPLICATION

See Privacy Act Statement, Submission Procedures, and Completion Instructions below.

A. CLAIMANT'S INFORMATION (REQUIRED FOR ALL SUBMISSIONS)			
1. Last Name	2. First Name	3. M.I.	
4. Street Address		5. Apartment/Unit #	
6. City	7. State/Province	8. ZIP/Postal Code	9. Country
10. Telephone	11. Alt. Phone	12. Email Address	13. Preferred Method of Communication

B. LEGAL REPRESENTATIVE INFORMATION (IF APPLICABLE – SEE INSTRUCTIONS)			
1. Legal Representative's Name			
2. Firm Name			
3. Street Address			
4. City	5. State/Province	6. ZIP/Postal Code	7. Country
8. Telephone	9. Email Address		

C. ELIGIBILITY REQUIREMENTS AND OTHER INFORMATION
1. Did you acquire the original information that you submitted to NHTSA solely through a communication that was subject to the attorney-client privilege or attorney work product doctrine? [] Yes [] No
2. Did you acquire the original information that you submitted to NHTSA by a means or manner that was determined by a United States federal court or state court to violate applicable federal or state criminal law? [] Yes [] No
3. Are you currently a subject or target of a criminal investigation in the United States, or have you been convicted of a criminal violation by a United States federal or state court, in connection with the allegations or conduct that you submitted to the NHTSA? [] Yes [] No
4. Indicate whether any of the factors in 49 CFR 513.7 apply, which could make you ineligible for an award. [] Yes [] No
5. If you answered "Yes" to any of Questions above, provide details. Use additional sheets, if necessary.

D. ISSUE DETAILS
1. How did you submit original information to NHTSA? [] By email to NHTSAWhistleblower@dot.gov [] Other: _____
2. Date(s) that you submitted the information:
3. Name of motor vehicle manufacturer, part supplier and/or dealership to which this issue relates

E. NOTICE OF COVERED ACTION AND RELATED ACTION
1. Date of relevant Notice of Covered Action
2. Notice Number
3. Case Name
4. Case Number
5. Date of relevant Notice of Covered Action for any related action
6. Notice Number of Related Action
7. Case Name of Related Action
8. Case Number of Related Action

F. AWARD JUSTIFICATION

Explain the basis for your belief that you should receive an award in connection with your submission of information to NHTSA. Specifically address how you believe you voluntarily provided NHTSA with original information that led to the successful resolution of a covered action. Provide any information that you think may be relevant in light of the criteria for determining the amount of an award set forth in 49 U.S.C. 30172 and 49 CFR Part 513. Use additional sheets, if necessary.

G. CLAIMANT'S DECLARATION	
I declare under penalty of perjury under the laws of the United States that the information contained herein is true and correct to the best of my knowledge, information and belief. I fully understand that I may be subject to prosecution and ineligible for a whistleblower award if, in my submission of information or other interactions with the National Highway Traffic Safety Administration, or my dealings with another authority in connection with a related action, I knowingly and willfully make any false, fictitious or fraudulent statements or representations, or use any false writing or document knowing that the writing or document contains any false, fictitious or fraudulent statement or entry.	
Print Name	
Signature	Date

Privacy Act Statement

The Privacy Act of 1974 requires that the National Highway Traffic Safety Administration ("NHTSA") inform individuals of the following when asking for information. This form may be used by an employee or contractor of a motor vehicle manufacturer, part supplier, or dealership, or a legal representative acting on such person's behalf, who wishes to apply for a whistleblower award for providing original information that led to the successful resolution of a covered action. The information provided will allow the Agency to evaluate the claim and elicit information relevant to whistleblower eligibility requirements. Furnishing the information is voluntary but a decision not to do so will result in you not being eligible for award consideration.

Questions concerning this form may be directed to the National Highway Traffic Safety Administration, Office of the Chief Counsel by email to NHTSAWhistleblower@dot.gov or a NHTSA attorney with whom you have previously been in contact.

General Information

- This form should be used by persons making a claim for a whistleblower award in connection with information provided to NHTSA. To be eligible for an award, you must meet all the requirements set forth in 49 U.S.C. 30172 and the rules thereunder, as

contained in 49 CFR Part 513.

- You must sign the WB-AWARD form as the claimant. If you provided your information to NHTSA anonymously, you must now disclose your identity on this form and your identity must be verified in a form and a manner that is acceptable to the Agency prior to the payment of any award.

- Your WB-AWARD form, and any attachments thereto, must be received by NHTSA within ninety (90) days of the date of the Notice of Covered Action to which the claim relates.

- You must submit your form to NHTSA in one of following two ways: emailing it to NHTSAWhistleblower@dot.gov or by any such method that the Agency may expressly designate on its website (https://www.nhtsa.gov/laws-regulations/whistleblower-program).

Instructions for Completing Form WB-AWARD

Section A: Claimant's Information

Questions 1-13: Please provide the following information about yourself:

- Last name, first name, and middle initial;
- Your complete address, including city, state/province, zip/postal code, and country;
- Your telephone number, and if available, an alternate number where you can be reached;
- Your email address (to facilitate communications, you are strongly encouraged to provide your email address); and
- Your preferred method of communication.

Section B: Legal representative Information. Complete this section only if you are represented by a legal representative in this matter. If you are not represented by a legal representative in this matter, leave this Section blank.

Questions 1-9: Provide the following information about the legal representative representing you in this matter:

- Your legal representative's name;
- The firm name;
- Your legal representative's complete address, including city, state, and zip code;
- Your legal representative's telephone number; and
- Your legal representative's email address.

Section C: Eligibility Requirements and Other Information

Question 1: Indicate whether you acquired the original information that you submitted to NHTSA solely through a communication that was subject to the attorney-client privilege or attorney work product doctrine.

Question 2: Indicate whether you acquired the original information that you submitted to NHTSA by a means or manner that was determined by a United States federal court or state court to violate applicable federal or state criminal law.

Question 3: Indicate whether you are currently a subject or target of a criminal investigation in the United States or whether you have been convicted of a criminal violation by a United States federal or state court in connection with the allegations or conduct that you submitted to NHTSA.

Question 4: Indicate whether any of the factors in 49 CFR 513.7 apply, which could make you ineligible for an award.

Question 5: If you answered "yes" to Questions 1, 2, 3, or 4 above, provide details. Use additional sheets if necessary.

Section D: Whistleblower Information Details

Questions 1-3: Provide the following information about the whistleblower information that you submitted to NHTSA:

- Select the method by which you submitted original information to NHTSA. If you selected "Other" describe how you submitted the information;
- Provide the date that you submitted the original information to NHTSA; and
- Provide the name of the motor vehicle manufacturer, part supplier, and/or dealership to which the issue relates.

Section E: Notice of Covered Action

The process for making a claim for a whistleblower award begins with the publication of a "Notice of Covered Action" on NHTSA's website. This notice is published whenever a judicial or administrative action brought under 49 U.S.C. Chapter 301 by NHTSA, the U.S. Department of Transportation, or the U.S. Department of Justice results in collected monetary sanctions exceeding $1,000,000.

A Notice of Covered Action is published on NHTSA's website subsequent to the entry of a final judgment, order or agreement that by itself, or collectively with other judgments, orders or agreements previously entered in the action, results in collected monetary sanctions exceeding the $1,000,000 threshold.

Question 1: Provide the date of the Notice of Covered action to which this claim relates.

Question 2: Provide the notice number of the Notice of Covered Action.

Question 3: Provide the case name referenced in the Notice of Covered Action.

Question 4: Provide the case number referenced in the Notice of Covered Action.

Question 5: Provide the date of the relevant Notice of Covered Action for any related action.

Question 6: Provide the notice number of the related action.

Question 7: Provide the case name of the related action.

Question 8: Provide the case number of the related action.

Section F: Award Justification

Use this section to explain the basis for your belief that you should be granted an award in connection with your submission of information to NHTSA. Specifically address how you

believe you voluntarily provided NHTSA with original information that led to the successful resolution of a covered action. Provide any information that you think may be relevant in light of the criteria for determining the amount of an award set forth in 49 U.S.C. 30172 and 49 CFR Part 513.

49 U.S.C. 30172(c) provides that in determining an award made under 49 U.S.C. 30172(b), the Secretary shall take into consideration: (i) if appropriate, whether a whistleblower reported or attempted to report the information internally to an applicable motor vehicle manufacturer, part supplier, or dealership; (ii) the significance of the original information provided by the whistleblower to the successful resolution of the covered action; (iii) the degree of assistance provided by the whistleblower and any legal representative of the whistleblower in the covered action; and (iv) such additional factors as the Secretary considers relevant.

Section G: Claimant's Declaration

This section must be completed and signed by the claimant.

Issued under authority delegated in 49 CFR 1.95 and 501.5.

Sophie Shulman,

Deputy Administrator.

[FR Doc. 2024–29268 Filed 12–16–24; 8:45 am]

BILLING CODE 4910–59–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Parts 223 and 224

[Docket No. 241112–0291; RTID 0648–XR126]

Endangered and Threatened Wildlife and Plants: Reclassification of Pillar Coral (*Dendrogyra cylindrus*) From Threatened to Endangered

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Final rule.

SUMMARY: NMFS is changing the status of pillar coral (*Dendrogyra cylindrus*) from threatened to endangered on the Federal List of Threatened and Endangered Species. We have considered the 5-year review of the status of *D. cylindrus,* expert reviewer comments, and public comments submitted on the proposed rule. Based on this information, we have determined that *D. cylindrus* is in danger of extinction throughout all or a significant portion of its range. Thus, we are changing the status of *D. cylindrus* from threatened to endangered under the Endangered Species Act (ESA) of 1973.

DATES: This final rule is effective on February 18, 2025.

ADDRESSES: Public comments that were submitted on the proposed rule to change the status of *D. cylindrus* are available at: *https://www.regulations.gov* identified by docket number NOAA–NMFS–2023–0002. A list of references cited in the final rule and other supporting materials are available at: *https://www.fisheries.noaa.gov/species/pillar-coral/conservation-management,* or by submitting a request to the National Marine Fisheries Service, Southeast Regional Office, Protected Resources Division, 263 13th Avenue South, St. Petersburg, Florida 33701.

FOR FURTHER INFORMATION CONTACT: Alison Moulding, 727–551–5607, *alison.moulding@noaa.gov.*

SUPPLEMENTARY INFORMATION:

Background

On September 10, 2014, we published a final rule listing *D. cylindrus,* along with 4 other Caribbean coral species and 15 Indo-Pacific coral species, as threatened under the ESA (79 FR 53851, September 10, 2014). In early 2021, we announced a 5-year review of 7 threatened Caribbean coral species, including *D. cylindrus* (86 FR 1091, January 7, 2021) to determine whether the listing classification of these species was still accurate. Based on the findings of the 5-year review (NMFS, 2022), we published a proposed rule to change the status of *D. cylindrus* from threatened to endangered (88 FR 59494, August 29, 2023). We solicited peer review of the scientific information contained in the proposed rule from three independent experts from the scientific community who have expertise in *D. cylindrus* biology, ecology, conservation, and threats to the species, and we incorporated their comments prior to publication of the proposed rule. We requested comments on the proposed rule from the public during a 60-day comment period and held a virtual public hearing on September 26, 2023, at which we also accepted public comments.

In this final rule, we are reclassifying *D. cylindrus* from a threatened species to an endangered species under the ESA. We have determined that *D. cylindrus* is in danger of extinction throughout all or a significant portion of its range. This final determination is based on the information in the 5-year review, from expert peer reviewers, and from public comments, which together comprise the best scientific and commercial data available.

Listing Determinations Under the ESA

Section 3 of the ESA defines an endangered species as any species that is in danger of extinction throughout all or a significant portion of its range and a threatened species as one that is likely to become an endangered species within the foreseeable future throughout all or a significant portion of its range (16 U.S.C. 1532(6) and (20)). Thus, an ''endangered species'' is one that is presently in danger of extinction. A ''threatened species,'' on the other hand, is not presently in danger of extinction but is likely to become so within the foreseeable future (*i.e.,* at a later time). So, the primary statutory difference between a threatened and endangered species is the timing of when a species is in danger of extinction, either presently (endangered) or not presently but within the foreseeable future (threatened).

The statute requires us to determine whether a species is threatened or endangered as a result of any of the factors listed in section 4(a)(1) of the ESA: (A) the present or threatened destruction, modification, or curtailment of its habitat or range; (B) overutilization for commercial, recreational, scientific, or educational purposes; (C) disease or predation; (D) the inadequacy of existing regulatory mechanisms; or (E) other natural or manmade factors affecting its continued existence. Changes to a listed species' status must be determined on the basis of these factors using solely the best scientific and commercial data available (16 U.S.C. 1533(c)(2)(B)). Implementing regulations in 50 CFR 424.11(b) reiterate the requirement that changes in a species' classifications must be based solely on the best available scientific and commercial information regarding a species' status.

Public Comments and Our Responses

Public comments were accepted by standard mail, email, during the public hearing, and through the Federal eRulemaking portal. We received 17 public comments on the proposed rule from individuals, government agencies, and conservation organizations. Of these, 14 comments were supportive of the proposed reclassification of *D. cylindrus,* 1 comment was against reclassification, and 2 comments were neutral and asked for clarification on the effects of the reclassification. Most of the supportive comments expressed general support for the proposed rule but did not include substantive content. Several comments presented general information on threats or information that was already considered in the proposed rule. We received 3 comments that provided documentation that reinforced the information on demographic factors and threats considered in the proposed rule, including population declines and susceptibility to climate-induced ocean warming, ocean acidification, nutrients, sedimentation, and disease. We also received 1 comment that is outside the scope of the proposed rule that stated that we need to provide support for the increased administrative burden on state and Federal agencies that results from listing and changing the status of species under the ESA, and that we need to increase the Federal funds designated for the management and recovery of ESA-listed species. All substantive public comments on the proposed rule to reclassify *D. cylindrus* as endangered are addressed in the following summary. We have categorized comments by topic, and, where appropriate, we have combined similar comments from multiple people or groups and addressed them together.

Demographics and Threats

Comment 1: Three commenters provided additional references (Jones *et al.,* 2021, Alvarez-Filip *et al.,* 2022) that addressed population decline of *D. cylindrus* from disease and were not included in the proposed rule or 5-year review (NMFS, 2022).

Response: We thank these commenters for the submission of additional data to inform the status of the species and this final rule. Jones *et al.* (2021) suggests that thermal stress in 2014 and 2015 exacerbated underlying disease and resulted in a disease outbreak that led to the extirpation of *D. cylindrus* in southeast Florida. Alvarez-Filip *et al.* (2022), reported that greater than 80 percent of *D. cylindrus* surveyed in Mexico suffered mortality or were infected by disease between 2018 and 2020. Population declines in Florida and Mexico and the threats of disease and ocean warming were considered in the proposed rule as factors leading to the extinction risk of *D. cylindrus.* The additional references are consistent with the information we considered in the proposed rule. Thus, these comments support our conclusions regarding the threats of ocean warming and disease and provide additional support for our conclusion that *D. cylindrus* meets the definition of an endangered species. These references were incorporated into the final rule.

Comment 2: We received several comments and references about the threat of climate change and its negative effects on corals that increase the extinction risk for *D. cylindrus.*

Response: We agree that the effects of climate change are contributing to the risk of extinction of *D. cylindrus.* In the original listing rule (79 FR 53851, September 10, 2014), we identified factors acting directly as stressors on *D. cylindrus* (*e.g.,* elevated ocean temperature and sedimentation) as distinct from the sources responsible for those factors (*e.g.,* climate change and land management practices) and evaluated the impact each threat has on the species' extinction risk. The susceptibility of *D. cylindrus* to ocean warming and ocean acidification was addressed in the 5-year review (NMFS, 2022) and in the proposed reclassification rule (88 FR 59494, August 29, 2023). The additional references are consistent with the information we considered in the proposed rule. Thus, these comments support our conclusions regarding the threats of ocean warming and ocean acidification and provide additional support for our conclusion that *D. cylindrus* meets the definition of an endangered species. Because stressors stemming from climate change are already identified as threats contributing to the extinction risk for *D. cylindrus,* no changes were made to the final rule in response to these comments.

Comment 3: We received a comment that human activities such as coastal development, dredging, wastewater disposal, and shipping have contributed to the susceptibility of *D. cylindrus* to stony coral tissue loss disease (SCTLD).

Response: In the original listing rule (79 FR 53851, September 10, 2014), we identified factors acting directly as stressors on *D. cylindrus* (*e.g.,* elevated ocean temperature and sedimentation) as distinct from the sources responsible for those factors (*e.g.,* climate change and land management practices) and evaluated the impact each threat has on the species' extinction risk. Although causative factors of coral disease remain poorly understood, we agree that the presence of stressors such as sedimentation and nutrient enrichment from human activities like coastal development and wastewater disposal can increase the susceptibility of corals to disease. A diseased state results from a complex interplay of factors including the cause or agent (*e.g.,* pathogen, environmental toxicant), the host, and the environment. The interaction of disease and other stressors was discussed in the original listing rule (79 FR 53851, September 10, 2014), and the susceptibility of *D. cylindrus* to disease, sedimentation, and nutrients was considered in the 5-year review (NMFS, 2022) and in the proposed reclassification rule (88 FR 59494, August 29, 2023). The public comments are consistent with the information we considered in the proposed rule. Thus, these comments support our conclusions regarding the threats of disease, nutrient enrichment, and sedimentation and provide additional support for our conclusion that *D. cylindrus* meets the definition of an endangered species.

Analyses

Comment 4: We received a comment that there is no benefit to changing the status of *D. cylindrus* to endangered since the ESA has no mechanism of protecting against the major threats of climate change and disease.

Response: Under section 4(b) of the ESA, we are required to base listing decisions solely on the best scientific and commercial data available after conducting a review of the status of the

species and after taking into account efforts to protect the species (16 U.S.C. 1533(b)(1)(A)). We may determine a species is threatened or endangered because of any of the following factors: (A) the present or threatened destruction, modification, or curtailment of its habitat or range; (B) overutilization for commercial recreational, scientific, or educational purposes; (C) disease or predation; (D) the inadequacy of existing regulatory mechanisms; or (E) other natural or manmade factors affecting its continued existence. When making a listing or reclassification determination, we cannot consider impacts that may stem from the listing determination itself, and we cannot ignore threats for which there are no existing mitigation mechanisms (16 U.S.C. 1533(b), 50 CFR 424.11(b)). After considering the best scientific and commercial information available on status of the species and taking into account efforts being made to protect the species, we conclude that *D. cylindrus* is in danger of extinction and should be listed as endangered under the ESA.

Comment 5: We received a comment stating that there is a need for expanded and purposeful opportunities for states and territories with coral reefs in their jurisdiction to comment on, participate in, and lead efforts before the Federal government makes any decisions under the ESA, such as listing or reclassifying a species, and requesting that states and territories be consulted on which data are used as the best available science for informing decisions.

Response: The ESA and the implementing regulations describe the process NMFS must use when listing species under the ESA (16 U.S.C. 1533; 50 CFR part 424). This process includes giving actual notice of the proposed listing regulation to the state agency in each state in which the species is believed to occur and to each county or equivalent jurisdiction in which the species is believed to occur and inviting them to comment on the proposal (16 U.S.C. 1533(b)(5)(A)(ii); 50 CFR 424.16(c)(1)(ii)). In accordance with this requirement, we notified the states, counties, and territories where *D. cylindrus* is known to occur when we published the proposed rule to reclassify *D. cylindrus* as endangered. We accepted comments by standard mail, email, during the public hearing on September 26, 2023, and through the Federal eRulemaking portal. This allowed those government agencies the opportunity to participate in the decision to reclassify *D. cylindrus* as endangered, including providing input on the best scientific and commercial data available. We considered all relevant comments within the scope of this rulemaking received during the comment period when making this final determination to reclassify *D. cylindrus* from threatened to endangered.

We also note that we worked cooperatively with states and territories to obtain unpublished coral monitoring data to inform the 5-year review of ESA-listed Caribbean coral species. We considered the information in the 5-year review, including the population data obtained from the states and territories, when making the determination that *D. cylindrus* met the definition of an endangered species. By seeking unpublished monitoring data from states and territories, giving notice of the proposed listing regulation to states and territories in which the species occurs, and considering comments from states and territories, we provided opportunities for these groups to participate in the decision to change the status of *D. cylindrus* from threatened to endangered.

Comment 6: We received a comment that we should incorporate data from mesophotic reefs, which may serve as thermal refugia for shallow water species, into factors considered for listing and reclassifying species under the ESA.

Response: For the proposed rule to reclassify *D. cylindrus* to endangered, we evaluated the best scientific and commercial data available. As stated in the proposed rule, *D. cylindrus* inhabits most reef environments in depths between 1 and 25 meters (m) and is most common in reef environments in water depths between 5 and 15 m. We have found no evidence that *D. cylindrus* occurs at mesophotic depths (30–150 m), and the commenter did not provide any information to the contrary. Therefore, we did not consider the role of mesophotic reefs as a factor in the decision to change the status of *D. cylindrus* from threatened to endangered.

Effects of the Reclassification

Comment 7: We received a comment asking if exporting dead samples of *D. cylindrus* for scientific research would require an ESA section 10(a)(1)(A) permit if they were collected prior to reclassification.

Response: If samples of *D. cylindrus* (alive, dead, or preserved) were collected prior to reclassification, an ESA section 10(a)(1)(A) permit is not needed to import or export them; rather, NMFS can issue a Letter of Determination to authorize import and export, provided certain criteria are met. In addition, *D. cylindrus* is listed on Appendix II of the Convention on International Trade in Endangered Species (CITES), and, therefore, a CITES export permit issued by the exporting country would be required. For more information on Letters of Determination, see *https://www.fisheries.noaa.gov/permit/letter-determination-protected-species-parts-and-products.* For more information on CITES, see *https://www.fws.gov/international-affairs/cites.*

Comment 8: We received a comment that it was unclear whether transport and transfer of captive *D. cylindrus* to another holding facility within the United States was a violation of the ESA section 9(a)(1) prohibitions and would require an ESA section 10(a)(1)(A) permit.

Response: Transportation of *D. cylindrus* or *D. cylindrus* parts within the United States is not a violation of the ESA section 9 prohibitions, provided that the corals were legally obtained and that the transport is not in the course of a commercial activity. Transfer of *D. cylindrus* between U.S. facilities is, therefore, allowable without the need for a NMFS ESA section 10(a)(1)(A) permit. Documentation of the transfer to a different holding facility should be maintained.

Comment 9: We received 2 comments that reclassification of *D. cylindrus* to endangered would have negative impacts on conservation efforts like restoration and rescue and cause delays, obstacles, and a greater administrative burden on restoration practitioners and state and territorial jurisdictions who would need to apply for an ESA section 10(a)(1)(A) permit. One of the commenters asked that NMFS minimize and streamline ESA section 10(a)(1)(A) permitting as much as possible to eliminate barriers to restoration and recovery. They recommended issuing a single permit to a state agency to authorize multiple practitioners to carry out restoration activities and developing a centralized database with online reporting that provides data access to all managing agencies.

Response: As explained in the response to Comment 4, listing and reclassification determinations must be made solely on the basis of the best available scientific and commercial information regarding a species' status and without reference to possible economic or other impacts of such determinations (16 U.S.C. 1533(b)(1)(A) and 50 CFR 424.11(b)). Thus, when making a listing or reclassification determination, we cannot consider whether the listing or reclassification will increase the administrative burden associated with applying for ESA permits for conservation activities.

NMFS is committed to making ESA section 10(a)(1)(A) permitting as clear and streamlined as possible within the bounds of the law. We will streamline the permitting process through several mechanisms, including issuing permits valid for up to 10 years, conducting programmatic consultation under section 7 of the ESA to eliminate the need for individual consultation on each permit application, and reprogramming the online application system, Authorizations and Permits for Protected Species (APPS) (see *https://apps.nmfs.noaa.gov*) to accept applications for *D. cylindrus.* ESA section 10 Permit Holders can submit annual reports of their permitted activities in APPS. While these currently are not publically accessible in APPS, copies of submitted reports may be requested from the NMFS Office of Protected Resources, Permits and Conservation Division under the Freedom of Information Act. We are further recommending that individuals and groups that are working on the same project, at the same institution, or under the same funding to consider applying together to work under a single permit. These options allow for less frequent and reduced numbers of permit applications and can reduce processing times.

In anticipation of a final determination to reclassify *D. cylindrus* to endangered, we held webinars on April 16 and 19, 2024, to present information on the effects of a reclassification and the ESA section 10(a)(1)(A) permitting process. We announced the webinars to researchers and restoration practitioners known to work with *D. cylindrus* and agencies that issue research and restoration permits. We also announced these webinars on a coral listserv (*i.e.,* Coral List) to reach a broader audience. During the webinars, we included information on what activities would need an ESA permit should *D. cylindrus* be reclassified as endangered and how and when to submit an ESA permit application. We encouraged attendees to apply for an ESA permit before a final determination was made so that conservation activities could continue uninterrupted if a final rule went into effect. Additional permitting guidance can be found on our website at: *https://www.fisheries.noaa.gov/species/pillar-coral/conservation-management.*

Summary of Changes From the Proposed Listing Rule

We did not receive, nor did we find, data or references that presented substantial new information that would cause us to change our proposed listing determination. We received several sources of new information (see Comment 1), which provided population data that supported the information considered in the 5-year review report (NMFS, 2022) and proposed rule. We also received additional information related to threats (*e.g.,* ocean warming, ocean acidification, disease, sedimentation, and nutrient enrichment) which was consistent with or reinforced information in the 5-year review and proposed rule (see Comments 2 and 3). Therefore, while the new information contributed to our overall understanding of population dynamics and threats, it did not alter the outcome of the extinction risk analysis nor our interpretation of risk factors across the range of the species. Therefore, in this rule, we are finalizing the change in the classification of *D. cylindrus* from a threatened species to an endangered species under the ESA.

In response to questions received about ESA permits, we have added additional information to the Effects of Listing section of this final rule to clarify that a Letter of Determination is needed for import or export of *D. cylindrus* or *D. cylindrus* parts in possession before the reclassification takes effect. In consultation with our ESA permitting division, we also provide further clarification in the Effects of Listing section with respect to prohibited and non-prohibited activities. These clarifications include rephrasing some of the descriptions to focus on the activity rather than the impact to the species, rearranging or splitting the activities in the list to differentiate prohibited activities that would need an ESA section 10(a)(1)(A) permit from non-prohibited activities, and adding more detail to describe the particular prohibited and non-prohibited activities.

Assessment of Species Status

In the proposed rule to reclassify *D. cylindrus* from threatened to endangered under the ESA, we outlined the rationale for our determination. Below, we summarize our evaluation and final determination. We relied on the best scientific and commercial data available including the information in the 5-year review and the public comments received. Please refer to the proposed rule for additional information (88 FR 59494, August 29, 2023).

Species Abundance, Trends, and Distribution

Dendrogyra cylindrus is a colonial coral that can form large pillars (up to 3 m) upon an encrusting base. It is a gonochoric (*i.e.,* separate sexes), broadcast spawning coral species, but some hermaphroditic colonies have been observed (Kabay, 2016; Neely *et al.,* 2018; Neely *et al.,* 2020a; O'Neil *et al.,* 2021). Spawning observations have also suggested that eggs may be fertilized within female colonies prior to release (Marhaver *et al.,* 2015). It has a relatively low annual egg production and low sexual recruitment, with no reports of observed sexual recruitment in the wild. *Dendrogyra cylindrus* can also reproduce asexually through fragmentation and reattachment to the substrate.

Dendrogyra cylindrus is present in the western Atlantic and throughout the greater Caribbean. It is absent in the Flower Garden Banks National Marine Sanctuary in the Gulf of Mexico and from the southwest Gulf of Mexico. It inhabits most reef environments in water depths ranging from 1 to 25 m and is most common in reef environments in water depths between 5 and 15 m. It has a naturally uncommon to rare occurrence, appearing as scattered, isolated colonies. It is sometimes found in highly clonal aggregations, likely resulting from fragmentation events (Chan *et al.,* 2019).

Population trend information indicates the species has continued to decline since being listed in 2014. Surveys of *D. cylindrus* conducted in Colombia in 2012 show a reduced spatial extent, loss of colonies, and higher prevalence and amount of partial mortality 10 years after initial surveys (Bernal-Sotelo *et al.,* 2019). Multiple thermal bleaching events in 2014 and 2015 and ongoing and emerging disease events (SCTLD) since 2014 have caused near extirpation of *D. cylindrus* in Florida (Jones *et al.,* 2021; Lewis, 2018; Lewis *et al.,* 2017; Neely *et al.,* 2021a; Neely, 2024), and *D. cylindrus* is now considered functionally extinct (*i.e.,* the population is no longer viable and will not be able to sustain itself) along the Florida reef tract (Neely *et al.,* 2021a).

Although quantitative population trend data are only available from Florida and Colombia, we assumed the species is in decline throughout most of its range based on the evidence from these regions (northern and southwestern portions of its range) and the more widespread evidence of severe disease impacts from SCTLD, which has spread from Florida to the eastern, western, and southern Caribbean (see *https://www.agrra.org/coral-disease-outbreak/* for a map of confirmed sightings of SCTLD in the greater Caribbean). *Dendrogyra cylindrus* is highly susceptible to SCTLD (Florida Coral Disease Response Research &

Epidemiology Team, 2018) and has been reported with high prevalence and confirmed or presumed mortality in multiple islands and countries across the Caribbean including the Bahamas (Dahlgren *et al.,* 2021), Mexico (Alvarez-Filip *et al.,* 2019; Alvarez-Filip *et al.,* 2022; Estrada-Saldivar *et al.,* 2021), and the U.S. Virgin Islands (Brandt *et al.,* 2021; Costa *et al.,* 2021). We assumed SCTLD will eventually reach all areas of the range of *D. cylindrus* based on its previous spread and the fact that it is waterborne (Aeby *et al.,* 2019).

Summary of Factors Affecting the Species

Dendrogyra cylindrus was listed as threatened in 2014 because of its susceptibility to and impacts from multiple threats, including ocean warming (ESA Factor E), disease (C), acidification (E), nutrient enrichment (A and E), sedimentation (A and E), trophic effects of fishing (A), and inadequate existing regulatory mechanisms to address global threats (D). As indicated in the proposed rule to reclassify *D. cylindrus* as endangered, these threats continue to contribute to the species' extinction risk. Several commenters provided additional information related to these threats, including ocean warming, ocean acidification, nutrient enrichment, sedimentation, and disease, which was consistent with the proposed rule and did not change our conclusions about any of these threats. Since its listing as threatened, *D. cylindrus* has declined in abundance and distribution in multiple locations with the most severe decline in the northern portions of its range. These declines are predominantly due to the effects of SCTLD, which emerged as a devastating and deadly new disease since the listing (Precht *et al.,* 2016). Though the occurrence of *D. cylindrus* has historically been uncommon to rare, the species has become even rarer as a result of SCTLD. Furthermore, no observed sexual recruitment has been reported in the wild, and we concluded that reductions in population size and local extirpations will further inhibit the species' ability to persist and replenish diminished populations through asexual and sexual reproduction.

Conservation Measures

We evaluated conservation measures used to protect *D. cylindrus,* including treatment of individual colonies for SCTLD (Miller *et al.,* 2020; Neely *et al.,* 2020b; Neely *et al.,* 2021c; O'Neil *et al.,* 2018; Shilling *et al.,* 2021; Walker *et al.* 2021), ex situ banking (Kabay, 2016; Neely *et al.,* 2021b; Neely, 2024; O'Neil *et al.,* 2021), and propagation of *D. cylindrus* for future restoration (Marhaver *et al.,* 2015; Neely, 2019; Neely *et al.,* 2020a; O'Neil *et al.,* 2021; Villalpando *et al.,* 2021). We concluded that the conservation actions would benefit the species but would not affect the status of *D. cylindrus* to the point at which listing as an endangered species is not warranted. Further, because current conservation actions do not directly address the root causes of threats such as disease, we concluded that they are insufficient to protect the species from the risk of extinction. See the proposed rule for additional discussion of conservation measures (88 FR 59497, August 29, 2023).

Final Listing Determination

We reviewed the best scientific and commercial information available on the status of *D. cylindrus,* threats to the species, and conservation measures. Based on consideration of this information and public comments, we determine that *D. cylindrus* meets the definition of an endangered species. We find that *D. cylindrus* is in danger of extinction throughout all or a significant portion of its range. *Dendrogyra cylindrus* is susceptible to multiple threats including ocean warming (ESA Factor E), disease (C), acidification (E), nutrient enrichment (A and E), sedimentation (A and E), trophic effects of fishing (A), and inadequate existing regulatory mechanisms to address global threats (D). In addition, the following characteristics contribute to its risk of extinction:

(1) It is geographically located in the highly disturbed Caribbean where localized human impacts are high and threats are predicted to increase. A range constrained to this particular geographic area that is likely to experience severe and increasing threats indicates that a high proportion of the population of this species is likely to be exposed to those threats;

(2) It has an uncommon to rare occurrence throughout its range, which heightens the potential effect of localized mortality events and leaves the species vulnerable to becoming of such low abundance that it may be at risk from depensatory processes, environmental stochasticity, or catastrophic events;

(3) Its low sexual recruitment limits its capacity for recovery from threat-induced mortality events throughout its range; and

(4) It has experienced population declines, primarily due to SCTLD, in multiple locations throughout its range, including severe declines in the northern portion of its range, which has resulted in diminished distribution and local extirpation.

The combination of these characteristics indicates that *D. cylindrus* is in danger of extinction throughout its range and warrants listing as an endangered species due to factors A, C, D, and E.

Effects of Listing

Conservation measures provided for species listed as endangered or threatened under the ESA include recovery plans (16 U.S.C. 1553(f)), critical habitat designations, Federal agency consultation requirements (16 U.S.C. 1536), and prohibitions of certain acts under the ESA (16 U.S.C. 1538). Because *D. cylindrus* was previously listed as threatened, Federal agency consultation requirements are already in effect, and a recovery outline has been developed to guide recovery until a full recovery plan has been finalized. Critical habitat has also been designated for *D. cylindrus* (88 FR 54026, August 9, 2023).

All of the prohibitions in section 9(a)(1) of the ESA automatically apply to fish and wildlife listed as endangered species. Section 9(a)(1) includes prohibitions on importing, exporting, engaging in foreign or interstate commerce, or ''taking'' of the species. ''Take'' is defined under the ESA as ''to harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or an attempt to engage in any such conduct'' (16 U.S.C. 1532(19)). These prohibitions apply to all persons subject to the jurisdiction of the United States, including in the United States, its territorial sea, or on the high seas. Upon the effective date of this rule to reclassify *D. cylindrus* as endangered, section 9 of the ESA would expressly prohibit the following:

(1) Taking of *D. cylindrus* within the United States or its territorial sea, or upon the high seas;

(2) Possessing, selling, delivering, carrying, transporting, or shipping any *D. cylindrus* that was illegally taken;

(3) Delivering, receiving, carrying, transporting, or shipping in interstate or foreign commerce any *D. cylindrus* in the course of a commercial activity;

(4) Selling or offering *D. cylindrus* for sale in interstate or foreign commerce; or

(5) Importing *D. cylindrus* into, or exporting *D. cylindrus* from, the United States.

On July 1, 1994, NMFS and the U.S. Fish and Wildlife Service (FWS) published a policy statement (59 FR 34272) that requires the agencies to identify, to the extent known at the time a species is listed, those activities that

would or would not constitute a violation of section 9 of the ESA. The intent of this policy is to increase public awareness of the effect of a listing on proposed and ongoing activities within a species' range. Based on available information, we conclude the following categories of activities are likely to meet the ESA's definition of ''take'' and, therefore, result in a violation of the ESA section 9 prohibitions. We emphasize that whether a violation results from a particular activity is entirely dependent upon the facts and circumstances of each incident. The mere fact that an activity may fall within one of these categories does not mean that the specific activity will cause a violation. Further, an activity not listed may in fact result in a violation. Activities that are likely to result in a violation of section 9 prohibitions include, but are not limited to, the following:

(1) Collection of *D. cylindrus,* including colonies, fragments, tissue samples, and gametes, from the wild;

(2) Research outside the bounds of normal animal husbandry that results in harm (*e.g.,* injuring or killing) to captive *D. cylindrus;*

(3) Removing, relocating, or reattaching *D. cylindrus* in the wild;

(4) Damaging, poisoning, contaminating, or killing *D. cylindrus;*

(5) Scientific research activities on wild *D. cylindrus* involving the manipulation of the coral or its environment;

(6) Release of captive *D. cylindrus* into the wild. Release of a captive coral could have the potential to injure or kill the coral or to affect wild populations of *D. cylindrus* through introduction of disease;

(7) Habitat alternation, such as removal of substrate or alteration of water quality, resulting in injury or death of *D. cylindrus;*

(8) Discharging pollutants (*e.g.,* toxic chemicals, radioactive matter, carcinogens, mutagens, teratogens) or organic nutrient-laden water, including sewage water, into *D. cylindrus* habitat to an extent that harms or kills *D. cylindrus;*

(9) Shoreline and riparian disturbances (whether in the riverine, estuarine, marine, or floodplain environment) that may harm or kill *D. cylindrus,* for instance, by disrupting or preventing the reproduction, settlement, reattachment, development, or normal physiology of *D. cylindrus.* Such disturbances could include land development, run-off, dredging, and disposal activities that result in direct deposition of sediment on *D. cylindrus,* shading, or covering of substrate for fragment reattachment or larval settlement; and

(10) Activities that modify water chemistry in *D. cylindrus* habitat to an extent that disrupts or prevents the reproduction, development, or normal physiology of *D. cylindrus.*

Some categories of activities are unlikely to constitute a violation of the section 9 prohibitions. Again, we emphasize that whether a violation results from a particular activity is entirely dependent upon the facts and circumstances of each incident. The mere fact that an activity may fall within one of these categories does not mean that the specific activity will not cause a violation. We consider the following activities to be ones that are unlikely to violate the ESA section 9 prohibitions:

(1) Taking of wild *D. cylindrus,* including collection of colonies, fragments, tissue samples, and gametes, authorized by an ESA section 10(a)(1)(A) permit issued by NMFS for the purposes of scientific research or the enhancement of propagation or survival of the species and carried out in accordance with the terms and conditions of the permit;

(2) Incidental taking of *D. cylindrus* resulting from federally authorized, funded, or conducted projects for which consultation under section 7 of the ESA has been completed and when the project is conducted in accordance with any terms and conditions set forth by NMFS in an incidental take statement in a biological opinion pursuant to section 7 of the ESA;

(3) Import or export of *D. cylindrus* or *D. cylindrus* parts authorized by a CITES permit and an ESA section 10(a)(1)(A) permit (or Letter of Determination for *D. cylindrus* or *D. cylindrus* parts in possession before the reclassification takes effect) issued by NMFS;

(4) Continued possession of *D. cylindrus* parts or live *D. cylindrus* that were in captivity at the time of up-listing to an endangered species, including any progeny produced from captive corals after the rule is finalized, so long as the prohibitions of ESA section 9(a)(1) are not violated. Corals are considered to be in captivity if they are maintained in a controlled environment or under human care in ocean-based coral nurseries. Individuals or organizations should be able to provide evidence that *D. cylindrus* or *D. cylindrus* parts were in captivity prior to its listing as an endangered species. We suggest such individuals or organizations submit information to us on the *D. cylindrus* in their possession (*e.g.,* type, number, size, source, date of acquisition), to establish their claim of possession (see **FOR FURTHER INFORMATION CONTACT**);

(5) Providing normal care for captive *D. cylindrus.* Captive corals are still protected under the ESA and may not be killed or injured or otherwise harmed and must receive proper care. Normal husbandry care of captive corals includes handling, cleaning, maintaining water quality within an acceptable range, extracting tissue samples for the purposes of diagnosis of condition or genetics, treating or preventing spread of maladies such as disease or parasites using established methods proven to be effective, propagating corals by sexual or asexual means (*i.e.,* fragmenting larger coral colonies into smaller colonies to increase the number of corals, maintain corals of manageable size, or accelerate their growth rate) within the bounds of normal husbandry practices, attaching to artificial surfaces, and removing dead skeleton. Scientific studies that are intended to improve the husbandry practices of caring for captive *D. cylindrus,* where there is a reasonable expectation that they would not cause harm to *D. cylindrus* (*e.g.,* trialing new food supplements, comparing different lighting systems, testing different attachment substrates), would not require an ESA permit;

(6) Interstate and intrastate transportation of legally obtained captive *D. cylindrus* and *D. cylindrus* parts provided it is not in the course of a commercial activity. If captive corals or *D. cylindrus* parts are to be moved to a different holding location, records documenting transfer of corals should be maintained;

(7) Stabilization of loose or unattached *D. cylindrus,* including fragments, in the wild by experienced individuals and as authorized by an ESA section 10(a)(1)(A) permit issued by NMFS;

(8) Relocation of wild *D. cylindrus* from one site to another under the authorization of an ESA section 10(a)(1)(A) permit issued by NMFS;

(9) Use of captive *D. cylindrus* for scientific studies under the authorization of an ESA Section 10(a)(1)(A) permit issued by NMFS. Scientific studies that have the potential to injure or harm captive *D. cylindrus* (*e.g.,* altered temperature outside of ideal range, exposure to contaminants, potentially harmful chemicals, or disease, introduction of coral predators) require an ESA section 10(a)(1)(A) permit;

(10) Research activities that involve collection or manipulation of *D. cylindrus* in the wild under the

authorization of an ESA section 10(a)(1)(A) permit;

(11) Observational studies on *D. cylindrus* in the wild that do not involve collection or manipulation of *D. cylindrus* such as benthic surveys, photographs, and videos;

(12) Release of captive *D. cylindrus* into the wild, as authorized by an ESA section 10(a)(1)(A) permit issued by NMFS; and

(13) Treatment of wild *D. cylindrus* for disease by experienced individuals using non-experimental methods proven to be effective and as authorized by state and territorial permits.

Information Quality Act and Peer Review

In December 2004, the Office of Management and Budget (OMB) issued a Final Information Quality Bulletin for Peer Review establishing minimum peer review standards, a transparent process for public disclosure of peer review planning, and opportunities for public participation. The OMB Peer Review Bulletin (the Bulletin), implemented under the Information Quality Act (Pub. L. 106–554), is intended to enhance the quality and credibility of the Federal Government's scientific information and applies to influential or highly influential scientific information disseminated on or after June 16, 2005. To satisfy our requirements under the Bulletin, the proposed rule was subject to peer review. A peer review plan was posted on the NOAA peer review agenda and can be found at: *https://www.noaa.gov/information-technology/endangered-species-act-proposed-rule-for-pillar-coral-dendrogyra-cylindrus-id432.* Our synthesis and assessment of scientific information supporting the proposed action was peer reviewed via individual letters soliciting the expert opinions of three qualified specialists selected from the academic and scientific community. The charge to the peer reviewers and the peer review report have been placed in the administrative record and posted on the agency's peer review agenda. In meeting the OMB Peer Review Bulletin requirements, we have also satisfied the requirements of the 1994 joint U.S. Fish and Wildlife Service/NMFS peer review policy (59 FR 34270; July 1, 1994).

References

A complete list of the references used in this rule is available online (see *www.fisheries.noaa.gov/species/pillar-coral#conservation-management*) and upon request (see **FOR FURTHER INFORMATION CONTACT**).

Classification

National Environmental Policy Act

The 1982 amendments to the ESA, in section 4(b)(1)(A), restrict the information that may be considered when assessing species for listing. Based on this limitation of criteria for a listing decision and the opinion in *Pacific Legal Foundation* v. *Andrus,* 675 F. 2d 825 (6th Cir. 1981), NMFS has concluded that ESA listing actions are not subject to the environmental assessment requirements of the National Environmental Policy Act (NEPA).

Regulatory Flexibility Act

As noted in the Conference Report on the 1982 amendments to the ESA, economic impacts cannot be considered when assessing the status of a species. Therefore, the economic analysis requirements of the Regulatory Flexibility Act are not applicable to the listing process.

Executive Order 12866

This final rule is exempt from review under Executive Order 12866.

Paperwork Reduction Act

This final rule does not contain a collection-of-information requirement for the purposes of the Paperwork Reduction Act.

Executive Order 13132

In accordance with Executive Order 13132, agencies are required to take into account any federalism impacts of regulations under development. This Executive order includes specific consultation directives for situations where a regulation will preempt state law or impose substantial direct compliance costs on state and local governments (unless required by statute). Neither of those circumstances is applicable to this final listing determination. In keeping with the intent of the Administration and Congress to provide continuing and meaningful dialogue on issues of mutual state and Federal interest, the proposed rule was provided to the relevant agencies in each state in which the subject species occurs, and these agencies were invited to comment. Their comments were addressed with other comments in the Public Comments and Our Responses section.

Executive Order 12898

Executive Order 12898 requires that Federal actions address environmental justice in the decision-making process. In particular, the environmental effects of the actions should not have a disproportionately high and adverse effect on the health or environment of minority and low-income populations. The purpose of this rule is to update the classification of a coral species that is already protected under the ESA. This rule will serve to continue the protection and conservation of this coral species and is expected to promote a healthy ecosystem. Therefore, this rule is not expected to have a disproportionately high or adverse effect on the health or the environment of minority populations or low-income populations.

List of Subjects

50 CFR Part 223

Endangered and threatened species, Exports, Imports, Transportation.

50 CFR Part 224

Administrative practice and procedure, Endangered and threatened species, Exports, Imports, Reporting and recordkeeping requirements, Transportation.

Dated: November 12, 2024.

Samuel D. Rauch, III,

Deputy Assistant Administrator for Regulatory Programs, National Marine Fisheries Service.

For the reason set out in the preamble, we amend 50 CFR parts 223 and 224 as follows:

PART 223—THREATENED MARINE AND ANADROMOUS SPECIES

■ 1. The authority citation for part 223 continues to read as follows:

Authority: 16 U.S.C. 1531–1543; subpart B, § 223.201–202 also issued under 16 U.S.C. 1361 *et seq.*; 16 U.S.C. 5503(d) for § 223.206(d)(9).

§ 223.102 [Amended]

■ 2. In § 223.102, amend the table in paragraph (e), under the subheading ''Corals,'' by removing the entry for ''Coral, pillar.''

PART 224—ENDANGERED MARINE AND ANADROMOUS SPECIES

■ 3. The authority citation of part 224 continues to read as follows:

Authority: 16 U.S.C. 1531–1543 and 16 U.S.C. 1361 *et seq.*

■ 4. In § 224.101, amend the table in paragraph (h), under the subheading ''Corals,'' by adding an entry for ''Coral, pillar'' in alphabetical order by common name to read as follows:

§ 224.101 Enumeration of endangered marine and anadromous species.

Confidentiality of Information

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Final rule.

SUMMARY: NMFS is issuing this final rule to revise existing regulations pertaining to confidentiality of information requirements under the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act or MSA). This rule updates the regulations consistent with the 2006 Magnuson-Stevens Fishery Conservation and Management Reauthorization Act (MSRA) and 1996 Sustainable Fisheries Act (SFA) and amendments to the High Seas Driftnet Fishing Moratorium Protection Act (FMPA) under the 2015 Illegal, Unreported and Unregulated Fishing Enforcement Act (IUU Fishing Act). The final rule provides other revisions to address issues that concern NMFS' internal control procedures (ICPs) for management of MSA confidentiality of information.

DATES: Effective January 16, 2025.

ADDRESSES: A plain language summary of this rule is available at: *https://www.regulations.gov/docket/NOAA-HQ-2023-0146.*

Electronic Access: Information relevant to this proposed rule, which includes a final regulatory impact review and a Regulatory Flexibility Act certification, is accessible via the internet at: *https://www.regulations.gov/docket/NOAA-HQ-2023-0146/.*

FOR FURTHER INFORMATION CONTACT: Karl Moline, 301–427–8225, or at NMFS, Operations, Management, & Information Division F/ST3, Ste. 12300, 1315 East West Highway, Silver Spring, MD 20910.

SUPPLEMENTARY INFORMATION: Section 402(b) of the MSA provides that ''any information submitted to the Secretary, a State fishery management agency, or a marine fisheries commission by any person in compliance with the requirements of this Act,'' 16 U.S.C. 1881a(b)(1), and ''[a]ny observer information,'' *id.* 1881a(b)(2), ''shall be confidential and shall not be disclosed'' except pursuant to certain exceptions. Section 402(b)(3) requires that the Secretary ''shall, by regulation, prescribe such procedures as may be necessary to preserve the confidentiality of information submitted in compliance with any requirement or regulation under [the MSA],'' but the Secretary may release confidential information ''in any aggregate or summary form which does not directly or indirectly disclose the identity or business of any person who submits such information.'' *Id.* 1881a(b)(3). NMFS regulations implementing MSA section 402(b) are at 50 CFR part 600, subpart E, and there are confidentiality related definitions and references at 50 CFR 600.10 and 600.130. NMFS published a proposed rule in the **Federal Register** on March 11, 2024 (89 FR 17358). Comments were invited and accepted through April 25, 2024. NMFS received 36 individual comments, including 1 letter that contained 5,040 signatures. NMFS responses are addressed in the Response to Comments section below. After considering public comments submitted for the proposed rule, NMFS is implementing the final rule with some changes.

Background

The agency last revised the confidentiality regulations in February 1998 (63 FR 7075, February 12, 1998). A number of statutory changes have been enacted since 1998, and this rule provides important updates and clarifications to the confidentiality regulations to reflect those statutory changes. The 2006 MSRA (Pub. L. 109–479) made three major changes to the confidentiality provisions at MSA section 402(b). First, the MSRA added a provision specifying that observer information (defined at 16 U.S.C. 1802(32)) shall be confidential and shall not be disclosed except pursuant to specified exceptions. 16 U.S.C. 1881a(b)(2). One such exception at MSA section 402(b)(1)(F) authorizes release of confidential information based on written authorization from the person submitting such information. *Id.* 1881a(b)(1)(F). The proposed rule distinguished between observer information that is collected onboard a vessel for scientific and management purposes and information collected for administration of the observer program and allowed a vessel permit holder to execute a written authorization only for the first category of information. See 89 FR 17358, 17364 (March 11, 2024) (explaining basis for proposed rule approach, which retains current agency practice).

Second, the MSRA added a new exception that authorizes the Secretary to disclose confidential information when such information is required to be submitted to the Secretary for any determination under a limited access program (LAP). 16 U.S.C. 1881a(b)(1)(G). The proposed rule included a definition of ''determination'' and defines ''limited access program'' consistent with how ''catch share'' is defined under NOAA's Catch Share Policy (available at *http://www.nmfs.noaa.gov/sfa/management/catch_shares/about/documents/noaa_cs_policy.pdf*). The proposed rule explained that the exception could

apply, regardless of whether NMFS has made a LAP determination as long as there are sufficient facts showing that the information was submitted to NMFS for it to make a determination under a LAP. For example, prior landings information would be releasable if a fishery management council (Council) has submitted a fishery management plan (FMP) or amendment for a LAP for secretarial approval and NMFS issues a **Federal Register** notice stating that it will use prior landings data for initial allocation determinations under the proposed LAP. The proposed rule also notes that information submitted under a non-LAP fishery may later be relevant for determinations regarding privileges, if the fishery transitions to a LAP. NMFS proposed that information previously submitted under a non-LAP that the agency uses or intends to use for determinations under a newly established LAP may fall within the scope of the LAP exception. See 89 FR 17363–17364 (March 11, 2024, explaining proposed rule approach to LAP exception).

Third, the MSRA expanded the confidentiality provision to include information submitted to a State fishery management agency or a marine fisheries commission in compliance with a requirement or regulation under the Act. Prior to the MSRA, the 1996 SFA (Pub. L. 104–297) had expanded the confidentiality provision to apply to information submitted in compliance with ''any requirement or regulation'' under the Act and also revised MSA section 402(b) to refer to ''information'' instead of ''statistics.''

In addition, as discussed in the preamble to the proposed rule, the Illegal, Unreported and Unregulated Fishing Enforcement Act of 2015 (IUU Fishing Act), Public Law 114–81 101(b) (Nov. 5, 2015), amended the FMPA to include provisions at 16 U.S.C. 1826i and 1826g related to MSA confidential information. 89 FR at 17359. NMFS implements and administers the FMPA through authority delegated from the Secretary. Under section 1826i(b)(1), the Secretary is authorized to disclose information, as necessary and appropriate, including information collected under joint authority of the MSA and another statute that implements an international fishery agreement, such as the Atlantic Tunas Convention Act (ATCA) of 1975, *Id.* 971 *et seq.,* to a Federal or State government agency, the Food and Agriculture Organization of the United Nations, or the secretariat or equivalent of an international fishery management organization or arrangement made pursuant to an international fishery agreement, if certain conditions are satisfied. Such information may be vessel-specific. One condition for release of the otherwise confidential information is ''such government, organization, or arrangement . . . has policies and procedures to protect such information from unintended or unauthorized disclosure.'' *Id.* 1826i(b)(1). Section 1826g(d)(2) authorizes disclosure to the same entities and foreign governments, subject to the same condition regarding policies and procedure to protect against unauthorized disclosure. In addition, section 1826g(d)(2) also requires that disclosures be necessary for one of the compliance or enforcement purposes enumerated under subparagraph (A)(ii). *Id.* 1826g(d)(2)(A)(i)–(ii). For purposes of the FMPA disclosure provisions, the term ''international fishery agreement'' has the same meaning as ''international fishery management agreement'' as set forth in 50 CFR 300.201.

Both 1826i(b)(2) and 1826g(d)(2)(B) provide that, with respect to the FMPA, the confidentiality requirements of the MSA are not applicable for obligations of the United States to share information under a Regional Fishery Management Organization (RFMO) to which the United States is a member, or to information collected by NMFS regarding foreign fishing vessels.

In response to comments on the proposed rule, NMFS has revised the final rule to more simply and closely track the FMPA provisions. See response to Comment 20 below. In addition, some RFMO implementing statutes have confidentiality provisions, *e.g.,* Western and Central Pacific Fisheries Convention (WCPFC) Implementation Act, 16 U.S.C. 6905(d). NMFS initiated this rulemaking based on the statutory changes described in the Background section of the proposed rule and this final rule and a general need to reorganize and clarify the scope of applicability of the confidentiality regulations.

NMFS proposed to revise § 600.405 to clarify that regulations under subpart E apply to confidential information that is under NMFS' custody and control. NMFS further explained that it treats information as subject to its custody and control when it physically obtains the information (*see* 16 U.S.C. 1881a(b) (providing for confidentiality of information ''submitted'' to the Secretary in compliance with MSA requirements)). In the case of electronically submitted information, NMFS has custody and control when the information enters a NMFS Federal Information Security Modernization Act (FISMA) domain (which is a collection of devices, applications, software and information technology assets that serve a coordinated purpose or mission, and have a common enforced boundary with enforced or inherited security and privacy controls). Thus, while the MSA confidentiality requirements apply to information submitted to a State fishery management agency or a marine fisheries commission, these regulations would not apply to such information as it is outside of NMFS' physical possession. Protection of that information would be addressed through an agreement with a State or a marine fisheries commission as provided for under § 600.410(c).

The 1998 regulations discuss the generic application of ''safeguards as specified by NOAA Directives, or other NOAA or NMFS internal procedures'' to confidential data. 50 CFR 600.410(a)(3). Currently those procedures are set forth in a NOAA Administrative Order (NAO 216–100). As discussed in the preamble of the proposed rule, NOAA intends to replace NAO 216–100 with updated internal control procedures. Accordingly, NMFS revised existing § 600.410 to clarify the need to establish these internal control procedures and to outline certain topics that should be included in the updated procedures (*See* § 600.410(b)).

This final rule includes the following elements:

(1) A clarification that the regulations under 50 CFR part 600, subpart E, apply to information under NMFS' custody and control (§ 600.405).

(2) Deletion of references to ''statistics'' in 50 CFR part 600, subpart E, and the definitions and Council sections (§§ 600.10 and 600.130), and other technical, non-substantive changes for the sake of clarity.

(3) Revised definition of ''Aggregate or summary form'' based on MSA section 402(b)(3), including adding a reference to ''business of any person'' (§ 600.10).

(4) New definitions of ''Business of any person'', ''Confidential information'', ''Electronic Monitoring Service Provider'', ''Information sharing obligation of a Regional Fishery Management Organization (RFMO)'', ''Observer provider'', and ''Regional Fishery Management Organization'' (§ 600.10).

(5) Deletion of existing text at § 600.410(a)(2) regarding NMFS removing, after receipt, ''identifying particulars'' from statistics.

(6) Procedures regarding State or marine fisheries commission information collection agreements (§ 600.410(c)) and observer providers

and electronic monitoring service providers (§ 600.410(d)).

(7) Addition of text from 16 U.S.C. 1881a(b)(1)(I) on disclosure of information to ''Federal agencies, to the extent necessary and appropriate, to administer Federal programs established to combat illegal, unreported, or unregulated fishing or forced labor (as such terms are defined in section 11329 of the Don Young Coast Guard Authorization Act of 2022 [16 U.S.C. 1885a note]), which shall not include an authorization for such agencies to release data to the public unless such release is related to enforcement.'' (§ 600.415(a)(3)).

(8) New procedures regarding access to confidential information by Federal employees when in support of homeland and national security activities (§ 600.415(a)(2)), State and marine fisheries commission employees (§ 600.415(b)), and State enforcement employees responsible for FMP enforcement (§ 600.415(c)).

(9) Revised procedures regarding access to confidential information by Council members (§ 600.415(d)(2)).

(10) New procedures regarding access to confidential information by a Council's scientific and statistical committee, advisory panels and contractors (§ 600.415(d)(3)–(5)).

(11) A provision on making vessel monitoring system information directly available to State enforcement employees and state management agencies, as provided under section 311(i) of the Magnuson-Stevens Act (§ 600.415(e)).

(12) A provision on disclosure of information to specified governmental and intergovernmental entities pursuant to the FMPA, 16 U.S.C. 1826i and 1826g (§ 600.415(f)).

(13) Provisions on disclosure of observer information for proceedings to adjudicate observer certifications and as authorized by regulations implementing recommendations in an FMP prepared by the North Pacific Fishery Management Council (§ 600.420(a)–(b)).

(14) LAP exception to confidentiality requirements and related new definitions for LAP and ''determination'' (§ 600.420(c)).

(15) Clarification of the court order exception (§ 600.420(d)).

(16) Provision regarding disclosure of information for enforcement of the MSA or when necessary for enforcement of any state living marine resource law, if that state has a Joint Enforcement Agreement that is in effect (§ 600.420(e)).

(17) Procedures for written authorization for release of confidential information, including observer information (§ 600.420(f));

(18) Provision that NMFS may disclose in any aggregate or summary form information that is required to be maintained as confidential under the regulation (§ 600.425)

(19) Prohibition on disclosing confidential information without authorization (§ 600.725(y)).

Response to Comments

NMFS published its proposed rule on March 11, 2024, (89 FR 17358) and accepted public comments for 45 days, closing on April 25, 2024. NMFS received a total of 36 comments. Below, NMFS summarizes and responds to all comments received. Comments are grouped by subject matter (*e.g., '45-day Comment Period'*) with similar comments summarized under a comment number (*e.g., 'Comment 1'* summarizes all comments received regarding the 45-day comment period).

45-Day Comment Period

Comment 1: Many commenters said that the 45-day comment period was too short and that NMFS should reissue the proposed rule with additional time for comment. Some commenters stated that, concurrent with additional time for comment, NMFS should engage the public on the rulemaking and specific issues such as electronic monitoring policies, data ownership and management, and public access. One commenter said that NMFS should at minimum conduct another rulemaking for the data aggregation and summarization procedures referenced under § 600.410(b). Two commenters recommended reinitiating this rulemaking and that NMFS should engage the public through an Advanced Notice of Proposed Rulemaking (ANPR).

Response: The 45-day comment period provided sufficient time for submission of a wide range of material issues and concerns. During that period no new information was presented that would warrant additional time for review and comment or for reissuance of the rule for another notice and comment period. After finalization of this rulemaking, NMFS will develop an approach to engage with the public on improvements to the procedures for aggregation and summarization of confidential information referenced under § 600.410(b) for the maintenance of and access to confidential information. NMFS typically engages the public through ANPRs in order to scope issues, identify possible alternatives, and generally gather information that it may need to develop a proposed rule. An ANPR was not necessary here given NMFS' experience in administering confidentiality requirements since enactment of the 1976 Fishery Conservation and Management Act (precursor to the MSA) and the 2012 MSA confidentiality proposed rule and public comments received during an almost 5-month comment period. See 82 FR 4278 (January 13, 2017) (describing and withdrawing 2012 proposed rule). If experience implementing these regulations identifies the need for additional procedures to preserve the confidentiality of information, the agency will consider an ANPR along with other options to engage the public in development of those procedures.

Open Government and Transparency

Comment 2: Some commenters opposed the proposed rule stating that it limited public access to information without a statutory mandate and is inconsistent with the Administration's Open Government Policy.

Response: NMFS disagrees. First, the MSA mandates the confidentiality of any information that is submitted to the Secretary, a State fishery management agency, or a marine fisheries commission and any observer information in compliance with a requirement or regulation under the MSA. 16 U.S.C. 1881a(b)(1) and (b)(2). The limitations on public access to information under this rule are consistent with that mandate and MSA section 402(b)(3) which directs the Secretary to promulgate, by regulation, such procedures as may be necessary to preserve the confidentiality of information. Second, this rule advances open government and transparency by providing a framework that allows for access to, or public disclosure of, confidential information when authorized by law.

Unauthorized Use/Disclosure Prohibition

Comment 3: Some commenters opposed the prohibition on unauthorized use or disclosure of confidential information in § 600.725 stating that it would discourage legitimate disclosures of confidential information. These commenters recommended that NMFS instead emphasize training on the handling of confidential information. A commenter asked that NMFS clarify whether NMFS would be responsible for enforcing the proposed prohibition.

Response: This prohibition reflects the confidentiality requirements of MSA 402(b) and section 307(1)(A) which provides that it is unlawful for any person to violate any provision of the

Act. Since 1996, NMFS' regulations for preservation of MSA confidential information under subpart E have included this prohibition and during that time NMFS employees and other individuals authorized to access confidential information have been required to sign a statement that they acknowledge the prohibition on unauthorized disclosure of confidential information and the potential for civil or criminal prosecution for any violation of that prohibition. The proposed prohibition, therefore, represents applicable law and existing policy. Based on its long history of successfully operating under this prohibition, NMFS has no basis to believe that the prohibition would discourage or create concerns within NMFS on legitimate access to and disclosure of confidential information. Enforcement will be the responsibility of NMFS' Office of Law Enforcement with support from other governmental entities.

Development of Internal Control Procedures

Comment 4: Many commenters requested that NMFS clarify how it will develop ICPs referenced under § 600.410(b) and how the ICPs would apply to the collection and maintenance of, access to, and release of any confidential information. Some commenters stated that they could not assess the rule without further information on the ICPs and how they would be developed. One commenter asserted that the rule's approach to development of the ICPs is not consistent with principles of transparency and inclusion provided in NMFS' Equity and Environmental Justice Strategy and NOAA's Data Strategic Action Plan. Commenters generally requested that NMFS provide a transparent and inclusive process with meaningful opportunities for public engagement in the development of ICPs.

Response: The ICPs are internal agency procedures intended to guide the handling of confidential information under the MSA. Because the current ICPs inform NMFS' internal administrative processes, they are included in a 1994 NOAA Administrative Order (NAO 216–100) and are not set forth in the Code of Federal Regulations. However, as noted in the preambleto the proposed rule, NOAA intends to replace NAO 216–100 with updated ICPs. NMFS is committed to an open, equitable, and transparent public engagement process in the development of the ICPs through appropriate means and methods and consistent with legal requirements. The extent and manner of public engagement will vary depending on the subject matter.

Recognizing that ICPs have been a part of the confidentiality regulations since 1998 in some fashion, this rule reiterates the need to establish ICPs. While the requirement to establish and maintain ICPs is part of this rulemaking, the rulemaking does not dictate the specific substance of those ICPs. As guidance rather than regulatory mandate, ICPs will be developed subsequent to the issuance of the final rule and reflect its requirements related to the preservation of confidential information. Developing internal administrative procedures that could change as a result of this rulemaking would not be efficient. When NMFS develops substantive ICPs, it plans to engage the public through webinars, workshops, and/or other forms and methods for obtaining public comment.

Comment 5: Some commenters stated that the ICPs are substantive rules of general applicability that must be promulgated through rulemaking in order to comply with the Administrative Procedure Act (APA). Other commenters also said that NMFS must promulgate ICPs by regulation in order to comply with MSA 402(b)(3), 16 U.S.C. 1881a(b)(3). One commenter viewed notice-and-comment rulemaking as appropriate for development of procedures for release of confidential information in aggregate or summary form while other procedures that only apply to NMFS's internal handling of confidential information could be developed through a non-rulemaking process.

Response: ICPs have been part of the confidentiality regulations since 1998. As stated above, they currently exist in NAO 216–100, have not been codified in the Code of Federal Regulations, and were not promulgated through notice and comment rulemaking in the **Federal Register**. These ICPs constitute a practice or procedure relating to agency management and are therefore not subject to notice and comment procedures under the APA, 5 U.S.C 553(a)(2). Nevertheless, NMFS intends to evaluate each ICP individually and determine the appropriate process for public engagement and development. NMFS anticipates that most, if not all, will constitute a practice or procedure relating to agency management and as such not subject to APA notice and comment procedures. However, NMFS will conduct further rulemaking, if necessary, and/or may choose to make draft ICPs available for public comment.

Under MSA 402(b)(3), the Secretary, through NMFS, is directed to ''prescribe such procedures [by regulation] as may be necessary to preserve the confidentiality of information . . .'' NMFS therefore has discretion to determine which procedures are necessary for the protection of confidential information and which, therefore, must be done through rulemaking. This final rule prescribes all such procedures.

In contrast, the ICPs contained in NAO 216–100 consist of procedures for agency management that can be addressed through non-regulatory methods. ICPs provide additional guidance on the application of the regulatory requirements in specific cases, but they are not themselves regulatory. As such, the subject matter to be addressed through ICPs, such as standardized agreements for sharing information, do not constitute procedures that are necessary for preserving confidentiality. However, if NMFS determines that a specific ICP should have regulatory effect, NMFS will promulgate that ICP through appropriate rulemaking. Until ICPs are developed and finalized, it will continue to apply the provisions of NAO 216–100 except those that are in conflict with applicable law. For example, NMFS will not apply Section 6.04.a.1(d) of NAO 216–100, which provides that observer data collected under the MSA are not confidential. This provision is in direct conflict with MSA 402(b)(2), 16 U.S.C 1881a(b)(2).

Comment 6: A commenter expressed concern that NMFS would release confidential information under the Freedom of Information Act (FOIA) even if prohibited under ICPs because procedures not completed through regulations lack the force of law.

Response: NMFS agrees that non-regulatory ICPs lack the force of law. Any such ICPs will not address or apply to whether confidential information may be released under FOIA. Rather, as stated in the preamble of the proposed rule, NMFS applies MSA section 402(b)(3) as the basis for FOIA Exemption Three, mandatory withholding authority.

Comment 7: A commenter stated that it is unclear how national policies developed through the ICPs will interact with regional practices and implementation plans.

Response: As required under § 600.410(b), NMFS intends to update the current ICPs set forth in NAO 216–100. As with the current ICPs, these updated ICPs will be intended to provide national-level guidance on the application of these regulations for the maintenance of and access to any confidential information. Regions may develop additional ICPs that address

specific issues with their region's data collection programs and/or fisheries for management of confidential information. Any such regional ICPs must be consistent with statutory and regulatory requirements and should also be consistent with the national ICPs.

Protection of Confidential Information Collected and/or Processed by Observer Information Services

Observer Providers

Comment 8: One commenter requested that NMFS revise the definition of ''observer provider'' because observer providers do not collect observer data. The commenter further requested that NMFS explain the use of the term ''observer information'' rather than ''observer data'' and whether using the term ''observer information'' will affect public access to information that is collected by observers.

Response: The definition of observer provider is clear that an observer provider does not itself collect observer information but rather collects that information through the placement of observers on certain platforms or in certain facilities. This rule defines ''observer provider'' as ''any person that collects observer information by placement of observers on or in fishing vessels, shoreside processors, or stationary floating processors under the MSA or as part of a cooperative research initiative.'' The MSA defines ''person'' to include ''any corporation, partnership, association, or other entity.'' 16 U.S.C. 1802(36). The MSA defines ''observer information,'' *id.* 1802(32), and specifically references that term in the MSA's confidentiality requirements at section 402(b), *id.* 1881a(b)(2). Accordingly, it is appropriate to use the term ''observer information'' for this rule rather than ''observer data,'' which is neither defined in the MSA nor referenced in the MSA's confidentiality requirements.

Electronic Monitoring (EM) Service Providers

Comment 9: One commenter recommended that NMFS expand the definition of ''EM Service Provider'' to include EM providers that contract directly with fishery participants or their representatives. Otherwise, portions of EM data that are collected and maintained by EM service providers may not be protected by NMFS even though that information is subject to the MSA confidentiality requirements. The commenter requested that NMFS maintain the confidentiality of EM information in the same way that it protects information collected by human observers. The commenter stated that protection of information will incentivize further participation in and development of EM. An additional commenter stated that NMFS should describe how the revised MSA confidentiality regulations will affect its policy directives on EM. The commenter stated that NMFS should initiate a distinct rulemaking for maintaining the confidentiality of EM information and engage the public on access to that information.

Response: Under this final rule, an EM service provider is defined to include such providers that contract directly with a vessel to manage information that is collected by an EM system required under MSA regulations or a permit. However, agency access, maintenance, and release responsibilities under this final rule apply only to information that is under NMFS' custody and control. As explained in the Background section of this final rule and the proposed rule (89 FR at 17361–62), NMFS treats information as subject to its custody and control when it physically obtains the information (*see* 16 U.S.C. 1881a(b) (providing for confidentiality of information ''submitted'' to the Secretary in compliance with MSA requirements)). Information that is maintained by an EM service provider under contract with a fishing vessel is not under NMFS' custody and control. Therefore, the access, maintenance, and release responsibilities of this final rule do not apply to that information.

As explained in the preamble to the proposed rule, because EM information is a form of observer information under the MSA, it is considered confidential under the MSA. NMFS expects an EM service provider to have a means to protect a vessel owner's EM information that is subject to the MSA's broader statutory prohibition on the release of observer information. See Information Law Application for Data and Supporting Guidance in Electronic Monitoring Programs For Federally Managed U.S. Fisheries 04–115–04, available at *https://media.fisheries.noaa.gov/dam-migration/04-115.pdf.* Regulatory programs that establish EM programs should require that third parties have a means to protect EM data, whether through FMP implementing regulations, a service provider approval process, or other applicable procedure. *Id.*

NMFS has a different approach for information collected by human observers because MSA 402(b)(2)(C) provides for limited dissemination of confidential information between observers, observer providers, and NMFS pursuant to a confidentiality agreement that prohibits other types of dissemination. See 89 FR at 17361 (proposed rule discussion). To comply with MSA section 402(b)(2)(C), NMFS must effectuate the MSA confidentiality requirements for human observer information including information collected by observers employed by an observer provider that is under contract with a fishing vessel, but a similar provision does not exist for electronic monitoring information not under NMFS' control. Thus, the final rule takes a different approach for observer providers than for EM service providers that are under contract with a fishing vessel.

For these reasons, NMFS is finalizing its proposed definition of an Electronic Monitoring Service Provider with no changes. NMFS' existing policy directives on EM information and these regulations are sufficient to guide the management of confidential information collected through EM systems, and a specific rulemaking on such issues is unwarranted.

NMFS has made one edit to the definition of ''observer information'' to insert statutory text that was inadvertently left out. The MSA defines ''observer information'' to include EM information collected pursuant to an authorization by the Secretary or ''as part of a cooperative research initiative.'' 16 U.S.C. 1802(36). The final rule adds the cooperative research text. Lastly, because this final rule does not apply to confidential information maintained by EM service providers, it does not affect NMFS' policy directive 04–115–03 which provides guidance on how long privately contracted EM service providers should retain EM information.

Comment 10: A commenter expressed concern that the proposed definition of ''confidential information'' did not cover certain categories of EM data or portions of the ''chain of custody,'' *i.e.,* the handling of EM data before review and data extraction.

Response: This final rule defines ''confidential information'' consistent with the MSA, which requires the confidentiality of any observer information with some exceptions. 16 U.S.C. 1881a(b)(2). Under the MSA, observer information is defined to include any information collected by an EM system. Accordingly, under this final rule, all categories of EM data that are collected by an EM system constitute confidential information. Information regarding ''chain of custody,'' or the handling of EM data before review and data extraction, does not fall under the MSA definition of

observer information. Therefore, such information would not be considered confidential information for MSA purposes unless it is required to be submitted to NMFS in compliance with a regulation under the Act.

Comment 11: One commenter requested an assessment of the impacts of the proposed rule on the implementation of a new reporting requirement for electronic logbooks (ELBs) for commercial fisheries in the Gulf of Mexico. The commenter stated that this assessment is important to ensure that implementation of the ELBs for commercial fisheries is not delayed.

Response 11: Confidentiality of information requirements under the MSA and this final rule may apply to information that a person submits through ELBs or other electronic devices but not the devices themselves. Agency access, maintenance, and release responsibilities under this rule apply only to information that is under NMFS' custody and control, *i.e.,* when it enters a NMFS FISMA domain. *See* Background section above for FISMA explanation. As such, this final rule does not have an impact on the implementation of new reporting requirements for ELBs in the Gulf of Mexico, and therefore, no assessment of the impacts of this rule on reporting requirements for ELBs was conducted.

Comment 12: A commenter stated that NMFS should improve the efficacy of its confidentiality agreement protocols by requiring EM providers to disclose their artificial intelligence and machine learning technologies.

Response: The commenter did not indicate why or how disclosure of an EM provider's artificial intelligence and machine learning technologies to NMFS would improve the efficacy of the confidentiality agreement protocols. These final regulations require that a confidentiality agreement between NMFS and EM service providers that are providing services to NMFS under a contract, or performing functions that require the handling of confidential information under a NMFS financial assistance award, specify the procedures that the provider will apply to protect confidential information from public disclosure; and also require that the EM service provider, and each of its employees who will handle confidential information, acknowledge the requirement to maintain the confidentiality of observer information and the civil penalties for unauthorized use or disclosure of this information under 16 U.S.C. 1858. NMFS believes that these procedures are sufficient to address any potential information security issues that may arise with respect to any technologies employed by an EM service provider for the processing of EM data.

Comment 13: A commenter requested that NMFS revise the proposed rule to clarify if all information collected by the EM systems that are required under the MSA or other authorities will be treated as confidential information.

Response: As stated above, any information collected by an EM system that is required under the MSA is subject to the Act's confidentiality requirements. Agency access, maintenance, and release responsibilities under this rule apply only to information that is under NMFS' custody and control, which occurs when NMFS physically obtains the information, or it enters an NMFS FISMA domain. *See* Background section above for FISMA explanation. The response to Comment 9 explains NMFS' approach to EM information maintained by an EM service provider under contract with a fishing vessel. Responses to Comments 14 and 24 describe agreements with states or Marine Fisheries Commissions for the collection of confidential information. Neither MSA confidentiality requirements nor this rule apply to information that is collected by an EM system that may be required under other authorities. Whether NMFS must protect from disclosure information collected by an EM system required under an authority other than the MSA depends on the authority at issue.

Comment 14: Commenters requested that NMFS clarify what constitutes ''authority comparable to the MSA'' for purposes of an agreement with a state that allows for collection of confidential information. Commenters also asked how NMFS will determine that a State will ''exercise such authority'' and what happens if it does not.

Response: Pursuant to § 600.410(c)(1), NMFS will assess whether a State has legal authority to protect confidential information from disclosure in the same manner that NMFS can protect such information from public disclosure under the MSA. NMFS will rely on the respective State's assurances to determine whether a State will exercise such authority. Should a State not exercise its authority to protect confidential information, NMFS may rescind the collection agreement. NMFS intends to develop ICPs to guide the development of confidentiality agreements with States and commissions that are authorized to collect confidential information.

Scope of Subpart E Regulations

Comment 15: A commenter said that proposed § 600.405 would narrow the scope of information that would be subject to the regulations compared to current regulations. Some commenters requested that NMFS clarify whether confidentiality protections would apply to information collected by NMFS under a fishery management plan (FMP) that was not implemented under the MSA.

Response: Proposed § 600.405 was not intended to narrow the scope of information subject to MSA confidentiality requirements (16 U.S.C. 1881a(b)); the section refers to a definition of confidential information (§ 600.10) that is consistent with 16 U.S.C. 1881a(b). After reviewing public comment, NMFS is clarifying § 600.405. Final § 600.405 continues to state that the regulations apply to confidential information as defined in § 600.10 with an additional explanation that agency access, maintenance, and release responsibilities apply only to confidential information under NMFS' custody and control. As explained in the Background section of this final rule and the proposed rule (89 FR at 17361–62), NMFS treats information as subject to its custody and control when it physically obtains the information (*see* 16 U.S.C. 1881a(b) (providing for confidentiality of information ''submitted'' to the Secretary in compliance with MSA requirements)).

With regard to the relevant FMP, the proposed rule stated that the MSA confidentiality requirements apply to information that a person submits in compliance with an FMP that is implemented under the MSA and any observer information collected under the Act. In some cases, FMP information collection and/or monitoring requirements are implemented under joint authority of the MSA and another authority. In those cases, the MSA confidentiality requirements apply just as they would to information that is submitted by a person or collected by an observer under an FMP implemented solely under the MSA. For information collection requirements implemented under FMPs under authorities other than the MSA, the Act's confidentiality requirements do not apply.

Voluntarily Submitted Data

Comment 16: A commenter asked NMFS for examples of information collected under an MSA program that isn't submitted to the Secretary, State agency, or marine fisheries commission and thus would not be subject to this rule. Additionally, a commenter sought clarification on the application of this

rule to data from cooperative research programs that is provided voluntarily. The commenters also requested clarification on privacy protections for data from recreational and voluntary collection programs not covered by MSA confidentiality and asserted that these voluntary data collection programs may suffer if data is considered non-confidential or not protected. They requested that the agency identify any data and privacy protections for information collected through State and NOAA surveys. They emphasized the need to differentiate between high-resolution data for research and data for management decisions and recommended that voluntary data streams, such as those from participants in an opt-in on-demand gear program, receive confidential protection.

Response: Where there is no MSA requirement for the information collected and a person voluntarily submits it, the MSA confidentiality prohibition against release does not apply. In addition, neither these regulations, nor any current or future ICPs developed pursuant to these regulations, would apply to information that is voluntarily provided to NMFS. For example, confidentiality restrictions would not apply to recreational fishing information collected through a state survey program and provided to NMFS. Any information voluntarily provided directly to NMFS through a NMFS-conducted survey, including voluntary surveys to collect cost and earnings data, would also not be MSA confidential information. While voluntarily submitted information is not confidential under the MSA, it may be exempt from public disclosure under FOIA as confidential business information or information that would result in an unwarranted invasion of personal privacy if made publicly available. As such, NMFS does not anticipate a reduction in participation of voluntary collections.

The MSA confidentiality requirements and procedures under this rule apply to observer information that was collected as part of a cooperative research initiative and that is under NMFS' custody and control. See 16 U.S.C. 1881a(b)(2) and 1802(32) (providing that ''observer information'' is confidential and referring to a cooperative research initiative in the definition of that term). In addition, if cooperative research is conducted under an exempted fishing permit and information collected through that research is required to be submitted under the terms of the permit, NMFS will treat it as confidential information for MSA purposes.

Lastly, NMFS intends to develop guidance on data aggregation standards as part of an ICP to address the level of data resolution needed to preserve confidentiality, if it is to be released for management purposes. See 50 CFR 600.410(b)(9).

Disclosure Under the Limited Access Program Exception

Comment 17: Commenters expressed a range of views on the LAP exception. A commenter stated that the proposed rule approach for the LAP exception seemed to be broader than what was intended and requested that NMFS narrow the LAP exception by revising the definition of LAP such that it only covers limited access privilege programs (LAPPs) and interpreting it to authorize release of confidential information only to a person who has applied for privileges under a LAPP. One commenter stated that ''determination'' for purposes of the LAP exception should apply only to the initial phase of a LAP program and not to monitoring under LAP-managed fisheries. Another commenter supported the proposed rule approach stating that treatment of some LAP participant information as non-confidential would enhance transparency and accountability. The commenter supported application of FOIA exemptions to information that is non-confidential under the LAP exception if necessary to protect personal privacy. Other commenters expressed qualified support for NMFS' proposed approach to the LAP exception but requested that NMFS consider a broader approach that would allow for more information to be treated as not confidential under that exception.

Response: The MSA LAP exception allows for the disclosure of information that a person is required to submit for a determination under a LAP. This final rule provides that the exception applies to LAPPs, 16 U.S.C. 1853a and 1802(26), and other fisheries that are managed through allocation of privileges to a person. The LAP exception uses the undefined term ''limited access programs;'' thus, in developing the proposed rule, NMFS considered what limited access management approaches may necessitate a specific confidentiality exception for disclosure of information. 89 FR 17358, 17362–17363 (March 11, 2024). After considering public comment, NMFS continues to believe the need is most evident for fisheries in which exclusive fishing privileges, such as a portion of a fishery's total allowable catch, are allocated to persons based on their historical catch, or other applicable historical fishery participation. *See Id.* at 17363 (noting the same need in the proposed rule). As discussed in the proposed rule, in these fisheries—often referred to as catch share programs—the availability of information is necessary for administration of appeals of allocations and related determinations and generally promotes transparency in the basis for such determinations. See NOAA's Catch Share Policy (available at *http://www.nmfs.noaa.gov/sfa/management/catch_shares/about/documents/noaa_cs_policy.pdf*) for information on catch shares. Accordingly, in this final rule, the LAP exception applies to information that underlies allocations of those privileges and subsequent NMFS determinations that apply to those allocated privileges. Having considered public comment, NMFS still sees no basis for interpreting ''determination'' to apply only to determinations that are made in the initial phase of a LAP and not to any subsequent allocation determinations. In this final rule, the exception applies to any determination under a LAP involving allocation decisions at any time. § 600.420(c)(2) defines ''Determination'' to include allocations generally and therefore covers both the initial and any subsequent annual allocation of privileges. Additionally, the final rule defines determination to include approval or denial of a lease or sale of either allocated privileges or annual allocations and end-of-season adjustments.

The LAP exception is just that—an exception to the MSA confidentiality requirements. NMFS declines to adopt a broader interpretation of the LAP exception that would result in it operating as a rule, rather than exception, where confidentiality does not apply to most if not all information that a person is required to submit in LAP managed fisheries. This exception allows, but does not require, release of excepted information pursuant to the MSA. Other statutes, such as FOIA, may apply and protect certain agency records from public disclosure (See *e.g.,* FOIA protections below).

Comment 18: Some commenters expressed concern that NMFS would treat information that it accesses through an agreement with a State as non-confidential, notwithstanding a State law that protects and restricts access to that information.

Response: NMFS has sufficient authority to protect vessel-specific information to avoid any conflict with State law requirements. While the LAP exception allows for release of information that is submitted for a

determination under a LAP, it does not require that NMFS proactively do so. Should NMFS receive a FOIA request for information that is not confidential under the LAP exception, NMFS could, as appropriate, protect that information from public disclosure under FOIA Exemption Four, which applies to confidential business information, or Exemption Six, which applies to information the release of which would constitute an unwarranted invasion of personal privacy. In determining the appropriateness of application of FOIA Exemption Four, NMFS will consider whether the requested information is protected under state law because that is relevant to whether a person submitted it with the expectation that it would be treated as confidential.

Comment 19: Some commenters asked NMFS how this rule's approach to the LAP exception compares to NMFS' current practice. A commenter also asked how the approach would affect confidentiality of information in LAPPs. A commenter expressed concern that the LAP exception would apply to information that NMFS uses to consider whether to establish a LAP. They requested NMFS clarify when the exception would apply to such considerations and what information NMFS uses to determine whether to approve a lease or sale of allocated privileges, and when that information would be made public.

Response: The LAP exception applies to LAPPs and other fisheries that are often referred to as catch share programs. See response to Comment 17. Since the LAP exception was enacted in 2007, NMFS has applied the exception in the same manner codified in this final rule. In other words, NMFS, including its regional offices, has not applied the exception beyond information submitted or used for any initial or annual allocations, approval or denial of a lease or sale of allocated privileges, or end-of-season adjustments. Some regions have applied the LAP exception only in the context of allocation determinations. The final rule will establish a uniform approach and clarifies that information a person submits for a determination, as defined at § 600.420(c)(2), would be subject to the LAP exception.

With regard to establishing a LAP, a Council could transmit an FMP amendment to NMFS recommending a new LAP. Even if NMFS has not yet determined whether to implement the FMP amendment through a final rule, NMFS may decide, as an example, that releasing historical landings or catch information to a potential LAP participant would be helpful in order to provide sufficient time for vessel owners to verify or correct information that will be used for initial allocations, 89 FR at 17363, and this final rule clarifies that such information could be released. The LAP exception would not, however, be applicable for a Council's consideration of whether to establish a LAP. In other words, NMFS would not release MSA confidential information pursuant to the LAP exception when a Council was considering whether to establish a LAP. *Id.*

What information is used to determine whether to approve a lease or sale of allocated privileges, and thus whether and when such information would be made public, depends on the requirements established and implemented for a particular fishery.

Disclosure Related to International Fisheries Agreements and the High Seas Driftnet Fishing Moratorium Protection Act

Comment 20: Some commenters objected to the rule's approach to what is not confidential for MSA purposes under section 608(b)(2) of the FMPA, as amended. 16 U.S.C. 1826i(b)(2). Specifically, these commenters said that the approach was too broad and should be removed or revised so that information collected from U.S. vessels is treated as confidential even if shared with an RFMO to satisfy a United States obligation. Another commenter asked that NMFS clarify whether the FMPA authorizes NMFS to rely on each RFMO's confidentiality procedures to protect information or whether NMFS will engage each RFMO to ensure protection of business and personal information.

Response: NMFS agrees that the proposed approach is too broad and has made changes to the rule language to reflect this concern. FMPA sections 608(b)(2) and 606(d)(2)(B) do not define information provided to satisfy an RFMO obligation or foreign vessel information as ''not confidential'' for MSA purposes. Rather, these sections specify that ''with respect to the [FMPA]'' the MSA confidentiality requirements shall not apply for, or with respect to, obligations of the United States to share information under an RFMO of which the United States is a member or foreign vessel information. 16 U.S.C. 1826i(b)(2) and 1826g(d)(2)(B). To clarify this point, this final rule deletes references to RFMO and foreign vessel information in the definition of confidential information (proposed § 600.10) and consolidates and simplifies relevant FMPA text in § 600.415(f).

The FMPA permits disclosure of information, including information that is collected jointly under the MSA and a statute that implements an international fishery agreement, to ''any other Federal or State government agency, the Food and Agriculture Organization of the United Nations, the secretariat or equivalent of an international fishery management organization or arrangement made pursuant to an international fishery agreement'' if they have policies and procedures in place to protect the information. *Id.* 1826i(b)(1). Such information may be vessel-specific. The FMPA allows for release of confidential information to the same list of entities as well as foreign governments if, in addition to having policies and procedures in place, the information is released for purposes specified at section 1826g(d)(2)(A)(ii). The FMPA authority described above is reflected in revised § 600.415(f), which states that NMFS may disclose such information, as authorized under, and subject to the requirements and conditions of, section 608(b) or 606(d)(2) of the High Seas Driftnet FMPA (16 U.S.C. 1826i(b) and 1826g(d)(2)), to entities specified in those sections. For such disclosures, specified entities must have in place policies and procedures to protect confidential information from unintended or unauthorized disclosure. The United States engages within the RFMOs it is a member of to support the development and adoption of policies and procedures, including confidentiality procedures to protect information from unintended or unauthorized disclosure. Where the United States is not a member of an RFMO, NMFS would consider the RFMO's policies and procedures on a case-by-case basis.

FMPA sections 608(b)(2) and 606(d)(2)(B), 16 U.S.C. 1826i(b)(2) and 1826g(d)(2)(B), provide for two exceptions where MSA confidentiality requirements do not apply; in other words, the policies and procedures described above are not required for disclosures of: (i) information disclosed with respect to obligations of the United States to share information under a RFMO of which the United States is a Member or (ii) information collected by NMFS regarding foreign fishing vessels. NMFS may determine what, if any, conditions may be appropriate for these two categories of information and will consider whether any additional, related guidance on agency management of information is needed in updated ICPs.

Comment 21: Commenters recommend that NMFS apply section 608 of the FMPA only to RFMOs

identified in 16 U.S.C. 1826g (section 606(d)(2)) rather than any RFMO.

Response: NMFS does not agree with limiting the FMPA disclosure of information provisions to U.S. obligations related to specifically listed RFMOs because the statute clearly applies to other RFMOs which implement fishery agreements, even if not specifically enumerated. Section 606 states that it applies to information collected under the joint authority of the MSA and the ATCA, WCPFC Implementation Act, ''or other statutes implementing international fishery agreements.'' The section authorizes disclosure of such information, subject to specific requirements and exceptions, to various entities, including the secretariat or equivalent of an international fishery management organization or arrangement made pursuant to an international fishery agreement. *Id.* § 1826g(d)(2)(A). Section 608 uses similar language with regard to information and entities. Thus, NMFS has made no changes to this aspect of the final rule.

Comment 22: A commenter expressed support for the proposed rule allowing state and federal agencies and certain international organizations to access confidential information if necessary and appropriate under the FMPA. Another commenter asked that NMFS clarify how access by RFMOs would be different under the proposed rule compared to current practices. The commenter stated that NMFS should treat information as non-confidential for purposes of sharing it with an RFMO only if that RFMO's definition of what is confidential is the same as NMFS'.

Response: NMFS acknowledges the support for disclosure of confidential information pursuant to the FMPA and that information sharing furthers efforts to develop science-based measures for conservation and management of domestic and international fisheries and to strengthen enforcement of those measures. The FMPA disclosure of information provisions were enacted under the 2015 Illegal, Unreported, and Unregulated Fishing Enforcement Act, and NMFS does not expect that the final rule will substantively change how NMFS applies them in practice. Under the MSA, information is confidential if required to be submitted in compliance with requirements of the Act. While an RFMO may have a policy that defines confidential information, it would not control what is confidential for MSA purposes. As stated in response to Comment 20, under the FMPA, NMFS may disclose information that is subject to the MSA confidentiality requirements to RFMOs if they have policies and procedures in place to protect the information. NMFS' practice has been to make disclosures under this authority only to RFMOs that have policies and procedures to protect confidential information that are equivalent to NMFS'. NMFS will consider whether any additional, related guidance on agency management of this information is needed in updated ICPs.

Comment 23: A commenter urged NMFS to provide transparency on global fisheries management through release of information that is collected under the Seafood Import Monitoring Program (SIMP). The commenter referenced the proposed rule's implementation of the FMPA, which provides that information collected from foreign fishing vessels is not confidential. The commenter believes that there should be greater public access to information collected under the Marine Mammal Protection Act Import Provisions and other authorities administered by NMFS.

Response: As explained in response to *Comment 20,* the final rule revises the definition of confidential information (§ 600.10) to delete reference to foreign fishing vessels and addresses the FMPA in § 600.415(f)). The MSA does not have an exception for public disclosure of confidential information collected under SIMP. Further, the Trade Secrets Act (18 U.S.C. 1905) prohibits the disclosure of information collected and maintained in Customs and Border Protection (CBP) systems, which may limit the ability for SIMP data to be shared publicly (data collected for SIMP is submitted electronically through the Automated Commercial Environment maintained by CBP). However, per the FMPA, NMFS could disclose information collected under the program regarding foreign vessels, as provided under § 600.415(f) and if consistent with other applicable law.

Enforcement of Data Agreements and Prohibitions To Release Data

Comment 24: Several commenters asked for clarity regarding the responsible party for enforcing the prohibition under MSA 308(a), 16 U.S.C. 1858(a), non-disclosure agreements, or any mutual agreements to ensure confidentiality procedures are maintained by those entities.

Response: Section 308(a) of the MSA concerns the assessment of a civil penalty if the Secretary determines that a person has committed an act prohibited by section 307 of the MSA. NMFS is generally responsible for enforcing the various prohibitions in the MSA and in regulations promulgated under the MSA including the prohibitions set forth in this rule. NMFS works closely and collaboratively with States, marine fishery management commissions, and other entities to ensure appropriate handling of MSA confidential information. Under § 600.410(c)(1), NMFS may enter into an agreement with a state for the collection of confidential information by the state on behalf of the Secretary if NMFS determines that the state has authority comparable to the MSA for the protection of information and that the state will exercise such authority to protect confidential information. See response to *Comment 3* for further explanation. In addition, NMFS may enter into an agreement with a marine fisheries commission per § 600.410(c)(2). In such circumstances, NMFS may look to the states or commissions to carry out agreed upon duties to protect information using the comparable State or Commission authorities rather than MSA authorities.

Data Collected Under Other Programs for Management Purposes and Applicability of MSA Confidentiality Measures

Comment 25: One commenter asked for clarity regarding how data collected and transmitted to the NOAA Office Of Law Enforcement (OLE) would be treated, especially vessel position information (*i.e.,* Vessel Monitoring Systems (VMS) data) or data collected for scientific monitoring purposes in the Gulf of Mexico commercial shrimp fishery. In addition, the commenter would like clarity that OLE data would enter the Federal Information Security System and thereby be under NMFS custody and control for protection as confidential information.

Response: The NOAA OLE is an office under the NMFS. Every NMFS office, including OLE, maintains VMS and other forms of MSA confidential information in accordance with the NMFS's Federal Information Security Management Act requirements. The NMFS office responsible for initially collecting MSA confidential information has no bearing on OLE's authority to access and use any MSA confidential information collected by NMFS. VMS data, like other forms of confidential information, can be accessed by NMFS and others for fishery conservation and management purposes. In the case of the proposed data collected in the Gulf of Mexico shrimp fishery, the data has traditionally been submitted to NMFS, resides in NMFS' custody and control, and is managed within a NMFS FISMA domain. In cases where MSA confidential information must be used to enforce the provisions of the MSA,

that MSA confidential information may become part of the public record.

Access to and Disclosure of Confidential Information to a Council's Management Entities

Comment 26: Comments were mixed on the proposed procedure that allows Council executive directors to request access to confidential information for scientific and statistical committee (SSC) and/or advisory committee or panel (AP) members. Those opposed said that the MSA does not authorize SSC/AP members to have access to confidential information. Other commenters asserted that State law may not permit such access to information that a State provides to NMFS in accordance with an agreement with the State. Some commenters expressed concern that SSC/AP members may gain a competitive advantage if given such access. Other commenters were in support of this procedure and requested broadening this approach to allow access to any individuals or groups who provide support to NMFS with respect to fishery conservation and management under the MSA such as technical management teams, cooperative researchers and contract employees.

Response: The MSA authorizes disclosure of confidential information to the Councils: ''Nothing in this subsection [402(b)] shall be interpreted or construed to prevent the use for conservation and management purposes by the Secretary, or with the approval of the Secretary, the Council, of any information submitted in compliance with any requirement or regulation under this chapter . . .'' 16 U.S.C. 1881a(b)(3). The MSA requires establishment of SSCs, 16 U.S.C. 1852(g)(1), and APs that are necessary or appropriate to assist a Council in carrying out its functions, notably, the preparation of fishery management plans and amendments, 16 U.S.C. 1852(g)(2)–(h)(1). Given these mandates, the MSA authorizes disclosure of information to SSCs and APs if needed for conservation and management purposes and subject to the below-described procedures. § 600.415(d)(5) also acknowledges the potential need for Council contractors to access confidential information. However, NMFS does not believe it is necessary to expand § 600.415(d) to include any individuals or entities who might provide some support to NMFS related to MSA conservation and management.

As explained in the preamble to the proposed rule, a Council may request, through its executive director, that members of its SSCs and APs be given access to confidential information. Proposed § 600.415(d), however, provided that the executive director could make this request on their own initiative. This final rule revises that procedure to reflect the procedure stated in the preamble; *i.e.,* that a Council may, through its executive director, request that members of its SSCs and APs be provided access to confidential information. This procedure can be applied consistent with a more restrictive State law. For example, a Council could include in its standard operating procedures a requirement to consider whether access by Council SSC or AP members may be in potential conflict with a State law. A Council member for a State with such a concern could raise it for consideration by the Council.

Before approving any such request, NMFS must determine that access will not result in any Council member having a personal or competitive advantage (§ 600.415(d)(3)–(4)). Further, NMFS will consider whether providing confidential information is inconsistent with State law. NMFS recognizes that State law applicable to information that NMFS accesses under an information sharing agreement with a State may not always align with what is authorized under the MSA and other applicable Federal law. NMFS coordinates with its State partners to address such issues as they arise but has not experienced an unresolvable conflict between State and Federal mandates to date.

Definition of Business of Any Person

Comment 27: Comments were mixed on the proposed definition of ''business of any person.'' Some commenters supported the proposed definition because business information and identifying information need protection. These commenters stated that the definition would apply to information that reasonably constitutes proprietary information and would cause competitive harm if disclosed. Other commenters opposed this definition, stating that it is contrary to the MSA and the agency's long-standing interpretation of ''identity or business of any person'' as referring to the identity of a person or a business. These commenters further stated that the definition is too broad and overly protective and would violate MSA National Standard 2 (NS 2) and the Open Government Policy by limiting public access to information for use in cooperative research and other activities related to fisheries management.

Response: MSA section 402(b)(3) expressly states that aggregated or summarized information may be released only if it does not directly or indirectly disclose the ''identity *or* business of any person'' (emphasis added). This rule amends existing regulations to better align with the statutory text. Since the statute distinguishes between the identity or business of any person, the regulations must go beyond a reference to identity. In practice, NMFS aggregates information to protect a person's identity as well as the person's business information. In other words, NMFS does not simply strip identifiers off information that it releases. Many fishermen have business interests in protecting information related to their fishing practices, including the time, location and gear used. Disclosure of this information at a vessel-specific level, even if stripped of identifiers, could raise concerns about competitive disadvantages. In NMFS's experience, the types of operational and financial information listed in the ''business of any person'' definition are precisely the types of information that, if disclosed at the vessel-specific level, could result in competitive harm. The definition is clear and relatively easy to apply, reflects a common understanding of what constitutes the ''business'' of a person in the MSA regulatory context, and is consistent with the agency's long-standing practice.

NMFS supports transparency, public participation, and collaboration through the MSA's regional, process-intensive approach to fishery management. For information on the U.S. Open Government initiative, go to *https://www.gsa.gov/governmentwide-initiatives/us-open-government.* NMFS agrees that access to fisheries information facilitates transparency, public participation, and collaboration and that these goals should be taken into account in its handling of confidential information. To that end, NMFS intends to develop ICPs to provide guidance on the minimum level of aggregation disclosure advisable to protect the identity and the business of any person, consistent with MSA confidentiality requirements. NMFS also intends that the ICPs will provide guidance on when information should be considered to indirectly disclose a person's identity or business. NMFS disagrees that the definition of ''business of any person'' is inconsistent with National Standard 2, which requires the use of best scientific information available but does not address confidentiality of information.

Comment 28: Some commenters said that NMFS should revise the proposed definition of ''business of any person'' to further detail what constitutes financial and operational information,

and one commenter recommended revising the definition to include information reported by processors such as amount processed or processing capacity.

Response: NMFS disagrees that revisions are necessary to detail or further clarify what constitutes the business of any person. MSA 402(b) broadly requires the confidentiality of any information that a person is required to submit in compliance with the Act and any observer information. The definition covers common types of financial or operational information such as ownership information or fishing locations and is not intended to be exhaustive. The definition, which is finalized as proposed, includes estimated and actual processing capacity of U.S. fish processors, so it is not necessary to add ''amount processed.''

Comment 29: A commenter stated that NMFS should exclude landings, revenue, and effort on annual or fishing year basis from the proposed rule definition for confidential information in cases where data is available from fewer than three vessels or entities. In the commenter's view, public interest in this information outweighs the interest of the participants in the fishery who are benefiting from a public resource.

Response: Under MSA section 402(b)(3), NMFS may publicly release confidential information only in an aggregate or summary form that does not directly or indirectly disclose the identity or business of any person. Aggregated information from at least three submissions or entities is often necessary to achieve that standard. If data from only two entities is aggregated, one entity could identify itself and/or its own data, thus disclosing the other entity's business and/or identity. For that reason, NMFS is not revising the definition of ''confidential information'' to refer to fewer than three vessels or entities. NMFS will explore the potential for disclosing information in a summary form on an ad hoc basis.

Comment 30: Many commenters requested that NMFS clarify through ICPs how confidential information can be aggregated or summarized into a form that would not directly or indirectly disclose the identity or business of any person. A commenter felt that the proposed rule missed an opportunity to address the level at which confidential information must be aggregated for it to be releasable to the public.

Response: NMFS determined that it was necessary to revise the definition of ''aggregate or summary form'' and to define ''business of any person'' before it developed an ICP that provides guidelines for aggregation and summarization of confidential information. As stated above, development of ICPs based on definitions that could change would not be efficient. With the revised definitions finalized through this rule, NMFS can proceed to develop guidance on the minimum level of aggregation or summarization advisable to protect the identity and the business of any person. In doing so, NMFS intends to advance and balance three objectives: transparency through release of the broadest amount of information at the finest level detail; protection of the identity and the business of any person; and responsiveness to individual information requests.

Comment 31: A commenter requested that NMFS clarify whether the proposed rule would change existing practices on the requests for confidential information that is held by different entities (*e.g.,* a State fishery management commission, a State fishery management agency, and NMFS).

Response: The final rule clarifies NMFS' practices but does not change them or the practices that a state fishery management commission or a state may have for responding to requests for confidential information. Access, maintenance, and release requirements under the rule apply only to information that is under NMFS' custody and control (§ 600.405). NMFS treats information as subject to its custody and control when it physically obtains the information, which, for electronically submitted information, is when the information enters a NMFS FISMA domain (See Background section for FISMA explanation).

In addition to subpart E regulations, requests for confidential information subject to NMFS' custody and control would be addressed by FOIA request procedures under NOAA Administrative Order 205–14 and any applicable ICPs. Requests for information under the custody and control of a State fishery management commission or a state would be subject to their requirements and procedures. NMFS will continue to work with these entities in a non-regulatory fashion to reach mutual agreement on how to maintain the confidentiality of information submitted to them pursuant to an MSA requirement.

Applicability and Authority of MSA and Marine Mammal Protection Act (MMPA)

Comment 32: Several commenters supported the approach in the proposed rule with respect to marine mammals while others expressed concern. In particular, some commenters supported the proposed rule's treatment of details that concern interactions with marine mammals as non-confidential for MSA purposes. Other commenters stated that the proposed rule is inconsistent with the protection of identity and business of any person under the MSA and the MMPA and other regulations protecting confidential information. Many commenters expressed concern that disclosure of details of interactions with marine mammals would indirectly disclose the identity of the vessel involved in the interaction and urged NMFS to take steps to prevent such disclosures. Some commenters recommended that NMFS release general area descriptions or latitude/longitude block areas instead of specific interaction locations.

Response: For the reasons stated in the proposed rule, this final rule continues to exclude observer information on interactions with marine mammals from the definition of confidential information (§ 600.10). This information can be publicly disclosed provided that information regarding fishing practices and gear would not constitute a trade secret under the FOIA, 5 U.S.C. 552(b)(4). NMFS included the trade secret text in proposed and final § 600.10, recognizing concerns that disclosing details of marine mammal interactions (take) may indirectly disclose the identity of vessels involved in interactions.

Fishery management plans and regulations under the MSA must be consistent with applicable law, which includes the MMPA. *See* 16 U.S.C. 1853(a)(1)(C) and 1854(a)(1), (3), (b)(1), and (c)(7). Release of observer information that concerns interactions with marine mammals advances implementation of MMPA mandates, and, in particular, such information is critical for deliberations of MMPA Take Reduction Teams (TRTs). *See* 89 FR at 17367–17368 (providing further explanation of MMPA mandates in proposed rule preamble).

This final rule reflects NMFS's long-standing approach as the agency has been presenting detailed information on commercial fisheries' interactions with marine mammals to TRTs since the program was mandated in 1994 by the MMPA. To prevent disclosures of the identity of a vessel involved in interactions, NMFS evaluates whether a release of detailed interaction information would, if combined with past disclosures, identify the vessel involved in the interaction. Additionally, if appropriate for purposes of the TRTs' goals and objectives, we routinely strive to present

data in aggregated form, particularly when illustrating latitude/longitude positions of individual takes. For example, TRTs, which include fishing industry representatives, may be particularly interested in viewing take locations by season to discern whether patterns in bycatch exist. In that case, NMFS would aggregate all available years of data to evaluate seasonal patterns. Further, the specific location of an interaction may in some cases be essential to develop meaningful mitigation measures and comply with the MMPA goals of reducing mortality and serious injury incidental to commercial fishing. For example, a particular marine mammal interaction may have occurred in association with a specific oceanographic feature (*e.g.,* a seamount, the continental shelf break) that would only be recognizable when evaluating individual latitude/longitude positions and not as a block area. In these circumstances, the TRTs cannot work effectively without disclosing the detailed, vessel-specific information upon which their analysis and determinations rely. In recent years, NMFS has disclosed this information through TRTs without receiving concerns that such disclosure harms MSA confidentiality interests. By knowing this information, TRTs can design more precise, targeted recommendations for mitigation measures, instead of broad, overly restrictive recommendations, which can lead to and has led to reduced regulatory burden on a fishery.

Comment 33: Several commenters recommended that photos and videos of marine mammals should be excluded from the definition of confidential information given they cannot readily be aggregated. The commenters also asserted that other information such as the nature and severity of interactions, samples collected, handling and release details, etc. should be excluded from the definition.

Response: While photos and videos may be useful, they are not among the specific information that TRTs need to develop measures to reduce take occurring in a fishery. However, NMFS has and will continue to release marine mammal injury or mortality events captured by cameras if the image does not disclose the identity or any unique gear configurations that may constitute a trade secret as defined for purposes of FOIA Exemption Four. See NMFS' Policy on Electronic Technologies and Fishery-Dependent Data Collection available at *https://media.fisheries.noaa.gov/2022-05/04-115-04_0.pdf.* In making such public disclosures, NMFS will evaluate the image that captures the marine mammal interaction and if feasible and practicable take steps to obscure identifying information prior to releasing it publicly. In contrast to photos, video collected through EM systems cannot be aggregated or summarized. NMFS will provide access to that information, and release it publicly, only as authorized under §§ 600.415 and 600.420.

Details of interactions (*e.g.,* nature and severity of interactions, samples collected, handling and release details, etc.) may also be useful, but they are not among the specific information that TRTs need to develop measures to reduce take occurring in a fishery. Thus, NMFS is not excluding this information as well as photos and videos from the definition of confidential information.

Comment 34: Some commenters stated that NMFS could allow TRTs to receive information without releasing it publicly by restricting release of detailed information on interactions with marine mammals to members of TRTs through confidentiality agreements.

Response: NMFS considered requiring members of TRTs to sign non-disclosure agreements but determined this approach is not appropriate because observer information on marine mammal interactions described in § 600.10 is not confidential information and may be disclosed. Additionally, as noted in the proposed rule, TRTs established under the MMPA must meet in public and develop plans to reduce incidental mortality and serious injury; specific details of interactions with marine mammals are critical to developing such plans. *See* 16 U.S.C. 1387(f)(6) (establishing and setting forth requirements for TRTs).

Comment 35: One commenter recommended that NMFS clarify the relationship between the MSA and MMPA, the authorities governing deployment of observers and the collection of information under each statute, and whether the confidentiality rules differ depending on the type of information and purpose for which they will be used.

Response: Section 600.10 of the proposed rule and final rules exclude details of observer information on interactions with marine mammals from the definition of ''confidential information'' for the purposes of the MSA. NMFS may require observers and observer coverage and other data reporting and collection under multiple statutory authorities depending on the conservation and management needs of and objectives of the program and the nature of, gear used, area fished during, or other circumstances for a particular trip. Regardless of whether an observer is deployed in a fishery under both MMPA and MSA authorities or solely MSA authority, observer information related to interactions with marine mammals will not be considered confidential information for MSA purposes.

Comment 36: Some commenters viewed NMFS' approach to excluding marine mammal interactions as too narrow and requested broadening it to include all protected species and bycatch data under the MMPA, Endangered Species Act (ESA), and Migratory Bird Treaty Act (MBTA), including non-protected species bycatch. One commenter asserted that the approach should be broadened to include vessel interactions with ESA-listed species, noting that specific conditions imposed on a fishery by ESA section 7 biological opinions and incidental take statements require detailed reporting and analyses of takes to assess impacts of proposed actions on ESA-listed species. The commenter asserted that this information should be reported publicly so that it can be used by stakeholders to review and examine, and sometimes challenge, agency decisions under the ESA, given the ESA explicitly provides for citizen suits in this regard.

Response: The MSA does not allow, nor do other Federal statutes require, disclosure of details on interactions with ESA-listed species, seabirds, bycatch of nonprotected species, or species protected under state statutes. *See* 89 FR at 17367–17368 (providing further explanation of ESA in proposed rule preamble). Observer information regarding interactions with ESA-listed species or other protected species would continue to be releasable in aggregate or summary form consistent with MSA section 402(b)(3) and these regulations.

Proposed Changes Clarifying NMFS' Confidentiality Regulations

Comment 37: Some commenters said NMFS should clarify whether regulations are necessary to implement MSA 402(b)(1)(I), 16 U.S.C. 1881a(b)(1)(I), which allows other federal agencies to access information for enforcement of forced labor prohibitions.

Response: For ease of reference, § 600.415 of the final rule includes the statutory text of MSA 402(b)(1)(I). NMFS does not believe regulations are needed to interpret that text. NMFS will prescribe additional procedures to implement this exception by regulation as may be necessary to preserve the confidentiality of information.

Entities Potentially Affected by the Rule

Comment 38: A commenter stated that any vessel with a Federal fishing permit should be included in a description of potential entities affected by the rule because any of those vessels might be subject to observer coverage and thus potentially affected if there are changes to how observer data are treated (confidential or not).

Response: This rule applies to information that is maintained by NMFS and subject to its custody and control and does not impose regulatory burdens on vessels. The rule does not change the extent of required observer coverage, and therefore there is no need to analyze impacts on vessels that might be potentially be subject to observer coverage. The rule broadly addresses NMFS' responsibility under MSA section 402(b) to maintain as confidential any information that a person is required to submit in compliance with any regulation or requirement under the MSA and any observer information. 89 FR at 17359. If a vessel were to be subject to MSA observer coverage requirements, the observer information would be handled as confidential consistent with the Act and this rule.

Changes From the Proposed Rule

In response to public comment, and after further agency consideration, NMFS has made minor edits for clarity and several substantive changes between the proposed and final rules. These changes are summarized and explained here.

The proposed rule (§ 600.10) defined confidential information to not include (1) vessel-specific information provided in satisfaction of obligations of the United States to share information under a RFMO of which the United States is a member and (2) any information collected by NMFS under the MSA regarding foreign vessels. This final rule deletes references to these two categories from § 600.10 and addresses the FMPA in § 600.415(f).

Final § 600.405 continues to state that the regulations apply to confidential information as defined in § 600.10. To clarify this section, NMFS revised it to provide that ''[a]gency access, maintenance, and release responsibilities [under this subpart] apply only to confidential information under NMFS' custody and control.''

In the proposed rule, NMFS also defined ''electronic monitoring service provider'' as any person who manages observer information collected by an electronic monitoring system required under an MSA regulation. The proposed rule left out ''or as part of a cooperative research initiative,'' a phrase that is in the MSA definition of observer information, 16 U.S.C. 1802(32). This final rule adds that statutory text to the regulatory definition.

NMFS proposed a procedure under which a Council may, through its executive director, request that members of its SSC and AP that are not Federal or State employees be granted access to confidential information. Although accurately described in the preamble, the proposed regulation incorrectly provided that the Council executive director, rather than the Council itself, may initiate it. This final rule corrects this error. Additionally, NMFS makes a technical revision to this procedure so that it applies to Members of the Council's advisory panels (plural), rather than a panel.

To implement the FMPA, the proposed rule excluded two categories of information from the definition of confidential information (see § 600.10 explanation above) and addressed access to information in proposed §§ 600.415(f)–(g). The final rule deletes FMPA-related references in § 600.10, deletes § 600.415(g), and addresses the FMPA in revised § 600.415(f). The revised text states, for the purposes of sections 608(b) and 606(d)(2) of the FMPA (16 U.S.C. 1826i(b) and 1826g(d)(2)), international fishery agreement has the same meaning as international fishery management agreement at 50 CFR 300.201. In addition, NMFS may disclose information, as authorized under, and subject to the requirements and conditions of, section 608(b) or 606(d)(2) of the FMPA to entities specified in those sections. For purposes of applying section 608(b) and 606(d)(2), the confidentiality requirements of section 402(b) of the Magnuson-Stevens Act, 16 U.S.C. 1881a(b), shall not apply with respect to (1) obligations of the United States to share information under a Regional Fishery Management Organization (RFMO) of which the United States is a Member; or (2) information collected by NMFS regarding foreign fishing vessels. The same cross-reference to 50 CFR 300.201 (international fishery management agreement), noted above, was in the proposed rule.

The final rule includes a confidentiality of information exception from MSA 402(b)(1)(I), 16 U.S.C. 1881a(b)(1)(I), related to illegal unreported, or unregulated fishing and forced labor. See final rule element # 7 in the Background section, above. NMFS did not include the statutory text in the proposed rule, but for ease of reference added it to the final rule regulatory text.

Classification

NMFS is issuing this final rule pursuant to section 305(d) of the MSA. The NMFS Assistant Administrator has determined that this final rule is consistent with the MSA and other applicable laws, including the FMPA. This final rule has been determined to be not significant for purposes of Executive Order 12866. There are no relevant Federal rules that may duplicate, overlap, or conflict with this action. This final rule contains no information collection requirements under the Paperwork Reduction Act of 1995.

Certification Under the Regulatory Flexibility Act Analysis

The Chief Counsel for Regulation, Department of Commerce, certified to the Chief Counsel for Advocacy of the Small Business Administration during the proposed rule stage that this action will not have a significant economic impact on a substantial number of small entities. The factual basis for this certification was published in the proposed rule and is not repeated here. NMFS received one comment regarding this certification. The commenter stated that any vessel with a Federal fishing permit should be included in a description of potential entities affected by the rule because any of those vessels might be subject to observer coverage and thus potentially affected if there are changes to how observer data are treated (confidential or not). This rule applies to information that is maintained by NMFS and subject to its custody and control and does not impose regulatory burdens on vessels. The rule does not change the extent of required observer coverage, and therefore there is no need to analyze impacts on vessels that might potentially be subject to observer coverage. The rule broadly addresses NMFS' responsibility under MSA section 402(b) to maintain as confidential any information that a person is required to submit in compliance with any regulation or requirement under the MSA and any observer information. If a vessel were to be subject to MSA observer coverage requirements, the observer information would be handled as confidential consistent with the Act and this rule.

This final rule is not expected to have a significant economic impact on a substantial number of small entities. As a result, a final regulatory flexibility analysis was not required, and none was prepared.

Lists of Subjects in 50 CFR Part 600

Confidential business information, Fisheries.

Dated: December 9, 2024.

Samuel D. Rauch, III,

Deputy Assistant Administrator for Regulatory Programs, National Marine Fisheries Service.

For the reasons set out in the preamble, NMFS amends 50 CFR part 600 as follows:

■ 1. The authority citation for part 600 continues to read as follows:

Authority: 5 U.S.C. 561 and 16 U.S.C. 1801 *et seq.*

■ 2. Amend § 600.10 by:
■ a. Revising the definition of ''Aggregate or summary form'';
■ b. Adding, in alphabetical order, definitions for ''Business of any person'', ''Confidential information'',
■ c. Removing the definitions of ''Confidential statistics'' and ''Data, statistics, and information''; and
■ d. Adding, in alphabetical order, definitions for ''Electronic monitoring service provider'', ''Information sharing obligation of a Regional Fishery Management Organization (RFMO)'', ''Observer provider'', and ''Regional Fishery Management Organization''.

The revisions and additions read as follows:

§ 600.10 Definitions.

* * * * *

Aggregate or summary form means information structured in such a way that the identity or business of any person (defined at 16 U.S.C. 1802(36)) who submitted the information cannot be directly or indirectly determined either from the present release of the information or in combination with other releases.

* * * * *

Business of any person means:

(1) Financial information such as ownership information, cash flow documents, income statements, or information that contributes to the preparation of balance sheets; or

(2) Operational information such as fishing locations, time of fishing, specific gear configuration, catch by species in numbers or weight thereof, number of hauls, number of employees and estimated processing capacity of and the actual processing capacity utilized by U.S. fish processors.

* * * * *

Confidential information includes any observer information as defined under 16 U.S.C. 1802(32) or any information submitted to the Secretary, a State fishery management agency, or a marine fisheries commission by any person in compliance with any requirement or regulation under the Magnuson-Stevens Act. Confidential information does not include observer information related to interactions with species protected under the Marine Mammal Protection Act: the date, time, and location of interactions, the type of species, and the fishing practices and gear involved provided that information regarding fishing practices and gear would not constitute a trade secret under the Freedom of Information Act, 5 U.S.C. 552(b)(4).

* * * * *

Electronic monitoring service provider means any person who manages observer information collected by an electronic monitoring system required under an MSA regulation or as part of a cooperative research initiative.

* * * * *

Information sharing obligation of a Regional Fishery Management Organization (RFMO) means a measure or part thereof that creates a binding requirement on the United States to report certain information by virtue of its membership in the respective RFMO.

* * * * *

Observer provider means any person that collects observer information by placement of observers on or in fishing vessels, shoreside processors, or stationary floating processors under a requirement of the MSA or as part of a cooperative research initiative.

* * * * *

Regional Fishery Management Organization (RFMO) means an intergovernmental fisheries organization or arrangement, as appropriate, that has the competence to establish conservation and management measures.

* * * * *

§ 600.130 [Amended]

■ 3. In § 600.130, remove the word ''statistics'', wherever it appears, and add in its place the word ''information''.

■ 4. Subpart E to part 600 is revised to read as follows:

Subpart E—Confidentiality of Information

Sec.

600.405 Applicability.
600.410 Protection of confidential Information.
600.415 Access to confidential information
600.420 Release of confidential information.
600.425 Release of information in aggregate or summary form.

Subpart E Confidentiality of Information

§ 600.405 Applicability.

This subpart applies to confidential information as defined at § 600.10. Agency access, maintenance, and release responsibilities apply only to confidential information that is under NMFS' custody and control.

§ 600.410 Protection of confidential information.

(a) *General.* This section requires control procedures related to confidential information and provides procedures for the protection of certain confidential information submitted to NMFS and State fishery management agencies or marine fisheries commissions pursuant to a statutory or regulatory requirement imposed pursuant to the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act).

(b) *Confidential information collected by NMFS.* NMFS must establish internal control procedures for the maintenance of and access to any confidential information. The control procedures should include, but are not limited to, the following:

(1) Requirements for information system management and data storage to prevent unauthorized access to or disclosure of confidential information;

(2) Procedures for NMFS employees to access confidential information;

(3) Procedures for providing access to confidential information by states, Councils, and Marine Fisheries Commissions;

(4) Procedures for evaluating whether members of a Council, or a Council Scientific and Statistical Committee (SSC), plan team, or Advisory Panel (AP) could gain personal or competitive advantage from access to confidential information under § 600.415(d);

(5) Procedures for evaluating requests by contractors, grantees, cooperative agreement recipients and other external individuals and organizations to access confidential information;

(6) Procedures for vessel owners to access and request confidential information, including historic information associated with a fishing permit;

7) Standardized sharing agreements that acknowledge the confidentiality and protection of information from public disclosure;

(8) Template for written authorization for release of confidential information for purposes of § 600.420(f);

(9) Procedures for aggregating and summarizing confidential data and responding to requests for non-confidential information;

(10) Any other procedures as necessary to maintain the confidentiality of information.

(c) *Confidential information collected by State Fishery Management Agencies or Marine Fisheries Commissions.* NMFS may enter into an agreement with a state or a Marine Fisheries Commission for the collection of confidential information on behalf of the Secretary provided that NMFS, as part of the agreement, determines that:

(1) The state has confidentiality of information authority comparable to the Magnuson-Stevens Act and that the state will exercise this authority to prohibit public disclosure of confidential information;

(2) The marine fisheries commission has established policies and procedures comparable to the Magnuson-Stevens Act and that the Commission will exercise such policies and procedures to prohibit public disclosure of confidential information.

(d) *Observer and Electronic Monitoring Services.* (1) Observer providers. NMFS may allow the collection of observer information by an observer pursuant to a confidentiality agreement that:

(i) Specifies procedures that the observer provider will apply to protect confidential information from public disclosure; and

(ii) Requires that the observer provider, each observer, and each of its other employees that will handle confidential information acknowledge the requirement to maintain the confidentiality of observer information and the civil penalties for unauthorized use or disclosure of such information provided under 16 U.S.C. 1858.

(2) Electronic monitoring service providers. NMFS may allow the handling of observer information by an electronic service provider pursuant to a confidentiality agreement that:

(i) Specifies procedures that the electronic monitoring service provider will apply to protect confidential information from public disclosure; and

(ii) Requires that the electronic monitoring service provider, and each of its employees who will handle confidential information, acknowledge the requirement to maintain the confidentiality of observer information and the civil penalties for unauthorized use or disclosure of such information provided under 16 U.S.C. 1858.

(3) As part of any agreement with an observer provider under paragraph (d)(1) of this section, NMFS may allow the sharing of observer information among and between observers and observer providers for:

(i) Training or preparation of observers for deployments on specific vessels; or

(ii) Validating the accuracy of the observer information collected.

§ 600.415 Access to confidential information.

Confidential information may be accessed by the following persons subject to any specified conditions and procedures:

(a) *Federal employees.* (1) Responsible for fishery management plan (FMP) development, monitoring, or enforcement, including persons that need access to confidential information to perform functions authorized under a Federal contract, cooperative agreement, or grant awarded by NOAA/NMFS;

(2) At the request of another Federal agency, if providing the information supports homeland security and national security activities, including the Coast Guard's homeland security missions as defined in section 888(a)(2) of the Homeland Security Act of 2002 (6 U.S.C. 468(a)(2)); or,

(3) To the extent necessary and appropriate to administer Federal programs established to combat illegal, unreported, or unregulated fishing or forced labor (as such terms are defined in section 11329 of the Don Young Coast Guard Authorization Act of 2022 [16 U.S.C. 1885a note]), which shall not include an authorization for such agencies to release data to the public unless such release is related to enforcement.

(b) *State or marine fisheries commission employees.* As necessary to further the mission of the Department of Commerce, subject to an agreement with NMFS that prohibits public disclosure of confidential information;

(c) *State enforcement personnel.* State employees who are responsible for enforcing FMPs, provided that the state for which the employee works has entered into a Joint Enforcement Agreement with NOAA and the agreement is in effect;

(d) *Councils.* A Council may, through its Executive Director, request access for the following:

(1) The Council's employees who are responsible for FMP development and monitoring;

(2) Members of the Council for use by the Council for conservation and management, but only if NMFS determines that access will not result in any Member having a personal or competitive advantage;

(3) Members of any Council scientific and statistical committee (SSC) established under section 302(g) of the Magnuson-Stevens Act who are not Federal or State employees, if necessary for the SSC to assist and advise the Council as provided under the Magnuson-Stevens Act, but only if NMFS determines that access will not result in any Member having a personal or competitive advantage;

(4) Members of any Council advisory panel (AP) established under section 302(g) of the Magnuson-Stevens Act, if necessary for the AP to provide information and recommendations on, and assist in the development of FMPs and amendments thereto, but only if NMFS determines that access will not result in any Member having a personal or competitive advantage;

(5) A contractor of the Council for use in such analysis or studies necessary for conservation and management purposes but only if approved by NMFS and subject to a confidentiality agreement; and

(e) *Vessel Monitoring System Information.* Nothing in these regulations contravenes section 311(i) of the Magnuson-Stevens Act which requires the Secretary to make vessel monitoring system information directly available to the following:

(1) Enforcement employees of a State with which NMFS has entered into a Joint Enforcement Agreement and the agreement is in effect;

(2) State management agencies involved in, or affected by, management of a fishery if the State has entered into an agreement with NMFS that prohibits public disclosure of the information.

(f) *High Seas Driftnet Fishing Moratorium Protection Act (FMPA).* (1) For purposes of sections 608(b) and 606(d)(2) of the FMPA (16 U.S.C. 1826i(b) and 1826g(d)(2)), international fishery agreement has the same meaning as international fishery management agreement at 50 CFR 300.201.

(2) NMFS may disclose information, as authorized under, and subject to the requirements and conditions of, section 608(b) or 606(d)(2) of the FMPA to entities specified in those sections.

(3) For purposes of applying section 608(b) and 606(d)(2), the confidentiality requirements of section 402(b) of the Magnuson-Stevens Act, 16 U.S.C. 1881a(b), shall not apply with respect to:

(i) Obligations of the United States to share information under a Regional Fishery Management Organization (RFMO) of which the United States is a Member; or

(ii) Information collected by NMFS regarding foreign fishing vessels.

§ 600.420 Release of confidential information.

NMFS will not disclose to the public any information made confidential pursuant to the Magnuson-Stevens Act, except the agency may disclose information when:

(a) Authorized by regulations issued by the Secretary to implement recommendations contained in an FMP prepared by the North Pacific Council and approved by NMFS to allow disclosure of observer information to the public of weekly summary bycatch information identified by vessel or for haul-specific bycatch information without vessel identification;

(b) Observer information is necessary in proceedings to adjudicate observer certifications;

(c) Information is required to be submitted to the Secretary for any determination under a limited access program (LAP). This exception applies at the level of confidential information that NMFS has used, or intends to use, for a regulatory determination under a LAP. This includes information that was submitted before the fishery was a LAP and that NMFS subsequently uses or intends to use for a LAP determination. For the purposes of this exception:

(1) *Limited Access Program* means a program that allocates exclusive fishing privileges, such as a portion of the total allowable catch, an amount of fishing effort, or a specific fishing area, to a person.

(2) *Determination* means a decision that is specific to a person and exclusive fishing privileges held or sought under a limited access program. These decisions are allocations, approval or denial of a lease or sale of allocated privileges or annual allocation, and end of season adjustments.

(d) Required to comply with a Federal court order. For purposes of this exception:

(1) *Court* means an institution of the judicial branch of the U.S. Federal Government. Entities not in the judicial branch of the Federal Government are not courts for purposes of this section;

(2) *Court order* means any legal process which satisfies all of the following conditions:

(i) It is issued under the authority of a Federal court;

(ii) A judge or magistrate judge of that court signs it; and

(iii) It commands NMFS to disclose confidential information as defined under § 600.10.

(e) Necessary for enforcement of the Magnuson-Stevens Act or any other statute administered by NOAA or when necessary for enforcement of any State living marine resource laws, if that State has a joint enforcement agreement that is in effect.

(f) A person that is subject to a Magnuson-Stevens Act submission of information requirement or their designee provides written authorization to the Secretary authorizing release of such information to other persons for reasons not otherwise provided for in section 402(b) of the Magnuson-Stevens Act and such release does not violate other requirements of the Magnuson-Stevens Act. That person or their designee must prove identity, and authorization to act if serving as a designee, by a statement consistent with 28 U.S.C. 1746, which permits statements to be made under penalty of perjury as a substitute for notarization. The statement of identity, and authority to serve as a designee, must be in the following form:

(1) If executed outside the United States: ''I declare (or certify, verify, or state) under penalty of perjury under the laws of the United States of America that the foregoing is true and correct. Executed on (date). (Signature)''.

(2) If executed within the United States, its territories, possessions, or commonwealths: ''I declare (or certify, verify, or state) under penalty of perjury that the foregoing is true and correct. Executed on (date). (Signature)''.

§ 600.425 Release of information in aggregate or summary form.

NMFS may disclose in any aggregate or summary form information that is required to be maintained as confidential under these regulations.

■ 5. In § 600.725, add paragraph (y) to read as follows:

§ 600.725 General prohibitions.

* * * * *

(y) Disclose confidential information without authorization.

[FR Doc. 2024–29366 Filed 12–16–24; 8:45 am]

BILLING CODE 3510–22–P

Proposed Rules

Federal Register
Vol. 89, No. 242
Tuesday, December 17, 2024

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA–2024–2661; Project Identifier MCAI–2024–00269–T]

RIN 2120–AA64

Airworthiness Directives; Airbus SAS Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: The FAA proposes to supersede Airworthiness Directive (AD) 2015–02–14, which applies to all Airbus SAS Model A318 series airplanes; A319–111, –112, –113, –114, –115, –131, –132, and –133 airplanes; A320–211, –212, –214, –231, –232, and –233 airplanes; and A321–111, –112, –131, –211, –212, –213, –231, and –232 airplanes. AD 2015–02–14 requires repetitive inspections for cracking, damage, correct installation, and correct adjustment of the main landing gear (MLG) door hinge and actuator fittings on the keel beam, corrective actions if necessary, and revision of the existing maintenance or inspection program, as applicable. Since the FAA issued AD 2015–02–14, a new design of the MLG door keel beam hinge and actuator fitting was developed. This proposed AD would continue to require the actions specified in AD 2015–02–14, add an optional terminating action, and revise the applicability, as specified in a European Union Aviation Safety Agency (EASA) AD, which is proposed for incorporation by reference (IBR). The FAA is proposing this AD to address the unsafe condition on these products.

DATES: The FAA must receive comments on this proposed AD by January 31, 2025.

ADDRESSES: You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

- *Federal eRulemaking Portal:* Go to *regulations.gov.* Follow the instructions for submitting comments.
- *Fax:* 202–493–2251.
- *Mail:* U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.
- *Hand Delivery:* Deliver to Mail address above between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

AD Docket: You may examine the AD docket at *regulations.gov* under Docket No. FAA–2024–2661; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this NPRM, the mandatory continuing airworthiness information (MCAI), any comments received, and other information. The street address for Docket Operations is listed above.

Material Incorporated by Reference:

- For EASA material identified in this proposed AD, contact EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; telephone +49 221 8999 000; email *ADs@easa.europa.eu;* website *easa.europa.eu.* You may find this material on the EASA website at *ad.easa.europa.eu.*
- You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195.

FOR FURTHER INFORMATION CONTACT: Tim Dowling, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; telephone 206–231–3667; email: *timothy.p.dowling@faa.gov.*

SUPPLEMENTARY INFORMATION:

Comments Invited

The FAA invites you to send any written relevant data, views, or arguments about this proposal. Send your comments to an address listed under the **ADDRESSES** section. Include ''Docket No. FAA–2024–2661; Project Identifier MCAI–2024–00269–T'' at the beginning of your comments. The most helpful comments reference a specific portion of the proposal, explain the reason for any recommended change, and include supporting data. The FAA will consider all comments received by the closing date and may amend the proposal because of those comments.

Except for Confidential Business Information (CBI) as described in the following paragraph, and other information as described in 14 CFR 11.35, the FAA will post all comments received, without change, to *regulations.gov*, including any personal information you provide. The agency will also post a report summarizing each substantive verbal contact received about this NPRM.

Confidential Business Information

CBI is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA) (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments responsive to this NPRM contain commercial or financial information that is customarily treated as private, that you actually treat as private, and that is relevant or responsive to this NPRM, it is important that you clearly designate the submitted comments as CBI. Please mark each page of your submission containing CBI as ''PROPIN.'' The FAA will treat such marked submissions as confidential under the FOIA, and they will not be placed in the public docket of this NPRM. Submissions containing CBI should be sent to Tim Dowling, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; telephone 206–231–3667; email: *timothy.p.dowling@faa.gov.* Any commentary that the FAA receives which is not specifically designated as CBI will be placed in the public docket for this rulemaking.

Background

The FAA issued AD 2015–02–14, Amendment 39–18081 (80 FR 11096, March 2, 2015) (AD 2015–02–14), for all Airbus SAS Model A318 series airplanes; A319–111, –112, –113, –114, –115, –131, –132, and –133 airplanes; A320–211, –212, –214, –231, –232, and –233 airplanes; and A321–111, –112, –131, –211, –212, –213, –231, and –232 series airplanes. AD 2015–02–14 was prompted by MCAI originated by the European Union Aviation Safety Agency (EASA), which is the Technical Agent for the Member States of the European Union. EASA issued AD 2012–0118, dated July 4, 2012 (EASA AD 2012–0118) (which corresponds to FAA AD

2015–02–14), to correct an unsafe condition.

AD 2015–02–14 requires repetitive inspections for cracking, damage, correct installation, and correct adjustment of the main landing gear (MLG) door hinge and actuator fittings on the keel beam; corrective actions if necessary; and revision of the existing maintenance or inspection program, as applicable. The FAA issued AD 2015–02–14 to detect and correct cracking on the MLG door hinge fitting and actuator fitting on the keel beam, which could lead to in-flight detachment of an MLG door, possibly resulting in injury to persons on the ground and/or damage to the airplane.

Actions Since AD 2015–02–14 Was Issued

Since the FAA issued AD 2015–02–14, EASA superseded AD 2012–0118, dated July 4, 2012, and issued EASA AD 2024–0097R2, dated July 12, 2024 (EASA AD 2024–0097R2) (referred to after this as the MCAI) to correct an unsafe condition on certain Airbus SAS Model A318–111, –112, –121, –122 airplanes; Model A319–111, –112, –113, –114, –115, –131, –132, –133, –151N, –153N, and –171N airplanes; Model A320–211, –212, –214, –215, –216, –231, –232, –233, –251N, –252N, –253N, –271N, –272N, and –273N airplanes; and Model A321–111, –112, –131, –211, –212, –213, –231, –232, –251N, –251NX, –252N, –252NX, –253N, –253NX, –271N, –271NX, –272N, and –272NX airplanes. Model A320–215 airplanes are not certificated by the FAA and are not included on the U.S. type certificate data sheet; this proposed AD therefore does not include those airplanes in the applicability.

The MCAI states that Airbus SAS Model A318–111, A318–112, A318–121, A318–122; Model A319–111, A319–112, A319–113, A319–114, A319–115, A319–131, A319–132, A319–133; Model A320–211, A320–212, A320–214, A320–215, A320–216, A320–231, A320–232, A320–233; Model A321–111, A321–112, A321–131, A321–211, A321–212, A321–213, A321–231, and A321–232 airplanes are commercially known as current engine option (CEO) airplanes.

The MCAI states that Airbus SAS Model A319–151N, A319–153N, A319–171N; Model A320–251N, A320–252N, A320–253N, A320–271N, A320–272N, A320–273N; Model A321–251N, A321–251NX, A321–252N, A321–252NX, A321–253N, A321–253NX, A321–271N, A321–271NX, A321–272N, and A321–272NX airplanes are commercially known as new engine option (NEO) airplanes.

The MCAI states that after EASA AD 2012–0118 was issued, a new design of the MLG door keel beam hinge and actuator fitting was certified for in-service embodiment through Airbus mod 165315 for CEO airplanes. The MCAI states that the applicability is expanded to include the NEO airplanes, which are subject to the same unsafe condition.

The FAA is proposing this AD to detect and correct cracking on the MLG door hinge fitting and actuator fitting on the keel beam, which could lead to in-flight detachment of an MLG door, possibly resulting in injury to persons on the ground and/or damage to the airplane.

You may examine the MCAI in the AD docket at *regulations.gov* under Docket No. FAA–2024–2661.

Explanation of Retained Requirements

Although this proposed AD does not explicitly restate the requirements of AD 2015–02–14, this proposed AD would retain all the requirements of AD 2015–02–14. Those requirements are referenced in EASA AD 2024–0097R2, which, in turn, is referenced in paragraph (g) of this proposed AD. Paragraph (i) of this proposed AD does restate the requirement of paragraph (k) of AD 2015–02–14, as EASA AD 2024–0097R2 only cancels Task 533154–02–1 of the Airbus A318/A319/A320/A321 ALS Part 2-Damage Tolerant Airworthiness Limitations Items (DT ALI), Revision 01, dated April 4, 2012; Airbus A318/A319/A320/A321 Airworthiness Limitation Items, Document AI/SE–M4/95A.0252/96, Issue 10, dated October 2009; or Airbus A318/A319/A320/A321 Airworthiness Limitation Items, Document AI/SE–M4/95A.0252/96, Issue 11, dated September 2010. However, it does not require removal from the maintenance or inspection program for certain airplanes. This proposed AD would require removal of this task.

Material Incorporated by Reference Under 1 CFR Part 51

EASA AD 2024–0097R2 specifies procedures for repetitive detailed visual, high frequency eddy current (HFEC), and ultrasonic inspections of the MLG door actuator fittings on the keel beam. Corrective actions include replacement of the affected MLG door actuator fitting, and repair of the bush migration, the wear marks underneath bolt head, and other damages on left and right sides of the airplane.

EASA AD 2024–0097R2 specifies procedures for repetitive detailed visual and HFEC inspections of the MLG door hinge fittings on the keel beam. Corrective actions include replacement of the MLG door hinge fitting, and repair of the bush migration, wear marks underneath bolt head, and other damages left and right sides of the airplane.

EASA AD 2024–0097R2 also specifies procedures for modifying the actuator and hinge fittings at the MLG door for the following parts: MLG actuator fittings, hinge fittings, and connecting plates between Frame (FR) 42 and FR 43; accomplishment of this modification terminates the repetitive inspections.

This material is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

FAA's Determination

This product has been approved by the aviation authority of another country and is approved for operation in the United States. Pursuant to the FAA's bilateral agreement with this State of Design Authority, it has notified the FAA of the unsafe condition described in the MCAI and material referenced above. The FAA is issuing this NPRM after determining that the unsafe condition described previously is likely to exist or develop on other products of the same type design.

Proposed AD Requirements in This NPRM

This proposed AD would retain all requirements of AD 2015–02–14, add an optional terminating action, and revise the applicability by adding NEO airplanes and removing airplanes with a certain modification. This proposed AD would also require accomplishing the actions specified in the material described previously.

Costs of Compliance

The FAA estimates that this AD, if adopted as proposed, would affect 1,766 airplanes of U.S. registry.

The FAA estimates the following costs to comply with this proposed AD:

ESTIMATED COSTS FOR REQUIRED ACTIONS

Action	Labor cost	Parts cost	Cost per product	Cost on U.S. operators
Inspections	20 work-hours × $85 per hour = $1,700, per inspection cycle.	$0	$1,700, per inspection cycle.	$3,002,200, per inspection cycle.

ESTIMATED COSTS FOR OPTIONAL ACTIONS

Action	Labor cost	Parts cost	Cost per product
Modify the actuator and hinge fittings at MLG door	82 work-hours × $85 per hour = $6,970	$52,000	$58,970

The FAA estimates the following costs to do any fitting replacement that would be required based on the results of any required actions. The FAA has no way of determining the number of aircraft that might need a fitting replacement:

ESTIMATED COSTS OF ON-CONDITION ACTIONS

Labor cost	Parts cost	Cost per product
38 work-hours × $85 per hour = $3,230	$6,742	$9,972

The FAA has received no definitive data on which to base the cost estimates for the repairs specified in this proposed AD.

According to the manufacturer, some or all of the costs of this proposed AD may be covered under warranty, thereby reducing the cost impact on affected individuals. The FAA does not control warranty coverage for affected individuals. As a result, the FAA has included all known costs in the cost estimate.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

The FAA determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this proposed regulation:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Would not affect intrastate aviation in Alaska, and

(3) Would not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by:

■ a. Removing Airworthiness Directive (AD) 2015–02–14, Amendment 39–18081 (80 FR 11096, March 2, 2015); and

■ b. Adding the following new AD:

Airbus SAS: Docket No. FAA–2024–2661; Project Identifier MCAI–2024–00269–T.

(a) Comments Due Date

The FAA must receive comments on this airworthiness directive (AD) by January 31, 2025.

(b) Affected ADs

This AD replaces AD 2015–02–14, Amendment 39–18081 (80 FR 11096, March 2, 2015) (AD 2015–02–14).

(c) Applicability

This AD applies to the Airbus SAS airplanes identified in paragraphs (c)(1) through (4) of this AD, certificated in any category, as identified in European Union Aviation Safety Agency (EASA) AD 2024–0097R2, dated July 12, 2024 (EASA AD 2024–0097R2).

(1) Model A318–111, –112, –121, and –122 airplanes.

(2) Model A319–111, –112, –113, –114, –115, –131, –132, and –133 airplanes.

(3) Model A319–151N, –153N, and –171N airplanes.

(4) Model A320–211, –212, –214, –216, –231, –232, and –233 airplanes.

(5) Model A320–251N, –252N, –253N, –271N, –272N, and –273N airplanes.

(6) Model A321–111, –112, –131, –211, –212, –213, –231, and –232 airplanes.

(7) Model A321–251N, –251NX, –252N, –252NX, –253N, –253NX, –271N, –271NX, –272N, and –272NX airplanes.

(d) Subject

Air Transport Association (ATA) of America Code 53, Fuselage.

(e) Unsafe Condition

This AD was prompted by reports of cracks on the main landing gear (MLG) door hinge

fitting and actuator fitting on the keel beam. The FAA is issuing this AD to detect and correct cracking on the MLG door hinge fitting and actuator fitting on the keel beam. The unsafe condition, if not addressed, could lead to in-flight detachment of an MLG door, possibly resulting in injury to persons on the ground and/or damage to the airplane.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Requirements

Except as specified in paragraphs (h) and (j) of this AD: Comply with all required actions and compliance times specified in, and in accordance with, EASA AD 2024–0097R2.

(h) Exceptions to EASA AD 2024–0097R2

(1) Where EASA AD 2024–0097R2 refers to ''16 May 2024 [the effective date of the original issue of this AD],'' this AD requires using the effective date of this AD.

(2) Where EASA AD 2024–0097R2 refers to ''18 July 2012 [the effective date of EASA AD 2012–0118],'' this AD requires using April 6, 2015 (the effective date of AD 2015–02–14).

(3) Where EASA AD 2024–0097R2 specifies to ''contact Airbus for approved repair instructions and, within the compliance time specified therein, accomplish those instructions accordingly,'' replace that text with ''all repairs must be done before further flight using a method approved by the Manager, International Validation Branch, FAA; or the European Union Aviation Safety Agency (EASA); or SAS's EASA Design Organization Approval (DOA). If approved by the DOA, the approval must include the DOA-authorized signature.''

(4) Where paragraph (6) of EASA AD 2024–0097R2 describes an airplane that has been inspected per ''ALI task 533154–03–2, 533154–04–2 or 533154–10–1, or in accordance with the instructions of inspection SB 1 (at any Revision) or inspection SB 2 (at any Revision),'' replace that text with ''ALI task 533154–03–2, 533154–04–2 or 533154–10–1, or in accordance with the instructions of Airbus SB A320–53–1195 or SB A320–53–1325 at any Revision, as applicable, or Airbus SB A320–53–1196 or SB A320–53–1326 at any Revision, as applicable.''

(5) This AD does not adopt the ''Remarks'' section of EASA AD 2024–0097R2.

(i) Retained Maintenance or Inspection Program Revision, With Added Airplanes and Compliance Time

This paragraph restates the requirements of paragraph (k) of AD 2015–02–14 with added airplanes and compliance time. At the applicable time specified in paragraph (i)(1) or (2) of this AD: Revise the maintenance or inspection program, as applicable, to remove Task 533154–02–1 of the Airbus A318/A319/A320/A321 ALS Part 2-Damage Tolerant Airworthiness Limitations Items (DT ALI), Revision 01, dated April 4, 2012; Airbus A318/A319/A320/A321 Airworthiness Limitation Items, Document AI/SE–M4/95A.0252/96, Issue 10, dated October 2009; or Airbus A318/A319/A320/A321 Airworthiness Limitation Items, Document AI/SE–M4/95A.0252/96, Issue 11, dated September 2010. The actions required by this AD take precedence over Task 533154–02–1 of the Airbus A318/A319/A320/A321 ALS Part 2-Damage Tolerant Airworthiness Limitation Items (DT ALI), Revision 01, dated April 4, 2012; Airbus A318/A319/A320/A321 Airworthiness Limitation Items, Document AI/SE–M4/95A.0252/96, Issue 10, dated October 2009; and Airbus A318/A319/A320/A321 Airworthiness Limitation Items, Document AI/SE–M4/95A.0252/96, Issue 11, dated September 2010.

(1) For airplanes identified in paragraphs (c)(1), (2), (4), and (6) of this AD: After the effective date of AD 2015–02–14 and before further flight after doing the initial inspections required by paragraph (g) of this AD.

(2) For airplanes identified in paragraphs (c)(3), (5), and (7) of this AD: After the effective date of this AD and before further flight after doing the initial inspections required by paragraph (g) of this AD.

(j) No Reporting Requirement

Although the material referenced in EASA AD 2024–0097R2 specifies to submit certain information to the manufacturer, this AD does not include that requirement.

(k) Additional AD Provisions

(1) *Alternative Methods of Compliance (AMOCs):* The Manager, International Validation Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or responsible Flight Standards Office, as appropriate. If sending information directly to the manager of the International Validation Branch, send it to the attention of the person identified in paragraph (l) of this AD and email to: *AMOC@faa.gov*.

(i) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the responsible Flight Standards Office.

(ii) AMOCs approved previously for AD 2015–02–14 are approved as AMOCs for the corresponding provisions of EASA AD 2012–0118 that are required by paragraph (g) of this AD.

(2) *Contacting the Manufacturer:* For any requirement in this AD to obtain instructions from a manufacturer, the instructions must be accomplished using a method approved by the Manager, International Validation Branch, FAA; or the European Union Aviation Safety Agency (EASA); or Airbus SAS's EASA Design Organization Approval (DOA). If approved by the DOA, the approval must include the DOA-authorized signature.

(3) *Required for Compliance (RC):* Except as required by paragraph (k)(2) of this AD, if any material contains procedures or tests that are identified as RC, those procedures and tests must be done to comply with this AD; any procedures or tests that are not identified as RC are recommended. Those procedures and tests that are not identified as RC may be deviated from using accepted methods in accordance with the operator's maintenance or inspection program without obtaining approval of an AMOC, provided the procedures and tests identified as RC can be done and the airplane can be put back in an airworthy condition. Any substitutions or changes to procedures or tests identified as RC require approval of an AMOC.

(l) Additional Information

For more information about this AD, contact Tim Dowling, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; telephone 206–231–3667; email: *timothy.p.dowling@faa.gov*.

(m) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference (IBR) of the material listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this material as applicable to do the actions required by this AD, unless this AD specifies otherwise.

(3) The following material was approved for IBR on [DATE 35 DAYS AFTER PUBLICATION OF THE FINAL RULE].

(i) European Union Aviation Safety Agency (EASA) AD 2024–0097R2, dated July 12, 2024.

(ii) [Reserved]

(4) For EASA AD 2024–0097R2 identified in this AD, contact EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; telephone +49 221 8999 000; email *ADs@easa.europa.eu;* website *easa.europa.eu*. You may find this material on the EASA website at *ad.easa.europa.eu*.

(5) You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195.

(6) You may view this material at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, visit *www.archives.gov/federal-register/cfr/ibr-locations* or email *fr.inspection@nara.gov*.

Issued on December 11, 2024.

Suzanne Masterson,

Deputy Director, Integrated Certificate Management Division, Aircraft Certification Service.

[Docket No. FAA–2024–2662; Project Identifier MCAI–2024–00448–T]

RIN 2120–AA64

Airworthiness Directives; The Boeing Company Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: The FAA proposes to adopt a new airworthiness directive (AD) for certain The Boeing Company Model 767–300 series airplanes modified by a certain supplemental type certificate (STC). This proposed AD was prompted by a discovery that certain pitot-static tubing of the first officer's pitot-static system was installed incorrectly in the main and mid equipment center during the airplane conversion from passenger to freighter. This proposed AD would require a visual inspection of certain pitot-static rigid tubes and flexible hoses to determine whether low points exist, and if necessary, related investigative and corrective actions. The FAA is proposing this AD to address the unsafe condition on these products.

DATES: The FAA must receive comments on this proposed AD by January 31, 2025.

ADDRESSES: You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

- *Federal eRulemaking Portal:* Go to *regulations.gov*. Follow the instructions for submitting comments.
- *Fax:* 202–493–2251.
- *Mail:* U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.
- *Hand Delivery:* Deliver to Mail address above between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

AD Docket: You may examine the AD docket at *regulations.gov* under Docket No. FAA–2024–2662; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this NPRM, the mandatory continuing airworthiness information (MCAI), any comments received, and other information. The street address for Docket Operations is listed above.

Material Incorporated by Reference:

- For Israel Aerospace Industries, Ltd. material identified in this proposed AD, contact Israel Aerospace Industries, Ltd., Ben-Gurion International Airport, Israel 70100; telephone 972–39359826; email *tmazor@iai.co.il.*
- You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195.

FOR FURTHER INFORMATION CONTACT: Joe Salameh, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; telephone: 206–231–3536; email: *Joe.Salameh@faa.gov.*

SUPPLEMENTARY INFORMATION:

Comments Invited

The FAA invites you to send any written relevant data, views, or arguments about this proposal. Send your comments to an address listed under the **ADDRESSES** section. Include ''Docket No. FAA–2024–2662; Project Identifier MCAI–2024–00448–T'' at the beginning of your comments. The most helpful comments reference a specific portion of the proposal, explain the reason for any recommended change, and include supporting data. The FAA will consider all comments received by the closing date and may amend the proposal because of those comments.

Except for Confidential Business Information (CBI) as described in the following paragraph, and other information as described in 14 CFR 11.35, the FAA will post all comments received, without change, to *regulations.gov*, including any personal information you provide. The agency will also post a report summarizing each substantive verbal contact received about this NPRM.

Confidential Business Information

CBI is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA) (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments responsive to this NPRM contain commercial or financial information that is customarily treated as private, that you actually treat as private, and that is relevant or responsive to this NPRM, it is important that you clearly designate the submitted comments as CBI. Please mark each page of your submission containing CBI as ''PROPIN.'' The FAA will treat such marked submissions as confidential under the FOIA, and they will not be placed in the public docket of this NPRM. Submissions containing CBI should be sent to Joe Salameh, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; telephone: 206–231–3536; email: *Joe.Salameh@faa.gov.* Any commentary that the FAA receives which is not specifically designated as CBI will be placed in the public docket for this rulemaking.

Background

The Civil Aviation Authority of Israel (CAAI), which is the aviation authority for Israel, has issued CAAI AD ISR I–34–2024–07–1, dated August 6, 2024 (CAAI AD ISR I–34–2024–07–1) (also referred to after this as the MCAI), to correct an unsafe condition for The Boeing Company Model 767–300 series airplanes, that have been modified to freighters, in accordance with CAAI STC SA–218 (FAA STC ST02040SE, EASA STC 10028430, CAAC VSTC0812, TCCA SA14–67, ANAC 2011S03–12). Only FAA STC ST02040SE is approved for U.S. operators. The MCAI states that due to the pitot-static tubing improper rerouting on the airplane conversion from passenger to freighter, two erroneous conditions were found in the tubing connecting the pitot and the static system tubing to the right air data computer belonging to the first officer system: The flexible hoses part number (P/N) BACH30BC06–0097 and P/N BACH30BC05–0111, creating a potential water trap; and rigid tubes P/N 233T9110–437 and P/N 233T9110–320/314 installed through a structure 9G rigid barrier opening, creating a potential water trap.

The FAA is proposing this AD to address the incorrect installation of the pitot-static tubing of the first officer's pitot-static system. The unsafe conditions, if not addressed, may affect the capability to drain water or moisture collected in the first officer pitot-static tubing, and may cause malfunction to the system.

You may examine the MCAI in the AD docket at *regulations.gov* under Docket No. FAA–2024–2662.

Material Incorporated by Reference Under 1 CFR Part 51

The FAA reviewed Israel Aerospace Industry Ltd., Service Bulletin 368–34–106, dated August 2024. This material specifies procedures for a visual inspection of the pitot-static rigid tubes, P/N 233T9110–437 and P/N 233T9110–314, and the flexible hoses, P/N BACH30BC06–0097 and P/N BACH30BC05–0111, to determine whether low points exist, and related investigative and corrective actions. The related investigative action is a visual inspection for the installation of the provisions located above the right miscellaneous electrical equipment panel (P37). The corrective actions include replacement of the pitot and the static system tubing connected to the right air data computer, including installation of standoffs, rigid tubes, union fitting, elbow fitting, flexible hoses, and performing functional tests.

This material is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

FAA's Determination

This product has been approved by the aviation authority of another

country and is approved for operation in the United States. Pursuant to the FAA's bilateral agreement with this State of Design Authority, it has notified the FAA of the unsafe condition described in the MCAI and material referenced above. The FAA is issuing this NPRM after determining that the unsafe condition described previously is likely to exist or develop on other products of the same type design.

Proposed AD Requirements in This NPRM

This proposed AD would require accomplishing the actions specified in the material already described.

Costs of Compliance

The FAA estimates that this AD, if adopted as proposed, would affect 88 airplanes of U.S. registry. The FAA estimates the following costs to comply with this proposed AD:

ESTIMATED COSTS FOR REQUIRED ACTIONS

Labor cost	Parts cost	Cost per product	Cost on U.S. operators
Up to 2 work-hours × $85 per hour = Up to $170	$0	Up to $170	Up to $14,960.

The FAA estimates the following costs to do any necessary on-condition actions that would be required based on the results of any required actions. The FAA has no way of determining the number of aircraft that might need this on-condition action:

ESTIMATED COSTS OF ON-CONDITION ACTIONS

Labor cost	Parts cost	Cost per product
11 work-hours × $85 per hour = $935	$600	$1,535

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

The FAA determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this proposed regulation:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Would not affect intrastate aviation in Alaska, and

(3) Would not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive:

The Boeing Company: Docket No. FAA–2024–2662; Project Identifier MCAI–2024–00448–T.

(a) Comments Due Date

The FAA must receive comments on this airworthiness directive (AD) by January 31, 2025.

(b) Affected ADs

None.

(c) Applicability

This AD applies to The Boeing Company Model 767–300 series airplanes, certificated in any category, that have been modified to a special freighter configuration, in accordance with FAA Supplemental Type Certificate (STC) ST02040SE, and which are listed in paragraph I.A., ''Effectivity,'' of Israel Aerospace Industry Ltd., Service Bulletin 368–34–106, dated August 2024.

(d) Subject

Air Transport Association (ATA) of America Code 34, Navigation.

(e) Unsafe Condition

This AD was prompted by a discovery that certain pitot-static tubing of the first officer's pitot-static system was installed incorrectly in the main and mid equipment center during the airplane conversion from passenger to freighter. The FAA is issuing this AD to address the incorrect installation of the pitot-static tubing of the first officer's pitot-static system. The unsafe condition, if not addressed, may affect the capability to drain water or moisture collected in the first officer pitot-static tubing, and may cause malfunction to the system.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Required Actions

Within 36 months after the effective date of this AD, do a visual inspection of the pitot-static rigid tubes, part number (P/N) 233T9110–437 and P/N 233T9110–314, and the flexible hoses, P/N BACH30BC06–0097 and P/N BACH30BC05–0111, at the locations specified in the Accomplishment Instructions of Israel Aerospace Industries Ltd., Service Bulletin 368–34–106, dated

August 2024, to determine whether low points exist, and, before further flight, do all applicable related investigative and corrective actions, in accordance with the Accomplishment Instructions of Israel Aerospace Industries Ltd., Service Bulletin 368–34–106, dated August 2024.

(h) Additional AD Provisions

The following provisions also apply to this AD:

(1) *Alternative Methods of Compliance (AMOCs):* The Manager, International Validation Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or responsible Flight Standards Office, as appropriate. If sending information directly to the manager of the International Validation Branch, send it to the attention of the person identified in paragraph (i) of this AD and email to: *AMOC@faa.gov*. Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the responsible Flight Standards Office.

(2) *Contacting the Manufacturer:* For any requirement in this AD to obtain instructions from a manufacturer, the instructions must be accomplished using a method approved by the Manager, International Validation Branch, FAA; or the Civil Aviation Authority of Israel (CAAI); or the CAAI's authorized Designee. If approved by the CAAI Designee, the approval must include the Designee's authorized signature.

(i) Additional Information

For more information about this AD, contact Joe Salameh, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; telephone: 206–231–3536; email: *Joe.Salameh@faa.gov*.

(j) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference of the material listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this material as applicable to do the actions required by this AD, unless this AD specifies otherwise.

(i) Israel Aerospace Industries Ltd. Service Bulletin 368–34–106, dated August 2024.

(ii) [Reserved]

(3) For Israel Aerospace Industry Ltd. material identified in this AD, contact Israel Aerospace Industries, Ltd., Ben-Gurion International Airport, Israel 70100; telephone 972–39359826; email *tmazor@iai.co.il.*

(4) You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195.

(5) You may view this material at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, visit *www.archives.gov/federal-register/cfr/ibr-locations* or email *fr.inspection@nara.gov.*

Issued on December 11, 2024.

Victor Wicklund,

Deputy Director, Compliance & Airworthiness Division, Aircraft Certification Service.

Bureau of Prisons

28 CFR Part 545

[BOP–1178]

RIN 1120–AB78

Inmate Financial Responsibility Program: Procedures

AGENCY: Bureau of Prisons, Justice.

ACTION: Supplemental notice of proposed rulemaking.

SUMMARY: This supplemental notice of proposed rulemaking would update and streamline regulations regarding the Inmate Financial Responsibility Program (IFRP).

DATES: Written comments must be postmarked and electronic comments must be submitted on or before February 18, 2025. Commenters should be aware that the electronic Federal Docket Management System will not accept comments after Midnight Eastern Time on the last day of the comment period.

ADDRESSES: If you wish to provide comment regarding this rulemaking, you must submit comments, identified by the agency name and reference Docket No. BOP 1178, by one of the two methods below.

Federal eRulemaking Portal: https://www.regulations.gov. Follow the website instructions for submitting comments. The electronic Federal Docket Management System at *www.regulations.gov* will accept electronic comments until 11:59 p.m. Eastern Time on the comment due date.

Mail: Paper comments that duplicate an electronic submission are unnecessary. If you wish to submit a paper comment in lieu of electronic submission, please direct the mail/shipment to: Rules Administrator, Legislative and Correctional Issues Branch, Office of General Counsel, Bureau of Prisons, 320 First Street NW, Washington, DC 20534. To ensure proper handling, please reference the agency name and Docket No. BOP 1178 on your correspondence. Mailed items must be postmarked or otherwise indicate a shipping date on or before the submission deadline.

FOR FURTHER INFORMATION CONTACT: Daniel J. Crooks III, Assistant General Counsel/Rules Administrator, Federal Bureau of Prisons, at the address above or at (202) 353–4885.

SUPPLEMENTARY INFORMATION: Please note that all comments received are considered part of the public record and generally will be made available for public inspection online at *www.regulations.gov*. If you want to submit personal identifying information (such as your name, address, etc.) as part of your comment, but do not want it to be posted online, you must include the phrase ''PERSONAL IDENTIFYING INFORMATION'' in the first paragraph of your comment. You must also locate all the personal identifying information you do not want posted online in the first paragraph of your comment and identify what information you want redacted.

If you want to submit confidential business information as part of your comment but do not want it to be posted online, you must include the phrase ''CONFIDENTIAL BUSINESS INFORMATION'' in the first paragraph of your comment. You must also prominently identify confidential business information to be redacted within the comment. If a comment contains so much confidential business information that it cannot be effectively redacted, all or part of that comment may not be posted *www.regulations.gov.*

Personal identifying information identified and located as set forth above will be placed in the agency's public docket file, but not posted online. Confidential business information identified and located as set forth above will not be placed in the public docket file. If you wish to inspect the agency's public docket file in person by appointment, please see the **FOR FURTHER INFORMATION CONTACT** paragraph.

Background

The purpose of the Inmate Financial Responsibility Program (Program or IFRP), operated by the Bureau of Prisons (Bureau) since 1987, is twofold: to encourage federal inmates in Bureau facilities to pay financial obligations; and to support federal inmates in developing financial planning skills.

Inmate participation in the IFRP is non-compulsory. Subject to certain exemptions listed in 28 CFR 545.10, all sentenced federal inmates are eligible to participate. During an inmate's initial classification, current Bureau policy requires staff to review the inmate's financial obligations—by consulting the inmate's presentence investigation report, judgment and commitment order(s) and other court documents, and any other available information—and

encourage inmates to satisfy any court-ordered obligations either at the time of this initial review or throughout the inmate's term of imprisonment. The Bureau strongly recommends that all inmates with financial obligations participate in the IFRP, along with other programs and activities designed to reduce recidivism, such as work, education, and drug rehabilitation programs.

If an inmate chooses to participate in the IFRP, Bureau staff will work with the inmate to develop a financial plan, which is documented and signed by the inmate and includes financial obligations paid in the following order of priority:

1. Special assessments imposed by the court under 18 U.S.C. 3013;
2. Court-ordered restitution, including assessments related to bodily injury to victims occurring as a result of the offense, loss or destruction of victim property, or other assessments as indicated by the court;
3. Fines and court costs;
4. State or local court obligations (such as child support or alimony, as documented by a court order or letter from the relevant state authority);
5. Other federal government obligations (including fees imposed under 18 U.S.C. 4001 for Cost of Incarceration, other judgments in favor of the United States, student loans, Veterans Administration claims, tax liabilities, and Freedom of Information or Privacy Act fees).

Given the importance of satisfying outstanding financial obligations and reducing the amount of debt upon release, there are effects of non-participation. Documented refusal by inmates to participate in the IFRP, or to comply with the provisions of their agreed-upon financial plan, results in the specific consequences currently listed in 28 CFR 545.11(d), including notification to the Parole Commission, preclusion of furlough eligibility (other than emergency or medical furlough), preclusion of certain pay benefits or increases, preclusion of eligibility for premium work opportunities and/or removal from a UNICOR work assignment, commissary spending restrictions, loss of release gratuity (unless approved by the warden), and loss of incentives (such as early release and financial awards) otherwise available to an inmate who participates in residential drug treatment programs.

As the IFRP is currently operated, Bureau staff review and reassess each inmate's financial plan and IFRP payments during the inmate's regularly scheduled program review meeting; these meetings generally occur every 180 days, although the interval becomes 90 days when the inmate is within 12 months of release. As part of that review, Bureau staff first review the total funds deposited into the inmate's commissary account over the previous six-month period from any source. As stated in 28 CFR 506.1, individual inmate commissary accounts allow the Bureau to maintain inmate monies while the inmate is incarcerated. Funds in inmate accounts can come from a number of sources: the inmate may earn pay from work assignments (including compensation earned through UNICOR); family members or friends may send funds to the inmate; the inmate may receive tax refunds or other government-related issuances; or the inmate may receive other types of income (such as stock dividends, state benefits, litigation settlements, and inheritance). All money earned by the inmate from the Bureau is automatically deposited into the inmate's commissary account.

Next, to determine whether future payments under the IFRP plan should be adjusted based on the inmate's financial activity over the previous six-month period under review, staff subtract the total amount of any payments an inmate has made during the previous six-month period under the IFRP plan (payments made toward the inmate's financial obligations) from the amount deposited into the account over that same time period. Under current regulations in 28 CFR 545.11(b), when performing this calculation to determine the amount an inmate has available for payment of financial obligations, staff must also subtract a $75 per month allowance for telephone communication (a total of $450 for each six-month period). That amount is not included in the calculation of the total amount an inmate has available for payments under the IFRP.

Then, based on the foregoing information, staff estimate the amount the inmate is likely to have remaining at the end of that six-month period. Based on that amount, staff determine whether to adjust the inmate's financial plan and IFRP payments. Under the current regulation, the minimum payment for inmates who do not have a UNICOR work assignment, or who have a UNICOR grade 5 work assignment, is ordinarily $25 per quarter. For inmates assigned a UNICOR work assignment with a grade between 1 and 4, the minimum payment is ordinarily expected to be 50 percent of the inmate's pay.

On January 10, 2023, the Federal Bureau of Prisons (Bureau) published a notice of proposed rulemaking (the ''January 2023 NPRM'') in the **Federal Register** relating to the Inmate Financial Responsibility Program (IFRP). 88 FR 1331 (Jan. 10, 2023). In the January 2023 NPRM, the Bureau detailed its proposed changes to the IFRP regulation. Among the most significant changes were a requirement that all inmates participating in IFRP contribute a percentage of their pay towards the IFRP payment process; a requirement that all inmates participating in IFRP contribute 75 percent of funds received from non-Bureau sources (''outside'' or ''community'' deposits) toward the IFRP payment process; and changes to the effects of IFRP non-participation, including noting that, as per Program Statement 5410.01, *First Step Act of 2018—Time Credits: Procedures for Implementation of 18 U.S.C. 3632(d)(4),* participation is a Productive Activity as that relates to First Step Act (FSA) Time Credits, as described in 18 U.S.C. 3624 and 3632(d)(4), and 28 CFR 523.40 through 523.44.

During the notice and comment period for the January 2023 NPRM, the Bureau received more than 1,300 comments from members of the public, including inmates, inmates' families and friends, advocacy organizations, and governmental officials. The large volume of comments received demonstrated to us that changes to the IFRP are of significant interest to the public. To ensure we obtain the benefit of the public's comments on additional suggested revisions to the IFRP, the Bureau now publishes this supplemental notice of proposed rulemaking (SNPRM). While the provisions proposed in this SNPRM maintain some features of the January 2023 NPRM, it differs in several material respects. The Bureau welcomes public comment on this alternative IFRP framework that considers an individual inmate's financial circumstances. Comments submitted on the January 2023 NPRM should not be resubmitted as new comments to this SNPRM. All relevant comments on the January 2023 NPRM and this SNPRM will be addressed when a final rule is issued.

Supplemental Proposed Rule

This supplemental proposed rule would make changes to update, streamline, and clarify IFRP regulations in sections 28 CFR 545.11(a) through (d), as follows:

Proposed Changes to 28 CFR 545.11(a)

The current IFRP regulation provides that an inmate's financial plan will include the following obligations, ordinarily paid in the priority order as listed: (1) special assessments under 18 U.S.C. 3013; (2) court-ordered

restitution; (3) fines and court costs; (4) state or local court obligations; and (5) other federal government obligations. The January 2023 NPRM did not propose any alteration to this list of obligations. In this SNPRM, the Bureau is proposing to modify this list by altering paragraph (4) to read ''child, spousal, or other familial support obligations,'' and adding a new paragraph (6) for ''other (non-family support) state or local court obligations''.

As initially proposed in 1986, no state or local financial obligations were included in the list of financial obligations collectible through IFRP. *See* NPRM, Control, Custody, Care, Treatment and Instruction of Inmates, Financial Responsibility Program, 51 FR 42167–01 (Nov. 21, 1986). However, in response to public comments received on the initial proposed rule, the Bureau added ''other court ordered obligations'' to the list:

> We agree with several commenters who suggested the Bureau add family financial obligations and child support to its priority list of obligations. Based on public comment, and because court-ordered child support or alimony or other court-ordered judgments against an inmate are financial obligations similar to those in the proposed rule, the Bureau of Prisons is adding new § 545.11(a)(6), other court-ordered obligations.

Final Rule, Control, Custody, Care, Treatment and Instruction of Inmates; Inmate Financial Responsibility Program, 52 FR 10528–01 (Apr. 1, 1987). In 1991, the Bureau published a final rule that combined two categories of obligations into one (''other federal government obligations''), adjusted the paragraph numbering, and adopted the verbiage (''State or local court obligations'') that it has continued to use to the present. Final Rule, Control, Custody, Care, Treatment and Instruction of Inmates; Financial Responsibility Program, 56 FR 23476–01 (May 21, 1991).

The Bureau believes that disaggregating familial support obligations from other state and local obligations is beneficial for several reasons. First, it will allow for the prioritization of family support over other types of state and local obligations in the way initially contemplated. The Bureau believes that it is more important that—to the extent an inmate's money is being sent to a state or local entity—it should go first towards supporting children or others for whom an order of support has been entered, rather than the state or local government for other purposes. Second, the Bureau (as a federal agency) believes that other federal obligations should be prioritized over non-family support state and local obligations, such as criminal fines and fees or fees imposed in civil cases or administrative proceedings.

Third, the Department of Justice in an April 2023 Dear Colleague Letter noted that, in certain circumstances, unjust imposition and enforcement of fines and fees violate the civil rights of adults and youth accused of felonies, misdemeanors, quasi-criminal ordinance violations, and civil infractions.[1] State and local fines and fees make up a miniscule portion (as of February 2024, less than one half of a percent) of the financial obligations subject to collection through IFRP. Nevertheless, as a Department component, the Bureau wants to ensure that it is operating consistent with the Department's guidance on this topic, and is not collecting fines and fees imposed by states and localities in ways that may have violated the civil rights of those in Bureau custody. The Bureau will provide more specific guidance to Bureau employees, in the program statement implementing this regulation, on how to ensure that a fine or fee imposed by a state or local entity was lawfully imposed, such as verifying that an ability-to-pay determination was conducted. Fines and fees that that BOP determines were unfairly or improperly imposed will not be collected through IFRP. The Bureau welcomes public comment on what steps the Bureau should take to ensure that fines and fees imposed by states and localities were not done so in a way that is inconsistent with the constitutional and statutory provisions described in the Dear Colleague Letter. Given that these same concerns are not present in the familial support context, it makes sense to separate those types of obligations as their own category not subject to this guidance.

Proposed Changes to 28 CFR 545.11(b)

1. *Introductory paragraph.* The Bureau still intends to make the two changes to the introductory paragraph that were detailed in the January 2023 NPRM. These changes were: (1) the deletion of language that was intended to serve as guidance for Bureau employees, and (2) the addition of language requiring that any payment plan laid out in the inmate's judgment and commitment order (J&C) be implemented as the inmate's IFRP payment plan.

One purpose of the IFRP is to promote inmate financial understanding and self-regulation. To meet that goal, staff work with inmates to structure a reasonable payment plan that is attainable for the inmate, in light of any funds coming into the account (whether from inmate work assignment pay or through outside sources) and any reasonable expenditures required by the inmate. As discussed in this SNPRM, BOP is proposing to retain a version of the monetary set-aside that is part of the current regulation, without tying it to a monthly amount or to a specific purpose (*e.g.,* phone calls).

2. *Addition of language regarding one-time payment.* In this SNPRM, the Bureau proposes to add language to the rule that (1) encourages all inmates to make a payment towards fully satisfying their financial obligation(s) at the time of initial classification and program review; and (2) would require inmates with commissary account balances above $250 to make a one-time payment. This proposal differs from the January 2023 NPRM in an important way. While the January 2023 NPRM encouraged all inmates to make a one-time payment at the time of initial classification, it did not require any inmate to do so. In this SNPRM, inmates with commissary balances greater than or equal to $250 at the time of initial classification would be required to make a one-time payment from available funds in their commissary accounts to satisfy any identified financial obligations. Currently, guidance to Bureau staff notes that in certain circumstances, including when an inmate's total financial obligation is $100 or less, the inmate should be encouraged to make a one-time payment to satisfy that obligation The purpose of this revision is to make clear that all inmates, regardless of the size of the financial obligation, would be encouraged—and in some circumstances required—to make a one-time payment.

The proposed rule would require an inmate with more than a certain amount of money in their commissary account to make a one-time payment equal to a specific percentage of funds in the account:

[1] Dear Colleague Letter (Apr. 20, 2023), available at *https://www.justice.gov/d9/press-releases/attachments/2023/04/20/doj_fines_and_fees_dear_colleague_letter_final_with_signatures_0.pdf.*

TABLE 1

Commissary account balance	Percentage deducted for one-time initial payment
$0.01–$249.99	0%.
$250.00–$5,000.00	50% of the amount between $250 and $5,000.
$5,000.01 or more	50% of the amount between $250 and $5,000 plus 100% of the amount above $5,000.

As depicted in the above chart, inmates with $249.99 or less in their commissary accounts would not be required to make an initial payment toward financial obligations. An inmate with between $250.00 and $5,000.00 in their account would be expected to pay 50 percent of the amount within that range towards IFRP. Finally, inmates with $5,000.01 or more in their accounts would be expected to pay (1) 50 percent of the amount between $250.00 and $5,000.00, and (2) 100% of the amount in excess of $5,000.00 toward financial obligations. In determining these account balance thresholds, the Bureau reviewed data on commissary account balances, which showed that the overwhelming majority of inmates maintain balances of $1,000 or less. In fact, as of December 4, 2024, approximately 77 percent of commissary account balances are $249.99 or less, and only 2 percent of commissary accounts have balances greater than $5,000.

The way this is intended to work is illustrated through the following examples:

Example 1: Inmate John Doe, who owes a $100 special assessment imposed pursuant to 18 U.S.C. 3013, and federal restitution of $5,000, attends his initial classification and program review meeting with a commissary account balance of $150. He would not be required to make an initial IFRP payment, although he may choose to do so if, for example, he wants to fully pay off his $100 special assessment.

Example 2: Inmate James Roe, who also owes a $100 special assessment imposed pursuant to 18 U.S.C. 3013, and federal restitution of $5,000, attends his initial classification and program review meeting with a commissary account balance of $500. He would be required to make a one-time IFRP payment of $125 (50% of the amount above $250), although as with John Doe, he may also pay more at this time if he chooses. This would leave James Roe with an account balance of $375.

Example 3: Inmate Jane Smith also owes a $100 special assessment imposed pursuant to 18 U.S.C. 3013, and federal restitution of $5,000. She attends her initial classification and program review meeting with a commissary account balance of $6,000. She would be expected to pay a total of $3,375 (50% of the amount between $250 and $5,000 ($2,375), plus $1,000—the amount in her account in excess of $5,000).

Because inmate financial plans developed under the IFRP focus on incoming deposits into the inmate's commissary account, part of the intent of this provision is to prevent the inmate from accumulating a significant account balance prior to initial classification and program review, and then using that large initial balance to evade making any future payments. Initial classification and program review is the first opportunity Bureau staff have to assess an inmate's financial obligations and available resources. While for some inmates this will occur relatively quickly after they enter Bureau custody, other inmates may have spent substantial time in Bureau custody pre-trial and accumulated significant funds in their commissary account. Similarly, inmates may enter Bureau custody following sentencing with a significant deposit or deposits made before their initial classification and review meeting occurs.

The Bureau recognizes that newly sentenced and designated inmates need to maintain some funds to aid in the transition into custody, including by maintaining family contact and purchasing commissary items that may help ease that transition. Thus, the proposed rule would not require an initial payment from inmates with less than $250 in their commissary accounts, and would apply a 50 percent deduction to amounts in excess of $250, up to $5,000. Inmates would still be left with funds for purchases, while also learning that payment of financial obligations based on their financial means is an expected part of their term of imprisonment and that they would not be permitted to maintain significant balances (in excess of $5,000) and stay in compliance with IFRP. It is also important to note that nothing in this proposed rule would prevent an inmate from making a larger payment than would be required under the proposed rule. Rather, the intent of the proposed rule is to set a minimum expectation for payment of financial obligations.

The Bureau believes that setting the threshold for this initial payment at a $250 commissary account balance adequately protects the ability of inmates in custody at Bureau facilities to maintain contact with members of the community and purchase supplementary items from institution commissaries.[2] The proposed rule is also focused on the account balance at the time of the initial program review meeting, meaning (particularly for pre-trial inmates) the inmate may have already purchased and banked phone minutes, or minutes used to access the electronic messaging (TRULINCS). They may also have purchased items from the commissary that they still have, including non-consumable items like shoes, an MP3 player, or a locker organizer.

Using Mr. Roe as an example, the $375 remaining in his commissary account following his initial IFRP payment would be enough to purchase (all prices current as of October 29, 2024, except where noted):

[2] In accordance with BOP Program Statement 4500.12, *Trust Fund/Deposit Fund Manual,* each Bureau facility establishes its list of items to sell in the commissary. Consumable items and medical items sold shall complement, not supplement, diet and medical care provided to the inmate population. These examples are provided for illustrative purposes only. Commissary price lists are available on each BOP facility's public website.

TABLE 2

Expenditure	Total cost
1,800 phone minutes for domestic calls [3]	$108 ($.06/minute).
500 minutes of access to TRULINCS public messaging service	$25 ($.05/minute).
Commissary purchases at FCI Lompoc I, to include: —radio ($31.25) & earbuds ($5.15). —stamps ($12.60/book). —alarm clock ($9.95). —shower shoes ($1.95). —sunglasses ($5.95). —combination lock ($7.65). —foot powder ($2.70). —ibuprofen ($2.60). —thermal mug ($4.00).	$83.80.
Total Cost	$216.80
Remaining Account Balance	$158.20

Even with these purchases, which includes a purchase of the maximum number of minutes Mr. Roe could spend on the phone over the next six months, he still would have $158.20 remaining of his initial $500 balance to either save, or spend on additional commissary items (including snacks and hobbycraft materials). And, going forward, his account balance would be supplemented by any pay received for a work assignment or additional deposits made from outside sources.

The Bureau is sensitive to the fact that this initial period of time at a designated institution can be a significant adjustment for many in its custody. Accordingly, the Bureau specifically invites comment on the $250 threshold from the public, and will consider responses received on this issue in formulating its final rule.

3. *Revision of language regarding payment plans.* The Bureau also proposes to modify language included in the current rule indicating that the minimum payment for inmates who do not work in UNICOR positions and those who work in UNICOR positions at the grade 5 level would be $25 per quarter, and that inmates assigned to UNICOR grades 1 through 4 work assignments would be expected to allot 50% of their monthly pay to IFRP payments.

In the January 2023 NPRM, the Bureau proposed implementing IFRP payment plans that would require (1) inmates in UNICOR work assignments grade 1 through 4 to allot 50 percent of their monthly pay to the IFRP payment process; (2) inmates in non-UNICOR and UNICOR grade 5 work assignments to allot 25 percent of their monthly pay to the IFRP payment process; and (3) all inmates to pay 75 percent of deposits placed in their commissary account by non-institution (community) sources toward the IFRP payment process. In this SNPRM, the Bureau is still proposing to require that inmates make IFRP payments from both sources of funds (pay for work and commissary deposits). However, this SNPRM features the following proposals:

- The regulation would indicate that, in the absence of some other court-ordered payment plan, inmates would be expected to allot 10% of pay (to include performance pay, bonus pay, and special bonus pay) received from any work assignment, whether institution or UNICOR, toward the IFRP payment process.
- The regulation would also clarify that all inmates, in the absence of some other court-ordered payment plan, would be expected to allot a specific percentage of each deposit from non-institution (community) resources to the IFRP payment process. The percentage that the inmate would be expected to allot will be adjustable, and would be based on the total amount of funds deposited into the inmate's commissary account over the prior six months.
- Inmates with six-month deposit totals below a certain amount, and whose account balances are also below a certain amount, would be exempt from the required percentage.
- Inmates who accumulate significant account balances, which the Bureau defines as a balance equal to or greater than $5,000, would be expected to allot all amounts in their accounts in excess of $5,000 to the IFRP payment process.

Further, the regulation would explain that exceptions to the stated allotments must be approved by the inmate's unit manager, in consultation with the associate warden of the inmate's institution, and documented in writing.

Changes to Pay

This SNPRM proposes a specified percentage—10 percent—of inmate pay for work assignments that would be allotted towards the IFRP payment process. This percentage would apply to all inmate work assignments, including UNICOR, and to all forms of compensation received for work, including hourly pay and bonuses. As is currently done for UNICOR pay for IFRP-participating inmates, the percentage deduction would be made prior to the disbursement of pay to individual inmate trust accounts.

The Bureau believes it is important that all inmates who are able to work have some of their pay remitted toward payment of their financial obligations. As a reentry tool, this obligation helps establish the expectation that earning income carries the requirement that one contribute financially to certain societal and personal obligations.[4] Outside the Bureau, these contributions might take the form of payroll taxes, garnishments for child support, or other deductions. By introducing the concept of a ''payroll deduction'' for *all* IFRP-participating inmates, this would ensure that all inmates who can work are making some consistent contribution, even a small one, to their financial obligations.

[3] Rates effective as of January 1, 2025. BOP policy generally limits inmates to 300 minutes of phone time per month. See BOP Program Statement 5264.08, *Inmate Telephone Regulations,* p.9. An additional 100 minutes are permitted during the months of November and December, and individual calls are limited to 15 minutes. *Id.* Pursuant to the First Step Act of 2018, codified in pertinent part at 18 U.S.C. 3632(d)(1)(A), inmates in Bureau custody who are successfully participating in evidence-based recidivism reduction programming receive up to 510 minutes of phone time per month. These inmates are not subject to the 300-minutes per month limit, and they are not required to pay for these minutes.

[4] Additionally, on November 8, 2023, the Bureau published a notice of proposed rulemaking in the **Federal Register** proposing to modify regulations on compensation for inmate workers in accordance with Section 605(c) of the First Step of 2018 (FSA), Public Law 115–391, December 21, 2018, 132 Stat. 5194. The proposed amendments to the regulations governing UNICOR and performance pay would require that 15 percent of an inmate's pay be reserved (*i.e.,* encumbered) to assist the inmate with costs associated with release from prison. 88 FR 77064.

Changes to Assessment of Outside Deposits

The most significant difference between this SNPRM and the January 2023 NPRM is how ''outside'' or ''community'' deposits into the inmate's commissary account will be considered for IFRP purposes. Currently, the IFRP regulation permits Bureau staff to ''consider'' these deposits in developing the inmate's financial plan, but a lack of more specific guidance has resulted in disparate application and widespread use of a $25/quarter minimum payment option. In this SNPRM, the Bureau proposes specific guidance for both Bureau staff and inmates for how any outside deposits would be assessed for IFRP financial planning purposes. The essence of the system proposed in this rulemaking is that those inmates who have more funds would be expected to pay more of each ''outside'' deposit toward their financial obligations.

Under this proposed rule, Bureau staff reviewing an inmate's IFRP participation would review the total value of deposits placed into the inmate's account over the past six months. Depending on that total value, a specific percentage of each *future* deposit received would be paid toward IFRP. The specific percentages are reflected in the chart below:

TABLE 3

Total value of deposits over prior six months	Percentage of future outside deposits deducted and paid toward IFRP
$.01–$249.99	0% if account balance is $249.99 or smaller. 25% if account balance is $250 or larger.
$250–$999.99	25%.
$1,000–$2,499.99	35%.
$2,500–$4,999.99	55%.
≥$5,000	100%.

As noted previously, in developing this SNPRM the Bureau reviewed commissary account data, and determined that setting these thresholds would best balance the competing interests discussed in this SNPRM. Under this SNPRM, inmates who receive no deposits or deposits less than $249.99 over a six-month period, and who have account balances of $249.99 or less, will not be required to pay any percentage of their outside deposits toward IFRP until such time as their payment plan is re-assessed (*i.e.,* generally during their next program review). An inmate in this category who receives a $1,200 outside deposit while his 0% financial plan is in effect will not be required to pay any of that deposit toward IFRP. However, when his plan is re-assessed during his next program review, he will then fall into the $1,000–$2,499.99 category based on his deposit activity over the prior six months, and 35 percent of outside deposits he receives going forward—regardless of the size of each individual deposit—will be paid toward his financial obligations.

The way this system works is further illustrated in the following examples:

Example 1: Inmate John Doe, who owes federal restitution, attends his regularly scheduled program review. During this review, his Case Manager reviews Bureau systems to determine (1) the total amount deposited into Mr. Doe's commissary account over the prior six months; and (2) Mr. Doe's commissary account balance.

The Case Manager's review indicates that Mr. Doe has a current commissary account balance of $600, as well as deposits over the prior six months of $600 ($100/month). Thus, his IFRP payment obligation would be 25 percent of each outside deposit he receives while this payment plan is in effect. After Mr. Doe agrees to this financial plan, the Case Manager would enter this financial plan into the Bureau's SENTRY system. While this financial plan is in effect, every time a deposit is made to Mr. Doe's commissary account, 25 percent would be withheld and paid toward his restitution obligation.

Example 2: Inmate Jane Smith, who also owes federal restitution, attends her program review meeting. Her Case Manager determines that Ms. Smith has an account balance of $200, as well as total deposits over the prior six months of only $100. Thus, Ms. Smith's financial plan would reflect that no percentage would be withheld from outside deposits she receives while the financial plan is in effect.

Example 3: Inmate William Brown, who owes a federal assessment, has $0 in deposits into his account over the previous six months. He attends his program review meeting, and has a commissary account balance of $300. Because his account balance is greater than $250, his payment plan will specify that 25 percent of each future outside deposit will be paid towards IFRP. While this plan is in effect, Mr. Brown receives a $1,200 tax refund deposit; $300 of this deposit will be paid toward his federal assessment through IFRP.

Example 4: Inmate James Roe, who owes a federal tax debt, has been on a 0% payment plan for multiple cycles because he receives less than $249.99 in deposits every six months, and his account balance is less than $250 at the time of his program review. While this plan is in effect, Mr. Roe receives a deposit of $5,000 from an inheritance, all of which he keeps. At his next program review, however, Mr. Roe's payment plan will be adjusted so that 100 percent of each outside deposit he receives, until such time as his financial plan is modified again or he satisfies his financial obligation, will be paid toward IFRP.

In each of these examples, the inmates' financial plans would also indicate that 10 percent of their work compensation would be paid toward the IFRP payment process.

The Bureau's intent in making this revision is to try to require inmates with greater financial resources to pay more toward their financial obligations. Admittedly, this system is not perfect. This proposal uses past deposit history to set a percentage of future deposits taken for IFRP. The Bureau elected to focus on total value of deposits (rather than account balances) because the total deposits figure more accurately depicts the individual inmate's financial circumstances and because it is already reported by the Bureau's SENTRY system and used as part of the current IFRP system to develop payment plans. If IFRP was designed around account balances, there would be a significant incentive for inmates to spend down their account balances in advance of the time at which their financial plan is established or reviewed, in order to evade financial responsibility obligations. Instead, by utilizing the total value of deposits, the Bureau will

be relying on a figure that gives the complete picture of how much money the inmate has available to spend, including on satisfying their financial obligations.

As the Bureau explained in its January 2023 NPRM, it faces significant technological, administrative, and other challenges in establishing any kind of variable-rate system. The Bureau considered a system similar to progressive taxation, which would apply a lower marginal rate to amounts below a certain threshold, and higher marginal rate to amounts above that threshold. This type of proposal would offer several benefits. It would allow the Bureau to target large account balances while still preserving a minimum amount of funds for an inmate's daily and future use. It is also more equitable, recognizing that an inmate with an account balance of $100 and minimal incoming deposits is differently situated than one with an account balance of $10,000 or one with numerous deposits.

However, the Bureau also determined that there were significant technological, administrative, and other disadvantages associated with this alternative approach. First, there is the risk that inmates might maintain deliberately small account balances through unlawful or illegitimate means (including having money held by other inmates), or otherwise engage in ''structuring'' of deposits and other transactions, to avoid paying a higher percentage toward IFRP. In addition, a system that set cut points based on the balance in an inmate's account presented the risk of unfairness by treating inmates with similar balances differently. For example, an inmate whose account balance totaled $499 might be expected to pay 25 percent of future deposits towards IFRP, while an inmate whose account balances totaled $500.01 might be expected to pay 50 percent of community deposits towards IFRP.

A ''progressive'' system tied to deposit amounts could mitigate this latter concern. For instance, such a system might set a marginal rate of 25% for the first $500 in community deposits during a time period, with a rate of 75% for any deposits over $500 during the same span. In that scenario, an inmate who deposited $500 in a 365-day period would pay $125 (25% of the $500). An inmate who deposited $501 in a 365-day period would pay $125.50 (25% of the first $500, and 75% of the amount—$1—over $500).

This solution, however, brings technological and administrative challenges for the Bureau. The Bureau lacks a fully automated process to ''freeze'' funds or make IFRP withdrawals from an inmate's account, which prevents the Bureau from implementing any plan that would automatically adjust amounts withheld from individual deposits as the amount in the account increases or decreases, or an individual deposit is above or below a certain point. With the number of deposits received by the Bureau each day, the Trust Fund system would have to query each individual account, its balance or deposit history, the inmate's IFRP status, and tie that to a specific percentage of the deposit to withhold. Under the current IFRP model, an individual inmate's IFRP financial plan is first manually entered by a unit team member, and payments are withdrawn and paid to the correct payee by a Trust Fund staff member pursuant to the terms of the financial plan the inmate has agreed to. In developing the financial plan, unit team staff look at the prior 180 days of financial activity in the inmate's account to determine what percentage the inmate would be expected to pay; the inmate then signs the financial plan and agrees to abide by that plan until the next review. If the financial plan involved variable rates of withholding of deposits, it would be more difficult for both Bureau staff to explain and for inmates to understand what they would be paying.

This SNPRM tries to strike a middle ground between setting a single, flat rate that applies to all inmates regardless of their financial means, and a highly sophisticated system that would automatically adjust withholding amounts based on various factors (*e.g.,* account balance, total sum of deposits over a specific period). Under the proposed rule, most inmates would keep a majority of their outside deposits; only those inmates who receive significant deposits (*e.g.,* $2,500 or more over a six-month period) would be assessed at a rate of 55 percent or higher. The Bureau plans to engage in significant notification and educational efforts for parties impacted by these IFRP changes when it issues its final rule and associated implementing policy. As part of those efforts, the Bureau anticipates informing members of the public (including ''outside'' depositors) that funds deposited into the account of an IFRP-participating inmate may be paid toward the inmate's financial obligations, in accordance with the terms of the inmate's agreed-to IFRP payment plan.

Importantly, financial plans are subject to review and adjustment at a minimum during every program review meeting. Accordingly, an inmate who receives a single large deposit may see their financial plan percentage increase for the next six months. However, once their deposits return to lower amounts, that percentage can be adjusted downward by Bureau staff.

Changes to Set-Aside Amounts

In developing this SNPRM, the Bureau's overarching intent is to establish that inmates with more money are expected to pay more towards their financial obligations. Under the current IFRP regulation, when developing an inmate's financial plan, Bureau staff are required to subtract $450 (*i.e.,* $75 × 6 months, inmate telephone exclusion) from consideration in evaluating the inmate's available financial resources.

This SNPRM would retain a version of the set-aside, but it does not explicitly tie it to telephone use for two reasons. First, Bureau inmates have multiple avenues, including telephone calls, electronic messaging, and video visiting (where available), to maintain contact with family and other members of the community, so restricting the set-aside consideration to just phone calls no longer reflects current realities. Second, the Bureau recognizes that inmates may choose to prioritize other purchases, including, for example, over-the-counter medications purchased from commissary, preferred hygiene products, hobbycraft materials, or materials for college or correspondence courses.

Under the SNPRM, an inmate who receives less than $250 in deposits over the six months prior to program review would generally not be required to pay *any* percentage of their outside deposits towards IFRP. The only circumstance in which this inmate would be required to pay a percentage of his outside deposits is if the inmate has accumulated a commissary account balance of $250 or more at the time of program review. In the Bureau's view, if the inmate has $250 in their commissary account, regardless of their deposit activity over that time period, then the rationale behind the set-aside is satisfied, and the inmate should pay a percentage of his future incoming deposits towards IFRP obligations. Importantly, that percentage would not be 100 percent, except for those inmates who receive more than $5,000 over a six-month period. Inmates who participate in IFRP would be guaranteed to keep a *minimum* of $250, and for all but the most well-off inmates, they would also be entitled to keep a majority of their external deposits in excess of that $250 amount as well.

We will briefly revisit the example of John Doe, who had an account balance of $600 and was placed on an IFRP

payment plan that would withhold 25 percent of future ''outside'' deposits. While that plan is in effect, Mr. Doe receives $100 every month deposited into his account by family members. For each deposit, he would be able to spend $75 on things like phone calls, electronic messaging, and commissary, *in addition to the $600 he already had in his account.* Meanwhile, $25 of each deposit would be paid towards his federal restitution. Given costs for phone calls ($.06/minute, with a limit of 300 minutes per month) and electronic messaging access ($.05/minute), Mr. Doe would have sufficient funds remaining after his IFRP payment is deducted to maintain contact with his family and friends through either of these methods. With respect to commissary spending, Mr. Doe would likewise have sufficient funds to purchase items in the commissary at FCI Lompoc I like aspirin ($1.90), hydrocortisone cream ($1.55), and antifungal foot cream ($2.70).

By exempting inmates with minimal funds (*i.e.,* less than $250) from the requirement regarding outside deposits, inmates will still be able to communicate with family and purchase some commissary items. While inmates with limited financial means may have to make choices about how to spend their funds, the exemption would ensure that they will all have some funds available.

Specific Treatment of High-Value Accounts

In the Bureau's experience, the vast majority of inmates carry commissary account balances of under $5,000. As of November 2024, for example, only two percent of BOP's inmate population of over 158,000 inmates had a commissary account balance of $5,000 or more. This SNPRM proposes to specifically target Bureau inmates who have significant account balances, which the Bureau defines as a balance greater than or equal to $5,000, and who also owe financial obligations. These inmates would be expected to allot all funds in excess of $5,000 held in their commissary accounts towards payment of financial obligations, in addition to 100 percent of all ''external'' deposits received during times when their accounts are at or above that $5,000 threshold.

As previously noted, only two percent of inmates have account balances of $5,000 or above, and an even smaller subset of that percentage owes any financial obligations, and thus would be subject to this provision. By imposing this requirement only on those inmates who maintain significant balances, the Bureau is communicating the expectation that inmates would not be able to use their commissary accounts to shield their funds from being used to satisfy their financial obligations.

Example: Inmate James Roe owes federal restitution of $100,000. He attends his program review meeting with a commissary account balance of $9,000, and deposits over the prior six months totaling $1,000. He would be expected to make a one-time payment of $4,000 (the amount in his commissary account in excess of $5,000), and would be placed on an IFRP payment plan that withholds 10% of his pay and 100% of his outside deposits.

The Bureau recognizes that this approach may lead some inmates who have the available means to seek to deposit their funds in non-Bureau, external accounts. In these circumstances, alternative financial collection methods can be pursued by federal, state, and/or local authorities. This approach may also lead some inmates to decline to participate in IFRP, but that decision would subject them to the consequences of non-participation detailed in 28 CFR 545.11(d).

Proposed Changes to 28 CFR 545.11(c)

In the January 2023 NPRM, the Bureau stated its intention to revise the proposed rule to explain that the inmate's financial plan would be reviewed *at a minimum* during the inmate's program review meeting. This SNPRM keeps this intended revision, and makes clear that the percentage of non-institution (community) resources deducted for IFRP payments may be revised at this time, based on the total value of deposits into the inmate's commissary account over the prior six months. Modifications to an inmate's financial plan may be made at times other than the inmate's program review meeting if, for example, the inmate receives a significant deposit or loses a source of community support.

The Bureau is also interested in receiving comments on the topic of whether an inmate should be exempt from IFRP participation for a certain length of time prior to reentry. For example, the inmate could be exempt from IFRP participation during the 90 or 180 days prior to either (1) the inmate's transition to a residential reentry center or home confinement, or (2) expiration of the inmate's term of imprisonment, if the inmate is not participating in community confinement.

Proposed Changes to 28 CFR 545.11(d)

Paragraph (d) of 28 CFR 545.11 lists the effects of non-participation in the IFRP. In the January 2023 NPRM, the Bureau proposed to revise this paragraph to remove two listed consequences, as they are no longer in use, and to add one new consequence. This SNPRM keeps the changes proposed by the January 2023 NPRM and clarifies how this paragraph will be structured. As detailed below, the Bureau continues to invite comments specifically on the linkage between IFRP and time credits under the First Step Act.

1. *Deletion of language requiring quartering in lowest housing status as an effect of non-participation in IFRP.* First, the Bureau still proposes to remove current paragraph (d)(7), which requires that if an inmate refuses to participate in or comply with the provisions of the IFRP, the inmate be quartered in the lowest housing status available (dormitory or double-bunking, for example).

2. *Deletion of language prohibiting placement in community-based programs as an effect of non-participation in IFRP.* Second, the Bureau still proposes to remove current paragraph (d)(8), which states that if an inmate refuses to participate in or comply with the provisions of the IFRP, the inmate would not be placed in a community-based program.

3. *Relationship between IFRP and Time Credits under the First Step Act.* The Bureau has taken very seriously the comments it received in response to the January 2023 NPRM that expressed concerns that conditioning FSA Time Credits on IFRP participation may take away from the FSA's spirit and intent to encourage individuals in custody to prepare for reentry. However, the Bureau maintains that participation in IFRP demonstrates acceptance of responsibility and is an important step in preparing for reentry. Accordingly, the Bureau has proposed a number of the reforms to the IFRP program described above aimed at minimizing the perceived burden of IFRP participation on those eligible for FSA Time Credits and addresses the concern that participation may leave individuals without necessary resources. These proposed reforms include the exemption of individuals with limited funds ($249.99 or less) from IFRP payments and the newly proposed progressive payment system for outside deposits. We therefore invite additional comments on the relationship between IFRP and FSA Time Credits in light of the Bureau's efforts to address the stated concerns through these and other reforms proposed in this rulemaking.

4. *Conforming amendments.* Finally, the Bureau proposes to renumber current paragraphs (d)(9) and (d)(11) to

paragraphs (d)(7) and (d)(8) respectively; to remove current paragraph (d)(10); which is currently listed as ''reserved''; and to make amendments to redesignate the numbered list in this regulation to conform to the changes described in this proposed rule.

Regulatory Certifications

Executive Orders 12866, 13563, and 14094 (Regulatory Review)

This proposed rule does not fall within a category of actions that the Office of Management and Budget (OMB) has determined constitutes a ''significant regulatory action'' under section 3(f) of Executive Order 12866 and, accordingly, it was not reviewed by OMB. The economic impact of this proposed rule is limited to an existing BOP program that applies to sentenced inmates in the custody of the Federal Bureau of Prisons, and does not apply to inmates in study/observation; pretrial detainees; or inmates in holdover status pending designation.

Executive Order 13132—Federalism

This proposed rule will not have substantial direct effects on the States, on the relationship between the national government and the States, or on distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order 13132, it is determined that this proposed rule does not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

Executive Order 12988—Civil Justice Reform (Plain Language)

This proposed rule meets the applicable standards set forth in sections 3(a) and 3(b)(2) of Executive Order 12988 to specify provisions in clear language. Pursuant to section 3(b)(1)(I) of the Executive Order, nothing in this proposed rule or any previous rule (or in any administrative policy, directive, ruling, notice, guideline, guidance, or writing) directly relating to the program that is the subject of this proposed rule is intended to create any legal or procedural rights enforceable against the United States.

Unfunded Mandates Reform Act of 1995

This proposed rule will not result in the expenditure by State, local and tribal governments, in the aggregate, or by the private sector, of $100,000,000 or more in any one year (as adjusted for inflation), and it will not significantly or uniquely affect small governments. Therefore, no actions were deemed necessary under the provisions of the Unfunded Mandates Reform Act of 1995.

Regulatory Flexibility Act

The Director of the Bureau of Prisons, under the Regulatory Flexibility Act (5 U.S.C. 605(b)), reviewed this regulation and certifies that it will not have a significant economic impact upon a substantial number of small entities for the following reasons: This regulation pertains to the correctional management of inmates committed to the custody of the Attorney General or the Director of the Bureau of Prisons. Its economic impact is limited to the Bureau's appropriated funds, and the funds held by individuals in Bureau custody who owe the types of financial obligations collectible through this Program. The Department anticipates that changes made by this proposed rule will result in additional monies collected through the Inmate Financial Responsibility Program and paid toward inmates' financial obligations, although the exact amount is unknown; in fiscal year 2023, the total collected from inmates through the Program was in excess of $9.2 million (*https://www.bop.gov/resources/victim_resources.jsp*).

Congressional Review Act

This proposed rule is not a major rule as defined by the Congressional Review Act, 5 U.S.C. 804.

List of Subjects in 28 CFR Part 545

Prisoners, Work and Compensation.

Under rulemaking authority vested in the Attorney General in 5 U.S.C. 301; 28 U.S.C. 509, 510 and delegated to the Director, Bureau of Prisons in 28 CFR 0.96, the Bureau proposes to amend 28 CFR part 545 as follows:

SUBCHAPTER C—INSTITUTIONAL MANAGEMENT

PART 545—WORK AND COMPENSATION

■ 1. The authority citation for 28 CFR part 545 continues to read as follows:

Authority: 5 U.S.C. 301; 18 U.S.C. 3013, 3571, 3572, 3621, 3622, 3624, 3632, 3663, 3771, 4001, 4042, 4081, 4082 (Repealed in part as to offenses committed on or after November 1, 1987), 4126, 5006–5024 (Repealed October 12, 1984 as to offenses committed after that date), 5039; 28 U.S.C. 509, 510.

■ 2. In 28 CFR 545.11:

■ a. Revise paragraphs (a)(4) and (5);

■ b. Add paragraph (a)(6);

■ c. Revise paragraphs (b), (c), and (d)(7) through (9); and

■ d. Remove paragraphs (d)(10) and (11).

The revisions and additions read as follows:

§ 545.11 Procedures.

* * * * *

(a) * * *

(4) Child, spousal, or other familial support obligations;

(5) Other federal government obligations; and

(6) Other (non-family support) state or local court obligations.

(b) *Payment of financial obligations.* The inmate is responsible for making satisfactory progress in meeting the inmate's financial responsibility plan and for providing documentation of these payments to unit team staff. Ordinarily, a plan for payment of financial obligations set out in the inmate's Judgment & Commitment order (J&C) or other court order should be implemented as the inmate's financial plan. In the event the J&C or other court order does not prescribe a payment plan or schedule, the following will apply.

(1) *Initial classification.* During the initial classification and review of the inmate's financial obligations, unit team staff will also review the inmate's individual commissary account balance, and encourage the inmate to make a payment to satisfy any financial obligations in full. The inmate can make this payment through his/her commissary account or from other financial resources. For a payment made through a non-Bureau resource, the inmate is required to provide documentation of the payment to unit team staff. If the inmate is unwilling or unable to fully satisfy any financial obligation at the time of initial classification and review, the inmate will be required to make a one-time single payment toward his/her financial obligation(s) if his/her commissary account balance is greater than or equal to $250. The amount of this one-time payment will be based on the amount of money in the inmate's commissary account at the time of initial classification and review:

TABLE 1 TO PARAGRAPH (b)(1)

Commissary account balance	Percentage deducted for one-time initial payment
$0.01–$249.99	0%.
$250.00–$5,000.00	50% of the amount between $250 and $5,000.
$5,000.01 or more	50% of the amount between $250 and $5,000 and 100% of the amount above $5,000.

(2) *Financial plans.* For an inmate who is unwilling or unable to make a single payment to satisfy the inmate's entire financial obligation(s) at the time of the initial classification and review, Bureau staff will establish a financial plan for the inmate. These financial plans shall be structured as follows:

(i) *Allotment of institution resources.* The inmate will be required to pay 10 percent of all pay received for an institution or UNICOR work assignment to the IFRP payment process. This includes performance pay, bonus pay, and special bonus pay.

(ii) *Allotment of non-institution (community) resources.* The inmate will be expected to allot a specified percentage of all deposits received from non-institution (community) resources toward the IFRP payment process.

(iii) *Establishing financial plan at program review.* During program review, BOP staff will review the inmate's commissary account balance, and total value of deposits into the inmate's commissary account over the prior six months. Based on the total value of deposits over the prior six months, BOP staff will place the inmate on a financial plan that specifies that a certain percentage of each future deposit from non-institution (community) resources will be deducted and paid toward the IFRP payment process. The specific percentages are reflected in the following table:

TABLE 2 TO PARAGRAPH (b)(2)(iii)

Total value of deposits over prior six months	Percentage of future outside deposits deducted and paid toward IFRP
$.01–$249.99	0% if commissary account balance is $249.99 or smaller. 25% if commissary account balance is $250.00 or larger.
$250.00–$999.99	25%.
$1,000–$2,499.99	35%.
$2,500–$4,999.99	55%.
≥$5,000	100%.

(iv) *Balances greater than or equal to $5,000.* For any inmate who has a commissary account balance greater than or equal to $5,000 at the time of review of the inmate's participation and/or progress in the IFRP, the inmate will be expected to pay all of the amount in the account, in excess of $5,000, toward the IFRP payment process.

(3) *Exceptions to allotment amounts.* Any allotment that differs from that described in part (2) of this subpart must be approved by the unit manager, after consultation with the associate warden, and documented in writing.

(c) *Monitoring.* Participation and/or progress in the IFRP, including the inmate's financial plan, will be reviewed, at a minimum, during an inmate's program review meeting. The percentage of non-institution (community) resources deducted for IFRP payments may be revised at this time, based on the total value of deposits into the inmate's commissary account over the prior six months. Modifications to an inmate's financial plan may be made at times other than the inmate's program review meeting.

(d) * * *

* * * * *

(7) The inmate will not receive a release gratuity unless approved by the warden;

(8) The inmate will not receive an incentive for participation in residential drug treatment programs; and

(9) The inmate will not be eligible to earn or apply First Step Act Time Credits, as described in 18 U.S.C. 3624 and 3632(d)(4), and 28 CFR 523.40 through 523.44.

Colette S. Peters,

Director, Federal Bureau of Prisons.

BILLING CODE 4410–05–P

DEPARTMENT OF VETERANS AFFAIRS

38 CFR Part 17

RIN 2900–AS25

Updates to Waiver of Charges for Copayments

AGENCY: Department of Veterans Affairs.

ACTION: Proposed rule.

SUMMARY: The Department of Veterans Affairs (VA) proposes to amend its medical regulations to allow VA to initiate a waiver request for debt accumulated from health care copayments on behalf of veterans in certain circumstances and to remove the requirement that veterans submit VA Form 5655 when seeking a waiver of copayment debt.

DATES: Comments must be received on or before February 18, 2025.

ADDRESSES: Comments must be submitted through *www.regulations.gov.* Except as provided below, comments received before the close of the comment period will be available at *www.regulations.gov* for public viewing, inspection, or copying, including any personally identifiable or confidential business information that is included in a comment. We post the comments received before the close of the comment period on *www.regulations.gov* as soon as possible after they have been received. VA will not post public comments on *www.regulations.gov* that make threats to individuals or institutions or suggest that the commenter will take actions to harm an individual. VA encourages individuals not to submit duplicative comments. We will post acceptable comments from multiple unique commenters even if the content is identical or nearly identical to other comments. Any public comment

received after the comment period's closing date is considered late and will not be considered in the final rulemaking. In accordance with the Providing Accountability Through Transparency Act of 2023, a plain language summary (not more than 100 words in length) of this proposed rule is available at *www.regulations.gov,* under RIN 2900–AS25.

FOR FURTHER INFORMATION CONTACT: Andrew Patrick, Executive Director, Revenue Operations, Office of Finance, (104RO), Veterans Health Administration, Department of Veterans Affairs, 810 Vermont Ave. NW, Washington DC 20420, (202) 809–3030. (This is not a toll-free telephone number.)

SUPPLEMENTARY INFORMATION:

Authority and Background

Section 1710 of title 38, United States Code (U.S.C.) requires VA to furnish hospital care and medical services, and authorizes VA to provide nursing home care, that VA determines to be needed for eligible veterans. Section 1710 authorizes VA to provide such care only when the veteran agrees to pay the applicable copayment. 38 U.S.C. 1710(f)(1) and (g)(1). Additionally, section 1722A establishes that VA must require a copayment from certain veterans for medications. VA has set forth copayment requirements for inpatient hospital care and outpatient medical care in § 17.108 of title 38, Code of Federal Regulations (CFR), copayment requirements for medication in § 17.110, copayments for extended care services in § 17.111, and copayments for urgent care at § 17.4600. These types of medical copayments are generally referred to as ''copayments'' throughout this rulemaking.

Under 31 U.S.C. 3711(a)(1), Federal agencies are required to ''try to collect a claim of the United States Government for money or property arising out of the activities of, or referred to, the agency,'' which means that VA must attempt to collect amounts owed by veterans to VA, including debts arising from copayments. However, VA is authorized to waive recovery of payments or overpayments of benefits, including copayments, when recovery would be against equity and good conscience and an application for relief is made within 180 days from the date of notification of the indebtedness by VA. 38 U.S.C. 5302(a)(1). VA has regulated the waiver of debts arising from medical copayments in 38 CFR 17.105(c). VA has also regulated the process for waiver applications in 38 CFR 1.963(b), the process to request a hearing in § 1.966(a), and the application of the ''equity and good conscience'' standard in §§ 1.965 and 1.966(a).

Explained in more detail below, VA proposes to amend § 17.105(c) to: remove the requirement to submit a particular form when requesting a waiver of charges for copayments; add the ability for VA to initiate waiver requests on behalf of veterans; update VA staff position titles; and clarify the applicability of other regulations related to appeals of VA decisions on the waiver of copayments. These changes would provide clarity within the regulation, be consistent with the statutory authority for collection of copayments and waiver of copayments, reflect the current position title used by VA, and update cross-references to other regulatory sections.

We note at the outset that current § 17.105(c) references only claimants, not veterans. In the proposed changes to § 17.105(c) discussed below, we would include references to both claimants and veterans. We would maintain the existing references to claimants when discussing the process for anyone other than VA to initiate a waiver request for charges of copayments, and we would use the word veteran when discussing the process whereby VA would initiate a request for waiver on behalf of a veteran.

Changes to 38 CFR 17.105(c)

In this rulemaking we propose to amend 38 CFR 17.105(c) related to waivers for copayments. We would first restructure current § 17.105(c) by breaking the single paragraph into proposed subparagraphs (c)(1) through (5), which would retain the majority of the language in current paragraph (c), but the further subparagraphs would make the proposed substantive and technical changes clearer.

The first sentence of current § 17.105(c) introduces the process for requesting a waiver of charges for copayments and states that ''[if] the debt represents charges for outpatient medical care, inpatient hospital care, medication or extended care services copayments made under §§ 17.108, 17.110, 17.111, or 17.4600, the claimant must request a waiver by submitting VA Form 5655 (Financial Status Report) to the Consolidated Patient Account Center (CPAC) Chief Financial Officer.'' We would retain this sentence as a standalone proposed § 17.105(c), with the following revisions.

We would first add the phrase ''urgent care'' to the list of debts from charges for care authorized to be waived. Current § 17.105(c) does not include the phrase urgent care but does include reference to § 17.4600, which addresses copayments for urgent care. Therefore, to ensure a complete and parallel listing of all applicable care types, we would add the phrase ''urgent care'' to qualify § 17.4600.

We would then add language in proposed § 17.105(c) to establish that VA may initiate a waiver request in addition to a ''claimant.'' This change would be necessary because VA recognizes that situations may arise where it would be more equitable and efficient for VA staff to initiate waiver requests on behalf of veterans. We would not propose to list specific situations in which VA may initiate a waiver, so that VA may retain greater flexibility in assessing what we believe would be novel circumstances. However, one example for when VA might initiate a waiver request would be in cases of VA error, particularly when large groups of veterans are impacted by the same VA error or errors.

Proposed § 17.105(c) would remove the requirement in current § 17.105(c) that claimants must submit VA Form 5655 to request a waiver of charges of copayments. VA Form 5655 is a two-page form that requires each claimant provide detailed information regarding monthly expenses, debts, and other financial information. VA now finds that this level of specificity can be burdensome to the claimant and is often more information than VA requires to make a waiver determination. VA would still regulate other criteria for submission of waiver requests, but the requirement would be moved to proposed § 17.105(c)(1).

Lastly, proposed § 17.105(c) would move the requirement that the form be sent to the Chief Financial Officer to § 17.105(c)(1)(ii), and in that provision, change the position title from ''Chief Financial Officer'' to ''Chief Fiscal Officer'' to reflect the current position title. This is merely a technical change and would not change the process to submit a waiver or to whom the request is submitted.

For the reasons stated above, proposed § 17.105(c) would read: ''*Of charges for copayments.* If the debt represents charges for outpatient medical care, inpatient hospital care, medication, extended care services, or urgent care copayments made under §§ 17.108, 17.110, 17.111, or 17.4600, either a claimant or VA may initiate a waiver request.''

Proposed § 17.105(c)(1) would establish requirements for claimants to submit requests for waiver of charges of copayments. Proposed paragraph (c)(1) would establish introductory language to state ''[i]f the claimant requests a

waiver, the claimant must:'' where proposed subparagraphs (c)(1)(i)–(iv) would establish the specific criteria for a waiver request.

The criteria in proposed paragraphs (c)(1)(i), (ii), and (iv) would remain the same as those listed in current § 17.105(c), with the exceptions of the requirement to submit VA Form 5655 and changing the title of the CPAC Chief Financial Officer to the Chief Fiscal Officer.

Proposed § 17.105(c)(1)(i) would establish that claimants must make the request within the time period provided in § 1.963(b) of this chapter. This is identical to the submission timeframe in current § 17.105(c) as VA finds it is still sufficient for purposes of waiver requests for copayments.

Proposed § 17.105(c)(1)(ii) would establish that claimants submit the request for waiver in writing to the Consolidated Patient Account Center (CPAC) Chief Fiscal Officer. We reiterate that removing the requirement for every claimant to submit VA Form 5655 would reduce burden for most claimants and eliminate requests for information that is not relevant for VA to determine whether to grant waiver requests. Therefore, as we would no longer be requiring a certain form, we would state that the request must be in writing in accordance with §§ 1.911(c)(2), 1.912(c)(2) and 1.912a(c)(2). As discussed below, the proposed removal of the requirement to submit VA Form 5655 would not prevent VA from requesting VA Form 5655, or other information, from a claimant after submission of the initial waiver request if, in the course determining whether a waiver will be granted, VA determines more information is needed to make a waiver determination.

To ensure that VA has the information required to make determinations related to waiver requests, proposed § 17.105(c)(1)(iii) would state that claimants must provide any additional information that VA may request to determine whether the waiver request will be granted. This requirement is not expressly stated in current § 17.105(c), but is consistent with VA practice.

Proposed § 17.105(c)(1)(iv) would direct claimants to request a hearing under § 1.966(a) of this chapter if a hearing is desired. This requirement is identical to what is stated in current § 17.105(c), as VA finds it is still sufficient for purposes of waiver requests for copayments.

Proposed § 17.105(c)(2) would establish requirements for VA to submit requests for waivers on behalf of veterans. VA believes that in certain circumstances it would be beneficial to veterans and VA if VA were permitted to submit requests for waivers on behalf of veterans. Proposed paragraph (c)(2) would provide that when VA requests a waiver on behalf of a veteran, VA would meet the criteria further outlined in proposed paragraphs (c)(2)(i)–(iv). The criteria in proposed § 17.105(c)(2)(i)–(iii) would essentially mirror the criteria required of claimants under proposed (c)(1)(i), (ii), and (iv). The waiver request requirements in proposed § 17.105(c)(2)(i)–(iii) are again substantively the same as those stated in current § 17.105(c), with the exceptions of the requirement to submit a particular VA form, and the change in title of the CPAC Chief Financial Officer to the Chief Fiscal Officer.

Proposed § 17.105(c)(2)(i) would state that VA must make the request within the time period provided in § 1.963(b) of this chapter, and proposed paragraph (c)(2)(ii) would direct VA to submit the waiver request to the designated CPAC Chief Fiscal Officer. Both of these requirements are consistent with what is stated in current § 17.105(c) and proposed paragraphs (c)(1)(i) and (c)(1)(ii), in terms of requirements for claimants' submission of waiver requests.

Proposed § 17.105(c)(2)(iii) would establish that VA must notify the veteran in writing that a request has been made on their behalf and that the veteran may request a hearing pursuant to § 1.966(a). The proposed requirement that VA notify the veteran when a waiver request has been initiated on their behalf is not in current § 17.105(c) because the process for VA to do so is newly proposed in this rulemaking. However, VA would ensure that the veteran is notified, in writing, so that way veterans are aware that VA has initiated a waiver request for the debt and that the veteran has the right to a hearing on the request under § 1.966(a).

Proposed § 17.105(c)(2)(iv) would state that VA may request any additional information from the veteran that may be required to determine whether the waiver will be granted. Although this requirement is also not stated in current § 17.105(c), it reflects current VA practice, and it is included in proposed § 17.105(c)(1)(iii) as applicable to claimants who request a waiver. It is necessary to ensure VA has sufficient information by which to determine whether or not a waiver request should be granted.

Proposed § 17.105(c)(3) would state that the CPAC Chief Fiscal Officer may extend the time period to submit a waiver request if the Chairperson of the Committee on Waivers and Compromises could do so under § 1.963(b) of this chapter. This language would be consistent with current § 17.105(c), except that proposed paragraph (c)(3) uses the term ''waiver request'' instead of the term ''claim.'' Using the term ''waiver request'' would be consistent with the terminology used in part 1 of Title 38, CFR, and referenced throughout this rulemaking, while not substantively changing the meaning of the provision.

Proposed § 17.105(c)(4) would contain the standard of review for waiver requests, and would state that the CPAC Chief Fiscal Officer will apply the ''equity and good conscience'' standard in accordance with §§ 1.965 and 1.966(a) of this chapter, and may waive all or part of the claimant's debts. This language would be identical to that in current § 17.105(c).

Lastly, proposed § 17.105(c)(5) would establish that a decision by the CPAC Chief Fiscal Officer under this provision is final (except that the decision may be reversed or modified based on new and material evidence, fraud, a change in law or interpretation of law, or clear and unmistakable error shown by the evidence in the file at the time of the prior decision, as provided in § 1.969 of this chapter) and may be appealed in accordance with 38 CFR parts 19 and 20 as applicable. This language would be consistent with current § 17.105(c), except that proposed paragraph (c)(5) would include the words ''as applicable'' to more clearly qualify that either or both 38 CFR parts 19 and 20 may apply for purposes of appealing VA's decisions related to waiver requests.

Executive Orders 12866, 13563, and 14094

Executive Order 12866 (Regulatory Planning and Review) directs agencies to assess the costs and benefits of available regulatory alternatives and, when regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, and other advantages; distributive impacts; and equity). Executive Order 13563 (Improving Regulation and Regulatory Review) emphasizes the importance of quantifying both costs and benefits, reducing costs, harmonizing rules, and promoting flexibility. Executive Order 14094 (Executive Order on Modernizing Regulatory Review) supplements and reaffirms the principles, structures, and definitions governing contemporary regulatory review established in Executive Order 12866 of September 30, 1993 (Regulatory Planning and Review), and Executive Order 13563 of January

18, 2011 (Improving Regulation and Regulatory Review). The Office of Information and Regulatory Affairs has determined that this rule is not a significant regulatory action under Executive Order 12866, as amended by Executive Order 14094. The Regulatory Impact Analysis associated with this rulemaking can be found as a supporting document at *www.regulations.gov.*

Regulatory Flexibility Act (RFA)

The Secretary hereby certifies that this proposed rule would or not have a significant economic impact on a substantial number of small entities as they are defined in the Regulatory Flexibility Act (5 U.S.C. 601–612). The factual basis for this certification is that this proposed rule impacts only VA staff and veterans, and thus no small entities will be affected. Therefore, pursuant to 5 U.S.C. 605(b), the initial and final regulatory flexibility analysis requirements of 5 U.S.C. 603 and 604 do not apply.

Unfunded Mandates

The Unfunded Mandates Reform Act of 1995 requires, at 2 U.S.C. 1532, that agencies prepare an assessment of anticipated costs and benefits before issuing any rule that may result in the expenditure by State, local, and tribal governments, in the aggregate, or by the private sector, of $100 million or more (adjusted annually for inflation) in any one year. This proposed rule would have no such effect on State, local, and tribal governments, or on the private sector.

Paperwork Reduction Act (PRA)

Although this proposed rule contains a collection of information under the provisions of the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3521), there are no provisions associated with this rulemaking constituting any new collection of information or any revisions to the current collection of information. The collection of information for 38 CFR 17.105(c) is currently approved by the Office of Management and Budget (OMB) and has a valid OMB control number of 2900–0165.

List of Subjects in 38 CFR Part 17

Administrative practice and procedure, Claims, Health care, Veterans.

Signing Authority

Denis McDonough, Secretary of Veterans Affairs, signed and approved this document on December 5, 2024, and authorized the undersigned to sign and submit the document to the Office of the Federal Register for publication electronically as an official document of the Department of Veterans Affairs.

Consuela Benjamin,

Regulation Development Coordinator, Office of Regulation Policy & Management, Office of General Counsel, Department of Veterans Affairs.

For the reasons stated in the preamble, the Department of Veterans Affairs proposes to amend 38 CFR part 17 as set forth below:

PART 17—MEDICAL

■ 1. The authority citation for part 17 continues to read as follows:

Authority: 38 U.S.C. 501, and as noted in specific sections.

* * * * *

■ 2. Amend § 17.105 by revising paragraph (c) to read as follows:

§ 17.105 Waivers

* * * * *

(c) *Of charges for copayments.* If the debt represents charges for outpatient medical care, inpatient hospital care, medication, extended care services, or urgent care copayments made under §§ 17.108, 17.110, 17.111, or 17.4600, either a claimant or VA may initiate a waiver request.

(1) If the claimant requests the waiver, the claimant must:

(i) Make the request within the time period provided in § 1.963(b) of this chapter.

(ii) Submit the request in writing to the Consolidated Patient Account Center (CPAC) Chief Fiscal Officer.

(iii) Provide any additional information that VA may request to determine whether the waiver will be granted.

(iv) Request a hearing under § 1.966(a) of this chapter if a hearing is desired.

(2) If VA requests a waiver on behalf of a veteran, VA will:

(i) Make the request within the time period provided in § 1.963(b) of this chapter.

(ii) Submit the request in writing to the designated CPAC Chief Fiscal Officer.

(iii) Notify the veteran in writing that a waiver request has been made on the veteran's behalf and that the veteran may request a hearing pursuant to § 1.966(a).

(iv) Request any additional information from the veteran that may be required to determine whether the waiver will be granted.

(3) The CPAC Chief Fiscal Officer may extend the time period to submit a waiver request if the Chairperson of the Committee on Waivers and Compromises could do so under § 1.963(b) of this chapter.

(4) The CPAC Chief Fiscal Officer will apply the ''equity and good conscience'' standard in accordance with §§ 1.965 and 1.966(a) of this chapter, and may waive all or part of the claimant's debts.

(5) A decision by the CPAC Chief Fiscal Officer under this provision is final (except that the decision may be reversed or modified based on new and material evidence, fraud, a change in law or interpretation of law, or clear and unmistakable error shown by the evidence in the file at the time of the prior decision, as provided in § 1.969 of this chapter) and may be appealed in accordance with 38 CFR parts 19 and 20, as applicable.

BILLING CODE 8320–01–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA–R02–OAR–2024–0573; FRL–12459–01–R2]

Approval of Air Quality Implementation Plans; New Jersey; Permits and Certificates for Minor Facilities (and Major Facilities Without an Operating Permit), and Air Emission Control and Permitting Exemptions

AGENCY: Environmental Protection Agency.

ACTION: Proposed rule.

SUMMARY: The Environmental Protection Agency (EPA) is proposing to approve a revision to New Jersey's State Implementation Plan (SIP), submitted by the New Jersey Department of Environmental Protection (NJDEP), to incorporate regulations concerning permits and certificates for minor source facilities and major source facilities without an operating permit. The intended effect of the NJDEP's revisions to the SIP, is to regulate the construction and modification of stationary sources with adequate requirements to ensure that the National Ambient Air Quality Standards (NAAQS) are satisfied. In addition, the NJDEP's revisions will strengthen the SIP by conforming it with the State regulations that were in effect at the time of the SIP submission. If the EPA finalizes this rulemaking as it is being proposed, the Federal air permitting program for New Jersey will be updated, which will better serve the regulated community and help to protect the quality of air in the State.

DATES: Written comments must be received on or before January 16, 2025.

ADDRESSES: Submit your comments, identified by Docket ID Number EPA–R02–OAR–2024–0573 at *https://www.regulations.gov*. Although listed in the index, some information is not publicly available, *e.g.,* Controlled Unclassified Information (CUI) (formally referred to as Confidential Business Information (CBI)) or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the internet and will be publicly available only in hard copy form. Publicly available docket materials are available electronically through *https://www.regulations.gov*. Follow the online instructions for submitting comments. Once submitted, comments cannot be edited or removed from *Regulations.gov*. The EPA may publish any comment received to its public docket. Do not submit electronically any information you consider to be CUI or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. The EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.,* on the web, cloud, or other file sharing system). For additional submission methods, the full EPA public comment policy, information about CUI or multimedia submissions, and general guidance on making effective comments, please visit *https://www.epa.gov/dockets/commenting-epa-dockets*.

SUPPLEMENTARY INFORMATION:

I. Background
II. Summary of the SIP Revision and the EPA's Analysis
III. Environmental Justice Considerations
IV. The EPA's Proposed Action
V. Incorporation by Reference
VI. Statutory and Executive Order Reviews

I. Background

On February 24, 2014, and as supplemented on August 23, 2018, the State of New Jersey, through the NJDEP, submitted to the EPA, revisions to the New Jersey SIP. The revisions consisted of new provisions and amendments to New Jersey Administrative Code (*i.e.,* N.J.A.C.), Title 7, Chapter 27 (*i.e.,* 7:27), subchapter 8, ''Permits and Certificates for minor facilities (and major facilities without an operating permit).'' The revisions submitted on February 24, 2014, and August 23, 2018, became State effective on September 19, 2011, and January 16, 2018, respectively. The last major EPA approval of subchapter 8 into the New Jersey SIP occurred in 1986, with further amendments to the rule approved into the SIP occurring in 1994, 1997, and 2023. The NJDEP's 2014 and 2018 submittals are intended to strengthen the SIP by conforming it with the subchapter 8 State regulations that the State had in effect at the time of submission to the EPA.

Section 110(a)(2)(C) of the Clean Air Act (CAA) requires States to include in their SIPs, programs that regulate the construction and modification of stationary sources with adequate requirements to ensure that the National Ambient Air Quality Standards (NAAQS) are achieved. New Jersey submitted the February 24, 2014, and August 23, 2018, SIP revisions to fulfill this requirement of the CAA as it applies to minor stationary sources and major source facilities without an operating permit.

In accordance with section 110(a) of the CAA, SIP rules must be enforceable, and the EPA must not approve a revision that interferes with any applicable requirement concerning attainment and reasonable further progress (see CAA section 110(l)). The EPA evaluates minor new source review programs included as SIP submittals based on the criteria in subpart I of 40 CFR part 51 and new major sources and major modifications under 40 CFR 51.165 and 51.166 and part C and D of title I of the CAA.

The EPA has determined that the rule revisions that New Jersey submitted, are mostly consistent with the relevant policy and guidance regarding the enforceability of the revisions. Additionally, the EPA has determined that the rule revisions comply with the requirement under CAA section 110(l), that the EPA may not approve a revision that could interfere with any applicable requirement concerning attainment and reasonable further progress and meet the criteria in subpart I of 40 CFR part 51, §§ 51.160 through 51.164. For the reasons herein stated, apart from five provisions related to odor (which the NJDEP acknowledged within its February 24, 2014, cover letter that was included with the SIP submittal would not be incorporated by the EPA into the federally enforceable SIP) and one provision related to affirmative defense (which was withdrawn by the NJDEP after the February 24, 2014, and August 23, 2018, submittals) the EPA proposes to approve the amendments submitted by New Jersey to strengthen the State's SIP.

II. Summary of the SIP Revision and the EPA's Analysis

On February 24, 2014, and as supplemented on August 23, 2018, New Jersey, through the NJDEP, submitted revisions to its SIP, consisting of new provisions and amendments to N.J.A.C. 7:27–8, ''Permits and Certificates for minor facilities (and major facilities without an operating permit).'' Specifics on the amendments to the current SIP-approved subchapter 8 provisions are provided in further detail under this section of the preamble. The NJDEP's submission included supplemental materials such as documentation of the: public hearing, public comment period, and the State's responses to public comments. These materials are in the EPA's docket for this proposal.

Subchapter 8.1, ''Definitions''

The EPA finalized the amendments to the definitions for terms under N.J.A.C. 7:27–8.1, ''Definitions,'' on November 28, 2023. *See* 88 FR 83036. As a result, the EPA will not be proposing to approve any revisions to N.J.A.C. 7:27–8.1 with this proposed rulemaking.

Subchapter 8.2, ''Applicability''

N.J.A.C. 7:27–8.2, ''Applicability,'' lists the sources of air contaminant emissions, including pieces of equipment, operations, and/or processes, for which the procurement of a permit and operating certificate are required. The EPA last approved N.J.A.C. 7:27–8.2, ''Permits and certificates required,'' into New Jersey's SIP on August 7, 1997,[1] and is now proposing to approve revisions that have since been made to N.J.A.C. 7:27–8.2, including the renaming of this subsection.

Per N.J.A.C. 7:27–8.2(a), a source that is required to have a permit and certificate under N.J.A.C. 7:27–8 (*i.e.,* ''subchapter 8'') is a ''significant source,'' and a source that is not required to have a permit and certificate under subchapter 8 is considered an ''insignificant source.'' As clarified in N.J.A.C. 7:27–8.2(b), a significant source that is located at a facility with an operating permit subject to N.J.A.C. 7:27–22, ''Operating permits,'' is not subject to the requirements of subchapter 8. However, in accordance with N.J.A.C. 7:27–8.2(b)(1) through (3),

[1] *See* 62 FR 42412.

a source located at a facility with an operating permit will still remain subject to the requirements of subchapter 8: (1) While awaiting an operating permit to be issued, (2) if it is a new source and it elects to obtain a preconstruction permit and certificate per N.J.A.C. 7:27–22.5(g), or (3) if a portion of the operating permit facility is not subject to N.J.A.C. 7:27–22 requirements, then that portion remains subject to subchapter 8.

A significant source includes any equipment or source of operation that may emit one or more air contaminants directly or indirectly into the outdoor air and belongs to one of the categories listed under N.J.A.C. 7:27–8.2(c)(1) through (21). However, equipment or source operations listed under N.J.A.C. 7:27–8.2(d)(1) through (14), are exempt from being classified as a significant source and do not require a preconstruction permit and operating certificate.

Per N.J.A.C. 7:27–8.2(e), equipment or a source operation that would be classified as a significant source solely based on a combined raw material weight exceeding 50 pounds in any one hour under N.J.A.C. 7:27–8.2(c)(19), is not considered a significant source, and therefore, not required to obtain a permit and certificate, provided it satisfies the conditions at N.J.A.C. 7:27–8.2(e)(1) through (3). In addition, per N.J.A.C. 7:27–8.2(f)(1), commercial fuel burning equipment under N.J.A.C. 7:27–8.2(c)(1), except for the sources listed under N.J.A.C. 7:27–8.2(c)(21), that has a maximum rated heat input of 1,00,000 BTU per hour or greater to the burning chamber (including emergency generators), is excluded from the requirement to obtain a preconstruction permit and operating certificate, if it meets the criteria under N.J.A.C. 7:27–8.2(f)(1) through (4).

The EPA will not be proposing to approve N.J.A.C. 7:27–8.2(d)(3)(ii)(2) and N.J.A.C. 7:27–8.2(e)(2)(ii), per the NJDEP's request, since these provisions address and reduce ''odors.'' [2] While the NJDEP included the odor provisions in the February 24, 2014, SIP revision, the NJDEP acknowledged in its cover letter that the EPA does not regulate odors and, consequently, the odor provisions will not be included in the federally enforceable SIP. The NJDEP is correct that odors are not regulated by the EPA and that the EPA's approval of SIPs is limited to air pollutants regulated by Federal rules; therefore, the EPA is not proposing to approve these odor related provisions into the SIP.

Furthermore, under N.J.A.C. 7:27–8.2(g), control apparatus serving as a significant source are to be included in the preconstruction permit and operating certificate control for the significant source. In accordance with N.J.A.C. 7:27–8.2(h), emissions information from an insignificant source is required to be provided on an application subject to N.J.A.C. 7:27–8.4, if the insignificant source vents to a control device, stack, or chimney, which also serves a significant source. Additionally, N.J.A.C. 7:27–8.2(i) stipulates that a permit and certificate are not required for equipment, control apparatus, or a source operation covered by a facility-wide permit issued per N.J.S.A. 13:1D–35, except where N.J.A.C. 7:27–8.27, ''Special facility-wide permit provisions,'' is still applicable. Finally, N.J.A.C. 7:27(j), clarifies that subchapter 8 does not preclude an owner or operator from voluntarily obtaining a preconstruction permit and operating certificate for a source not required to obtain a permit.

The EPA finds the applicability provisions of N.J.A.C. 7:27–8.2 acceptable for ensuring a vast variety of sources are covered by the provisions of subchapter 8. Therefore, the EPA is proposing to approve N.J.A.C. 7:27–8.2, except for N.J.A.C. 7:27–8.2(d)(3)(ii)(2) and N.J.A.C. 7:27–8.2(e)(2)(ii), as it was submitted to the EPA by the NJDEP on February 24, 2014, and as supplemented on August 23, 2018.

Subchapter 8.3, ''General Provisions''

N.J.A.C. 7:27–8.3, ''General provisions,'' provides the general requirements for obtaining a preconstruction permit or operating certificate for a significant source or a control apparatus serving a significant source. The EPA last approved N.J.A.C. 7:27–8.3 into New Jersey's SIP on November 25, 1986,[3] and is now proposing to approve the revisions that New Jersey made since the 1986 approval, through August 23, 2018.

As specified in N.J.A.C. 7:27–8.3(a) and (b), no person shall construct, reconstruct, install, modify, or operate a significant source or control apparatus without first obtaining a preconstruction permit and/or valid operating certificate. In addition, under N.J.A.C. 7:27–8.3(c), a permittee may not take any action that requires a permit revision, compliance plan change, seven-day-notice change, amendment, or change to a batch plant permit under any appliable provision at N.J.A.C. 7:27–8.17 through 23 (as will be discussed later in this proposed rulemaking), without complying with the applicable provisions under subchapter 8.

According to N.J.A.C. 7:27–8.3(d) and N.J.A.C. 7:27–8.3(m), persons holding a permit or certificate are required to make relevant documents readily available to the NJDEP for inspection on the operating premises. The NJDEP reserves the right for its representatives to enter and inspect any facility or property as provided by N.J.A.C. 7:27–1.31. Additionally, under N.J.A.C. 7:27–8.3(e), no person is allowed to use any equipment unless all components are functioning properly and in a manner that is consistent with the preconstruction permit and certificate. Per N.J.A.C. 7:27–8.3(f), a preconstruction permit or certificate is not allowed to be transferred from the location authorized in the permit to another location, as well as from one piece of equipment to another.

Once a permit and certificate are issued, the permittee is fully responsible for compliance with the permit and certificate, subchapter 8, and any other requirement issued by the NJDEP with the force of law (N.J.A.C. 7:27–8.3(g)). Under N.J.A.C. 7:27–8.3(h) permits or certificates issued under subchapter 8 do not relieve an applicant from obtaining necessary permits from other governmental agencies to comply with Federal, State, and local rules and regulations. Finally, per N.J.A.C. 7:27–8.3(i), a person conducting only normal repair and maintenance of a control apparatus or equipment, as defined at N.J.A.C. 7:27–81, need not comply with N.J.A.C. 7:27–8.3(a), (b), or (c).

While the NJDEP included odor provisions in the February 24, 2014, SIP revision, the EPA will not be proposing to approve N.J.A.C. 7:27–8.3(j), per the NJDEP's acknowledgement that odors are not regulated by the EPA and cannot be included in a federally enforceable SIP.[4] The NJDEP is correct that odors are not regulated by the EPA and that the EPA's approval of SIPs is limited to air pollutants regulated by Federal rules; therefore, the EPA is not proposing to approve this odor related provision. Additionally, consistent with a request from the NJDEP on October 7, 2024,[5] the EPA is not acting on N.J.A.C. 7:27–8.3(n), which is an affirmative defense provision. On June 15, 2015, the EPA issued a final action in the **Federal**

[2] *See* the letter that the NJDEP submitted to the EPA's Region 2 Director of the Air and Radiation Division, John Filippelli, dated February 24, 2014, within the docket for this rulemaking.

[3] *See* 51 FR 42565.

[4] *Id.*

[5] *See* the letter that the NJDEP submitted to the EPA's Region 2 Director of the Air and Radiation Division, Richard Ruvo, dated October 7, 2024, within the docket for this rulemaking.

Register that concerned how provisions in EPA-approved SIPs treat excess emissions during periods of startup, shutdown, or malfunction. *See* 80 FR 33840 (June 15, 2015). In that final action, the EPA clarified its interpretation of the Clean Air Act (CAA) with respect to affirmative defense provisions.[6] The EPA explained that affirmative defense provisions in any context are not appropriate under the CAA (''These provisions are not appropriate under the CAA, no matter what type of event they apply to, what criteria they contain or what forms of remedy they purport to limit or eliminate.'').[7] Consequently, the emergency affirmative defense provision in N.J.A.C. 7:27–8.3(n) falls within the scope of the EPA's June 15, 2015, final action and cannot be approved. Thus, to avoid potential disapproval, the NJDEP has withdrawn this provision from its submittal, and the EPA will not include this provision within the EPA-approved version of N.J.A.C. 7:27–8.3 that will be included in New Jersey's SIP upon the EPA finalizing this rulemaking. The EPA's treatment of this provision is also consistent with the D.C. Circuit's decision on affirmative defenses in *Environmental Committee of the Florida Electric Power Coordinating Group, Inc.,* v. *EPA,* 94 F.4th 77 (D.C. Cir. 2024).

Except for N.J.A.C. 7:27–8.3(j) and (n), the EPA finds the general provisions listed under N.J.A.C. 7:27–8.3, to be acceptable. The EPA is therefore proposing to approve N.J.A.C. 7:27–8.3, except for N.J.A.C. 7:27–8.3(j) and (n), as it was submitted to the EPA by the NJDEP on February 24, 2014.

Subchapter 8.4, ''*How To Apply, Register, Submit a Notice, or Renew*''

Under N.J.A.C. 7:27–8.4, ''How to apply, register, submit a notice, or renew,'' instructions are provided pertaining to applications, registrations, notices, and renewals related to subchapter 8.

Specifically, N.J.A.C. 7:27–8.4(a)(1) through (12) includes requirements for preconstruction permit and operating certificate applications, registrations for general permits or used oil space heaters, notices of change or amendments (to a seven-day-notice, preconstruction permit or operating certificate, and/or registration), and renewal of an operating certificate or registrations. Actions listed under N.J.A.C. 7:27–8.4(a)(1) through (12) are to be submitted in accordance with forms obtained from the NJDEP via the options listed under N.J.A.C. 7:27–8.4(b)(1) and (2). In addition, directions for how to complete electronic or paper application forms, registration forms, notices or renewal application stubs and renewal fee payments are listed at N.J.A.C. 7:27–8.4(c)(1) through (7). Applications, registrations, or notices will be required under N.J.A.C. 7:27–8.4(d), to contain all relevant details and information which the NJDEP considers necessary pertaining to applicable sources to ensure such sources are designed to operate without violating any relevant State or Federal laws or regulations. Notably, per N.J.A.C. 7:27–8.4(e), all information submitted to the NJDEP, will be considered public information, unless the applicant marks information as confidential in accordance with N.J.S.A. 26:2C–9.2 and N.J.A.C. 7:27–1.

Before approving an operating certificate, the NJDEP, in its discretion, may require an applicant to conduct testing if it is determined to be necessary to verify that an applicable source will comply with the limits established in a preconstruction permit and certificate (N.J.A.C. 7:27–8.4(f)). N.J.A.C. 7:27–8.4(f)(1) through (6) lists the requirements that applicants shall follow if the NJDEP determines testing is required. An application, registration, or notice will generally not be required to include information on insignificant sources unless the exception at N.J.A.C. 7:27–8.4(g) applies. The number of sources that can be included on one application, registration, or notice is determined according to the guidelines in N.J.A.C. 7:27–8.4(h).

A New Source Performance Standards (NSPS) and National Emission Standard for Hazardous Air Pollutants (NESHAP) applicability and compliance demonstration will be required under N.J.A.C. 7:27–8.4(i), as part of an application for a preconstruction permit or permit revision for proposed equipment that is within any source category to which an NSPS or NESHAP is applicable. Under N.J.A.C. 7:27–8.4(j), an application shall include a protocol for conducting an air quality impact analysis and a risk assessment, if required under N.J.A.C. 7:27–8.5. An application, registration, or notice is required to list each air contaminant which meets the conditions under N.J.A.C. 7:27–8.4(k)(1) if it is required by an applicable form. The EPA is not proposing to approve N.J.A.C. 7:27–8.4(k)(2) since it addresses the reduction of ''odors,'' and the EPA's approval of SIPs is limited to pollutants regulated by Federal rules, as acknowledged by the NJDEP in the cover letter for its February 24, 2014 submission.

Applicants must list each Hazardous Air Pollutant (HAP) raw material individually on their application. For non-HAP raw materials, applicants can either list them individually or group them together based on similar physical and/or chemical properties, as specified in N.J.A.C. 7:27–8.4(l)(1) and (2). When listing the emissions for a contaminant pursuant to N.J.A.C. 7:27–8.4(k), the application, registration, or notice should follow the instructions at N.J.A.C 7:27–8.4(m). To ensure timely renewal of an operating certificate, a used oil space heater registration, or a registration under a general permit, a permittee is required to submit a renewal application stub and renewal fee payment no less than 90 days prior to the expiration date of such certificates and registrations (N.J.A.C. 7:27–8.4(n)). In accordance with N.J.A.C. 7:27–8.4(o), persons submitting an application, registration, or notice to the NJDEP pursuant to subchapter 8, are required to include certifications complying with N.J.A.C. 7:27–1.39. In addition, any relevant information an applicant might want the NJDEP to consider during the decision-making process will be required to be submitted in writing prior to the NJDEP deciding on the application, registration, or notice (N.J.A.C. 7:27–8.4(p)).

As was the case for N.J.A.C. 7:27–8.4(k)(2), N.J.A.C. 7:27–8.4(q) also addresses and reduces ''odors,'' therefore the EPA is not acting on this provision. Despite including the odor provisions in an attachment to its February 24, 2014 SIP submittal, the NJDEP acknowledged in its cover letter that the EPA does not regulate odors and, consequently, the oder provisions will not be included in the SIP.

Finally, permitting procedure manuals are listed under N.J.A.C. 7:27–8.4(s)(1) through (4), which summarize certain alternative application and permitting procedures, developed to take into consideration the specific characteristics of sources, for which an applicant may elect to use, rather than the corresponding standard procedures set forth in subchapter 8.

The EPA finds the provisions under N.J.A.C. 7:27–8.4 (except for N.J.A.C. 7:27–8.4(k)(2) and (q)), as submitted to the EPA by the NJDEP on February 24, 2014, and as supplemented on August 23, 2018, to be acceptable and is therefore proposing approval into the SIP.

Subchapter 8.5, ''*Air Quality Impact Analysis*''

Under N.J.A.C. 7:27–8.5, ''Air quality impact analysis,'' requirements for

[6] 80 FR 33981–33982.

[7] 80 FR 47029.

applications subject to an air quality impact analysis are established.

Applications that shall include an air quality impact analysis are listed under N.J.A.C. 7:27–8.5(a). This includes applications which are subject to the Prevention of Significant Deterioration (PSD) air quality impact analysis requirements of 40 CFR part 52.21, those for which the proposed maximum allowable emission of an air contaminant would result in a significant net emission increase, those for which are required to by a State or Federal rule, and those which the NJDEP determines such an analysis to be necessary to determine the environmental impact of proposed activities.

In addition, N.J.A.C. 7:27–8.5(b) provides the NJDEP with the authority to require ambient air monitoring and a risk assessment as part of the air quality impact analysis. An air quality impact analysis is required to demonstrate whether the maximum controlled emissions specified on the preconstruction application may violate the requirements under N.J.A.C. 7:27–8.5(c)1–4.

Finally, the NJDEP can only approve an air quality analysis and/or risk assessment if it is conducted in accordance with a protocol that is approved in advance by the NJDEP (N.J.A.C. 7:27–8.5(d)). An approvable protocol must include, but is not limited to, the relevant site-specific and general factors detailed under N.J.A.C. 7:27–8.5(d). This subsection also references the technical guidance on protocol preparation under the Air Quality Permitting Program's Technical Manual 1002, ''Guidance on preparing an Air Quality Modeling Protocol'' and Technical Manual 1003, ''Guidance on Preparing a Risk assessment for Air Contaminant Emissions.'' [8]

The EPA finds the provisions under N.J.A.C. 7:27–8.5 appropriate for ensuring that necessary projects undergo air quality assessments. The EPA is therefore proposing to approve N.J.A.C. 7:27–8.5, as it was submitted to the EPA, by the NJDEP on February 24, 2014.

Subchapter 8.6, ''*Service Fees*''

Under N.J.A.C. 7:27–8.6, ''Service fees,'' the applicable registration fees a registrant shall submit with a completed registration form, acceptable forms of payment, and the schedule for which fees are to be submitted by a registrant and processed by the NJDEP are specified. The EPA last approved provisions pertaining to service fees into New Jersey's SIP with its approval of N.J.A.C. 7:27–8.11, ''Service fees,'' on April 15, 1994,[9] and is now proposing to approve the revisions that have since been made, which include the renumbering of this subsection from 8.11 to 8.6.

N.J.A.C 7:27–8.6(a) through (f), provides for paper and online applications, the procedure for invoicing and paying any potential supplementary fees, the fee process for new applications, and the payment of fees by installments. N.J.A.C. 7:27–8.6(f) lists the specific fee amounts in ''Base Fee Tables'' (Tables 1–3) and the ''Supplementary Fee Schedule.'' Further, the NJDEP is provided with the ability and allowance to consider an increase to these fees under N.J.A.C. 7:27–8.6(l).

In accordance with N.J.A.C. 7:27–8.6(g), facilities subject to N.J.A.C. 7:27–22 are not required to pay the operating certificate fees set forth in Tables of N.J.A.C. 7:27–8.6 after June 30, 1995; however, after June 30, 1995, such facilities are required to pay fees in accordance with N.J.A.C. 7:27–22.31 for any significant modification, as defined under N.J.A.C. 7:27–22.1, while the issuance of an operating permit for the facility is pending. Moreover, under N.J.A.C. 7:27–8.6(k) there is no fee for an insignificant source even if emissions from an insignificant source must be listed on an application under N.J.A.C. 7:27–8.4(g).

The EPA finds these provisions under N.J.A.C. 7:27–8.6 to be acceptable for ensuring that facilities required to obtain such permits and certificates in accordance with subchapter 8 are making the payments necessary to fund such a program. The EPA is therefore proposing to approve N.J.A.C. 7:27–8.6, as it was submitted to the EPA by the NJDEP on February 24, 2014.

Subchapter 8.7, ''*Operating Certificates*''

N.J.A.C. 7:27–8.7, ''Operating certificates,'' details the provisions pertaining to the acquisition of an operating certificate, the lifetime and renewal requirements of an operating certificate, and the types of temporary operating certificates that may be issued if the NJDEP determines additional information is needed while the source is operational.

In accordance with N.J.A.C. 7:27–8.7(a), a source covered by a preconstruction permit is required to also be covered by an operating certificate. The preconstruction permit application form will also serve as the application form for the operating certificate and the NJDEP will issue both the preconstruction permit and operating certificate simultaneously, in one combined document (N.J.A.C. 7:27–8.7(a)). As a result, under N.J.A.C. 7:27–8.7(b), an applicant is required to follow the procedures for applying for a permit and certificate under N.J.A.C. 7:27–8.4 to obtain an operating certificate or temporary operating certificate.

Operating certificates (except for temporary operating certificates issued under N.J.A.C. 7:27–8.7(d)) expire five years after the date the preconstruction permit for the source is issued under N.J.A.C. 7:27–8.7(c) and are to be renewed prior to their expiration, if a source continues to operate, under N.J.A.C. 7:27–8.7(e). The NJDEP can issue one of two types of temporary operating certificates under N.J.A.C. 7:27–8.7(d)(1) and (2), before issuing the final operating certificate, if it needs information that can only be obtained while a source is operating (*e.g.,* stack test results). As provided under N.J.A.C. 7:27–8.7(f), the NJDEP may also require testing to ensure compliance with State and Federal air pollution control requirements prior to renewing an operating certificate.

The EPA finds these provisions under N.J.A.C. 7:27–8.7 to be appropriate for ensuring that operating certificates are regulated by the NJDEP in accordance with Federal regulations. The EPA is therefore proposing to approve N.J.A.C. 7:27–8.7, as it was submitted to the EPA by the NJDEP on February 24, 2014.

Subchapter 8.8, ''*General Permits*''

Under N.J.A.C. 7:27–8.8, ''General permits,'' the requirements pertaining to a general permit are provided. As detailed under N.J.A.C. 7:27–8.8(a), a general permit is a pre-approved permit and certificate which applies to a specific class of significant sources that the NJDEP issues pursuant to N.J.S.A. 26:2C–9.2(h). If a source qualifies for a general permit, and its owner or operator registers and complies with subchapter 8, then the registration satisfies the requirements at N.J.A.C. 7:27–8.3 for a permit and certificate.

Per N.J.A.C. 7:27–8.7(b), general permits may not cover sources subject to the PSD requirements under 40 CFR 52.21, or the emissions offset requirements of N.J.A.C. 7:27–18. However, general permits are available for sources listed under N.J.A.C. 7:27–8.8(c)(1) through (23). These sources include, but are not limited to: fuel dispensing facilities, certain eligible stationary storage tanks, boilers and/or heaters with specified heat inputs,

[8] These technical guidance documents are available on the NJDEP's website at *https://www.nj.gov/dep/aqpp/techman.html.*

[9] *See* 59 FR 17933.

certain solvent degreasers using only Methylene Chloride or 1,1,1, Trichloroethane, certain equipment located at dry cleaning facility, equipment located at a plating or electroplating facility which is not subject to Maximum Achievable Control Technology (MACT), and equipment used for research and development meeting the applicability requirements specified in the general permit.

Per N.J.A.C. 7:27–8.8(d), the NJDEP will be responsible for providing a registration form, the general permit itself, and a document entitled ''General Procedures for General Permits.'' The registration form to be provided by the NJDEP must include the information in N.J.A.C. 7:27–8.8(e). Furthermore, the general permit will be required to include all the conditions and requirements which must be met in order to act under the authority of the general permit including those listed under N.J.A.C. 7:27–8.8(f)(1) through (5). According to N.J.A.C. 7:27–8.8(g), the ''General Procedures for General Permits'' shall apply to all general permits; and shall include instructions for their use, a list of available general permits, and citations to the relevant regulatory provisions for their use.

While some general permits apply to only one source, others may apply to a class of sources located at the same facility; therefore, N.J.A.C. 7:27–8.8(h) specifies whether each general permit applies to a group or a single source. That said, if a general permit applies to only one source, and if there are several sources at one facility that qualify for a general permit, a separate registration, including a fee, will have to be submitted for each source (N.J.A.C. 7:27–8.8(h)).

Per N.J.A.C. 7:27–8.8(i), registrants have the authority to operate under a general permit if they provide proof of the NJDEP's receipt of a registration form. A registrant will be allowed to operate under the general permit for five years after the date of proof of receipt, unless one of the circumstances under N.J.A.C. 7:27–8.8(i)(1) and (2) are satisfied.

Registrants are fully responsible for ensuring that the requirements of the general permit, the General Procedures for General Permits, and N.J.A.C. 7:27–8.8 are complied with, or otherwise may be liable for penalties if a source has been registered under a general permit and the registration is incorrect or deficient (N.J.A.C. 7:27–8.8(j)). Per N.J.A.C 7:27–8.8(k), the NJDEP shall acknowledge when a registration and fee are received. The NJDEP's acknowledgment under N.J.A.C. 7:27–8.8(k) solely indicates that NJDEP received the registration; it is not confirmation of review or approval of the registration and will not relieve a registrant from liability for penalties for any unauthorized activities. Under N.J.A.C. 7:27–8.8(l), registrants must operate within the conditions of the general permit, including any parameters tailored to the source, and failure to do so shall constitute a violation of a permit. Additionally, under N.J.A.C. 7:27–8.8(l), if a registrant wants to make a change to a source registered under a general permit, a new general permit registration is required unless the modifications would fall under the same permit conditions.

When a general permit is issued, or an existing one is amended, the NJDEP, under N.J.A.C. 7:27–8.8(m), will draft or amend a registration form and general permit, as well as publish a notice in the New Jersey Register to make the documents available for public review and comment. Moreover, in accordance with N.J.A.C. 7:27–8.8(m), the NJDEP will also be required to incorporate any changes deemed appropriate into the final general permit. The NJDEP will announce the final general permit and add to the list of sources in N.J.A.C. 7:27–8.8(c) through a notice of administrative change published in the New Jersey Register (N.J.A.C. 7:27–8.8(m)). If the NJDEP modifies an existing permit, it will notify each person who has registered under the general permit, and the registrant will be required to comply with the applicable requirements of N.J.A.C. 7:27–8.8(n)(1) and (2).

The EPA finds the provisions under N.J.A.C. 7:27–8.8 to be appropriate for ensuring that general permits are adequately regulated by the NJDEP. The EPA is therefore proposing to approve N.J.A.C. 7:27–8.8, as it was submitted to the EPA by the NJDEP on February 24, 2014.

Subchapter 8.9, ''Environmental Improvement Pilot Tests''

N.J.A.C. 7:27–8.9, ''Environmental improvement pilot tests,'' provides the requirements concerning applications for preconstruction permits and certificates for environmental improvement pilot tests for air pollution control equipment or other environmental clean-up equipment.

Applicants are required to include the specific information listed at N.J.A.C. 7:27–8.9(c) and satisfy the fee for such a test set forth under N.J.A.C. 7:27–8.6 when applying for such tests (N.J.A.C 7:27–8.9(f)). In addition, under N.J.A.C. 7:27–8.9(b), applicants must ensure that all equipment for an environmental improvement pilot test complies with applicable requirements under subchapter 8 and that the activities will not cause impacts outside the property boundary. Upon completion of such a test, equipment involved must cease operating or return to operating under conditions of an existing permit, if there are any.

The NJDEP has 30 days to take final action after receipt of a complete application under N.J.A.C. 7:27–8.9(d), and the NJDEP's approval of a permit and certificate for an environmental improvement pilot test shall not last any longer than a 90-day term, unless the permittee files a new application and the NJDEP grants an extension, however the NJDEP will only grant an extension if the proposed activities meet the definition of an environmental improvement pilot test at N.J.A.C. 7:27–8.1 (N.J.A.C. 7:27–8.9(e)). Records pertaining to product run time, emission testing performed, and other data relevant to the emission of air contaminants must be retained by the holder of an environmental improvement pilot test for a minimum of five years and included in future applications (N.J.A.C. 7:27–8.9(g)). Finally, under N.J.A.C. 7:27–8.9(h), once the environmental improvement pilot test is complete, the equipment involved must stop operating or return to operating under the condition of any existing permit. Moreover, the approval of an environmental improvement test does not constitute the NJDEP's acceptance of the equipment or a process for future production purposes (N.J.A.C. 7:27–8.9(h)).

The EPA finds these provisions under N.J.A.C. 7:27–8.9 to be appropriate for ensuring that environmental improvement pilot tests are conducted in an appropriate manner. The EPA is therefore proposing to approve N.J.A.C. 7:27–8.9, as it was submitted to the EPA by the NJDEP on February 24, 2014.

Subchapter 8.10, ''Public Comment''

Under N.J.A.C. 7:27–8.10, ''Public comment,'' the public comment requirements for applications subject to the provisions of subchapter 8 are specified. Specifically, the NJDEP is obligated to seek public comment prior to making any final decision on applications for which comment is required by State or Federal statutes, including those listed under N.J.A.C. 7:27–8.10(a)(1) through (3).

Pursuant to N.J.A.C. 7:27–8.10(b), the Commissioner of the NJDEP may seek comments from the public if the Commissioner finds a significant degree of public interest in the application, if public comments might clarify issues in the application, or if it is relevant to the

factors, including but not limited to, those listed at N.J.A.C. 7:27–8.10(b)(1) through (4). In accordance with N.J.A.C. 7:27–8.10(c), NJDEP is also required to notify those who submitted a written request for public comment of the decision, including its rationale if a request is denied.

To clarify, while there is no opportunity for the public to request a public hearing for minor sources covered under N.J.A.C. 7:27–8.10 (unless the NJDEP Commissioner determines there is significant public interest), the NJDEP does post every draft permit it receives under the NJDEP's ''Public Notices'' web page during the associated public comment period, providing transparency and thereby affording review and comment.[10] Beyond posting draft permits for public comment on its website, the NJDEP enhances transparency through tools like its DataMiner tool,[11] which allows the public to easily find a variety of reports that will provide them with up- to-the-minute results from many different environmental records. The EPA also considers the NJDEP's ''What's in My Community'' web page to be a helpful tool for engaging local communities. The web page is an online ArcGIS mapping tool that provides communities with access to facility permits, emissions data, and enforcement information [12] to enable the public to submit meaningful and informed comments during the public comment period on minor sources.

The EPA also notes that, in accordance with New Jersey's Environmental Justice (EJ) Law (N.J.S.A. 13:1D–157 *et seq.*), signed by Governor Phil Murphy in September 2020, when permit applicants propose to construct, renew, or operate a facility located wholly or in part in an overburdened community, permit applicants must: (1) prepare an environmental justice impact statement (EJIS) assessing the potential environmental and public health stressors associated with the proposed new, expanded, or major facility; (2) transmit the environmental impact statement at least 60 days in advance of the public hearing required pursuant to paragraph 3; and (3) organize and conduct a public hearing within the overburdened community. Regarding the public hearing, the permit applicants shall publish a notice no less than 60 days prior to the hearing, which will include: the date, time and location of the hearing, a description of the proposed new, expanded, or existing major source facility, a summary of the EJIS and information on how to review it, and an address for the submittal of written comments. After the public hearing, the permit applicants shall transcribe the public hearing and, no later than 10 days after the public hearing, shall submit the transcript along with any written comments to the NJDEP.

The EPA finds the provisions under N.J.A.C. 7:27–8.10, as well as resources the NJDEP has made available via its web page and the requirements for facilities under New Jersey's EJ Law, to be appropriate for ensuring that the public is offered an adequate opportunity to provide comments on permits and certificates that the NJDEP issues under subchapter 8. The EPA is therefore proposing to approve N.J.A.C. 7:27–8.10, as it was submitted to the EPA by the NJDEP on February 24, 2014.

Subchapter 8.11, ''Standards for Issuing a Permit''

Under N.J.A.C. 7:27–8.11, ''Standards for issuing a permit,'' applicants are required to document compliance with relevant State and Federal air pollution control regulations to obtain approval for a permit and certificate, a permit revision, or a compliance plan change. Specifically, under N.J.A.C. 7:27–8.11(a)(1), each significant source included on an application must document that it meets the Reasonable Available Control Technology (RACT) requirements under N.J.A.C. 7:27–16 or 19, New Source Performance Standards (NSPS) requirements, PSD requirements under 40 CFR 52.21, and all other applicable State or Federal air pollution control standards and regulations. Additionally, per N.J.A.C. 7:27–8.11(a)(2), each significant source is required to document that it incorporates advances in the art of air pollution control (*i.e.,* ''state of the art'' or ''SOTA'') for the kind and amount of air contaminant emitted if the source meets the criteria at N.J.A.C. 7:27–8.12(a) and the applicant proposes to modify the source.

The EPA finds these provisions under N.J.A.C. 7:27–8.11 to be sufficient for guaranteeing that the approval of a permit and certificate, a permit revision, or a compliance plan change protects air quality within the State. The EPA is therefore proposing to approve N.J.A.C. 7:27–8.11, as it was submitted to the EPA by the NJDEP on February 24, 2014.

Subchapter 8.12, ''State of the Art''

N.J.A.C. 7:27–8.12, ''State of the art,'' requires an application that proposes construction, installation, reconstruction, or modification of equipment and control apparatus for a significant source meeting the criteria of N.J.A.C. 7:27–8.12(a)(1) and (2), to document SOTA for the source. As the EPA states under the analysis of N.J.A.C. 7:27–8.11 within this propose rulemaking, SOTA is the level of emissions control that a significant source must meet.

In particular, under N.J.A.C. 7:27–8.12(a), that all significant sources that have the potential to emit (PTE) at least 5.0 tons per year of total volatile organic compounds (VOC), total suspended particles (TSP), particulate matter under 10 microns (PM_{10}), particulate matter under 2.5 microns ($PM_{2.5}$), nitrogen oxides (NO_X), carbon monoxide (CO), or sulfur dioxide (SO_2), as detailed within the SOTA Threshold in Appendix 1, Tables A, are required to document compliance with SOTA. Per N.J.A.C. 7:27–8.12(d), and in accordance with the definition of ''potential to emit'' under N.J.A.C. 7:27–8.1, PTE will be calculated separately for each piece of equipment, including any fugitive emissions after considering emission controls.

As set forth at N.J.A.C. 7:27–8.12(b), if an equipment or control apparatus is subject to the SOTA criteria of N.J.A.C. 7:27–8.12(a), documentation of SOTA for the air contaminant(s) that meet the criteria will only be required. In addition, under N.J.A.C. 7:27–8.12(c), documentation of SOTA for equipment and control apparatus that has, for every air contaminant, a PTE less than the levels indicated in N.J.A.C. 7:27–8.12(a) will not be required.

N.J.A.C. 7:27–8.12(e) allows sources to document their compliance with

[10] Under the provisions of N.J.A.C. 7:27–8.10 and N.J.A.C. 7:27–22.11, the NJDEP seeks comments from the public on draft permits during the associated public comment period on its web page. *See https://dep.nj.gov/boss/public-notices/*. The NJDEP also makes all documents available for public review at the NJDEP's offices located at 401 East State Street, Trenton, New Jersey, and permit documents are available for review at the Regional Enforcement Offices. The NJDEP also provides the public with the opportunity to review older public notice postings by selecting the ''Public Notice Archive'' option at the top of the ''Public Notice'' web page.

[11] *See https://njems.nj.gov/DataMiner/Search/SearchByCategory*.

[12] The NJDEP's ''What's in My Community'' is a mapping tool that helps the public find what sources of air pollution is in and around their community. Upon opening the tool, a map displaying every facility with an air permit (including both major and minor sources) registered with the Division of Air Quality at the NJDEP is provided. The public can also view what the closest air monitors are reading by clicking on them and generating a report for Ozone, $PM_{2.5}$, CO, NO_2 and SO_2.

The tool can be accessed at *https://njdep.maps.arcgis.com/apps/webappviewer/index.html?id=76194937cbbe46b1ab9a9ec37c7d709b*.

SOTA if they are complying with Lowest Achievable Emission Rate (LAER), Best Available Control Technology (BACT), MACT, or NSPS; or through compliance with the available SOTA technical manuals that the NJDEP has developed.

Current SOTA technical manuals are listed on the NJDEP website for several source categories and a permit applicant must document compliance with a SOTA Manual (available from the NJDEP at the address in N.J.A.C. 7:27–8.4(b)) that applies to the source. If neither of the previously listed options for determining SOTA are applicable, then the NJDEP, based on a demonstration by the applicant, would perform a ''top down'' SOTA demonstration as is detailed under N.J.A.C. 7:27–8.12(f)(1) through (3).

The EPA finds the procedures for determining SOTA for criteria air pollutants N.J.A.C. 7:27–8.12 to be acceptable; therefore, the EPA is proposing to approve these procedures for determining SOTA for criteria pollutants. With respect to the SOTA technical manuals referred to in N.J.A.C. 7:27–8.12, as a method for documenting SOTA, it is the EPA's understanding that each of the SOTA technical manuals cited within subchapter 8 are likely to change and be updated over time, and the language is not contained in the regulation itself; therefore, the EPA is not proposing to approve the individual manuals referred to within N.J.A.C. 7:27–8.12 and is instead proposing to approve the process of using the manuals set forth in N.J.A.C. 7:27–8.12.

Subchapter 8.13, ''*Conditions of Approval*''

Under N.J.A.C. 7:27–8.13, ''Conditions of approval,'' the NJDEP has the authority to establish conditions of approval for any preconstruction permit or certificate application. Under N.J.A.C. 7:27–8.13(b)(1) through (3), the NJDEP may revise approval conditions at various points, such as during permit or certificate renewal, or at any time while the certificate is in effect.

A permittee will be required to submit information relevant to the operation of equipment and control apparatus to the NJDEP, including but not limited to information listed at N.J.A.C. 7:27–8.13(c)(1) through (3). As a condition of approval, the NJDEP can also include a compliance plan that includes monitoring, recordkeeping, and reporting requirements in accordance with N.J.A.C. 7:27–8.13(d)(1) through (4) and establish a schedule of periodic compliance inspections to which the equipment or control apparatus is subject in accordance with N.J.A.C. 7:27–8.13(e). In addition, under N.J.A.C. 7:27–8.13(f), the NJDEP may include a condition allowing it to convert a certificate to a temporary operating certificate upon written notice to the permittee.

The NJDEP may also impose financial conditions on an applicant, such as requiring reimbursement for compliance monitoring costs listed under N.J.A.C. 7:27–8.13(g). All information in an approved application, including rates of emission, hours of operation, and rate of production (as listed under N.J.A.C. 7:27–8.13(h)(1) through (3)), and any condition of approval thereof, is subject to enforcement. Moreover, upon the NJDEP's request, a permittee can be required to provide testing facilities exclusive of instrumentation and sensing devices, as may be necessary to determine the kind and amount of air contaminants emitted from equipment or a control apparatus, and in accordance with the testing requirements listed under N.J.A.C. 7:27–8.13(i).

The EPA finds the provisions under N.J.A.C. 7:27–8.13 to be sufficient for ensuring that the NJDEP appropriately approves applications for permits and certificates in a manner that ensures the protection of human health and the environment. The EPA is therefore proposing to approve N.J.A.C. 7:27–8.13, as it was submitted to the EPA by the NJDEP on February 24, 2014.

Subchapter 8.14, ''*Denials*''

Under N.J.A.C. 7:27–8.14, ''Denials,'' the NJDEP has the authority to deny a permit and certificate application.

In particular, under N.J.A.C. 7:27–8.14(a), the NJDEP shall deny an application if anything in an application has the potential to violate any provision within N.J.A.C. 7:27, an applicable NSPS, an applicable NESHAP (including a MACT standard), a Federal stack height or emission dispersion requirement as stated in 40 CFR part 51, administrative order, or a State/Federal requirement. In addition, under N.J.A.C. 7:27–8.14(a), the NJDEP shall deny an application if it would result in the exceedance of a State or Federal ambient air quality standard, an applicable PSD increment as defined in 40 CFR part 52, or other criteria established by the NJDEP to protect human health and the environment.

Furthermore, N.J.A.C. 7:27–8.14(b), states that the NJDEP must deny an application for a preconstruction permit that fails to meet the requirements of N.J.A.C. 7:27–8.11, ''Standards for issuing permits''; or if the applicant fails to provide all information requested by the NJDEP within 30 days of its request (or longer if approved by the NJDEP), as provided under N.J.A.C. 7:27–8.14(c). Finally, in accordance with N.J.A.C. 7:27–8.14(d), the NJDEP may deny an application for a certificate, or renewal thereof, if the applicant has failed to pay the associates fees for such application or failed to reimburse the NJDEP for any of the charges incurred under the scenarios in N.J.A.C 7:27–814(d)(2)(i) and (ii).

The EPA finds the provisions under N.J.A.C. 7:27–8.14 to be sufficient for ensuring that the NJDEP appropriately denies applications for permits and certificates, or renewals of such, consistent in a manner that ensures the protection of air quality in the State. The EPA is therefore proposing to approve N.J.A.C. 7:27–8.14, as it was submitted to the EPA by the NJDEP on February 24, 2014.

Subchapter 8.15, ''*Reporting Requirements*''

Under N.J.A.C. 7:27–8.15, ''Reporting requirements,'' the NJDEP has the authority to request that any person holding a preconstruction permit or certificate submit any record relevant to a permit or certificate within 30 days of its request (or longer if approved by the NJDEP). In accordance with N.J.A.C. 7:27–8.15(b) and (c), permittees must submit, along with the appropriate certifications in compliance with N.J.A.C. 7:27–1.39, any required report in a format and on a schedule at the discretion of the NJDEP.

The EPA considers these reporting provisions necessary for effective regulatory enforcement and proposes to approve N.J.A.C. 7:27–8.15, as it was submitted to the EPA by the NJDEP on February 24, 2014.

Subchapter 8.16, ''*Revocation*''

Under N.J.A.C. 7:27–8.16, ''Revocation,'' the conditions under which the NJDEP can revoke a permit or certificate are listed. Specific conditions under N.J.A.C. 7:27–8.16(a), include unauthorized operational changes, non-compliance with permit terms, refusal of inspection access, and non-payment of penalties or fees.

If a permittee does not begin activities authorized by the permit/permit revision, or discontinues the activities authorized by the permit/permit revision within one year from the date of a preconstruction permit/permit revision, the NJDEP has authority to withdraw its approval or a preconstruction permit/permit revision (N.J.A.C. 7:27–8.16(b)(1) and (2)). In addition, the NJDEP can revoke its approval of an application if it

determines the approval contravenes a Federal or State regulation (N.J.A.C. 7:27–8.16(c)). Under N.J.A.C. 7:27–8.16(d), any notice of revocation must be issued by the NJDEP in writing.

The EPA finds the provisions under N.J.A.C. 7:27–8.16, which provide the NJDEP with authority to retire a permit or certificate and withdraw an application under certain circumstances, to be appropriate. The EPA is therefore proposing to approve N.J.A.C. 7:27–8.16 as it was submitted to the EPA by the NJDEP on February 24, 2014.

Subchapter 8.17, ''*Changes to Existing Permits and Certificates*''

Under N.J.A.C. 7:27–8.17, ''Changes to existing permits and certificates,'' the conditions for which a change to an existing permit or certificate may occur are listed.

With N.J.A.C. 7:27–8.16(a), some changes may require prior approval from the NJDEP, while others may only require a notification to the NJDEP. N.J.A.C. 7:27–8.17(b) establishes a hierarchy for review, mandating that the most comprehensive review standards apply depending on the permit change, which include permit revisions, compliance plan changes, seven-day-notices, and amendments. N.J.A.C. 7:27–8.17(c) refers permittees on which applications to file for each type of change, and the applicable fees under N.J.A.C. 7:27–8.6(b). Per N.J.A.C. 7:27–8.17(e), none of the changes listed under N.J.A.C. 7:27–8.17(b)(1) through (4) can change the date of the preconstruction permit's operating certificate.

The EPA finds these provisions authorizing the NJDEP to revoke a permit or certificate acceptable for ensure permittees follow appropriate procedures to ensure compliance with the provisions of subchapter 8. The EPA therefore proposes to approve N.J.A.C. 7:27–8.17 as it was submitted to the EPA by the NJDEP on February 24, 2014.

Subchapter 8.18, ''*Permit Revisions*''

Under N.J.A.C. 7:27–8.18, ''Permit revisions,'' the circumstances in which prior approval by the NJDEP is required for a permit revision are provided.

The circumstances that will require prior NJDEP approval include the seven conditions listed at N.J.A.C. 7:27–8.18(a)(1) through (7). Actions include: (1) A request for an increase in the maximum allowable emission limit (including for corrections and/or miscalculations); (2) an action that will cause an increase of emissions or the emission of a new air contaminant not specified in the permit and certificate; (3) use of a new raw material not specified in the permit if it could result in exceedance of the maximum allowable emission limit or emission of a new air contaminant that meets or exceeds applicable reporting thresholds of N.J.A.C. 7:27–8 Appendix 1, Table A; (4) a reconstruction as described in N.J.A.C. 7:27–8.23, unless the reconstructed source has the potential to emit the air contaminants at an acceptable threshold level in accordance with N.J.A.C. 7:27–8 Appendix 1, Table A; (5) changes that would cause the ground level concentration of an air contaminant to increase in the portion of the atmosphere surrounding the facility and which the public may be impacted by; (6) the replacement of an entire permitted source with a replacement source, except as allowed by N.J.A.C. 7:27–8.21, that will take the place of the replaced source in the manufacturing process, and the replaced source will be permanently shutdown; and (7) the construction or installation of a new significant source that could be combined with an existing permitted source, as allowed under N.J.A.C. 7:27–8.4(h). Lastly, as set forth at N.J.A.C. 7:27–8.18(b), to obtain approval of a permit revision, an applicant must meet the requirements of N.J.A.C. 7:27–8.11, ''Standards for issuing permits''.

The EPA finds the circumstances for which a revision to a permit will be required to obtain prior approval from the NJDEP, to be acceptable. The EPA therefore proposes to approve N.J.A.C. 7:27–8.18 as it was submitted to the EPA by the NJDEP on February 24, 2014, and supplemented on August 23, 2018.

Subchapter 8.19, ''*Compliance Plan Changes*''

Under N.J.A.C. 7:27–8.19, ''Compliance plan changes,'' the circumstances are provided for which prior NJDEP approval is required for a compliance plan change. In accordance with N.J.A.C. 7:27–8.19(b), such compliance plan changes are not to proceed until the NJDEP issues written approval of a change, except for emission decreases that are not reflected in a change to a source's potential to emit made under N.J.A.C. 7:27–8.19(a)4.

The circumstances for which approval of a compliance plan change is required are listed at N.J.A.C. 7:27–8.19(a)(1) through (4). The circumstances include: (1) A decrease in the frequency of testing, monitoring, recordkeeping, or reporting below the frequency specified in a permit and certificate; (2) a change to the monitoring method; (3) a change to a level, rate, or limit of an operational parameter; and (4) a reduction in a source's potential to emit, as provided by a decrease in the maximum allowable hours of operation and/or the maximum allowable production rate. The EPA would like to clarify that a permittee may reduce a source's potential to emit without contacting the NJDEP, but this reduction will not take effect and be federally enforceable until after the NJDEP approves the compliance plan change.

The EPA finds the circumstances under which a compliance plan change requires prior approval from the NJDEP to be acceptable. The EPA therefore proposes to approve N.J.A.C. 7:27–8.19 as it was submitted to the EPA by the NJDEP on February 24, 2014.

Subchapter 8.20, ''*Seven-Day-Notice Changes*''

Under N.J.A.C. 7:27–8.20, ''Seven-day-notice changes,'' permittees are provided with the ability to proceed with a change seven days after a seven-day-notice change is submitted to the NJDEP. Notably, under N.J.A.C. 7:27–8.20(a), a permittee acting under the authority of a seven-day-notice change does so at their own risk, and that the permittee may be subject to penalties for noncompliance should the NJDEP determine that an action was incorrectly processed as a seven-day-notice.

A permittee is allowed to proceed with a change at a facility after submitting a seven-day-notice, so long as the change meets the requirements set forth at N.J.A.C. 7:27–8.20(b). The first requirement, under N.J.A.C. 7:27–8.20(b)(1)(i), is that the action is a physical or operational change that is outside the scope of activities allowed by the permit. The second requirement, N.J.A.C. 7:27–8.20(b)(1)(ii), provides that the action must have ''the potential to result in an increase in actual emissions but will not increase emissions over the allowable limits in the permit and certificate.'' The third requirement, N.J.A.C. 7:27–8.20(b)(1)(iii), will allow the use of a seven-day-notice so long as the action would not alter stack parameters or characteristics that could cause ground level concentration of air contaminant to increase in the ambient air surrounding the facility. The NJDEP then reviews the seven-day-notice to determine whether all three requirements are met or if a permit revision is instead required (N.J.A.C. 7:27–8.20(e)). This provision, and the initial acknowledgement of receipt from the NJDEP, indicates that the seven-day-notice does not relieve the owner or operator from liability for penalties for unauthorized activities (N.J.A.C. 7:27–8.20(f)).

The EPA finds the conditions for which a permittee can submit a seven-day-notice for a change at a facility to be acceptable for preserving air quality. The EPA therefore proposes to approve N.J.A.C. 7:27–8.20 as it was submitted to the EPA by the NJDEP on February 24, 2014, and on August 23, 2018.

Subchapter 8.21, ''*Amendments*''

Under N.J.A.C. 7:27–8.21, ''Amendments,'' a permittee is allowed to proceed with a change to a permitted source, its permit, certificate, or to a registration, if a permittee submits a notice of amendment within 120 days of the change. Nonetheless, a permittee is required to maintain a copy of each amendment with the permit and certificate at the facility in accordance with N.J.A.C. 7:27–8.21(c).

In accordance with N.J.A.C. 7:27–8.21(b)(1) through (8), the following changes are required to be submitted to the NJDEP by the permittee, in the form of a notice of amendment: (1) A change in the permit and certificate information which allows the NJDEP to identify and contact the permittee; (2) a transfer of ownership or operational control for the source of a facility; (3) a change to the name, number, or designation for any given source in the permit or certificate; (4) changes to a permitted source's stack or chimney or use therefore as listed under N.J.A.C. 7:27–8.21(b)(4)i through iv, if the change complies with the EPA stack height regulations at 40 CFR part 51; (5) the use of a new raw material in a permitted source that is not specified within the permit; (6) replacement of an entire permitted source with a source that performs the same function and has the potential to emit an air contaminant in an amount less than the applicable SOTA threshold level listed in N.J.A.C. 7:27–8 Appendix 1, Table A; (7) a typographical correction that would result in an increase in the actual or allowable emissions; and (8) a reconstruction, as described in N.J.A.C. 7:27–8.23, that would result in the potential to emit of air contaminants listed in N.J.A.C. 7:27–8 Appendix 1, Table A in amounts less than the applicable SOTA threshold level. Additional details regarding specific conditions and/or circumstances which will require a permittee and/or registrant to meet under the particular circumstances listed at N.J.A.C. 7:27–8.21(b), are provided within N.J.A.C. 7:27–8.21(d) through (f).

The EPA finds the circumstances under which permittees are allowed to submit a notice of amendment within 120 days of the change to be acceptable. The EPA therefore proposes to approve N.J.A.C. 7:27–8.21 as it was submitted to the EPA by the NJDEP on February 24, 2014.

Subchapter 8.22, ''*Changes to Sources Permitted Under Batch Plant, Pilot Plant, Dual Plant, or Laboratory Operations Permitting Procedures*''

N.J.A.C. 7:27–8.22, ''Changes to sources permitted under batch plant, pilot plant, dual plant, or laboratory operations permitting procedures,'' provides details on how permittees can make a change to an issued permit using the NJDEP's Batch Production Plant Permit Procedure, Pilot Plant Permit Procedure, Dual Plant Permit Procedure, and Laboratory Operations Permit Procedure.

Per N.J.A.C. 7:27–8.22(a), permittees, seeking to make a change using the Batch Production Plant Permit Procedure, are referred to the procedures in technical manual 1301 which covers certain batch plant permits and is available in the address listed in N.J.A.C. 7:27–8.4(b). Permittees are referred to the procedures in technical manual 1302 which cover changes to a permit using the Pilot Plant Permit Procedure (N.J.A.C. 7:27–8.23(b)) and the Dual Plant Permit Procedure under (N.J.A.C. 7:27–8.22(c)). Per N.J.A.C. 7:27–8.23(d), permittees are referred to technical manual 1211, available at the address listed in N.J.A.C. 7:27–8.4(b), to make a change to a permit using the Laboratory Operations Permit Procedure. However, as provided under N.J.A.C. 7:27–8.22(e), if the technical manuals 1301, 1302, and 1211 do not provide a procedure for making the change a permittee desires, the change should be processed through the applicable provisions of N.J.A.C. 7:27–8.17 through 8.21.

The EPA finds the procedures for which permittees seeking to make a change to a permit issued using either the NJDEP's batch plant, pilot plant, dual plant, or laboratory operations permitting procedures, to be acceptable. While the EPA is not approving the technical manuals themselves because the specific language of the manuals is not included in N.J.A.C. 7:27–8.22 and can be changed, the EPA approves the process set forth in this subsection. The EPA therefore proposes to approve N.J.A.C. 7:27–8.22 as it was submitted to the EPA by the NJDEP on February 24, 2014.

Subchapter 8.23, ''*Reconstruction*''

Under N.J.A.C. 7:27–8.23, ''Reconstruction,'' the provisions related to the replacement of parts on a significant source or control apparatus are listed. Reconstruction is described as the replacement of the part(s) on a significant source included in a process unit, or replacement of the part(s) on a control apparatus, so long as the fixed capital cost of replacing the part(s) exceeds both amounts listed under N.J.A.C. 7:27–8.23(a)(1) and (2).

When evaluating whether the cost associated with the replacement of part(s) amounts to being qualified as a reconstruction, N.J.A.C. 7:27–8.23(b) provides that the process unit and the control apparatus are to be considered separately. Under N.J.A.C. 7:27–8.23(c), that the replacement of an entire significant source or control apparatus is not a reconstruction and is instead considered to be a construction as defined at N.J.A.C. 7:27–8.1. Per N.J.A.C. 7:27–8.23(d), reconstruction of a permitted source shall be submitted to the NJDEP and reviewed under the procedures for a permit revision at N.J.A.C. 7:27–8.18, and if a replacement of part(s) is considered to not be a reconstruction, it may still be subject to the requirements of N.J.A.C. 7:27–8.18 through 8.23 if it meets the criteria under those subsections. In accordance with N.J.A.C. 7:27–8.23(e), if a source is not covered by a permit or certificate, and a reconstruction is planned, the owner or operator of the source is required to obtain a permit and certificate pursuant to N.J.A.C. 7:27–8.3(a).

The EPA finds the conditions which constitute the replacement of parts on a significant source or control apparatus as a reconstruction, to be acceptable. The EPA therefore proposes to approve N.J.A.C. 7:27–8.23 as it was submitted to the EPA by the NJDEP on February 24, 2014.

Subchapter 8.24, ''*Special Provisions for Construction But Not Operation*''

Under N.J.A.C. 7:27–8.24, ''Special provisions for construction but not operation,'' an applicant will be allowed to undertake certain activities, in particular, construction, reconstruction, installing, and/or putting in place a source while the NJDEP reviews an application under certain circumstances, as is provided in N.J.S.A. 26:2C–9.2(j).

There are five circumstances under which an applicant can alter a source accordingly and they are listed under N.J.A.C. 7:27–8.24(a)1 through 5. These include if: (1) The applicant has submitted a complete application to the NJDEP proposing an activity of the source; (2) the applicant undertakes an activity at the source on footing or a foundation and does not test or operate it; (3) the activity is carried out as proposed in the application; (4) the activity is not prohibited by any Federal

requirement; and (5) all other requirements of this section are met.

Per N.J.A.C. 7:27–8.24(b), applicants will be required to notify the NJDEP seven days prior to beginning the activities listed under N.J.A.C. 7:27–8.24(a)(1) through (5), and in accordance with the procedure for a seven-day-notice change at N.J.A.C. 7:27–8.20, including the associated seven-day-notice fee. N.J.A.C. 7:27–8.24 does not limit the NJDEP's authority to establish construction, installation, maintenance, operating standards, or from reviewing any application, as provided in N.J.A.C. 7:27–8.24(c). Regarding fiscal expenditures, costs incurred by an applicant in connection with actions taken under this subsection may not be used as grounds for an appeal to the NJDEP's decision on an application and an applicant shall be subject to penalties if an action taken under this subsection causes emissions of any air contaminant in a manner that is inconsistent with applicable law under N.J.A.C. 7:27–8.24(d) and (e), respectively.

The EPA finds the guidance allowing for an applicant to construct, reconstruct, install, and/or put in place a source while the NJDEP reviews an application under certain circumstances to be acceptable. The EPA therefore proposes to approve N.J.A.C. 7:27–8.24 as it was submitted to the EPA by the NJDEP on February 24, 2014.

Subchapter 8.25, ''Special Provisions for Pollution Control Equipment or Pollution Prevention Process Modifications''

Under N.J.A.C. 7:27–8.25(a), ''Special provisions for pollution control equipment or pollution prevention process modifications,'' the circumstances and associated conditions are provided for the period in which an application is pending, that a private entity, as defined at N.J.A.C. 7:27–8.1, can proceed with: (1) Construction, installation, reconstruction, or operation of control apparatus serving an existing source; or (2) implementation of a pollution prevention process modification, as defined at N.J.A.C. 7:27–8.1, involving one or more existing sources, as provided by N.J.S.A. 26:2C–9.3 and 9.4.

Notwithstanding the circumstances referenced in N.J.A.C. 7:27–8.25(a), applicants are not authorized to conduct any activities listed in N.J.A.C. 7:27–8.25(b)(1) through (4), including activities that are prohibited by the CAA, will result in increased emissions, will result in the emission of an air contaminant not previously emitted, and will result in air contaminant emissions not authorized by a permit or certificate. Moreover, to act under the authority of this section, per N.J.A.C. 7:27–8.25(c), an applicant will be required to have submitted a complete application covering activities listed under N.J.A.C. 7:27–8.25(b) and have notified the NJDEP seven days prior to beginning activities listed under N.J.A.C. 7:27–8.25(b).

Notably, under N.J.A.C. 7:27–8.25(d), an applicant acting under the authority of this section assumes all risks, since the applicant may be subject to penalties for noncompliance should the applicant commence proposed activities and the NJDEP does not approve the proposed action. Costs incurred by an applicant in connection with actions taken under this subsection will not be used as grounds for an appeal of the NJDEP's decision for an application under N.J.A.C. 7:27–8.25(f). Per, N.J.A.C. 7:27–8.25(e) clarifies that N.J.A.C. 7:27–8.25 does not limit the NJDEP in establishing standards or reviewing any application. As detailed under N.J.A.C. 7:27–8.25(g), if the NJDEP determines the actions taken at risk by the applicant are inconsistent with applicable law, the applicant and the NJDEP are to enter into an agreement that provides a date by which the applicant will comply with the law. If the applicant and the NJDEP fail to enter into an agreement, the NJDEP may issue a schedule with a compliance date. If an applicant fails to comply with the NJDEP's schedule, the applicant will be subject to penalties if the applicant's actions have resulted in the emission-related consequences listed in N.J.A.C. 7:27–8.25(h)(1–3).

The EPA finds the circumstances and conditions which private entities have permission to proceed with: (1) Construction, installation, reconstruction, or operation of control apparatus serving an existing source; and (2) implementation of a pollution prevention process modification, to be sufficient for ensuring compliance with the subchapter. The EPA therefore proposes to approve N.J.A.C. 7:27–8.25 as it was submitted to the EPA by the NJDEP on February 24, 2014.

Subchapter 8.26, ''Civil or Criminal Penalties for Failure To Comply''

Under N.J.A.C. 7:27–8.26, ''Civil or criminal penalties for failure to comply,'' any person that fails to conform with the requirements of subchapter 8 is subject to civil penalties in accordance with N.J.A.C. 7:27A–3, or criminal penalties pursuant to N.J.S.A. 26:2C–19(f), or both. The EPA finds this to be adequate for ensuring compliance with the provisions under Subchapter 8 and is therefore proposing to approve N.J.A.C. 7:27–8.26, as it was submitted to the EPA on February 24, 2014.

Subchapter 8.27, ''Special Facility-Wide Permit Provisions''

Under N.J.A.C. 7:27–8.27, ''Special facility-wide permit provisions,'' unique circumstances are provided in which the holder of a facility-wide permit, as defined at N.J.A.C. 7:27–8.1, is not required to obtain a permit and certificate for a planned action or change.

The circumstances in which the holder of facility-wide permit is not required to obtain a permit and certificate for a planned action or change are listed at N.J.A.C. 7:27–8.27(a)(1) through (3). The circumstances include when a production process that is affected by the action or change is identified in and subject to an approved facility-wide permit issued under N.J.S.A. 13:1D–35 *et seq.* It also includes circumstances when the planned action or change is adequately documented in a modification to a Pollution Prevention Plan or in a Pollution Prevention Assessment, as defined in N.J.A.C. 7:1K–5, (N.J.A.C. 7:27–8.27(a)(2)(i) and (ii)) and the planned action or change does not cause an increase or exceedance of certain parameters beyond levels listed at N.J.A.C. 7:27–8.29(a)(3)(i–iv). Within 120 days of commencement of an action or change allowed under N.J.A.C. 7:27–8.27(a) a permittee will be required to submit an amendment to the facility-wide permit alongside a copy of the Pollution Prevention Plan Modification or Pollution Prevention Assessment (N.J.A.C. 7:27–8.27(b)). Lastly, per N.J.A.C 7:27–8.27(c), if a permittee makes a change which does not meet the criteria under N.J.A.C. 7:27–8.27(a), a new permit will be required, or that the change be processed in accordance with the procedures for changing an existing permit under N.J.A.C. 7:27–8.17 through 8.22.

The EPA finds the circumstances under which the holder of facility-wide permit will not be required to obtain a permit and certificate for a planned action or change to be acceptable. The EPA is therefore proposing to approve N.J.A.C. 7:27–8.27, as it was submitted to the EPA by the NJDEP on February 24, 2014.

Subchapter 8.28, ''Delay of Testing''

N.J.A.C. 7:27–8.28, ''Delay of testing,'' lists the circumstances and conditions under which a permittee can seek the NJDEP's approval to delay tests required under N.J.A.C. 7:27–8.4(f), 8.7(f), and 8.13(d).

Permittees seeking to delay testing must submit a request for the NJDEP's approval at the contact information/addresses provided in N.J.A.C. 7:27–8.28(a)(1). Any request to delay testing must include, at minimum, information listed under N.J.A.C. 7:27–8.28(a)(2)(i–iii), which includes a justification why the delay is needed and a proposed test date. The NJDEP must approve each initial delay request of up to 90 days, and any subsequent request for a delay in testing, if one or more specific criteria under N.J.A.C. 7:27–8.28(a)(3)(i–iv) are met. Finally, as provided under N.J.A.C. 7:27–8.28(b), a permittee may include a waiver of its right to assert that its emissions during the period of delay were any different than the emissions measured by the test when performed.

The EPA finds these circumstances and conditions for delaying a test required under N.J.A.C. 7:27–8.4(f), 8.7(f), and 8.13(d) to be adequate for ensuring compliance with the provisions under Subchapter 8. The EPA is therefore proposing to approve N.J.A.C. 7:27–8.28, as it was submitted to the EPA by the NJDEP on February 24, 2014.

III. Environmental Justice Considerations

New Jersey supplemented this SIP revision on May 16, 2023 and December 3, 2024. The supplemental submissions briefed the EPA on Environmental Justice (EJ) considerations within New Jersey by detailing the State's programs and initiatives addressing the needs of communities with EJ concerns that have been ongoing since 1998. To clarify, although New Jersey included environmental justice considerations as part of its SIP submittal, the CAA and applicable implementing regulations neither prohibit nor require such an evaluation.

In its supplement, New Jersey discusses addressing the needs of communities starting with the creation of the Environmental Equity Task Force in 1998, which eventually became the Environmental Justice Advisory Council (EJAC). New Jersey states that this group holds regular meetings that include EJ advocates and the NJDEP to discuss and address environmental justice issues of concern.

New Jersey also details having implemented numerous initiatives, collaborations, Administrative Orders and Executive Orders to address the needs and concerns of overburdened communities. A timeline of New Jersey's EJ actions implemented, including both prior to and after the two SIP submittals addressed within this notice, was provided and is indicative of the State's continued attention to EJ issues within the State.

Administrative Orders (AO) and Executive Orders (E.O.) include New Jersey's first EJ E.O. issued by Governor James E. McGreevey in 2004 (E.O. No. 96), an EJ E.O. issued by Governor Jon Corzine in 2009 (E.O. No. 131), an EJ AO issued by NJDEP Commissioner Bob Martin in 2016 (AO 2016–08) and an EJ E.O. issued by Governor Phil Murphy in 2018 (E.O. No. 23). The supplement also mentions that U.S. Senator for New Jersey, Cory Booker, introduced the first Federal EJ bill in 2017 (S.1996—Environmental Justice Act of 2017).

In addition, New Jersey references the creation of the ''What's In My Community'' [13] tool that identifies the overburdened communities, schools, and emergency services and where public users can see measurements from air monitors

The EPA would like to clarify that since New Jersey's provisions being proposed for approval by the EPA with this notice address statewide matters, and since EJ issues are more accurately captured when evaluating relatively smaller areas or on a community level basis, the EPA determined it would not have been appropriate to evaluate the impact of proposed revisions to New Jersey's SIP on communities with EJ concerns at a statewide level. As previously stated, the CAA and applicable implementing regulations neither prohibit nor require such an evaluation of EJ. In addition, there is no information in the record indicating that this action is inconsistent with the stated goal of E.O. 12898 and E.O. 14096, and/or that this action is expected to have disproportionately high or adverse human health or environmental effects on a particular group of people.

Based on the EPA's review of New Jersey's supplement, the EPA expects that this proposed action will generally be neutral or contribute to reduced environmental and health impacts on all populations within New Jersey, including on communities with EJ concerns. At a minimum, this action is not expected to worsen any air quality and it is expected that this action will ensure the State is meeting requirements to attain and/or maintain air quality standards. New Jersey evaluated its EJ considerations as part of its SIP submittal even though the CAA and applicable implementing regulations neither prohibit nor require an evaluation, and the EPA's discussion of New Jersey's EJ considerations was done for the purpose of providing additional context and information about this rulemaking to the public, not as a basis of the action. The EPA is taking action under the CAA on bases independent of the State's evaluation of EJ.

[13] Mapping application used to find facilities with an air permit registered with New Jersey's Division of Air Quality, *https://njdep.maps.arcgis.com/apps/webappviewer/index.html?id=76194937cbbe46b1ab9a9ec37c7d709b.*

IV. The EPA's Proposed Action

The EPA proposes to approve New Jersey's revisions to N.J.A.C. 7:27–8, ''Permits and Certificates for Minor Facilities (and Major Facilities without an Operating Permit),'' which will incorporate regulations under N.J.A.C. 7:27 8.2 through 8.28 into the State' SIP, that had a State effective of September 19, 2011, and January 16, 2018. The EPA is soliciting public comments on provisions proposed for adoption into New Jersey's SIP and as discussed within this notice. These comments will be considered before the EPA takes final action.

V. Incorporation by Reference

In this document, the EPA is proposing to include regulatory text that includes incorporation by reference. In accordance with requirements of 1 CFR 51.5, the EPA is proposing to incorporate by reference revisions to N.J.A.C. 7:27–8, ''Permits and Certificates for Minor Facilities (and Major Facilities without an Operating Permit),'' section 8.2, ''Applicability'' (except for N.J.A.C. 7:27–8.2(d)(3)(ii)(2) and N.J.A.C. 7:27–8.2(e)(2)(ii)); section 8.3, ''General provisions'' (except for N.J.A.C. 7:27–8.3(j) and (n)); section 8.4, ''How to apply, register, submit a notice, or renew'' (except for N.J.A.C. 7:27–8.4(k)(2) and (q)); section 8.5, ''Air quality impact analysis;'' section 8.6, ''Service fees;'' section 8.7, ''Operating certificates;'' section 8.8, ''General permits;'' section 8.9, ''Environmental improvement pilot tests;'' section 8.10, ''Public comment;'' section 8.11, ''Standards for issuing a permit;'' section 8.12, ''State of the art;'' section 8.13, ''Conditions of approval;'' section 8.14, ''Denials;'' section 8.15, ''Reporting requirements;'' section 8.16, ''Revocation;'' section 8.17, ''Changes to existing permits and certificates;'' section 8.18, ''Permit revisions;'' section 8.19, ''Compliance plan changes;'' section 8.20, ''Seven-day-notice changes;'' section 8.21, ''Amendments;'' section 8.22, ''Changes to sources permitted under batch plant, pilot plant, dual plant, or laboratory operations permitting procedures;'' section 8.23, ''Reconstruction;'' section 8.24, ''Special provisions for construction but not operation;'' section 8.25, ''Special provisions for pollution control

equipment or pollution prevention process modifications;'' section 8.26, ''Civil or criminal penalties for failure to comply;'' section 8.27, ''Special facility-wide permit provisions;'' and section 8.28, ''Delay of testing;'' as described in section II of this preamble. The EPA has made, and will continue to make, these materials generally available through *www.regulations.gov* and at the EPA Region 2 Office (please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section of this preamble for more information).

VI. Statutory and Executive Order Reviews

Under the CAA, the Administrator is required to approve a SIP submission that complies with the provisions of the CAA and applicable Federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, the EPA's role is to approve state choices, provided that they meet the criteria of the CAA. Accordingly, this action merely proposes to approve State law as meeting Federal requirements and does not impose additional requirements beyond those imposed by State law. For that reason, this proposed action:

- Is not a ''significant regulatory action'' subject to review by the Office of Management and Budget under Executive Orders 12866 (58 FR 51735, October 4, 1993) and 14094 (88 FR 21879, April 11, 2023);
- Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
- Does not have federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- Is not subject to Executive Order 13045 (62 FR 19885, April 23, 1997) because it approves a state program;
- Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001); and
- Is not subject to requirements of section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the Clean Air Act.

In addition, this proposed SIP will not apply on any Indian reservation land or in any other area where EPA or an Indian Tribe has demonstrated that a Tribe has jurisdiction. In those areas of Indian country, the rules do not have Tribal implications and will not impose substantial direct costs on Tribal governments or preempt Tribal law as specified by Executive Order 13175 (65 FR 67249, November 9, 2000).

Executive Order 12898 (Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations, 59 FR 7629, Feb. 16, 1994) directs Federal agencies to identify and address ''disproportionately high and adverse human health or environmental effects'' of their actions on communities with EJ concerns to the greatest extent practicable and permitted by law. Executive Order 14096 (Revitalizing Our Nation's Commitment to Environmental Justice for All, 88 FR 25251, April 26, 2023) builds on and supplements E.O. 12898 and defines EJ as, among other things, the just treatment and meaningful involvement of all people, regardless of income, race, color, national origin, or Tribal affiliation, or disability in agency decision-making and other Federal activities that affect human health and the environment.

The NJDEP considered EJ as part of its SIP submittal given that the CAA and applicable implementing regulations neither prohibit nor require an evaluation. The EPA's review of the NJDEP's EJ considerations is described above in the section titled, ''Environmental Justice Considerations.'' The consideration was done for the purpose of providing additional context and information about this rulemaking to the public, not as a basis of the action. The EPA is taking action under the CAA on bases independent of the consideration of EJ. Due to the nature of the action being taken here, this action is expected to have a neutral to positive impact on the air quality of the affected area. In addition, there is no information in the record upon which this decision is based that is inconsistent with the stated goal of E.O. 12898/14096 of achieving EJ for communities with EJ concerns.

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Ammonia, Incorporation by reference, Intergovernmental relations, Nitrogen oxides, Particulate matter, Reporting and recordkeeping requirements, Sulfur dioxide, Volatile organic compounds.

Authority: 42 U.S.C. 7401 *et seq.*

Significant New Use Rules on Certain Chemical Substances (24–3.5e)

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: EPA is proposing significant new use rules (SNURs) under the Toxic Substances Control Act (TSCA) for certain chemical substances that were the subject of premanufacture notices (PMNs) and are also subject to an Order issued by EPA pursuant to TSCA. The SNURs require persons who intend to manufacture (defined by statute to include import) or process any of these chemical substances for an activity that is proposed as a significant new use by this rulemaking to notify EPA at least 90 days before commencing that activity. The required notification initiates EPA's evaluation of the conditions of that use for that chemical substance. In addition, the manufacture or processing for the significant new use may not commence until EPA has conducted a review of the required notification, made an appropriate determination regarding that notification, and taken such actions as required by that determination.

DATES: Comments must be received on or before January 16, 2025.

ADDRESSES: Submit your comments, identified by docket identification (ID) number EPA–HQ–OPPT–2024–0079, at *https://www.regulations.gov.* Follow the online instructions for submitting comments. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Additional instructions on commenting and visiting the docket, along with more information about dockets generally, is available at *https://www.epa.gov/dockets.*

Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460–0001; telephone number: (202) 564–4156; email address: *garbin.jordan@epa.gov*.

For general information on SNURs: William Wysong, New Chemicals Division (7405M), Office of Pollution Prevention and Toxics, Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460–0001; telephone number: (202) 564–4163; email address: *wysong.william@epa.gov*.

For general information on TSCA: The TSCA-Hotline, ABVI-Goodwill, 422 South Clinton Ave., Rochester, NY 14620; telephone number: (202) 554–1404; email address: *TSCA-Hotline@epa.gov*.

SUPPLEMENTARY INFORMATION:

I. Executive Summary

A. What is the Agency's authority for taking this action?

TSCA section 5(a)(2) (15 U.S.C. 2604(a)(2)) authorizes EPA to determine that a use of a chemical substance is a ''significant new use.'' EPA must make this determination by rule after considering all relevant factors, including the factors in TSCA section 5(a)(2) (see also the discussion in Unit II.).

B. What action is the Agency taking?

EPA is proposing SNURs for the chemical substances discussed in Unit III. These SNURs, if finalized as proposed, would require persons who intend to manufacture or process any of these chemical substances for an activity that is designated as a significant new use to notify EPA at least 90 days before commencing that activity.

C. Does this action apply to me?

1. General Applicability

This action applies to you if you manufacture, process, or use the chemical substances contained in this proposed rule. The following list of North American Industrial Classification System (NAICS) codes is not intended to be exhaustive, but rather provides a guide to help readers determine whether this document applies to them. Potentially affected entities may include:

- Manufacturers or processors of one or more subject chemical substances (NAICS codes 325 and 324110), *e.g.,* chemical manufacturing and petroleum refineries.

2. Applicability to Importers and Exporters

This action may also apply to certain entities through pre-existing import certification and export notification requirements under TSCA (*https://www.epa.gov/tsca-import-export-requirements*).

Chemical importers are subject to TSCA section 13 (15 U.S.C. 2612), the requirements in 19 CFR 12.118 through 12.127, 19 CFR 127.28, and the EPA policy in support of import certification at 40 CFR part 707, subpart B. Chemical importers must certify that the shipment of the chemical substance complies with all applicable rules and orders under TSCA, including regulations issued under TSCA sections 5, 6, 7 and Title IV.

Pursuant to 40 CFR 721.20, any persons who export or intend to export a chemical substance that is the subject of this proposed rule on or after January 16, 2025 are subject to TSCA section 12(b) (15 U.S.C. 2611(b)) and must comply with the export notification requirements in 40 CFR part 707, subpart D.

D. What are the incremental economic impacts of this action?

EPA has evaluated the potential costs of establishing SNUN reporting requirements for potential manufacturers (including importers) and processors of the chemical substances subject to these proposed SNURs. This analysis, which is available in the docket, is briefly summarized here.

1. Estimated Costs for SNUN Submissions

If a SNUN is submitted, costs are an estimated $45,000 per SNUN submission for large business submitters and $14,500 for small business submitters. These estimates include the cost to prepare and submit the SNUN (including registration for EPA's Central Data Exchange (CDX)), and the payment of a user fee. Businesses that submit a SNUN would be subject to either a $37,000 user fee required by 40 CFR 700.45(c)(2)(ii) and (d), or, if they are a small business as defined at 13 CFR 121.201, a reduced user fee of $6,480 (40 CFR 700.45(c)(1)(ii) and (d)) per fiscal year 2022. The costs of submission for SNUNs will not be incurred by any company unless a company decides to pursue a significant new use as defined in these SNURs. Additionally, these estimates reflect the costs and fees as they are known at the time of this rulemaking.

2. Estimated Costs for Export Notifications

EPA has also evaluated the potential costs associated with the export notification requirements under TSCA section 12(b) and the implementing regulations at 40 CFR part 707, subpart D. For persons exporting a substance that is the subject of a SNUR, a one-time notice to EPA must be provided for the first export or intended export to a particular country. The total costs of export notification will vary by chemical, depending on the number of required notifications (*i.e.,* the number of countries to which the chemical is exported). While EPA is unable to make any estimate of the likely number of export notifications for the chemical substances covered by these SNURs, as stated in the accompanying economic analysis, the estimated cost of the export notification requirement on a per unit basis is approximately $106.

E. What should I consider as I prepare my comments for EPA?

1. Submitting CBI

Do not submit CBI to EPA through email or *https://www.regulations.gov*. If you wish to include CBI in your comment, please follow the applicable instructions at *https://www.epa.gov/dockets/commenting-epa-dockets#rules* and clearly mark the information that you claim to be CBI. Information so marked will not be disclosed except in accordance with procedures set forth in 40 CFR parts 2 and 703.

2. Tips for Preparing Your Comments

When preparing and submitting your comments, see the commenting tips at *https://www.epa.gov/dockets/commenting-epa-dockets*.

II. Background

This unit provides general information about SNURs. For additional information about EPA's new chemical program go to *https://www.epa.gov/reviewing-new-chemicals-under-toxic-substances-control-act-tsca*.

A. Significant New Use Determination Factors

TSCA section 5(a)(2) states that EPA's determination that a use of a chemical substance is a significant new use must be made after consideration of all relevant factors, including:

- The projected volume of manufacturing and processing of a chemical substance.
- The extent to which a use changes the type or form of exposure of human beings or the environment to a chemical substance.
- The extent to which a use increases the magnitude and duration of exposure of human beings or the environment to a chemical substance.
- The reasonably anticipated manner and methods of manufacturing,

processing, distribution in commerce, and disposal of a chemical substance.

In determining what would constitute a significant new use for the chemical substances that are the subject of these SNURs, EPA considered relevant information about the toxicity of the chemical substances, and potential human exposures and environmental releases that may be associated with the substances, in the context of the four bulleted TSCA section 5(a)(2) factors listed in this unit and discussed in Unit III.

These proposed SNURs include PMN substances that are subject to orders issued under TSCA section 5(e)(1)(A), as required by the determinations made under TSCA section 5(a)(3)(B). The TSCA orders require protective measures to limit exposures or otherwise mitigate the potential unreasonable risk. The proposed SNURs identify as significant new uses any manufacturing, processing, use, distribution in commerce, or disposal that does not conform to the restrictions imposed by the underlying TSCA orders, consistent with TSCA section 5(f)(4).

B. Rationale and Objectives of the SNURs

1. Rationale

Under TSCA, no person may manufacture a new chemical substance or manufacture or process a chemical substance for a significant new use until EPA makes a determination as described in TSCA section 5(a) and takes any required action. The issuance of a SNUR is not a risk determination itself, only a notification requirement for ''significant new uses,'' so that the Agency has the opportunity to review the SNUN for the significant new use and make a TSCA section 5(a)(3) risk determination.

During review of the PMNs submitted that are the subject to these proposed SNURs, EPA concluded that regulation was warranted under TSCA section 5(e), pending the development of information sufficient to make reasoned evaluations of the health or environmental effects of the chemical substances. Based on the findings outlined in Unit III., TSCA section 5(e) Orders requiring the use of appropriate exposure controls were negotiated with the PMN submitters. As a general matter, EPA believes it is necessary to follow the TSCA Orders with a SNUR that identifies the absence of those protective measures as significant new uses to ensure that all manufacturers and processors—not just the original submitter—are held to the same standard.

2. Objectives

EPA is proposing these SNURs because the Agency wants:

- To identify as significant new uses any manufacturing, processing, use, distribution in commerce, or disposal that does not conform to the restrictions imposed by the underlying TSCA Orders, consistent with TSCA section 5(f)(4).
- To have an opportunity to review and evaluate data submitted in a SNUN before the submitter begins manufacturing or processing a listed chemical substance for the described significant new use.
- To be obligated to make a determination under TSCA section 5(a)(3) regarding the use described in the SNUN, under the conditions of use. The Agency will either determine under TSCA section 5(a)(3)(C) that the significant new use is not likely to present an unreasonable risk, including an unreasonable risk to a potentially exposed or susceptible subpopulation identified as relevant by the Administrator under the conditions of use, or make a determination under TSCA section 5(a)(3)(A) or (B) and take the required regulatory action associated with the determination, before manufacture or processing for the significant new use of the chemical substance can occur.

Issuance of a proposed SNUR for a chemical substance does not signify that the chemical substance is listed on the TSCA Chemical Substance Inventory (TSCA Inventory). Guidance on how to determine if a chemical substance is on the TSCA Inventory is available at *https://www.epa.gov/tsca-inventory.*

C. Significant New Uses Claimed as CBI

EPA is proposing to establish certain significant new uses which have been claimed as CBI subject to Agency confidentiality regulations at 40 CFR part 2 and 40 CFR part 703. Absent a final determination or other disposition of the confidentiality claim under these regulations, EPA is required to keep this information confidential. EPA promulgated a procedure at 40 CFR 721.11 to deal with the situation where a specific significant new use is CBI. Under these procedures. a manufacturer or processor may request EPA to identify the confidential significant new use under the rule. The manufacturer or processor must show that it has a *bona fide* intent to manufacture or process the chemical substance. If EPA concludes that the person has shown a *bona fide* intent to manufacture or process the chemical substance, EPA will identify the confidential significant new use to that person. Since most of the chemical identities of the chemical substances subject to these SNURs are also CBI, manufacturers and processors can combine the *bona fide* submission under the procedure in 40 CFR 721.11 into a single step.

D. Applicability of General Provisions

General provisions for SNURs appear in 40 CFR part 721, subpart A. These provisions describe persons subject to SNURs, recordkeeping requirements, exemptions to reporting requirements, and applicability of the rule to uses occurring before the effective date of the rule. Pursuant to 40 CFR 721.1(c), persons subject to SNURs must comply with the same requirements and EPA regulatory procedures as submitters of PMNs under TSCA section 5(a)(1)(A). In particular, these requirements include the information submission requirements of TSCA sections 5(b) and 5(d)(1), the exemptions authorized by TSCA sections 5(h)(1), 5(h)(2), 5(h)(3), and 5(h)(5) and the regulations at 40 CFR part 720. In addition, provisions relating to user fees appear at 40 CFR part 700.

Once EPA receives a SNUN, EPA must either determine that the significant new use is not likely to present an unreasonable risk of injury under the conditions of use for the chemical substance or take such regulatory action as is associated with an alternative determination under TSCA section 5 before the manufacture (including import) or processing for the significant new use can commence. If EPA determines that the significant new use of the chemical substance is not likely to present an unreasonable risk, EPA is required under TSCA section 5(g) to make public, and submit for publication in the **Federal Register**, a statement of EPA's findings.

As discussed in Unit I.C.2., persons who export or intend to export a chemical substance identified in a proposed or final SNUR are subject to the export notification provisions of TSCA section 12(b), and persons who import a chemical substance identified in a final SNUR are subject to the TSCA section 13 import certification requirements. See also *https://www.epa.gov/tsca-import-export-requirements.*

E. Applicability of the Proposed SNURs to Uses Occurring Before the Effective Date of the Final Rule

To establish a significant new use, EPA must determine that the use is not ongoing. The chemical substances subject to this proposed rule have undergone premanufacture review and

received determinations under TSCA section 5(a)(3)(C). TSCA Orders have been issued for these chemical substances and the PMN submitters are required by the TSCA Orders to submit a SNUN before undertaking activities that would be designated as significant new uses in these SNURs. Additionally, the identities of many of the chemical substances subject to this proposed rule have been claimed as confidential per 40 CFR 720.85, further reducing the likelihood that another party would manufacture or process the substances for an activity that would be designated as a significant new use. Based on this, the Agency believes that it is highly unlikely that any of the significant new uses identified in Unit III. are ongoing.

When the chemical substances identified in Unit III. are added to the TSCA Inventory, EPA recognizes that, before the rule is effective, other persons might engage in a use that has been identified as a significant new use. Persons who begin manufacture or processing of the chemical substances for a significant new use identified on or after the designated cutoff date specified in Unit III.A. would have to cease any such activity upon the effective date of the final rule. To resume their activities, these persons would have to first comply with all applicable SNUR notification requirements and EPA would have to take action under TSCA section 5 allowing manufacture or processing to proceed.

F. Important Information About SNUN Submissions

1. SNUN Submissions

SNUNs must be submitted on EPA Form No. 7710–25, generated using e-PMN software, and submitted to the Agency in accordance with the procedures set forth in 40 CFR 720.40 and 721.25. E–PMN software is available electronically at *https://www.epa.gov/reviewing-new-chemicals-under-toxic-substances-control-act-tsca.*

2. Development and Submission of Information

EPA recognizes that TSCA section 5 does not require development of any particular new information (*e.g.,* generating test data) before submission of a SNUN. There is an exception: If a person is required to submit information for a chemical substance pursuant to a rule, order or consent agreement under TSCA section 4, then TSCA section 5(b)(1)(A) requires such information to be submitted to EPA at the time of submission of the SNUN.

In the absence of a rule, TSCA order, or consent agreement under TSCA section 4 covering the chemical substance, persons are required only to submit information in their possession or control and to describe any other information known to or reasonably ascertainable by them (see 40 CFR 720.50). However, upon review of PMNs and SNUNs, the Agency has the authority to require appropriate testing. To assist with EPA's analysis of the SNUN, submitters are encouraged, but not required, to provide the potentially useful information identified for the chemical substance in Unit III.C.

EPA strongly encourages persons, before performing any testing, to consult with the Agency pertaining to protocol selection. Furthermore, pursuant to TSCA section 4(h), which pertains to reduction of testing in vertebrate animals, EPA encourages consultation with the Agency on the use of alternative test methods and strategies (also called New Approach Methodologies, or NAMs), if available, to generate the recommended test data. EPA encourages dialog with Agency representatives to help determine how best the submitter can meet both the data needs and the objective of TSCA section 4(h). For more information on alternative test methods and strategies to reduce vertebrate animal testing, visit *https://www.epa.gov/assessing-and-managing-chemicals-under-tsca/alternative-test-methods-and-strategies-reduce.*

The potentially useful information described in Unit III. may not be the only means of providing information to evaluate the chemical substance associated with the significant new uses. However, submitting a SNUN without any test data may increase the likelihood that EPA will take action under TSCA sections 5(e) or 5(f). EPA recommends that potential SNUN submitters contact EPA early enough so that they will be able to conduct the appropriate tests.

SNUN submitters should be aware that EPA will be better able to evaluate SNUNs that provide detailed information on the human exposure and environmental release that may result from the significant new use of the chemical substances.

III. Chemical Substances Subject to These Proposed SNURs

A. What is the designated cutoff date for ongoing uses?

EPA designates December 17, 2024 as the cutoff date for determining whether the new use is ongoing. This designation is explained in more detail in Unit II.E.

B. What information is provided for each chemical substance?

For each chemical substance identified in Unit III.C., EPA provides the following information:

- PMN number (the proposed CFR citation assigned in the regulatory text section of the proposed rule).
- Chemical name (generic name, if the specific name is claimed as CBI).
- Chemical Abstracts Service Registry Number (CASRN) (if assigned for non-confidential chemical identities).
- Basis for the action (effective date of and basis for the TSCA Order).
- Potentially useful information.

The regulatory text section of the proposed rule specifies the activities designated as significant new uses. Certain new uses, including production volume limits and other uses designated in the proposed rules, may be claimed as CBI.

These proposed rules include PMN substances that are subject to orders issued under TSCA section 5(e)(1)(A), as required by the determinations made under TSCA section 5(a)(3)(B). Those TSCA Orders require protective measures to limit exposures or otherwise mitigate the potential unreasonable risk. The proposed SNURs identify as significant new uses any manufacturing, processing, use, distribution in commerce, or disposal that does not conform to the restrictions imposed by the underlying TSCA Orders, consistent with TSCA section 5(f)(4).

C. Which chemical substances are subject to these proposed rules?

The substances subject to the proposed rules in this document are as follows:

PMN Number (Proposed CFR Citation): P–18–127 (40 CFR 721.12043)

Chemical Name: Heptane, 2-methoxy-2-methyl-.

CASRN: 76589–16–7.

Effective Date of TSCA Order: December 15, 2023.

Basis for TSCA Order: The PMN states that the use will be as a fragrance for household and consumer products, mainly laundry detergents. Based on submitted test data on the PMN substance, EPA has identified concerns for skin sensitization. Based on comparison to analogous chemical substances, EPA has also identified concerns for systemic and developmental effects. Based on submitted test data on the PMN substance, EPA predicts toxicity to

aquatic organisms may occur at concentrations that exceed 210 ppb. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health and the environment. To protect against these risks, the Order requires:

- Manufacture of the PMN substance only by import into the United States in a solution of no greater than 5% by weight (*i.e.,* no domestic manufacture);
- Processing of the PMN substance only in a solution of no greater than 5% by weight of the PMN substance;
- Processing for use or use of the PMN substance in consumer products only if the concentration of the PMN substance is less than 1% by weight;
- No release of the PMN substance, or any waste stream containing the PMN substance, in surface water concentrations that exceed 210 ppb;
- Use of personal protective equipment where there is a potential for dermal exposure; and
- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a ''significant new use'' the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of developmental toxicity, specific target organ toxicity, and pulmonary effects testing may be potentially useful to characterize the health and environmental effects of the PMN substance. Although the Order does not require these tests, the Order's restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number (Proposed CFR Citation): P–18–325 (40 CFR 721.12044)

Chemical Name: Benzenesulfonic acid, alkyl-, compd. with 1,1′-iminobis[2-propanol] (1:1) (generic).

CASRN: Not available.

Effective Date of TSCA Order: January 9, 2024.

Basis for TSCA Order: The PMN states that the use will be as an industrial crosslinking catalyst. Based on the structure of the anion, EPA identified concerns for lung toxicity (surfactant effects). Based on test data for the neutral form of the cation and analogues for the anion, EPA also identified concerns for skin and eye irritation, and systemic and reproductive effects. Based on comparison to analogous anionic surfactants, EPA predicts toxicity to aquatic organisms may occur at concentrations that exceed 0.4 ppb. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health and the environment. To protect against these risks, the Order requires:

- No manufacture, processing, or use of the PMN substance in any manner that results in inhalation exposure to the PMN substance;
- No processing for use or use of the PMN substance other than as an industrial cross-linking catalyst;
- No release of the PMN substances, or any waste stream containing the PMN substances, into waters of the United States;
- Use of personal protective equipment where there is a potential for dermal exposure; and
- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a ''significant new use'' the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of skin irritation/corrosion, eye irritation/corrosion, pulmonary effects, specific target organ toxicity, and aquatic toxicity testing may be potentially useful to characterize the health and environmental effects of the PMN substance. Although the Order does not require these tests, the Order's restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number (Proposed CFR Citation): P–20–14 (40 CFR 721.12045)

Chemical Name: Sugars, polymer with alkanetriamine (generic).

CASRN: Not available.

Effective Date of TSCA Order: January 27, 2023.

Basis for TSCA Order: The PMN states that the generic (non-confidential) use will be as a water resistant resin additive. Based on comparison to analogous chemical substances, EPA has identified concerns for systemic effects (body weight). Based on potential chelation to nutrient metals, EPA has also identified concerns for developmental and systemic effects. Based on submitted test data on the PMN substance, EPA predicts toxicity to aquatic organisms may occur at concentrations that exceed 191 ppb. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health and the environment. To protect against these risks, the Order requires:

- No use of the PMN substance in a consumer product;
- No release of the PMN substance, or any waste stream containing the PMN substance, in surface water concentrations that exceed 191 ppb;
- Use of personal protective equipment where there is a potential for dermal exposure; and
- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a ''significant new use'' the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of reproductive toxicity and specific target organ toxicity testing may be potentially useful to characterize the health and environmental effects of the PMN substance. Although the Order does not require these tests, the Order's restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number (Proposed CFR Citation): P–21–86 (40 CFR 721.12046)

Chemical Name: Isooctadecanamide, N,N-bis(2-ethylhexyl)-.

CASRN: 1616494–50–8.

Effective Date of TSCA Order: February 6, 2024.

Basis for TSCA Order: The PMN states that the generic (non-confidential) use will be as an automotive engine

additive. Based on test data for the metabolite, EPA has identified concerns for systemic effects. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health. To protect against these risks, the Order requires:

- No processing for use of the PMN substance in a consumer product where the concentration of the PMN substance in the consumer product formulation exceeds the confidential percentage listed in the Order;
- No use of the PMN substance in a consumer product where the concentration of the PMN substance exceeds the confidential percentage listed in the Order;
- Use of personal protective equipment where there is a potential for dermal exposure; and
- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a ''significant new use'' the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of metabolism or pharmacokinetics and specific target organ toxicity testing may be potentially useful to characterize the health effects of the PMN substance. Although the Order does not require these tests, the Order's restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number (Proposed CFR Citation): P–21–164 (40 CFR 721.12047)

Chemical Name: 2-Butanone, oxime, reaction products with trimethoxymethylsilane.

CASRN: 2639393–45–4.

Effective Date of TSCA Order: November 13, 2023.

Basis for TSCA Order: The PMN states that the use will be as a crosslinker for waterproofing. Based on comparison to analogous chemical substances, EPA has identified concerns for irritation to skin and eyes and systemic effects. Based on test data for hydrolysis products, EPA has also identified concerns for acute toxicity, skin irritation, eye corrosion, respiratory tract irritation and corrosion, skin sensitization, systemic effects, developmental effects, neurotoxicity and carcinogenicity. Based on test data for hydrolysis products, EPA predicts toxicity to aquatic organisms may occur at concentrations that exceed 102 ppb. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health and the environment. To protect against these risks, the Order requires:

- No use of the PMN substance unless at 4% or less by weight in formulation;
- No loading or unloading of the PMN substance for manufacture, processing, or use unless under a gas (*e.g.,* nitrogen) blanket;
- Application of the PMN substance for use only by roll, brush, or dip coating;
- Use of personal protective equipment where there is a potential for dermal exposure;
- Use of a NIOSH-certified combination particulate and gas/vapor respirator with an APF of at least 50 where there is a potential for inhalation exposure;
- Disposal of the PMN substance, or waste streams containing the PMN substance, only by incineration;
- No release of the PMN substance, or any waste stream containing the PMN substance, into waters of the United States; and
- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a ''significant new use'' the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of acute toxicity, carcinogenicity, eye damage, pulmonary effects, skin irritation, specific target organ toxicity, and aquatic toxicity testing may be potentially useful to characterize the health and environmental effects of the PMN substance. Although the Order does not require these tests, the Order's restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number (Proposed CFR Citation): P–21–170 (40 CFR 721.12048)

Chemical Name: 2,6-Bis(dialkyl)-4-[2-(1-alkyl-4(1H)-pyridinylidene)alkylidene]-2,5-cycloalkyladien-1-one (generic).

CASRN: Not available.

Effective Date of TSCA Order: January 27, 2024.

Basis for TSCA Order: The PMN states that the use will be as a color indicator for frying oil breakdown. Based on comparison to analogous chemical substances, EPA has identified concerns for irritation to skin and eyes, skin sensitization, neurotoxicity, systemic effects (respiratory tract, lung, liver, kidney, spleen, and body weight effects), reproductive and developmental effects, genotoxicity, carcinogenicity, and acute toxicity (mortality). Based on OECD Toolbox results, EPA identified concerns for skin sensitization and based on information provided in the SDS, EPA has also identified concerns for acute toxicity and irritation to skin, eyes, and respiratory tract. Based on comparison to analogous chemical substances, EPA predicts toxicity to aquatic organisms may occur at concentrations that exceed 1 ppb. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health and the environment. To protect against these risks, the Order requires:

- Manufacture of the PMN substance only below an annual volume of 10 kg;
- No manufacture, processing, or use of the PMN substance resulting in releases to air except with the use of a HEPA filtration system;
- No processing for use or use of the PMN substance other than as a color indicator for frying oil breakdown;
- No processing for use or use of the PMN substance where the concentration of the PMN substance in the final product exceeds 0.008%;
- No release of the PMN substance, or any waste stream containing the PMN substance, into waters of the United States;
- Use of a NIOSH-certified particulate respirator with an APF of at least 10 where there is a potential for inhalation exposure;
- Use of personal protective equipment where there is a potential for dermal exposure; and
- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a ''significant new use'' the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of biodegradation, bioaccumulation, log P, and aquatic toxicity testing may be potentially useful to characterize the physical/chemical properties and environmental fate/effects of the PMN substance. Although the Order does not require these tests, the Order's restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number (Proposed CFR Citation): P–21–184 (40 CFR 721.12049)

Chemical Name: Fatty acids, soya, reaction products with ammonia-ethanolamine reaction by-products.

CASRN: 2378512–59–3.

Effective Date of TSCA Order: November 16, 2023.

Basis for TSCA Order: The PMN states that the generic (non-confidential) use will be in asphalt emulsion applications. Based on comparison to analogous chemical substances, EPA has identified concerns for acute toxicity, skin and eye irritation/corrosion, skin sensitization, point-of-contact effects, lung effects, and systemic effects. Based on the surfactant-like properties of the PMN substance and its use as an emulsifier, EPA has also identified concerns for lung effects (surfactancy). Based on information in the SDS, EPA has also identified concerns for skin irritation, eye corrosion, and respiratory irritation. Based on comparison to analogous aliphatic amines, EPA predicts toxicity to aquatic organisms may occur at concentrations that exceed 2 ppb. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health and the environment. To protect against these risks, the Order requires:

- No manufacture, processing, or use of the PMN substance in any manner that results in the generation of vapor, mist, dust, or aerosol;
- No processing for use or use of the PMN substance in a consumer product;
- Use of personal protective equipment where there is a potential for dermal exposure;
- No release of the PMN substance, or any waste stream containing the PMN substance, in surface water concentrations that exceed 2 ppb; and
- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a ''significant new use'' the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of acute toxicity, specific target organ toxicity, pulmonary effects, skin irritation/corrosion, eye damage, neurotoxicity, skin sensitization, and aquatic toxicity testing may be potentially useful to characterize the health and environmental effects of the PMN substance. Although the Order does not require these tests, the Order's restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Numbers (Proposed CFR Citations): P–22–3 (40 CFR 721.12050), P–22–4 (40 CFR 721.12051), P–22–5 (40 CFR 721.12052), and P–22–6 (40 CFR 721.12053)

Chemical Names: 1,5-Pentanediamine, 2-methyl-, hydrochloride (1:2) (P–22–3), 1,5-Pentanediamine, 2-methyl-, hydrochloride (1:1) (P–22–4), Formic acid, compd. with 2-methyl-1,5-pentanediamine (2:1) (P–22–5), and Formic acid, compd. with 2-methyl-1,5-pentanediamine (1:1) (P–22–6).

CASRNs: 34813–63–3 (P–22–3), 1840915–04–9 (P–22–4), 1836131–73–7 (P–22–5), and 1836131–75–9 (P–22–6).

Effective Date of TSCA Order: December 4, 2023.

Basis for TSCA Order: The PMNs state that the uses will be as clay stabilizers for oil and gas fracking. Based on submitted test data on the P–22–3 substance, comparison to analogous chemical substances, structure and expected acidity or basicity of components, physical/chemical properties of components, and information provided in the SDS, EPA has identified concerns for acute toxicity, irritation or corrosion to skin, eyes, and respiratory tract, and systemic effects. Based on submitted test data for the P–22–3 substance, EPA predicts toxicity to aquatic organisms may occur at concentrations that exceed 570 ppb. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substances may present an unreasonable risk of injury to human health and the environment. To protect against these risks, the Order requires:

- No processing for use or use of the PMN substances in consumer products;
- No manufacture, processing, or use of the PMN substances in any manner that results in inhalation exposure to the PMN substances;
- Use of personal protective equipment where there is a potential for dermal exposure;
- No release of the PMN substances, or any waste stream containing the PMN substances, in surface water concentrations that exceed 570 ppb combined; and
- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a ''significant new use'' the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of eye irritation/corrosion, skin irritation/corrosion, specific target organ toxicity, pulmonary effects, and aquatic toxicity testing may be potentially useful to characterize the health and environmental effects of the PMN substances. Although the Order does not require these tests, the Order's restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number (Proposed CFR Citation): P–22–11 (40 CFR 721.12054)

Chemical Name: Alkadiene, homopolymer, hydroxy-terminated, bis[N-[2-[(1-oxo-2-propen-1-yl)oxylethyl]carbamates] (generic).

CASRN: Not available.

Effective Date of TSCA Order: November 27, 2023.

Basis for TSCA Order: The PMN states that the generic (non-confidential) use will be as a functionalized rubber in the resin side of two component epoxy

modified acrylic adhesive and as a functionalized rubber in the resin side of two component acrylic adhesive. Based on test data on one or both of the two components in the formulation, EPA has identified concerns for skin sensitization, and systemic, reproductive, and developmental effects. Based on the weight of the scientific evidence, EPA has also identified concerns for respiratory sensitization. Based on information in the SDS, EPA has also identified concerns for skin sensitization and reproductive toxicity. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health. To protect against these risks, the Order requires:

- No use of the PMN substance in a consumer product;
- No manufacture, processing, or use of the PMN substance in any manner that results in inhalation exposure;
- Use of personal protective equipment where there is a potential for dermal exposure; and
- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a ''significant new use'' the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of skin sensitization, developmental toxicity, reproductive toxicity, and specific target organ toxicity testing may be potentially useful to characterize the health effects of the PMN substance. Although the Order does not require these tests, the Order's restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number (Proposed CFR Citation): P–22–25 (40 CFR 721.12055)

Chemical Name: Oxirane, 2-(chloromethyl)-, homopolymer, ether with dialkyl-alkanediol (2:1) (generic).

CASRN: Not available.

Effective Date of TSCA Order: February 20, 2024.

Basis for TSCA Order: The PMN states that the use will be as a chemical intermediate. Based on comparison to analogous chemical substances and structural alerts, EPA has identified concerns for acute toxicity, irritation to the respiratory tract, skin, and eyes, systemic effects, genetic toxicity, and carcinogenicity. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health. To protect against these risks, the Order requires:

- No exceedance of the confidential annual production volume listed in the Order;
- No manufacture, processing, or use of the PMN substance in any manner that results in the generation of a vapor, mist, dust, or aerosol;
- Use of the PMN substance only as a chemical intermediate;
- Disposal of the PMN substance, or waste streams containing the PMN substance, only by hazardous waste incineration;
- No release of the PMN substance, or any waste stream containing the PMN substance, into waters of the United States;
- Use of personal protective equipment where there is a potential for dermal exposure; and
- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a ''significant new use'' the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of acute toxicity, specific target organ toxicity, pulmonary effects, eye irritation, skin irritation, genetic toxicity, and carcinogenicity testing may be potentially useful to characterize the health effects of the PMN substance. Although the Order does not require these tests, the Order's restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number (Proposed CFR Citation): P–22–49 (40 CFR 721.12056)

Chemical Name: Aryl, polymer with formaldehyde, glycidyl ether, reaction products with amino alkyl-alkane diamine, cyclohexanediamine and alkylene (alkylcyclohexanamine) (generic).

CASRN: Not available.

Effective Date of TSCA Order: January 11, 2024.

Basis for TSCA Order: The PMN states that the use will be as a hardener in coatings for oil and gas, power, and chemical/petrochemical industries for tank and pipe linings and for asset protection, in coatings in wastewater applications industries for tank and pipe linings and for asset protection, in coatings used in manufacturing industries for tank and pipe linings and for asset protection, and in OEM automotive and heavy industrial machinery coatings. Based on submitted test data on the PMN substance, EPA has identified concerns for acute toxicity. Based on residual data, EPA has also identified concerns for irritation to the skin, eye, and respiratory tract, skin and respiratory sensitization, systemic, developmental, and reproductive effects, corrosion to all tissues, and genetic toxicity. Based on submitted test data on the PMN substance and comparison to analogous polycationic polymers, EPA predicts toxicity to aquatic organisms may occur at concentrations that exceed 2 ppb. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health or the environment. To protect against these risks, the Order requires:

- No release of the PMN substance, or any waste stream containing the PMN substance, in surface water concentrations that exceed 2 ppb;
- Use of a NIOSH-certified particulate respirator with an APF of at least 1,000 where there is a potential for inhalation exposure;
- No use of the PMN substance in a consumer product;
- Use of personal protective equipment where there is a potential for dermal exposure; and
- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a ''significant new use'' the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has

determined that the results of skin irritation, skin corrosion, eye irritation, eye corrosion, specific target organ toxicity, pulmonary effects, and aquatic toxicity testing may be potentially useful to characterize the health and environmental effects of the PMN substance. Although the Order does not require these tests, the Order's restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number (Proposed CFR Citation): P–22–50 (40 CFR 721.12057)

Chemical Name: Alkene, alkoxy-, polymer with alkoxyalkene (generic).

CASRN: Not available.

Effective Date of TSCA Order: January 8, 2024.

Basis for TSCA Order: The PMN states that the generic (non-confidential) use will be as a lubricant. Based on comparison to analogous chemical substances, EPA has identified concerns for skin, eye, and respiratory tract irritation and systemic effects. Based on comparison to analogous neutral organics, EPA predicts toxicity to aquatic organisms may occur at concentrations that exceed 32 ppb. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health and the environment. To protect against these risks, the Order requires:

- No processing for use or use of the PMN substance in a consumer product;
- No manufacture, processing, or use of the PMN substance in any manner that results in inhalation exposure to the PMN substance;
- No processing for use or use of the PMN substance other than for the confidential use listed in the Order;
- No release of the PMN substance, or any waste stream containing the PMN substance, into waters of the United States;
- Use of personal protective equipment where there is a potential for dermal exposure; and
- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a ''significant new use'' the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of specific target organ toxicity, skin irritation, eye irritation, pulmonary effects, and aquatic toxicity testing may be potentially useful to characterize the health and environmental effects of the PMN substance. Although the Order does not require these tests, the Order's restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number (Proposed CFR Citation): P–22–58 (40 CFR 721.12058)

Chemical Name: Methanesulfonamide, 1,1,1-trifluoro-N-[(trifluoromethyl)sulfonyl]-, sodium salt (1:1).

CASRN: 91742–21–1.

Effective Date of TSCA Order: February 13, 2024.

Basis for TSCA Order: The PMN states that the generic (non-confidential) use will be as a process chemical. Based on submitted test data on the PMN substance, EPA has identified concerns for acute toxicity and serious eye damage. Based on comparison to analogous chemical substances, EPA has also identified concerns for respiratory tract and skin irritation, neurotoxicity, systemic, reproductive, and developmental effects. Based on comparison to analogous chemical substances, EPA has also identified concerns for respiratory, systemic, and neurological effects for the potential incineration product of the anion. Based on submitted test data on the PMN substance and comparison to analogous substances, EPA predicts toxicity to aquatic organisms may occur at concentrations that exceed 140 ppb. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health and the environment. To protect against these risks, the Order requires:

- No manufacture of the PMN substance other than in an enclosed process;
- No processing or use of the PMN substance other than in a manner that does not generate a vapor, mist, dust, or aerosol that results in inhalation exposure to workers;
- No use of the PMN substance other than for the confidential use listed in the Order;
- No use of the PMN substance other than in the form of a liquid;
- No release of the PMN substance, or any waste stream containing the PMN substance, in surface water concentrations that exceed 100 ppb;
- Use of a NIOSH-certified combination particulate and gas/vapor respirator with an APF of at least 50 where there is a potential for inhalation exposure;
- Use of personal protective equipment where there is a potential for dermal exposure; and
- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a ''significant new use'' the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of specific target organ toxicity, pulmonary effects, reproductive toxicity, developmental toxicity, neurotoxicity, sediment toxicity, and aquatic toxicity testing may be potentially useful to characterize the health and environmental effects of the PMN substance. Although the Order does not require these tests, the Order's restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number (Proposed CFR Citation): P–22–75 (40 CFR 721.12059)

Chemical Name: 1H-Isoindole-1,3(2H)-dione, 3a,4,7,7a-tetrahydro-2-(2-hydroxyethyl)-.

CASRN: 15458–48–7.

Effective Date of TSCA Order: January 19, 2024.

Basis for TSCA Order: The PMN states that the use will be as a monomer used to produce an unsaturated polyester resin. Based on comparison to analogous chemical substances, EPA has identified concerns for acute toxicity, skin and eye irritation, and systemic effects. Based on comparison to analogous imides, EPA predicts toxicity to aquatic organisms may occur at concentrations that exceed 21 ppb. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health and the environment. To protect against these risks, the Order requires:

• Manufacture of the PMN substance only at or below an annual volume of 3,000 kg;
• No domestic manufacture of the PMN substance (*i.e.,* import only);
• No use of the PMN substance other than as a monomer used to produce an unsaturated polyester resin;
• Use of personal protective equipment where there is a potential for dermal exposure; and
• Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a ''significant new use'' the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of acute toxicity, eye irritation, skin irritation, pulmonary effects, specific target organ toxicity, and aquatic toxicity testing may be potentially useful to characterize the health and environmental effects of the PMN substance. Although the Order does not require these tests, the Order's restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number (Proposed CFR Citation): P–22–78 (40 CFR 721.12060)

Chemical Name: Oxirane, 2-methyl-, polymer with oxirane, mono-isoalkyl ethers, phosphates, salt (generic).

CASRN: Not available.

Effective Date of TSCA Order: November 27, 2023.

Basis for TSCA Order: The PMN states that the use will be as a dispersing agent for pesticide formulations. Based on structure, EPA has identified concerns for lung effects (surfactancy). Based on comparison to analogous chemical substances, EPA has also identified concerns for skin irritation and systemic effects. Based on comparison to analogous anionic surfactants, EPA predicts toxicity to aquatic organisms may occur at concentrations that exceed 23 ppb. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health and the environment. To protect against these risks, the Order requires:

• No processing for use or use of the PMN substance other than as a dispersing agent for pesticide formulations;
• No manufacture or processing of the PMN substance in any manner that results in the generation of a vapor, mist, dust, or aerosol;
• Use of personal protective equipment where there is a potential for dermal exposure;
• No release of the PMN substance, or any waste stream containing the PMN substance, in surface water concentrations that exceed 23 ppb; and
• Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a ''significant new use'' the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of pulmonary effects, skin irritation, specific target organ toxicity, and aquatic toxicity testing may be potentially useful to characterize the health and environmental effects of the PMN substance. Although the Order does not require these tests, the Order's restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number (Proposed CFR Citation): P–22–80 (40 CFR 721.12061)

Chemical Name: Poly(oxy-1,2-ethanediyl), .alpha.-(2-aminoethyl)-.omega.-(2-aminoethoxy)- and Poly(oxy-1,2-ethanediyl), .alpha.,.alpha.′,-(iminodi-2,1- ethanediyl)bis[.omega.-(2-aminoethoxy)-.

CASRNs: 24991–53–5 and 90350–34–8.

Effective Date of TSCA Order: December 1, 2023.

Basis for TSCA Order: The PMN states that the use will be as an industrial intermediate used in the manufacture of polyamides as a monomer. Based on the pH of the PMN substance, EPA has identified concerns for skin, eye, and respiratory tract corrosion. Based on comparison to analogous chemical substances, EPA has also identified concerns for acute toxicity and skin sensitization. Based on comparison to analogous polycationic polymers, EPA predicts toxicity to aquatic organisms may occur at concentrations that exceed 0.7 ppb. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health and the environment. To protect against these risks, the Order requires:

• No manufacture, processing, or use of the PMN substance in any manner that results in inhalation exposure;
• No release of the PMN substance, or any waste stream containing the PMN substance, in surface water concentrations that exceed 0.7 ppb;
• Use of personal protective equipment where there is a potential for dermal exposure; and
• Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a ''significant new use'' the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of acute toxicity, skin corrosion, eye corrosion, pulmonary effects, skin sensitization, and aquatic toxicity testing may be potentially useful to characterize the health and environmental effects of the PMN substance. Although the Order does not require these tests, the Order's restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number (Proposed CFR Citation): P–22–82 (40 CFR 721.12062)

Chemical Name: Alkenoic acid, alkyl, carbopolycyclic alkyl ester, polymer with trihalo (trihaloalkyl) alkyl alkyl alkenoate (generic).

CASRN: Not available.

Effective Date of TSCA Order: November 3, 2023.

Basis for TSCA Order: The PMN states that the generic (non-confidential) use will be as a component of photoresist. Based on test data on the degradation product and an analogue of the degradation product, EPA has identified concerns for neurotoxicity, reproductive, developmental, and systemic effects. Based on the potential incineration product, EPA has also identified concerns for systemic effects, and neurotoxicity. The Order was issued under TSCA sections

5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health. To protect against these risks, the Order requires:

- No manufacture of the PMN substance other than by import into the United States (*i.e.,* no domestic manufacture) in a liquid formulation;
- No processing or use of the PMN substance other than in a liquid formulation;
- Use of the PMN substance only for the confidential use listed in the Order;
- No release of the PMN substance, or any waste stream containing the PMN substance, into waters of the United States;
- Disposal of the PMN substance, or waste streams containing the PMN substance, only by incineration;
- Use of personal protective equipment where there is a potential for dermal exposure; and
- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a ''significant new use'' the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of pulmonary effects, reproductive and developmental effects, and neurotoxicity testing may be potentially useful to characterize the health effects of the PMN substance. Although the Order does not require these tests, the Order's restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number (Proposed CFR Citation): P–22–121 (40 CFR 721.12063)

Chemical Name: Polychloroalkene (generic).

CASRN: Not available.

Effective Date of TSCA Order: February 6, 2024.

Basis for TSCA Order: The PMN states that the generic (non-confidential) use will be as a process intermediate. Based on submitted test data on the PMN substance and information in the SDS, EPA has identified concerns for acute toxicity (oral) and skin sensitization. Based on test data for analogues, EPA identified concerns for acute toxicity (oral, inhalation), skin irritation, eye corrosion, respiratory irritation, genotoxicity, carcinogenicity, and systemic effects. Based on submitted acute test data and comparison to analogous chemical substances, EPA predicts toxicity to aquatic organisms may occur at concentrations that exceed 0.15 ppb. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health and the environment. To protect against these risks, the Order requires:

- No domestic manufacture of the PMN substance (*i.e.,* import only);
- No processing, use, loading, or unloading of the PMN substance unless under a gas (*e.g.,* nitrogen) blanket or in a closed system except that sampling may occur outside the closed system resulting in exposures;
- No use of the PMN substance other than for the confidential use listed in the Order;
- Use of a NIOSH-certified combination particulate and gas/vapor respirator with an APF of at least 50 where there is a potential for inhalation exposure;
- Use of personal protective equipment where there is a potential for dermal exposure;
- No release of the PMN substance, or any waste stream containing the PMN substance, in surface water concentrations that exceed 0.15 ppb; and
- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a ''significant new use'' the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results carcinogenicity, eye irritation/corrosion, genetic toxicity, pulmonary effects, skin irritation, specific target organ toxicity, toxicokinetics, and aquatic toxicity testing may be potentially useful to characterize the health and environmental effects of the PMN substance. Although the Order does not require these tests, the Order's restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number (Proposed CFR Citation): P–22–145 (40 CFR 721.12064)

Chemical Name: Alkanoic acid, trialkyl-, diester with carbomonocycle bis(alkyleneoxy)]bis[alkanediol] (generic).

CASRN: Not available.

Effective Date of TSCA Order: February 21, 2024.

Basis for TSCA Order: The PMN states that the use will be as a reactive-diluent in a polyol component of a 2K (Isocyanate-Polyol) Urethane coating system for interior concrete floor sealant or interior/exterior paver sealer. Based on the physical/chemical properties of the PMN substance (as described in the New Chemical Program's PBT category at 64 FR 60194; November 1999) and test data on structurally similar substances, the PMN substance is a potentially persistent, bioaccumulative, and toxic (PBT) chemical. EPA estimates that the PMN substance will persist in the environment for more than six months and estimates a bioconcentration factor of greater than or equal to 5,000. Based on test data for a potential hydrolysis product, EPA has identified concerns for acute toxicity and systemic, reproductive, and developmental effects. Based on comparison to analogous esters, EPA predicts toxicity to aquatic organisms may occur at concentrations that exceed 0.14 ppb. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health and the environment. To protect against these risks, the Order requires:

- No use of the PMN substance in any manner that generates a spray, mist, vapor, or aerosol containing the PMN substance unless the concentration of the PMN substance is less than 5.7% by weight;
- No processing for use or use of the PMN substance in a consumer product;
- No release of the PMN substance, or any waste stream containing the PMN substance, into waters of the United States;
- Disposal of the PMN substance, or waste streams containing the PMN substance, only by incineration;
- Use of personal protective equipment where there is a potential for dermal exposure; and
- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a ''significant new use'' the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of acute toxicity, reproductive toxicity, developmental toxicity, specific target organ toxicity, toxicokinetics, and aquatic toxicity testing may be potentially useful to characterize the health and environmental effects of the PMN substance. Although the Order does not require these tests, the Order's restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number (Proposed CFR Citation): P–22–175 (40 CFR 721.12065)

Chemical Name: Modified Silsesquioxane, alkoxy-terminated (generic).

CASRN: Not available.

Effective Date of TSCA Order: January 30, 2024.

Basis for TSCA Order: The PMN states that the use will be as a curable binder resin for composite stone articles (engineered stone). Based on comparison to analogous alkoxysilanes and other analogous chemical substances, EPA has identified concerns for lung toxicity. Based on the reactivity of the PMN substance and the low molecular weight fraction content, EPA has also identified concerns for irritation to the skin, eyes, and respiratory tract. Based on comparison with analogous chemical substances, EPA has also identified concerns for hematological effects (*i.e.,* increased neutrophils, eosinophils, lymphocytes) associated with lung toxicity. Based on comparison to analogous alkoxysilanes, EPA predicts toxicity to aquatic organisms may occur at concentrations that exceed 7 ppb. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health and the environment. To protect against these risks, the Order requires:

- No domestic manufacture of the PMN substance (*i.e.,* import only);
- Use of the PMN substance only if the concentration of the PMN substance does not exceed 10% by weight in formulation;
- Use of a NIOSH-certified respirator with an APF of at least 10 where there is a potential for inhalation exposure;
- No release of the PMN substance, or any waste stream containing the PMN substance, in surface water concentrations that exceed 7 ppb;
- Use of personal protective equipment where there is a potential for dermal exposure; and
- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a ''significant new use'' the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of skin irritation, eye irritation, specific target organ toxicity, and aquatic toxicity testing may be potentially useful to characterize the health and environmental effects of the PMN substance. Although the Order does not require these tests, the Order's restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number (Proposed CFR Citation): P–23–18 (40 CFR 721.12066)

Chemical Name: Vegetable oil, polymer with pimelin ketone, oxymethylene and polymethylenepolyphenylene isocyanate (generic).

CASRN: Not applicable.

Effective Date of TSCA Order: February 23, 2024.

Basis for TSCA Order: The PMN states that the use will be as an industrial adhesive. Based on the weight of the scientific evidence, EPA has identified concerns for skin and respiratory sensitization and lung toxicity for the PMN substance and the low molecular weight fraction. Based on test data for residuals and comparison to analogous chemical substances of the residuals, EPA has also identified acute toxicity, irritation to the skin, eyes, and respiratory tract, skin sensitization, respiratory sensitization, neurotoxicity, lung effects, systemic effects, reproductive and developmental effects, genetic toxicity, and carcinogenicity for the residuals. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health. To protect against these risks, the Order requires:

- No manufacture, processing, or use of the PMN substance in any manner that results in inhalation exposure to the PMN substance;
- No processing for use or use of the PMN substance in a consumer product;
- Use of personal protective equipment where there is a potential for dermal exposure; and
- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a ''significant new use'' the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of skin irritation, skin sensitization, and pulmonary effects testing may be potentially useful to characterize the health effects of the PMN substance. Although the Order does not require these tests, the Order's restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number (Proposed CFR Citation): P–23–20 (40 CFR 721.12067)

Chemical Name: Silsesquioxanes, 3-mercaptopropyl, polymers with silicic acid (H4SiO4) tetra-Et ester, [(trimethylsilyl)oxy]-terminated.

CASRN: 2796383–42–9.

Effective Date of TSCA Order: November 21, 2023.

Basis for TSCA Order: The PMN states that the generic (non-confidential) use will be as an additive/intermediate. Based on comparison to analogous chemical substances and alkoxysilanes, EPA has identified concerns for lung effects. Based on analogue data for the hydrolysis product, EPA has also identified concerns for skin sensitization and systemic effects. Based on comparison to analogous alkoxysilanes and thiols, EPA predicts toxicity to aquatic organisms may occur at concentrations that exceed 3 ppb. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may

present an unreasonable risk of injury to human health and the environment. To protect against these risks, the Order requires:

- Use of the PMN substance only for the confidential use listed in the Order;
- No manufacture, processing, or use of the PMN substance in any manner that results in inhalation exposure to the PMN substance;
- Use of personal protective equipment where there is a potential for dermal exposure;
- No release of the PMN substance, or any waste stream containing the PMN substance, in surface water concentrations that exceed 3 ppb; and
- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a ''significant new use'' the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of specific target organ toxicity, pulmonary effects, skin sensitization, and aquatic toxicity testing may be potentially useful to characterize the health and environmental effects of the PMN substance. Although the Order does not require these tests, the Order's restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number (Proposed CFR Citation): P–23–36 (40 CFR 721.12068).

Chemical Name: Castor oil, polymer with dicyclopentadiene, maleic anhydride, 2-methyl-1,3-propanediol, 3a,4,7,7a-tetrahydro-2-(2-hydroxyethyl)-1H-isoindole-1,3(2H)-dione and triethylene glycol.

CASRN: 2794200–69–2.

Effective Date of TSCA Order: January 19, 2024.

Basis for TSCA Order: The PMN states that the use will be as a resin used in an electrical insulation coating to insulate electrical components (motors) in automobiles. Based on test data for the expected hydrolysis product and an analogue of the expected hydrolysis product, EPA has identified concerns for skin irritation, eye irritation, systemic effects, and reproductive/developmental effects. Based on comparison to analogous nonionic polymers, EPA predicts toxicity to aquatic organisms may occur at concentrations that exceed 27 ppb. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health and the environment. To protect against these risks, the Order requires:

- No processing for use or use of the PMN substance in a consumer product;
- No manufacture, processing, or use of the PMN substance in any manner that generates a vapor, mist, dust, or aerosol;
- Use of personal protective equipment where there is a potential for dermal exposure;
- No release of the PMN substance, or any waste stream containing the PMN substance, in surface water concentrations that exceed 27 ppb; and
- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a ''significant new use'' the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of skin irritation, eye irritation, specific target organ toxicity, toxicokinetics, and aquatic toxicity testing may be potentially useful to characterize the health and environmental effects of the PMN substance. Although the Order does not require these tests, the Order's restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Numbers (Proposed CFR Citations): P–23–37 (40 CFR 721.12069), P–23–44 (40 CFR 721.12070), P–23–80 (40 CFR 721.12071), and P–23–93 (40 CFR 721.12072)

Chemical Names: Monoaromatic cyclic alkylene sulfonium fluoroalkyl sulfonic acid salt (generic) (P–23–37 and P–23–44), Aromatic sulfonium tricyclo fluoroalkyl sulfonic acid salt (generic) (P–23–80), and Aromatic dibenzothiophenium fluoroalkyl carbopolycycle sulfonic acid salt (generic) (P–23–93).

CASRNs: Not available.

Effective Date of TSCA Order: December 22, 2023.

Basis for TSCA Order: The PMNs state that the generic (non-confidential) use of the PMN substances will be as photoacid generators (PAGs) for use in electronics industry. Based on the physical/chemical properties of the PMN substances (as described in the New Chemical Program's PBT category at 64 FR 60194; November 1999) and test data on structurally similar substances, the PMN substance are potentially persistent, bioaccumulative, and toxic (PBT) chemicals. EPA estimates that the PMN substances will persist in the environment for more than six months and have unknown bioaccumulation. Based on comparison to analogous chemical compounds, EPA has identified concerns for acute toxicity, irritation to the skin and respiratory tract, neurological effects, and systemic effects for the cation of the PMN substances, as well as eye corrosion for P–23–44, P–23–80, and P–23–93. Based on comparison to analogous chemical substances, EPA has also identified concerns for genetic toxicity for the PMN substances, and skin sensitization and portal-of-entry (respiratory) effects for P–23–93. Based on the photoreactivity of the PMN substances, EPA has also identified concerns for photosensitization. Based on comparison to analogous compounds, EPA has also identified concerns for systemic and reproductive effects for the anion of P–23–44 and P–23–93. Based on data on a potential incineration product, EPA identified concerns for local and systemic effects via inhalation exposure. Based on a lack of scientific data, there is unknown toxicity to aquatic organisms. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substances may present an unreasonable risk of injury to human health or the environment. To protect against these risks, the Order requires:

- No manufacture of the PMN substances beyond the time limits specified in the Order without submittal to EPA the results of certain testing described in the Testing section of the Order;
- Use of personal protective equipment where there is a potential for dermal exposure;
- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS;
- No modification of the processing or use of the PMN substances in any way that generates a vapor, dust, mist, or aerosol in a non-enclosed process;

• Use of the PMN substances only for the confidential uses listed in the Order;
• No domestic manufacture of the PMN substances (*i.e.,* import only);
• Import of the PMN substances only in solution or in sealed containers weighing 5 kilograms or less; and
• No exceedance of the confidential annual importation volumes listed the Order.

The proposed SNUR would designate as a ''significant new use'' the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information about the physical/chemical properties, fate, bioaccumulation, environmental hazard, and human health effects of the PMN substances may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. The submitter has agreed not to exceed the time limits specified in the Order without performing the required Tier I and Tier II testing outlined in the Testing section of the Order.

PMN Number (Proposed CFR Citation): P–23–64 (40 CFR 721.12073)

Chemical Name: Alkanediol, substituted, polymer with diisocyanatoalkane, substituted heterocycle-modified (generic).

CASRN: Not available.

Effective Date of TSCA Order: February 21, 2024.

Basis for TSCA Order: The PMN states that the generic (non-confidential) use will be as a component in aerospace coatings. Based on comparison to analogous chemical substances, EPA has identified concerns for pulmonary effects, systemic effects, and skin sensitization. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health. To protect against these risks, the Order requires:

• No processing for use or use of the PMN substance in consumer products;
• No manufacture, processing, or use of the PMN substance in any manner that results in the generation of a vapor, mist, dust, or aerosol;
• Use of personal protective equipment where there is a potential for dermal exposure; and
• Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a ''significant new use'' the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of pulmonary effects and specific target organ toxicity testing may be potentially useful to characterize the health effects of the PMN substance. Although the Order does not require these tests, the Order's restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number (Proposed CFR Citation): P–23–72 (40 CFR 721.12074)

Chemical Name: Halosubstituted carbopolycycle, polymer with substituted carbomonocycles and oxybis[alkanol] (generic).

CASRN: Not available.

Effective Date of TSCA Order: February 22, 2024.

Basis for TSCA Order: The PMN states that the use will be as a UV resin for offset lithographic printing on plastic substrates. Based on the physical/chemical properties of the PMN substance (as described in the New Chemical Program's PBT category at 64 FR 60194; November 1999) and test data on structurally similar substances, the PMN substance is a potentially persistent, bioaccumulative, and toxic (PBT) chemical. EPA estimates that the PMN substance will persist in the environment for more than six months and estimates a bioaccumulation factor of greater than or equal to 5,000. Based on test data for hydrolysis products of the low molecular weight fraction of the PMN substance, EPA has identified concerns for genetic toxicity, carcinogenicity, and systemic, reproductive, and developmental effects. Based on comparison to analogous esters, EPA predicts toxicity to aquatic organisms may occur at concentrations that exceed 0.4 ppb. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health and the environment. To protect against these risks, the Order requires:

• No processing for use or use of the PMN substance in a consumer product;
• No processing for use or use of the PMN substance other than in an enclosed roll-coating lithographic printing machine;
• No processing for use or use of the PMN substance in a final coating formulation that exceeds 40% by weight;
• Disposal of the PMN substance only by landfill;
• No release of the PMN substance, or any waste stream containing the PMN substance, into waters of the United States;
• Use of a NIOSH-certified respirator with an APF of at least 10 where there is a potential for inhalation exposure;
• Use of personal protective equipment where there is a potential for dermal exposure; and
• Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a ''significant new use'' the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of carcinogenicity, developmental toxicity, genetic toxicity, reproductive toxicity, specific target organ toxicity, toxicokinetics, and aquatic toxicity testing may be potentially useful to characterize the health and environmental effects of the PMN substance. Although the Order does not require these tests, the Order's restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number (Proposed CFR Citation): P–23–94 (40 CFR 721.12075)

Chemical Name: Polymer of benzenedicarboxylic acid, substituted-benzenedicarboxylic acid, branched-alkyldiol, alkyldiol and triisocyanate (generic).

CASRN: Not available.

Effective Date of TSCA Order: January 9, 2024.

Basis for TSCA Order: The PMN states that the use will be as a reactive polymer for use in surface pre-treatment. Based on test data for the feedstock residual, EPA has identified concerns for lung effects for the residual. Based on OECD QSAR Toolbox results and the structural alert for diisocyanates, EPA has also identified

concerns for dermal and respiratory sensitization. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health. To protect against these risks, the Order requires:

- No processing for use or use of the PMN substance in a consumer product;
- No manufacture, processing, or use of the PMN substance in any manner that results in inhalation exposure to the PMN substance;
- Use of personal protective equipment where there is a potential for dermal exposure; and
- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a ''significant new use'' the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of specific target organ toxicity, pulmonary effects, and skin sensitization testing may be potentially useful to characterize the health effects of the PMN substance. Although the Order does not require these tests, the Order's restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number (Proposed CFR Citation): P–23–172 (40 CFR 721.12076)

Chemical Name: Sulfonium, tricarbocyclic-, alkylcarbomonocyclic-polyfluoro-heteropolycyclic-alkyl sulfonate (1:1), polymer with alkylaryl and carbomonocyclic alkylalkanoate, di-Me 2,2′-(1,2-diazenediyl)bis[2-alkylalkanoate]-initiated (generic).

CASRN: Not available.

Effective Date of TSCA Order: January 29, 2024.

Basis for TSCA Order: The PMN states that the generic (non-confidential) use of the PMN substance will be for photolithography. Based on the physical/chemical properties of the PMN substance (as described in the New Chemical Program's PBT category at 64 FR 60194; November 1999) and test data on structurally similar substances, the PMN substance is a potentially persistent, bioaccumulative, and toxic (PBT) chemical. EPA estimates that the PMN substance will persist in the environment for more than six months and estimates unknown bioaccumulation. Based on comparison to analogous sulfonium compounds, EPA has identified concerns for acute toxicity, irritation to the skin and respiratory tract, eye corrosion, neurological effects, and systemic effects for the sulfonium cation. Based on comparison to analogous chemical substances, EPA has also identified concerns for genetic toxicity. Based on the photoreactivity of the PMN substance, EPA has also identified concerns for photosensitization. Based on a potential incineration product (trifluroacetate), EPA has also identified concerns for local, neurological, developmental and systemic effects via inhalation exposure. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health or the environment. To protect against these risks, the Order requires:

- No manufacture of the PMN substance beyond the time limits specified in the Order without submittal to EPA the results of certain testing described in the Testing section of the Order;
- Use of personal protective equipment where there is a potential for dermal exposure;
- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS;
- No modification of the processing of the PMN substance in any way that generates a vapor, dust, mist, or aerosol in a non-enclosed process;
- Use of the PMN substance only for the confidential use listed in the Order;
- No domestic manufacture of the PMN substance (*i.e.,* import only);
- Import of the PMN substance only in solution or in sealed containers weighing 5 kilograms or less; and
- No exceedance of the confidential annual importation volume listed the Order.

The proposed SNUR would designate as a ''significant new use'' the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information about the physical/chemical properties, fate, bioaccumulation, environmental hazard, and human health effects of the PMN substance may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. The submitter has agreed not to exceed the time limits specified in the Order without performing the required Tier I and Tier II testing outlined in the Testing section of the Order.

IV. Statutory and Executive Order Reviews

Additional information about these statutes and Executive Orders can be found at *https://www.epa.gov/laws-regulations-and-executive-orders.*

A. Executive Order 12866: Regulatory Planning and Review and Executive Order 14094: Modernizing Regulatory Review

This action proposes to establish SNURs for new chemical substances that were the subject of PMNs. The Office of Management and Budget (OMB) has exempted these types of actions from review under Executive Order 12866 (58 FR 51735, October 4, 1993), as amended by Executive Order 14094 (88 FR 21879, April 11, 2023).

B. Paperwork Reduction Act (PRA)

According to the PRA (44 U.S.C. 3501 *et seq.*), an agency may not conduct or sponsor, and a person is not required to respond to a collection of information that requires OMB approval under PRA, unless it has been approved by OMB and displays a currently valid OMB control number. The OMB control numbers for EPA's regulations in title 40 of the CFR, after appearing in the **Federal Register**, are listed in 40 CFR part 9, and included on the related collection instrument or form, if applicable.

The information collection requirements related to SNURs have already been approved by OMB pursuant to PRA under OMB control number 2070–0038 (EPA ICR No. 1188). This action does not impose any burden requiring additional OMB approval. If an entity were to submit a SNUN to the Agency, the annual burden is estimated to average between 30 and 170 hours per submission. This burden estimate includes the time needed to review instructions, search existing data sources, gather and maintain the data needed, and complete, review, and submit the required SNUN.

EPA always welcomes your feedback on the burden estimates. Send any comments about the accuracy of the burden estimate, and any suggested methods for improving the collection instruments or instruction or minimizing respondent burden,

including through the use of automated collection techniques.

C. Regulatory Flexibility Act (RFA)

I certify that this action will not have a significant economic impact on a substantial number of small entities under the RFA (5 U.S.C. 601 *et seq.*). The requirement to submit a SNUN applies to any person (including small or large entities) who intends to engage in any activity described in the final rule as a ''significant new use.'' Because these uses are ''new,'' based on all information currently available to EPA, EPA has concluded that no small or large entities presently engage in such activities.

A SNUR requires that any person who intends to engage in such activity in the future must first notify EPA by submitting a SNUN. Although some small entities may decide to pursue a significant new use in the future, EPA cannot presently determine how many, if any, there may be. However, EPA's experience to date is that, in response to the promulgation of SNURs covering over 1,000 chemicals, the Agency receives only a small number of notices per year. For example, the number of SNUNs received was 16 in Federal fiscal year (FY) FY2018, five in FY2019, seven in FY2020, 13 in FY2021, 11 in FY2022, and 15 in FY2023, and only a fraction of these submissions were from small businesses.

In addition, the Agency currently offers relief to qualifying small businesses by reducing the SNUN submission fee from $37,000 to $6,480. This lower fee reduces the total reporting and recordkeeping cost of submitting a SNUN to about $14,500 per SNUN submission for qualifying small firms. Therefore, the potential economic impacts of complying with these proposed SNURs are not expected to be significant or adversely impact a substantial number of small entities. In a SNUR that published in the **Federal Register** of June 2, 1997 (62 FR 29684) (FRL–5597–1), the Agency presented its general determination that SNURs are not expected to have a significant economic impact on a substantial number of small entities, which was provided to the Chief Counsel for Advocacy of the Small Business Administration.

D. Unfunded Mandates Reform Act (UMRA)

This action does not contain an unfunded mandate of $100 million or more (in 1995 dollars) in any one year as described in UMRA, 2 U.S.C. 1531–1538, and does not significantly or uniquely affect small governments. Based on EPA's experience with proposing and finalizing SNURs, State, local, and Tribal governments have not been impacted by SNURs, and EPA does not have any reasons to believe that any State, local, or Tribal government will be impacted by these SNURs. In addition, the estimated costs of this action to the private sector do not exceed $183 million or more in any one year (the 1995 dollars are adjusted to 2023 dollars for inflation using the GDP implicit price deflator). The estimated costs for this action are discussed in Unit I.D.

E. Executive Order 13132: Federalism

This action will not have federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999), because it is not expected to have a substantial direct effect on States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Accordingly, the requirements of Executive Order 13132 do not apply to this action.

F. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

This action will not have Tribal implications as specified in Executive Order 13175 (65 FR 67249, November 9, 2000), because it is not expected to have substantial direct effects on Indian Tribes, significantly or uniquely affect the communities of Indian Tribal governments and does not involve or impose any requirements that affect Indian Tribes. Accordingly, the requirements of Executive Order 13175 do not apply to this action.

G. Executive Order 13045: Protection of Children From Environmental Health Risks and Safety Risks

This action is not subject to Executive Order 13045 (62 FR 19885, April 23, 1997), because it does not concern an environmental health or safety risk. Since this action does not concern a human health risk, EPA's 2021 Policy on Children's Health also does not apply. Although the establishment of these SNURs do not address an existing children's environmental health concern because the chemical uses involved are not ongoing uses, SNURs require that persons notify EPA at least 90 days before commencing manufacture (defined by statute to include import) or processing of any of these chemical substances for an activity that is designated as a significant new use by this rulemaking. This notification allows EPA to assess the intended uses to identify potential risks and take appropriate actions before the activities commence.

H. Executive Order 13211: Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use

This action is not a ''significant energy action'' as defined in Executive Order 13211 (66 FR 28355, May 22, 2001), because it is not likely to have a significant adverse effect on the supply, distribution, or use of energy.

I. National Technology Transfer and Advancement Act (NTTAA)

This action does not involve any technical standards subject to NTTAA section 12(d) (15 U.S.C. 272 note).

J. Executive Order 12898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations and Executive Order 14096: Revitalizing Our Nation's Commitment to Environmental Justice for All

EPA believes that this type of action does not concern human health or environmental conditions and therefore cannot be evaluated with respect to the potentially disproportionate and adverse effects on communities with environmental justice concerns in accordance with Executive Orders 12898 (59 FR 7629, February 16, 1994) and 14096 (88 FR 25251, April 26, 2023). Although this action does not concern human health or environmental conditions, the premanufacture notifications required by these SNURs will allow EPA to assess the intended uses to identify potential disproportionate risks and take appropriate actions before the activities commence.

List of Subjects in 40 CFR part 721

Environmental protection, Chemicals, Hazardous substances, Reporting and recordkeeping requirements.

Kevin DeBell,

Acting Director, Office of Pollution Prevention and Toxics.

Therefore, for the reasons stated in the preamble, EPA proposes to amend 40 CFR chapter I as follows:

PART 721—SIGNIFICANT NEW USES OF CHEMICAL SUBSTANCES

■ 1. The authority citation for part 721 continues to read as follows:

Authority: 15 U.S.C. 2604, 2607, and 2625(c).

■ 2. Add §§ 721.12043 through 721.12076 to Subpart E to read as follows:

Subpart E—Significant New Uses for Specific Chemical Substances

Sec.

* * * * *

721.12043 Heptane, 2-methoxy-2-methyl-.
721.12044 Benzenesulfonic acid, alkyl-, compd. with 1,1′-iminobis[2-propanol] (1:1) (generic).
721.12045 Sugars, polymer with alkanetriamine (generic).
721.12046 Isooctadecanamide, N,N-bis(2-ethylhexyl)-.
721.12047 2-Butanone, oxime, reaction products with trimethoxymethylsilane.
721.12048 2,6-Bis(dialkyl)-4-[2-(1-alkyl-4(1H)-pyridinylidene)alkylidene]-2,5-cycloalkyladien-1-one (generic).
721.12049 Fatty acids, soya, reaction products with ammonia-ethanolamine reaction by-products.
721.12050 1,5-Pentanediamine, 2-methyl-, hydrochloride (1:2).
721.12051 1,5-Pentanediamine, 2-methyl-, hydrochloride (1:1).
721.12052 Formic acid, compd. with 2-methyl-1,5- pentanediamine (2:1).
721.12053 Formic acid, compd. with 2-methyl-1,5-pentanediamine (1:1).
721.12054 Alkadiene, homopolymer, hydroxy-terminated, bis[N-[2-[(1-oxo-2-propen-1-yl)oxylethyl]carbamates] (generic).
721.12055 Oxirane, 2-(chloromethyl)-, homopolymer, ether with dialkyl-alkanediol (2:1) (generic).
721.12056 Aryl, polymer with formaldehyde, glycidyl ether, reaction products with amino alkyl-alkane diamine, cyclohexanediamine and alkylene (alkylcyclohexanamine) (generic).
721.12057 Alkene, alkoxy-, polymer with alkoxyalkene (generic).
721.12058 Methanesulfonamide, 1,1,1-trifluoro-N-[(trifluoromethyl)sulfonyl]-, sodium salt (1:1).
721.12059 1H-Isoindole-1,3(2H)-dione, 3a,4,7,7a-tetrahydro-2-(2-hydroxyethyl).
721.12060 Oxirane, 2-methyl-, polymer with oxirane, mono-isoalkyl ethers, phosphates, salt (generic).
721.12061 Poly(oxy-1,2-ethanediyl), .alpha.-(2-aminoethyl)-.omega.-(2-aminoethoxy)- and Poly(oxy-1,2-ethanediyl), .alpha.,.alpha.′,-(iminodi-2,1- ethanediyl)bis[.omega.-(2-aminoethoxy)-.
721.12062 Alkenoic acid, alkyl, carbopolycyclic alkyl ester, polymer with trihalo (trihaloalkyl) alkyl alkyl alkenoate (generic).
721.12063 Polychloroalkene (generic).
721.12064 Alkanoic acid, trialkyl-, diester with carbomonocycle bis(alkyleneoxy)]bis[alkanediol] (generic).
721.12065 Modified Silsesquioxane, alkoxy-terminated (generic).
721.12066 Vegetable oil, polymer with pimelin ketone, oxymethylene and polymethylenepolyphenylene isocyanate (generic).
721.12067 Silsesquioxanes, 3-mercaptopropyl, polymers with silicic acid (H4SiO4) tetra-Et ester, [(trimethylsilyl)oxy]-terminated.
721.12068 Castor oil, polymer with dicyclopentadiene, maleic anhydride, 2-methyl-1,3-propanediol, 3a,4,7,7a-tetrahydro-2-(2-hydroxyethyl)-1H-isoindole-1,3(2H)-dione and triethylene glycol.
721.12069 Monoaromatic cyclic alkylene sulfonium fluoroalkyl sulfonic acid salt (generic).
721.12070 Monoaromatic cyclic alkylene sulfonium fluoroalkyl sulfonic acid salt (generic).
721.12071 Aromatic sulfonium tricyclo fluoroalkyl sulfonic acid salt (generic).
721.12072 Aromatic dibenzothiophenium fluoroalkyl carbopolycycle sulfonic acid salt (generic).
721.12073 Alkanediol, substituted, polymer with diisocyanatoalkane, substituted heterocycle-modified (generic).
721.12074 Halosubstituted carbopolycycle, polymer with substituted carbomonocycles and oxybis[alkanol] (generic).
721.12075 Polymer of benzenedicarboxylic acid, substituted-benzenedicarboxylic acid, branched-alkyldiol, alkyldiol and triisocyanate (generic).
721.12076 Sulfonium, tricarbocyclic-, alkylcarbomonocyclic-polyfluoro-heteropolycyclic-alkyl sulfonate (1:1), polymer with alkylaryl and carbomonocyclic alkylalkanoate, di-Me 2,2′-(1,2-diazenediyl)bis[2-alkylalkanoate]-initiated (generic).

* * * * *

§ 721.12043 Heptane, 2-methoxy-2-methyl-.

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified as Heptane, 2-methoxy-2-methyl- (PMN P–18–127; CASRN 76589–16–7) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section.

(2) The significant new uses are:

(i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1), (3), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (*e.g.,* enclosure or confinement of the operation, general and local ventilation) or administrative control measures (*e.g.,* workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a) through (d), (f), (g)(1), (3), and (5). For purposes of § 721.72(g)(1), this substance may cause: skin sensitization and specific target organ toxicity. For purposes of § 721.72(g)(3), this substance may be: toxic to aquatic life. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(f). It is a significant new use to manufacture the substance unless by import into the United States in a solution of no greater than 5% by weight (*i.e.,* no domestic manufacture). It is a significant new use to process the substance unless in a solution of no greater than 5% by weight of the substance. It is a significant new use to process for use or use the substance in consumer products unless the concentration of the substance is less than 1% by weight.

(iv) *Release to water.* Requirements as specified in § 721.90(a)(4), (b)(4), and (c)(4), where N=210.

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i), and (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.12044 Benzenesulfonic acid, alkyl-, compd. with 1,1′-iminobis[2-propanol] (1:1) (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as benzenesulfonic acid, alkyl-, compd. with 1,1′-iminobis[2-propanol] (1:1) (PMN P–18–325) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section.

(2) The significant new uses are:

(i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1) and (3), (b), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (*e.g.,* enclosure or confinement of the operation, general and local ventilation) or administrative control measures (*e.g.,* workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(b), the concentration is set at 1.0%.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a) through (f), and (g)(1), (3) and (5). For

purposes of § 721.72(e), the concentration is set at 1.0%. For purposes of § 721.72(g)(1), this substance may cause: skin irritation, eye irritation, and specific target organ toxicity. For purposes § 721.72(g)(3), this substance may be: toxic to aquatic life. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(k). It is a significant new use to manufacture, process, or use the substance in any manner that results in inhalation exposure to the substance. It is a significant new use to process for use or use the substance other than as an industrial cross-linking catalyst.

(iv) *Release to water.* Requirements as specified in § 721.90(a)(1), (b)(1), and (c)(1).

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i), and (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.12045 Sugars, polymer with alkanetriamine (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as sugars, polymer with alkanetriamine (PMN P–20–14) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted or cured.

(2) The significant new uses are:

(i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1) and (3), (b), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (*e.g.,* enclosure or confinement of the operation, general and local ventilation) or administrative control measures (*e.g.,* workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(b), the concentration is set at 1.0%.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a) through (f), (g)(1), (3), and (5). For purposes of § 721.72(e), the concentration is set at 1.0%. For purposes of § 721.72(g)(1), this substance may cause: reproductive toxicity and specific target organ toxicity. For purposes of § 721.72(g)(3), this substance may be: toxic to aquatic life. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(o).

(iv) *Release to water.* Requirements as specified in § 721.90(a)(4), (b)(4), and (c)(4), where N=191.

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i), and (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.12046 Isooctadecanamide, N,N-bis(2-ethylhexyl)-.

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified as isooctadecanamide, N,N-bis(2-ethylhexyl)- (PMN P–21–86; CASRN 1616494–50–8) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been entrained in a polymer.

(2) The significant new uses are:

(i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1) and (3), (b), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (*e.g.,* enclosure or confinement of the operation, general and local ventilation) or administrative control measures (*e.g.,* workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(b), the concentration is set at 1.0%.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a) through (f), (g)(1), and (5). For purposes of § 721.72(e), the concentration is set at 1.0%. For purposes of § 721.72(g)(1), this substance may cause: specific target organ toxicity. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* It is a significant new use to process the substance for use in a consumer product where the concentration of the substance in the consumer product formulation exceeds the confidential percentage listed in the Order. It is a significant new use to use the substance in a consumer product where the concentration of the substance exceeds the confidential percentage listed in the Order.

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.12047 2-Butanone, oxime, reaction products with trimethoxymethylsilane.

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified as 2-butanone, oxime, reaction products with trimethoxymethylsilane (PMN P–21–164; CASRN 2639393–45–4) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted or cured.

(2) The significant new uses are:

(i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1), (3) through (6), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1) and (4), engineering control measures (*e.g.,* enclosure or confinement of the operation, general and local ventilation) or administrative control measures (*e.g.,* workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(a)(5), respirators must provide a National Institute for Occupational Safety and Health (NIOSH) assigned protection factor (APF) of at least 50.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a)

through (d), (f), (g)(1), (3), and (5). For purposes of § 721.72(g)(1), this substance may cause: acute toxicity, carcinogenicity, serious eye damage, reproductive toxicity, skin irritation, skin sensitization, and specific target organ toxicity. For purposes of § 721.72(g)(3), this substance may be: toxic to aquatic life. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* It is a significant new use to load or unload the substance for manufacture, processing, or use in any manner unless under a gas (*e.g.* nitrogen) blanket. It is a significant new use to use the substance unless at 4% or less by weight in formulation. It is a significant new use to apply the substance for use unless by roll, brush, or dip coating.

(iv) *Disposal.* Requirements as specified in § 721.85(a)(1), (b)(1), and (c)(1).

(v) *Release to water.* Requirements as specified in § 721.90(a)(1), (b)(1), and (c)(1).

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.12048 2,6-Bis(dialkyl)-4-[2-(1-alkyl-4(1H)-pyridinylidene)alkylidene]-2,5-cycloalkyladien-1-one (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as 2,6-bis(dialkyl)-4-[2-(1-alkyl-4(1H)-pyridinylidene)alkylidene]-2,5-cycloalkyladien-1-one (generic) (PMN P–21–170) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section.

(2) The significant new uses are:

(i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1), (3) through (6), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1) and (4), engineering control measures (*e.g.,* enclosure or confinement of the operation, general and local ventilation) or administrative control measures (*e.g.,* workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(a)(5), respirators must provide a National Institute for Occupational Safety and Health (NIOSH) assigned protection factor (APF) of at least 10.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a) through (d), (f), (g)(1), (3), and (5). For purposes of § 721.72(g)(1), this substance may cause: acute toxicity, skin irritation, eye irritation, skin sensitization, genetic toxicity, carcinogenicity, reproductive toxicity, and specific target organ toxicity. For purposes of § 721.72(g)(3), this substance may be: toxic to aquatic life. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(k), (t). It is a significant new use to manufacture the substance in excess of an annual volume of 10 kg. It is a significant new use to process for use or use the substance other than as a color indicator for frying oil breakdown. It is a significant new use to manufacture, process, or use the substance in any manner that results in the release of the substance to air except with the use of a HEPA filtration system.

(iv) *Release to water.* Requirements as specified in § 721.90(a)(1), (b)(1), and (c)(1).

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i), and (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.12049 Fatty acids, soya, reaction products with ammonia-ethanolamine reaction by-products.

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified as fatty acids, soya, reaction products with ammonia-ethanolamine reaction by-products (PMN P–21–184; CASRN 2378512–59–3) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section.

(2) The significant new uses are:

(i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1), (3), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (*e.g.,* enclosure or confinement of the operation, general and local ventilation) or administrative control measures (*e.g.,* workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a) through (d), (f), (g)(1), (3), and (5). For purposes of § 721.72(g)(1), this substance may cause: acute toxicity, skin corrosion, skin irritation, serious eye damage, eye irritation, skin sensitization, and specific target organ toxicity. For purposes of § 721.72(g)(3), this substance may be: toxic to aquatic life. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(o), and (y)(1) and (2). It is a significant new use to manufacture, process, or use the substance in any manner that results in the generation of vapor, mist, aerosol, or dust.

(iv) *Release to water.* Requirements as specified in § 721.90(a)(4), (b)(4), and (c)(4), where N=2.

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i), and (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.12050 1,5-Pentanediamine, 2-methyl-, hydrochloride (1:2).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified as 1,5-pentanediamine, 2-methyl-, hydrochloride (1:2) (PMN P–22–3; CASRN 34813–63–3) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section.

(2) The significant new uses are:

(i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1), (3), (b), and (c). When determining which persons are

reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (*e.g.,* enclosure or confinement of the operation, general and local ventilation) or administrative control measures (*e.g.,* workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(b), the concentration is set at 1.0%.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a) through (f), (g)(1), (3), and (5). For purposes of § 721.72(e), the concentration is set at 1.0%. For purposes of § 721.72(g)(1), this substance may cause: acute toxicity, skin irritation, and eye irritation. For purposes of § 721.72(g)(3), this substance may be: toxic to aquatic life. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(o). It is a significant new use to manufacture, process, or use the substance in any manner that results in inhalation exposure to the substance.

(iv) *Release to water.* Requirements as specified in § 721.90(a)(4), (b)(4), and (c)(4), where N=570 of P–22–3, P–22–4, P–22–5, and P–22–6 combined.

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i), and (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.12051 1,5-Pentanediamine, 2-methyl-, hydrochloride (1:1).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified as 1,5-pentanediamine, 2-methyl-, hydrochloride (1:1) (PMN P–22–4; CASRN 1840915–04–9) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section.

(2) The significant new uses are:

(i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1), (3), (b), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (*e.g.,* enclosure or confinement of the operation, general and local ventilation) or administrative control measures (*e.g.,* workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(b), the concentration is set at 1.0%.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a) through (f), (g)(1), (3), and (5). For purposes of § 721.72(e), the concentration is set at 1.0%. For purposes of § 721.72(g)(1), this substance may cause: acute toxicity, skin irritation, eye irritation, serious eye damage, skin corrosion, and specific target organ toxicity. For purposes of § 721.72(g)(3), this substance may be: toxic to aquatic life. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(o). It is a significant new use to manufacture, process, or use the substance in any manner that results in inhalation exposure to the substance.

(iv) *Release to water.* Requirements as specified in § 721.90(a)(4), (b)(4), and (c)(4), where N=570 of P–22–3, P–22–4, P–22–5, and P–22–6 combined.

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i), and (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.12052 Formic acid, compd. with 2-methyl-1,5- pentanediamine (2:1).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified as formic acid, compd. with 2-methyl-1,5- pentanediamine (2:1) (PMN P–22–5; CASRN 1836131–73–7) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section.

(2) The significant new uses are:

(i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1) and (3), (b), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (*e.g.,* enclosure or confinement of the operation, general and local ventilation) or administrative control measures (*e.g.,* workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(b), the concentration is set at 1.0%.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a) through (f), (g)(1), (3), and (5). For purposes of § 721.72(e), the concentration is set at 1.0%. For purposes of § 721.72(g)(1), this substance may cause: acute toxicity, skin irritation, eye irritation, and specific target organ toxicity. For purposes of § 721.72(g)(3), this substance may be: toxic to aquatic life. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(o). It is a significant new use to manufacture, process, or use the substance in any manner that results in inhalation exposure to the substance.

(iv) *Release to water.* Requirements as specified in § 721.90(a)(4), (b)(4), and (c)(4), where N=570 of P–22–3, P–22–4, P–22–5, and P–22–6 combined.

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i), and (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.12053 Formic acid, compd. with 2-methyl-1,5-pentanediamine (1:1).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified as formic acid, compd. with 2-methyl-1,5-pentanediamine (1:1) (PMN P–22–6; CASRN 1836131–75–9) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section.

(2) The significant new uses are:

(i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1) and (3), (b), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (*e.g.,* enclosure or confinement of the operation, general

and local ventilation) or administrative control measures (*e.g.,* workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(b), the concentration is set at 1.0%.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a) through (f), (g)(1), (3), and (5). For purposes of § 721.72(e), the concentration is set at 1.0%. For purposes of § 721.72(g)(1), this substance may cause: acute toxicity, skin corrosion, skin irritation, serious eye damage, eye irritation, and specific target organ toxicity. For purposes of § 721.72(g)(3), this substance may be: toxic to aquatic life. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(o). It is a significant new use to manufacture, process, or use the substance in any manner that results in inhalation exposure to the substance.

(iv) *Release to water.* Requirements as specified in § 721.90(a)(4), (b)(4), and (c)(4), where N=570 of P–22–3, P–22–4, P–22–5, and P–22–6 combined.

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i), and (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.12054 Alkadiene, homopolymer, hydroxy-terminated, bis[N-[2-[(1-oxo-2-propen-1- yl)oxylethyl]carbamates] (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as alkadiene, homopolymer, hydroxy-terminated, bis[N-[2-[(1-oxo-2-propen-1-yl)oxylethyl]carbamates] (PMN P–22–11) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section.

(2) The significant new uses are:

(i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1), (3), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (*e.g.,* enclosure or confinement of the operation, general and local ventilation) or administrative control measures (*e.g.,* workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a) through (d), (f), (g)(1), and (5). For purposes of § 721.72(g)(1), this substance may cause: skin sensitization, respiratory sensitization, reproductive toxicity, and specific target organ toxicity. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(o). It is a significant new use to manufacture, process, or use the substance in any manner that results in inhalation exposure to the substance.

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.12055 Oxirane, 2-(chloromethyl)-, homopolymer, ether with dialkyl-alkanediol (2:1) (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as oxirane, 2-(chloromethyl)-, homopolymer, ether with dialkyl-alkanediol (2:1) (PMN P–22–25) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section.

(2) The significant new uses are:

(i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1), (3), (b), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (*e.g.,* enclosure or confinement of the operation, general and local ventilation) or administrative control measures (*e.g.,* workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(b), the concentration is set at 0.1%.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a) through (f), (g)(1), and (5). For purposes of § 721.72(e), the concentration is set at 0.1%. For purposes of § 721.72(g)(1), this substance may cause: acute toxicity, skin irritation, eye irritation, genetic toxicity, carcinogenicity, and specific target organ toxicity. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(g), (t), (y)(1), and (2). It is a significant new use to manufacture, process, or use the substance in any manner that generates a vapor, mist, aerosol, or dust.

(iv) *Disposal.* It is a significant new use to dispose of the substance, or waste streams containing the substance, other than by hazardous waste incineration.

(v) *Release to water.* Requirements as specified in § 721.90(a)(1), (b)(1), and (c)(1).

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.12056 Aryl, polymer with formaldehyde, glycidyl ether, reaction products with amino alkyl-alkane diamine, cyclohexanediamine and alkylene (alkylcyclohexanamine) (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as aryl, polymer with formaldehyde, glycidyl ether, reaction products with amino alkyl-alkane diamine, cyclohexanediamine and alkylene (alkylcyclohexanamine) (PMN P–22–49) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted or cured.

(2) The significant new uses are:

(i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1), (3) through (6), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1) and (4), engineering control measures (*e.g.,*

enclosure or confinement of the operation, general and local ventilation) or administrative control measures (*e.g.,* workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(a)(5), respirators must provide a National Institute for Occupational Safety and Health (NIOSH) assigned protection factor (APF) of at least 1,000.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a) through (d), (f), (g)(1), (3), and (5). For purposes of § 721.72(g)(1), this substance may cause: acute toxicity, skin irritation, eye irritation, skin corrosion, serious eye damage, respiratory sensitization, skin sensitization, genetic toxicity, reproductive toxicity, and specific target organ toxicity. For purposes of § 721.72(g)(3), this substance may be: toxic to aquatic life. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(o).

(iv) *Release to water.* Requirements as specified in § 721.90(a)(4), (b)(4), and (c)(4), where N=2.

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i), and (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.12057 Alkene, alkoxy-, polymer with alkoxyalkene (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as alkene, alkoxy-, polymer with alkoxyalkene (PMN P–22–50) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section.

(2) The significant new uses are:

(i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1) and (3), (b), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (*e.g.,* enclosure or confinement of the operation, general and local ventilation) or administrative control measures (*e.g.,* workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(b), the concentration is set at 1.0%.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a) through (f), (g)(1), (3), and (5). For purposes of § 721.72(e), the concentration is set at 1.0%. For purposes of § 721.72(g)(1), this substance may cause: skin irritation, eye irritation, and specific target organ toxicity. For purposes of § 721.72(g)(3), this substance may be: toxic to aquatic life. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(k) and (o). It is a significant new use to manufacture, process, or use the substance in any manner that results in inhalation exposure to the substance.

(iv) *Release to water.* Requirements as specified in § 721.90(a)(1), (b)(1), and (c)(1).

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i), and (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.12058 Methanesulfonamide, 1,1,1-trifluoro-N-[(trifluoromethyl)sulfonyl]-, sodium salt (1:1).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified as Methanesulfonamide, 1,1,1-trifluoro-N-[(trifluoromethyl)sulfonyl]-, sodium salt (1:1) (PMN P–22–58; CASRN 91742–21–1) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been incorporated into an article.

(2) The significant new uses are:

(i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1), (3) through (6), (b), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1) and (4), engineering control measures (*e.g.,* enclosure or confinement of the operation, general and local ventilation) or administrative control measures (*e.g.,* workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(a)(5), respirators must provide a National Institute for Occupational Safety and Health (NIOSH) assigned protection factor (APF) of at least 50. For purposes of § 721.63(b), the concentration is set at 1.0%.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a) through (f), (g)(1), (3), and (5). For purposes of § 721.72(e), the concentration is set at 1.0%. For purposes of § 721.72(g)(1), this substance may cause: acute toxicity, serious eye damage, skin irritation, reproductive toxicity, and specific target organ toxicity. For purposes of § 721.72(g)(3), this substance may be: toxic to aquatic life. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(b), (k), (v)(2), and (y)(1) and (2). It is a significant new use to process the substance in a manner that generates a vapor, mist, aerosol, or dust that results in inhalation to workers.

(iv) *Release to water.* Requirements as specified in § 721.90(a)(4), (b)(4), and (c)(4), where N=100.

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i), and (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.12059 1H-Isoindole-1,3(2H)-dione, 3a,4,7,7a-tetrahydro-2-(2-hydroxyethyl)-.

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified as 1H-Isoindole-1,3(2H)-dione, 3a,4,7,7a-tetrahydro-2-(2-hydroxyethyl)- (PMN P–22–75; CASRN 15458–48–7) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted or cured.

(2) The significant new uses are:

(i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1), (3), (b), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (*e.g.,* enclosure or confinement of the operation, general and local ventilation) or administrative control measures (*e.g.,* workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(b), the concentration is set at 1.0%.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a) through (f), (g)(1), (3), and (5). For purposes of § 721.72(e), the concentration is set at 1.0%. For purposes of § 721.72(g)(1), this substance may cause: acute toxicity, skin irritation, eye irritation, and specific target organ toxicity. For purposes of § 721.72(g)(3), this substance may be: toxic to aquatic life. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(f), (k), and (t). It is a significant new use to manufacture the substance in excess of an annual volume of 3,000 kg. It is a significant new use to use the substance other than as a monomer used to produce an unsaturated polyester resin.

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.12060 Oxirane, 2-methyl-, polymer with oxirane, mono-isoalkyl ethers, phosphates, salt (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as oxirane, 2-methyl-, polymer with oxirane, mono-isoalkyl ethers, phosphates, salt (PMN P–22–78) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section.

(2) The significant new uses are:

(i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1), (3), (b), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (*e.g.,* enclosure or confinement of the operation, general and local ventilation) or administrative control measures (*e.g.,* workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(b), the concentration is set at 1.0%.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a) through (f), (g)(1), (3), and (5). For purposes of § 721.72(e), the concentration is set at 1.0%. For purposes of § 721.72(g)(1), this substance may cause: skin irritation and specific target organ toxicity. For purposes of § 721.72(g)(3), this substance may be: toxic to aquatic life. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(k). It is a significant new use to manufacture or process the substance in a manner that generates a vapor, mist, aerosol, or dust. It is a significant new use to process for use or use the substance other than as a dispersing agent for pesticide formulations.

(iv) *Release to water.* Requirements as specified in § 721.90(a)(4), (b)(4), and (c)(4), where N=23.

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i), and (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.12061 Poly(oxy-1,2-ethanediyl), .alpha.-(2-aminoethyl)-.omega.-(2-aminoethoxy)- and Poly(oxy-1,2-ethanediyl), .alpha.,.alpha.′,-(iminodi-2,1-ethanediyl)bis[.omega.-(2-aminoethoxy)-.

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified as poly(oxy-1,2-ethanediyl), .alpha.-(2-aminoethyl)-.omega.-(2-aminoethoxy)- and poly(oxy-1,2-ethanediyl), .alpha.,.alpha.′,-(iminodi-2,1-ethanediyl)bis[.omega.-(2-aminoethoxy)- (PMN P–22–80; CAS Nos. 24991–53–5 and 90350–34–8) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted or destroyed.

(2) The significant new uses are:

(i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1), (3), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (*e.g.,* enclosure or confinement of the operation, general and local ventilation) or administrative control measures (*e.g.,* workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a) through (d), (f), (g)(1), (3), and (5). For purposes of § 721.72(g)(1), this substance may cause: acute toxicity, skin corrosion, serious eye damage, and skin sensitization. For purposes of § 721.72(g)(3), this substance may be: toxic to aquatic life. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* It is a significant new use to manufacture, process, or use the substance in any manner that results in inhalation exposure to the substance.

(iv) *Release to water.* Requirements as specified in § 721.90(a)(4), (b)(4), and (c)(4), where N=0.7.

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i), and (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.12062 Alkenoic acid, alkyl, carbopolycyclic alkyl ester, polymer with trihalo (trihaloalkyl) alkyl alkyl alkenoate (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as alkenoic acid, alkyl, carbopolycyclic alkyl ester, polymer with trihalo (trihaloalkyl) alkyl alkyl alkenoate (PMN P–22–82) is subject to reporting under this section for the significant new uses described in

paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been entrained in dried photoresist.

(2) The significant new uses are:

(i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1), (3), (b), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (*e.g.,* enclosure or confinement of the operation, general and local ventilation) or administrative control measures (*e.g.,* workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(b), the concentration is set at 1.0%.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a) through (f), (g)(1), and (5). For purposes of § 721.72(e), the concentration is set at 1.0%. For purposes of § 721.72(g)(1), this substance may cause: reproductive toxicity and specific target organ toxicity. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(f), (k), (v)(1), (2) and (4), (w)(1), (2) and (4), and (x)(1), (2) and (4). It is a significant new use to manufacture the substance other than by import into the United States (*i.e.,* no domestic manufacture) in a liquid formulation.

(iv) *Disposal.* Requirements as specified in § 721.85(a)(1), (b)(1), and (c)(1).

(v) *Release to water.* Requirements as specified in § 721.90(a)(1), (b)(1), and (c)(1).

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.12063 Polychloroalkene (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as polychloroalkene (PMN P–22–121) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted.

(2) The significant new uses are:

(i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1), (3) through (6), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1) and (4), engineering control measures (*e.g.,* enclosure or confinement of the operation, general and local ventilation) or administrative control measures (*e.g.,* workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(a)(5), respirators must provide a National Institute for Occupational Safety and Health (NIOSH) assigned protection factor (APF) of at least 50.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a) through (d), (f), (g)(1), (3), and (5). For purposes of § 721.72(g)(1), this substance may cause: acute toxicity, skin irritation, serious eye damage, skin sensitization, genetic toxicity, carcinogenicity, and specific target organ toxicity. For purposes of § 721.72(g)(3), this substance may be: toxic to aquatic life. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(f) and (k). It is a significant new use to process, use, load, or unload the substance unless under a gas (*e.g.,* nitrogen) blanket or in a closed system except that sampling may occur outside the closed system resulting in exposures.

(iv) *Release to water.* Requirements as specified in § 721.90(a)(4), (b)(4), and (c)(4), where N=0.15.

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i), and (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.12064 Alkanoic acid, trialkyl-, diester with carbomonocycle bis(alkyleneoxy)]bis[alkanediol] (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as alkanoic acid, trialkyl-, diester with carbomonocycle bis(alkyleneoxy)]bis[alkanediol] (PMN P–22–145) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section.

(2) The significant new uses are:

(i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1), (3), (b), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (*e.g.,* enclosure or confinement of the operation, general and local ventilation) or administrative control measures (*e.g.,* workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(b), the concentration is set at 1.0%.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a) through (f), (g)(1), (3), and (5). For purposes of § 721.72(e), the concentration is set at 1.0%. For purposes of § 721.72(g)(1), this substance may cause: acute toxicity, reproductive toxicity, and specific target organ toxicity. For purposes of § 721.72(g)(3), this substance may be: toxic to aquatic life. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(o). It is a significant new use to use the substance in any manner that may generate a spray, mist, vapor, or aerosol containing the substance unless the concentration of the substance is less than 5.7% by weight.

(iv) *Disposal.* Requirements as specified in § 721.85(a)(1), (b)(1), and (c)(1).

(v) *Release to water.* Requirements as specified in § 721.90(a)(1), (b)(1), and (c)(1).

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.12065 Modified Silsesquioxane, alkoxy-terminated (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as modified silsesquioxane, alkoxy-terminated (PMN P–22–175) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section.

(2) The significant new uses are:

(i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1), (3) through (6), (b), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1) and (4), engineering control measures (*e.g.,* enclosure or confinement of the operation, general and local ventilation) or administrative control measures (*e.g.,* workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(a)(5), respirators must provide a National Institute for Occupational Safety and Health (NIOSH) assigned protection factor (APF) of at least 10. For purposes of § 721.63(b), the concentration is set at 1.0%.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a) through (f), (g)(1), (3), and (5). For purposes of § 721.72(e), the concentration is set at 1.0%. For purposes of § 721.72(g)(1), this substance may cause: skin irritation, eye irritation, and specific target organ toxicity. For purposes of § 721.72(g)(3), this substance may be: toxic to aquatic life. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(f). It is a significant new use to use the substance unless the concentration of the substance does not exceed 10% by weight in formulation.

(iv) *Release to water.* Requirements as specified in § 721.90(a)(4), (b)(4), and (c)(4), where N=7.

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i), and (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.12066 Vegetable oil, polymer with pimelin ketone, oxymethylene and polymethylenepolyphenylene isocyanate (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as vegetable oil, polymer with pimelin ketone, oxymethylene and polymethylenepolyphenylene isocyanate (PMN P–23–18) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted or cured.

(2) The significant new uses are:

(i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1) and (3), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (*e.g.,* enclosure or confinement of the operation, general and local ventilation) or administrative control measures (*e.g.,* workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a) through (d), (f), (g)(1), and (5). For purposes of § 721.72(g)(1), this substance may cause: acute toxicity, skin irritation, eye irritation, respiratory sensitization, skin sensitization, genetic toxicity, carcinogenicity, reproductive toxicity, and specific target organ toxicity. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(o). It is a significant new use to manufacture, process, or use the substance in any manner that results in inhalation exposure to the substance.

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.12067 Silsesquioxanes, 3-mercaptopropyl, polymers with silicic acid (H4SiO4) tetra-Et ester, [(trimethylsilyl)oxy]-terminated.

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified as silsesquioxanes, 3-mercaptopropyl, polymers with silicic acid (H4SiO4) tetra-Et ester, [(trimethylsilyl)oxy]-terminated (PMN P–23–20; CASRN 2796383–42–9) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted or cured.

(2) The significant new uses are:

(i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1), (3), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (*e.g.,* enclosure or confinement of the operation, general and local ventilation) or administrative control measures (*e.g.,* workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a) through (d), (f), (g)(1), (3), and (5). For purposes of § 721.72(g)(1), this substance may cause: skin sensitization and specific target organ toxicity. For purposes of § 721.72(g)(3), this substance may be: toxic to aquatic life. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(k). It is a significant new use to manufacture, process, or use the substance in any manner that results inhalation exposure.

(iv) *Release to water.* Requirements as specified in § 721.90(a)(4), (b)(4), and (c)(4), where N=3.

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i), and (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.12068 Castor oil, polymer with dicyclopentadiene, maleic anhydride, 2-methyl-1,3-propanediol, 3a,4,7,7a-tetrahydro-2-(2-hydroxyethyl)-1H-isoindole-1,3(2H)-dione and triethylene glycol.

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified as castor oil, polymer with dicyclopentadiene, maleic anhydride, 2-methyl-1,3-propanediol, 3a,4,7,7a-tetrahydro-2-(2-hydroxyethyl)-1H-isoindole-1,3(2H)-dione and triethylene glycol (PMN P–23–36; CASRN 2794200–69–2) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted or cured.

(2) The significant new uses are:

(i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1), (3), (b), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (*e.g.,* enclosure or confinement of the operation, general and local ventilation) or administrative control measures (*e.g.,* workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(b), the concentration is set at 1.0%.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a) through (f), (g)(1), (3), and (5). For purposes of § 721.72(e), the concentration is set at 1.0%. For purposes of § 721.72(g)(1), this substance may cause: skin irritation, eye irritation, and specific target organ toxicity. For purposes of § 721.72(g)(3), this substance may be: toxic to aquatic life. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(o), (y)(1), and (2). It is a significant new use to manufacture or process the substance in a manner that generates a vapor, mist, aerosol, or dust.

(iv) *Release to water.* Requirements as specified in § 721.90(a)(4), (b)(4), and (c)(4), where N=27.

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i), and (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.12069 Monoaromatic cyclic alkylene sulfonium fluoroalkyl sulfonic acid salt (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as monoaromatic cyclic alkylene sulfonium fluoroalkyl sulfonic acid salt (PMN P–23–37) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted or adhered (during photolithographic processes) onto a semiconductor wafer surface or similar manufactured article used in the production of semiconductor technologies.

(2) The significant new uses are:

(i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1), (2)(i) and (iii), (3), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (*e.g.,* enclosure or confinement of the operation, general and local ventilation) or administrative control measures (*e.g.,* workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a) through (d), (f), (g)(1), (2)(i) through (iii), (v), (3)(i) and (ii), and (5). For purposes of § 721.72(g)(1), this substance may cause: acute toxicity, skin irritation, skin sensitization, genetic toxicity, and specific target organ toxicity. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(f), (k), and (t). It is a significant new use to import the substance other than in solution, or in sealed containers weighing 5 kilograms or less. It is a significant new use to modify the processing or use of the substance in any way that generates dust, mist, or aerosol in a non-enclosed process. It is a significant new use to manufacture the substance longer than 18 months.

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.12070 Monoaromatic cyclic alkylene sulfonium fluoroalkyl sulfonic acid salt (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as monoaromatic cyclic alkylene sulfonium fluoroalkyl sulfonic acid salt (PMN P–23–44) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted or adhered (during photolithographic processes) onto a semiconductor wafer surface or similar manufactured article used in the production of semiconductor technologies.

(2) The significant new uses are:

(i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1), (2)(i) and (iii), (3), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (*e.g.,* enclosure or confinement of the operation, general and local ventilation) or administrative control measures (*e.g.,* workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a) through (d), (f), (g)(1), (2)(i) through (iii), (v), (3)(i) and (ii), and (5). For purposes of § 721.72(g)(1), this substance may cause: acute toxicity, skin irritation, serious eye damage, reproductive toxicity, skin sensitization, genetic toxicity, and specific target organ toxicity. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(f), (k), and (t). It is a significant new use to import the substance other than in solution, or in sealed containers weighing 5 kilograms or less. It is a significant new use to modify the processing or use of the substance in any way that generates

dust, mist, or aerosol in a non-enclosed process. It is a significant new use to manufacture the substance longer than 18 months.

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.12071 Aromatic sulfonium tricyclo fluoroalkyl sulfonic acid salt (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as aromatic sulfonium tricyclo fluoroalkyl sulfonic acid salt (PMN P–23–80) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted or adhered (during photolithographic processes) onto a semiconductor wafer surface or similar manufactured article used in the production of semiconductor technologies.

(2) The significant new uses are:

(i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1), (2)(i) and (iii), (3), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (*e.g.,* enclosure or confinement of the operation, general and local ventilation) or administrative control measures (*e.g.,* workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a) through (d), (f), (g)(1), (2)(i) through (iii), (v), (3)(i) and (ii), and (5). For purposes of § 721.72(g)(1), this substance may cause: acute toxicity, skin irritation, serious eye damage, skin sensitization, genetic toxicity, and specific target organ toxicity. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(f), (k), and (t). It is a significant new use to import the substance other than in solution, or in sealed containers weighing 5 kilograms or less. It is a significant new use to modify the processing or use of the substance in any way that generates dust, mist, or aerosol in a non-enclosed process. It is a significant new use to manufacture the substance longer than 18 months.

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.12072 Aromatic dibenzothiophenium fluoroalkyl carbopolycycle sulfonic acid salt (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as aromatic dibenzothiophenium fluoroalkyl carbopolycycle sulfonic acid salt (PMN P–23–93) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted or adhered (during photolithographic processes) onto a semiconductor wafer surface or similar manufactured article used in the production of semiconductor technologies.

(2) The significant new uses are:

(i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1), (2)(i) and (iii), (3), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (*e.g.,* enclosure or confinement of the operation, general and local ventilation) or administrative control measures (*e.g.,* workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a) through (d), (f), (g)(1), (2)(i) through (iii), (v), (3)(i) and (ii), and (5). For purposes of § 721.72(g)(1), this substance may cause: acute toxicity, skin irritation, serious eye damage, reproductive toxicity, skin sensitization, genetic toxicity, and specific target organ toxicity. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(f), (k), and (t). It is a significant new use to import the substance other than in solution, or in sealed containers weighing 5 kilograms or less. It is a significant new use to modify the processing or use of the substance in any way that generates dust, mist, or aerosol in a non-enclosed process. It is a significant new use to manufacture the substance longer than 18 months.

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.12073 Alkanediol, substituted, polymer with diisocyanatoalkane, substituted heterocycle-modified (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as alkanediol, substituted, polymer with diisocyanatoalkane, substituted heterocycle-modified (PMN P–23–64) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted or cured.

(2) The significant new uses are:

(i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1), (3), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (*e.g.,* enclosure or confinement of the operation, general and local ventilation) or administrative control measures (*e.g.,* workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a) through (d), (f), (g)(1), and (5). For purposes of § 721.72(g)(1), this substance may cause: skin sensitization and specific target organ toxicity. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA

Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(o), and (y)(1) and (2). It is a significant new use to manufacture or process the substance in a manner that generates a vapor, mist, aerosol, or dust.

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.12074 Halosubstituted carbopolycycle, polymer with substituted carbomonocycles and oxybis[alkanol] (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as halosubstituted carbopolycycle, polymer with substituted carbomonocycles and oxybis[alkanol] (PMN P–23–72) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted or cured.

(2) The significant new uses are:

(i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1), (3) through (6), (b), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1) and (4), engineering control measures (*e.g.,* enclosure or confinement of the operation, general and local ventilation) or administrative control measures (*e.g.,* workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(a)(5), respirators must provide a National Institute for Occupational Safety and Health (NIOSH) assigned protection factor (APF) of at least 10. For purposes of § 721.63(b), the concentration is set at 0.1%.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a) through (f), (g)(1), (3), and (5). For purposes of § 721.72(e), the concentration is set at 0.1%. For purposes of § 721.72(g)(1), this substance may cause: genetic toxicity, carcinogenicity, and specific target organ toxicity. For purposes of § 721.72(g)(3), this substance may be: toxic to aquatic life. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(o). It is a significant new use to process for use or use the substance other than in an enclosed roll-coating lithographic printing machine. It is a significant new use to process for use or use the substance to a final formulation for coating application that exceeds 40% by weight.

(iv) *Disposal.* Requirements as specified in § 721.85(a)(2), (b)(2), and (c)(2).

(v) *Release to water.* Requirements as specified in § 721.90(a)(1), (b)(1), and (c)(1).

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.12075 Polymer of benzenedicarboxylic acid, substituted-benzenedicarboxylic acid, branched-alkyldiol, alkyldiol and triisocyanate (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as polymer of benzenedicarboxylic acid, substituted-benzenedicarboxylic acid, branched-alkyldiol, alkyldiol and triisocyanate (PMN P–23–94) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted or cured.

(2) The significant new uses are:

(i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1), (3), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (*e.g.,* enclosure or confinement of the operation, general and local ventilation) or administrative control measures (*e.g.,* workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a) through (d), (f), (g)(1), and (5). For purposes of § 721.72(g)(1), this substance may cause: skin sensitization, respiratory sensitization, and specific target organ toxicity. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(o). It is a significant new use to manufacture, process, or use the substance in any manner that results inhalation exposure.

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.12076 Sulfonium, tricarbocyclic-, alkylcarbomonocyclic-polyfluoro-heteropolycyclic-alkyl sulfonate (1:1), polymer with alkylaryl and carbomonocyclic alkylalkanoate, di-Me 2,2′-(1,2-diazenediyl)bis[2-alkylalkanoate]-initiated (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as sulfonium, tricarbocyclic-, alkylcarbomonocyclic-polyfluoro-heteropolycyclic-alkyl sulfonate (1:1), polymer with alkylaryl and carbomonocyclic alkylalkanoate, di-Me 2,2′-(1,2-diazenediyl)bis[2-alkylalkanoate]-initiated (PMN P–23–172) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted or adhered (during photolithographic processes) onto a semiconductor wafer surface or similar manufactured article used in the production of semiconductor technologies.

(2) The significant new uses are:

(i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1), (2)(i) and (iii), (3), and (c). When determining which persons are reasonably likely to be exposed as

required for § 721.63(a)(1), engineering control measures (*e.g.,* enclosure or confinement of the operation, general and local ventilation) or administrative control measures (*e.g.,* workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a) through (d), (f), (g)(1), (2)(i) through (iii), (v), (3)(i) and (ii), and (5). For purposes of § 721.72(g)(1), this substance may cause: acute toxicity, skin irritation, serious eye damage, skin sensitization, genetic toxicity, reproductive toxicity, and specific target organ toxicity. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(f), (k), and (t). It is a significant new use to import the substance other than in solution, or in sealed containers weighing 5 kilograms or less. It is a significant new use to modify the processing of the substance in any way that generates dust, mist, or aerosol in a non-enclosed process. It is a significant new use to manufacture the substance longer than 18 months.

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

BILLING CODE 6560–50–P

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

50 CFR Part 17

[Docket No. FWS–R7–ES–2024–0117; FXES1111090FEDR–256–FF09E21000]

RIN 1018–BI15

Endangered and Threatened Wildlife and Plants; Endangered Species Status for Suckley's Cuckoo Bumble Bee

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Proposed rule.

SUMMARY: We, the U.S. Fish and Wildlife Service (Service), propose to list the Suckley's cuckoo bumble bee (*Bombus suckleyi*), an invertebrate species from North America, as an endangered species under the Endangered Species Act of 1973, as amended (Act). This determination also serves as our 12-month finding on a petition to list the Suckley's cuckoo bumble bee. After a review of the best available scientific and commercial information, we find that listing the species is warranted. Accordingly, we propose to list the species as an endangered species under the Act. If we finalize this rule as proposed, it would add this species to the List of Endangered and Threatened Wildlife and extend the Act's protections to the species. Due to the current lack of data sufficient to perform required analyses, we conclude that the designation of critical habitat for the species is not determinable at this time.

DATES: We will accept comments received or postmarked on or before February 18, 2025. Comments submitted electronically using the Federal eRulemaking Portal (see **ADDRESSES**, below) must be received by 11:59 p.m. eastern time on the closing date. We must receive requests for a public hearing, in writing, at the address shown in **FOR FURTHER INFORMATION CONTACT** by January 31, 2025.

ADDRESSES: You may submit comments by one of the following methods:

(1) *Electronically:* Go to the Federal eRulemaking Portal:

https://www.regulations.gov. In the Search box, enter FWS–R7–ES–2024–0117, which is the docket number for this rulemaking. Then, click on the Search button. On the resulting page, in the panel on the left side of the screen, under the Document Type heading, check the Proposed Rule box to locate this document. You may submit a comment by clicking on ''Comment.''

(2) *By hard copy:* Submit by U.S. mail to: Public Comments Processing, Attn: FWS–R7–ES–2024–0117, U.S. Fish and Wildlife Service, MS: PRB/3W, 5275 Leesburg Pike, Falls Church, VA 22041–3803.

We request that you send comments only by the methods described above. We will post all comments on *https://www.regulations.gov.* This generally means that we will post any personal information you provide us (see Information Requested, below, for more information).

Availability of supporting materials: Supporting materials, such as the species status assessment report, are available at *https://www.regulations.gov* at Docket No. FWS–R7–ES–2024–0117.

FOR FURTHER INFORMATION CONTACT: Mike Daigneault, Acting Field Supervisor, Southern Alaska Fish and Wildlife Field Office, 4700 BLM Road, Anchorage, AK 99507; telephone 907–271–1467. Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States. Please see Docket No. FWS–R7–ES–2024–0117 on *https://www.regulations.gov* for a document that summarizes this proposed rule.

SUPPLEMENTARY INFORMATION:

Executive Summary

Why we need to publish a rule. Under the Act, a species warrants listing if it meets the definition of an endangered species (in danger of extinction throughout all or a significant portion of its range) or a threatened species (likely to become an endangered species within the foreseeable future throughout all or a significant portion of its range). If we determine that a species warrants listing, we must list the species promptly and designate the species' critical habitat to the maximum extent prudent and determinable. We have determined that Suckley's cuckoo bumble bee meets the Act's definition of an endangered species; therefore, we are proposing to list it as such. Listing a species as an endangered or threatened species can be completed only by issuing a rule through the Administrative Procedure Act rulemaking process (5 U.S.C. 551 *et seq.*).

What this document does. We propose to list Suckley's cuckoo bumble bee as an endangered species under the Act.

The basis for our action. Under the Act, we may determine that a species is an endangered or a threatened species because of any of five factors: (A) The present or threatened destruction, modification, or curtailment of its habitat or range; (B) overutilization for commercial, recreational, scientific, or educational purposes; (C) disease or predation; (D) the inadequacy of existing regulatory mechanisms; or (E) other natural or manmade factors affecting its continued existence. We have determined that Suckley's cuckoo bumble bee meets the Act's definition of an endangered species due to threats

from host species decline, pathogens, pesticides, habitat fragmentation and conversion, and climate change.

Section 4(a)(3) of the Act requires the Secretary of the Interior (Secretary), to the maximum extent prudent and determinable, concurrently with listing designate critical habitat for the species. We have not yet obtained the necessary economic information needed to develop a proposed critical habitat designation for the Suckley's cuckoo bumble bee, although we are in the process of obtaining this information. At this time, we find that designation of critical habitat for the Suckley's cuckoo bumble bee is not determinable. When critical habitat is not determinable, the Act allows the Service an additional year to publish a critical habitat designation (16 U.S.C. 1533(b)(6)(C)(ii)).

Information Requested

We intend that any final action resulting from this proposed rule will be based on the best scientific and commercial data available and be as accurate and as effective as possible. Therefore, we request comments or information from other governmental agencies, Native American Tribes, the scientific community, industry, or any other interested parties concerning this proposed rule. We particularly seek comments concerning:

(1) The species' biology, range, and population trends, including:

(a) Biological or ecological requirements of the species, including habitat requirements for feeding, breeding, and sheltering;

(b) Genetics and taxonomy;

(c) Historical and current range, including distribution patterns and the locations of any additional populations of this species;

(d) Historical and current population levels, and current and projected trends; and

(e) Past and ongoing conservation measures for the species, its habitat, or both.

(2) Threats and conservation actions affecting the species, including:

(a) Factors that may be affecting the continued existence of the species, which may include habitat modification or destruction, overutilization, disease, predation, the inadequacy of existing regulatory mechanisms, or other natural or manmade factors;

(b) Biological, commercial trade, or other relevant data concerning any threats (or lack thereof) to this species; and

(c) Existing regulations or conservation actions that may be addressing threats to this species.

(3) Additional information concerning the historical and current status of this species.

(4) The reasons why we should or should not designate habitat as ''critical habitat'' under section 4 of the Act (16 U.S.C. 1531 *et seq.*), including information to inform the following factors that the regulations identify as reasons why designation of critical habitat may be not prudent:

(a) The species is threatened by taking or other human activity and identification of critical habitat can be expected to increase the degree of such threat to the species;

(b) The present or threatened destruction, modification, or curtailment of a species' habitat or range is not a threat to the species, or threats to the species' habitat stem solely from causes that cannot be addressed through management actions resulting from consultations under section 7(a)(2) of the Act;

(c) Areas within the jurisdiction of the United States provide no more than negligible conservation value, if any, for a species occurring primarily outside the jurisdiction of the United States; or

(d) No areas meet the definition of critical habitat.

Please include sufficient information with your submission (such as scientific journal articles or other publications) to allow us to verify any scientific or commercial information you include.

Please note that submissions merely stating support for, or opposition to, the action under consideration without providing supporting information, although noted, do not provide substantial information necessary to support a determination. Section 4(b)(1)(A) of the Act directs that determinations as to whether any species is an endangered or a threatened species must be made solely on the basis of the best scientific and commercial data available.

You may submit your comments and materials concerning this proposed rule by one of the methods listed in **ADDRESSES**. We request that you send comments only by the methods described in **ADDRESSES.**

If you submit information via *https://www.regulations.gov,* your entire submission—including any personal identifying information—will be posted on the website. If your submission is made via a hardcopy that includes personal identifying information, you may request at the top of your document that we withhold this information from public review. However, we cannot guarantee that we will be able to do so. We will post all hardcopy submissions on *https://www.regulations.gov.*

Comments and materials we receive, as well as supporting documentation we used in preparing this proposed rule, will be available for public inspection on *https://www.regulations.gov.*

Our final determination may differ from this proposal because we will consider all comments we receive during the comment period as well as any information that may become available after this proposal. Based on the new information we receive (and, if relevant, any comments on that new information), we may conclude that the species is threatened instead of endangered, or we may conclude that the species does not warrant listing as either an endangered species or a threatened species. In our final rule, we will clearly explain our rationale and the basis for our final decision, including why we made changes, if any, that differ from this proposal.

Public Hearing

Section 4(b)(5) of the Act provides for a public hearing on this proposal, if requested. Requests must be received by the date specified in DATES. Such requests must be sent to the address shown in **FOR FURTHER INFORMATION CONTACT**. We will schedule a public hearing on this proposal, if requested, and announce the date, time, and place of the hearing, as well as how to obtain reasonable accommodations, in the **Federal Register** and local newspapers at least 15 days before the hearing. We may hold the public hearing in person or virtually via webinar. We will announce any public hearing on our website, in addition to the **Federal Register**. The use of virtual public hearings is consistent with our regulations at 50 CFR 424.16(c)(3).

Previous Federal Actions

We were petitioned on April 23, 2020, by the Center for Biological Diversity to list Suckley's cuckoo bumble bee as an endangered species and to designate critical habitat for this species under the Act. On May 11, 2021, we announced in the **Federal Register** (86 FR 25833) that the petition presented substantial information indicating that this species may be warranted for listing; that document also announced the initiation of a status review for the species. On April 22, 2022, the Center for Biological Diversity filed a complaint that the Service failed to meet our statutory deadline to complete a 12-month finding on the petition. On September 27, 2022, the Service agreed to submit a finding to the **Federal Register** by December 10, 2024. This action constitutes our 12-month finding on the

2020 petition to list Suckley's cuckoo bumble bee.

Peer Review

A species status assessment (SSA) team prepared an SSA report for Suckley's cuckoo bumble bee. The SSA team was composed of Service biologists, in consultation with other species experts. The SSA report represents a compilation of the best scientific and commercial data available concerning the status of the species, including the impacts of past, present, and future factors (both negative and beneficial) affecting the species.

In accordance with our joint policy on peer review published in the **Federal Register** on July 1, 1994 (59 FR 34270), and our August 22, 2016, memorandum updating and clarifying the role of peer review in listing and recovery actions under the Act (*https://www.fws.gov/sites/default/files/documents/peer-review-policy-directors-memo-2016-08-22.pdf*), we solicited independent scientific review of the information contained in the Suckley's cuckoo bumble bee SSA report. We sent the SSA report to nine independent peer reviewers and received seven responses. Results of this structured peer review process can be found at *https://www.regulations.gov.* In preparing this proposed rule, we incorporated the results of these reviews, as appropriate, into the SSA report, which is the foundation for this proposed rule.

Summary of Peer Reviewer Comments

As discussed in Peer Review above, we received comments from seven peer reviewers on the draft SSA report. We reviewed all comments we received from the peer reviewers for substantive issues and new information regarding the contents of the SSA report. The peer reviewers generally concurred with our methods and conclusions, and provided additional information, clarifications, and suggestions. These suggestions included providing more detailed explanations of assumptions and uncertainties, more discussion of model strengths and limitations, and clarifications in terminology and discussions of genetic diversity; they also made other minor editorial suggestions. Otherwise, no substantive changes to our analysis and conclusions within the SSA report were deemed necessary, and peer reviewer comments are addressed in version 1.0 of the SSA report (Service 2024, entire).

I. Proposed Listing Determination

Background

A thorough review of the taxonomy, life history, and ecology of Suckley's cuckoo bumble bee is presented in the SSA report (version 1.0; Service 2024, pp. 11–28). Suckley's cuckoo bumble bee is an obligate social parasite (it depends on social hosts for survival and raising young) in the subgenus *Psithyrus.* Bumble bees in this subgenus lack a mechanism to carry pollen and are unable to produce worker bees, so they are entirely dependent on social bumble bee hosts to collect pollen to rear their young (Lhomme and Hines 2019, p. 126). Since Suckley's cuckoo bumble bees are entirely dependent on host bumble bee colonies, host colony availability is critical for the species' survival and overall viability. Cuckoo bumble bees are generally observed in low abundance at the margins of a host species' range, and cuckoo bumble bee distributions are less than that of the host species (Antonovics and Edwards 2011, p. 1003).

Cuckoo bumble bee females emerge from hibernation in the spring and usurp the nest of a suitable host colony, where host workers care for their young. Suckley's cuckoo bumble bee is described as a semi-specialist parasite (Lhomme and Hines 2019, p. 129) and is confirmed to usurp nests of western bumble bees (*Bombus occidentalis*) and Nevada bumble bees (*B. nevadensis*), with other potential hosts in subgenus *Bombus* throughout the extent of its range (see Host Species Decline, below).

The species has a broad historical distribution across North America and it has been found in various habitat types including prairies, grasslands, meadows, urban and agricultural areas, and woodlands from 2 to 3,200 meters (6 to 10,500 feet) in elevation (Williams et al. 2014, pp. 164–165; Committee on the Status of Endangered Wildlife in Canada (COSEWIC) 2019, p. 26; Martin et al. 2023, p. 22; Montana Natural Heritage Program 2023, entire; Service 2024, pp. 17–19). The analytical units and occurrences of Suckley's cuckoo bumble bee are shown below in figure 1.

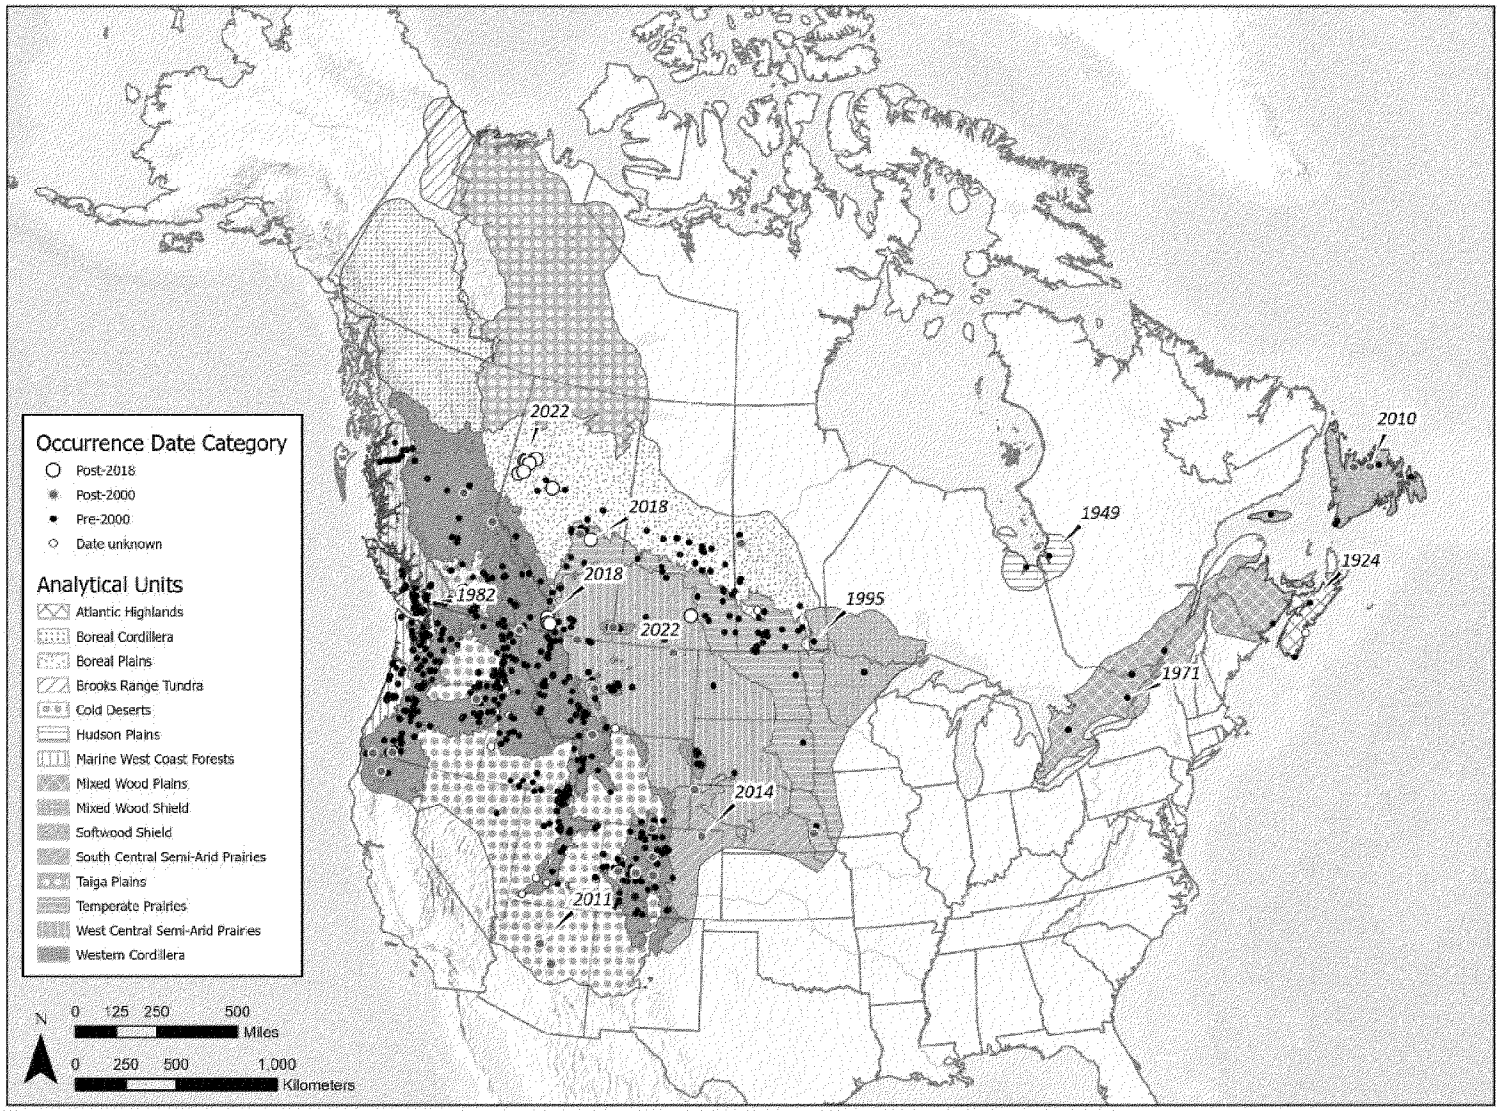

Figure 1. Analytical units and all occurrence records of Suckley's cuckoo bumble bee. The date of the most recent occurrence point per analytical unit is labelled.

Regulatory and Analytical Framework

Regulatory Framework

Section 4 of the Act (16 U.S.C. 1533) and the implementing regulations in title 50 of the Code of Federal Regulations set forth the procedures for determining whether a species is an endangered species or a threatened species, issuing protective regulations for threatened species, and designating critical habitat for endangered and threatened species.

The Act defines an ''endangered species'' as a species that is in danger of extinction throughout all or a significant portion of its range, and a ''threatened species'' as a species that is likely to become an endangered species within the foreseeable future throughout all or a significant portion of its range. The Act requires that we determine whether any species is an endangered species or a threatened species because of any of the following factors:

(A) The present or threatened destruction, modification, or curtailment of its habitat or range;

(B) Overutilization for commercial, recreational, scientific, or educational purposes;

(C) Disease or predation;

(D) The inadequacy of existing regulatory mechanisms; or

(E) Other natural or manmade factors affecting its continued existence.

These factors represent broad categories of natural or human-caused actions or conditions that could have an effect on a species' continued existence. In evaluating these actions and conditions, we look for those that may have a negative effect on individuals of the species, as well as other actions or conditions that may ameliorate any negative effects or may have positive effects.

We use the term ''threat'' to refer in general to actions or conditions that are known to or are reasonably likely to negatively affect individuals of a species. The term ''threat'' includes actions or conditions that have a direct impact on individuals (direct impacts), as well as those that affect individuals through alteration of their habitat or required resources (stressors). The term ''threat'' may encompass—either together or separately—the source of the action or condition or the action or condition itself.

However, the mere identification of any threat(s) does not necessarily mean that the species meets the statutory definition of an ''endangered species'' or a ''threatened species.'' In determining whether a species meets either definition, we must evaluate all identified threats by considering the species' expected response and the effects of the threats—in light of those actions and conditions that will ameliorate the threats—on an individual, population, and species level. We evaluate each threat and its expected effects on the species, then analyze the cumulative effect of all of the threats on the species as a whole. We also consider the cumulative effect of the threats in light of those actions and conditions that will have positive effects on the species, such as any existing regulatory mechanisms or conservation efforts. The Secretary determines whether the species meets the definition of an ''endangered species'' or a ''threatened species'' only after conducting this cumulative analysis and describing the expected effect on the species.

The Act does not define the term ''foreseeable future,'' which appears in the statutory definition of ''threatened species.'' Our implementing regulations at 50 CFR 424.11(d) set forth a framework for evaluating the foreseeable future on a case-by-case basis, which is further described in the 2009 Memorandum Opinion on the foreseeable future from the Department of the Interior, Office of the Solicitor (M–37021, January 16, 2009; ''M-Opinion,'' available online at *https://www.doi.gov/sites/doi.opengov.ibmcloud.com/files/uploads/M-37021.pdf*). The foreseeable future extends as far into the future as the U.S. Fish and Wildlife Service and National Marine Fisheries Service (hereafter, the Services) can make reasonably reliable predictions about the threats to the species and the species' responses to those threats. We need not identify the foreseeable future in terms of a specific period of time. We will describe the foreseeable future on a case-by-case basis, using the best available data and taking into account considerations such as the species' life-history characteristics, threat projection timeframes, and environmental variability. In other words, the foreseeable future is the period of time over which we can make reasonably reliable predictions. ''Reliable'' does not mean ''certain''; it means sufficient to provide a reasonable degree of confidence in the prediction, in light of the conservation purposes of the Act.

Analytical Framework

The SSA report documents the results of our comprehensive biological review of the best scientific and commercial data regarding the status of the species, including an assessment of the potential threats to the species. The SSA report does not represent our decision on whether the species should be proposed for listing as an endangered or threatened species under the Act. However, it does provide the scientific basis that informs our regulatory decisions, which involve the further application of standards within the Act and its implementing regulations and policies.

To assess the viability of Suckley's cuckoo bumble bee, we used the three conservation biology principles of resiliency, redundancy, and representation (Shaffer and Stein 2000, pp. 306–310). Briefly, resiliency is the ability of the species to withstand environmental and demographic stochasticity (for example, wet or dry, warm or cold years); redundancy is the ability of the species to withstand catastrophic events (for example, droughts, large pollution events); and representation is the ability of the species to adapt to both near-term and long-term changes in its physical and biological environment (for example, climate conditions, pathogens). In general, species viability will increase with increases in resiliency, redundancy, and representation (Smith et al. 2018, p. 306). Using these principles, we identified the species' ecological requirements for survival and reproduction at the individual, population, and species levels, and described the beneficial and risk factors influencing the species' viability.

The SSA process can be categorized into three sequential stages. During the first stage, we evaluated the individual species' life-history needs. The next stage involved an assessment of the historical and current condition of the species' demographics and habitat characteristics, including an explanation of how the species arrived at its current condition. The final stage of the SSA involved making predictions about the species' responses to positive and negative environmental and anthropogenic influences. Throughout all of these stages, we used the best available information to characterize viability as the ability of a species to sustain populations in the wild over time, which we then used to inform our regulatory decision.

The following is a summary of the key results and conclusions from the SSA report; the full SSA report can be found at Docket No. FWS–R7–ES–2024–0117 on *https://www.regulations.gov*.

Summary of Biological Status and Threats

In this discussion, we review the biological condition of the species and its resources, and the threats that influence the species' current and future

condition, in order to assess the species' overall viability and the risks to that viability.

Species Needs

There have been few studies focused specifically on understanding Suckley's cuckoo bumble bee biology and needs. Thus, we relied on information available for cuckoo bumble bees (subgenus *Psithyrus*) or bumble bees (genus *Bombus*) where appropriate.

Host Species

Suckley's cuckoo bumble bees cannot successfully reproduce without the availability of suitable host bumble bee colonies. Female cuckoo bumble bees invade host bumble bee nests where they will often eliminate the host queen, destroy host eggs, and eject host larvae from the nest. This may be driven by the need to create space for parasitic eggs and/or to increase the incubation effort of host workers towards parasitic eggs. Cuckoo bumble bees lack a mechanism to carry pollen and are unable to produce worker bees, and thus depend on social bee hosts to collect the pollen on which they rear their young (Lhomme and Hines 2019, p. 126). Thus, survival of Suckley's cuckoo bumble bees is dependent upon the survival and health of the host colony.

Food Resources

Cuckoo bumble bees require diverse native floral resources (pollen and nectar) for nutrition. Limited information exists regarding key forage plants for cuckoo bumble bees (Dozier et al. 2023, p. 643), but abundant spring floral resources are important to cuckoo bumble bee females for ovary development (Lhomme and Hines 2019, p. 132) and abundant fall floral resources are important to the fitness of the colony (Hatfield and LeBuhn 2007, pp. 156–157), since this is when new gynes (the primary reproductive females) and drones (male bees that are solely responsible for reproduction) are produced (Goulson 2010a, pp. 6–8). In addition, fall floral resources are important for females who must survive an overwintering diapause (a period of suspended development) without foraging (Beekman et al. 1998, p. 207; Ogilvie and CaraDonna 2022, p. 2419). Because cuckoo bumble bees are dependent on host workers to raise their offspring, females tend to emerge from hibernation later than their hosts to feed on nectar and pollen in preparation for laying eggs (Lhomme and Hines 2019, p. 132). While specific requirements for overwintering sites are unknown, Suckley's cuckoo bumble bee females likely overwinter in and under mulch or other decomposing vegetation that is separated from nesting habitat (COSEWIC 2019, p. 27; Liczner and Colla 2019, p. 793; Martin et al. 2023, p. 25).

Habitat and Population Connectivity

Dispersal of bees is necessary to find unrelated mates and is aided by the proximity of other usurped colonies and the presence of suitable dispersal corridors. Bumble bee reproductive individuals (drones and gynes) can disperse up to 10.0 kilometer (km) (6.2 mile (mi)) (Darvill et al. 2006, p. 606; Jha and Kremen 2013, p. 2490; Lepais et al. 2010, p. 287). Dispersal distance can vary widely across species, and it has not yet been described for Suckley's cuckoo bumble bees. The indiscriminate cuckoo bumble bee (*B. insularis*) was found to disperse up to 7.0 km (4.3 mi) which is comparable to research on other Bombus species (Koch et al. 2021, p. 5). Connectivity is a constraint for cuckoo bumble bees because they live in small, fragmented populations as a result of their dependence on host bumble bee colonies (Suhonen et al. 2016, p. 529). Population connectivity is important for Suckley's cuckoo bumble bee's viability as it increases the likelihood of genetic diversity, which promotes successful reproduction. Bumble bees are prone to producing unviable sterile males when genetic diversity between mating pairs is low (Zayed 2009, p. 239). Sterile males are unable to contribute to the following year's cohort, which can have negative impacts to the population and overall species viability.

Dispersal of bees to find unrelated mates is aided by the proximity of other usurped colonies. Consequently, the sharp historical decrease in the prevalence of both Suckley's cuckoo bumble bee, and many of its confirmed and potential host species (see *Historical, Current, and Near-term Condition of Suckley's Cuckoo Bumble Bee,* below), has likely reduced population connectivity relative to historical conditions. Reduced gene flow may have consequences on the genetic diversity of Suckley's cuckoo bumble bee, because small populations can experience stronger genetic drift (Zayed 2009, p. 246). This is important because high genetic diversity reduces prevalence of some pathogens (Parsche and Lattorff 2018, p. 900), and the risk of matched mating, which produces sterile males that do not contribute to population growth (Zayed 2009, p. 239).

Thermal Suitability

Bumble bees require temperatures to be within a suitable range throughout their lifecycle; however, this temperature range appears to be highly variable both across and within bumble bee species (Service 2024, pp. 20–22). Based on occupancy modeling results for Suckely's cuckoo bumble bee, occupancy is greatest when the average maximum temperature is near 20 Celsius (°C) (68 Fahrenheit (°F)) and declines when temperatures are lower and higher than the average maximum temperature (Service 2024, p. 64). In general, as bumble bees approach the lower end of their thermal limits, they become lethargic (Oyen et al. 2016, p. 53). Additionally, extreme cold can affect foraging behavior; exposure to cold (approximately 4°C (39°F) for 5 minutes) reduced bumble bee foraging for days after exposure (Wilson et al. 2006, p. 171). The upper end of some bumble bee thermal limits, where loss of muscle control occurs, ranged from approximately 38 to 53°C (100–129°F) (Hamblin et al. 2017, p. supplemental dataset; Oyen et al. 2016, p. 54; Oyen and Dillon 2018, p. 4). Compared to other bee species, bumble bees may be particularly sensitive to increases in temperature (Hamblin et al. 2017, p. 3). Further, bumble bee abundance was observed to decrease following heat waves in Europe (Rasmont and Iserbyt, 2012, p. 276).

Nest temperatures are important to the maintenance and growth of the colony (Heinrich 1979, p. 68; Vogt 1986, p. 64). Temperatures in underground bumble bee nests fluctuate less than in the surrounding environment, maintaining around 30°C (86°F) (Vogt, 1986, p. 61; Goulson, 2010a, p. 20; Heinrich 1979, p. 66), due to insulating qualities and colony behavior. Nest temperatures outside of ideal thermal ranges can slow larvae development and colony growth (Heinrich 1979, p. 68; Vanderplanck et al. 2019, p. 3; Vogt 1986, p. 64). The brood is most susceptible to cold temperatures earlier in the season when ambient temperatures are low, and the colony is small.

In summary, Suckley's cuckoo bumble bee must have availability of suitable host colonies, sufficient food resources, connectivity, and thermal suitability to support viability. Highly resilient populations consist of many genetically diverse individuals that have all their basic resource needs met (host colony availability, floral resource abundance and diversity, overwintering site availability, population connectivity, and thermal suitability). This translates into a diverse collection of individuals on the landscape with high survival and reproduction success, which ultimately results in population

growth and larger populations. Survival and reproduction of Suckley's cuckoo bumble bees depend on the survival and health of the host colony. Host colony workers are paramount to the growth and survival of new generations of Suckley's cuckoo bumble bees because they forage and care for the brood of parasite larva.

Redundancy for Suckley's cuckoo bumble bee is described as having multiple, healthy populations widely distributed across the breadth of adaptive diversity relative to the spatial occurrence of catastrophic events (*e.g.,* pathogen outbreak, wildfire, or drought events). In addition to guarding against a single or series of catastrophic event(s) extirpating all populations of Suckley's cuckoo bumble bee, redundancy is important to protect against losing irreplaceable sources of adaptive diversity. Having multiple populations distributed across the range of the species will help preserve the breadth of adaptive diversity and, hence, the evolutionary flexibility of the species.

The adaptive capacity, as it relates to representation, of Suckley's cuckoo bumble bee is a function of the amount and spatial distribution of genetic and phenotypic diversity. Based on genetic studies of other bumble bee species with similar ecologies, and given the potential dispersal capability, Suckley's cuckoo bumble bee may not exhibit much genetic differentiation across its broad range. Genetic variation can be negatively affected by genetic drift; small populations experience stronger drift (Zayed 2009, p. 246). Thus, preserving the genetic diversity of Suckley's cuckoo bumble bee may require maintaining relatively large populations and connectivity among them.

Threats

Host Species Decline

Cuckoo bumble bees have higher threat indices (higher extinction vulnerability) than host species because they are entirely dependent on host colonies for reproduction (Suhonen et al. 2015, pp. 238–239). The presence of parasitic bees depends on the presence of their hosts; any stressor effects on the host will be reflected in the status of the parasite (Sheffield et al. 2013, p. 508). Because cuckoo bumble bees depend on host species, there is a co-extinction risk for host and parasite species (Suhonen et al. 2015, p. 238). Thus, signs that host species are declining are of major concern to the viability of Suckley's cuckoo bumble bee. The effect of all the stressors impacting Suckley's cuckoo bumble bee are compounded through the additional effects of these stressors on host species availability (Service 2024, p. 33).

Suckley's cuckoo bumble bee is part of a group in the subgenus *Psithyrus* which primarily parasitizes bumble bees in the subgenus *Bombus* (Lhomme and Hines 2019, p. 129). Bumble bee nests are rare to encounter at a baseline, and usurped nests are even rarer to encounter, making observations supporting host choice limited (Lhomme and Hines 2019, pp. 132–133). Additionally, cuckoo bumble bee females may shelter in nests they do not usurp, leading to inconclusive observations.

Given these challenges, our current understanding is that Suckley's cuckoo bumble bee has two confirmed hosts and numerous potential hosts. The western bumble bee is the most widely known host of Suckley's cuckoo bumble bee (Hobbs 1968, p. 164; Williams et al. 2014, p. 165; Lhomme and Hines 2019, p. 128). The western bumble bee occurs throughout the core of Suckley's cuckoo bumble bee's range in western North America. There are also three records of Suckley's cuckoo bumble bee nesting successfully (*i.e.,* rearing young) in Nevada bumble bee nests (Hobbs 1965, p. 127).

Aside from these two confirmed hosts, there are numerous potential hosts (Service 2024, pp. 35–37) including yellow-banded bumble bee (*B. terricola*), red-belted bumble bee (*B. rufocinctus*), yellow bumble bee (*B. fervidus*), and white-shouldered bumble bee (*B. appositus*) (Hobbs 1968, pp. 157, 164; Williams et al. 2014, p. 165). Suckley's cuckoo bumble bees are also observed in locations beyond the range of these confirmed and potential hosts (based on nest observations). Because of this, it is reasonable to assume there are additional hosts not yet confirmed through observations. The following additional potential hosts have been identified for Suckley's cuckoo bumble bee: rusty patched bumble bee (*B. affinis*), McKay's bumble bee (*B. mckayi*), and cryptic bumble bee (*B. cryptarum*) (COSEWIC 2019, p. 17; Service 2024, pp. 5–6).

Over the past century, many species parasitized by Suckley's cuckoo bumble bee have documented declines (Hatfield et al. 2014, p. 46; Hatfield et al. 2015, p. 4; COSEWIC 2019, p. vi). Trends observed across North America suggest subgenus *Bombus* species are experiencing widespread declines (Giles and Ascher 2006, pp. 217–218; Colla and Packer 2008, p. 1387; Schweitzer et al. 2012, p. 7; Janousek et al. 2023, p. 2). For the SSA report, we updated a multi-species occupancy model (Jackson et al. 2022, entire) to evaluate host species declines for two confirmed hosts (western bumble bee and Nevada bumble bee), and four potential hosts in the subgenus *Bombus* (rusty patched bumble bee, McKay's bumble bee, yellow-banded bumble bee, and cryptic bumble bee). The western bumble bee, McKay's bumble bee, rusty patched bumble bee, and yellow-banded bumble bee all exhibited statistically significant temporal declines in occupancy rangewide (Service 2024, pp. 69–70). Since Suckley's cuckoo bumble bee is dependent on host species for survival, declines in host species abundance is having significant impacts to Suckley's cuckoo bumble bee viability.

Managed Bees

Generally, the term ''managed bees'' describes hives or colonies of bees that are used commercially to provide pollination services for a wide variety of crops over the growing season. Some hives or colonies are moved within and between States multiple times throughout a single growing season. Within the range of Suckley's cuckoo bumble bee, managed bees are used for a wide variety of crops including, but not limited to, alfalfa, almonds, apples, avocado, canola, cherries, sunflowers, squash, melon, berries, cucumbers, and clover (Bond et al. 2014, entire). The use of managed bees is expanding in some portions of the range of Suckley's cuckoo bumble bee, including western Canada (COSEWIC 2019, p. 49). Managed bees also include hobby or backyard bee keeping, as well as small-scale greenhouse operations. Managed bees include many different species of bees, such as the introduced European honey bee (*Apis mellifera*) and several species of native North American bumble bees, including common eastern bumble bee (*B. impatiens*), an eastern species that has recently been moved into the range of Suckley's cuckoo bumble bee for commercial pollination services (Palmier and Sheffield 2019, p. 9).

Managed bees are a threat to Suckley's cuckoo bumble bee in two primary contexts—as a pathway for pathogen introduction and spread, and competition for resources (Thomson 2004, p. 467; Winter et al. 2006, entire; Goulson et al. 2008, p. 193; Goulson 2010b, p. 10; Fürst et al. 2014, p. 365; Goulson et al. 2015, p. 11). For example, wild bumble bees located more closely to managed honey bee colonies had significantly higher disease rates than wild bumble bees located farther away (Alger et al. 2019, p. 5). Similarly, infection rates for several bumble bee pathogens were higher in multiple

Bombus species near commercial greenhouses where managed bees were used than in areas located far away from commercial greenhouses (Colla et al. 2006, pp. 462–464).

While individual Suckley's cuckoo bumble bees need floral resources for nectar and pollen, competition for resources likely more directly affects the hosts for Suckley's cuckoo bumble bees, such as western bumble bees, whose colonies may have hundreds of foraging workers. As a result of competition, populations of wild *Bombus* species have been shown to decrease with an increase in honey bee density (Thomson 2016, p. 1251). In particular, western bumble bee colonies that were found near higher densities of managed honey bees had reduced reproductive success (Thomson 2004, p. 464).

Pathogens

Bumble bees are susceptible to a variety of pathogens including fungal pathogens, parasites, tracheal mites, viruses, and nematodes. Many of these pathogens are widespread and cause lethal and sublethal effects for *Bombus* species. We provide a brief summary below of some pathogens that are known to affect Suckley's cuckoo bumble bee, its hosts, or both. Please see the SSA report for a detailed review of all pathogens affecting Suckley's cuckoo bumble bees (Service 2024, pp. 38–34).

The fungal pathogens *Vairimorpha bombi* (formerly *Nosema bombi;* Tokarev et al. 2020, p. 11) and *V. ceranae* (formerly *Nosema ceranae;* Tokarev et al. 2020, p. 11) which are caused by microsporidian parasites, can have lethal and sublethal effects on bumble bees, including disabled wings and impacts to reproduction (Otti and Schmid-Hempel 2007, p. 122), suppressed immune response, and increased mortality (Graystock et al. 2013, pp. 116–117; Graystock et al. 2014, p. 9; Rotheray et al. 2017, p. 294; Service 2018, p. 52). *Vairimopha bombi* has been documented in Suckley's cuckoo bumble bee, one confirmed host species (western bumble bee), and four suspected host species (rusty patched bumble bee, yellow bumble bee, red-belted bumble bee, yellow-banded bumble bee) (Kissinger et al. 2011, p. 222; Cordes et al. 2012, p. 212), and it is classified as an emerging infectious disease (Sachman-Ruiz et al. 2015, p. 2044; Wilfert et al. 2016, pp. 595–596).

Many protozoan parasites have been documented in bumble bees in North America and can negatively affect populations by reducing colony founding success, lowering colony fitness and growth, causing delayed reproduction and inadequate fat reserves in hibernating queens, and causing adult mortality (Shykoff and Schmid-Hempel 1991, p. 242; Schmid-Hempel 2001, pp. 148, 150–154; Brown et al. 2003, pp. 995–1000). In particular, *Apicystis bombi* is a protozoan parasite classified as an emerging infectious disease (Sachman-Ruiz et al. 2015, p. 2044; Wilfert et al. 2016, pp. 595–596). This disease has not been documented in Suckley's cuckoo bumble bee, but it has been documented in Nevada bumble bee, one of two confirmed host species (Maxfield-Taylor et al. 2011, p. 4).

Several honey bee viruses (*e.g.,* deformed wing virus, black queen cell virus, sacbrood virus, Kashmire bee virus, Israeli acute paralysis virus, and acute bee paralysis virus) are also known to infect bumble bees (Singh et al. 2010, p. 8; Robson-Hyska 2017, pp. 124–125; Tehel et al. 2022, p. 4). These viruses have not been documented in Suckley's cuckoo bumble bee, but they have been documented in several of its potential hosts, including red-belted bumble bee, yellow bumble bee, and yellow-banded bumble bee (Robson-Hyska 2017, pp. 63–65, 124–125).

Parasitic nematodes, such as *Sphaerularia bombi,* can result in multiple negative effects to bumble bee queens, including changes in gene expression affecting energy usage, translation, and circadian rhythm (Colgan et al. 2020, p. 170), and in endocrine gland function involved in growth and development in the larva and pupa (Maxfield-Taylor et al. 2011, p. 134). *Sphaerularia bombi* has not been documented in Suckley's cuckoo bumble bee, but it has been documented in western bumble bee (Poinar 1974, p. 305).

In summary, bumble bees are susceptible to a variety of pathogens and parasites, many of which are widespread and cause lethal and sublethal effects for *Bombus* species. Although we lack information on pathogen studies specific to Suckley's cuckoo bumble bee (Dozier et al. 2023, p. 642), we know many of these pathogens and parasites have negative impacts to host species.

Pesticides

A variety of pesticides are widely used in agricultural, urban, and natural environments, including herbicides, insecticides, fungicides, miticides, rodenticides, and adjuvants. The pesticides with greatest effects on bumble bees are herbicides and insecticides (particularly, neonicotinoids, see below for more detail). Herbicide use can cause changes in vegetation and the loss or reduction of flowers needed to provide consistent sources of pollen, nectar, and nesting material (Johansen 1977, p. 188; Kearns et al. 1998, pp. 91–92; Kearns and Inouye 1997, p. 302; Plowright et al. 1978, p. 1145; Smallidge and Leopold 1997, p. 264). Insecticides are specifically designed to directly kill insects, which includes bumble bees, and herbicides reduce available floral resources, thus indirectly affecting bumble bees. For a full review of pesticides and the effects on bumble bees, please see the SSA report (Service 2024, pp. 42–44).

Neonicotinoids are a class of insecticides that are used in a wide variety of agricultural applications, including common use as seed coatings in corn, wheat, soybeans, and cotton (Alford and Krupke, 2017, p. 1) and have been strongly implicated in the decline of several *Bombus* species (Colla and Packer 2008, p. 10; Goulson 2013, pp. 7–8; Pisa et al. 2015, p. 69). Neonicotinoids are currently used throughout the range of Suckley's cuckoo bumble bee in North America. Neonicotinoids kill insects by interfering with the receptors of their nervous systems, causing overstimulation, paralysis, and death (Buszewski et al. 2019, p. 34728). Sublethal effects of neonicotinoids to bumble bees can include impairments to reproduction (Whitehorn et al. 2012, pp. 351–352; Baron et al. 2017, p. 4; Raine 2018, p. 40; Wu-Smart and Spivak 2018, pp. 4–5). Suckley's cuckoo bumble bee have been observed in and around regions of agricultural production, including those involved in the production of crops commonly treated with neonicotinoids.

Habitat Conversion and Fragmentation

The conversion of natural habitat to agricultural and urban areas is the primary cause of bumble bee habitat loss (Goulson et al. 2015, p. 2). Suckley's cuckoo bumble bee is associated with a wide variety of habitats including prairies, grasslands, meadows, and woodlands as well as urban and agricultural areas (COSEWIC 2019, p. 26; Martin et al. 2023, p. 22; Montana Natural Heritage Program 2023, entire). Habitat conversion and fragmentation reduce the amount and/or accessibility of suitable host nests and foraging and overwintering habitat. Habitat conversion and fragmentation also reduce the connectivity required for healthy populations to expand in response to environmental or demographic changes and to maintain genetic diversity. High populations of bumble bee species are associated with diverse floral resources, particularly when surrounded by a complexity of

natural habitats across the landscape (Hines and Hendrix 2005, pp. 1481–1483; Hatfield and LeBuhn 2007, pp. 154–157). Due to their foraging, nesting and overwintering requirements, bumble bees are sensitive to the negative effects of habitat fragmentation (Kearns and Inouye 1997, p. 298).

Habitat loss is commonly cited as a long-term contributor to bee declines through the 20th century, and it may continue to contribute to current declines, at least for some species (Goulson et al. 2008, pp. 191–198; Brown and Paxton 2009, pp. 411–412; Goulson et al. 2015, p. 2). As generalist foragers, Suckley's cuckoo bumble bee and its confirmed host species may not be as severely affected by historical and ongoing habitat loss compared to habitat specialists. However, habitat loss or degradation reduces bee diversity and abundance (Potts et al. 2010, pp. 348–349), and small, isolated patches of habitat may not be sufficient to support healthy bee populations (Öckinger and Smith 2006, pp. 55–56; Hatfield and LeBuhn 2007, pp. 154–156).

Habitat conversion leads to the reduction of abundant and diverse floral resources, which can lead to a lack of sufficient nutritional resources; can reduce colony growth, health, and reproduction; and can negatively influence long-term bee populations (Vaudo et al. 2015, p. 4040). Food shortfalls because of habitat loss can induce longer larval development, can produce smaller and fewer individuals, and can cause an early shift to male production (Beekman and van Stratum 1998, entire; Sutcliffe and Plowright 1990, pp. 1056–1057). Larval and colony growth can be significantly affected by pollen type (plant species), pollen diversity, and the varying nutritional quality and quantity. Nutritional stress caused by habitat loss can affect learning and memory that can lead to reduced foraging efficiency, increased competition, and overall decline in colony fitness (Townsend-Mehler and Dyer 2011, pp. 275–286; Colla 2016, p. 413).

Monoculture farming is another factor that impacts plant community changes and thus reduces nesting opportunities for host colonies (Kearns and Inouye 1997, p. 298). Agricultural manipulation and changes across various landscape types likely impacted the availability of host nest sites in North America in the 20th century due to habitat degradation, modification, conversion, and loss (Goulson 2003, p. 142). These are important changes because diet breadth and coexistence in bumble bees can become limited due to habitat loss (Goulson et al. 2008, pp. 193–200) and coexistence is important for parasitic species such as the Suckley's cuckoo bumble bee that rely on host colonies to raise their young. Decreases in foraging habitat increases competition among bumble bee species, because there is overlap in resources that these species use (Goulson et al. 2008, p. 196).

While habitat conversion and fragmentation are well documented throughout the range of Suckley's cuckoo bumble bee, limited recent observations show Suckley's cuckoo bumble bee, western bumble bee, and rusty patched bumble bee populations do occur in urban and agricultural settings. However, these areas may not represent high-quality habitat with diverse native floral resources, and records of species in these habitats may represent refugia from the primary threats in these areas (*i.e.,* application of pesticides in agricultural settings) (Everett 2023, pers. comm.).

Climate Change

Changes in ambient temperatures and heatwaves—Global annual surface temperatures have risen an average of 0.09 °C (0.17 (°F)) each decade from 1901 to 2020 (U.S. Environmental Protection Agency (EPA) 2021, n.p.). Temperature increases in the contiguous United States since the late 1970s have surpassed the global rates for that period, increasing from 0.17 °C to 0.30 °C (0.31 °F to 0.54 °F) each decade. The northern and western parts of the United States have experienced the greatest temperature increases (EPA 2021, n.p.), representing much of the range of Suckley's cuckoo bumble bee. Suckley's cuckoo bumble bee has been observed at latitudes up to 68.9 degrees North, within the Arctic Circle. Based on the most recent climate models, temperatures in the Arctic have increased at three times the global rate, and are expected to continue to increase at a higher rate than the global average, with surface temperatures exceeding 6 °C (42.9 °F) above preindustrial times by the end of the 21st century (Ma et al. 2022, pp. 1, 7; Hayhoe et al. 2018, pp. 91–92). Climate change is contracting temperate, arctic, and alpine zones (Staten et al. 2018, p. 770) in which bumble bees are distributed and to which they are adapted (Goulson 2010a, p. 2).

In addition to increasing average temperatures, heatwaves in the United States have become more frequent, more intense, and longer in duration (EPA 2021, n.p.). Rising ambient temperatures and heatwaves can negatively affect bumble bee individuals and colonies by reducing survival, increasing energy expenditures, reducing flight and foraging, reducing reproduction, and impacting when bees enter diapause (Bartomeus et al. 2011, p. 20645; Maebe et al. 2021, p. 4229; Service 2024, pp. 20–22).

Bumble bees have low variation in heat stress resistance and, therefore, may have low capacity to adapt physiologically to warming temperatures (Martinet et al. 2021, p. 7). Bumble bee species that occur across a relatively broad climatic range, such as Suckley's cuckoo bumble bee, likely have a greater capacity to adapt to warming temperatures than species with narrow ranges. While we do not know how well Suckley's cuckoo bumble bee will adapt to rising temperatures, their main host species, the western bumble bee, appears to be sensitive to temperature (Janousek et al. 2023, p. 2). Heat waves are projected to increase, particularly in the western portions of North America (Hicke et al. 2022, p. 1937), which represents the bulk of the Suckley's cuckoo bumble bee's range.

Temperature changes could make the southern portions of the Suckley's cuckoo bumble bee's range less suitable for the species, while additional habitat may become more suitable in the northern portions of the range and at higher elevations. Colonizing new areas may be dependent on dispersal ability and may require adapting to novel communities where Suckley's cuckoo bumble bees could be exposed to new environmental conditions (*e.g.,* extreme heat or extreme cold) and potential hosts (Cameron et al. 2011, pp. 39–40; Pradervand et al. 2014, p. 5). Additionally, warming ambient temperatures and heatwaves commonly co-occur with drought, another influence that could compound the effects of any one of the other threats to this species (see *Drought frequency and intensity,* below) (Cameron et al. 2011, pp. 39–40; Pradervand et al. 2014, p. 5).

While northern areas may become suitable in the future, an analysis of long-term observations of 67 bumble bee species from Europe and North America showed southern range contractions as a result of climate change, with no change in northern limits (Kerr et al. 2015, p. 178). Future projections of the distribution of bumble bee species under different climate scenarios and dispersal assumptions also predict widespread declines, and possible extirpations, in the southern portions of species ranges. (Sirois-Delisle and Kerr 2018, pp. 4–5; Soroye et al. 2020, pp. 685, 687).

Warming temperatures could additionally affect Suckley's cuckoo bumble bee and its hosts by affecting floral resources. Shifts in flowering

times (in response to warming temperatures) could result in phenological mismatch between pollinators and their foraging resources (Service 2024, pp. 47–48). Heatwave conditions directly reduce bumble bee foraging, as well as have indirect effects on bumble bee foraging from heat-stressed flowering resources (Williams and Hemberger 2023, p. 597). Decreased pollination due to phenological mismatch could reduce plant reproduction and further affect floral resource availability (Forrest et al. 2010, p. 438; Thomson 2010, p. 3197).

Drought frequency and intensity—Drought negatively impacts floral resources and the pollinators that depend on them. A large portion of Suckley's cuckoo bumble bee's range is within water-limited areas of western North America where drought is frequent and has major implications for floral resources. The frequency of biologically significant drought events is projected to increase within the range of Suckley's cuckoo bumble bee and its host species due to changes in climate and resource impacts (Swain and Hayhoe 2015, pp. 2737–2750).

Drought indirectly impacts bumble bees by altering or reducing floral resources, including reductions to the quality, quantity, and availability of pollen and nectar (Carroll et al. 2001, p. 443; Waser and Price 2016, p. 1405; Phillips et al. 2018, pp. 3226–3235) Shifts in the spatial and temporal patterns of flowering, which result in mid-summer floral gaps (Aldridge et al. 2011, entire), highlight that drought-stress impacts on a plant community could reduce pollen and nectar resources needed for successful pollinator reproduction. Since droughts have a direct effect on floral resources, this in turn has an effect on pollinators at the population level (Roulston and Goodell 2011, p. 305). Drought may also lead to increased competition with honey bees in areas where their resources overlap. When drought conditions impact preferred floral resources, bumble bees will forage on less preferred, drought-resistant species sought after by the more populous honey bees (Thomson 2016, pp. 1247–1255).

A model of cumulative effects of climate changes, landcover, and pesticide use on western bumble bee occupancy found that consecutive years of severe drought was the second most influential cause of occupancy declines (Janousek et al. 2023, pp. 2–3). In addition, suitable habitats may be restricted with rising temperatures, reducing the range of some bumble bee species, especially at range edges where abundance may decline when floral resources decline in response to drought (Thomson 2016, pp. 1247–1255). Although drought may be locally and temporarily alleviated by precipitation, the impacts to the growing season may persist and reduced floral resources could impact Suckley's cuckoo bumble bees that require pollen and nectar to overwinter with adequate body mass (Service 2024, pp. 22–23).

Droughts, especially in consecutive years (Janousek et al. 2023, p. 2), will likely amplify biologically significant negative effects on Suckley's cuckoo bumble bee resources and host species, though the direct drought impacts on Suckley's cuckoo bumble bee individuals and populations are unstudied. Droughts are expected to negatively affect floral resources, alter floral communities to less preferred flowering conditions or timing, increase competition between pollinators, and negatively impact Suckley's cuckoo bumble bee and its hosts throughout much of the species' range.

Wildfire—Wildfires pose complex effects to bumble bees, from decreasing resource availability (Mola and Williams 2018, p. 7; Galbraith et al. 2019, p. 15; Mola et al. 2020, p. 1807) to increasing floral and bee abundance and diversity (Mola and Williams 2018, pp. 4–8; Carbone et al. 2019, entire; Galbraith et al. 2019, entire; Mola et al. 2020, pp. 1804–1808). Fire disturbance can temporarily increase floral resources, thereby enhancing bee body size, reproductive output, genetic diversity, and population size (Carbone et al. 2019, entire; Mola et al. 2020, pp. 1804–1808), although these effects may vary by habitat type (*i.e.,* forested vs. grassland habitats). The relative effect of high-intensity fires varies based on the ecological conditions in which they occur. Since Suckley's cuckoo bumble bee is a broad-ranging species with multiple hosts, fire is likely to have variable and diverse effects throughout its range.

Early spring frosts—Early spring frosts pose a risk to bumble bees, specifically to new queens and newly established colonies, by damaging floral resources (CaraDonna and Bain 2015, pp. 61–62). Flowers, compared to vegetative parts, are generally more sensitive to damage from frost events (CaraDonna and Bain 2015, pp. 61–62), and spring frosts reduce the overall availability of floral resource abundance across the subsequent summer (CaraDonna et al. 2014, p. 4919).

Despite some plants with early phenology exhibiting some tolerance to freezing temperatures (CaraDonna and Bain 2015, pp. 61–63), an advancing bloom date for plants triggered by climate change (CaraDonna et al. 2014, p. 4919) exposes early floral growth to an additional risk of frost damage (Willmer 2012, p. R131). The increased frost damage to flowering plants could also contribute to an observed change in flowering dates across small geographic and altitudinal distributions (Inouye 2008, pp. 357, 361).

Floral resources are important throughout the lifecycles of both Suckley's cuckoo bumble bee and its hosts, but they are particularly important for host colony establishment in early spring. Negative effects of early spring frost on host colony queens, workers, and overall colony size may reduce their ability to persist within season, and to successfully support Suckley's cuckoo bumble bee. Spring frost damage to floral resources has been linked to within-season declines in wild bee populations (Graham et al. 2021, p. 6). Spring frosts could have a negative impact on the success of local bumble bee colonies (Inouye 2008, p. 361) by reducing existing and future within-season availability of pollen and nectar resources on which pollinators, including host colonies for Suckley's cuckoo bumble bee, rely. Inadequate floral resources could especially affect colony establishment and growth if they occur during critical times, such as early spring when new queens emerge from diapause and are establishing their colonies. Delays in emergence or colony initiation after emergence may hinder the ability of bees to complete their life cycle before the end of the relatively short subarctic season (Vogt et al. 1994, p. 1554).

Livestock Grazing

Livestock grazing occurs throughout much of the historical range of Suckley's cuckoo bumble bee, primarily by cattle, sheep and wild horses, and it can have complex effects on bumble bees. In general, grazed sites have reduced floral resources and lower bumble bee diversity and abundance (Hatfield and LeBuhn 2007, p. 150; Sjödin 2007, pp. 2110–2113; Sjödin et al. 2008, p. 763). Although grazing can be a useful management tool for maintaining early successional habitat, benefits are dictated by frequency, intensity, species (*i.e.* sheep, cattle, horses, etc.) and timing (Carvell 2002, p. 44; Kimoto et al. 2012, pp. 9–13). Low-intensity grazing preserves floral resources benefiting bumble bees (Scohier et al. 2012, pp. 287–292), while increased intensity of grazing can reduce bee species richness as a result of altered floral composition, including invasive species establishment and soil

compaction (Hatfield and LeBuhn 2007, p. 156; Vázquez and Simberloff 2003, p. 1080). Bumble bees are sensitive to grazing intensity early in the season, potentially because of altered foraging behavior (Kimoto et al. 2012, pp. 9–13). Intense summer grazing, compared to areas only grazed in winter, reduces vegetation height and floral resources, leading to fewer bee visits to preferred food plants and decreased bumble bee diversity (Xie et al. 2008, pp. 699–700). The reduction of vegetation height and structure from high-intensity grazing in the Pacific Northwest bunchgrass prairies has been linked to declines in bumble bee richness and abundance (Kimoto et al. 2012, pp. 12–13).

Grazing may compact soil and change plant communities (Connors 2016, pers. comm.), thus impacting nesting habitat for Suckley's cuckoo bumble bee hosts (Defenders of Wildlife 2015, p. 14). Livestock may also trample nesting sites (Kearns et al. 1998, p. 90) and negatively impact ground-nesting rodents (Johnson and Horn 2008, p. 444), which in turn may reduce the number of nest sites available for bumble bees (The Xerces Society and Thorp 2010, p. 13). Livestock grazing also impacts hydrology through compaction of soils and degraded riparian areas and may lead to increased fire cycles through the introduction of exotic species (Dwire et al. 1999, pp. 319–321).

In summary, grazing can assist in maintaining open habitat, and low-intensity grazing can preserve floral resources. However, high-intensity grazing can have a negative impact on floral resources and can negatively impact nest site availability. Thus, grazing has varied and complex effects on bumble bees, which makes the impacts difficult to analyze.

Conservation Efforts and Regulatory Mechanisms

Suckley's cuckoo bumble bee is assessed as threatened in Canada (COSEWIC, 2019, p. iii) and is listed as critically endangered by the International Union for Conservation of Nature (Hatfield et al., 2015, p. 1). In the United States, Suckley's cuckoo bumble bee is on the sensitive species list for the U.S. Forest Service and Bureau of Land Management Interagency Special Status/Sensitive Species Program (ISSSSP) in the Pacific Northwest (ISSSSP 2021, entire). It is also listed as a species of greatest conservation need in Idaho, Washington, Colorado, and California, where it is also a candidate for listing under the California Endangered Species Act (Colorado Parks and Wildlife 2015, p. B–1; Washington Department of Fish and Wildlife 2015, pp. 3–39; Idaho Department of Fish and Game 2017, p. xvii; California Natural Diversity Database (CNDDB) 2023, p. 6). These States generally outline research and conservation needs for species of greatest conservation need in State Wildlife Action Plans, but these plans do not offer regulatory protection.

Some States regulate the import of nonnative bee species, which can help protect native bee species, including Suckley's cuckoo bumble bee. The Oregon Department of Agriculture restricts some potential sources of the pathogen *Vairimorpha bombi* from entering the State; only *Bombus* species native to Oregon are permitted for commercial pollination purposes (Oregon Department of Agriculture 2017, p. 5). California requires permits to import some bee species for pollination services (California Department of Food and Agriculture 2023, entire).

The U.S. Forest Service has taken steps to reduce impacts of nonnative bee species. The Pacific Northwest Region of the U.S. Forest Service is working on finalizing apiary guidelines, which include recommendations for management practices and considerations to protect native pollinators and minimize negative effects from managed bees and apiaries on lands managed by the U.S. Forest Service (Everett 2023, pers. comm.). Additionally, at least one U.S. Forest Service National Forest in the Pacific Northwest already restricts commercial and privately owned bees on their managed lands (Everett 2023, pers. comm.). For example, the Colville National Forest plan directs that apiaries should not be placed where they would pose a risk to native pollinators, butterflies, or rare bee species (U.S. Forest Service 2019, p. 67). These measures highlight that the U.S. Forest Service takes the threat of managed bees seriously and is actively working in some regions to protect native bees.

States have also begun implementing strategies to limit pesticide effects on bees. The Oregon Bee Project was initiated in 2017, as a collaboration between the Oregon Department of Agriculture, the Oregon State University Extension Service, and the Oregon Department of Forestry. One project goal is to mitigate bee exposure to pesticides through increased pesticide label comprehension, adoption of new application practices, and increasing coordination between beekeepers and pesticide applicators (Oregon Department of Agriculture et al. 2022, pp. 2–3). Washington State has established similar goals, as stated in their Managed Pollinator Protection Plan, which offers best management practices for beekeepers, growers, and pesticide applicators to help protect pollinators from pesticides (Washington State Department of Agriculture 2018, p. 5). Washington State also adopted additional recommendations and funding for pollinator health (Washington State Bill 5253, effective July 25, 2021).

In Washington, neither the Managed Pollinator Protection Plan nor State Bill 5253 restrict the use of pesticides, but several other States have begun passing regulations on pesticides that are harmful to bees and other pollinators. For example, California recently developed regulations that will implement mitigation measures to protect pollinators by limiting the agricultural uses of certain neonicotinoid pesticides, which went into effect January 1, 2024 (California Department of Pesticide Regulation 2024, entire). Other States that have enacted various regulations on neonicotinoid pesticides to reduce impacts to bees and other pollinators include Colorado, Connecticut, Maine, Minnesota, Massachusetts, Maryland, Nevada, New York, New Jersey, Rhode Island, and Vermont (Malfi 2023, entire).

Other recent efforts aim to better understand bees at risk and implement broader protections. The Pacific Northwest Bumble Bee Atlas (a collaborative effort between the Washington Department of Fish and Wildlife, the Idaho Department of Fish and Game, the Oregon Department of Fish and Wildlife, and the Xerces Society for Invertebrate Conservation) seeks to increase understanding of bumble bee distributions and their habitats (Washington Department of Fish and Wildlife et al. 2023, entire). This effort has contributed to the creation of a statewide strategy to protect bumble bee species of conservation concern in Washington, with one of the focal species being Suckley's cuckoo bumble bee (Martin et al. 2023, p. 12). In Alaska, the Alaska Center for Conservation Science at the University of Alaska Anchorage and the Bureau of Land Management have developed the Alaska Bee Atlas. The program aims to collect data on bee biodiversity within Alaska; these data can eventually be used to inform sensitive species lists and management (Fulkerson et al. 2023, p. 18). The number of bumble bee atlases is increasing across the United States and increasingly covering the range of Suckley's cuckoo bumble bee. The expanding coverage of these atlases will

increase understanding of bumble bee status and distribution in North America.

On a broader scale, the Colla Laboratory at York University in Toronto has released a national pollinator strategy for Canada. This national strategy identifies specific goals and actions to protect pollinators and needed research to fill knowledge gaps (Colla and Nalepa 2023, p. 5). The Service is also working on a nationwide plan through a bumble bee conservation benefit agreement, known as The Nationwide Conservation Benefit Agreement for Bumble Bees on Energy and Transportation Lands. This conservation benefit agreement is modeled after the nationwide monarch butterfly candidate conservation agreement with assurances, which is a voluntary agreement with transportation and utility landowners that provides incentives for monarch conservation measures on their lands. The bumble bee conservation benefit agreement will likely include many of the same acres enrolled for the protection of several bumble bee species, including Suckley's cuckoo bumble bee and some of its host species (*i.e.,* western bumble bee, rusty patched bumble bee, and yellow-banded bumble bee). The Nationwide Conservation Benefit Agreement for Bumble Bees on Energy and Transportation Lands is expected to be completed in 2024 (Everett 2023, pers. comm.).

Together, these voluntary and regulatory measures highlight an increase in effort to protect native bumble bee species across North America. Some of these measures specifically target Suckley's cuckoo bumble bee, its host species, or both for conservation. Broad efforts to protect and conserve native pollinators and bees will also likely benefit Suckley's cuckoo bumble bee.

Cumulative Effects

We note that, by using the SSA framework to guide our analysis of the scientific information documented in the SSA report, we have analyzed the cumulative effects of identified threats and conservation actions on the species. To assess the current and future condition of the species, we evaluate the effects of all the relevant factors that may be influencing the species, including threats and conservation efforts. Because the SSA framework considers not just the presence of the factors, but to what degree they collectively influence risk to the entire species, our assessment integrates the cumulative effects of the factors and replaces a standalone cumulative-effects analysis.

Historical, Current, and Near-Term Condition of Suckley's Cuckoo Bumble Bee

We assessed Suckley's cuckoo bumble bee viability by evaluating the historical and current condition and identifying the primary influences leading to the species' current and near-term condition. We delineated 15 analytical units for Suckley's cuckoo bumble bee: 4 in eastern North America and 11 in western North America (figure 1). Analytical units are based on ecoregions and further detailed in the SSA report (Service 2024, pp. 55–56).

We used a published multi-species occupancy model (Jackson et al. 2022, entire) with updated Suckley's cuckoo bumble bee occurrence records (Service 2024, pp. 56–57) to understand trends in both Suckley's cuckoo bumble bee and host species occupancy. Our dataset included 2,317 occurrence records of Suckley's cuckoo bumble bee. The occupancy model also incorporated floral resources and climate variables. For a detailed review of the methods, please refer to the SSA report (Service 2024, pp. 56–57, 120–123). We provide a summary below of the methods and key findings.

We used the output of the multi-species occupancy model to assess historical trends, and to support our assessment of current and near-term condition. We used decadal projections of rangewide probability of occupancy to visualize and characterize overall, rangewide trends in occupancy from 1900–2020 (Service 2024, pp. 63–64). We used spatially explicit estimates of probability of occupancy from 1900–1960 to characterize the historical probability of occupancy in each analytical unit; we specifically used 1900–1960 to represent the historical baseline, as this is the period before declines were apparent (Service 2024, pp. 63–64). We used spatially explicit occupancy estimates in each analytical unit for the 2000–2020 period to provide a current snapshot or baseline of species condition relative to historical. We used spatially explicit projections of near-term (2020–2040) occupancy in each analytical unit to assess near-term risk of extinction.

The near-term occupancy projections were made under two scenarios. Scenario 1 assumes moderate climate warming under representative concentration pathway (RCP) 4.5. Scenario 2 assumes a high warming scenario (RCP 8.5), and also projects the observed, historical rates of decline due to other, non-climatic (*i.e.,* trend momentum) forward. Both scenarios hold floral resources constant at their 2020 levels, as data are not available to project this variable forward. Thus, under scenario 1, any changes in occupancy are based solely on changes in climate (RCP 4.5), while under scenario 2, any changes in occupancy are based on both climate change (RCP 8.5), as well as historical rates of change due to non-climatic factors. Projections for all host species followed the same procedures.

Suckley's cuckoo bumble bee has exhibited a statistically significant decline, resulting in lower occupancy from historical condition. Historically, the median probability of occupancy of Suckley's cuckoo bumble bee rangewide was 0.65. By the 2000–2020 period all analytical units are estimated to have lower probability of occupancy, with median probability of occupancy less than 0.16 for all analytical units and 0.13 rangewide (table 1).

TABLE 1—MEDIAN ESTIMATED PROBABILITY OF OCCUPANCY FOR SUCKLEY'S CUCKOO BUMBLE BEE IN EACH ANALYTICAL UNIT DURING THE HISTORICAL PERIOD (AVERAGE FROM 1900–1960) AND THE CURRENT (2000–2020) PERIOD

[The percent change in median occupancy from historical to current period is also noted for each analytical unit, as is the total land area of each analytical unit (square kilometers (km^2)) and the percent of the range the unit represents, in terms of land area.]

Analytical unit	Area (km^2)	Percent of range	Last detection	Median historical occupancy	Median current occupancy	Percent change
Atlantic Highlands (East)	44,482	0.6	1924	0.712	0.149	−79
Boreal Cordillera	532,782	7.4	2019	0.706	0.147	−79

Western Cordillera	1,214,900	17.0	2018	0.692	0.140	−80
Rangewide	7,151,965	100	[1] 2022	0.653	0.128	[2] −85

[1] The last detection of Suckley's cuckoo bumble bee in our dataset was 2022. However, field data from across the country from the 2023 field season or beyond had not been fully curated in time to include in the SSA.

[2] Rangewide decline from 1900 to present, based on an analysis of all Suckley's cuckoo bumble bee occurrence records (Service 2024, pp. 63–68).

Suckley's cuckoo bumble bee has not been observed in the United States since 2016, despite widespread historical occurrence records and increased sampling effort for bumble bees. Additionally, the species has only been detected since 2000 (detections after 2000 are considered modern detections) in 9 of the 15 analytical units (60 percent of the total analytical units; see table 1, above). We considered analytical units to be quasi-extirpated (when the density of reproductive individuals in a population becomes so small that extirpation is likely inevitable without intervention) if there were no detections since 2000. In the species' eastern range, three of the four analytical units of Suckley's cuckoo bumble bee were considered quasi-extirpated, including the Atlantic Highlands (last detection in 1924), Hudson Plains (last detection in 1949), Mixed Wood Plains (last detection in 1971).

In the west of the species' range, 3 of the 11 analytical units lack modern detections (*i.e.,* since 2000) of Suckley's cuckoo bumble bee. Notably, the Marine West Coast Forest analytical unit has 515 historical occurrence records (23 percent of total occurrences), but no occurrence records after 1982. The Mixed Wood Shield analytical unit has two historical records of the species, with the most recent occurrence in 1995. Thus, we consider the Marine West Coast Forest and the Mixed Wood Shield analytical units to be quasi-extirpated. Although the species has not been observed in the Taiga Plains since 1962, this area has not been extensively sampled for bees, and, therefore, we did not consider it to be quasi-extirpated.

Additionally, four (western bumble bee, McKay's bumble bee, rusty patched bumble bee, and yellow-banded bumble bee) of six host species exhibited statistically significant temporal declines in occupancy rangewide (Service 2024, pp. 69–70). These results are similar to other studies that found rangewide population declines for bumble bees in the subgenus *Bombus* (Giles and Ascher 2006, pp. 217–218; Colla and Packer 2008, p. 1387; Schweitzer et al. 2012, p. 7; Janousek et al. 2023, p. 2;).

In the near-term (by 2040), probability of occupancy is expected to continue to decline. Under scenario 1, median probability of occupancy is estimated to be less than 0.11 across all analytical units. This represents a 26 to 77 percent decline relative to 2000–2020 estimates. Under scenario 2, median probability of occupancy is estimated to be less than 0.05 across all analytical units. This represents a 73 to 92 percent decline relative to 2000–2020 estimates.

Resiliency

Suckley's cuckoo bumble bee has experienced a statistically significant, rangewide, 85 percent decline in occupancy. Additionally, the species has not been observed in the contiguous United States since 2016, despite widespread historical occurrence records and increased sampling effort for bumble bees. These results suggest that the species is currently found in fewer locations across its range than historically. High abundance and survival are demographic needs of healthy Suckley's cuckoo bumble bee populations. While there are some areas in Canada where the species is still regularly observed, these results suggest resiliency is low across all analytical units. In the near-term, resiliency is projected to continue to decline, further reducing the species ability to sustain populations over time.

Redundancy

Redundancy buffers the species against catastrophic events and can be summarized based on the spatial distribution of sufficiently resilient populations relative to catastrophic events. Currently, three eastern analytical units and two western analytical units are considered quasi-extirpated. This apparent contraction of the range results in a loss of redundancy for the species. In the near-term, the continued decline in occupancy projected will likely further reduce redundancy. Given that one confirmed host species (western bumble bee) and three potential host species (rusty patched bumble bee, McKay's bumble bee, and yellow-banded bumble bee) are in decline, redundancy in terms of host species is considered low. For instance, if a catastrophic event wipes out one host species in an area, then there is less likely to be an alternative host species available for the Suckley's cuckoo bumble bee.

Representation

Due to estimated and observed declines in occupancy, Suckley's cuckoo bumble bee has substantially lower connectivity, and representation than historically. Population connectivity is important for Suckley's cuckoo bumble bee's viability as it increases the likelihood of genetic diversity and promotes successful haplodiploid reproduction (genetic sex-determination system in which females develop from fertilized (diploid) eggs and males from unfertilized (haploid) eggs). Loss of connectivity, genetic drift, and inbreeding may be particularly consequential for bumble bees due to their low effective population size and their haplodiploid sex determination (Goulson et al. 2008, p. 205). However,

population connectivity is naturally a constraint for cuckoo bumble bees because they live in small, fragmented populations due to their dependence on host bumble bee colonies (Suhonen et al. 2016, p. 529). Dispersal of bees to find unrelated mates is aided by the proximity of other usurped host colonies. Consequently, the sharp decrease in the prevalence of both Suckley's cuckoo bumble bee and many of its confirmed and potential host species has likely reduced population connectivity relative to historical conditions. Reduced gene flow may have consequences on the genetic diversity of Suckley's cuckoo bumble bee, because small populations can experience stronger genetic drift (Zayed 2009, p. 246). This is important because high genetic diversity reduces prevalence of some pathogens (Parsche and Lattorff 2018, p. 900), and the risk of matched mating, which produces diploid males that do not contribute to population growth (Zayed 2009, p. 239).

Given the observed 85 percent decrease in the species' occupancy relative to historical conditions, the low current and projected near-term occupancy across all analytical units, and the potential that the species is extirpated or quasi-extirpated in portions of its range, the species has likely lost representation across longitudinal and ecological gradients.

The adaptive capacity of Suckley's cuckoo bumble bee is also dependent on host species, as the distribution of the parasitic bee is restricted by the geographic distribution and population health of host bees, and parasite abundance is low where host abundance is low (Antonovics and Edwards 2011, p. 1003). Therefore, availability of host species may also indirectly restrict the adaptive capacity of Suckley's cuckoo bumble bee, given that four of the six host species are also in decline.

Future Condition

As part of the SSA, the same methods to model near-term condition were also used to mode the two future condition scenarios out to the year 2100. Our scenarios assumed a moderate to major increase in climate change (warming conditions) and either a continuation of factors that resulted in the historical decline of the species, or no continuation of these factors (just the impacts of climate change) to the species. Because we determined that the current and near-term condition of Suckley's cuckoo bumble bee is consistent with the Act's definition of an endangered species (see Determination of Suckley's Cuckoo Bumble Bee's Status, below), we are not presenting the results of the future scenarios beyond 2040 in this proposed rule. Please refer to the SSA report (Service 2024, pp. 73–83) for the full analysis of future conditions.

Determination of Suckley's Cuckoo Bumble Bee's Status

Section 4 of the Act (16 U.S.C. 1533) and its implementing regulations (50 CFR part 424) set forth the procedures for determining whether a species meets the definition of an endangered species or a threatened species. The Act defines an ''endangered species'' as a species in danger of extinction throughout all or a significant portion of its range and a ''threatened species'' as a species likely to become an endangered species within the foreseeable future throughout all or a significant portion of its range. The Act requires that we determine whether a species meets the definition of an endangered species or a threatened species because of any of the following factors: (A) The present or threatened destruction, modification, or curtailment of its habitat or range; (B) overutilization for commercial, recreational, scientific, or educational purposes; (C) disease or predation; (D) the inadequacy of existing regulatory mechanisms; or (E) other natural or manmade factors affecting its continued existence.

We presented summary evaluations of the main drivers of the species' current and near-term condition analyzed in the SSA report including habitat conversion and fragmentation (Factor A), livestock grazing (Factor A), pathogens (Factor C), host species decline (Factor E), climate change (Factor E), and pesticides (Factor E). We also evaluated existing regulatory mechanisms (Factor D) and ongoing conservation measures.

Status Throughout All of Its Range

After evaluating threats to the species and assessing the cumulative effect of the threats under the Act's section 4(a)(1) factors, we have determined that Suckley's cuckoo bumble bee has limited resiliency, redundancy, and representation to maintain viability over time. Suckley's cuckoo bumble bee has exhibited a statistically significant decline (85 percent) in probability of occupancy rangewide. Historically, the median probability of occupancy of Suckley's cuckoo bumble bee rangewide was 0.65. By the current time period (2000–2020), all analytical units are estimated to have lower probability of occupancy, with median probability of occupancy less than 0.16 for all analytical units and 0.13 rangewide. In the near-term (by 2040), the probability of occupancy is projected to continue to decline, with probability of occupancy for all analytical units projected to be below 0.05 (scenario 1) and 0.11 (scenario 2). Additional analyses of host species occupancy indicate that four of six known or potential host species exhibited statistically significant temporal declines in probability of occupancy rangewide. Thus, resiliency for all analytical units is considered low.

Suckley's cuckoo bumble bee has lost redundancy because 5 of the 15 analytical units are currently considered to be in a quasi-extirpated state, the species has not been observed in the contiguous United States since 2016, and the remaining analytical units are all considered to have low resiliency. Near-term projections indicate continued declines in occupancy, further reducing redundancy.

Representation has also declined as a result of range contraction and occupancy decline, as phenotypic, genetic, and ecological diversity have declined. As host colonies become less common across the landscape, Suckley's cuckoo bumble bees will likely have lower likelihood of finding unrelated mates. Population fragmentation, genetic drift, and inbreeding are likely to be exacerbated in the near-term as the species becomes even less prevalent. Finally, it is important to note that the viability of Suckley's cuckoo bumble bee is also highly dependent on its host species, many of which have declined historically, and are expected to continue to do so in the near-term.

We do not find Suckley's cuckoo bumble bee meets the Act's definition of a threatened species because the species currently has low resiliency, redundancy, and representation and near-term projections are estimated to further reduce overall species viability. Because Suckley's cuckoo bumble bee has low redundancy and representation, the species is vulnerable to even a single catastrophic event such as a pathogen outbreak, wildfire, or drought event. Thus, after assessing the best scientific and commercial data available, we determine that Suckley's cuckoo bumble bee is in danger of extinction throughout all of its range.

Status Throughout a Significant Portion of Its Range

Under the Act and our implementing regulations, a species may warrant listing if it is in danger of extinction or likely to become so within the foreseeable future throughout all or a significant portion of its range. We have determined that Suckley's cuckoo bumble bee is in danger of extinction throughout all of its range and

accordingly did not undertake an analysis of any significant portion of its range. Because Suckley's cuckoo bumble bee warrants listing as endangered throughout all of its range, our determination does not conflict with the decision in *Center for Biological Diversity* v. *Everson,* 435 F. Supp. 3d 69 (D.D.C. 2020), because that decision related to significant portion of the range analyses for species that warrant listing as threatened, not endangered, throughout all of their range.

Determination of Status

Based on the best scientific and commercial data available, we determine that Suckley's cuckoo bumble bee meets the Act's definition of an endangered species. Therefore, we propose to list Suckley's cuckoo bumble bee as an endangered species in accordance with sections 3(6) and 4(a)(1) of the Act.

Available Conservation Measures

Conservation measures provided to species listed as endangered or threatened species under the Act include recognition as a listed species, planning and implementation of recovery actions, requirements for Federal protection, and prohibitions against certain practices. Recognition through listing results in public awareness, and conservation by Federal, State, Tribal, and local agencies, foreign governments, private organizations, and individuals. The Act encourages cooperation with the States and other countries and calls for recovery actions to be carried out for listed species. The protection required by Federal agencies, including the Service, and the prohibitions against certain activities are discussed, in part, below.

The primary purpose of the Act is the conservation of endangered and threatened species and the ecosystems upon which they depend. The ultimate goal of such conservation efforts is the recovery of these listed species, so that they no longer need the protective measures of the Act. Section 4(f) of the Act calls for the Service to develop and implement recovery plans for the conservation of endangered and threatened species. The goal of this process is to restore listed species to a point where they are secure, self-sustaining, and functioning components of their ecosystems.

The recovery planning process begins with development of a recovery outline made available to the public soon after a final listing determination. The recovery outline guides the immediate implementation of urgent recovery actions while a recovery plan is being developed. Recovery teams (composed of species experts, Federal and State agencies, nongovernmental organizations, and stakeholders) may be established to develop and implement recovery plans. The recovery planning process involves the identification of actions that are necessary to halt and reverse the species' decline by addressing the threats to its survival and recovery. The recovery plan identifies recovery criteria for review of when a species may be ready for reclassification from endangered to threatened (''downlisting'') or removal from protected status (''delisting''), and methods for monitoring recovery progress. Recovery plans also establish a framework for agencies to coordinate their recovery efforts and provide estimates of the cost of implementing recovery tasks. Revisions of the plan may be done to address continuing or new threats to the species, as new substantive information becomes available. The recovery outline, draft recovery plan, final recovery plan, and any revisions will be available on our website as they are completed (*https://www.fws.gov/program/endangered-species*) or from our Southern Alaska Fish and Wildlife Field Office (see **FOR FURTHER INFORMATION CONTACT**).

Implementation of recovery actions generally requires the participation of a broad range of partners, including other Federal agencies, States, Tribes, nongovernmental organizations, businesses, and private landowners. Examples of recovery actions include habitat restoration (*e.g.,* restoration of native vegetation), research, captive propagation and reintroduction, and outreach and education. The recovery of many listed species cannot be accomplished solely on Federal lands because their range may occur primarily or solely on non-Federal lands. To achieve recovery of these species requires cooperative conservation efforts on private, State, and Tribal lands.

If this species is listed, funding for recovery actions will be available from a variety of sources, including Federal budgets, State programs, and cost-share grants for non-Federal landowners, the academic community, and nongovernmental organizations. In addition, pursuant to section 6 of the Act, the States of Washington, Oregon, Idaho, California, Colorado, Nevada, Utah, Arizona, Wyoming, Montana, North Dakota, South Dakota, Nebraska, and Minnesota would be eligible for Federal funds to implement management actions that promote the protection or recovery of the Suckley's cuckoo bumble bee. Information on our grant programs that are available to aid species recovery can be found at: *https://www.fws.gov/service/financial-assistance.*

Although Suckley's cuckoo bumble bee is only proposed for listing under the Act at this time, please let us know if you are interested in participating in recovery efforts for this species. Additionally, we invite you to submit any new information on this species whenever it becomes available and any information you may have for recovery planning purposes (see **FOR FURTHER INFORMATION CONTACT**).

Section 7 of the Act is titled, ''Interagency Cooperation,'' and it mandates all Federal action agencies to use their existing authorities to further the conservation purposes of the Act and to ensure that their actions are not likely to jeopardize the continued existence of listed species or adversely modify critical habitat. Regulations implementing section 7 are codified at 50 CFR part 402.

Section 7(a)(2) states that each Federal action agency shall, in consultation with the Secretary, ensure that any action they authorize, fund, or carry out is not likely to jeopardize the continued existence of a listed species or result in the destruction or adverse modification of designated critical habitat. Each Federal agency shall review its action at the earliest possible time to determine whether it may affect listed species or critical habitat. If a determination is made that the action may affect listed species or critical habitat, formal consultation is required (50 CFR 402.14(a)), unless the Service concurs in writing that the action is not likely to adversely affect listed species or critical habitat. At the end of a formal consultation, the Service issues a biological opinion, containing its determination of whether the Federal action is likely to result in jeopardy or adverse modification.

In contrast, section 7(a)(4) of the Act requires Federal agencies to confer with the Service on any action which is likely to jeopardize the continued existence of any species proposed to be listed under the Act or result in the destruction or adverse modification of critical habitat proposed to be designated for such species. Although the conference procedures are required only when an action is likely to result in jeopardy or adverse modification, action agencies may voluntarily confer with the Service on actions that may affect species proposed for listing or critical habitat proposed to be designated. In the event that the subject species is listed or the relevant critical habitat is designated, a conference opinion may be adopted as a biological

opinion and serve as compliance with section 7(a)(2) of the Act.

Examples of discretionary actions for Suckley's cuckoo bumble bee that may be subject to conference and consultation procedures under section 7 are management of Federal lands administered by the National Park Service, U.S. Fish and Wildlife Service, and U.S. Forest Service, as well as actions that require a Federal permit (such as a permit from the U.S. Army Corps of Engineers under section 404 of the Clean Water Act (33 U.S.C. 1251 *et seq.*) or actions funded by Federal agencies such as the Federal Highway Administration, Federal Aviation Administration, or the Federal Emergency Management Agency. Federal actions not affecting listed species or critical habitat—and actions on State, Tribal, local, or private lands that are not federally funded, authorized, or carried out by a Federal agency—do not require section 7 consultation. Federal agencies should coordinate with the Southern Alaska Fish and Wildlife Field Office (see **FOR FURTHER INFORMATION CONTACT**) with any specific questions on section 7 consultation and conference requirements.

The Act and its implementing regulations set forth a series of general prohibitions and exceptions that apply to endangered wildlife. The prohibitions of section 9(a)(1) of the Act, and the Service's implementing regulations codified at 50 CFR 17.21, make it illegal for any person subject to the jurisdiction of the United States to commit, to attempt to commit, to solicit another to commit or to cause to be committed any of the following acts with regard to any endangered wildlife: (1) import into, or export from, the United States; (2) take (which includes harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in any such conduct) within the United States, within the territorial sea of the United States, or on the high seas; (3) possess, sell, deliver, carry, transport, or ship, by any means whatsoever, any such wildlife that has been taken illegally; (4) deliver, receive, carry, transport, or ship in interstate or foreign commerce, by any means whatsoever and in the course of commercial activity; or (5) sell or offer for sale in interstate or foreign commerce. Certain exceptions to these prohibitions apply to employees or agents of the Service, the National Marine Fisheries Service, other Federal land management agencies, and State conservation agencies.

We may issue permits to carry out otherwise prohibited activities involving endangered wildlife under certain circumstances. Regulations governing permits for endangered wildlife are codified at 50 CFR 17.22, and general Service permitting regulations are codified at 50 CFR part 13. With regard to endangered wildlife, a permit may be issued: for scientific purposes, for enhancing the propagation or survival of the species, or for take incidental to otherwise lawful activities. The statute also contains certain exemptions from the prohibitions, which are found in sections 9 and 10 of the Act.

II. Critical Habitat

Background

Section 4(a)(3) of the Act requires that, to the maximum extent prudent and determinable, we designate a species' critical habitat concurrently with listing the species. Critical habitat is defined in section 3 of the Act as:

(1) The specific areas within the geographical area occupied by the species, at the time it is listed in accordance with the Act, on which are found those physical or biological features

(a) Essential to the conservation of the species, and

(b) Which may require special management considerations or protection; and

(2) Specific areas outside the geographical area occupied by the species at the time it is listed, upon a determination that such areas are essential for the conservation of the species.

Our regulations at 50 CFR 424.02 define the geographical area occupied by the species as an area that may generally be delineated around species' occurrences, as determined by the Secretary (*i.e.,* range). Such areas may include those areas used throughout all or part of the species' life cycle, even if not used on a regular basis (*e.g.,* migratory corridors, seasonal habitats, and habitats used periodically, but not solely by vagrant individuals).

Conservation, as defined under section 3 of the Act, means to use and the use of all methods and procedures that are necessary to bring an endangered or threatened species to the point at which the measures provided pursuant to the Act are no longer necessary. Such methods and procedures include, but are not limited to, all activities associated with scientific resources management such as research, census, law enforcement, habitat acquisition and maintenance, propagation, live trapping, and transplantation, and, in the extraordinary case where population pressures within a given ecosystem cannot be otherwise relieved, may include regulated taking.

Critical habitat receives protection under section 7 of the Act through the requirement that each Federal action agency ensure, in consultation with the Service, that any action they authorize, fund, or carry out is not likely to result in the destruction or adverse modification of designated critical habitat. The designation of critical habitat does not affect land ownership or establish a refuge, wilderness, reserve, preserve, or other conservation area. Such designation also does not allow the government or public to access private lands. Such designation does not require implementation of restoration, recovery, or enhancement measures by non-Federal landowners. Rather, designation requires that, where a landowner requests Federal agency funding or authorization for an action that may affect an area designated as critical habitat, the Federal agency consult with the Service under section 7(a)(2) of the Act. If the action may affect the listed species itself (such as for occupied critical habitat), the Federal agency would have already been required to consult with the Service even absent the designation because of the requirement to ensure that the action is not likely to jeopardize the continued existence of the species. Even if the Service were to conclude after consultation that the proposed activity is likely to result in destruction or adverse modification of the critical habitat, the Federal action agency and the landowner are not required to abandon the proposed activity, or to restore or recover the species; instead, they must implement ''reasonable and prudent alternatives'' to avoid destruction or adverse modification of critical habitat.

Under the first prong of the Act's definition of critical habitat, areas within the geographical area occupied by the species at the time it was listed are included in a critical habitat designation if they contain physical or biological features (1) which are essential to the conservation of the species and (2) which may require special management considerations or protection. For these areas, critical habitat designations identify, to the extent known using the best scientific data available, those physical or biological features that are essential to the conservation of the species (such as space, food, cover, and protected habitat).

Under the second prong of the Act's definition of critical habitat, we can designate critical habitat in areas

outside the geographical area occupied by the species at the time it is listed, upon a determination that such areas are essential for the conservation of the species.

Section 4(b)(2) of the Act requires that we designate critical habitat on the basis of the best scientific data available. Further, our Policy on Information Standards Under the Endangered Species Act (published in the **Federal Register** on July 1, 1994 (59 FR 34271)), the Information Quality Act (section 515 of the Treasury and General Government Appropriations Act for Fiscal Year 2001 (Pub. L. 106–554; H.R. 5658)), and our associated Information Quality Guidelines provide criteria, establish procedures, and provide guidance to ensure that our decisions are based on the best scientific data available. They require our biologists, to the extent consistent with the Act and with the use of the best scientific data available, to use primary and original sources of information as the basis for recommendations to designate critical habitat.

When we are determining which areas should be designated as critical habitat, our primary source of information is generally the information compiled in the SSA report and information developed during the listing process for the species. Additional information sources may include any generalized conservation strategy, criteria, or outline that may have been developed for the species; the recovery plan for the species; articles in peer-reviewed journals; conservation plans developed by States and counties; scientific status surveys and studies; biological assessments; other unpublished materials; or experts' opinions or personal knowledge.

Habitat is dynamic, and species may move from one area to another over time. We recognize that critical habitat designated at a particular point in time may not include all of the habitat areas that we may later determine are necessary for the recovery of the species. For these reasons, a critical habitat designation does not signal that habitat outside the designated area is unimportant or may not be needed for recovery of the species. Areas that are important to the conservation of the species, both inside and outside the critical habitat designation, will continue to be subject to: (1) Conservation actions implemented under section 7(a)(1) of the Act; (2) regulatory protections afforded by the requirement in section 7(a)(2) of the Act for Federal agencies to ensure their actions are not likely to jeopardize the continued existence of any endangered or threatened species; and (3) the prohibitions found in section 9 of the Act. Federally funded or permitted projects affecting listed species outside their designated critical habitat areas may still result in jeopardy findings in some cases. These protections and conservation tools continue to contribute to recovery of the species. Similarly, critical habitat designations made on the basis of the best scientific data available at the time of designation will not control the direction and substance of future recovery plans, habitat conservation plans (HCPs), or other species conservation planning efforts if new information available at the time of those planning efforts calls for a different outcome.

Critical Habitat Determinability

Our regulations at 50 CFR 424.12(a)(2) state that critical habitat is not determinable when one or both of the following situations exist:

(i) Data sufficient to perform required analyses are lacking, or

(ii) The biological needs of the species are not sufficiently well known to identify any area that meets the definition of ''critical habitat.''

We reviewed the available information pertaining to the biological needs of the species and habitat characteristics where this species is located. A careful assessment of the economic impacts that may occur due to a critical habitat designation is still ongoing, and we are in the process of acquiring the complex information needed to perform that assessment. Therefore, due to the current lack of data sufficient to perform required analyses, we conclude that the designation of critical habitat for Suckley's cuckoo bumble bee is not determinable at this time. The Act allows the Service an additional year to publish a critical habitat designation that is not determinable at the time of listing (16 U.S.C. 1533(b)(6)(C)(ii)).

Required Determinations

Clarity of the Rule

We are required by E.O.s 12866 and 12988 and by the Presidential Memorandum of June 1, 1998, to write all rules in plain language. This means that each rule we publish must:

(1) Be logically organized;

(2) Use the active voice to address readers directly;

(3) Use clear language rather than jargon;

(4) Be divided into short sections and sentences; and

(5) Use lists and tables wherever possible.

If you feel that we have not met these requirements, send us comments by one of the methods listed in **ADDRESSES**. To better help us revise the rule, your comments should be as specific as possible. For example, you should tell us the numbers of the sections or paragraphs that are unclearly written, which sections or sentences are too long, the sections where you feel lists or tables would be useful, etc.

Government-to-Government Relationship With Tribes

In accordance with the President's memorandum of April 29, 1994 (Government-to-Government Relations with Native American Tribal Governments; 59 FR 22951, May 4, 1994), E.O. 13175 (Consultation and Coordination with Indian Tribal Governments), the President's memorandum of November 30, 2022 (Uniform Standards for Tribal Consultation; 87 FR 74479, December 5, 2022), and the Department of the Interior's manual at 512 DM 2, we readily acknowledge our responsibility to communicate meaningfully with federally recognized Tribes and Alaska Native Corporations (ANCs) on a government-to-government basis. In accordance with Secretary's Order 3206 of June 5, 1997 (American Indian Tribal Rights, Federal-Tribal Trust Responsibilities, and the Endangered Species Act), we readily acknowledge our responsibilities to work directly with Tribes in developing programs for healthy ecosystems, to acknowledge that Tribal lands are not subject to the same controls as Federal public lands, to remain sensitive to Indian culture, and to make information available to Tribes. We sent letters to all Tribes within the range of the species. We received responses back from the Tsleil-Waututh Nation and the Nottawaseppi Huron Band of the Potawatomi; both Tribes provided support for our SSA efforts, but no new data or information. We will continue to work with Tribal entities during the development of any subsequent rules for Suckley's cuckoo bumble bee.

Seafood Import Procedures and Certification of Admissibility

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of proposed rulemaking; request for comments.

SUMMARY: NMFS proposes to revise regulations to provide for electronic entry filing of data from the Certification of Admissibility (COA) form, which allows entry of certain fish or fish products otherwise subject to trade restrictions pursuant to the Marine Mammal Protection Act (MMPA), High Seas Driftnet Fishing Moratorium Protection Act (Moratorium Protection Act), or Atlantic Tunas Convention Act (ATCA). This proposed rule would standardize and consolidate existing permit, reporting, recordkeeping, and entry filing requirements and allow nations to use their own aggregate catch documentation. The intent of these actions are to enable the continued flow of trade while adhering to existing statutory requirements.

DATES: Written comments must be received on or before February 18, 2025.

ADDRESSES: Written comments on this action, identified by NOAA–NMFS–2022–0057, may be submitted by either of the following methods:

Electronic Submission: Submit all electronic public comments via the Federal e-Rulemaking Portal. Go to *https://www.regulations.gov* and enter NOAA–NMFS–2022–0057 in the Search box. Click on the ''Comment'' icon, complete the required fields, and enter or attach your comments.

Mail: Submit written comments to Bryan Keller, Office of International Affairs, Trade, and Commerce, National Marine Fisheries Service, 1315 East-West Highway (F/IS5), Silver Spring, MD 20910.

Instructions: Comments sent by any other method, to any other address or individual, or received after the end of the comment period, may not be considered by NMFS. All comments received are a part of the public record and will generally be posted for public viewing on *https://www.regulations.gov* without change. All personal identifying information (*e.g.,* name, address, *etc.*), confidential business information, or otherwise sensitive information submitted voluntarily by the sender will be publicly accessible. NMFS will accept anonymous comments (enter ''N/A'' in the required fields if you wish to remain anonymous).

Written comments regarding the burden-hour estimates or other aspects of the collection-of-information requirements addressed in the proposed rule may be submitted to the Office of International Affairs, Trade, and Commerce, and/or to NMFS.

FOR FURTHER INFORMATION CONTACT: Bryan Keller, Office of International Affairs, Trade, and Commerce, National Marine Fisheries Service (phone: 301–427–7725; or email: *bryan.keller@noaa.gov*).

SUPPLEMENTARY INFORMATION:

Background

Several statutes, including the MMPA (16 U.S.C 1361 *et seq.*), Moratorium Protection Act (16 U.S.C. 1826d–k), and ATCA (16 U.S.C. 971 *et seq.*), authorize the U.S. Government to impose trade restrictions on certain fish or fish products (both wild-caught and aquaculture) of a foreign nation, or other entities that have competency to enter into international fishery management agreements as per the Moratorium Protection Act, where the nation has failed to meet the standards or requirements of the United States. In order to allow for entry of similar fish and fish products that are not subject to trade restrictions, NMFS developed the COA fish harvest record form, which is designed to accompany a non-prohibited shipment of fish or fish product to attest to its method and location of harvest. NMFS currently uses paper-format COAs that require

signatures of the certifying official of the exporting nation prior to arrival and the U.S. importer upon release into the United States. This information collection is currently approved by the Office of Management and Budget (OMB) under control number 0648–0651. The COA is currently referenced under separate regulations that implement the MMPA (see 50 CFR 216.24(h)) and the Moratorium Protection Act (see 50 CFR part 300, subpart N).

NMFS now seeks to automate the COA and entry process and proposes to amend and consolidate COA-related permit, reporting and recordkeeping, and entry filing requirements in a new subpart S to 50 CFR part 300. The goal is to ensure consistency in the COA requirements for importing non-restricted products across all programs. This proposed rule would make conforming edits to regulations promulgated pursuant to the MMPA, Moratorium Protection Act, and ATCA, including adding a cross-reference to the new subpart S.

Current COA Use

The COA procedures are used to facilitate and monitor trade in fish products from nations that are subject to narrowly defined trade restrictions (*e.g.,* specific nations, fishing gear or fishing areas) under the MMPA, Moratorium Protection Act, or ATCA, but for which conditions of harvest may allow for entry of certain fish or fish products (see 16 U.S.C. 1371(a)(2)(A); 16 U.S.C. 1826j(d)(2); 16 U.S.C. 1826k(c)(4); and 16 U.S.C. 971d(c)(4) and (5)).

To date, NMFS has allowed use of a COA fish harvest record form to import non-prohibited fish or fish products from nations subject to import prohibitions in two situations under MMPA authority. In the first case, to protect the endangered vaquita porpoise, certain fish products from Mexico that are harvested by specified fishing gear in the Upper Gulf of California that incidentally catch vaquita are subject to trade restrictions (see 85 FR 13626, March 9, 2020). However, those types of fish or fish products are admissible when documented by Mexico via the COA as having been harvested in other fishing areas outside the Upper Gulf of California or with other fishing gear not subject to the import restriction. In the second case, to protect the endangered Maui dolphin, the U.S. Court of International Trade issued a preliminary injunction on the import of certain fish products from New Zealand that were harvested with set net or trawl gear off the west coast of North Island (see Slip OP 22–130 at *https://www.cit.uscourts.gov/sites/cit/files/22-130.pdf*). However, those types of fish or fish products were admissible, when documented by New Zealand via the COA as having been harvested in other fishing areas outside the west coast of North Island or with other fishing gear not subject to the import restriction. As of April 2, 2024, the MMPA import ban was lifted for fish or fish products from New Zealand. Detailed information on the current trade restrictions and provisions for use of the COA to file entries for admissible shipments can be found at: *https://www.fisheries.noaa.gov/foreign/marine-mammal-protection/seafood-import-restrictions.*

NMFS worked closely with U.S. Customs and Border Protection (CBP) to implement the trade restrictions and use of the COA fish harvest record form to document eligible entries. In the two cases referenced above, NMFS worked with CBP trade specialists to determine the U.S. Harmonized Tariff Schedule (HTSUS) codes applicable to the fish or fish products subject to the trade restrictions. NMFS then worked with the CBP Office of Field Operations to implement the trade restriction, with the scope of the restriction specified by the country of origin and the HTSUS code of the product. For the applicable country of origin and HTSUS code combination, the Document Image System (DIS) submission was required in the Automated Commercial Environment (ACE) portal. NMFS communicated the scope of the seafood trade restrictions and the documentation requirements for entry to the trade community through notices in the **Federal Register** (see *https://www.federalregister.gov/documents/2020/03/09/2020-04692/implementation-of-fish-and-fish-product-import-provisions-of-the-marine-mammal-protection*) and/or use of the CBP Cargo Systems Messaging Service (see *https://content.govdelivery.com/accounts/USDHSCBP/bulletins/33ef290*).

Upon the effective date of each trade restriction, CBP port inspectors began monitoring seafood imports from any affected countries to determine if the COA fish harvest record form had been submitted for the selected HTSUS codes. Absent the COA fish harvest record form, the entry was rejected and the entry filer (customs broker or importer of record) notified of the documentation requirement. Pursuant to a data-sharing memorandum of understanding, NMFS receives a daily feed of entry filings from CBP and, for entries requiring the COA, is able to validate the information presented on the COA fish harvest record form.

Proposed Action

Consolidating COA Requirements in New Subpart S

NMFS proposes a new subpart S to 50 CFR part 300 (the International Fisheries Regulations) to provide consistent COA requirements for use across the MMPA, Moratorium Protection Act, and ATCA programs. Under the proposed rule, the importer of record would be required to possess an International Fisheries Trade Permit (IFTP) issued under 50 CFR 300.322. The importer of record must file electronically, at the time of entry, or in advance of entry, the message set required under this subpart with U.S. CBP via the ACE portal. All products subject to subpart S, regardless of value, are subject to the subpart's requirements, notwithstanding any CBP exemptions. NMFS may allow entry of such products if: the exporting nation certifies the products are not subject to U.S. import restrictions via the COA fish harvest record form; the importer of record enters required data via the CBP ACE portal at the time of entry; and the importer of record uploads a copy of the COA fish harvest record form or other approved form through the DIS via the ACE portal within 24 hours of release of the product by CBP.

The COA is defined in this proposed rule as the attestation that the fish or fish products offered for entry into the United States are not subject to any import prohibitions issued pursuant to 50 CFR 216.24(h), 300.206, or 635.40(a) (*i.e.,* the import prohibition provisions under the MMPA, Moratorium Protection Act, and ATCA regulations, respectively). The proposed rule specifies that the COA fish harvest record form is available from NMFS and must be properly completed and certified by a duly authorized official of the exporting nation. The COA must also be validated by the importer of record and submitted to CBP in a format specified by NMFS. Nations subject to import prohibitions may use their own form or aggregate catch documentation, if NMFS finds that the provided information satisfies all requirements of this subpart and is the functional equivalent of NMFS' COA fish harvest record form. The COA fish harvest record form would include the following: information on the fish that was harvested and processed; information on where and when the fish were harvested and/or information on the aquaculture facility producing the product. The proposed rule specifies

that the importer would be required to provide all of the required information as applicable but may provide the total quantity and/or weight of the product(s) as landed/delivered and may omit certain vessel information (*i.e.,* vessel name, vessel authorization, and vessel number) for aggregate reporting. This flexibility may be desirable for aggregate harvests involving multiple small-scale fishing vessels that land fish or fish products at shore. An exporting nation may provide its own report of aggregated catch documentation for the shipment if it contains all the relevant information needed to satisfy this subpart. Finally, the NMFS-issued IFTP number issued for all IFTP holders under 50 CFR 300.322 for the importer of record would be required to be submitted via the ACE portal.

Data Required for Entry Into the ACE Portal

Information entered into the ACE portal must be complete and accurate and must match exactly the information provided on the COA fish harvest record form or other approved documentation. NMFS is working with CBP to automate the process in ACE for applying fish product trade restrictions, including situations when entry is allowed through use of the COA. CBP will develop functionality within the ACE portal to allow NMFS to specify trade restrictions for particular fish or fish products harvested by and/or exported from specific nations. NMFS would also specify when those products may be entered with a COA fish harvest record form documenting that the fish products were harvested by a method or in a location not subject to the specified trade restriction. Specific instructions on submitting the electronic message set are in the ACE Implementation Guide for NMFS incorporated in the Appendices to the Customs and Trade Automated Interface Requirements (CATAIR) appendix PGA (see *https://www.cbp.gov/document/guidance/nmfs-pga-message-set-guidelines*).

To automate the process of entry determination, this proposed rule will set forth the types of data elements that must be entered at the time of entry, or in advance of entry, into the ACE portal by the importer of record for each fish or fish product designated by NMFS as requiring a COA. Automated entry processing would facilitate enforcement of trade restrictions while also reducing the potential for disruptions/delays affecting the trade community when documents are checked manually.

ACE automation of the COA data would allow for the ability to act more quickly in implementing trade restrictions and COA requirements at entry. Under the MMPA, Moratorium Protection Act, and ATCA trade restriction provisions, it is envisioned that the exporting nation subject to a restriction may eventually take the necessary corrective action to address the issue or issues leading to the trade restrictions (*e.g.,* enhanced monitoring of fishing vessels, strengthening enforcement mechanisms, bycatch mitigation, *etc.*). In response to corrective actions, NMFS would lift trade restrictions and an update would be made accordingly in ACE by CBP following guidance and instruction provided by NMFS.

Recordkeeping and Inspections

This proposed rule would add a new requirement, at 50 CFR 300.354, that the importer of record retain records of the information reported at entry under this subpart in electronic or paper format, and make them available for inspection at the importer's place of business or submit them to NMFS upon request, for a period of 2 years from the date of the entry.

Prohibitions

This proposed rule adds a new § 300.355 setting forth prohibitions that it is unlawful for any person subject to the jurisdiction of the United States to violate any provision of this subpart, or the conditions of any IFTP issued under this part, and import fish or fish products subject to restrictions and documentation requirements under the MMPA, Moratorium Protection Act, or ATCA without a valid IFTP issued under 50 CFR 300.322 or without submitting complete and accurate information and documentation. These prohibitions are in addition to the prohibitions specified in the MMPA, Moratorium Protection Act, and ATCA regulations at §§ 216.12(d), 300.4, 300.325, and 635.71.

Revisions to the International Trade Documentation and Tracking Programs Regulations of Subpart Q

This proposed rule also amends the international trade documentation and tracking regulations at subpart Q to clarify authorities to which the subpart applies, correct the citation in the definition of International Fisheries Trade Permit and make minor organizational changes to 50 CFR 300.322 and 300.323 to improve readability.

Revisions to the MMPA Import Regulations

Under the MMPA, nations that export fish or fish products to the United States must ensure that their exporting fisheries have regulatory programs to address the incidental and intentional mortality and serious injury of marine mammals during the course of commercial fishing operations that are comparable in effectiveness to those required in U.S. fisheries (see 16 U.S.C. 1371(a)(2) and 50 CFR 216.24(h)). A nation that does not receive a comparability finding from NMFS for a fishery would be subject to trade prohibitions for the fish or fish products from that fishery. However, shipments from that nation may still be allowed if accompanied by a COA fish harvest record form certified by officials of the exporting nation to document that the product was not harvested in a fishery that did not receive a comparability finding. Therefore, NMFS is proposing to revise the MMPA regulations at 50 CFR 216.24(h)(1)(ii)(B) to remove the COA requirements from this provision. This proposed rule would add a reference to 50 CFR part 300, subpart S, for COA-related requirements and procedures for entry of non-prohibited products.

Revisions to the Moratorium Protection Act Regulations

The Moratorium Protection Act contains provisions to negatively certify nations for illegal, unreported or unregulated (IUU) fishing; bycatch of protected living marine resources (PLMR); and unsustainable fishing for sharks (16 U.S.C. 1826j and 1826k and 50 CFR 300.202 through 300.204). Negatively certified nations may be subject to trade restrictions for products harvested in the fisheries of concern. However, the Moratorium Protection Act authorizes alternative procedures that allow entry of fish and fish products on a shipment by shipment or vessel specific basis (16 U.S.C. 1826j(d)(2) and 1826k(c)(4) and 50 CFR 300.207 through 300.209). Current regulations at 50 CFR 300.207 (IUU fishing), 300.208 (PLMR bycatch), and 300.209 (shark catches) set forth the procedures for entry of product from negatively certified nations if the importer submits a COA fish harvest record form validated by the exporting nation to document that the fish or fish products are not subject to trade restrictions. This proposed rule would consolidate the alternative procedures for relevant fish or fish products from negatively certified nations for IUU fishing, PLMR bycatch, or shark catch into 50 CFR 300.207 and remove 300.208 and 300.209 as redundant. This proposed rule would also refer to 50 CFR part 300, subpart S, for COA-

related requirements and procedures for entry of non-prohibited products.

Revisions to ATCA Regulations

ATCA authorizes NMFS to make determinations under 16 U.S.C. 971d(c)(4) and (5) that fish subject to regulation or investigation by the International Commission for the Conservation of Atlantic Tunas (ICCAT) are ineligible for entry into the United States. Paragraph (c)(4) addresses fishing in the ICCAT Convention area in such a manner or in such circumstances as would tend to diminish the effectiveness of ICCAT conservation recommendations. Paragraph (c)(5) addresses repeated and flagrant fishing operations in the Convention area which seriously threaten the achievement of the objectives of the Commission's recommendations. Implementing regulations for these provisions are at 50 CFR 635.40.

The regulations (50 CFR 635.40(a)) provide that NMFS, with the concurrence of the Secretary of State, will publish its findings under 16 U.S.C. 971d(c)(4) or (5) in the **Federal Register**. Upon filing, all shipments of fish in any form of the species found to be ineligible will be denied entry unless a particular shipment is accompanied by a certificate of eligibility (COE), 50 CFR 635.40(b), which provides satisfactory proof that the shipment of fish is eligible for entry. This proposed rule revises 50 CFR 635.40(b) to replace the COE with the COA and refer to 50 CFR part 300, subpart S, for COA-related requirements and procedures for entry of non-prohibited products.

Response to Comments on Advance Notice of Proposed Rulemaking

NMFS published an Advance Notice of Proposed Rulemaking (ANPR) to alert the trade community of the intention to automate entry of the COA in ACE and to seek comment on the data programming needs on the part of the trade (87 FR 44078, July 25, 2022). NMFS received six comments in response to the ANPR from various trade, fishing industry, and environmental non-governmental organizations and has considered them in the development of this proposed rule. Some comments go beyond the scope of this rulemaking, which is solely focused on automated entry filing of COA related to import prohibitions under the MMPA, Moratorium Protection Act, or ATCA. A summary of the relevant comments and responses follows.

Comment 1: Commenters suggested that NMFS should create a separate and independent reporting system similar to the toothfish pre-approval application; then only the approval number will need to be submitted by the importer to ACE.

Response: The toothfish preapproval system is unique in that there is a relatively small number of toothfish shipments that are also covered by the centralized catch documentation system adopted by the Commission for the Conservation of Antarctic Marine Living Resources (CCAMLR). NMFS has determined that because the majority of fish or fish products subject to potential trade prohibitions are not covered by a centralized catch documentation system, as adopted by CCAMLR, the COA is an appropriate process to facilitate entry of non-prohibited fish or fish products that are from a nation subject to an import prohibition under the MMPA, Moratorium Protection Act, or ATCA. Therefore, NMFS is not implementing this suggestion.

Comment 2: Commenters suggested that NMFS should harmonize the information set called for by the COA fish harvest record form and other information collection programs for importing fish or fish products, such as highly migratory species, tuna tracking, seafood import monitoring, and Antarctic resources programs.

Response: Some trade restrictions may be temporary and require specific harvest data to narrowly target the fishing activity of concern, while other trade monitoring programs have information requirements that are agreed multilaterally and are more durable. As the longevity of trade restrictions and scope of information to be collected varies substantially, it is not feasible to harmonize the information set collected by all import programs. Therefore, NMFS is not implementing this suggestion because the proposed solution to harmonize information sets with other trade programs does not align with the temporal or substantive scope of this proposed rule.

Comment 3: Commenters suggested that NMFS should use the Seafood Import Monitoring Program to achieve electronic reporting as needed for COA with minimal disruption to industry/current practices.

Response: NMFS disagrees. Not all seafood products are currently included in the Seafood Import Monitoring Program and trade restrictions may need to be targeted on a range of fish or fish products produced by specific fishing gear/methods/areas. Also, trade restrictions requiring use of the COA may be temporary depending on responsive actions taken by the exporting nation. Similar to Comment 3, NMFS is not implementing this approach because the seafood products covered by the Seafood Import Monitoring Program do not align with all of the potential fish and fish products that could be subject to trade restrictions under this proposed rule.

Comment 4: Commenters suggested that NMFS should include all seafood imports in the COA program and ensure products produced as a result of forced labor are prohibited. NMFS should use the COA to require affirmation of compliance with applicable labor laws and treaties.

Response: NMFS disagrees. Under the MMPA, Moratorium Protection Act, and ATCA, the U.S. Government may deny entry of fish and fish products under certain conditions. The COA provides a means for allowing entry of fish and fish products that were not harvested under those conditions. Therefore, including all seafood imports in the COA program is outside the scope of this regulatory action.

Comment 5: Commenters suggested that NMFS should fully digitize the COA data reporting into ACE (no paper forms).

Response: NMFS disagrees. ACE is designed to receive a prescribed format message set for use by CBP and other partner government agencies. Creating a data entry interface for the COA within ACE would require a major change in functionality and would affect all partner government agency programs. In addition, the use of the paper form is critical to ensure nations certify that the fish or fish products in the subject shipment are not subject to U.S. import restrictions pursuant to the cited authorities. As described in more detail in comment 6 below, NMFS disagrees that this is a practical solution given the number of nations that export fish or fish products into the United States. Requiring a fully digital interface would require some government-to-government interface which is not feasible (see NMFS's response to question 6 below). The paper form is therefore critical for NMFS' validation of trade events as there would otherwise be no certification from the foreign government.

Comment 6: One commenter recommended that NMFS adopt a government-to-government approach to allow electronic transfers of the catch certificate. Another commenter stated that foreign nations that have electronic catch documentation systems in place can certify admissibility through their systems and can provide documents/certificates to NMFS that have less exposure to fraud or misrepresentation.

Response: NMFS disagrees. The U.S. imports seafood from over 130 nations. Developing a system for catch certification that could be supported by all nations would require considerable time and resources and is beyond the scope of this rulemaking. As proposed, the COA fish harvest record form requires validation by the exporting nation. Additionally, this proposed rule specifies that nations subject to import prohibitions may use their own form or aggregate catch documentation if NMFS finds that the provided information satisfies all requirements of this subpart and is the functional equivalent of NMFS' COA fish harvest record form. Thus, under the provisions in this proposed rule, nations with electronic catch certificates could work with NMFS to see if the COA program requirements can be met through use of their electronic catch documentation system.

Comment 7: One commenter suggested that the automated COA should not become a redundant message set layered over the current NOAA message sets used for other trade monitoring programs.

Response: NMFS agrees, but it cannot anticipate all of the situations that may lead to a trade restriction based on the concerns about particular foreign fisheries under various statutory authorities. Likewise, the particular fish or fish products subject to trade restrictions cannot be determined in advance of a determination about the fishery of concern. A situation may arise in which fish or fish products subject to COA are also subject to other NMFS trade monitoring programs. Customs brokers and importers should therefore work with their software developers to avoid repetitive data entry of common elements while generating the individual ACE message sets for each respective NMFS program applicable to the particular shipment.

Comment 8: One commenter recommended carrying out a pilot program with selected importers and brokers for troubleshooting purposes.

Response: NMFS is actively working with CBP to develop the reference files, message set requirements, and business rules in ACE for the COA. Once this work is completed in the ACE certification environment, automation of the COA can be tested against the current COA requirements for Mexico. NMFS will continue work with CBP and the trade community to provide adequate time for testing even after the program is deployed to the ACE production environment. This approach therefore allows for preliminary testing. Preliminary testing could provide insights into any issues or adjustments that need to be made to the program.

Comment 9: Commenters inquired whether product(s) imported into the United States on or after the effective date of a trade restriction but harvested before that date are also subject to the requirement for a COA.

Response: The COA requirements would pertain to U.S. importers upon the effective date of the trade restriction. Importers would then have to report certain data for the product pertaining to the time, place, and circumstances of harvest. Importers that provide a reported harvest date prior to the effective date of the trade restriction on the COA fish harvest record form and through the ACE portal would be allowed to offer their fish or fish product for entry.

Comment 10: Commenters inquired if the foreign nation Harmonized System (HS) Codes be used for products instead of the U.S. Harmonized Tariff Schedule Numbers on the COA form.

Response: U.S. importers must specify 10-digit codes based on the U.S. Harmonized Tariff Schedule (HTSUS), which also comports with the World Customs Organization. NMFS will notify trade restrictions to exporting nations and to CBP by indicating affected HTSUS codes for the products restricted from the specific country of origin. As proposed in this rule, if a U.S. importer files an entry that matches a specified combination of HTSUS code and country of origin, the COA information will be required. If the information provided by the COA fish harvest record form and inputted into the ACE portal shows that the harvest meets admissibility criteria, the entry will be processed and shipment released. If COA data are missing or invalid or indicate the fish products are inadmissible, the entry will be rejected. Foreign exporters should work with U.S. importers to clarify the HTSUS code that is applicable to the fish product offered for entry. That HTSUS code will determine whether the entry will be subject to the COA data requirement. U.S. importers are required to file entries under the applicable HTSUS codes and are subject to penalties should they intentionally misrepresent information about a shipment to avoid CBP or other U.S. Federal Agency information requirements. See additional HTSUS information at: *https://hts.usitc.gov/current.*

Comment 11: Multiple comments addressed that, in some nations, export product may be derived from aggregate fisheries involving several vessels. These nations may make use of a grouping feature for the issuance of simplified catch certificates that will not provide the details for each vessel involved in a certified catch but will keep all the information behind the certificate available in the database. The question was posed whether entering the name of the grouping of vessels rather than each vessel individually would be acceptable to meet the requirements for the COA procedures.

Response: Under the proposed rule, NMFS would consider the use of foreign nation catch certificates provided they meet the requirement to certify admissibility relative to the trade restriction that is imposed. In addition, the proposed rule allows certain vessel information (*i.e.,* vessel name, vessel authorization, and vessel number) to be omitted in aggregate reporting. NMFS seeks further comment on the issue of vessel identifiers and grouping so that trade prohibitions can be effectively enforced while minimizing the burden to the exporting nation and the trade community.

Comment 12: Commenters inquired whether a list of all the duly authorized officials who may certify fish products listed on a COA fish harvest record form meet the specifications on the form would be made publicly available and whether this list includes the duly authorized officials from all exporting nations for which a requirement for COA fish harvest record form is in place.

Response: To date, the COA program has been applied under MMPA authority only to certain Mexican fisheries operating in the Upper Gulf of California with fishing gear that interacts with the endangered vaquita porpoise and to certain New Zealand fisheries operating off the west coast of North Island with fishing gear that interacts with the endangered Maui dolphin. NMFS worked with Mexico to identify officials authorized to certify the harvest information presented on the COA fish harvest record form. To assist Mexican exporters and U.S. importers in identifying and contacting the authorized officials, NMFS published the list. New Zealand sought and received approval from NMFS to use a form generated from that nation's electronic catch certification system. Because the New Zealand catch certificate system is restricted to authorized users, there was no need to publish a list of officials authorized to validate the COA.

For each situation where products of a particular fishery from a nation are subject to an import restriction, NMFS will work with the nation to determine how the COA program may be applied

to avoid disruption to legitimate trade in admissible products. NMFS will consider the benefits to the trade community of posting information about authorizing officials from the nation. NMFS will coordinate with the relevant nation in considering whether to publish a list of authorized officials.

NMFS seeks further comment on the COA provisions from the trade community affected by the current MMPA trade restrictions on certain fish products from Mexico. NMFS also seeks comments from exporters, importers, and customs brokers of fish or fish products who are subject to reporting requirements at entry through the ACE portal. In addition, NMFS seeks comments from software developers who develop programs for trade community computer systems to interface with ACE.

NMFS is interested in any additional comments or suggestions for improving the implementation of the COA provisions pursuant to regulations issued under parts 216 (MMPA), 300 (Moratorium Protection Act), and 635 (ATCA).

Classification

This rulemaking is published under the authority of the MMPA (16 U.S.C. 1361 *et seq.*), the Moratorium Protection Act (16 U.S.C. 1826d-k), and ATCA (16 U.S.C. 971 *et seq.*) The NMFS Assistant Administrator has determined that this proposed rule is consistent with the above referenced statutes and other applicable law, subject to further consideration after public comment.

Under the MMPA, Moratorium Protection Act, and ATCA, certain fish or fish products are to be prohibited from entry into the United States if fishing practices from exporting nations or the nation's actions in regulating certain fisheries result in unsustainable fishing practices (see 16 U.S.C. 1371(a)(2); 16 U.S.C. 1826j(d)(3)(A); 16 U.S.C. 1826k(c)(5); and 16 U.S.C. 971d(c)(4) and (5)). Each of the aforementioned statutes includes provisions authorizing the Secretary of Commerce to implement alternative procedures to ensure non-prohibited products can continue to enter the United States (see 16 U.S.C. 1371(a)(3)(A); 16 U.S.C. 1826j(d)(2); 16 U.S.C. 1826k(c)(4); and 16 U.S.C. 971d(c)(3)(1)(H)). This proposed regulation consolidates the existing alternative procedures for entry regulations in a new subpart S to allow entities seeking to import non-prohibited fish and fish products into the United States to easily locate documentation requirements (*i.e.,* the COA) that must accompany such shipments. This proposed regulation also updates the existing regulations and includes procedures for automating the alternative entry procedures through electronic submission of required data through the ACE portal. Providing for electronic submission of required data accompanying non-prohibited products would allow more rapid entry of these products into the United States. The automated entry filing of the COA via electronic message set through the ACE portal therefore allows NMFS to adhere to our statutory obligations as described in this paragraph while meeting our policy goal of minimizing disruption of lawful trade.

Executive Order 12866

This proposed rule has been determined to be not significant for purposes of Executive Order 12866.

Regulatory Flexibility Act

The Chief Counsel for Regulation of the Department of Commerce certified to the Chief Counsel for Advocacy of the Small Business Administration that this proposed rule, if adopted, would not have a significant economic impact on a substantial number of small entities.

The proposed amendments to the COA include the following amendment of importer permitting, reporting and recordkeeping, and entry filing requirements in situations where the COA fish harvest record form is required; and allowance of the use of forms generated by a foreign nation or aggregate catch documentation, if approved by NMFS.

The Small Business Administration (SBA) has established size criteria for all major industry sectors in the United States, including seafood wholesalers. According to SBA regulations at 13 CFR 121.201, the small business size standards identified by North American Industry Classification System (NAICS) codes classify a business involved in fish and seafood wholesale trade as a small entity if it has under 100 employees (NAICS code 424460, Fish and Seafood Merchant Wholesalers) for all its affiliated operations worldwide. The rulemaking will also have incidental impacts on trade agents and brokers (NAICS code 425120, Wholesale Trade Agents And Brokers), who may be responsible for some of the data entry burden but we assume this cost will be fully passed on to the wholesaler. As of the 2021 Census Bureau report, there were 1,873 firms categorized by NAICS code 424460 with a combined total annual payroll of $1.2 billion. Revenue information is available from the 2017 Economic Census, at which time the total category revenue was $17.9 billion.

We estimate that 100 firms will be impacted by the rulemaking. According to the 2021 County Business Patterns, 98 percent of businesses categorized by NAICS code 424460 have fewer than 100 employees and therefore qualify as small entities. Therefore, we assume that the rulemaking will apply to 98 small entities.

The economic impact of the rulemaking is the associated labor burden, paperwork maintenance, and permit fee. Specifically, the firms must certify certain information using the COA fish harvest record form, submit data to ACE both before and after release, acquire an International Fisheries Trade Permit, maintain the required records, and respond to any requests for verification. A detailed breakdown of these burdens is included in the Paperwork Reduction Act (PRA) supporting statement and the Regulatory Impact Review, with the total increase in burden from the information collection estimated to be $54,899.77 for the impacted firms. This increase is due to new requirements for submission of an electronic message set to the ACE portal, obtaining an IFTP, and maintaining records for 2 years. The increase was calculated by omitting the elements associated with the previous reporting requirements from the burden summation. Averaged across the 100 impacted firms, the burden is approximately $549 for each firm.

The rulemaking will apply to firms importing certain seafood with the species/country pair that falls under import restrictions. There is no reason to believe this rulemaking will apply disproportionately to small or large firms. If anything, there is likely to be a proportional effect, with larger wholesalers both more likely to import covered products and likely to import more of such products. To estimate the impact of the rulemaking on profitability, we estimate an average revenue from the 2017 Economic Census and adjust it for inflation. Due to the uncertainty regarding the size and income level of impacted firms, we take a conservative approach to estimating the average revenue. There were 410 firms (21.6 percent of the category) with an enterprise size below $500,000 which combined to report $92.7 million in revenue, which equates to $118.2 million after accounting for inflation calculations based on the Bureau of Labor Statistics (BLS) inflation calculator, using December 2017 to May 2024 as the reference dates. This implies an average revenue of $288,292 per firm, of which the $549 burden represents 0.2 percent of the total revenue. This is a conservative estimate of the impact,

having included only the lowest-earning 21.6 percent of firms.

Based on this calculation, we conclude that the regulation will not have a significant economic effect on the impacted small entities, and therefore an initial regulatory flexibility analysis is not required and none has been prepared.

Paperwork Reduction Act

Section 603(b)(4) of the RFA requires agencies to describe any new reporting, recordkeeping and other compliance requirements. NMFS proposes a revision to a currently approved collection-of-information requirement that is subject to OMB review and approval under the Paperwork Reduction Act (OMB control number 0648–0651). The proposed revisions to the collection-of-information would expand the data elements to be collected from the exporting nation regarding the fishing activity that produced the fish or fish product in the export shipment. Further, the proposed revisions to the collection-of-information would require U.S. entry filers (customs brokers, importer of record) to file a NMFS-specific message set in the ACE portal that provides sufficient information to determine that the fish in the shipment were not harvested under circumstances subject to an import prohibition.

The revised collection-of-information burden, as proposed under this rule, is estimated to be an increase of $54,899.77 across all affected entities. This increase is due to new requirements for submission of an electronic message set to the ACE portal, obtaining an IFTP, and maintaining records for 2 years. The increase was calculated by omitting the elements associated with the previous reporting requirements from the burden summation. Details on the burden associated with these requirements and methodology used to calculate the total burden increase can be found in the Supporting Statement for the Paperwork Reduction Act at: *https://www.regulations.gov/docket/NOAA-NMFS-2022-0057.*

NMFS anticipates that neither U.S. entities nor foreign entities would be significantly affected by this action. Many of the data elements to be submitted electronically through this collection-of-information to gain release of shipments from port are, to some extent, either already collected under the existing fishery monitoring programs, collected pursuant to national or international trade tracking or catch documentation requirements, or collected in support of third-party certification schemes voluntarily adopted by the trade. The COA form is already required for entry of non-prohibited product from nations subject to import restrictions. The minimal increase to burden relates primarily to the submission of an electronic message set to the ACE portal, obtaining an IFTP, and maintaining records for 2 years.

The information collection requirement under this proposed rule intends to minimize any potential overlap with other reporting requirements.

NMFS specifically seeks comments on the burden estimates or any other aspects of the new collection of information. Please send such comments to the Office of International Affairs, Trade, and Commerce at the **ADDRESSES** above, and by submission to Information Collection Review at: *https://www.reginfo.gov/public/do/PRAMain.*

Notwithstanding any other provision of the law, no person is required to respond to, and no person shall be subject to penalty for failure to comply with, a collection of information subject to the requirements of the Paperwork Reduction Act, unless that collection of information displays a currently valid OMB control number.

List of Subjects

50 CFR Part 216

Administrative practice and procedure, Exports, Fish, Imports, Indians, Labeling, Marine mammals.

50 CFR Part 300

Administrative practice and procedure, Antarctica, Canada, Exports, Fish, Fisheries, Fishing, Imports, Indians, Labeling, Marine resources, Reporting and recordkeeping requirements, Russian Federation, Transportation, Treaties, Wildlife.

50 CFR Part 635

Fisheries, Fishing, Fishing vessels, Foreign relations, Imports, Penalties, Reporting and recordkeeping requirements, Statistics, Treaties.

Dated: December 6, 2024.

Samuel D. Rauch, III,

Deputy Assistant Administrator for Regulatory Programs, National Marine Fisheries Service.

For the reasons set out in the preamble, NMFS proposes to amend 50 CFR parts 216, 300, and 635 as follows:

PART 216—REGULATIONS GOVERNING THE TAKING AND IMPORTING OF MARINE MAMMALS

■ 1. The authority citation for part 216 continues to read as follows:

Authority: 16 U.S.C. 1361 *et. seq.,* unless otherwise noted.

■ 2. In § 216.24, revise paragraphs (h)(1)(ii)(B) and (h)(9)(iii)(A) and remove paragraph (h)(9)(iii)(D) to read as follows:

§ 216.24 Taking and related acts in commercial fishing operations including tuna purse seine vessels in the eastern tropical Pacific Ocean.

* * * * *

(h) * * *

(1) * * *

(ii) * * *

(B) Is not accompanied by a Certification of Admissibility (COA) fish harvest record form where such certification is required pursuant to paragraph (h)(9)(iii) of this section.

* * * * *

(9) * * *

(iii) *Certification of Admissibility.* (A) If fish or fish products of a nation are subject to an import prohibition under paragraph (h)(1) or (9) of this section, the Assistant Administrator may allow entry of the same or similar fish and fish products caught or harvested in another fishery of that nation not subject to the prohibition if accompanied by a COA fish harvest record form pursuant to the procedures and requirements specified in 50 CFR part 300, subpart S.

* * * * *

PART 300—INTERNATIONAL FISHERIES REGULATIONS

Subpart N—Identification and Certification of Nations

■ 3. The authority for subpart N continues to read as follows:

Authority: 16 U.S.C. 1826d *et seq.*

■ 4. Revise § 300.207 to read as follows:

§ 300.207 Alternative procedures for products not subject to trade restrictions under this subpart.

(a) As provided under 16 U.S.C. 1826j and 1826k, fish or fish products from a negatively certified nation (§ 300.202, § 300.203, or § 300.204) that are prohibited for entry (§ 300.205) may be allowed entry into the United States on a shipment-by-shipment, shipper-by-shipper, or other basis, if the product was not harvested through the fishing activity for which the nation was negatively certified.

(b) To facilitate entry of products under paragraph (a) of this section, fish or fish products from a negatively certified nation must be accompanied upon entry by a Certification of Admissibility (COA) fish harvest record form pursuant to the procedures and requirements specified in subpart S of this part.

(c) Any trade action recommended and applied under this section shall be consistent with international obligations, including the WTO Agreement.

§§ 300.208 and 300.209 [Removed]

■ 5. Remove §§ 300.208 and 300.209.

Subpart Q—International Trade Documentation and Tracking Programs

■ 6. The authority for subpart Q is added to read as follows:

Authority: 6 U.S.C. 901 *et seq.;* 16 U.S.C. 951–961;16 U.S.C. 971 *et seq.;* 16 U.S.C. 1361–1407; 16 U.S.C. 1385; 16 U.S.C. 1801 *et seq.;* 16 U.S.C. 1826a–c; 16 U.S.C. 1826d–k; 16 U.S.C. 2431 *et seq.; 16* U.S.C. 3371 *et seq.;* 16 U.S.C. 5501 *et seq.;* 22 U.S.C. 1978; 31 U.S.C. 9701 *et seq.*

■ 7. Revise § 300.320 to read as follows:

§ 300.320 Purpose and scope.

The regulations in this subpart are issued under the authority of the Atlantic Tunas Convention Act of 1975 (ATCA), the Magnuson-Stevens Fishery Conservation and Management Act, the Tuna Conventions Act of 1950, and the Antarctic Marine Living Resources Convention Act of 1984. This subpart implements the applicable recommendations of the International Commission for the Conservation of Atlantic Tunas (ICCAT) for the conservation and management of tuna and tuna-like species in the Atlantic Ocean, the Inter-American Tropical Tuna Commission (IATTC) for the conservation and management of highly migratory fish resources in the eastern Pacific Ocean, and the Commission for the Conservation of Antarctic Marine Living Resources so far as they affect vessels and persons subject to the jurisdiction of the United States. The regulations under this subpart are also issued under the Marine Mammal Protection Act of 1972, the Dolphin Protection Consumer Information Act, the High Seas Driftnet Fisheries Enforcement Act, the High Seas Driftnet Fishing Moratorium Protection Act, and the Security and Accountability for Every Port Act of 2006. Other relevant authorities include the Pelly Amendment to the Fishermen's Protective Act and the Lacey Act. The requirements in this subpart may be adopted by reference in other regulations under this title.

■ 8. In § 300.321, revise the definition for ''International Fisheries Trade Permit'' to read as follows:

§ 300.321 Definitions.

* * * * *

International Fisheries Trade Permit (or IFTP) means the permit issued by NMFS under § 300.322.

* * * * *

■ 9. In § 300.322, revise paragraph (a) to read as follows:

§ 300.322 International Fisheries Trade Permit.

(a) *General.* Any person who imports (as defined in § 300.321) exports, or re-exports fish or fish products regulated under this subpart from any ocean area, must possess a valid International Fisheries Trade Permit (IFTP) issued under this section. Fish or fish products regulated under this subpart may not be imported into, or exported or re-exported from, the United States unless the IFTP holder files electronically the documentation and the data sets required under this subpart with U.S. Customs and Border Protection (CBP) via ACE at the time of, or in advance of, importation, exportation or re-exportation. If authorized under other applicable laws and regulations, a representative or agent of the IFTP holder may make the electronic filings on behalf of the IFTP holder. Only persons residing in the United States are eligible to apply for the IFTP. A resident agent of a nonresident corporation (see 19 CFR 141.18) may apply for an IFTP.

* * * * *

■ 10. In § 300.323, revise paragraph (a) to read as follows:

§ 300.323 Reporting and recordkeeping requirements.

(a) *Reporting.* Any person who imports, exports, or re-exports fish or fish products regulated under this subpart must file all data sets, reports, and documentation as required under the AMLR program, HMS ITP, TTVP and SIMP, and under other regulations that adopt by reference the requirements of this subpart. For imports, specific instructions for electronic filing are found in Customs and Trade Automated Interface Requirements (CATAIR) appendix PGA (*https://www.cbp.gov/document/guidance/appendix-pga*). For exports, specific instructions for electronic filing are found in Automated Export System Trade Interface Requirements (AESTIR) appendix Q (*https://www.cbp.gov/document/guidance/aestir-draft-appendix-q-pga-record-formats*). For fish and fish products regulated under this subpart, an ACE entry filing or AES export filing, as applicable, is required, except in cases where CBP provides alternate means of collecting NMFS-required data and/or document images.

* * * * *

■ 11. Add subpart S, consisting of §§ 300.350 through 300.355, to read as follows:

Subpart S—Certification of Admissibility

Sec.

300.350 Purpose and scope.
300.351 Definitions.
300.352 International Fisheries Trade Permit requirement.
300.353 Certification of Admissibility procedures.
300.354 Recordkeeping and inspections.
300.355 Prohibitions.

Authority: 16 U.S.C. 971 *et seq.,* 16 U.S.C. 1371 *et seq.,* 16 U.S.C. 1826j and 1826k.

Subpart S—Certification of Admissibility

§ 300.350 Purpose and scope.

The regulations in this subpart are issued under the authority of the Marine Mammal Protection Act (MMPA), the High Seas Driftnet Fishing Moratorium Protection Act (Moratorium Protection Act), and the Atlantic Tunas Convention Act (ATCA). This subpart implements the applicable requirements for Certification of Admissibility (COA) of fish and fish products otherwise subject to import prohibitions under the relevant statutory authority. The requirements in this subpart may be adopted by reference in other regulations under this title.

§ 300.351 Definitions.

Automated Commercial Environment (ACE) means, for purposes of this subpart, the single window portal through which import shipment data required by multiple partner government agencies is filed electronically with the U.S. Customs and Border Protection (CBP) to determine product admissibility.

Certification of Admissibility (COA) means the attestation that the fish or fish products offered for entry into the United States are not subject to any import prohibitions issued pursuant to 50 CFR 216.24(h), 300.205, or 635.40. The COA consists of the fish harvest record form available from NMFS or the comparable form or aggregate catch documentation, issued by the exporting nation for the purposes of documenting admissibility under this subpart if NMFS finds that the provided information satisfies all requirements of this subpart. The COA also includes the submission of electronic data from that form into the ACE portal as required under § 300.353(c).

Fish or fish products means the fish species and products containing those species subject to import prohibitions under 50 CFR part 216, subpart N of this part, and 50 CFR part 635, subpart D,

and to which admissibility documentation and reporting requirements pertain.

Import has the same meaning as in 16 U.S.C. 1802(22). Import includes, but is not limited to, customs entry for consumption, withdrawal from customs bonded warehouse for consumption, or entry for consumption from a foreign trade zone.

International Fisheries Trade Permit (or IFTP) means the permit issued by NMFS under § 300.322.

§ 300.352 International Fisheries Trade Permit requirement.

Any person who imports as defined in § 300.321 fish or fish products for which a COA fish harvest record form is required under 50 CFR 216.24(h), 300.207, or 635.40, must possess a valid International Fisheries Trade Permit (IFTP) issued under § 300.322.

§ 300.353 Certification of Admissibility procedures.

Fish or fish products for which a COA is required under 50 CFR 216.24(h), 300.207, or 635.40 will be denied entry unless the importer of record files electronically, at the time of, or in advance of importation, the data sets and documentation required under this subpart with U.S. Customs and Border Protection (CBP) via the ACE portal. All such products regardless of value are subject to the requirements of this subpart, notwithstanding any CBP exemptions. NMFS may allow entry of such products if the shipments are accompanied by a COA fish harvest record form or other approved documentation (paragraph (a) of this section); the importer of record enters required data (paragraph (c) of this section) via the CBP ACE portal at the time of entry; and the importer of record uploads a copy of the COA or other approved form via the ACE portal within 24 hours of release of the product by CBP (paragraph (d) of this section).

(a) *COA fish harvest record form.* The COA fish harvest record form is available from NMFS and must be properly completed and signed by a duly authorized official of the exporting nation whose fishery is subject to an import prohibition. The COA fish harvest record form must also be validated and signed by the importer of record and submitted to NMFS in a format specified by NMFS. Nations subject to import prohibitions may use their own form or aggregate catch documentation, in lieu of the COA fish harvest record form, if NMFS finds that it satisfies all requirements of this subpart and the COA fish harvest record form.

(b) *COA fish harvest record form information required.* The following data must be included, unless otherwise noted in paragraphs (b)(1) and (2) of this section, in the COA fish harvest record form, or other approved form:

(1) For all fish or fish products: Species of fish (Aquatic Sciences Fishery Information System 3-alpha code as listed at: *https://www.fao.org/*); Product form(s) at the point of first landing whether unprocessed or processed prior to landing/delivery; Quantity and/or weight of the product(s) as landed/delivered (total quantity and/or weight of the product(s) as landed/delivered may be provided for aggregate reporting); Location(s) of first landing, transshipment or delivery; Date(s) of first landing, transshipment or delivery; Name of entity(ies) (processor, dealer, vessel) to which fish was landed or delivered; 10-digit codes based on the U.S. Harmonized Tariff Schedule (HTSUS).

(2) Capture and gear information for wild harvest: Type(s) of fishing gear used to harvest the fish; Area(s) of wild-capture location; Flag state of harvesting vessel(s). Vessel information (may be omitted in aggregate reporting): Name of vessel(s); Evidence of fishing authorization; Unique vessel identifier(s) (if available).

(3) Aquaculture information: Name(s) of farm or aquaculture facility; location of aquaculture facility.

(4) The NMFS-issued IFTP number for the importer of record and the U.S. customs entry number.

(c) *COA data required at the time of entry.* The importer of record must electronically file via the ACE portal the documentation and data from the COA fish harvest record form (or other approved documentation) at the time of, or in advance of, the import of fish or fish products as required under this subpart to determine admissibility. Information entered into the ACE portal must be complete and accurate and must match exactly the information provided on the COA fish harvest record form or other approved documentation. Specific instructions on submitting the required data sets and document images are in the ACE Implementation Guide for NMFS incorporated in the Appendices to the Customs and Trade Automated Interface Requirements (CATAIR) appendix PGA (*https://www.cbp.gov/document/guidance/nmfs-pga-message-set-guidelines*). An ACE entry filing is required for applicable fish or fish products regardless of shipment value.

(d) *Submission of COA fish harvest record form.* Within 24 hours of the release of the product by CBP, the importer of record must submit a copy of the COA fish harvest record form, or other approved documentation, with the U.S. customs entry number noted via the Document Image System for the ACE portal. Prior to submission, the importer of record must validate that the contents of the shipment were accurately described on the COA fish harvest record form and all relevant parties (including the importer of record) have signed the form as per this subpart. Additional data reporting requirements under other U.S. laws or regulations may apply to the particular fish or fish product offered for entry.

§ 300.354 Recordkeeping and inspections.

Import shipments of fish or fish products subject to this subpart may be selected for inspection and/or the information or records supporting entry may be selected for inspection, on a pre- or post-release basis, in order to verify the information submitted at entry. To support such inspections, the importer of record must retain records of the information reported at entry under § 300.353 in electronic or paper-format and make them available for inspection at the importer's place of business or submit them to NMFS upon request, for a period of 2 years from the date of the import.

§ 300.355 Prohibitions.

In addition to the prohibitions specified in 50 CFR 216.12(d), 300.4, 300.325, and 635.71, it is unlawful for any person subject to the jurisdiction of the United States to:

(a) Violate any provision of this subpart, or the conditions of any IFTP issued under this part;

(b) Import fish or fish products subject to restrictions and documentation requirements under 50 CFR part 216 or subpart N of this part or 50 CFR part 635, subpart D, without a valid IFTP issued under § 300.322 or without submitting complete and accurate information and documentation that are required under this subpart and applicable to the fish or fish products offered for entry.

PART 635—ATLANTIC HIGHLY MIGRATORY SPECIES

■ 12. The authority citation for part 635 continues to read as follows:

Authority: 16 U.S.C. 971 *et seq.;* 16 U.S.C. 1801 *et seq.*

■ 13. In § 635.40, revise paragraph (b) to read as follows:

§ 635.40 Restrictions to enhance conservation.

* * * * *

(b) *Proof of admissibility.* For the purposes of paragraph (a) of this section and section 971d(6)(a) of ATCA, a shipment of fish in any form of the species under regulation or under investigation by ICCAT offered for entry, directly or indirectly, from a country named in a finding filed with the Office of the Federal Register for publication under paragraph (a) of this section is eligible for entry if the shipment is accompanied by Certification of Admissibility (COA) fish harvest record form pursuant to the procedures and requirements specified in 50 CFR part 300, subpart S, certifying that the fish in the shipment:

(1) Are not of the species specified in the finding;

(2) Are of the species named in the finding, but were not taken in the regulatory area; or

(3) Are of the species named in the finding but are products of an American fishery and were lawfully taken in conformity with applicable conservation laws and regulations and landed in the country named in the finding solely for transshipment.

[FR Doc. 2024–29238 Filed 12–16–24; 8:45 am]

BILLING CODE 3510–22–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 622

[Docket No. 241210–0322]

RIN 0648–BN22

Fisheries of the Caribbean, Gulf of Mexico, and South Atlantic; Fishery Management Plan of Puerto Rico; Triggerfish Management Measures

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Proposed rule; request for comments.

SUMMARY: NMFS proposes to implement management measures described in Framework Action 3 under the Fishery Management Plan (FMP) for Puerto Rico (Framework Action 3). If implemented, this proposed rule would modify the annual catch limits (ACLs) for the triggerfish stock complex in Federal waters off Puerto Rico. The purpose of this proposed rule and Framework Action 3 is to update management reference points for the triggerfish stock complex under the Puerto Rico FMP consistent with the most recent stock assessment to prevent overfishing and achieve optimum yield (OY).

DATES: Written comments must be received by January 16, 2025.

ADDRESSES: A plain language summary of this proposed rule is available at *https://www.regulations.gov/docket/NOAA-NMFS-2024-0105.* You may submit comments on this document, identified by ''NOAA–NMFS–2024–0105'' by either of the following methods:

- *Electronic Submission:* Submit all electronic public comments via the Federal e-Rulemaking Portal. Visit *https://www.regulations.gov* and enter ''NOAA–NMFS–2024–0105'' in the Search box. Click on the ''Comment'' icon, complete the required fields, and enter or attach your comments.
- *Mail:* Submit all written comments to Maria Lopez-Mercer, Southeast Regional Office, NMFS, 263 13th Avenue South, St. Petersburg, FL 33701.

Instructions: Comments sent by any other method, to any other address or individual, or received after the end of the comment period, may not be considered by NMFS. All comments received are a part of the public record and will generally be posted for public viewing on *https://www.regulations.gov* without change. All personal identifying information (*e.g.,* name, address, *etc.*), confidential business information, or otherwise sensitive information submitted voluntarily by the sender will be publicly accessible. NMFS will accept anonymous comments (enter ''N/A'' in the required fields if you wish to remain anonymous).

Electronic copies of Framework Action 3, which includes an environmental assessment, a regulatory impact review, and a Regulatory Flexibility Act (RFA) analysis, may be obtained from the Southeast Regional Office website at *https://www.fisheries.noaa.gov/action/framework-action-3-puerto-rico-fishery-management-plan-modification-status-determination.*

FOR FURTHER INFORMATION CONTACT: Maria Lopez-Mercer, NMFS Southeast Regional Office, 727–824–5305, *maria.lopez@noaa.gov.*

SUPPLEMENTARY INFORMATION: The triggerfish stock complex in the Federal waters off Puerto Rico consists of ocean triggerfish, gray triggerfish and queen triggerfish, and is managed under the Puerto Rico FMP. The Puerto Rico FMP was prepared by the Caribbean Fishery Management Council (Council), approved by the Secretary of Commerce, and is implemented by NMFS through regulations at 50 CFR part 622 under the authority of the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act).

Background

The Magnuson-Stevens Act requires NMFS and regional fishery management councils to prevent overfishing and to achieve, on a continuing basis, the OY from federally managed fish stocks to ensure that fishery resources are managed for the greatest overall benefit to the nation, particularly with respect to providing food production and recreational opportunities, and protecting marine ecosystems.

The Council and NMFS manage fisheries in Federal waters around Puerto Rico under the Puerto Rico FMP. The Puerto Rico FMP was approved by the Secretary of Commerce on September 22, 2020, along with the St. Croix and St. Thomas and St. John FMPs, under section 304(a)(3) of the Magnuson-Stevens Act. NMFS published the final rule in the **Federal Register** to implement the Puerto Rico FMP on September 13, 2022 (87 FR 56204), which, among other measures, included the current ACL values for the triggerfish stock complex in Puerto Rico. The Puerto Rico FMP contains management measures applicable for Federal waters off Puerto Rico, which extend seaward from 9 nautical miles (nmi; 16.7 kilometers) from shore to the offshore boundary of the U.S. Caribbean exclusive economic zone.

The Puerto Rico FMP established status determination criteria (SDC) and other management reference points for triggerfish species under Federal management in Federal waters off Puerto Rico. In the Puerto Rico FMP, the triggerfish stock complex contains queen triggerfish, ocean triggerfish, and gray triggerfish. Queen triggerfish is the indicator stock for the complex because of the limited information (*e.g.,* landings) available for ocean and gray triggerfish. Thus, management measures, SDC, and other reference points are based on landings of queen triggerfish only, but apply to the entire complex.

The Puerto Rico FMP applies a four-tiered acceptable biological catch (ABC) control rule depending on differing levels of data availability. Each tier specifies SDC, such as the maximum fishing mortality threshold (MFMT), minimum stock size threshold (MSST), and overfishing limit (OFL), or OFL proxy, and other reference points such as the maximum sustainable yield (MSY), or MSY proxy, and ABC. Under

the ABC control rule, tier 1 applies to stocks with the most data available, and each subsequent tier operates with less available data than the preceding tier. Tier 4, the final tier, is the most data limited and applies when no accepted quantitative assessment is available. Tier 4 contains two sub-tiers, tier 4a and tier 4b, which are based on an understanding of the stock's vulnerability to fishing pressure. Tier 4a applies when the stock's vulnerability to fishing pressure is relatively low or moderate, while tier 4b applies to stocks with a high vulnerability to fishing pressure.

In the Puerto Rico FMP, the triggerfish stock complex is considered a tier 4a stock and the MSY proxy, MFMT, and MSST were defined, but as a result of data limitations, were not quantified. Similarly, the OFL for the triggerfish stock complex could not be quantified in the Puerto Rico FMP and a new reference point, the sustainable yield level (SYL), was quantified and used as the OFL proxy. The SYL is a level of landings that can be sustained by a stock over the long-term. For the triggerfish stock complex, the Council's Scientific and Statistical Committee (SSC) derived the ABC from the SYL, and the Council set the ACL for the triggerfish stock complex equal to 95 percent of the recommended ABC. The total ACL was set equal to OY. Under the Puerto Rico FMP, commercial and recreational data were available to establish sector-specific ACLs for the triggerfish stock complex, which were equal to 91.77 percent and 8.23 percent of the total ACL, respectively.

All weights described in this proposed rule are in round weight.

For the triggerfish stock complex, the total ACL is 90,552 pounds (lb; 41,073.6 kilograms [kg]), the commercial ACL is 83,099 lb (37,693 kg), and the recreational ACL is 7,453 lb (3,380.6 kg).

In 2022, the Southeast Data, Assessment, and Review (SEDAR) stock assessment was completed for queen triggerfish in Puerto Rico (SEDAR 80). SEDAR 80 was reviewed by the Council's SSC and determined to be suitable for short-term (*i.e.,* <5 years) management advice. The SSC in consultation with NMFS' Southeast Fisheries Science Center (SEFSC) determined that SEDAR 80 represented the best scientific information available and recommended queen triggerfish (*i.e.,* the triggerfish stock complex) be reclassified from a tier 4a stock to a tier 3 stock (data limited, accepted assessment available) under the Puerto Rico FMP ABC control rule. Under tier 3, if the biomass of the stock goes below MSST, the stock would be determined to be overfished and the Council would then need to develop a rebuilding plan capable of returning the stock to a level that allows the stock to achieve MSY on a continuing basis. Additionally, under tier 3, in years when there is a stock assessment, the stock would be considered to be undergoing overfishing if fishing mortality exceeds the MFMT. This level of fishing mortality, if continued, would reduce the stock biomass to an overfished condition. In years in which there is no assessment, the stock complex would be considered to be undergoing overfishing if landings exceed the OFL.

Under tier 3, the ABC is derived by reducing the OFL by the SSC's scientific uncertainty buffer and reflecting the acceptable probability of overfishing determined by the Council (defined as P*). The SSC coordinated with the SEFSC to provide OFLs and ABCs for the triggerfish stock complex. At the December 2022 Council meeting, the SSC recommended both variable and constant OFLs and ABCs for years 2024 to 2026 for the triggerfish stock complex, with the ABCs across a range of P* values. The Council recommended a P* value of 0.4 and the constant value OFL and ABC, which are equal to the 3-year average OFLs and ABCs from years 2024 to 2026. The total ACL for the triggerfish stock complex is then derived by reducing the ABC by the Council's management uncertainty buffer.

Following the SEDAR 80 stock assessment and recommendations from the Council's SSC, the Council developed Framework Action 3 to update management reference points to prevent overfishing of the triggerfish stock complex and achieve OY, consistent with the requirements of the Magnuson-Stevens Act. In Framework Action 3, the Council decided to recommend a 5 percent management uncertainty buffer and set the total ACL for the stock complex equal to 95 percent of the ABC. The Council specified commercial and recreational ACLs for the triggerfish stock complex using the same sector allocation percentages used under the Puerto Rico FMP (91.77 percent of the total ACL for the commercial sector and 8.23 percent of the total ACL for the recreational sector). Currently, recreational landings in Puerto Rico are not being collected by the NMFS' Marine Recreational Information Program, which was disrupted by Hurricane Maria in 2017, and has not yet resumed operations in Puerto Rico. Therefore, at this time it is not possible to revise the sector allocations for the triggerfish complex.

Management Measures Contained in This Proposed Rule

If implemented, this proposed rule would revise the total, commercial, and recreational ACLs for the triggerfish stock complex in Federal waters around Puerto Rico. The total ACL for the triggerfish stock complex would decrease from 90,552 lb (41,073.6 kg) to 87,220 lb (39,562 kg). The commercial ACL for the complex would decrease from 83,099 lb (37,693 kg) to 80,041 lb (36,306 kg). The recreational ACL for the complex would decrease from 7,453 lb (3,380.6 kg) to 7,178 lb (3,256 kg).

The updated ACLs are expected to better protect against the risk of overfishing of the stock complex in relation to the current ACLs, thus ensuring, to the greatest extent practicable, continued access to the resource in future years.

Measures in Framework Action 3 Not Codified in This Proposed Rule

In addition to the ACL revisions described in this proposed rule and consistent with SEDAR 80, Framework Action 3 revises the MFMT, OFL, and ABC for the triggerfish stock complex under the Puerto Rico FMP. The MFMT, previously not quantified, would be 0.215. The OFL would decrease from the SYL (OFL proxy) of 190,636 lb (86,471 kg) to 118,283 lb (53,652 kg), and the ABC would decrease from 95,318 lb (45,236 kg) to 91,810 lb (41,644 kg). Because estimates of the long-term recruitment for queen triggerfish assessed in SEDAR 80 are unknown, values for the MSY and MSST were not quantified and remain as defined under tier 3 of the ABC control rule. The MSY proxy is equal to 30 percent of the spawning potential ratio, and MSST is equal to 75 percent of the spawning stock biomass produced when fishing at MSY or MSY proxy. The updated management reference points are expected to better protect against the risk of overfishing of the stock complex in relation to the current reference points, thus ensuring, to the greatest extent practicable, continued access to the resource in future years.

Classification

Pursuant to section 304(b)(1)(A) of the Magnuson-Stevens Act, the NMFS Assistant Administrator has determined that this proposed rule is consistent with Framework Action 3, the Puerto Rico FMP, other provisions of the Magnuson-Stevens Act, and other applicable law, subject to further consideration after public comment.

This proposed rule has been determined to be not significant for

purposes of Executive Order 12866. The Magnuson-Stevens Act provides the statutory basis for this proposed rule. No duplicative, overlapping, or conflicting Federal rules have been identified. In addition, no new reporting and record-keeping requirements are introduced by this proposed rule. This proposed rule contains no information collection requirements under the Paperwork Reduction Act of 1995.

The Chief Counsel for Regulation of the Department of Commerce certified to the Chief Counsel for Advocacy of the Small Business Administration that this proposed rule, if adopted, would not have a significant economic impact on a substantial number of small entities. The factual basis for this certification is as follows. A copy of the full analysis is available from NMFS (see **ADDRESSES**).

A description of the action, why it is being considered, and the objectives of this proposed rule are contained in the **SUMMARY** section of this proposed rule.

This proposed action directly impacts commercial and recreational fishing for queen triggerfish in Federal waters off Puerto Rico. Recreational fishers (anglers) are not considered small entities as that term is defined in 5 U.S.C. 601(6), whether fishing from charter vessels (for-hire), private or leased vessels. Therefore, estimates of the number of anglers directly affected by the proposed action and any impacts on them are neither required nor assessed here.

For-hire fishing businesses sell services to recreational fishers (anglers). The proposed changes to the total ACL and corresponding recreational ACL for queen triggerfish in Puerto Rico would not directly alter the services sold by for-hire fishing businesses. Any change in demand for these fishing services, and associated economic effects, as a result of this action would be a consequence of a change in anglers' behavior, secondary to any direct effect on anglers. Therefore, the impact on for-hire fishing businesses would be an indirect effect of the proposed action.

The proposed action would directly apply to commercial fishing businesses that operate in Federal waters off Puerto Rico. For RFA purposes, NMFS has established a small business size standard for businesses, including their affiliates, whose primary industry is commercial fishing. A business primarily involved in the commercial fishing industry (North American Industrial Classification Code 11411) is classified as a small business if it is independently owned and operated, is not dominant in its field of operation (including its affiliates) and its combined annual receipts are no more than $11 million for all of its affiliated operations worldwide. None of Puerto Rico's commercial fishermen had or have annual revenues that reach that figure. As each fisherman is assumed to represent a unique business, NMFS concludes that all commercial fishing businesses in Puerto Rico are small.

At the time Framework Action 3 was prepared, the most recent 5-year commercial landings data considered to be the best available science are from 2015 through 2019. Consequently, estimates of the number of small commercial fishing businesses directly affected by the action and any impacts on them are based on landings from 2015 through 2019. From 2015 through 2019, an annual average of 80 (10.2 percent) of Puerto Rico's 785 small commercial fishing businesses harvested queen triggerfish from Federal and unknown waters. For this proposed rule, ''unknown waters'' represent an area around Puerto Rico for which the jurisdiction, Federal or territorial, was not reported on the commercial catch report form.

Queen triggerfish is part of the triggerfish stock complex, and the proposed action would reduce the total ACL for the triggerfish stock complex in Puerto Rico from 90,552 lb (41,073.6 kg), to 87,220 lb (39,562 kg). This rule would correspondingly reduce the commercial ACL for the triggerfish stock complex from 83,099 lb (37,693 kg), to 80,041 lb (36,306 kg). From 2015 through 2019, annual commercial landings of queen triggerfish ranged from 40,437 lb (18,342 kg) to 71,407 lb (32,390 kg). From those landings, there is no future expectation that any single year or average of multiple years of commercial landings of queen triggerfish would reach or exceed the current commercial ACL (83,009 lb, (37,693 kg)) or proposed commercial ACL (80,041 lb, (36,306 kg)). Moreover, although preliminary, the most recent monitoring of total triggerfish landings indicates those landings are substantially below the current and proposed total ACL. As such, the proposed action would not affect small businesses' commercial landings of triggerfish in Puerto Rico. Therefore, the proposed rule would have no significant impact on a substantial number of small entities.

List of Subjects in 50 CFR Part 622

Caribbean, Fisheries, Fishing, Reef fish, Triggerfish.

(Authority: 16 U.S.C. 1801 *et seq.*)

Dated: December 11, 2024.

Samuel D. Rauch, III,

Deputy Assistant Administrator for Regulatory Programs, National Marine Fisheries Service.

For the reasons set out in the preamble, NMFS proposes to amend 50 CFR part 622 as follows:

PART 622—FISHERIES OF THE CARIBBEAN, GULF OF MEXICO, AND SOUTH ATLANTIC

■ 1. The authority citation for part 622 continues to read as follows:

Authority: 16 U.S.C. 1801 *et seq.*

■ 2. In § 622.440, amend paragraphs (a)(1) through (3) by revising the table headings and the entries for Triggerfishes for Table 1 to § 622.440(a)(1), Table 2 to § 622.440(a)(2), and Table 3 to § 622.440(a)(3). The revisions read as follows:

§ 622.440 Annual catch limits (ACLs), annual catch targets (ACTs), and accountability measures (AMs).

Certain Collated Steel Staples From the People's Republic of China: Final Results of Countervailing Duty Administrative Review; 2022

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The U.S. Department of Commerce (Commerce) determines that countervailable subsidies were provided to Tianjin Hweschun Fasteners Manufacturing Co., Ltd. (Tianjin Hweschun) a producer and exporter of certain collated steel staples (collated staples) from the People's Republic of China (China) during the period of review (POR) from January 1, 2022, through December 31, 2022.

DATES: Applicable December 17, 2024.

FOR FURTHER INFORMATION CONTACT: Brandon James or Robert Palmer, AD/CVD Operations, Office VIII, Enforcement and Compliance, International Trade Administration, Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–7472 or (202) 482–9068, respectively.

SUPPLEMENTARY INFORMATION:

Background

On August 12, 2024, Commerce published the *Preliminary Results.*[1] For a complete description of the events that occurred subsequent to the *Preliminary Results, see* the Issues and Decision Memorandum.[2] On July 22, 2024, Commerce tolled certain deadlines in this administrative proceeding by seven days.[3] Additionally, on December 9, 2024, Commerce tolled the deadline to issue the final results in this administrative review by 90 days.[4] Accordingly, the deadline for these final results is now March 10, 2025.

Scope of the Order[5]

The merchandise subject to the *Order* is collated staples from China. A full description of the scope of the *Order* is contained in the Issues and Decision Memorandum.

Analysis of Comments Received

All issues raised by interested parties in briefs are addressed in the Issues and Decision Memorandum. A list of the issues addressed in the Issues and Decision Memorandum is provided in the appendix to this notice. The Issues and Decision Memorandum is a public document and is on file electronically via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at *https://access.trade.gov*. In addition, a complete version of the Issues and Decision Memorandum can be accessed directly at *https://access.trade.gov/public/FRNoticesListLayout.aspx*.

Changes Since the Preliminary Results

Based on our review of the record and comments received from interested parties regarding our *Preliminary Results,* we made no revisions to the countervailable subsidy rate calculations for Tianjin Hweschun, the sole mandatory respondent in this review.[6]

Methodology

Commerce is conducting this review in accordance with section 751(a)(1)(A) of the Act. For each of the subsidy programs found countervailable, we find that there is a subsidy, *i.e.,* a government-provided financial contribution that gives rise to a benefit to the recipient, and that the subsidy is specific.[7] The Issues and Decision Memorandum contains a full description of the methodology underlying Commerce's conclusions, including any determination that relied upon the use of facts otherwise available, including with an adverse inference, pursuant to sections 776(a) and (b) of the Act.

Final Results of Review

We find the net countervailable subsidy rate for the mandatory respondent under review for the period of January 1, 2022, through December 31, 2022, to be as follows:

Producer/exporter	Subsidy rate (percent *ad valorem*)
Tianjin Hweschun Fasteners Manufacturing Co., Ltd	70.10

Disclosure

Because Commerce has not modified its analysis or calculations from the Preliminary Results, there are no new calculations to disclose for these final results of review in accordance with 19 CFR 351.224(b).

Assessment Rates

Pursuant to section 751(a)(2)(C) of the Act and 19 CFR 351.212(b), Commerce has determined, and U.S Customs and Border Protection (CBP) shall assess, countervailing duties on all appropriate entries of subject merchandise in accordance with the final results of this review for Tianjin Hweschun at the applicable *ad valorem* assessment rate listed above. Commerce intends to issue assessment instructions to CBP no earlier than 35 days after the date of publication of the final results of this review in the **Federal Register**. If a

timely summons is filed at the U.S. Court of International Trade, the assessment instructions will direct CBP not to liquidate relevant entries until the time for parties to file a request for a statutory injunction has expired (*i.e.,* within 90 days of publication).

Cash Deposit Requirements

In accordance with section 751(a)(1) of the Act, Commerce intends to instruct CBP to collect cash deposits of estimated countervailing duties in the amounts shown for Tianjin Hweschun listed above on shipments of subject merchandise entered, or withdrawn from warehouse, for consumption on or after the date of publication of the final results of this administrative review. For all non-reviewed firms subject to the *Order,* we will instruct CBP to continue to collect cash deposits of estimated countervailing duties at the most recent company-specific or all-others rate applicable to the company, as appropriate. These cash deposit requirements, effective upon publication of the final results of review, shall remain in effect until further notice.

Administrative Protective Order (APO)

This notice also serves as a reminder to parties subject to an APO of their responsibility concerning the return or destruction of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a)(3), which continues to govern business proprietary information in this segment of the proceeding. Timely written notification of the return or destruction of APO materials, or conversion to judicial protective order, is hereby requested. Failure to comply with the regulations and terms of an APO is a violation which is subject to sanction.

Notification to Interested Parties

We are issuing and publishing these final results of administrative review and notice in accordance with sections 751(a)(1) and 777(i) of the Act and 19 CFR 351.221(b)(5).

Dated: December 10, 2024.

Abdelali Elouaradia,

Deputy Assistant Secretary for Enforcement and Compliance.

Silicomanganese From India, Kazakhstan, and Venezuela: Continuation of Antidumping Duty Orders

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: As a result of the determinations by the U.S. Department of Commerce (Commerce) and the U.S. International Trade Commission (ITC) that revocation of the antidumping duty (AD) orders on silicomanganese from India, Kazakhstan, and Venezuela would likely lead to the continuation or recurrence of dumping and material injury to an industry in the United States, Commerce is publishing a notice of continuation of these AD orders.

DATES: Applicable December 10, 2024.

FOR FURTHER INFORMATION CONTACT: Jacob Waddell, AD/CVD Operations, Office VI, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–1369.

SUPPLEMENTARY INFORMATION:

Background

On May 23, 2002, Commerce published in the **Federal Register** the AD orders on silicomanganese from India, Kazakhstan, and Venezuela.[1] On May 1, 2024, the ITC instituted,[2] and Commerce initiated,[3] the fourth sunset review of the *Orders,* pursuant to section 751(c) of the Tariff Act of 1930, as amended (the Act). As a result of its reviews, Commerce determined that revocation of the *Orders* would likely lead to the continuation or recurrence of dumping and, therefore, notified the ITC of the magnitude of the margins of dumping likely to prevail should the *Orders* be revoked.[4]

On December 10, 2024, the ITC published its determination, pursuant to sections 751(c) and 752(a) of the Act, that revocation of the *Orders* would likely lead to continuation or recurrence of material injury to an industry in the United States within a reasonably foreseeable time.[5]

Scope of the Orders

For purposes of these *Orders,* the products covered are all forms, sizes and compositions of silicomanganese, except low-carbon silicomanganese, including silicomanganese briquettes, fines and slag. Silicomanganese is a ferroalloy composed principally of manganese, silicon and iron, and normally contains much smaller proportions of minor elements, such as carbon, phosphorous and sulfur. Silicomanganese is sometimes referred to as ferrosilicon manganese.

Silicomanganese is used primarily in steel production as a source of both silicon and manganese. Silicomanganese generally contains by weight not less than 4 percent iron, more than 30 percent manganese, more than 8 percent silicon and not more than 3 percent phosphorous. Silicomanganese is properly classifiable under subheading 7202.30.0000 of the Harmonized Tariff Schedule of the United States (HTSUS). Some silicomanganese may also be classified under HTSUS subheading 7202.99.5040.

The low-carbon silicomanganese excluded from this scope is a ferroalloy with the following chemical specifications: minimum 55 percent manganese, minimum 27 percent silicon, minimum 4 percent iron, maximum 0.10 percent phosphorus, maximum 0.10 percent carbon and maximum 0.05 percent sulfur. Low-carbon silicomanganese is used in the manufacture of stainless steel and special carbon steel grades, such as motor lamination grade steel, requiring a very low carbon content. It is sometimes referred to as ferromanganese-silicon. Low-carbon silicomanganese is classifiable under HTSUS subheading 7202.99.5040.

This scope covers all silicomanganese, regardless of its tariff

classification. Although the HTSUS subheadings are provided for convenience and customs purposes, our written description of the scope remains dispositive.

Continuation of the Orders

As a result of the determinations by Commerce and the ITC that revocation of the *Orders* would likely lead to continuation or recurrence of dumping and material injury to an industry in the United States, pursuant to section 751(d)(2) of the Act, Commerce hereby orders the continuation of the *Orders.* U.S. Customs and Border Protection will continue to collect AD cash deposits at the rates in effect at the time of entry for all imports of subject merchandise.

The effective date of the continuation of the *Orders* will be December 10, 2024.[6] Pursuant to section 751(c)(2) of the Act and 19 CFR 351.218(c)(2), Commerce intends to initiate the next five-year reviews of the *Orders* not later than 30 days prior to fifth anniversary of the date of the last determination by the ITC.

Administrative Protective Order (APO)

This notice also serves as a final reminder to parties subject to an APO of their responsibility concerning the return or destruction of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a)(3), which continues to govern business proprietary information in this segment of the proceeding. Timely written notification of the return or destruction of APO materials, or conversion to judicial protective order, is hereby requested. Failure to comply with the regulations and terms of an APO is a violation which is subject to sanction.

Notification to Interested Parties

These five-year (sunset) reviews and this notice are in accordance with sections 751(c) and 751(d)(2) of the Act and published in accordance with section 777(i) of the Act, and 19 CFR 351.218(f)(4).

Dated: December 11, 2024.

Abdelali Elouaradia,

Deputy Assistant Secretary for Enforcement and Compliance.

Certain Carbon and Alloy Steel Cut-to-Length Plate From Belgium: Final Results of Antidumping Duty Administrative Review; 2022–2023

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The U.S. Department of Commerce (Commerce) determines that Industeel Belgium S.A. (Industeel) made sales of subject merchandise at less than normal value during the period of review (POR), May 1, 2022, through April 30, 2023.

DATES: Applicable December 17, 2024.

FOR FURTHER INFORMATION CONTACT: Jerry Xiao, AD/CVD Operations, Office II, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–2273.

SUPPLEMENTARY INFORMATION:

Background

On June 6, 2024, Commerce published in the **Federal Register** the preliminary results of the 2022–2023 administrative review [1] of the antidumping duty order on certain carbon and alloy steel cut-to-length plate (CTL plate) from Belgium.[2] The review covers one mandatory respondent, Industeel. We invited parties to comment on the *Preliminary Results.*[3] On July 22, 2024, Commerce tolled certain deadlines in this administrative proceeding by seven days.[4] On July 29, 2024, we received a case brief from Nucor Corporation (the petitioner).[5] On August 12, 2024, we received a rebuttal brief from Industeel.[6] On September 13, 2024, we extended the deadline for the final results until December 10, 2024.[7] Additionally, on December 9, 2024, Commerce tolled the deadline to issue the final results in this administrative review by 90 days.[8] Accordingly, the deadline for these final results is now March 10, 2025.

For a complete description of the events that occurred since the *Preliminary Results, see* the Issues and Decision Memorandum.[9] Commerce conducted this administrative review in accordance with section 751 of the Tariff Act of 1930, as amended (the Act).

Scope of the Order

The products covered by the *Order* are CTL plate from Belgium. A full description of the scope of the *Order* is contained in the Issues and Decision Memorandum.

Analysis of Comments Received

All issues raised in the case and rebuttal briefs are addressed in the Issues and Decision Memorandum and are listed in the appendix to this notice. The Issues and Decision Memorandum is a public document and is on file electronically via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at *https://access.trade.gov.* In addition, a complete version of the Issues and Decision Memorandum can be accessed directly at *https://access.trade.gov/public/FRNoticesListLayout.aspx.*

Changes Since the Preliminary Results

Based on a review of the record and comments received from interested parties regarding our *Preliminary Results,* and for the reasons explained in the Issues and Decision Memorandum, Commerce made certain changes to the preliminary weighted-average dumping margin calculations for Industeel.[10]

Final Results of Review

As a result of this review, we determine that the following estimated weighted-average dumping margin exist for the period May 1, 2022, through April 30, 2023:

[1] *See Certain Carbon and Alloy Steel Cut-to-Length Plate from Belgium: Preliminary Results and Partial Rescission of Antidumping Duty Administrative Review; 2022–2023,* 89 FR 48392 (June 6, 2024) (*Preliminary Results*) and accompanying Preliminary Decision Memorandum.

[2] *See Certain Carbon and Alloy Steel Cut-to-Length Plate from Austria, Belgium, France, the Federal Republic of Germany, Italy, Japan, the Republic of Korea, and Taiwan: Amended Final Affirmative Antidumping Determinations for France, the Federal Republic of Germany, the Republic of Korea and Taiwan, and Antidumping Duty Orders,* 82 FR 24096 (May 25, 2017) (*Order*).

Producer/exporter	Weighted-average dumping margin (percent)
Industeel Belgium S.A	2.52

Disclosure

Commerce intends to disclose the calculations performed in connection with these final results of review to parties in this review within five days after public announcement of the final results or, if there is no public announcement, within five days of the date of publication of this notice in the **Federal Register**, in accordance with 19 CFR 351.224(b).

Assessment Rates

Pursuant to section 751(a)(2)(C) of the Act, and 19 CFR 351.212(b)(1), Commerce has determined, and U.S. Customs and Border Protection (CBP) shall assess, antidumping duties on all appropriate entries of subject merchandise in accordance with the final results of this review.

Pursuant to 19 CFR 351.212(b)(1), we calculated importer-specific *ad valorem* duty assessment rates based on the ratio of the total amount of dumping calculated for the examined sales to the total entered value of the sales. Where either the respondent's weighted-average dumping margin is zero or *de minimis,* within the meaning of 19 CFR 351.106(c)(1), or an importer-specific rate is zero or *de minimis,* we will instruct CBP to liquidate the appropriate entries without regard to antidumping duties.

Commerce's ''automatic assessment'' will apply to entries of subject merchandise during the POR produced by Industeel in these final results of review for which Industeel did not know that the merchandise it sold to the intermediary (*e.g.,* a reseller, trading company, or exporter) was destined for the United States. In such instances, we will instruct CBP to liquidate unreviewed entries at the all-others rate if there is no rate for the intermediate company(ies) involved in the transaction.

Commerce intends to issue assessment instructions to CBP no earlier than 35 days after the date of publication of the final results of this review in the **Federal Register**. If a timely summons is filed at the U.S. Court of International Trade, the assessment instructions will direct CBP not to liquidate relevant entries until the time for parties to file a request for a statutory injunction has expired (*i.e.,* within 90 days of publication).

Cash Deposit Requirements

Upon publication of this notice in the **Federal Register**, the following cash deposit requirements will be effective for all shipments of the subject merchandise entered, or withdrawn from warehouse, for consumption on or after the publication date of the final results of this administrative review, as provided by section 751(a)(2)(C) of the Act: (1) the cash deposit rate for Industeel will be equal to the weighted-average dumping margin established in the final results of this review; (2) for merchandise exported by producers or exporters not covered in this review but covered in a prior completed segment of the proceeding, the cash deposit will continue to be the company-specific rate published in the completed segment for the most recently completed period; (3) if the exporter is not a firm covered in this review, a prior review, or the original less-than-fair-value (LTFV) investigation, but the producer has been covered in a prior completed segment of this proceeding, then the cash deposit rate will be the rate established in the completed segment for the most recent period for the producer of the merchandise; and (4) the cash deposit rate for all other producers or exporters will continue to be 5.40 percent, the all-others rate established in the LTFV investigation for this proceeding.[11] These deposit requirements, when imposed, shall remain in effect until further notice.

Notification to Importers

This notice serves as a final reminder to importers of their responsibility under 19 CFR 351.402(f)(2) to file a certificate regarding the reimbursement of antidumping duties prior to liquidation of the relevant entries during this review period. Failure to comply with this requirement could result in Commerce's presumption that reimbursement of antidumping duties occurred and the subsequent assessment of double antidumping duties.

Notification Regarding Administrative Protective Order

This notice serves as the only reminder to parties subject to administrative protective order (APO) of their responsibility concerning the disposition of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a)(3), which continues to govern business proprietary information in this segment of the proceeding. Timely written notification of return/destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and the terms of an APO is a violation subject to sanction.

[11] *See Order,* 82 FR at 24098.

Notification to Interested Parties

We are issuing and publishing this notice in accordance with sections 751(a)(1) and 777(i) of the Act, and 19 CFR 351.221(b)(5).

Dated: December 10, 2024.

Abdelali Elouaradia,

Deputy Assistant Secretary for Enforcement and Compliance.

Certain Aluminum Foil From the People's Republic of China: Amended Final Results of Countervailing Duty Administrative; 2022

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The U.S. Department of Commerce (Commerce) is amending the final results of the countervailing duty administrative review of certain aluminum foil (aluminum foil) from the People's Republic of China (China) to correct a ministerial error. The period of review (POR) is January 1, 2022, through December 31, 2022.

DATES: Applicable December 17, 2024.

FOR FURTHER INFORMATION CONTACT: Natasia Harrison or Harrison Tanchuck, AD/CVD Operations, Office VI, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–1240 or (202) 482–7421, respectively.

SUPPLEMENTARY INFORMATION:

Background

In accordance with sections 751(a)(1) of the Tariff Act of 1930, as amended (the Act), and 19 CFR 351.221(b)(5), on November 12, 2024, Commerce published its final results in the countervailing duty administrative review of aluminum foil from China.[1] On November 13, 2024, the Aluminum Association Trade Enforcement Working Group and its individual members (collectively, the petitioners) timely alleged that Commerce made a ministerial error in the *Final Results*.[2] No party submitted rebuttal comments.

Scope of the Order [3]

The product covered by the scope of the *Order* is aluminum foil from China. A full description of the scope of the *Order* is contained in the *Final Results* IDM.

Ministerial Errors

Section 751(h) of the Act, and 19 CFR 351.224(f) define a ''ministerial error'' as an error ''in addition, subtraction, or other arithmetic function, clerical error resulting from inaccurate copying, duplication, or the like, and any similar type of unintentional error which the Secretary considers ministerial.'' Commerce finds that the purported error alleged by the petitioners constitutes a ministerial error within the meaning of 19 CFR 351.224(f).[4] Specifically, we committed a ministerial error with regard to the calculation of mandatory respondent Jiangsu Zhongji Lamination Materials Co., (HK) Limited's (Zhongji HK's) input supplier company sales denominators, and consequently, the subsidy rate calculations performed in connection with Zhongji HK's affiliated input supplier company sales denominators. For a complete discussion of this alleged error, *see* the Ministerial Error Analysis Memorandum.

In accordance with section 751(h) of the Act and 19 CFR 351.224(e), we are amending the *Final Results*.[5] Specifically, we are amending the net subsidy rate for Zhongji HK. The revised net subsidy rate is provided in the table below. As a result of amending the net subsidy rate for Zhongji HK, we are also amending the rate for the non-selected companies, which is the average of the average of the rates calculated for two mandatory respondents, as provided in the table below.

Amended Final Results of Review

As a result of correcting the ministerial errors described above, Commerce determines the following net countervailable subsidy rates for the period January 1, 2022, through December 31, 2022:

Company	Subsidy rate (percent *ad valorem*)
Hangzhou Five Star Aluminium Co., Ltd.[6]	[7] 29.90
Jiangsu Zhongji Lamination Materials Co., (HK) Limited [8]	[9] 25.24
Non-Selected Companies Under Review [10]	[11] 29.13

Disclosure

Commerce intends to disclose the calculations performed for these amended final results within five days after the date of publication of this notice in the **Federal Register** in accordance with 19 CFR 351.224(b).

Assessment Rates

In accordance with section 751(a)(1) of the Act and 19 CFR 351.212(b)(2), Commerce shall determine, and U.S. Customs and Border Protections (CBP) shall assess, countervailing duties on all appropriate entries of subject merchandise in accordance with the amended final results of this review. Commerce intends to issue assessment instructions to CBP no earlier than 35 days after the date of publication of these amended final results of this review in the **Federal Register**. If a timely summons is filed at the U.S. Court of International Trade, the assessment instructions will direct CBP not to liquidate relevant entries until the time for parties to file a request for a statutory injunction has expired (*i.e.,* within 90 days of publication).

Cash Deposit Requirements

In accordance with section 751(a)(1) of the Act, Commerce also intends to instruct CBP to collect cash deposits of estimated countervailing duties in the amounts shown for the companies subject to this review, effective November 12, 2024, the date of publication of the *Final Results* in the **Federal Register**. For all non-selected companies, CBP will continue to collect cash deposits of estimated countervailing duties at the most recent company-specific or all-others rate applicable to the company, as appropriate. These cash deposits, when imposed, shall remain in effect until further notice.

[6] Commerce finds the following companies to be to be cross-owned with Five Star: Jiangsu Dingsheng New Materials Joint-Stock Co., Ltd. (Jiangsu Dingsheng), Dingsheng Aluminum Industries (Hong Kong) Trading Co., Ltd. (Dingsheng HK), Hangzhou Dingsheng Import & Export Co., Ltd. (Dingsheng IE), Hangzhou Teemful Aluminium Co., Ltd. (Teemful), Inner Mongolia Liansheng New Energy Material Co., Ltd. or Inner Mongolia Liansheng New Energy Material Joint-Stock Co., Ltd. (Liansheng), Inner Mongolia Xinxing New Energy Material Co., Ltd. or Inner Mongolia Xinxing New Material Co., Ltd. (Xinxing), Hangzhou Dingsheng Industrial Group Co., Ltd. (Dingsheng Group), Hangzhou Dingcheng Aluminium Co., Ltd. (Dingcheng); Luoyang Longding Aluminum Co., Ltd. (Longding); Walson (HK) Trading Co., Limited (Walson HK); Dingheng New Materials Co., Ltd. (Dingheng) and Thai Ding Li New Materials Co., Ltd. (Ding Li), (collectively, Dingsheng Respondents). Walson HK, Dingheng and Ding Li were listed separately in *Initiation of Antidumping and Countervailing Duty Administrative Reviews,* 88 FR 38021 (June 12, 2023) (*Initiation Notice*). *See* Dingsheng Respondents' Letter, ''Hangzhou Five Star Affiliation Response,'' dated August 25, 2023 (Dingsheng Respondents AQR) at Exhibit A.1.

[7] Unchanged from *Final Results.*

[8] As discussed in the *Preliminary Results,* Commerce finds the following companies to be to be cross-owned with Zhongji HK: Jiangsu Zhongji Lamination Materials Co., Ltd. (Zhongji) (FKA Jiangsu Zhongji Lamination Materials Stock Co., Ltd.); Jiangsu Huafeng Aluminium Industry Co., Ltd. (Jiangsu Huafeng); Shantou Wanshun New Material Group Co., Ltd. (Shantou Wanshun) (FKA Shantou Wanshun Package Material Stock Co., Ltd.); Anhui Zhongji Battery Foil Science & Technology Co., Ltd. (Anhui Zhongji) (FKA Anhui Maximum Aluminium Industries Company Limited); and Sichuan Wanshun Zhongji Aluminium Industry Co., Ltd. (Sichuan Wanshun). Anhui Zhongji, Anhui Maximum Aluminium Industries Company Limited, Jiangsu Huafeng, Zhongji, and Shantou Wanshun Package Material Stock Co., Ltd. were listed separately in the *Initiation Notice.*

[9] This net countervailable *ad valorem* subsidy rate reflects an entered value adjustment (EVA). *See Final Results* IDM at Comment 3.

[10] *See* Appendix for a list of the non-selected companies under review.

[11] The non-selected company rate reflects Five Star's *ad valorem* net countervailable subsidy rate and Zhongji HK's amended *ad valorem* net countervailable subsidy rate without the EVA, which is 28.35 percent. *See Final Results* IDM at Comment 3; *see also* Memorandum, ''Amended Final Results Calculation of Subsidy Rate for Non-Selected Companies Under Review,'' dated concurrently with this notice.

Administrative Protective Order

This notice also serves as a final reminder to parties subject to an administrative protective order (APO) of their responsibility concerning the disposition of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a)(3). Timely written notification of the return or destruction of APO materials or conversion to judicial protective order, is hereby requested. Failure to comply with the regulations and terms of an APO is a sanctionable violation.

Notification to Interested Parties

We are issuing and publishing these amended final results of the review in accordance with sections 751(h) and 777(i)(1) of the Act, and 19 CFR 351.224(e).

Dated: December 10, 2024.

Abdelali Elouaradia,

Deputy Assistant Secretary for Enforcement and Compliance.

Certain Corrosion-Resistant Steel Products From the Republic of Korea: Final Results of Antidumping Duty Administrative Review; 2022–2023

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The U.S. Department of Commerce (Commerce) determines that Dongkuk Coated Metal Co., Ltd. (Dongkuk) and certain companies not selected for individual examination made sales of subject merchandise in the United States at prices below normal value (NV) during the period of review (POR) July 1, 2022, through June 30, 2023. In addition, Commerce determines that Hyundai Steel Company (Hyundai) did not make sales of subject merchandise in the United States at prices below NV during the POR.

DATES: Applicable December 17, 2024.

FOR FURTHER INFORMATION CONTACT: Jaron Moore or William Horn, AD/CVD Operations, Office VIII, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–3640 or (202) 482–4868, respectively.

SUPPLEMENTARY INFORMATION:

Background

On August 12, 2024, Commerce published the *Preliminary Results* of this administrative review of the antidumping duty order on certain corrosion-resistant steel products (CORE) from the Republic of Korea (Korea) and invited interested parties to comment.[1] This administrative review covers 11 exporters and/or producers of the subject merchandise,[2] of which we selected Dongkuk and Hyundai as mandatory respondents. On December 9, 2024, Commerce tolled the deadline to issue the final results in this administrative review by 90 days.[3] Accordingly, the deadline for these final results is now March 10, 2025. For a summary of the events that occurred since the *Preliminary Results, see* the Issues and Decision Memorandum.[4] Commerce conducted this review in accordance with section 751(a)(1)(B) of the Tariff Act of 1930, as amended (the Act).

Scope of the Order [5]

The merchandise covered by this *Order* is CORE from Korea. For a full description of the scope of the *Order, see* the Issues and Decision Memorandum.

Analysis of Comments Received

All issues raised by parties in the case and rebuttal briefs are addressed in the Issues and Decision Memorandum. A list of the issues addressed in the Issues and Decision Memorandum is provided in the appendix to this notice. The Issues and Decision Memorandum is a public document and is on file electronically via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at *https://access.trade.gov.* In addition, a complete version of the Issues and Decision Memorandum can be accessed directly at *https://access.trade/gov/public/FRNoticesListLayout.aspx.*

Changes Since the Preliminary Results

Based on comments received from interested parties regarding our *Preliminary Results,* we made certain changes to the preliminary weighted-average dumping margin calculation for Dongkuk,[6] as well as the preliminary weighted-average dumping margin assigned to the companies not selected for individual examination.

Rates for Companies Not Selected for Individual Examination

The statute and Commerce's regulations do not address the establishment of a rate to be applied to individual companies not selected for examination when Commerce limits its examination in an administrative review pursuant to section 777A(c)(2) of the Act. Generally, Commerce looks to section 735(c)(5) of the Act, which provides instructions for calculating the all-others rate in an investigation, for guidance when calculating the rate for companies which we did not individually examine in an administrative review. Section 735(c)(5)(A) of the Act establishes a preference to avoid using rates which are zero, *de minimis,* or based entirely

[1] *See Certain Corrosion-Resistant Steel Products from the Republic of Korea: Preliminary Results of Antidumping Duty Administrative Review,* 2022–2023, 89 FR 65596 (August 12, 2024) (*Preliminary Results*),and accompanying Preliminary Decision Memorandum.

[2] *See Initiation of Antidumping and Countervailing Duty Administrative Reviews,* 88 FR 62322, 62326 (September 11, 2023).

[3] *See* Memorandum, ''Tolling of Deadlines for Antidumping and Countervailing Duty Proceedings,'' dated December 9, 2024.

[4] *See* Memorandum, ''Issues and Decision Memorandum for the Final Results of the 2022–2023 Antidumping Duty Administrative Review: Certain Corrosion-Resistant Steel Products from the Republic of Korea,'' dated concurrently with, and hereby adopted by, this notice (Issues and Decision Memorandum).

[5] *See Certain Corrosion-Resistant Steel Products from India, Italy, the People's Republic of China, the Republic of Korea and Taiwan: Amended Final Affirmative Antidumping Determination for India and Taiwan, and Antidumping Duty Orders,* 81 FR 48390 (July 25, 2016) (*Order*).

[6] *See* Issues and Decision Memorandum at Comment 1.

on facts available (FA) in calculating an all-others rate. Accordingly, Commerce's practice in administrative reviews has been to average the weighted-average dumping margins for the companies selected for individual examination in the administrative review, excluding rates that are zero, *de minimis,* or based entirely on FA.[7] For these final results of review, we calculated a zero weighted-average dumping margin for Hyundai and a weighted-average dumping margin for Dongkuk that is not zero, *de minimis,* or based entirely on FA. Therefore, consistent with our practice, we have assigned the companies not selected for individual examination the weighted-average dumping margin calculated for Dongkuk.

Final Results of Review

We determine that the following weighted-average dumping margins exist for the period July 1, 2022, through June 30, 2023:

Exporter/producer	Weighted-average dumping margin (percent)
Dongbu Incheon Steel Co., Ltd	1.99
Dongkuk Coated Metal Co., Ltd., successor in interest to Dongkuk Steel Mill Co., Ltd.[8]	1.99
Dongkuk International, Inc	1.99
Hyundai Steel Company	0.00
KG Steel Corporation; KG Dongbu Steel Co., Ltd	1.99
POSCO	1.99
POSCO Coated & Color Steel Co., Ltd	1.99
POSCO International Corporation	1.99
POSCO STEELEON Co., Ltd	1.99
SeAH Coated Metal Corporation	1.99
SeAH Steel Corporation	1.99

Disclosure

Commerce intends to disclose to interested parties the calculations performed in connection with these final results within five days of any public announcement or, if there is no public announcement, within five days of the date of publication of the notice of final results in the **Federal Register**, in accordance with 19 CFR 351.224(b).

Assessment Rates

Commerce has determined, and U.S. Customs and Border Protection (CBP) shall assess, antidumping duties on all appropriate entries in accordance with section 751(a)(2)(C) of the Act and 19 CFR 351.212(b). Pursuant to 19 CFR 351.212(b)(1), because Dongkuk reported the entered value of its U.S. sales, we calculated importer-specific *ad valorem* duty assessment rates based on the ratio of the total amount of dumping calculated for the examined sales to the total entered value of the sales for which entered value was reported. Where an importer-specific assessment rate is *de minimis* (*i.e.,* less than 0.5 percent), the entries by that importer will be liquidated without regard to antidumping duties. Because the final weighted-average dumping margin for Hyundai is zero, we intend to instruct CBP to liquidate the appropriate entries without regard to antidumping duties.[9]

Consistent with Commerce's clarification of its assessment practice, for entries of subject merchandise during the POR produced by the above-referenced respondents for which they did not know that the merchandise was destined for the United States, we will instruct CBP to liquidate those entries at the all-others rate in the original less-than-fair-value (LTFV) investigation (as amended) [10] if there is no rate for the intermediate company(ies) involved in the transaction.[11]

Commerce intends to issue assessment instructions to CBP no earlier than 35 days after the date of publication of the final results of this review in the **Federal Register**. If a timely summons is filed at the U.S. Court of International Trade, the assessment instructions will direct CBP not to liquidate relevant entries until the time for parties to file a request for a statutory injunction has expired (*i.e.,* within 90 days of publication).

The final results of this review shall be the basis for the assessment of antidumping duties on entries of merchandise covered by the final results of this review and for future deposits of estimated duties, where applicable.[12]

Cash Deposit Requirements

The following cash deposit requirements will be effective for all shipments of CORE from Korea entered, or withdrawn from warehouse, for consumption on or after the date of publication of the final results as provided by section 751(a)(2) of the Act: (1) the cash deposit rate for each specific company listed above will be equal to the weighted-average dumping margin established in the final results of the review; (2) for merchandise exported by producers or exporters not covered in this review but covered in a prior completed segment of the proceeding, the cash deposit rate will continue to be the company-specific rate established in the completed segment for the most recent period; (3) if the exporter is not a firm covered in this review or the original LTFV investigation, but the producer is, then the cash deposit rate will be the rate established in the completed segment for the most recent period for the producer of the merchandise; (4) the cash deposit rate for all other producers or exporters will

continue to be 8.31 percent, the all-others rate established in the LTFV investigation (as amended) in this proceeding.[13] These cash deposit requirements, when imposed, shall remain in effect until further notice.

Notification to Importers

This notice serves as a final reminder to importers of their responsibility under 19 CFR 351.402(f)(2) to file a certificate regarding the reimbursement of antidumping and/or countervailing duties prior to liquidation of the relevant entries during this POR. Failure to comply with this requirement could result in Commerce's presumption that reimbursement of antidumping and/or countervailing duties occurred and the subsequent assessment of double antidumping duties, and/or an increase in the amount of antidumping duties by the amount of the countervailing duties.

Administrative Protective Order (APO)

This notice also serves as a reminder to parties subject to an APO of their responsibility concerning the return or destruction of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a)(3), which continues to govern business proprietary information in this segment of the proceeding. Timely written notification of the return or destruction of APO materials, or conversion to judicial protective order, is hereby requested. Failure to comply with the regulations and terms of an APO is a violation subject to sanction.

Notification to Interested Parties

We are issuing and publishing these final results of administrative review in accordance with sections 751(a) and 777(i) of the Act, and 19 CFR 351.221(b)(5).

Dated: December 10, 2024.

Abdelali Elouaradia,

Deputy Assistant Secretary for Enforcement and Compliance.

Truck and Bus Tires From Thailand: Antidumping Duty Order

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: Based on the affirmative final determinations by the U.S. Department of Commerce (Commerce) and the U.S. International Trade Commission (ITC), Commerce is issuing an antidumping duty order on truck and bus tires from Thailand.

DATES: Applicable December 17, 2024.

FOR FURTHER INFORMATION CONTACT: Faris Montgomery or Jonathan Schueler, AD/CVD Operations, Office VIII, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–1537 or (202) 482–9175, respectively.

SUPPLEMENTARY INFORMATION:

Background

In accordance with sections 735(d) and 777(i) of the Tariff Act of 1930, as amended (the Act), on October 17, 2024, Commerce published in the **Federal Register** its affirmative final determination of sales at less-than-fair-value (LTFV) in the investigation of truck and bus tires from Thailand.[1] As part of its determination, Commerce made an affirmative crticial cirumstances finding for Bridgestone Corporation in the LTFV investigation. Pursuant to section 735(d) of the Act, on December 2, 2024, the ITC notified Commerce of its affirmative final determination that an industry in the United States is materially injured, within the meaning of section 735(b)(1)(A)(i) of the Act, by reason of imports of truck and bus tires from Thailand that are sold in the United States at LTFV.[2] On December 6, 2024, in accordance with section 735(d) of the Act, the ITC published in the **Federal Register** its affirmative final injury determination in this investigation in which it found that an industry in the United States is materially injured by reason of imports of truck and bus tires from Thailand.[3] In addition, the ITC found that critical circumstances do not exist with regard to imports of truck and bus tires from Thailand.[4]

Scope of the Order

The products covered by this order are truck and bus tires from Thailand. For a complete description of the scope of this order, *see* the appendix to this notice.

Antidumping Duty Order

Based on the above-referenced affirmative final determinations, in accordance with sections 735(c)(2) and 736 of the Act, Commerce is issuing this antidumping duty order. Moreover, because the ITC determined that U.S. imports of truck and bus tires from Thailand are materially injuring a U.S. industry, unliquidated entries of such merchandise from Thailand, entered or withdrawn from warehouse for consumption, as described below, are subject to the assessment of antidumping duties.

Therefore, in accordance with section 736(a)(1) of the Act, Commerce will direct U.S. Customs and Border Protection (CBP) to assess, upon further instruction by Commerce, antidumping duties equal to the amount by which the normal value of the merchandise exceeds the export price or constructed export price of the merchandise, for all relevant entries of truck and bus tires from Thailand. With the exception of entries occurring after expiration of the provisional measures period, but before publication of the ITC's final affirmative injury determination, as further described below, antidumping duties will be assessed on unliquidated U.S. entries of truck and bus tires from Thailand entered, or withdrawn from warehouse, for consumption on or after the date on which the suspension of liquidation was first ordered. As discussed in the *Final Determination,* with respect to Prinx Chengshan Tire (Thailand) Co., Ltd. (Prinx) this date is October 17, 2024, the date of publication of the *Final Determination* in the **Federal Register**.[5] With respect to Bridgestone Corporation and all other companies, this date is May 20, 2024, the date of publication of the *Preliminary Determination* in the **Federal Register**.[6]

[1] *See Truck and Bus Tires from Thailand: Final Affirmative Determination of Sales at Less Than Fair Value and Final Affirmative Determination of Critical Circumstances, in Part,* 89 FR 83636 (October 17, 2024) (*Final Determination*), and accompanying Issues and Decision Memorandum.

[4] *Id.*

[5] *See Final Determination,* 89 FR at 83638.

[6] *Id.; see also Truck and Bus Tires from Thailand: Preliminary Affirmative Determination of Sales at Less Than Fair Value, Preliminary Negative*

Continued

Critical Circumstances

With respect to the ITC's negative critical circumstances determination on imports of truck and bus tires from Thailand, we will instruct CBP to lift the suspension of liquidation and to refund all cash deposits for estimated antidumping duties with respect to entries of the subject merchandise entered, or withdrawn from warehouse, for consumption on or after February 20, 2024, which is 90 days prior to the publication of the *Preliminary Determination,* but before May 20, 2024, which is the date of publication of the *Preliminary Determination.*[7]

Continuation of Suspension of Liquidation and Cash Deposits

Except as noted in the ''Provisional Measures'' section of this notice below, in accordance with section 736 of the Act, Commerce will instruct CBP to continue to suspend liquidation of all relevant entries of truck and bus tires from Thailand. These instructions suspending liquidation will remain in effect until further notice.

Commerce will also instruct CBP to require cash deposits at a rate equal to the estimated weighted-average dumping margins listed in the table below. Accordingly, effective on the date of publication in the **Federal Register** of the notice of the ITC's affirmative final injury determination, CBP will suspend the entries of liquidation of entries of subject merchandise and require, at the same time as importers would normally deposit estimated duties on subject merchandise, a cash deposit equal to the weighted-average dumping margins listed in the table below. The all-others rate applies to all producers or exporters not specifically listed, as appropriate.

Estimated Weighted-Average Dumping Margins

The estimated weighted-average dumping margins for this antidumping duty order are as follows:

Producer or exporter	Weighted-average dumping margin (percent)
Bridgestone Corporation	48.39
Prinx Chengshan Tire (Thailand) Co., Ltd	12.33
All Others	12.33

Determination of Critical Circumstances, and Postponement of Final Determination, 89 FR 43806 (May 20, 2024) (*Preliminary Determination*).

[7] *See Preliminary Determination.*

Provisional Measures

Section 733(d) of the Act states that suspension of liquidation pursuant to an affirmative preliminary determination may not remain in effect for more than four months, except where exporters representing a significant proportion of exports of the subject merchandise request that Commerce extend the four-month period to no more than six months. Commerce published the *Preliminary Determination* in this investigation on May 20, 2024. Commerce extended the deadline for issuing its final determination in this investigation, which it published in the **Federal Register** on October 17, 2024. Therefore, the six-month provisional measures period beginning on the date of publication of the *Preliminary Determination* for Bridgestone and all other companies ended on November 15, 2024. As noted above, suspension of liquidation for Prinx was not ordered until October 17, 2024, the date of publication of the *Final Determination* in the **Federal Register**;[8] therefore, the six-month provisional measures period for Prinx has not yet ended.

Consequently, in accordance with section 733(d) of the Act, Commerce will instruct CBP to terminate the suspension of liquidation, and to liquidate, without regard to antidumping duties, unliquidated U.S. entries of truck and bus tires from Thailand entered, or withdrawn from warehouse, for consumption on or after November 16, 2024, the first day on which the provisional measures were no longer in effect for Bridgestone and all other companies, through the day preceding the date of publication of the *ITC Final Determination* in the **Federal Register**. Suspension of liquidation and the collection of cash deposits will resume on the date of publication of the *ITC Final Determination* in the **Federal Register**.

Establishment of the Annual Inquiry Service Lists

On September 20, 2021, Commerce published the final rule titled *Regulations to Improve Administration and Enforcement of Antidumping and Countervailing Duty Laws* in the **Federal Register**.[9] On September 27, 2021, Commerce published a notification titled *Scope Ruling Application; Annual Inquiry Service List; and Informational Sessions* in the **Federal Register**.[10] The *Final Rule* and *Procedural Guidance* provide that Commerce will maintain an annual inquiry service list for each order or suspended investigation, and any interested party submitting a scope ruling application or request for circumvention inquiry shall serve a copy of the application or request on the persons on the annual inquiry service list for that order, as well as any companion order covering the same merchandise from the same country of origin.[11]

In accordance with the *Procedural Guidance,* for orders published in the **Federal Register** after November 4, 2021, Commerce will create an annual inquiry service list segment in Commerce's online e-filing and document management system, Antidumping and Countervailing Duty Electronic Service System (ACCESS), available at *https://access.trade.gov,* within five business days of publication of the notice of the order. Each annual inquiry service list will be maintained in ACCESS, under each case number, and under a specific segment type called ''AISL-Annual Inquiry Service List.'' [12]

Interested parties who wish to be added to the annual inquiry service list for an order must submit an entry of appearance in the annual inquiry service list segment in ACCESS for the order within 30 days after the date of publication of the order in the **Federal Register**. For ease of administration, Commerce requests that a law firm with more than one attorney representing an interested party in an order designate a lead attorney to be included on the annual inquiry service list. Commerce will finalize the annual inquiry service list within five business days thereafter. As mentioned in the *Procedural Guidance,* the new annual inquiry service list will be in place until the following year, when the *Opportunity Notice* for the anniversary month of the order is published in the **Federal Register**.

[8] *See Final Determination,* 89 FR at 83638.

[9] *See Regulations to Improve Administration and Enforcement of Antidumping and Countervailing Duty Laws,* 86 FR 52300 (September 20, 2021) (*Final Rule*).

[10] *See Scope Ruling Application; Annual Inquiry Service List; and Informational Sessions,* 86 FR 53205 (September 27, 2021) (*Procedural Guidance*).

[11] *Id.*

[12] This segment will be combined with the ACCESS Segment Specific Information (SSI) field which will display the month in which the notice of the order or suspended investigation was published in the **Federal Register**, also known as the anniversary month. For example, for an order under case number A–000–000 that was published in the **Federal Register** in January, the relevant segment and SSI combination will appear in ACCESS as ''AISL-January Anniversary.'' Note that there will be only one annual inquiry service list segment per case number, and the anniversary month will be pre-populated in ACCESS.

Commerce may update an annual inquiry service list at any time, as needed, based on interested parties' amendments to their entries of appearance to remove, or otherwise modify, their list of members and representatives, or to update contact information. Changes or announcements pertaining to these procedures will be posted to the ACCESS website at *https://access.trade.gov.*

Special Instructions for Petitioners and Foreign Governments

In the *Final Rule,* Commerce stated that, ''after an initial request and placement on the annual inquiry service list, both petitioners and foreign governments will automatically be placed on the annual inquiry service list in the years that follow.'' [13] Accordingly, as stated above, the petitioners and foreign governments should submit their initial entry of appearance after publication of this notice in the **Federal Register** in order to appear in the first annual inquiry service list. Pursuant to 19 CFR 351.225(n)(3), the petitioners and foreign governments will not need to resubmit their entries of appearance each year to continue to be included on the annual inquiry service list. However, the petitioners and foreign governments are responsible for making amendments to their entries of appearance during the annual update to the annual inquiry service list in accordance with the procedures described above.

Notification to Interested Parties

This notice constitutes the antidumping duty order with respect to truck and bus tires from Thailand, pursuant to section 736(a) of the Act. Interested parties can find a list of antidumping duty orders currently in effect at *https://www.trade.gov/data-visualization/adcvd-proceedings.*

This antidumping duty order is issued and published in accordance with section 736(a) of the Act and 19 CFR 351.211(b).

Dated: December 11, 2024.

Abdelali Elouaradia,

Deputy Assistant Secretary for Enforcement and Compliance.

Appendix

Scope of the Order

The scope of the order covers truck and bus tires. Truck and bus tires are new pneumatic tires, of rubber, with a truck or bus size designation. Truck and bus tires covered by the scope may be tube-type, tubeless, radial, or non-radial (also known as bias construction or bias-ply). Subject tires have, at the time of importation, the symbol ''DOT'' on the sidewall, certifying that the tire conforms to applicable motor vehicle safety standards. Subject tires may also have one of the following suffixes in their tire size designation, which also appear on the sidewall of the tire:

TR—Identifies tires for service on trucks or buses to differentiate them from similarly sized passenger car and light truck tires; and

HC—Identifies a 17.5 inch rim diameter code for use on low platform trailers.

All tires with a ''TR'' or ''HC'' suffix in their size designations are covered by the scope regardless of their intended use.

In addition, all tires that lack one of the above suffix markings are included in the scope, as well as all tires that include any other prefix or suffix in their sidewall markings, are included in the scope, regardless of their intended use, as long as the tire is of a size that fits trucks or busses. Sizes that fit trucks and busses include, but are not limited to, the numerical size designations listed in the ''Truck-Bus'' section of the Tire and Rim Association Year Book, as updated annually. The scope includes all tires that are of a size that fits trucks or busses, unless the tire falls within one of the specific exclusions set out below.

Truck and bus tires, whether or not mounted on wheels or rims, are included in the scope. However, if a subject tire is imported mounted on a wheel or rim, only the tire is covered by the scope. Subject merchandise includes truck and bus tires produced in the subject country whether mounted on wheels or rims in the subject country or in a third country. Truck and bus tires are covered whether or not they are accompanied by other parts, *e.g.,* a wheel, rim, axle parts, bolts, nuts, *etc.* Truck and bus tires that enter attached to a vehicle are not covered by the scope.

Specifically excluded from the scope are the following types of tires: (1) pneumatic tires, of rubber, that are not new, including recycled and retreaded tires; (2) non-pneumatic tires, such as solid rubber tires; and (3) tires that exhibit each of the following physical characteristics: (a) the designation ''MH'' is molded into the tire's sidewall as part of the size designation; (b) the tire incorporates a warning, prominently molded on the sidewall, that the tire is for ''Mobile Home Use Only;'' and (c) the tire is of bias construction (also known as non-radial construction) as evidenced by the fact that the construction code included in the size designation molded into the tire's sidewall is not the letter ''R.''

The subject merchandise is currently classifiable under Harmonized Tariff Schedule of the United States (HTSUS) subheadings: 4011.20.1015 and 4011.20.5020. Tires meeting the scope description may also enter under the following HTSUS subheadings: 4011.90.1010, 4011.90.1050, 4011.90.2010, 4011.90.2050, 4011.90.8010, 4011.90.8050, 8708.70.4530, 8708.70.4546, 8708.70.4548, 8708.70.4560, 8708.70.6030, 8708.70.6045, 8708.70.6060, and 8716.90.5059.

While HTSUS subheadings are provided for convenience and for customs purposes, the written description of the subject merchandise is dispositive.

Notice of Extension of the Deadline for Determining the Adequacy of the Antidumping and Countervailing Duty Petitions: Float Glass Products From the People's Republic of China and Malaysia

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

DATES: Applicable December 11, 2024.

FOR FURTHER INFORMATION CONTACT: Dmitry Vladimirov at (202) 482–0665 or Nathan James at (202) 482–5305 (the People's Republic of China) (China), Jeffrey Pedersen at (202) 482–2769, Mira Warrier at (202) 482–8031, or Benjamin Nathan at (202) 482–3834 (Malaysia), AD/CVD Operations, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230.

Extension of Initiation of Investigation

The Petitions

On November 21, 2024, the U.S. Department of Commerce (Commerce) received antidumping and countervailing duty petitions on imports of float glass products from China and Malaysia, filed in proper form on behalf of Vitro Flat Glass, LLC and Vitro Meadville Flat Glass, LLC (the

petitioner), a domestic producer of float glass products.[1]

Determination of Industry Support for the Petitions

Sections 702(b)(1) and 732(b)(1) of the Tariff Act of 1930, as amended (the Act), require that a petition be filed by or on behalf of the domestic industry. To determine that the petition has been filed by or on behalf of the industry, sections 702(c)(4)(A) and 732(c)(4)(A) of the Act require that the domestic producers or workers who support the petition account for: (i) at least 25 percent of the total production of the domestic like product; and (ii) more than 50 percent of the production of the domestic like product produced by that portion of the industry expressing support for, or opposition to, the petition. Moreover, sections 702(c)(4)(D) and 732(c)(4)(D) of the Act provide that, if the petition does not establish support of domestic producers or workers accounting for more than 50 percent of the total production of the domestic like product, Commerce shall: (i) poll the industry or rely on other information in order to determine if there is support for the petition, as required by subparagraph (A); or (ii) if there is a large number of producers, determine industry support using a statistically valid sampling method to poll the industry.

Extension of Time

Sections 702(c)(1)(A) and 732(c)(1)(A) of the Act provide that within 20 days of the filing of an antidumping or countervailing duty petition, Commerce will determine, *inter alia,* whether the petition has been filed by or on behalf of the U.S. industry producing the domestic like product. Sections 702(c)(1)(B) and 732(c)(1)(B) of the Act provide that the deadline for the initiation determination, in exceptional circumstances, may be extended by 20 days in any case in which Commerce must ''poll or otherwise determine support for the petition by the industry.'' Because it is not clear from the Petitions whether the industry support criteria have been met, Commerce has determined it would be appropriate in these cases to poll the industry and extend the time period for determining whether to initiate the investigations in order to further examine the issue of industry support.

Commerce will need additional time to gather and analyze additional information regarding industry support. Therefore, it is necessary to extend the deadline for determining the adequacy of the Petitions for a period not to exceed 40 days from the filing of the Petitions. As a result, in accordance with sections 702(c)(1)(B) and 732(c)(1)(B) of the Act, Commerce's initiation determination will now be due no later than December 31, 2024.

International Trade Commission Notification

Commerce will contact the U.S. International Trade Commission (ITC) and will make this extension notice available to the ITC.

Dated: December 11, 2024.

Scot Fullerton,

Acting Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations.

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

Agency Information Collection Activities; Submission to the Office of Management and Budget (OMB) for Review and Approval; Comment Request; Coastal and Estuarine Land Conservation Planning, Protection or Restoration

AGENCY: National Oceanic & Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of information collection, request for comment.

SUMMARY: The Department of Commerce, in accordance with the Paperwork Reduction Act of 1995 (PRA), invites the general public and other Federal agencies to comment on proposed, and continuing information collections, which helps us assess the impact of our information collection requirements and minimize the public's reporting burden. The purpose of this notice is to allow for 60 days of public comment preceding submission of the collection to OMB.

DATES: To ensure consideration, comments regarding this proposed information collection must be received on or before February 18, 2025.

ADDRESSES: Interested persons are invited to submit written comments to Adrienne Thomas, NOAA PRA Officer, at *NOAA.PRA@noaa.gov.* Please reference OMB Control Number 0648–0459 in the subject line of your comments. Do not submit Confidential Business Information or otherwise sensitive or protected information.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or specific questions related to collection activities should be directed to Elaine Vaudreuil, Program Analyst, NOAA Ocean Service, 1305 East-West Hwy, 202–936–6008, *Elaine.Vaudreuil@noaa.gov.*

SUPPLEMENTARY INFORMATION:

I. Abstract

NOAA's Office for Coastal Management requests the extension of a currently approved information collection. NOAA has, or is given, authority under the Coastal Zone Management Act (CZMA), annual appropriations or other authorities, to issue funds to coastal states, localities or other recipients for planning, conservation, acquisition, protection, restoration, or construction projects. The required information enables NOAA to implement the Coastal and Estuarine Land Conservation Program (CZMA section 307A), under its current or future authorization, and facilitate the review of similar projects under different, but related, authorities, including the National Estuarine Research Reserve System (CZMA section 315) Land Acquisition and Construction program, the Coastal Zone Management Program's low-cost acquisition and construction program (CZMA section 306A), the Fish and Wildlife Coordination Act, or other authorities.

This collection covers the development of state coastal land conservation plans, and collection of information specifically needed for applying for and carrying out land acquisition, restoration and construction projects, such as: appraisals, property surveys and site plans, legal documentation such as deeds, easements and/or plats, and information needed for environmental compliance reviews. Such information is collected from project applicants or sub-recipients, which are typically state or local government agencies, but may also include nongovernmental or Tribal organizations.

The information will be used in evaluating project proposals, reviewing the location and impact of proposed activities, documenting compliance with the National Environmental Policy Act and other applicable statutes, and conducting due diligence on market value, title encumbrances, property boundaries, proper recording of legal instruments. No changes are proposed to the collection.

II. Method of Collection

Electronic formats are the preferred method for submitting Coastal and Estuarine Land Conservation Planning, Protection or Restoration (CELCP) plans, land conservation project applications, performance reports and other required materials. However, respondents may submit materials in electronic or paper formats. Project applications are normally submitted electronically via *Grants.gov,* but may be submitted by mail in paper form if electronic submittal is not a viable option. Methods of submittal for plans, performance reports or other required materials primarily include electronic submittal via email, secure file transfer, or eRA Commons, with submittal of paper forms or electronic files by mail if necessary.

III. Data

OMB Control Number: 0648–0459.

Form Number(s): None.

Type of Review: Regular submission (extension of a currently approved information collection).

Affected Public: State, Local, or Tribal Government; not-for-profit institutions.

Estimated Number of Respondents: 55.

Estimated Time per Response: CELCP Plans, 120 hours to develop, 35 hours to revise or update; project application and checklist, 20 hours; semi-annual and annual reporting, 5 hours each.

Estimated Total Annual Burden Hours: 1,455.

Estimated Total Annual Cost to Public: $55 in recordkeeping/reporting costs.

Respondent's Obligation: Required to Obtain or Retain Benefits.

Legal Authority: Coastal Zone Management Act (16 U.S.C. 1451, *et seq.*).

IV. Request for Comments

We are soliciting public comments to permit the Department/Bureau to: (a) Evaluate whether the proposed information collection is necessary for the proper functions of the Department, including whether the information will have practical utility; (b) Evaluate the accuracy of our estimate of the time and cost burden for this proposed collection, including the validity of the methodology and assumptions used; (c) Evaluate ways to enhance the quality, utility, and clarity of the information to be collected; and (d) Minimize the reporting burden on those who are to respond, including the use of automated collection techniques or other forms of information technology.

Comments that you submit in response to this notice are a matter of public record. We will include or summarize each comment in our request to OMB to approve this ICR. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you may ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Sheleen Dumas,

Departmental PRA Clearance Officer, Office of the Under Secretary for Economic Affairs, Commerce Department.

Taking and Importing Marine Mammals; Taking Marine Mammals Incidental to Construction of the Vineyard Northeast Offshore Wind Project Offshore of Massachusetts and Connecticut

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; receipt of application for letter of authorization; request for comments and information.

SUMMARY: NMFS has received a request from Vineyard Northeast, LLC (Vineyard Northeast), for authorization to take small numbers of marine mammals incidental to the development of the Vineyard Northeast Offshore Wind Project (Project) in the Bureau of Ocean Energy Management (BOEM) Commercial Lease on the Outer Continental Shelf OCS–A–0522 off of Massachusetts (MA) and Connecticut (CT) over the course of 5 years beginning on January 1, 2028. Pursuant to regulations implementing the Marine Mammal Protection Act (MMPA), NMFS is announcing receipt of Vineyard Northeast's request for regulations governing the incidental taking of marine mammals and associated Letter of Authorization (LOA). NMFS invites the public to provide information, suggestions, and comments on Vineyard Northeast's application and request.

DATES: Comments and information must be received no later than January 16, 2025.

ADDRESSES: Comments on the applications should be addressed to Jolie Harrison, Chief, Permits and Conservation Division, Office of Protected Resources, National Marine Fisheries Service. Physical comments should be sent to 1315 East-West Highway, Silver Spring, Maryland 20910 and electronic comments should be sent to *ITP.taylor@noaa.gov.*

Instructions: NMFS is not responsible for comments sent by any other method, to any other address or individual, or received after the end of the comment period. Comments received electronically, including all attachments, must not exceed a 25-megabyte file size. Attachments to electronic comments will be accepted in Microsoft Word or Excel or Adobe PDF file formats only. All comments received are a part of the public record and will generally be posted online at *https://www.fisheries.noaa.gov/national/marine-mammal-protection/incidental-take-authorizations-other-energy-activities-renewable* without change. All personal identifying information (*e.g.,* name, address) voluntarily submitted by the commenter may be publicly accessible. Do not submit confidential business information or otherwise sensitive or protected information.

An electronic copy of Vineyard Northeast's application may be obtained online at: *https://www.fisheries.noaa.gov/national/marine-mammal-protection/incidental-take-authorizations-other-energy-activities-renewable.* In case of problems accessing these documents, please call the contact listed below.

FOR FURTHER INFORMATION CONTACT: Jessica Taylor, Office of Protected Resources, NMFS, (301) 427–8401.

SUPPLEMENTARY INFORMATION:

Background

Sections 101(a)(5)(A) and (D) of the MMPA (16 U.S.C. 1361 *et seq.*) direct the Secretary of Commerce (as delegated to NMFS) to allow, upon request, the incidental, but not intentional, taking of small numbers of marine mammals by U.S. citizens who engage in a specified activity (other than commercial fishing) within a specified geographical region if certain findings are made and either regulations are issued or, if the taking is limited to harassment, a notice of a proposed authorization is provided to the public for review.

An incidental take authorization shall be granted if NMFS finds that the taking

will have a negligible impact on the species or stock(s), will not have an unmitigable adverse impact on the availability of the species or stock(s) for subsistence uses (where relevant), and if the permissible methods of taking and requirements pertaining to the mitigation, monitoring and reporting of such takings are set forth.

NMFS has defined ''negligible impact'' in 50 CFR 216.103 as an impact resulting from the specified activity that cannot be reasonably expected to, and is not reasonably likely to, adversely affect the species or stock through effects on annual rates of recruitment or survival.

The MMPA states that the term ''take'' means to harass, hunt, capture, kill or attempt to harass, hunt, capture, or kill any marine mammal.

Except with respect to certain activities not pertinent here, the MMPA defines ''harassment'' as: any act of pursuit, torment, or annoyance, which (i) has the potential to injure a marine mammal or marine mammal stock in the wild (Level A harassment); or (ii) has the potential to disturb a marine mammal or marine mammal stock in the wild by causing disruption of behavioral patterns, including, but not limited to, migration, breathing, nursing, breeding, feeding, or sheltering (Level B harassment).

Summary of Request

On May 24, 2024, NMFS received an application from Vineyard Northeast requesting authorization to take marine mammals incidental to the development of the Project in the BOEM Lease Area OCS–A–0522 off of MA and CT. In response to our comments, and following an extensive information exchange with NMFS, Vineyard Northeast submitted a final revised application on November 18, 2024, which we deemed adequate and complete on November 18, 2024. Vineyard Northeast requests the regulations and subsequent Letter of Authorization (LOA) be valid for 5 years, beginning on January 1, 2028.

Vineyard Northeast has proposed to construct the Project (comprised of two sub-projects: Project 1 and Project 2) using impact and vibratory pile driving of wind turbine generators (WTG) foundations, impact pile driving of electrical service platform (ESP) foundations and a booster station, vibratory installation and removal of cofferdams at cable landfall sites, detonation of unexploded ordinances (UXOs), site characterization surveys, seabed preparation and scour protection application, and inter-array and export cable trenching, laying, and burial. Vessels would be used to transport crew, supplies, and materials to the project area to support construction. Vineyard Northeast has determined that a subset of these activities (*i.e.,* installing piles using impact and vibratory pile driving, vibratory installation and removal of cofferdams, site characterization surveys, and potential UXO detonation) may result in the take, by Level A harassment and/or Level B harassment, of marine mammals. Therefore, Vineyard Northeast requests authorization to incidentally take marine mammals. Take by mortality or serious injury of any marine mammal or take by Level A harassment of North Atlantic right whales is not requested.

Specified Activities

Vineyard Northeast proposes to develop, construct, and operate an offshore wind energy facility in the BOEM Lease Area OCS–A–0522 along with associated offshore and onshore transmission systems. The purpose of this facility would be to generate renewable electricity to meet the demand expressed by northeastern states and other users in order to achieve renewable energy and carbon emission reduction goals. The Lease Area is located within the southeastern portion of the MA Wind Energy Area and is approximately 46 kilometers (29 miles) from Nantucket. Offshore export cable corridors (OECC) would connect the Lease Area to landfall sites in MA and CT. Vineyard Northeast has divided the Lease Area into Project 1 (northeastern portion) and Project 2 (southwestern portion), as well as proposed two potential construction schedules consisting of a 2-year (Schedule A: 2030–2031) or 4-year (Schedule B: 2029–2032) timeline. The Project would consist of up to 160 wind turbine generator and electrical service platform positions within the Lease Area, and up to 4 offshore export cable bundles with 2 cable bundles making landfall in MA and 2 cable bundles making landfall in CT. If high voltage alternating current (HVAC) cables are used, Vineyard Northeast may install a booster station along the MA OECC in the northwestern portion of Lease Area OCS–A–0534 to increase efficiency of electrical transmission.

Vineyard Northeast anticipates the following activities may potentially result in the harassment of marine mammals during the effective period of the requested regulations and associated LOA:

- Installing up to 159 WTG monopile and/or piled jacket foundations with a maximum diameter of 14 meters (m) using a 6,600 or 8,000 kilojoules (kJ) impact hammer, vibratory hammer, and potential drilling;
- Installing up to three ESP foundations and one booster station foundation using piled jacket foundations comprised of 4.25 m pin piles driven with a 3,500 kJ impact hammer;
- Installing and removing up to 5 cofferdams comprised of sheet piles using a vibratory hammer;
- Using HRG equipment to survey the Lease Area over 64 days; and
- Potential detonation of up to 10 UXOs.

Information Solicited

Interested persons may submit information, suggestions, and comments concerning Vineyard Northeast's request (see **ADDRESSES**). NMFS will consider all information, suggestions, and comments related to the request during the development of proposed regulations governing the incidental taking of marine mammals by Vineyard Northeast, if appropriate.

Dated: December 11, 2024.

Kimberly Damon-Randall,

Director, Office of Protected Resources, National Marine Fisheries Service.

[FR Doc. 2024–29574 Filed 12–16–24; 8:45 am]

BILLING CODE 3510–22–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

Notice To Solicit Nominations for Membership on the National Sea Grant Advisory Board (NSGAB)

AGENCY: Office of Oceanic and Atmospheric Research (OAR), National Oceanic and Atmospheric Administration (NOAA), Department of Commerce (DOC).

ACTION: Notice to solicit nominations for membership on the National Sea Grant Advisory Board (NSGAB). *https://seagrant.noaa.gov/About/Advisory-Board.*

SUMMARY: The National Sea Grant Advisory Board (NSGAB) advises the National Sea Grant College Program (Sea Grant) in the areas of program evaluation, strategic planning, education and extension and science and technology programs. For more information on this Federal Advisory Committee please visit the Federal Advisory Committee database: *https://www.facadatabase.gov/FACA/FACAPublicPage.* This notice also responds to the Sea Grant Program Improvement Act of 1976, which

requires the Secretary of Commerce to solicit nominations at least once a year for membership on the NSGAB. To apply for membership to the Board, applicants should submit a current resume. A cover letter highlighting specific areas of expertise relevant to the purpose of the Board is helpful, but not required. Nominations will be accepted by Email at *oar.sg-feedback@noaa.gov.* While nominations are always accepted, to be considered for current openings, please submit your nomination no later than January 31, 2025. NOAA is an equal opportunity employer.

SUPPLEMENTARY INFORMATION: The Board, which consists of a balanced representation from academia, industry, state government and citizens groups, was established in 1976 by Section 209 of the Sea Grant Improvement Act (Pub. L. 94–461, 33 U.S.C. 1128). The Board advises the Secretary of Commerce and the Director of the National Sea Grant College Program with respect to operations under the Act, and such other matters as the Secretary refers to them for review and advice.

Privacy Act Statement

Authority. The collection of information concerning nominations to the NSGAB FAC is authorized under the FACA, as amended, 5 U.S.C. App. and its implementing regulations, 41 CFR part 102–3, and in accordance with the Privacy Act of 1974, as amended, (Privacy Act) 5 U.S.C. 552a. *Purpose.* The collection of names, contact information, resumes, professional information, and qualifications is required in order for the Under Secretary to appoint members to the NSGAB FAC. *Routine Uses.* NOAA will use the nomination information for the purpose set forth above. The Privacy Act of 1974 authorizes disclosure of the information collected to NOAA staff for work-related purposes and for other purposes only as set forth in the Privacy Act and for routine uses published in the Privacy Act System of Records Notice COMMERCE/DEPT–11, Candidates for Membership, Members, and Former Members of Department of Commerce Advisory Committees, available at *https://www.osec.doc.gov/opog/PrivacyAct/SORNs/dept-11.html,* and the System of Records Notice COMMERCE/DEPT–18, Employees Personnel Files Not Covered by Notices of Other Agencies, available at *https://www.osec.doc.gov/opog/PrivacyAct/SORNs/DEPT-18.html. Disclosure.* Furnishing the nomination information is voluntary; however, if the information is not provided, the individual would not be considered for appointment as a member of the NSGAB FAC.

David Holst,

Chief Financial Officer/Administrative Officer, Office of Oceanic and Atmospheric Research, National Oceanic and Atmospheric Administration.

BILLING CODE 3510–KA–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

[RTID 0648–XE511]

Marine Mammals; File No. 28286

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; receipt of application.

SUMMARY: Notice is hereby given that SeaWorld LLC, 6240 Sea Harbor Drive, Orlando, FL 32821 (Responsible Party: Chris Dold, DVM), has applied in due form for a permit to conduct research and enhancement activities on one stranded, non-releasable beluga whale (*Delphinapterus leucas*) from the endangered Cook Inlet distinct population segment (DPS).

DATES: Written comments must be received on or before January 31, 2025.

ADDRESSES: The application and related documents are available for review by selecting ''Records Open for Public Comment'' from the ''Features'' box on the Applications and Permits for Protected Species home page, *https://apps.nmfs.noaa.gov,* and then selecting File No. 28286 from the list of available applications. These documents are also available upon written request via email to *NMFS.Pr1Comments@noaa.gov.*

Written comments on this application should be submitted via email to *NMFS.Pr1Comments@noaa.gov.* Please include File No. 28286 in the subject line of the email comment.

Those individuals requesting a public hearing should submit a written request via email to *NMFS.Pr1Comments@noaa.gov.* The request should set forth the specific reasons why a hearing on this application would be appropriate.

FOR FURTHER INFORMATION CONTACT: Courtney Smith, Ph.D., or Jennifer Skidmore, (301) 427–8401.

SUPPLEMENTARY INFORMATION: The subject permit is requested under the authority of the Marine Mammal Protection Act of 1972, as amended (MMPA; 16 U.S.C. 1361 *et seq.*), the regulations governing the taking and importing of marine mammals (50 CFR part 216), the Endangered Species Act of 1973, as amended (ESA; 16 U.S.C. 1531 *et seq.*), and the regulations governing the taking, importing, and exporting of endangered and threatened species (50 CFR parts 222 through 226).

The applicant proposes to conduct research on and provide long-term care for one male beluga whale (NOA0010477/''Tyonek'') from the depleted and endangered Cook Inlet DPS. This whale stranded as a neonate (estimated date of birth: September 1, 2017), and was rescued and rehabilitated by the Alaska marine mammal stranding network under the authority of the NMFS Marine Mammal Health and Stranding Response Program. NMFS determined him to be non-releasable and placed Tyonek with SeaWorld of Texas where he has been maintained for research and enhancement purposes since March 18, 2018.

Proposed research activities for this beluga whale include behavioral observations, underwater photography/videography, and active acoustic sonar imaging. The proposed enhancement activities include continued daily husbandry care (feeding, training, monitoring growth [measurements, weight, ultrasound]); veterinary care (exams and biological sampling including but not limited to blood, breath exhalate, oral swabs, skin scrapes, gastric fluids, urine, feces; and treatments as warranted); reproductive health assessment (testicular ultrasound); behavioral observations; and enrichment.

Tyonek would be placed on public display incidental to the proposed research and enhancement activities but would not be used in interactive programs with the public or trained for performance. Tyonek would be included in public educational presentations would address the endangered status and current threats to the Cook Inlet DPS and may include demonstrations of trained husbandry and enrichment behaviors as well as natural behaviors. Tyonek may be transported to another SeaWorld facility in consultation with NMFS, if deemed necessary for socialization or husbandry purposes. The permit is requested for a 5-year period.

In compliance with the National Environmental Policy Act of 1969 (42 U.S.C. 4321 *et seq.*), an initial determination has been made that the activity proposed is categorically excluded from the requirement to prepare an environmental assessment or environmental impact statement.

Concurrent with the publication of this notice in the **Federal Register**, NMFS is forwarding copies of the application to the Marine Mammal Commission and its Committee of Scientific Advisors.

Dated: December 11, 2024.

Julia M. Harrison,

Chief, Permits and Conservation Division, Office of Protected Resources, National Marine Fisheries Service.

BILLING CODE 3510–22–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

[RTID 0648–XE529]

Marine Mammals; File No. 28533

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; receipt of application.

SUMMARY: Notice is hereby given that Leslie Hart, Ph.D., College of Charleston, 66 George Street, Charleston, SC 29424, has applied in due form for a permit to import, export, and receive marine mammal parts for scientific research.

DATES: Written comments must be received on or before January 16, 2025.

ADDRESSES: The application and related documents are available for review by selecting ''Records Open for Public Comment'' from the ''Features'' box on the Applications and Permits for Protected Species home page, *https://apps.nmfs.noaa.gov,* and then selecting File No. 28533 from the list of available applications. These documents are also available upon written request via email to *NMFS.Pr1Comments@noaa.gov.*

Written comments on this application should be submitted via email to *NMFS.Pr1Comments@noaa.gov.* Please include File No. 28533 in the subject line of the email comment.

Those individuals requesting a public hearing should submit a written request via email to *NMFS.Pr1Comments@noaa.gov.* The request should set forth the specific reasons why a hearing on this application would be appropriate.

FOR FURTHER INFORMATION CONTACT: Shasta McClenahan, Ph.D., or Carrie Hubard, (301) 427–8401.

SUPPLEMENTARY INFORMATION: The subject permit is requested under the authority of the Marine Mammal Protection Act of 1972, as amended (MMPA; 16 U.S.C. 1361 *et seq.*), the regulations governing the taking and importing of marine mammals (50 CFR part 216), the Endangered Species Act of 1973, as amended (ESA; 16 U.S.C. 1531 *et seq.*), the regulations governing the taking, importing, and exporting of endangered and threatened species (50 CFR parts 222–226), and the Fur Seal Act of 1966, as amended (16 U.S.C. 1151 *et seq.*).

The applicant requests a 5-year permit to receive, import, and export parts from up to 700 individual cetaceans and 700 individual pinnipeds (excluding walrus) annually to investigate exposure to environmental microplastics. Sources of foreign and domestic parts may include captive animals, other authorized researchers or curated collections, bycatch from legal commercial fishing operations, and foreign stranded animals.

In compliance with the National Environmental Policy Act of 1969 (42 U.S.C. 4321 *et seq.*), an initial determination has been made that the activity proposed is categorically excluded from the requirement to prepare an environmental assessment or environmental impact statement.

Concurrent with the publication of this notice in the **Federal Register**, NMFS is forwarding copies of the application to the Marine Mammal Commission and its Committee of Scientific Advisors.

Dated: December 11, 2024.

BILLING CODE 3510–22–P

CORPORATION FOR NATIONAL AND COMMUNITY SERVICE

Agency Information Collection Activities; Comment Request; Childcare Benefit Forms

AGENCY: Corporation for National and Community Service.

ACTION: Notice of information collection; request for comment.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, the Corporation for National and Community Service (operating as AmeriCorps) is proposing to renew an information collection.

DATES: Written comments must be submitted to the individual and office listed in the **ADDRESSES** section by February 18, 2025.

ADDRESSES: You may submit comments, identified by the title of the information collection activity, by any of the following methods:

(1) Electronically through *www.regulations.gov* (preferred method).

(2) By mail sent to: AmeriCorps, Attention: Courtney Russell, 250 E Street SW, Washington, DC 20525.

(3) By hand delivery or by courier to the AmeriCorps mailroom at the mail address given in paragraph (2) above, between 9 a.m. and 4 p.m. Eastern Time, Monday through Friday, except Federal holidays.

Comments submitted in response to this notice may be made available to the public through *regulations.gov.* For this reason, please do not include in your comments information of a confidential nature, such as sensitive personal information or proprietary information. If you send an email comment, your email address will be automatically captured and included as part of the comment that is placed in the public docket and made available on the internet. Please note that responses to this public comment request containing any routine notice about the confidentiality of the communication will be treated as public comment that may be made available to the public, notwithstanding the inclusion of the routine notice.

FOR FURTHER INFORMATION CONTACT: Courtney Russell, at 202–380–7825 or by email at *crussell@americorps.gov.*

SUPPLEMENTARY INFORMATION:

Title of Collection: Childcare Benefit Forms.

OMB Control Number: 3045–0142.

Type of Review: Renewal.

Respondents/Affected Public: AmeriCorps members and their childcare providers.

Total Estimated Number of Annual Responses: 450 AmeriCorps members and 590 childcare providers.

Total Estimated Number of Annual Burden Hours: 520.

Abstract: AmeriCorps' childcare benefit forms are submitted by AmeriCorps members seeking childcare assistance and by the childcare providers identified by the members, for the purpose of applying for and receiving payment for the care of members' children during the day while the member is in service. Completion of this information is required to receive a benefit (*e.g.,* receive payment for childcare provider invoices). Eight forms are included in this information collection: (1) provider application; (2) member application; (3) childcare attendance sheet; (4) statement of work activity; (5) member update form; (6) childcare payment authorization; (7)

AmeriCorps unlicensed provider affidavit; and (8) program certification of active service. The currently approved information collection is due to expire on March 31, 2025.

Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval. Comments are invited on: (a) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information. Burden means the total time, effort, or financial resources expended by persons to generate, maintain, retain, disclose or provide information to or for a Federal agency. This includes the time needed to review instructions; to develop, acquire, install and utilize technology and systems for the purpose of collecting, validating and verifying information, processing and maintaining information, and disclosing and providing information; to train personnel and to be able to respond to a collection of information, to search data sources, to complete and review the collection of information; and to transmit or otherwise disclose the information. All written comments will be available for public inspection on *regulations.gov.*

Carly Bruder,

Acting Chief Program Officer.

BILLING CODE 6050–28–P

DEPARTMENT OF DEFENSE

Office of the Secretary

[Docket ID: DoD–2024–OS–0133]

Proposed Collection; Comment Request

AGENCY: Office of the Under Secretary of Defense for Personnel and Readiness (OUSD(P&R)), Department of Defense (DoD).

ACTION: 60-Day information collection notice.

SUMMARY: In compliance with the *Paperwork Reduction Act of 1995,* the OUSD(P&R) announces a proposed public information collection and seeks public comment on the provisions thereof. Comments are invited on: whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; the accuracy of the agency's estimate of the burden of the proposed information collection; ways to enhance the quality, utility, and clarity of the information to be collected; and ways to minimize the burden of the information collection on respondents, including through the use of automated collection techniques or other forms of information technology.

DATES: Consideration will be given to all comments received by February 18, 2025.

ADDRESSES: You may submit comments, identified by docket number and title, by any of the following methods:

Federal eRulemaking Portal: http://www.regulations.gov. Follow the instructions for submitting comments.

Mail: Department of Defense, Office of the Assistant to the Secretary of Defense for Privacy, Civil Liberties, and Transparency, 4800 Mark Center Drive, Mailbox #24, Suite 05F16, Alexandria, VA 22350–1700.

Instructions: All submissions received must include the agency name, docket number and title for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the internet at *http://www.regulations.gov* as they are received without change, including any personal identifiers or contact information.

FOR FURTHER INFORMATION CONTACT: To request more information on this proposed information collection or to obtain a copy of the proposal and associated collection instruments, please write to Director, Military Community Support Programs, Military Community and Family Policy, 4800 Mark Center Drive, Suite 14E08, Alexandria, VA 22350–2300, Erika Slaton, 571–372–5417; or (2) Director, Military Community Outreach (MCO) Directorate, Military Community and Family Policy, 4800 Mark Center Drive, Alexandria, VA 22350, Shondell Towns, 571–624–5809.

SUPPLEMENTARY INFORMATION:

Title; Associated Form; and OMB Number: Military OneSource Case Management System—Intake; OMB Control Number 0704–0528.

Needs and Uses: The Military OneSource program fulfills the requirement established in 10 U.S.C. 1781, ''Establishment of Online Resources to provide Information About Benefits and Services Available to Members of the Armed Forces and Their Families,'' and establishes an internet outreach website for the purpose of providing comprehensive information to members of the Armed Forces and their families about the benefits and services available to them. The Military OneSource Business Operations Information System drives the technological capabilities that deliver the full ecosystem of Military OneSource web-based services and capabilities that supports service members and families throughout their military life.

Affected Public: Individuals or households.

Annual Burden Hours: 242,711.

Number of Respondents: 242,711.

Responses per Respondent: 1.

Annual Responses: 242,711.

Average Burden per Response: 1 hour.

Frequency: On occasion.

Dated: December 11, 2024.

Aaron T. Siegel,

Alternate OSD Federal Register, Liaison Officer, Department of Defense.

DEPARTMENT OF DEFENSE

Office of the Secretary

[Docket ID: DoD–2024–OS–0132]

Proposed Collection; Comment Request

AGENCY: Office of the Under Secretary of Defense for Intelligence and Security (OUSD(I&S)), Department of Defense (DoD).

ACTION: 60-Day information collection notice.

SUMMARY: In compliance with the *Paperwork Reduction Act of 1995,* the Defense Counterintelligence and Security Agency (DCSA) announces a proposed public information collection and seeks public comment on the provisions thereof. Comments are invited on: whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; the accuracy of the agency's estimate of the burden of the proposed information collection; ways to enhance the quality, utility, and clarity of the information to be

collected; and ways to minimize the burden of the information collection on respondents, including through the use of automated collection techniques or other forms of information technology.

DATES: Consideration will be given to all comments received by February 18, 2025.

ADDRESSES: You may submit comments, identified by docket number and title, by any of the following methods:

Federal eRulemaking Portal: https://www.regulations.gov. Follow the instructions for submitting comments.

Mail: Department of Defense, Office of the Assistant to the Secretary of Defense for Privacy, Civil Liberties, and Transparency, 4800 Mark Center Drive, Mailbox #24, Suite 05F16, Alexandria, VA 22350–1700.

Instructions: All submissions received must include the agency name, docket number and title for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the internet at *http://www.regulations.gov* as they are received without change, including any personal identifiers or contact information.

FOR FURTHER INFORMATION CONTACT: To request more information on this proposed information collection or to obtain a copy of the proposal and associated collection instruments, please write to the Defense Counterintelligence and Security Agency, 27130 Telegraph Rd., Quantico, VA 22134, ATTN: Mr. Matthew Kitzman, (571) 305–6042.

SUPPLEMENTARY INFORMATION:

Title; Associated Form; and OMB Number: National Industrial Security Program Contracts Classification System; DD Form 254; OMB Control Number 0704–0567.

Needs and Uses: Pursuant to 48 CFR 27, in conjunction with subpart 4.4 of the Federal Acquisition Regulation, contracting officers shall determine whether access to classified information may be required by a contractor during contract performance. DoD Components shall use the DD Form 254, ''Contract Security Classification Specification,'' as an attachment to contracts or agreements requiring access to classified information by U.S. contractors. The DD Form 254 is used to identify the classified areas of information involved in a contract and the specific items of information that require protection. The National Industrial Security Program Contract Classification System (NCCS) is the electronic repository for the DD Form 254. NCCS expedites the processing and distribution of contract classification specifications for contracts requiring access to classified information. NCCS also has a built-in automated process for the Request for Approval to Subcontract and provides workflow support for the Facility Clearance Request and National Interest Determination processes.

Affected Public: Business or other for profit.

Annual Burden Hours: 28,800.

Number of Respondents: 8,000.

Responses per Respondent: 6.

Annual Responses: 48,000.

Average Burden per Response: 36 minutes.

Frequency: On occasion.

Respondents are cleared contractor facilities in the National Industrial Security Program under the security cognizance of DCSA. Pursuant to security classification guidance in 32 CFR part 117, NISP contractors must provide contract security classification specifications with any contract or agreement that they propose or award. DD Form 254 is the official vehicle for providing this information. A respondent submits completed DD Form 254 with any attachments to the applicable subcontractor and to the DoD NISP Cognizant Security Office for evaluation. Once the DD Form 254 is submitted, it is reviewed by Government Security personnel to ensure access language is present. Following review, Government Contracting Officers certify and release the DD Form 254 to the Industry Commercial and Government Entity referenced within the DD Form 254.

Dated: December 11, 2024.

Aaron T. Siegel,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

Office of the Secretary

[Docket ID: DoD–2024–OS–0131]

Proposed Collection; Comment Request

AGENCY: Office of the Under Secretary of Defense for Acquisition and Sustainment (OUSD(A&S)), Department of Defense (DoD).

ACTION: 60-Day information collection notice.

SUMMARY: In compliance with the *Paperwork Reduction Act of 1995,* the Office of Local Defense Community Cooperation announces a proposed public information collection and seeks public comment on the provisions thereof. Comments are invited on: whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; the accuracy of the agency's estimate of the burden of the proposed information collection; ways to enhance the quality, utility, and clarity of the information to be collected; and ways to minimize the burden of the information collection on respondents, including through the use of automated collection techniques or other forms of information technology.

DATES: Consideration will be given to all comments received by February 18, 2025.

ADDRESSES: You may submit comments, identified by docket number and title, by any of the following methods:

Federal eRulemaking Portal: http://www.regulations.gov. Follow the instructions for submitting comments.

Mail: Department of Defense, Office of the Assistant to the Secretary of Defense for Privacy, Civil Liberties, and Transparency, 4800 Mark Center Drive, Mailbox #24, Suite 05F16, Alexandria, VA 22350–1700.

Instructions: All submissions received must include the agency name, docket number and title for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the internet at *http://www.regulations.gov* as they are received without change, including any personal identifiers or contact information.

FOR FURTHER INFORMATION CONTACT: To request more information on this proposed information collection or to obtain a copy of the proposal and associated collection instruments, please write to Office of Local Defense Community Cooperation, 2231 Crystal Drive, Arlington, VA 22202, ATTN: Mr. Michael Wilson or call (703) 697–2188.

SUPPLEMENTARY INFORMATION:

Title; Associated Form; and OMB Number: Defense Manufacturing Community Support Program Grant Proposals; OMB Control Number 0704–0606.

Needs and Uses: The Defense Manufacturing Community Support Program (DMCSP) is designed to undertake long-term investments in critical skills, facilities, research and development, and small business support in order to strengthen the

national security innovation and manufacturing base. The program also seeks to ensure complementarity of those communities so designated with existing Defense Manufacturing Institutes. Defense Manufacturing Institutes are manufacturing ecosystems with common manufacturing and design challenges revolving around specific technologies. The DMCSP is designed to recognize communities that demonstrate best practices in attracting and expanding defense manufacturing. This information collection is necessary to facilitate the identification of new Defense Manufacturing Communities and the awarding of grants under the DMCSP via a grant proposal package. The proposal package is prepared in accordance to a Federal Funding Opportunity Announcement posted on the *Grants.gov* website.

Affected Public: Businesses or other for-profit; Not-for-profit Institutions; State, Local or Tribal Government.

Annual Burden Hours: 525.

Number of Respondents: 75.

Responses per Respondent: 1.

Annual Responses: 75.

Average Burden per Response: 7 hours.

Frequency: Annually.

Dated: December 11, 2024.

BILLING CODE 6001–FR–P

DEPARTMENT OF DEFENSE

Office of the Secretary

[Docket ID: DoD–2024–OS–0134]

Proposed Collection; Comment Request

AGENCY: Office of the Under Secretary of Defense for Personnel and Readiness (OUSD(P&R)), Department of Defense (DoD).

ACTION: 60-Day information collection notice.

SUMMARY: In compliance with the *Paperwork Reduction Act of 1995,* the OUSD(P&R) announces a proposed public information collection and seeks public comment on the provisions thereof. Comments are invited on: whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; the accuracy of the agency's estimate of the burden of the proposed information collection; ways to enhance the quality, utility, and clarity of the information to be collected; and ways to minimize the burden of the information collection on respondents, including through the use of automated collection techniques or other forms of information technology.

DATES: Consideration will be given to all comments received by February 18, 2025.

ADDRESSES: You may submit comments, identified by docket number and title, by any of the following methods:

Federal eRulemaking Portal: http://www.regulations.gov. Follow the instructions for submitting comments.

Mail: Department of Defense, Office of the Assistant to the Secretary of Defense for Privacy, Civil Liberties, and Transparency, 4800 Mark Center Drive, Mailbox #24, Suite 05F16, Alexandria, VA 22350–1700.

Instructions: All submissions received must include the agency name, docket number and title for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the internet at *http://www.regulations.gov* as they are received without change, including any personal identifiers or contact information.

FOR FURTHER INFORMATION CONTACT: To request more information on this proposed information collection or to obtain a copy of the proposal and associated collection instruments, please write to Office of the Under Secretary of Defense (Personnel and Readiness), Military Personnel Policy, Office of Financial Readiness, 4000 Defense Pentagon, Washington, DC 20301–4000, Ms. Loraine Heckenberg, (703) 695–3088.

SUPPLEMENTARY INFORMATION:

Title; Associated Form; and OMB Number: Mandatory Disclosures as Part of Limitations on Terms of Consumer Credit Extended to Service Members and Dependents; OMB Control Number 0704–0444.

Needs and Uses: Title 10 U.S.C. 987 establishes limitations on terms of consumer credit extended to members of the Armed Forces and their dependents. The purpose of this information collection is to ensure disclosures required by 10 U.S.C. 987(c)(1) and discretionary checks of covered-borrower status stipulated in 32 CFR 232.5(b)(2) by creditors in the process of extending consumer credit.

Affected Public: Individuals or households.

Annual Burden Hours: 1,983,438.

Number of Respondents: 37,500.

Responses per Respondent: 6,347 averages (varies widely by type of respondent).

Annual Responses: 238,012,500.

Average Burden per Response: 30 seconds.

Frequency: On occasion.

Dated: December 11, 2024.

Aaron T. Siegel,

Alternate OSD Federal Register, Liaison Officer, Department of Defense.

BILLING CODE 6001–FR–P

DEPARTMENT OF DEFENSE

Office of the Secretary

[Docket ID: DoD–2024–OS–0130]

Proposed Collection; Comment Request

AGENCY: Office of the Under Secretary of Defense for Acquisition and Sustainment (OUSD(A&S)), Department of Defense (DoD).

ACTION: 60-Day information collection notice.

SUMMARY: In compliance with the *Paperwork Reduction Act of 1995,* the Office of Local Defense Community Cooperation (OLDCC) announces a proposed public information collection and seeks public comment on the provisions thereof. Comments are invited on: whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; the accuracy of the agency's estimate of the burden of the proposed information collection; ways to enhance the quality, utility, and clarity of the information to be collected; and ways to minimize the burden of the information collection on respondents, including through the use of automated collection techniques or other forms of information technology.

DATES: Consideration will be given to all comments received by February 18, 2025.

ADDRESSES: You may submit comments, identified by docket number and title, by any of the following methods:

Federal eRulemaking Portal: http://www.regulations.gov. Follow the instructions for submitting comments.

Mail: Department of Defense, Office of the Assistant to the Secretary of Defense for Privacy, Civil Liberties, and Transparency, 4800 Mark Center Drive, Mailbox #24, Suite 05F16, Alexandria, VA 22350–1700.

Instructions: All submissions received must include the agency name, docket

number and title for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the internet at *http://www.regulations.gov* as they are received without change, including any personal identifiers or contact information.

FOR FURTHER INFORMATION CONTACT: To request more information on this proposed information collection or to obtain a copy of the proposal and associated collection instruments, please write to Office of Local Defense Community Cooperation, 2231 Crystal Drive, Arlington, VA 22202, ATTN: Mr. Michael Wilson or call (703) 697–2188.

SUPPLEMENTARY INFORMATION:

Title; Associated Form; and OMB Number: Defense Community Infrastructure Program Grant Proposals; OMB Control Number 0704–0607.

Needs and Uses: Section 2391(d) of Title 10, United States Code (10 U.S.C. 2391), authorizes the Secretary of Defense to, ''make grants, conclude cooperative agreements, and supplement funds available under Federal programs administered by agencies other than the Department of Defense, for projects owned by a State or local government, or a not-for-profit, member-owned utility service to address deficiencies in community infrastructure supportive of a military installation.'' The Consolidated Appropriations Act for Fiscal Year 2021 (Pub. L. 116–260) provided $60 million to the Office of Local Defense Community Cooperation for the Defense Community Infrastructure Program (DCIP). This information collection supports the awarding of grants under DCIP via the initial grant proposal package prepared in accordance with a Federal Funding Opportunity Announcement posted on the *Grants.gov* website. The criteria established for the selection of community infrastructure projects reflects projects consisting of some combination of attributes that will enhance: (i) Military value; (ii) military installation resilience; and/or, (iii) military family quality of life at a military installation. Respondents can be State or local governments and not-for-profit, member-owned utility services owning infrastructure outside of, but supporting, a military installation.

Affected Public: State, Local or Tribal Government; Not-for-profit Institutions.

Annual Burden Hours: 2,250.

Number of Respondents: 150.

Responses per Respondent: 1.

Annual Responses: 150.

Average Burden per Response: 15 hours.

Frequency: Annually.

Respondents will be State or local Governments and not-for-profit, member-owned utility services owning infrastructure outside of, but supporting, a military installation. A Proposal Package shall include the following information: point of contact; summary of installation need; letter of endorsement from the Commander of the local installation; description of the proposed project with explanation of how it addresses the installation need; demonstration of the technical feasibility of the project; identification of other parties involved in the project; overview and commitment of all funding sources; uses of project funding, including a total project cost estimate with major cost elements broken out for project administration, inspection, construction, utilities, and contingency costs; project schedule demonstrating that the project can commence within 12 months upon receipt of a grant and that the grant funds will be spent steadily and expeditiously once the project commences, and completed no later than 5 years following the obligation of Federal funds; Environmental Approvals; State and Local Planning (if applicable); Evidence of the intended recipient's ability and authority to manage grants; Documentation that the Submitting Official is authorized by the proposer to submit a proposal and subsequently apply for assistance; and National Security Waiver Attestation (if appropriate).

Dated: December 11, 2024.

Aaron T. Siegel,

Alternate OSD Federal Register, Liaison Officer, Department of Defense.

Office of the Secretary

[Docket ID: DoD–2024–OS–0129]

Proposed Collection; Comment Request

AGENCY: Office of the Under Secretary of Defense for Acquisition and Sustainment (OUSD(A&S)), Department of Defense (DoD).

ACTION: 60-Day information collection notice.

SUMMARY: In compliance with the *Paperwork Reduction Act of 1995,* the Office of Local Defense Community Cooperation (OLDCC) announces a proposed public information collection and seeks public comment on the provisions thereof. Comments are invited on: whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; the accuracy of the agency's estimate of the burden of the proposed information collection; ways to enhance the quality, utility, and clarity of the information to be collected; and ways to minimize the burden of the information collection on respondents, including through the use of automated collection techniques or other forms of information technology.

DATES: Consideration will be given to all comments received by February 18, 2025.

ADDRESSES: You may submit comments, identified by docket number and title, by any of the following methods:

Federal eRulemaking Portal: http://www.regulations.gov. Follow the instructions for submitting comments.

Mail: Department of Defense, Office of the Assistant to the Secretary of Defense for Privacy, Civil Liberties, and Transparency, 4800 Mark Center Drive, Mailbox #24, Suite 05F16, Alexandria, VA 22350–1700.

Instructions: All submissions received must include the agency name, docket number and title for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the internet at *http://www.regulations.gov* as they are received without change, including any personal identifiers or contact information.

FOR FURTHER INFORMATION CONTACT: To request more information on this proposed information collection or to obtain a copy of the proposal and associated collection instruments, please write to Office of Local Defense Community Cooperation, 2231 Crystal Drive, Arlington, VA 22202, ATTN: Mr. Michael Wilson or call (703) 697–2188.

SUPPLEMENTARY INFORMATION:

Title; Associated Form; and OMB Number: OLDCC Military Installation Sustainability Program of Assistance Grant Proposals; OMB Control Number 0704–0628.

Needs and Uses: This information collection facilitates the awarding of grants under the Office of Local Defense Community Cooperation (OLDCC) Military Installation Resilience Program of Assistance. OLDCC, in coordination

with the other Federal Agencies, delivers a program of technical and financial assistance to enable states and communities to plan and carry out civilian responses to workforce, business, and community needs arising from Defense actions; cooperate with their military installations and leverage public and private capabilities to deliver public infrastructure and services to enhance the military mission, achieve facility and infrastructure savings as well as reduced operating costs; and increase military, civilian, and industrial readiness and resiliency, and support military families. Respondents will be states, United States territories, counties, municipalities, other political subdivisions of a state, special purpose units of a state or local government, other instrumentalities of a state or local government, and tribal nations supporting a military installation or the defense industrial base. Grant proposal packages for the Military Installation Sustainability Program of Assistance will be prepared in accordance with the Federal Funding Opportunity Announcement posted in the **Federal Register**.

Affected Public: State, Local, or Tribal Government.

Annual Burden Hours: 480.

Number of Respondents: 12.

Responses per Respondent: 1.

Annual Responses: 12.

Average Burden per Response: 40 hours.

Frequency: Annually.

Dated: December 11, 2024.

Aaron T. Siegel,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

BILLING CODE 6001–FR–P

DEPARTMENT OF EDUCATION

[Docket No.: ED–2024–SCC–0117]

Agency Information Collection Activities; Submission to the Office of Management and Budget for Review and Approval; Comment Request; Private School Universe Survey (PSS) 2025–26 and 2027–28 Data Collections, and 2027–28 PSS Frame Development Activities

AGENCY: Institute of Educational Sciences (IES), Department of Education (ED).

ACTION: Notice.

SUMMARY: In accordance with the Paperwork Reduction Act (PRA) of 1995, the Department is proposing a revision of a currently approved information collection request (ICR).

DATES: Interested persons are invited to submit comments on or before January 16, 2025.

ADDRESSES: Written comments and recommendations for proposed information collection requests should be submitted within 30 days of publication of this notice. Click on this link *www.reginfo.gov/public/do/PRAMain* to access the site. Find this information collection request (ICR) by selecting ''Department of Education'' under ''Currently Under Review,'' then check the ''Only Show ICR for Public Comment'' checkbox. *Reginfo.gov* provides two links to view documents related to this information collection request. Information collection forms and instructions may be found by clicking on the ''View Information Collection (IC) List'' link. Supporting statements and other supporting documentation may be found by clicking on the ''View Supporting Statement and Other Documents'' link.

FOR FURTHER INFORMATION CONTACT: For specific questions related to collection activities, please contact Carrie Clarady, (202) 245–6347.

SUPPLEMENTARY INFORMATION: The Department is especially interested in public comment addressing the following issues: (1) is this collection necessary to the proper functions of the Department; (2) will this information be processed and used in a timely manner; (3) is the estimate of burden accurate; (4) how might the Department enhance the quality, utility, and clarity of the information to be collected; and (5) how might the Department minimize the burden of this collection on the respondents, including through the use of information technology. Please note that written comments received in response to this notice will be considered public records.

Title of Collection: Private School Universe Survey (PSS) 2025–26 and 2027–28 Data Collections, and 2027–28 PSS Frame Development Activities.

OMB Control Number: 1850–0641.

Type of Review: Revision of a currently approved ICR.

Respondents/Affected Public: Individuals or Households.

Total Estimated Number of Annual Responses: 32,550.

Total Estimated Number of Annual Burden Hours: 5,981.

Abstract: The National Center for Education Statistics (NCES), within the U.S. Department of Education, conducts the Private School Universe Survey (PSS), a national survey of private elementary and secondary schools. The PSS is designed to collect biennial data on the total number of private schools, teachers, and students; and to create an NCES universe frame of private schools that serve as a sampling frame for NCES surveys. This survey is an ongoing project to improve NCES universe and sample data on private schools.

This request is to conduct the 2025–26 and 2027–28 Private School Universe Survey (PSS) data collections, and the 2027–28 PSS frame-development activities.

Dated: December 11, 2024.

Juliana Pearson,

PRA Coordinator, Strategic Collections and Clearance, Governance and Strategy Division, Office of Chief Data Officer, Office of Planning, Evaluation and Policy Development.

BILLING CODE 4000–01–P

DEPARTMENT OF ENERGY

Preventing Outages and Enhancing the Resilience of the Electric Grid Formula Grants to States and Indian Tribes

AGENCY: Grid Deployment Office, Department of Energy.

ACTION: Notice of intent.

SUMMARY: The U.S. Department of Energy's (DOE's) National Energy Technology Laboratory (NETL) intends to issue, on behalf of the DOE Grid Deployment Office (GDO), an amendment to the Administrative Legal Requirements Document (ALRD) DE–FOA–0002736 (BIL—Preventing Outages and Enhancing the Resilience of the Electric Grid Formula Grants to States and Indian Tribes) in February 2025, titled Amendment 000010. This grant program is authorized under the Bipartisan Infrastructure Law (BIL). Amendment 000010 to DE–FOA–0002736 will provide access to Fiscal Year (FY) 2025 formula grant allocations.

ADDRESSES: Requests for more information should be addressed by electronic mail to Cory Felder, Senior Project Manager, at *cory.felder@hq.doe.gov.*

FOR FURTHER INFORMATION CONTACT: Cory Felder, (240) 597–8694, *cory.felder@hq.doe.gov.*

SUPPLEMENTARY INFORMATION: The BIL is a once-in-a-generation investment in infrastructure, which will grow a more sustainable, resilient, and equitable economy through enhancing U.S. competitiveness, driving the creation of good-paying union jobs, and ensuring access to economic, environmental, and other benefits for disadvantaged

communities.[1] The BIL appropriates more than $62 billion to DOE to invest in American manufacturing and workers [2] expand access to energy efficiency; deliver reliable, clean and affordable power to more Americans; and deploy the technologies of tomorrow through clean energy demonstrations. The forthcoming ALRD Amendment 000010, expected to take effect in February 2025 (available at: *https://www.fedconnect.net/fedconnect/?doc=DE-FOA-0002736&agency=DOE*) will support Congressional goals to (1) demonstrate measurable improvements in energy resilience in the United States and mitigate climate related risk, (2) invest in modernized grid infrastructure that can enable consumer access to lower-cost energy and accommodate increased electrification, increased penetrations of variable renewable electricity and distributed energy resources, and other evolving system needs over the coming decades, (3) invest in clean energy and decarbonization solutions to achieve a carbon-free power sector by 2035 and net-zero greenhouse gas emissions economy-wide by 2050, and (4) create good-paying jobs with the free and fair choice to join a union.

The purpose of the forthcoming ALRD Amendment 000010 is to allow for submission of applications for the FY 2025 formula grant allocations. The FY 2025 formula grant allocation amounts are available at: *https://netl.doe.gov/bilhub/grid-resilience/formula-grants.* The process for requesting a FY 2025 allocation depends on whether the applicant is an existing grant recipient or a new grant applicant:

- *Existing Grant Recipients* that have already received grants for FY 2022, FY 2023 or FY 2024 of the Program will have 90 days from issuance of the ALRD Amendment 000010 to request their FY 2025 allocation, in accordance with the Terms and Conditions of their current Grant award.
- *New Grant Applicants* are eligible applicants (as defined in ALRD Amendment 000010) that did not receive a grant for FY 2022, FY 2023 or FY 2024. New Grant Applicants will have 90 days from issuance of the ALRD Amendment 000010 to submit a grant application for a FY 2025 allocation. Several one-time actions, explained below, must be completed before an application can be submitted, including registration with the System for Award Management (SAM), obtaining a Unique Entity Identifier (UEI), and registering with *FedConnect.net.* These actions can be completed prior to the issuance of ALRD Amendment 000010. Prospective New Grant Applicants are encouraged to address these items as soon as possible, as some may take several weeks to complete. Additional instructions for New Grant Applicants will be provided in the ALRD Amendment 000010.

Note: Neither applications nor allocation requests are being accepted at this time.

The current ALRD (Amendment 000009) is available at: *https://www.fedconnect.net/fedconnect/?doc=DE-FOA-0002736&agency=DOE.*

New Grant Applicants must complete the following steps in order to submit their application via FedConnect: *https://www.fedconnect.net/fedconnect/?doc=DE-FOA-0002736&agency=DOE.*

Pre-application actions: *https://www.sam.gov/.*

SAM—Applicants must register with the SAM at: *https://www.sam.gov/* prior to submitting an application in response to this ALRD. Designating an Electronic Business Point of Contact (EBiz POC) and obtaining a special password called an MPIN are important steps in SAM registration. The applicant must maintain an active SAM registration with current information at all times during which it has an active Federal award or an application under consideration. More information about SAM registration for applicants is available at: *https://www.fsd.gov/gsafsd_sp?id=gsafsd_kb_articles&sys_id=650d493e1bab7c105465eaccac4bcbcb.*

Note: If clicking the SAM links do not work, please copy and paste the link into your browser.

UEI—Applicants must obtain an UEI from the SAM to uniquely identify the entity. The UEI is available in the SAM entity registration record.

Note: Subawardees/subrecipients at all tiers must also obtain an UEI from the SAM and provide the UEI to the award recipient before the subaward can be issued.

Note: Due to the high demand of UEI requests and SAM registrations, entity legal business name and address validations are taking longer than expected to process. Entities should start the UEI and SAM registration process as soon as possible. If entities have technical difficulties with the UEI validation or SAM registration process they should utilize the HELP feature on *SAM.gov. SAM.gov* will address entity service tickets in the order in which they are received and asks that entities not create multiple service tickets for the same request or technical issue.

FedConnect.net—Applicants must register with FedConnect to submit applications in response to the ALRD, to submit questions, and to receive the award. FedConnect website: *https://www.fedconnect.net/.* For more information regarding registration with FedConnect, review the FedConnect Ready, Set, Go! Guide at: *https://www.fedconnect.net/FedConnect/Marketing/Documents/FedConnect_Ready_Set_Go.pdf.*

Electronic Signatures—Acknowledgement of award documents by the Grant Recipient authorized representative through electronic systems used by the Department of Energy, including FedConnect, constitutes the Grantee's acceptance of the Terms and Conditions of the award. Acknowledgement via FedConnect by the Grantee's authorized representative constitutes the Grantee's electronic signature.

Signing Authority

This document of the Department of Energy was signed on December 6, 2024, by Maria D. Robinson, Director, Grid Deployment Office, pursuant to delegated authority from the Secretary of Energy. That document with the original signature and date is maintained by DOE. For administrative purposes only, and in compliance with requirements of the Office of the Federal Register, the undersigned DOE Federal Register Liaison Officer has been authorized to sign and submit the document in electronic format for publication, as an official document of the Department of Energy. This administrative process in no way alters the legal effect of this document upon publication in the **Federal Register**.

BILLING CODE 6450–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. CP25–18–000]

DCP Operating Company, LP; Notice of Petition for Declaratory Order

Take notice that on November 12, 2024, pursuant to Rule 207(a)(2) of the Federal Energy Regulatory Commission's (Commission) Rules of Practice and Procedure, DCP Operating Company, LP (DCP Operating or Petitioner) filed a petition for declaratory order requesting that the Commission issue an order finding that upon DCP Operating's acquisition of certain pipeline facilities in the Anadarko Basin in various counties of Texas, Oklahoma, and Kansas, from Cimarron River Pipeline LLC, the facilities will perform a gathering function and are not subject to the Commission's jurisdiction under section 7 of the Natural Gas Act, 15 U.S.C. 717b, as more fully explained in the petition.

Any person desiring to intervene or to protest this filing must file in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211, 385.214). Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a notice of intervention or motion to intervene, as appropriate. Such notices, motions, or protests must be filed on or before the comment date. Anyone filing a motion to intervene, or protest must serve a copy of that document on the Petitioner.

The Commission encourages electronic submission of comments, protests, and interventions in lieu of paper using the ''eFiling'' link at *http://www.ferc.gov.* Persons unable to file electronically may submit a paper copy. Submissions sent via the U.S. Postal Service must be addressed to: Debbie-Anne A. Reese, Secretary, Federal Energy Regulatory Commission, 888 First Street NE, Room 1A, Washington, DC 20426. Submissions sent via any other carrier must be addressed to: Debbie-Anne A. Reese, Secretary, Federal Energy Regulatory Commission, 12225 Wilkins Avenue, Rockville, Maryland 20852. The first page of any submission should include docket number CP25–18–000.

In addition to publishing the full text of this document in the **Federal Register**, the Commission provides all interested persons an opportunity to view and/or print the contents of this document via the internet through the Commission's Home Page (*http://www.ferc.gov*). From the Commission's Home Page on the internet, this information is available on eLibrary. The full text of this document is available on eLibrary in PDF and Microsoft Word format for viewing, printing, and/or downloading. To access this document in eLibrary, type the docket number excluding the last three digits of this document in the docket number field.

The Commission's Office of Public Participation (OPP) supports meaningful public engagement and participation in Commission proceedings. OPP can help members of the public, including landowners, environmental justice communities, Tribal members and others, access publicly available information and navigate Commission processes. For public inquiries and assistance with making filings such as interventions, comments, or requests for rehearing, the public is encouraged to contact OPP at (202) 502–6595 or *OPP@ferc.gov.*

Comment Date: 5 p.m. Eastern Time on January 10, 2025.

Dated: December 11, 2024.

Carlos D. Clay,

Acting Deputy Secretary.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

Combined Notice of Filings

Take notice that the Commission has received the following Natural Gas Pipeline Rate and Refund Report filings:

Filings Instituting Proceedings

Docket Numbers: CP25–20–000.

Applicants: Midcontinent Express Pipeline LLC, Enable Oklahoma Intrastate Transmission, LLC.

Description: Midcontinent Express Pipeline LLC, et al. submit Joint Abbreviated Application for Authorization to Abandon a Capacity Lease Agreement and a Limited Jurisdiction Certificate.

Filed Date: 11/20/24.

Accession Number: 20241120–5060.

Comment Date: 5 p.m. ET 12/23/24.

Docket Numbers: RP25–277–000.

Applicants: Bear Creek Storage Company, L.L.C.

Description: Compliance filing: Annual Fuel Summary 2024 to be effective N/A.

Filed Date: 12/11/24.

Accession Number: 20241211–5053.

Comment Date: 5 p.m. ET 12/23/24.

Any person desiring to intervene, to protest, or to answer a complaint in any of the above proceedings must file in accordance with Rules 211, 214, or 206 of the Commission's Regulations (18 CFR 385.211, 385.214, or 385.206) on or before 5:00 p.m. Eastern time on the specified comment date. Protests may be considered, but intervention is necessary to become a party to the proceeding.

Filings in Existing Proceedings

Docket Numbers: PR25–22–001.

Applicants: Public Service Company of Colorado.

Description: Amendment Filing: Statement of Rates_11–05–2024 Amended to be effective 11/5/2024.

Filed Date: 12/10/24.

Accession Number: 20241210–5178.

Comment Date: 5 p.m. ET 12/31/24.

§ 284.123(g) Protest: 5 p.m. ET 2/10/25.

Any person desiring to protest in any the above proceedings must file in accordance with Rule 211 of the Commission's Regulations (18 CFR 385.211) on or before 5 p.m. Eastern time on the specified comment date.

The filings are accessible in the Commission's eLibrary system (*https://elibrary.ferc.gov/idmws/search/fercgensearch.asp*) by querying the docket number.

eFiling is encouraged. More detailed information relating to filing requirements, interventions, protests, service, and qualifying facilities filings can be found at: *http://www.ferc.gov/docs-filing/efiling/filing-req.pdf.* For other information, call (866) 208–3676 (toll free). For TTY, call (202) 502–8659.

The Commission's Office of Public Participation (OPP) supports meaningful public engagement and participation in Commission proceedings. OPP can help members of the public, including landowners, environmental justice communities, Tribal members and others, access publicly available information and navigate Commission processes. For public inquiries and assistance with making filings such as interventions, comments, or requests for rehearing, the public is encouraged to contact OPP at (202) 502–6595 or *OPP@ferc.gov.*

Sunshine Act Meetings

The following notice of meeting is published pursuant to section 3(a) of the government in the Sunshine Act (Pub. L. No. 94–409), 5 U.S.C. 552b:

AGENCY HOLDING MEETING: Federal Energy Regulatory Commission.

TIME AND DATE: December 19, 2024, 10 a.m.

PLACE: Room 2C, 888 First Street NE, Washington, DC 20426.

STATUS: Open to the public.

MATTERS TO BE CONSIDERED: Agenda.

* NOTE—Items listed on the agenda may be deleted without further notice.

CONTACT PERSON FOR MORE INFORMATION: Debbie-Anne A. Reese, Secretary, Telephone (202) 502–8400.

For a recorded message listing items Stricken from or added to the meeting, call (202) 502–8627.

This is a list of matters to be considered by the Commission. It does not include a listing of all documents relevant to the items on the agenda. All public documents, however, may be viewed online at the Commission's website at *https://elibrary.ferc.gov/eLibrary/search* using the eLibrary link.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Project No. 15376–000]

Kram Hydro 8, LLC; Notice of Preliminary Permit Application Accepted for Filing and Soliciting Comments, Motions To Intervene, and Competing Applications

On October 11, 2024, Kram Hydro 8, LLC, filed an application for a preliminary permit, pursuant to section 4(f) of the Federal Power Act (FPA), proposing to study the feasibility of a hydropower project that would be located at the U.S. Army Corps of Engineers' (Corps) Howell Heflin Lock and Dam on Tennessee-Tombigbee River, near the Town of Gainesville, in Sumter County, Alabama. The sole purpose of a preliminary permit, if issued, is to grant the permit holder priority to file a license application during the permit term. A preliminary permit does not authorize the permit holder to perform any land-disturbing activities or otherwise enter upon lands or waters owned by others without the owners' express permission.

The proposed Howell Heflin Lock and Dam Hydroelectric Project would consist of the following: (1) a 125-foot-wide, 350-foot-long armored intake channel; (2) a 125-foot-long, 125-foot-wide concrete powerhouse located downstream of the existing Corps dam on the eastern bank, containing two Kaplan turbine-generator units, with a combined generating capacity of 30 megawatts; (3) a 200-foot-long, 125-foot-wide unlined tailrace; and (4) a 2.75-mile-long, 46 kilovolt transmission line. The proposed project would have an estimated annual generation of 208.4 gigawatt-hours.

Applicant Contact: Kristen Fan, Kram Hydro 8, 3120 Southwest Fwy., Suite 101, PMB 50808, Houston, TX 77080; phone: (772) 418–2705.

FERC Contact: Prabharanjani Madduri; phone: (202) 502–8017, or by email at *prabharanjani.madduri@ferc.gov.*

Deadline for filing comments, motions to intervene, competing applications (without notices of intent), or notices of intent to file competing applications: 60 days from the issuance of this notice. Competing applications and notices of intent must meet the requirements of 18 CFR 4.36.

The Commission strongly encourages electronic filing. Please file comments, motions to intervene, notices of intent, and competing applications using the Commission's eFiling system at *https://ferconline.ferc.gov/eFiling.aspx.* Commenters can submit brief comments up to 6,000 characters, without prior registration, using the eComment system at *https://ferconline.ferc.gov/QuickComment.aspx.* For assistance, please contact FERC Online Support at *FERCOnlineSupport@ferc.gov,* (866) 208–3676 (toll free), or (202) 502–8659 (TTY). In lieu of electronic filing, you may submit a paper copy. Submissions sent via the U.S. Postal Service must be addressed to: Debbie-Anne Reese, Secretary, Federal Energy Regulatory Commission, 888 First Street NE, Room 1A, Washington, DC 20426. Submissions sent via any other carrier must be addressed to: Debbie-Anne Reese, Secretary, Federal Energy Regulatory Commission, 12225 Wilkins Avenue, Rockville, Maryland 20852. The first page of any filing should include docket number P–15376–000.

The Commission's Office of Public Participation (OPP) supports meaningful public engagement and participation in Commission proceedings. OPP can help members of the public, including landowners, environmental justice communities, Tribal members and others, access publicly available information and navigate Commission processes. For public inquiries and assistance with making filings such as interventions, comments, or requests for rehearing, the public is encouraged to contact OPP at (202) 502–6595 or *OPP@ferc.gov.*

More information about this project, including a copy of the application, can be viewed, or printed on the ''eLibrary'' link of the Commission's website at *https://elibrary.ferc.gov/eLibrary/search.* Enter the docket number (P–15376) in the docket number field to access the document. For assistance, contact FERC Online Support.

Dated: December 11, 2024.

Carlos D. Clay,

Acting Deputy Secretary.

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. CP25–12–000]

Rover Pipeline LLC; Notice of Scoping Period Requesting Comments on Environmental Issues for the Proposed Rover-Bulger Compressor Station and Harmon Creek Meter Station Expansion Project

The staff of the Federal Energy Regulatory Commission (FERC or Commission) will prepare an environmental document, that will discuss the environmental impacts of the Rover-Bulger Compressor Station and Harmon Creek Meter Station Expansion Project (Project) involving construction and operation of facilities by Rover Pipeline LLC (Rover) in Smith Township, Washington County, Pennsylvania. The Commission will use this environmental document in its decision-making process to determine whether the project is in the public convenience and necessity.

This notice announces the opening of the scoping process the Commission will use to gather input from the public and interested agencies regarding the project. As part of the National Environmental Policy Act (NEPA) review process, the Commission takes into account concerns the public may have about proposals and the environmental impacts that could result from its action whenever it considers the issuance of a Certificate of Public Convenience and Necessity. This gathering of public input is referred to as ''scoping.'' The main goal of the scoping process is to focus the analysis in the environmental document on the important environmental issues. Additional information about the Commission's NEPA process is described below in the *NEPA Process and Environmental Document* section of this notice.

By this notice, the Commission requests public comments on the scope of issues to address in the environmental document. To ensure that your comments are timely and properly recorded, please submit your comments so that the Commission receives them in Washington, DC on or before 5:00 p.m. Eastern Time on January 10, 2025. Comments may be

submitted in written form. Further details on how to submit comments are provided in the *Public Participation* section of this notice.

Your comments should focus on the potential environmental effects, reasonable alternatives, and measures to avoid or lessen environmental impacts. Your input will help the Commission staff determine what issues they need to evaluate in the environmental document. Commission staff will consider all written comments during the preparation of the environmental document.

If you submitted comments on this project to the Commission before the opening of this docket on October 31, 2024, you will need to file those comments in Docket No. CP25–12–000 to ensure they are considered as part of this proceeding.

This notice is being sent to the Commission's current environmental mailing list for this project. State and local government representatives should notify their constituents of this proposed project and encourage them to comment on their areas of concern.

Rover provided landowners with a fact sheet prepared by the FERC entitled ''An Interstate Natural Gas Facility On My Land? What Do I Need To Know?'' which addresses typically asked questions, including the use of eminent domain and how to participate in the Commission's proceedings. This fact sheet along with other landowner topics of interest are available for viewing on the FERC website (*www.ferc.gov*) under the Natural Gas, Landowner Topics link.

Public Participation

There are three methods you can use to submit your comments to the Commission. Please carefully follow these instructions so that your comments are properly recorded. The Commission encourages electronic filing of comments and has staff available to assist you at (866) 208–3676 or *FercOnlineSupport@ferc.gov.*

(1) You can file your comments electronically using the eComment feature, which is located on the Commission's website (*www.ferc.gov*) under the link to FERC Online. Using eComment is an easy method for submitting brief, text-only comments on a project;

(2) You can file your comments electronically by using the eFiling feature, which is located on the Commission's website (*www.ferc.gov*) under the link to FERC Online. With eFiling, you can provide comments in a variety of formats by attaching them as a file with your submission. New eFiling users must first create an account by clicking on ''eRegister.'' You will be asked to select the type of filing you are making; a comment on a particular project is considered a ''Comment on a Filing''; or

(3) You can file a paper copy of your comments by mailing them to the Commission. Be sure to reference the project docket number (CP25–12–000) on your letter. Submissions sent via the U.S. Postal Service must be addressed to: Debbie-Anne A. Reese, Secretary, Federal Energy Regulatory Commission, 888 First Street NE, Room 1A, Washington, DC 20426. Submissions sent via any other carrier must be addressed to: Debbie-Anne A. Reese, Acting Secretary, Federal Energy Regulatory Commission, 12225 Wilkins Avenue, Rockville, Maryland 20852.

Additionally, the Commission offers a free service called eSubscription which makes it easy to stay informed of all issuances and submittals regarding the dockets/projects to which you subscribe. These instant email notifications are the fastest way to receive notification and provide a link to the document files which can reduce the amount of time you spend researching proceedings. Go to *https://www.ferc.gov/ferc-online/overview* to register for eSubscription.

The Commission's Office of Public Participation (OPP) supports meaningful public engagement and participation in Commission proceedings. OPP can help members of the public, including landowners, environmental justice communities, Tribal members and others, access publicly available information and navigate Commission processes. For public inquiries and assistance with making filings such as interventions, comments, or requests for rehearing, the public is encouraged to contact OPP at (202)502–6595 or *OPP@ferc.gov.*

Summary of the Proposed Project

Rover proposes to construct, own, and operate certain facilities at its existing Bulger Compressor Station, located at milepost 0 of Rover's Burgettstown Lateral in Washington County, Pennsylvania. The proposed expansion of the Bulger Compressor Station would consist of the following facilities:

- one new 2,750-horsepower compressor unit package and cooling;
- one discharge filter separator;
- one unit blowdown silencer;
- extension of the existing compressor building and station fencing; and
- associated interconnect piping systems.

The Project also includes expansion of Rover's existing Harmon Creek Receipt Meter Station located within the Bulger Compressor Station. The proposed meter station expansion consist of one ultrasonic meter skid, one flow control skid, one filter separator, and associated interconnect piping. The Rover-Bulger Compressor Station and Harmon Creek Meter Station Expansion Project would allow Rover to ensure delivery of Range Resources—Appalachia LLC's (Range) requested transportation quantities at the required pressures. According to Rover, the Project is designed to provide to an additional 400,000 dekatherms of natural gas per day.

The general location of the project facilities is shown in appendix 1.[1]

Land Requirements for Construction

The Project would impact about 8.38 acres of land within and immediately adjacent to Rover's existing Bulger Compressor Station. About 8.05 acres of land would be used for temporary workspace, including 6.62 acres of existing aboveground facilities, 1.09 acres of an existing permanent access road, 0.24 acre of an existing parking area, and 0.10 acre of a temporary access road. Of the 8.38 acres, about 0.33 acre of open space land cover would be permanently impacted due to the extension of the compressor station fence line by 50 feet. Rover would convert the 0.33 acre of open space land cover to gravel to accommodate the addition of the new compressor unit and building.

NEPA Process and the Environmental Document

Any environmental document issued by the Commission will discuss impacts that could occur as a result of the construction and operation of the proposed project under the relevant general resource areas:

- geology and soils;
- water resources and wetlands;
- vegetation and wildlife;
- threatened and endangered species;
- cultural resources;
- land use;
- environmental justice;
- air quality and noise; and
- reliability and safety.

Commission staff will also evaluate reasonable alternatives to the proposed project or portions of the project and make recommendations on how to

[1] The appendices referenced in this notice will not appear in the **Federal Register**. Copies of the appendices were sent to all those receiving this notice in the mail and are available at *www.ferc.gov* using the link called ''eLibrary''. For instructions on connecting to eLibrary, refer to the last page of this notice. For assistance, contact FERC at *FERCOnlineSupport@ferc.gov* or call toll free, (886) 208–3676 or TTY (202) 502–8659.

lessen or avoid impacts on the various resource areas. Your comments will help Commission staff identify and focus on the issues that might have an effect on the human environment and potentially eliminate others from further study and discussion in the environmental document.

Following this scoping period, Commission staff will determine whether to prepare an Environmental Assessment (EA) or an Environmental Impact Statement (EIS). The EA or the EIS will present Commission staff's independent analysis of the issues. If Commission staff prepares an EA, a *Notice of Schedule for the Preparation of an Environmental Assessment* will be issued. The EA may be issued for an allotted public comment period. The Commission would consider timely comments on the EA before making its decision regarding the proposed project. If Commission staff prepares an EIS, a *Notice of Intent to Prepare an EIS/ Notice of Schedule* will be issued, which will open up an additional comment period. Staff will then prepare a draft EIS which will be issued for public comment. Commission staff will consider all timely comments received during the comment period on the draft EIS and revise the document, as necessary, before issuing a final EIS. Any EA or draft and final EIS will be available in electronic format in the public record through eLibrary [2] and the Commission's natural gas environmental documents web page (*https://www.ferc.gov/industries-data/natural-gas/environment/environmental-documents*). If eSubscribed, you will receive instant email notification when the environmental document is issued.

With this notice, the Commission is asking agencies with jurisdiction by law and/or special expertise with respect to the environmental issues of this project to formally cooperate in the preparation of the environmental document.[3] Agencies that would like to request cooperating agency status should follow the instructions for filing comments provided under the *Public Participation* section of this notice.

Consultation Under Section 106 of the National Historic Preservation Act

In accordance with the Advisory Council on Historic Preservation's implementing regulations for section 106 of the National Historic Preservation Act, the Commission is using this notice to initiate consultation with the applicable State Historic Preservation Office(s), and to solicit their views and those of other government agencies, interested Indian tribes, and the public on the project's potential effects on historic properties.[4] The environmental document for this project will document findings on the impacts on historic properties and summarize the status of consultations under section 106.

Environmental Mailing List

The environmental mailing list federal, state, and local government representatives and agencies; elected officials; environmental and public interest groups; Native American Tribes; other interested parties; and local libraries and newspapers. This list also includes all affected landowners (as defined in the Commission's regulations) who are potential right-of-way grantors, whose property may be used temporarily for project purposes, or who own homes within certain distances of aboveground facilities, and anyone who submits comments on the project and includes a mailing address with their comments. Commission staff will update the environmental mailing list as the analysis proceeds to ensure that Commission notices related to this environmental review are sent to all individuals, organizations, and government entities interested in and/or potentially affected by the proposed project.

If you need to make changes to your name/address, or if you would like to remove your name from the mailing list, please complete one of the following steps:

(1) Send an email to *GasProjectAddressChange@ferc.gov* stating your request. You must include the docket number CP24–88–000 in your request. If you are requesting a change to your address, please be sure to include your name and the correct address. If you are requesting to delete your address from the mailing list, please include your name and address as it appeared on this notice. This email address is unable to accept comments. OR

(2) Return the attached ''Mailing List Update Form'' (appendix 2).

Additional Information

Additional information about the project is available from the Commission's Office of External Affairs, at (866) 208–FERC, or on the FERC website at *www.ferc.gov* using the eLibrary link. Click on the eLibrary link, click on ''General Search'' and enter the docket number in the ''Docket Number'' field. Be sure you have selected an appropriate date range. For assistance, please contact FERC Online Support at *FercOnlineSupport@ferc.gov* or (866) 208–3676, or for TTY, contact (202) 502–8659. The eLibrary link also provides access to the texts of all formal documents issued by the Commission, such as orders, notices, and rulemakings.

Public sessions or site visits will be posted on the Commission's calendar located at *https://www.ferc.gov/news-events/events* along with other related information.

Dated: December 11, 2024.

Carlos D. Clay,

Acting Deputy Secretary.

Comment Date: 5 p.m. ET 1/1/25.

The filings are accessible in the Commission's eLibrary system (*https://elibrary.ferc.gov/idmws/search/fercgensearch.asp*) by querying the docket number.

Any person desiring to intervene, to protest, or to answer a complaint in any of the above proceedings must file in accordance with Rules 211, 214, or 206 of the Commission's Regulations (18 CFR 385.211, 385.214, or 385.206) on or before 5:00 p.m. Eastern time on the specified comment date. Protests may be considered, but intervention is necessary to become a party to the proceeding.

eFiling is encouraged. More detailed information relating to filing requirements, interventions, protests, service, and qualifying facilities filings can be found at: *http://www.ferc.gov/docs-filing/efiling/filing-req.pdf.* For other information, call (866) 208–3676 (toll free). For TTY, call (202) 502–8659.

The Commission's Office of Public Participation (OPP) supports meaningful public engagement and participation in Commission proceedings. OPP can help members of the public, including landowners, environmental justice communities, Tribal members and others, access publicly available information and navigate Commission processes. For public inquiries and assistance with making filings such as interventions, comments, or requests for rehearing, the public is encouraged to contact OPP at (202) 502–6595 or *OPP@ferc.gov.*

Dated: December 11, 2024.

Carlos D. Clay,

Acting Deputy Secretary.

BILLING CODE 6717–01–P

ENVIRONMENTAL PROTECTION AGENCY

[EPA–HQ–OW–2023–0268; FRL 10613–02–OW]

Final National Pollutant Discharge Elimination System (NPDES) Pesticide General Permit for Point Source Discharges From the Application of Pesticides; Reissuance

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of final permit issuance.

SUMMARY: This notice announces issuance by all 10 Environmental Protection Agency (EPA) Regions of the final 2026 National Pollutant Discharge Elimination System (NPDES) pesticide general permit (PGP)—the 2026 PGP. The 2026 PGP, which has an effective date of October 31, 2026, replaces the existing permit (2021 PGP) that expires on October 30, 2026, and authorizes certain point source discharges from the application of pesticides to waters of the United States in accordance with the terms and conditions described therein. The EPA is issuing this permit for five (5) years in all areas of the country where the EPA is the NPDES permitting authority.

DATES: The permit becomes effective on October 31, 2026, and will expire at 11:59 p.m. on October 30, 2031. In accordance with 40 CFR part 23, this permit shall be considered issued for the purpose of judicial review on December 31, 2024 Under section 509(b) of the Clean Water Act (CWA), judicial review of this general permit can be requested by filing a petition for review in the United States Court of Appeals within 120 days after the permit is considered issued. Under section 509(b) of the CWA, the requirements of this permit may not be challenged later in civil or criminal proceedings to enforce these requirements. In addition, this permit may not be challenged in other agency proceedings. Deadlines for submittal of a Notices of Intent (NOI) to be covered, if required, are provided in Part 1.2.3, Table 1–2 of the 2026 PGP.

FOR FURTHER INFORMATION CONTACT: Contact the appropriate EPA Regional office listed on EPA's NPDES website at *https://www.epa.gov/npdes/contact-us-pesticide-permitting,* email *PGP@epa.gov,* or contact Dr. Lauren Mosesso, EPA Headquarters, Office of Water, Office of Wastewater Management (4203M), 1200 Pennsylvania Avenue NW, Washington, DC 20460; telephone number: 202–564–1012; email address: *Mosesso.Lauren@epa.gov*. Electronic versions of the 2026 PGP and Fact Sheet are also available on EPA's NPDES website at *https://www.epa.gov/npdes/pesticide-permitting*.

I. General Information

A. Does this action apply to me?

You may be affected by this action if you apply pesticides, under the use patterns in Part 1.1.1. of the 2026 PGP, that result in a discharge to a water of the United States in one of the geographic areas identified in Appendix C of the 2026 PGP. Potentially affected entities, as categorized in the North American Industry Classification System (NAICS), may include, but are not limited to:

TABLE 1—ENTITIES POTENTIALLY REGULATED BY THE 2026 PGP

Category	NAICS	Examples of potentially affected entities
Agricultural entities—General agricultural interests, farmers/producers, forestry, and irrigation.	111 Crop Production	Producers of crops mainly for food and fiber, including farms, orchards, groves, greenhouses, and nurseries that have irrigation ditches requiring pest control.
	113110 Timber Tract Operations	The operation of timber tracts for the purpose of selling standing timber.
	113210 Forest Nurseries Gathering of Forest Products.	Growing trees for reforestation and/or gathering forest products, such as gums, barks, balsam needles, rhizomes, fibers, Spanish moss, ginseng, and truffles.
	221310 Water Supply for Irrigation	Operating irrigation systems.
Pesticide parties (includes pesticide manufacturers, other pesticide users/interests, and consultants).	325320 Pesticide and Other Agricultural Chemical Manufacturing.	Formulation and preparation of agricultural pest control chemicals.
Public health parties (includes mosquito or other vector control districts and commercial applicators that service these).	923120 Administration of Public Health Programs.	Government establishments primarily engaged in the planning, administration, and coordination of public health programs and services, including environmental health activities.
Resource management parties (includes State departments of fish and wildlife, State departments of pesticide regulation, State environmental agencies, and universities).	924110 Administration of Air and Water Resource and Solid Waste Management Programs.	Government establishments primarily engaged in the administration, regulation, and enforcement of air and water resource programs; the administration and regulation of water and air pollution control and prevention programs; the administration and regulation of flood control programs; the administration and regulation of drainage development and water resource consumption programs; and coordination of these activities at intergovernmental levels.

TABLE 1—ENTITIES POTENTIALLY REGULATED BY THE 2026 PGP—Continued

Category	NAICS	Examples of potentially affected entities
	924120 Administration of Conservation Programs.	Government establishments primarily engaged in the administration, regulation, supervision and control of land use, including recreational areas; conservation and preservation of natural resources; erosion control; geological survey program administration; weather forecasting program administration; and the administration and protection of publicly and privately owned forest lands. Government establishments responsible for planning, management, regulation and conservation of game, fish, and wildlife populations, including wildlife management areas and field stations; and other administrative matters relating to the protection of fish, game, and wildlife are included in this industry.
Utility parties (includes utilities)	221 Utilities	Provide electric power, natural gas, steam supply, water supply, and sewage removal through a permanent infrastructure of lines, mains, and pipes.

B. How can I get copies of this document and other related information?

Docket. EPA has established a docket for this action under Docket ID No. [EPA–HQ–OW–2023–0268]. Although all documents in the docket are listed in an index, some information is not publicly available, *i.e.,* Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Publicly available docket materials are available either electronically through *https://www.regulations.gov* or in hard copy at the EPA Docket Center, WJC West Building, Room 3334, 1301 Constitution Ave. NW, Washington, DC. The Docket Center's hours of operations are 8:30 a.m.–4:30 p.m., Monday–Friday (except Federal Holidays). For further information on the EPA Docket Center services and the current status, see: *https://www.epa.gov/dockets.*

C. Geographic Coverage

The EPA provides permit coverage for classes of point source discharges of pollutants that occur in areas where the EPA is the NPDES permitting authority which includes Massachusetts, New Hampshire, New Mexico, the District of Columbia, all U.S. territories except the U.S. Virgin Islands, Federal facilities in Delaware, Vermont, Colorado, and Washington, all Indian Country except in Maine, and where applicable, Lands of Exclusive Federal Jurisdiction. The geographic coverage of the 2026 PGP is listed in Appendix C of the permit.

D. Who are the EPA regional contacts for this final permit?

For the list of EPA Regional contacts, visit the EPA's NPDES website at *https://www.epa.gov/npdes/contact-us-pesticide-permitting.*

II. Background

Section 301(a) of the CWA provides that ''the discharge of any pollutant by any person shall be unlawful'' unless the discharge is in compliance with certain other sections of the Act. 33 U.S.C. 1311(a). The CWA defines ''discharge of a pollutant'' as ''(A) any addition of any pollutant to navigable waters from any point source and (B) any addition of any pollutant to the waters of the contiguous zone or the ocean from any point source other than a vessel or other floating craft.'' 33 U.S.C. 1362(12). A ''point source'' is any ''discernible, confined and discrete conveyance'' but does not include ''agricultural stormwater discharges and return flows from irrigated agriculture.'' 33 U.S.C. 1362(14).

The term ''pollutant'' includes among other things ''garbage . . . chemical wastes, biological materials . . . and industrial, municipal, and agricultural waste discharged into water.'' 33 U.S.C. 1362(6).

A person may discharge a pollutant without violating the section 301 prohibition by obtaining authorization to discharge (referred to herein as ''coverage'') under a section 402 NPDES permit (33 U.S.C. 1342). Under section 402(a), the EPA may ''issue a permit for the discharge of any pollutant, or combination of pollutants, notwithstanding section 1311(a)'' upon certain conditions required by the Act.

The EPA issued the first Pesticide General Permit (''2011 PGP'') on October 31, 2011, in response to the United States Sixth Circuit Court of Appeals ruling vacating EPA's 2006 Final Rule on Aquatic Pesticides. *National Cotton Council of America.* v. *EPA,* 553 F.3d 927 (6th Cir. 2009). The EPA developed the PGP to control point source discharges of biological pesticides and chemical pesticides that leave a residue into waters of the United States. In 2016 and 2021 respectively, The EPA issued the second PGP (2016 PGP) and third PGP (2021 PGP). After the EPA issued the 2021 PGP in September 2021, a petition for review of the permit was filed in the U.S. Court of Appeals for the Ninth Circuit. *Center for Biological Diversity* v. *EPA and FWS,* No. 21–71306 (9th Cir.) The petition filed by the Center for Biological Diversity (CBD) challenged EPA's permit issuance under the CWA, and the EPA and the U.S. Fish and Wildlife Service (FWS) actions with respect to the permit under the Endangered Species Act (ESA). After CBD filed the petition, EPA, FWS, and CBD entered into settlement discussions. A settlement agreement resulted from these discussions, which the parties entered into on July 25, 2023 (Settlement Agreement). The Settlement Agreement does not affect the provisions in the 2021 PGP, but several terms concern what was to be proposed in the 2026 PGP. Information on the Settlement Agreement is available in Docket ID EPA–HQ–OGC–2023–0247–0002.

The EPA is issuing the 2026 PGP to replace the 2021 PGP which expires on October 30, 2026. Like the previously issued PGP, the 2026 PGP provides coverage for certain point source discharges of pollutants to waters of the United States in areas where the EPA is the NPDES permitting authority. The EPA published the draft 2026 PGP and accompanying Fact Sheet in the **Federal Register** on November 28, 2023 (88 FR 83120), soliciting comments on the draft permit. The EPA also conducted consultation with Indian Tribal Governments. The EPA received 12 written comment letters on the draft permit. The EPA considered all comments received during the comment period in preparing the final permit. The EPA responded to all significant comments in the Response to Comment Document which is available as part of the docket for this permit.

III. Summary of the 2026 PGP

A. Summary of 2026 PGP Terms and Requirements

While the requirements of the 2026 PGP remain largely the same as those in the previously issued PGPs, a summary of updates from the 2021 PGP and from the proposed 2026 PGP are outlined in the 2026 PGP Fact Sheet. The 2026 PGP is structured in the same nine parts as the previously issued PGPs: (1) Coverage under This Permit, (2) Technology-Based Effluent Limitations, (3) Water Quality-Based Effluent Limitations and Other Limitations, (4) Monitoring, (5) Pesticide Discharge Management Plan, (6) Corrective Action, (7) Recordkeeping and Annual Reporting, (8) EPA Contact Information and Mailing Addresses, and (9) Permit Conditions Applicable Within Specific States (including Territories) and Indian Country. Additionally, as with the previously issued PGPs, the 2026 PGP includes nine appendices with additional conditions and guidance for permittees: (A) Definitions, Abbreviations, and Acronyms, (B) Standard Permit Conditions, (C) Areas Covered, (D) Notice of Intent (NOI) form, (E) Notice of Termination (NOT) form, (F) Pesticide Discharge Evaluation Worksheet (PDEW), (G) Annual Reporting Template, (H) Adverse Incident Report Template, and (I) PGP Eligibility Worksheet for Threatened and Endangered Species Protection. A summary of the 2026 PGP's requirements is provided in the 2026 PGP Fact Sheet.

B. 2026 PGP Cost Analysis

The cost analysis accompanying this final permit monetizes and quantifies certain incremental cost impacts of the final permit changes as compared to the 2021 PGP. The EPA analyzed each change in the 2026 PGP considering the previous permit's requirements. The objective of the cost analysis is to show where or to what extent the 2026 PGP requirements impose an incremental increase in administrative and compliance costs (such as sampling and monitoring costs) on Operators in relation to costs that are already accounted for in the 2021 PGP. As a majority of the changes in the final permit are to clarify requirements in previously issued permits, the EPA expects minimal incremental cost impact on entities that will be covered under the 2026 PGP. For further discussion, see Appendix D of the fact sheet.

IV. Executive Orders 12866 and 13563

The 2026 PGP is not a significant regulatory action and was therefore not submitted to the Office of Management and Budget (OMB) for review.

V. Executive Order 12898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations and Executive Order 14096: Revitalizing Our Nation's Commitment to Environmental Justice for All

The EPA believes that it is not practicable to assess whether the human health or environmental conditions that exist prior to this action result in disproportionate and adverse effects on communities with environmental justice concerns. As part of the general permit development process, the EPA reviews available information to evaluate whether issuance of a permit could affect overburdened communities. The EPA has determined that a more in-depth environmental justice analysis is not feasible for this permit reissuance due to the limited amount of and format of information the EPA currently has available. The information supporting this Executive Order review is contained in Appendix E of the fact sheet.

VI. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

This action does not have tribal implications as specified in Executive Order 13175. It will neither impose substantial direct compliance costs on federally recognized Tribal governments, nor preempt Tribal law. The EPA directly implements the NPDES Program, including the 2026 PGP, in Indian Country; therefore, consistent with the EPA Policy on Consultation and Coordination with Indian Tribes, the EPA consulted with Tribal officials early in the process to provide Tribes an opportunity to have meaningful and timely input into the renewal of the PGP. To gain an understanding of, and where appropriate, to address Tribal implications of the draft 2026 PGP, the EPA conducted the following activities:

- August 22, 2023—the EPA emailed notification letters to tribal leaders initiating consultation and coordination on the renewal of the PGP. The initiation letter was also posted on EPA's Tribal Consultation Opportunities Tracking System (TCOTS) at *https://tcots.epa.gov/.*
- September 19 and 21, 2023—the EPA held two informational webinars open to all tribal representatives and reserved the last part of each webinar for official consultation comments. Eighteen Tribal representatives participated in the webinars. No official comments were received during the webinars. The presentation was posted on the Tribal portal website at *https://tcots.epa.gov.*

The EPA received one comment from Tribes and Tribal organizations during the consultation and coordination period. Records of the Tribal informational webinars and a consultation summary are included in the docket for this proposed action (Docket ID No. EPA–HQ–OW–2023–0268). The EPA has considered the comment received in the proposal. The Agency specifically solicited additional comment on this proposed permit during the public comment period. The EPA also notes that as part of the finalization of this permit, the Agency completed CWA section 401 certification procedures with all applicable authorized Tribes where this permit will apply (see Part 9 and Appendix C of the PGP).

ENVIRONMENTAL PROTECTION AGENCY

[EPA–HQ–OAR–2015–0341; FRL–12497–01–OAR]

Notice of Availability of One New Chapter in the Environmental Protection Agency's Air Pollution Control Cost Manual—Dry Sorbent Injection

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of availability and public comment period.

SUMMARY: The Environmental Protection Agency (EPA) is providing notice that we are adding one chapter to the current EPA Air Pollution Control Cost Manual (henceforth, Control Cost Manual). The EPA is requesting comment on: Chapter 2, Section 5, ''Dry Sorbent Injection.'' This new Control Cost Manual chapter covers control measures for sulfur dioxide (SO_2) and acid gas emissions.

DATES: Comments must be received on or before March 17, 2025. Please refer to **SUPPLEMENTARY INFORMATION** for additional information on submitting comments on the provided data.

ADDRESSES: You may send comments, identified by Docket ID No. EPA–HQ–OAR–2015–0341, by any of the following methods:

- *Federal eRulemaking Portal: http://www.regulations.gov/* (our preferred method). Follow the online instructions for submitting comments.
- *Mail*: U.S. Environmental Protection Agency, EPA Docket Center, Docket No. EPA–HQ–OAR–2015–0341, Office of Air and Radiation Docket, Mail Code 28221T, 1200 Pennsylvania Avenue NW, Washington, DC 20460.
- *Hand Delivery or Courier:* EPA Docket Center, WJC West Building, Room 3334, 1301 Constitution Avenue NW, Washington, DC 20004. The Docket Center's hours of operations are 8:30 a.m. to 4:30 p.m., Monday through Friday (except Federal Holidays).

Instructions: All submissions received must include the Docket ID No. for this action. Comments received may be posted without change to *https://www.regulations.gov/,* including any personal information provided. For detailed instructions on sending comments and additional information on the rulemaking process, see the ''Public Participation'' heading of the **SUPPLEMENTARY INFORMATION** section of this document.

FOR FURTHER INFORMATION CONTACT: Larry Sorrels, Health and Environmental Impacts Division, Office of Air Quality Planning and Standards, Environmental Protection Agency, C439–02, 109 T.W. Alexander Drive, Research Triangle Park, NC 27709; telephone number: (919) 541–5041; email address: *sorrels.larry@epa.gov.*

SUPPLEMENTARY INFORMATION: The EPA is requesting comment on the specific Control Cost Manual chapter included in this notice.

Written Comments: Submit your comments, identified by Docket ID No. EPA–HQ–OAR–2015–0341, at *https://www.regulations.gov* (our preferred method), or the other methods identified in the **ADDRESSES** section. Once submitted, comments cannot be edited or removed from the docket. The EPA may publish any comment received to its public docket. Do not submit to EPA's docket at *https://www.regulations.gov* any information you consider to be Confidential Business Information (CBI), Proprietary Business Information (PBI), or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. The EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.,* on the web, cloud, or other file sharing system). Please visit *https://www.epa.gov/dockets/commenting-epa-dockets* for additional submission methods; the full EPA public comment policy; information about CBI, PBI, or multimedia submissions; and general guidance on making effective comments.

I. General Information

A. What should I consider as I prepare my comments for the EPA?

1. *Submitting CBI.* Do not submit this information to the EPA through *www.regulations.gov* or email. Clearly mark the part or all of the information that you claim to be CBI. For CBI information in a disk or CD–ROM that you mail to the EPA docket office, mark the outside of the disk or CD–ROM as CBI and then identify electronically within the disk or CD–ROM the specific information that is claimed as CBI. In addition to one complete version of the comment that includes information claimed as CBI, a copy of the comment that does not contain the information claimed as CBI must be submitted for inclusion in the public docket. Information so marked will not be disclosed except in accordance with procedures set forth in 40 Code of Federal Regulation (CFR) part 2.

2. *Tips for Preparing your Comments.* When submitting comments, remember to: Identify the notification by docket number and other identifying information (subject heading, **Federal Register** date and page number).

- Follow directions—The agency may ask you to respond to specific questions or organize comments by referencing a CFR part or section number.
- Explain why you agree or disagree; suggest alternatives and substitute language/data for your requested changes.
- Describe any assumptions and provide any technical information and/or data that you used.
- If you estimate potential costs or burdens, explain how you arrived at your estimate in sufficient detail to allow for it to be reproduced.
- Provide specific examples to illustrate your concerns and suggest alternatives.
- Explain your views as clearly as possible, avoiding the use of profanity or personal threats.
- Make sure to submit your comments by the comment period deadline identified.

II. Information Available for Public Comment

The EPA is requesting comment on one new chapter of the EPA Air

Pollution Control Cost Manual. The Control Cost Manual contains individual chapters on emissions control measures, including data and equations to aid users in estimating capital costs for installation and annual costs for operation and maintenance of these measures, and data concerning the percentage of pollutant emissions that control measures can reduce. The Control Cost Manual is used by the EPA for estimating the impacts of rulemakings and serves as a basis for sources to estimate costs of controls that are Best Available Control Technology (BACT) under the New Source Review Program, the Regional Haze Program, Reasonably Achievable Control Technology (RACT) for State Implementation Plans (SIPs) and for other programs.

The one updated Control Cost Manual chapter is: Chapter 2, Section 5, ''Dry Sorbent Injection.'' This revised Control Cost Manual chapter can be found in the docket for the Control Cost Manual update (Docket ID No. EPA–HQ–OAR–2015–0341). The current Control Cost Manual version (sixth edition) is available at *https://www.epa.gov/economic-and-cost-analysis-air-pollution-regulations/cost-reports-and-guidance-air-pollution#cost%20manual,* and last updated in 2003.

The Consolidated Appropriations Act of 2014 requested that the EPA begin development of a seventh edition of the Control Cost Manual. The EPA has met with state, local, and Tribal officials to discuss plans for the Control Cost Manual update as called for under the Consolidated Appropriations Act of 2014. The EPA has met with other groups as well at their request. Since 2014, the EPA has updated the selective non-catalytic reduction (SNCR) and selective catalytic reduction (SCR) chapters, the first two chapters (Chapter 1, Section 4; Chapter 2, Section 4, respectively) completed for the seventh edition of the Control Cost Manual and made them available to the public in May 2016 (81 FR 38702, June 14, 2016) and also updated these chapters again in May 2019. In addition, the EPA has updated the Refrigerated Condensers (Chapter 1, Section 3 and Section 3.1) and Incinerators (Chapter 2, Section 3, Section 3.2, now Incinerators/Oxidizers) chapters in November 2017, the Cost Estimation: Concepts and Methodology chapter (Chapter 2, Section 1) as of November 2017, the Carbon Adsorbers (Chapter 1, Section 3, Section 3.1) and Flares (Chapter 1, Section 3, Section 3.2) chapters in October 2018, and the Gas Absorbers (now Wet and Dry Scrubbers for Acid Gas, Chapter 1, Section 5) chapter in May 2021. Finally, the EPA is currently updating the Fabric Filters (Chapter 1, Section 6) chapter, with the expected date for its finalization to be in 2025.

To help focus review of the Dry Sorbent Injection chapter, we offer the following list of questions that the EPA is particularly interested in addressing in this new Control Cost Manual chapter. Regardless of the topics that are covered in this list of questions, commenters are welcome to address any aspects of this chapter. Please provide supporting data for responses to these questions and for other comments on the chapter.

For the Dry Sorbent Injection Chapter

(1) What is a reasonable and up-to-date estimate of equipment life (defined as design or operational life) for dry sorbent injection (or DSI) systems—that is, an entire DSI system? Please provide data, if possible, on accurate estimates of equipment life.

(2) Are the descriptions of and technical background on DSI complete, up to date, and accurate with regard to control of SO_2 and acid gas? Please provide information, if possible, on descriptions of and background on control by DSI of SO_2 and acid gases if you do not believe that the descriptions in the draft chapter are complete, up to date, and accurate.

(3) Is the applicability of DSI to various types of emissions sources complete, up to date, and accurate?

(4) Are the estimates of SO_2 removal or control efficiency for DSI accurate and up-to-date? If not, what are more accurate estimates? Please provide data, if possible, to address inaccuracies. Please offer the same for acid gas (*e.g.,* hydrogen chloride (HCl)) removal or control efficiency.

(5) Is the information accurate on how DSI operate in tandem with control technologies such as fabric filters and electrostatic precipitators (ESP) to reduce particulate matter (PM) and activated carbon injection (ACI) to reduce mercury? Please provide data, if possible, to address inaccuracies.

(6) Are the capital cost correlations, factors, and equations for DSI applied to various types of emissions sources and industries accurate and up to date? If not, how should they be revised? Please provide data, if possible, to address inaccuracies.

(7) Are the annual costs (such as operating and maintenance costs) for DSI applied to various types of emissions sources and industries accurate and up-to-date? In particular, are the sorbent data, both types of sorbent and sorbent prices, for use in DSI accurate and up-to-date? If not, how should they be revised? Please provide data, if possible, to address inaccuracies.

(8) How can neural networks and computational fluid dynamics be used, separately or integrated, to enhance the design and optimization of DSI for improved SO_2 and acid gas control efficiency and overall efficiency? What are the costs of including such techniques in the design and operation of DSI?

Erika N. Sasser,

Director, Health and Environmental Impacts Division.

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

[EPA–HQ–OPP–2024–0093; FRL–12320–01–OCSPP]

Receipt of Requests To Voluntarily Cancel Certain Pesticide Registrations and/or Amend Registrations To Terminate Certain Uses

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: In accordance with the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA), EPA is issuing a notice of receipt of requests by the registrants to voluntarily cancel their registrations of certain product registrations and/or to amend their product registrations to terminate one or more uses. EPA intends to grant these requests at the close of the comment period for this announcement unless the Agency receives substantive comments within the comment period that would merit its further review of the requests, or unless the registrants withdraw its requests. If these requests are granted, any sale, distribution, or use of products listed in this notice will be permitted after the registrations have been cancelled and/or uses have been terminated only if such sale, distribution, or use is consistent with the terms as described in the final order.

DATES: Comments must be received on or before January 16, 2025.

ADDRESSES: Submit your comments, identified by docket identification (ID) number EPA–HQ–OPP–2024–0093, through the *Federal eRulemaking Portal* at *https://www.regulations.gov.* Follow the online instructions for submitting comments. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is

restricted by statute. Additional instructions on commenting and visiting the docket, along with more information about dockets generally, is available at *https://www.epa.gov/dockets.*

FOR FURTHER INFORMATION CONTACT: Christopher Green, Registration Division (7505T), Office of Pesticide Programs, Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460–0001; telephone number: (202) 566–2707; email address: *green.christopher@epa.gov.*

SUPPLEMENTARY INFORMATION:

I. General Information

A. Does this action apply to me?

This action is directed to the public in general and may be of interest to a wide range of stakeholders including environmental, human health, and agricultural advocates; the chemical industry; pesticide users; and members of the public interested in the sale, distribution, or use of pesticides. Since others also may be interested, the Agency has not attempted to describe all the specific entities that may be affected by this action.

B. What should I consider as I prepare my comments for EPA?

1. *Submitting CBI.* Do not submit this information to EPA through *regulations.gov* or email. Clearly mark the part or all of the information that you claim to be CBI. For CBI information in a disk or CD–ROM that you mail to EPA, mark the outside of the disk or CD–ROM as CBI and then identify electronically within the disk or CD–ROM the specific information that is claimed as CBI. In addition to one complete version of the comment that includes information claimed as CBI, a copy of the comment that does not contain the information claimed as CBI must be submitted for inclusion in the public docket. Information so marked will not be disclosed except in accordance with procedures set forth in 40 CFR part 2.

2. *Tips for preparing your comments.* When preparing and submitting your comments, see the commenting tips at *http://www.epa.gov/dockets/comments.html.*

II. What action is the Agency taking?

This notice announces receipt by EPA of requests from registrants to cancel certain and/or terminate certain uses of product registrations. The affected products and the registrants making the requests are identified in Tables 1–3 of this unit.

Unless a request is withdrawn by the registrant or if the Agency determines that there are substantive comments that warrant further review of these requests, EPA intends to issue an order canceling and/or amending the affected registrations.

TABLE 1—PRODUCT REGISTRATIONS WITH PENDING REQUESTS FOR CANCELLATION

Registration No.	Company No.	Product name	Active ingredients
279–3455	279	Marvel Herbicide	Fluthiacet-methyl (108803/117337–19–6)—(1.2%), Fomesafen (123803/72178–02–0)—(30.08%)
279–3568	279	Dawn Herbicide	Sodium salt of fomesafen (123802/108731–70–0)—(22.8%)
279–3569	279	Rhythm Herbicide	Sodium salt of fomesafen (123802/108731–70–0)—(22.1%)
2749–642	2749	Dicrotophos Technical	Dicrotophos (035201/141–66–2)—(85%)
2749–643	2749	Dicromax XP Insecticide	Bifenthrin (128825/82657–04–3)—(10.8%), Dicrotophos (035201/141–66–2)—(43.1%)
7401–38	7401	Ferti-Lome Liquid Carbaryl Home Garden Spray.	Carbaryl (056801/63–25–2)—(23.7%)
7401–69	7401	Ferti Lome Garden Dust	Carbaryl (056801/63–25–2)—(5%)
7401–166	7401	Hi-Yield 10% Carbaryl Garden Dust	Carbaryl (056801/63–25–2)—(10%)
9386–34	9386	AMA–204	Terbuthylazine (080814/5915–41–3)—(4%)
9386–42	9386	AMA–2500G	Glutaraldehyde (043901/111–30–8)—(25%)
9386–43	9386	AMA–1500G	Glutaraldehyde (043901/111–30–8)—(15%)
9386–46	9386	AMA–480WB	1,2-Benzisothiazolin-3-one (098901/2634–33–5)—(19%)
9386–47	9386	AMA–80S	1,2-Benzisothiazolin-3-one (098901/2634–33–5)—(19%)
33427–35	33427	Dicrotophos Technical	Dicrotophos (035201/141–66–2)—(85%)
47000–113	47000	Roberts Dust'M	Gardona (cis-isomer) (083702/22248–79–9)—(3%)
47000–122	47000	RL–2-Rabon Livestock Dust	Gardona (cis-isomer) (083702/22248–79–9)—(3%)
47000–125	47000	Crown All Purpose Livestock and Poultry Dust with Rabon.	Gardona (cis-isomer) (083702/22248–79–9)—(3%)
FL–080008	62719	G–120 NF Naturalyte Fruit Fly Bait	Spinosad (110003/131929–60–7)—(.02%)
MN–230002	87865	Spin-Aid Herbicide	Phenmedipham (098701/13684–63–4)—(15.9%)
NC–090001	62719	Lorsban Advanced	Chlorpyrifos (059101/2921–88–2)—(40.2%)
NC–090004	62719	Lorsban Advanced	Chlorpyrifos (059101/2921–88–2)—(40.2%)
NC–180002	5481	Parazone 3SL Herbicide	Paraquat dichloride (061601/1910–42–5)—(43.8%)
ND–230001	87865	Spin-Aid Herbicide	Phenmedipham (098701/13684–63–4)—(15.9%)
NY–120006	67690	SP 1908 Aquatic Herbicide	Fluridone (112900/59756–60–4)—(6.3%)
NY–120017	67690	Sonar SRP	Fluridone (112900/59756–60–4)—(5%)
NY–130001	67690	Sonar X	Fluridone (112900/59756–60–4)—(5%)
TX–040027	62719	Lock-On	Chlorpyrifos (059101/2921–88–2)—(22.9%)
TX–080018	62719	Starane Ultra	Fluroxypyr 1-methylheptyl ester (128968/81406–37–3)—(45.52%)
TX–180004	62719	Lorsban Advanced	Chlorpyrifos (059101/2921–88–2)—(40.2%)
TX–220002	100	Gramoxone® SL 2.0	Paraquat dichloride (061601/1910–42–5)—(30.1%)
WY–180001	5481	Parazone 3SL Herbicide	Paraquat dichloride (061601/1910–42–5)—(43.8%)

TABLE 2—PRODUCT REGISTRATION WITH PENDING REQUEST FOR AMENDMENT

Registration No.	Company No.	Product name	Active ingredient	Uses to be terminated
8383–3	8383	Sporicidin Disinfectant Solution ..	Phenol (064001/108–95–2)—(1.56%), Sodium phenate (064002/139–02–6)—(.06%).	Fogging Use

Table 3 of this unit includes the names and addresses of record for the registrants of the products listed in Table 1 and Table 2 of this unit, in sequence by EPA company number. This number corresponds to the first part of the EPA registration numbers of the products listed in Table 1 and Table 2 of this unit.

TABLE 3—REGISTRANTS REQUESTING VOLUNTARY CANCELLATION AND/OR AMENDMENTS.

EPA company No.	Company name and address
100	Syngenta Crop Protection, LLC, 410 Swing Road, P.O. Box 18300, Greensboro, NC 27419–8300.
279	FMC Corporation, 2929 Walnut Street, Philadelphia, PA 19104.
2749	Aceto Life Sciences, L.L.C., D/B/A Actylis, Agent Name: Product & Regulatory Associates, LLC, 8595 Collier Blvd., Suite 107–51, Naples, FL 34114.
5481	AMVAC Chemical Corporation, 4695 MacArthur Court, Suite 1200, Newport Beach, CA 92660–1706.
7401	Voluntary Purchasing Groups, Inc., Agent Name: Pyxis Regulatory Consulting, Inc., 535 Dock Street, Suite 211, Tacoma, WA 98402.
8383	Contec, Inc., 525 Locust Grove, Spartanburg, SC 29303.
9386	Kemira Water Solutions, Inc., Agent Name: Ramboll, 4245 North Fairfax Drive, Suite 700, Arlington, VA 22203.
33427	Aceto US, L.L.C., D/B/A/Actylis, Agent Name: Product & Regulatory Associates, LLC, 8595 Collier Blvd., Suite 107–51, Naples, FL 34114.
47000	Chem-Tech, Ltd., 620 Lesher Place, Lansing, MI 48912.
62719	Corteva Agriscience, LLC, 9330 Zionsville Road, Indianapolis, IN 46268.
67690	SePRO Corporation, 11550 N. Meridian Street, Suite 600, Carmel, IN 46032.
87865	Belchim Crop Protection US Corporation, 225 Wilmington West Chester Pike, Suite 200, Chadds Ford, PA 19317.

III. What is the Agency's authority for taking this action?

Section 6(f)(1) of FIFRA (7 U.S.C. 136d(f)(1)) provides that a registrant of a pesticide product may at any time request that any of its pesticide registrations be canceled or amended to terminate one or more uses. FIFRA further provides that, before acting on the request, EPA must publish a notice of receipt of any such request in the **Federal Register**.

Section 6(f)(1)(B) of FIFRA (7 U.S.C. 136d(f)(1)(B)) requires that before acting on a request for voluntary cancellation, EPA must provide a 30-day public comment period on the request for voluntary cancellation or use termination. In addition, FIFRA section 6(f)(1)(C) (7 U.S.C. 136d(f)(1)(C)) requires that EPA provide a 180-day comment period on a request for voluntary cancellation or termination of any minor agricultural use before granting the request, unless:

1. The registrants request a waiver of the comment period, or
2. The EPA Administrator determines that continued use of the pesticide would pose an unreasonable adverse effect on the environment.

The registrants have requested that EPA waive the 180-day comment period. Accordingly, EPA will provide a 30-day comment period on the proposed requests.

IV. Procedures for Withdrawal of Requests

Registrants who choose to withdraw a request for product cancellation or use termination should submit the withdrawal in writing to the person listed under **FOR FURTHER INFORMATION CONTACT**. If the products have been subject to a previous cancellation action, the effective date of cancellation and all other provisions of any earlier cancellation action are controlling.

V. Provisions for Disposition of Existing Stocks

Existing stocks are those stocks of registered pesticide products that are currently in the United States and that were packaged, labeled, and released for shipment prior to the effective date of the action. If the requests for voluntary cancellation and/or amendments to terminate uses are granted, the Agency intends to publish the cancellation order in the **Federal Register**.

In any order issued in response to these requests for cancellation of product registrations and/or for amendments to terminate uses, EPA proposes to include the following provisions for the treatment of any existing stocks of the products listed in Tables 1 and 2 of Unit II.

For voluntary product cancellations, registrants will be permitted to sell and distribute existing stocks of voluntarily canceled products for 1 year after the effective date of the cancellation, which will be the date of publication of the cancellation order in the **Federal Register**. Thereafter, registrants will be prohibited from selling or distributing the products identified in Table 1 of Unit II, except for export consistent with FIFRA section 17 (7 U.S.C. 136o) or for proper disposal.

Once EPA has approved product labels reflecting the requested amendments to terminate uses, registrants will be permitted to sell or distribute products under the previously approved labeling for a period of 18 months after the date of **Federal Register** publication of the cancellation order, unless other restrictions have been imposed. Thereafter, registrants will be prohibited from selling or distributing the products whose labels include the terminated uses identified in Table 2 of Unit II, except for export consistent with FIFRA section 17 or for proper disposal.

Persons other than the registrant may sell, distribute, or use existing stocks of canceled products and/or products whose labels include the terminated uses until supplies are exhausted, provided that such sale, distribution, or use is consistent with the terms of the previously approved labeling on, or that accompanied, the canceled products and/or terminated uses.

Authority: 7 U.S.C. 136 *et seq.*

Dated: December 11, 2024.

Daniel Rosenblatt,

Acting Director, Registration Division, Office of Pesticide Programs.

ENVIRONMENTAL PROTECTION AGENCY

[EPA–R05–SFUND–2024–0439; FRL 12259–01–R5]

Request for Public Comment on Settlement Agreement for Licking Chemical Spill Site, Licking County, Ohio

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice; request for public comment.

SUMMARY: In accordance with the Comprehensive Environmental Response, Compensation, and Liability Act of 1980, as amended (''CERCLA''), notice is hereby given by the U.S. Environmental Protection Agency (''EPA''), Region 5, of a proposed administrative settlement for recovery of past response costs concerning the Licking Chemical Spill Site (Site) in Licking County, Ohio with William H. Trucking, LLC, as the Settling Party and Respondent.

DATES: Comments must be received on or before January 16, 2025.

ADDRESSES: You may send comments, identified by Docket ID No. EPA–R05–SFUND–2024–0439, by the following method:

• *Federal eRulemaking Portal: https://www.regulations.gov/* (our preferred method). Follow the online instructions for submitting comments.

Instructions: All submissions received must include the Docket ID No. for this rulemaking. Comments received may be posted without change to *https://www.regulations.gov/,* including any personal information provided. For detailed instructions on sending comments and additional information on the rulemaking process, see the ''Public Participation'' heading of the **SUPPLEMENTARY INFORMATION** section of this document.

FOR FURTHER INFORMATION CONTACT: Don Schwer, Enforcement Investigator, Superfund & Emergency Management Division, Region 5, EPA, 77 West Jackson Blvd. (SE–5J); telephone number: 312–353–8752; email address: *schwer.don@epa.gov.*

SUPPLEMENTARY INFORMATION: The settlement requires the Respondent to pay $300,000 in past response costs. The settlement includes a covenant not to sue pursuant to sections 107(a) of CERCLA, 42 U.S.C. 9607(a), relating to the Site, subject to limited reservations, and protection from contribution actions or claims as provided by section 113(f)(2) of CERCLA, 42 U.S.C. 9613(f)(2). For thirty (30) days following the date of publication of this notice, EPA will receive written comments relating to this settlement. EPA will consider all comments received and may modify or withdraw its consent to the settlement if comments received disclose facts or considerations that indicate that the proposed settlement is inappropriate, improper, or inadequate. EPA's response to any comments received will be available for public inspection at *https://response.epa.gov/LickingChemicalSpill.*

A. Written Comments

Submit your comments, identified by Docket ID No. EPA–R05–SFUND–2024–0439, at *https://www.regulations.gov* (our preferred method), or the other methods identified in the **ADDRESSES** section. Once submitted, comments cannot be edited or removed from the docket. The EPA may publish any comment received to its public docket. Do not submit to EPA's docket at *https://www.regulations.gov* any information you consider to be Confidential Business Information (CBI), Proprietary Business Information (PBI), or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. The EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.,* on the web, cloud, or other file sharing system). Please visit *https://www.epa.gov/dockets/commenting-epa-dockets* for additional submission methods; the full EPA public comment policy; information about CBI, PBI, or multimedia submissions; and general guidance on making effective comments.

Douglas Ballotti,

Director, Superfund & Emergency Management Division, Region 5.

EXPORT-IMPORT BANK

Adoption of Categorical Exclusions from the Department of Energy Under the National Environmental Policy Act

AGENCY: Export-Import Bank of the United States.

ACTION: Notice of adoption of multiple Categorical Exclusions from the Department of Energy.

SUMMARY: The Export-Import Bank of the United States (EXIM) is adopting multiple categorical exclusions (CEs) from the agencies as listed: Department of Energy Ces A9, B1.15, B1.23, B2.1, B2.2, and B3.1. This notice identifies the categories of proposed actions and describes the consultation between the agencies.

DATES: The Ces identified below are available for EXIM to use for its proposed actions effective December 17, 2024.

FOR FURTHER INFORMATION CONTACT: Scott Condren (VP Policy Analysis), *Scott.Condren@exim.gov,* (202) 565–3777; Tiffin Caverly (VP Engineering & Environment), *Tiffin.Caverly@exim.gov.*

SUPPLEMENTARY INFORMATION:

I. Background

NEPA and Ces

The National Environmental Policy Act, 42 U.S.C. 4321–4347, (NEPA) requires Federal agencies to interpret and administer Federal policies, regulations, and laws in accordance with NEPA's policies and to consider environmental values in their decision making.

Federal agencies are required to provide a detailed statement on proposals for major Federal actions significantly affecting the quality of the human environment.[1] NEPA also created the Council of Environmental Quality (CEQ) as the body responsible for implementing NEPA.

Categorical exclusions (Ces) can be used when there is a determination the proposed type of action would not have a significant effect on the human environment; this option eliminates the need for an environmental assessment (EA) or more detailed environmental impact statement (EIS).[2] CEQ considers Ces ''an important mechanism to promote efficiency in the NEPA process'' and recognizes an agency's ability to ''identify and substantiate categories of actions that normally do not have a significant effect on the human environment''.[3]

Section 109 of NEPA, enacted as part of the Fiscal Responsibility Act of 2023, allows a Federal agency to ''adopt'' or use another agency's Ces for a category of proposed agency actions.[4] To use another agency's Ces under section 109, an agency must identify the relevant Ces listed in another agency's (''establishing agency'') NEPA procedures that cover its category of proposed actions or related actions; consult with the establishing agency to ensure that the

[2] 40 CFR 1501.4.

[3] 88 FR 49924.

[4] 42 U.S.C. 4336c.

proposed adoption of the CE to a category of actions is appropriate; identify to the public the CE that the agency plans to use for its proposed actions; and document adoption of the CE. EXIM has prepared this notice to meet these statutory requirements.

Program Background

As the official export credit agency of the United States, ''the mission of the Export-Import Bank of the United States is to support the creation of American jobs by facilitating the export of U.S. goods and services.'' The Export–Import Bank of the United States (EXIM) steps in when the private sector does not provide financing for American businesses. The Bank's actions have historically helped support these firms in competing with foreign businesses overseas. The Make More in America (MMIA) initiative applies EXIM's authorities for medium and long-term (MLT) loans, loan guarantees, and insurance to export-oriented domestic projects. In doing so, MMIA allows EXIM to support American business during the whole export lifecycle. The purpose of such loans remains unchanged: to support U.S. employment.

As EXIM usually lends to projects outside the United States, NEPA has not often been applicable as there is no impact to the human environment in the United States. In the new MMIA initiative which focuses on domestic lending, adopting Ces from another agency will speed up the processing time of deals and conserve staff resources with no need for an EA or EIS. Faster processing times in this initiative will greatly facilitate EXIM's support of American businesses and workers.

II. Identification of the Categorical Exclusions

Department of Energy Ces

A9 Information Gathering, Analysis, and Dissemination

Information gathering (including, but not limited to, literature surveys, inventories, site visits, and audits), data analysis (including, but not limited to, computer modeling), document preparation (including, but not limited to, conceptual design, feasibility studies, and analytical energy supply and demand studies), and information dissemination (including, but not limited to, document publication and distribution, and classroom training and informational programs), but not including site characterization or environmental monitoring. (See also B3.1 of appendix B to this subpart.)

B1.15 Supporting Buildings

Siting, construction or modification, and operation of support buildings and support structures (including, but not limited to, trailers and prefabricated and modular buildings) within or contiguous to an already developed area (where active utilities and currently used roads are readily accessible). Covered support buildings and structures include, but are not limited to, those for office purposes; parking; cafeteria services; education and training; visitor reception; computer and data processing services; health services or recreation activities; routine maintenance activities; storage of supplies and equipment for administrative services and routine maintenance activities; security (such as security posts); fire protection; small-scale fabrication (such as machine shop activities), assembly, and testing of non-nuclear equipment or components; and similar support purposes, but exclude facilities for nuclear weapons activities and waste storage activities, such as activities covered in B1.10, B1.29, B1.35, B2.6, B6.2, B6.4, B6.5, B6.6, and B6.10 of this appendix.

B1.23 Demolition and Disposal of Buildings

Demolition and subsequent disposal of buildings, equipment, and support structures (including, but not limited to, smoke stacks and parking lot surfaces), provided that there would be no potential for release of substances at a level, or in a form, that could pose a threat to public health or the environment.

B2.1 Workplace Enhancements

Modifications within or contiguous to an existing structure, in a previously disturbed or developed area, to enhance workplace habitability (including, but not limited to, installation or improvements to lighting, radiation shielding, or heating/ventilating/air conditioning and its instrumentation, and noise reduction).

B2.2 Building and Equipment Instrumentation

Installation of, or improvements to, building and equipment instrumentation (including, but not limited to, remote control panels, remote monitoring capability, alarm and surveillance systems, control systems to provide automatic shutdown, fire detection and protection systems, water consumption monitors and flow control systems, announcement and emergency warning systems, criticality and radiation monitors and alarms, and safeguards and security equipment).

B3.1 Site Characterization and Environmental Monitoring

Site characterization and environmental monitoring (including, but not limited to, siting, construction, modification, operation, and dismantlement and removal or otherwise proper closure (such as of a well) of characterization and monitoring devices, and siting, construction, and associated operation of a small-scale laboratory building or renovation of a room in an existing building for sample analysis). Such activities would be designed in conformance with applicable requirements and use best management practices to limit the potential effects of any resultant ground disturbance. Covered activities include, but are not limited to, site characterization and environmental monitoring under CERCLA and RCRA. (This class of actions excludes activities in aquatic environments. See B3.16 of this appendix for such activities.) Specific activities include, but are not limited to:

(a) Geological, geophysical (such as gravity, magnetic, electrical, seismic, radar, and temperature gradient), geochemical, and engineering surveys and mapping, and the establishment of survey marks. Seismic techniques would not include large-scale reflection or refraction testing;

(b) Installation and operation of field instruments (such as stream-gauging stations or flow-measuring devices, telemetry systems, geochemical monitoring tools, and geophysical exploration tools);

(c) Drilling of wells for sampling or monitoring of groundwater or the vadose (unsaturated) zone, well logging, and installation of water-level recording devices in wells;

(d) Aquifer and underground reservoir response testing;

(e) Installation and operation of ambient air monitoring equipment;

(f) Sampling and characterization of water, soil, rock, or contaminants (such as drilling using truck- or mobile-scale equipment, and modification, use, and plugging of boreholes); 5

(g) Sampling and characterization of water effluents, air emissions, or solid waste streams;

(h) Installation and operation of meteorological towers and associated activities (such as assessment of potential wind energy resources);

(i) Sampling of flora or fauna; and

(j) Archeological, historic, and cultural resource identification in compliance with 36 CFR part 800 and 43 CFR part 7.

The Department of Energy Ces also includes additional conditions referred

to as integral elements. (10 CFR part 1021 subpt. D, app. B) In order to apply these CEs, the proposal must be one that would not:

(1) Threaten a violation of applicable statutory, regulatory, or permit requirements for environment, safety, and health, or similar requirements of the Department of Energy or Executive Orders;

(2) Require siting and construction or major expansion of waste storage, disposal, recovery, or treatment facilities (including incinerators), but the proposal may include categorically excluded waste storage, disposal, recovery, or treatment actions or facilities;

(3) Disturb hazardous substances, pollutants, contaminants, or Comprehensive Environmental Response, Compensation and Liability Act-excluded petroleum and natural gas products that preexist in the environment such that there would be uncontrolled or unpermitted releases;

(4) Have the potential to cause significant impacts on environmentally sensitive resources. An environmentally sensitive resource is typically a resource that has been identified as needing protection through Executive Order, statute, or regulation by Federal, State, or local government, or a Federally recognized Indian Tribe. An action may be categorically excluded if, although sensitive resources are present, the action would not have the potential to cause significant impacts on those resources (such as construction of a building with its foundation well above a sole-source aquifer or upland surface soil removal on a site that has wetlands). Environmentally sensitive resources include, but are not limited to:

(i) Property (such as sites, buildings, structures, and objects) of historic, archeological, or architectural significance designated by a Federal, State, or local government, federally recognized Indian Tribe, or Native Hawaiian organization; or property determined to be eligible for listing on the National Register of Historic Places;

(ii) Federally listed threatened or endangered species or their habitat (including critical habitat) or federally proposed or candidate species or their habitat (Endangered Species Act); state-listed or state-proposed endangered or threatened species or their habitat; Federally protected marine mammals and Essential Fish Habitat (Marine Mammal Protection Act; Magnuson-Stevens Fishery Conservation and Management Act); and otherwise Federally protected species (such as the Bald and Golden Eagle Protection Act or the Migratory Bird Treaty Act);

(iii) Floodplains and wetlands (as defined in 10 CFR 1022.4, ''Compliance with Floodplain and Wetland Environmental Review Requirements: Definitions,'' or its successor);

(iv) Areas having a special designation such as Federally and State-designated wilderness areas, national parks, national monuments, national natural landmarks, wild and scenic rivers, State and Federal wildlife refuges, scenic areas (such as National Scenic and Historic Trails or National Scenic Areas), and marine sanctuaries;

(v) Prime or unique farmland, or other farmland of statewide or local importance, as defined at 7 CFR 658.2(a), ''Farmland Protection Policy Act: Definitions,'' or its successor;

(vi) Special sources of water (such as sole-source aquifers, wellhead protection areas, and other water sources that are vital in a region); and

(vii) Tundra, coral reefs, or rain forests; or

(5) Involve genetically engineered organisms, synthetic biology, governmentally designated noxious weeds, or invasive species, unless the proposed activity would be contained or confined in a manner designed and operated to prevent unauthorized release into the environment and conducted in accordance with applicable requirements, such as those of the Department of Agriculture, the Environmental Protection Agency, and the National Institutes of Health.

EXIM intends to apply these categorical exclusions to loans, loan guarantees, and insurance transactions. The scope of projects would be akin to projects from the Department of Energy's Loans Program Office to which DOE has applied these categorical exclusions. These include limited construction, full disposal of buildings, desk work for feasibility studies, soil testing, etc. In principle, such transactions would be similar to those EXIM's export finance transactions deemed a category C under its environmental and social procedures and guidelines.[5]

[5] EXIM's Environmental and Social Due Diligence Procedures and Guidelines state that ''applications greater than $10 Million will be classified as Category C if they are not related to a physical project or if they relate to projects which do not require further environmental review because they are likely to have minimal or no adverse environmental or social risks or impacts. This category includes transactions related to new, expansion or existing projects of the type that have little or no potential to cause environmental effects and do not impact sensitive locations.'' Procedures and Guidelines | *EXIM.GOV*.

III. Consideration of Extraordinary Circumstances (if Applicable)

In assessing whether a categorical exclusion applies, EXIM would review whether there were extraordinary circumstances that would indicate a categorical exclusion is not appropriate due to the potential for a significant environmental effect. EXIM would review that proposed actions do not breach the integral elements of classes of action in DOE's regulations (10 CFR 1021, subpart D, appendix B (1)–(5)). When applying these Ces, EXIM will consider whether the proposed action has the potential to result in significant effects as described in DOE's definition of extraordinary circumstances. DOE defines extraordinary circumstances as unique situations presented by specific proposals, including, but not limited to, scientific controversy about the environmental effects of the proposal; uncertain effects or effects involving unique or unknown risks; and unresolved conflicts concerning alternative uses of available resources. 10 CFR 1021.410(b)(2).

EXIM's engineering and environment division will have responsibility for determining if a categorical exclusion applies. These determinations will be posted at *https://www.exim.gov/policies/exim-bank-and-environment/make-more-america-initiative-approved-transactions.*

Consultation and Determination of Appropriateness

Consultations

1. Department of Energy Consultation

In October 2024, EXIM conducted consultation with the Department of Energy's Loans Program Office on adoption of several CE categories. Through those consultation and coordination efforts, DOE and EXIM mutually agreed that EXIM's adoption of CEs A9 (Information gathering, analysis, and dissemination), B1.15 (Supporting Buildings), B1.23, (Demolition and disposal of buildings), B2.1 (Workplace enhancements), B2.2 (Building and equipment instrumentation) and B3.1(site characterization and environmental monitoring) is appropriate. This notice documents EXIM's adoption of Department of Energy CEs for such actions.

At the conclusion of that process, DOE determined that EXIM's proposed use of the CE as described in this notice would be appropriate because the categories of actions for which EXIM plans to use the CE are consistent with the adopted CEs.

Notice to the Public and Documentation of the Adoption

This notice serves to identify to the public and document EXIM's adoption of several CEs from both the Department of Energy. The notice identifies the types of actions to which EXIM will apply the CE, as well as the considerations that EXIM will use in determining whether an action is within the scope of the CE.

Scott Condren,

Vice President, Policy Analysis.

BILLING CODE 6690–01–P

FEDERAL COMMUNICATIONS COMMISSION

[DA 24–1235; FR ID 267996]

In the Matter of 2,411 Robocall Mitigation Database Filers

AGENCY: Federal Communications Commission.

ACTION: Notice of Order.

SUMMARY: On December 10, 2024, the Enforcement Bureau (Bureau) released an Order directing the 2,411 companies named in Appendix A to the Order (each, a Company; collectively, the Companies) to cure the deficiencies in each Company's Robocall Mitigation Database (RMD) certification and notify the Bureau that the deficiencies have been cured, or to file a response explaining why the Bureau should not remove the Company's certification from the RMD. Each Company's RMD certification is deficient because a robocall mitigation plan was not provided or the plan lacks newly-required information; and the certification lacks newly-required information. Removal of a Company's certification from the RMD would require all intermediate providers and voice service providers to cease accepting all calls directly from the Company.

DATES: Responses are due no later than December 31, 2024.

ADDRESSES: The responses must be mailed to the Office of the Secretary, Federal Communications Commission, 45 L Street NE, Washington, DC 20554, ATTN: Enforcement Bureau—Telecommunications Consumers Division. The responses must also be emailed to *EnforcementBureauTCD@fcc.gov.*

FOR FURTHER INFORMATION CONTACT: Kristi Thompson, Federal Communications Commission, Enforcement Bureau, Telecommunications Consumers Division, 45 L Street NE, Washington, DC 20554 or at *kristi.thompson@fcc.gov,* 202–418–1318.

SUPPLEMENTARY INFORMATION: The Bureau adopted the Order pursuant to sections 4(i), 4(j), 227b, 251(e), and 403 of the Communications Act of 1934, as amended, 47 U.S.C. 154(i), 154(j), 227b, 251(e), and 403, and §§ 0.111, 0.311, 1.1, and 64.6305 of the Commission's rules, 47 CFR 0.111, 0.311, 1.1, and 64.6305. The Order is available here: *https://docs.fcc.gov/public/attachments/DA-24-1235A1.pdf.*

Federal Communications Commission.

Peter S. Hyun,

Acting Chief, Enforcement Bureau.

FEDERAL RESERVE SYSTEM

Change in Bank Control Notices; Acquisitions of Shares of a Bank or Bank Holding Company

The notificants listed below have applied under the Change in Bank Control Act (Act) (12 U.S.C. 1817(j)) and § 225.41 of the Board's Regulation Y (12 CFR 225.41) to acquire shares of a bank or bank holding company. The factors that are considered in acting on the applications are set forth in paragraph 7 of the Act (12 U.S.C. 1817(j)(7)).

The public portions of the applications listed below, as well as other related filings required by the Board, if any, are available for immediate inspection at the Federal Reserve Bank(s) indicated below and at the offices of the Board of Governors. This information may also be obtained on an expedited basis, upon request, by contacting the appropriate Federal Reserve Bank and from the Board's Freedom of Information Office at *https://www.federalreserve.gov/foia/request.htm.* Interested persons may express their views in writing on the standards enumerated in paragraph 7 of the Act.

Comments received are subject to public disclosure. In general, comments received will be made available without change and will not be modified to remove personal or business information including confidential, contact, or other identifying information. Comments should not include any information such as confidential information that would not be appropriate for public disclosure.

Comments regarding each of these applications must be received at the Reserve Bank indicated or the offices of the Board of Governors, Ann E. Misback, Secretary of the Board, 20th Street and Constitution Avenue, NW, Washington DC 20551–0001, not later than January 2, 2025.

A. Federal Reserve Bank of Chicago (Colette A. Fried, Assistant Vice President) 230 South LaSalle Street, Chicago, Illinois 60690–1414. Comments can also be sent

electronically to *Comments.applications@chi.frb.org*:

1. *Christopher M. George, Fremont, California;* to acquire voting shares of Greenwoods Financial Group, Inc., and thereby indirectly acquire voting shares of The Greenwood's State Bank, both of Lake Mills, Wisconsin.

Board of Governors of the Federal Reserve System.

DEPARTMENT OF DEFENSE

GENERAL SERVICES ADMINISTRATION

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

[OMB Control No. 9000–0198; Docket No. 2024–0053; Sequence No. 20]

Information Collection; Certain Federal Acquisition Regulation Part 9 Requirements

AGENCY: Department of Defense (DOD), General Services Administration (GSA), and National Aeronautics and Space Administration (NASA).

ACTION: Notice and request for comments.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, and the Office of Management and Budget (OMB) regulations, DoD, GSA, and NASA invite the public to comment on an extension concerning certain Federal Acquisition Regulation (FAR) part 9 requirements. DoD, GSA, and NASA invite comments on: whether the proposed collection of information is necessary for the proper performance of the functions of Federal Government acquisitions, including whether the information will have practical utility; the accuracy of the estimate of the burden of the proposed information collection; ways to enhance the quality, utility, and clarity of the information to be collected; and ways to minimize the burden of the information collection on respondents, including the use of automated collection techniques or other forms of information technology. OMB has approved this information collection for use through April 30, 2025. DoD, GSA, and NASA propose that OMB extend its approval for use for three additional years beyond the current expiration date.

DATES: DoD, GSA, and NASA will consider all comments received by February 18, 2025.

ADDRESSES: DoD, GSA, and NASA invite interested persons to submit comments on this collection through *https://www.regulations.gov* and follow the instructions on the site. This website provides the ability to type short comments directly into the comment field or attach a file for lengthier comments. If there are difficulties submitting comments, contact the GSA Regulatory Secretariat Division at 202–501–4755 or *GSARegSec@gsa.gov.*

Instructions: All items submitted must cite OMB Control No. 9000–0198, Certain Federal Acquisition Regulation Part 9 Requirements. Comments received generally will be posted without change to *https://www.regulations.gov,* including any personal and/or business confidential information provided. To confirm receipt of your comment(s), please check *www.regulations.gov,* approximately two-to-three days after submission to verify posting.

FOR FURTHER INFORMATION CONTACT: Zenaida Delgado, Procurement Analyst, at telephone 202–969–7207, or *zenaida.delgado@gsa.gov.*

SUPPLEMENTARY INFORMATION:

A. OMB Control Number, Title, and Any Associated Form(s)

9000–0198, Certain Federal Acquisition Regulation Part 9 Requirements.

B. Need and Uses

This clearance covers the information that offerors and contractors must submit to comply with the following FAR requirements:

1. FAR 52.209–1, Qualification Requirements. This clause requires offerors to provide with their proposal: Their name, the manufacturer's name, source's name, item's name, service identification, and test number (if known) for a proposed product or service that has already been determined to meet the qualification standards. If an offeror, manufacturer, source, product or service has met the qualification requirement but is not yet on a qualified products list, qualified manufacturers list, or qualified bidders list, this clause requires the offeror to submit evidence of qualification prior to award of a contract.

2. FAR 52.209–2, 52.209–10, and 52.212–3(n), Prohibition on Contracting with Inverted Domestic Corporations. FAR provision 52.209–2, Prohibition on Contracting with Inverted Domestic Corporations-Representation, and its equivalent for commercial acquisitions at FAR 52.212–3(n), requires each offeror to represent whether it is, or is not, an inverted domestic corporation or a subsidiary of an inverted domestic corporation.

FAR clause 52.209–10, Prohibition on Contracting with Inverted Domestic Corporations, requires contractors to promptly notify the contracting officer in the event the contractor becomes an inverted domestic corporation or a subsidiary of an inverted domestic corporation during the period of performance of the contract.

3. FAR 52.209–5, 52.209–6, and 52.212–3(h), Debarment, Suspension, and other Responsibility Matters. FAR provision 52.209–5, Certification Regarding Responsibility Matters, and its equivalent for commercial acquisitions at FAR 52.212–3(h), require the disclosure of the following critical information by an offeror to be considered by the contracting officer in making a responsibility determination:

- Whether the offeror or any of its principals have been—
  - Debarred, suspended, proposed for debarment, declared ineligible for contract award;
  - Within a three-year period preceding their offer:
- Convicted of or had a civil judgment rendered against them or indicted for commission of a fraud or a criminal offense in connection with obtaining, attempting to obtain, or performing a public (Federal, State, or local) contract or subcontract, violation of Federal or State antitrust statutes relating to the submission of offers, or commission of embezzlement, theft, forgery, bribery, falsification or destruction of records, making false statements, tax evasion, violating Federal criminal tax laws, or receiving stolen property;
- Notified of any delinquent Federal taxes in an amount that exceeds $10,000 for which the liability remains unsatisfied;
- Had one or more contracts terminated for default by any Federal agency; or
- Are presently indicted for, or otherwise criminally or civilly charged by a governmental entity with commission of any of the offenses identified above.

If the offeror has responded affirmatively to the certifications in the FAR provisions at 52.209–5 or 52.212–3(h), the offeror shall provide additional information if requested by the contracting officer.

The offeror shall also provide immediate written notice to the contracting officer if, at any time prior

to contract award, the offeror learns that its certification was erroneous when submitted or has become erroneous by reason of changed circumstances.

Paragraph (c) of the FAR clause at 52.209–6, Protecting the Government's Interest When Subcontracting with Contractor's Debarred, Suspended, or Proposed for Debarment, requires the contractor to require each proposed subcontractor whose subcontract will exceed $35,000, other than a subcontractor providing a commercially available off-the-shelf (COTS) item, to disclose to the contractor in writing, whether as of the time of award of the subcontract, the subcontractor, or its principals, is or is not debarred, suspended, or proposed for debarment by the Government.

Paragraph (d) of the FAR clause at 52.209–6 requires a corporate officer or designee of the contractor to notify the contracting officer, in writing, before entering into a subcontract (for other than COTS items) with a party that is debarred, suspended, or proposed for debarment. The written notice must include: The name of the subcontractor; why the subcontractor is debarred, suspended, or ineligible; the compelling reason(s) for doing business with the subcontractor; and how the contractor will protect the Government's interests when dealing with such subcontractor. For any subcontract subject to Government consent, contracting officers shall not consent to such subcontracts unless the agency head or a designee states in writing the compelling reasons for approving such subcontract.

4. FAR 52.209–7 and 52.209–9, Information Regarding Responsibility Matters and Updates to that Publicly Available Information. FAR provision 52.209–7, Information Regarding Responsibility Matters, requires each offeror to represent whether it has current active Federal contracts and grants with a total value greater than $10 million. The provision also requires each offeror to post in the Federal Awardee Performance and Integrity Information System (FAPIIS), as required by maintaining an active registration in the System for Award Management (SAM), information on whether the offeror and/or any of its principals has, or has not, within the past five years, in connection with the award to or performance by the offeror of a federal contract or grant, been the subject of a proceeding, at the Federal or State level, that resulted in:

(a) A criminal conviction in the case of a criminal proceeding;

(b) The finding of fault and liability in a civil proceeding resulting in the payment of $5,000 or more in damages, restitution, reimbursement, fine or penalty;

(c) The finding of fault and liability in an administrative proceeding resulting in the payment of a monetary fine or penalty of $5,000 or more, or the payment of a reimbursement, restitution, or damages in excess of $100,000; or

(d) In a criminal, civil, or administrative proceeding, a disposition of the matter by consent or compromise with an acknowledgement of fault by the contractor if the proceeding could have led to any of the outcomes specified in (4)(a) through (c) above.

Paragraph (a) of the FAR clause 52.209–9, Updates of Publicly Available Information Regarding Responsibility Matters, requires contractors to update the information in FAPIIS on a semiannual basis, throughout the life of the contract, by posting the information in SAM. Paragraph (c) of the FAR clause 52.209–9 informs contractors of their ability to provide feedback on information posted by the Government in FAPIIS and the procedure to follow in the event information exempt from public disclosure is slated to become publicly available information in FAPIIS.

5. FAR 52.209–11, 52.209–12, and 52.212–3(q), Prohibition on Contracting With Corporations with Delinquent Taxes or a Felony Conviction. FAR provision 52.209–11, Representation by Corporations Regarding Delinquent Tax Liability or a Felony Conviction under any Federal Law, and its equivalent for commercial acquisitions at FAR 52.212–3(q), require offerors to represent whether the offeror is a corporation that—

- Has any unpaid Federal tax liability that has been assessed, for which all judicial and administrative remedies have been exhausted or have lapsed, and that is not being paid in a timely manner pursuant to an agreement with the authority responsible for collecting the tax liability; and
- Was convicted of a felony criminal violation under a Federal law within the preceding 24 months.

FAR provision 52.209–12, Certification Regarding Tax Matters, require offerors proposing a total contract price that will exceed $5.5 million (including options) to certify that, to the best of the offeror's knowledge and belief, it—

- Has filed all Federal tax returns required during the three years preceding the certification;
- Has not been convicted of a criminal offense under the Internal Revenue Code of 1986; and
- Has not, more than 90 days prior to certification, been notified of any unpaid Federal tax assessment for which the liability remains unsatisfied, unless the assessment is the subject of an installment agreement or offer in compromise that has been approved by the Internal Revenue Service and is not in default, or the assessment is the subject of a non-frivolous administrative or judicial proceeding.

6. FAR 52.209–13, Violations of Arms Control Treaties or Agreements with the United States. Unless the offeror is providing evidence of a waiver or determination in accordance with paragraph (b)(2) of the FAR provision at 52.209–13, Violation of Arms Control Treaties or Agreements—Certification, paragraph (b)(1) of the provision requires offerors to certify that—

- The offeror does not engage and has not engaged in any activity that contributed to or is a significant factor in the President's or Secretary of State's determination that a foreign country is in violation of its obligations undertaken in any arms control, nonproliferation, or disarmament agreement to which the United States is a party, or is not adhering to its arms control, nonproliferation, or disarmament commitments in which the United States is a participating state. The determinations are described in the most recent unclassified annual report provided to Congress pursuant to section 403 of the Arms Control and Disarmament Act (22 U.S.C. 2593a); and
- No entity owned or controlled by the offeror is an entity organized under the laws of such country, that engages or has engaged in any activity that contributed to or is a significant factor in the President's or Secretary of State's determination that a foreign country is in violation of its obligations undertaken in any arms control, nonproliferation, or disarmament agreement to which the United States is a party, or is not adhering to its arms control, nonproliferation, or disarmament commitments in which the United States is a participating state.

Contracting officers use the collected information described above to determine an offeror's responsibility for contract award.

C. Annual Burden

Respondents: 1,973,803.
Total Annual Responses: 2,177,511.
Total Burden Hours: 1,125,803. (589,703 reporting hours + 536,100 recordkeeping hours).

Obtaining Copies: Requesters may obtain a copy of the information collection documents from the GSA Regulatory Secretariat Division by

calling 202–501–4755 or emailing *GSARegSec@gsa.gov.* Please cite OMB Control No. 9000–0198, Certain Federal Acquisition Regulation Part 9 Requirements.

Janet Fry,

Director, Federal Acquisition Policy Division, Office of Governmentwide Acquisition Policy, Office of Acquisition Policy, Office of Governmentwide Policy.

BILLING CODE 6820–EP–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

[Docket No. CDC–2024–0103; NIOSH 355]

Expansion of NIOSH B Reader Certification Eligibility; Request for Information

AGENCY: Centers for Disease Control and Prevention (CDC), Department of Health and Human Services (HHS).

ACTION: Request for information.

SUMMARY: The B Reader Program, administered by CDC's National Institute for Occupational Safety and Health (NIOSH), is seeking information from experts in occupational respiratory health surveillance and radiology, nurse practitioners, physician assistants, workers exposed to mineral dust and unions representing such workers, industry and other parties interested in allowing nurse practitioners and physician assistants to be eligible to take the NIOSH B Reader examination and become certified B Readers if they successfully pass the examination.

DATES: Comments must be received by March 17, 2025.

ADDRESSES: Submit comments by either of the following methods:

- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments.
- *Mail:* NIOSH Docket Office, Robert A. Taft Laboratories, MS C–34, 1090 Tusculum Avenue, Cincinnati, Ohio 45226–1998.

Instructions: All written submissions received in response to this document must include the agency name and docket number (CDC–2024–0103; NIOSH–355) for this activity. All relevant comments, including any personal information provided, will be posted without change to *https://www.regulations.gov.* Do not submit comments by email.

FOR FURTHER INFORMATION CONTACT: Laura E. Reynolds, NIOSH B Reader Program, Respiratory Health Division, 1095 Willowdale Road, MS HG900.2, Morgantown, WV 26505–2888; (304) 285–5853 (this is not a toll-free number); *lreynolds@cdc.gov.*

SUPPLEMENTARY INFORMATION: The NIOSH B Reader program, established in 42 CFR 37.52, certifies physicians as being able to apply the International Labour Organization (ILO) International Classification of Radiographs of Pneumoconioses in classifying posteroanterior chest radiographic images for the presence and severity of appearances of pneumoconiosis (a type of dust-induced lung disease). In the United States, B Readers classify chest radiographic images of workers participating in health surveillance programs.[1] These workers have jobs involving exposure to mineral dusts that can cause pneumoconiosis such as coal mine dust, crystalline silica, and asbestos.

B Readers participate in several types of activities involving classification of chest radiographs. Physicians who classify chest radiographs for certain Federal surveillance programs such as the NIOSH Coal Workers' Health Surveillance Program must be B Readers. Additionally, B Readers provide classifications for research purposes and for certain legal and administrative activities such as compensation programs.

Currently, only physicians licensed to practice medicine in the United States can serve as certified B Readers in the United States, and only after successfully completing the B Reader examination. The examination, developed by NIOSH in partnership with the American College of Radiology, is rigorous and tests physicians' ability to apply the ILO classification system. International physicians may also take the B Reader examination to document their ability to apply the ILO classification system, but those who pass the examination do not serve as certified B Readers in the United States.

As of October 2024, 184 U.S. physicians based in 35 States and 2 Territories are NIOSH-certified B Readers. NIOSH is interested in ensuring that B Readers are available to classify chest radiographs obtained in all states and territories. To meet this goal, NIOSH is requesting information from parties interested in allowing nurse practitioners and physician assistants to be eligible to take the NIOSH B Reader examination and become certified B Readers if they successfully pass the examination.

[1] *See https://www.cdc.gov/niosh/chestradiography/php/breader/.*

NIOSH is particularly interested in receiving information about the following questions:

1. What is the current demand for B Readers, and would expanding the program to include nurse practitioners and physician assistants help meet this demand?

2. Are there specific geographic areas or populations that might benefit from having nurse practitioners and physician assistants certified as B Readers?

3. Are there any potential risks associated with expanding the B Reader certification to nurse practitioners and physician assistants and, if so, how can those risks be mitigated?

4. ILO classification of chest radiographs is not the same as clinical interpretation. Are there states where scope of practice and standards of care allow nurse practitioners and physician assistants to perform clinical interpretation of chest radiographs without physician oversight? In states where physician oversight is required for clinical interpretation, is it also required for ILO classification? What would be the best approach to ensuring that appropriate clinical interpretations are obtained for all contemporary chest radiographs undergoing ILO classification by nurse practitioners and physician assistants?

5. How do you anticipate different interested parties (*e.g.,* physicians, nurse practitioners and physician assistants, industry representatives, workers, health profession boards) would view the potential expansion of the B Reader program to include non-physicians?

6. What challenges might arise during the implementation of this expansion, and how could they be effectively managed?

7. Do you have any other information or comments relevant to whether nurse practitioners and physician assistants should be able to become B Readers and, if so, the best way to implement that expansion?

John J. Howard,

Director, National Institute for Occupational Safety and Health, Centers for Disease Control and Prevention, Department of Health and Human Services.

[FR Doc. 2024–29622 Filed 12–16–24; 8:45 am]

BILLING CODE 4163–18–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

Solicitation of Nominations for Appointment to the Clinical Laboratory Improvement Advisory Committee

AGENCY: Centers for Disease Control and Prevention (CDC), Department of Health and Human Services (HHS).

ACTION: Notice.

SUMMARY: In accordance with the Federal Advisory Committee Act, the Centers for Disease Control and Prevention (CDC), within the Department of Health and Human Services (HHS), is seeking nominations for membership on the Clinical Laboratory Improvement Advisory Committee (CLIAC). CLIAC, consisting of up to 20 members including the Chair, represents a diverse membership across laboratory specialties, professional roles (laboratory management, technical specialists, physicians, nurses), and practice settings (academic, clinical, public health), and includes a consumer representative.

DATES: Nominations for membership on CLIAC must be received no later than July 1, 2025. Packages received after this time will not be considered for the current membership cycle.

ADDRESSES: All nominations should be emailed to *CLIAC@cdc.gov.*

FOR FURTHER INFORMATION CONTACT: Heather Stang, M.S., Senior Advisor for Clinical Laboratories, Division of Laboratory Systems, Office of Laboratory Systems and Response, Centers for Disease Control and Prevention, 1600 Clifton Road NE, Mailstop H24–2, Atlanta, Georgia 30329–4027. Telephone: (404) 498–2769; Email: *HStang@cdc.gov.*

SUPPLEMENTARY INFORMATION: Nominations are sought for individuals who have the expertise and qualifications necessary to contribute to the accomplishment of the objectives of the Clinical Laboratory Improvement Advisory Committee (CLIAC). Nominees will be selected based on expertise in the fields of microbiology (including bacteriology, mycobacteriology, mycology, parasitology, and virology), immunology (including histocompatibility), chemistry, hematology, pathology (including histopathology and cytology), or genetic testing (including cytogenetics); from representatives in the fields of medical technology, bioinformatics, public health, and clinical practice; and from consumer representatives. Selection of members is based on candidates' qualifications to contribute to the accomplishment of CLIAC objectives (*https://www.cdc.gov/cliac/php/about/index.html*). Members may be invited to serve up to four-year terms.

Department of Health and Human Services (HHS) policy stipulates that committee membership be balanced in terms of points of view represented and the committee's function. Appointments shall be made without discrimination on the basis of age, race, ethnicity, gender, sexual orientation, gender identity, HIV status, disability, and cultural, religious, or socioeconomic status. Nominees must be U.S. citizens and cannot be full-time employees of the U.S. Government. Current participation on Federal workgroups or prior experience serving on a Federal advisory committee does not disqualify a candidate; however, HHS policy is to avoid excessive individual service on advisory committees and multiple committee memberships. Committee members are Special Government Employees, requiring the filing of financial disclosure reports at the beginning of and annually during their terms. The Centers for Disease Control and Prevention (CDC) reviews potential candidates for CLIAC membership each year and provides a slate of nominees for consideration to the Secretary of HHS for final selection. HHS notifies selected candidates of their appointment near the start of the term in July or as soon as the HHS selection process is completed. Note that the need for different expertise varies from year to year and a candidate who is not selected in one year may be reconsidered in a subsequent year.

Candidates should submit the following items:

- Current curriculum vitae, including complete contact information (telephone numbers, mailing address, email address).
- At least one letter of recommendation from person(s) not employed by HHS. Candidates may submit letter(s) from current HHS employees if they wish, but at least one letter must be submitted by a person not employed by an HHS agency (*e.g.,* CDC, National Institutes of Health, Food and Drug Administration).

Nominations may be submitted by the candidate or by the person/organization recommending the candidate.

The Director, Office of Strategic Business Initiatives, Office of the Chief Operating Officer, Centers for Disease Control and Prevention, has been delegated the authority to sign **Federal Register** notices pertaining to announcements of meetings and other committee management activities, for both the Centers for Disease Control and Prevention and the Agency for Toxic Substances and Disease Registry.

Kalwant Smagh,

Director, Office of Strategic Business Initiatives, Office of the Chief Operating Officer, Centers for Disease Control and Prevention.

[FR Doc. 2024–29646 Filed 12–16–24; 8:45 am]

BILLING CODE 4163–18–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

Notice of Closed Meeting

In accordance with 5 U.S.C. 1009(d), the Centers for Disease Control and Prevention (CDC) announces the following meeting.

The meeting will be closed to the public in accordance with the provisions set forth in sections 552b(c)(4) and 552b(c)(6), Title 5 U.S.C., as amended, and the Determination of the Director, Office of Strategic Business Initiatives, Office of the Chief Operating Officer, CDC, pursuant to Public Law 92–463.

Name of Committee: Safety and Occupational Health Study Section (SOHSS), National Institute for Occupational Safety and Health (NIOSH).

Dates: February 4–5, 2025.

Times: 11 a.m.–5 p.m., EST.

Place: Teleconference.

Agenda: The meeting will convene to address matters related to the conduct of Study Section business and for the Study Section to consider safety and occupational health-related grant applications.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Medicare & Medicaid Services

[Document Identifiers: CMS–10765]

Agency Information Collection Activities: Proposed Collection; Comment Request

AGENCY: Centers for Medicare & Medicaid Services, Health and Human Services (HHS).

ACTION: Notice.

SUMMARY: The Centers for Medicare & Medicaid Services (CMS) is announcing an opportunity for the public to comment on CMS' intention to collect information from the public. Under the Paperwork Reduction Act of 1995 (PRA), federal agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information (including each proposed extension or reinstatement of an existing collection of information) and to allow 60 days for public comment on the proposed action. Interested persons are invited to send comments regarding our burden estimates or any other aspect of this collection of information, including the necessity and utility of the proposed information collection for the proper performance of the agency's functions, the accuracy of the estimated burden, ways to enhance the quality, utility, and clarity of the information to be collected, and the use of automated collection techniques or other forms of information technology to minimize the information collection burden.

DATES: Comments must be received by February 18, 2025.

ADDRESSES: When commenting, please reference the document identifier or OMB control number. To be assured consideration, comments and recommendations must be submitted in any one of the following ways:
