SBA proposed to amend § 126.605 to clarify that this section describes circumstances under which a contracting officer is prohibited from soliciting a requirement as a HUBZone contract. The proposed rule changed the words ''may not'' to ''shall not'' to clarify that a contracting officer does not have discretion to award a HUBZone contract in those specified instances. SBA did not receive any comments on this proposed amendment and implements it as proposed.

Section 126.612

SBA proposed to amend § 126.612 by adding a new paragraph (f) providing that the awardee of a HUBZone sole source contract must be an eligible HUBZone small business concern on the date of award. This has always been the policy for the 8(a) Business Development program (*see* § 124.501(h)), and SBA is trying to make its socioeconomic programs as consistent as possible. SBA received two comments on this section, both of which opposed the change. One commenter believed that annual recertification should be sufficient, because compliance with the 35% requirement can change from one day to another. The second commenter argued that firms lack control over the timing of awards, so they may maintain artificially high staffing overhead while an award is pending, which could ultimately discourage program use. As noted in the discussion pertaining to § 126.601(f) above, because of the restrictive nature of HUBZone sole source contracts, SBA believes that the eligibility for such contracts should also be restrictive. Because of that and SBA's priority to make its contracting programs as uniform as possible, the final rule requires eligibility for sole source HUBZone contracts on the date of award. A firm must not merely be a certified HUBZone small business concern on the date of award for a HUBZone sole source contract, it must actually still meet all HUBZone eligibility requirements. The final rule adds clarifying language to provide that a contracting officer may rely on the firm's status as a certified HUBZone small business concern in awarding a sole source HUBZone contract, but if there is a status protest relating to the apparent successful offeror, SBA will determine whether that firm continues to meet the HUBZone eligibility requirements. Because of the addition of that language, the final rule renumbers the paragraphs contained in § 126.612, with proposed § 126.612(f) becoming § 126.612(a)(6) in the final rule.

Section 126.613

SBA proposed to amend § 126.613, which addresses the HUBZone price evaluation preference (PEP), to clarify how the HUBZone PEP should be applied. The proposed rule explained that to apply the HUBZone PEP, a contracting officer must add 10% to the offer of the otherwise successful large business offeror. Then, if the certified HUBZone small business concern's offer is lower than that of the large business after the HUBZone PEP is applied, the certified HUBZone small business concern must be deemed the lowest-priced offeror. The proposed rule added a sentence specifying that the HUBZone price evaluation preference does not apply where the initial lowest responsive and responsible offeror is a small business concern. It also added language specifying that the HUBZone price evaluation preference does not apply if the certified HUBZone small business concern will receive the contract as part of a reserve for certified HUBZone small business concerns. However, the HUBZone price evaluation preference does apply to the non-reserved portion of a full and open multiple award contract.

The proposed rule also added clarifying language to Example 1 explaining that a non-HUBZone small business concern is not affected by the application of the HUBZone PEP where such non-HUBZone small business is not the lowest offeror prior to the application of the preference. This is because the HUBZone PEP is intended neither to harm nor to benefit a non-HUBZone small business.

The proposed rule amended Example 2 by specifying that, in the example, after the application of the HUBZone PEP, the HUBZone small business concern's offer is not lower than the offer of the large business (*i.e.,* $103 is not lower than $102.3 ($93 × 110%)).

The proposed rule amended Example 3 to clarify that a contracting officer should not apply the HUBZone PEP where the lowest, responsive, responsible offeror is a small business concern, even if a large business concern submitted an offer.

In addition, the proposed rule clarified how the PEP should be applied to a procurement using trade off procedures. The proposed rule stated that for a procurement using trade off procedures, the contracting officer must first apply the 10% price preference to the offers of any large businesses and then determine which offeror represents the best value to the Government, in accordance with the terms of the solicitation. Where, after considering the price adjustment, the offer of the certified HUBZone small business is determined to be the best value to the Government, award shall be made to the certified HUBZone small business concern. Where evaluation points are given to both the price and technical aspects of an offer and the total evaluation points received by a certified HUBZone small business concern is equal to or greater than the total evaluation points received by a large business after considering the price adjustment, award shall be made to the certified HUBZone small business concern.

SBA received four comments on this section. Several commenters suggested that SBA should explicitly state that the HUBZone PEP applies to all full and open procurements, including those involving orders issued under Indefinite Delivery/Indefinite Quantity (IDIQ) contracts and other procurement vehicles. SBA notes that the HUBZone PEP is a statutory requirement, and thus

SBA does not have the discretion to expand the HUBZone PEP to orders under IDIQ contracts without Congressional action. In general, the commenters agreed with the proposed clarifications on how the HUBZone PEP should be applied, including the examples provided by SBA. One commenter asked for clarification as to whether the applicable limitation on subcontracting and the nonmanufacturer rule applied to contracts for which a certified HUBZone small business concern received the benefit of the HUBZone PEP. Section 126.600(c) specifies that awards through full and open competition after the HUBZone price evaluation preference is applied to an other than small business in favor of a certified HUBZone small business is a HUBZone contract. Since the limitations on subcontracting and the nonmanufacturer rule apply to all HUBZone contracts as they do generally for all small business contracts, they apply to unrestricted contracts where a HUBZone PEP is used. SBA does not believe a specific regulatory provision stating that is needed. Several commenters requested further clarification regarding the application of the HUBZone PEP to mentor-protégé joint ventures, particularly when a large business mentor is performing a significant portion (*e.g.,* 60%) of the contract. They questioned whether it is appropriate to give the large business mentor a price evaluation preference over another large business competing for the same contract, as this could create an unfair advantage and dilute the intent of the HUBZone PEP. SBA agrees that one large business should not be receiving a PEP against another large business. The final rule clarifies that a HUBZone PEP does not apply to a HUBZone joint venture consisting of a certified HUBZone small business concern and its other than small mentor.

Section 126.615

SBA proposed to amend § 126.615 by adding a reference to § 125.9 to clarify that large businesses may participate in HUBZone procurements by serving as SBA-approved mentors under SBA's mentor-protégé program, and by correcting the cross-reference to the limitations on subcontracting. SBA did not receive any comments on this proposed amendment but changes the words ''large business'' to ''other than small business'' in the final rule to reflect SBA's general terminology.

Section 126.616

SBA proposed to amend § 126.616, which describes the circumstances under which a joint venture can be awarded a HUBZone contract. The proposed rule deleted language from current § 126.616(a)(1) stating that a ''joint venture itself need not be a certified HUBZone small business concern.'' SBA proposed to delete this language because it implies that a joint venture could be HUBZone-certified, when in fact the HUBZone program does not certify joint ventures under any circumstances. Instead, proposed § 126.616(a)(1) clarified that SBA does not certify HUBZone joint ventures, but provided that a joint venture should be designated as a HUBZone joint venture in SAM (or successor system), with the HUBZone-certified joint venture partner identified. The proposed rule added a new paragraph (k) providing that a procuring agency may only receive HUBZone credit for an award to a HUBZone joint venture where the joint venture complies with the requirements in § 126.616.

SBA received two comments on this proposed amendment. One commenter supported this change without substantive comment. The second commenter stated that joint ventures should not lose an award if they are not designated in SAM. SBA notes that all offerors, including joint venturers must be registered in SAM at the time of offer. SBA implements this section as proposed.

Section 126.619

As discussed above, this final rule moves all recertification requirements for size and socioeconomic status to a new § 125.12. Section 126.619 refers to the requirements set forth in § 125.12 as applying to recertifications of HUBZone status.

Section 126.701

SBA proposed to amend § 126.701 by removing the words ''these subcontracting percentages'' in the section heading and adding in their place the words ''the limitations on subcontracting'' to clarify the content of the section. SBA received no comments on this proposed revision and adopts it as final in this rule.

Section 126.800

SBA proposed to revise § 126.800 to make the section more readable, to clarify that interested parties may protest a HUBZone joint venture offeror's eligibility for award of a HUBZone contract, and to add a paragraph providing that SBA may protest an apparent successful offeror's status as a certified HUBZone small business concern on a non-HUBZone contract. SBA believes that where there is evidence that a prospective awardee claiming status as a certified HUBZone small business does not meet the HUBZone requirements, there should be the ability to protest the firm's HUBZone status, even for a non-HUBZone award. This will prevent an agency from receiving HUBZone credit where the awardee is not eligible for the program. SBA received no comments on this proposed revision and makes minor wording changes to clarify that for other than HUBZone contracts, any offeror for that contract, the contracting officer or SBA may protest an apparent successful offeror's status as a certified HUBZone small business concern.

Section 126.801

In response to the change made to § 126.601(a) requiring a HUBZone small business to be eligible for a HUBZone contract as of the date of its initial offer, the proposed rule made corresponding changes to § 126.801, to recognize that the date of offer would be the relevant date for protesting a HUBZone small business concern's eligibility for award of a HUBZone contract. SBA received no comments on this proposed revision. The final rule adopts the proposed language and adds clarifying language regarding timeliness and where a HUBZone status protest should be filed. The final rule clarifies that an interested party other than a contracting officer or SBA must submit its written protest to the contracting officer. The contracting officer must then forward that protest to SBA at *hzprotests@sba.gov*. A contracting officer can initiate his/her own HUBZone status protest by filing a protest with SBA at that same email address. The final rule also specifies in the general section the current policy that a protest by a contracting officer or SBA challenging the HUBZone status of an apparent successful offeror on a HUBZone contract or of an awardee on a HUBZone contract is always timely. It cannot be premature (*i.e.,* before an apparent awardee has been selected), but it can be at any point after that.

Section 126.803

SBA proposed to amend § 126.803 by revising paragraph (a), which explains the date that will be used to determine a firm's HUBZone eligibility if it is the subject of a HUBZone status protest. Consistent with the proposed requirement that a firm be eligible on the date of offer for a competitive HUBZone contract, proposed § 126.803(a) provided that for all HUBZone contracts other than HUBZone sole source awards, SBA shall determine a protested firm's HUBZone eligibility as of the date of its initial offer that includes price. The proposed

rule provided that for HUBZone sole source awards, SBA would determine a protested firm's HUBZone eligibility as of the date of award.

SBA also proposed to add a new paragraph to § 126.803 providing that the burden of proof to demonstrate eligibility is on the protested concern. This paragraph explained that if a concern does not provide information requested by SBA within the allotted time provided, or if it submits incomplete information, SBA may draw an adverse inference and presume that the information that the applicant failed to provide would demonstrate ineligibility and sustain the protest on that basis. These policies are explained in SBA's protest notification letters, and SBA believes they should also appear in the protest regulations. SBA received no comments on these proposed revisions and adopts them in this final rule. In addition, this final rule adds a paragraph specifying that for two-step or two-phase procurements, SBA will determine the HUBZone small business concern's eligibility as of the date that it submits its initial bid or proposal (which may or may not include price) during phase one. This is to align with § 126.601(e), which addresses two-step procurements.

Section 126.900

SBA proposed to amend § 126.900 by adding a new paragraph (e)(4) providing that if SBA discovers that false or misleading information has been knowingly submitted by a small business concern in order to obtain or maintain HUBZone certification, SBA will propose the firm for decertification. SBA received fifteen comments on this section, all of which were supportive. SBA adopts this proposed revision as final in this rule.

Sections 127.200 and 128.200

In order to be eligible for the 8(a) BD program, SBA requires socially and economically disadvantaged individuals to reside in the United States. *See* 13 CFR 124.101. There currently is not a similar requirement for the WOSB or VetCert programs. SBA believes that qualifying individuals should reside in the United States to more adequately advance the purposes of the programs. The proposed rule added a United States residency requirement for qualifying individuals in the WOSB and VetCert programs. SBA received two comments supporting these proposals without substantive comment and adopts the proposed rule as final.

Section 127.400

Section 127.400 provides guidance as to how a concern can maintain its WOSB or EDWOSB certification. Current § 127.400(b) specifies that a concern must either request a program examination from SBA or notify SBA that it has requested a program examination from a third-party certifier no later than 30 days prior to its certification anniversary. In order to provide consistency between the programs, this rule states that a concern must either recertify with SBA or notify SBA that it has completed a program examination from a third party certifier in the 90 calendar days prior to its certification anniversary. This rule also revises the example set forth in the regulations to take into account the change from 30 days to 90 days.

Section 134.1104

Section 134.1104 sets forth the time limits a VOSB or SDVOSB must appeal an adverse determination finding it ineligible for the VetCert program to SBA's Office of Hearings and Appeals (OHA). Currently, § 134.1104 requires an appeal to be filed within 10 business days of receipt of the denial. When an application for the 8(a) BD program is denied, a firm has 45 days from the date it receives the Agency decision to file an appeal with OHA. *See* 13 CFR 124.206(b). SBA is in the process of establishing a uniform application processing system. That system will allow a firm to simultaneously apply for multiple certifications for which it believes it is eligible. If a firm applied for 8(a) and VetCert certification at the same time and was denied for both programs, the current regulations would require the firm to appeal its VetCert denial withing 10 days while not being required to file its 8(a) eligibility appeal for 45 days. SBA believes that may be confusing to affected applicants and that there should be consistency in the appeal process. As such, this rule changes the time to file an appeal for the VetCert program to 45 days.

Compliance With Executive Orders 12866, 12988, 13132, 13563, the Congressional Review Act (5 U.S.C. 801–808), the Paperwork Reduction Act (44 U.S.C. Ch. 35), and the Regulatory Flexibility Act (5 U.S.C. 601–612):

Executive Orders 12866, 13563 and 14904

Executive Order 12866, ''Regulatory Planning and Review,'' directs agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Executive Order 13563, ''Improving Regulation and Regulatory Review,'' emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. Executive Order 14094, ''Modernizing Regulatory Review,'' amends section 3(f) of Executive Order 12866 and supplements and reaffirms the principles, structures and definitions governing contemporary regulatory review established in Executive Order 12866 and Executive Order 13563. The OMB Office of Information and Regulatory Affairs (OIRA) has determined that this rule is a significant regulatory action and, therefore, it was reviewed under subsection 6(b) of E.O. 12866.

Regulatory Impact Analysis

1. Is there a need for the regulatory action?

This regulatory action clarifies and streamlines SBA's regulations governing the HUBZone Program and other contracting assistance programs. In 2019, SBA published a comprehensive revision to the HUBZone Program regulations, which implemented changes intended to make these regulations easier to understand and implement. This rule is intended to further clarify and improve policies surrounding some of those changes to ensure that the HUBZone program fulfills its statutory purpose. In addition, SBA has heard from small businesses of a desire for consistency among its contracting assistance programs in order to relieve burdens associated with compliance with multiple programs. As a result, the rule makes several improvements to create uniformity among the programs, including deleting the program-specific recertification requirements contained separately in SBA's size, 8(a) BD, HUBZone, WOSB, and VetCert and moving them to a new section that would cover all size and status recertification requirements.

2. What are the incremental benefits and costs of this regulatory action?

This rule benefits program participants by reducing burdens and increasing consistency with other contracting programs while changing or adding some compliance requirements that strengthen the program's impact and reduce the potential for business policies and practices that are contrary to the goals of the HUBZone program. The reduction of burdens includes the

decrease in the time of proof of residence for employees, removal of the 90-day wait period for reapplication after decertification, revisions to the part of the rule that addresses Governor-designated covered areas, a change in the negative-control rule in SBA's affiliation rule, deletion of program-specific requirements for certification, and triennial instead of annual recertification. Compliance requirements include limits on the number of Legacy Employees, revised requirements for the use of the ''attempt to maintain'' statutory language, and proof of eligibility at the time of offer of a HUBZone contract. These compliance measures are consistent with the program's goal of promotion of growth and impact of small businesses in historically underutilized areas and SBA believes, as outlined below, that they are not substantial burdens.

Benefits

The decrease from 180 days to 90 days for proof of employees' residency allows for firms to enter the HUBZone program more quickly and increases opportunities for newly-hired employees. Both of these results increase accessibility of the program's opportunities. Removal of the 90-day wait period for decertified firms also promotes the program's accessibility because SBA has found that a shorter wait period is consistent with firms' ability to qualify or return to compliance by hiring HUBZone residents or by moving to a newly-designated HUBZone.

The restatement of § 126.104 clarifies existing policy on Governor-designated covered areas, including the condition for annual petitions and a statement of no need for SBA's approval of previously designated covered areas. This restatement decreases uncertainty for firms that participate or plan to participate in the program. The restatement also authorizes the Associate Administrator for Government Contracting and Business Development, or designee, instead of the Administrator to approve covered areas, which will reduce time to approve a petition and facilitate entry into the program.

Amendments to regulations on affiliation will remove inconsistencies with other programs' regulations. The benefit of the amendments is more certainty on measures that minority-share investors can include to protect their investments without a finding of control. This rule further reduces uncertainty in this matter by applying the same language to the 8(a) BD, WOSB and VetCert programs. SBA expects the changes in regulations on affiliation and control and increased consistency among programs to improve the environment for access to capital for small businesses in contracting assistance programs.

The rule returns the HUBZone program to triennial recertification and deletes program-specific recertification requirements. Both of these changes alleviate the burden associated with recertification. With recertification taking about an hour to complete, SBA estimates that the change to triennial recertification will result in an annual reduction in the time burden from recertification of approximately 2,468 hours and about $326,911 in annual savings. SBA has seen a downward trend in the number of HUBZone firms over the years, with lateness in annual recertification as one reason for the trend, so a reduction in this recertification burden may increase the number of HUBZone program participants and, consequently, result in wider economic benefits generated by more HUBZone firms in communities. Deletion of program-specific recertification requirements will also reduce time in recertification. In 2023, SBA sampled several years of data to estimate that about 10% of the firms in the HUBZone program were also in the WOSB program and 15% in the 8(a) program. The eliminated recertification procedures from uniform certification will reduce the time burden by an estimated 617 hours and generate an additional $81,728 in annual savings.

Revisions in Compliance Measures

This final rule revises § 126.200(d)(3) to allow HUBZone firms to retain employees who have move out of a HUBZone but proposes a limitation on the number of these Legacy HUBZone Employees. This is an attempt to balance the needs of employees who move for personal reasons or for professional development with the aims of the program to promote business activity in specific areas. The limitation is a potential source of burden on small business entities but is offset by the economic development from employment of HUBZone residents.

SBA is also adjusting the threshold of 20 percent of employees for ''attempt to maintain'' currently in § 126.500(a)(2) with 35 percent. This increased threshold is a stronger standard but the procedures for demonstrating compliance are not different. Any resulting costs should be balanced against SBA's assessment that HUBZone goals are not sufficiently fulfilled by implementation of the current requirement of 20 percent.

This rule requires any certified HUBZone small business to be eligible as of the date of offer for any HUBZone contract. In Federal Procurement Data System (FPDS) data from previous years, approximately 2,100 new HUBZone contracts were awarded in a fiscal year. SBA estimates it takes approximately 1 hour for a firm to gather proof that it is eligible at the time of offer. Thus, this rule will increase the burden on HUBZone small business concerns by approximately 2,100 hours for an estimated annual cost of $278,166. SBA notes that the number of firms in the program has decreased over the past few years and this number of 2,100 may therefore be too high. SBA also notes that a specific small business entity incurs this burden only when a contract is offered and that, in the aggregate, the burden is balanced by the benefits of consistency of this provision with other contracting programs and maintenance of standards for the integrity of the HUBZone program.

Summary

The changes in this rule clarify and streamline regulations and increase consistency with other contracting programs. Many of the benefits are not quantifiable, but SBA estimates annual savings of about $408,639 from reduced frequency of recertification. Benefits from the changes regarding affiliation and control reduce uncertainty for investors and will therefore have a significant impact on access to capital. The rule contains measures that introduce or strengthen some compliance requirements but these are balanced by the need to maintain the goals and integrity of the program. The one quantifiable burden noted in these compliance measures is proof of eligibility at the time of offer and this is a cost only when the benefit of the offer is present.

3. What are the alternatives to this rule?

SBA considered alternatives to each of the significant changes made by this rule. Instead of requiring HUBZone firms to recertify every three years and be eligible at the time of offer, SBA considered maintaining the current requirement where annual recertification allows a concern to seek and be eligible for HUBZone contracts for a year. However, SBA has found that the annual recertification requirement does not fulfill the purposes of the HUBZone program as effectively as requiring firms to be eligible at the time of offer for HUBZone contracts. Moreover, SBA believes that uniformity among its contracting programs is an important goal, and returning to

triennial recertification and eligibility determinations based on the date of offer would bring the HUBZone program much more in line with SBA's other small business and socioeconomic contracting programs.

This regulatory action is needed to clarify and improve SBA's regulations governing the HUBZone Program and SBA's other socioeconomic contracting programs. In 2019, SBA published a comprehensive revision to the HUBZone Program regulations, which implemented changes intended to make the HUBZone Program more efficient and effective. This rule is intended to clarify and improve policies surrounding some of those changes. The clarifications and improvements are needed to ensure that the rules governing the HUBZone program fulfill its statutory purpose. In addition, SBA has heard from the small business community that improvements are needed to make its socioeconomic contracting programs more uniform, in order to relieve burdens associated with compliance with multiple programs. As a result, this final rule makes several improvements to create uniformity among the programs, including deleting the program specific recertification requirements contained separately in SBA's size, 8(a) BD, HUBZone, WOSB, and VetCert and moving them to a new section that would cover all size and status recertification requirements.

Executive Order 13132

For the purposes of Executive Order 13132, Federalism, SBA has determined that this rule will not have substantial, direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, for the purpose of Executive Order 13132, Federalism, SBA has determined that this rule has no federalism implications warranting preparation of a federalism assessment.

Paperwork Reduction Act, 44 U.S.C. Ch. 35

This rule does not impose additional reporting or recordkeeping requirements under the Paperwork Reduction Act, 44 U.S.C. Chapter 35.

In 2019, SBA revised its regulations to give contracting officers discretion to request information demonstrating compliance with the limitations on subcontracting requirements. *See* 84 FR 65647 (Nov. 29, 2019). In conjunction with this revision, SBA requested an Information Collection Review by OMB (Limitations on Subcontracting Reporting, OMB Control Number 3245–0400). OMB approved the Information Collection. This rule does not alter the contracting officer's discretion to require a contractor to demonstrate its compliance with the limitations on subcontracting at any time during performance and upon completion of a contract. The estimated number of respondents, burden hours, and costs remain the same as that identified by SBA in the previous Information Collection. As such, SBA believes this provision is covered by its existing Information Collection, Limitations on Subcontracting Reporting.

Regulatory Flexibility Act, 5 U.S.C. 601–612

According to the Regulatory Flexibility Act (RFA), 5 U.S.C. 601, when an agency issues a rulemaking, it must prepare a regulatory flexibility analysis to address the impact of the rule on small entities. However, section 605 of the RFA allows an agency to certify a rule, in lieu of preparing an analysis, if the rulemaking is not expected to have a significant economic impact on a substantial number of small entities. The RFA defines ''small entity'' to include ''small businesses,'' ''small organizations,'' and ''small governmental jurisdictions.'' This final rule concerns various aspects of SBA's HUBZone program, as well as its size, 8(a) BD, WOSB, and VetCert programs. As such, the rule relates to small businesses but would not affect ''small organizations'' or ''small governmental jurisdictions.''

The rule changes clarify and streamline regulations and increase consistency with other contracting programs. Many of the benefits are not quantifiable, but SBA estimates annual savings of about $408,639 from reduced frequency of HUBZone recertification. There are approximately 5,000 small businesses that are listed as certified HUBZone small businesses in DSBS, and under the proposed rule, these firms would only need to recertify every three years, rather than every year. Benefits from the proposed changes regarding affiliation and control reduce uncertainty for investors and may therefore improve access to capital. The rule contains measures that introduce or strengthen some compliance requirements, but these are balanced by the need to maintain the goals and integrity of the program. The one quantifiable burden noted in these proposed compliance measures is proof of HUBZone eligibility at the time of offer and this is a cost only when the benefit of the offer is present. Moreover, this burden is counterweighed by the benefit of making the HUBZone program more consistent with SBA's other socioeconomic contracting programs, which decreases the amount of regulations that small businesses must learn and understand in order to participate in SBA's programs. The other changes that make the programs more consistent, such as consolidating the regulations related to recertification of size and status, only serve to benefit the small businesses that participate in these programs. Based on the foregoing, SBA does not believe that the proposed amendments would have a disparate impact on small businesses or would impose any additional significant costs. For the reasons discussed, SBA certifies that this proposed rule would not have a significant economic impact on a substantial number of small entities.

List of Subjects

13 CFR Part 121

Administrative practice and procedure, Government procurement, Government property, Grant programs—business, Individuals with disabilities, Loan programs—business, Small businesses.

13 CFR Part 124

Administrative practice and procedure, Government procurement, Government property, Small businesses.

13 CFR Part 125

Government contracts, Government procurement, Reporting and recordkeeping requirements, Small businesses, Technical assistance.

13 CFR Part 126

Administrative practice and procedure, Government procurement, Penalties, Reporting and recordkeeping requirements, Small businesses.

13 CFR Part 127

Government contracts, Reporting and recordkeeping requirements, Small businesses.

13 CFR Part 128

Government contracts, Government procurement, Reporting and recordkeeping requirements, Small businesses Technical assistance, Veterans.

13 CFR Part 134

Administrative practice and procedure, Claims, Confidential business information, Equal access to justice, Equal employment opportunity, Lawyers, Organization and function (Government agencies).

Accordingly, for the reasons stated in the preamble, SBA amends 13 CFR parts

121, 124, 125, 126, 127, 128, and 134 as follows:

PART 121—SMALL BUSINESS SIZE REGULATIONS

■ 1. The authority citation for part 121 continues to read as follows:

Authority: 15 U.S.C. 632, 634(b)(6), 636(a)(36), 662, and 694a(9).

■ 2. Amend § 121.103 by revising paragraphs (a)(3), (h)(3) introductory text, and (h)(3)(i), and adding a new adding paragraph (h)(3)(v), to read as follows:

§ 121.103 How does SBA determine affiliation?

(a) * * *

(3) Control may be affirmative or negative. Negative control includes, but is not limited to, instances where a minority shareholder has the ability, under the concern's charter, by-laws, or shareholder's agreement, to prevent a quorum or otherwise block action by the board of directors or shareholders. However, SBA will not find that a minority shareholder has negative control where such minority shareholder has the authority to block action by the board of directors or shareholders regarding the following extraordinary circumstances:

(i) Adding a new equity stakeholder or increasing the investment amount of an equity stakeholder;

(ii) Dissolution of the company;

(iii) Sale of the company or all assets of the company;

(iv) The merger of the company;

(v) The company declaring bankruptcy;

(vi) Amendment of the company's corporate governance documents to remove the shareholder's authority to block any of (a)(3)(i) through (v); and

(vii) Any other extraordinary action that is crafted solely to protect the investment of the minority shareholders, and not to impede the majority's ability to control the concern's operations or to conduct the concern's business as it chooses.

* * * * *

(h) * * *

(3) *Ostensible subcontractors and unduly reliant managing joint venture partners.* (i) An offeror is ineligible as a small business concern, an 8(a) small business concern, a certified HUBZone small business concern, a WOSB/EDWOSB concern, or a VOSB/SDVOSB concern where SBA determines there to be an ostensible subcontractor. An ostensible subcontractor is a subcontractor that is not a similarly situated entity, as that term is defined in § 125.1 of this chapter, and performs primary and vital requirements of a contract, or of an order, or is a subcontractor upon which the prime contractor is unusually reliant.

* * * * *

(v) A joint venture offeror is ineligible as a small business concern, an 8(a) small business concern, a certified HUBZone small business concern, a WOSB/EDWOSB concern, or a VO/SDVO small business concern where SBA determines that the managing joint venture partner will not perform 40% of the work to be performed by the joint venture.

* * * * *

■ 3. Amend § 121.104 by revising paragraph (a)(1) to read as follows:

§ 121.104 How does SBA calculate annual receipts?

(a) * * *

(1) SBA will consider and generally rely on a concern's Federal income tax return and any amendments filed with the IRS on or before the date of self-certification to determine the size status of the concern. Where a concern may legally exclude certain revenue for tax purposes, SBA will not include that revenue in its analysis. However, SBA may consider other relevant information where there is reasonable basis to believe the tax filings are false.

* * * * *

■ 4. Revise § 121.404 to read as follows:

§ 121.404 When is the size status of a business concern determined?

(a) *General.* A concern, including its affiliates, must qualify as small under the NAICS code assigned to a contract as of the date the concern submits a written self-certification that it is small to the procuring activity as part of its initial offer or response which includes price. Once awarded a contract as a small business, a firm is generally considered to be a small business throughout the life of that contract.

(b) *Multiple Award Contracts.* (1) If a single NAICS code is assigned to a multiple award contract as set forth in § 121.402(c)(1)(i), SBA determines size status for the underlying multiple award contract as of the date a business concern submits its initial offer (or other formal response to a solicitation), which includes price, for the contract based upon the size standard set forth in the solicitation for the multiple award contract.

(2) When multiple NAICS codes are assigned to a multiple award contract as set forth in § 121.402(c)(1)(ii), SBA determines size status for the underlying multiple award contract for each discrete category for which an offer is submitted, by applying the size standard corresponding to each discrete category, as of the date a business concern submits its initial offer which includes price for the contract.

(3) Where concerns are not required to submit price as part of the initial offer for a multiple award contract, SBA determines size status for the underlying multiple award contract as of the date a business concern submits its initial offer for the contract, which may not include price.

(c) *Orders and Agreements Established Against Multiple Award Contracts*—(1) *Unrestricted Contracts.* Where an order is set-aside for small business under an unrestricted multiple award contract, SBA determines size status for each order placed against the multiple award contract as of the date a business concern submits its initial offer (or other formal response to a solicitation), which includes price, for each order.

(2) *Set-Aside or Reserved Contracts.* Where an order is issued under a multiple award contract that itself was set aside or reserved for small business (*i.e.,* small business set-aside, 8(a) small business, service-disabled veteran-owned small business, HUBZone small business, or women-owned/economically-disadvantaged women-owned small business), SBA determines size status as of the date a business concern submits its initial offer, which includes price, for the set-aside or reserved multiple award contract, unless a contracting officer requests size recertification with respect to a specific order.

(i) Where a contracting officer requests size recertification with respect to a specific order, size is determined as of the date the business concern submits its initial offer (or other formal response to a solicitation), which includes price, for the order.

(ii) Where a contracting officer requests size recertification with respect to a specific order, size is determined only with respect to that order. Where a contract holder has grown to be other than small and cannot recertify as small for a specific order for which a contracting officer requested recertification, it may continue to qualify as small for other orders issued under the contract where a contracting officer does not request recertification.

(3) *Agreements.* With respect to agreements established under FAR part 13, size is determined as of the date the business concern submits its initial offer, which includes price, for the agreement. Because an agreement is not a contract, the concern must also qualify as small as of the date the concern

submits its initial offer, which includes price, for each order issued pursuant to the agreement to be considered small for the order.

(4) *Exceptions.* (i) For orders or BPAs to be placed against the GSA Federal Supply Schedule (FSS) Multiple Award Schedule (MAS) contract, size is determined as of the date the business concern submits its initial offer, which includes price, for the GSA FSS MAS contract.

(ii) For 8(a) sole source orders issued under a multiple award contract, size is determined in accordance with § 124.503(i)(1)(iv) of this chapter, as of the date the order is offered to the 8(a) BD program, regardless of whether the multiple award contract is unrestricted, set-aside, or the GSA FSS MAS contract.

(iii) Size is determined on the date of recertification when a recertification is required pursuant to §§ 125.12(a) and (b) of this chapter, or on the date of initial offer which includes price if requested by a contracting officer pursuant to § 125.12(c). This exception applies to all provisions of §§ 121.404(a), (b), (c), and (d).

(d) *Eligibility for SBA programs.* A concern applying to be certified as a Participant in SBA's 8(a) Business Development program (under part 124, subpart A, of this chapter), as a HUBZone small business concern (under part 126 of this chapter), as a women-owned small business concern (under part 127 of this chapter), or as a service-disabled veteran-owned small business concern (under part 128 of this chapter) must qualify as a small business as of the date of its application and, where applicable, the date the SBA program office requests a formal size determination in connection with a concern that otherwise appears eligible for program certification. For the 8(a) Business Development program, a concern must qualify as small under the size standard corresponding to its primary industry classification. For all other certification programs, a concern must qualify as small under the size standard corresponding to any NAICS code listed in its SAM profile. SBA will accept a concern's size representation in SAM, or successor system, unless there is evidence indicating that the concern is other than small. SBA will request a formal size determination pursuant to § 121.1001(b)(8) where any information it possesses calls into question the SAM size representation.

(e) *Certificates of competency.* The size status of an applicant for a Certificate of Competency (COC) relating to an unrestricted procurement is determined as of the date of the concern's application for the COC.

(f) *Nonmanufacturer rule, ostensible subcontractor rule, and joint venture agreements.* Compliance with the nonmanufacturer rule set forth in § 121.406(b)(1), the ostensible subcontractor rule set forth in § 121.103(h)(3), and the joint venture agreement requirements in §§ 124.513(c) and (d), §§ 126.616(c) and (d), §§ 127.506(c) and (d), and §§ 125.8(b) and (c) of this chapter, as appropriate, is determined as of the date of the final proposal revision for negotiated acquisitions and final bid for sealed bidding.

(g) *Subcontracting.* For subcontracting purposes, a concern must qualify as small as of the date that it certifies that it is small for the subcontract. The applicable size standard is that which is set forth in § 121.410 and which is in effect at the time the concern self-certifies that it is small for the subcontract. A prime contractor may rely on the self-certification of a subcontractor provided it does not have a reason to doubt the concern's self-certification.

(h) *Two-step procurements.* For purposes of architect-engineering, design/build or two-step sealed bidding procurements, a concern must qualify as small as of the date that it certifies that it is small as part of its initial bid or proposal (which may or may not include price).

(i) *Recertification. See* § 125.12 for information on recertification of size and status, and the effect of recertification. None of the exceptions set forth in paragraph (c)(4) of this section have an effect or serve as an exception to whether recertification is required under § 125.12.

(j) *Follow-on contracts.* A follow-on or renewal contract is a new contracting action. As such, size is determined as of the date the concern submits a written self-certification that it is small to the procuring agency as part of its initial offer including price for the follow-on or renewal contract.

■ 5. Amend § 121.702 by revising paragraph (c)(7) to read as follows:

§ 121.702 What size and eligibility standards are applicable to the SBIR and STTR programs?

* * * * *

(c) * * *

(7) *Affiliation based on the ostensible subcontractor rule.* A concern with an other than small ostensible subcontractor cannot be considered a small business concern for SBIR and STTR awards. An ostensible subcontractor is a subcontractor or subgrantee that performs primary and vital requirements of a funding agreement (*i.e.,* those requirements associated with the principal purpose of the funding agreement), or a subcontractor or subgrantee upon which the concern is unusually reliant.

(i) All aspects of the relationship between the concern and the subcontractor are considered, including, but not limited to, the terms of the proposal (such as management, technical responsibilities, and the percentage of subcontracted work) and agreements between the concern and subcontractor or subgrantee (such as bonding assistance or the teaming agreement).

(ii) To determine whether a subcontractor performs primary and vital requirements of a funding agreement, SBA will also consider whether the concern's proposal complies with the performance requirements of the SBIR or STTR program.

(iii) The prime and any small business ostensible subcontractor both must comply individually with the ownership and control requirements in paragraphs (a) and (b) of this section, as applicable.

* * * * *

■ 6. Amend § 121.1001 by adding paragraphs (a)(10) through (12), and (b)(2)(iii) to read as follows:

§ 121.1001 Who may initiate a size protest or request a formal size determination?

(a) * * *

(10) For orders set-aside for small business, women-owned small business, service-disabled veteran-owned small business, or HUBZone small business under an unrestricted multiple award contract or such orders issued under any type of small business multiple award contract where a contracting officer has requested a size recertification, the following entities may file a size protest:

(i) Any offeror that the contracting officer has not eliminated from consideration for any procurement-related reason, such as non-responsiveness, technical unacceptability or outside of the competitive range;

(ii) The contracting officer;

(iii) The SBA Government Contracting Area Director having responsibility for the area in which the headquarters of the protested offeror is located, regardless of the location of a parent company or affiliates, the SBA program manager relating to the order at issue (*i.e.,* the Director of Government Contracting, the Associate Administrator for Business Development, or the Director of

HUBZone, as appropriate), or the Associate General Counsel for Procurement Law.

(11) In connection with a size recertification relating to a contract required by § 125.12 of this chapter, the following entities may file a size protest challenging the recertification:

(a) Any contract holder on that multiple award contract;

(b) The contracting officer; or

(c) The SBA program manager relating to the contract at issue (*i.e.,* the Director of Government Contracting, the Associate Administrator for Business Development, or the Director of HUBZone, as appropriate), or the Associate General Counsel for Procurement Law.

(12) In connection with a size recertification relating to a multiple award contract required by § 125.12 of this chapter, any contract holder on that multiple award contract may also request a formal size determination concerning a recertifying concern's status as a small business.

(i) A request for a formal size determination made by another contract holder on a multiple award contract must be sufficiently specific to provide reasonable notice as to the grounds upon which the recertifying concern's size is questioned. Some basis for the belief or allegation that the recertifying concern does not continue to qualify as small must be given.

(ii) SBA will dismiss as not sufficiently specific any request for a formal size determination alleging merely that the recertifying concern is not small or is affiliated with unnamed other concerns.

(b) * * *

(2) * * *

(iii) Where SBA initially verified the eligibility of an 8(a) Participant for the award of an 8(a) contract but subsequently receives specific information that the Participant may be other than small and consequently ineligible for the award, the Associate Administrator for Business Development or the Associate General Counsel for Procurement Law may request a formal size determination at any point prior to award.

* * * * *

■ 7. Amend § 121.1010 by revising paragraph (b) to read as follows:

§ 121.1010 How does a concern become recertified as a small business?

* * * * *

(b) Recertification will not be required nor will the prohibition against future self-certification apply if the adverse SBA size determination is based solely on a finding of affiliation limited to a particular Government procurement or property sale, such as an ostensible subcontracting relationship or non-compliance with the nonmanufacturer rule.

* * * * *

PART 124—8(a) BUSINESS DEVELOPMENT/SMALL DISADVANTAGED BUSINESS STATUS DETERMINATIONS

■ 8. The authority citation for part 124 continues to read as follows:

Authority: 15 U.S.C. 634(b)(6), 636(j), 637(a), 637(d), 644, 42 U.S.C. 9815; and Pub. L. 99–661, 100 Stat. 3816; Sec. 1207, Pub. L. 100–656, 102 Stat. 3853; Pub. L. 101–37, 103 Stat. 70; Pub. L. 101–574, 104 Stat. 2814; Sec. 8021, Pub. L. 108–87, 117 Stat. 1054; and Sec. 330, Pub. L. 116–260.

■ 9. Amend § 124.3 by revising the definition of ''Community Development Corporation or CDC'' to read as follows:

§ 124.3 What definitions are important in the 8(a) BD program?

* * * * *

Community Development Corporation or CDC means a nonprofit organization responsible to residents of the area it serves which has received financial assistance under 42 U.S.C. 9805, *et seq.* or has received a letter from the Department of Health and Human Services affirming that it has received assistance under a successor program to that authorized by 42 U.S.C. 9805.

* * * * *

§ 124.4 [Removed]

■ 10. Remove § 124.4.

■ 11. Amend § 124.102 by adding the following sentences to the end of paragraph (a)(1) to read as follows:

§ 124.102 What size business is eligible to participate in the 8(a) BD program?

(a) * * *

(1) * * * In determining whether a concern applying to be certified for the 8(a) BD program qualifies as a small business concern under the size standard corresponding to its primary industry classification, SBA will accept the concern's size representation in the System for Award Management (SAM), or successor system, unless there is evidence indicating that the concern is other than small. SBA will request a formal size determination pursuant to § 121.1001(b)(8) of this chapter where any information it possesses calls into question the concern's SAM size representation.

* * * * *

■ 12. Amend § 124.105 by:

■ a. Revising paragraph (b);

■ b. Revising paragraph (f)(1);

■ c. Removing the words ''10 percent'' wherever they appear in paragraph (h)(1) and adding in their place the words ''20 percent'';

■ d. Removing the words ''20 percent'' in paragraph (h)(1) and adding in their place the words ''30 percent''; and

■ e. Revising paragraphs (h)(2), (i)(2), and (k).

The revisions read as follows:

§ 124.105 What does it mean to be unconditionally owned by one or more disadvantaged individuals?

* * * * *

(b) *Ownership of a partnership.* In the case of a concern which is a partnership, one or more individuals determined by SBA to be socially and economically disadvantaged must serve as general partners, with control over all partnership decisions. At least 51 percent of every class of partnership interest must be unconditionally owned by one or more individuals determined by SBA to be socially and economically disadvantaged. The ownership must be reflected in the concern's partnership agreement.

* * * * *

(f) * * *

(1) At least 51 percent of any distribution of profits paid to the owners of a corporation, partnership, or limited liability company concern, and a disadvantaged individual's ability to share in the profits of the concern must be commensurate with the extent of his or her ownership interest in that concern;

* * * * *

(h) * * *

(2) A non-Participant business concern in the same or similar line of business or a principal of such concern may generally not own more than a 20 percent interest in an 8(a) Participant that is in the developmental stage or more than a 30 percent interest in an 8(a) Participant in the transitional stage of the program, except that a business concern approved by SBA to be a mentor pursuant to § 125.9 of this chapter may own up to 40 percent of its 8(a) Participant protégé as set forth in § 125.9(d)(2), whether or not that concern is in the same or similar line of business as the Participant.

(i) * * *

(2) (i) Prior approval by the AA/BD is not needed where:

(A) All non-disadvantaged individual (or entity) owners involved in the change of ownership own no more than a 30 percent interest in the concern both before and after the transaction;

(B) The transfer results from the death or incapacity due to a serious, long-term

illness or injury of a disadvantaged principal;

(C) The disadvantaged individual or entity in control of the Participant will increase the percentage of its ownership interest by any percentage; or

(D) The Participant has never received an 8(a) contract and the individual(s) or entity upon whom initial eligibility was based continues to own more than 50% of the Participant.

(ii) In determining whether a non-disadvantaged individual involved in a change of ownership has more than a 30 percent interest in the concern, SBA will aggregate the interests of all immediate family members as set forth in § 124.3, as well as any individuals who are affiliated based on an identity of interest under § 121.103(f).

(iii) Where prior approval is not required, the concern must notify SBA within 60 days of such a change in ownership, or before it submits an offer for an 8(a) contract, whichever occurs first.

Example 1 to paragraph (i)(2). Disadvantaged individual A owns 90% of 8(a) Participant X; non-disadvantaged individual B owns 10% of X. In order to raise additional capital, X seeks to change its ownership structure such that A would own 75%, B would own 10% and C would own 15%. X can accomplish this change in ownership without prior SBA approval. Non-disadvantaged owner B is not involved in the transaction and non-disadvantaged individual C owns less than 30% of X both before and after the transaction.

Example 2 to paragraph (i)(2). Disadvantaged individual C owns 60% of 8(a) Participant Y; non-disadvantaged individual D owns 35% of Y; and non-disadvantaged individual E owns 5% of Y. C seeks to transfer 5% of Y to E. Prior SBA approval is not needed. Although non-disadvantaged individual D owns more than 30% of Y, D is not involved in the transfer. Because the only non-disadvantaged individual involved in the transfer, E, owns less than 30% of Y both before and after the transaction, prior approval is not needed.

Example 3 to paragraph (i)(2). Disadvantaged individual A owns 80% of 8(a) Participant X; non-disadvantaged individual B owns 20% of X. A seeks to transfer 15% of X to B. SBA approval is needed. Although B, the non-disadvantaged owner of X, owns less than 30% of X prior to the transaction, prior approval is needed because B would own more than 30% after the transaction.

Example 4 to paragraph (i)(2). ANC A owns 55% of 8(a) Participant X; non-disadvantaged individual B owns 45% of X. B seeks to transfer 10% to A. Prior SBA approval is not needed. Although a non-disadvantaged individual who is involved in the transaction, B, owns more than 30% of X both before and after the transaction, SBA approval is not needed because the change only increases the percentage of A's ownership interest in X.

Example 5 to paragraph (i)(2). Disadvantaged individual C owns 65% of 8(a) Participant Z and non-disadvantaged individual D owns 35% of Z. Z has been in the 8(a) BD program for 2 years but has not yet been awarded an 8(a) contract. C seeks to transfer 10% to D. Although a non-disadvantaged individual who is involved in the transaction, D, owns more than 30% of Z both before and after the transaction, prior SBA approval is not needed because Z has never received an 8(a) contract.

* * * * *

(k) *Right of first refusal.* A right of first refusal granting a non-disadvantaged individual or other entity the contractual right to purchase the ownership interests of a qualifying disadvantaged individual does not affect the unconditional nature of ownership, if the terms follow normal commercial practices. If those rights are exercised by a non-disadvantaged individual or other entity after certification, the Participant must notify SBA. If the exercise of those rights results in disadvantaged individuals owning less than 51% of the concern, SBA will initiate termination pursuant to §§ 124.303 and 124.304.

■ 13. Amend § 124.106 by:

■ a. Removing paragraph (d)(3);

■ b. Redesignating paragraphs (d)(4) and (d)(5) as paragraphs (d)(3) and (d)(4), respectively;

■ c. Revising paragraph (e)(3);

■ d. Removing the text ''director, or key employee'' in paragraph (f) and adding in its place the text ''or director'';

■ e. Redesignating paragraph (h) as paragraph (i); and

■ f. Adding new paragraph (h).

The revision and addition to read as follows:

§ 124.106 When do disadvantaged individuals control an applicant or Participant?

* * * * *

(e) * * *

(3) Receive compensation from the applicant or Participant in any form as a director, officer or employee, that exceeds the compensation to be received by the highest ranking officer (usually CEO or President), unless the concern demonstrates that the compensation to be received by the non-disadvantaged individual is commercially reasonable or that the highest-ranking officer has elected to take lower compensation to benefit the applicant or Participant. A Participant must notify SBA within 30 calendar days if the compensation paid to the highest-ranking officer of the Participant falls below that paid to a non-disadvantaged individual. In such a case, SBA must determine that that the compensation to be received by the non-disadvantaged individual is commercially reasonable or that the highest-ranking officer has elected to take lower compensation to benefit the Participant before SBA may determine that the Participant is eligible for an 8(a) award.

* * * * *

(h) *Exception for extraordinary circumstances.* SBA will not find that a lack of control exists where a socially and economically disadvantaged individual does not have the unilateral power and authority to make decisions regarding the following extraordinary circumstances:

(1) Adding a new equity stakeholder or increasing the investment amount of an equity stakeholder;

(2) Dissolution of the company;

(3) Sale of the company or all assets of the company;

(4) The merger of the company;

(5) The company declaring bankruptcy;

(6) Amendment of the company's corporate governance documents to remove the shareholder's authority to block any of paragraphs (h)(1) through (5) of this section;

(7) Any other extraordinary action that is crafted solely to protect the investment of the minority shareholders, and not to impede the majority's ability to control the concern's operations or to conduct the concern's business as it chooses.

* * * * *

■ 14. Amend § 124.107 by:

■ a. Revising the first sentence of the introductory text;

■ b. Revising paragraph (a);

■ c. Removing paragraph (e); and

■ d. Redesignating paragraph (f) as paragraph (e).

The revisions read as follows:

§ 124.107 What is potential for success?

SBA must determine that with contract, financial, technical, and management support from the 8(a) BD program, from contractors or from others assisting with business operations, the applicant concern is able to perform 8(a) contracts and possess reasonable prospects for success in competing in the private sector. * * *

(a) Income tax returns for each of the two previous tax years must show operating revenues.

* * * * *

■ 15. Amend § 124.108 by:
■ a. Removing paragraph (a)(1);
■ b. Redesignating paragraphs (a)(2), (3), (4) and (5) as paragraphs (a)(1), (2), (3), and (4), respectively; and
■ c. Revising newly redesignated paragraph (a)(3) and paragraph (e).

The revision to read as follows:

§ 124.108 What other eligibility requirements apply for individuals or businesses?

* * * * *

(a) * * *

(3) An applicant is ineligible for admission to the 8(a) BD program if the applicant concern or a proprietor, partner, limited liability member, director, officer, or holder of at least 20 percent of its stock, or another person (including key employees) with significant authority over the concern lacks business integrity as demonstrated by conduct that could be grounds for suspension or debarment;

* * * * *

(e) *Federal financial obligations.* A business concern is ineligible for admission to or participation in the 8(a) BD program if either the concern or any of its principals has failed to pay significant financial obligations owed to the Federal Government, including unresolved tax liens and defaults on Federal loans or other Federally assisted financing. However, a small business concern may be eligible if the concern or the affected principals can demonstrate that they are current on an approved repayment plan or the financial obligations owed have been settled and discharged/forgiven by the Federal Government.

■ 16. Amend § 124.203 by removing the last three sentences and adding a sentence in their place to read as follows:

§ 124.203 What must a concern submit to apply to the 8(a) BD program?

* * * The majority socially and economically disadvantaged owner must take responsibility for the accuracy of all information submitted on behalf of the applicant.

■ 17. Amend § 124.204 by revising paragraph (d) to read as follows:

§ 124.204 How does SBA process applications for 8(a) BD program admission?

* * * * *

(d) An applicant must be eligible as of the date SBA issues a decision. An applicant's eligibility will be based on the totality of circumstances, including facts set forth in the application, supporting documentation, any information received in response to any SBA request for clarification, and any changed circumstances.

* * * * *

■ 18. Revise § 124.207 to read as follows:

§ 124.207 Can an applicant reapply for admission to the 8(a) BD program?

A concern which has been declined for 8(a) BD program participation may submit a new application for admission to the program at any time after 90 calendar days from the date of the Agency's final decision to decline.

■ 19. Amend § 124.303 by adding paragraph (c) to read as follows:

§ 124.303 What is termination?

* * * * *

(c)(1) A firm that is terminated from the 8(a) BD Program due to the submission of false or misleading information may be removed from SBA's other small business contracting programs, including the HUBZone Program, the Women-Owned Small Business (WOSB) Program, the Veteran Small Business Certification (VetCert) Program, and SBA's Mentor-Protégé Program. In addition, SBA will refer the matter to the SBA Office of Inspector General for review and may recommend that Government-wide debarment or suspension proceedings be initiated.

(2) A firm that is decertified from the HUBZone Program, the WOSB Program, or the VetCert Program due to the submission of false or misleading information may be terminated from the 8(a) BD Program.

(3) SBA may require a firm that is decertified from the HUBZone Program, the WOSB Program, or the VetCert Program due to the submission of false or misleading information to enter into an administrative agreement with SBA as a condition of admission to the 8(a) BD program.

■ 20. Amend § 124.503 by revising paragraph (g)(1)(iii) to read as follows:

§ 124.503 How does SBA accept a procurement for award through the 8(a) BD program?

* * * * *

(g) * * *

(1) * * *

(iii) For open requirements, the effect that contract would have on the equitable distribution of 8(a) contracts; and

* * * * *

■ 21. Amend § 124.504 by revising paragraph (a) to read as follows:

§ 124.504 What circumstances limit SBA's ability to accept a procurement for award as an 8(a) contract, and when can a requirement be released from the 8(a) BD program?

* * * * *

(a) *Prior intent to award as a small business set-aside, or use the HUBZone, VetCert, or Women-Owned Small Business programs.* A procuring activity, for itself or for another end user, issued a solicitation for or otherwise expressed publicly a clear intent to award the contract as a small business set-aside, or to use the HUBZone, VetCert, or Women-Owned Small Business programs prior to offering the requirement to SBA for award as an 8(a) contract.

(1) However, SBA may accept the requirement into the 8(a) BD program where the AA/BD determines that there is a reasonable basis to cancel the initial solicitation or, if a solicitation had not yet been issued, a reasonable basis for the procuring agency to change its initial clear expression of intent to procure outside the 8(a) BD program (*e.g.,* the procuring agency's needs have changed since the initial solicitation was issued such that the solicitation no longer represents its current needs; or appropriations that were no longer available for the requirement as anticipated in one fiscal year are available in the succeeding fiscal year).

(i) A change in strategy only (*i.e.,* an agency seeking to solicit through the 8(a) BD program instead of through another previously identified program) will not constitute a reasonable basis for SBA to accept the requirement into the 8(a) BD program.

(ii) The AA/BD may coordinate with the D/GC, where appropriate, before accepting a requirement into the 8(a) BD program to ensure that another SBA program is not adversely affected.

(2) The AA/BD may also permit the acceptance of the requirement under extraordinary circumstances.

* * * * *

■ 22. Amend § 124.509 by redesignating paragraph (d)(1)(ii) as paragraph (d)(1)(iii), and adding new paragraph (d)(1)(ii) to read as follows:

§ 124.509 What are non-8(a) business activity targets?

* * * * *

(d) * * *

(1) * * *

(ii) In determining the projected revenue SBA should consider in determining whether one or more unsuccessful offers submitted by the Participant would have given the Participant sufficient revenues to achieve the applicable non-8(a) business

activity target under paragraph (d)(1)(i)(A) of this section, SBA will consider only the base year of the procurement at issue and not the projected full value of the procurement. SBA will not consider projected revenue under a particular non-8(a) contract where SBA determines the Participant submitted its offer without possessing reasonable prospects of success. In making this determination, SBA will consider all relevant factors, including, but not limited to:

(A) The magnitude of the contract relative to that of the Participant's previous contracts: and

(B) The past performance and experience of a joint venture partner and/or a subcontractor.

Example 1 to paragraph (d)(1)(ii): Participant X is in year 2 of the transitional stage (or year 6 of the 8(a) BD program). It has never received a contract in excess of $5M. X received $20M in total revenue and $3M in non-8(a) revenue during program year 6. X failed to meet its applicable non-8(a) business activity target (BAT) of 25% ($20M × 0.25 = $5M). To demonstrate its good efforts to achieve non-8(a) revenue, X submits evidence that it submitted two offers without any identified subcontractors: one for a five-year contract valued at $100M and one for a five-year contract valued at $5M. SBA would not consider the first offer to qualify as a ''good faith effort'' and would determine that the offer had no reasonable prospect for success since the magnitude of that contract far exceeded anything it had performed previously (submitting an offer for a $100M contract where the firm had never performed a contract in excess of $5M) and X did not identify any subcontractor or joint venture partner with relevant past performance and experience. The second offer would count as a good faith effort since its overall value was in line with previous contracts X had performed. However, because SBA considers only the projected revenue for the base year of the contract (or $1M), considering this offer does not bring X into compliance with its BAT ($3M + $1M = $4M, which is less than the $5M required to be in compliance).

* * * * *

■ 23. Amend § 124.514 by revising paragraph (a)(1) to read as follows:

§ 124.514 Exercise of 8(a) options and modifications.

(a) * * *

(1) If a firm's term of participation in the 8(a) BD program has ended (or the firm has otherwise exited the program) or is no longer small under the size standard corresponding to the NAICS code for the requirement, negotiations to price the option cannot be entered into and the option cannot be exercised.

* * * * *

■ 24. Amend § 124.518 by revising the section heading and paragraph (c), and adding paragraph (d) to read as follows:

§ 124.518 How can an 8(a) contract be terminated or novated before performance is completed?

* * * * *

(c) *Substitution of one 8(a) contractor for another.* SBA may authorize another Participant to complete performance and, in conjunction with the procuring activity, permit novation of an 8(a) contract where a procuring activity contracting officer demonstrates to SBA that the Participant that was awarded the 8(a) contract is unable to complete performance, where an 8(a) contract will otherwise be terminated for default, or where SBA determines that substitution would serve the business development needs of both 8(a) Participants. In determining whether a substitution would serve the business development needs of both 8(a) Participants, SBA will consider whether the substitution would allow a Participant to circumvent program policies or impede the interests of the program.

Example 1 to paragraph (c): Participant A anticipates it will not meet its applicable business activity target (BAT). Participant A seeks to transfer an 8(a) contract to another eligible 8(a) Participant through the substitution process and then perform a significant portion of that contract as a subcontractor to the new 8(a) Participant because the revenue from the subcontract will accrue to Participant A as non-8(a) revenue. SBA would not approve such a substitution because doing so would allow Participant X to circumvent the BAT requirement.

Example 2 to paragraph (c): Participant B is performing the last option period of performance under an 8(a) contract it won through competition. Participant B has graduated from the 8(a) Business Development (BD) program and will therefore not be eligible to receive the contract for the follow-on requirement. Participant B seeks to transfer its contract to Participant C, a sister company owned by the same Tribe/Alaska Native Corporation/Native Hawaiian Organization/Community Development Corporation, to allow Participant C to be the incumbent contractor when the procuring agency seeks to procure the follow-on procurement as an 8(a) sole source contract. SBA regulations governing entity participation in the 8(a) BD program prohibit a Participant from receiving an 8(a) sole source contract that is a follow-on contract to an 8(a) contract that was performed immediately previously by a sister company. Participant C would therefore not be eligible to receive the sole source follow-on contract to Participant B's 8(a) contract if contract performance ended under Participant B. SBA would not approve such a substitution because doing so would impede these policies.

Example 3 to paragraph (c): Participant D competed for and won a spot on a multiple award, Indefinite Quantity, Indefinite Delivery 8(a) contract. Participant D has exceeded the size standard under the NAICS code assigned to the contract and is therefore no longer eligible to receive sole source task orders issued under the contract; Participant D may, however, continue to receive competitive orders. Participant D seeks to transfer the contract to another eligible 8(a) Participant through the substitution process. SBA would not approve such a substitution because doing so would not serve its business development needs.

(d) *Novation to the lead partner to an 8(a) joint venture.* A joint venture that was awarded an 8(a) contract may seek to novate the 8(a) contract to the lead 8(a) Participant to the joint venture, provided each member of the joint venture agrees to such novation and the non-lead 8(a) joint venture partner will transfer all assets needed to perform the contract to the lead 8(a) Participant. In order for SBA to authorize novation, SBA must determine that the 8(a) Participant seeking to be novated the contract continues to meet all 8(a) eligibility requirements as if for a new 8(a) contract at the time of novation and the procuring agency must determine that the 8(a) firm is capable and responsible to perform the contract.

§ 124.602 [Amended]

■ 25. Amend § 124.602 by:

■ a. Removing the word ''$10,000,000'' in paragraphs (a)(1) and (a)(2) and adding in its place the word ''$20,000,000'';

■ b. Removing the words ''$2,000,000 and $10,000,000'' in paragraph (b)(1) and adding in their place the words ''7,500,000 and $20,000,000''; and

■ c. Removing the word ''$2,000,000'' in paragraph (c) and adding in its place the word ''$7,500,000''.

§ 124.603 [Amended]

■ 26. Amend § 124.603 by removing the word ''Former'' and adding in its place

the words ''If requested by the SBA, former''.

■ 27. Revise § 124.604 to read as follows:

§ 124.604 Report of benefits for firms owned by Tribes, ANCs, NHOs and CDCs.

(a) As part of its annual financial statement submission (*see* § 124.602), each Participant owned by a Tribe, ANC, NHO or CDC must submit to SBA information showing how the Tribe, ANC, NHO or CDC has provided benefits to the Tribal or native members and/or the Tribal, native or other community due to the Tribe's/ANC's/NHO's/CDC's participation in the 8(a) BD program through one or more firms. This data includes information relating to funding cultural programs, employment assistance, jobs, scholarships, internships, subsistence activities, and other services provided by the Tribe, ANC, NHO or CDC to the affected community.

(b) A participating Tribe, ANC, NHO, or CDC may submit a consolidated report prepared by the parent entity showing how the Tribe, ANC, NHO, or CDC has provided benefits to the Tribal or native members and/or the Tribal, native or other community due to the Tribe's/ANC's/NHO's/CDC's participation in the 8(a) BD program through one or more firms. Where a Tribe/ANC/NHO/CDC elects to report consolidated community benefits, its individual 8(a) Participants need not submit separate reports as prescribed under paragraph (a) of this section.

PART 125—GOVERNMENT CONTRACTING PROGRAMS

■ 28. The authority citation for part 125 continues to read as follows:

Authority: 15 U.S.C. 632(p), (q), 634(b)(6), 637, 644, 657f, 657q, 657r, and 657s; 38 U.S.C. 501 and 8127.

■ 29. Amend § 125.1 by adding, in alphabetical order, the definitions of ''Agreement'', ''Disqualifying recertification'', ''Qualifying recertification'', and ''Set Aside or Reserved Award'' to read as follows:

§ 125.1 What definitions are important to SBA's Government Contracting Programs?

Agreement means a Blanket Purchase Agreement, Basic Agreement, or a Basic Ordering Agreement.

* * * * *

Disqualifying recertification means a recertification as either other than small or other than a qualified small business program participant that is required for eligibility to participate in a Set Aside or Reserved Award.

* * * * *

Qualifying recertification means a recertification as small or as a qualified small business program participant that is required for eligibility to participate in a Set Aside or Reserved Award.

* * * * *

Set Aside or Reserved Award means a contract, including multiple award contracts, agreements, or orders against contracts or agreements, that are set aside, partially set aside, or reserved for small business or any socio-economic small business program participants.

* * * * *

■ 30. Amend § 125.2 by:

■ a. Redesignating paragraph (c)(6) as paragraph (c)(7);

■ b. Adding new paragraph (c)(6);

■ c. Redesignating paragraph (e)(7) as paragraph (e)(8); and

■ d. Adding new paragraph (e)(7).

The additions read as follows:

§ 125.2 What are SBA's and the procuring agency's responsibilities when providing contracting assistance to small businesses?

* * * * *

(c) * * *

(6) *Prohibition on competitions requiring or favoring additional socioeconomic certifications.* A procuring activity cannot create a small business set-aside or reserve (for either a contract, order or agreement) that requires multiple socioeconomic certifications in addition to a size certification (*e.g.,* a competition cannot be limited only to small business concerns that are also 8(a) and HUBZone certified) or give evaluation preferences to concerns having multiple socioeconomic certifications.

* * * * *

(e) * * *

(7) *Partial set-aside and reserve.* A procuring activity may have both a partial small business set-aside and a small business reserve on the same contract. A partial set-aside can be done for one or more CLINs that must be set-aside for small business and a reserve could also be done on the same procurement for other items or services where a contracting officer would have discretion to utilize the small business reserve where appropriate.

* * * * *

■ 31. Amend § 125.3 by:

■ a. Adding paragraphs (a)(4) and (b)(4);

■ b. Removing from paragraph (d)(1) the text ''30 days'' and ''October 30th'' and adding in their place ''45 days'' and ''November 14th'', respectively; and

■ c. Removing from paragraph (d)(2) the text ''60 days'' and ''November 30th'' and adding in their place ''75 days'' and ''December 14th'', respectively.

The additions read as follows:

§ 125.3 What types of subcontracting assistance are available to small businesses?

(a) * * *

(4) For subcontracting purposes, a concern must qualify as a small business concern and a socioeconomic small business concern as of the date that it certifies that it is small or that it qualifies as a socioeconomic small business concern for the subcontract.

(b) * * *

(4) Except for HUBZone and SDVO small business subcontractors, a prime contractor may rely on the socioeconomic self-certification of a subcontractor provided the prime contractor does not have a reason to doubt the subcontractor's self-certification.

* * * * *

■ 32. Amend § 125.6 by revising the second sentence and adding a new third sentence in paragraph (d) introductory text and adding two sentences to the end of paragraph (d)(3) to read as follows:

§ 125.6 What are the prime contractor's limitations on subcontracting?

* * * * *

(d) * * * However, for a multi-agency set aside contract where more than one agency can issue orders under the contract, the ordering agency must use the period of performance for each order to determine compliance and monitor compliance with the limitations on subcontracting for that specific order. At the end of performance of the order, the ordering contracting officer should then inform the contracting officer for the underlying multi-agency contract if the ordering contracting officer knows that the contractor has failed to meet the applicable limitations on subcontracting requirement. * * *

* * * * *

(3) * * * Except with respect to staffing contracts, work performed by an employee obtained from a temporary employee agency, professional employer organization, or leasing concern shall be treated as the recipient concern's self-performance. The work performed by employees leased to the small business prime contractor will therefore not count against the applicable limitation on subcontracting.

* * * * *

■ 33. Amend § 125.8 by revising paragraphs (e) and (f) to read as follows:

§ 125.8 What requirements must a joint venture satisfy to submit an offer for a procurement or sale set aside or reserved for small business?

* * * * *

(e) *Capabilities, past performance and experience.* When evaluating the capabilities, past performance, experience, business systems and certifications of an entity submitting an offer for a contract set aside or reserved for small business as a joint venture established pursuant to this section, a procuring activity must consider work done and qualifications held individually by each partner to the joint venture as well as any work done by the joint venture itself previously.

(1) A procuring activity has discretion whether to require a protégé or lead small business member of a joint venture to demonstrate some level of past performance and/or experience. It may rely solely on the past performance and experience of the mentor or non-similarly situated joint venture partner, or it may require some level of past performance and/or experience of the protégé or lead small business member. Where it requires some level of past performance and/or experience of the protégé or lead small business firm, the procuring activity shall not require that firm to individually meet all the same evaluation or responsibility criteria as that required of other offerors generally.

(2) If a procuring activity requires a protégé or lead small business joint venture partner to demonstrate some successful performance and/or experience on fewer previous contracts of lower values than that required of other offerors generally, successful performance by the protégé or lead small business firm on the contracts it identifies shall be rated equivalently to successful performance by the mentor or non-similarly situated partner to the joint venture or any other individual offeror on the higher valued contracts they identify.

(3) The partners to the joint venture in the aggregate must demonstrate the past performance, experience, business systems and certifications necessary to perform the contract.

Example 1 to paragraph (e). A solicitation requires offerors to demonstrate successful performance on five similar contracts valued at $20 million or more. Because a protégé joint venture partner must perform at least 40% of the work to be done by a successful joint venture offeror, the procuring activity seeks to require a protégé joint venture partner to demonstrate some past performance. The procuring activity may require a protégé joint venture partner to demonstrate one or two contracts valued at $10 million or $8 million, but may not require the protégé to demonstrate successful performance on five similar contracts and may not require the protégé to demonstrate successful performance on contracts valued at $20 million. In addition, if a procuring activity requires a protégé joint venture partner to demonstrate successful performance on two contracts valued at $10 million or more, successful performance by the protégé firm on those $10 million contracts shall be rated equivalently to successful performance by the mentor partner to the joint venture or any other individual offeror on $20 million contracts.

(f) *Contract execution.* The procuring activity will execute a contract set aside or reserved for small business in the name of the joint venture entity when there is a separate legal entity joint venture or the name of a small business partner to the joint venture when there is an informal joint venture, but in either case will identify the award as one to a small business joint venture or a small business mentor-protégé joint venture, as appropriate.

* * * * *

■ 34. Amend § 125.9 by:
■ a. Revising paragraph (b) introductory text;
■ b. Revising paragraph (b)(2);
■ c. Adding the word ''a'' after the words ''more than one protégé at'' and before the word ''time'' in paragraph (b)(3) introductory text;
■ d. Adding paragraph (b)(4);
■ e. Revising paragraph (c)(2);
■ f. Redesignating paragraph (e)(6) as paragraph (c)(4);
■ g. Revising newly redesignated paragraphs (c)(4)(iii) and (iv);
■ h. Adding paragraph (c)(5);
■ i. Adding paragraph (d)(1)(iv); and
■ j. Redesignating paragraphs (e)(7), (8) and (9) as paragraphs (e)(6), (7) and (8), respectively.

The revisions and additions read as follows:

§ 125.9 What are the rules governing SBA's small business mentor-protégé program?

* * * * *

(b) *Mentors.* Any for-profit business concern that demonstrates a commitment and the ability to assist small business concerns may act as a mentor and receive benefits as set forth in this section. This includes other than small businesses.

* * * * *

(2) (i) SBA will decline an application if SBA determines that the mentor does not possess good character or a favorable financial position, employs or otherwise controls the managers or key employees of the protégé, or is otherwise affiliated with the protégé.

(ii) SBA may terminate the mentor-protégé agreement if:

(A) SBA determines that the mentor does not possess good character or a favorable financial position;

(B) SBA determines that the mentor was affiliated with the protégé at the time of application or becomes affiliated with the protégé for reasons other than the mentor-protégé agreement or assistance provided under the agreement; or

(C) Key managers or personnel become employees of both the mentor and protégé firms at the same time.

* * * * *

(4) A mentor cannot be a contract holder through joint ventures with two protégé small business concerns on the same small business multiple award contract or small business reserve on a multiple award contract at the same time.

(i) Where a mentor purchases another business entity that is also an SBA-approved mentor that is a contract holder as a joint venture with a protégé small business and the mentor is also a contract holder with a protégé small business on that same multiple award contract, the mentor must exit one of those joint venture relationships.

(ii) The protégé firm connected to the joint venture from which the mentor exits may seek to:

(A) Acquire the new mentor's interest in the small business multiple award contract or reserve and, where necessary and appropriate, novate such contract or reserve to itself only pursuant to FAR 42.1204; or

(B) Replace the new mentor with another business in the joint venture such that the revised joint venture will continue to qualify as small and be eligible for orders issued under the multiple award contract.

(C) SBA will not find affiliation where a protégé obtains financing under normal commercial terms in order to purchase the mentor's interest in a multiple award contract.

* * * * *

(c) * * *

(2) A protégé firm may generally have only one mentor at a time.

(i) SBA may approve a second mentor for a particular protégé firm where the second relationship will not compete or otherwise conflict with the first mentor-protégé relationship, and:

(A) The second relationship pertains to an unrelated NAICS code; or

(B) The protégé firm is seeking to acquire a specific expertise that the first mentor does not possess.

(ii) Where SBA has approved two mentor-protégé relationships for the same protégé small business, the protégé may enter joint venture relationships with each of its two mentors. However, those joint ventures cannot compete against each other and cannot be contract holders on the same multiple award contract.

* * * * *

(4) * * *

(iii) If during the evaluation of the mentor-protégé relationship pursuant to paragraphs (g) and (h) of this section SBA determines that a mentor has not provided the business development assistance set forth in its mentor-protégé agreement or that the quality of the assistance provided was not satisfactory, SBA may terminate the mentor-protégé relationship. Where SBA or the parties themselves terminate a mentor-protégé relationship, SBA may allow the protégé to substitute another mentor for the time remaining in the mentor-protégé agreement without counting against the two-mentor limit.

Example to paragraph (c)(4)(iii). 8(a) Participant X enters an SBA approved mentor-protégé relationship with A. After 3 years, X and A decide to terminate the mentor-protégé relationship. After 8 months of searching for a new mentor, X and B submit a mentor-protégé agreement to SBA for review. Once SBA determines that the mentor-protégé agreement meets all of SBA's requirements, SBA will approve the X–B relationship for a period of 3 years from the date of SBA's approval. The time searching for a new mentor and SBA's review time are not subtracted from the time authorized for the substituted mentor-protégé relationship.

(iv) Instead of having a six-year mentor-protégé relationship with two separate mentors, a protégé may seek to extend or renew a mentor-protégé relationship with the same mentor for a second six-year term. In order for SBA to approve an extension or renewal of a mentor-protégé relationship with the same mentor, the mentor must commit to providing additional business development assistance to the protégé. Whether a protégé has a mentor-protégé relationship with two different mentors or the same mentor for a second six-year period, a concern cannot be a protégé for a total of more than 12 years.

(5) Where a business concern purchases another business concern that is currently the mentor of a protégé firm, that business concern shall become the new mentor of the protégé if it commits to honoring the obligations under the seller's mentor-protégé agreement or the purchasing business concern and the protégé negotiate a new mentor-protégé agreement that SBA approves. Where that occurs, that new mentor-protégé relationship will be effective for no longer than six years minus the length of the mentor-protégé relationship with the seller mentor.

(i) The protégé firm can terminate its mentor-protégé relationship only if the purchasing business concern and the protégé firm cannot agree on either continuing with the previous mentor-protégé agreement or negotiating a new mentor-protégé agreement that is acceptable to SBA.

(ii) Where a mentor-protégé relationship is terminated, the protégé firm may seek another business concern to enter a mentor-protégé relationship for a duration not to exceed six years minus the length of the mentor-protégé relationship with the former mentor.

Example 1 to paragraph (c)(5). 8(a) Participant A enters a mentor-protégé relationship with business concern X. After 3 years, business concern Y purchases X. A and Y agree to continue to abide by the mentor-protégé agreement between A and X. The mentor-protégé relationship between A and Y can last no longer than 3 years (6 years minus the length of the A and X mentor-protégé relationship). At the end of that agreement A and Y could seek to renew the mentor-protégé relationship for another 6 years if this is A's first mentor-protégé relationship.

Example 2 to paragraph (c)(5). 8(a) Participant Z enters a mentor-protégé relationship with business concern B. After 3 years, business concern C purchases B. If either C is unwilling to abide by the terms of the Z–B mentor-protégé agreement or Z does not want to extend a mentor protégé relationship with C and the mentor-protégé agreement is terminated, Z may seek a new business concern to enter a mentor-protégé relationship. If business concern D agrees to enter into a mentor-protégé relationship with Z and SBA approves that relationship, the Z–D mentor-protégé relationship can last for no longer than 3 years (6 years minus the length of the Z/B mentor-protégé relationship). If that was Z's first mentor-protégé relationship, Z may seek to extend the Z–D mentor-protégé relationship for an additional 6 years or may seek a new mentor-protégé relationship with another firm for up to 6 years. In no case can a protégé firm have mentor-protégé relationships lasting more than 12 years.

(d) * * *

(1) * * *

(iv) Where a mentor seeks to sell its interest in a mentor-protégé joint venture, the protégé firm shall have a right of first refusal to purchase that interest. SBA will not find affiliation where a protégé obtains financing under normal commercial terms in order to purchase the mentor's interest in a mentor-protégé joint venture.

* * * * *

■ 35. Add § 125.12 to read as follows:

§ 125.12 Recertification of Size and Small Business Program Status.

(a) *General.* Recertification of size and small business program status (*i.e.,* 8(a), HUBZone, WOSB/EDWOSB, or SDVOSB) is required within 30 calendar days of a merger, acquisition, or sale of or by a concern or an affiliate of the concern, which results in a change in controlling interest.

(1) A concern and the acquiring concern must recertify if each has received an award as a small business or small business program participant.

(2) In the context of a joint venture, recertification is required from any partner to the joint venture that has merged or is party to the sale or acquisition.

(3) Recertification does not change the terms and conditions of the award. The limitations on subcontracting, non-manufacturer and subcontracting plan requirements in effect at the time of award remain in effect throughout the life of the award regardless of whether a recertification is qualifying or disqualifying. However, a contracting officer may require a subcontracting plan if a prime contractor's size status changes from small to other than small as a result of a size recertification.

(4) A size re-certification shall relate to the size standard in effect at the time of re-certification that corresponds to the NAICS code that was initially assigned to the award.

(b) *Long term contracts.* For contracts (including multiple award contracts) and orders with durations of more than five years (including options), a concern must recertify its size and status no more than 120 days prior to the end of the fifth year of the award, and no more than 120 days prior to exercising any option thereafter. A contracting officer may also request size and/or status recertification, as he or she deems appropriate, prior to the 120-day point in the fifth year of a long-term contract or order. The agency and the contractor must immediately revise all applicable Federal contract databases to reflect the new size status.

(c) *Request by contracting officer.* Recertification of size and small

business program status is required where the contracting officer explicitly requires concerns to recertify their size or status in response to a solicitation for a set aside or reserved order or agreement.

(d) *Change in structure of entity-owned concern.* Size or status recertification is not required when the ownership of a concern that is at least 51% owned by an Indian Tribe, Alaska Native Corporation, or Community Development Corporation changes to or from a wholly-owned business concern of the same entity, as long as the ultimate owner remains that entity.

Example 1 to paragraph (d). Indian Tribe X owns 100% of small business ABC. ABC wins an award for a small business set-aside contract. In year two of contract performance, X changes the ownership of ABC so that X owns 100% of a holding company XYZ, Inc., which in turn owns 100% of ABC. This restructuring does not require ABC to recertify its status as a small business because it continues to be 100% owned (indirectly rather than directly) by Indian Tribe X.

(e) *Effect of Recertification*—(1) *Qualifying Recertification.* A concern that has a qualifying recertification is generally considered to be a small business or small business program participant for up to five years from the date of the recertification and remains eligible for set-aside or reserved awards unless there is a subsequent disqualifying recertification.

(2) *Disqualifying Recertification*—(i) *Pending Set Aside or Reserved Award.* If events triggering a disqualifying recertification under paragraph (a) of this section occur within 180 days after the date of an offer but prior to award, the concern is ineligible to receive the pending small business set aside or reserved award. The concern must notify the contracting officer of the change in its size or status. If events triggering a disqualifying recertification under paragraph (a) of this section occur more than 180 days after the date of an offer but prior to award, the concern is eligible to receive a pending single award or reserve and the award will count as an award to a small business or small business program participant for goaling purposes for up to five years from the date of the award unless there is a disqualifying recertification. However, where the underlying award is a multiple award small business set aside or reserve the concern is ineligible for the pending award because the concern would not be eligible for orders set aside for small business or set aside for a specific type of small business. *See* paragraph (e)(2)(ii)(B) of this section.

(ii) *Future Set Aside or Reserved Award*—(A) *Request for recertification on a specific order or agreement under an underlying multiple award contract that is set aside or reserved for small business.* If a concern has a disqualifying size or status recertification in response to a contracting officer request for recertification on a specific order or agreement under an underlying multiple award contract that is set aside or reserved for small business (*i.e.,* small business set-aside or reserve, 8(a) small business, service-disabled veteran-owned small business, HUBZone small business, or women-owned/economically disadvantaged women-owned small business), the concern is ineligible for the specific order or agreement but remains eligible for other set aside or reserved awards and unrestricted awards.

(*1*) Where an initially-small contract holder has naturally grown to be other than small and could not recertify as small for a specific order or agreement for which a contracting officer requested recertification, it may continue to qualify as small for other orders or agreements where a contracting officer does not request recertification.

(*2*) Where an initially-eligible 8(a), HUBZone, WOSB or SDVOSB contract holder on an 8(a), HUBZone, WOSB or SDVOSB set-aside or reserve cannot recertify its status for a specific order or agreement for which a contracting officer requested recertification, it may continue to qualify as eligible for other competitively awarded orders or agreements where a contracting officer does not request recertification.

(B) *Other Events Triggering Recertification.* (*1*) If a concern has a disqualifying recertification in response to a recertification requirement on a long-term multiple award contract or a recertification requirement following a merger, acquisition, or sale involving a business entity that does not itself qualify as small under the NAICS code assigned to the multiple award contract, the concern is ineligible to submit an offer for a set aside or reserved award after the triggering event occurs. The concern remains eligible for unrestricted awards under a multiple award contract and orders issued under a single award small business contract. In either case, a procuring agency cannot count the order as an award to small business or to the specific type of small business (*i.e.,* 8(a), WOSB, SDVOSB, or HUBZone).

(*2*) If a concern has a disqualifying recertification in response to a requirement to recertify size and/or status following a merger, acquisition, or sale involving another small business concern, the concern remains eligible for set-aside or reserved orders issued under a multiple award contract, but a procuring agency cannot count the order as an award to small business or to the specific type of small business (*i.e.,* 8(a), WOSB, SDVOSB, or HUBZone).

(iii) *Options.* (A) For a single award small business set-aside or reserve award or any unrestricted award, a concern that submits a disqualifying recertification remains eligible to receive options. The procuring agency cannot count the option period as an award to a small business or small business program participant for goaling purposes. Such a concern may make a qualifying recertification for a subsequent option period if it meets the applicable size standard or becomes a certified small business program participant.

(B) For a multiple award contract that is set-aside or reserved for small business, a concern that submits a disqualifying recertification in response to a recertification requirement on a long-term contract or a recertification requirement following a merger, acquisition, or sale involving a business entity that does not itself qualify as small under the NAICS code assigned to the multiple award contract is ineligible to receive options.

(C) For a multiple award contract that is set-aside or reserved for small business, a concern that submits a disqualifying recertification in response to a requirement to recertify size and/or status following a merger, acquisition, or sale involving another small business concern, the concern remains eligible to receive options. The procuring agency cannot count the option period as an award to a small business or to the specific type of small business (*i.e.,* 8(a), WOSB, SDVOSB, or HUBZone). Such a concern may make a qualifying recertification for a subsequent option period if it meets the applicable size standard or becomes a certified small business program participant.

(f) *Joint venture recertifications.* Where a joint venture must recertify its small business size status under paragraph (a) of this section, the joint venture can recertify as small where all parties to the joint venture qualify as small at the time of recertification, or the protégé small business in a still active mentor-protégé joint venture qualifies as small at the time of recertification. A joint venture can recertify as small even though the date of recertification occurs more than two years after the joint venture received its first contract award (*i.e.,* recertification

is not considered a new contract award under § 121.103(h).

(g) *Delayed effective date.* Notwithstanding paragraphs (e)(2)(ii)(B) and (e)(2)(iii)(B) of this section:

(i) A firm that has a disqualifying size or status recertification due to a merger, acquisition or sale that occurs prior to January 17, 2026 remains eligible for orders issued under an underlying small business multiple award contract. However, the agency cannot count any new or pending orders issued pursuant to the contract, from that point forward, towards its small business and socioeconomic goals. This includes set-asides, partial set-asides, and reserves for 8(a) BD Participants, certified HUBZone small business concerns, SDVO SBCs, and ED/WOSBs.

(ii) A firm that has a disqualifying size or status recertification prior to the end of the fifth year of a long-term contract remains eligible for any options to be exercised prior to January 17, 2026. However, the agency cannot count those options towards its small business and socioeconomic goals.

■ 36. Add § 125.13 to read as follows:

§ 125.13 What restrictions apply to fees for representatives of applicants and participants in SBA's 8(a) BD, HUBZone, WOSB and VetCert programs?

(a) The compensation received by any packager, agent, or representative of a concern applying for 8(a) BD, HUBZone, WOSB/EDWOSB, or VOSB/SDVOSB certification in exchange for assisting the applicant in obtaining such certification must be reasonable in light of the service(s) performed by the packager, agent, or representative.

(b) The compensation received by any packager, agent, or representative of a certified 8(a) BD, HUBZone small business concern, WOSB/EDWOSB, or VOSB/SDVOSB in exchange for assisting the concern in obtaining any small business contracts, orders, BPAs, BAs, or BOAs must be reasonable in light of the service(s) performed by the packager, agent, or representative, and cannot be a fee that is a percentage of the gross value of the contract, order, BPA, BA or BOA.

(c) For good cause, SBA may initiate proceedings to suspend or revoke a packager's, agent's, or representative's privilege to assist applicants obtain SBA certification and assist certified small business concerns obtain contracts, orders, or any other assistance to support participation in the 8(a) BD, HUBZone, WOSB or VetCert programs. Good cause is defined in § 103.4 of this chapter.

(1) SBA may send a ''show cause'' letter requesting the agent or representative to demonstrate why the agent or representative should not be suspended or proposed for revocation, or may immediately send a written notice suspending or proposing revocation, depending upon the evidence in the administrative record. The notice will include a discussion of the relevant facts and the reason(s) why SBA believes that good cause exists.

(2) Unless SBA specifies a different time in the notice, the agent or representative must respond to the notice within 30 calendar days of the date of the notice with any facts or arguments showing why good cause does not exist. The agent or representative may request additional time to respond, which SBA may grant in its discretion.

(3) After considering the agent's or representative's response, SBA will issue a final determination, setting forth the reasons for this decision and, if a suspension continues to be effective or a revocation is implemented, the term of the suspension or revocation.

(d) The relevant SBA program office may refer a packager, agent, or other representative to SBA's Suspension and Debarment Official for possible Government-wide suspension or debarment where appropriate, including where it appears that the packager, agent, or representative assisted an applicant or certified small business concern to submit information to SBA that the packager, agent, or representative knew to be false or materially misleading.

PART 126—HUBZONE PROGRAM

■ 37. The authority citation for part 126 continues to read as follows:

Authority: 15 U.S.C. 632(a), 632(j), 632(p), 644 and 657a.

§ 126.100 [Amended]

■ 38. Amend § 126.100 by removing the words ''qualified SBCs'' and adding in their place the words ''small business concerns''.

§ 126.102 [Amended]

■ 39. Amend § 126.102 by removing the words ''qualified HUBZone SBCs'' and adding in their place the words ''certified HUBZone small business concerns''.

■ 40. Amend § 126.103 by:

■ a. Removing the definition for ''AA/BD'';

■ b. Revising the definitions for ''Attempt to maintain'', ''Certification or Certify'', ''Community Development Corporation or CDC'', ''Contracting Officer'', ''Decertify'', ''Dynamic Small Business Search (DSBS)'', ''Employee'', and ''Governor-Designated Covered Area'';

■ c. Adding in alphabetical order definitions for ''HUBZone certification date'', ''HUBZone Map'', and ''HUBZone resident employee'';

■ d. Revising the definitions for ''HUBZone small business concern or certified HUBZone small business concern'', ''Indian Tribal Government'', and ''Principal office'';

■ e. Removing paragraph (3) in the definition of ''Qualified Census Tract'';

■ f. Revising the definition of ''Qualified Disaster Area'';

■ g. Removing paragraph (4) in the definition of ''Qualified Non-Metropolitan County'';

■ h. Adding in alphabetical order the definition for ''Recertification (or certification renewal)'';

■ i. Revising the definitions for ''Redesignated Area'', ''Reside'', and ''Small business concern''; and

■ j. Adding in alphabetical order the definition for ''System for Award Management (SAM)''.

The revisions and additions read as follows:

§ 126.103 What definitions are important in the HUBZone program?

* * * * *

Attempt to maintain means making substantive and documented efforts to meet the HUBZone residency requirement, such as making written offers of employment, publishing advertisements seeking employees, and attending job fairs, and applies only during the performance of a HUBZone contract as defined in § 126.600. A firm that cannot demonstrate that it is making such efforts has failed to attempt to maintain the HUBZone residency requirement. In addition, a firm that has less than 20% of its total employees residing in a HUBZone during the performance of a HUBZone contract has failed to attempt to maintain the HUBZone residency requirement.

* * * * *

Certification or Certify means the process by which SBA determines that a concern is qualified for the HUBZone program and eligible to be designated by SBA as a certified HUBZone small business concern in DSBS (or successor system).

* * * * *

Community Development Corporation or CDC means a nonprofit organization responsible to residents of the area it serves which has received financial assistance under 42 U.S.C. 9805, *et seq.* or has received a letter from the Department of Health and Human Services affirming that it has received

assistance under a successor program to that authorized by 42 U.S.C. 9805.

* * * * *

Contracting Officer has the meaning given that term in 41 U.S.C. 2101(1), which defines a contracting officer as a person who, by appointment in accordance with applicable regulations, has the authority to enter into a Federal agency procurement contract on behalf of the Government and to make determinations and findings with respect to such a contract.

* * * * *

Decertify means the process by which SBA removes a concern as a certified HUBZone small business concern from DSBS (or successor system) upon a finding that the firm does not meet the HUBZone eligibility requirements or after a firm voluntarily withdraws from the HUBZone program.

Dynamic Small Business Search (DSBS) means the database that government agencies use to find small business contractors for upcoming contracts. The information a business provides when registering in SAM, as defined in this section, is used to populate DSBS. For HUBZone Program purposes, a concern's DSBS profile will indicate whether it is a certified HUBZone small business concern, and if so, the date it was certified.

Employee means an individual employed on a full-time, part-time, or other basis, so long as that individual generally works a minimum of 10 hours per week during the four-week period immediately prior to the relevant date of review. SBA may permit an individual to count as an employee if that individual works less than 10 hours in any week during the four-week period immediately prior to the relevant date of review provided the individual works at least 40 hours during that four-week period and the concern demonstrates a legitimate business reason for that work schedule.

(1) To determine the number of hours worked by each individual employed by the business concern, SBA will review a concern's payroll records for the most recently completed pay periods that account for the four-week period immediately prior to the relevant date of review. To determine if an individual is an employee, SBA reviews the totality of circumstances, including criteria used by the Internal Revenue Service (IRS) for Federal income tax purposes and the factors set forth in SBA's Size Policy Statement No. 1 (51 FR 6099, February 20, 1986).

(2) In general, the following are considered employees:

(i) Individuals obtained from a temporary employee agency, from a concern primarily engaged in leasing employees, or through a union agreement, or co-employed pursuant to a Professional Employer Organization agreement;

(ii) An individual who has an ownership interest in the concern and who works for the concern 80 hours or more during the four-week period immediately prior to the relevant date of review, whether or not the individual receives compensation;

(iii) An owner who works less than 80 hours during the four-week period immediately prior to the relevant date of review, where another individual has not been hired to manage and direct the actions of the concern's employee(s);

(iv) Reservists or National Guard members when called to active duty; and

(v) Individuals who are on annual, sick, or maternity leave and continue to be paid by the business concern.

(3) In general, the following are not considered employees:

(i) Individuals who are not owners and receive no compensation for work performed;

(ii) Individuals who receive deferred compensation for work performed;

(iii) Independent contractors to whom payments are reported via IRS Form 1099 and who are not otherwise considered employees under SBA's Size Policy Statement No. 1; and

(iv) Subcontractors.

(4) Employees of an affiliate may be considered employees, if the totality of the circumstances shows that there is no clear line of fracture between the HUBZone applicant (or certified HUBZone small business concern) and its affiliate(s) (*see* § 126.204).

(5) An individual must perform work for the concern to be considered an employee for HUBZone purposes. SBA may require evidence that an individual is performing work, including but not limited to the following: a job description; the individual's resume; timesheets; proof of onboarding and/or training; evidence of regular communication assigning work to the individual and responses to such communication; examples of work product commensurate with hours worked; documentation demonstrating the individual's participation in online or telephonic meetings with supervisors or colleagues, such as meeting invitations, notes from meetings, post-meeting questions or assignments; written attestations; and other relevant documentation.

Governor-Designated Covered Area means an area that SBA has designated as a HUBZone by approving a Governor-generated petition pursuant to the procedures described in § 126.104.

* * * * *

HUBZone certification date means the date on which SBA approves a concern's application for HUBZone certification and is the date specified in the concern's certification letter. If a concern leaves the HUBZone program and reapplies for certification, its HUBZone certification date is the date SBA approves the concern's most recent application.

HUBZone Map means a publicly accessible online tool that depicts HUBZones.

HUBZone resident employee means an individual who meets the definition of an employee and who SBA has determined resides in a HUBZone.

HUBZone small business concern or certified HUBZone small business concern means a small business concern that meets the requirements described in § 126.200 and that SBA has certified as eligible for Federal contracting assistance under the HUBZone program.

* * * * *

Indian Tribal Government means the governing body of any Indian Tribe, band, nation, pueblo, or other organized group or community which is recognized as eligible for the special programs and services provided by the United States to Indians because of their status as Indians, or is recognized as such by the State in which the Tribe, band, nation, group, or community resides.

* * * * *

Principal Office means the location where the greatest number of the concern's employees at any one location perform their work.

(1) In order for a location to be considered the principal office, the concern must provide a deed or an active lease that includes a start date that was at least 30 calendar days prior to the relevant date of review, and an end date that is at least 60 calendar days after the relevant date of review, as well as any other documentation requested by SBA;

(2) In order for a location to be considered the principal office, the concern must conduct business at this location. The concern may be required to demonstrate that it is doing so by submitting evidence including but not limited to the following:

(i) Photos and/or a live or virtual walk-through of the space; and

(ii) For shared working spaces, evidence that the firm has dedicated space within any shared location, and that such dedicated space contains

sufficient work surface area, furniture, and equipment to accommodate the number of employees claimed to work from this location;

(3) If an employee works at multiple locations, then the employee will be deemed to work at the location where the employee spends more than 50% of his or her time. If an employee does not spend more than 50% of his or her time at any one location and at least one of those locations is a non-HUBZone location, then the employee will be deemed to work at a non-HUBZone location.

(4) For those concerns whose ''primary industry classification'' is services or construction (*see* § 121.201 of this chapter), the determination of principal office excludes the concern's employees who perform more than 50% of their work at job-site locations to fulfill specific contract obligations. If all of a concern's employees perform more than 50% of their work at job sites, the concern does not comply with the principal office requirement.

(i) *Example 1:* A business concern whose primary industry is construction has a total of 78 employees, including the owners. The business concern has one office (Office A), which is located in a HUBZone, with 3 employees working at that location. The business concern also has a job-site for a current contract, where 75 employees perform more than 50% of their work. The 75 job-site employees are excluded for purposes of determining principal office. Since the remaining 3 employees all work at Office A, Office A is the concern's principal office. Since Office A is in a HUBZone, the business concern complies with the principal office requirement.

(ii) *Example 2:* A business concern whose primary industry is services has a total of 4 employees, including the owner. The business concern has one office located in a HUBZone (Office A), where 2 employees perform more than 50% of their work, and a second office not located in a HUBZone (Office B), where 2 employees perform more than 50% of their work. Since there is not one location where the greatest number of the concern's employees at any one location perform their work, the business concern would not have a principal office in a HUBZone.

(iii) *Example 3:* A business concern whose primary industry is services has a total of 6 employees, including the owner. Five of the employees perform all of their work at job-sites fulfilling specific contract obligations. The business concern's owner performs 45% of her work at job-sites, and 55% of her work at an office located in a HUBZone (Office A) conducting tasks such as writing proposals, generating payroll, and responding to emails. Office A would be considered the principal office of the concern since it is the only location where any employees of the concern work that is not a job site and the 1 individual working there spends more than 50% of her time at Office A. Since Office A is located in a HUBZone, the small business concern would meet the principal office requirement.

* * * * *

Qualified Disaster Area. (1) Qualified Disaster Area means any census tract or non-metropolitan county located in an area where a major disaster declared by the President under section 401 of the Robert T. Stafford Disaster Relief and Emergency Assistance Act (42 U.S.C. 5170) has occurred or an area in which a catastrophic incident has occurred if such census tract or non-metropolitan county ceased to be a Qualified Census Tract or Qualified Non-Metropolitan County during the period beginning 5 years before the date on which the President declared the major disaster or the catastrophic incident occurred.

(2) A census tract or non-metropolitan county shall be considered to be a Qualified Disaster Area for the period of time starting on the date on which the President declared the major disaster for the area in which the census tract or non-metropolitan county, as applicable, is located (or in the case of a catastrophic incident, on the date on which the catastrophic incident occurred in the area in which the census tract or non-metropolitan county, as applicable, is located) and ending on the date when SBA next updates the HUBZone Map in accordance with § 126.104(a).

* * * * *

Recertification (or certification renewal), for purposes of this subpart, means the process by which a concern represents that it continues to meet the requirements of the HUBZone program.

Redesignated Area means any census tract that ceases to be a Qualified Census Tract or any non-metropolitan county that ceases to be a Qualified Non-Metropolitan County. A Redesignated Area generally shall be treated as a HUBZone for a period of three years, starting from the date on which the area ceased to be a Qualified Census Tract or a Qualified Non-Metropolitan County. The date on which the census tract or non-metropolitan county ceases to be qualified is the date on which the official government data affecting the eligibility of the HUBZone is released to the public.

Reside means to live at a location full-time and for at least 90 calendar days immediately prior to the relevant date of review.

(1) To determine residence, SBA will first look to an individual's address identified on his or her driver's license or other government-issued identification card. Where such documentation is not available (or where the address on the individual's driver's license does not match the residence claimed), SBA will require other specific proof of residency, such as deeds, leases, and/or utility bills, as well as an explanation as to why a driver's license is unavailable or inconsistent.

(2) For HUBZone purposes, SBA will consider individuals temporarily residing overseas in connection with the performance of a contract to reside at their U.S. residence.

(i) *Example 1:* A person possesses the deed to a residential property and pays utilities and property taxes for that property. However, the person does not live at this property, but instead rents out this property to another individual. For HUBZone purposes, the person does not reside at the address listed on the deed and is not considered a HUBZone employee.

(ii) *Example 2:* A person moves into an apartment under a month-to-month lease and lives in that apartment full-time. SBA would consider the person to reside at the address listed on the lease if the person can show that he or she has lived at that address for at least 90 calendar days immediately prior to the relevant date of review.

(iii) *Example 3:* A person is working overseas on a contract for the small business and is therefore temporarily living abroad. The employee can provide documents showing he has paid rent for an apartment located in a HUBZone for at least 90 calendar days immediately prior to the relevant date of review. That person is deemed to reside in a HUBZone.

* * * * *

Small business concern means a concern that, with its affiliates, meets the size standard corresponding to any NAICS code listed in its profile in the System for Award Management (or successor system), pursuant to part 121 of this chapter.

System for Award Management (SAM) has the same meaning as in FAR 2.101.

■ 41. Revise § 126.104 as follows:

§ 126.104 How can a Governor petition for the designation of a Governor-designated cover area?

(a) *Petition.* Each calendar year, the Governor of a State may submit a

petition to the SBA Office of the HUBZone Program requesting that certain covered areas be designated as Governor-designated covered areas. For a specific covered area to receive a designation as a Governor-designated covered area, the Governor of the State in which the identified covered area is wholly contained shall include such area in a petition to SBA requesting such a designation.

(1) A Governor may submit not more than one petition described in this section per calendar year.

(2) The petition described in this section shall include all covered areas in a State for which the Governor seeks designation as a Governor-designated covered area. The total number of covered areas included in such petition may not exceed ten percent of the total number of covered areas in the State.

(3)(i) The total number of covered areas in a State shall be calculated by aggregating the number of census tracts and counties that qualify as covered areas as described in paragraph (d) of this section.

(ii) A petition need not seek SBA approval for those covered areas previously designated as Governor-designated covered areas.

(b) *SBA Review.* In reviewing a request for designation included in such a petition, SBA may consider:

(1) The potential for job creation and investment in the covered area;

(2) The demonstrated interest of small business concerns in the covered area to be designated as a Governor-designated covered area;

(3) How State and local government officials have incorporated the covered area into an economic development strategy; and

(4) If the covered area was a HUBZone before becoming the subject of the petition, the impact on the covered area if the Administrator did not approve the petition.

(c) *SBA Decision.* The AA/GCBD (or designee) is authorized to grant the petitions described in this section. If the AA/GCBD (or designee) grants a petition described in this section, SBA will issue a written notice to the petitioning Governor and add the newly designated Governor-designated covered areas to the HUBZone Map.

(d) *Length of designation.* A Governor-designated covered area will be treated as a HUBZone until SBA next updates the HUBZone Map in accordance with § 126.105(a), or one year after the petition is approved, whichever is later.

(e) *Definitions.* In this section:

(1) The term ''covered area'' means a census tract or county in a State—

(i) That is located outside of an urban area, as determined by the Bureau of the Census, with a population of not more than 50,000; and

(ii) For which the average unemployment rate is at least 120 percent of the average unemployment rate of the United States or of the State in which the covered area is located, whichever is less, based on the most recent data available from the American Community Survey conducted by the Bureau of the Census.

(2) The term ''Governor'' means the chief executive of a State.

(3) The term ''State'' means each of the States of the United States, the District of Columbia, the Commonwealth of Puerto Rico, the United States Virgin Islands, Guam, the Commonwealth of the Northern Mariana Islands, or American Samoa.

■ 42. Add § 126.105 to read as follows:

§ 126.105 How often will the HUBZone Map be updated?

The HUBZone Map will be updated as follows:

(a) Qualified Census Tracts and Qualified Non-Metropolitan Counties will be updated every 5 years.

(b) Redesignated Areas will be added to the HUBZone Map when areas cease to be designated as Qualified Census Tracts or Qualified Non-Metropolitan Counties, in accordance with the 5-year cycle described in paragraph (a) of this section, and will be removed after 3 years.

(c) Qualified Base Closure Areas will be added to the HUBZone Map after SBA receives information from the Department of Defense that a new base closure area has been created and will be removed after 8 years.

(d) Qualified Disaster Areas generally will be added to the HUBZone Map on a monthly basis, based on data received by SBA from the Federal Emergency Management Agency (FEMA), and generally will be removed on the effective date of the 5-year HUBZone Map update following the declaration.

(e) Governor-Designated Covered Areas will be added to the HUBZone Map after SBA approves a petition in accordance with § 126.104 and will be removed on the effective date of the 5-year HUBZone Map update following the approval, or one year after the petition is approved, whichever is later.

■ 43. Amend § 126.200 by:

■ a. Revising paragraphs (b)(1) and (c)(1);

■ b. Adding a paragraph heading in paragraph (c)(2);

■ c. Revising paragraph (d)(1);

■ d. Adding a paragraph heading in paragraph (d)(2);

■ e. Revising paragraph (d)(3);

■ f. Revising paragraphs (e), (f), and (g); and

The revisions and additions read as follows:

§ 126.200 What requirements must a concern meet to be eligible as a certified HUBZone small business concern?

* * * * *

(b) * * *

(1) In order to be eligible for HUBZone certification and recertification, a concern, together with its affiliates, must qualify as a small business concern as defined in part 121 of this chapter under the size standard corresponding to any NAICS code listed in its profile in SAM (or successor system). In determining whether a concern qualifies as small under the size standard corresponding to a specific NAICS code, SBA will accept the concern's size representation in SAM (or successor system), unless there is evidence indicating that the concern is other than small. SBA will request a formal size determination pursuant to § 121.1001(b)(8) of this chapter where any information it possesses calls into question the concern's SAM size representation.

* * * * *

(c) * * *

(1*) Long-term investment*—(i) *General.* A concern that has purchased a building or entered a long-term lease of at least 10 years for a property in a HUBZone (other than in a Redesignated Area or Qualified Disaster Area) will be deemed to have its principal office located in a HUBZone for up to 10 years from the date of the investment, as long as that building or property qualifies as the concern's principal office and continues to qualify as the concern's principal office, and as long as the firm maintains the long-term lease or continues to be the sole owner of the property.

(ii) *Commencement of 10-year period.* The 10-year principal office long-term investment protection period starts to run on the firm's HUBZone certification date (if the investment was made prior to the firm's certification) or on the date of the investment (if the investment was made after the firm's HUBZone certification date).

Example 1 to paragraph (c)(2)(i): If a firm was certified on March 31, 2020, and purchased a building on July 20, 2020, the 10-year clock would begin when the firm recertifies as of July 29, 2020.

(iii) *Exceptions.* The following do not qualify for this provision:

(A) An office located in a Redesignated Area or Qualified Disaster

Area at the time of initial HUBZone certification;

(B) An office that is shared with one or more other concerns or individuals;

(C) Any location being used as a personal residence; or

(D) An investment made within 180 calendar days of the expiration of an area's designation as a Qualified Census Tract, Qualified Non-Metropolitan County, Governor-Designated Covered Area, or Qualified Base Closure Area.

(2) *Tribally-owned concerns.* * * * * * * * * * *

(d) * * *

(1) *General.* In order to be eligible for HUBZone certification, at least 35% of a concern's employees must qualify as HUBZone resident employees. When determining the percentage of employees that must reside in a HUBZone to meet the 35% HUBZone residency requirement, if the percentage results in a fraction, SBA rounds to the nearest whole number, except for a firm with only one employee. For firms with only one employee, that one employee must reside in a HUBZone.

Example 1 to paragraph (d)(1): A concern has 25 employees; 35% of 25, or 8.75, employees must reside in a HUBZone. The number 8.75 rounded to the nearest whole number is 9. Thus, 9 employees must reside in a HUBZone.

Example 2 to paragraph (d)(1): A concern has 95 employees; 35% of 95, or 33.25, employees must reside in a HUBZone. The number 33.25 rounded to the nearest whole number is 33. Thus, 33 employees must reside in a HUBZone.

(2) *Tribally-owned concerns.* * * *

(3) *Legacy HUBZone employees.* (i) An individual will be considered a Legacy HUBZone Employee and count as a HUBZone resident employee, even if the employee subsequently moves to a location that is not in a HUBZone or the area in which the employee's residence is located no longer qualifies as a HUBZone, if the individual:

(A) Continues to live in a HUBZone for at least 180 calendar days immediately after the firm's HUBZone certification date (or recertification date); and

(B) Continues to meet the definition of ''employee'' in § 126.103 continuously and without interruption.

(ii) A certified HUBZone small business concern may have up to four Legacy HUBZone Employees at a given time, but must have at least one other HUBZone employee in order for any legacy employee to count as a HUBZone employee.

(iii) The certified HUBZone small business concern must maintain records of the Legacy HUBZone Employee's original HUBZone address, as well as records of any HUBZone other address in which the individual resided, as well as records of the individual's continuous and uninterrupted employment by the HUBZone small business concern, for the duration of the concern's participation in the HUBZone program. In order to demonstrate that an individual resided in a HUBZone for 180 days after certification (or recertification), the concern must submit to SBA copies of leases, utility bills, or property tax records.

(iv) The certification date or recertification date being used to establish the HUBZone residency of the employee must be after December 26, 2019.

(v) The following individuals do not qualify as Legacy HUBZone Employees:

(A) An individual who initially qualified as a HUBZone Resident Employee by residing in a Redesignated Area or a Qualified Disaster Area; and

(B) An individual who works less than 30 hours per week.

Example 1 to paragraph (d)(3): As part of its application for HUBZone certification, a concern provides documentation showing that it has ten employees, four of which reside in HUBZones. SBA certifies the concern as a certified HUBZone small business concern. More than 180 days after being certified, two individuals who qualified as HUBZone Resident Employees, and were critical to the concern's meeting the 35% residency requirement, move out of the HUBZone area but continuously remain employees of the concern. Because the business concern has two other employees who still live in a HUBZone, both of the individuals who may be treated as Legacy Employees and count as HUBZone Resident Employees for purposes of recertification.

(e) *Attempt to maintain.* (1) At the time of application, each recertification required by § 126.500(a), and offer for a HUBZone contract, a concern must certify that it will ''attempt to maintain'' (*see* § 126.103) having at least 35% of its employees reside in a HUBZone during the performance of any HUBZone contract it receives.

(2) At the time of recertification, a firm that is currently performing a HUBZone contract and falls below the 35% HUBZone residency requirement may recertify as a HUBZone small business concern as long as at least 20% of its total employees reside in a HUBZone and it is making substantive and documented efforts to meet the HUBZone residency requirement.

(3) During performance of a HUBZone contract, a HUBZone small business concern must attempt to maintain having at least 35% of its employees residing in HUBZones.

(f) *Suspension and Debarment.* At the time of application and at all times while a concern is HUBZone-certified, such concern and any of its owners must not have an active exclusion in SAM.

(g) *Federal financial obligations.* A business concern is ineligible to be certified as a HUBZone small business concern or to participate in the HUBZone program if either the concern or any of its principals has failed to pay significant financial obligations owed to the Federal Government, including unresolved tax liens and defaults on Federal loans or other Federally assisted financing. However, a small business concern may be eligible if the concern or the affected principals can demonstrate that they are current on an approved repayment plan, or the financial obligations owed have been settled and discharged/forgiven by the Federal Government.

■ 44. Amend § 126.201 by revising the section heading, and the first sentence of the introductory text to read as follows:

§ 126.201 Who does SBA consider to be an owner of a HUBZone small business concern?

For purposes of qualifying for HUBZone certification, SBA considers any person who owns any legal or equitable interest in a concern to be an owner of the concern. * * * * * * * * * * *

§ 126.202 [Amended]

■ 45. Amend § 126.202 by removing the word ''SBC'' in the section heading and in the first sentence and adding in its place the words ''small business concern'', and removing the third and fourth sentences.

■ 46. Amend § 126.204 by:
■ a. Revising paragraph (a);
■ b. Removing the words ''all information'' in the introductory text of paragraph (c) and adding in their place the words ''the totality of circumstances'';
■ c. Revising paragraph (c)(3); and
■ d. Adding paragraph (c)(4).

The revisions and addition read as follows:

§ 126.204 May a HUBZone small business concern have affiliates?

(a) A HUBZone small business concern may have affiliates, provided that the HUBZone small business

concern, together with its affiliates, qualifies as a small business concern as defined in part 121 of this chapter under the size standard corresponding to any NAICS code listed in its profile in SAM (or successor system), except as otherwise provided for small agricultural *cooperatives.gov* in § 126.103.

* * * * *

(c) * * *

(3) Minimal business activity between the concern and its affiliate alone will not result in an affiliate's employees being counted as employees of the HUBZone applicant or HUBZone small business concern.

(4) SBA will not treat the employees of one company as employees of another for HUBZone program purposes if the two firms would not be considered affiliated for size purposes under Part 121 of this chapter.

Example 1 to paragraph (c): X owns 100% of Company A and 51% of Company B. Based on X's common ownership of A and B, the two companies are affiliated under SBA's size regulations. SBA will look at the totality of circumstances to determine whether it would be reasonable to treat the employees of B as employees of A for HUBZone program purposes. If both companies do construction work and share office space and equipment, then SBA would find that there is not a clear line of fracture between the two concerns and would treat the employees of B as employees of A for HUBZone program purposes. In order to be eligible for the HUBZone program, at least 35% of the combined employees of A and B must reside in a HUBZone.

§ 126.302 [Amended]

■ 47. Amend § 126.302 by removing the last sentence.

■ 48. Revise § 126.303 to read as follows:

§ 126.303 Where must a concern submit its application for certification?

A concern seeking certification as a HUBZone small business concern must submit an electronic application to SBA's HUBZone Program Office via SBA's website at *https://SBA.gov*. The majority owner must take responsibility for the accuracy of all information submitted on behalf of the applicant.

■ 49. Amend § 126.304 by revising paragraph (e) to read as follows:

§ 126.304 What must a concern submit to SBA in order to be certified as a HUBZone small business concern?

* * * * *

(e) *Records maintenance.* (1) HUBZone small business concerns must retain documentation demonstrating satisfaction of all qualifying requirements for 6 years from the date of submission of all initial and continuing eligibility actions.

(2) HUBZone small business concerns must retain documentation related to ''Legacy HUBZone employees,'' as described in § 126.200(d)(3).

■ 50. Amend § 126.306 by:

■ a. Revising paragraph (d);

■ b. Removing the words ''System for Award Management'' in paragraph (g) and adding in their place the word ''SAM''; and

■ c. Adding paragraph (h).

The revision and addition read as follows:

§ 126.306 How will SBA process an application for HUBZone certification?

* * * * *

(d) An applicant must be eligible as of the date SBA issues a decision.

* * * * *

(h) SBA's decision to approve or deny an application is the final agency decision.

§ 126.308 [Amended]

■ 51. Amend § 126.308 in paragraph (b) by removing the words ''System for Award Management'' and adding in their place the word ''SAM''.

■ 52. Revise § 126.309 to read as follows:

§ 126.309 May a declined or decertified concern apply for certification at a later date?

(a) A concern that SBA has declined may apply for certification after ninety (90) calendar days from the date of decline if it believes that it has overcome all reasons for decline through changed circumstances and is currently eligible.

(b) A concern that SBA has decertified may apply for certification immediately after the date of decertification, if it believes that it has overcome all reasons for decertification through changed circumstances and is currently eligible.

(c) A concern that voluntarily withdraws from the HUBZone program may immediately re-apply for certification, if it believes that it is currently eligible.

■ 53. Revise § 126.401 to read as follows:

§ 126.401 What is a program examination?

A program examination is an investigation by SBA officials, which verifies the accuracy of any certification made or information provided as part of the HUBZone application process, as part of the recertification process, or in connection with a HUBZone contract.

■ 54. Amend § 126.403 by revising paragraphs (a) and (b) to read as follows:

§ 126.403 What will SBA review during a program examination?

(a) SBA will determine the scope of a program examination and may review any information related to the concern's HUBZone eligibility including, but not limited to, documentation related to the concern's size, principal office, ownership, compliance with the 35% HUBZone residency requirement, and compliance with the ''attempt to maintain'' (*see* § 126.103) requirement. A representative from SBA may visit one or more of a concern's offices as part of a program examination.

(b) SBA may require that a HUBZone small business concern submit additional information as part of the program examination. If SBA requests additional information, SBA will presume that written notice of the request was provided when SBA sends such request to the concern at an email address provided in the concern's profile in DSBS or SAM (or successor systems). The burden of proof to demonstrate eligibility is on the concern. If a concern does not provide requested information within the allotted time provided by SBA, or if it submits incomplete information, SBA may draw an adverse inference and presume that the information that the concern failed to provide would demonstrate ineligibility and decertify the concern (or deny certification) on this basis.

* * * * *

■ 55. Amend § 126.404 by revising paragraphs (b) and (c) to read as follows:

§ 126.404 What are the possible outcomes of a program examination and when will SBA make its determination?

* * * * *

(b) If SBA determines that the concern is eligible, SBA will send a written notice to the HUBZone small business concern and continue to designate the concern as a certified HUBZone small business concern in DSBS (or successor system).

(c) If SBA determines that the concern is not eligible, the firm will be suspended from the HUBZone program. The concern will have 30 calendar days to submit sufficient documentation showing that it was in fact eligible on the date of review. During the suspension period, SBA will remove the firm as a certified HUBZone small business concern from DSBS. In addition, the concern may not compete for or be awarded a HUBZone contract during that suspension period and must provide written notice of the concern's

ineligibility to the contracting officer for any pending HUBZone award. If such concern fails to submit documentation sufficient to demonstrate its eligibility, the concern will be decertified. If SBA overturns its determination, SBA will lift the suspension and reinstate the firm as an eligible certified HUBZone small business concern in DSBS.

■ 56. Revise § 126.500 to read as follows:

§ 126.500 How does a concern maintain HUBZone certification?

(a) *Recertification.* (1) Any concern seeking to remain a certified HUBZone small business concern in DSBS (or successor system) must recertify to SBA that it continues to meet all HUBZone eligibility criteria (*see* § 126.200) every three years. In order to recertify—

(i) A certified HUBZone small business concern that was not awarded a HUBZone contract during the 12-month period preceding its recertification must represent that, at the time of its recertification, at least 35% of its employees reside in HUBZones and the concern's principal office is located in a HUBZone.

(ii) A certified HUBZone small business concern that was awarded a HUBZone contract during the 12-month period preceding its recertification must represent that, at the time of its recertification, it is attempting to maintain compliance with the 35% HUBZone residency requirement and the concern's principal office is located in a HUBZone.

(2) The concern's recertification must be submitted in the 90 calendar days before the triennial anniversary of its HUBZone certification date.

(3) If a concern fails to recertify, SBA will decertify the concern at the end of its eligibility period. However, if a concern is able to recertify its eligibility within 30 days of the end of its eligibility period, SBA will reinstate the firm as a certified HUBZone small business concern.

(4) For a certified HUBZone small business concern that is also a certified WOSB or SDVOSB, the firm may have to recertify less than three years after its previous recertification in order to align certification date.

(b) *Program examinations.* SBA will conduct a program examination of each certified HUBZone small business concern at least once every three years to ensure continued program eligibility, but may conduct more frequent program examinations using a risk-based analysis to select which concerns are examined.

■ 57. Revise § 126.501 to read as follows:

§ 126.501 What are a certified HUBZone small business concern's ongoing obligations to SBA?

A certified HUBZone small business concern that acquires, is acquired by, or merges with another business entity must provide evidence to SBA, within 30 calendar days of the transaction becoming final, that the concern continues to meet the HUBZone eligibility requirements. A concern that no longer meets the requirements may voluntarily withdraw from the program or it will be removed by SBA pursuant to program decertification procedures.

§ 126.502 [Amended]

■ 58. Amend § 126.502 by removing the words ''§§ 126.200, 126.500, and 126.501'' and adding in their place the words ''§§ 126.200, 126.500, and 126.501, and all other requirements described in this part''.

■ 59. Amend § 126.503 by:
■ a. Revising paragraphs (a) and (c);
■ b. Redesignating paragraph (d) as paragraph (e);
■ c. Adding new paragraph (d); and
■ d. Revising the first sentence of redesignated paragraph (e).

The revisions and addition read as follows:

§ 126.503 What happens if SBA is unable to verify a HUBZone small business concern's eligibility or determines that a concern is no longer eligible for the program?

(a) *Proposed decertification*—(1) *Bases for proposed decertification.* SBA may propose a certified HUBZone small business concern for decertification from the HUBZone program if:

(i) SBA has found the concern to be ineligible based on a program examination;

(ii) The concern failed to respond to a program examination;

(iii) SBA has information indicating that the concern is performing a HUBZone but is not attempting to maintain (*see* § 126.103) compliance with the 35% HUBZone residency requirement; or

(iv) SBA is unable to verify the concern's eligibility or otherwise has information indicating that the concern may not meet the eligibility requirements of this part,

(2) *Notice of proposed decertification.* SBA will notify the HUBZone small business concern by email that SBA is proposing to decertify it and state the reason(s) for the proposed decertification. The notice of proposed decertification will notify the concern that it has 30 calendar days from the date SBA emails the letter to submit a written response to SBA explaining why the proposed ground(s) should not justify decertification. SBA will consider that written notice was provided if SBA sends the notice of proposed decertification to the concern at the email address provided in the concern's profile in DSBS (or successor system).

(3) *Response to notice of proposed decertification.* The HUBZone small business concern must submit a written response to the notice of proposed decertification within the timeframe specified in the notice. In this response, the concern must rebut each of the reasons set forth by SBA in the notice of proposed decertification, and where appropriate, the rebuttal must include documents showing that the concern is eligible for the HUBZone program as of the date specified in the notice.

(4) *Adverse inference.* If a HUBZone small business concern fails to cooperate with SBA or fails to provide the information requested, SBA may draw an adverse inference and assume that the information that the concern failed to provide would demonstrate ineligibility.

(5) *SBA's decision.* SBA will determine whether the HUBZone small business concern remains eligible for the program within 90 calendar days after receiving all requested information, when practicable. SBA will provide written notice to the concern stating the basis for the determination.

(i) If SBA finds that the concern is not eligible, SBA will decertify the concern and remove its designation as a certified HUBZone small business concern in DSBS (or successor system).

(ii) If SBA finds that the concern is eligible, the concern will continue to be designated as a certified HUBZone small business concern in DSBS (or successor system).

* * * * *

(c) *Decertification based on false or misleading information.* (1) If SBA discovers that a certified HUBZone small business concern or its representative submitted false or misleading information, SBA will propose the firm for decertification. In addition, SBA will refer the matter to the SBA Office of Inspector General for review and may recommend that Government-wide debarment or suspension proceedings be initiated.

(2) A firm that is decertified from the HUBZone program due to the submission of false or misleading information may be removed from SBA's other small business contracting programs, including the 8(a) Business Development Program, the Women-Owned Small Business (WOSB)

Program, the Veteran Small Business Certification (VetCert) Program, and SBA's Mentor-Protégé Program.

(3) A firm that is decertified or terminated from the 8(a) BD Program, the WOSB Program, or the VetCert Program due to the submission of false or misleading information may be decertified from the HUBZone Program.

(4) SBA may require a firm that is decertified or terminated from the HUBZone Program, 8(a) BD Program, the WOSB Program, or the VetCert Program due to the submission of false or misleading information to enter into an administrative agreement with SBA as a condition of admission or re-admission to the HUBZone program.

(d) *Decertification due to debarment.* If a certified HUBZone small business concern is debarred from Federal contracting, SBA will decertify the HUBZone small business concern immediately and change the concern's status in DSBS (or successor system) to reflect that it no longer qualifies as a certified HUBZone small business concern, without first proposing it for decertification.

(e) * * * Once SBA has decertified a concern, the concern is ineligible for the HUBZone program and may not submit an offer or quote for a HUBZone contract. * * *

■ 60. Amend § 126.504 by:
■ a. Removing the word ''or'' at the end of paragraph (a)(2);
■ b. Redesignating paragraph (a)(3) as (a)(4);
■ c. Adding new paragraph (a)(3);
■ d. Removing the words ''pursuant to § 126.501(b)'' in newly redesignated paragraph (a)(4); and
■ e. Removing paragraph (c).

The addition reads as follows:

§ 126.504 When will SBA remove the designation of a concern in DSBS (or successor system) as a certified HUBZone small business concern?

(a) * * *

(3) Been debarred pursuant to the procedures in FAR 9.4; or

* * * * *

■ 61. Revise § 126.600 to read as follows:

§ 126.600 What are HUBZone contracts?

HUBZone contracts are prime contracts awarded to a certified HUBZone small business concern (or a HUBZone joint venture that complies with the requirements of § 126.616), regardless of the place of performance, through any of the following procurement methods:

(a) Sole source awards awarded pursuant to § 126.612 to certified HUBZone small business concerns (or HUBZone joint ventures that comply with the requirements of § 126.616);

(b) Set-aside awards (including partial set-asides and set-aside multiple award contracts) based on competition restricted to certified HUBZone small business concerns;

(c) Awards through full and open competition after the HUBZone price evaluation preference is applied to an other than small business in favor of a certified HUBZone small business;

(d) Awards based on a reserve for certified HUBZone small business in an unrestricted solicitation;

(e) Orders awarded to certified HUBZone small business concerns under a multiple award contract that was set-aside for certified HUBZone small business concerns;

(f) Orders set-aside for certified HUBZone small business concerns under a multiple award contract that was awarded using full and open competitive procedures;

(g) Orders set-aside for certified HUBZone small business concerns under a multiple award contract that was awarded as a small business set-aside.

■ 62. Amend § 126.601 by revising paragraphs (a), (b)(1), and (e), and adding paragraph (f) to read as follows:

§ 126.601 What additional requirements must a certified HUBZone small business concern meet to submit an offer on a HUBZone contract?

(a) Only certified HUBZone small business concerns are eligible to submit offers for a HUBZone contract or to receive a price evaluation preference under § 126.613.

(1) An offeror for a HUBZone contract must be identified as a certified HUBZone small business concern in DSBS (or successor system) and meet the HUBZone requirements in § 126.200 as of the date it submits its initial offer that includes price.

(2) A certified HUBZone small business concern that was awarded a HUBZone contract during the 12-month period prior to submitting an offer relating to the award of another HUBZone contract may submit an offer and be eligible as a certified HUBZone small business concern as long as at least 20% of its total employees reside in a HUBZone and it is making substantive and documented efforts to meet the HUBZone residency requirement.

(3) For a multiple award contract, where concerns are not required to submit price as part of the offer for the contract, an offeror must be identified as a certified HUBZone small business concern in DSBS (or successor system) and meet the HUBZone requirements in § 126.200 as of the date it submits its initial offer, which may not include price.

(4) A HUBZone joint venture must have its joint venture agreement in place that complies with the requirements in § 126.616 as of its final offer.

(5) As long as a concern was a certified HUBZone small business and met the HUBZone requirements as of the date of its initial offer for a HUBZone contract, it may be awarded a HUBZone contract even if it no longer appears as a certified HUBZone small business concern on DSBS, or successor system, or no longer qualifies as an eligible HUBZone small business on the date of award.

(b) * * *

(1) Is a certified HUBZone small business concern in DSBS (or successor system) and meets the HUBZone requirements in § 126.200, including having 35% of its employees residing in HUBZones and having its principal office located in a HUBZone;

* * * * *

(e) For two-step procurements to be awarded as HUBZone contracts (*e.g.,* architect-engineering and design-build procurements), a certified HUBZone small business concern must be eligible as of the date that it submits its initial bid or proposal (which may or may not include price) during phase one.

(f) In general, an offeror on a HUBZone contract is not required to be HUBZone-certified on the date the contract is awarded. However, for HUBZone sole source contracts, the concern must be a certified HUBZone small business concern and meet the requirements in § 126.200 at the time of award and must qualify as small as of that date under the size standard corresponding to the NAICS code assigned to the procurement.

■ 63. Revise § 126.602 to read as follows:

§ 126.602 Must a certified HUBZone small business concern maintain the HUBZone employee residency percentage during contract performance?

(a) A certified HUBZone small business concern that has been awarded a HUBZone contract must ''attempt to maintain'' (*see* § 126.103) having 35% of its employees residing in a HUBZone during the performance of any HUBZone contract. If a certified HUBZone small business concern is awarded a HUBZone contract within 12 months prior to the due date for its triennial recertification, then such concern must attempt to maintain compliance with the 35% HUBZone

residency requirement at the time of such recertification. However, such a concern must have at least 35% of its employees residing in HUBZones at the time of each recertification thereafter, even if the concern is still performing that HUBZone contract.

(b) For orders under indefinite delivery, indefinite quantity contracts (including orders under multiple award contracts), a certified HUBZone small business concern must ''attempt to maintain'' the HUBZone residency requirement during the performance of each order that is set aside for HUBZone small business concerns.

(c) A certified HUBZone small business concern that is tribally-owned, and made the certification in § 126.200(c)(2)(ii) at the time of its HUBZone certification (or at the time of its most recent recertification), must have at least 35% of its employees engaged in performing a HUBZone contract residing within any Indian reservation governed by one or more of the concern's Indian Tribal Government owners, or residing within any HUBZone adjoining any such Indian reservation.

(d) A certified HUBZone small business concern that has less than 20% of its total employees residing in a HUBZone during the performance of a HUBZone contract has failed to attempt to maintain the HUBZone residency requirement. Such failure will result in proposed decertification pursuant to § 126.503.

§ 126.603 [Amended]

■ 64. Amend § 126.603 by removing the word ''concernwill'' and adding in its place the words ''concern will''.

§ 126.604 [Amended]

■ 65. Amend § 126.604 by removing the words ''makes this decision'' and adding in their place the words ''determines if a contract opportunity for HUBZone set-aside competition exists''.

§ 126.605 [Amended]

■ 66. Amend § 126.605 by removing the word ''may'' in the introductory text and adding in its place the word ''shall''.

§ 126.607 [Amended]

■ 67. Amend § 126.607 by:

■ a. Removing the word ''must'' in the section heading and adding in its place the word ''may'';

■ b. Removing the words ''SDVO SBC'' wherever they appear in paragraphs (b)(1) and (b)(2) and adding in their place the words ''Veteran Small Business Certification''; and

■ c. Removing the words ''qualified HUBZone SBCs'' in paragraph (c)(1) and adding in their place the words ''certified HUBZone small business concerns''.

■ 68. Revise § 126.612 to read as follows:

§ 126.612 When may a contracting officer award sole source contracts to HUBZone small business concerns?

(a) A contracting officer may award a sole source contract to a HUBZone small business concern only when the contracting officer determines that:

(1) None of the provisions of §§ 126.605 or 126.607 apply;

(2) The anticipated award price of the contract, including options, will not exceed: (i) $7,000,000 for a contract assigned a manufacturing NAICS code, or

(ii) $4,500,000 for all other contracts.

(3) Two or more HUBZone small business concerns are not likely to submit offers;

(4) A HUBZone small business concern is a responsible contractor able to perform the contract; and

(5) In the estimation of the contracting officer, contract award can be made at a fair and reasonable price.

(6) The intended awardee is a certified HUBZone small business concern at the time of its initial offer and continues to be eligible on the date of award.

(b) A contracting officer may rely on the firm's status as a certified HUBZone small business concern in awarding a sole source HUBZone contract. However, if there is a status protest relating to the apparent successful offeror, SBA will determine eligibility as of the intended date of award.

■ 69. Amend § 126.613 by revising paragraph (a), adding paragraph headings in paragraphs (b) through (d), and adding a new paragraph (e).

The revisions and additions read as follows:

§ 126.613 How does a price evaluation preference affect the bid of a certified HUBZone small business concern in full and open competition?

(a) *General.* (1) Where a contracting officer will award a contract on the basis of full and open competition, the contracting officer must deem the price offered by a certified HUBZone small business concern to be lower than the price offered by an offeror that is not a small business concern if: the other than small business initially is the lowest responsive and responsible offeror, and the price offered by the certified HUBZone small business concern is not more than 10% higher than the price offered by the other than small business.

(2) The HUBZone price evaluation preference does not apply where the initial lowest responsive and responsible offeror is a small business concern.

(3) The HUBZone price evaluation preference does not apply to the portion of a multiple award contract that is reserved for certified HUBZone small business concerns. However, the HUBZone price evaluation preference does apply to the non-reserved portion of a multiple award contract.

(4) To apply the HUBZone price evaluation preference, the contracting officer must add 10% to the offer of the otherwise successful other than small business offeror. If the certified HUBZone small business concern's offer is lower than that of the other than small business after the preference is applied, the certified HUBZone small business concern must be deemed the lowest-priced offeror. For a best value procurement, the contracting officer must first apply the 10% price preference to the offers of any other than small businesses and then determine which offeror represents the best value to the Government, in accordance with the terms of the solicitation. Where, after considering the price evaluation adjustment, the offer of a certified HUBZone small business concern is determined to be the best value to the Government, award shall be made to the certified HUBZone small business concern.

Example 1 to paragraph (a): In a full and open competition procurement, a certified HUBZone small business concern submits an offer of $98, a non-HUBZone small business concern submits an offer of $95, and a large business submits an offer of $93. The initial lowest, responsive, responsible offeror is the large business. The contracting officer must then apply the HUBZone price evaluation preference because an offer was received from a certified HUBZone small business concern. After the application of the price preference, the HUBZone small business concern's offer is considered to be lower than the offer of the large business (*i.e.,* $98 is lower than $102.3 ($93 × 110%)). Since the certified HUBZone small business concern's offer is not more than 10% higher than the large business' offer, the certified HUBZone small business concern displaces the large business as the lowest, responsive, and responsible offeror. The non-HUBZone small business concern is unaffected by the preference because it was not the lowest offeror prior to the application of the preference.

Example 2 to paragraph (a): In a full and open competition procurement, a certified HUBZone small business concern submits an offer of $103, a non-HUBZone small business concern submits an offer of $100, and a large business submits an offer of $93. The initial lowest responsive and responsible offeror is the large business. The contracting officer must then apply the HUBZone price evaluation preference. After the application of the price preference, the HUBZone small business concern's offer is not lower than the offer of the large business (*i.e.,* $103 is not lower than $102.3 ($93 × 110%)). Since the certified HUBZone small business concern's offer is more than 10% higher than the large business' offer, the certified HUBZone small business concern does not displace the large business as the lowest offeror. In addition, the non-HUBZone small business concern's offer at $100 does not displace the large business' offer because a price evaluation preference is not applied to change an offer and benefit a non-HUBZone small business concern.

Example 3 to paragraph (a): In a full and open competition procurement, a certified HUBZone small business concern submits an offer of $98, a large business submits an offer of $95, and a non-HUBZone small business concern submits an offer of $93. The contracting officer would not apply the price evaluation preference in this procurement because the lowest, responsive, responsible offeror is a small business concern.

Example 4 to paragraph (a): In a full and open competition procurement, a certified HUBZone small business concern submits an offer of $98 and a large business submits an offer of $93. The contracting officer has stated in the solicitation that one contract will be reserved for a certified HUBZone small business concern. The contracting officer would not apply the price evaluation preference when determining which HUBZone small business concern would receive the contract reserved for HUBZone small business concerns but would apply the price evaluation preference when determining the awardees for the non-reserved portion.

(b) *Agricultural commodities.* * * *

(c) *International food aid operations.* * * *

(d) *Not treated as partial set-aside.* * * *

(e) *Applicability to HUBZone joint ventures.* The HUBZone price evaluation preference applies only to a joint venture consisting of a certified HUBZone small business concern and a small business concern that complies with the requirements of § 125.9. The HUBZone price evaluation preference does not apply to a joint venture consisting of a certified HUBZone small business concern and its other than small mentor.

■ 70. Revise § 126.615 to read as follows:

§ 126.615 May an other than small business participate on a HUBZone contract?

Except as provided in §§ 125.9 and 126.618, an other than small business may not participate as a prime contractor on a HUBZone award but may participate as a subcontractor to a certified HUBZone small business concern, subject to the limitations on subcontracting set forth in § 125.6.

■ 71. Amend § 126.616 by revising paragraphs (a)(1) and (e)(1)(i), and adding paragraph (l) to read as follows:

§ 126.616 What requirements must a joint venture satisfy to submit an offer and be eligible for award of a HUBZone contract?

(a) * * *

(1) SBA does not certify HUBZone joint ventures, but the joint venture should be designated as a HUBZone joint venture in SAM (or successor system) with the HUBZone-certified joint venture partner identified.

* * * * *

(e) * * *

(1) * * *

(i) It is a certified HUBZone small business concern that appears in DSBS (or successor system) as a certified HUBZone small business concern and it meets the eligibility requirements in § 126.200;

* * * * *

(l) *Non-HUBZone contracts.* On a non-HUBZone contract, for an award to a joint venture to be considered awarded to a certified HUBZone small business concern (*i.e.,* for a procuring agency to receive HUBZone credit for goaling purposes), the joint venture awardee must comply with the requirements of this section and § 125.8.

■ 72. Revise § 126.619 to read as follows:

§ 126.619 When must a certified HUBZone small business concern recertify its status for a HUBZone contract?

A prime contractor that receives an award as a certified HUBZone small business concern must comply with the recertification requirements set forth in § 125.12 of this chapter regarding its status as a certified HUBZone small business.

■ 73. Revise the subpart heading for subpart G to read as follows:

Subpart G—Limitations on Subcontracting Requirements

§ 126.701 [Amended]

■ 74. Amend § 126.701 by:

■ a. Removing the words ''these subcontracting percentages'' in the section heading and adding in their place the words ''the limitations on subcontracting''.

■ b. Removing the words ''the subcontracting percentage'' in the paragraph and adding in their place the words ''the limitations on subcontracting''.

■ 75. Revise § 126.800 to read as follows:

§ 126.800 Who may protest the status of a certified HUBZone small business concern?

(a) For a HUBZone sole source procurement, SBA or the contracting officer may protest the intended awardee's status as a certified HUBZone small business concern.

(b) For HUBZone contracts other than sole source procurements, including multiple award contracts (*see* § 125.1 of this chapter), SBA, the contracting officer, or any other interested party may protest the apparent successful offeror's status as a certified HUBZone small business concern (or the HUBZone joint venture offeror's compliance with § 126.616).

(c) For other than HUBZone contracts, any offeror for that contract, the contracting officer or SBA may protest an apparent successful offeror's status as a certified HUBZone small business concern.

§ 126.801 [Amended]

■ 76. Amend § 126.801 by revising paragraphs (b), (c) and paragraph (d) introductory text to read as follows:

§ 126.801 How does an interested party file a HUBZone status protest?

* * * * *

(b) *Format and specificity.* (1) Protests must be in writing and must state all specific grounds as to why the protestor believes the protested concern did not qualify as a certified HUBZone small business concern. Specifically, a protestor must explain why:

(i) The protested concern did not meet the HUBZone eligibility requirements set forth in § 126.200;

(ii) The protested joint venture does not meet the requirements set forth in § 126.616;

(iii) The protested concern, as a HUBZone prime contractor, is unduly reliant on one or more small subcontractors that are not HUBZone-certified, or subcontractors that are not HUBZone-certified will perform the

primary and vital requirements of the contract; and/or

(iv) The protested concern that was awarded a HUBZone contract during the 12-month period prior to submitting the offer at issue has less than 20% of its total employees that reside in a HUBZone and/or is not making substantive and documented efforts to meet the HUBZone residency requirement.

(2) Specificity requires more than conclusions of ineligibility. A protest merely asserting that the protested concern did not qualify as a HUBZone small business concern, or that it did not meet the principal office and/or 35% residency requirements, without setting forth specific facts or allegations, is insufficient and will be dismissed.

(3) For a protest filed against a HUBZone joint venture, the protest must state all specific grounds as to why:

(i) The HUBZone small business partner to the joint venture did not meet the HUBZone eligibility requirements set forth in § 126.200 at the time of offer; and/or

(ii) The protested HUBZone joint venture does not meet the requirements set forth in § 126.616 as of the date of its final proposal revision.

(4) For a protest alleging that the prime contractor has an ostensible subcontractor, the protest must state all specific grounds as to why:

(i) The protested concern is unduly reliant on one or more small subcontractors that are not HUBZone-certified, or

(ii) One or more subcontractors that are not HUBZone-certified will perform the primary and vital requirements of the contract.

(5) For a protest alleging that the protested concern failed to attempt to maintain compliance with the 35% HUBZone residency requirement during the performance of a HUBZone contract, the protest must state all specific grounds explaining why the protester believes that at least 20% of the protested firm's employees do not reside in a HUBZone and/or that the protested firm has not made any substantive and documented efforts to meet the HUBZone residency requirement.

(c) *Filing.* (1) An interested party other than a contracting officer or SBA must submit its written protest to the contracting officer.

(2) A contracting officer must submit his/her protest and forward an interested party's protest to SBA at *hzprotests@sba.gov*.

(d) *Timeliness.* A protest by an interested party challenging the HUBZone status of an apparent successful offeror on a HUBZone contract must be timely, or it will be dismissed. A protest by a contracting officer or SBA challenging the HUBZone status of an apparent successful offeror on a HUBZone contract or of an awardee on a HUBZone contract is always timely.

* * * * *

■ 77. Amend § 126.803 by:
■ a. Revising paragraph (a);
■ b. Redesignating paragraphs (c), (d), and (e) as paragraphs (d), (e), and (f), respectively;
■ c. Adding new paragraph (c); and
■ d. Revising newly redesignated paragraph (f)(3).

The revisions and additions read as follows:

§ 126.803 How will SBA process a HUBZone status protest and what are the possible outcomes?

(a) *Date at which eligibility determined.* (1) For competitively awarded HUBZone contracts, SBA will determine the eligibility of a concern subject to a HUBZone status protest as of the date of its initial offer that includes price.

(2) For sole source HUBZone contracts, SBA will determine the eligibility of a concern subject to a HUBZone status protest as of the date of the award or intended award.

(3) For protests filed against a HUBZone joint venture alleging that the joint venture does not comply with the requirements in § 126.616, SBA will determine the eligibility of the joint venture as of its final proposal revision for the procurement.

(4) For protests alleging undue reliance on one or more non-HUBZone subcontractors or alleging that such subcontractor(s) will perform the primary and vital requirements of the contract, SBA will determine the HUBZone small business concern's eligibility as of the date of its final proposal revision for the procurement.

(5) For two-step or two-phase procurements, SBA will determine the HUBZone small business concern's eligibility as of the date that it submits its initial bid or proposal (which may or may not include price) during phase one.

* * * * *

(c) *Burden of proof.* In the event of a protest, the burden of proof to demonstrate eligibility is on the protested concern. If a concern does not provide requested information within the allotted time provided by SBA, or if it submits incomplete information, SBA may draw an adverse inference and presume that the information that the concern failed to provide would demonstrate ineligibility and sustain the protest on that basis.

* * * * *

(f) * * *

(3) A concern found to be ineligible may apply for HUBZone certification immediately after its decline if it believes that it has overcome all reasons for ineligibility through changed circumstances and is currently eligible.

■ 78. Amend § 126.900 by:
■ a. Removing the word ''SBCs'' in paragraphs (a) and (b)(1) and adding in its place the phrase ''small business concerns'';
■ b. Removing the word ''SBC'' in paragraphs (a), (b)(2), (b)(3), (d), and (e)(1) and adding in its place the phrase ''small business concern'';
■ c. Removing the word ''SBC'' in the introductory text of paragraph (b) and in paragraph (c);
■ d. Removing the phrase ''agency suspension'' in paragraph (e)(1) and adding in its place the phrase ''procuring agency's suspension'';
■ e. Adding paragraph (e)(4).

The addition reads as follows:

§ 126.900 What are the requirements for representing HUBZone status, and what are the penalties for misrepresentation?

* * * * *

(e) * * *

(4) If SBA discovers that false or misleading information has been knowingly submitted by a small business concern in order to obtain or maintain HUBZone certification, SBA will propose the firm for decertification. In addition, SBA will refer the matter to the SBA Office of Inspector General for review and may recommend that Government-wide debarment or suspension proceedings be initiated.

PART 127—WOMEN-OWNED SMALL BUSINESS FEDERAL CONTRACT PROGRAM

■ 79. The authority citation for part 127 continues to read as follows:

Authority: 15 U.S.C. 632, 634(b)(6), 637(m), 644 and 657r.

■ 80. Amend § 127.200 by:
■ a. Revising paragraphs (a)(2) and (b)(2);
■ b. Redesignating paragraph (d) as paragraph (f); and
■ c. Adding new paragraphs (d) and (e).

The revisions and additions read as follows:

§ 127.200 What are the requirements a concern must meet to qualify as an EDWOSB or WOSB?

(a) * * *

(2) Not less than 51 percent unconditionally and directly owned and

controlled by one or more economically disadvantaged women who are citizens of and reside in the United States.

(b) * * *

(2) Not less than 51 percent unconditionally and directly owned and controlled by one or more women who are citizens of and reside in the United States.

* * * * *

(d) *Size.* In determining whether a concern qualifies as small for WOSB/EDWOSB certification and recertification under the size standard corresponding to a specific NAICS code, SBA will accept the concern's size representation in the System for Award Management (SAM), or successor system, unless there is evidence indicating that the concern is other than small. SBA will request a formal size determination pursuant to § 121.1001(b)(7) of this chapter where any information it possesses calls into question the concern's SAM size representation.

(e) *Federal financial obligations.* A business concern is ineligible to be certified as a WOSB or EDWOSB or to participate in the WOSB program if either the concern or any of its principals has failed to pay significant financial obligations owed to the Federal Government, including unresolved tax liens and defaults on Federal loans or other Federally assisted financing. However, a small business concern may be eligible if the concern or the affected principals can demonstrate that they are current on an approved repayment plan, or the financial obligations owed have been settled and discharged/forgiven by the Federal Government.

* * * * *

■ 81. Amend § 127.201 by revising paragraph (b) and adding paragraph (g) to read as follows:

§ 127.201 What are the requirements for ownership of an EDWOSB and WOSB?

* * * * *

(b) *Unconditional ownership.* To be considered unconditional, ownership must not be subject to any conditions, executory agreements, voting trusts, restrictions on or assignments of voting rights, or other arrangements causing or potentially causing ownership benefits to go to another (other than after death or incapacity).

(1) The pledge or encumbrance of stock or other ownership interest as collateral, including seller-financed transactions, does not affect the unconditional nature of ownership if the terms follow normal commercial practices and the owner retains control absent violations of the terms.

(2) In determining unconditional ownership, SBA will disregard any unexercised stock options or similar agreements held by qualifying women. However, any unexercised stock options or similar agreements (including rights to convert non-voting stock or debentures into voting stock) held by men or other entities will be treated as exercised, except for any ownership interests which are held by investment companies licensed under 15 U.S.C. 681 *et. seq.*

(3) A right of first refusal granting a man or other entity the contractual right to purchase the ownership interests of the qualifying woman, does not affect the unconditional nature of ownership, if the terms follow normal commercial practices. If those rights are exercised by a man or other entity after certification, the WOSB/EDWOSB must notify SBA. If the exercise of those rights results in qualifying women owning less than 51% of the concern, SBA will initiate decertification pursuant to § 127.405.

* * * * *

(g) *Dividends and distributions.* One or more qualifying women must be entitled to receive:

(1) At least 51 percent of any distribution of profits paid to the owners of a corporation, partnership, or limited liability company concern, and a qualifying woman's ability to share in the profits of the concern must be commensurate with the extent of her ownership interest in that concern;

(2) 100 percent of the value of each share of stock owned by them in the event that the stock is sold; and

(3) At least 51 percent of the retained earnings of the concern and 100 percent of the unencumbered value of each share of stock or member interest owned in the event of dissolution of the corporation, partnership, or limited liability company.

■ 82. Amend § 127.202 by revising paragraphs (d) and (g) and adding paragraph (h) to read as follows:

§ 127.202 What are the requirements for control of an EDWOSB or WOSB?

* * * * *

(d) *Ownership of a partnership.* In the case of a concern which is a partnership, one or more qualifying women, or in the case of an EDWOSB, economically disadvantaged women, must serve as general partners, with control over all partnership decisions. At least 51 percent of every class of partnership interest must be unconditionally owned by one or more qualifying women or economically disadvantaged women. The ownership must be reflected in the concern's partnership agreement.

* * * * *

(g) *Involvement in the concern by other individuals or entities.* Men or other entities may be involved in the management of the concern and may be stockholders, partners or limited liability members of the concern. However, no males or other entities may:

(1) Exercise actual control or have the power to control the concern;

(2) Have business relationships that cause such dependence that the qualifying woman cannot exercise independent business judgment without great economic risk;

(3) Control the concern through loan arrangements (which does not include providing a loan guaranty on commercially reasonable terms);

(4) Provide critical financial or bonding support or a critical license to the concern, which directly or indirectly allows the male or other entity to significantly influence business decisions of the qualifying woman.

(5) Be a former employer, or a principal of a former employer, of any qualifying woman, unless the concern demonstrates that the relationship between the former employer or principal and the qualifying woman does not give the former employer actual control or the potential to control the concern and such relationship is in the best interests of the concern; or

(6) Receive compensation from the concern in any form as a director, officer, or employee, that exceeds the compensation to be received by the qualifying woman who holds the highest officer position (usually Chief Executive Officer or President), unless the concern demonstrates that the compensation to be received by non-qualifying woman is commercially reasonable or that the qualifying woman has elected to take lower compensation to benefit the concern. A certified WOSB or EDWOSB must notify SBA within 30 calendar days if the compensation paid to the highest-ranking officer falls below that paid to a man. In such a case, SBA must determine that that the compensation to be received by the man is commercially reasonable or that the highest-ranking officer has elected to take lower compensation to benefit the WOSB or EDWOSB before SBA may determine that the concern is eligible for a WOSB/EDWOSB award.

(h) *Exception for extraordinary circumstances.* SBA will not find that a lack of control exists where a woman or an economically disadvantaged woman

does not have the unilateral power and authority to make decisions regarding the following extraordinary circumstances:

(1) Adding a new equity stakeholder or increasing the investment amount of an equity stakeholder;

(2) Dissolution of the company;

(3) Sale of the company or all assets of the company;

(4) The merger of the company;

(5) The company declaring bankruptcy;

(6) Amendment of the company's corporate governance documents to remove the shareholder's authority to block any of the actions in paragraphs (h)(1) through (5) of this section; and

(7) Any other extraordinary action that is crafted solely to protect the investment of the minority shareholders, and not to impede the majority's ability to control the concern's operations or to conduct the concern's business as it chooses.

§ 127.301 [Amended]

■ 83. Amend § 127.301 by removing the last sentence.

■ 84. Revise § 127.302 to read as follows:

§ 127.302 Where can a concern apply for certification?

A concern seeking certification as a WOSB or EDWOSB must submit an electronic application to SBA via *https://certifications.sba.gov* or any successor system. The majority woman or economically disadvantaged woman owner must take responsibility for the accuracy of all information submitted on behalf of the applicant.

■ 85. Amend § 127.304 by revising paragraph (d) to read as follows:

§ 127.304 How is an application for certification processed?

* * * * *

(d) An applicant must be eligible as of the date SBA issues a decision. An applicant's eligibility will be based on the totality of circumstances, including facts set forth in the application, supporting documentation, any information received in response to any SBA request for clarification, and any changed circumstances.

* * * * *

■ 86. Revise § 127.305 to read as follows:

§ 127.305 May declined or decertified concerns apply for certification at a later date?

(a) A concern that SBA or a third-party certifier has declined may apply for certification after ninety (90) calendar days from the date of decline if it believes that it has overcome all of the reasons for decline and is currently eligible. A concern that has been declined may seek certification by any of the certification options listed in § 127.300.

(b) A concern that SBA has decertified may apply for certification immediately after the date of decertification, if it believes that it has overcome all reasons for decertification through changed circumstances and is currently eligible.

(c) A concern that voluntarily withdraws from the WOSB program may immediately apply for certification, if it believes that it is currently eligible.

■ 87. Amend § 127.400 by revising paragraph (b) to read as follows:

§ 127.400 How does a concern maintain its WOSB or EDWOSB certification?

* * * * *

(b) The concern must either recertify with SBA or notify SBA that it has completed a program examination from a third party certifier within 90 calendar days of the end of its eligibility period. If a concern fails to so, SBA will decertify the concern at the end of its eligibility period. However, if a concern is able to recertify its eligibility within 30 days of the end of its eligibility period, SBA will reinstate the firm as a certified WOSB or EDWOSB.

Example 1 to paragraph (b). On July 20, 2024, concern B is certified as a WOSB under the WOSB Program by a third-party certifier. Concern B is considered a certified WOSB that is eligible to receive WOSB contracts (as long as it is small for the size standard corresponding to the NAICS code assigned to the contract) through July 19, 2027. Concern B must request a program examination from SBA or notify SBA that it has completed a program examination from a third-party certifier, by April 21, 2027, to continue participating in the WOSB Program after July 19, 2027.

* * * * *

■ 88. Amend § 127.405 by revising paragraph (d) to read as follows:

§ 127.405 What happens if SBA determines that the concern is no longer eligible for the program?

* * * * *

(d) *Decertification due to submission of false or misleading information.* If SBA discovers that a WOSB or EDWOSB or its representative knowingly submitted false or misleading information, SBA will propose the firm for decertification. In addition, SBA will refer the matter to the SBA Office of Inspector General for review and may recommend that Government-wide debarment or suspension proceedings be initiated.

(1) A firm that is decertified from the WOSB program due to the submission of false or misleading information may be removed from SBA's other small business contracting programs, including the 8(a) Business Development Program, the HUBZone Program, the Veteran Small Business Certification (VetCert) Program, and SBA's Mentor-Protégé Program.

(2) A firm that is decertified or terminated from the 8(a) BD Program, the HUBZone Program, or the VetCert Program due to the submission of false or misleading information may be decertified from the WOSB Program.

(3) SBA may require a firm that is decertified or terminated from the WOSB Program, 8(a) BD Program, the HUBZone Program, or the VetCert Program due to the submission of false or misleading information to enter into an administrative agreement with SBA as a condition of admission or re-admission to the WOSB program.

* * * * *

■ 89. Amend § 127.504 by:

■ a. Revising paragraph (a);

■ b. Removing the words ''under paragraph (f) of this section'' in paragraph (d)(1) and adding in their place the words ''under § 125.12 of this chapter''; and

■ c. Revising paragraph (h).

The revisions read as follows:

§ 127.504 What requirements must an EDWOSB or WOSB meet to be eligible for an EDWOSB or WOSB requirement?

(a) *General.* In order for a concern to submit an offer on a specific EDWOSB or WOSB set-aside requirement, the concern must, at the time of its initial offer that includes price:

(1) Qualify as a small business concern under the size standard corresponding to the NAICS code assigned to the contract;

(2) Meet the eligibility requirements of an EDWOSB or WOSB in § 127.200; and

(3) Either be a certified EDWOSB or WOSB pursuant to § 127.300, or represent that the concern has submitted a complete application for WOSB or EDWOSB certification to SBA or a third-party certifier and has not received a negative determination regarding that application from SBA or the third party certifier.

(i) If a concern becomes the apparent successful offeror while its application for WOSB or EDWOSB certification is pending, either at SBA or a third-party certifier, the contracting officer for the particular contract must immediately inform SBA's D/GC. SBA will then

prioritize the concern's WOSB or EDWOSB application and make a determination regarding the firm's status as a WOSB or EDWOSB within 15 calendar days from the date that SBA received the contracting officer's notification. Where the application is pending with a third-party certifier, SBA will immediately contact the third-party certifier to require the third-party certifier to complete its determination within 15 calendar days.

(ii) If the contracting officer does not receive an SBA or third-party certifier determination within 15 calendar days after the SBA's receipt of the notification, the contracting officer may presume that the apparently successful offeror is not an eligible WOSB or EDWOSB and may make award accordingly, unless the contracting officer grants an extension to the 15-day response period.

* * * * *

(h) *Recertification.* A prime contractor that receives an award as a certified WOSB or EDWOSB must comply with the recertification requirements set forth in § 125.12 of this chapter regarding its status as a certified WOSB or EDWOSB.

PART 128—VETERAN SMALL BUSINESS CERTIFICATION PROGRAM

■ 90. The authority citation for part 128 continues to read as follows:

Authority: 15 U.S.C. 632(q), 634(b)(6), 644, 645, 657f, 657f–1.

§ 128.100 [Amended]

■ 91. Amend § 128.100 by removing the words ''Veteran Small Business Certification Program'' and adding in their place the words ''Veteran Small Business Certification Program (VetCert)''.

■ 92. Amend § 128.200 by revising paragraphs (a)(2) and (b)(2) to read as follows:

§ 128.200 What are the requirements a concern must meet to qualify as a VOSB or SDVOSB?

(a) * * *

(2) Not less than 51 percent owned and controlled by one or more veterans who reside in the United States.

(b) * * *

(2) Not less than 51 percent owned and controlled by one or more service-disabled veterans who reside in the United States or, in the case of a veteran with a disability that is rated by the Secretary of Veterans Affairs as a permanent and total disability who are unable to manage the daily business operations of such concern, the spouse or permanent caregiver of such veteran who resides in the United States.

* * * * *

■ 93. Amend § 128.201 by revising paragraph (b) to read as follows:

§ 128.201 What other eligibility requirements apply for certification as a VOSB or SDVOSB?

* * * * *

(b) *Federal financial obligations.* A business concern is ineligible to be certified as a VOSB or SDVOSB or to participate in the VetCert program if either the concern or any of its principals has failed to pay significant financial obligations owed to the Federal Government, including unresolved tax liens and defaults on Federal loans or other Federally assisted financing. However, a small business concern may be eligible if the concern or the affected principals can demonstrate that they are current on an approved repayment plan, or the financial obligations owed have been settled and discharged/forgiven by the Federal Government.

■ 94. Amend § 128.202 by
■ a. Revising paragraph (c); and
■ b. In paragraph (g)(1), removing the words ''the annual distribution'' and adding in their place the words ''any distribution''.

The revision reads as follows:

§ 128.202 Who does SBA consider to own a VOSB or SDVOSB?

* * * * *

(c) *Ownership of a partnership.* In the case of a concern which is a partnership, one or more qualifying veterans must serve as general partners, with control over all partnership decisions. At least 51 percent of every class of partnership interest must be unconditionally owned by one or more qualifying veterans. The ownership must be reflected in the concern's partnership agreement.

* * * * *

■ 95. Amend § 128.203 by:
■ a. Removing the second and third sentences in paragraph (f);
■ b. Revising paragraphs (g) and (h);
■ c. Revising paragraph (j)(1);
■ d. Removing the word ''and'' at the end of paragraph (j)(4);
■ e. Removing the punctuation mark ''.'' at the end of paragraph (j)(5) and adding in its place punctuation mark ''; ''; and
■ e. Adding paragraphs (j)(6) and (7).

The revision and addition read as follows:

§ 128.203 Who does SBA consider to control a VOSB or SDVOSB?

* * * * *

(g) *Unexercised rights.* Except as set forth in paragraph (e)(1) of this section, a qualifying veteran's unexercised right to cause a change in the control or management of the concern does not in itself constitute control, regardless of how quickly or easily the right could be exercised.

(h) *Limitations on control by non-qualifying-veterans.* Non-qualifying-veterans may be involved in the management of the concern and may be stockholders, partners or limited liability members of the concern. However, no non-qualifying veteran may:

(1) Exercise actual control or have the power to control the concern;

(2) Have business relationships that cause such dependence that the qualifying veteran cannot exercise independent business judgment without great economic risk;

(3) Control the concern through loan arrangements (which does not include providing a loan guaranty on commercially reasonable terms);

(4) Provide critical financial or bonding support or a critical license to the concern, which directly or indirectly allows the non-qualifying veteran to significantly influence business decisions of the qualifying veteran.

(5) Be a former employer, or a principal of a former employer, of any qualifying veteran, unless the concern demonstrates that the relationship between the former employer or principal and the qualifying veteran does not give the former employer actual control or the potential to control the concern and such relationship is in the best interests of the concern; or

(6) Receive compensation from the concern in any form as a director, officer, or employee, that exceeds the compensation to be received by the qualifying veteran who holds the highest officer position (usually Chief Executive Officer or President), unless the concern demonstrates that the compensation to be received by non-qualifying veteran is commercially reasonable or that the qualifying veteran has elected to take lower compensation to benefit the concern. A certified SDVOSB must notify SBA within 30 calendar days if the compensation paid to the highest-ranking officer falls below that paid to a non-qualifying veteran. In such a case, SBA must determine that that the compensation to be received by the non-qualifying veteran is commercially reasonable or that the highest-ranking officer has elected to take lower compensation to benefit the SDVOSB before SBA may determine that the concern is eligible for a SDVOSB award.

* * * * *

(j) * * *

(1) Adding a new equity stakeholder or increasing the investment amount of an equity stakeholder;

* * * * *

(6) Amendment of the company's corporate governance documents to remove the shareholder's authority to block any of the actions in paragraphs (j)(1) through (5) of this section; and

(7) Any other extraordinary action that is crafted solely to protect the investment of the minority shareholders, and not to impede the majority's ability to control the concern's operations or to conduct the concern's business as it chooses.

* * * * *

■ 96. Amend § 128.204 by revising paragraph (a) to read as follows:

§ 128.204 What size standards apply to VOSBs and SDVOSBs?

(a) *Time of certification.* At the time of certification or recertification, a VOSB or SDVOSB must be a small business under the size standard corresponding to any NAICS code listed in its System for Award Management (SAM), or successor system, profile. In determining whether a concern qualifies as small for VOSB/SDVOSB certification or recertification under the size standard corresponding to a specific NAICS code, SBA will accept the concern's size representation in SAM, unless there is evidence indicating that the concern is other than small. SBA will request a formal size determination pursuant to § 121.1001(b)(12) of this chapter where any information it possesses calls into question the concern's SAM size representation.

* * * * *

■ 97. Revise § 128.301 to read as follows:

§ 128.301 Where must an application be filed?

An application for certification as a VOSB or SDVOSB must be electronically filed according to the instructions on SBA's website at *www.sba.gov*. The qualifying veteran must take responsibility for the accuracy of all information submitted on behalf of the applicant.

■ 98. Amend § 128.302 by:

■ a. Adding a sentence to the end of paragraph (a); and

■ b. Removing from the introductory text to paragraph (d) the phrase ''any independent research conducted by SBA,''.

The addition reads as follows:

§ 128.302 How does SBA process applications for certification?

(a) * * * An applicant must be eligible as of the date SBA issues a decision.

* * * * *

■ 99. Revise § 128.305 to read as follows:

§ 128.305 May declined or decertified concerns apply for recertification at a later date?

(a) A concern that SBA has declined may apply for certification after ninety (90) calendar days from the date of decline, if it believes that it has overcome all of the reasons for decline and is currently eligible.

(b) A concern that SBA has decertified may apply for certification immediately after the date of decertification, if it believes that it has overcome all reasons for decertification through changed circumstances and is currently eligible.

(c) A concern that voluntarily withdraws from the VetCert program may immediately apply for certification, if it believes that it is currently eligible.

■ 100. Amend § 128.306 by revising paragraph (a) to read as follows:

§ 128.306 How does a concern maintain its VOSB or SDVOSB certification?

(a) Any Participant seeking to remain certified must recertify its eligibility every 3 years. There is no limitation on the number of times a business may recertify. Participants may recertify within 90 calendar days prior to the termination of their eligibility period. If a concern fails to recertify, SBA will decertify the concern at the end of its eligibility period. However, if a concern is able to recertify its eligibility within 30 days of the end of its eligibility period, SBA will reinstate the concern as a certified VOSB or SDVOSB.

* * * * *

§ 128.309 [Amended]

■ 101. Amend § 128.309 by removing the third and fourth sentences of paragraph (a), the second and third sentences of paragraph (b), and the second and third sentences of paragraph (c).

■ 102. Amend § 128.310 by revising paragraph (d) to read as follows:

§ 128.310 What are the procedures for decertification?

* * * * *

(d) *Decertification based on false or misleading information.* (1) If SBA discovers that a VOSB/SDVOSB or its representative knowingly submitted false or misleading information, SBA will propose the firm for decertification. In addition, SBA will refer the matter to the SBA Office of Inspector General for review and may recommend that Government-wide debarment or suspension proceedings be initiated.

(2) A firm that is decertified from the VetCert Program due to the submission of false or misleading information may be removed from SBA's other small business contracting programs, including the 8(a) Business Development Program, the HUBZone Program, the Women-Owned Small Business (WOSB) Program, and SBA's Mentor-Protégé Program.

(3) A firm that is decertified or terminated from the 8(a) BD Program, the HUBZone Program, or the WOSB Program due to the submission of false or misleading information may be decertified from the VetCert Program.

(4) SBA may require a firm that is decertified or terminated from the VetCert Program, the 8(a) BD Program, the HUBZone Program, or the WOSB Program due to the submission of false or misleading information to enter into an administrative agreement with SBA as a condition of admission or re-admission to the VetCert program.

* * * * *

■ 103. Amend § 128.401 by:

■ a. Revising paragraph (a);

■ b. In paragraph (d)(1)(i) removing the words ''under paragraph (e) of this section'' and adding in their place the words ''under § 125.12 of this chapter''; and

■ c. Revising paragraph (e).

The revisions read as follows:

§ 128.401 What requirements must a VOSB or SDVOSB meet to submit an offer on a contract?

(a) *Certification requirement.* Only certified VOSBs and SDVOSBs are eligible to submit an offer on a specific VOSB or SDVOSB requirement. For a competitively awarded VOSB/SDVOSB contract, order, or agreement, the concern must qualify as a small business concern under the size standard corresponding to the NAICS code assigned to the contract, order or agreement, and be a certified VOSB or SDVOSB and meet the eligibility requirements of a VOSB or SDVOSB in § 128.200 at the time of initial offer or response which includes price. For any sole source VOSB or SDVOSB award, the concern must qualify as a small business concern under the size standard corresponding to the applicable NAICS code and be a certified VOSB or SDVOSB and meet the eligibility requirements of a VOSB or SDVOSB in § 128.200 on the date of award.

* * * * *

(e) *Recertification.* A prime contractor that receives an award as a certified SDVOSB must comply with the recertification requirements set forth in § 125.12 of this chapter regarding its status as a certified SDVOSB.

* * * * *

■ 104. Amend § 128.402 by revising the second sentence of the introductory text of paragraph (a) and adding paragraph (k) to read as follows:

§ 128.402 When may a joint venture submit an offer on a VOSB or SDVOSB contract?

(a) * * * SBA does not certify VOSB or SDVOSB joint ventures, but the joint venture should be designated as a VOSB or SDVOSB joint venture in SAM with the VOSB or SDVOSB-certified joint venture partner identified. * * *

* * * * *

(k) *Non-VOSB/SDVOSB contracts.* On a non-VOSB/SDVOSB contract, for an award to a joint venture to be considered awarded to a VOSB or SDVOSB (*i.e.,* for a procuring agency to receive VOSB or SDVOSB credit for goaling purposes), the joint venture awardee must comply with the requirements of this section and § 125.8.

§ 128.500 [Amended]

■ 105. Amend § 128.500 by removing the text ''128.402(c)'' in paragraph (c) and adding in its place ''128.402''.

PART 134—RULES OF PROCEDURE GOVERNING CASES BEFORE THE OFFICE OF HEARINGS AND APPEALS

■ 106. The authority citation for part 134 continues to read as follows:

Authority: 5 U.S.C. 504; 15 U.S.C. 632, 634(b)(6), 634(i), 637(a), 648(l), 656(i), 657t and 687(c); E.O. 12549, 51 FR 6370, 3 CFR, 1986 Comp., p. 189.

Subpart J issued under 15 U.S.C. 657f.

Subpart K issued under 15 U.S.C. 657f.

Subpart L issued under 15 U.S.C. 636(a)(36); Pub. L. 116–136, 134 Stat. 281; Pub. L. 116–139, 134 Stat. 620; Pub. L. 116–142, 134 Stat. 641; and Pub. L. 116–147, 134 Stat. 660.

Subpart M issued under 15 U.S.C. 657a; Pub. L. 117–81, 135 Stat. 1541.

■ 107. Amend § 134.1003 by revising the first sentence of paragraph (e)(1) to read as follows:

§ 134.1003 Grounds for filing a VOSB or SDVOSB status protest.

* * * * *

(e) * * *

(1) If the VOSB or SDVOSB status protest pertains to a procurement, the Judge will determine a protested concern's eligibility as a VOSB or SDVOSB as of the date of its initial offer or response which includes price for a competitively awarded VOSB/SDVOSB contract, order, or agreement, and as of the date of award for any sole source VOSB or SDVOSB award. * * *

* * * * *

§ 134.1104 [Amended]

■ 108. Amend § 134.1104 by removing the words ''10 business days'' in paragraph (a) and adding in their place the words ''45 business days''.

Isabella Casillas Guzman,

Administrator.

Department of Health and Human Services

45 CFR Part 171

Health Data, Technology, and Interoperability: Protecting Care Access; Final Rule

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Office of the Secretary

45 CFR Part 171

RIN 0955–AA06

Health Data, Technology, and Interoperability: Protecting Care Access

AGENCY: Assistant Secretary for Technology Policy/Office of the National Coordinator for Health Information Technology, Department of Health and Human Services (HHS).

ACTION: Final rule.

SUMMARY: This final rule has finalized certain proposals from the Health Data, Technology, and Interoperability: Patient Engagement, Information Sharing, and Public Health Interoperability Proposed Rule (HTI–2 Proposed Rule) and in doing so supports the access, exchange, and use of electronic health information. Specifically, this final rule amends the information blocking regulations to revise two existing information blocking exceptions and establish an additional reasonable and necessary activity that does not constitute information blocking referred to as the Protecting Care Access Exception.

DATES: This final rule is effective on December 17, 2024.

FOR FURTHER INFORMATION CONTACT: Kate Tipping, Office of Policy, Assistant Secretary for Technology Policy (ASTP)/Office of the National Coordinator for Health Information Technology, 202–690–7151.

I. Executive Summary

A. Purpose of Regulatory Action

The Secretary of Health and Human Services has delegated responsibility to the Assistant Secretary for Technology Policy and Office of the National Coordinator for Health Information Technology (hereafter ASTP/ONC) [1] to identify reasonable and necessary activities that do not constitute information blocking.[2] This final rule fulfills this responsibility; advances equity and innovation; and supports the access to, and exchange and use of, electronic health information (EHI).

The final rule is also consistent with Executive Order (E.O.) 14036. E.O. 14036, Promoting Competition in the American Economy,[3] issued on July 9, 2021, established a whole-of-government effort to promote competition in the American economy and reaffirmed the policy stated in E.O. 13725 of April 15, 2016 (Steps to Increase Competition and Better Inform Consumers and Workers to Support Continued Growth of the American Economy).[4] In this rule, we have finalized enhancements to support information sharing under the information blocking regulations and promote innovation and competition, while ensuring patients' privacy and access to care remain protected.

Addressing information blocking is critical for promoting innovation and competition in health IT and for the delivery of health care services to individuals, as discussed in both the March 4, 2019, proposed rule, ''21st Century Cures Act: Interoperability, Information Blocking, and the ONC Health IT Certification Program'' (84 FR 7508 and 7523) (ONC Cures Act Proposed Rule) and the May 1, 2020 final rule, ''21st Century Cures Act: Interoperability, Information Blocking, and the ONC Health IT Certification Program'' (85 FR 25790 and 25791) (ONC Cures Act Final Rule), and reiterated in the January 9, 2024 final rule, ''Health Data, Technology, and Interoperability: Certification Program Updates, Algorithm Transparency, and Information Sharing'' (89 FR 1195) (HTI–1 Final Rule). Specifically, we described (84 FR 7508 and 85 FR 25791) how the information blocking provision (section 3022 of the Public Health Service Act (PHSA) (42 U.S.C. 300jj–52)) provides a comprehensive response to the issues identified by empirical and economic research that suggested that information blocking may weaken competition, encourage consolidation, and create barriers to entry for developers of new and innovative applications and technologies that enable more effective uses of EHI to improve population health and the patient experience.[5] As we explained in the ONC Cures Act Final Rule, the PHSA information blocking provision itself expressly addresses practices that impede innovation and advancements in EHI access, exchange, and use, including care delivery enabled by health IT (85 FR 25820, citing section 3022(a)(2) of the PHSA). Actors subject to the information blocking provisions may, among other practices, attempt to exploit their control over interoperability elements to create barriers to entry for competing technologies and services that offer greater value for health IT customers

[1] The Office of the National Coordinator for Health Information Technology (ONC) was the previous name of this office. See **Federal Register**: Statement of Organization, Functions, and Delegations of Authority; Office of The National Coordinator for Health Information Technology *(89 FR 60903, July 29. 2024).*

[2] Reasonable and necessary activities that do not constitute information blocking, also known as information blocking exceptions, are identified in 45 CFR part 171, subparts B, C and D. ASTP/ONC's official website, HealthIT.gov, offers a variety of resources on the topic of Information Blocking, including fact sheets, recorded webinars, and frequently asked questions. To learn more, please visit: *https://www.healthit.gov/topic/information-blocking/.*

and users, provide new or improved capabilities, and enable more robust access, exchange, and use of EHI (85 FR 25820).[6] Information blocking may also harm competition not just in health IT markets, but also in markets for health care services (85 FR 25820). In the ONC Cures Act Final Rule, we described practices that dominant market providers may leverage and use to control access and use of their technology, resulting in technological dependence and possibly leading to barriers to entry by would-be competitors, as well as making some market providers vulnerable to acquisition or inducement into arrangements that enhance the market power of incumbent providers to the detriment of consumers and purchasers of health care services (85 FR 25820). The revisions to the information blocking regulations, including the addition of the new exception finalized in this final rule, will continue to promote innovation and support the lawful access, exchange, and use of EHI, while strengthening support for individuals' privacy and EHI sharing preferences.

B. Summary of Information Blocking Enhancements

We received approximately 270 comment submissions on the broad range of proposals included in the ''Health Data, Technology, and Interoperability: Patient Engagement, Information Sharing, and Public Health Interoperability'' proposed rule (89 FR 63498) (HTI–2 Proposed Rule). We thank all commenters for their thoughtful input. For the purposes of this final rule, we have reviewed and responded to comments on a narrowed set of proposals. Specifically, we summarize and respond to comments related to the proposals finalized in this rule (described below). Comments received in response to other proposals from the HTI–2 Proposed Rule are beyond the scope of this final rule, have been addressed in the ''Health Data, Technology, and Interoperability: Trusted Exchange Framework and Common Agreement (TEFCA™)'' final rule (RIN 0955–AA07) (HTI–2 Final Rule) or are still being reviewed and considered. Comments related to proposals not discussed in this final rule or the HTI–2 Final Rule may be the subject of subsequent final rules related to such proposals in the future.

On July 25, 2024, HHS announced a reorganization that, among other things, renamed the Office of the National Coordinator for Health Information Technology (ONC). ONC is now dually titled as the Assistant Secretary for Technology Policy and Office of the National Coordinator for Health Information Technology (ASTP/ONC) per the **Federal Register** notice that appeared in the **Federal Register** on July 29, 2024.[7] It was not until days after the HTI–2 Proposed Rule's content had been released to the public (on July 10, 2024) [8] that the name change was announced. Therefore, when the HTI–2 Proposed Rule appeared in the **Federal Register** on August 5, 2024, it retained reference to the office as ''ONC.'' We continue to refer to ''ONC'' when referencing the HTI–2 Proposed Rule in this final rule. However, in the comment summaries and responses of this final rule, we have revised and replaced ''ONC'' references with ''ASTP/ONC.''

In this final rule, we have finalized the addition of a definition of ''reproductive health care'' to the defined terms for purposes of the information blocking regulations, which appear in 45 CFR 171.102. We have finalized select proposed revisions (proposed in the HTI–2 Proposed Rule at 89 FR 63620 through 63627 and 89 FR 63803) for two existing information blocking exceptions (Privacy Exception and Infeasibility Exception) in subpart B of 45 CFR part 171. Finally, we have finalized a new information blocking exception (Protecting Care Access) in subpart B of part 171.

C. Costs and Benefits

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Executive Order 14094 (Modernizing Regulatory Review) (hereinafter, the Modernizing E.O.) amends section 3(f) of Executive Order 12866 (Regulatory Planning and Review). The amended section 3(f) of Executive Order 12866 defines a ''significant regulatory action.'' The Office of Management and Budget's (OMB) Office of Information and Regulatory Affairs (OIRA) has determined that this final rule is a significant regulatory action under section 3(f) of Executive Order 12866 as amended by E.O. 14094.

II. Background

A. Statutory Basis

The Health Information Technology for Economic and Clinical Health Act (HITECH Act), Title XIII of Division A and Title IV of Division B of the American Recovery and Reinvestment Act of 2009 (Pub. L. 111–5), was enacted on February 17, 2009. The HITECH Act added to the Public Health Service Act (PHSA) ''Title XXX—Health Information Technology and Quality'' (Title XXX) to improve health care quality, safety, and efficiency through the promotion of health IT and EHI exchange.

The 21st Century Cures Act (Pub. L. 114–255) (Cures Act) was enacted on December 13, 2016, to accelerate the discovery, development, and delivery of 21st century cures, and for other purposes. The Cures Act, through Title IV—Delivery, amended Title XXX of the PHSA by modifying or adding certain provisions to the PHSA relating to health IT.

Information Blocking Under the 21st Century Cures Act

Section 4004 of the Cures Act added section 3022 of the Public Health Service Act (PHSA) (42 U.S.C. 300jj-52, ''the information blocking provision''). Section 3022(a)(1) of the PHSA defines practices that constitute information blocking when engaged in by a health care provider, or a health information technology developer, exchange, or network. Section 3022(a)(3) authorizes the Secretary to identify, through notice and comment rulemaking, reasonable and necessary activities that do not constitute information blocking for purposes of the definition set forth in section 3022(a)(1).

B. Regulatory History

On March 4, 2019, the ONC Cures Act Proposed Rule was published in the **Federal Register** (84 FR 7424). The proposed rule proposed to implement certain provisions of the Cures Act that would advance interoperability and support the access, exchange, and use of electronic health information.

On May 1, 2020, the ONC Cures Act Final Rule was published in the **Federal Register** (85 FR 25642). The final rule implemented certain provisions of the Cures Act, including Conditions and Maintenance of Certification requirements for health IT developers

[6] *See also* Martin Gaynor, Farzad Mostashari, and Paul B. Ginsberg, Making Health Care Markets Work: Competition Policy for Health Care, *JAMA,* 317(13) 1313–1314 (Apr. 2017).

[7] Statement of Organization, Functions, and Delegations of Authority; Office of The National Coordinator for Health Information Technology *(89 FR 60903).*

and the voluntary certification of health IT for use by pediatric health providers, and identified reasonable and necessary activities that do not constitute information blocking. The final rule also implemented certain parts of the Cures Act to support patients' access to their EHI. Additionally, the ONC Cures Act Final Rule modified the 2015 Edition health IT certification criteria and ONC Health IT Certification Program (Program) in other ways to advance interoperability, enhance health IT certification, and reduce burden and costs, as well as to improve patient and health care provider access to EHI and promote competition. On November 4, 2020, the Secretary published an interim final rule with comment period titled ''Information Blocking and the ONC Health IT Certification Program: Extension of Compliance Dates and Timeframes in Response to the COVID–19 Public Health Emergency'' (85 FR 70064) (Cures Act Interim Final Rule). The interim final rule extended certain compliance dates and timeframes adopted in the ONC Cures Act Final Rule to offer the health care system additional flexibilities in furnishing services to combat the COVID–19 pandemic, including extending the applicability date for information blocking provisions to April 5, 2021.

On April 18, 2023, a proposed rule titled, ''Health Data, Technology, and Interoperability: Certification Program Updates, Algorithm Transparency, and Information Sharing'' (88 FR 23746) (HTI–1 Proposed Rule) was published in the **Federal Register**. The HTI–1 Proposed Rule proposed to implement the Electronic Health Record (EHR) Reporting Program provision of the Cures Act by establishing new Conditions and Maintenance of Certification requirements for health IT developers under the Program. The HTI–1 Proposed Rule also proposed to make several updates to certification criteria and implementation specifications recognized by the Program, including revised certification criteria for: ''clinical decision support'' (CDS), ''patient demographics and observations'', and ''electronic case reporting.'' The HTI–1 Proposed Rule also proposed to establish a new baseline version of the United States Core Data for Interoperability (USCDI). Additionally, the HTI–1 Proposed Rule proposed enhancements to support information sharing under the information blocking regulations.

On January 9, 2024, the HTI–1 Final Rule was published in the **Federal Register**, which implemented the EHR Reporting Program provision of the 21st Century Cures Act and established new Conditions and Maintenance of Certification requirements for health IT developers under the Program (89 FR 1192). The HTI–1 Final Rule also made several updates to certification criteria and standards recognized by the Program. The HTI–1 Final Rule provided enhancements to support information sharing under the information blocking regulations, including clarifying certain definitions and establishing a new ''TEFCA Manner'' Exception—which provides that an actor's practice of not fulfilling a request to access, exchange, or use EHI in any alternative manner besides via TEFCA will not be considered information blocking when the practice follows certain conditions (*see* 45 CFR 171.403 and 89 FR 1387 through 1394). Through these provisions, we sought to advance interoperability, improve algorithm transparency, and support the access, exchange, and use of EHI. The HTI–1 Final Rule also updated numerous technical standards in the Program in additional ways to advance interoperability, enhance health IT certification, and reduce burden and costs for health IT developers and users of health IT.

On August 5, 2024, the HTI–2 Proposed Rule was published in the **Federal Register** (89 FR 63498). The HTI–2 Proposed Rule is the second of the Health Data, Technology, and Interoperability rules that seek to advance interoperability, improve transparency, and support the access, exchange, and use of electronic health information. The HTI–2 Proposed Rule included proposals for: standards adoption; adoption of certification criteria to advance public health data exchange; expanded uses of certified application programming interfaces, such as for electronic prior authorization, patient access, care management, and care coordination; and information sharing under the information blocking regulations. Additionally, the HTI–2 Proposed Rule proposed to establish a new baseline version of the USCDI standard and proposed to update the ONC Health IT Certification Program to enhance interoperability and optimize certification processes to reduce burden and costs. The HTI–2 Proposed Rule also proposed to implement certain provisions related to TEFCA, which would support reliability, privacy, security, and trust within TEFCA. In the HTI–2 Final Rule (RIN 0955–AA07), we codified definitions of certain TEFCA terms in § 171.401 of the information blocking regulations and finalized the 45 CFR part 172 TEFCA provisions.

III. Information Blocking Enhancements

In the HTI–2 Proposed Rule, we proposed revisions to defined terms for purposes of the information blocking regulations, which appear in 45 CFR 171.102. Specifically, we proposed to clarify the definition of ''health care provider'' (89 FR 63616, 63617, and 63802) and adopt definitions for three terms not previously included in § 171.102: ''business day'' (89 FR 63601, 63602, 63626, and 63802), ''health information technology or health IT'' (89 FR 63617 and 63802), and ''reproductive health care'' (89 FR 63633 and 63802). Of these, we address in this final rule only the proposal to add to § 171.102 a definition of ''reproductive health care'' and comments received in response to that proposal. Comments received specific to other proposed revisions to § 171.102 are beyond the scope of this final rule but may be the subject(s) of a different final rule or rules related to such proposal(s).

We proposed to revise two existing exceptions in subpart B of 45 CFR part 171 (§ 171.202 and § 171.204) and solicited comment on potential revisions to one exception in subpart D (§ 171.403). We proposed revisions to paragraphs (a), (d), and (e) of § 171.202 (89 FR 63620 through 63622, and 63803) and to paragraphs (a)(2), (a)(3) and (b) of § 171.204 (89 FR 63622 through 63628, and 63803). In this final rule, we address comments received on or relevant to proposed revisions to paragraphs (a) and (e) of § 171.202 and paragraph (a)(2) of § 171.204. Comments received specific to proposed revisions to § 171.202(d), § 171.204(a)(3), and § 171.204(b) are beyond the scope of this final rule but may be the subject(s) of a future final rule related to such proposal(s).

We proposed two new exceptions, the Protecting Care Access Exception and the Requestor Preferences Exception, in subparts B and C of part 171 respectively. The Protecting Care Access Exception was proposed as new § 171.206 (89 FR 63627 through 63639, and 63804). We have finalized the proposed Protecting Care Access Exception (§ 171.206), and we address comments relevant to it in this final rule. Comments received specific to the Requestor Preferences Exception (§ 171.304) proposal (89 FR 63639 through 63642, 63804 and 63805) are beyond the scope of this final rule but may be a subject of a future final rule related to that proposal.

We proposed to codify in § 171.401 definitions of certain terms relevant to the Trusted Exchange Framework and

Common Agreement™ (TEFCA™) (89 FR 63642, 63804, and 63805) and in § 171.104 descriptions of certain practices that constitute interference with the access, exchange, and use of electronic health information (EHI) (89 FR 63617 through 63620, 63802, and 63803). We do not address either of those proposals in this final rule, and comments regarding them are also beyond the scope of this final rule. However, in the HTI–2 Final Rule (RIN 0955–AA07), we finalized the proposed definitions of certain terms relevant to TEFCA™ in § 171.401.

A. Out of Scope Comments

In addition to comments received on proposals that we included in the HTI–2 Proposed Rule, we received numerous comments that were beyond the scope of any proposal in the HTI–2 Proposed Rule. For example, we received comments recommending that ASTP/ONC revise an information blocking exception to which we had not proposed any revisions. We also received comments recommending that we adopt new requirements for actors' conduct or technology regarding which we did not make any related proposals in the HTI–2 Proposed Rule. While we do not specifically address in this final rule all comments received on matters beyond the scope of the HTI–2 Proposed Rule, nor do we intend to address them all in any other final rule, we do address some of them (below) prior to more in-depth discussions of comments received that are specifically related to proposals addressed in this final rule.

Comment. One commenter expressed support for greater transparency and timely access to health information for patients. However, they stated that the regulations as they exist today do not appropriately mitigate patient harm within the ''Preventing Harm Exception.'' They stated a belief that the Preventing Harm Exception does not account for the harm caused by immediate patient access to distressing or confusing laboratory test or imaging results. They stated a belief that ''the strict definition outlined by ONC does not include emotional harm.'' The commenter stated that certain scenarios require particularly sensitive care conversations, where patients are able to process the results with an experienced health care professional. Therefore, they urged that we clarify that the Preventing Harm Exception includes emotional distress.

Response. We thank the commenter for their feedback. As discussed in context of finalized revisions to the *segmentation* condition of the Infeasibility Exception (§ 171.204(a)(2)), this rule retains application of the Infeasibility Exception in circumstances where an actor cannot unambiguously segment EHI they have chosen to withhold consistent with the Preventing Harm Exception (§ 171.201) from other EHI that they could share under applicable law. Any modification to the Preventing Harm Exception or other revision to 45 CFR part 171 to create a regulatory exception designed to cover situations where a health care provider may want to limit a patient's own access to their health information based on concern about the information being upsetting or confusing the patient is beyond the scope of this final rule. We did not propose in the HTI–2 Proposed Rule any changes to the Preventing Harm Exception. The revisions we did propose to the Infeasibility Exception or Privacy Exception, or establishment of the new Protecting Care Access Exception, finalized in this rule do not change or conflict with any condition of the Preventing Harm Exception in § 171.201. We emphasize that the Preventing Harm Exception and the Protecting Care Access Exception operate independently of one another and of all other exceptions. An actor's practice does not need to satisfy any portion of any other exception in order to satisfy the Preventing Harm Exception. Likewise, an actor's practice need not satisfy any portion of any other exception to satisfy the Protecting Care Access Exception. We refer readers to the discussion in the HTI–1 Final Rule of how ''stacking'' of exceptions may be relevant because an actor wishes to engage in one or more practice(s) that are covered in part, but not fully covered, solely by the Privacy Exception (§ 171.202) or solely by the Preventing Harm Exception (§ 171.201) (89 FR 1352 through 1354). As we noted and emphasized in the HTI–1 Final Rule (89 FR 1354), the example detailed in that discussion was an example scenario where an individual has requested restrictions that the actor has chosen to honor, but there may be a wide variety of scenarios where ''stacking'' other combinations of various exceptions with one another, or with restrictions on use or disclosure of EHI under applicable law, may occur. The Protecting Care Access Exception finalized in this rule may be combined (or ''stacked'') with the Infeasibility Exception when both are applicable. Later in this final rule, we discuss the revised *segmentation* condition of the Infeasibility Exception and when it may be applicable in complement to another exception under which an actor may have chosen to withhold a portion of the EHI the actor would be permitted by applicable law to make available to a requestor for permissible purposes.

Specific to this commenter's concerns about allowing patients to access EHI before it has been explained to them or with limited context, we recognize that patients have different degrees of health literacy as well as different individual preferences for when and how to receive information that may be upsetting. We are aware that some patients may experience emotional distress from accessing new information about their health without additional context or explanation of what the information means for their health or care. We also recognize that many clinical situations are too nuanced to provide the context a patient needs through means other than a conversation with a health care professional. However, as we noted in the ONC Cures Act Final Rule (*85 FR 25824 and 25825*), it would be challenging to define an appropriate and unique standard for purposes of the Preventing Harm Exception for non-physical harms that all actors, as defined in § 171.102, could apply consistently and, most importantly, without unduly restricting patients' rights to access their health information. We may consider exploring options to address such concerns in future rulemaking, but we note that we would not interpret anything in 45 CFR part 171 as compelling a patient to review information before the patient is ready.

To ensure that this discussion does not introduce confusion about the applicability of the Preventing Harm Exception (§ 171.201),[9] we remind readers that the Preventing Harm Exception relies on the same types of harm that apply for a covered entity to deny access to protected health information (PHI) under the Health Insurance Portability and Accountability Act of 1996 (HIPAA) Privacy Rule.[10] For example, in situations where a patient's representative is accessing the patient's EHI (such as a parent accessing EHI of their minor child), the Preventing Harm Exception relies on the same

[9] For the Preventing Harm Exception to cover an actor's practice likely to interfere with access, exchange, or use of EHI (by the patient or by anyone else who may, under applicable law, access, exchange, or use the patient's EHI for permissible purposes), the actor's practice must meet the applicable conditions of the exception at all relevant times. We refer readers to 45 CFR 171.201 for the full conditions of the Preventing Harm Exception, and those seeking additional information about those conditions to their preamble discussion in the ONC Cures Act Final Rule (85 FR 25821 to 25844).

[10] 45 CFR part 160 and subparts A and E of 45 CFR part 164.

''substantial harm'' standard that applies under the HIPAA Privacy Rule to a HIPAA covered entity's denial of a personal representative's access of an individual's PHI on ''reviewable grounds'' (see 45 CFR 164.524(a)(3)(iii)).[11] ''Substantial harm'' includes ''substantial physical, emotional, or psychological harm'' (see, for example, HIPAA Privacy Rule preamble at 65 FR 82556). We have published an illustrative chart of the patient access cases where the Preventing Harm Exception recognizes ''substantial harm,'' in a frequently asked question (IB.FAQ42.1.2022FEB) that is available at: *https://www.healthit.gov/faq/which-patient-access-cases-does-preventing-harm-exception-recognize-substantial-harm.*[12]

Comment. One commenter noted that information blocking could seriously harm the free market and the health care services market if left unchecked. The commenter expressed that the information blocking provisions set the country up for the future by promoting innovation, while simultaneously ensuring lawful access, exchange, and use of electronic health information. The commenter noted that the inclusion of information blocking provisions ensures that barriers to entry are not created for competing technologies, allowing for competition and unhindered development of improved technologies.

Response. We agree with and appreciate the commenter's feedback.

Comments. Multiple commenters requested clarification or sought additional education on a variety of topics related to information blocking or to information sharing. One commenter sought guidance on how to understand information blocking concepts and relationships between concepts. They suggested that we provide decision trees, relationship diagrams, or possibly supplemental educational materials. A commenter requested a concerted effort by key HHS entities, including the Office for Civil Rights (OCR) and ASTP/ONC, to bolster patient and provider community education about the HIPAA Privacy Rule, its updates, and related information blocking exceptions. This commenter emphasized the importance of patient understanding in assuring data sharing consent is true, informed consent. The commenter encouraged us to continue investing in the education of individuals whose data is exchanged in support of patient and population health goals, especially as data sharing becomes more widespread under TEFCA and other frameworks.

Another commenter urged that we place a special emphasis on educating consumers and other parties about limitations in the ability for long-term and post-acute care (LTPAC) providers to furnish some information electronically due to current standards limitations. This commenter expressed concerns regarding legitimate circumstances where certain patient health information from LTPAC providers is not currently feasible to be exchanged via a portal or third-party app and how this could potentially result in a high volume of avoidable consumer information blocking complaints and investigations directed at LTPAC providers. Another commenter expressed that it is important to promote interoperability and exchange between LTPAC providers and the EHRs of patients' doctors.

Response. We thank commenters for requesting these clarifications. We note that we have offered information sessions and published sub-regulatory guidance documents, fact sheets, and frequently asked questions to provide supplemental information about the information blocking regulations.

We agree that it is important to educate patients about data sharing and its implications. However, discussion of specific additional investment in educational initiatives, as one commenter suggested, is beyond the scope of this final rule. Similarly, we recognize the importance of educating consumers about the limitations of EHI exchange, including particular care and practice settings (such as LTPAC) where the functionalities supported by currently deployed health IT may be more variable than in other settings (such as acute-care hospitals or physician practices). However, providing such education is not in scope for this final rule and would be more effective, we believe, in different contexts than this final rule. We refer readers seeking resources and information for LTPAC providers to advance their adoption and use of interoperable health IT and health information exchange to support care coordination and outcomes to ASTP/ONC's official website, HealthIT.gov. We offer a range of resources for health care providers across a broad array of care settings online, free of charge. (Start at *https://www.healthit.gov/topic/health-it-health-care-settings/health-it-health-care-settings*). For example, we offer an educational module for LTPAC providers [13] and our Health IT Playbook (*https://www.healthit.gov/playbook/*) has implementation resources for LTPAC providers.[14] From an information-blocking perspective, information resources currently available at *https://www.healthit.gov/informationblocking* are relevant to actors, including LTPAC and other health care providers.[15] We will continue to look for ways to engage and educate the health IT community, including patients, about our regulations.

Comment. One commenter suggested requiring exam room laptops to be locked after every patient. They expressed concerns about patient record visibility between visits, noting that physicians should be required to enter their passwords to access the information when they enter the room.

Response. Although the concern raised by this comment is beyond the scope of the HTI–2 Proposed Rule, we thank the commenter for their feedback. We strive to promote and recommend best practices for securing EHI. Additional privacy and security information, resources, and tools for both consumers and health care providers are available through ASTP/ONC's official website, HealthIT.gov.[16]

B. Exceptions

1. Privacy Exception Updates

a. Privacy Exception—Definition of Individual

For purposes of the Privacy Exception, the term ''individual'' is defined in § 171.202(a)(2). When the Privacy Exception in § 171.202 and paragraph (a)(2) were initially established by the ONC Cures Act Final Rule, the codified text included a typographical error that was not identified until after publication. In the ONC Cures Act Final Rule (at 85 FR 25957) and the current Code of Federal Regulations, the text of § 171.202(a)(2)(iii), (iv), and (v) cross-

[11] The ''substantial harm'' standard also applies to denial of access to PHI that references another person (other than a health care provider), see 45 CFR 164.524(a)(3)(ii).

[12] This FAQ can also be found, alongside others about the Preventing Harm Exception, other exceptions, and other topics, on HealthIT.gov's Information Blocking FAQs page (*https://www.healthit.gov/faqs?f%5B0%5D=term_parent%3A7011*).

[13] *https://www.healthit.gov/sites/default/files/ltpac_healthit_educationmodule_8-7-17_ecm.pdf.*

[14] *https://www.healthit.gov/playbook/care-settings/.*

[15] In addition to fact sheets, FAQs, blogs, we offer recorded webinars, including a three-webinar series designed for the health care provider audience as a whole and one that we designed for and delivered to an LTPAC audience. The LTPAC webinar slides are available at: *https://www.healthit.gov/sites/default/files/2024-03/InformationBlockingPresentationPDF_LTPAC_2.22.24.pdf* (A link to view the recorded webinar is available from *https://www.healthit.gov/topic/information-blocking*).

[16] *https://www.healthit.gov/topic/privacy-security-and-hipaa.*

references paragraphs (a)(1) and (2) of § 171.202 instead of paragraphs (a)(2)(i) and (ii) when referencing a person who is the subject of EHI in defining the term ''individual.'' We proposed to make a technical correction to cross-references within the text of § 171.202(a)(2)(iii), (iv), and (v) to accurately cross-reference paragraph (a)(2)(i), (a)(2)(ii), or both, as applicable.

Paragraph (a)(2) of the current § 171.202 defines the term ''individual'' in part by referring to its definition in 45 CFR 160.103. In § 171.202(a)(2)(i), we cross-referenced to the definition of ''individual'' as defined in the HIPAA Privacy Rule at 45 CFR 160.103. In § 171.202(a)(2)(ii), we provided a second definition: ''any other natural person who is the subject of the electronic health information being accessed, exchanged, or used.'' [17] Then, in (a)(2)(iii), (iv), and (v), we expanded on those two definitions in order to include persons legally acting on behalf of such individuals or their estates in certain circumstances. However, the current text of § 171.202(a)(2)(iii), (iv), and (v) incorrectly referenced a ''person described in paragraph (a)(1) or (2) of this section'' instead of referencing a ''person described in paragraph (a)(2)(i) or (ii) of this section.''

The ONC Cures Act Final Rule preamble demonstrates our intent for the definition of ''individual'' in paragraph (a)(2) of § 171.202. Citing the ONC Cures Act Proposed Rule at 84 FR 7526, we stated in the ONC Cures Act Final Rule preamble (85 FR 25846 through 25847) that ''the term 'individual' encompassed any or all of the following: (1) An individual defined by 45 CFR 160.103; (2) any other natural person who is the subject of EHI that is being accessed, exchanged or used; (3) a person who legally acts on behalf of a person described in (1) or (2), including as a personal representative, in accordance with 45 CFR 164.502(g); or (4) a person who is a legal representative of and can make health care decisions on behalf of any person described in (1) or (2); or (5) an executor or administrator or other person having authority to act on behalf of the deceased person described in (1) or (2) or the individual's estate under State or other law.'' Further, still referencing the ONC Cures Act Proposed Rule preamble, we wrote at 85 FR 25845 that ''(3) encompasses a person with legal authority to act on behalf of the individual, which includes a person who is a personal representative as defined under the HIPAA Privacy Rule.'' The paragraph designated as ''(a)(3)'' in the ONC Cures Act Proposed Rule at 84 FR 7602 and referenced simply as ''(3)'' in the discussion at 85 FR 25845 was designated as (a)(2)(iii) in § 171.202 as finalized at 85 FR 25957 and currently codified.

We stated in the HTI–2 Proposed Rule (89 FR 63620) that the quotes from the ONC Cures Act Final Rule preamble above demonstrate a consistent intention across the ONC Cures Act Proposed and Final Rules to cross-reference in the paragraphs finalized (at 85 FR 25957) and codified in § 171.202 as (a)(2)(iii), (iv), and (v) the paragraphs finalized and codified in § 171.202(a)(2)(i) and (ii). Accordingly, we proposed the technical correction in the revised text of 45 CFR 171.202 (89 FR 63803) to reflect the correct reading and intent (89 FR 63620).

In drafting our proposed technical correction to § 171.202(a)(2), we determined that the cross-reference to (a)(2)(ii), a natural person who is the subject of the EHI being exchanged *other than* an individual as defined in 45 CFR 160.103, is not needed in describing (in (a)(2)(iii)) a person acting as a personal representative in making decisions related to health care specifically in accordance with 45 CFR 164.502(g) (89 FR 63620 to 63621). As we explained in the HTI–2 Proposed Rule (89 FR 63621), this is because 45 CFR 164.502(g) pertains to personal representatives of individuals as defined in 45 CFR 160.103 (persons who are the subject of PHI) under the HIPAA Privacy Rule. A person described in (a)(2)(i) is an individual as defined in 45 CFR 160.103 for purposes of the HIPAA Privacy Rule.[18] However, (a)(2)(ii) describes ''any *other* natural person who is the subject of the EHI being accessed, exchanged, or used'' (emphasis added) rather than an ''individual'' who is the subject of PHI under the HIPAA Privacy Rule. Such *other* person (described in (a)(2)(ii)) would not have a person who is a ''personal representative'' specifically in accordance with the 45 CFR 164.502(g) provisions pertaining to ''personal representatives'' under the HIPAA Privacy Rule. Therefore, we proposed to strike the unnecessary reference to § 171.202(a)(2)(ii) (a subject of EHI who does *not* meet the 45 CFR 160.103 (HIPAA Privacy Rule) definition of ''individual'') from the § 171.202(a)(2)(iii) description of a person who acts as a personal representative specifically in accordance with the HIPAA Privacy Rule provisions in 45 CFR 164.502(g). By striking an unnecessary cross-reference, the proposal would simplify the regulatory text without changing what the § 171.202(a)(2) definition of ''individual'' means or how it applies in practice.

Comments. We received two comments stating support for the proposal and none opposing. We received one comment questioning whether ''personal representative'' (§ 171.202(a)(iii)) is different from ''legal representative'' (§ 171.202(a)(iv)) and requesting that we provide an example of someone who is not a personal representative under § 171.202(a)(2)(iii) but is a legal representative who can make health care decisions under § 171.202(a)(2)(iv). This comment stated that the clarification would be useful to all actors.

Response. We appreciate commenters taking the time to provide feedback on this proposal. Having reviewed and considered all comments received on the § 171.202(a)(2) technical correction, we have finalized it as proposed.

We also appreciate the opportunity to explain again the difference between a ''personal representative'' (§ 171.202(a)(iii)) and a ''legal representative'' (§ 171.202(a)(iv)). As explained in the ONC Cures Act Final Rule (85 FR 25847), ''§ 171.202(a)(2)(iii) encompasses only a person who is a personal representative as defined under the HIPAA Privacy Rule.'' As revised by this final rule, that subparagraph reads, in its entirety: ''A person who legally acts on behalf of a person described in paragraph (a)(2)(i) of this section in making decisions related to health care as a personal representative, in accordance with 45 CFR 164.502(g).'' Thus, § 171.202(a)(iii) refers specifically, and only, to a person who is a ''personal representative''

[17] The definition of ''person'' for purposes of 45 CFR part 171 is codified in § 171.102 and is, by cross-reference to 45 CFR 160.103, the same definition used for purposes of the HIPAA Privacy Rule. The § 160.103 definition of ''person'' clarifies the meaning of ''natural person'' within it. We use ''natural person'' with that same meaning in § 171.202(a)(2) and throughout this discussion of § 171.202(a)(2). Consistent with the § 171.102 definition of ''person'' by cross-reference to the definition of ''person'' in 45 CFR 160.103, ''natural person'' in context of the information blocking regulations means ''a human being who is born alive.''

[18] In the second sentence that begins on page 89 FR 63621 in the HTI–2 Proposed Rule, the reference to ''45 CFR 170.103'' instead of ''45 CFR 160.103'' was a typographical error. Other references to the HIPAA Privacy Rule's definition of ''individual'' in the HTI–2 Proposed Rule correctly reference 45 CFR 160.103, including the reference in the first sentence of the paragraph in which the ''45 CFR 170.103'' typographical error appears. In this summary of our explanation at 89 FR 63620 through 63621, we have used the correct reference (45 CFR 160.103) rather than reproducing the error that appeared at 89 FR 63621.

consistent with 45 CFR 164.502(g).[19] We refer readers interested in learning more about personal representatives under the HIPAA Privacy Rule to 45 CFR 164.502(g), 45 CFR 164.524, and to guidance provided in the OCR section of the Department's official website, *HHS.gov.*[20]

We distinguish a ''personal representative'' under the HIPAA Privacy Rule (specifically, consistent with 45 CFR 164.502(g)) from all other persons who are *legal* representatives and who can make health care decisions on behalf of the individual who is the subject of EHI (whether or not that EHI is also PHI). We include reference to § 171.202(a)(i) in § 171.202(a)(iv) because—in limited circumstances as permitted under State law, or Tribal law where applicable—a family member may be the *legal* representative to act on behalf of a patient to make health care decisions in emergency situations even if that family member may not be the ''personal representative'' of the individual in accordance with 45 CFR 164.502(g).

Comments. We received several comments requesting that we clarify how or where the HTI–2 Proposed Rule treats an actor that is a covered entity differently than an actor that is not a covered entity.

Response. It is not clear whether these comments refer to all or only some of the information blocking enhancement proposals in the HTI–2 Proposed Rule (89 FR 63616 through 63643 and 89 FR 63802 through 63805). Therefore, to ensure it is easy for readers to map our answer to each of the proposals finalized in this rule, we summarize and respond to these comments in context of each of the enhancements finalized in this final rule.

The definition of ''individual'' in § 171.202(a)(2) applies for purposes of all of the sub-exceptions (paragraphs (b), (c), (d), and (e)) of the Privacy Exception (§ 171.202). This definition explicitly includes both ''individuals'' as defined in 45 CFR 160.103 (§ 171.202(a)(2)(i)) and ''any other natural person who is the subject of the electronic health information being accessed, exchanged, or used'' [21] (§ 171.202(a)(2)(ii)). Thus, the definition of ''individual'' is constructed to account for both § 171.102 ''actors'' who are, and § 171.102 ''actors'' who are not, subject to the HIPAA regulations in 45 CFR parts 160, 162, and 164.

Comments. We received several comments requesting or recommending that we clarify or reaffirm what ''natural person'' means when used in defining ''individual'' or ''patient'' for purposes of the information blocking regulations.

Response. Although the comments requesting clarification of what ''natural person'' means within the definition of ''individual'' did not specifically connect the request to the Privacy Exception, § 171.202(a)(2) is the only place in 45 CFR part 171 where we have codified a definition of the word ''individual.'' That definition includes at § 171.202(a)(2)(ii) ''any other natural person who is the subject of the electronic health information being accessed, exchanged, or used.'' Therefore, we believe responding to comments requesting clarity or confirmation of what ''natural person'' means within the definition of ''individual'' in context of the technical correction to § 171.202(a)(2) will make it easier for actors to find when they need it to understand and, if they choose to, apply the Privacy Exception (§ 171.202).

Consistent with the § 171.102 definition of ''person'' by cross-reference to the definition of ''person'' in 45 CFR 160.103, ''natural person'' in context of the information blocking regulations means ''a human being who is born alive.'' In 2002, Congress enacted 1 U.S.C. 8, which defines ''person,'' ''human being,'' ''child,'' and ''individual.'' The statute specifies that these definitions shall apply when determining the meaning of any Act of Congress, or of any ruling, regulation, or interpretation of the various administrative bureaus and agencies of the United States. When used in any definition of ''patient'' outlined in 45 CFR part 171, the term ''natural person'' has the same meaning that it has within the definition of ''person'' in § 171.102, and in the definition of ''individual'' in § 171.202(a)(2)(ii), which is a human being who is born alive. The term ''patient'' was included in the proposed Protecting Care Access Exception (§ 171.206), which is finalized in this final rule. We therefore address other comments regarding the meaning of ''patient'' in the context of § 171.206 in the section of this rule's preamble that is specific to the Protecting Care Access Exception.

b. Privacy Sub-Exception—Individual's Request Not To Share EHI

In the HTI–2 Proposed Rule, we proposed to slightly modify the header of § 171.202(e) for ease of reference to ''individual's request not to share EHI'' (89 FR 63622). More importantly, we proposed to revise the sub-exception to remove a limitation that applied the exception only to individual-requested restrictions on EHI sharing where the sharing is not otherwise required by law. Thus, we proposed to extend the availability of the § 171.202(e) sub-exception to an actor's practice of implementing restrictions the individual has requested on the access, exchange, or use of the individual's EHI even when the actor may have concern that another law or instrument could attempt to compel the actor to fulfill access, exchange, or use of EHI contrary to the individual's expressed wishes.

The original text and scope of 45 CFR 171.202(e) was established in 2020 by the ONC Cures Act Final Rule (85 FR 25642). When the sub-exception was established, health care providers and other actors did not raise explicit concerns regarding when they must comply with statutes, regulations, or instruments (such as subpoenas) issued under the laws of states in which they are not licensed, do not reside, and do not furnish care. In 2022, the Supreme Court decision in *Dobbs* v. *Jackson Women's Health Organization* overturned precedent that protected a federally protected constitutional right to abortion and altered the legal and health care landscape.[22] Since the Court's decision, across the United States, a variety of states have newly enacted or are newly enforcing restrictions on access to abortion and other reproductive health care. The Court's ruling—and subsequent state restrictions—have had far-reaching implications for health care beyond the effects on access to abortion.[23]

In light of the changing landscape and the limitation of § 171.202(e) as

[19] 45 CFR 164.502(g) sets forth the HIPAA Privacy Rule's ''personal representative'' standard and implementation specifications.

[20] *https://www.hhs.gov/hipaa/for-professionals/privacy/guidance/personal-representatives/index.html*

[21] The definition of ''person'' for purposes of 45 CFR part 171 is codified in § 171.102 and is, by cross-reference to 45 CFR 160.103, the same definition used for purposes of the HIPAA Privacy Rule. The § 160.103 definition of ''person'' clarifies the meaning of ''natural person'' within it. We use ''natural person'' with that same meaning in § 171.202(a)(2) and throughout this discussion of § 171.202(a)(2). Consistent with the § 171.102 definition of ''person'' by cross-reference to the definition of ''person'' in 45 CFR 160.103, ''natural person'' in context of the information blocking regulations means ''a human being who is born alive.''

[22] *See* 142 S. Ct. 2228.

established by the ONC Cures Act Final Rule (85 FR 25958), we noted in the HTI–2 Proposed Rule our concern that actors might deny or terminate an individual's requested restrictions on sharing their EHI specifically due to uncertainty about whether the actor is aware of and can account for any and all laws that might override the individual's requested restrictions (89 FR 63622). Due to that uncertainty, an actor who might otherwise be inclined to agree to an individual's request not to share their EHI could be concerned about potential information blocking implications of honoring the individual's requests in the face of demands for disclosure that *might* ultimately be enforced in a court of competent jurisdiction. In particular, as we noted at 89 FR 63622, we were and are concerned that actors may be unwilling to consider granting individuals' requests for restrictions to sharing their EHI, or may prematurely terminate some or all requested restrictions, based on uncertainty as to whether information blocking penalties or appropriate disincentives might be imposed if the actor ultimately is required by another law to disclose the information. For example, we understand actors are concerned about potentially implicating the information blocking definition by delaying a disclosure of EHI pursuant to a court order that the actor is aware is being contested, so that the actor can wait to see if the order will, in fact, compel the actor to make EHI available for access, exchange, or use contrary to the individual's request for restrictions to which the actor had agreed consistent with § 171.202(e). Accordingly, we proposed to remove the ''unless otherwise required by law'' limitation from § 171.202(e) to help address actors' uncertainty about various state laws' applicability as they relate to information blocking (89 FR 63622).

We explained in the HTI–2 Proposed Rule (89 FR 63622) that the proposed revision to § 171.202(e) could serve as a useful complement to the Precondition Not Satisfied sub-exception (§ 171.202(b)). We also noted in the HTI–2 Proposed Rule, and reaffirm here, that the § 171.202(b) sub-exception of the Privacy Exception outlines a framework for actors to follow so that the actors' practices of not fulfilling requests to access, exchange, or use EHI would not constitute information blocking when one or more preconditions has not been satisfied for the access, exchange, or use to be permitted under applicable Federal, State, or Tribal laws. For actors' and other interested parties' clarity regarding the relationship between paragraphs (b) and (e) of § 171.202, we now also note that each sub-exception under the Privacy Exception (§ 171.202) stands alone and operates independently of each other sub-exception. Thus, an actor's practice that fully meets the requirements of *any one* sub-exception (paragraph (b), (c), (d), or (e) of § 171.202) need not also satisfy any other sub-exception (any other of paragraphs (b) through (e) within § 171.202) in order to be covered by the Privacy Exception (§ 171.202).

We noted in the HTI–2 Proposed Rule that the proposed revision to § 171.202(e) would not operate to override other law compelling disclosure against the individual's wishes (89 FR 63622). The revision is intended to offer actors who elect to honor an individual's requested restrictions certainty that applying those restrictions will not be considered information blocking so long as the actor's practices in doing so satisfy the requirements of the § 171.202(e) sub-exception. Whether any other law in fact applies to any given actor and compels production of any EHI (or other data) is beyond the scope of this final rule.

If a law requires a particular actor to fulfill a request to access, exchange, or use EHI without the individual's authorization, permission, or consent, the actor might be compelled to comply with that law independent of the information blocking statute and 45 CFR part 171. This has been the case since the first eight information blocking exceptions were finalized in the ONC Cures Act Final Rule (85 FR 25642) and will continue to be the case despite the revision to § 171.202(e) proposed in the HTI–2 Proposed Rule (89 FR 63622 and 63803) and finalized in this final rule.

We reiterate here for emphasis the reminder we included in the HTI–2 Proposed Rule (89 FR 63622) that HIPAA covered entities and business associates must comply with the HIPAA Privacy Rule, including privacy protections in the ''HIPAA Privacy Rule to Support Reproductive Health Care Privacy'' final rule (89 FR 32976, April 26, 2024) (2024 HIPAA Privacy Rule) and any other applicable Federal laws that govern the use of EHI. For example, an actor's practice likely to interfere with an individual's access, exchange, or use of EHI (as defined in 45 CFR 171.102) might satisfy an information blocking exception without complying with the actor's separate obligations under 45 CFR 164.524 (HIPAA Privacy Rule's individual right of access). In such cases, an actor that is a HIPAA covered entity or business associate would be subject to penalties for violating the HIPAA Privacy Rule.

Comments. The overwhelming majority of comments supported the proposed revisions to § 171.202(e) and provided multiple reasons for their support. Many commenters specifically agreed with our reasoning that in the current environment, actors may be unwilling to consider granting individuals' requests for restrictions on sharing of their EHI, or may prematurely terminate requested restrictions, due to uncertainty about whether laws might exist that would override the individual's requested restrictions and fear of resulting information blocking penalties or appropriate disincentives.

Several commenters stated that the proposed revisions will offer meaningful protections against criminalization risks faced by patients and give greater certainty to health care providers who otherwise might deny an individual's requested restrictions on sharing their EHI due to uncertainty about laws that could supersede these requests. Several commenters specifically highlighted uncertainty regarding potential legal risks related to reproductive health care as reasons for supporting the proposed revisions. Several commenters stated that the proposed revisions will give physicians and other actors the confidence to delay the disclosure of EHI in accordance with this sub-exception when they are aware that a court order is being contested. One commenter noted that currently, confusion and concern about withholding EHI at the request of a patient due to a contested court order leads physicians and other actors to disclose EHI against a patient's wishes out of fear of information blocking accusations or penalties.

Several commenters stated that the proposed revisions would benefit actors by reducing information blocking compliance burdens, noting that the proposed revisions reduce burden and costs by simplifying the analysis of whether the sub-exception is applicable. One commenter also stated that the proposed revisions are needed to align with the proposed Protecting Care Access Exception given the variability regarding what information must be disclosed in connection with reproductive health care services in different jurisdictions. Some commenters stated that the proposed revisions would provide actors with greater flexibility in managing EHI sharing. Additionally, commenters stated that clarifying the applicability of various laws related to information blocking through the proposed revisions

will protect patients and physicians, encourage the use of health IT, and support care coordination.

Several commenters in support of the proposed revisions stressed that the revisions would help maintain and strengthen a patient's ability to trust their providers and would improve the patient-provider relationship, as patients and providers would be empowered to discuss and determine the level of risk a patient is willing to take. Commenters stated that patient preferences should always be the priority when providers are faced with an EHI disclosure request. One commenter noted the proposed revisions balance ensuring patient autonomy over their EHI while upholding existing legal frameworks for EHI disclosure.

Response. We appreciate the many comments in favor of the proposed revisions to § 171.202(e) and recognition of the benefits that we outlined in the HTI–2 Proposed Rule (89 FR 63622). Having reviewed and considered all comments received relevant to this sub-exception, we have finalized the revision to the Privacy sub-exception ''individual's request not to share EHI'' in § 171.202(e) as proposed in the HTI–2 Proposed Rule (89 FR 63803).

Comments. Several commenters expressed concerns about potential unintended legal consequences for actors who restrict the sharing of EHI under the information blocking regulations when it is contrary to an existing law. These commenters generally did not support the proposed revisions and recommended that ASTP/ONC maintain the existing limitation allowing the use of this sub-exception unless disclosure is required by law. One commenter stated that not allowing reliance on this sub-exception when the disclosure is required by law would align the sub-exception with HIPAA and thus reduce complexity for actors and serve public policy since restricting the sharing of EHI could adversely affect patient care in cases such as emergency treatment.

Response. We appreciate these comments and reiterate that the finalized revisions to § 171.202(e) do not override other laws compelling disclosure against the individual's wishes, as we noted when we proposed them (89 FR 63622). As we stated in the HTI–2 Proposed Rule, where there may be a law requiring a particular actor to fulfill a request to access, exchange, or use EHI without the individual's authorization, permission, or consent, the actor might be compelled to comply with that law independent of the information blocking statute (section 3022 of Title XXX of the PHSA) and 45 CFR part 171 (89 FR 63622).

Knowing that the exception does not override any other law(s) with which an actor knows they must comply, any actor can choose to honor an individual's request to the extent that they are able under such law(s) and can choose how to communicate to the individual the limits of the actor's ability to honor that request under such law(s). For example, an actor that is also required to comply with the HIPAA Privacy Rule with respect to an individual's information could choose to agree to honor requests for restrictions on disclosures of PHI that the HIPAA Privacy Rule does not require (see 45 CFR 164.502(a)(2) ''Covered entities: Required disclosures''). Such an actor could also choose how to communicate to an individual that the actor is able to honor the request for restrictions only to the extent that the restrictions do not prevent the actor from disclosing PHI as required under 45 CFR 164.502(a)(2).

The § 171.202(e) sub-exception applies to requests that an actor chooses to honor and that the HIPAA Privacy Rule *permits* (but does not *require*) the actor to honor, as well as to scenarios where the actor is not required to comply with the HIPAA Privacy Rule. We remind readers that where an actor that is subject to the HIPAA Privacy Rule is required to agree to an individual's requested restriction on use or disclosure of PHI that is also EHI, such as where 45 CFR 164.522(a)(1)(ii) and (vi) applies, the actor's agreeing to and applying such restrictions is ''required by law.'' [24] The revisions to § 171.202(e) finalized in this rule are intended to address concerns of actors who are worried about potential implications specific to the information blocking regulations (45 CFR part 171) of attempting to honor an individual's request (that they want to agree to honor) in the face of uncertainty about whether some statute they are not certain is applicable, or some other legally enforceable mandate (such as a contested court order), may or may not ultimately compel them to make EHI available for access, exchange, or use.

Regarding potential adverse impacts of restricted sharing based on the individual's request that some or all of their EHI not be shared for certain or any purpose(s), it is important to recognize that the sub-exception is not intended to create an affirmative obligation on the part of any actor to agree to honor any particular individual request(s) that the individual's EHI not be shared to the full extent permitted by applicable law (HIPAA Privacy Rule, other Federal law that may apply such as 42 CFR part 2, or, where applicable, State or Tribal laws). Moreover, as we explained when we originally finalized this sub-exception in the ONC Cures Act Final Rule, we recognize that an individual's requested restriction may need to be compromised in emergency treatment situations and therefore we provided for the ability of an actor to terminate an individual's requested restriction under limited circumstances (85 FR 25859). We did not propose, nor have we finalized, any revisions to the termination provisions of this sub-exception in § 171.202(e)(4).

Comments. Several commenters expressed concerns that the proposed revisions to § 171.202(e) may undermine information sharing and interoperability of EHI as well as inhibit sharing for treatment and other allowable purposes. One commenter provided examples to illustrate the concern, including: if a patient requests that EHI from a visit with a specialist be restricted from their primary care provider; restricting EHI needed for coordinated care and safe medication management; and limiting the sharing of health information used for operational purposes such as teaching that are permitted under HIPAA.

Response. We appreciate the opportunity to clarify why we do not agree that the proposed revisions to this exception would inhibit information sharing or interoperability of EHI on the whole. To satisfy the existing requirements in § 171.202(e)(3), which we did not propose to revise and have not revised in this final rule, the actor's practice must be implemented in a consistent and non-discriminatory manner. As we noted when we originally finalized the sub-exception in the ONC Cures Act Final Rule, this provides basic assurance that the practice is directly related to the risk of disclosing EHI contrary to the wishes of an individual and is not being used to interfere with access, exchange, or use of EHI for other purposes (85 FR 25857). We further noted that this condition requires that the actor's privacy-protective practice must be based on objective criteria that apply uniformly for all substantially similar privacy risks (85 FR 25857).

[24] Where applicable law prohibits a specific access, exchange, or use of information, the information blocking regulations consider the practice of complying with such laws to be ''required by law.'' Practices that are ''required by law'' are not considered ''information blocking'' (*see* the statutory information blocking definition in section 3022(a)(1) of the PHSA and the discussion in the HTI–1 Final Rule at 89 FR 1351 and in the ONC Cures Act Final Rule at 85 FR 25794).

Specific to concerns about an individual potentially requesting restrictions on EHI sharing that an actor believes would, if implemented, compromise the patient's health or care, we emphasize that the § 171.202(e) sub-exception, like all information blocking exceptions, is voluntary. Exceptions are intended to offer actors certainty that the practices in which they choose to engage consistent with the conditions of an exception will not be considered information blocking, but they are not intended to create, and do not create, an affirmative obligation for any actor to choose to engage in all of the practices that could potentially be covered by any given exception(s). If an actor is unwilling to agree to an individual's requested restrictions on sharing the individual's EHI for teaching or another permitted purpose, nothing in 45 CFR part 171 is intended to obligate the actor to honor the individual's request. We note, however, that an actor's practice to honor or decline individual requests for restrictions in a discriminatory manner—such as based on whether the individual's other health care provider(s) or those providers' health IT developer(s) were competitor(s) or affiliate(s) of the actor—would be inappropriate and could implicate the information blocking definition.

Comments. Several commenters focused on minor patients' EHI and the applicability of the sub-exception in proxy situations. One commenter stated that it is important to consider who is making the request not to share EHI. The commenter noted that there may be times when the adolescent is making the request not to share information and times when the parent is making the request, stating that it would be helpful for ASTP/ONC to explicitly clarify that an adolescent's request not to share information is allowed under the sub-exception unless otherwise prohibited by State law. Another commenter stated that ASTP/ONC must ensure that providers have flexibility to address the confidentiality needs of minor patients and reflect specific state or local requirements, noting the variation in federal and state rules and regulations around parent/guardian access to adolescent data. Other commenters sought clarification that this sub-exception would apply to proxy consent situations.

Response. We clarify that, as proposed (89 FR 63622) and finalized, the revisions to § 171.202(e) offer actors who elect to honor an individual's request not to share EHI certainty that applying the requested restrictions on sharing will not be considered information blocking so long as the actor's practices in doing so satisfy the requirements of the § 171.202(e) Privacy sub-exception. We did not propose, nor are we finalizing, any revisions to the requirements of the § 171.202(e) Privacy sub-exception that would categorically limit application of the sub-exception to only requests from individuals who are not unemancipated minors. Thus, it is possible that the exception could apply to some scenarios where a parent seeks access, exchange, or use of a non-emancipated minor's EHI when an actor has agreed to the request of the minor (as the individual as described in § 171.202(a)(2)(i) or (ii)) that the EHI not be made available to the minor's parents or other representatives. However, we remind actors and other interested parties that where an actor's practice meets the sub-exception's requirements, the revised § 171.202(e) Privacy sub-exception (like any Privacy sub-exception or any other exception codified in subparts B, C, or D of 45 CFR part 171), simply offers actors assurance that the practice will not constitute ''information blocking'' under 45 CFR part 171. We emphasize that the revisions to § 171.202(e) do not change how the HIPAA Privacy Rule, or other Federal, State, or Tribal law, applies to adults or minors. In various circumstances, one or more of such other laws may require disclosure of all of an unemancipated minor's health information to the minor's personal representative (consistent with 45 CFR 164.502(g)) or other legal representative as established by applicable law. We also refer readers to the information about how the HIPAA Privacy Rule applies to minors that can be found at 45 CFR 164.502(g) and on the OCR website.[25] We also note that revisions to § 171.202(e) do not change how any other Federal, State, or Tribal law applies to proxy requests. We stress that the revisions to § 171.202(e) do not override other law compelling disclosure against the individual's wishes, and whether courts will or should apply any particular Federal, State, or Tribal law to any actor to compel disclosure of any type of information to any requestor for any purpose is beyond the scope of this final rule.

Comments. A couple of commenters expressed concern that patients requesting restrictions on sharing of EHI may lack an understanding of the potential safety impact of not sharing complete health information with their other providers as well as the feasibility of the request to not share information. These commenters generally recommended that if finalized as proposed, ASTP/ONC should provide education on these issues for patients and other interested parties.

Response. We reiterate that the § 171.202(e) Privacy sub-exception does not create an affirmative obligation for any actor to agree to any individual's request for restrictions on access, exchange, or use of the individual's EHI. Where no other applicable law *requires* the actor to agree to an individual's requested restriction, the actor would have discretion to discuss the potential implications of a requested restriction on the availability of information to the individual's other health care providers before agreeing to the request, to not agree to apply restrictions the actor believes introduce unacceptable risks to the patient's health or safety, and to explain to the individual why the actor will not honor the individual's request(s) to which the actor chooses not to agree. We reiterate, however, that if an actor's practice specific to granting individual requests for restrictions is implemented in an inconsistent or discriminatory manner, that practice would not meet the § 171.202(e)(3) requirements, would therefore not be covered by the Privacy Exception (§ 171.202), and could implicate the information blocking definition in § 171.103.

We also appreciate the opportunity to remind readers of our continued commitment to support EHI sharing consistent with patient preferences and applicable law. Whether received through the public comments process for a proposed rule or through informal channels, we appreciate the feedback and questions we receive. They help to inform our development of information resources that we make publicly available on *HealthIT.gov*. Informal channels include, for example, the Health IT Feedback and Inquiry Portal [26] that is available year-round and not tied to the comment period for a proposed rule.

Comments. A couple of commenters expressed concern about the feasibility of actors implementing individuals' requested restrictions on the sharing of EHI, and some stated that the technology to operationalize segmentation of data does not exist. One commenter recommended that if revisions to the Privacy Exception are

[25] *See https://www.hhs.gov/hipaa/for-professionals/faq/personal-representatives-and-minors/index.html, https://www.hhs.gov/hipaa/for-professionals/privacy/laws-regulations/index.html,* and *https://www.hhs.gov/hipaa/for-professionals/privacy/guidance/personal-representatives/index.html.*

[26] To find the portal, please click, paste, or search *https://www.healthit.gov/feedback*

finalized as proposed, ASTP/ONC should pursue certification program initiatives to create the needed technology. Another commenter recommended that ASTP/ONC help ensure that operationalizing data segmentation is an immediate priority for health IT developers by offering financial incentives for developers enabling restrictions on sharing of EHI.

Response. We appreciate these comments regarding segmentation technology relevant to circumstances where an actor may wish to agree to an individual's request that only some of the individual's EHI not be shared. In proposing to revise § 171.204(e), we recognized the importance of data segmentation technology for exchanging sensitive health data and enabling access, exchange, and use of EHI (89 FR 63634). We also noted our awareness of the limitations of current health IT capabilities for data segmentation and of external efforts to develop technical standards that over time may result in increasingly advanced data segmentation capabilities in EHR systems and other health IT (89 FR 63634). These statements are also relevant in the context of the § 171.202(e) Privacy sub-exception and an actor's practice of implementing restrictions requested by an individual on the access, exchange, or use of the individual's EHI. As we indicated in the HTI–1 Final Rule (89 FR 1301), we continue to encourage and engage with industry and standards development community efforts to advance standards supporting privacy workflows and to monitor the continued evolution of relevant standards to consider in new or revised criteria in future rulemaking. In the HTI–1 Final Rule, we specifically discussed the HL7 data segmentation for privacy (DS4P) implementation guides (89 FR 1301). It is not clear from the comments we received what mechanism(s) the commenters may have envisioned ASTP/ONC using to make data segmentation innovation and advancement an immediate priority for health IT developers, or to offer financial incentives to developers.

In the HTI–1 Proposed Rule, we made several proposals related to the ONC Health IT Certification Program to support additional tools for implementing patient requested privacy restrictions. We proposed a new certification criterion in § 170.315(d)(14), an addition to ASTP/ONC's Privacy and Security Framework under the Program in § 170.550(h), and a revision to an existing ''view, download, and transmit to 3rd party'' certification criterion in § 170.315(e)(1) (88 FR 23822 through 23824). We sought public comment on these proposals—the new criterion in § 170.315(d)(14), the inclusion of the request capability for patients in § 170.315(e)(1), and the requirements with the Privacy and Security Framework in § 170.550(h)—both separately and as a whole. We specifically sought comment on the feasibility of each part in terms of technical implementation and usefulness for patients and covered entities using these capabilities. We proposed and sought comment on several alternatives which would add standards to the proposed new certification criterion and would specifically leverage HL7 DS4P IGs for the new certification criterion in § 170.315(d)(14). We also proposed and sought comment on alternate proposals that looked exclusively at the HL7 Privacy and Security Healthcare Classification System (HCS) Security Label Vocabulary within the HL7 DS4P IGs for a source taxonomy for the ''flag'' applied to the data (88 FR 23822). We sought comment on the health IT development burden associated with implementation of the capabilities including for the individual certification criterion referenced in the Privacy and Security Framework in § 170.550(h). As noted in the HTI–1 Final Rule, we also expressed our concerns about feasibility, timelines, and the overall complexity of the workflows and the related capabilities associated with this right as well as our intent to propose several options for consideration by the health care and health IT communities (89 FR 1301). We refer readers to the HTI–1 Final Rule for discussion of these proposals and of public comments received in response to the primary and alternative proposals we made specific to functionalities supporting individuals' requests for restrictions (89 FR 1298 through 1305).

The *segmentation* condition (§ 171.204(a)(2)) of the Infeasibility Exception specifies a condition [27] under which an actor who is not able to segment EHI that the actor must [28] or may have chosen to withhold [29] from other EHI that the actor could share with a requestor (or various requestors) for permissible purposes can ensure that not fulfilling a request to access, exchange, or use the requested EHI is not information blocking. The § 171.204(a)(2) *segmentation* condition has applied, since it was established in the ONC Cures Act Final Rule (85 FR 25867 and 25958), where the actor cannot fulfill a request for access, exchange, or use of EHI because the actor cannot unambiguously segment the requested EHI from EHI that cannot be made available due to an individual's preference, cannot be made available by law, or that may be withheld in accordance with § 171.201.

In the HTI–2 Proposed Rule, we proposed to explicitly reference the entire § 171.202 Privacy sub-exception in our revisions to § 171.204(a)(2) and noted that this would ensure that the *segmentation* condition would continue to apply where the actor cannot segment EHI which the actor has chosen to withhold in honoring an individual's request not to share EHI consistent with § 171.202(e) (89 FR 63623). In another section of this final rule preamble, we discuss the revisions we have finalized to § 171.204(a)(2), including a reference to the entire § 171.202 Privacy sub-exception in § 171.204(a)(2)(ii). We also refer readers to the discussion in the HTI–1 Final Rule of how ''stacking'' of exceptions may occur where an actor may wish to engage in one or more practice(s) that are covered in part, but not fully covered, by one exception (such as the Privacy Exception). The HTI–1 Final Rule discussion (89 FR 1353 and1354) includes an illustrative example where the actor has elected to grant an individual's request consistent with § 171.202(e).

Comments. A couple of commenters expressed a need for clarification on how the proposed revisions to this sub-exception work. These commenters asked for examples of use cases and urged ASTP/ONC to develop comprehensive guidance to ensure actors understand when and how the sub-exception applies. One commenter recommended that ASTP/ONC work across agencies and with other parties, including payers, to provide more clarity around the sub-exception to help ensure it is not overinterpreted or used to limit sharing of EHI unnecessarily. Specific areas where clarity was requested included standards for segmenting clinical data, differences in clinical versus claim codes, how third-party, non-HIPAA regulated entities can be held to standards, including standards required under TEFCA, and how entities can rely on the stated purpose of the information request.

Response. We appreciate the comments and offer the following use

[27] The actor would still need to meet the requirements of § 171.204(b) for the Infeasibility Exception to apply.

[28] An example of when an actor must withhold EHI would be if an individual chose not to give consent that is a pre-requisite for a particular access, exchange, or use to be permissible under applicable State or Tribal law.

[29] An example of when an actor may have chosen to withhold EHI would be if an actor chose to agree to an individual's request that the individual's EHI not be shared.

cases as illustrative examples, while reminding readers that this is *not* an exhaustive list. The revised § 171.202(e) Privacy sub-exception could also be met in other scenarios (use cases) not specifically discussed here.

One use case where the revised § 171.202(e) Privacy sub-exception is intended to apply is where an actor is concerned about implicating the information blocking definition by delaying a disclosure of EHI pursuant to a court order that the actor is aware is being contested (89 FR 63622). In this use case, the actor could choose to meet the requirements of the revised Privacy sub-exception in § 171.202(e) in order to have assurance that it will not be ''information blocking'' to delay release of EHI in compliance with an individual's request for restrictions while waiting to see if the order will eventually compel the actor to make EHI available for access, exchange, or use contrary to the individual's request for restrictions to which the actor had agreed consistent with § 171.202(e).

Another use case to which the revised § 171.202(e) Privacy sub-exception would apply is where an actor is inclined to grant an individual's request for restrictions but is uncertain whether other authority might compel the actor to provide access, exchange, or use of EHI despite the individual's wishes and is concerned about potentially implicating the information blocking definition if, after granting the request, the actor learns of or confirms that such other authority compels provision of access, exchange, or use of EHI contrary to the individual's expressed wishes. (We discussed this use case, in explaining the need for this revision, in the HTI–2 Proposed Rule at 89 FR 63622). In this use case, an actor could choose to meet the requirements of the revised Privacy sub-exception in § 171.202(e) and have assurance that honoring the individual's request and applying those restrictions in the interim or for other requestors will not be considered information blocking even if other law ultimately compels disclosure to specific requestor(s) (for permissible purposes) [30] against the individual's wishes.

However, we reiterate that a practice satisfying the conditions and requirements to be covered by any exception to the information blocking definition simply means HHS will not consider the practice to be ''information blocking'' under 45 CFR part 171 or the information blocking statute (PHSA section 3022). We emphasize, again, that the revisions to § 171.202(e) do not operate to override other law compelling disclosure against the individual's wishes, and if a court with jurisdiction over the actor and subject matter enforces, via court order, a law that requires a particular actor to fulfill access, exchange, or use of EHI without the individual's authorization, permission, or consent, the actor would be compelled to comply with that law independent of the information blocking statute and 45 CFR part 171.

The specific requests for clarity on segmentation standards, other standards-related issues, TEFCA, and reliability of information requests are beyond the scope of the proposal to revise § 171.202(e). We refer readers to our official website, *HealthIT.gov*, for more information on the ONC Health IT Certification Program, TEFCA, and a wide variety of other health IT topics in addition to information blocking and note that we continue to work alongside federal partners and other interested parties, including providers and payers, to serve as a resource to the entire health system in support of the adoption of health information technology and the promotion of nationwide, standards-based health information exchange to improve health care.

Comments. A couple of commenters expressed concern that not sharing EHI could be a default position for actors and stated that sharing of data in the spirit of the information blocking rules should be the default position. These commenters sought clarification that an actor must receive a specific request from an individual in order to trigger this exception.

Response. An actor's practice of honoring an individual's request not to share EHI will be covered by the § 171.202(e) Privacy sub-exception only so long as the practice satisfies the requirements found in § 171.202(e)(1)–(4). The requirements in § 171.202(e)(1)–(4), to which we did not propose changes and have made no changes, include that ''the individual requests that the actor not provide such access, exchange, or use of electronic health information without any improper encouragement or inducement of the request by the actor'' (§ 171.202(e)(1)). We also remind readers that the term ''individual'' is defined for purposes of the Privacy Exception in § 171.202(a), as discussed in this final rule.

We appreciate the opportunity to emphasize that the revised § 171.202(e) Privacy sub-exception remains specific to restrictions an individual requests and that are applied on an individual basis. We emphasize that in order to be covered by the § 171.202(e) Privacy sub-exception, an actor's practice of restricting the access, exchange, or use of any individual's EHI must be triggered by a request consistent with § 171.202(e)(1) from the individual (as described in § 171.202(a)(2)(i) and (ii)) or their representative (as described in § 171.202(a)(2)(iii) or (iv)) or a person having authority to act on behalf of a deceased person (as described in § 171.202(a)(2)(v)).

Comments. Several commenters requested that we clarify how or where the HTI–2 Proposed Rule treats an actor that is a covered entity differently than an actor that is not a covered entity.

Response. It is not clear whether these comments refer to all or only some of the information blocking enhancement proposals discussed in the HTI–2 Proposed Rule (89 FR 63616). Therefore, to ensure it is easy for readers to map our answer to each of the proposals finalized in this rule, we summarize and respond to these comments in the context of each of the enhancements finalized in this final rule.

The § 171.202(e) (individual's request not to share EHI) sub-exception is applicable to any actor's practice that meets its requirements. The § 171.202(e) sub-exception is available, and all of its requirements apply equally, to any actor's practice without regard to whether the actor also happens to be a HIPAA covered entity or business associate.

Please see our additional responses addressing these comments in other sections of this final rule.

Comments. Several comments received were beyond the scope of the proposed revisions to the sub-exception. One commenter commented on the documentation provisions in § 171.202(e)(2), which we did not propose to revise. The commenter noted that the current language requires documentation of the request not to share EHI in a timely manner and stated that if an actor fails to do so, then the actor could be subject to an information blocking claim for not sharing the information and the individual requesting the restriction would suffer unintended consequences of an actor's

[30] For purposes of the information blocking regulations (45 CFR part 171), ''permissible purpose'' is defined in § 171.102. Notably, the § 171.102 definition of ''permissible purpose'' would *not* apply to a purpose for which access, exchange, or use of EHI is prohibited by Federal or, where applicable, State or Tribal law. Examples of such federal law prohibitions are not limited to but do include the HIPAA Privacy Rule's prohibition of the use and disclosure of genetic information for underwriting purposes (45 CFR 164.502(a)(5)(i) and the HIPAA Privacy Rule's prohibition of using or disclosing reproductive health care information for the activities identified in 45 CFR 164.502(a)(5)(iii)(A)(*1*)–(*3*) (subject to paragraphs (B) and (C) of 45 CFR 164.502(a)(5)(iii)).

oversight. One commenter expressed concern about verbal requests, which were not an aspect of the proposed revisions to § 171.202(e). Another commenter recommended that ASTP/ONC and the HHS Office of Inspector General begin investigations into information blocking no earlier than January 1, 2027, if the provider claims they are protected under the Privacy Exception, in order to give providers at least one year to integrate the new patient requested restrictions technology into their practices.

Response. We appreciate these comments, however we did not propose or solicit comment on any potential revision(s) to the request provisions of § 171.202(e)(1), which do not mention verbal requests, or the documentation provisions of § 171.202(e)(2). We also did not propose to establish a moratorium on OIG investigating any claim of information blocking, or on ASTP/ONC reviewing potential non-conformities of ONC-Certified Health IT with ONC Health IT Certification Program (Program) requirements—such as a Program-participating developer's potential non-compliance with § 170.401 Information Blocking Condition and Maintenance of Certification requirements. We do not believe such moratorium is necessary. Like all other information blocking exceptions, the Privacy Exception and each of its sub-exceptions is *voluntary* and does not require an actor to deploy or use specific technology(ies) as a condition of a practice by the actor being covered by the exception.

We recognize that it may be easier or more efficient for an actor to engage in practices covered by some exceptions if they have more comprehensive or advanced technological capabilities than if they have only limited or outdated technological capabilities. For example, for an actor to conform practices to § 171.202(e) if they have efficient electronic workflows for receiving (or otherwise logging) individuals' requests that the individual's EHI not be shared, identifying whatever subset of such requests as applicable law(s) require the actor to honor,[31] and considering whether the actor is willing to agree to other individual-requested restrictions. However, as we have maintained since establishing the first eight exceptions in the ONC Cures Act Final Rule, ''failure to meet the conditions of an exception does not automatically mean a practice constitutes information blocking'' (85 FR 25649).[32] Although we encourage actors to voluntarily conform their practices to the conditions of an exception suited to the practice and its purpose, an actor's choice to do so simply provides them an enhanced level of assurance that the practices do not meet the definition of information blocking. If subject to an investigation by OIG, each practice that implicates the information blocking provision would be analyzed on a case-by-case basis (*see, e.g.,* 85 FR 25842). Each information blocking case, and whether the actor's practice would meet all conditions of an exception, will depend on its own unique facts and circumstances (85 FR 25868). We refer any party interested in a short, easy-to-read explanation of how any claim or report of information blocking would be evaluated to the following FAQ available on ASTP/ONC's website, HealthIT.gov: ''How would any claim or report of information blocking be evaluated?'' [33]

2. Infeasibility Exception Updates

In the ONC Cures Act Final Rule, we established the Infeasibility Exception (§ 171.204) (85 FR 25865 through 25870, and 85 FR 25958). Under the Infeasibility Exception, it is not considered information blocking if an actor, as defined in § 171.102, does not fulfill a request to access, exchange, or use EHI due to the infeasibility of the request, provided the actor satisfies the § 171.204(b) *responding to requests* condition and any one of the conditions in § 171.204(a).

In the HTI–1 Final Rule (89 FR 1373 through 1387 and 1436), we finalized the following revisions to § 171.204:

- clarification of the § 171.204(a)(1) *uncontrollable events* condition requirement that the uncontrollable event must have an actual negative impact on an actor's ability to fulfill EHI access, exchange, or use in order for *uncontrollable events* condition to apply;
- addition of two new conditions (*third party seeking modification use* and *manner exception exhausted,* respectively subparagraphs (3) and (4)) under paragraph (a); and
- renumbering the *infeasible under the circumstances* condition from § 171.204(a)(3) to § 171.204(a)(5).

However, in the HTI–1 rulemaking, we did not change the substance of the *infeasible under the circumstances* condition (now codified in § 171.204(a)(5)) or the § 171.204(a)(2) *segmentation* condition, and we did not make any changes to § 171.204(b). In the HTI–2 Proposed Rule (89 FR 63623), we proposed to modify:

- the § 171.204(a)(2) *segmentation* condition as described in the HTI–2 Proposed Rule (89 FR 63623 through 63624);
- the § 171.204(a)(3) *third party seeking modification use* condition as described in the HTI–2 Proposed Rule (89 FR 63624 through 63625); and
- the § 171.204(b) *responding to requests* condition as discussed in the HTI–2 Proposed Rule (89 FR 63625 through 63627).

In this final rule, we have finalized modifications to the § 171.204(a)(2) *segmentation* condition of the Infeasibility Exception. We do not address in this final rule our HTI–2 Proposed Rule proposals to revise § 171.204(a)(3) and (b). We may address in a future final rule revisions to the Infeasibility Exception that we do not address in this final rule.

In the HTI–2 Proposed Rule, we explained that the § 171.204(a)(2) *segmentation* condition applies where the actor is not able to fulfill a request for access, exchange, or use of EHI specifically because the actor cannot unambiguously segment from other requested EHI the EHI that cannot be made available by law or due to an individual's preference, or that may be withheld in accordance with § 171.201 (89 FR 63623). We noted that in practice, ''by law or due to an individual's preference'' would include situations where: an actor has chosen to honor an individual's request for restrictions on sharing of some of the individual's EHI; an individual's authorization or consent is a pre-requisite for a particular use or disclosure of the individual's EHI to be lawful and the individual has not provided such authorization or consent; or law applicable in the circumstances of the request restricts sharing of the individual's EHI.

In the HTI–2 Proposed Rule (89 FR 63623 through 63624), we proposed updates to the *segmentation* condition to enhance clarity and certainty, and to provide for its application to additional situations. We proposed to update how the text of § 171.204(a)(2) describes why certain EHI cannot or will not be made available, including more specific cross-

[31] For example, an actor that is subject to the HIPAA Privacy Rule is required to agree to an individual's requested restriction on use or disclosure of PHI where 45 CFR 164.522(a)(1)(ii) and (vi) apply. (As noted earlier in this discussion, where that is the case and the PHI is also EHI, the actor's agreeing to and applying such restrictions we would consider to be ''required by law.'')

[32] *See also, e.g.,* IB.FAQ29.2.2024APR: ''If an actor does not fulfill a request for access, exchange, and use of EHI in ''any manner requested'' that they have the technical capability to support, is the actor automatically an information blocker unless they satisfy at least one of the information blocking exceptions?''

[33] IB.FAQ46.1.2022FEB, FAQ-specific URL: *https://www.healthit.gov/faq/how-would-any-claim-or-report-information-blocking-be-evaluated.*

references to relevant provisions within 45 CFR part 171.

In the HTI–2 Proposed Rule (89 FR 63623), we noted that the *segmentation* condition references EHI that cannot be made available due to an individual's preference or by law in § 171.204(a)(2)(i), and EHI that the actor may choose to withhold in accordance with the Preventing Harm Exception in § 171.204(a)(2)(ii). We proposed to revise the condition (§ 171.204(a)(2)) as follows: to focus subparagraph (i) on EHI that is not permitted by applicable law to be made available, and to explicitly cross-reference in subparagraph (ii) the proposed Protecting Care Access Exception (§ 171.206) and the existing Privacy Exception (§ 171.202) in addition to the existing Preventing Harm Exception (§ 171.201) (which currently has an explicit cross-reference).

We stated that focusing § 171.204(a)(2)(i) solely on EHI that an actor is not permitted by applicable law to make available for a requested access, exchange, or use will reinforce for actors and other interested persons that actors cannot make EHI available when applicable law, such as the HIPAA Privacy Rule or 42 CFR part 2, does not permit covered information to be made available (89 FR 63623). Under the revision we proposed of § 171.204(a)(2)(i), the *segmentation* condition would continue to apply as it does today when an actor cannot unambiguously segment EHI that, under applicable law, is permitted to be available to a particular person for a particular purpose from EHI that is not permitted to be available to that person for that purpose. We noted in the HTI–2 Proposed Rule that this would include situations where the actor cannot unambiguously segment EHI for which preconditions for permitting use or disclosure under the HIPAA Privacy Rule (or other applicable law) have not been met from EHI for which such preconditions have been met, as well as scenarios where use or disclosure of specific EHI for a particular purpose is prohibited by applicable law (89 FR 63623).

We explained that the proposed revision to § 171.204(a)(2) would retain in subparagraph (ii) the explicit reference to the Preventing Harm Exception (§ 171.201). Thus, we noted that the Infeasibility Exception's revised *segmentation* condition would continue to apply where the actor cannot unambiguously segment other EHI from EHI that the actor has chosen to withhold in accordance with the Preventing Harm Exception (§ 171.201) (89 FR 63623).

We proposed to explicitly add reference to § 171.202 in our revision to subparagraph (ii) of § 171.204(a)(2) in order to ensure that the *segmentation* condition would continue to apply in scenarios where the actor cannot unambiguously segment other EHI they could lawfully make available from the EHI that the actor has chosen to honor the individual's request not to share (consistent with § 171.202(e) sub-exception). In addition, we noted that citing § 171.202 in the proposed revision to subparagraph (ii) of § 171.204(a)(2) would expand explicit application of the § 171.204(a)(2) *segmentation* condition to certain situations where an actor subject to multiple laws with inconsistent preconditions adopts uniform privacy policies and procedures to adopt the more restrictive preconditions (as provided for under the Privacy sub-exception Precondition Not Satisfied, see § 171.202(b)(3) as currently codified). We explained that by referencing all of the Privacy Exception (§ 171.202), the proposed revision to § 171.204(a)(2)(ii) would allow the Infeasibility Exception's *segmentation* condition to apply in scenarios where an actor has adopted the more restrictive of multiple laws' preconditions for sharing of some information about an individual's health or care consistent with § 171.202(b). Specifically, the condition would apply when such an actor cannot unambiguously segment EHI for which a more restrictive precondition has not been met from other EHI that the actor could lawfully share in jurisdictions with less restrictive preconditions.

We also noted (89 FR 63623) that by referencing all of the Privacy Exception (§ 171.202), the proposed revision would extend the *segmentation* condition's coverage to situations where the actor is unable to unambiguously segment EHI that could be made available from specific EHI that the actor may choose to withhold from the individual or their (personal or legal) representative consistent with the § 171.202(d) Privacy sub-exception ''denial of individual access based on unreviewable grounds.''

In the HTI–2 Proposed Rule (89 FR 63623 and 63624), we identified a possibility that individuals and interested parties could be concerned that extending the *segmentation* condition's coverage could affect the speed with which actors move to adopt or improve segmentation capabilities. We noted that segmentation capabilities may need to be improved to sequester the EHI that may be withheld from an individual on certain unreviewable grounds from *other* EHI an actor may have for that individual. For instance, we explained that in comparison to health information that may need to be sequestered for other reasons, different or additional segmentation functionality may be needed to sequester from other EHI only that information created or obtained in the course of research that includes treatment and only for as long as the research is in progress (89 FR 63624).[34] We noted that while the actor that is a HIPAA covered entity would still need to satisfy the individual's right of access to other PHI to the extent possible (see 45 CFR 164.524(d)(1)), the form and format in which the PHI is readily producible (see 45 CFR 164.524(c)(2)) may not be supported by the same electronic manner of access, exchange, or use that the individual would prefer. Therefore, we invited commenters to share any concerns or other perspectives they may wish to share relevant to this issue. We also proposed in the alternative to reference only Privacy Exception sub-exceptions *other than* denial of access based on unreviewable grounds (§ 171.202(d)) in the revised § 171.204(a)(2) *segmentation* condition. We noted that including this alternative proposal in the HTI–2 Proposed Rule meant we could decide to finalize the revision to the § 171.204(a)(2) *segmentation* condition with or without cross-reference to (or that would include) ''denial of access based on unreviewable grounds'' (§ 171.202(d)).

We noted (89 FR 63624) that for an actor's practice to be consistent with the § 171.202 Privacy Exception, the practice must meet the requirements set forth in any one of the sub-exceptions enumerated in § 171.202(b) through (e). We explained that referencing the entirety of § 171.202 in § 171.204(a)(2)(ii) would, therefore, also extend application of the Infeasibility Exception's *segmentation* condition to situations where a health IT developer of certified health IT that is not required to comply with the HIPAA Privacy Rule may withhold EHI they could otherwise lawfully make available based on an organizational privacy policy consistent with the § 171.202(c) sub-exception. (As used in § 171.202, ''HIPAA Privacy Rule'' means 45 CFR parts 160 and 164 (§ 171.202(a)(1).)

We noted that because the § 171.202(c) sub-exception is applicable only where a health IT developer of certified health IT is not required to

[34] Please *see* 45 CFR 164.524(a)(2)(iii) for the HIPAA Privacy Rule's full ''unreviewable grounds for denial'' circumstances to which this example alludes.

comply with the HIPAA Privacy Rule, it would apply in situations where the health IT developer of certified health IT is not required to comply with the individual right of access in 45 CFR 164.524. We stated that we believe it is possible that some individuals might seek health care or other services from such developers' customers (including health care providers) who are not HIPAA covered entities. We noted that in such situations, a State or Tribal law may operate to provide the individual a right to access their health information that the actor has.[35] We explained that although the number of such situations may be relatively small, we do recognize it is possible for some individuals to find themselves in situations where no other law explicitly guarantees them a right to access EHI of which the individual is the subject (or the legal representative of the subject). We noted that in such situations, the individual may rely solely on the information blocking statute to ensure actors will not unreasonably and unnecessarily interfere with the individual's EHI access, exchange, or use. We requested comments about potential unintended consequences of extending the (§ 171.204(a)(2)) *segmentation* condition to situations where a health IT developer is not required to comply with HIPAA and cannot segment EHI they have *chosen* to withhold consistent with the actor's own organizational privacy policies from other EHI. We also asked if extending the *segmentation* condition to situations where a health IT developer has chosen to withhold EHI consistent with the Privacy sub-exception ''health IT developer of certified health IT not covered by HIPAA'' (§ 171.202(c)) pose too much risk of such developers avoiding individuals' EHI requests by choosing not to develop segmentation capabilities in the health IT they provide their customers who are not HIPAA covered entities. We also included an alternative proposal to reference in the revised § 171.204(a)(2)(ii) *segmentation* condition only the Privacy Exception sub-exceptions *other than* § 171.202(c) ''health IT developer of certified health IT not covered by HIPAA'' sub-exception (89 FR 63624).

We noted that as discussed in the HTI–2 Proposed Rule (89 FR 63624), the § 171.206 Protecting Care Access Exception would apply to practices that an actor chooses to implement that are likely to interfere with access, exchange, or use of specific EHI (including, but not limited to, withholding such EHI) when relevant conditions are met. We proposed to reference § 171.206 in the revised § 171.204(a)(2)(ii) because the proposed § 171.206(a) *threshold* condition's requirements include (among others) a requirement that the actor's practice be no broader than necessary to reduce the risk of potential exposure of any person(s) to legal action that the actor believes could arise from the particular access, exchange, or use of the specific EHI. We noted that the actor's lack of technical capability to sequester only the EHI for which relevant conditions of § 171.206 have been satisfied would not render § 171.206 applicable to interference with the lawful access, exchange, or use of other EHI pertaining to the same individual(s). We explained that, therefore, proposed reference to § 171.206 in the proposed revised § 171.204(a)(2)(ii) would accommodate circumstances where an actor lacks the technical capability to unambiguously segment the EHI the actor has chosen to withhold consistent with the Protecting Care Access Exception (§ 171.206) from other EHI that they could lawfully make available.

In the HTI–2 Proposed Rule (89 FR 63624), we noted that the requirements for an actor's practice to satisfy the proposed new § 171.206 exception, including the § 171.206(a) *threshold* condition that would be relevant to any practice to which § 171.206 could apply as well as when the § 171.206(b) *patient protection* or § 171.206(c) *care access* conditions are relevant, were discussed in detail in the HTI–2 Proposed Rule preamble (89 FR 63627 through 63639). Similarly, we discuss comments received and the finalized requirements for the new § 171.206 exception in this final rule's preamble.

Comments. The majority of commenters supported our proposal to focus subparagraph (i) of § 171.204(a)(2)(i) *segmentation* condition to continue to apply to EHI that is not permitted by applicable law to be made available, stating that the proposed revision provides clarity and certainty for actors who choose to withhold certain patient EHI. Commenters also stated that the proposed revision reduces burden on actors when determining whether and which EHI may meet the Infeasibility Exception and mentioned that providers currently must use extensive time and resources to redact sensitive information before disclosure. Commenters expressed support for the proposal, asserting that the revision addresses technical health IT systems issues (*i.e.,* where systems do not have the capabilities to unambiguously segment EHI). Commenters further noted that our proposal would result in improved patient experience, engagement, and safety. Several commenters applauded ASTP/ONC for our proposal noting that it allows individuals more control over their health data.

Response. We thank commenters for their support and have finalized § 171.204(a)(2)(i) as proposed. Sub-paragraph (i) of the *segmentation* condition (§ 171.204(a)(2)) of the Infeasibility Exception (§ 171.204), as revised, focuses solely on EHI that is not permitted by applicable law to be made available for a requested access, exchange, or use.

Comment. We did not receive substantive feedback regarding our proposal to retain explicit cross-reference § 171.201 Preventing Harm Exception, now shown in subparagraph (ii) of § 171.204(a)(2).

Response. Therefore, we have finalized, as proposed, retention of the explicit cross-reference to § 171.201 Preventing Harm Exception in sub-paragraph (ii) of § 171.204. The § 171.204(a)(2) *segmentation* condition continues to apply where an actor cannot unambiguously segment other EHI from EHI that the actor has chosen to withhold in accordance with the Preventing Harm Exception (§ 171.201).

Comments. The majority of commenters strongly supported our proposal to explicitly add a cross-reference in § 171.204(a)(2)(ii) to the entirety of § 171.202 Privacy Exception, noting that it safeguards patient privacy and sensitive health information, enhances clarity and certainty, provides flexibility, reduces compliance burden on actors, and accounts for health IT system limitations until segmentation capabilities are more mature. Commenters commended ASTP/ONC for the proposal, noting that the provisions are a positive step that allow providers to prioritize caring for patients and will significantly improve patient and family experience, engagement, and safety.

Many commenters endorsed the proposal to expand the *segmentation* condition's coverage stating that it would lead to improved patient privacy and provided several examples of situations where health care providers are unable to segment granular health data. Some commenters specifically referenced the benefits of the proposal for health care providers who treat patients exposed to violence and who request to keep their sensitive information private. Commenters also noted that it would help patients with stigmatizing diagnoses keep their

[35] Determining what other laws may operate, or how, in specific circumstances is beyond the scope of this final rule.

information private. Another commenter pointed to their support for the proposed revised *segmentation* condition as it relates to the continued expansion of USCDI data elements and the implications on patient privacy and the potential harm of releasing sensitive information.

Commenters commended ASTP/ONC for the clarity and certainty that our proposal provides for actors to confidently withhold EHI without fear of an information blocking claim or risks of an information blocking determination. For example, one commenter noted that many laboratories do not have the technology to keep certain sensitive results separate, and this proposal would allow laboratories to confidently not share this data without fear of violating information blocking regulations. Commenters also stated that the proposal would have the benefit of providing additional necessary protections and assurances for health care providers who seek to not share a patient's EHI due to risks of an information blocking claim or determination. Commenters asserted that the proposal ensures that actors have clarity that use of exceptions to prevent the disclosure of specific EHI is not considered information blocking. One commenter noted that the proposal is especially helpful for health care providers who lack resources and access to more sophisticated health IT systems.

Many commenters stressed that current health IT systems cannot provide the level of segmentation that is required to safeguard patient data. Commenters specifically noted that health IT systems lack the necessary data segmentation capabilities to map to how Local, State, Federal, and Tribal health data privacy laws are written and cannot apply the variation on disclosure requirements. Commenters stressed that it is technically impossible for EHRs to segment EHI that is protected and treated differently by various privacy laws depending on the jurisdiction and circumstances. Many commenters who endorsed the proposal stated that the *segmentation* condition is necessary in the interim until technology that can separate and sequester sensitive data is available. Commenters stressed that the proposal ultimately eases the burden on actors, especially health care providers, associated with compliance with the information blocking regulations given there are factors outside of their control, like the limited segmentation capabilities in EHRs.

Some commenters specifically supported the proposal to reference the entirety of the Privacy Exception in the Infeasibility Exception's *segmentation* condition because it would expand the applicability of the *segmentation* condition to health IT developers of certified health IT that are not required to comply with the HIPAA Privacy Rule.

The majority of commenters recommended that we finalize subparagraph (ii) of the *segmentation* condition (§ 171.204(a)(2)) to cross-reference the entirety of the Privacy Exception as proposed.

Response. We thank commenters for their support to expand subparagraph (ii) of the *segmentation* condition (§ 171.204(a)(2)) to cross-reference the entirety of the Privacy Exception (§ 171.202). We also appreciate commenters concerns that technology does not currently have the capability to sequester EHI that is protected and treated differently by laws in various jurisdictions. In the HTI–2 Proposed Rule we noted the importance of data segmentation, our awareness of the limitations of current health IT capabilities for data segmentation and of external efforts to develop technical standards that over time may result in increasingly advanced data segmentation capabilities in EHR systems and other health IT, and the variability in heath IT products capabilities to segment data (89 FR 63634). We agree with commenters that revisions to the *segmentation* condition are necessary to provide for circumstances where an actor cannot sequester EHI from other EHI that is treated differently depending on the jurisdiction and circumstances. Therefore, after consideration of the comments and the strong support for the *segmentation* condition proposal to include the entirety of the § 171.202 Privacy Exception, we have finalized, as proposed, subparagraph (ii) of the *segmentation* condition (§ 171.204(a)) of the Infeasibility Exception to cross-reference the entirety of the Privacy Exception (§ 171.202)).

We discuss comments specific to cross-referencing § 171.202 Privacy Exception in the *segmentation* condition (§ 171.204(a)(2)(ii)) in more detail below.

Comments. No commenters supported our alternative proposal to reference the Privacy Exception sub-exceptions *other* than denial of access based on unreviewable grounds (§ 171.202(d)) in the revised § 171.204(a)(2) *segmentation* condition in response to our alternative proposal request for comment.

Response. We have not finalized the alternative proposal. We have finalized § 171.202(a)(2)(ii) to include a cross-reference to the entirety of § 171.202. By referencing all of the Privacy Exception (§ 171.202), the *segmentation* condition's coverage includes situations where the actor is unable to unambiguously segment EHI that could be made available from specific EHI that the actor may choose to withhold from the individual or their (personal or legal) representative consistent with the § 171.202(d) Privacy sub-exception ''denial of individual access based on unreviewable grounds.''

Comments. Some commenters supported our alternative proposal to reference in subparagraph (ii) of the revised *segmentation* condition (§ 171.204(a)(2)) the Privacy Exception sub-exceptions other than § 171.202(c) ''health IT developer of certified health IT not covered by HIPAA'' sub-exception instead of the entirety of § 171.202. Commenters expressed concern that expanding the application of the Infeasibility Exception's *segmentation* condition to situations where a health IT developer of certified health IT that is not required to comply with the HIPAA Privacy Rule could lead health IT vendors to abuse the Infeasibility Exception by inappropriately limiting the format, volume, and categories of health care data because they have deliberately designed their health IT system to limit shared data. Some commenters referred to the practice as ''infeasibility by design'' and urged ASTP/ONC to clarify that actors may not use the Infeasibility Exception's *segmentation* condition in this manner.

Some commenters expressed their concern that some organizations rely on the *segmentation* condition as a shield to not share EHI for purposes of business expediency instead of separating discrete data that an entity has requested for a legitimate business purpose. The commenters asserted that actors understand that segmentation capabilities are not available in most EHRs, and the *segmentation* condition provides a justification for not sharing EHI when sharing is legally permissible. One commenter expressed concerns with including the Privacy Exception sub-exceptions other than § 171.202(c) ''health IT developer of certified health IT not covered by HIPAA,'' yet acknowledged that the *segmentation* condition is necessary until more robust segmentation capabilities are available. The commenter stated that it was ''not clear how to provide the environment, incentives, and potential penalties'' to ameliorate the behavior of actors that abuse the *segmentation* condition.

Another commenter expressed concerns that including the § 171.202 Privacy Exception cross-reference in its entirety could inadvertently create challenges for third-party companies to

access and utilize patient data, and result in incentives to limit the development of health care solutions that could improve experiences for providers, patients, and payers.

Response. We thank commenters for their input addressing the alternative proposal. After consideration of the comments received, we have not adopted the alternative proposal. We have finalized the *segmentation* condition (§ 171.204(a)(2)) revision as proposed at 89 FR 63803.

We understand and appreciate commenters' concerns about expanding the *segmentation* condition to include an explicit cross-reference to the entirety of § 171.202 in § 171.204(a)(2), however we are not convinced that these concerns outweigh, at this point in time, the need for including a cross-reference to the entirety of Privacy Exception (§ 171.202) in the *segmentation* condition (§ 171.204(a)(2)(ii)). A large number of comments received in response to the proposals addressed in this final rule expressed concerns and stated it is a reality that many actors use health IT that cannot currently, due to technology limitations, unambiguously segment from other EHI the EHI that they must withhold under laws that apply to them or that they may choose to withhold in accordance with another information blocking exception (such as § 171.202(e), which is available to all actors). Adopting the cross-reference to the entirety of the Privacy Exception (§ 171.202) in the *segmentation* condition in § 171.204(a)(2), provides certainty and clarity for all actors that they can both avoid committing information blocking and protect individuals' privacy interests in accordance with the laws that apply to them—be those laws Federal, State, or Tribal—even if the actor that is unable to unambiguously segment their EHI is a health IT developer of certified health IT not covered by HIPAA. Finalizing the revisions to § 171.204(a)(2) as proposed (89 FR 63803) also avoids adding further complexity because it more precisely identifies for actors the practices that would not be considered information blocking without treating certain actors differently, thus the revisions do not create additional burden for health IT developers not covered by HIPAA that would not likewise apply to actors covered by HIPAA. Additionally, we are not persuaded that it is necessary to exclude non-covered actors in finalized § 171.204(a)(2)(ii), given the relatively small subset of actors and circumstances where the distinction between including or excluding § 171.202(c) from the cross-reference in § 171.204(a)(2)(ii) is likely relevant because the vast majority of health IT developers of certified health IT operate as business associates or covered entities under HIPAA. We agree with commenters that it is important to ensure that non-covered actors that offer products or services not regulated by the HIPAA Privacy Rule, and are still subject to the information blocking provisions, should have the ability to seek coverage under the provisions finalized in § 171.204(a)(2)(ii) due to the limitations of current segmentation capabilities in health IT.

We note, however, that any abuse of the *segmentation* condition of the Infeasibility Exception (or any component of any information blocking exception) would be of concern to ASTP/ONC, and we plan to continue monitoring for any signals that this may be occurring. We would anticipate taking appropriate educational, outreach, and (where applicable) enforcement steps in response to such signals and may consider future rulemaking, as necessary, to amend any provision in 45 CFR part 171 in response to changing market conditions.

We also plan to continue to engage with the health IT, standards, health care provider, and patient advocacy communities to encourage innovative approaches to development and implementation of more granular and interoperable segmentation capabilities. We encourage anyone who believes they may have experienced or observed information blocking by any health care provider, health IT developer of certified health IT, or HIN or HIE to share their concerns with us through the Information Blocking Portal on ASTP/ONC's website, *HealthIT.gov*. Information received by ASTP/ONC through the Information Blocking Portal as well as the Health IT Feedback and Inquiry Portal helps inform the development of resources we make publicly available on ASTP/ONC's website, *HealthIT.gov*.

Comments. A small number of commenters opposed our proposal to include the cross-reference in the *segmentation* condition (§ 171.204(a)(2)(ii)) to any sub-exception within the Privacy Exception (§ 171.202) because they believed ASTP/ONC could accomplish the same objectives by adding functionality or requirements similar to our proposed ''patient right to request a restriction on use or disclosure'' certification criterion requirement in the ONC Health IT Certification Program (Program). These commenters opposed any revisions to the Infeasibility Exception's *segmentation* condition in § 171.204(a)(2).

Response. We thank the commenters for their concerns and recommendation, but we did not propose changes to the ONC Health IT Certification Program related to segmentation capabilities in the HTI–2 Proposed Rule. The proposals related to actors lacking segmentation capabilities in the HTI–2 Proposed Rule are related to information blocking. These comments are out of scope of this final rule. In addition, we note that information blocking provisions are relevant where actors deploy a wide range of health IT beyond what is currently certified under the ONC Health IT Certification Program. We refer readers to the HTI–1 Final Rule (89 FR 1298 through 1305) for an explanation on our decision to decline adopting our proposal for a ''patient right to request a restriction on use or disclosure'' certification criterion in the Program, most notably because of limited developer capabilities to manage the complexities of every patient request and a lack of configured privacy and security systems for this data, which can lead to unintended consequences on patient data.

As mentioned above, we plan to continue to engage with the health IT, health care provider, and patient advocacy communities to encourage innovative approaches to development and implementation of more granular and interoperable segmentation capabilities.

Comments. Some commenters expressed support for expanding the *segmentation* condition to include the entirety of the Privacy Exception because it would protect the EHI of survivors of violence. Some commenters endorsed modifying the Infeasibility Exception's *segmentation* condition to explicitly account for circumstances where the provider cannot comply with a request without disclosing exposure to violence. One commenter expressed concern that clarifying the *segmentation* condition by adding a cross-reference to the Privacy Exception may not be adequate to address a patient's privacy concerns with respect to exposure to violence. The commenter claimed that due to the complexity of information blocking rules, health care providers do not understand or employ the existing *segmentation* condition or the currently codified Privacy Exception adequately, risking harm to the patient. The same commenter stated that our proposal is a step in the right direction regarding protecting sensitive medical information, but the commenter expressed concern that in practice, providers are not aware of how to apply the Privacy Exception and instead share private patient information in fear of

information blocking accusations. Commenters urged ASTP/ONC to clarify the information blocking requirements regarding releasing sensitive patient data in online portals as it relates to the Privacy Exception and the Infeasibility Exception's *segmentation* condition.

Response. We thank the commenters for their support and for bringing to our attention their concerns about health care providers not withholding EHI due to fear of information blocking accusations even when the Privacy Exception would apply if the actor chose to withhold some or all of the patient's EHI. In the HTI–2 Proposed Rule, we proposed to revise the § 171.202(e) Privacy sub-exception (89 FR 63622). We have finalized the § 171.202(e) revision in this rule. We believe the revision will make it easier for actors to feel confident in their ability to satisfy the § 171.202(e) Privacy sub-exception if the actor chooses to honor an individual's request not to share EHI. The Privacy sub-exception ''individual's request not to share EHI'' (§ 171.202(e)) is agnostic as to why the individual wants to restrict sharing of their EHI, and as to what topics or other subset of their EHI the individual might ask an actor not to share. Thus, § 171.202(e) is not limited to situations where an individual asks an actor not to share information about the individual's exposure to violence, but it would apply where the individual requests that the actor not share that information.

We are aware that adding a cross-reference in § 171.204(a)(2)(ii) to the entirety of § 171.202 does not expand the Privacy Exception's coverage for an actor's electing to withhold exposure to violence or other information that an actor may consider sensitive where none of the sub-exceptions in § 171.202(b), (c), (d), or (e) is applicable. We did not propose in the HTI–2 Proposed Rule such an expansion of the Privacy Exception, nor of any other exception. Where no applicable law requires, and no other exception applies to an actor's choosing to, withhold EHI indicating exposure to violence from access, exchange, or use permitted by applicable law, the Infeasibility Exception's *segmentation* condition will not operate to cover the actor's withholding of such EHI or of other EHI that the actor may be unable to unambiguously segment from it. We did not propose in the HTI–2 Proposed Rule to modify § 171.204(a)(2) so that it could operate in such a manner. Therefore, any expansion of the Infeasibility Exception or another exception to cover actors' electing to withhold EHI indicating exposure to violence or other EHI on the basis that the actor finds it to be sensitive would be beyond the scope of this rule (or another final rule addressing any other proposals made in the HTI–2 Proposed Rule). We refer commenters and other interested parties to 45 CFR part 171 for the full conditions of all information blocking exceptions, and to ASTP/ONC's official website, *HealthIT.gov*, for the array of resources (such as FAQs, fact sheets, and webinars) we have published about information blocking exceptions. As additional resources become available, including for the newly finalized Protecting Care Access Exception, we anticipate making them available at *HealthIT.gov*.

We note that some actors may operate under one or more laws that restrict information about individuals' exposure to violence in ways that the HIPAA Privacy Rule does not. We also appreciate the opportunity these commenters have provided us to remind all actors that where applicable law prohibits a specific access, exchange, or use of information, complying with such laws is ''required by law'' for purposes of the information blocking regulations. Practices that are ''required by law'' are not considered ''information blocking'' (see, for example, 89 FR 1351 and 85 FR 25794). As we noted in the HTI–2 Proposed Rule (89 FR 63623 through 63624), focusing subparagraph (i) of § 171.204(a)(2) solely on EHI that applicable law prohibits an actor from making available for a requested access, exchange, or use will reinforce for actors and other interested persons that actors cannot make EHI available when applicable law prohibits the actor from making covered information available.

We also appreciate the opportunity to remind readers of our continued commitment to support EHI sharing consistent with patient preferences and applicable law. Whether received through the public comments process for a proposed rule or through informal channels, the feedback, and questions we receive are appreciated and help to inform our development of information resources that we make publicly available on *HealthIT.gov*. Informal channels include, for example, the Health IT Feedback and Inquiry Portal that is available year-round and not tied to the comment period for a proposed rule. To find the portal, please click, paste, or search *https://www.healthit.gov/feedback.*

Comment. One commenter urged ASTP/ONC to exercise caution as it considers policies about segmenting patient data that could be necessary to provide patient care. The commenter expressed concerns over the potential for patient harm with competing State and Federal laws and regulations and noted that segmentation could lead to incomplete clinical information.

Response. We thank the commenter for their perspective. As we have stated, all information blocking exceptions are voluntary; the existence of an exception that could apply to an actor's choice to withhold EHI from access, exchange, or use under the exception's conditions is not intended to create an affirmative obligation that any actor do so. For example, if an actor believes that withholding EHI in accordance with the Preventing Harm Exception (§ 171.201) would in fact create more risk to the patient than would be prevented—either by application of § 171.201 alone or in combination with the Infeasibility Exception due to the actor's lack of segmentation capabilities—then we presume the actor would not choose to withhold the EHI just because an exception (or combination of exceptions) exists that could apply if the actor did choose to withhold the EHI.

We recognize that the landscape of Federal, State, and (where applicable) Tribal laws that affect when sharing patient health information is not permitted, conditionally permissible, permitted, or required is complex. Resolving that complexity would be beyond the scope of this final rule. We plan to continue working with the health care, health IT, patients, and privacy advocate communities in the hopes of encouraging innovation that will advance availability and use of increasingly granular, interoperable, and flexible data segmentation capabilities to help actors safeguard patients' privacy interests and comply with various applicable laws while optimizing data sharing to promote care coordination, safety, and quality.

Comment. One commenter acknowledged their support for the overall intent of the proposal but stated that ASTP/ONC should leave the definition as described in the HIPAA policy. The commenter recommended that ASTP/ONC clarify this definition to fit ''the TEFCA rule.''

Response. It is unclear to us which specific HIPAA definition the commenter is referring to and therefore it is not clear how they may have envisioned us incorporating such a description into the *segmentation* condition (§ 171.204(a)(2)). It is also not clear from the comment what the commenter was referring to as ''the TEFCA rule'' or how they intended to suggest the infeasibility exception might, in the commenter's view, better align with whatever aspect of TEFCA the commenter may have intended to reference. We could interpret the

comment as suggesting that ASTP/ONC should finalize our proposed revisions to the *segmentation* condition of the Infeasibility Exception because the prior references in § 171.204(a)(2)(i) and (ii) (before this final rule) may have, in the commenter's assessment, not made it as easy for an actor to know when the *segmentation* condition would apply to a specific situation. We would agree that the original scope of § 171.204(a)(2)(i) and (ii) can be presented in a way that is easier to read, and to that end we proposed the improved wording and structure of § 171.204 in the HTI–2 Proposed Rule alongside the proposal to reference all of the Privacy Exception and the new Protecting Care Access Exception.

In light of the ambiguity of the comment, we note that information blocking regulations are issued under separate statutory authority from HIPAA regulations and TEFCA. We work to ensure the regulations do not conflict with one another and align requirements where practical given the different purpose and function of the information blocking regulations in comparison to the HIPAA Privacy Rule or TEFCA.

Additionally, we do not define terms, nor did we propose to define terms in the *segmentation* condition (§ 171.204(a)). The proposed (and finalized) subparagraph (ii) of the *segmentation* condition (§ 171.204(a)(2)(ii) adds the cross-reference to § 171.202 where we define the term ''HIPAA Privacy Rule.'' As noted in the HTI–2 Proposed Rule (89 FR 63624), the HIPAA Privacy Rule definition in § 171.202(a)(1), as used in § 171.202, ''HIPAA Privacy Rule'' means 45 CFR parts 160 and 164 (§ 171.202(a)(1)). Given the ambiguity of the comment and our interpretation, we decline to consider aligning the definition in § 171.202(a)(1) to other definitions discussed in the HTI–2 Proposed Rule.

Comments. In general, commenters expressed strong support to expand explicit application of the *segmentation* condition to the Privacy Exception to account for certain situations where an actor is subject to multiple laws with conflicting or inconsistent pre-conditions, noting that it provides clarity and is helpful. Commenters expressed appreciation for the expansion because it allows providers to enact uniform policies that outline their inability to segment data, and justify their nondisclosure, allowing providers to prioritize the important work of caring for patients.

Response. We thank commenters for their support and have finalized, as proposed, § 171.204(a)(2)(ii).

Comments. A few commenters seemed to misinterpret our proposal to expand the *segmentation* condition, as well as the existing codified requirements of the *segmentation* condition in § 171.204(a)(2) that we did not propose to revise in the HTI–2 Proposed Rule. Commenters cited the OCR ''Privacy Rule to Support Reproductive Health Care Privacy'' Final Rule's valid attestation requirements as a pre-condition that must be satisfied by the health care provider before disclosing specific EHI. The commenters suggested that the proposed revised *segmentation* condition would now apply if a physician does not receive a valid attestation, and it would allow the physician or their EHR developer to withhold most of the medical record if prohibited from sharing specific EHI based on OCR, State, or other privacy regulations.

Response. As discussed above, the expanded *segmentation* condition applies where an actor has adopted the more restrictive of multiple laws' preconditions for sharing of some information about an individual's health or care consistent with § 171.202(b) but cannot unambiguously segment EHI for which a more restrictive precondition has not been met from other EHI that the actor could lawfully share in the jurisdictions with less restrictive preconditions. We refer readers to the HTI–2 Proposed Rule (89 FR 63627 through 63642) for a discussion of the new Protecting Care Access Exception (§ 171.206) and alignment with the 2024 HIPAA Privacy Rule.

Comments. Commenters had differing views on whether expanding the *segmentation* condition's coverage could affect the speed with which actors move to adopt or improve segmentation capabilities. Most commenters stated that expanding the *segmentation* condition's coverage would not discourage health IT developers from developing segmentation capabilities or health care providers from adopting the technology. Several commenters stated that including the entirety of § 171.202 would not cause a delay in development or adoption of segmentation capabilities. Commenters noted that health care providers would welcome the technology and acknowledged that some heath IT developers are working to improve segmentation capabilities, but that the availability of the *segmentation* condition is necessary in the interim until health IT capabilities mature. Commenters stated that the § 171.204(a)(2)(ii) *segmentation* condition would improve interoperability, and in turn patient safety and privacy, until health IT capabilities fully support more granular segmentation.

One commenter suggested that ASTP/ONC should not be concerned if the expanded *segmentation* condition disincentivizes the development of data segmentation capabilities because there are other policy avenues to address these concerns, notably through certification criteria requirements and Centers for Medicare & Medicaid Services (CMS) regulations that incorporate by reference the technical standards needed for segmentation. The commenter believed that addressing these concerns through other federal regulations would lead to speedier adoption of segmentation capabilities. The commenter further stated that the interests of interoperability are not advanced by denying actors—particularly those that do not develop or control the health technologies—the protection of the *segmentation* condition given the realities of current health IT capabilities and third-party payer systems.

However, some commenters expressed concerns that expanding the *segmentation* condition's coverage would encourage the health IT industry to delay development and adoption of robust segmentation capabilities at the peril of promoting interoperability and possibly patient safety. One commenter stated that the expansion would result in incentives to limit the development of health care solutions that could improve experiences for providers, patients, and payers. Another commenter stated that the entire health IT industry is delaying the development of segmentation capabilities, regardless of whether a health IT developer is required to comply with the HIPAA Privacy Rule.

Response. We thank commenters for their suggestions and insights in responding to our question on the expansion of the Infeasibility Exception's *segmentation* condition in § 171.204(a)(2)(ii) and whether there are potential effects on the speed with which actors move to adopt or improve segmentation capabilities. As commenters noted, the health IT that is currently available cannot easily sequester granular data. To the extent that adopting the expanded *segmentation* condition's coverage does or does not affect the speed with which actors move to adopt or improve segmentation capabilities, we agree that the availability of the *segmentation* condition is necessary, at this time,

until health IT capabilities mature, and more interoperable and granular segmentation capabilities improve. We recognize the need to promote interoperability, but we also consider patient privacy and safety when promoting interoperability. We thank commenters for sharing their thoughts on how the Infeasibility Exception's *segmentation* condition provides an interim solution for actors to limit sharing sensitive EHI without violating the information blocking regulations.

We appreciate the commenter's observations that policy development and requirements in other Federal programs could encourage the development of data segmentation capabilities and that our proposal would not disincentivize these developments. As stated, we plan to continue to engage with the health IT, standards, health care provider, and patient advocacy communities, as well as our Federal partners, to encourage innovative approaches to development and implementation of more granular and interoperable segmentation capabilities. We will continue to monitor and analyze approaches by health IT developers for real world implementation of segmentation capabilities and the adoption of the technology by health care providers.

Comment. One commenter urged ASTP/ONC to examine how it can spur action to respond to growing threats to patient privacy, the patient-physician relationship, and patient and clinician safety.

Response. Although the comment is beyond the scope of this final rule, we thank the commenter for sharing their thoughts. We recognize these topics are important to patients, physicians, other clinicians, and the health care system as a whole. ASTP/ONC plans to continue our efforts to foster development of a nationwide health IT infrastructure in a manner consistent with, among other important goals, improving health care quality, reducing medical errors, reducing health disparities, and advancing the delivery of patient-centered medical care while ensuring that each patient's health information is secure and protected in accordance with applicable law. As we mention above, whether received through the public comments process for a proposed rule or through informal channels, the feedback, and questions we receive are appreciated and help to inform our development of information resources that we make publicly available on *HealthIT.gov.* Informal channels include, for example, the Health IT Feedback and Inquiry Portal that is available year-round and not tied to the comment period for a proposed rule. To find the portal, please click, paste, or search *https://www.healthit.gov/feedback.*

Comments. We received several comments requesting that we clarify how or where the HTI–2 Proposed Rule treats an actor that is a covered entity differently than an actor that is not a covered entity.

Response. As we previously noted in our discussion of the Privacy Exception in this final rule, it is not clear whether these comments refer to all or only some of the information blocking enhancement proposals in the HTI–2 Proposed Rule (89 FR 63498). With respect to our proposals regarding the Infeasibility Exception, the proposal in § 171.204(a)(2)(ii) expands the application of the Infeasibility Exception's *segmentation* condition to all situations where an actor is unable to segment EHI from other requested EHI that the actor has chosen to withhold consistent with the Privacy Exception (§ 171.202) or Protecting Care Access Exception (§ 171.206). The information an actor is prohibited by applicable law from making available may vary based on what laws, including the HIPAA Privacy Rule, do or do not apply to the actor. However, the Infeasibility Exception's *segmentation* condition does not have different requirements based on whether an actor must also comply with the HIPAA Privacy Rule.

Because the finalized *segmentation* condition (§ 171.204(a)(2)) adds a cross-reference to the entirety of the Privacy Exception, we remind readers that the § 171.202(e) sub-exception's alignment with the individual's right under the HIPAA Privacy Rule to request restrictions does not limit the sub-exception's availability to actors who are also subject to the HIPAA Privacy Rule's requirements (89 FR 1353). We refer readers to the HTI–2 Proposed Rule (89 FR 63620 through 63622) for further discussion of the Privacy sub-exception ''individual's request not to share EHI'' (§ 171.202(e)).

Comments. Commenters commended ASTP/ONC for expanding the *segmentation* condition to specifically cross-reference the proposed Protecting Care Access Exception in § 171.206 noting that it logically aligns with the cross-reference in § 171.204(a)(ii) to § 171.201 and the proposed cross-reference to § 171.202. Commenters noted that the reference to the Protecting Care Access Exception in the *segmentation* condition of § 171.204(a)(2)(ii) is a positive revision because it allows actors to consider segmentation limitations when evaluating whether the withholding of reproductive health information was properly tailored. Commenters stated that it is technically difficult for health care providers to fulfill requests without sharing protected reproductive health information, making it necessary for the new Protecting Care Access Exception cross-reference in the Infeasibility Exception's *segmentation* condition. Commenters appreciated the flexibility the proposal provides for health care providers declining to share reproductive health information without facing information blocking consequences. Commenters stated that ASTP/ONC should not penalize health care providers for honoring patients' preferences to refrain from sharing EHI or to withhold EHI that could expose patients to legal consequences for receiving lawful reproductive care when segmentation of that data is not feasible.

Response. We thank commenters for their support and have finalized, as proposed, the cross-reference to the Protecting Care Access Exception (§ 171.206) in the subparagraph (ii) of the *segmentation* condition of the Infeasibility Exception (§ 171.204(a)(2)(ii)).

We explained in the HTI–2 Proposed Rule (89 FR 63624) that the § 171.206 Protecting Care Access Exception applies to practices that an actor chooses to implement that are likely to interfere with access, exchange, or use of specific EHI (including, but not limited to, withholding such EHI) when relevant conditions are met. We have finalized the cross-reference to the Protecting Care Access Exception (§ 171.206) in the *segmentation* condition (§ 171.204(a)(2)(ii)) because the finalized § 171.206(a) *threshold* condition's requirements include (among others) a requirement that the actor's practice be no broader than necessary to reduce the risk of potential exposure of any person(s) to legal action that the actor believes could arise from the particular access, exchange, or use of the specific EHI. The actor's lack of technical capability to sequester only the EHI for which relevant conditions of § 171.206 have been satisfied does not render § 171.206 applicable to interference with the lawful access, exchange, or use of other EHI pertaining to the same individual(s). Therefore, the reference to § 171.206 in the finalized § 171.204(a)(2)(ii) accommodates circumstances where an actor lacks the technical capability to unambiguously segment the EHI the actor has chosen to withhold consistent with the finalized Protecting Care Access Exception (§ 171.206) from other EHI that they could lawfully make available. The

requirements for an actor's practice to satisfy the new finalized Protecting Care Access Exception (§ 171.206), including the § 171.206(a) *threshold* condition that is relevant to any practice to which § 171.206 could apply as well as when the § 171.206(b) *patient protection* or § 171.206(c) *care access* conditions are relevant, are discussed in detail in the HTI–2 Proposed Rule (89 FR 63633 through 63638).

3. New Protecting Care Access Exception

a. Background and Purpose

As we explained in the ONC Cures Act Final Rule, the information blocking provision in PHSA section 3022 was enacted in response to concerns about practices that ''unreasonably limit the availability and use of electronic health information (EHI) for authorized and permitted purposes'' because such practices ''undermine public and private sector investments in the nation's health IT infrastructure, and frustrate efforts to use modern technologies to improve health care quality and efficiency, accelerate research and innovation, and provide greater value and choice to health care consumers'' (85 FR 25790). We also noted in the ONC Cures Act Final Rule that research suggests that information blocking practices ''weaken competition among health care providers by limiting patient mobility'' and that the information blocking provision of the 21st Century Cures Act works to deter practices that ''unnecessarily impede the flow of EHI or its use to improve health and the delivery of care'' (85 FR 25791). As required by section 3022(a)(3) of the PHSA, we recognized that certain reasonable and necessary activities that could otherwise meet the definition of information blocking should not be considered information blocking, and therefore, established the initial eight ''exceptions'' to the definition of information blocking (see 45 CFR 171 Subpart B and C; a ninth exception was established by the HTI–1 Final Rule in Subpart D (89 FR 1437)). Each reasonable and necessary activity identified as an exception to the information blocking definition does not constitute information blocking for purposes of section 3022(a)(1) of the PHSA if the conditions of the exception are met (85 FR 25649).

Between when the first eight regulatory exceptions to the information blocking definition were finalized in 2020 and the proposal of the Protecting Care Access Exception in the HTI–2 Proposed Rule (89 FR 63627 through 63639 and 63804), the legal landscape had changed significantly for many patients seeking, and for health care providers providing, reproductive health care. In the wake of the decision in *Dobbs* v. *Jackson Women's Health Organization,* 597 U.S. 215 (2022) decision, some states have newly enacted or are newly enforcing restrictions on access to reproductive health care. Uncertainties and other concerns that people who seek reproductive health care and people who provide or facilitate that care have about the legal landscape in the wake of the Supreme Court's ruling—and subsequent state restrictions on reproductive health care—have had far-reaching implications for health care beyond access to abortion. The changing legal landscape increases the likelihood that a patient's EHI may be disclosed in ways that erode trust in health care providers and the health care system, ultimately chilling an individual's willingness to seek, or other persons' willingness to provide or facilitate, lawful health care as well as individuals' willingness to provide full information to their health care providers.

As noted in the HTI–2 Proposed Rule (89 FR 63627), a person's ability to access care of any kind depends on a variety of factors including whether the care is available. For health care to be available, licensed health care professionals and health care facilities must be willing to provide it—and people other than the licensed health care professionals must be willing to take on various roles essential to delivering care in this modern, technology-enabled environment. Also, patients' access to care may rely in part on services or supports from other persons, such as a spouse, partner, or friend.

In the current legal environment, various jurisdictions are enforcing laws, or contemplating legislation, that purports to authorize administrative, civil, or criminal legal action against persons who engage in reproductive health care that is required or authorized by Federal law or that is permitted by the law of the jurisdiction where the care is provided. Fear of being investigated or of having to defend themselves against potential legal liability under such laws, even where the health care is lawful under the circumstances in which it was provided, may impact people's willingness to provide or assist in reproductive health care.

On April 26, 2024, OCR issued the 2024 HIPAA Privacy Rule to adopt a prohibition on the use or disclosure of PHI by an entity regulated under the HIPAA Privacy Rule, in certain circumstances, for the following purposes:

- To conduct a criminal, civil, or administrative investigation into any person for the mere act of seeking, obtaining, providing, or facilitating lawful reproductive health care.
- To impose criminal, civil, or administrative liability on any person for the mere act of seeking, obtaining, providing, or facilitating reproductive health care.
- To identify any person for any purpose described above.

As noted in the National Coordinator's May 13, 2024, blog post titled ''Supporting Information Privacy for Patients, Now and Always: Four Reminders of How HHS Information Blocking Regulations Recognize Privacy Rules,'' [36] on and after the 2024 HIPAA Privacy Rule's effective date, a HIPAA covered entity's or business associate's practice of denying a request for a use or disclosure of PHI where the use or disclosure is prohibited under that rule is excluded from the information blocking definition (45 CFR 171.103) because that denial is required by law. Therefore, the practice does not need to be covered by any information blocking exception because it is not considered information blocking.

As we noted in the HTI–2 Proposed Rule (89 FR 63628), the 2024 HIPAA Privacy Rule also established a requirement for HIPAA covered entities and business associates to obtain attestations prior to using or disclosing PHI potentially related to reproductive health care for certain purposes (see 45 CFR 164.509; 89 FR 33063). The Precondition Not Satisfied (45 CFR 171.202(b)) sub-exception of the information blocking Privacy Exception outlines a framework actors can follow so that the actors' practices of not fulfilling requests to access, exchange, or use EHI would not be considered information blocking when a precondition of applicable law has not been satisfied. By meeting the Precondition Not Satisfied sub-exception's requirements, the actor can have confidence that their practices of not sharing EHI because they have not obtained the required attestation will not be considered information blocking.[37]

[36] This HealthITbuzz blog post is available at *https://www.healthit.gov/buzz-blog/information-blocking/supporting-information-privacy-for-patients-now-and-always-four-reminders-of-how-hhs-information-blocking-regulations-recognize-privacy-rules.*

[37] We did not propose in the HTI–2 Proposed Rule, nor have we finalized in this final rule, any changes to the Privacy Exception's Precondition Not Satisfied sub-exception (§ 171.202(b)). As the

In preamble discussion of the background and purpose of the proposed Protecting Care Access Exception (89 FR 63628), we observed that the 2024 HIPAA Privacy Rule's new protections do not prohibit use or disclosure of PHI for various purposes other than those specified in 45 CFR 164.502(a)(5)(iii), although the protections include additional preconditions or limitations on disclosures for certain purposes (for more information, please see the 2024 HIPAA Privacy Rule (89 FR 32976) and consider visiting the *HHS.gov* Health Information Privacy section's HIPAA and Reproductive Health page: *https://www.hhs.gov/hipaa/for-professionals/special-topics/reproductive-health/index.html*). The 2024 HIPAA Privacy Rule does not require a HIPAA covered entity or business associate to obtain the attestations specified in 45 CFR 164.509 before disclosing PHI (including PHI potentially related to reproductive health care) for permissible purposes other than those specified in 45 CFR 164.512(d), (e), (f), or (g)(1). For example, the HIPAA Privacy Rule continues to allow uses and disclosures of PHI for treatment, payment, or health care operations purposes (see 45 CFR 164.506) that do not meet any of the prohibitions set out in 45 CFR 164.524(a)(5)(iii). Thus, an actor choosing to deny requests for access, exchange, or use of EHI for a purpose permitted under HIPAA could be implicating the information blocking definition unless another applicable law requires the denial, or another regulatory exception applies. Similarly, an actor conditioning fulfilment of such requests on preconditions that an actor chooses to set (such as that the requestor provides an attestation that is not required by any privacy law that applies in the circumstances) could implicate the information blocking definition unless an exception applies to that practice.

In the HTI–2 Proposed Rule (89 FR 63628), we provided a brief review of how the information blocking regulations, which are based on statutory authority separate from HIPAA, operate (independently of regulations promulgated under HIPAA). This background information is repeated here because it may help readers understand how and why an actor may be concerned about potentially implicating the information blocking definition (and civil monetary penalties or appropriate disincentives for information blocking authorized by the information blocking statute) if the actor engages in practices that the HIPAA Privacy Rule would require of a HIPAA covered entity or business associate when the actor is not required to comply with the HIPAA Privacy Rule.

First, information blocking regulations apply to health care providers, health IT developers of certified health IT, and health information networks (HIN) and health information exchanges (HIE), as each is defined in 45 CFR 171.102. Any individual or entity that meets one of these definitions is an ''actor'' and subject to the information blocking regulations in 45 CFR part 171, regardless of whether they are also a HIPAA covered entity or business associate as those terms are defined in 45 CFR 160.103. Second, for purposes of the information blocking regulations, the definition of ''EHI'' applies to information ''*regardless* of whether the group of records are used or maintained by or for a covered entity as defined in 45 CFR 160.103'' (§ 171.102, emphasis added). Therefore, it is possible for an information blocking actor that is not required to comply with the HIPAA Privacy Rule to have EHI that is not also PHI. It is also possible for an actor (such as a HIN/HIE) to not be a HIPAA covered entity itself and to exchange, maintain, or otherwise handle EHI on behalf of network participants that are not required to comply with the HIPAA Privacy Rule.

Where an actor that is not a HIPAA covered entity has EHI that is not maintained on behalf of a HIPAA covered entity, the actor may be concerned about potential information blocking consequences if the actor were to engage in a practice such as denying requests for access, exchange, or use of EHI that indicates or potentially relates to reproductive health care for purposes for which the 2024 HIPAA Privacy Rule would prohibit use or disclosure of PHI or would require an attestation as a precondition for permitting disclosure of PHI.

There is a sub-exception within the Privacy Exception currently codified in § 171.202(c) that is available to a health IT developer of certified health IT ''not covered by HIPAA.'' The sub-exception is available ''if the actor is a health IT developer of certified health IT that is not required to comply with the HIPAA Privacy Rule, when engaging in a practice that promotes the privacy interests of an individual'' (§ 171.202(c)). However, this exception represents a departure from our general approach of designing each information blocking exception to be available to all actors (regardless of whether they must comply with the HIPAA Privacy Rule). The § 171.202(c) sub-exception is also not available to actors who meet the § 171.102 definition of ''health care provider'' or ''HIN/HIE'' without meeting the ''health IT developer of certified health IT'' definition, even if they are not required to comply with the HIPAA Privacy Rule. (We refer actors and other persons interested in learning more about how the information blocking regulations, and particularly the exceptions, work in concert with the HIPAA Rules and other privacy laws to support health information privacy, to the discussion of this topic in the HTI–1 Final Rule at 89 FR 1351 through 1354.)

As we explained in the HTI–2 Proposed Rule (89 FR 63629), we understand that some health care providers and other actors may have concerns about the risk of potential exposure to legal action flowing from the uses and disclosures of EHI indicating or (in the case of patient health concern(s) or history) potentially relating to reproductive health care that remains permissible under applicable law. For example, the HIPAA Privacy Rule permits a HIPAA covered entity to disclose an individual's PHI to a health care provider who is not a HIPAA covered entity for treatment activities. Once PHI is in the possession, custody, or control of an entity that is not regulated under the HIPAA Privacy Rule, the information is no longer protected by the HIPAA Privacy Rule.

Thus, as we noted in the preamble discussion of the proposed Protecting Care Access Exception (89 FR 63629), the HIPAA Privacy Rule's strengthened protections for PHI would not preclude a health care provider (or other recipient of PHI for other permissible purposes) who is not a HIPAA covered entity or business associate from further disclosing individually identifiable health information to someone who might then use the information to potentially impose criminal, civil, or administrative liability on any person for the mere act of seeking, obtaining, providing, or facilitating reproductive health care (or any other care) that was lawful under the circumstances in which it was provided.

National Coordinator had reminded interested members of the public prior to HHS releasing the HTI–2 Proposed Rule: ''the information blocking regulations are designed to consider applicable law, including HIPAA rules.'' (Tripathi, M, ''Supporting Information Privacy for Patients, Now and Always: Four Reminders of How HHS Information Blocking Regulations Recognize Privacy Rules,'' HealthITbuzz blog dated May 13, 2024, available at: *https://www.healthit.gov/buzz-blog/information-blocking/supporting-information-privacy-for-patients-now-and-always-four-reminders-of-how-hhs-information-blocking-regulations-recognize-privacy-rules.*)

As we reiterated in the HTI–2 Proposed Rule (89 FR 63629), the information blocking statute is separate from the HIPAA statute and the information blocking regulations operate both separately and differently from the HIPAA regulations. One point of such difference that is key to understanding why we proposed a new ''Protecting Care Access Exception'' (§ 171.206) is that a HIPAA covered entity or business associate is not required by the HIPAA Privacy Rule to make a use or disclosure that the HIPAA Privacy Rule merely permits.[38] Actors subject to the information blocking regulations, however, could implicate the information blocking definition if they ''interfere with'' any access, exchange, or use of EHI except as required by law or covered by an exception. It is the implication of the ''information blocking'' definition (and the potential to incur penalties or disincentives for engaging in information blocking) that would cause an actor to be concerned about, for instance, refusing to disclose EHI indicating reproductive health care for permissible purposes to an entity not required to comply with the HIPAA Privacy Rule and whom the actor has reason to believe does not safeguard the privacy or security of individuals' health information in compliance with the same standards as would be required of a HIPAA covered entity or business associate.

In a variety of situations where a patient or an actor may be concerned that an access, exchange, or use of EHI may implicate any person's physical safety interests or the individual's privacy interests, other exceptions (such as the Preventing Harm Exception in § 171.201 or three of the four sub-exceptions of the Privacy Exception in § 171.202) have long been available to any actor who wants to engage in practices that are likely to interfere with EHI access, exchange, or use consistent with the conditions of the applicable exception. We noted this in the HTI–2 Proposed Rule (89 FR 63629) and emphasize again here that such other exceptions remain available to all actors. Each of the information blocking exceptions codified in subparts B, C, and D of 45 CFR part 171 applies under the conditions specified in the exception.

In the HTI–2 Proposed Rule (89 FR 63629), we noted that there were at that time no exceptions in 45 CFR part 171 designed to accommodate concerns an actor may have about a patient's, health care provider's, or other person's risk of potential exposure to legal action (investigation, action in court, or imposition of liability) that could arise from [39] the access, exchange, or use for permissible purposes specific EHI (that is, one or more data points) that indicates reproductive health care was sought, obtained, provided, or facilitated. None of the exceptions, we noted, were designed to accommodate similar concerns an actor may have about risk of patients' potential exposure to legal action that could arise from the sharing for permissible purposes of EHI that indicates health condition(s) or history for which reproductive health care is often sought, obtained, or medically indicated.[40] Thus, we explained that where preconditions (under the HIPAA Privacy Rule or other applicable law—or both, where applicable) to the provision of access, exchange, or use of EHI have been met, and another exception (such as the Privacy Exception (§ 171.202) or Preventing Harm Exception (§ 171.201)) does not apply, attempts to limit the disclosure of EHI for the purposes addressed in the *patient protection* or *care access* condition of the proposed Protecting Care Access Exception (§ 171.206(b) or (c)) could constitute information blocking (89 FR 63629). An actor's practice will only meet the statutory or regulatory definition of information blocking if it meets all of the definition's elements, including the knowledge standard applicable to the actor engaged in the practice.

Even for actors to whom the HIPAA Privacy Rule does not apply, other laws (Federal, State, or Tribal) may apply preconditions that must be satisfied in order for EHI to be shared without violating these laws. For any actor, compliance with such other applicable law does not implicate the information blocking definition, as discussed in the HTI–1 Final Rule preamble (see 89 FR 1351–1354) and in information resources available on ASTP/ONC's official website (*HealthIT.gov*). However, where the preconditions under such other applicable law are met, any practice by an actor that is likely to interfere with access, exchange, or use of EHI could implicate the information blocking definition (§ 171.103) unless the actor's practice is covered by an exception set forth in 45 CFR part 171.

In proposing the Protecting Care Access Exception (§ 171.206), we noted (89 FR 63629) that it would be available to any actor, regardless of whether the actor is also a HIPAA covered entity or business associate. The exception was proposed to apply regardless of whether another exception could also apply to an actor's practice(s) assuming that the applicable conditions were satisfied. Also, we noted in the HTI–2 Proposed Rule that other exceptions would continue to be available in circumstances where the conditions of the Protecting Care Access Exception cannot be met but the conditions of the other exception(s) can be met (89 FR 63629).

At the bottom of 89 FR 63629 (in the last column as printed in the **Federal Register**), the HTI–2 Proposed Rule included a reminder that each information blocking exception and each provision of each exception is designed to stand independent of any and every other exception unless, and to the extent that, any specific provision of an exception explicitly references another exception. Even in instances with such references, the dependency is limited to the exact provision or function of the provision that relies upon the cross-reference. Thus, we explained in proposing the Protecting Care Access Exception that the exception would operate independently of any provision of any other exception in part 171 and any provision in 45 CFR 171 that does not reference it (89 FR 63629). We stated in proposing the Protecting Care Access Exception that it was our intent that if any provision in § 171.206 were held to be invalid or unenforceable facially, or as applied to any person, plaintiff, or stayed pending further judicial or agency action, such provision shall be severable from other provisions of § 171.206 that do not rely upon it and from any other provision codified in 45 CFR part 171 that does not explicitly reference § 171.206 even if such provisions were to be established or modified through this same rulemaking action (89 FR 63629 and 63630). It continues to be HHS's intent that if any provision of § 171.206, as finalized in this final rule, were held to be invalid or unenforceable facially, or as applied to any person, plaintiff, or

[38] The HIPAA Privacy Rule does *not* generally require uses and disclosures of PHI but merely permits uses and disclosures for various purposes. Disclosures that *are* required under the HIPAA Privacy Rule are identified in 45 CFR 164.502(a)(2).

[39] For purposes of this discussion and of the proposed Protecting Care Access Exception, we noted that a risk need not be one that is certain to occur, or that is likely to occur immediately following, an access, exchange, or use of EHI in order to be one that could arise from the access, exchange, or use.

[40] In this preamble, we at some points use for brevity and readability ''potentially related to reproductive health care'' as shorthand for EHI that shows or would carry a substantial risk of supporting an inference that (as described in proposed § 171.206(b)(1)(iii)) the patient has health condition(s) or history for which reproductive health care is often sought, obtained, or medically indicated.

stayed pending further judicial or agency action, such provision shall be severable from other provisions of § 171.206 that do not rely upon it and from any other provision codified in 45 CFR part 171 that does not explicitly reference § 171.206 even if such provisions were to be established or modified through this same final rule.

As we noted in the HTI–2 Proposed Rule (89 FR 63630), a patient's ability to access care can be adversely affected when a provider believes they could be exposed to legal action based on the mere fact that care is provided. Given the demonstrated chilling effect of some states' laws on the availability of medically appropriate care, it is reasonable and necessary for actors to mitigate risks of potential exposure of health care professionals and other persons who provide or facilitate, as well as those who seek or obtain, reproductive health care that is lawful under the circumstances in which the care is provided to legal action based on the mere fact that such care was sought, obtained, provided, or facilitated. Thus, we stated (89 FR 63630), a new exception was needed to address actors' concerns about potentially implicating the information blocking definition (§ 171.103) if they choose not to share applicable EHI in the circumstances where the Protecting Care Access Exception (§ 171.206) would apply. We stated that this exception (§ 171.206) is important and intended to ensure health care providers do not feel the need to adopt paper or hybrid recordkeeping methods in place of fully electronic, interoperable formats (89 FR 63630).[41] We explained that we believe it is reasonable and necessary for an actor to restrict access, exchange, or use of specific EHI that indicates or (under § 171.206(b)) is potentially related to reproductive health care so that health care providers continue to use modern, interoperable health IT that better promotes patient safety than would paper or hybrid recordkeeping methods (89 FR 63630). We clarified that creating an information blocking exception that would exclude from the information blocking definition an actor's restricting EHI sharing under the conditions of the Protecting Care Access Exception (§ 171.206) is necessary to preserve and promote public trust in health care professionals, health care, and the health information infrastructure.

The Protecting Care Access Exception (§ 171.206), as proposed (89 FR 63630) and as finalized in this final rule, is intended to address actors' concerns about potentially implicating the information blocking definition if they choose not to share EHI in a scenario that an actor believes in good faith could risk exposing a patient, provider, or facilitator of lawful reproductive health care to potential legal action based on the mere fact that reproductive health care was sought, obtained, provided, or facilitated (89 FR 63632). Under the *patient protection* condition (§ 171.206(b)), the exception is also intended to address such concerns and belief, on the part of the actor, specific to EHI indicating a patient has health condition(s) or history for which reproductive health care is often sought, obtained, or medically indicated.

The HIPAA Privacy Rule does not prohibit the use or disclosure of PHI that indicates or is potentially related to ''reproductive health care'' as defined in 45 CFR 160.103 if the use or disclosure is not for a purpose described at 45 CFR 164.502(a)(5)(iii) and the use or disclosure is otherwise required or permitted by the HIPAA Privacy Rule. Therefore, the Protecting Care Access Exception is needed where an information blocking actor (whether or not that actor is required to comply with the HIPAA Privacy Rule) is concerned about the information blocking implications of limiting sharing of EHI when the actor believes such limits could reduce a risk of potential exposure to legal action (as defined in § 171.206(e)) in connection with an access, exchange, or use of such EHI for a permissible purpose.

We recognize that no information blocking exception can address all concerns a person may have about potential legal action for the mere act of seeking, obtaining, providing, or facilitating reproductive health care. However, we clarify that, to the extent such concerns may be mitigated by an information blocking exception that applies where an actor chooses to withhold relevant EHI from access, exchange, or use that all other applicable law would permit and where no other existing information blocking exception applies, we believe an exception that applies to such withholding of EHI is reasonable and necessary. We noted our concern that actors' uncertainty about whether such withholding of EHI could implicate the information blocking definition could prevent actors from withholding EHI unless an exception applies. Thus, we believe the Protecting Care Access Exception is needed to address actors' concerns specific to information blocking related to the risk of providers changing or limiting what care they are willing to offer (such as when a professional changes practice specialty or a hospital closes a service or department).

When providers limit what care they are willing to offer or what new patients they are willing to accept, it may be more difficult for those who seek care to get access to the care they need. When patients' needs are not being met, they lose trust in the health care system and in their physicians. Trust in one's own physician, in general, correlates with better care satisfaction and outcomes.[42] This may also be true of trust in other types of health care professionals, such as nurses, physician assistants, pharmacists, or organizational providers such as hospitals or long-term/post-acute care facilities. Thus, we believe that addressing actors' uncertainty specific to information blocking with the Protecting Care Access Exception would promote better patient satisfaction and health outcomes as well as continued development, public trust in, and effective nationwide use of health information technology infrastructure to improve health and care.

Moreover, actors' uncertainty about the potential information blocking implications of not sharing all of the EHI that applicable laws would permit them to share could undermine health care professionals' (and other health care providers') confidence in their ability to protect the privacy and confidentiality of their patients' EHI. Such a lack of confidence on the part of health care providers can in turn erode a patient's trust.

As we noted in the HTI–2 Proposed Rule (89 FR 63630), patient trust in physician confidentiality and competence is associated with patients being less likely to withhold information from doctors and more likely to agree it is important for health care providers to share information with each other.[43] Thus, we clarified that the

[41] As defined in § 171.102 and excluding certain information as specified in subparagraphs (1) and (2) of this definition, EHI is electronic protected health information (ePHI) (defined in 45 CFR 160.103) that is or would be in the designated record set (defined in 45 CFR 164.501) regardless of whether the group of records are used or maintained by or for a covered entity as defined in 45 CFR 160.103.

Protecting Care Access Exception in § 171.206—which would apply under specified conditions to actors' practices of choosing not to share specific EHI (where such sharing would be otherwise lawful)—is reasonable and necessary to preserve patient trust in the health IT infrastructure and information sharing, as well as to protect the availability and safety of care, and to promote better care outcomes (89 FR 63630).

One of the goals of the information blocking exceptions is ''to accommodate practices that, while they may inhibit access, exchange, or use of EHI, are reasonable and necessary to advance other compelling policy interests . . .'' including ''[p]romoting public confidence in the health IT infrastructure by supporting the privacy and security of EHI and protecting patient safety,'' as we explained in the ONC Cures Act Final Rule (85 FR 25791). In the absence of an information blocking exception applicable to risks of legal actions that actors believe could arise from the sharing of EHI for permissible purposes (for instance, with entities not required to comply with the HIPAA Privacy Rule), we are concerned actors may be unwilling to engage in these practices that—for example—advance public confidence in health IT infrastructure and protect patient safety.

If other actors are unwilling to engage in such practices, health care providers may convey to patients an inability to withhold EHI even when they believe withholding the EHI could mitigate the potential risks cognizable in the current environment. If patients are aware that health care providers believe that they are unable to avoid sharing EHI to mitigate risks of potentially exposing care providers, recipients, or facilitators to legal action then patients may be less willing to be candid with their providers about their health history, conditions, or other information relevant to the patient's care. Without that candor, health care providers may be unable to provide care that will best meet the patient's needs. In addition, a care provider's lack of confidence or competence in their ability to adequately safeguard the privacy of information that care recipients share with them could erode the mutual trust that contributes to better care outcomes by promoting more effective relationships between care providers (including clinicians) and the individuals receiving care.

In the absence of an exception applicable to practices that the proposed Protecting Care Access Exception would cover, we are concerned that health IT developers of certified health IT and HINs/HIEs may be unwilling to take the actions necessary to address their own, or their customer health care provider's, good faith belief that particular sharing of specific EHI could create the risk of potential exposure of a health care provider (or persons seeking, obtaining, providing, or facilitating care) to legal action regarding health care items and services that are lawful under the circumstances in which such health care is provided. Thus, health care providers in these situations may believe they are faced with a choice between changing what care they offer (such as when a hospital closes a department) or switching at least some portions of their clinical records from electronic to paper formats specifically to avoid concerns that they may be engaged in information blocking.

For health care professionals in reproductive health care specialties or whose practice necessarily includes patients who need reproductive health care, a partial or complete switch to paper-based recordkeeping for that care may seem like their only option in the absence of the Protecting Care Access Exception. Because the information blocking definition references ''electronic health information'' rather than all ''protected health information,'' the information blocking regulations do not apply to health information maintained only in paper format. A reversal to paper-based methods of keeping even a relatively small portion of the records currently managed using modern health IT would have an adverse effect on interoperability and on the development of a nationwide health IT infrastructure consistent with section 3001(b) of the PHSA. Thus, such a reversal to paper-based recordkeeping methods would impede the goals of promoting public confidence in the electronic health information infrastructure and of advancing patient safety through the use of interoperable health IT and EHI. For example, information kept only on paper is not available to support tools that help clinicians avoid adverse drug events by automatically checking for potential drug-drug or drug-allergy interactions.

As we discussed in the HTI–2 Proposed Rule and in the preceding paragraphs, we stated that, for the reasons discussed at 89 FR 63627–63631, we believe actors' practices of limiting EHI sharing under the conditions of the Protecting Care Access Exception are reasonable and necessary to preserve advances in digitization, interoperability, and public confidence in the nationwide health information technology infrastructure. We noted that actors selectively withholding EHI that indicates or is potentially related to reproductive health care (as applicable) under the conditions of the proposed exception would also promote patient safety and improve outcomes by fostering trust between care providers and recipients. Maintaining advances and trust in the health information technology infrastructure fosters better care by continuing to make information available to more care providers and care recipients when and where the information can help them choose the right care for each patient (care recipient). Use of interoperable, electronic health IT and exchange of EHI also enables providers to use decision support tools, such as drug-drug interaction alerting, and to deliver better care.

In the HTI–2 Proposed Rule (89 FR 63631), we noted that the proposed Protecting Care Access Exception (§ 171.206) could apply in some circumstances where another exception (such as Preventing Harm (§ 171.201) or Privacy (§ 171.202)) would or could also apply. The proposed new exception was, however, intended to stand alone and independent of other exceptions. We note that through a typographical error, the word ''exceptions'' was omitted from the HTI–2 Proposed Rule preamble at the end of the second sentence at *89 FR 63631.* We also stated that the proposed Protecting Care Access Exception would not affect if, how, or when any provision of any exception that does not explicitly reference § 171.206 applies to an actor's practice, or how any such provision operates. Moreover, we stated that where facts and circumstances were such that an actor could choose to shape their practice in withholding EHI to satisfy either the Protecting Care Access Exception (if finalized) or another exception, the actor would have discretion to choose which exception they wish to satisfy. An actor's practice in such situation(s) would not need to satisfy both exceptions in order for the practice to not be considered information blocking.

In the HTI–2 Proposed Rule (89 FR 63631), we also noted that one of the existing information blocking exceptions applicable in some circumstances where the proposed Protecting Care Access Exception could also apply is the Privacy Exception (§ 171.202). Of particular relevance to actors' confidence that they will not be ''information blocking'' if they withhold EHI based on the individual's preference that their EHI be closely held is the Privacy Exception's sub-exception ''respecting an individual's request not to share information'' (§ 171.202(e)).

The § 171.202(e) Privacy sub-exception is applicable where an actor agrees to honor an individual's request not to share their EHI even where it is permissible to share under all applicable law. We proposed to strengthen and simplify the § 171.202(e) Privacy sub-exception as discussed in the HTI–2 Proposed Rule (89 FR 63622). Finalization decisions specific to that proposed revision to the § 171.202(e) Privacy sub-exception are discussed in this final rule preamble, above. The § 171.202(e) sub-exception offers actors certainty that they can, if they so choose, honor an individual's preference for restrictions on the sharing of EHI about the individual without subjecting the actor to an information blocking penalty or disincentive for not sharing such EHI. The § 171.202(e) sub-exception does not—and will not as revised by this final rule—rest on why the individual may prefer that some or all of their EHI not be shared. But, as we noted in proposing the Protecting Care Access Exception, the § 171.202(e) sub-exception only applies to scenarios where the individual requests the restrictions (89 FR 63631). As we noted in the HTI–2 Proposed Rule (89 FR 63631), there may be circumstances where an individual does not request the restriction, but when it would be reasonable and necessary for an actor to interfere with access, exchange, or use of EHI for the purpose of addressing individuals' (or providers' and others') risk of potential exposure to legal action that could discourage availability, access, and choice of medically appropriate reproductive health care.

We stated in the HTI–2 Proposed Rule (89 FR 63631 and 63632) that we believe it would be burdensome to individuals, in the constantly changing legal landscape, to rely exclusively on them to make or update requests for restrictions on their EHI that indicates or is potentially related to reproductive health care. In such a complex and uncertain environment, any individual may experience difficulty in making timely requests for such restrictions. Moreover, we noted that some individuals may not have the resources—such as affordable, secure access to the internet—to update their providers on their information sharing preferences outside of the occasions that they interact with these providers to obtain health care. Thus, we observed that individuals may not be able to request restrictions soon enough, or that are broad enough, to protect themselves or others from potential legal liability based on what care they have received (89 FR 63631 and 63632).

We explained (at 89 FR 63632) that an individual's request for restrictions on sharing their EHI is specific and limited to that individual's EHI, and (depending on what the individual chooses to request) may be specific to identified requestors of the individual's EHI. Thus, we stated that it is not as efficient for actors to implement such individual restrictions as it would be to implement restrictions based on an organizational policy that consistently addresses a concern common to sharing any individuals' EHI in a particular access, exchange, or use scenario—such as the actor's good faith belief that there is a concern regarding the risk of potential exposure to legal action that could be created or increased by propagating to a recipient not required to comply with the HIPAA Privacy Rule the specific EHI within a patient's record that indicates the receipt of reproductive health care.

For these reasons, we stated (89 FR 63632) our belief that that health care providers and other actors must have available to them an information blocking exception designed to apply to practices that the actor believes could help to avoid creating—through sharing of EHI indicating or potentially related to reproductive health care in relevant scenarios—a risk of potential exposure to legal action based on the mere fact that lawful reproductive health care was sought, obtained, provided, or facilitated (or where the proposed *patient protection* condition would apply, because the EHI indicates patient health history or condition(s) for which reproductive health care is often sought, obtained, or medically indicated).

When an actor has a belief consistent with the proposed § 171.206(a)(1) belief requirement, we believe an exception should be available that is designed to cover practices likely to interfere with access, exchange, or use of EHI under conditions specified in the exception. Therefore, we proposed a new Protecting Care Access Exception (§ 171.206) for the information blocking definition (89 FR 63632 through 63640 and 63804). We stated that when its conditions were met, the proposed new exception would cover an actor's practices that interfere with access, exchange or use of EHI in order to reduce potential exposure of applicable persons to legal action (as defined in the exception). For the exception as proposed to apply, we explained that the potential exposure to legal action that the actor believes could be created would need to be one that would arise from the fact that reproductive health care was (or may have been) sought, obtained, provided, or facilitated rather than because the care provided was (or is alleged to have been) clinically inappropriate or otherwise substandard.

We noted that the statutory authority in PHSA section 3022(a)(3) is to ''identify reasonable and necessary activities that do not constitute information blocking.'' Thus, practices that meet the applicable conditions of the proposed Protecting Care Access Exception (§ 171.206) would not be considered information blocking (as defined in PHSA section 3022(a)(1) and 45 CFR 171.103), and, therefore, actors would not be subject to civil monetary penalties or appropriate disincentives as applicable, under HHS information blocking regulations based specifically on those practices.

As is the case with exceptions already established in 45 CFR part 171, the proposed Protecting Care Access Exception would not override an actor's obligation to comply with a mandate contained in law that requires disclosures that are enforceable in a court of law. For example, the proposed exception would not invalidate otherwise valid court-ordered disclosures, or disclosures (for example, infectious disease, or child or elder abuse case reports) mandated by a Federal, State, or Tribal law with which an actor is required to comply in relevant circumstances. The exception is also not intended to justify an attempt to limit the legally required production of (otherwise discoverable) EHI in a civil, criminal, or administrative action that is brought in the jurisdiction where a health care provider provided health care that a patient (or their representative) alleges was negligent, defective, substandard, or otherwise tortious. Similarly, the exception would not apply to, and is not intended to justify, attempts to avoid disclosing information where the actor's belief is that the information could be useful to a legal action against the actor or other person specific to alleged violations of federal or other law against conduct other than merely seeking, receiving, providing, or facilitating reproductive health care. One example of such other conduct would be a physical assault of any natural person, even if the assault occurred in a health care setting.[44]

[44] The definition of ''person'' for purposes of 45 CFR part 171 is codified in § 171.102 and is, by cross-reference to 45 CFR 160.103, the same definition used for purposes of the HIPAA Privacy Rule. The § 160.103 definition of ''person'' clarifies the meaning of ''natural person'' within it. We noted that we use ''natural person'' with that same meaning in § 171.206(b)(3) and throughout the discussion of § 171.206. Consistent with the § 171.102 definition of ''person'' by cross-reference to the definition of ''person'' in 45 CFR 160.103, ''natural person'' in context of the information

Continued

We emphasized that if the proposed Protecting Care Access Exception were to be finalized, actors would continue to be subject to other Federal laws, and to State and Tribal laws. This is consistent with how the information blocking exceptions in place today operate in harmony with, but separate from, requirements of other statutes and regulations—including, among others, the HIPAA Privacy Rule's individual right of access (45 CFR 164.524).

For example, an actor that is also a HIPAA covered entity may receive a request from an individual for access to EHI of which the individual is the subject, in a manner (form and format) specified by the individual. If the actor is technically unable to fulfill the request, or if the individual and actor cannot come to agreement on terms to fulfill the request in the manner requested or an alternative manner consistent with § 171.301(b), the actor may be able to satisfy the Infeasibility Exception by meeting that exception's *manner exception exhausted* (§ 171.204)(a)(4)) and the *responding to requests* (§ 171.204(b)) conditions. By satisfying the Infeasibility Exception, the actor's practice of failing to fulfill the request for access, exchange, or use of EHI will not be considered information blocking. However, the actor in this example is a HIPAA covered entity and, therefore, must comply with the HIPAA Privacy Rule's right of access at 45 CFR 164.524, even though the actor's practices in failing to provide access, exchange, or use of EHI met the requirements to be covered by the Infeasibility Exception (§ 171.204) for purposes of the information blocking regulations.

We noted that consistent with our approach to establishing the initial eight information blocking exceptions, the conditions of the proposed Protecting Care Access Exception (§ 171.206) are intended to limit its application to the reasonable and necessary activities enumerated within the exception. Therefore, the Protecting Care Access Exception would (for purposes of the information blocking definition in § 171.103) cover an actor's practice that is implemented to reduce potential exposure of persons meeting the § 171.202(a)(2)(i) or (ii) definition of ''individual,'' other persons referenced or identifiable from EHI as having sought or obtained reproductive health care, health care providers, or persons who facilitate access to or delivery of health care to potential threats of legal action based on the decision to seek, obtain, provide, or facilitate reproductive health care, or on patient health information potentially related to reproductive health care, subject to the exception's conditions.

We explained that for the proposed exception to apply to an actor's practice that is likely to interfere with EHI access, exchange, or use, the practice would have to satisfy the *threshold* condition in the proposed paragraph (a), and at least one of the other conditions (proposed paragraph (b) or (c)) of the proposed exception (89 FR 63633). We clarified that an actor's practice could satisfy both conditions (b) and (c) at the same time, but the minimum requirement for the proposed exception to apply would be that the practice satisfy at least one of these two conditions in addition to the *threshold* condition in paragraph (a) (89 FR 63633).

We discuss the proposed conditions of the proposed Protecting Care Access Exception, and the comments we received specific to them, in detail in below.

Comments. In general, many commenters expressed strong support for the proposed Protecting Care Access Exception and endorsed the necessity of an exception that applies to withholding of specific EHI that indicates or is potentially related to reproductive health care in circumstances where the exception applies. Many commenters stated that the proposed exception will facilitate patients' access to care, and health care providers' willingness to provide such care to patients who are seeking it. Several commenters also stated that the proposed exception would provide clarity and certainty for actors, including clarity for health care providers who are seeking to understand their responsibilities under the information blocking regulations in light of varying laws regarding reproductive health information in different jurisdictions. Some commenters stated that the proposed exception would encourage the continued use of electronic methods for sharing health information, so that some actors would not feel that they needed to revert to paper records to protect their patients' privacy. Several commenters noted the importance of trust in the patient-provider relationship to support health care and interoperability including one commenter who noted that this exception would protect the sanctity of the patient-physician relationship.

Many commenters stated that the proposed exception would support communication and trust in the patient-provider relationship, and that such trust is essential to provide care to patients. One commenter stated that ''many clinicians have resorted to keeping paper charts'' and that ''it is essential that ASTP/ONC enable us to better protect our patients from unintended disclosure of their legally sensitive health information.'' Many commenters supported finalization of the exception as proposed. Two commenters stated that HIEs have direct experience with states and localities implementing laws that would invoke other exceptions to information blocking, leading to potentially less interoperability and data exchange, in order to address concerns that actors would otherwise run afoul of information blocking regulations if they did not exchange reproductive data. These commenters stated they, therefore, appreciate this exception.

Response. We appreciate the support for this exception expressed by many commenters. Having considered all comments received in response to the proposed Protecting Care Access Exception (§ 171.206), we have finalized the exception as proposed and provide additional responses to specific comments below.

Comments. Several commenters expressed support for the exception's intent or effect but advocated reducing the conditions that need to be met for the exception to apply, eliminating documentation requirements, or both. Some of these comments advocated an exception that would apply broadly where a health care provider believes withholding any EHI could protect patient privacy or protect patients or others from exposure to potential legal action on bases beyond those addressed in the proposed exception.

Response. We appreciate the commenters' support for the exception. We have finalized the exception's conditions as proposed because we believe they strike the best balance we can attain at this time between the interests of actors and patients in protecting reproductive health care availability and patients' reproductive health privacy with the interests of actors, patients, and others in maintaining and building upon progress made to date toward EHI interoperability and a norm of information sharing that includes individuals being able to easily access, exchange, and use their EHI however and whenever they want. We have not adopted any of the alternative proposals on which we sought comments that would have added complexity to the exception in an effort to maintain this balance of interests. We do not believe it is necessary to reduce the conditions

blocking regulations means ''a human being who is born alive.''

that need to be met to satisfy the exception, or to eliminate its documentation requirements, because doing so would not strike the best balance between the aforementioned interests of actors and patients.

We have adopted the ''good faith belief'' standard that considers what potential risk of exposure to legal action the actor honestly believes could be reduced by their practice likely to interfere with access, exchange, or use of EHI. By relying on a subjective standard, the § 171.206(a)(1) belief requirement supports the policy goal of this exception being efficient for actors to use, because the *threshold* condition's subjective standard does not require the actor to track or analyze in detail all the laws of the various jurisdictions across the country in order to hold a belief in good faith. Thus, the subjective ''good faith belief'' requirement ensures the Protecting Care Access Exception can be used easily and with confidence even by single-physician practices and small rural hospitals or LTPAC facilities; these providers need not understand all of the various laws in order to hold an honest belief.

Where an actor chooses to satisfy the § 171.206(a)(3) implementation requirement by implementing a practice based on a case-by-case determination, they would need to document the determination consistent with paragraph (a)(3)(ii). Within that, we note that although subparagraph (D) calls for the documentation to ''identify the connection or relationship between the interference with particular access, exchange, or use of specific electronic health information and the risk of potential exposure to legal action,'' the identification need only describe the risk of potential exposure to legal action that the actor believes the interference with EHI access, exchange, or use could reduce. To satisfy the § 171.206(a)(3) implementation requirement through an organizational policy (paragraph (a)(3)(i)) or case-by-case determination (paragraph (a)(3)(ii)), an actor would *not* need to catalog potential sources of legal risk comprehensively or to a high degree of specificity. Further, we note that if an actor chooses to satisfy the § 171.206(a)(3) implementation requirement by implementing a practice consistent with paragraph (a)(3)(i), all that is expressly required to be in writing is an organizational policy with the characteristics identified in subparagraphs (a)(3)(ii)(A) through (E). None of the subparagraphs in (a)(3)(i) specify that the policy call for creation of particular documentation every time the practice implemented based on the policy may interfere with someone's access, exchange, or use of relevant EHI.

Broadening the Protecting Care Access Exception (§ 171.206) to apply when an actor has a good faith belief that sharing EHI could create risk of potential exposure to legal action based on anything other than the mere act of seeking, obtaining, providing, or facilitating ''reproductive health care'' (using the definition of reproductive health care as defined at § 171.102) would be beyond the scope of the proposal. We also remind readers that other exceptions may apply in a variety of circumstances where the finalized Protecting Care Access Exception (§ 171.206) does not apply. For example, the Privacy sub-exception ''individual's request not to share EHI'' (§ 171.202(e)) is *not* limited or specific to concerns related to any specific type(s) of health care, health condition(s) or history, or reasons why an individual may be concerned about sharing some or all of their EHI with whomever the individual does not want to have access, exchange, or use of that EHI. As we noted in the HTI–1 Final Rule (89 FR 1353): the § 171.202(e) Privacy sub-exception does not specify that the individual requesting restrictions should have particular reasons for requesting restrictions or be required to share their reasoning with the health care provider or other actor of whom they make the request. As we observed in the HTI–1 Proposed Rule (88 FR 23874), out of respect for the patient's privacy and autonomy and fostering trust within the patient-provider relationship, a provider might choose to honor a patient's request for restrictions on sharing of their EHI even if the provider did not *know* the patient's specific reasons for the request. As originally codified, and as revised by this final rule, the § 171.202(e) Privacy sub-exception applies to an actor's practice that meets its requirements—regardless of *why* the individual may have made a request consistent with § 171.202(e)(1) or what EHI the individual may not want shared. (As we have repeated in the HTI–2 Proposed Rule and this final rule, however, we remind actors and other readers that none of the exceptions established or revised by this final rule, and none of the other six exceptions codified in 45 CFR part 171, are intended to override any other applicable law that compels access, exchange, or use of EHI.)

Comments. Some commenters did not support the proposal. Two of these commenters expressed concern that the proposal could impede enforcement of, or investigations into possible violations of, Federal and State laws such as those regulating reproductive health care. One commenter stated that the exception is not reasonable and necessary as required by the Cures Act and is arbitrary and capricious in violation of the Administrative Procedure Act. One of these commenters connected opposition to the proposal to the commenter's view that actors should not be expected to evaluate or determine the lawfulness of others' actions. Other commenters expressed concern that the proposal could give actors too much power to withhold or limit access to information, that EHR developers would disproportionately benefit from the proposal, or that EHR developers might use the Protecting Care Access Exception to limit data sharing in a way that benefits them and harms patients. One commenter generally opposed the exception and stated that the use of pronouns other than those connoting a person is male or female, or pronouns not matching the patient's sex assigned at birth, could lead to a lower quality of medical care. A few commenters stated that their concerns about the proposed exception should be addressed by placing control with providers as to whether the exception applies, prohibiting actors from using the exception for commercial gain, or ensuring that patients understand when their data is requested, disclosed, or protected by the exception. Other commenters suggested that health IT developers of certified health IT should be required to enable a user to restrict uses or disclosures when requested by the patient, stating this requirement would help reduce ''overly broad'' restrictions on interoperability or EHI sharing.

Response. Having considered all comments received, in context of the totality of feedback on the proposed exception, we have concluded that finalizing the exception as proposed is consistent with identifying, through notice and comment rulemaking, reasonable and necessary activities that do not constitute information blocking. We do not believe the exception impedes investigation or enforcement of independent laws enforceable against any actor in a court with jurisdiction over the actor and subject matter. As we have repeatedly reminded actors in this final rule and as is the case with exceptions previously established in 45 CFR part 171, the Protecting Care Access Exception (§ 171.206) would not override an actor's obligation to comply with a mandate contained in law that requires disclosures that are enforceable in a court of law. For example, the proposed exception would not

invalidate otherwise valid court-ordered disclosures, or disclosures (for example, infectious disease, or child or elder abuse case reports) mandated by a federal, state, or tribal law with which an actor is required to comply in relevant circumstances. Moreover, the Protecting Care Access Exception, like all information blocking exceptions, is voluntary. It is not intended to create an affirmative obligation for an actor to evaluate whether a risk of potentially exposing anyone to legal action from any particular EHI access, exchange, or use scenario(s) might occur.

Because the Protecting Care Access Exception is unrelated to the use of pronouns in medical documentation, and does not require any actor to withhold any of a patient's EHI from any health care provider treating the patient, a health care provider's use of pronouns or any other demographic data is outside the scope of this exception.

Commenters' suggestions that health IT developers of certified health IT should be required to enable a user to restrict uses or disclosures when requested by the patient are beyond the scope of this exception. As we explained earlier in this final rule's preamble, in discussing the finalized revision to sub-exception (e) of the Privacy Exception at § 171.202, suggestions that ASTP/ONC mandate health IT include particular functionalities are outside the scope of any enhancement to the information blocking regulations (45 CFR part 171) included in the HTI–2 Proposed Rule. The Infeasibility Exception's *segmentation* condition (§ 171.204(a)(2)) accommodates actors who are unable to unambiguously segment data they have chosen to withhold consistent with another applicable exception—such as § 171.202(e) (''individual's request not to share EHI'')—from other EHI they could share with a requestor. We discuss earlier in this preamble revisions to § 171.204(a)(2) that include adding explicit reference to the Protecting Care Access (§ 171.206). We refer readers interested in learning more about how information blocking exceptions may be used in complement when an actor wishes to engage in a practice that is not fully covered by a single exception to the discussion of that topic in the HTI–1 Final Rule (89 FR 1353 and 1354).

In finalizing the initial information blocking exceptions in the ONC Cures Act Final Rule, we stated that we were guided by three overarching policy considerations: that exceptions are limited to certain activities that we believe are important to the successful functioning of the U.S. health care system, that exceptions are intended to address a significant risk that regulated individuals and entities will not engage in these reasonable and necessary activities because of potential uncertainty regarding whether they would be considered information blocking, and that each exception is intended to be tailored, through appropriate conditions, so that it is limited to the reasonable and necessary activities that it is designed to exempt (*85 FR 25649*).

This finalized exception aligns with these same policy considerations. As we explained in the HTI–2 Proposed Rule, we had at that time come to understand that some health care providers and other actors had concerns about the risk of potential exposure to legal action flowing from the uses and disclosures of EHI indicating or (in the case of patient health concern(s) or history) potentially relating to reproductive health care that remain permissible under applicable law (*89 FR 63629*). We believe that the many comments we received in support of finalizing the Protecting Care Access Exception, as proposed or with various adjustments to make it easier for actors to use, validate our balancing of actors' concerns. Information provided in such comments supports our belief that actors' and patients' response to these concerns in the absence of the Protecting Care Access Exception has contributed to patients withholding information from their health care providers and health care providers avoiding creation of EHI, such as through use of paper recordkeeping; both of these solutions we believe have a much greater negative impact than this narrowly tailored information blocking exception could on care quality, coordination, and advancement of an interoperable nationwide health information infrastructure where sharing EHI consistent with applicable law and patient preferences is the norm and withholding EHI is the exception.

We believe that addressing actors' uncertainty specific to information blocking by finalizing the Protecting Care Access Exception will promote better patient satisfaction and health outcomes as well as continued development, public trust in, and effective nationwide use of health information technology infrastructure to improve health and care. We noted this belief in proposing this new exception (*89 FR 63620*). By addressing an actor's concern about potential exposure to legal action flowing from an access, exchange, or use of EHI related to reproductive health care, the exception addresses the risk that actors such as health care providers may be unable to provide care that will best meet the patient's needs (*89 FR 63631*), among other risks we describe in the HTI–2 Proposed Rule's preamble (*89 FR 63630*). The exception is also tailored to limit its application to the reasonable and necessary activities enumerated within the exception, consistent with our approach to establishing the initial eight information blocking exceptions (*89 FR 63632*).

We plan to remain alert for signals that any type(s) of actor—not just health IT developers of certified health IT—may be attempting to misuse any of the exceptions in 45 CFR part 171. We would anticipate engaging in education and outreach as well as (where applicable) enforcement steps in response to such signals and may consider future proposals for 45 CFR part 171 in response to changing market conditions.

Comments. One commenter stated that it is not the responsibility of the health IT developer or health care provider to assess the motivations of an otherwise legal request for information, or to take actions to restrict data sharing that could be unlawful in some states. One commenter expressed concern about setting a precedent where an actor's practice is not considered information blocking but may still be a violation of another law.

Response. For an actor's practice to be covered by the finalized Protecting Care Access Exception, there is no specific requirement that the actor must assess the motivations of any request for EHI access, exchange, or use for permissible purposes. The finalized exception in no way requires any actor to take any action that would violate any law enforceable against the actor.

All information blocking exceptions are voluntary. They offer actors assurance that a practice consistent with one or, where applicable, more exceptions will not meet the ''information blocking'' definition (in § 171.103 or PHSA section 3022(a)) even if such practice is not required by law and is likely to interfere with access, exchange, or use of EHI. The Protecting Care Access Exception is responsive to concerns we have heard from the regulated community; it is intended to address these concerns for actors who choose to limit EHI sharing under the exception's conditions. The Protecting Care Access Exception is not intended to create a mandate that an actor engage in any practice(s) the exception would cover if the actor does not want to engage in such practice(s). Also, actors who may choose to limit availability of applicable EHI under the conditions of

the finalized Protecting Care Access Exception will nevertheless continue to be subject to other Federal laws, and to State and Tribal laws. We emphasized in the HTI–2 Proposed Rule that this would be the case if the Protecting Care Access Exception were to be finalized (*89 FR 63632*) and noted this is also the case with exceptions that had previously been established in *45 CFR part 171.* We reiterate that the Protecting Care Access Exception does *not* override an actor's obligation to comply with a mandate contained in law that requires disclosures that are enforceable in a court of law. Because we have explicitly, and repeatedly, reminded actors in the HTI–2 Proposed Rule [45] and this final rule [46] that information blocking exceptions do not override such obligations, we presume such actors will, therefore, account for this reality in their approach to maintaining compliance with the laws to which they are subject.

Comments. Some commenters stated that the proposed exception would be difficult to implement because the actor's staff may have different interpretations of potential legal risk or because there are not existing technical standards which could be leveraged to support the exception's implementation, particularly the ability to identify and segment relevant EHI.

Response. If an actor is concerned about different members of their staff having different understandings of legal risks or when the exception would apply, we refer the actor to the finalized conditions of the exception. These include an option to satisfy the § 171.206(a)(3) implementation requirement by implementing practices consistent with an organizational policy that meets subparagraph (i) of § 171.206(a)(3). It has been our observation that developing and training relevant staff on written organizational policies is a strategy that helps an organization's personnel understand how to proceed, and to act consistently, in relevant scenarios.

We recognize that the capabilities of existing health IT continue to evolve, and that there is variation in health IT products' ability to segment EHI that a health care provider or a patient may wish to withhold from various access, exchange, or use scenarios from other EHI with the levels of precision and automation that providers and patients would prefer. In the HTI–2 Proposed Rule, we stated that because there is a potential that some actors who may wish to withhold specific EHI under the conditions specified in the Protecting Care Access Exception (§ 171.206) may not yet have the technical capability needed to unambiguously segment the EHI for which § 171.206 would apply from other EHI that they could lawfully make available for a particular access, exchange, or use, we proposed to modify the Infeasibility Exception's *segmentation* condition (§ 171.204(a)(2)) to explicitly provide for circumstances where the actor cannot unambiguously segment EHI that may be withheld in accordance with Protecting Care Access Exception (§ 171.206) from the EHI for which this exception is not satisfied (*89 FR 63634*). We refer readers to the section of this final rule preamble where we discuss the finalized revision to the Infeasibility Exception's *segmentation* condition (§ 171.204(a)(2)).

Comments. One commenter encouraged ASTP/ONC to engage in further discussions with stakeholders to refine the proposals and to align them further with HIPAA and other HHS regulations rather than adopting the proposed exception. Some commenters suggested that ASTP/ONC require health IT developers of certified health IT enable a user to implement a process to restrict uses or disclosures of data in response to a patient request when such restriction is necessary, citing 88 FR 23822. Another commenter encouraged ASTP/ONC to strengthen certification criteria for capabilities to allow clinical users to tag and withhold data from exchange.

Response. We recognize that no information blocking exception can address all of the concerns a person may have about potential exposure of various persons to legal action for the mere act of seeking, obtaining, providing, or facilitating reproductive health care (as we noted in the HTI–2 Proposed Rule at *89 FR 63630*). While we appreciate the commenters' suggestions, their requests specific to imposing certain requirements on developers of certified health IT, which appear to refer to ASTP/ONC's proposal in the HTI–1 Proposed Rule to adopt a new certification criterion ''patient requested restrictions'' in § 170.315(d)(14) which was not finalized in the HTI–1 Final Rule (*89 FR 1301*), are outside the scope of this rulemaking. We will continue to work with our federal partners to promote alignment on, and understanding of, regulations which support the lawful access, exchange, and use of electronic health information. We also note that we may consider amending relevant ONC Health IT Certification Program or information blocking regulations in future rulemaking in response to changing market conditions.

Comments. Several commenters requested that we develop guidance, education, examples, and training materials on the Protecting Care Access Exception, including for specific situations and fact patterns and materials for both providers and patients. For example, one commenter requested guidance specifically on how health care practices who serve patients who live in a different state can protect the information of their patients. Some commenters stated that actors such as health care providers have sometimes been hesitant or fearful to use information blocking exceptions, and that guidance and educational materials from ASTP/ONC are essential. Several commenters also noted the need for health care providers to engage with a variety of internal and external partners and entities in the implementation of their policies to comply with the information blocking regulations. One commenter requested that ASTP/ONC include examples, objective criteria for assessing legal risks, and best practices for documentation and patient communication in its guidance. Another commenter asked ASTP/ONC to include use cases in this final rule to help actors operationalize it. One commenter stated that ASTP/ONC should undertake education on information blocking more broadly. One commenter recommended, as part of implementation of the Protecting Care Access Exception, education for providers about the exception (and other information blocking exceptions) and best practices to protect sensitive health information and facilitate care coordination that supports confidentiality, safety, and autonomy for individuals.

Response. The requests and recommendations for additional guidance, training, examples, and educational materials on the information blocking exceptions are appreciated. We have not provided criteria for assessing legal risks in this final rule because we have finalized, as proposed, the subjective ''good faith'' standard for the § 171.206(a)(1) belief requirement. An actor would be free to reference or apply objective legal risk assessment criteria in determining whether they wish to engage in a practice the Protecting Care Access Exception would cover, if that is how the actor prefers to make such decisions. But we emphasize that because the finalized belief standard is a subjective standard it does *not* require an actor to reference or apply objective risk

[45] 89 FR 63509, 89 FR 63622, 89 FR 63632, 89 FR 63637, and 89 FR 63639.

[46] In addition to the reminder in this paragraph, we have reiterated it multiple times in this final rule preamble.

assessment criteria; any actor who wishes to do so could implement a practice consistent with the *threshold* condition (§ 171.206(a)) without having applied objective legal risk assessment criteria.

As part of our ongoing outreach and education, all feedback and information we receive helps to inform our consideration and ongoing development of resources such as webinar presentations, fact sheets, guidance, and frequently asked questions (FAQs). As new resources become available, they are publicly posted on ASTP/ONC's internet website: *https://www.healthit.gov.* Actors and other interested parties who would like to do so can also subscribe to ASTP/ONC email updates and be among the first to hear about newly posted resources and opportunities to register for upcoming webinars. (A subscription can be created or updated through ASTP/ONC's online Email Subscription Preference Center; for which the URL as of the date this final rule is published is: *https://www.healthit.gov/PreferenceCenter?qs=1&form=HealthIT_PreferenceCenter&height=1100&mbreak=800&mheight=1600.*)

Comments. Some commenters stated that ASTP/ONC and OIG should focus on enforcement with corrective action plans as opposed to the imposition of civil monetary penalties. One commenter stated that ASTP/ONC should exercise enforcement discretion for medical groups.

Response. Details of the enforcement process for actors who may be found to have engaged in information blocking, including imposing corrective action programs, are outside the scope of this rulemaking. In light of the many comments calling for ongoing education and information about all aspects of information blocking, we remind readers that ASTP/ONC has authority to review claims of potential information blocking against health IT developers of certified health IT that may constitute a non-conformity under the ONC Health IT Certification Program. Separately, OIG has authority to investigate claims of potential information blocking across all types of actors: health care providers, health information networks and health information exchanges, and health IT developers of certified health IT. We refer readers seeking additional information about the ''OIG Grants, Contracts, and Other Agreements: Fraud and Abuse; Information Blocking; Office of Inspector General's Civil Money Penalty Rules'' final rule (OIG Final Rule) implementing information blocking civil monetary penalties (88 FR 42820) to OIG's website (*https://oig.hhs.gov/reports-and-publications/featured-topics/information-blocking*) and those seeking more information about the ''21st Century Cures Act: Interoperability, Information Blocking, and the ONC Health IT Certification Program'' final rule (Information Blocking Provider Disincentives Final Rule) (89 FR 54662) to ASTP/ONC's website (*https://www.healthit.gov/informationblocking*). ASTP/ONC's website also provides information on how to submit an information blocking claim and what happens to a claim once it is submitted.

Comments. A few commenters stated that they did not support adding any additional or alternative conditions or requirements to the Protecting Care Access Exception. Some of these commenters stated that additional conditions or requirements would make the exception more complex, and that complying with various State or Federal laws relating to reproductive health care is already complex for health care providers. Some commenters also stated that adding additional conditions to the exception would not reduce the risk of information blocking or improper use of the exception or were unnecessary because other laws such as HIPAA already have their own requirements or enforcement mechanisms. One commenter asked that the exception consist of only the good faith belief condition, stating that the additional requirements created uncertainty and documentation burden.

Response. We appreciate the concerns raised by the commenters. We have not finalized any additional or alternative conditions or requirements for the Protecting Care Access Exception at this time. We will continue working with the regulated community and other interested parties to promote awareness of all of the information blocking exceptions.

We recognize that the health care and health privacy legal landscape is complex for reasons outside the scope of this final rule. However, we do not believe that an exception consisting of only the good faith belief portion of the threshold condition would provide patients or health care providers with adequate assurance that actors (including other health care providers) implement practices under the exception fairly, consistently, and with appropriate consideration of risks of legal action based on the mere fact that someone sought, obtained, provided, or facilitated (or, for the patient protection condition, may have sought, obtained, or needed) reproductive health care that was lawful under the circumstances.

As we stated in the HTI–2 Proposed Rule on how the information blocking regulations operate, the information blocking regulations operate both separately and differently from the HIPAA regulations (*89 FR 63629*). The information blocking regulations are based on statutory authority separate from HIPAA. We refer actors and other persons interested in learning more about how the information blocking regulations, and particularly the exceptions, work in concert with the HIPAA Rules and other privacy laws to support health information privacy, to the discussion of this topic in the HTI–1 Final Rule at *89 FR 1351* through *1354* and the discussion in the HTI–2 Proposed Rule at *89 FR 63628* through 89 FR 63633.

We have finalized the exception's conditions as proposed because we believe they strike the best balance we can attain at this time between the interests of actors and patients in protecting reproductive health care availability and patients' reproductive health privacy with the interests of actors, patients, and others in maintaining and building upon progress made to date toward EHI interoperability and a norm of information sharing that includes individuals being able to easily access, exchange, and use their EHI however and whenever they want. We will remain alert for signals that any type(s) of actor—not just health IT developers of certified health IT—may be attempting to misuse any of the exceptions in 45 CFR part 171. We would anticipate engaging in education and outreach as well as (where applicable) enforcement steps in response to such signals and may consider future proposals for 45 CFR part 171 in response to changing market conditions.

Comments. A few commenters stated that it is important for ASTP/ONC to address that public health use cases for reproductive health data remain relevant while that data is also protected by the Protecting Care Access Exception. The commenters stated that there may be important reasons to send reproductive health data to public health entities while at the same time segmenting that data from being used for other purposes, because that data may be critical to public health functions. Some of these commenters stated they favor provisions to ensure that reproductive health data transmitted electronically is restricted to public health use cases and may not be reused later for non-public-health purposes.

Response. We appreciate the comments. We emphasized in the HTI–2 Proposed Rule (at 89 FR 63632) that actors would continue to be subject to other Federal laws, and to State and Tribal laws. With regard to public health reporting, we stated in an information blocking FAQ (IB.FAQ43.1.2022FEB) [47] that where a law requires actors to submit EHI to public health authorities, an actor's failure to submit EHI to public health authorities could be considered an interference under the information blocking regulations. For example, many states legally require reporting of certain diseases and conditions to detect outbreaks and reduce the spread of disease. Should an actor that is required to comply with such a law fail to report, the failure could be an interference with access, exchange, or use of EHI under the information blocking regulations.[48]

Establishing or explaining which use cases represent permissible purposes for access, exchange, or use of reproductive health care EHI (or any other EHI) under independent laws that may apply to various actors in various circumstances is beyond the scope of this final rule. We refer readers to the definition of ''public health'' in 45 CFR 160.103, and extensive interpretation in the 2024 HIPAA Privacy Rule (89 FR 32976) clarifying that activities such as investigation, intervention, or surveillance in the public health context do not encompass conducting a criminal, civil, or administrative investigation into any person, or imposing criminal, civil, or administrative liability on any person for the mere act of seeking, obtaining, providing, or facilitating health care, or identifying any person for such activities, including those for which use or disclosure of PHI is prohibited by *45 CFR 164.502(a)(5)(iii).*

Comment. One commenter asked that we clearly state that information blocking requirements do not apply to non-clinical public health (*e.g.,* disease surveillance programs).

Response. Opining or advising on whether a particular type of organization or function would or would not meet the § 171.102 ''actor'' definition is beyond the scope of this final rule.

Comments. Several commenters expressed concern about their ability to ''comply'' with the proposed Protecting Care Access Exception ''requirement,'' citing a lack of capability or conflicts with state laws.

Response. Information blocking exceptions are voluntary as we have stated repeatedly over time, including in the ONC Cures Act Final Rule (85 FR 25892), HTI–1 Final Rule (89 FR at 1353, 1378, 1383, and 1392) and the HTI–2 Proposed Rule (89 FR 63638). The information blocking exceptions defined in 45 CFR part 171 offer actors certainty that any practice meeting the conditions of one or more exceptions would not be considered information blocking, but they are not mandatory.

The use of the word ''requirement'' in describing any provision of any information blocking exception in 45 CFR part 171 is not intended to imply that actors must satisfy the provision regardless of whether they wish to engage in a practice to which the exception applies. We refer to ''requirements'' as the way(s) to satisfy a condition of an exception only to make it clear that if an actor's practice does not meet what is specified (*i.e.,* required), then the actor's practice will not be covered by that exception. For example, if an actor wants to share all the EHI that they have and all laws and regulations that apply to the actor and the EHI permit it to be shared with any requestor, then no exception in 45 CFR part 171 is intended to create an affirmative obligation that the actor instead withhold EHI. Rather, an exception offers an actor who chooses to engage in a practice meeting the exception's conditions assurance that such practice will not be ''information blocking'' even though the practice may be likely to interfere with access, exchange, or use of EHI for purposes permissible under all applicable law (such as the HIPAA Privacy Rule, State or, where applicable, Tribal privacy laws).

Comment. One commenter was concerned that the regulation did not mention a date when information blocking exceptions would be ''enforceable.''

Response. The information blocking regulations in 45 CFR part 171, including the first eight exceptions, first became effective on April 5, 2021 (85 FR 70068 and 70069) and actors were subject to the regulations upon the effective date. The OIG Final Rule provisions implementing information blocking penalties (*88 FR 42826*) have been in effect since September 1, 2023. The Information Blocking Provider Disincentives Final Rule (89 FR 54662) became effective as of July 31, 2024.

The Protecting Care Access Exception will be available to actors on and after the effective date of this final rule. The finalized revisions to § 171.202(e) and § 171.204(a)(2) will also be effective on and after that date.

Comments. Several commenters made statements about what the HIPAA Rules require, permit, and do not permit with respect to sharing information related to reproductive health, and how HIPAA relates to the Protecting Care Access Exception. Some commenters encouraged working with OCR and across HHS to align the information blocking regulations with the HIPAA Rules. One commenter requested clarification that ASTP/ONC has considered and accounted for any disclosure consent that is required under changes to HIPAA as it relates to reproductive health care. One comment sought clarification of how a health care provider could get or share EHI without being a HIPAA covered entity.

Response. As we stated in the HTI–2 Proposed Rule on how the information blocking regulations operate, the information blocking regulations operate both separately and differently from the HIPAA regulations (*89 FR 63629*). The information blocking regulations are based on statutory authority separate from HIPAA. We refer actors and other persons interested in learning more about how the information blocking regulations, and particularly the exceptions, work in concert with the HIPAA Rules and other privacy laws to support health information privacy, to the discussion of this topic in the HTI–1 Final Rule at *89 FR 1351* through *1354* and the discussion in the HTI–2 Proposed Rule at *89 FR 63628* through 89 FR 63633. The 45 CFR 164.509 requirement for HIPAA covered entities and business associates to obtain attestations prior to using or disclosing PHI potentially related to reproductive health care for certain purposes is discussed at 89 FR 63628. We plan to continue to work with our federal partners, including OCR, to maintain alignment on, and promote understanding of, regulations which support the lawful access, exchange, and use of electronic health information.

Interpreting the HIPAA regulations in 45 CFR parts 160 and 164, such as by offering guidance as to when or how a health care provider might be capable of or engaged in getting or sharing EHI without also being a HIPAA covered entity, is outside the scope of this rule. We therefore refer readers with questions about HIPAA covered entities to the guidance and informational resources available from both the OCR website: (*https://www.hhs.gov/hipaa/for-professionals/covered-entities/index.html*) and the CMS website

[47] *https://www.healthit.gov/faq/would-not-complying-another-law-implicate-information-blocking-regulations.*

[48] *Ibid.*

(*https://www.cms.gov/priorities/key-initiatives/burden-reduction/administrative-simplification/hipaa/covered-entities*). Additional information about HIPAA transactions is available via the following section of the CMS website: *https://www.cms.gov/priorities/key-initiatives/burden-reduction/administrative-simplification.*

Comments. A few commenters requested that ASTP/ONC clarify the intersection of the proposed Protecting Care Access Exception with state laws and other laws such as 42 CFR part 2 or the HIPAA Privacy Rule. These commenters expressed the importance of safeguarding information concerning seeking care for substance use disorder during pregnancy.

Response. We appreciate the comments received and the insights they offer into the challenges associated with managing information concerning seeking care for substance use disorder during pregnancy. We emphasize that where otherwise applicable law prohibits a specific access, exchange, or use of information, an exception to part 171 is not necessary due to the exclusion of ''required by law'' practices from the statutory information blocking definition—as we have previously noted (for example, at *85 FR 25825*).

Any changes to or interpretation of 42 CFR part 2, which is issued by the Substance Abuse and Mental Health Services Agency (SAMHSA) pursuant to statutory authority separate from the information blocking statute, are out of scope for this final rule. Similarly, interpretation of any State or Tribal law (statute or regulation) is outside the scope of this final rule.

Interpreting or otherwise providing guidance on the HIPAA regulations in subchapter C of subtitle A of title 45 of the CFR is outside the scope of this final rule. We therefore refer readers with questions about HIPAA covered entities to the guidance and informational resources available from both the HHS OCR (*https://www.hhs.gov/hipaa/for-professionals/covered-entities/index.html*) and the CMS website (*https://www.cms.gov/priorities/key-initiatives/burden-reduction/administrative-simplification/hipaa/covered-entities*). Additional information about HIPAA transactions is available via the following section of the CMS website: *https://www.cms.gov/priorities/key-initiatives/burden-reduction/administrative-simplification.*

As noted above, we refer actors and other persons interested in learning more about how the information blocking regulations, and particularly the exceptions, work in concert with the HIPAA Rules and other privacy laws to support health information privacy, to the discussion of this topic in the HTI–1 Final Rule at 89 FR 1351 through 1354 and the discussion in the HTI–2 Proposed Rule at 89 FR 63628 through 63633. We will continue to work with our federal partners, including OCR, to promote alignment on, and understanding of, regulations which support the lawful access, exchange, and use of electronic health information.

Comments. One commenter appreciated that ASTP/ONC recognized the interplay between the proposed Protecting Care Access Exception, the existing Infeasibility Exception (particularly, the Segmentation sub-exception) and the Privacy Exception (specifically, Individual's Request Not to Share EHI sub-exception) given that advanced capabilities to easily segment data are not uniformly available for all EHR and health IT systems. Another commenter asked ASTP/ONC to clarify how the Protecting Care Access Exception would intersect with the Infeasibility Exception. Noting that the proposal indicated that the redacted information must only be that which is believed to put an individual at risk of legal action, the commenter stated it was unclear whether the Infeasibility Exception could be used with this exception when segmentation is not available and asked ASTP/ONC to clarify whether such a combination of exceptions is permitted.

Response. We appreciate the comment. As discussed above, the HTI–2 Proposed Rule's proposed revisions to the Infeasibility Exception's *segmentation* condition (§ 171.204(a)(2)) included addition of an explicit cross-reference to the Protecting Care Access Exception (§ 171.206) (89 FR 63623). In various circumstances, an actor may wish to engage in one or more practice(s) that are covered in part, but not fully covered, by the Protecting Care Access Exception. In some of these situations, such an actor may want to consider the potential certainty that could be available by satisfying a combination of the Protecting Care Access Exception and the Infeasibility Exception (§ 171.204). (We note that this is only one example where ''stacking'' of exceptions may occur; there may be a wide variety of scenarios where ''stacking'' other combinations of various exceptions with one another—or with restrictions on use or disclosure of EHI under applicable law—may occur, as we discussed in more detail in the HTI–1 Final Rule preamble, 89 FR 1353 through 1354).

The information blocking exceptions operate independently. In the HTI–2 Proposed Rule, we stated that one of the existing information blocking exceptions applicable in some circumstances where the proposed Protecting Care Access Exception could also apply is the Privacy Exception (89 FR 63631). Where facts and circumstances were such that an actor could choose to shape their practice in withholding EHI to satisfy either the Protecting Care Access Exception (if finalized) or another exception, the actor would have discretion to choose which exception they wish to satisfy. An actor's practice in such situation(s) would not need to satisfy both exceptions in order for the practice to not be considered information blocking (89 FR 63631).

b. Threshold Condition and Structure of Exception

We proposed that the § 171.206(a) *threshold* condition's requirements must be satisfied in order for any practice to be covered by the exception (89 FR 63633). To meet the condition's subparagraph (a)(1) belief requirement, we proposed that the practice must be undertaken based on a good faith belief that:

- the person(s) seeking, obtaining, providing, or facilitating reproductive health care is at risk of being potentially exposed to legal action that could arise as a consequence of particular access, exchange or use of specific EHI; and
- the practice could reduce that risk.

To satisfy the belief requirement (§ 171.206(a)(1)), we proposed that the actor's belief need not be accurate but must be held in good faith. We also sought comment, on whether actors, patients, or other interested parties may view ''good faith belief'' as a standard that is unnecessarily stringent or that could make the Protecting Care Access Exception difficult for small actors with limited resources, such as small and safety net health care providers, to confidently use. We requested input from commenters regarding concerns they might have about the ''good faith belief'' standard and how such concerns could be mitigated by the addition to § 171.206 of a presumption that an actor's belief is held in good faith.

We also sought comment about setting the belief standard at ''belief'' or ''honest belief'' as alternatives to the good faith standard, and whether those standards might help to reduce misunderstanding of § 171.206(a). We sought comment on whether to add to § 171.206 a provision to presume an actor's belief met the standard unless we have or find evidence that an actor's belief did not meet the standard at all relevant times (relevant times are those

when the actor engaged in practices for which the actor seeks application of the exception). Like ''good faith belief,'' each of ''belief'' or ''honest belief'' would be a subjective rather than an objective standard. Under either alternative, the actor's belief would not be required to be accurate but could not be falsely claimed. Unlike ''good faith belief,'' neither ''belief'' nor ''honest belief'' is a particularly long established and widely used legal standard. However, we requested input on whether these standards might help to reduce potential misunderstanding of § 171.206(a) and what would be necessary for an actor to meet the proposed ''good faith belief'' standard.

We noted that where an actor is a business associate of another actor or otherwise maintains EHI on behalf of another actor, this exception would (where its requirements are otherwise fully satisfied) apply to practices implemented by the actor who maintains EHI based on the good faith belief and organizational policy or case-by-case determinations of the actor on whose behalf relevant EHI is maintained. We proposed in the alternative to require that each actor rely only on their own good faith belief in order to implement practices covered by the Protecting Care Access Exception, including when an actor maintains EHI on behalf of other actor(s) or any other person(s).

We proposed in § 171.206(e) (89 FR 63804) to define ''legal action'' for purposes of the Protecting Care Access Exception to include any of the following when initiated or pursued against any person for the mere act of seeking, obtaining, providing, or facilitating reproductive health care: (1) civil, criminal, or administrative investigation; (2) a civil or criminal action brought in a court to impose criminal, civil, or administrative liability; or (3) an administrative action or proceeding against any person (89 FR 63639). We emphasized that the proposed Protecting Care Access Exception would apply where an actor's practice meets the § 171.206(a) *threshold* condition and at least one of the other two conditions in the exception, none of which would require the actor to quantify a degree, amount, or probability of the risk of potential exposure to legal action the actor believes in good faith exists and could be reduced by the practice to which § 171.206 applies (89 FR 63639).

We emphasized that to satisfy the proposed Protecting Care Access Exception, an actor's practice that is likely to interfere with lawful access, exchange, or use of EHI would need to fully satisfy relevant requirements of the *threshold* condition in § 171.206(a) and at least one of the other two conditions (§ 171.206(b) or § 171.206(c)).[49] Thus, a practice could satisfy the exception as proposed *only if* implemented based on an actor's good faith belief that access, exchange, or use potentially creates or increases anyone's risk of facing legal action that would be specifically based upon a person having merely sought, obtained, provided, or facilitated care that was lawful under the circumstances in which such health care was provided. The exception is not intended to apply to an actor's interference with access, exchange, or use of EHI based on an actor's belief that the practice would reduce any person's exposure to legal action or liability based on conduct that was not the mere act of seeking, obtaining, providing, facilitating, or (where the *patient protection* condition applies, potentially needing) reproductive health care that was, under the circumstances in which the conduct occurred, unlawful.

The belief requirement (subparagraph (1)) of the *threshold* condition (§ 171.206(a)) was proposed to ensure that the exception is applicable only in situations where an actor has a good faith belief that their practice of interfering with the access, exchange, or use of EHI that indicates the seeking, obtaining, providing or facilitating of reproductive health care (not with EHI access, exchange, or use in general or universally) could reduce a risk of potential exposure to legal action against identifiable persons that could otherwise arise as a consequence of the particular access, exchange or use of specific EHI that is affected by the practice. We stated (89 FR 63634) that to satisfy the § 171.206(a)(1) requirement, the actor's good faith belief would need to be that persons seeking, obtaining, providing, or facilitating reproductive health care ''are at risk'' of being potentially exposed to legal action. This does not mean that the exception would apply only where the actor is confident that legal action will follow from access, exchange, or use of EHI related to reproductive health care. ''Are at risk'' would simply mean that the risk the actor believes might arise as a consequence of the affected access, exchange, or use of EHI is one that could, to the best of the actor's knowledge and understanding, arise under law that is in place at the time the practice(s) that is based on the belief are implemented. Thus, we noted that the proposed § 171.206 exception would not apply to practices undertaken based on a hypothetical risk of exposure to legal action, such as one the actor postulates could perhaps become possible if applicable law(s) were to change in the future. Similarly, where an actor may believe a risk exists that someone could potentially be exposed to legal action but does not believe that a particular practice could achieve some reduction in that risk, the § 171.206(a)(1) requirement would not be met by (and therefore the § 171.206 exception would not apply to) that practice.

The § 171.206(a) *threshold* condition's tailoring requirement (§ 171.206(a)(2)) is intended to further restrict the exception's coverage to practices that are no broader than necessary to reduce the risk of potential exposure to legal action that the actor has a good faith belief could arise from the particular access, exchange or use of the specific EHI.

We noted that like similar provisions in other exceptions, this tailoring requirement ensures that the exception would not apply to an actor's practices likely to interfere with access, exchange, or use of all of an individual's EHI when it is only portions of the EHI that the actor believes could create the type of risk recognized by the exception. Where only portion(s) of the EHI an actor has pertaining to one or more patients pose a risk of potentially exposing some person(s) to legal action, the proposed Protecting Care Access Exception would apply only to practices affecting particular access, exchange, or use of the specific portion(s) of the EHI that pose the risk.

Data segmentation is important for exchanging sensitive health data (as noted in the ONC Cures Act Final Rule at *85 FR 25705*) and for enabling access, exchange, and use of EHI (as noted in the HTI–1 Proposed Rule at *88 FR 23874*). We noted in the HTI–2 Proposed Rule at 89 FR 63634 that we were aware of the external efforts to innovate and further develop consensus technical standards, and we are hopeful that this will foster routine inclusion of advanced data segmentation capabilities in EHR systems and other health IT over time. However, we have received public feedback (both prior to and in response to the HTI–1 Proposed Rule request for information on health IT capabilities for data segmentation and user/patient access at 88 FR 23874 and 23875) that

[49] In relevant circumstances, an actor's practice might meet *both* the § 171.206(b) *patient protection* and § 171.206(c) *care access* conditions simultaneously. But each of these conditions could also apply in circumstances where the other does not. Thus, the proposed exception is intended and designed to apply where either or both of the *patient protection* and *care access* conditions are met in complement to the § 171.206(a) *threshold condition.*

indicates that there is currently significant variability in health IT products' capabilities to segment data, such as to enable differing levels of access to data based on the user and purpose. We recognize there is a potential that some actors, who may wish to withhold specific EHI under the conditions specified in the proposed Protecting Care Access Exception (§ 171.206), may not yet have the technical capability needed to unambiguously segment the EHI for which § 171.206 would apply from other EHI that they could lawfully make available for a particular access, exchange, or use. Therefore, we proposed elsewhere in the HTI–2 Proposed Rule to modify the Infeasibility Exception's *segmentation* condition (§ 171.204(a)(2)) to explicitly provide for circumstances where the actor cannot unambiguously segment EHI that may be withheld in accordance with Protecting Care Access Exception (§ 171.206) from the EHI for which this exception is not satisfied (89 FR 63633 and 63634).

We stated (89 FR 63634) that the implementation requirement in subparagraph (a)(3) of the *threshold* condition is intended to ensure that practices are applied fairly and consistently while providing flexibility for actors to implement a variety of practices, and to do so through organizational policy or in response to specific situations, as best suits their needs. We proposed that any given practice could satisfy this implementation requirement in either of two ways. First, an actor could undertake the practice consistent with an organizational policy that meets the requirements proposed in § 171.206(a)(3)(i). To satisfy the proposed requirement in this first way, the organization's policy would need to identify the connection or relationship between the particular access, exchange, or use of the specific EHI with which the practice interferes and the risk of potential exposure to legal action that the actor believes could be created by such access, exchange, or use. The policy would also need to be:

- in writing;
- based on relevant clinical, technical, or other appropriate expertise;
- implemented in a consistent and non-discriminatory manner; and
- structured to ensure each practice implemented pursuant to the policy satisfies paragraphs (a)(1) and (a)(2) as well as at least one of the conditions in paragraphs (b) or (c) of § 171.206 that is applicable to the prohibition of the access, exchange, or use of the EHI.

We stated that in order to ensure each practice implemented pursuant to the policy applies only to the particular access, exchange, or use scenario(s) to which at least one of the conditions in paragraphs (b) or (c) of § 171.206 is applicable, a policy would need to specify the facts and circumstances under which it would apply a practice. To clarify, we note that a policy would need to specify the facts and circumstances under which the policy would apply to a practice. Such specifications need not be particularized to individual patients but would need to identify with sufficient clarity for the actor's employees and business associates (or other contractors, as applicable) to accurately apply the practice only to relevant access, exchange, or use scenarios. The types of facts or circumstances the policy might need to specify may vary, but we believe might often include such details as to what EHI (such as what value set(s) within what data element(s)) and to what scenario(s) of access, exchange, or use the policy will apply to a practice.

We noted (89 FR 63634) that there may be value sets currently available or in development by various parties that may help an actor to identify what EHI within the actor's EHR or other health IT systems indicates care meeting the reproductive health care definition at § 171.102. However, we did not propose to limit the application of the exception to any specific value set(s). Because version updates of such value sets, or new value sets, may develop more rapidly than adoption or reference of them in regulations could occur, we noted that we believed the intended operation of the exception will be best served by leaving actors flexibility to identify, document in their organizational policy or case-by-case determination(s), and then use whatever value set(s) comport with their belief that a risk of potential exposure to legal action (consistent with the exception's conditions) could be created or increased by sharing specific EHI indicating or (where the *patient protection* condition applies) potentially related to reproductive health care.

The proposed provision in paragraph (a)(3)(ii) offers actors the second of the two ways to satisfy subparagraph (a)(3): by making determination(s) on a case-by-case basis. As we discussed (89 FR 63635), to satisfy paragraph (a)(3)(ii), any case-by-case determination would need to be made in the absence of an organizational policy applicable to the particular situation and be based on facts and circumstances known to, or believed in good faith by, the actor at the time of the determination. A practice implemented based on the determination must also be tailored to reduce the risk of legal action the actor has a good faith belief could result from access, exchange, or use of the EHI. And the practice must be no broader than necessary to reduce the risk of potential exposure to legal action (paragraphs (a)(1) and (a)(2)).

Finally, to meet paragraph (a)(3)(ii), the determination made on a case-by-case basis would need to be documented either before or contemporaneous with beginning to engage in any practice(s) based on the determination (89 FR 63634 and 63635). The documentation of the determination must identify the connection or relationship between the interference with access, exchange, or use of EHI indicating or related to reproductive health care and the risk of potential exposure to legal action. By identifying the connection or relationship, this documentation would explain what risk the actor believes the practice(s) will mitigate (89 FR 63635).

We explained (89 FR 63635) that the proposed § 171.206(a)(3) implementation requirement's optionality would support the actor's interest in having flexibility to address both relatively stable and more dynamic facts and circumstances. Each of the options is intended to balance this interest of the actor with the interests of others, including the actor's current and potential competitors, in ensuring that any information blocking exception does not apply to practices that are not necessary for the specific purpose(s) the exception is designed to serve. The subparagraph (a)(3)(i) organizational policy provision would allow actors to apply relevant expertise available at the time of creating and updating organizational policies to craft a policy that suits their circumstances (such as technological capabilities and staffing and the types of scenarios they have experienced or expect to experience, perhaps with some regularity). The case-by-case determination provision (subparagraph (a)(3)(ii)) ensures the proposed exception would be available for all actors across the full array of facts and circumstances they may encounter, including unanticipated ones.

We also sought comment (89 FR 63635) on adding to the § 171.206(a) *threshold* condition an additional requirement that the actor's practice must not have the effect of increasing any fee for accessing, exchanging, or using EHI that the actor chooses to seek from an individual (as defined in § 171.202(a)) or counsel representing the individual in an action or claim contemplated, filed, or in progress with

a federal agency, in federal court, or a court in the jurisdiction where care was provided. We proposed this requirement in the alternative. This alternative proposal would mean that the proposed exception would not be met by an actor's practice that had such effect even if any fee that the actor chooses to charge for access, exchange, or use of EHI would, after such increase, continue to satisfy the Fees Exception (§ 171.302).

The following is a summary of the comments we received and our responses, organized by specific subparagraph within the § 171.206(a) *threshold* condition.

Threshold Condition, General

Comments. One commenter advocated a two-step approach so the actor who ''owns'' the EHI would be the first to decide whether to invoke the exception. If such actor decided to withhold EHI based on the exception, then the commenter stated a business associate or other actor performing services on behalf of the ''owning'' actor should be bound by that decision because it is acting on behalf of the ''owning'' actor. The commenter stated that if the ''owning'' actor does not invoke the exception, the business associate or other actor performing services should be able to make an independent decision as to whether to invoke the exception. Some commenters suggested that only actors who are health care providers should be able to utilize the exception although they did not expressly address whether they believed another actor who holds EHI on behalf of such a provider would be required to follow the provider's decision.

Response. We appreciate the opportunity to clarify that, like all information blocking exceptions, the Protecting Care Access Exception, as proposed and as finalized, is voluntary for any actor. We interpret the one commenter's references to an actor ''owning'' EHI as the commenter's shorter way of saying the actor who maintains EHI on or on whose behalf another actor maintains or otherwise handles EHI. We decline to adopt at this time a requirement that an actor performing services on behalf of another follow the decision of the actor who maintains EHI, or on whose behalf EHI is maintained, to withhold EHI consistent with the Protecting Care Access Exception. A *mandate* that any actor conform their practices to an exception based on another actor's choice to do so would be both unprecedented in 45 CFR part 171 and beyond the scope of any alternative provision for § 171.206 on which we solicited comments in the HTI–2 Proposed Rule.

We proposed, and have finalized, the Protecting Care Access Exception to be available to all actors. We did not propose an option or alternative for the exception to be available only to certain type(s) of actor. Moreover, we believe that making the Protecting Care Access Exception available only to health care providers would add unnecessary complexity to the information blocking regulations while potentially failing to support providers' ability to implement practices consistent with the exception. If the Protecting Care Access Exception were not equally available to health IT developers of certified health IT and HINs/HIEs on whom health care providers often rely for many or all of their health IT, these actors would be left with the same uncertainty they have experienced to date about potentially implicating the information blocking definition. For example, a health IT developer of certified health IT or a HIN/HIE would be left with uncertainty about implicating the information blocking definition if they were to limit access, exchange, or use of reproductive health care EHI at the direction of a health care provider, but the Protecting Care Access Exception were applicable only to practices undertaken by health care providers.

Comments. Several comments requested that we indicate whether care would or would not be lawful in a variety of scenarios involving various intersections of Federal law with State(s)' laws, State(s)' law with Tribal law, or Federal and Tribal law with State(s)' law. One commenter suggested that carefully defining these would ensure that the exception is carefully targeted in scope. One commenter suggested we remove references to care being lawful where furnished, citing scenarios where a patient may seek lawful follow-on care for complications of self-administered care that the commenter asserted is not required to be reported to law enforcement under state law.

Response. Opining on what care is or is not lawful under what specific circumstances, or advising on which laws take precedence in any specific fact pattern, is beyond the scope of this final rule. The exception is designed to accommodate the wide variety of scenarios where reproductive health care is (or the actor may for purposes of the exception presume it is) lawful under the circumstances in which it is provided. We decline at this time to remove references to care being lawful where furnished, because such references provide clarity to actors regarding our intent with regards to the applicability of the Protecting Care Access Exception. For example, we noted in the HTI–2 Proposed Rule that the exception is not intended to apply, and as finalized in this rule it does not apply, to an actor's attempt to avoid consequences for the actor's own wrongdoing (89 FR 63636) or limit production of (otherwise discoverable) EHI in a civil, criminal, or administrative action that is brought in the jurisdiction where a health care provider provided health care that a patient (or their representative) alleges was negligent, defective, substandard, or otherwise tortious (89 FR 63632).

Threshold Condition—Belief Requirement

Comments. Many commenters supported the proposed exception, explicitly as proposed or without further comments. Some of them expressly supported the good faith belief standard. A few commenters noted that ''good faith belief'' is a subjective standard and supported the use of a subjective standard. A few commenters expressed support for the alternative standard of ''belief'' or ''honest belief'' rather than ''good faith belief'' for purposes of the *threshold* condition at § 171.206(a)(1). These commenters stated that using ''belief'' or ''honest belief'' as the standard would reduce potential misunderstandings while encouraging appropriate use of the exception by providing actors with as much flexibility as possible to protect patients and providers. One commenter suggested that good faith belief and honest belief were synonymous but in either case, ASTP/ONC should state that the standard is subjective. A few commenters asked for outreach and education to promote accurate understanding of the standard and actor confidence in their ability to use the exception.

Response. We thank commenters for their feedback. Having reviewed and considered all comments received in response to the proposal, we have finalized § 171.206(a)(1) as proposed. As we stated in the HTI–2 Proposed Rule, to satisfy the § 171.206(a)(1) belief requirement, the actor's belief need not be accurate (89 FR 63633). We have updated the regulatory text to state that for purposes of the Threshold Condition, an actor who is a business associate of or who otherwise maintains EHI on behalf of another actor may rely on the good faith belief (consistent with § 171.206(a)(1)) and organizational policy (consistent with § 171.206(a)(3)) of the actor on whose behalf the relevant EHI is maintained. As noted in the HTI–

2 Proposed Rule and above, unlike ''good faith,'' neither ''belief'' nor ''honest belief'' is a particularly long established or widely used legal standard (89 FR 63633). We also affirm that the finalized ''good faith belief'' standard is a subjective standard. As we noted in the HTI–2 Proposed Rule preamble, the alternatives (''belief'' and ''honest belief'') were, like the ''good faith belief'' standard, subjective standards (89 FR 63633). Also, we provide in response to other comments (below) additional discussion to help actors understand what it means, in specific context and for the specific purpose of an actor's practice meeting the § 171.206 exception's conditions, to hold a belief in good faith.

Comments. Several comments supported adding a provision to presume an actor's belief met the standard unless we have or find evidence that an actor's belief did not meet the standard at all relevant times. Commenters stated that this provision would promote alignment with HIPAA, reduce confusion in light of rapidly shifting state laws, and strengthen the protections of this new exception. One commenter asked that this presumption of good faith would only be able to be rebutted with clear and convincing evidence, which they noted is a well-established legal standard.

Response. We appreciate the comments advocating for a presumption provision for ''good faith belief.'' Commenters did not supply reasons supporting the assertion that a presumption provision for ''good faith belief'' would align with HIPAA as there is no generally applicable presumption of good faith in the HIPAA Rules. Having reviewed and considered all comments received in response to the proposed Protecting Care Access Exception, we have decided not to adopt in regulation an explicit presumption for ''good faith belief'' at this time. Instead, we emphasize, as we stated in the HTI–2 Proposed Rule, that ''good faith belief'' is a subjective standard. To meet this standard for purposes of an actor's practice meeting the conditions of the finalized Protecting Care Access Exception, an actor's belief need not ultimately be accurate; it only need to be held in good faith. In response to concerns about how an actor would demonstrate good faith, we note that the § 171.206(a) *threshold* requirement is designed to function as a cohesive whole, within which one of the functions of the paragraph (3)(i) requirement that an organizational policy be in writing is to document what the actor believes. This includes identifying the connection between the particular access, exchange, or use scenarios for specific EHI with which the practice based on the policy interference and the risk of potential exposure to legal action the actor has a good faith belief could be created by such access, exchange, or use of that EHI. The paragraph (3)(ii) requirement that any case-by-case determination be documented either before or contemporaneous with the actor beginning to engage in any practice(s) based on the determination serves the same purpose.

We also note that whether a belief is held in good faith for purposes of § 171.206(a) may be partly proven by the absence of indicators of bad faith, such as indicators that the actor's claim of having met the exception may in fact be pretextual. One illustrative example or indicator of bad faith (of which there could be many more) would be if the actor in practice only withholds EHI based on their purported belief when the EHI is requested by a competitor or potential competitor of the actor, while not withholding EHI from otherwise similarly situated non-competitor requestors. By contrast, indicators of good faith would include, among others, that the actor applies the same practices to all requests from any and all similarly situated requestors, with no difference in applying the practice to requests from competitors or potential competitors in comparison to affiliates or other non-competitors. For these reasons, we have decided that that the subjective ''good faith belief'' standard we have finalized properly accommodates actors who are unsure of their risks.

Comments. One commenter suggested that the subjective good faith standard should be harmonized with the objective standard used in the 2024 HIPAA Privacy Rule. One commenter stated that the ''good faith belief'' threshold was not high enough, especially when EHI is requested for treatment.

Response. While ''good faith belief'' is a subjective standard (*89 FR 63633*), we believe that a subjective standard is important to offer actors, including health care providers, the flexibility they need to care for their patients through promoting effective relationships with them based on mutual trust. Given the substantive policy approach differences between information blocking exceptions and the HIPAA Privacy Rule's permitted and prohibited uses and disclosures, we note that use of a subjective standard for this voluntary exception within the information blocking regulations is fully compatible with the HIPAA Privacy Rule's use of objective standards in prohibiting the use or disclosure of PHI for specific activities. The Protecting Care Access Exception is intended to be available and usable for all actors, including small actors with limited resources (such as safety net health care providers) who might struggle to evaluate the many particular EHI sharing scenarios that they encounter against an objective standard. Moreover, the exception is not relevant where the EHI involved is also PHI subject to a prohibited use or disclosure under the HIPAA Privacy Rule. This is because where applicable law prohibits a specific access, exchange, or use of information, the information blocking regulations consider the practice of complying with such laws to be ''required by law.'' Practices that are ''required by law'' are not considered ''information blocking'' (*see* the statutory information blocking definition in section 3022(a)(1) of the PHSA and the discussion in the ONC Cures Act Final Rule at 85 FR 25794).[50]

Comments. One commenter stated that they approve of ASTP/ONC's choice of ''could reduce that risk'' rather than ''would,'' ''likely would,'' or ''should,'' in paragraph (a)(1)(ii) of the Protecting Care Access Exception, referring to the practice undertaken based on the actor's good faith belief that specific practices likely to interfere with access, exchange, or use of electronic health information could reduce the risk of being potentially exposed to legal action. The commenter stated that the approach differs from ASTP/ONC (and often CMS and other HHS partners') practice of trying to maximize data sharing while considering privacy concerns that might inhibit sharing because using the words ''could reduce that risk'' make it less likely that data will be shared, compared to using words such as ''would,'' ''likely would,'' or ''should.''

Response. We appreciate the comments and the commenter's support. As we explained above, we believe it is reasonable and necessary for an actor to restrict access, exchange, or use of specific EHI that indicates or (under § 171.206(b)) is potentially

[50] We refer readers interested in learning more about the interaction of the information blocking regulations with the HIPAA Rules and other laws protecting individuals' privacy interests to the discussion of the Privacy Exception in the ONC Cures Act Final Rule (85 FR 25642, 85 FR 25845 through 25859) and the discussion of this topic in the HTI–1 Final Rule preamble (89 FR 1351 through 1354). We also highlight the availability of additional resources through our website (to quickly navigate to the information blocking section of HealthIT.gov, the following URL can be entered into a browser address bar or search bar: *https://www.healthit.gov/informationblocking*).

related to reproductive health care so that health care providers continue to use modern, interoperable health IT that better promotes patient safety than would paper or hybrid recordkeeping methods.

Comments. No comments were received on the possible alternative proposal that each actor be required to rely only on its own good faith belief.

Response. We have finalized, as proposed, that where an actor is a business associate of another actor or otherwise maintains EHI on behalf of another actor, the Protecting Care Access Exception applies (where its requirements were otherwise fully satisfied) to practices implemented by the actor who maintains EHI based on the good faith belief and organizational policy or case-by-case determinations of the actor on whose behalf relevant EHI is maintained (*89 FR 63633*). As discussed in the HTI–2 Proposed Rule, this means that where an actor is a business associate or otherwise maintains EHI on behalf of another actor, the finalized Protecting Care Access Exception (§ 171.206) will be applicable (where its requirements are otherwise fully satisfied) to practices implemented by the actor who maintains EHI based on the good faith belief and organizational policy or case-by-case determinations of the actor on whose behalf relevant EHI is maintained. We have clarified this finalized policy by adding this wording as § 171.206(a)(4), so that this flexibility is immediately clear to actors from the face of the regulatory text.

We clarify, however, that where an actor is a business associate or otherwise maintains EHI on behalf of an entity that is not an actor (as defined in § 171.102), the Protecting Care Access Exception's *threshold* condition (§ 171.206(a)) will be satisfied only where the actor who maintains EHI holds a good faith belief consistent with § 171.206(a)(1) and implements a practice consistent with either § 171.206(a)(2)(i) or (ii). We specifically proposed that an actor could rely on the good faith belief and organizational policy or case-by-case determinations of another § 171.102 actor (89 FR 63633). We did not propose that an actor could rely on belief, policy, or case-by-case determination of *any* entity on behalf of whom the actor may maintain EHI. An entity that is not an actor subject to the information blocking regulations may be unlikely to address information blocking regulations in any of their policies, procedures, or regulatory compliance plans. Therefore, we believe that, *when* an actor is maintaining EHI on behalf of a non-actor entity, limiting application of the finalized Protecting Care Access Exception to practice(s) undertaken based on the actor's own good faith belief and implemented consistent with the actor's own organizational policy or case-by-case determination is an important safeguard against attempts to misuse the exception (by accident or otherwise).

i. Threshold Condition—Tailoring Requirement

Comment. One commenter noted that requiring the practice be no broader than necessary to reduce the risk seemingly preempts health care providers from leveraging organization wide policies in order to avail themselves of this exception.

Response. The tailoring requirement in § 171.206(a)(2), like similar provisions in other exceptions, ensures that the exception will not apply to an actor's practices likely to interfere with access, exchange, or use of all of an individual's EHI when it is only portions of the EHI that the actor believes could create the type of risk recognized by the exception. Where only portion(s) of the EHI an actor has pertaining to one or more patients pose a risk of potentially exposing some person(s) to legal action, the proposed Protecting Care Access Exception would apply only to practices affecting access, exchange, or use of the specific portion(s) of the EHI that pose the risk. Individuals' EHI will often include a wide range of care types, many of which an actor would seem unlikely to have a good faith belief could expose anyone involved in the care to a risk of legal action *as defined in § 171.206(e).* We emphasize that the finalized Protecting Care Access Exception does *not* apply to an actor's interference with access, exchange, or use of EHI based on an actor's belief that the practice would reduce any person's exposure to legal action or liability based on conduct *other than* the mere act of seeking, obtaining, providing, facilitating, or (where the *patient protection* condition applies) potentially needing, reproductive health care that under the circumstances was, or (where the *patient protection* condition applies) would have been, lawful.

When read as a whole, including the option for an actor's practice to satisfy the § 171.206(a)(3) implementation requirement by implementing the practice based on an organizational policy consistent with § 171.206(a)(3)(i), we believe the finalized *threshold* condition (§ 171.206(a)) provides adequate flexibility for actors who wish to do so to implement a practice based on organizational policy. As we explained in the preamble proposing § 171.206(a)(3)(i), a policy's specifications need not be particularized to individual patients (89 FR 63634). We clarify that an organizational policy's specifications would also not need to be particularized to individual requests for access, exchange, or use of EHI in order to satisfy the requirements of § 171.206(a)(3)(i). For additional explanation of § 171.206(a)(3)(i) and (ii), we refer readers to the HTI–2 Proposed Rule preamble at 89 FR 63634 through 63635.

Comments. One commenter generally supported the Protecting Care Access Exception but expressed concern about how the tailoring requirement may be interpreted and enforced given the broad definition of reproductive health care. The commenter asserted that nearly every patient record contains information about reproductive health care under the HIPAA definition, which may make it difficult to tailor EHI. The commenter therefore asked that ASTP/ONC be flexible in its interpretation and enforcement of the tailoring practices, considering the breadth of the new HIPAA regulatory amendments and the state laws at issue. If ASTP/ONC is expecting hospitals to tailor their practices in a certain manner, the commenter asked ASTP/ONC to provide further information and resources on what constitutes tailoring. The commenter also noted the limited feasibility of data segmentation. Another commenter acknowledged the potential challenges for Health IT developers in generating the technological capabilities to meet the requirements of the Protecting Care Access Exception including that the practice is tailored to be no broader than necessary to reduce the risk of potential legal exposure.

Response. In context of the comment about whether ASTP/ONC may be expecting hospitals to tailor their practices in a certain manner, we interpret ''manner'' to mean particular health IT functionalities or workflows. We do not read ''manner'' in this context to mean by way of value set(s) within data elements specifically because we had indicated in the HTI–2 Proposed Rule that we did not propose to limit the application of the Protecting Care Access Exception to any specific value set(s) (89 FR 63634). We have not specified that any actor have or use certain functionalities or workflows in order to satisfy the § 171.206(a)(2) tailoring requirement. We refer readers to our explanation in the HTI–2 Proposed Rule (89 FR 636333) that the (§ 171.206(a)(2)) tailoring requirement is intended to restrict the exception's coverage to

practices that are no broader than necessary to reduce the risk of potential exposure to legal action.[51] We emphasize that, like similar provisions in other exceptions, this tailoring requirement ensures that the exception would not apply to an actor's practices likely to interfere with access, exchange, or use of all of an individual's EHI when it is only portions of the EHI that the actor believes could create the type of risk recognized by the exception. Where only portion(s) of the EHI an actor has pertaining to one or more patients pose a risk of potentially exposing some person(s) to legal action, the proposed Protecting Care Access Exception would apply only to practices affecting particular access, exchange, or use of the specific portion(s) of the EHI that pose the risk.

In our discussion of the § 171.206(a) *threshold* condition's tailoring requirement (§ 171.206(a)(2)) in the HTI–2 Proposed Rule, we noted the importance of data segmentation for exchanging sensitive health data and enabling access, exchange, and use of EHI (*89 FR 63634*). We stated that we are aware of external efforts to innovate and mature consensus technical standards, and we hope this will foster routine inclusion of increasingly advanced data segmentation capabilities in more EHR systems and other health IT over time (*89 FR 63634*). At the same time, we also stated that public feedback has indicated significant variability in health IT products' capabilities to segment data, such as to enable differing levels of access to data based on the user and purpose. Given this varying capability, we acknowledged that some actors who may wish to withhold specific EHI under the conditions specified in the proposed Protecting Care Access Exception (§ 171.206) may not yet have the technical capability needed to unambiguously segment the EHI for which § 171.206 would apply from other EHI that they could lawfully make available for a particular access, exchange, or use (*89 FR 63634*). We therefore proposed to modify the Infeasibility Exception's segmentation condition (§ 171.204(a)(2)) to explicitly provide for circumstances where the actor cannot unambiguously segment EHI that may be withheld in accordance with Protecting Care Access Exception (§ 171.206) from the EHI for which this exception is not satisfied. We refer readers to discussion of the finalized § 171.204(a)(2) modification of this final rule preamble. We also refer readers, as mentioned previously, to the discussion in the HTI–1 Final Rule of how combination(s) of exceptions may be used when an actor wishes to engage in one or more practices that are covered in part (but not fully covered) by one exception (89 FR 1353 and 1354). We will continue working with interested parties and the regulated community to promote understanding and foster all actors' compliance with the information blocking regulations. Details of the enforcement process for actors who may be found to have engaged in information blocking are outside the scope of this rulemaking.

ii. Threshold Condition—Implementation Requirement

Comments. One comment noted the importance of a provider being able to implement the exception as part of an organizational policy because it is infeasible and a paperwork burden for providers to individually mark charts or data elements as sensitive. Another comment expressed appreciation that providers would be able to limit access to reproductive EHI as part of following organizational policies that are based on their expertise and suit their circumstances (such as technological capabilities, staffing, and the types of scenarios they have experienced or expect to experience) in addition to the case-by-case basis. Another commenter thought that the language of the exception contemplates workflows where actors are making manual decisions to withhold or release data but suggested that in practice, most of these decisions are likely to be made programmatically by EHRs and other certified health IT noting that the actors would be constrained by their technology.

Response. We appreciate the comments. We agree on the importance of having the option of implementing the exception as a part of an organizational policy. We explained (89 FR 63634) that the implementation requirement in subparagraph (a)(3) of the *threshold* condition is intended to ensure that practices are applied fairly and consistently while providing flexibility for actors to implement a variety of practices, and to do so through organizational policy or in response to specific situations, as best suits their needs. We have finalized subparagraph (a)(3) of the *threshold* condition as proposed (89 FR 63804). We refer readers to our discussion of what an organizational policy needs to specify, which also notes that a policy need not be particularized to individual patients in order to be consistent with subparagraph (a)(3)(i). Furthermore, we discussed in the HTI–2 Proposed Rule that we recognize there is currently significant variability in health IT products' capabilities to segment data and thus we finalized in this final rule modifications to the Infeasibility Exception's *segmentation* condition (§ 171.204(a)(2)) to explicitly provide for circumstances where the actor cannot unambiguously segment EHI that may be withheld in accordance with the Protecting Care Access Exception (§ 171.206) from the EHI for which this exception is not satisfied.

iii. Reproductive Health Care Definition

In the HTI–2 Proposed Rule, we proposed that the exception would rely on the ''reproductive health care'' definition in 45 CFR 160.103 and therefore proposed to add to § 171.102 the following: ''Reproductive health care is defined as it is in 45 CFR 160.103'' (89 FR 63633). We referred readers to 45 CFR 160.103 or 89 FR 32976 for that definition, which became effective for purposes of the HIPAA Privacy Rule on June 25, 2024. (89 FR 63633).[52] We also referred readers interested in learning more about this definition to 89 FR 33005 through 33007 for the 2024 HIPAA Privacy Rule's preamble discussion of the ''reproductive health care'' definition (89 FR 63633).

Comments. Several commenters supported use of the substance of the 45 CFR 160.103 definition but recommended that we separately adopt the same definition for purposes of the Protecting Care Access Exception (§ 171.206), instead of cross-referencing the definition as proposed. One commenter stated that separate adoption of the same definition would improve certainty for actors. A number of commenters expressing support for adopting the definition asked that we clarify specific types of services that fall within the ''reproductive health care'' definition. A few comments expressing opposition to the exception also noted that the 45 CFR 160.103 definition, on

[51] The tailoring requirement of the § 171.206(a) threshold condition does not include specifications that vary based on whether the actor falls into a specific category (such as health care provider) or is of a particular type of entity within any given category (such as ''hospital'' or ''skilled nursing facility'' within the health care provider category).

[52] The addition of the ''reproductive health care'' definition to 45 CFR 160.103 was reflected in the Electronic Code of Federal Regulations (eCFR) system at *https://www.ecfr.gov/current/title-45/subtitle-A/subchapter-C/part-160/subpart-A/section-160.103* at the time the HTI–2 Proposed Rule was issued and remained available there at the time this final rule was issued. (The eCFR is a continuously updated online version of the CFR. Please *see* the following website for more information about the eCFR system: *https://www.ecfr.gov/reader-aids/using-ecfr/getting-started.*) The printed annual edition of Title 45 is revised as of October 1 of each year.

which we proposed the exception would rely, was too expansive and would encompass procedures that the commenters did not consider reproductive health care. Several commenters expressing support for the exception stated the 45 CFR 160.103 definition is appropriately broad or enables the exception to address their information blocking concerns. A few commenters asked or recommended that we clarify whether the definition of reproductive health care encompasses care that renders a person incapable of becoming pregnant, or that affects the health of individuals already incapable of becoming pregnant in matters relating to their reproductive system and to its functions and processes. Some commenters asked that we add language that outlines that any actor who, in good faith, adopts an expansive interpretation of reproductive health care be covered by the Protecting Care Access Exception.

Response. Instead of adopting the same definition by cross-reference to 45 CFR 160.103, as shown in draft regulatory text in the HTI–2 Proposed Rule (89 FR 63802), we are finalizing in § 171.102 the substance of the definition of ''reproductive health care'' that is in 45 CFR 160.103. By separately codifying a substantively identical definition, we are adopting the same definition we proposed to apply for purposes of the Protecting Care Access Exception but severing reliance on the text of 45 CFR 160.103.

As finalized, the ''reproductive health care'' definition at § 171.102 mirrors the 45 CFR 160.103 definition of ''reproductive health care.'' Readers may find it helpful to review the non-exhaustive list of examples that fit within the definition provided at 89 FR 33006 of the 2024 HIPAA Privacy Rule's preamble discussion of the ''reproductive health care'' definition (89 FR 63633). We further note that in order to determine whether care meets the ''reproductive health care'' definition for purposes of applying the Protecting Care Access Exception it is not necessary to assess whether the care was appropriate. A health care professional's or organizational health care provider's obligations to provide clinically appropriate care according to applicable standards of care is addressed by laws separate and operating independently from 45 CFR part 171.

c. Patient Protection Condition

We explained (89 FR 63635) that the *patient protection* condition in paragraph (b) of § 171.206 could be met by practices implemented for the purpose of reducing the patient's risk of potential exposure to legal action (as legal action would be defined in § 171.206(e)). Further narrowing the practices that could satisfy the condition, paragraph (b)(1) would require that the practice affect only specific EHI (the data point or points) that the actor in good faith believes demonstrates, indicates, or would carry a substantial risk of supporting a reasonable inference that the patient has: (1) obtained reproductive health care that was lawful under the circumstances in which such care was provided; (2) inquired about or expressed an interest in seeking reproductive health care; or (3) or has any health condition(s) or history for which reproductive health care is often sought, obtained, or medically indicated. The HTI–2 Proposed Rule preamble inadvertently included (at 89 FR 63509 and 89 FR 63635) the words ''particular demographic characteristics or'' preceding ''health condition(s) or history.'' The words ''particular demographic characteristics or'' did not appear in the proposed text of 45 CFR 171.206(b)(1)(iii) (89 FR 63804) and would, we believe, be superfluous considering the proposed wording for 45 CFR 171.206(b)(1)(iii).

For purposes of § 171.206, we would interpret ''lawful under the circumstances in which it was provided'' to mean that when, where, and under relevant circumstances (such as, for health care, the patient's clinical condition and a rendering health care provider's scope of practice) the care was:

- not prohibited by Federal law and lawful under the law of the jurisdiction in which it was provided; or
- protected, required, or authorized by Federal law, including the United States Constitution, in the circumstances under which such health care is provided, regardless of the state in which it is provided.

Where care is not prohibited by Federal law and is permitted under the law of the jurisdiction in which it is provided, we would consider the care lawful regardless of whether the same care would, under otherwise identical circumstances, also be unlawful in other circumstances (for instance, if provided in another jurisdiction).

We noted (89 FR 63635) that the *patient protection* condition proposed in § 171.206(b) would provide the actor discretion and flexibility over time to determine which EHI poses a risk of potential exposure to legal action. At the same time, the § 171.206(b)(1) requirement that the practice ''affect only the access, exchange, or use of specific electronic health information the actor believes could expose the patient to legal action'' because it shows or carries a substantial risk of supporting an inference of one of the things described in subparagraphs (i) through (iii) would preserve the expectation that the actor would share other EHI that the actor does not believe poses such a risk unless another exception applies, or sharing restriction(s) under other law apply, to that other EHI in relevant circumstances.

We proposed that even when an actor has satisfied the requirements in paragraph (b)(1), the practice would be subject to nullification by the patient if the patient explicitly requests or directs that a particular access, exchange, or use of the specific EHI occur despite any risk(s) the actor has identified to the patient. This requirement (which we proposed in paragraph (b)(2)) is intended to respect patients' autonomy to choose whether and when to share their own EHI. The requirement would prevent the exception from applying where an actor is attempting to substitute their judgment or tolerance of risks to the patient for the patient's own judgment.[53]

We clarified (89 FR 63636) in proposed paragraph (b)(3) that for purposes of the *patient protection* condition, ''patient'' means the natural person who is the subject of the electronic health information, or another natural person referenced in, or identifiable from, the EHI as a person who has sought or obtained reproductive health care. We proposed to also recognize as ''patients,'' for purposes of this condition, natural persons other than the natural person who is the subject of the EHI because we are aware that there may be times when information about a parent's

[53] We stated (89 FR 63635) that the *patient protection* condition in § 171.206(b) would apply to practices implemented for the purpose of reducing the patient's risk of potential exposure to legal action (as ''legal action'' would be defined in § 171.206(e)). The *care access* condition in § 171.206(c) would apply to practices an actor implements to reduce potential exposure to legal action based on the mere fact that reproductive health care occurred for persons, other than the person seeking or receiving care, who provide care or are otherwise involved in facilitating the provision or receipt of reproductive health care that is lawful under the circumstances in which it is provided. In some circumstances, an actor's practice might meet both the § 171.206(b) *patient protection* and § 171.206(c) *care access* conditions simultaneously. But each of these conditions could also apply in circumstances where the other does not. Thus, we noted that the proposed Protecting Care Access Exception is intended and designed to apply where either or both of the *patient protection* and *care access* conditions are met in complement to the § 171.206(a) *threshold* condition.

reproductive health care is included in the EHI of a child. (For example, a child's parent is often identified in or identifiable through the child's EHI.)

We noted that the *patient protection* condition, and generally the Protecting Care Access Exception, are not intended to permit any actor to avoid legal consequences resulting from malpractice or their own wrongdoing. The exception is also not intended to have any effect on any obligation an actor has to comply with disclosure requirements under Federal, State, or Tribal law that applies to the actor. Even where an actor could deny any given access, exchange, or use of EHI for permissible purposes consistent with an information blocking exception, the actor who is a HIPAA covered entity or business associate would still have to comply with the 45 CFR 164.524 individual right of access, and any actor would still have to comply with other valid, applicable law compelling the actor to make the EHI available for permissible purposes.[54] For example, the actor would still need to comply with applicable legal discovery rules and judicial orders issued by a court of competent jurisdiction. Non-compliance with such other laws could subject the actor to sanctions under those other laws regardless of whether the actor's practice would also be considered information blocking or would instead be covered by an exception set forth in any subpart of 45 CFR part 171.

We also considered, and proposed in the alternative (89 FR 63636), adding one or more of the following explicit requirements to the *patient protection* (§ 171.206(b)), *care access* (§ 171.206(c)), or *threshold* (§ 171.206(a)) condition(s) so that to be covered by the exception the actor's practice must not:

- if undertaken by any actor that is also a HIPAA covered entity or business associate, delay beyond the time allowed under 45 CFR 164.524 or otherwise interfere with any request for access, exchange, or use of EHI that implicates the HIPAA Privacy Rule's individual right of access in a manner or to an extent that would constitute non-compliance with 45 CFR 164.524;
- deny the individual (as defined in § 171.202(a)(2)) or an attorney representing the individual access, exchange, or use of EHI for purposes of considering, bringing, or sustaining any claim for benefits under any federal law or any action against the actor under administrative, civil, or criminal (including discovery and other procedural) law of the jurisdiction in which care indicated by the EHI was provided;
- interfere with any use or disclosure of EHI required by subpart C of 45 CFR part 160 as it applies to actions by the Secretary (or by any part of HHS) with respect to ascertaining compliance by covered entities and business associates with, and the enforcement of, applicable provisions of 45 CFR parts 160, 162, and 164; or
- prevent any EHI's use by or disclosure to a federal agency or a state or tribal authority in the jurisdiction where health care indicated by the EHI was provided, to the extent such use or disclosure is permitted under 45 CFR parts 160 and 164.

We stated that each (or any) of these requirements would function as a limit on the applicability of the exception and mean that practices not meeting the exception for those reasons could constitute information blocking in addition to potentially violating any other law. (Due to the substantial variation across individual actors' circumstances, it would be impossible to maintain in the text of 45 CFR part 171 an accurate, comprehensive catalog of all other laws that could be implicated by an actor's practices otherwise consistent with any exception set forth in subparts B, C, or D of 45 CFR part 171.)

We solicited comments on the proposed *patient protection* condition, and the Protecting Care Access Exception generally, including whether commenters would recommend we add to the Protecting Care Access Exception any or all of the potential additional limits on applicability of the proposed Protecting Care Access Exception (§ 171.206) that we proposed in the alternative.

Any actor(s) wishing to engage in any applicable practice(s) and avail themselves of the certainty offered by the Protecting Care Access Exception (§ 171.206) that such practice(s) will not be considered ''information blocking'' as defined in § 171.103 will need to remember that to be covered by the exception a practice meeting either (or both) of the *patient protection* (§ 171.206(b)) and *care access* (§ 171.206(c)) condition(s) of the exception must also satisfy the *threshold* condition (§ 171.206(a)) or *care access* condition. Where an actor's practice satisfies the *threshold* condition's implementation requirement ((§ 171.206(a)(3)) by being implemented consistent with an organizational policy meeting subparagraph (i) of the requirement, the actor's crafting and documentation of their policy would present an efficient opportunity to address how, when, and by whom patients would be made aware of the actor's belief that risk(s) of potential exposure of the patient to legal action could arise from a particular access, exchange, or use of EHI and provided an opportunity to explicitly request or direct that the sharing occur despite such risk(s) to the patient of potential exposure to (§ 171.206)(e)) legal action.

Comments. A few commenters asked ASTP/ONC to carefully consider the impact on a minor patient's ability to obtain reproductive health care if one or more of the alternate proposals were adopted as conditions to the Protecting Care Access Exception to prohibit actors from violating 45 CFR 164.524 with respect to individual access rights as a condition of the Protecting Care Access Exception. One commenter noted that section 164.524's requirements with respect to minor health information and personal representatives are exceedingly complex under section 164.524's access requirements and the legal standards in section 164.502(g) for personal representatives with respect to minor and parental access and control rights as they relate to underlying (and changing) state minor consent to treatment laws for reproductive health care. With this in mind, the commenter suggested that reasonable minds can differ regarding who should be treated as the ''individual'' under 45 CFR 164.524. Further, given the special considerations involved with reproductive health care, the commenter suggested a delay in imposing such a prohibition that could negatively affect minor patients and provider decisions relating to such care for minor patients.

Response. We thank the commenter for their feedback. Having considered all of the comments received, we have finalized the Protecting Care Access Exception as proposed. We have not attempted to infer what prohibition the commenter above may be referencing because any prohibition on sharing of EHI (of a minor or other person) would be beyond the scope of the Protecting Care Access Exception. All information blocking exceptions are voluntary. Moreover, as we noted in the HTI–2 Proposed Rule, even where an actor might choose to deny any given access, exchange, or use of EHI for permissible purposes consistent with an information blocking exception, the actor who is a HIPAA covered entity or business associate would still, separately, have to comply with the *45 CFR 164.524* individual right of access, and any actor would still have to comply with other valid, applicable law compelling the actor to make the EHI available for

[54] For purposes of the information blocking regulations, ''permissible purpose'' is defined in 45 CFR 171.102.

permissible purposes (*89 FR 63636*). Any changes to State or Tribal law that would affect if or when a non-emancipated minor can consent to or otherwise lawfully obtain any type of health care, including but not limited to reproductive health care, is beyond the scope of this final rule. Any changes or clarifications to which person(s) a HIPAA covered entity is required by 45 CFR 160.502(g) to recognize as the personal representative of an individual in what circumstances for purposes of 45 CFR 164.524, or how any paragraph of 45 CFR 164.524 applies to requests for access to an individual's PHI that may be made in any specific circumstances, is beyond the scope of this final rule. Any interpretation of such provisions of the HIPAA Privacy Rule is also outside the scope of this final rule because we did not adopt any of the HTI–2 Proposed Rule alternative proposals that would have limited the applicability of the Protecting Care Access Exception to actors' practices that fully complied with 45 CFR 164.524 in individual access scenarios to which 45 CFR 164.524 would also apply. For purposes of the Protecting Care Access Exception, an actor's practice that meets the § 171.206(a) *threshold* condition and at least one of the other conditions (§ 171.206(b) *patient protection* or § 171.206(c) *care access*) will satisfy the exception. We have finalized, as proposed, in § 171.206(b)(3) what ''patient'' means for purposes of § 171.206(b)(1) and (b)(2), including the § 171.206(b)(2) specification that to meet the condition an actor's practice must be subject to nullification by an explicit request or directive from the patient.

Comments. A commenter noted that a patient's ability to direct disclosure should be informed, and actors should not be penalized for seeking to ensure that patients have the relevant information available in considering whether to direct disclosure. The commenter generally supported the provisions of the HTI–2 Proposed Rule that permit actors to delay disclosure to provide honest information that is provided in a non-discriminatory manner and that is relevant to the actor's belief that a risk of potential exposure to legal action could be created by the action and general information about privacy laws or other relevant laws that the actor believes may be relevant. The commenter suggested that the actor's permission to share such information with patients fits more logically with the patient nullification rights and should be situated in that condition.

Response. We thank the commenter for their support. We believe this comment pertains to our second proposed alternative to include in the proposed *care access* condition (§ 171.206(c)) an additional requirement that would be applicable specifically if an actor chooses to engage in a practice of delaying fulfillment of requests for EHI access, exchange, or use by individuals (as defined in § 171.202(a)(2)) because the actor wants to provide, in a non-discriminatory manner, information to the individual relevant to the actor's good faith belief that a risk of potential exposure to legal action could be created by the individual's choice of how to receive their EHI or to whom the individual wishes to direct their EHI (*89 FR 63637*). We have finalized the Protecting Care Access Exception as proposed and have not finalized any of our proposed alternatives to include in the *care access* condition (§ 171.206(c)) or any other conditions. We may consider further refining the exception's conditions in future rulemaking based on experience in the field with the exception as finalized in this final rule or on changes in the legal landscape or market conditions.

Comment. One commenter appreciated the reference in the patient protection condition to EHI that shows or would carry a substantial risk of supporting an inference that the patient has health condition(s) or history for which reproductive health care is often sought, obtained, or medically indicated as well as the references to having obtained or inquired about or expressed an interest in receiving reproductive health care.

Response. We appreciate the comment. We believe that addressing actors' uncertainty specific to information blocking by finalizing the Protecting Care Access Exception will promote better patient satisfaction and health outcomes as well as continued development, public trust in, and effective nationwide use of health information technology infrastructure to improve health and care. We noted this belief in proposing this new exception (*89 FR 63630*). By addressing an information blocking actor's concern about potential exposure to legal action flowing from an access, exchange, or use of EHI related to reproductive health care, the exception addresses the risk that actors such as health care providers may be unable to provide care that will best meet the patient's needs (*89 FR 63631*), among other risks we describe in the HTI–2 preamble (*89 FR 63630*).

Comments. We received several comments requesting or recommending that we clarify or reaffirm what ''natural person'' means when used in defining ''individual'' or ''patient'' for purposes of the information blocking regulations. We received several comments asking that we clarify what ''patient'' means for purposes of this exception. We received one comment stating we should use the same ''patient'' as the HIPAA Privacy Rule. A couple of commenters noted that the definition of ''person'' under the information blocking regulations cross-referenced the definition of person in 45 CFR 160.103, indicated the clarification of ''natural person'' in that definition addressed their concerns about what that means and requested we provide an explanation so that it is clear to all actors.

Response. The term ''individual'' is not used in the text of the Protecting Care Access Exception (§ 171.206). However, references to ''individual'' in the preamble discussions of this exception in discussing the HIPAA Privacy Rule or individuals' privacy interests should be understood to mean what it means in 45 CFR parts 160 and 164. Where we are discussing the operation of the Privacy Exception, the term ''individual'' should be understood to have the meaning it is given, for purposes of the Privacy Exception, in § 171.202(a)(2). We refer readers to the section of this final rule preamble where we discuss what ''individual'' means in context of the Privacy Exception, § 171.202.

Second, the meaning of ''patient'' for purposes of the finalized Protecting Care Access Exception is specified in § 171.206(b)(3) and explained both in the HTI–2 Proposed Rule preamble and the summary of that proposal (above) in this final rule. It relies on the term ''natural person'' which, in context of the information blocking regulations, means ''a human being who is born alive.'' We did not propose changes to the definition of ''person'' in § 171.102, which cross-references the definition of ''person'' in 45 CFR 160.103.

d. Care Access Condition

We stated (89 FR 63636) that the proposed *care access* condition would apply as specified in paragraph (c) of § 171.206. We clarified that the condition could be met by practices an actor implements to reduce the risk of potential exposure to legal action for persons who provide reproductive health care or are otherwise involved in facilitating reproductive health care that is lawful under the circumstances in which it is provided. We stated (89 FR 63636) that such persons would include licensed health care professionals, other health care providers, and other persons

involved in facilitating care that is lawful under the circumstances in which it is provided. We stated (89 FR 63636) that such persons would include persons (friends, family, community caregivers, and others) who help patients find, get to the site of or home from, and afford care. We stated that for purposes of the *care access* condition in § 171.206(c) and § 171.206(b)(1)(i) (within the *patient protection* condition), the reproductive health care must be ''lawful under the circumstances in which it is provided'' as explained in the HTI–2 Proposed Rule (89 FR 63635).

To satisfy the *care access* condition in paragraph (c) of § 171.206, the practice must affect only access, exchange, or use of specific EHI (one or more data points) that the actor believes could potentially expose a care provider(s) or facilitator(s) to legal action because that EHI shows or would carry a substantial risk of supporting a reasonable inference that such person(s) are currently providing or facilitating, have provided or facilitated, or both, reproductive health care that is (or was) lawful under the circumstances in which it is (or was) provided.[55]

We proposed this requirement to make the exception inapplicable to other EHI that actors will often have that applicable law would also permit them to make available for permissible purposes. Such EHI to which these exceptions might not apply could include, we noted (89 FR 63637), information relevant to the safety, continuity, and quality of care, such as a patient's chronic condition(s) or a medically confirmed allergy to a substance that does not indicate or suggest reproductive health care has, or may have, occurred (and thus poses no risk of exposure to legal action as defined in § 171.206(e)). To the extent the actor has such other EHI that the actor can (both legally and technically) make available for any and all permissible purposes, we would expect the actor to do so. We recognized that in some circumstances the actor may need to make such other EHI available in an alternative manner rather than the manner requested by the requestor. (We used ''manner requested'' and ''alternative manner'' in a sense consistent with paragraphs (a) and (b), respectively, of the Manner Exception as currently codified in § 171.301.)

We proposed that when an actor's practice satisfies the *threshold* condition in § 171.206(a) and meets all the requirements of the *care access* condition in § 171.206(c), the actor's practice will not constitute information blocking. As with any of the existing exceptions, the Protecting Care Access Exception would not supersede or override any other valid Federal, State, or Tribal laws that compel production of EHI for purposes of legal proceedings or that compel other disclosures in relevant circumstances. Therefore, actors and other interested persons will want to remember that satisfying an exception set forth in 45 CFR part 171 does not prevent other law that operates independently from 45 CFR part 171 from potentially compelling an actor to provide access, exchange, or use of EHI in a manner or for purposes the actor, or an individual, might prefer the EHI not be accessed, exchanged, or used. As actors are likely already aware, conduct that is not considered ''information blocking'' under 45 CFR part 171, whether on the basis of satisfying an exception or on the basis of not meeting an element of the definition of ''information blocking'' in the information blocking statute (42 U.S.C. 300jj–52) may nevertheless violate, and may subject the actor to consequences authorized by, laws separate from and operating independently of the information blocking statute and 45 CFR part 171.

We stated that the *care access* condition would apply where the risk of potential exposure to legal action is specific to the mere fact that reproductive health care (that was lawful under the circumstances in which it was provided) was provided or facilitated. The *care access* condition would not be met where the risk of potential exposure to legal action is based on care having been provided in circumstances where the care was not lawful. (We refer readers again to our explanation, in the HTI–2 Proposed Rule (89 FR 63635), of how we would interpret ''lawful under the circumstances'' in which care was provided in context of the proposed § 171.206.)

We stated (89 FR 63637) the Protecting Care Access Exception would not apply to a practice that precludes the patient or an attorney representing the patient from obtaining access, exchange, or use of the patient's EHI for purposes of filing a benefit claim or a complaint against the actor with any agency of the U.S. Government. We explained that it would be unreasonable for an actor to withhold from a patient or a patient's attorney EHI that they need or seek to use in support of a claim for a benefit that is filed with any agency of the U.S. Government (89 FR 63637). We further explained that it would be unreasonable for the actor to attempt to withhold EHI access, exchange, or use to impede the patient or the patient's attorney filing, or the U.S. Government investigating, any complaint against the actor that the patient or the patient's attorney may file with any agency of the U.S. Government (89 FR 63637). Patients and their attorneys should have easy access to necessary information for considering, filing, or maintaining or pursuing such claims or complaints.

We noted (89 FR 63637) that an actor that is also required to comply with the HIPAA Privacy Rule must comply with the individual right of access as codified in 45 CFR 164.524 regardless of whether the actor may be able to satisfy any existing or proposed exceptions to the § 171.103 definition of ''information blocking.'' To ensure actors remain aware of this fact, we proposed as the first of several (non-exclusive) alternatives, to include in the *care access* condition (§ 171.206(c)) an additional explicit restriction of the condition to practices that do not violate 45 CFR 164.524. We stated that we might finalize this additional requirement even if we did not finalize any of the other additional requirements that we proposed to potentially apply to the Protecting Care Access Exception as a whole or to the proposed *patient protection* condition (§ 171.206(b)).

The first requirement we proposed in the alternative specific to the *care access* condition would provide for the *care access* condition (§ 171.206(c)) to be met by practices that could interfere with an individual's access to EHI only to the extent that the interference could otherwise implicate the ''information blocking'' definition in § 171.103 without also constituting non-compliance with 45 CFR 164.524 where 45 CFR 164.524 also applies. For example, under this first proposed potential added restriction on the applicability of § 171.206(c), a delay of

[55] We stated that the *patient protection* condition in § 171.206(b) would apply to practices implemented for the purpose of reducing the patient's risk of potential exposure to legal action (as ''legal action'' is defined in § 171.206(e)). The *care access* condition in § 171.206(c) would apply to practices an actor implements to reduce potential exposure to legal action based on the mere fact that reproductive health care occurred for persons, other than the person seeking or receiving care, who provide care or are otherwise involved in facilitating the provision or receipt of reproductive health care that is lawful under the circumstances in which it is provided. In some circumstances, an actor's practice might meet both the § 171.206(b) *patient protection* and § 171.206(c) *care access* conditions simultaneously. But each of these conditions could also apply in circumstances where the other does not. Thus, we noted that the proposed Protecting Care Access Exception is intended and designed to apply where either or both of the *patient protection* and *care access* conditions are met in complement to the § 171.206(a) *threshold* condition.

an individual's access, exchange, or use of EHI that would rise to the level of an ''interference'' for purposes of the ''information blocking'' definition in § 171.103 that satisfied all other requirements of § 171.206(a) and (c) would be covered by the § 171.206 exception only to the extent the delay of the individual's (or their personal representative's) access to EHI did not exceed the maximum time permitted, in the specific circumstances, for fulfillment of access to PHI under 45 CFR 164.524. (Coverage of an exception would be irrelevant for a delay not rising to the level of an ''interference'' because § 171.103 focuses on practices not required by law that are likely to ''interfere with'' access, exchange, or use of EHI.) This proposed restriction to practices not violating § 164.524 would also mean § 171.206 would apply where an actor's interference involved offering fewer manners of access, exchange, or use than would be feasible for the actor to support, but only to the extent that the actor's limiting the manners in which EHI is made available would not constitute a violation under 45 CFR 164.524. We welcomed comment on this first additional potential limitation on the applicability of the proposed exception.

We proposed as a second (again, non-exclusive) alternative to include in the proposed *care access* condition (§ 171.206(c)) an additional requirement that would be applicable specifically if an actor chooses to engage in a practice of delaying fulfillment of requests for EHI access, exchange, or use by individuals (as defined in § 171.202(a)(2)) because the actor wants to provide, in a non-discriminatory manner, information to the individual relevant to the actor's good faith belief that a risk of potential exposure to legal action could be created by the individual's choice of how to receive their EHI or to whom the individual wishes to direct their EHI. For example, we stated that an actor that is also a HIPAA covered entity would, under § 164.524, be required to fulfill an individual's request for access to PHI or to transmit to a third party an electronic copy of an individual's PHI in an EHR within the time period required under § 164.524. We noted (89 FR 63638) that where the § 171.206 exception would apply and the third party is not a covered entity or business associate, the actor may wish to first provide the individual with information (that is, to the best of the actor's knowledge and belief, accurate and factual) about the HIPAA Privacy, Security, and Breach Notification Rules and differences in their applicability to EHI when it is not held by a HIPAA covered entity or business associate in comparison to when it is. Similarly, we stated that an actor might wish to communicate such information to an individual before enabling access, exchange, or use of EHI for a health care provider that is not a HIPAA covered entity or business associate. The actor might, for example, be concerned that the individual may not have previously obtained or been provided basic information about how the applicability of the HIPAA Privacy Rule to information held by or for a provider that is not a HIPAA covered entity may differ from the rule's application to the same information when it is held by or for entities regulated under HIPAA. The actor may wish to provide the individual such information so that the individual would have a fair opportunity to consider the possible privacy risks. In such situations, the actor may be concerned about potential information blocking implications of the delay that is necessary to provide the individual with information. Or the actor may be concerned with the delay that results when an individual (or their personal representative) is considering the information before confirming they want the actor to proceed with enabling the application the individual (or their personal representative) has chosen to receive the EHI of which the individual is a subject. Specifically, the actor may be concerned these delays could rise to the level of an ''interference'' and, therefore, implicate the information blocking definition even if the time required is less than the maximum time permitted to fulfill PHI access under 45 CFR 164.524 in the relevant circumstances.

Therefore, we considered the second proposed additional requirement for § 171.206. We noted that this second potential additional requirement would apply where an actor's practice delays making EHI available upon individual request or directive in order to provide individuals with non-biased general information about relevant laws or about the actor's belief that is consistent with § 171.206(a)(1)(i), the delay must be of no longer duration than is reasonably necessary to provide to the individual two things:

(1) honest information that is provided in a non-discriminatory manner and that is relevant to the actor's belief that a risk of potential exposure to legal action could be created by the particular access, exchange, and use of what specific EHI, such as general information about privacy laws or other laws that the actor believes may be relevant; and

(2) a reasonable opportunity to consider the information and seek additional information from other sources if the individual would like, before the individual is asked to either confirm or revise any specifics of their request for access, exchange, or use of their EHI.

We stated that under this alternative proposal specific to delaying a response to a right of access request (including the right to direct a HIPAA covered entity to transmit to a third party an electronic copy of the individual's PHI in an EHR), delays longer than reasonably necessary to provide the individual with information relevant to the actor's belief that is consistent with § 171.206(a)(1) and allow the individual to consider the actor's information and seek information from additional source(s) (if the individual desires) would not satisfy the § 171.206(c) *care access* condition. We noted that this proposed restriction that is specific to delays for the purpose of informing individuals of an actor's belief that sharing specific EHI could create risk of potential exposure to legal action could be implemented regardless of whether we also implement a requirement that, for the *care access* condition or for the *threshold* condition to be met by an actor's practice, the practice must not constitute a violation of § 164.524. We also noted that this potential additional requirement would limit the applicability of the condition in scenarios where an actor might choose to engage in delay to provide individuals with information about potential privacy consideration but should not be construed as creating an affirmative requirement for any actor to delay fulfillment of individual access requests to provide individuals with information about potential privacy implications of the individual's request. We reiterated that information blocking exceptions are voluntary.

We reiterated that even in scenarios where an actor's denial of access, exchange, or use of EHI might not be ''information blocking'' because it satisfies an exception under and for purposes of part 171, an actor that is a HIPAA covered entity or business associate will still need to comply with 45 CFR 164.524 (individual right of access). (This was true of the exceptions codified in subparts B, C, and D of 45 CFR part 171 as of the date of publication of the HTI–2 Proposed Rule and would also be true of the new exceptions proposed in the HTI–2 Proposed Rule in the event any of them are finalized.)

We noted that the additional requirement(s) we considered would seek to further the exception's balance of the interests of actors and patients in protecting reproductive health care availability by mitigating legal risks for the people who provide that care, and for the people who facilitate the provision of such care, with the interests of individuals in being able to access, exchange, and use all of their EHI however and whenever they want, and to share all of their EHI however and with whomever they choose, at no cost for ''electronic access'' as defined in § 171.302(d). We sought comment on those alternative proposals (89 FR 63638).

Comments. Several commenters expressed support for the *care access* condition and recommended finalizing the condition as proposed. These commenters stated that the condition was appropriately structured and necessary to provide protections for all individuals who may be involved in providing or facilitating reproductive health care.

Response. We appreciate the comments on this condition. This condition is intended to ensure that the Protecting Care Access Exception will address actors' concerns about potentially implicating the information blocking definition from their consideration of whether they wish to engage in practices consistent with the exception's conditions in order to reduce potential exposure to legal action (as defined in § 171.206(e), as finalized) for individuals involved in providing or facilitating reproductive health care under circumstances in which such care is lawful. Having reviewed and considered all comments received on the proposed Protecting Care Access Exception, we have finalized the *care access* condition (§ 171.206(c)) as proposed.

Comments. A commenter asked that we indicate whether facilitating care included various people engaged in various activities that may make it possible or easier for a patient to seek or obtain care: friends, family members, or other persons helping the patient find and get to a location where reproductive health care is available or was obtained; accompanying a patient to obtain care; helping a patient return home or providing support to a patient recovering after obtaining lawful reproductive health care. One commenter asked whether persons with legal authority to make health care decisions on behalf of patients, and who consent to care on behalf of patients who cannot consent due to the patient's incapacity, are considered ''persons who facilitate access to'' reproductive health care for purposes of the Protecting Care Access exception.

Response. We reiterate that ''facilitating reproductive health care that is lawful under the circumstances in which such health care is provided'' (§ 171.206(c)) includes conduct that: facilitates a patient seeking or obtaining such care; facilitates a provider's provision of such care; or both. Each of the examples described in the paragraph immediately above would, therefore, be included. However, this is not an exhaustive catalog of all of the actions, activities, or ways in which a person might lawfully facilitate another's seeking, obtaining, or providing lawful reproductive health care. We do not believe it is necessary to catalog all of the various activities or scenarios in which persons other than those involved in providing health care make it easier or possible for patients to seek or obtain reproductive health care that is lawful under the circumstances in which it is furnished. Moreover, we decline to provide or discuss in detail any sampling of examples of conduct to which § 171.206(c) when a person is facilitating a patient's seeking or obtaining lawful reproductive health care to avoid creating a risk that such a discussion could be misconstrued as limiting the actions or activities (or scenarios within which such actions or activities) would, for purposes of paragraph (a)(1)(i) or paragraph (c) of § 171.206, qualify as facilitating reproductive health care.

Comments. One commenter, commenting on the alternative proposal specific to delaying a response to a right of access request, stated that the recognition of a potential delay in fulfilling EHI requests due to any protections afforded to information about reproductive health care is an important step in implementing information blocking and HIPAA privacy regulations. The commenter recommended finalizing this proposal as written. One commenter opposed the alternative proposals that would tie the Protecting Care Access Exception to the HIPAA right of access, stating that the proposals are unnecessary and citing HIPAA's enforcement processes. Another commenter noted that a patient's ability to direct disclosure should be informed and actors should be permitted to delay disclosure to provide in a non-discriminatory manner honest information that is relevant to the actor's belief that a risk of potential exposure to legal action could be created by the particular access, exchange, or use of EHI. This comment described the alternative proposal in terms of permission to share information with patients and suggested this would fit more logically with the patient nullification provision.

Response. We appreciate the comments on the alternative proposal specific to individual right of access requests for access, exchange, or use of EHI. Having reviewed and considered all comments received on the Protecting Care Access Exception, we have decided not to adopt this alternative proposal. We have finalized the *care access* condition (§ 171.206(c)) as proposed (89 FR 63804).

In light of comments asking for guidance on this and other provisions within the information blocking regulations (45 CFR part 171), it may be helpful to clarify that the Protecting Care Access Exception (§ 171.206), as proposed and as finalized, applies under its codified conditions to a wide variety of practices likely to interfere with access, exchange, or use of EHI. Such practices would include, but are not limited to, an actor delaying fulfillment of a patient's request for access to their own EHI or to direct their EHI to a third party for the time needed to provide to the patient, in a non-discriminatory manner, honest information that is relevant to the actor's belief that a risk of potential exposure to legal action could be created by a particular access, exchange, or use of EHI the patient has requested, directed, or authorized. While it might be ideal for an actor to have communicated such information to a patient in advance of the patient directing or authorizing any specific access, exchange, or use of EHI, we recognize that this may not always be feasible. Therefore, the actor may need some time upon receipt of request to convey information relevant to a belief that the actor holds in good faith at that time. In this regard, we want to make clear that similar to our guidance in the ONC Cures Act Final Rule (85 FR 25642), it would not be an interference to provide a patient with information that is relevant to the actor's belief that a risk of potential exposure to legal action could be created by a particular access, exchange, or use of EHI the patient has requested, directed, or authorized. However, as we described such an approach in the alternative proposal and here, the information provided must be: (1) relevant to the actor's belief that a risk of potential exposure to legal action could be created by a particular access, exchange, or use of EHI the patient has requested, directed, or authorized; (2) honest (unbiased and based on a good faith

belief); and (3) in a nondiscriminatory manner (treat all patients the same).

We remind actors that, although we have not adopted the alternative proposal to limit the Protecting Care Access Exception's coverage of delays to individual access to such delays that are shorter than the maximum timeframes allowed under 45 CFR 164.524, all actors who are also HIPAA covered entities or business associates remain responsible for complying with the HIPAA Privacy Rule. We reiterate that ASTP/ONC partners closely with OCR to maintain alignment across the regulations issued pursuant to both HIPAA and the information blocking statute (PHSA section 3022), and also that these are *separate* regulations issued under independent statutory authorities. An actor that is also required to comply with the HIPAA Privacy Rule must comply with the individual right of access as codified in 45 CFR 164.524 regardless of whether the actor may be able to satisfy *any* exception(s) to the § 171.103 definition of ''information blocking'' with respect to some or all of the PHI they may have for any given individual (as both ''protected health information'' and ''individual'' are defined in 45 CFR 160.103).

e. Presumption Provision and Definition of ''Legal Action''

i. Presumption Provision

For purposes of determining whether an actor's practice meets § 171.206(b)(1)(i) or § 171.206(c), we proposed (89 FR 63638) in § 171.206(d) to state that care furnished by someone other than the actor would be presumed to be lawful unless the actor has actual knowledge that the care was not lawful under the circumstances in which it was provided. This presumption proposed in § 171.206(d) is similar to the presumption in 45 CFR 164.502(a)(5)(iii)(C) of the 2024 HIPAA Privacy Rule, but is necessarily different because of differences in how the prohibition at 45 CFR 164.502(a)(5)(iii)(A) operates and how the Protecting Care Access Exception (§ 171.206) is intended to operate.

First, the Protecting Care Access Exception (§ 171.206) was proposed to be voluntary (89 FR 63638). As proposed and as finalized, it is designed and intended to offer certainty that practices that meet the exception's conditions will not be considered ''information blocking.'' Nothing in § 171.206, as proposed or as finalized, is intended to create an affirmative obligation for any actor to evaluate whether the Protecting Care Access Exception might apply to any access, exchange, or use of EHI for permissible purposes.

Second, the Protecting Care Access Exception (§ 171.206) was proposed based on statutory authority found in section 3022 of the PHSA to identify reasonable and necessary activities that do not constitute information blocking for purposes of the PHSA section 3022 definition of the term (89 FR 63638). We did not propose that anything in § 171.206 would operate to override an actor's obligation to comply with another (applicable) law that requires the actor to make EHI available for any permissible purpose (89 FR 63638 and 63639). Thus, we noted (89 FR 63639), an actor may still be compelled to disclose EHI in compliance with such other law even where the exception might mean an actor's failure to comply with such other law would not be considered ''information blocking'' under 45 CFR part 171 or PHSA section 3022. (We noted at 89 FR 63639 that the exception would not be relevant where an actor is also a HIPAA covered entity or business associate that would be required to comply with the prohibition at 45 CFR 164.502(a)(5)(iii) because a HIPAA covered entity's or business associate's practice of refusing to make a use or disclosure of PHI prohibited by the HIPAA Privacy Rule is ''required by law'' and therefore not information blocking to begin with.)

Finally, we stated (at 89 FR 63639) that a policy goal of the Protecting Care Access Exception is that it be easy for any actor to confidently and efficiently meet the conditions of the proposed exception. One way the exception's proposed structure supports this goal is by providing (in § 171.206(a)(3)(i)) for the actor to implement practices per organizational policies that address particular types of EHI sharing scenarios where the actor believes the risk of potential exposure to legal action could be created even if the actor has not yet received a request for EHI for the activities specified in 45 CFR 164.502(a)(5)(iii)(A) or any of the purposes specified in 45 CFR 164.512(d), (e), (f), or (g)(1) for which the attestations specified in 45 CFR 164.509 would be required as a precondition for disclosing PHI potentially related to reproductive health care to be permitted under the 2024 HIPAA Privacy Rule (89 FR 63639).

We stated that, as noted elsewhere, an actor's practice satisfying the new Protecting Care Access Exception would mean the practice will not be considered information blocking (89 FR 63639). To the extent that EHI indicates or potentially relates to reproductive health care that was not lawful under the specific circumstances in which it was provided, we presume that the legal authority compelling disclosure of EHI for such purposes would have its own enforcement provisions independent of the penalties and disincentives authorized by PHSA section 3022 for an actor determined by the HHS OIG to have committed information blocking. As we noted in proposing the new § 171.206 Protecting Care Access Exception (89 FR 63639), because the exception would not exempt the actor from their obligation to comply with such other law, we do not believe it is necessary to preserve the potential for information blocking penalties to apply in addition to any consequences that might attach under such other law to an actor's non-compliance with that law. On the other hand, we stated that we believe it is important to ensure that concerns about information blocking consequences would not prevent the actor from, for example, delaying fulfillment of a demand for EHI in order to review factual information supplied by the requestor and determine whether that information ''demonstrates a substantial factual basis'' (as stated in 45 CFR 164.502(a)(5)(iii)(C)(2)) and, by extension, whether the 2024 HIPAA Privacy Rule or applicable state law permits, preempts, or conflicts with the law the requestor indicates compels the actor to make the EHI available to the requestor (89 FR 63639).[56]

The proposed § 171.206(d) presumption provision was *not* tied to a requestor not supplying information demonstrating a substantial factual basis that the reproductive health care was not lawful under the specific circumstances in which it was provided (89 FR 63639). Doing so might have made the proposed Protecting Care Access Exception (§ 171.206) more difficult for actors to use and therefore discourage actors from using it (89 FR 63639). We noted in proposing the provision our concern that this difficulty could discourage use of the exception particularly by those actors—such as small and safety net health care

[56] We remind readers that the currently codified ''pre-condition not satisfied'' sub-exception of the Privacy Exception outlines a framework for actors to follow so that the actors' practices of not fulfilling requests to access, exchange, or use EHI would not constitute information blocking when one or more preconditions has not been satisfied for the access, exchange, or use to be permitted under applicable Federal and State or Tribal laws. Please *see* § 171.202(b) and discussion in HTI–1 Final Rule (at 89 FR 1351 through 1354) of how information blocking exceptions work in concert with the HIPAA Rules and other privacy laws to support health information privacy.

providers or non-profit health information networks who serve them—who may have limited ability to divert resources to these types of legal analyses (89 FR 63639). For example, this might arise in circumstances where the exception is intended to apply but the request for EHI access, exchange, or use may not be coming from a law enforcement entity and the access, exchange, or use of EHI sought may be for a purpose other than law enforcement (89 FR 63639).

At 89 FR 63639, we proposed in the alternative to add to § 171.206(d), if finalized, a provision that parallels the provision in 45 CFR 164.502(a)(5)(iii)(C)(2) and that would prevent the § 171.206(d) presumption from applying where factual information supplied by the person requesting access, exchange, or use of EHI demonstrates a substantial factual basis that the reproductive health care was not lawful under the specific circumstances in which it was provided. We welcomed comments on this alternative proposal.

Comments. A few comments stated that ASTP/ONC should adopt the § 171.206(d) presumption provision as proposed. One commenter stated that ASTP/ONC did not need to adopt the alternative provision to parallel the HIPAA Privacy Rule because the proposed exception is voluntary, and the information blocking rules do not preempt state law. This commenter stated that including the factual basis provision would unnecessarily preclude actors from protecting health information.

Response. We appreciate the comments on the proposed presumption provision. Having reviewed and considered all comments received on the proposed Protecting Care Access Exception, and for the reasons explained above, we have not adopted the alternative proposal to parallel the provision in 45 CFR 164.502(a)(5)(iii)(C)(2). We have finalized the § 171.206(d) presumption provision as proposed (89 FR 63804).

Comment. One comment stated that applying a clear and convincing evidence standard across the board to the Protecting Care Access exception's *threshold* condition, *patient protection* condition, and *care access* condition would be preferable to the alternative we proposed to 171.206(d) noting that the clear and convincing standard is a well-established legal standard.

Response. We did not present or solicit comment on such an alternative in the HTI–2 Proposed Rule. We have finalized 171.206(d) as proposed (89 FR 63804). As we noted in the HTI–2 Proposed Rule, we believe it would be more difficult for actors to use the Protecting Care Access Exception (§ 171.206) if the presumption only applied if the requestor supplied the information demonstrating a substantial factual basis that the reproductive health care was not lawful under the specific circumstances. We believe requiring clear and convincing evidence that care the actor did not provide was unlawful would severely limit the presumption's ability to support efficient application of the exception. Although clear and convincing evidence is a well-established legal standard, it is unclear whether small actors with limited resources, such as small and safety net health care providers, would be able to apply the type of legal analysis that would be required for them to accurately meet the Protecting Care Access Exception's conditions if it used a clear and convincing evidence standard.

Comments. One comment stated that it should not be presumed whether an abortion is lawful in any particular circumstance. This comment stated that this type of information may be sought in criminal, civil, and administrative investigations in order to determine whether the procedure was lawful. One commenter asked ASTP/ONC to clarify, potentially in conjunction with OCR, that ''lawfulness'' for purposes of the proposed exception should be assessed in the jurisdiction where the provider is located.

Response. The § 171.206(d) presumption provision applies ''for purposes of determining whether an actor's practice meets paragraph (b)(1)(i) or (c) of'' § 171.206. We remind actors and other readers that, as we noted in the HTI–2 Proposed Rule (89 FR 63639), to the extent that EHI indicates or potentially relates to reproductive health care that was not lawful under the specific circumstances in which it was provided, we presume that the legal authority compelling disclosure of EHI for such purposes would have its own enforcement provisions independent of the penalties and disincentives authorized by PHSA section 3022 for an actor determined by the HHS OIG to have committed information blocking. We emphasize that the exception would not override an actor's obligation to comply with a mandate contained in law that requires disclosures that are enforceable in a court of law, as we noted in proposing the exception (89 FR 63632).

Comment. One comment asked that ASTP/ONC remove the presumption of lawfulness to allow for a broader interpretation of the rule's language. This commenter stated that lawfulness of care should not be a priority for providers whose jobs are to ensure access to health care and also noted the difficulty for patients and providers to track what and where health care may be ''lawful.''

Response. We appreciate the opportunity to clarify that the § 171.206(d) *presumption* provision is designed to enable any § 171.102 actor (including any health care provider) to confidently use the exception when they did not provide the reproductive health care indicated in the EHI, or (where the *patient protection* condition applies) may not be certain what care, or whether care, may have occurred for any health condition(s) or history for which reproductive health care is often sought, obtained, or medically indicated. Where the care in question was not provided by the actor, the presumption ensures that actors need not interrogate patients, or investigate patients' EHI received from other actors, to compare available details of the patient's health and care against the often complex and nuanced details of applicable laws just because the actor wants to engage in a practice likely to interfere with access, exchange, or use of EHI with confidence that (under the conditions of the Protecting Care Access Exception) the practice will not constitute ''information blocking.'' Similarly, the presumption ensures that an actor can confidently use the Protecting Care Access Exception without tracking laws under which they do not operate but under which a patient may have received care from someone other than the actor.

We also reiterate that all information blocking exceptions are voluntary. The Protecting Care Access Exception does not create an affirmative obligation under the information blocking regulations for any actor to engage in any practice the exception would cover.

ii. Definition of ''legal action''

We proposed in § 171.206(e) (89 FR 63804) to define ''legal action'' for purposes of the Protecting Care Access Exception to include any of the following when initiated or pursued against any person for the mere act of seeking, obtaining, providing, or facilitating reproductive health care: (1) civil, criminal, or administrative investigation; (2) a civil or criminal action brought in a court to impose criminal, civil, or administrative liability; or (3) an administrative action or proceeding against any person (89 FR 63639). We emphasized that the proposed Protecting Care Access Exception would apply where an actor's

practice meets the § 171.206(a) *threshold* condition and at least one of the other two conditions in the exception, none of which would require the actor to quantify a degree, amount, or probability of the risk of potential exposure to legal action the actor believes in good faith exists and could be reduced by the practice to which § 171.206 applies (89 FR 63639).

Comments. Several commenters expressed support for our proposed definition of ''legal action'' and noted that it covered expected concerns and risks.

Response. We appreciate the comments. We proposed the definition of ''legal action'' for purposes of § 171.206 to include a broad array of criminal, civil, and administrative investigations, actions, and proceedings as specified in the proposed § 171.206(e)(1)—(3) (89 FR 63633). Having considered all comments received in response to the proposed exception, we have finalized the ''legal action'' definition in § 171.206(e) as proposed (89 FR 63804).

Comment. One commenter supported the definition of ''legal action'' but asked that it be expanded to be parallel to HIPAA which covers uses of protected health information to identify any person for certain investigations or proceedings, noting that mere efforts to identify individuals, shy of a formal investigation or proceeding, can chill health care access and patient trust to the same degree as formal investigations and proceedings.

Response. We appreciate the comment. We did not present an expansion of the definition of ''legal action'' as an alternative proposal or solicit comment on such an alternative. We believe that because the Protecting Care Access Exception (§ 171.206) as proposed and finalized functions differently from 45 CFR 164.502(a)(5)(iii), the exception as a whole is sufficiently broad. Specifically, § 171.206 is not limited to uses or disclosures of EHI for specific purposes but instead relies on a good faith belief consistent with § 171.206(a)(1)(i) that specific practices likely to interfere with applicable access, exchange, or use of specific EHI could reduce that risk. Such practices could include an actor not sharing relevant EHI with entities, such as entities not regulated under the HIPAA Privacy Rule, that are known or suspected of making EHI available to data brokers or whom the actor believes in good faith would otherwise potentially expose the EHI to identification activities that could lead to a ''legal action'' as defined in § 171.206(e).

Comments. One commenter stated that the language on protection against potential legal action is vague and potentially overly broad, noting that under the proposed language, custody disputes could be considered legal action. The commenter stated that this could create unnecessary legal liability and a burden on stakeholders.

Response. The § 171.206(e) ''legal action'' definition establishes what the term ''legal action'' means when used in the § 171.206(a) *threshold* condition, the § 171.206(b) *patient protection* condition, and the § 171.206(c) *care access* condition. The definition is intended to encompass a broad array of criminal, civil, and administrative investigations, actions, and proceedings, but only if those investigations, actions, and proceedings are based on the mere fact that a person sought, obtained, provided, or facilitated reproductive health care.

The Protecting Care Access Exception, like all information blocking exceptions, is voluntary. It is not intended to create an affirmative obligation for an actor to evaluate whether a risk of potentially exposing anyone to legal action from any particular EHI access, exchange, or use scenario(s) might occur. It is also not intended to override an actor's obligation to comply with other valid, applicable law compelling the actor to make the EHI available for permissible purposes.[57] An example of this that we used in the HTI–2 Proposed Rule was that an actor would still need to comply with applicable legal discovery rules and judicial orders issued by a court of competent jurisdiction. Non-compliance with such other laws could subject the actor to sanctions under those other laws regardless of whether the actor's practice would also be considered information blocking or would instead be covered by an exception set forth in any subpart of *45 CFR part 171.* We therefore do not expect the definition of ''legal action'' in § 171.206(e), or this exception as a whole, to affect the ability of a party to a custody dispute to obtain relevant evidence in the normal course of that legal proceeding.

Comments. A few commenters sought application of the exception to any instance in which the fact of seeking or obtaining reproductive health care increases the risk of legal action, stating that some jurisdictions undermine care access by using the fact that a person obtained or sought reproductive health care as evidence of other crimes (*e.g.,* substance use during pregnancy).

Response. The exception was proposed to address actors' concerns about potential information blocking implications of their limiting EHI sharing when they believe such interference with sharing could reduce a risk of legal action based on the mere fact that any person sought, obtained, provided, or facilitated reproductive health care or (where the *patient protection* condition applies) may have sought or needed reproductive health care. We do not believe explicit expansion of the exception to include legal action(s) based on conduct of a pregnant person *other than* the mere act of seeking, obtaining, providing, or facilitating reproductive health care would have the effect of ensuring that health care providers are not compelled to disclose information for use in such actions. This is because, as we have repeatedly reminded actors throughout this final rule, the exception is not intended to override other laws with which the actor must comply. Such an expansion is also beyond the scope of our proposal for this exception, including all of the alternatives on which we solicited comments in the HTI–2 Proposed Rule.

IV. Severability

As we explained in the HTI–2 Proposed Rule (89 FR 63511), it was and continues to be our intent that if any provision of the proposed rule were, if or when finalized, held to be invalid or unenforceable—facially or as applied to any person, plaintiff, or circumstance—or stayed pending further judicial or agency action, such provision shall be severable from other provisions finalized, and from rules and regulations otherwise in effect, and not affect the remainder of provisions finalized. It was and continues to be our intent that, unless such provision shall be held to be utterly invalid or unenforceable, it be construed to give the provision maximum effect permitted by law including in the application of the provision to other persons not similarly situated or to other, dissimilar circumstances from those where the provision may be held to be invalid or unenforceable.

This final rule finalizes provisions that are intended to and will operate independently of each other and of provisions finalized in previous rules, even if multiple of them may serve the same or similar general purpose(s) or policy goal(s). Where a provision is necessarily dependent on another, the context generally makes that clear (such as by cross-reference to a particular standard, requirement, condition, or pre-requisite, or other regulatory

[57] For purposes of the information blocking regulations, ''permissible purpose'' is defined in 45 CFR 171.102.

provision). Where a provision that is dependent on one that is stayed or held invalid or unenforceable (as described in the preceding paragraph) is included in a subparagraph, paragraph, or section within 45 CFR part 171, we intend that other provisions of such subparagraph(s), paragraph(s), or section(s) that operate independently of said provision would remain in effect.

For example, if an information blocking exception, sub-exception, or condition of any 45 CFR part 171 exception were stayed or held invalid or unenforceable, the other information blocking exceptions, sub-exceptions, or conditions to an exception would continue to be available for actors. For instance, an actor's practice meets the § 171.202 Privacy Exception by satisfying all the requirements of at least one of multiple sub-exceptions (paragraph (b), (c), (d), or (e)) that are not dependent on one another. If any one of the sub-exceptions were stayed or held invalid or unenforceable, the other sub-exceptions would remain available. When an actor's practice can meet an exception by satisfying all the requirements of a combination of conditions that includes any condition picked from an array of multiple conditions that are not dependent on one another, the exception would remain available and continue to apply to any practice meeting any of the remaining conditions. The Infeasibility Exception (§ 171.204) is an example of an exception that can be satisfied by meeting one always-required condition (§ 171.204(b) *responding to requests*) plus any one of the independent conditions in § 171.204(a). It is our intent that even if one of the conditions in § 171.204(a) were stayed or held to be utterly invalid or unenforceable, the § 171.204 Infeasibility Exception would remain available, and all of the other conditions in § 171.204(a) would remain in force and available to actors.

The Infeasibility Exception's *segmentation* condition (§ 171.204(a)(2)) is an example of a paragraph within part 171 that includes provisions dependent on provisions in another section or paragraph. Specifically, § 171.204(a)(2) *segmentation* condition includes provisions that are applicable where an actor has chosen to withhold some EHI consistent with any of §§ 171.201, 171.202, or 171.206. These specific provisions are, therefore, dependent on the cross-referenced sections, while other provisions in § 171.204(a)(2) are not. It is our intent that if any provision in any paragraph in § 171.201 or § 171.202 or § 171.206 were held to be invalid or unenforceable—facially or as applied to any person, plaintiff, or circumstance—or stayed pending further judicial or agency action, *only* the operation of the specific provision of § 171.204(a)(2) that specifically references such other section would be affected. All other provisions in § 171.204(a)(2) would remain in effect, including cross-references to other sections in 45 CFR part 171 *and* the § 171.204(a)(i) provision for EHI that other applicable law does not permit to be made available. For example, as noted in this rule's preamble discussion of the Protecting Care Access Exception (§ 171.206), it is our intent that if any provision of § 171.206, as finalized in this final rule, were held to be invalid or unenforceable facially, or as applied to any person, plaintiff, or stayed pending further judicial or agency action, such provision shall be severable from other provisions of § 171.206 that do not rely upon it and from any other provision codified in 45 CFR part 171 that does not explicitly rely upon § 171.206, even if such provisions were to be established or modified through this same final rule.[58] Thus, if § 171.206 were held to be utterly invalid, unenforceable, or stayed, it is our intent that the provisions in § 171.204(a)(2) that reference and rely on §§ 171.201 and 171.202 rather than § 171.206 should be construed as fully severable from the reference to § 171.206 and retain their full applicability and effect.

Moreover, we reiterate that it is our intent that unless any provision in any section or paragraph in 45 CFR part 171 shall be held to be utterly invalid or unenforceable, it be construed to give the provision maximum effect permitted by law including in the application of the provision to other persons not similarly situated or to other, dissimilar circumstances from those where the provision may be held to be invalid or unenforceable. For example, if the Protecting Care Access Exception (§ 171.206) were held to be invalid and unenforceable with respect to its application to a specific item or service that fits the § 171.102 definition of reproductive health care, it should be upheld with respect to other items and services that also fit this definition. Similarly, if either the § 171.206(b) *patient protection* condition or § 171.206(c) *care access* condition were held to be invalid as applied to specific reproductive health care item(s) or service(s) with respect to particular person(s) or in particular circumstance(s), that condition should be upheld with respect to the seeking, obtaining, provision, or facilitation of such item(s) or service(s) by other persons not similarly situated or in other, dissimilar, circumstances.

Even if a paragraph or subparagraph were held to be utterly invalid or unenforceable, it is our intent that the remaining subparagraphs or paragraphs even within the same section of the CFR would remain in effect and be construed to have the maximum effect permitted by law. For example, an actor's practice can satisfy the Protecting Care Access Exception (§ 171.206) by satisfying the *threshold* condition (§ 171.206(a)) and the requirements of at least one of the *patient protection* (§ 171.206(b)) or *care access* (§ 171.206(c)) conditions. If only the *patient protection* condition (paragraph (b)) of the Protecting Care Access Exception (§ 171.206) were held to be utterly invalid or unenforceable as applied to any person or situation, it is our intent that the provision in § 171.204(a)(2)(ii) that references EHI an actor may withhold consistent with § 171.206 be construed to give § 171.204(a)(2)(ii) maximum effect permitted by law where an actor has chosen to withhold EHI consistent with the § 171.206(a) *threshold* condition and § 171.206(c) *care access* condition.

To ensure our intent for severability of provisions is clear in the CFR, we proposed (as explained at 89 FR 63511) the addition to § 170.101 (89 FR 63766), § 171.101 (89 FR 63802), and inclusion in § 172.101 (89 FR 63805), of a paragraph stating our intent that if any provision is held to be invalid or unenforceable it shall be construed to give maximum effect to the provision permitted by law, unless such holding shall be one of utter invalidity or unenforceability, in which case the provision shall be severable from this part and shall not affect the remainder thereof or the application of the provision to other persons not similarly situated or to other dissimilar circumstances. These proposals are not addressed in this final rule but are among the subjects of the HTI–2 final rule (RIN 0955–AA07), which was recently issued.

V. Waiver of Delay in Effective Date

Under the Administrative Procedure Act (APA) (Pub. L. 79–404, Jun. 11, 1946), 5 U.S.C. 553(d) mandates a 30-day delay in effective date after issuance or publication of a rule. Such a delay is not required, however, for ''a substantive rule which grants or recognizes an exemption or relieves a restriction.'' 5 U.S.C. 553(d)(1). Moreover, section 553(d)(3) allows that an agency may waive the 30-day delay

[58] The reference to § 171.206 in § 171.204(a)(2) is currently the only example of a provision in any section of 45 part 171 that relies on § 171.206 in any way.

in effective date ''for good cause found and published with the rule.'' *Id.* 553(d)(3).

A delay in the effective date of the finalized provisions of this final rule is not required because this rule recognizes an exemption or relieves a restriction from the information blocking requirements that would otherwise exist in the absence of this final rule. Actors are not under any obligation to alter practices because of this final rule, as the information blocking exceptions generally, and the specific regulations finalized here, are voluntary. In addition, to the extent that a waiver of the delay in effective date would be required, there is good cause to waive the delay in the effective date for this final rule.

Because information blocking exceptions are voluntary, the expansion of the scope of provisions in § 171.202 and § 171.204, as well as the adoption of § 171.206, as finalized in this rule, do not create an obligation for any actor to begin engaging in practices to which the exceptions would apply if the actor does not want to or, if they do want to, on any particular timeframe. Therefore, because these provisions are all voluntary, we do not believe affected persons require additional time to prepare for the effective date of this final rule, to include the 30 days required by 5 U.S.C. 553(d). An actor who does need additional time could simply continue their current practices and would not be acting in contradiction to this rule. Additionally, because an actor conforming their practices to the exceptions, including those finalized in this rule, exempts those practices from the possible consequences of information blocking, this rule satisfies the requirement for an exemption from the effective date delay requirement under 5 U.S.C. 553(d)(1) (a delayed effective date after publication is not required for ''a substantive rule which grants or recognizes an exemption or relieves a restriction''). This final rule exempts an actor's conforming practices from the consequences of information blocking enforcement and does not apply or require any change in practice except to the extent that an actor wishes to undertake a practice conforming to the exceptions, thereby ensuring the actor's exemption from civil monetary penalties or appropriate disincentives.

As we have repeatedly reminded actors, an actor's practice that does not meet the conditions of an exception does not automatically constitute information blocking, as the practice must still meet all the elements of the information blocking definition to be considered information blocking, including that the practice is likely to interfere with the access, exchange, or use of EHI, and that the actor acted with the requisite intent (89 FR 1378 citing 85 FR 25820). Information blocking exceptions are also voluntary; we do not intend that the existence of any exception be construed as creating a mandate for actors to engage in a practice to which the exception would apply. However, information blocking exceptions offer actors certainty that if they choose to engage in certain practices that meet the conditions of applicable exception(s), then they will not be subject to a civil monetary penalty or appropriate disincentive from HHS. Thus, an immediate effective date for the new and revised exceptions will not require any actor to take immediate action, and therefore actors do not require additional time to prepare for the effective date of this final rule.

In addition, an immediate effective date will allow actors to immediately avail themselves of the revised and new exceptions finalized in this rule upon publication of the final rule, alleviating burdens associated with the uncertainty specific to information blocking implications that the provisions finalized in this rule are designed to address. For example, actors, such as health care providers, who withhold EHI related to reproductive health care consistent with the Protecting Care Access Exception will not be subject to civil monetary penalties or appropriate disincentives under the information blocking regulations as of the date of publication of this final rule for engaging in that practice. Thus, an immediate effective date for the Protecting Care Access Exception will remove from health care providers and the other actors on whom they rely for health IT items and services the burden of weighing, for another 30 days, their uncertainty about information blocking civil monetary penalties or appropriate disincentives for withholding patients' reproductive health care information in applicable circumstances against their belief that sharing the information in those circumstances risks potentially exposing persons to legal action as defined in § 171.206. Regardless of whether we expect, intend, or believe it is likely that HHS would seek to impose a civil monetary penalty or appropriate disincentive on any actor specifically for engaging in conduct to which § 171.206 applies, or within the expanded scope of provisions in § 171.202 or § 171.204 revised by this rule, during a 30 day period of delay between publication and effective date of this rule, our interactions with actors since the ONC Cures Act Final Rule (85 FR 25642) appeared in the **Federal Register** leads us to expect a majority of actors would be concerned that such enforcement activity would be possible and that some significant portion of them would continue to be burdened by that concern.

In further support of waiving the delayed effective date, the public has also expressed a need to avoid delays in implementing the proposed new Protecting Care Access Exception. As discussed at the end of the Background and Purpose section of ''III. Information Blocking Enhancements; *B. Exceptions;* 3. New Protecting Care Access Exception,'' commenters on the HTI–2 Proposed Rule specifically stated that the information blocking provisions finalized in this final rule should be effective without procedural delay, noting that such an approach would encourage continued use of electronic methods for sharing health information and ensure that some providers would not feel a need to revert to paper records to protect patients' privacy.

Because a disclosure—including one that is only permitted (not required) by other applicable law—is a bell that cannot be unrung, we believe it is important to mitigate the risk of actors' fear of being subject to civil monetary penalties or appropriate disincentives under the information blocking regulations from being the sole reason that they refuse to grant individuals' requests that their EHI not be shared or make individuals' reproductive health care information available for an access, exchange, or use that the actor believes in good faith could potentially expose the patient, provider, or facilitator of lawful reproductive health care to legal action (as defined in § 171.206). We are concerned that providers' uncertainties about their ability to track all laws that might be applied to them may be contributing to what some commenters on the proposed revision to § 171.204(a)(2) described as underuse of the Privacy Exception related to limited segmentation capabilities. An immediate effective date for the Protecting Care Access Exception and the revised Privacy sub-exception for individuals' requested restrictions, and the clarified and expanded *segmentation* condition of the Infeasibility Exception (§ 171.204(a)(2)), would afford all actors the assurance they need to immediately stop erring on the side of sharing individuals' EHI contrary to the individual's request or in situations where § 171.206 would apply. However many disclosures actors might make during a 30-day delay in the

effective date of this rule specifically and solely because of actors' fears of being subject to civil monetary penalties or appropriate disincentives as ''information blockers'' represent a compromise of patients' privacy and a commensurate, avoidable impediment to restoring patients' trust that their health care provider will be able to maintain their confidence unless another law that applies to the provider compels disclosure of patients' private health information against the provider's and patient's wishes.

Because, as we have explained, actors do not require additional time to prepare for the effective date of this final rule due to the voluntary nature of the information blocking exceptions we have revised and the exception we have finalized, we believe we have satisfied the requirements in 5 U.S.C. 553(d) needed to waive the delay in the effective date of the final rule. Avoiding a delay in effective date of this final rule could also help to more quickly render unnecessary concerned actors' efforts to seek state or local enactments aimed solely at addressing actors' concerns about implicating the information blocking regulations if they do not share reproductive health care information as widely as applicable laws might permit. Thus, an immediate effective date of this rule would enable actors to set aside the burden of these efforts and refocus on other goals, such as developing or implementing improved data segmentation capabilities or other health IT or patient care advancements.

VI. Regulatory Impact Analysis

A. Statement of Need

This final rule is necessary to meet our statutory responsibility under the Cures Act and to advance HHS policy goals to promote information sharing. As discussed in this final rule, the revised Privacy sub-exception ''individual's request not to share EHI'' (45 CFR 171.202(e)) and new Protecting Care Access Exception (45 CFR 171.206) respond to actors' uncertainty about potentially being subject to civil monetary penalties or appropriate disincentives under the information blocking regulations (45 CFR part 171) if they engage in practices intended to protect patients' privacy, providers' willingness to furnish care that is lawful under the circumstances in which it is furnished, and patients' trust in their providers and the nation's health information infrastructure. The revision to the Infeasibility Exception's *segmentation* condition (§ 171.204(a)(2)) finalized in this rule recognizes the current variability in, and in many cases lack of, technical capability an actor may have to segment EHI that an actor might wish to withhold under the Protecting Care Access Exception, or on ''unreviewable grounds'' for denial of individual access under the HIPAA Privacy Rule, from other EHI that the actor could share under applicable law. Thus, revising § 171.204(a)(2) is not only necessary to fully implement § 171.206 but also to ensure actors do not feel compelled—specifically by the information blocking regulations in combination with their inability to unambiguously segment relevant EHI—to disclose EHI in circumstances where the actor might otherwise (and a HIPAA covered entity would be permitted to) to deny an individual access to their health information. Such circumstances are identified in 45 CFR 164.524(a)(2) and include those where an inmate obtaining their health information would jeopardize the health, safety, security, custody, or rehabilitation of that inmate or others, or the safety of officers or other persons at the correctional institution or involved in transporting the inmate. The revisions to the Infeasibility Exception's *segmentation* condition broadens its scope of applicability without creating a need for any actor who may already be engaged in practices that were already in conformance to with the original scope of § 171.204(a)(2) to change any of their policies, procedures, or processes in order for such practices to remain in conformance with § 171.204(a)(2) as revised.

B. Alternatives Considered

In the HTI–2 Proposed Rule, we noted that we were unable to identify alternatives to our proposals that would appropriately implement our responsibilities under the Cures Act (89 FR 63662). We concluded that our proposals took the necessary steps to fulfill the mandates specified in the Public Health Service Act (PHSA), as amended by the Health Information Technology for Economic and Clinical Health Act (HITECH Act) and the Cures Act, in the least burdensome way. We welcomed comments on our assessment and any alternatives we should have considered.

Comments. We received comments suggesting alternatives to our proposals. Specifically, some commenters suggested that ASTP/ONC require health IT developers of certified health IT enable a user to implement a process to restrict uses or disclosures of data in response to a patient request when such restriction is necessary, citing 88 FR 23822. Another commenter encouraged ASTP/ONC to strengthen ONC Health IT Certification Program certification criteria for capabilities to allow clinical users to tag and withhold data from exchange. Other commenters suggested the alternative was to not adopt the proposed changes to the Privacy and Infeasibility Exceptions as well as the new Protecting Care Access Exception. These commenters supported the sharing of reproductive health information for clinical care.

Response. We appreciate the commenters' suggestions, but their requests specific to imposing certain requirements on developers of certified health IT, which appear to refer to ASTP/ONC's proposal in the HTI–1 Proposed Rule to adopt a new certification criterion ''patient requested restrictions'' in § 170.315(d)(14) and which was not finalized in the HTI–1 Final Rule (89 FR 1301), are outside the scope of this rulemaking. We note that we may consider amending relevant ONC Health IT Certification Program or information blocking regulations in future rulemaking in response to changing market conditions. As to the commenters' suggestions that we not adopt our proposals, we decline to do so as such action would be counter to our stated reasons for the revisions to the exceptions and the new Protecting Care Access Exception.

C. Overall Impact

1. Executive Orders 12866 and 13563—Regulatory Planning and Review Analysis

We have examined the impacts of this final rule as required by Executive Order12866 on Regulatory Planning and Review (September 30, 1993), Executive Order 13563 on Improving Regulation and Regulatory Review (January 18, 2011), Executive Order 14094 entitled ''Modernizing Regulatory Review'' (April 6, 2023), the Regulatory Flexibility Act (RFA), section 202 of the Unfunded Mandates reform Act of 1995 (March 22, 1995; Pub. L. 104–4), the Small Business Regulatory Enforcement Fairness Act of 1996 (also known as the Congressional Review Act, 5 U.S.C. 801 *et seq.*), and the Executive Order 13132 on Federalism (August 4, 1999).

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). The Executive Order 14094 amends section 3(f) of Executive Order 12866. The amended section 3(f) of

Executive Order 12866 defines a ''significant regulatory action'' as an action that is likely to result in a rule: (1) having an annual effect on the economy of $200 million or more in any 1 year (adjusted every 3 years by the Administrator of OMB's OIRA for changes in gross domestic product), or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, territorial, or tribal governments or communities; (2) creating a serious inconsistency or otherwise interfering with an action taken or planned by another agency; (3) materially altering the budgetary impacts of entitlement grants, user fees, or loan programs or the rights and obligations of recipients thereof; or (4) raise legal or policy issues for which centralized review would meaningfully further the President's priorities or the principles set forth in the Executive order, as specifically authorized in a timely manner by the Administrator of OIRA in each case.

An RIA must be prepared for rules that are significant per section 3(f)(1) (annual effect of $200 million or more in any 1 year).

OIRA has determined that this final rule is a significant regulatory action under 3(f) of Executive Order 12866, as amended by E.O. 14094. Pursuant to Subtitle E of the Small Business Regulatory Enforcement Fairness Act of 1996 (also known as the Congressional Review Act, 5 U.S.C. 801 *et seq.*), OIRA has also determined that this final rule does not meet the criteria set forth in 5 U.S.C. 804(2).

Although we did not include an assessment of the cost and benefits of the proposed information blocking enhancements in the HTI–2 Proposed Rule, we have included an assessment of the finalized information blocking enhancements in this final rule. We have finalized in this final rule preamble several enhancements with respect to the information blocking provisions in 45 CFR part 171. These include the addition of a definition of ''reproductive health care'' for the purpose of information blocking regulations. The enhancements also include revising the Privacy and Infeasibility Exceptions and adding a Protecting Care Access Exception in subpart B of 45 CFR part 171.

Costs

We expect ASTP/ONC to incur an annual cost for issuing educational resources related to the finalized information blocking enhancements. We estimate that ASTP/ONC would issue educational resources each quarter, or at least four times per year. We assume that the resources would be developed by ASTP/ONC staff with the expertise of a GS–15, Step 1 federal employee(s). We calculate the hourly benefits for a federal employee to be equal to one hundred (100) percent of hourly wage. The hourly wage with benefits for a GS–15, Step 1 employee located in Washington, DC is approximately $157.[59]

We estimate it would take ASTP/ONC staff between 50 and 100 hours to develop resources each quarter, or 200 to 400 hours annually. Therefore, we estimate the annual cost to ASTP/ONC would, on average, range from $31,400 to $62,800.

Benefits

We anticipate that the adopted information blocking enhancements will enable actors to determine more easily and with greater certainty whether their practices (acts or omissions) that may or do interfere with access, exchange, or use of EHI (as defined in 45 CFR 171.102) meet the conditions to fall within an information blocking exception. As such, we expect these policies will further improve actors understanding of, and compliance with, the Cures Act information blocking definition. The benefits of the revisions to the Privacy and Infeasibility Exceptions and the new Protecting Care Access Exception are discussed in detail in section III.B (''*Exceptions*'') of this preamble.

D. Regulatory Flexibility Act

The RFA requires agencies to analyze options for regulatory relief of small businesses if a rule has a significant impact on a substantial number of small entities. The Small Business Administration (SBA) establishes the size of small businesses for Federal Government programs based on average annual receipts or the average employment of a firm.[60]

In the HTI–2 Proposed Rule we noted that the entities that are likely to be directly affected by the information blocking provisions in this final rule are actors within the meaning of 45 CFR 171.102 (health IT developers of certified health IT, health information networks/health information exchanges, and health care providers) under the information blocking regulations (89 FR 63765). The revised and new information blocking exceptions, reflecting practices that do not constitute information blocking, will provide flexibilities and relief for actors subject to the information blocking regulations. In the HTI–2 Proposed Rule (89 FR 63765), we referred readers to our information blocking-related proposals (89 FR 63616 through 63643) and welcomed comments on their impacts on small entities.

Comments. We received no comments on our assessment.

Response. The policies in this final rule, as proposed, establish revised exceptions and a new exception to the information blocking definition that provide flexibilities and relief for actors subject to the information blocking regulations. The exceptions exist as a voluntary means for actors to gain assurance that their practice(s) does not constitute information blocking. In addition, the exceptions (reasonable and necessary activities under the statute) take into account the potential burden on small entities to meet them, such as providing actors the ability to make case-by-case determinations versus using established organizational policies under the Privacy Exception (45 CFR 171.202(b)(1)(ii)) and the new Protecting Care Access Exception (45 CFR 171.206(a)(3)(ii)).

We do not believe that this final rule would create a significant impact on a substantial number of small entities, and the Secretary certifies that this final rule would not have a significant impact on a substantial number of small entities.

E. Executive Order 13132—Federalism

Executive Order 13132 establishes certain requirements that an agency must meet when it promulgates a rule that imposes substantial direct requirement costs on state and local governments, preempts state law, or otherwise has federalism implications.

Comments. We received no comments.

Response. Nothing in this final rule imposes substantial direct compliance costs on state and local governments, preempts state law, or otherwise has federalism implications.

F. Unfunded Mandates Reform Act of 1995

Section 202 of the Unfunded Mandates Reform Act of 1995 requires that agencies assess anticipated costs and benefits before issuing any rule that imposes unfunded mandates on state, local, and tribal governments or the

[59] Office of Personnel and Management. *https://www.opm.gov/policy-data-oversight/pay-leave/salaries-wages/salary-tables/pdf/2024/DCB_h.pdf.* Accessed December 3, 2024.

[60] The SBA references that annual receipts mean ''total income'' (or in the case of a sole proprietorship, ''gross income'') plus ''cost of goods sold'' as these terms are defined and reported on Internal Revenue Service tax return forms.

private sector requiring spending in any one year of $100 million in 1995 dollars, updated annually for inflation. The current inflation-adjusted statutory threshold is approximately $183 million in 2024.

Comments. We received no comments on the application of this law to our proposals finalized in this final rule.

Response. This final rule does not impose unfunded mandates on State, Local, and Tribal governments, or the private sector.

List of Subjects in 45 CFR Part 171

Computer technology, Electronic health record, Electronic information system, Electronic transactions, Health, Healthcare, Health care provider, Health information exchange, Health information technology, Health information network, Health insurance, Health records, Hospitals, Privacy, Public health, Reporting and record keeping requirements, Security.

For the reasons set forth in the preamble, the Department of Health and Human Services amends 45 CFR part 171 as follows:

PART 171—INFORMATION BLOCKING

■ 1. The authority citation for part 171 continues to read as follows:

Authority: 42 U.S.C. 300jj–52; 5 U.S.C. 552.

■ 2. Amend § 171.102 by adding, in alphabetical order, the definition ''Reproductive health care'' to read as follows:

* * * * *

Reproductive health care means health care, as defined in 45 CFR 160.103, that affects the health of an individual in all matters relating to the reproductive system and to its functions and processes. This definition shall not be construed to set forth a standard of care for or regulate what constitutes clinically appropriate reproductive health care.

* * * * *

■ 3. Amend § 171.202 by revising paragraph (a)(2) and paragraph (e) introductory text to read as follows:

§ 171.202 Privacy exception—When will an actor's practice of not fulfilling a request to access, exchange, or use electronic health information in order to protect an individual's privacy not be considered information blocking?

* * * * *

(a) * * *

(2) The term *individual* as used in this section means one or more of the following—

(i) An individual as defined by 45 CFR 160.103.

(ii) Any other natural person who is the subject of the electronic health information being accessed, exchanged, or used.

(iii) A person who legally acts on behalf of a person described in paragraph (a)(2)(i) of this section in making decisions related to health care as a personal representative, in accordance with 45 CFR 164.502(g).

(iv) A person who is a legal representative of and can make health care decisions on behalf of any person described in paragraph (a)(2)(i) or (ii) of this section.

(v) An executor, administrator, or other person having authority to act on behalf of a deceased person described in paragraph (a)(2)(i) or (ii) of this section or the individual's estate under State or other law.

* * * * *

(e) *Sub-exception—individual's request not to share EHI.* An actor may elect not to provide access, exchange, or use of an individual's electronic health information if the following requirements are met—

* * * * *

■ 4. Amend § 171.204 by revising paragraph (a)(2) to read as follows:

§ 171.204 Infeasibility exception—When will an actor's practice of not fulfilling a request to access, exchange, or use electronic health information due to the infeasibility of the request not be considered information blocking?

(a) * * *

(2) *Segmentation.* The actor cannot fulfill the request for access, exchange, or use of electronic health information because the actor cannot unambiguously segment the requested electronic health information from electronic health information that:

(i) Is not permitted by applicable law to be made available; or

(ii) May be withheld in accordance with 45 CFR 171.201, 171.202, or 171.206 of this part.

■ 5. Add § 171.206 to read as follows:

§ 171.206 Protecting Care Access—When will an actor's practice that is likely to interfere with the access, exchange, or use of electronic health information in order to reduce potential exposure to legal action not be considered information blocking?

An actor's practice that is implemented to reduce potential exposure to legal action will not be considered information blocking when the practice satisfies the condition in paragraph (a) of this section and also satisfies the requirements of at least one of the conditions in paragraphs (b) or (c) of this section.

(a) *Threshold condition.* To satisfy this condition, a practice must meet each of the following requirements:

(1) *Belief.* The practice is undertaken based on the actor's good faith belief that:

(i) Persons seeking, obtaining, providing, or facilitating reproductive health care are at risk of being potentially exposed to legal action that could arise as a consequence of particular access, exchange, or use of specific electronic health information; and

(ii) Specific practices likely to interfere with such access, exchange, or use of such electronic health information could reduce that risk.

(2) *Tailoring.* The practice is no broader than necessary to reduce the risk of potential exposure to legal action that the actor in good faith believes could arise from the particular access, exchange, or use of the specific electronic health information.

(3) *Implementation.* The practice is implemented either consistent with an organizational policy that meets paragraph (a)(3)(i) of this section or pursuant to a case-by-case determination that meets paragraph (a)(3)(ii) of this section.

(i) An organizational policy must:

(A) Be in writing;

(B) Be based on relevant clinical, technical, and other appropriate expertise;

(C) Identify the connection or relationship between the interference with particular access, exchange, or use of specific electronic health information and the risk of potential exposure to legal action that the actor believes the interference could reduce;

(D) Be implemented in a consistent and non-discriminatory manner; and

(E) Conform to the requirements in paragraphs (a)(1) and (2) of this section and to the requirements of at least one of the conditions in paragraphs (b) or (c) of this section that are applicable to the prohibition of the access, exchange, or use of the electronic health information.

(ii) A case-by-case determination:

(A) Is made by the actor in the absence of an organizational policy applicable to the particular situation;

(B) Is based on facts and circumstances known to, or believed in good faith by, the actor at the time of the determination;

(C) Conforms to the conditions in paragraphs (a)(1) and (2) of this section; and

(D) Is documented either before or contemporaneous with engaging in any practice based on the determination. Documentation of the determination must identify the connection or

relationship between the interference with particular access, exchange, or use of specific electronic health information and the risk of potential exposure to legal action.

(4) *Another actor's reliance on good faith belief.* For purposes of this section, an actor who is a business associate of, or otherwise maintains EHI on behalf of, another actor may rely on the good faith belief consistent with paragraph (a)(1) of the section and organizational policy or case-by-case determinations consistent with paragraph (a)(3) of this section of the actor on whose behalf relevant EHI is maintained.

(b) *Patient protection condition.* When implemented for the purpose of reducing the patient's risk of potential exposure to legal action, the practice must:

(1) Affect only the access, exchange, or use of specific electronic health information the actor in good faith believes could expose the patient to legal action because the electronic health information shows, or would carry a substantial risk of supporting a reasonable inference, that the patient:

(i) Obtained reproductive health care;

(ii) Inquired about or expressed an interest in seeking reproductive health care; or

(iii) Has any health condition(s) or history for which reproductive health care is often sought, obtained, or medically indicated.

(2) Be subject to nullification by an explicit request or directive from the patient that the access, exchange, or use of the specific electronic health information occur despite the risk(s) to the patient that the actor has identified.

(3) For purposes of paragraph (b)(1) and (2) of this section, ''patient'' means the natural person who is the subject of the electronic health information or another natural person referenced in, or identifiable from, the EHI as a person who has sought or obtained reproductive health care.

(c) *Care access condition.* When implemented for the purpose of reducing the risk of potential exposure to legal action for one or more licensed health care professionals, other health care providers, or other persons involved in providing or facilitating reproductive health care that is lawful under the circumstances in which such health care is provided, the practice must affect only access, exchange, or use of specific electronic health information that the actor believes could expose a care provider(s) and facilitator(s) to legal action because the information shows, or would carry a substantial risk of supporting a reasonable inference, that they provide or facilitate, or have provided or have facilitated, reproductive health care.

(d) *Presumption.* For purposes of determining whether an actor's practice meets paragraph (b)(1)(i) or (c) of this section, care provided by someone other than the actor is presumed to have been lawful unless the actor has actual knowledge that the care was not lawful under the circumstances in which such care is provided.

(e) *Definition of legal action.* As used in this section, legal action means any one or more of the following—

(1) A criminal, civil, or administrative investigation into any person for the mere act of seeking, obtaining, providing, or facilitating reproductive health care;

(2) A civil or criminal action brought in a court to impose liability on any person for the mere act of seeking, obtaining, providing, or facilitating reproductive health care; or

(3) An administrative action or proceeding against any person for the mere act of seeking, obtaining, providing, or facilitating reproductive health care.

Xavier Becerra,

Secretary, Department of Health and Human Services.

[FR Doc. 2024–29683 Filed 12–16–24; 8:45 am]

BILLING CODE 4150–45–P

FEDERAL REGISTER

Vol. 89 Tuesday,
No. 242 December 17, 2024

Part VIII

Environmental Protection Agency

40 CFR Part 751
Trichloroethylene (TCE); Regulation Under the Toxic Substances Control Act (TSCA); Final Rule

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 751

[EPA–HQ–OPPT–2020–0642; FRL–8317–02–OCSPP]

RIN 2070–AK83

Trichloroethylene (TCE); Regulation Under the Toxic Substances Control Act (TSCA)

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: The Environmental Protection Agency (EPA or Agency) is finalizing a rule to address the unreasonable risk of injury to health presented by trichloroethylene (TCE) under its conditions of use. TSCA requires that EPA address by rule any unreasonable risk of injury to health or the environment identified in a TSCA risk evaluation and apply requirements to the extent necessary so that the chemical no longer presents unreasonable risk. EPA's final rule will, among other things, prevent serious illness associated with uncontrolled exposures to the chemical by preventing consumer access to the chemical, restricting the industrial and commercial use of the chemical while also allowing for a reasonable transition period with interim worker protections in place where an industrial and commercial use of the chemical is being prohibited, and provide time-limited exemptions for critical or essential uses of TCE for which no technically and economically feasible safer alternatives are available.

DATES: This final rule is effective on January 16, 2025.

ADDRESSES: The docket for this action, identified by docket identification (ID) number EPA–HQ–OPPT–2020–0642, is available online at *https://www.regulations.gov.* Additional information about dockets generally, along with instructions for visiting the docket in-person, is available at *https://www.epa.gov/dockets.*

For general information: The TSCA-Hotline, ABVI-Goodwill, 422 South Clinton Ave., Rochester, NY 14620; telephone number: (202) 554–1404; email address: *TSCA-Hotline@epa.gov.*

SUPPLEMENTARY INFORMATION:

I. Executive Summary

A. Does this action apply to me?

1. General Applicability

This action applies to you if you manufacture, process, distribute in commerce, use, or dispose of TCE or products containing TCE. TSCA section 3(9) defines the term ''manufacture'' to mean ''to import into the customs territory of the United States (as defined in general note 2 of the Harmonized Tariff Schedule of the United States), produce, or manufacture.'' Therefore, unless expressly stated otherwise, importers of TCE are subject to any provisions regulating manufacture of TCE (see also Unit I.A.2.). The following list of North American Industrial Classification System (NAICS) codes is not intended to be exhaustive, but rather provides a guide to help readers determine whether this document applies to them. Potentially affected entities include:

- Crude Petroleum Extraction (NAICS code 211120);
- Fossil Fuel Electric Power Generation (NAICS code 221112);
- Other Electric Power Generation (NAICS code 221118);
- Broadwoven Fabric Mills (NAICS code 313210);
- Narrow Fabric Mills and Schiffli Machine Embroidery (NAICS code 313220);
- Nonwoven Fabric Mills (NAICS code 313230);
- Textile and Fabric Finishing Mills (NAICS code 313310);
- Fabric Coating Mills (NAICS code 313320);
- Wood Window and Door Manufacturing (NAICS code 321911);
- Prefabricated Wood Building Manufacturing (NAICS code 321992);
- Paper Bag and Coated and Treated Paper Manufacturing (NAICS code 322220);
- Petroleum Refineries (NAICS code 324110);
- All Other Petroleum and Coal Products Manufacturing (NAICS code 324199);
- Petrochemical Manufacturing (NAICS code 325110);
- Other Basic Inorganic Chemical Manufacturing (NAICS code 325180);
- Ethyl Alcohol Manufacturing (NAICS code 325193);
- All Other Basic Organic Chemical Manufacturing (NAICS code 325199);
- Plastics Material and Resin Manufacturing (NAICS code 325211);
- Medicinal and Botanical Manufacturing (NAICS code 325411);
- Pharmaceutical Preparation Manufacturing (NAICS code 325412);
- Paint and Coating Manufacturing (NAICS code 325510);
- Adhesive Manufacturing (NAICS code 325520);
- Polish and Other Sanitation Good Manufacturing (NAICS code 325612);
- Photographic Film, Paper, Plate and Chemical Manufacturing (NAICS code 325992);
- All Other Miscellaneous Chemical Product and Preparation Manufacturing (NAICS code 325998);
- Polystyrene Foam Product Manufacturing (NAICS code 326140);
- Urethane and Other Foam Product (except Polystyrene) Manufacturing (NAICS code 326150);
- Tire Manufacturing (except Retreading) (NAICS code 326211);
- Tire Retreading (NAICS code 326212);
- Rubber and Plastics Hoses and Belting Manufacturing (NAICS code 326220);
- Rubber Product Manufacturing for Mechanical Use (NAICS code 326291);
- All Other Rubber Product Manufacturing (NAICS code 326299);
- Pottery, Ceramics, and Plumbing Fixture Manufacturing (NAICS code 327110);
- Gypsum Product Manufacturing (NAICS code 327420);
- Iron and Steel Mills and Ferroalloy Manufacturing (NAICS code 331110);
- Iron and Steel Pipe and Tube Manufacturing from Purchased Steel (NAICS code 331210);
- Rolled Steel Shape Manufacturing (NAICS code 331221);
- Steel Wire Drawing (NAICS code 331222);
- Nonferrous Metal (except Aluminum) Smelting and Refining (NAICS code 331410);
- Copper Rolling, Drawing, Extruding, and Alloying (NAICS code 331420);
- Nonferrous Metal (except Copper and Aluminum) Rolling, Drawing and Extruding (NAICS code 331491);
- Secondary Smelting, Refining, and Alloying of Nonferrous Metal (except Copper and Aluminum) (NAICS code 331492);
- Nonferrous Metal Die-Casting Foundries (NAICS code 331523);
- Iron and Steel Forging (NAICS code 332111);
- Nonferrous Forging (NAICS code 332112);
- Custom Roll Forming (NAICS code 332114);
- Powder Metallurgy Part Manufacturing (NAICS code 332117);
- Metal Crown, Closure, and Other Metal Stamping (except Automotive) (NAICS code 332119);

- Metal Kitchen Cookware, Utensil, Cutlery, and Flatware (except Precious) Manufacturing (NAICS code 332215);
- Saw Blade and Handtool Manufacturing (NAICS code 332216);
- Metal Window and Door Manufacturing (NAICS code 332321);
- Sheet Metal Work Manufacturing (NAICS code 332322);
- Ornamental and Architectural Metal Work Manufacturing (NAICS code 332323);
- Power Boiler and Heat Exchanger Manufacturing (NAICS code 332410);
- Metal Tank (Heavy Gauge) Manufacturing (NAICS code 332420);
- Metal Can Manufacturing (NAICS code 332431);
- Other Metal Container Manufacturing (NAICS code 332439);
- Hardware Manufacturing (NAICS code 332510);
- Spring Manufacturing (NAICS code 332613);
- Other Fabricated Wire Product Manufacturing (NAICS code 332618);
- Machine Shops (NAICS code 332710);
- Precision Turned Product Manufacturing (NAICS code 332721);
- Bolt, Nut, Screw, Rivet and Washer Manufacturing (NAICS code 332722);
- Metal Heat Treating (NAICS code 332811);
- Metal Coating, Engraving (except Jewelry and Silverware), and Allied Services to Manufacturers (NAICS code 332812);
- Electroplating, Plating, Polishing, Anodizing and Coloring (NAICS code 332813);
- Industrial Valve Manufacturing (NAICS code 332911);
- Fluid Power Valve and Hose Fitting Manufacturing (NAICS code 332912);
- Plumbing Fixture Fitting and Trim Manufacturing (NAICS code 332913);
- Other Metal Valve and Pipe Fitting Manufacturing (NAICS code 332919);
- Ball and Roller Bearing Manufacturing (NAICS code 332991);
- Small Arms Ammunition Manufacturing (NAICS code 332992);
- Ammunition (except Small Arms) Manufacturing (NAICS code 332993);
- Small Arms, Ordnance, and Ordnance Accessories Manufacturing (NAICS code 332994);
- Fabricated Pipe and Pipe Fitting Manufacturing (NAICS code 332996);
- All Other Miscellaneous Fabricated Metal Product Manufacturing (NAICS code 332999);
- Farm Machinery and Equipment Manufacturing (NAICS code 333111);
- Lawn and Garden Tractor and Home Lawn and Garden Equipment Manufacturing (NAICS code 333112);
- Construction Machinery Manufacturing (NAICS code 333120);
- Mining Machinery and Equipment Manufacturing (NAICS code 333131);
- Oil and Gas Field Machinery and Equipment Manufacturing (NAICS code 333132);
- Food Product Machinery Manufacturing (NAICS code 333241);
- Semiconductor Machinery Manufacturing (NAICS code 333242);
- Sawmill, Woodworking, and Paper Machinery Manufacturing (NAICS code 333243);
- Printing Machinery and Equipment Manufacturing (NAICS code 333244);
- Other Industrial Machinery Manufacturing (NAICS code 333249);
- Optical Instrument and Lens Manufacturing (NAICS code 333314);
- Photographic and Photocopying Equipment Manufacturing (NAICS code 333316);
- Other Commercial and Service Industry Machinery Manufacturing (NAICS code 333318);
- Industrial and Commercial Fan and Blower and Air Purification Equipment Manufacturing (NAICS code 333413);
- Heating Equipment (except Warm Air Furnaces) Manufacturing (NAICS code 333414);
- Air-Conditioning and Warm Air Heating Equipment and Commercial and Industrial Refrigeration Equipment Manufacturing (NAICS code 333415);
- Industrial Mold Manufacturing (NAICS code 333511);

- Coin-Operated Laundries and Drycleaners (NAICS code 812310);
- Drycleaning and Laundry Services (except Coin-Operated) (NAICS code 812320); and
- Industrial Launderers (NAICS code 812332).

2. Applicability to Importers and Exporters

This action may also affect certain entities subject to import certification and export notification requirements under TSCA (*https://www.epa.gov/tsca-import-export-requirements).* Persons who import any chemical substance in bulk form, as part of a mixture, or as

part of an article (if required by rule) are subject to TSCA section 13 (15 U.S.C. 2612) import certification requirements and the corresponding regulations at 19 CFR 12.118 through 12.127 (see also 19 CFR 127.28(i)). Those persons must certify that the shipment of the chemical substance complies with all applicable rules and orders under TSCA (see 19 CFR 12.121). The EPA policy in support of import certification appears at 40 CFR part 707, subpart B.

In addition, any persons who export or intend to export a chemical substance that is the subject of this final rule are subject to the export notification provisions of TSCA section 12(b) (15 U.S.C. 2611(b)) and must comply with the export notification requirements in 40 CFR part 707, subpart D. Any person who exports or intends to export TCE must comply with the export notification requirements in 40 CFR part 707, subpart D.

If you have any questions regarding the applicability of this action to a particular entity, consult the technical information contact listed under **FOR FURTHER INFORMATION CONTACT**.

B. What is the Agency's authority for taking this action?

Under TSCA section 6(a) (15 U.S.C. 2605(a)), if the Agency determines through a TSCA section 6(b) risk evaluation that a chemical substance presents an unreasonable risk of injury to health or the environment, EPA must by rule apply one or more requirements listed in TSCA section 6(a) to the extent necessary so that the chemical substance or mixture no longer presents such risk.

C. What action is the Agency taking?

Pursuant to TSCA section 6(b), EPA determined in 2023 that TCE presents an unreasonable risk of injury to health, without consideration of costs or other non-risk factors, including an unreasonable risk to potentially exposed or susceptible subpopulations (PESS) identified by EPA as relevant to the 2020 Risk Evaluation for TCE under the conditions of use (Refs. 1, 2). A description of the conditions of use that contribute to EPA's determination that TCE presents an unreasonable risk is in III.B.1. of the proposed rule (88 FR 74712, October 31, 2023 (FRL–8317–01–OCSPP), with a summary in Unit II.C.4 of this final rule. Accordingly, to address the unreasonable risk, EPA is issuing this final rule to:

(i) Prohibit the manufacture (including import), processing, and distribution in commerce of TCE for all uses (including all consumer uses (see Unit IV.B.2.)), as described in Unit IV.B., with longer compliance timeframes for manufacture, processing, and distribution in commerce related to certain industrial and commercial uses;

(ii) Prohibit the industrial and commercial use of TCE, as described in Unit IV.B.1., with longer compliance timeframes for certain uses;

(iii) Prohibit the manufacture (including import) and processing of TCE as an intermediate for the manufacturing of hydrofluorocarbon 134a (HFC–134a), following an 8.5-year phase-out, as described in Unit IV.B.3.;

(iv) Prohibit the industrial and commercial use of TCE as a solvent for closed-loop batch vapor degreasing for rayon fabric scouring for end use in rocket booster nozzle production by Federal agencies and their contractors, following a 10-year phase-out, outlined in Unit IV.B.4.;

(v) Prohibit the manufacture (including import), processing, distribution in commerce, and use of TCE as a laboratory chemical for asphalt testing and recovery, following a 10-year phase-out, outlined in Unit IV.B.5.;

(vi) Prohibit the manufacture (including import), processing, distribution in commerce, and industrial and commercial use of TCE as a solvent in batch vapor degreasing for essential aerospace parts and components and narrow tubing used in medical devices, following a 7-year TSCA section 6(g) exemption, outlined in Unit IV.G.1.;

(vii) Prohibit the manufacture (including import), processing, distribution in commerce, and industrial and commercial use of TCE as a solvent in closed loop vapor degreasing necessary for rocket engine cleaning by Federal agencies and their contractors, following a 7-year TSCA section 6(g) exemption, outlined in Unit IV.G.2.;

(viii) For vessels of the Armed Forces and their systems, and in the maintenance, fabrication, and sustainment for and of such vessels and systems, prohibit the industrial and commercial use of TCE as: potting compounds for naval electronic systems and equipment; sealing compounds for high and ultra-high vacuum systems; bonding compounds for materials testing and maintenance of underwater systems and bonding of nonmetallic materials; and cleaning agents to satisfy cleaning requirements (which includes degreasing using wipes, sprays, solvents and vapor degreasing) for: materials and components required for military ordnance testing; temporary resin repairs in vessel spaces where welding is not authorized; ensuring polyurethane adhesion for electronic systems and equipment repair and installation of elastomeric materials; various naval combat systems, radars, sensors, equipment; fabrication and prototyping processes to remove coolant and other residue from machine parts; machined part fabrications for naval systems; installation of topside rubber tile material aboard vessels; and vapor degreasing required for substrate surface preparation prior to electroplating processes, following a 10-year TSCA section 6(g) exemption, outlined in Unit IV.G.3.;

(ix) Prohibit the emergency industrial and commercial use of TCE in furtherance of the NASA mission for specific conditions which are critical or essential and for which no technically and economically feasible safer alternative is available, following a 10-year TSCA section 6(g) exemption, outlined in Unit IV.G.4.;

(x) Prohibit the manufacture (including import), processing, distribution in commerce, disposal, and use of TCE as a processing aid for manufacturing battery separators for lead acid batteries, following a 20-year TSCA section 6(g) exemption, as described in Unit IV.G.5.;

(xi) Prohibit the manufacture (including import), processing, distribution in commerce, disposal, and use of TCE as a processing aid for manufacturing specialty polymeric microporous sheet materials following a 15-year TSCA section 6(g) exemption, as described in Unit IV.G.6.;

(xii) Prohibit the manufacture (including import), processing, distribution in commerce, and use of TCE as a laboratory chemical for essential laboratory activities and some research and development activities, following a 50-year TSCA section 6(g) exemption, as described in Unit IV.G.7.;

(xiii) Require strict workplace controls to limit exposure to TCE, including compliance with a TCE workplace chemical protection program (WCPP), which would include requirements for an interim existing chemical exposure limit (ECEL) revised from the proposed rule, as well as dermal protection, for conditions of use with long term phase-outs or time-limited exemptions under TSCA section 6(g), as described in Unit IV.C., or prescriptive workplace controls, as described in Unit IV.D.;

(xiv) Prohibit the disposal of TCE to industrial pre-treatment, industrial treatment, or publicly owned treatment works, through a phaseout allowing for longer timeframes for disposal necessary for certain industrial and commercial uses as described in Unit IV.B.6., along with a 50-year TSCA section 6(g)

exemption for disposal for cleanup projects before prohibition, as described in Unit IV.G.8., and interim requirements for wastewater worker protection, as described in Unit IV.E.; and

(xv) Establish recordkeeping and downstream notification requirements, as described in Unit IV.F.

EPA notes that all TSCA conditions of use of TCE are subject to this final rule. ''Conditions of use'' is defined in TSCA section 3(4) to mean the circumstances, as determined by EPA, under which a chemical substance is intended, known, or reasonably foreseen to be manufactured, processed, distributed in commerce, used, or disposed of.

D. Why is the Agency taking this action?

Under TSCA section 6(a), ''[i]f the Administrator determines in accordance with subsection (b)(4)(A) that the manufacture, processing, distribution in commerce, use or disposal of a chemical substance or mixture, or that any combination of such activities, presents an unreasonable risk of injury to health or the environment, the Administrator shall by rule . . . apply one or more of the [section 6(a)] requirements to such substance or mixture to the extent necessary so that the chemical substance no longer presents such risk.'' TCE was the subject of a risk evaluation under TSCA section 6(b)(4)(A) that was issued in November 2020 (Ref. 1). In addition, EPA issued a revised unreasonable risk determination for TCE in January 2023 (Ref. 2), determining that TCE, as a whole chemical substance, presents an unreasonable risk of injury to health under the conditions of use. On October 31, 2023, EPA issued a proposed rule (88 FR 74712) (FRL–8317–01–OCSPP) under TSCA section 6(a) to regulate TCE so that it no longer presents unreasonable risk (hereinafter ''2023 TCE proposed rule''). The Agency received public comment on the proposed rule, and with this action, EPA is finalizing the 2023 TCE proposed rule with modifications so that TCE no longer presents an unreasonable risk. The conditions of use that contribute to the unreasonable risk from TCE are described in Unit III.B.1. of the 2023 TCE proposed rule.

EPA emphasizes that while some of the adverse effects from TCE exposure are experienced following acute single exposures, other risks are incurred following long-term repeated exposures. Risks of non-cancer effects, specifically fetal cardiac defects and autoimmunity, are the most sensitive adverse effects following exposure. In addition, risks of other significant adverse outcomes associated with TCE exposure include: non-cancer effects (liver toxicity, kidney toxicity, neurotoxicity, immunosuppression, reproductive toxicity, and developmental toxicity), as well as cancer (liver, kidney, and non-Hodgkin's lymphoma). This final rule will eliminate the unreasonable risk to human health from TCE, as identified in the 2020 Risk Evaluation for TCE (Ref. 1) and the 2023 Revised Unreasonable Risk Determination for TCE (Ref. 2).

While EPA's rule will result in a ban of TCE, the timeframes for the phase-outs differ across conditions of use and are described in fuller detail in Unit IV.B. One phase-out is for uses that may impact the Agency's efforts to address climate-damaging HFCs (and the associated adverse impacts on human health and the environment) under the American Innovation and Manufacturing Act of 2020 (AIM Act) (42 U.S.C. 7675). EPA is implementing a longer phase-out in tandem with strict workplace controls for the manufacturing (including import) and processing of TCE as an intermediate in the generation of HFC–134a, one of the regulated substances subject to a phasedown under the AIM Act. More information on HFC–134a is in Unit V.A.1. of the 2023 TCE proposed rule.

Additionally, the Agency recognizes that alternatives to TCE may not be readily available for some important conditions of use. As an example, EPA is finalizing a longer phase-out timeframe for industrial and commercial use of TCE as a solvent for closed-loop batch vapor degreasing for rayon fabric scouring for end use in rocket booster nozzle production by Federal agencies and their contractors. Currently, substitutes and alternative processes do not meet the technical specifications required to clean the rayon fabric in order to safely produce rockets. Similarly, EPA is finalizing a longer phase-out for the industrial and commercial use of TCE in laboratory use for asphalt testing and recovery, based on information provided by state departments of transportation and regulated entities regarding the timeframes needed for revising state certifications that currently include this use of TCE for, among other activities, enabling the recycling of asphalt.

Additionally, EPA recognizes that some conditions of use may be important for national security applications or for other critical needs. For these reasons, this final rule includes a 15-year exemption under TSCA section 6(g) for industrial and commercial use of TCE as a processing aid for battery separator manufacturing in the production of lead-acid battery separators, as well as for the manufacturing, processing, and distribution in commerce of TCE for this use. EPA recognizes that battery separators are essential components of batteries that power vehicles and systems in the U.S. supply chain for multiple critical infrastructure sectors within the national economy. Further, there are a number of critical uses required for DoD vessels. EPA is finalizing a 10-year exemption under TSCA section 6(g) for DoD vessel requirements for potting, bonding and sealing compounds, and bonding and cleaning requirements for naval combat systems, radars, sensors, equipment, and fabrication and prototyping processes. Additionally, EPA is finalizing a 50-year exemption under TSCA section 6(g) for the industrial and commercial use of TCE for critical laboratory activities; for example, laboratory activities associated with ongoing environmental cleanup projects that fall under the Superfund program or other similar EPA authorities, in which it is necessary to use TCE as a laboratory chemical for the analysis of contaminated soil, air, and water samples.

EPA proposed and is finalizing a requirement to comply with a WCPP, which includes monitoring, adherence to industrial hygiene best practices, and requirements to meet an interim ECEL as a condition for most of the conditions of use for which a phase-out or time-limited exemption was provided. For the remaining conditions of use for which a phase-out or time-limited exemption was provided, EPA is requiring prescriptive worker controls. For many of the conditions of use for which EPA is finalizing longer phase-outs or time-limited exemptions under the WCPP, data were submitted to support many commenters' position that a higher interim ECEL than the limit proposed is necessary for successful implementation of worker protections before those conditions of use are prohibited. These comments were submitted to inform the risk evaluation, Small Business Advocacy Review (SBAR) Panel process, the comment period following publication of the 2023 TCE proposed rule, or during stakeholder outreach, and are available in the corresponding public dockets (EPA–HQ–OPPT–2020–0642; EPA–HQ–OPPT–2019–0500; EPA–HQ–OPPT–2016–0737, respectively).

E. What are the estimated incremental impacts of this action?

EPA has prepared an Economic Analysis of the potential incremental impacts associated with this rulemaking that can be found in the rulemaking

docket (Ref. 3). As described in more detail in the Economic Analysis (Ref. 3), EPA was unable to quantify all incremental costs of this rule. The quantifiable cost of the rule is estimated to be $64.1 million annualized over 20 years at a 2% discount rate, $71.3 million annualized at 3%, and $102.4 million annualized at a 7% discount rate. These costs take into consideration costs of compliance with implementation of an interim WCPP for certain conditions of use, based on an interim ECEL of 0.2 ppm (1.07 mg/m^3) for inhalation exposures as an 8-hour time-weighted average (TWA), costs for transitioning to alternatives, where possible, and reformulation costs of numerous products. Estimated costs for the interim WCPP include costs for monitoring and applicable personal protective equipment (PPE). There are a number of notable unquantified costs. These are described in this Unit and more fully in section 7.12 of the Economic Analysis.

Alternative products with similar cost and efficacy are available for most of the products that are formulated with TCE. However, for some applications, there may be additional unquantified costs associated with the alternatives including costs to develop alternatives where they are not currently available. For instance, in some cases, some effort might be required by firms using TCE products to identify suitable alternatives, test them for their desired applications, learn how to use them safely and effectively, and implement new processes for using the alternative products. There may also be some safety-critical applications, such as energized electrical equipment cleaners and adhesives and sealants specifically for aerospace applications, where alternatives would need to undergo extensive safety reviews and testing before they could replace the TCE products. The information to estimate how often these costs might be incurred or what the specific costs would be per-user or per-firm when they are incurred is not available. Therefore, EPA is unable to consider these costs quantitatively.

There also may be some unquantified costs associated with the implementation of a WCPP. EPA used available air monitoring data as well as modelled data to estimate a distribution of exposure concentrations, but since these data were not collected in the same way monitoring data under a WCPP would be collected, these estimated distributions are uncertain and therefore, the costs of compliance with the WCPP are uncertain. The WCPP costs also assume that when the exposure levels exceed the interim ECEL, compliance is achieved by implementing a respirator PPE program. However, and consistent with the hierarchy of controls, the final rule requires implementation of feasible engineering and administrative controls before using PPE to reduce exposure to or below the interim ECEL. These costs would be specific to individual firms, and EPA does not have sufficient information to estimate these costs.

The costs of alternative identification, testing, and potential process changes could not be estimated for battery separator manufacturers, synthetic paper processors, and fluoroelastomer producers. It is expected that these facilities would need to adopt process and/or physical plant changes in order to comply with the rule. EPA does not have sufficient information to estimate the costs of the prohibition to these sectors.

EPA expects the processing of TCE as an intermediate for the manufacture of HFC–134a to decline over time, in light of the AIM Act requirements (Ref. 4). At some point, the domestic manufacture of HFC–134a may be discontinued. While the timing for this discontinuation is uncertain, it is unclear whether this rule will hasten the closure of plants that use TCE to produce HFC–134a. There could be some unknown cost impacts associated with hastening the closure of these two plants.

EPA is finalizing a 10-year phase-out for the industrial and commercial use of TCE as a solvent for closed-loop batch vapor degreasing for rayon fabric scouring for end use in rocket booster nozzle production by Federal agencies and their contractors, conditioned on Federal agencies performing within 5 years a final pre-launch test of rocket booster nozzles that have been produced without using TCE. EPA does not have information to estimate the cost of such a test. The prohibition of TCE used in vapor degreasing for narrow tubing for aerospace and medical devices is expected to require testing and certification of alternative solvents and/or processes to meet strict safety and performance requirements. These costs will be specific to a facility's design, selected alternative, and end use of the product. EPA does not have information to estimate the costs associated with meeting these safety and performance requirements.

The disposal of TCE from cleanup projects to industrial pre-treatment, industrial treatment, or publicly owned treatment works is prohibited after the TSCA section 6(g) exemption ends, 50 years after the rule is finalized. If cleanup is not finished by the end of this time period and the TSCA section 6(g) exemption has not been extended, cleanup sites will need to identify and implement alternative disposal or treatment methods and will likely also need to renegotiate Resource Conservation and Recovery Act (RCRA) permits or Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) agreements to include those changes. These approaches could be more costly to implement and/or increase the duration of cleanups allowing any potential environmental or human health impacts to continue for a longer period of time. The information to estimate how often these costs might be incurred or what the specific costs would be per site when they are incurred is not available.

During the timeframe of the exemptions, this rule requires owners and operators of cleanup sites with TCE exposures to potentially exposed persons (*e.g.,* workers or others in the workplace, such as persons directly handling the chemical or in the area where the chemical is being used) as well as publicly owned treatment works (POTWs) receiving TCE wastes from cleanup sites, battery separator manufacturers, and specialty polymeric microporous sheet material manufacturers to comply with the Occupational Safety and Health Administration's (OSHA's) Hazardous Waste Operations and Emergency Response (HAZWOPER) requirements modified to incorporate the interim ECEL (for cleanup sites) and WCPP requirements modified to include a water screening method (for POTWs). EPA does not have sufficient information to estimate the number of sites and workers that may need to meet the requirements to protect potentially exposed persons and could not estimate the costs for those protections. In addition, the economic analysis does not estimate costs regarding disposal of TCE or TCE-containing products after the effective date prohibiting the industrial and commercial use and disposal of TCE to industrial pre-treatment, industrial treatment, or publicly owned treatment works. The final rule includes a staggered compliance timeline throughout the supply chain to allow for much of the TCE to be used before disposal is necessary. However, some unused product may need to be disposed of as hazardous waste. Since there is no reliable way of estimating the volume of this waste, the additional disposal costs are not quantified in this economic

analysis. Finally, EPA could not estimate any potential business closures or off-shoring of businesses that might result from the rule. Vapor degreasing is one use of TCE where switching to a suitable alternative may be challenging and where closing or off-shoring may be a compliance strategy. EPA estimates that 366 facilities still use TCE in vapor degreasers, a majority of which are small businesses. There is no standard generally accepted approach for estimating the cost impacts of a firm closure. Despite information EPA has sought from stakeholders and commenters, including through a SBAR Panel, it is not clear whether or how many firms might choose closure as a compliance strategy, nor what the costs might be.

Following the mandate of TSCA to address unreasonable risk to health as well as in alignment with the goals of President Biden's Cancer Moonshot, the rule will protect people from cancer and other significant adverse health effects of TCE by prohibiting the manufacture (including import), processing, and distribution in commerce of TCE for all uses while allowing for a longer reasonable transition period or time-limited exemptions for certain uses (Ref. 5). The actions in this final rule are expected to achieve health benefits for the American public, some of which can be monetized and others that, while tangible and significant, cannot be monetized due to data and methodology limitations. The monetized benefits of this rule are approximately $22.9 million to $ 23.2 million annualized over 20 years at a 2% discount rate, $18.2 million to $18.3 million annualized over 20 years at 3%, and $8.7 million to $ 8.9 million annualized over 20 years at a 7% discount rate. These monetized benefits only include potential reductions in risk of liver, kidney, and non-Hodgkin's lymphoma cancers associated with reducing chronic TCE exposure.

There are a number of non-cancer endpoints associated with exposure to TCE, including liver toxicity, kidney toxicity, reproductive effects, neurotoxicity, immunotoxicity effects and fetal cardiac defects (Ref. 1). There is human evidence for hepatitis accompanying immune-related generalized skin diseases, jaundice, hepatomegaly, hepatosplenomegaly, and liver failure in TCE-exposed workers and changes in the proximal tubules of the kidney following exposure to TCE, and occupational studies have shown increased levels of kidney damage (proximal tubules) and end-stage renal disease in TCE-exposed workers. Evidence exists to associate TCE with reproductive effects. Most human studies support an association between TCE exposure and alterations in sperm density and quality, as well as changes in sexual drive or function and serum endocrine levels. Fewer epidemiological studies exist linking decreased incidence of fecundability (time-to pregnancy) and menstrual cycle disturbances in women with TCE exposures. Human studies have consistently reported vestibular system related symptoms such as headaches, dizziness, and nausea following TCE exposure. Several newer epidemiological studies have found an association between TCE exposure and neurodegenerative disorders such as amyotrophic lateral sclerosis and Parkinson's disease (Ref. 1). EPA does not have sufficient information to estimate the monetized benefits of the rule with respect to these noncancer effects, and therefore monetized benefits are likely underestimated.

EPA does estimate that there 67,869 workers and occupational non-users (ONUs, or people who do not directly handle the chemical, but are in close proximity) exposed to TCE and of those, approximately 1,162 pregnant workers and ONUs annually that may potentially benefit from a reduced risk of fetal cardiac defects resulting from reduced TCE exposure. Although EPA has not developed a complete estimate of the monetized benefits associated with avoiding fetal cardiac defects, as described in the Economic Analysis (Ref. 3), Arth, Tinker et al. (Ref. 6) estimated a mean annual cost of $41,166 (2013$) (median $14,552) for each fetal cardiac defects-associated hospitalization. For critical fetal cardiac defects, mean and median costs were estimated at $79,011 and $29,886 (2013$), respectively, for each incidence. In addition to hospitalization costs, individuals with fetal cardiac defects will likely incur healthcare costs associated with physician visits and outpatient care. They are also more likely to require specialized healthcare such as medications, physical or speech therapy, or treatment for developmental or behavioral problems (Ref. 7). Additional social costs may include caregiver burden and mental health services (Ref. 8), as well as non-market costs such as pain and suffering and fetal cardiac defect-related mortality. Because these costs are not accounted for, monetized benefits are likely underestimated. The severity of specific types of fetal cardiac defects and associated costs will vary depending on the type of heart defect.

Additionally, to the extent that the rule reduces the amount of TCE in drinking water systems and thereby exposures to populations using those drinking water sources, there could be potential health-related benefits related to improved drinking water quality that EPA was unable to quantify.

II. Background

A. Overview of TCE

As described in more detail in the 2023 TCE proposed rule, TCE is an immunotoxicant and developmental toxicant and is carcinogenic to humans by all routes of exposure. This final rule is specifically intended to address the unreasonable risk of injury to health that EPA has identified in the 2020 Risk Evaluation for TCE (Ref. 1) and 2023 Revised Unreasonable Risk Determination (Ref. 2), as described in Unit II.D. of the 2023 TCE proposed rule. TCE is a volatile organic compound (VOC) used in industry as well as in commercial and consumer products. The total aggregate annual production volume ranged from 100 to 250 million pounds between 2016 and 2019 according to the most recent (2020) Chemical Data Reporting (CDR) data (Ref. 9). The majority of TCE is processed as an intermediate during the manufacture of refrigerants, specifically HFC–134a, which accounts for about 83.6% of TCE's annual production volume (Ref. 1). TCE is also used as a solvent, frequently in cleaning and degreasing (including spot cleaning, vapor degreasing, cold cleaning, and aerosol degreasing), which accounts for another 14.7% of TCE production volume. Other uses account for approximately 1.7% of TCE production volume. TCE is used as a solvent in a variety of commercial and consumer applications including in lubricants, adhesives and sealants, paints and coatings, and other miscellaneous products.

B. Regulatory Actions Pertaining to TCE

Because of its significant adverse health effects, TCE is subject to numerous State, Federal, and international regulations restricting and regulating its use. A summary of EPA regulations pertaining to TCE, as well as other Federal, State, and international regulations, is in the docket (Ref. 10).

As described in more detail in the 2023 TCE proposed rule and in the Response to Public Comments document (Ref. 11), EPA considered the adequacy of the current regulation of TCE by OSHA for protection of workers. EPA notes that the standards for chemical hazards that OSHA promulgates under the Occupational Safety and Health (OSH) Act share a

broadly similar purpose with the worker protection-related standards that EPA promulgates under TSCA section 6(a). The control measures OSHA and EPA require to satisfy the objectives of their respective statutes may also, in many circumstances, overlap or coincide. However, there are important differences between EPA's and OSHA's regulatory approaches and jurisdiction, and EPA considers these differences when deciding whether and how to account for OSHA requirements when evaluating and addressing potential unreasonable risk to workers so that compliance requirements are clearly explained to the regulated community. TSCA risk evaluations are subject to statutory science standards, an explicit requirement to consider risks to potentially exposed or susceptible subpopulations, and a prohibition on considering costs and other non-risk factors when determining whether a chemical presents an unreasonable risk that warrants regulatory actions—all requirements that do not apply to development of OSHA regulations. As such, EPA may find unreasonable risk for purposes of TSCA notwithstanding OSHA requirements. In addition, health standards issued under section 6(b)(5) of the OSH Act must reduce significant risk only to the extent that it is technologically and economically feasible. OSHA's legal requirement to demonstrate that its section 6(b)(5) standards are technologically and economically feasible at the time they are promulgated often precludes OSHA from imposing exposure control requirements sufficient to ensure that the chemical substance no longer presents a significant risk to workers. While it is possible in some cases that the OSHA standards for some chemicals reviewed under TSCA will eliminate unreasonable risk, based on EPA's experience thus far in conducting occupational risk assessments under TSCA, EPA believes that OSHA chemical standards would in general be unlikely to address unreasonable risk to workers within the meaning of TSCA, since TSCA section 6(b) unreasonable risk determinations may account for unreasonable risk to more sensitive endpoints and working populations than OSHA's risk evaluations typically contemplate and EPA is obligated to apply TSCA section 6(a) risk management requirements to the extent necessary so that the unreasonable risk is no longer presented. Because the requirements and application of TSCA and OSHA regulatory analyses differ, it is necessary for EPA to conduct risk evaluations and, where it finds unreasonable risk to workers, develop risk management requirements for chemical substances that OSHA also regulates, and it is expected that EPA's findings and requirements may sometimes diverge from OSHA's. Additional considerations of OSHA standards in the revised unreasonable risk determination are discussed further in the 2023 Revised Unreasonable Risk Determination for TCE (88 FR 1222, January 9, 2023 (FRL–9945–02–OCSPP)).

C. Summary of EPA's Risk Evaluation Activities on TCE

In July 2017, EPA published the scope of the TCE risk evaluation (82 FR 31592, July 7, 2017 (FRL–9963–57)), and, after receiving public comments, published the problem formulation in June 2018 (83 FR 26998, June 11, 2018 (FRL–9978–40)). In February 2020, EPA published a draft risk evaluation (85 FR 11079, February 26, 2020 (FRL–10005–52)), and, after public comment and peer review by the Science Advisory Committee on Chemicals (SACC), EPA issued the 2020 Risk Evaluation for TCE in November 2020 in accordance with TSCA section 6(b) (85 FR 75010, November 24, 2020 (FRL–10016–91)). EPA subsequently issued a draft revised TSCA risk determination for TCE (87 FR 40520, July 7, 2022 (FRL–9945–01–OCSPP)), and, after public notice and comment, published a Revised Risk Determination for TCE in January 2023 (88 FR 1222, January 9, 2023 (FRL–9945–02–OCSPP)). The 2020 Risk Evaluation for TCE and supplemental materials are in Docket ID No. EPA–HQ–OPPT–2019–0500, and the January 2023 Revised Unreasonable Risk Determination for TCE and additional materials supporting the risk evaluation process are in Docket ID No. EPA–HQ–OPPT–2016–0737. Both dockets can be accessed online through *https://www.regulations.gov.*

1. 2020 Risk Evaluation for TCE

In the 2020 Risk Evaluation for TCE, EPA evaluated risks associated with 54 conditions of use within the following categories: manufacture (including import), processing, distribution in commerce, industrial and commercial use, consumer use, and disposal (Ref. 1). Descriptions of these conditions of use are in Unit III.B.1. of the 2023 TCE proposed rule. The 2020 Risk Evaluation for TCE identified significant adverse health effects associated with short- and long-term exposure to TCE. A further discussion of the hazards of TCE is presented in Unit III.B.2. of the 2023 TCE proposed rule.

2. 2023 Revised Unreasonable Risk Determination for TCE

As described in more detail in EPA's 2023 TCE proposed rule, EPA revised the original unreasonable risk determination based on the 2020 Risk Evaluation for TCE and issued a final revised unreasonable risk determination in January 2023 (Ref. 2). EPA revised the risk determination for the 2020 Risk Evaluation for TCE pursuant to TSCA section 6(b) and consistent with Executive Order 13990 (''Protecting Public Health and the Environment and Restoring Science to Tackle the Climate Crisis'') and other Administration priorities. The revisions consisted of making the risk determination based on the whole chemical substance instead of making risk determinations for each individual condition of use, which resulted in the revised risk determination superseding the prior ''no unreasonable risk'' determinations for specific conditions of use (Ref. 2), the withdrawal of the associated TSCA section 6(i)(1) ''no unreasonable risk'' order, and clarification that the risk determination does not reflect an assumption that all workers are always provided and appropriately wear PPE (Ref. 2).

EPA determined that TCE presents an unreasonable risk of injury to health and did not identify risks of injury to the environment that contribute to the unreasonable risk determination for TCE. The TCE conditions of use that contribute to EPA's determination that the chemical substance poses unreasonable risk to health are listed in the unreasonable risk determination (Ref. 2) and the 2023 TCE proposed rule, with descriptions to aid chemical manufacturers, processors, and users in determining how their particular use or activity would be addressed under the final regulatory action.

3. Description of Unreasonable Risk

EPA has determined that TCE presents an unreasonable risk of injury to human health under the conditions of use based on acute and chronic non-cancer risks and cancer risks (Ref. 2). As described in the TSCA section 6(b) 2020 Risk Evaluation for TCE, EPA identified non-cancer adverse effects from acute and chronic inhalation and dermal exposures to TCE, and for cancer from chronic inhalation and dermal exposures to TCE (Ref. 1). In the TCE risk characterization, the endpoints identified by EPA as the basis for the unreasonable risk determination in the Risk Conclusions were immunosuppression effects for acute inhalation and dermal exposures, and

autoimmunity effects for chronic inhalation and dermal exposures (Ref. 1). Additional risks associated with other non-cancer adverse effects (*e.g.,* developmental toxicity, immunosuppression, liver toxicity, kidney toxicity, neurotoxicity, autoimmunity, and reproductive toxicity) were identified for acute and chronic inhalation and dermal exposures. EPA also concluded, based on EPA's Guidelines for Carcinogen Risk Assessment (Ref. 12), that TCE is carcinogenic by all routes of exposure, and identified cancer risk (liver, kidney, and non-Hodgkin lymphoma) from chronic inhalation and dermal exposures (Ref. 2). Unit VII. of the 2023 TCE proposed rule summarizes the health effects and the magnitude of the exposures.

To make the unreasonable risk determination for TCE, EPA evaluated exposures to PESS including workers, ONUs, consumer users, and bystanders to consumer use by using reasonably available monitoring and modeling data for inhalation and dermal exposures (Ref. 1). EPA conducted a screening-level analysis to assess potential risks from the air and water pathways to fenceline communities. A discussion of EPA's analysis and the expected effects of this rulemaking on fenceline communities is in Unit VII.A. of the 2023 TCE proposed rule.

For the 2020 Risk Evaluation for TCE, and as discussed in Unit II.D.1. and Unit III.A.3. of the 2023 TCE proposed rule, EPA considered PESS. EPA identified the following groups as PESS: workers and ONUs, including men and women of reproductive age, adolescents, and biologically susceptible subpopulations; and consumer users and bystanders (of any age group, including infants, toddlers, children, and elderly), including biologically susceptible subpopulations. Additionally, older pregnant women are identified as especially susceptible to cardiac defects in their developing fetus based on epidemiological data (Ref. 1). All PESS are included in the quantitative and qualitative analyses described in the 2020 Risk Evaluation for TCE and were considered in the determination of unreasonable risk for TCE (Refs. 1, 2).

4. Conditions of Use Subject to This Regulatory Action

As noted in Unit I.C. of this final rule, the term ''conditions of use'' is defined in TSCA section 3(4). Condition of use descriptions are provided in Unit III.B.1. of the 2023 TCE proposed rule and were obtained from EPA sources such as CDR use codes, the 2020 Risk Evaluation for TCE and related documents, as well as the Organisation for Economic Co-operation and Development harmonized use codes, and stakeholder engagements. EPA did not receive public comments identifying inaccuracies or necessitating changes to those descriptions; however, EPA received some comments requesting clarification for particular uses, which can be found in the Response to Comments document (Ref. 11). Additionally, to assist with implementation and compliance with the final rule, in Units IV.C.1., IV.D.1., and IV.E.1. of this final rule, EPA has provided a description of the conditions of use that are subject to the WCPP or other workplace controls during phaseout or time-limited exemption before prohibition.

For the purposes of this final rule, ''occupational conditions of use'' refers to the TSCA conditions of use other than consumer use as described in Units III.B.1.a., b., c., and e. of the 2023 TCE proposed rule. Although EPA identified both industrial and commercial uses in the 2020 Risk Evaluation for TCE (Ref. 1) for purposes of distinguishing scenarios, the Agency clarified then and clarifies now that EPA interprets the authority Congress gave to the Agency to ''regulat[e] any manner or method of commercial use'' under TSCA section 6(a)(5) to reach both industrial and commercial uses.

Additionally, as described in the 2023 TCE proposed rule and in the 2020 Risk Evaluation for TCE (Ref. 1), EPA identified and assessed all known, intended, and reasonably foreseen industrial, commercial, and consumer uses of TCE. EPA determined that all industrial, commercial, and consumer uses of TCE evaluated in the 2020 Risk Evaluation for TCE contribute to the unreasonable risk of injury to health. As such, for purposes of this risk management rule, ''consumer use'' refers to all known, intended, or reasonably foreseen TCE consumer uses. Likewise, for the purpose of this risk management rule, ''industrial and commercial use'' refers to all known, intended, or reasonably foreseen TCE industrial and commercial uses.

EPA further notes that this rule does not apply to any substance excluded from the definition of ''chemical substance'' under TSCA section 3(2)(B)(i) through (vi). Those exclusions include, but are not limited to, any pesticide (as defined by the Federal Insecticide, Fungicide, and Rodenticide Act) when manufactured, processed, or distributed in commerce for use as a pesticide; and any food, food additive, drug, cosmetic, or device, as defined in section 201 of the Federal Food, Drug, and Cosmetic Act, when manufactured, processed, or distributed in commerce for use as a food, food additive, drug, cosmetic or device.

D. EPA's 2023 Proposed Rule for TCE

1. Description of TSCA Section 6(a) Requirements

Under TSCA section 6(a), if the Administrator determines through a TSCA section 6(b) risk evaluation that a chemical substance presents an unreasonable risk of injury to health or the environment, without consideration of costs or other non-risk factors, including an unreasonable risk to a PESS identified as relevant to the Agency's risk evaluation, under the conditions of use, EPA must by rule apply one or more of the section 6(a) requirements to the extent necessary so that the chemical substance no longer presents such risk.

The TSCA section 6(a) requirements can include one or more of the following actions alone or in combination:

- Prohibit or otherwise restrict the manufacturing (including import), processing, or distribution in commerce of the substance or mixture, or limit the amount of such substance or mixture which may be manufactured, processed, or distributed in commerce (section 6(a)(1)).
- Prohibit or otherwise restrict the manufacturing, processing, or distribution in commerce of the substance or mixture for a particular use or above a specific concentration for a particular use (section 6(a)(2)).
- Limit the amount of the substance or mixture which may be manufactured, processed, or distributed in commerce for a particular use or above a specific concentration for a particular use specified (section 6(a)(2)).
- Require clear and adequate minimum warning and instructions with respect to the substance or mixture's use, distribution in commerce, or disposal, or any combination of those activities, to be marked on or accompanying the substance or mixture (section 6(a)(3)).
- Require manufacturers and processors of the substance or mixture to make and retain certain records or conduct certain monitoring or testing (section 6(a)(4)).
- Prohibit or otherwise regulate any manner or method of commercial use of the substance or mixture (section 6(a)(5)).
- Prohibit or otherwise regulate any manner or method of disposal of the substance or mixture, or any article containing such substance or mixture,

by its manufacturer or processor or by any person who uses or disposes of it for commercial purposes (section 6(a)(6)).

- Direct manufacturers or processors of the substance or mixture to give notice of the unreasonable risk determination to distributors, certain other persons, and the public, and to replace or repurchase the substance or mixture (section 6(a)(7)).

In the 2023 TCE proposed rule, EPA analyzed how the TSCA section 6(a) requirements could be applied to address the unreasonable risk from TCE so that it no longer presents such risk. This unit summarizes the TSCA section 6 considerations for issuing regulations under TSCA section 6(a), and Unit IV. outlines how EPA applied these considerations while managing the unreasonable risk from TCE.

As required, EPA developed a proposed regulatory action and one primary alternative regulatory action, which are described in Units V.A. and V.B. of the 2023 TCE the proposed rule, respectively. To identify and select a regulatory action, EPA considered the two routes of exposure driving the unreasonable risk, inhalation and dermal, and the exposed populations. For occupational conditions of use, EPA considered how it could directly regulate manufacturing (including import), processing, distribution in commerce, industrial and commercial use, or disposal to address the unreasonable risk. EPA also considered how it could exercise its authority under TSCA to regulate the manufacturing (including import), processing, and/or distribution in commerce of TCE at different levels in the supply chain to eliminate exposures or restrict the availability of TCE and TCE-containing products for consumer use in order to address the unreasonable risk.

As required by TSCA section 6(c)(2), EPA considered several factors, in addition to identified unreasonable risk, when selecting among possible TSCA section 6(a) regulatory requirements for the proposed rule. EPA's considerations regarding TSCA section 6(c)(2) for TCE are discussed in full in Unit VII. of the 2023 TCE proposed rule, including the statement of effects with respect to the section 6(c)(2)(A) considerations.

As described in more detail in the 2023 TCE proposed rule, EPA also considered regulatory authorities under statutes administered by other agencies such as the Occupational Safety and Health (OSH) Act, the Consumer Product Safety Act (CPSA), and the Federal Hazardous Substances Act (FHSA), as well as other EPA-administered statutes, to examine (1) Whether there are opportunities to address unreasonable risk under other statutes, such that a referral may be warranted under TSCA section 9(a) or 9(b); or (2) Whether TSCA section 6(a) regulation could include alignment of requirements and definitions in and under existing statutes and regulations to minimize confusion to the regulated entities and the general public.

Additionally, as described in more detail in EPA's 2023 TCE proposed rule in Unit VI.B, EPA considered the availability of alternatives when finalizing a prohibition or a substantial restriction (TSCA section 6(c)(2)(C)), and in setting final compliance dates in accordance with the requirements in TSCA section 6(d)(1).

To the extent information was reasonably available, EPA considered pollution prevention strategies and the hierarchy of controls adopted by OSHA and the National Institute for Occupational Safety and Health (NIOSH) when developing its proposed rule, with the goal of identifying risk management control methods that would be permanent, feasible, and effective. EPA also considered how to address the unreasonable risk while providing flexibility to the regulated community where appropriate and took into account the information presented in the 2020 Risk Evaluation for TCE (Ref. 1), input from stakeholders, insight received during consultations, and anticipated compliance strategies from regulated entities.

Taken together, these considerations led EPA to the proposed regulatory action and primary alternative action described in this Unit. Additional details related to how the requirements in this Unit were incorporated into development of the proposed rule and primary alternative action are in Unit VI. of the 2023 TCE proposed rule.

2. Consultations and Other Engagement

a. Consultations

EPA conducted consultations and outreach as part of development of the 2023 TCE proposed rule. The Agency held a federalism consultation from July 22, 2021, until October 22, 2021, as part of the rulemaking process and pursuant to Executive Order 13132 (Ref. 13).

EPA also consulted with tribal officials during the development of the 2023 TCE proposed rule. The Agency held a tribal consultation from May 17, 2021, to August 20, 2021, with meetings on June 15 and July 8, 2021 (Ref. 14). EPA received no written comments as part of this consultation.

EPA's environmental justice (EJ) consultation occurred from June 3, 2021, through August 20, 2021. On June 16 and July 6, 2021, EPA held public meetings as part of this consultation. These meetings were held pursuant to Executive Orders 12898 and 14008. EPA received three written comments following the EJ meetings, in addition to oral comments provided during the consultations (Refs. 15, 16, 17, 18). A brief summary of the comments is in Unit III.A.1 of the 2023 TCE proposed rule.

As required by section 609(b) of the Regulatory Flexibility Act (RFA), EPA convened a SBAR Panel to obtain advice and recommendations from Small Entity Representatives (SERs) that potentially would be subject to the rule's requirements. EPA met with SERs before and during Panel proceedings, on October 28, 2022, and January 31, 2023. Panel recommendations were presented in the SBAR Panel report (Ref. 19) and were addressed in Unit XI.C. of the 2023 TCE proposed rule and in the Initial Regulatory Flexibility Analysis (IRFA) (Ref. 20). EPA has also prepared a Final Regulatory Flexibility Analysis (FRFA) (Ref. 21).

More information about these consultations is presented in Units III.A.1., XI.C., XI.E., XI.F., and XI.J. of the 2023 TCE proposed rule.

b. Other Stakeholder Consultations

For development of the proposed rule, in addition to the formal consultations described in Unit XI. of the 2023 TCE proposed rule, EPA provided an overview of the TSCA risk management process and the risk evaluation findings for TCE on December 15, 2020 (Ref. 22). EPA also presented on the TSCA risk management process and the findings in the 2020 Risk Evaluation for TCE at a Small Business Administration (SBA) Office of Advocacy Environmental Roundtable on December 18, 2020 (Ref. 19). Attendees of these meetings were given an opportunity to voice their concerns regarding the risk evaluation and risk management.

Furthermore, during development of the proposed rule, EPA engaged in discussions with representatives from different industries, non-governmental organizations, technical experts, organized labor, and users of TCE. A list of external meetings held during the development of the 2023 TCE proposed rule is in the docket (Ref. 23); meeting materials and summaries are also in the docket. See Unit III.A.2. of the 2023 TCE proposed rule for a summary of the topics discussed during the meetings.

c. Children's Environmental Health

The Agency's 2021 Policy on Children's Health (Ref. 24) requires EPA

to protect children from environmental exposures by consistently and explicitly considering early life exposures (from conception, infancy, and early childhood and through adolescence until 21 years of age) and lifelong health in all human health decisions through identifying and integrating children's health data and information when conducting risk assessments. TSCA section 6(b)(4)(A) also requires EPA to conduct risk evaluations ''to determine whether a chemical substance presents an unreasonable risk of injury to health or the environment . . . including an unreasonable risk to a PESS identified as relevant to the risk evaluation by the Administrator, under the conditions of use.'' In addition, TSCA section 6(a) requires EPA to apply one or more risk management requirements so that TCE no longer presents an unreasonable risk (which includes unreasonable risk to any relevant PESS). Information about the health and risk assessments supporting this action and how the Policy was applied is presented in Unit II.C., II.D., and IV.A. of the 2023 TCE proposed rule, as well as in the 2020 Risk Evaluation for TCE, and the Economic Analysis for this rule (Refs. 25, 1, 3).

3. Proposed Regulatory Action

EPA's 2023 TCE proposed rule under TSCA section 6(a) to address the unreasonable risk presented by TCE under its conditions of use included the following:

(i) Prohibition of the manufacture (including import), processing, and distribution in commerce of TCE for all uses (including all consumer uses), with longer compliance timeframes for manufacture and processing related to certain uses;

(ii) Prohibition of the industrial and commercial use of TCE, with longer compliance timeframes for certain uses;

(iii) Prohibition of the manufacture (including import) and processing of TCE as an intermediate for the manufacturing of HFC–134a, following an 8.5-year phase-out;

(iv) Prohibition of the industrial and commercial use of TCE as a solvent for closed-loop batch vapor degreasing for rayon fabric scouring for end use in rocket booster nozzle production by Federal agencies and their contractors, following a 10-year phase-out;

(v) For vessels of the Armed Forces and their systems, and in the maintenance, fabrication, and sustainment for and of such vessels and systems, prohibition of the industrial and commercial use of TCE as: potting compounds for naval electronic systems and equipment; sealing compounds for high and ultra-high vacuum systems; bonding compounds for materials testing and maintenance of underwater systems and bonding of nonmetallic materials; and cleaning agents to satisfy cleaning requirements (which includes degreasing using wipes, sprays, solvents and vapor degreasing) for: materials and components required for military ordinance testing; temporary resin repairs in vessel spaces where welding is not authorized; ensuring polyurethane adhesion for electronic systems and equipment repair and installation of elastomeric materials; various naval combat systems, radars, sensors, equipment; fabrication and prototyping processes to remove coolant and other residue from machine parts; machined part fabrications for naval systems; installation of topside rubber tile material aboard vessels; and vapor degreasing required for substrate surface preparation prior to electroplating processes, following a 10-year TSCA section 6(g) exemption;

(vi) Prohibition of the manufacture (including import), processing, distribution in commerce, and use of TCE as a processing aid for battery separator manufacturing, following a 10-year TSCA section 6(g) exemption;

(vii) Prohibition of the manufacture (including import), processing, distribution in commerce, and use of TCE as a laboratory chemical for essential laboratory activities and some research and development activities, following a 50-year TSCA section 6(g) exemption;

(viii) Prohibition of the manufacture (including import), processing, distribution in commerce, and industrial and commercial use of TCE as a solvent in closed loop vapor degreasing necessary for human-rated rocket engine cleaning by NASA and its contractors, following a 7-year TSCA section 6(g) exemption;

(ix) Prohibition of the emergency industrial and commercial use of TCE in furtherance of the NASA mission for specific conditions which are critical or essential and for which no technically and economically feasible safer alternative is available, following a 10-year TSCA section 6(g) exemption;

(x) Requirements for strict workplace controls, including compliance with a TCE WCPP, which would include requirements for an inhalation exposure limit and dermal protection to limit exposure to TCE, for conditions of use with long term phase-outs or time-limited exemptions under TSCA section 6(g);

(xi) Prohibition of, due to worker risks, the disposal of TCE to industrial pre-treatment, industrial treatment, or publicly owned treatment works, with a 50-year TSCA section 6(g) exemption for cleanup projects; and

(xii) Requirements for recordkeeping and downstream notification.

EPA notes that all TSCA conditions of use of TCE were subject to the 2023 TCE proposed rule and are subject to this final rule.

The proposed rule included timeframes for implementation. The prohibitions EPA proposed would take effect in phases, beginning at the top of the supply chain, and coming into full effect, for most conditions of use, after 90 days for manufacturers, in 180 days for processors, and in 270 days for most industrial and commercial users, with different timeframes related to specific conditions of use. Specifically, for processing TCE as a reactant/intermediate, EPA proposed that the compliance dates for the proposed prohibitions would come into effect in 1.5 years for manufacturers and 2 years for processors EPA proposed additional exceptions from the prohibition for the manufacturing and processing associated with certain processing and industrial and commercial uses, including phase-outs (see Units V.A.1.b., d., and e., of the 2023 TCE proposed rule or time-limited exemptions under TSCA section 6(g) (see Unit V.A.3.b. of the 2023 TCE proposed rule). Likewise, for the WCPP that would be required for several conditions of use before prohibitions went into effect, EPA proposed timeframes for phases of compliance, beginning with monitoring at 180 days and full implementation after 1 year, as described in Unit V.A.1. of the 2023 TCE proposed rule.

As required under TSCA section 6(c)(2)(A)(iv)(II) through (III), EPA presented its consideration of an alternative regulatory action in the Unit V.B. of the 2023 TCE proposed rule. Similar to the proposed regulatory action, the alternative regulatory action combined prohibitions with requirements for a WCPP for certain conditions of use before they would be prohibited, to address the unreasonable risk from TCE under its conditions of use. The primary alternative regulatory action described in the proposed rule differed from the proposed regulatory action by providing longer timeframes for prohibitions, and by describing an ECEL based on a different health endpoint (*i.e.,* immunotoxicity), as part of the WCPP that would be required for the conditions of use of TCE that would be permitted to continue for longer than one year after publication of the final rule until the prohibition compliance dates. The ECEL for the WCPP under the

proposed rule's primary alternative regulatory action was based on the endpoint used for EPA's unreasonable risk determination for TCE under TSCA (*i.e.,* immunotoxicity (Ref. 2)). In contrast, the ECEL for the WCPP under the proposed regulatory action was based on the most sensitive health endpoint (developmental toxicity). The rationale for these differences is discussed in Unit V.A, of this rule and Unit VI.A.1.a. of the 2023 TCE proposed rule.

For a comprehensive overview of the alternative regulatory action, refer to Unit V.B. of the 2023 TCE proposed rule, with the rationale for the primary alternative regulatory action provided in Unit VI.B. of the 2023 TCE proposed rule.

4. Public Comments Received

EPA requested comment on all aspects of the 2023 TCE proposed rule. During the public comment period, EPA held a webinar on November 14, 2023, providing an overview of the proposed rule and TSCA section 6; during the webinar, members of the public had the opportunity to share their perspectives (Ref. 26). The comment period closed on December 15, 2023. EPA received almost 30,000 public comments, with a vast majority received from individuals participating in mass mailer campaigns organized by non-governmental organizations. The public comments also include approximately 200 unique comments from industry stakeholders, trade associations, environmental groups, unions, non-governmental health advocacy organizations, academics, State and local governments, and members of the regulated community. A summary of the comments, as well as EPA's responses, is in the docket for this rulemaking (Ref. 11). Additionally, Unit III. contains summaries of public comments that informed EPA's regulatory approach in this final rule.

After the close of the public comment period for the proposed rule, EPA held meetings with stakeholders to receive clarifying information on their comments, including affected industry and interested groups, related to the use of TCE. Topics of these meetings included exposure controls, process descriptions, monitoring data, and specific conditions of use. EPA received data as part of and following these stakeholder meetings and has made the information available to the public in the rulemaking docket (EPA–HQ–OPPT–2020–0642) (Ref. 27).

After review of the public comments received from the 2023 TCE proposed rule, EPA revised certain preliminary considerations that impacted the length of time-limited exemptions from prohibition under TSCA section 6(g) and key provisions of the WCPP (including identification of a new, interim ECEL), among other changes. Similarly, based on public comments received, EPA modified for this final rule several proposed compliance timeframes, with details provided in Unit III. of this final rule.

III. Changes From the Proposed Rule

This unit summarizes the main changes from the 2023 TCE proposed rule to the final rule, based on the consideration of the public comments.

A. Changes to the WCPP

As part of the conditions for exemptions under TSCA section 6(g) or phase-outs for several conditions of use before prohibition, EPA proposed to require owners or operators to comply with a WCPP to reduce exposures and risks to potentially exposed persons. Numerous commenters expressed concern regarding the requirements of the WCPP. While EPA is finalizing as proposed many aspects of the WCPP, the final rule includes several significant changes, based on consideration of public comments. The details of and rationale for these changes are described in this Unit and EPA notes that in the event that sensitive information relating to national security or critical infrastructure is submitted to EPA, the Agency will protect such information in accordance with applicable authorities.

1. Interim Occupational Exposure Limit

EPA proposed requirements to comply with the TCE WCPP for all conditions of use that would continue for one year or more before prohibition, as an interim measure to reduce exposures to TCE in the workplace. As part of the TCE WCPP, EPA proposed that each owner or operator of a workplace subject to the TCE WCPP ensure that no person is exposed to airborne concentrations above the occupational exposure limit to the extent possible. EPA proposed an existing chemical exposure limit, or ECEL, of 0.0011 ppm as an 8-hour TWA. In proposing to set this risk-based exposure limit, EPA described in Unit IV.A. of the 2023 TCE proposed rule how the ECEL is based on developmental toxicity, the most sensitive acute and chronic non-cancer health endpoint, specifically calculated based on the occupational acute, non-cancer human equivalent concentration for fetal cardiac defects (Ref. 28).

EPA also described in Unit V.A.2. of the 2023 TCE proposed rule how a WCPP provides regulated entities with some flexibility in the manner in which they implement modifications, within certain parameters, or otherwise aim to prevent exceedances of inhalation exposure limits at their facilities. EPA proposed or finalized a WCPP for several conditions of use for other chemicals regulated under TSCA section 6, such as methylene chloride (89 FR 39254, May 8, 2024 (FRL–8155–01–OCSPP)), perchloroethylene (PCE) (88 FR 39652, June 16, 2023 (FRL–8329–02–OCSPP)), and carbon tetrachloride (88 FR 49180, July 28, 2023) (FRL–8206–01–OCSPP)). The proposed TCE WCPP differed from those other proposals in two key ways. First, EPA intended for the TCE WCPP to be in place only as an interim measure before prohibitions take effect (rather than continuing in perpetuity, as was the case in the other proposed rules cited previously). Second, for the reasons described in Unit VI. of the 2023 TCE proposed rule, the proposed rule, including the challenges of reliably reducing exposure below the ECEL and being able to monitor at the appropriate action level, EPA's proposed requirement for the TCE WCPP was that owners or operators ensure that no person is exposed to TCE in excess of the ECEL of 0.0011 ppm as an 8-hr TWA *to the extent possible* rather than (as has been proposed in other rules under TSCA section 6) a requirement that exposures *do not exceed* the ECEL. Due to these challenges in reducing exposure, as well as the severity of the hazard from TCE, EPA emphasizes that, even with the proposed ECELs, EPA cannot ensure that TCE does not present unreasonable risk to workers and, therefore, it is not a substitute for a ban as a long-term risk management solution. Thus, prohibition of all conditions of use ultimately is necessary to address the unreasonable risk.

In the 2023 TCE proposed rule, EPA requested comment on the proposed ECEL (including the feasibility of the limit, the associated action level of 0.00055 ppm as an 8-hr TWA, monitoring methods, and whether a phased approach is desirable). EPA also requested comment on the ECEL described in the alternative regulatory action (0.004 ppm as an 8-hr TWA, based on the immunotoxicity endpoint).

Numerous commenters expressed concern that EPA proposed that compliance with the WCPP would be measured by reaching and documenting the lowest exposure level that could be achieved, instead of a requirement to meet an exposure limit (Refs. 29, 30,

and 31). Additional commenters stated it would not be technically feasible to meet the proposed ECEL (Refs. 32, 33), despite what they described as robust implementation of engineering and administrative controls (Refs. 34, 35). These and other commenters described how they are not aware of any additional feasible engineering or administrative controls that would enable them to avoid, under the TCE WCPP, having employees wear supplied-air respirators at all times (Refs. 34, 35, 36, 37). Commenters expressed several concerns with requiring employees to wear supplied-air respirators at all times (Refs. 34, 35). Industry commenters requested a higher interim occupational exposure limit that would not require an unworkably burdensome level of PPE; commenters provided numerous suggestions for alternate ECEL values such as 0.36 ppm, 5 ppm, or 6 ppm, each expressed as 8-hr TWAs (Refs. 38, 39, 40, 41). Commenters offered these alternate occupational exposure limits based on either their current monitoring or on regulatory values set in other countries, to reduce reliance on extensive respiratory PPE. Commenters noted that setting an ECEL at the level proposed level or at the alternative regulatory action ECEL would require potentially exposed persons across all industries to use high levels of respiratory protection that EPA acknowledges can represent an occupational hazard on its own. EPA recognizes the challenges of respiratory PPE. As detailed in the proposed rule in Unit VI.A.1.b., and in OSHA's 1998 final rule to update its respiratory protection standard, which cited communication problems, vision problems, worker fatigue, and reduced work efficiency among such challenges. (63 FR 1152, January 8, 1998). As OSHA explained, ''improperly selected respirators may afford no protection at all (for example, use of a dust mask against airborne vapors), may be so uncomfortable as to be intolerable to the wearer, or may hinder vision, communication, hearing, or movement and thus pose a risk to the wearer's safety or health.'' (63 FR 1189 through 1190).

In addition to describing anticipated challenges in meeting the proposed or the alternative regulatory action ECEL, commenters also described the challenges they would expect in attempting to monitor indoor air TCE concentrations at or below the ECEL and ECEL action level of 0.00055 ppm or the alternative ECEL and alternative ECEL action level of 0.0002 ppm. Specifically, several commenters emphasized that laboratories would need to transition from typical methods that use sorbent tubes and sample media solvent desorption (OSHA Method 1001) to a more sensitive method that may involve a completely different approach, such as a relevant EPA Compendium Method, and that these may still not be sufficient due to a level of detection of volatile organic compounds above 0.5 parts per billion by volume (ppbv), which is above the proposed ECEL action level (Refs. 38, 39, 42). The commenters also discussed the EPA TO–17 Method, which uses a sorbent tube/thermal desorption/gas chromatographic-based monitoring method for VOCs, but emphasized the use of thermal desorption is not common across the industry (Refs. 38, 39). EPA agrees that while available monitoring and analytical methods for TCE are possible in the low parts-per-billion range, typical occupational sampling methods such as OSHA method 1001 (*i.e.,* personal breathing zone monitoring) used in industrial hygiene generally allow detection in the 10 to 100 ppb range (or 0.010 ppm to 0.100 ppm) (Ref. 38). Widespread adoption of monitoring and sampling methods that could meet a TCE ECEL in the low parts-per-billion range would be difficult, expensive, and take at least several years. Public commenters specifically requested the option to be able to use methods common in occupational sampling, both for familiarity and from a commercial lab capacity perspective, and pointed out the proposed ECEL would not provide that ability (Ref. 38). Additionally, setting a regulatory occupational exposure limit at 0.0011 ppm would be incompatible with the NIOSH-recommended best practice of monitoring to a fraction (specifically 10%) of the occupational exposure limit in order to quantify results, because 0.0011ppm is significantly lower than the detection limits of available monitoring and analytical methods for TCE.

One commenter, a union, stated that setting an ECEL at a level that cannot be measured would render the rule unenforceable and would therefore be meaningless for employees continuing to work with TCE during the phase-out period (Ref. 29). Another commenter, an industry trade organization, asserted that lowering exposures ''to the extent possible'' is unenforceable (Ref. 43). Based on the significant feasibility challenges described by commenters; the need for a robust, implementable, and enforceable WCPP for conditions of use that would continue for more than a year before prohibition; EPA's strong interest in rapidly putting into place the TCE WCPP and resulting exposure reductions; and the forthcoming future prohibitions that will take effect on these conditions of use, EPA is finalizing an interim ECEL of 0.2 ppm as an 8-hr TWA with an associated interim ECEL action level of 0.1 ppm as an 8-hr TWA. This occupational exposure level is achievable to meet, can be reliably and consistently monitored, and will provide an interim level of protection for conditions of use with longer timeframes until prohibition.

Several commenters supported the risk-based exposure limit that was proposed, and stated that, in their view, it is supported by sound scientific evidence (Refs. 31, 44, 29, 45). The proposed ECEL is based on data presented in the risk evaluation, which is the best available science. EPA emphasizes that modifying the final TCE WCPP to include an interim ECEL does not diminish the scientific rationale for the risk-based exposure limit that EPA proposed. EPA's justification for identification of the ECEL that would address unreasonable risk as 0.0011 ppm as an 8-hr TWA is described in detail in the notice of proposed rulemaking and highlighted section 5 of the Response to Comments document (Ref. 11). EPA also emphasizes that this interim ECEL is specific to TSCA and incorporates different considerations than limits or levels set for TCE exposures in other contexts or inhalation exposures that are regulated under other authorities, such as RCRA. EPA's action to finalize an interim ECEL for TCE under TSCA is based on feasibility considerations during ongoing occupational use of TCE beyond one year. Specifically, the interim ECEL takes into account significant challenges potentially exposed persons would experience from extensive respiratory PPE use in an occupational setting.

EPA is finalizing an interim ECEL of 0.2 ppm as an 8-hr TWA. This interim ECEL takes into account considerations raised by the commenters, such as feasibility of implementation in several critical or essential industries, Specifically, EPA expects that the various industries subject to the interim ECEL can meet the interim ECEL with exposure controls that are feasible for owners and operators to implement for potentially exposed persons over a full shift, using engineering controls and, in some instances, respiratory PPE. While certain supplied air respirators could be used to reduce exposures below the proposed exposure limit, these respirators are burdensome and EPA is

not confident that they could be effectively and consistently implemented on an ongoing basis in a way that fully addresses the unreasonable risk. EPA views extremely high levels of PPE (*e.g.,* assigned protection factor (APF) 10,000) as unable to consistently and over a long timeframe address occupational risk. As noted earlier, setting an ECEL at the level proposed would require potentially exposed persons across all industries to use high levels of respiratory protection, such as APF 10,000 supplied air respirators, that EPA acknowledges could represent an occupational hazard on its own due to communication problems, vision problems, worker fatigue, and reduced work efficiency. The interim ECEL allows for more robust use of the hierarchy of controls.

The interim ECEL was also developed with consideration for risk reduction and health protectiveness. EPA estimates that the 0.2 ppm interim ECEL would reduce estimated baseline chronic workplace exposure by 97% (Ref. 28). The reduction in the baseline excess cancer risk is estimated to be proportional to the reduction in exposure. Acute health effects would also be reduced to the extent that they are proportional to exposure reduction. For example, based on EPA's TSCA TCE risk evaluation, the 0.2 ppm interim ECEL is protective of the acute immunotoxicity endpoint.

Lastly, the interim ECEL allows for occupational monitoring methodologies based on validated active, passive, and direct-read instrumentation. There are several available active sampling methods (*e.g.,* OSHA 1001, OSHA 5000) that are fully validated methods that readily allow for compliance with the interim ECEL value of 0.2 ppm for all affected industries. As described elsewhere in this preamble, this rule is also finalizing an interim ECEL action level that serves as a trigger for certain compliance activities (*e.g.,* periodic monitoring). Therefore, it is important for regulated entities to be able to reliably and accurately measure both the interim action level and the interim ECEL value. The interim ECEL also enables use of the NIOSH 1003 (active sampling) method as well as field portable instruments that use the NIOSH 3701 method for occupational monitoring. While real-time monitoring with a digital measure device is not required for rule compliance, EPA understands the practical benefits of field portable and/or real-time occupational exposure monitoring. In the near term, the interim ECEL and the associated interim action level aids with implementation of the WCPP from the perspective of monitoring methodology and availability. Setting the interim ECEL at a value of 0.2 ppm allows for the immediate implementation of the WCPP, as monitoring methods are currently available and widely recognized and used. A lower value interim ECEL would pose technical challenges (*i.e.,* achievable with only a subset of monitoring methods) and be less feasible.

EPA emphasizes that the regulatory limit adopted in this final rule (0.2 ppm as an 8-hr TWA) will be a significant reduction from the current regulatory occupational exposure limit (*i.e.,* 500 times lower than the current OSHA PEL of 100 ppm as an 8-hr TWA) as well as more than 50 times lower than the voluntary standard frequently cited by commenters (10 ppm as an 8-hr TWA). EPA expects that regulated entities may need to make significant, but feasible, changes from current practice by adopting the WCPP to reduce inhalation exposures sufficiently and provide risk reduction to potentially exposed persons. EPA also recognizes that the interim ECEL of 0.2 ppm as an 8-hr TWA does not fully address the unreasonable risk from TCE, hence, the term ''interim.'' Potentially exposed persons may continue to be at risk for the developmental and immunotoxicity effects that provide the basis for EPA's ultimate prohibition. Given the risk profile for TCE, EPA is addressing the unreasonable risk through prohibition, and acknowledging the critical or essential nature of several conditions of use affected by providing reasonable timeframes and time-limited exemptions for a TCE prohibition. A WCPP including the interim ECEL will be required as an interim measure for each of the conditions of use listed in Unit IV.C.

The requirement to meet an interim ECEL for the conditions of use for which EPA is finalizing exemptions under TSCA section 6(g) is supported by TSCA section 6(g)(4), which states that ''the Administrator may impose conditions that are necessary to protect health and environment while achieving the purposes of the exemption.'' EPA has determined the interim ECEL of 0.2 ppm is a condition that, as explained in this Unit, allows for implementation and monitoring feasibility, thus achieving the purposes of the exemption, while providing health protectiveness for potentially exposed persons during the duration of the TSCA section 6(g) exemptions. As a condition of the exemption, it protects health by reducing exposure and thus risk significantly: as stated previously, the interim ECEL will reduce estimated baseline chronic workplace exposure by 97%.

For the conditions of use that continue for more than one year subject to the interim ECEL but for which there is no TSCA section 6(g) exemption, EPA also finds that the interim ECEL of 0.2 ppm and interim action level of 0.1 ppm are necessary to reduce the risk during the TSCA section 6(d) timeframe for those conditions of use. Throughout the proposed rule and this final rule, EPA has emphasized the high risk posed by TCE. Due to this risk, the proposed health protective air exposure concentration (proposed ECEL) was so low that facilities would encounter significant difficulty mitigating occupational exposures to this level. Based on information in the 2020 Risk Evaluation (Ref. 1) and on the extensive public comments, facilities would need to augment their existing controls with unreasonably extensive use of burdensome PPE. EPA determined reliance on extreme respiratory protection measures is unlikely to mitigate the occupational risk of TCE, a view corroborated by commenters. In particular, commenters noted that air supplied respirators would present health and safety concerns for workers due to their weight, bulk, impairment of hearing and vision, and interference with use of other safety equipment (Refs. 34, 46, 29). Respiratory protection is considered a last resort because respirators cannot be worn by all persons, are not suitable for all situations, and due to worker discomfort and fatigue, cannot be worn for long periods of time. In addition, as discussed in this Unit, compliance with the WCPP would be challenging; while specialized monitoring and analytical methods are available for TCE in the low parts-per-billion range, typical methods allow for detection in the 10 to 100 ppb (0.01 to 0.1 ppm) range. As a result, EPA determined that any measures short of prohibition are insufficient to address the unreasonable risk from TCE.

2. Worker Protection Measures for Workers Disposing of TCE in Wastewater to Industrial Pre-Treatment, Industrial Treatment, or Publicly Owned Treatment Works

EPA proposed requirements to comply with the TCE WCPP for all conditions of use that would continue for one year or more before prohibition, as an interim measure to reduce exposures to TCE in the workplace. As discussed in Unit III.A.1, numerous commenters stated it would not be technically feasible to monitor to or

meet the proposed ECEL. Commenters emphasized that for wastewater disposal, unlike a typical workplace where a WCPP could apply, work at a cleanup site happens so intermittently that a regular monitoring program would be extremely difficult to develop, requiring owners and operators to implement sampling every time they were in the field. Additionally, the WCPP requires additional monitoring to occur after a change in workplace conditions as a commenter pointed out, which could create a requirement for constant monitoring because cleanup sites are dynamic systems (Ref. 43). In particular regarding the feasibility of compliance with the WCPP, commenters associated with wastewater disposal described that even with the maximum available engineering controls, workers would have to rely on PPE of APF 10,000 to meet the proposed ECEL at cleanup sites (Ref. 47).

As stated in Unit III.A.1, EPA recognizes the challenges of high levels of respiratory protection which include, as described by OSHA, communication problems, vision problems, worker fatigue, and reduced work efficiency. Commenters involved in wastewater cleanup operations were among those who submitted public comments in favor of an interim exposure level that could be reliably measured using current analytical methods (Ref. 33). Additionally, these commenters emphasized that existing RCRA permits require HAZWOPER training for all employees who are exposed or potentially exposed to hazardous substances at cleanup sites. The HAZWOPER standard is a set of established policies, practices, and procedures found in 29 CFR 1910.120. This standard is designed to protect workers who may be exposed to hazardous substances resulting from uncontrolled releases such as natural disasters, equipment malfunctions, or other emergencies (Ref. 48). Operations that fall within the scope of the HAZWOPER standard include cleanup operations required by a government body and corrective actions involving hazardous waste and sites covered by RCRA. Commenters also provided information to EPA on the variety of remediation methods used for TCE contaminated water and groundwater, noting a difference between *ex situ* treatment systems that remove TCE-contaminated groundwater from the ground, and *in situ* treatment systems that remediate the groundwater in its place (Ref. 35). A commenter requested that the HAZWOPER standard, currently implemented at thousands of clean-up sites, should continue to be used instead of EPA's proposed WCPP (Ref. 45). Cleanup sites are dynamic systems that often involve multiple chemical contaminants, and EPA agrees with commenters that the structure and procedures under the HAZWOPER standard are best suited for the unique worker protection scenarios at cleanup sites. However, OSHA's PEL for TCE is 100 ppm as an 8-hour time-weighted average. See 29 CFR 1910.1000, Table Z–2. As discussed in the proposed rule, the OSHA PEL has not been changed since the 1970s (Ref. 49).

For the purposes of the TSCA section 6(g) exemption from prohibition for 50 years for disposal of TCE to industrial pre-treatment, industrial treatment, or publicly owned treatment works for the purposes of facilitating cleanup projects of TCE-contaminated water and groundwater, based on public comments and coordination across Federal programs, EPA has determined it is appropriate that owners and operators of cleanup sites where potentially exposed persons are involved in the disposal of TCE-contaminated water or groundwater for the purposes of cleanup projects of TCE-contaminated water and groundwater, including industrial pre-treatment and industrial treatment activities, must ensure that potentially exposed persons involved with the activity of removing the contaminated water or groundwater from the location where it was found and treating the removed contaminated water or groundwater on site continue to comply with HAZWOPER requirements but with exposures for potentially exposed persons limited to the interim ECEL for TCE (0.2 ppm as an 8-hr TWA, for reasons discussed in Unit III.A.1.). Specifically, EPA has determined that at cleanup sites, the TCE interim ECEL would apply to any potentially exposed person involved in the disposal of TCE-contaminated water or groundwater to industrial treatment, industrial pre-treatment, or POTWs. A potentially exposed person most likely includes a person who is involved with the activity of removing TCE-contaminated water or groundwater from the location where it was found and the on-site treatment of the TCE-contaminated water or groundwater. EPA generally considers workers in and around those locations to be potentially exposed persons as that term is defined is 40 CFR 751.5. For example, EPA's requirements would apply to protect workers conducting remediation through pump and treat systems or workers sampling groundwater in conjunction with extraction or treatment (*e.g.,* remediation or cleanup) activities. EPA considers treatment activities that are performed at the cleanup site on TCE-contaminated wastewater that has been removed from the subsurface, surface water impoundments, or aquifers, and that are recognized as industrial treatment, industrial pretreatment, or discharge to a POTW to be covered under the provisions described in this unit. To further clarify, the workplace protections for this exemption are not intended to cover potentially exposed persons who may be exposed to TCE from other contaminated media. Additionally, the workplace protections for this exemption are not intended to cover potentially exposed persons who are sampling groundwater to monitor the presence of a plume, but specifically only those sampling wastewater at the site of extraction and active treatment activities. EPA also notes that while the cross-referenced OSHA regulations do not require the establishment of regulated areas, the OSHA regulations do suggest excluding non-essential persons during certain operations as a feasible work practice control.

For cleanup sites involved in the disposal of TCE-contaminated water or groundwater to industrial treatment, industrial pre-treatment, or POTWs, rather than implementing the monitoring, notification, and exposure control plan requirements of the WCPP, in light of the special circumstances of these sites, and the likely presence of multiple contaminants, EPA is requiring compliance with the current requirements in 29 CFR 1910.120 (HAZWOPER) except that for those provisions in 29 CFR 1910.120 that reference a PEL, owners and operators will instead comply with the TSCA interim ECEL. EPA's requirement for cleanup sites to meet specific existing OSHA health and safety requirements in 29 CFR 1910.120 combined with EPA's interim ECEL differs from the requirements for the WCPP that will be in effect in other workplaces. EPA emphasizes that this standard is only for cleanup sites involved in the disposal of TCE contaminated groundwater and wastewater from cleanup sites under the applicable condition of use and that no other remedial actions at cleanup sites will be covered or affected. More specifically, EPA notes that this rule only includes within its scope remediation methods that would be considered industrial wastewater pretreatment, industrial wastewater treatment or discharge to a POTW. As such, a remediation method would need to be considered one of these three types of disposal to fall within this condition

of use under TSCA, and if not would not be subject to the prohibition or other requirements of the rule.

Similarly, some commenters asked EPA to clarify what responsibility the receiver of waste, specifically POTWs, would have regarding compliance with the WCPP and highlighted the challenges of the WCPP in the context of POTWs, some of which may be outdoors and thus unable to demarcate a regulated area in a straightforward way (Refs. 35, 45). EPA emphasizes that disposal of TCE-containing wastewater to and from POTWs is within the disposal condition of use. As exposures to TCE are likely to continue in POTWs for the duration of the exemption for TCE disposal under TSCA section 6(g) for industrial pre-treatment, industrial treatment, or POTWs for the purposes of cleanup projects of TCE-contaminated water and groundwater, and as EPA is interested in reducing to the extent possible exposures to TCE during the time period of this exemption, EPA proposed the WCPP as an appropriate measure. However, under the proposal, the ECEL was so low that, as one commenter stated, ''receivers of groundwater from cleanup sites would be forced to assume that TCE is present, since it is not currently possible to measure down to the ECEL'' (Ref. 45).

Even with a new interim ECEL, based on the public comments and information reasonably available to the agency, EPA recognizes that POTWs have more experience in water monitoring. As an example, commenters described that TCE is measured in wastewater at POTWs as water concentrations, not ambient air levels. Commenters described regular water monitoring schedules of the concentration of TCE in wastewater at the POTWs to which they disposed (Refs. 36, 50, and 51). For this reason, in the final rule, POTW's must comply with either solely the WCPP, or a water monitoring structure already more familiar and implementable for POTWs as the initial screening before the WCPP in the interim until prohibition.

To ease monitoring implementation, EPA has determined that POTWs that can reasonably expect TCE to be present, because of existing industrial users discharging into the POTW, will be able to determine the need to comply with the WCPP by conducting an initial screening of their wastewater. This approach follows EPA's 1992 ''Guidance to Protect POTW Workers from Toxic and Reactive Gases and Vapors'' (Ref. 52) which sets wastewater screening levels for toxic chemicals using Henry's Law constants to translate toxicity-based air exposure concentrations to wastewater concentrations. This monitoring approach also is consistent with water screenings described by several public commenters (Refs. 36, 50, 51). The methodology assumes that wastewater and air are in equilibrium, *e.g.,* that the system is closed and water agitation is negligible; that temperature is defined and constant; and that other constituents in the wastewater do not affect a chemical's volatilization to air.

The water screening requirement that EPA is finalizing follows the methodology in the 1992 guidance, using the Henry's Law constant for TCE (378 $(mg/m^3)/(mg/L)$ at 25 °C) to calculate a screening level for TCE in wastewater, 0.00284 mg/L, that corresponds to the interim ECEL (0.2 ppm). This screening level is a level specific to TSCA, to regulate unreasonable risk to workers performing wastewater disposal that are exposed to TCE. This differs from maximum contaminant levels (MCLs) which regulate public water systems under a different federal statute and do not address exposures to TCE through wastewater. While the screening level is lower than the current enforceable MCL for TCE (0.005 mg/L), the values are within a factor of 2. EPA believes that the conservative assumptions used to derive 0.00284 mg/L are appropriate here because this is a screening approach, and the TCE occupational exposure profile of wastewater workers may be variable.

If the concentration of TCE in wastewater received by a POTW is less than or equal to the screening level, the POTW can assume that the concentration of TCE in air that results from TCE volatilization from wastewater is equal to or less than the interim ECEL. If a POTW's water screening detects TCE in wastewater at a concentration greater than 0.00284 mg/L of TCE, then the WCPP is required. More information is in Unit IV.E.

3. Exposure Monitoring Requirements

As part of the WCPP, EPA proposed to require that owners or operators meet certain documentation requirements for each instance of monitoring of TCE, including compliance with the Good Laboratory Practice (GLP) Standards in accordance with 40 CFR part 792.

Numerous commenters expressed concern regarding the requirement that the WCPP include compliance with the GLP Standards at 40 CFR part 792. Commenters stated that it is atypical to use this standard for air sampling of TCE for industrial hygiene purposes (Refs. 39, 38). According to the commenters, it is common practice within the industrial hygiene community to have analyses performed by American Industrial Hygiene Association (AIHA) accredited labs (Refs. 38, 39). A commenter further reasoned that because labs in the United States are certified by International Organization for Standards (ISO) and the International Electrochemical Commission (IEC) standard 17025 (Testing and Calibration Laboratories), a standard that differs from the proposed GLP, they recommended that provisions of monitoring results and recordkeeping in the final rule be allowed from any accredited laboratory, without regard to a specific type (Refs. 38, 39).

EPA agrees with the commenters that the WCPP for TCE is incompletely served by solely relying on the GLP standard as proposed. EPA has considered laboratory capacity concerns raised by some commenters (*i.e.,* that potential increases in demand for professional safety services and sampling laboratories may strain the broader availability of laboratory service and result in sampling limitations (Refs. 38, 39), and agrees that sufficient infrastructure must be in place to ensure that the regulated community can successfully implement the WCPP while TCE use is ongoing. For the final rule, EPA is requiring that exposure samples be analyzed using an appropriate analytical method by a laboratory that complies with the GLP Standards in 40 CFR part 792 or that otherwise maintains a relevant third-party laboratory accreditation (*e.g.,* under the AIHA Laboratory Accreditation Programs, LLC Policy Module 2A/B/E of Revision 17.3) or other analogous industry-recognized programs. The laboratory must also retain related records.

Another commenter noted that EPA's proposal did not make clear that ''personal breathing zone'' air samples to monitor occupational exposures are to be taken without regard to respirator use. More specifically, the commenter pointed to the importance of EPA being explicit that occupational monitoring only occurs in the absence of respiratory protection (Ref. 29). EPA agrees with the commenter that exposure monitoring should be conducted to reflect ambient occupational conditions (*i.e.,* without respiratory protection) to best inform engineering control options and respiratory protection considerations for potentially exposed persons. Therefore, the final rule now explicitly states that occupational air sampling is required to measure ambient concentrations for TCE without taking respiratory protection into account when air sampling is performed. This will ensure the highest degree of protection to potentially

exposed persons by requiring measurement of ambient air concentrations of TCE, thus empowering owners or operators to appropriately consider the hierarchy of controls.

Additionally, as part of the WCPP, EPA proposed to require owners and operators to re-monitor within 15 working days after receipt of any exposure monitoring if results indicated non-detect or air monitoring equipment malfunction, unless an Environmental Professional, as defined at 40 CFR 312.10, or a Certified Industrial Hygienist reviews the monitoring results and determines re-monitoring is not necessary. EPA received several comments disagreeing with the proposed requirement to review non-detect air monitoring samples. The commenters stated that the requirement is inconsistent with OSHA rules, is an unnecessary step that adds no value to reduce risk to workers, and could be costly, especially for smaller companies (Refs. 53, 54, 55, 47, 56, 57, 58). One commenter suggested that EPA incorporate a six-sample rolling average as the statistical evaluation would incorporate ongoing validation of exposure levels for a particular task and thus remove any need for resampling based on a non-detect result.

EPA disagrees with commenters that expressed the opinion that re-evaluating non-detect results adds no value and is inappropriate. A sampling result that is non-detectable does not necessarily imply negligible occupational exposure to the chemical. A non-detect result is indicative that the chemical was not detected by the particular sampling and analytical procedures used at the time of sampling. Multiple factors can contribute to a non-detect result. For example, the chemical may simply not be present in appreciable quantities. An alternative possibility is that the chemical is present at a level below the limit of detection for the particular sampling and analytical method used. Depending on the chemical and ambient conditions, interference from another chemical during occupational sampling sometimes results in an incorrect reporting of non-detectable levels. This interference may or may not be known by the owner or operator at the time of sampling, or by the laboratory at the time of analysis. It is also possible that the owner's or operator's sampling technique or the laboratory's analytical procedure was not particularly effective, or that the chosen sampling and analytical method was not very efficient or precise for the particular chemical of interest. Therefore, re-evaluating non-detectable sampling results is often appropriate and desirable. In each of the examples described in this paragraph, a nondetectable sampling result, along with supporting documentation about the sampling and analytical method used to get that result, is a meaningful part of the potentially exposed person's exposure record required under the WCPP. Monitoring results from malfunctioning air monitoring equipment are not valid monitoring and require resampling consistent with § 751.315(b)(3)(i)(A) through (D).

The provisions proposed for the WCPP did not require re-monitoring in all cases. Re-monitoring may not be necessary based on a professional evaluation by an Environmental Professional as defined at 40 CFR 312.10 or a Certified Industrial Hygienist. The final rule provides flexibility in the event of a non-detect by allowing owners or operators to either re-monitor or seek a determination from a qualified professional that re-monitoring is not necessary. From an owner and operator's perspective, a non-detect sampling result—when effective sampling and analysis procedures are used—is valuable because it suggests effective implementation of exposure controls. Potentially exposed persons may also use these records in discussions with owners and operators, in collective bargaining situations, or in compliance assistance inquiries to EPA or other federal agencies. Exposure monitoring results may also improve overall workplace health and reduce owner and operator liability through effective detection, treatment, and prevention of occupational disease or illness. All of these scenarios are valuable for owners and operators, potentially exposed persons, and for effective mitigation of occupational exposures. In consideration of these factors, EPA has removed the air monitoring equipment malfunction from the monitoring activities that do not require resampling based on professional evaluation by an Environmental Professional or Certified Industrial Hygienist. While professional discretion may be warranted in determining whether re-monitoring is needed following results that indicate non-detect, EPA has determined this discretion is not appropriate in the event of air monitoring equipment malfunction, which warrants re-monitoring. This is due to the importance of air monitoring in ensuring that the requirements of the WCPP are met, and the importance of the WCPP in reducing risks from exposures to TCE in the workplace. Monitoring results from malfunctioning air monitoring equipment are not valid monitoring.

Additionally, while statistical methods may be useful in establishing and analyzing an occupational monitoring program, EPA determined that information presented in support of amending the evaluation of re-monitoring to rely on six sample rolling average of exposure measurements in place of the proposal is not persuasive, as discussed in detail in section 5.5.3 of the Response to Comments document (Ref. 11). Occupational monitoring (and associated recordkeeping) is a topic on which EPA may develop guidance as part of final rule implementation efforts.

Therefore, based on consideration of public comment, EPA is finalizing as proposed with slight modification the requirement to re-monitor within 15 working days after receipt of any exposure monitoring if results indicated non-detect, unless an Environmental Professional, as defined at 40 CFR 312.10, or a Certified Industrial Hygienist reviews the monitoring results and determines re-monitoring is not necessary. EPA has modified the re-monitoring recordkeeping requirement to clarify what would suffice as justification for when re-monitoring is not necessary, and has therefore updated the recordkeeping requirements associated with the WCPP exposure records required under 40 CFR 751.319(b)(1). EPA has also removed air monitoring equipment malfunction from the monitoring activities that do not require resampling if determined unnecessary by an Environmental Professional or Certified Industrial Hygienist.

EPA proposed to require under the WCPP that each owner or operator conduct additional exposure monitoring whenever a change in the production, process, control equipment, personnel, or work practices may reasonably be expected to result in new or additional exposures at or above the ECEL action level, or when the owner or operator has any reason to believe that new or additional exposures at or above the ECEL action level occurred. In the event of start-up, shutdown, spills, leaks, ruptures, or other breakdowns that may lead to employee exposure, EPA proposed to require that each owner or operator conduct additional initial exposure monitoring to potentially exposed persons (using personal breathing zone sampling) after the cleanup of the spill or repair of the leak, rupture, or other breakdown. EPA is finalizing that requirement, with a compliance timeframe requiring that this type of additional exposure monitoring must be conducted within

30 days (see Unit IV.C.4.d.), which is a change from the proposed rule, in which a timeframe was not specified.

4. Designated Representatives

As part of the WCPP, EPA proposed to require that owners and operators (*i.e.,* any person who owns, leases, operates, controls, or supervises a workplace covered by the rule) provide potentially exposed persons or their designated representatives regular access to the exposure control plans, exposure monitoring records, and PPE program implementation and documentation. Additionally, EPA proposed to require that owners or operators document the notice to and ability of any potentially exposed person who may reasonably be affected by TCE exposure to readily access the exposure control plans, facility exposure monitoring records, PPE program implementation, or any other information relevant to TCE inhalation exposure in the workplace.

EPA solicited and received public comments on the role of designated representatives in the WCPP. One commenter, a group of labor unions, urged EPA to incorporate requirements similar to OSHA's access standard at 29 CFR 1910.1020 (entitled, ''Access to employee exposure and medical records'') to ensure that exposure information is promptly and fully shared with both potentially exposed persons and their designated representatives (Ref. 29). The commenter also suggested that EPA include a requirement that employers provide employees and their designated representatives an opportunity to observe monitoring events. The commenter observed that workers and their designated representatives have a critical role to play in ensuring effective control of toxic substances and further noted that, often, unions are the organizations with expertise in understanding occupational exposure information.

EPA recognizes the importance of having the ability for potentially exposed persons and their designated representative(s), such as labor union representatives, to observe exposure monitoring and have prompt access to exposure records. EPA additionally recognizes that, in some instances, individual workers may be hesitant to ask owners or operators for information relating to their chemical exposure or may be less familiar with discipline-specific industrial hygiene practices. EPA determined that it is appropriate in this final rule to revise, to some extent, the requirements regarding designated representatives included in the proposed rule, consistent with existing OSHA precedent in certain 29 CFR part 1910, subpart Z regulations, to allow designated representatives the ability to observe occupational exposure monitoring and have access to exposure monitoring records. The WCPP provisions of the final rule include a requirement that owners and operators provide potentially exposed persons or their designated representatives an opportunity to observe any exposure monitoring that is designed to characterize their exposures and is conducted under the WCPP. With respect to facilities classified in the interest of national security, only persons authorized to have access to such facilities must be allowed to observe exposure monitoring.

The final rule also requires that designated representatives have access to relevant exposure records, similar to provisions in certain OSHA regulations under 29 CFR part 1910, subpart Z, such as 29 CFR 1910.1020. EPA is requiring owners and operators to notify potentially exposed persons and their designated representatives of the availability of the exposure control plan and associated records of exposure monitoring and PPE program implementation within 30 days of the date that the exposure control plan is completed and at least annually thereafter.

EPA's definition of ''designated representative'' in 40 CFR 751.5 was established in the recently promulgated final rule under TSCA section 6(a) that addresses the unreasonable risk presented by PCE (RIN 2070–AK84). This term means any individual or organization to whom a potentially exposed person gives explicit, written authorization to exercise a right of access. A recognized or certified collective bargaining agent must be treated automatically as a designated representative without regard to written authorization, analogous to OSHA requirements set forth in 29 CFR 1910.1200. Additionally, with respect to Federal Government employees, EPA, like OSHA at 29 CFR 1960.2(e), will interpret these designated representative requirements consistent with the Federal Service Labor Management Relations Statute (5 U.S.C. 71), or collective bargaining or other labor-management arrangements that cover the affected employees.

Should a request be initiated for such records by the potentially exposed person or their designated representative(s), the owner or operator will be required to provide the specified records at a reasonable time, place, and manner, analogous to OSHA requirements set forth at 29 CFR 1910.1020(e)(1)(i). If the owner or operator is unable to provide the requested records within 15 working days, the owner or operator must, within those 15 days, inform the potentially exposed person or designated representative(s) requesting the record of the reason for the delay and the earliest date when the record can be made available. Additionally, in the event that a designated representative is observing exposure monitoring, the owner or operator must ensure that designated representatives are provided with PPE appropriate for the observation of monitoring. Finally, this rule requires owners or operators to provide notice to potentially exposed persons and their designated representatives of exposure monitoring results and of the availability of the exposure control plan and associated records. For purposes of this requirement, the owner or operator is only required to provide notice to those designated representatives that the owner or operator is aware of, such as representatives designated in writing or a recognized collective bargaining agent for the owner or operator's own employees.

5. Changes to WCPP Timeframes for Federal Agencies

EPA understands that certain departments and agencies of the Federal government, as well as Federal contractors acting for or on behalf of the Federal government, need additional time to comply with these timeframes. For example, complying with these timeframes could impact the ability of NASA or the Department of Defense to continue to engage in vapor degreasing necessary for rockets key to national security and critical infrastructure. While, for example, 29 CFR part 1960 sets forth procedures and guidelines for ensuring that Federal workers are protected in comparable ways to their non-Federal counterparts, EPA believes that compliance with this final rule will require increased and different preparations on the part of Federal agencies. For example, Federal agencies must follow procurement requirements, which will likely result in increased compliance timelines. In addition, these requirements will require support in the Federal budget, which, for some agencies, is a multi-year process. Therefore, EPA is providing additional time for agencies of the Federal government and their contractors, when acting for or on behalf of the Federal government, to comply with the WCPP, including 915 days for initial monitoring, 1,005 days to ensure that no

person is exposed to an airborne concentration of TCE that exceeds the interim ECEL, and 1,095 days to implement an exposure control plan.

B. Modifications to the TSCA Section 6(g) Exemptions

1. Industrial and Commercial Use of TCE as a Processing Aid in Battery Separator Manufacturing

EPA proposed a 10-year exemption from prohibition under TSCA section 6(g)(1)(B) for the industrial and commercial use of TCE as a processing aid in battery separator manufacturing, for lead acid and lithium batteries. EPA is finalizing with modifications a time-limited exemption from prohibition for this specific condition of use of TCE. These modifications, based on information provided in public comments, include: (1) narrowing the exemption to apply only to use of TCE as a processing aid in manufacturing separators for lead acid batteries; (2) extending the time period of the exemption for lead acid batteries from ten to 20 years; and (3) allowing the disposal of wastewater containing TCE following lead acid and lithium battery separator manufacture under a separate TSCA section 6(d) phase-out for disposal of TCE to industrial pre-treatment, industrial treatment, or POTWs (see Unit III.C.4.). Separate from the modified 6(g) exemption, EPA is finalizing a 5-year phase-out under TSCA section 6(d) for use of TCE in manufacturing separators for lithium batteries.

As described in the proposed rule, based on information provided by commenters and other information reasonably available to the agency, EPA understands that separators are fundamental components in batteries that provide the necessary separation between the internal anode and cathode components that make batteries work, and that restrictions on the production of battery separators could critically impact the United States battery manufacturing supply chain and impede the expansion of domestic battery production capacity. EPA understands that battery separator manufacturing processes are highly engineered, and that the separators are specialty products designed precisely to meet stringent technical specifications that are essential in powering vehicles and systems in the United States' supply chain for multiple critical infrastructure sectors.

Based on information provided in public comments regarding specifications around the final battery separator product, such as the required thickness of the separator itself and the feasibility of substitute chemicals for TCE, EPA determined that battery separators for lead acid and lithium batteries should be treated separately. Thus, EPA is distinguishing between the industrial and commercial use of TCE as a processing aid in battery separator manufacture for each type of battery (lead acid or lithium (also referred to in comments as lithium-ion batteries)) and providing different exemption or phase-out timeframes for each type of battery separator manufacturing. More details are in this Unit.

a. Lithium Battery Separator Manufacturing

EPA is finalizing a prohibition on the manufacture (including import), processing, distribution in commerce, and industrial and commercial use of TCE as a processing aid for lithium battery separator manufacturing, which will come into effect 5 years after the publication date of this rule. In response to EPA's proposal to establish a 10-year TSCA section 6(g) exemption for the use of TCE in battery separatory manufacturing, EPA received substantiative public comments that described feasible alternatives to TCE in the manufacture of lithium battery separators, as well as information on why the two types of battery separator manufacturing should be treated as distinct.

One company uses TCE in the manufacture of lithium battery separators (Ref. 46). In their public comment, the company described how they could transition out of TCE within 5 years and retracted its request for an exemption under TSCA section 6(g) for lithium battery separators (Ref. 46). EPA is unaware of any other domestic manufacturer that uses TCE to produce lithium battery separators. In public comments on a separate rulemaking for methylene chloride under TSCA section 6, at least five commenters described their plans to construct manufacturing plants for lithium-ion battery separators, specifically for electric vehicles, that would use methylene chloride as a processing aid (Refs. 59, 60, 61, 62, 63, 64), rather than TCE. (The final rule under TSCA section 6(a) to address the unreasonable risk for the use of methylene chloride as a processing aid to continue with the implementation of a WCPP (40 CFR 751.109) (89 FR 39254, May 8, 2024 (FRL–8155–01–OCSPP)).

TSCA section 6(d) requires the Agency to establish compliance deadlines that are as soon as practicable. TSCA section 6(g) requires that any exemptions be adequately justified. For the final rule, the exemption under TSCA section 6(g) applies only to lead acid battery separator manufacturing, and the Agency is prohibiting manufacture, processing, and commercial use of TCE for the manufacture of lithium battery separators after the five years specified under TSCA section 6(d). During the time before prohibition, manufacturers and processors of TCE for use in the manufacture of lithium battery separators and the users of TCE in the manufacture of lithium battery separators are required to comply with the WCPP, as described in Units III.A., and IV.C.

b. Lead Acid Battery Separator Manufacturing

EPA is finalizing a 20-year TSCA section 6(g) exemption from prohibition for the manufacture (including import), processing, distribution in commerce, and industrial and commercial use of TCE as a processing aid for lead acid battery separator manufacturing. While EPA proposed a 10-year section 6(g) exemption for the use of TCE in battery separator manufacturing, in the primary alternative regulatory action in the proposed rule EPA presented a 15-year exemption from the prohibition on TCE for the industrial and commercial use of TCE as a processing aid for battery separator manufacturing. EPA received substantiative information in follow up meetings based on public comments that 20 years would be the minimum timeframe needed to transition to an alternative for manufacturing separators for lead-acid batteries (Refs. 34, 39, 64, 65). While EPA received comments that more than 20 years may be needed, for the reasons described in this Unit, EPA is finalizing the exemption for use of TCE in manufacture of lead acid battery separators at 20 years.

EPA emphasizes that alternatives to TCE in lithium battery separator manufacturing are not expected to be feasible substitutes for TCE in lead-acid battery manufacturing due to differences in the processes for each separator type. This is primarily due to the difference in thickness of the battery separators: lithium battery separators are typically only 9 to 10 microns thick, while lead-acid battery separators range from 6 to 50 times thicker than lithium battery separators. Given the chemistry of the alternative solvent reacting with the mineral oil and metal sheets that constitute the process of manufacturing a battery separator, it would therefore require between 225 to 625 times longer to physically extract lead acid separators compared to lithium separators using an alternative solvent. TCE is about 50% to 80% (depending

on temperature) more effective at extracting process oil during the battery separator manufacturing process than the alternative product used in the manufacturer's new lithium separator process (Ref. 64). Overall, while alternatives to TCE are suitable for lithium battery separator manufacturing and may be feasibly substituted in domestic manufacturing within five years, these alternatives are not feasible for lead acid battery separator manufacturing.

Numerous commenters submitted information on the use of TCE as a processing aid in lead-acid battery manufacturing. Industry commenters and trade associations involved in battery manufacture agreed that EPA correctly categorized battery separator manufacturing as critical and essential. In public comments, battery separator manufacturers described the need for the exemption to be extended to 25 years, citing the lack of a currently identified alternative and once identified, the time necessary for testing and recertification for any alternatives to TCE. As described by commenters, the steps for such a process include: identifying and/or developing an alternative chemical as a processing aid, sample trials, battery testing, second level battery testing, changing battery separator production lines, and testing and production approval processes from battery end users (*e.g.,* automobile manufacturers). This step-wise process is consistent with EPA's understanding of developing and implementing alternatives for other chemicals and uses. In follow-up conversations with battery separator manufactures, EPA gained further clarity that timeframes could be expedited somewhat, and on an expedited timeline would take 20 years (Ref. 64). Because TSCA section 6(g) requires that any exemptions be adequately-justified, in consideration of public input, and that the period of the exemption is reasonable, EPA is lengthening the proposed TSCA section 6(g) exemption from the prohibition for manufacture (including import), processing, distribution in commerce, and use of TCE in manufacturing separators for lead acid batteries from 10 years to 20 years (*i.e.,* to December 18, 2044.). EPA encourages manufacturers of battery separators to identify early in their substitution efforts if any further time would be needed.

2. Industrial and Commercial Use of TCE as a Processing Aid for Specialty Polymeric Microporous Sheet Materials

EPA is finalizing a 15-year TSCA section 6(g) exemption from prohibition for the manufacture (including import), processing, distribution in commerce, and industrial and commercial use of TCE as a processing aid for specialty polymeric microporous sheet materials. While EPA proposed to prohibit industrial and commercial use of TCE as a processing aid for specialty polymeric microporous sheet materials, EPA's primary alternative regulatory action described a 15-year TSCA section 6(g)(1)(A) exemption from prohibition for this use. EPA received substantiative information in public comments to support finalizing this exemption, as well as support for 15 years as the appropriate timeframe for this exemption (Ref. 40).

As noted in the initial exemption request and in the public comments submitted to EPA, specialty polymeric microporous sheet materials are fundamental components in the production of critical or essential products such as drivers' licenses, passports, and chemical drum labels (Refs. 66, 40). EPA agrees that TCE is a critical and essential component in the manufacturing process for these products. EPA also agrees that certain applications of these specialty polymeric microporous sheet materials are critical and essential uses for which no technically and economically feasible safer alternative is available. In public comments, the manufacturer of specialty polymeric microporous sheet materials disagreed with EPA's proposal to restrict the end uses of the specialty polymeric microporous sheet materials to critical and essential products, stating that all end products of the material use the same production line. EPA is finalizing with modifications a time-limited exemption from prohibition for this specific condition of use of TCE. These modifications, based on information provided in public comments, include: (1) modifying the exemption from the proposal to allow for this exempted use of TCE as a processing aid to apply broadly to any end product; (2) allowing the disposal of wastewater containing TCE associated with manufacture of specialty polymeric microporous sheet materials under a separate TSCA section 6(d) phase-out for disposal of TCE to industrial pre-treatment, industrial treatment, or POTWs (see Unit III.C.4.); and (3), in an effort to minimize worker exposure during the period of the exemption, EPA is requiring that the industrial and commercial use of TCE as a processing aid in the manufacture of specialty polymeric microporous sheet materials can only continue at existing facilities already using TCE to manufacture specialty polymeric microporous sheet materials. EPA expects that development of any new facilities for the manufacture of specialty polymeric microporous sheet materials could innovate new processes that do not include use of TCE.

3. Industrial and Commercial Use of TCE in Batch Vapor Degreasing for Essential Aerospace Parts and Components and Narrow Tubing Used in Medical Devices

EPA is finalizing the proposed primary alternative 7-year TSCA section 6(g)(1)(B) exemption from prohibition for industrial and commercial use of TCE in batch vapor degreasing for essential aerospace parts and components and 7-year TSCA section 6(g)(1)(A) exemption from prohibition for industrial and commercial use of TCE in batch vapor degreasing for narrow tubing used in medical devices. EPA received substantiative information in public comments to support the need for these exemptions. Based on the information received, EPA determined it is necessary to finalize these exemptions.

Numerous commenters urged EPA to finalize the alternative exemptions, citing strict safety and performance standards that TCE is currently used to meet and a recertification process that would take a longer timeframe than the 1 year that was proposed (Refs. 36, 43, 32, 56, 67, 43, 32, 56). Given that under this condition of use TCE is used to clean parts for highly specialized end uses in the aerospace and medical fields, commenters stressed that a significant length of time would be needed for safety recertification of an alternative. These commenters also described how all currently known potentially effective drop-in substitutes to TCE for this highly specialized use are also chemicals currently being evaluated or regulated by EPA under TSCA, and, as such, they do not view these substitutes as viable long-term alternatives to TCE. In many cases, according to commenters, the transition to a TCE substitute would require the transformation or complete replacement of complex equipment. One manufacturer indicated in their public comments that they had identified an alternative that could meet the cleanliness required for their end products; however, using this substitute chemical solvent would also require changing to a different machine type (*i.e.,* to vacuum vapor degreasers). According to that commenter, it would take seven years to install vacuum degreasers, implement the necessary infrastructure upgrades, obtain permits, notify customers, and validate existing

contracts (Ref. 36). EPA agrees that the significant amount of infrastructure and equipment changes needed to transition out of TCE for this specific vapor degreasing condition of use support finalizing a longer timeline until prohibition.

Regarding section 6(g) criteria, commenters agreed with EPA's characterization of TCE as being essential to meet unique cleanliness demands for narrow tubing used in medical devices as well as for aerospace parts. A public commenter noted the intensity of these safety concerns particularly in medical tubing, noting that in implanted devices ''manufacturing residues may 'pose an inflammatory or autoimmune trigger risk' that can lead to death'' (Ref. 36). For these reasons, EPA is finalizing a time-limited exemption under TSCA section 6(g)(1)(A) for seven years for the industrial and commercial use of TCE in batch vapor degreasing for narrow tubing used in medical devices, and a time-limited exemption under TSCA section 6(g)(1)(B) for seven years for the industrial and commercial use of TCE in batch vapor degreasing for essential aerospace parts.

4. Industrial and Commercial Use in Closed-Loop Batch Vapor Degreasing Necessary for Rocket Engine Cleaning by Federal Agencies and Their Contractors

EPA proposed a 7-year TSCA section 6(g)(1)(B) exemption from the prohibition on the industrial and commercial use of TCE as a solvent in closed-loop vapor degreasing necessary for human-rated rocket engine cleaning by NASA and its contractors, and the manufacture (including import), processing, and distribution in commerce of TCE for this use. EPA is finalizing with modifications the time-limited exemption from prohibition for this specific condition of use of TCE. EPA received information that this exemption should include all Federal agencies, rather than just NASA, due to Federal agencies having similar critical infrastructure and national security needs of rocket engines. Due to the commonality of the United States' rocket engine industrial base, other Federal agencies like NASA use TCE in the same condition of use to support their rocket engine cleaning. EPA has made this change and is finalizing a time-limited exemption under TSCA section 6(g)(1)(B) for industrial and commercial use of TCE as a solvent in closed-loop batch vapor degreasing necessary for rocket engine cleaning by Federal agencies and their contractors.

C. Changes to Compliance Dates for Prohibitions Under TSCA Section 6(d)

EPA proposed a compliance timeframe of 1 year for the prohibitions on industrial and commercial use of TCE and requested public comments on the appropriateness of this timeline for specific conditions of use. This unit describes modifications EPA made to proposed timeframes for prohibitions under TSCA section 6(d) for the two conditions of use for which EPA is finalizing different timeframes for prohibition. (Changes to timeframes for proposed TSCA section 6(g) exemptions or modifications of a section 6(g) exemption to a section 6(d) timeframe are described in Unit III.B.). Given that the part of the rule affecting the most significant volume of TCE is unchanged between proposal and final, the overall impact of these changes is expected to be minor.

1. Industrial and Commercial Use of TCE in Energized Electrical Cleaner

As described in this Unit, EPA is finalizing a prohibition in three years for the industrial and commercial use of TCE in energized electrical cleaner rather than the prohibition within 1 year as proposed for this condition of use. EPA notes that energized electrical cleaner is a sub-use of the industrial and commercial use of TCE as solvent for aerosol spray degreaser/cleaner. During the timeframe before prohibition, EPA is finalizing requirements to comply with *either* specific prescriptive controls *or* the WCPP for the industrial and commercial use of TCE in energized electrical cleaner, which is a sub-use of the industrial and commercial use of TCE as solvent for aerosol spray degreaser/cleaner, as described in Unit IV.D.1.

In the proposed rule, EPA solicited comment on whether some activities would need longer compliance timeframes in order to appropriately transition, and specifically mentioned uses such as energized electrical cleaning, where TCE may be desired due to its low flammability. EPA also requested comment on the feasibility and appropriateness of the WCPP. EPA subsequently received several comments expressing concern over the proposed prohibition on TCE in energized electrical cleaner (Refs. 51, 68). In addition to describing the need for additional time to transition to alternatives to TCE in energized electrical cleaner, commenters described the work practices and context that support the potential for exposure reduction to TCE through workplace controls, including, but not limited to, the WCPP. For example, one commenter described how energized electrical cleaners are typically used only by professionals for specialized uses in which strict workplace controls already exist (Ref. 51). As another example, in a separate rulemaking under TSCA section 6 for PCE (RIN 2070–AK84), one commenter described work practices and controls for use of energized electrical cleaners, stating that facilities that require cleaning of energized equipment rely on skilled technicians or other professional users who typically have education and training that may include two years at lineman school, time as an apprentice, licensing or certifications, and continuing education (Ref. 69). The commenter also stated that OSHA General Industry and Construction standards include requirements specific to electrical work under 29 CFR part 1926, subparts E, K, and V. Commenters differed on whether the WCPP or other workplace controls would be most suitable. Several commenters stated that the WCPP would be impractical for use of TCE in energized electrical cleaner because trained technicians often travel to different facilities to conduct work, including facilities that may not otherwise use a chemical for which the WCPP is required, and suggested that instead of a WCPP, a training and certification program would be sufficient to address the unreasonable risk (Refs. 51, 68).

Based on the information submitted to EPA as part of the comment period regarding this condition of use, supported by subsequent discussions for clarification, and in consideration of existing best practices and regulations for work in electrical spaces as well as the need for additional time to certify and transition to substitutes, EPA is finalizing a prohibition on the use of TCE in energized electrical cleaner after December 18, 2027. In addition, EPA has determined that either the WCPP or specific prescriptive controls specified in the final rule, including dermal PPE and respiratory protection, are necessary and appropriate for reducing exposures to potentially exposed persons until the prohibition takes effect.

EPA notes the importance of existing OSHA regulations designed to protect workers exposed to dangers such as electric shock, electrocution, fires, and explosions. Specifically, in addition to the requirements for electrical work under OSHA General Industry and Construction standards at 29 CFR part 1926, subparts E, K, and V that one commenter mentioned in their public comment, OSHA regulates electrical work under Occupational Safety and

Health standards at 29 CFR part 1910. For example, OSHA requires safety-related work practices on electrical equipment under the Electrical Standard at 29 CFR part 1910, subpart S (29 CFR 1910.301 to 1910.399), which was significantly updated in 2007 (72 FR 7136, February 14, 2007). OSHA also sets forth requirements for the operation and maintenance of electrical power generation, control, transformation, transmission, and distribution lines and equipment under the Electric Power Generation, Transmission, and Distribution standard at 29 CFR 1910.269, which was significantly updated in 2014 (79 FR 20316, April 11, 2014). Additionally, OSHA regulates electrical protective equipment under the Electrical Protective Equipment standard at 29 CFR part 1910, subpart I (29 CFR 1910.137), which was significantly updated in 2014 (79 FR 20316, April 11, 2014). Other standards and best practices apply to electrical safety in the workplace, for example the National Fire Protection Association (NFPA) 70E Standard for Electrical Safety in the Workplace (Ref. 70).

As discussed in the proposed rule, given the risk profile of TCE, EPA determined that it is necessary to require worker protection measures such as the WCPP for those conditions of use that will continue beyond 1 year. In view of the relatively short timeframe for transitioning to an alternative, combined with the specialized nature of this use of TCE and the existing OSHA regulations and other best practices for performing work on energized equipment, EPA recognizes that the WCPP may not be the best approach to addressing occupational exposures in the interim. EPA understands that trained technicians performing this activity often travel to different facilities to conduct their work, including facilities that may not otherwise use TCE. EPA also determined that owners and operators who perform this kind of work should focus their efforts on transitioning to alternatives, rather than setting up comprehensive exposure control plans and programs. EPA is therefore providing an alternative to the WCPP in the form of prescriptive controls, including respiratory and dermal protection to protect workers in the interim. Considering all of these factors, as well as the workplace requirements for energized electrical cleaner in the final regulation of PCE under TSCA section 6 (RIN 2070–AK84) and the burdens associated with higher APF respirators, EPA has determined that the use of respirators with an APF of 50 or greater and impermeable gloves will minimize the exposure to the potentially exposed persons engaged in this use of TCE during the interim period before the prohibition takes effect, as further described in Unit IV.D. In addition, requiring PPE similar to that required by the PCE regulation is expected to ease the transition to PCE, which is a possible replacement for TCE in these products. The upstream manufacturing and processing of TCE for the use in energized electrical cleaner will be subject to the WCPP as described in Unit IV.C. until the use is prohibited.

EPA emphasizes that other industrial and commercial use of TCE as a solvent for aerosol spray degreasers/cleaners is prohibited in the final rule, consistent with the proposal for that condition of use.

2. Industrial and Commercial Use in Adhesives and Sealants for Aerospace Applications

EPA is finalizing a prohibition in five years for the industrial and commercial use of TCE in adhesives and sealants for aerospace applications. EPA proposed a compliance timeframe of 1 year for the prohibitions on industrial and commercial use, and in public comments requested feedback on the appropriateness of this timeline for specific applications. EPA received public comments highlighting that the industrial and commercial use of TCE in adhesives and sealants specifically for aerospace applications has safety implications and involves longer recertification timelines (Ref. 56). EPA's rationale for the short timeframe until prohibition for this condition of use was based on the understanding that alternative formulations or products exist that do not contain TCE. During the public comment period, EPA received public comments highlighting the safety considerations for industrial and commercial use of TCE in adhesives and sealants specifically for aerospace applications and longer recertification timelines. A public commenter stated that TCE is still critically necessary in adhesives and sealants; particularly in aircraft pneumatic deicing boots; in solvent bonding of plastic components, including on Oxygen Container Assemblies for Passenger Service Unit products used in aircraft; and as an adhesive or sealant for flight-critical equipment on new and existing aircraft, both commercial and military (Ref. 56). Regarding compliance timeframes, this commenter requested that adhesives and sealants for aerospace be allowed to continue in perpetuity under a WCPP. EPA has determined that prohibition of this use is necessary to address the unreasonable risk. EPA did consider the information raised by this commenter in determining an appropriate timeframe for the prohibition on use of TCE in adhesives and sealants for aerospace applications. Specifically, the commenter provided information that for uses in the aerospace and defense sector, changes in response to a prohibition on TCE would be a multiyear process that requires redesign and recertification that a product meets performance standards such as customers' technical requirements, UL and Conformité Européenne (CE) marking requirements, military specifications, and specifications from other government agencies such as the Federal Aviation Administration and NASA (Ref. 56).

EPA recognizes that the recertification process for uses in aerospace applications is lengthy and agrees that one year is not a sufficient timeframe. In identifying a reasonable timeframe, EPA considered public comments on the proposed rulemaking and follow-up clarifying conversations with commenters, as well as information submitted during the public comment period on EPA's proposed rule under TSCA section 6 for methylene chloride (88 FR 28284, May 3, 2023 (FRL–8155–02–OCSPP)) regarding anticipated timeframes to recertify adhesives and sealants used in the aerospace field. As such, EPA has determined that a 5-year timeframe until prohibition for the industrial and commercial use of TCE in adhesives and sealants for aerospace applications is appropriate and will be sufficient to allow for a reasonable transition from TCE. During this time, EPA is requiring compliance with the WCPP, as detailed in Unit IV.C. The issuance of this final rule does not preclude these users from presenting additional information to EPA on their redesign and recertification progress in the future.

3. Industrial and Commercial Use of TCE in Laboratory Use for Asphalt Testing and Recovery

EPA is finalizing a phase-out of ten years for the industrial and commercial use of TCE in laboratory use for asphalt testing and recovery, with a prohibition on use of TCE in manual centrifuge processes at 5 years. In the proposed rule, EPA proposed to prohibit the laboratory use of TCE (which falls within the condition of use ''Industrial and commercial use of TCE in hoof polish; gun scrubber; pepper spray; and other miscellaneous industrial and commercial uses'') within 1 year. EPA proposed a TSCA section 6(g)(1)(A) exemption from prohibition for the

industrial and commercial use of TCE in laboratory use for essential laboratory activities that are critical (*e.g.,* occupational sampling and monitoring, the support of environmental cleanup activities, wax removal from NASA infrared sensors, and equipment calibration related to the search for chlorinated hydrocarbons on Mars; for a full list of critical activities see Unit V.A.3.a.iii. of the 2023 TCE proposed rule). In the 2023 TCE proposed rule, EPA specifically noted that the use of TCE in laboratory settings for testing asphalt would not be included in the TSCA section 6(g) exemption due to information available to EPA that indicated it was not critical nor essential, and because alternative testing methods exist, including the Nuclear Asphalt Content Gauge and the Ignition Method.

During the public comment period, EPA received numerous comments providing new information on the importance of TCE in asphalt testing and recovery as a laboratory use, and the challenges of using a substitute that had appeared theoretically feasible. Many commenters, including several state departments of transportation, emphasized to EPA that 23 state specifications require TCE to be used for solvent extraction for asphalt testing accuracy (Refs. 55, 57, 58, 71, 72, 73, 74, 75, 76, 77). Commenters described how this use of TCE is critical or essential; specifically, numerous commenters emphasized that in the current landscape for asphalt testing and recycling, TCE is widely used at this time because it can be easily recovered and the asphalt test sample can then be reused rather than discarded. Further, as commenters described, using TCE in laboratory testing allows departments of transportation to recycle asphalt paving and shingles into new asphalt by determining how much asphalt binder is present. The ability to determine the amount of remaining asphalt binder has resulted in, according to commenters, asphalt being one of the most recycled materials. The Nuclear Asphalt Content Gauge that EPA had identified as an alternative in the proposed rule does not allow for asphalt recycling, as it destroys the asphalt sample during the test which makes it impossible to test the asphalt binder as well.

In consideration of public comments, EPA has determined that a prohibition after 1 year is not reasonable. States are currently invested heavily in extraction equipment that uses TCE and EPA agrees with commenters who stated that transitioning from TCE would take years and incur significant costs as a result of equipment changes. Commenters expressed an interest in ceasing their use of TCE and requested between 5 years and 20 years until prohibition of this use of TCE in order to facilitate a transition away from TCE. In determining a reasonable timeframe for a phase-out, EPA considered significant information provided in public comments about the potential alternatives to TCE in laboratory asphalt testing that would allow for testing as well as recovery. While alternatives have already been identified, fully implementing use of those substitutes would require the complete retrofit of existing laboratory equipment. Additionally, numerous state departments of transportation standards would need to be updated, which would take time.

EPA does not view the 50-year timeframe proposed (and finalized) for the exemption for laboratory use of TCE for essential laboratory uses as appropriate for use of TCE in asphalt testing and recovery, so is not finalizing the laboratory asphalt testing and recovery use as part of the TSCA section 6(g) exemption for essential laboratory activities. Based on public comments and discussions with the U.S. Department of Transportation, EPA has determined that 10 years is a reasonable timeframe until the prohibition on TCE use in laboratory use for asphalt testing and recovery and is finalizing an extended phase-out of ten years for the industrial and commercial use of TCE in laboratory use for asphalt testing and recovery. Associated with this phase-out, EPA will require the establishment of the TCE WCPP, outlined in Unit IV.C. within 180 days after publication of the final rule, as workplace protections during the period of the phase-out. Additionally, EPA has identified asphalt testing and recovery conducted through manual centrifuge methods as specific activities that would be prohibited within five years as part of the phase-out, due to the higher level of worker exposure from this activity and information received from commenters about automated alternatives.

In public comments, numerous users of TCE for asphalt testing and recovery provided information to EPA regarding technological advances in this sector—namely the transition from manual centrifuge methods of testing to automated machines (Refs. 71, 72, 57). Many laboratories have invested in automated extraction machines. These machines are expensive and currently are calibrated to be chemical-specific, with TCE-calibrated machines unable to use a different or replacement solvent, such as PCE (Refs. 71, 72, 55). EPA's identification of a 10-year timeframe for prohibition is partly based on the time it would take to replace or retrofit the current laboratory practices with non-TCE automatic extraction machines.

Based on public comments, EPA understands that the industry favors automated extraction machines due to the extremely high worker exposures inherent with manual centrifuge processes. Commenters describe manual centrifuge processes as resulting in worker exposure to TCE for the entire task duration, with constant handling of the solvent by stirring, repouring, straining, and vaporizing it at times (Ref. 71). EPA agrees with commenters on the high risk of asphalt testing and recovery using TCE in manual methods. As such, as part of the phase-out, any lab use of TCE for asphalt testing or recovery which uses manual centrifuge processes is prohibited in 5 years. Between 5 and 10 years, labs must either use TCE in automated machines only, or use alternative solvents in automated machines or manual centrifuge processes (such as methylene chloride or PCE, for which EPA has finalized provisions requiring chemical specific WCPPs). Therefore, EPA is finalizing an extended phase-out of ten years for the industrial and commercial use of TCE in laboratory use for asphalt testing and recovery, with a prohibition on use of TCE in manual centrifuge processes at 5 years, rather than the prohibition within 1 year as proposed for all other industrial and commercial uses without extended phase-outs or exemptions.

4. Disposal of TCE to Industrial Pre-Treatment, Industrial Treatment, and POTWs

For disposal of TCE to industrial pre-treatment, industrial treatment, and POTWs, EPA is finalizing a phase-out over 20 years. In the proposed rule, EPA proposed to prohibit the disposal of TCE to industrial pre-treatment, industrial treatment, and POTWs in 1 year after the rule finalization. In the proposal, EPA requested comment on whether the prohibition timeframes and compliance dates were appropriate. In public comments, EPA received substantive information from several industrial and commercial users of TCE as a processing aid that wastewater disposal should continue on a timeframe to facilitate those uses.

Commenters manufacturing battery separators provided details on why the industrial and commercial use of TCE in battery separator manufacturing necessitates the disposal of wastewater containing TCE (Refs. 46, 34). As described by commenters, in battery separator manufacturing, TCE enters the

wastewater stream following contact between cooling tower blowdown, processes involving TCE, and water generated from the plant's steam distillation process, which is a key process step in battery separator manufacture. Water used in these processes becomes wastewater containing TCE. These manufacturers perform on-site treatment of this wastewater through air stripping and carbon absorption. The pre-treated water is then either recycled and reused in the process or discharged to a POTW. Wastewater discharges by battery separator manufacturers are regulated under existing wastewater discharge permits and have limits for volatile organic compounds such as TCE. EPA agrees with commenters assertions that TCE wastewater is inherently leftover as part of the process and agrees that no other form of disposal is acceptable. Given that the generation of wastewater containing TCE cannot be avoided as it results from an intrinsic component of battery separator manufacture, and EPA's determination that use of TCE in battery separator manufacture is either a critical and essential function for which there is no technically or economically feasible safer alternative (in the case of lead acid batteries) or for which five years before prohibition is as soon as practicable (in the case of lithium batteries), EPA is modifying the associated timelines for the prohibition on disposal for these uses, with worker protections, to continue disposal of wastewater containing TCE that is a necessary part of this process.

Based on public comments, EPA also finds that disposal of wastewater is a necessary part of the use of TCE as a processing aid in the manufacture of specialty polymeric microporous sheet materials. Like the battery separator manufacturers, comments submitted from the specialty polymeric microporous sheet materials manufacturer explained that TCE enters the facility wastewater that is generated in cooling tower blowdown water and subsequently discharged to a POTW (Ref. 40). Wastewater discharges are regulated under existing wastewater discharge permits and have limits for volatile organic compounds such as TCE. Given the determination of the critical and essential need for the longer timeframes for this industrial and commercial use, EPA is modifying the TSCA section 6(d) phaseout for disposal of TCE for this use to allow disposal of wastewater containing TCE that is a necessary part of this process.

As such, the disposal of TCE to industrial pre-treatment, industrial treatment, and POTWs is prohibited with the following phase-out structure. For the majority of industrial and commercial uses, such disposal is prohibited at one year. For industrial and commercial users of TCE as a processing aid in lithium battery separator manufacturing, such disposal is prohibited at 5 years. For industrial and commercial users of TCE as a processing aid in specialty polymeric microporous sheet materials manufacturing, such disposal is prohibited after 15 years. For industrial and commercial users of TCE as a processing aid in lead-acid battery separator manufacturing, such disposal is prohibited after 20 years. Industrial and commercial users who are allowed to continue disposing of TCE to wastewater for more than one year must follow the WCPP provisions as laid out in Unit IV.C, and POTWs receiving wastewater must follow the wastewater worker protection provisions discussed in Unit IV.E.3.

5. Industrial and Commercial Use of TCE for Batch Vapor Degreasing for Land-Based DoD Defense Systems by Federal Agencies and Their Contractors

EPA is finalizing a prohibition in five years for the industrial and commercial use of TCE in batch vapor degreasing for land-based DoD defense systems by Federal agencies and their contractors. EPA proposed a compliance timeframe of one year for the prohibitions on industrial and commercial use of TCE in vapor degreasing. EPA received information indicating that this use needs to continue for a longer period of time due to the national security implications of the end products, and the need for a reasonable transition period for that use that is as soon as practicable but longer than the one year proposed. TCE vapor degreasing is necessary due to technical challenges with other substitute chemicals or alternative methods. The cleanliness standards of certain parts as required by DOD specifications or other specifications included in existing contracts within the supply chain currently require TCE. A reasonable transition period for this technically challenging use requires substantial investment and time to develop viable alternatives, because conversion from vapor degreasing to other methods of cleaning is a capital-intensive investment that would require several years to plan, permit, construct, and install. TCE has been used in vapor degreasing to meet required levels of cleanliness of certain supplied parts by long-standing design specifications that are incorporated into contracts of a complex supply chain. As such, the industrial and commercial use of TCE for batch vapor degreasing for land-based DoD defense systems is prohibited after 5 years, rather than at 1 year with vapor degreasing for other purposes.

D. Other Changes

1. Regulatory Threshold

In the 2023 TCE proposed rule, EPA requested comment on whether the Agency should consider a de minimis threshold of TCE in formulations when finalizing prohibitions, and, if so, what threshold should be considered. EPA received comments in support of the inclusion of a de minimis threshold, as well as comments opposing such a threshold. Of the supportive commenters, many agreed with the EPA request for comment on using 0.1% by weight as the threshold for the applicability of prohibitions and restrictions on TCE (Refs. 53, 78, 51), which EPA is referring to in this final rule as a regulatory threshold. Commenters provided a variety of reasons in support of a regulatory threshold, such as the difficulty of proving the absence of a chemical (Refs. 38, 79) and the importance of providing for very small amounts of a chemical that cannot be reasonably eliminated (Ref. 37). Commenters observed that TCE is unintentionally manufactured as a byproduct in small amounts in the manufacture of chlorinated organics and noted that this cannot be prevented in the production process (Ref. 39). In some cases, commenters noted that a 0.1% threshold would be consistent with the requirements under the OSHA Hazard Communication Standard at 29 CFR 1910.1200 (Refs. 78, 51). One of these commenters observed that, because levels below 0.1% are not required to be reported on Safety Data Sheets (SDSs) under the OSHA Standard, there is likely to be a lack of awareness of products that contain TCE below this level.

To aid the regulated community with implementing the prohibitions on TCE and to account for TCE as a byproduct or impurity in products, EPA is establishing a regulatory threshold of 0.1% for TCE, indicating that TCE at concentrations less than 0.1% by weight are not subject to the prohibitions and restrictions outlined in this rulemaking. EPA views the regulatory threshold as an appropriate policy approach necessary to aid in the rule implementation and to clarify which products are subject to the final rule. As defined in 40 CFR 751.5, ''product'' means ''the chemical substance, a mixture containing the chemical

substance, or any object that contains the chemical substance or mixture containing the chemical substance that is not an article.''

This 0.1% regulatory threshold for TCE is in alignment with Appendix A of 29 CFR 1910.1200 Health Hazard Criteria developed by OSHA; OSHA described this threshold in the 2012 modifications to the hazard communication standard: ''When data on the mixture as a whole are not available, the mixture is considered to present the same health hazards as any ingredients present at a concentration of 1% or greater, or, in the case of carcinogens, concentrations of 0.1% or greater. The current HCS [hazard communication standard] also recognizes that risk may remain at concentrations below these cut-offs, and where there is evidence that that is the case, the mixtures are considered hazardous under the standard.'' (89 FR 44144, May 20, 2024). Under 29 CFR 1910.1200, a health hazard is defined as ''a chemical which is classified as posing one of the following hazardous effects: acute toxicity (any route of exposure); skin corrosion or irritation; serious eye damage or eye irritation; respiratory or skin sensitization; germ cell mutagenicity; carcinogenicity; reproductive toxicity; specific target organ toxicity (single or repeated exposure); or aspiration hazard.'' The criteria for determining whether a chemical is classified as a health hazard are detailed in Appendix A to 29 CFR 1910.1200—Health Hazard Criteria. Appendix A.6.3.1 and A.7.3.1.1 of 29 CFR 1910.1200 indicate that a mixture must be classified as a carcinogen or a reproductive toxicant, respectively, if it includes greater than or equal to 0.1% of a substance that, like TCE, is classified as a carcinogen or a reproductive toxicant. Other EPA programs, such as the Toxics Release Inventory (TRI) program, have adopted the OSHA threshold of 0.1% for chemicals which are defined as carcinogens or as a potential carcinogen under the National Toxicology Program, International Agency for Research on Cancer, or OSHA (see 40 CFR 372.38(a)).

EPA is finalizing a regulatory threshold of 0.1% so that products containing TCE at concentrations less than 0.1% by weight are not subject to the prohibitions and restrictions of this final rule. EPA is finalizing this threshold for many of the reasons stated by commenters, such as the difficulty of proving the absence of a chemical (and the resulting uncertainty in various supply chains), the fact that the manufacture of chlorinated organics results in the unintentional manufacture of small amounts of TCE (and other chlorinated compounds) as a byproduct that becomes an impurity that is not feasible to remove, and the fact that it would be consistent with the OSHA Hazard Communication Standard and other programs to which industry has already calibrated its processes. EPA believes that adopting a regulatory threshold of 0.1% for TCE, which is a carcinogen and a reproductive toxicant, will increase regulatory certainty and ease implementation of the eventual prohibition of this chemical. This regulatory threshold is well below the concentration used for any products that contributed to the unreasonable risk. By prohibiting TCE concentrations of 0.1% or greater in products, EPA prevents any functional uses of TCE, which generally rely on a higher concentration of the chemical in order to make use of TCE's chemical properties. The manufacture (including import), processing, and distribution in commerce of products that contain TCE at concentrations equal to or above the regulatory threshold of 0.1% are still subject to the prohibitions and restrictions of this final rule, regardless of the concentration of TCE in the end product.

2. Processing of TCE Manufactured as a Byproduct

In the 2023 TCE proposed rule, EPA noted that TCE that is manufactured as a byproduct (such as during the manufacture of other chemicals, *e.g.,* 1,2-dichloroethane (1,2–DCA)) is not considered to be within the condition of use of TCE manufacturing. EPA has not changed this determination. However, in the 2023 TCE proposed rule, EPA did consider processing (including reuse) of TCE that was manufactured as a byproduct to be under the processing as a reactant/intermediate condition of use of TCE. Specifically, in Unit III.B.1.b.i. of the 2023 TCE proposed rule (''processing as a reactant/intermediate''), EPA noted that ''this condition of use includes reuse of byproduct or residual TCE as a reactant.'' EPA received numerous public comments on how the proposed rule addressed TCE as a byproduct that was then processed, with several commenters providing detailed information on how TCE is unintentionally manufactured as a byproduct during complex chemical processing streams and then processed and re-processed within those streams alongside other, similar chemicals (Refs. 42, 80, 39, 81, and 56). For clarity, EPA is using the terms reuse, recycling, and re-processing within this section as specifically used by commenters to refer to actions that occur under the larger condition of use of ''processing.'' One commenter pointed out that without excluding from the prohibitions any subsequent processing of TCE manufactured as a byproduct, chemical facilities would experience significant disruptions when trying to isolate and remove the TCE that was unintentionally manufactured, and that would otherwise be processed and consumed (Ref. 43). This commenter also emphasized the anticipated negative waste and upstream production impacts from a prohibition on the reuse of TCE manufactured as a byproduct, and highlighted how TCE is produced in the 1,2–DCA manufacturing process and how it is processed and recycled in the reactor manufacturing process for PCE and carbon tetrachloride (CTC). This commenter highlighted that if TCE byproduct processing was prohibited, this would significantly increase the quantity of hazardous waste disposed of and increase the use of virgin raw material in chemical manufacturing (Ref. 43). The commenter also provided a description of controls in place at chlorinated organic facilities to mitigate risk associated with TCE byproduct creation and recycling as well as citations to communications with EPA regarding these processes (Ref. 43).

As described in more detail in the Response to Comments document (Ref. 11), EPA agrees with commenters that TCE manufactured as a byproduct should logically be able to be processed, including recycled, during or concurrent with the processing of the intended manufactured chemical substance(s) so long as the TCE is processed in a site-limited, physically enclosed system within the same reaction process. EPA also recognizes the significant risks to workplace safety if all facilities manufacturing TCE as a byproduct had to distill, remove, and destroy all traces of TCE before further chemical processing could commence. For this reason, EPA is excluding from this rule the processing of TCE as a byproduct when that byproduct TCE is processed within a site-limited, physically enclosed system that is part of the same overall manufacturing process from which the byproduct substance was generated. In this rule, EPA is incorporating the definition of ''site-limited'' in 40 CFR 711.3 and also aligning with the description of site-limited, physically enclosed systems in 40 CFR 711.10(d)(1), which identifies activities for which reporting on certain byproducts is not required under the CDR Rule.

In proposing the CDR definition, EPA described enclosed systems for the purposes of CDR as system of

equipment directly connected to the production process that is designed, constructed, and operated in a manner which prevents emissions, or the release of any chemical substance into the facility or environment during the production process. (84 FR 17692, April 25, 2019) (FRL–9982–16). Such emissions, including fugitive emissions, could lead to exposures to workers, the public, or the environment. For an enclosed system, exposure and release could only occur due to loss of integrity or failure of the manufacturing process equipment or control systems. To meet the EPA enclosed system scenario, any equipment that the byproduct is present in at any point during the process sequence, such as tanks, reaction vessels, reactors, processing units (*e.g.,* a drum filter), and/or connecting lines, must: (1) Be of high structural integrity and contained on all sides, (2) pose no foreseeable potential for escape of constituents to the facility or environment during normal use, and (3) be connected directly by pipeline or similarly enclosed device to a production process. Also, any transfers or holding steps occurring in this system must be necessary to the recycle process and must take place within physically enclosed equipment that meet the enclosed system scenario. For example, hard piping or completely sealed (*i.e.,* welded) equipment would meet these criteria if connected directly to other enclosed equipment, preventing potential releases including fugitive emissions.

EPA is finalizing an exclusion from this rule for TCE manufactured and then processed as a byproduct in a site-limited, physically enclosed system that is part of the same overall manufacturing process from which the byproduct TCE was generated. EPA plans to interpret the exclusion for processing byproduct TCE in this rule in a similar way as the exemption for certain byproducts from CDR.

EPA recognizes the concerns that other commenters raised regarding potential risks from TCE manufactured as a byproduct; several commenters stated that rather than expand exclusions for TCE manufactured as a byproduct, EPA should evaluate all aspects of manufacture of a chemical substance and that byproducts could pose a risk to fenceline communities (Refs. 44, 30). As described in the proposed rule, EPA is including the evaluation of TCE manufactured as a byproduct during the manufacture of 1,2–DCA in the risk evaluation for 1,2–DCA. Additionally, unless it is for the purposes of disposal (see Unit IV.C.1.d.), TCE that exits the site-limited, physically enclosed systems in which it was manufactured by removal from the system, by relocation, or by conclusion of the manufacturing process is subject to the restrictions, prohibitions, and other provisions of this final rule. EPA notes that for the manufacturing of two chemicals, PCE and CTC, which may produce TCE as a byproduct within site-limited, physically enclosed systems, EPA is requiring a WCPP for PCE or CTC, which would provide a level of protection from TCE for potentially exposed persons while addressing the unreasonable risk from PCE or CTC.

EPA received additional information from a chemical manufacturer (Ref. 82) that manufactures TCE as a byproduct during other processes and then sends the TCE offsite for RCRA hazardous waste disposal. EPA notes that in the Risk Evaluation for TCE, EPA explained that it had tailored the scope of the risk evaluation to exclude the disposal pathway of TCE, except for limited disposal of TCE-containing wastewater discussed in Unit IV.B.6. Thus, the disposal of TCE and the processing and distribution in commerce for such disposal is out of scope for this rule unless otherwise specified. EPA understands that some facilities, such as those that produce substances critical to the battery supply chain, may manufacture TCE as a byproduct and that TCE is not further processed onsite but rather is disposed of offsite. Such activity is not covered by this rule.

3. Industrial and Commercial Use of TCE as a Solvent for Closed-Loop Batch Vapor Degreasing for Rayon Fabric Scouring for Rocket Booster Nozzle Production for Federal Agencies and Their Contractors

In the 2023 TCE proposed rule, EPA included several longer timeframes for TCE uses specifically to foster and support Federal Agencies' missions related to national security and critical infrastructure. EPA received public comment on one of these conditions of use and provisions that relate to compliance. The comment relates to the phase-out of TCE in industrial and commercial use as a solvent for closed-loop batch vapor degreasing for rayon fabric scouring for rocket booster nozzle production. EPA proposed that within 5 years of the publication date of the final rule the Federal agency that is the end user of the rayon fabric for rocket booster nozzle production (*e.g.,* the U.S. Department of Defense (DOD) or NASA) would need to conduct a final pre-launch test of rocket boosters without using TCE. By 10 years from the publication date of the final rule, the phase-out would be complete and industrial and commercial use of TCE as a solvent for closed-loop batch vapor degreasing would be prohibited. A commenter brought to EPA's attention that although EPA proposed to require the testing of an alternative process, the proposed regulation did not include a requirement to switch to an alternative once a suitable one was fully validated (Ref. 44). As the commenter noted, such a requirement is necessary to prompt users to discover and implement effective and safer alternatives to TCE. EPA agrees, as the intention of this phase-out and the 5-year testing requirement is to incentivize TCE users to transition away as fast as practicable. Based on this public comment, EPA has modified the regulatory text to require use of the tested alternative if it proves to be an adequate substitute.

4. Definitions

EPA proposed to add definitions for ''Authorized person,'' ''ECEL,'' ''Exposure group,'' ''Owner or operator,'' ''Potentially exposed person,'' ''Regulated area,'' and ''Retailer'' to 40 CFR part 751, subpart A. The final rule under TSCA section 6 to address the unreasonable risk presented by methylene chloride (89 FR 39254, May 8, 2024 (FRL–8155–01–OCSPP)) added the definitions for ''Authorized person,'' ''Owner or operator,'' ''Potentially exposed person,'' ''Regulated area,'' and ''Retailer'' to subpart A. The final rule under TSCA section 6 to address the unreasonable risk presented by PCE (RIN 2070–AK84) added the definition for ''Exposure group'' and ''ECEL'' to subpart A.

In this final rule, EPA is adding a definition for ''interim ECEL'' to subpart D to incorporate the interim ECEL value discussed in Unit III.A.1. and to make it clear that the interim ECEL is only applicable during the phaseout and TSCA section 6(g) exemption periods. EPA has also revised the proposed subpart D definition of ''ECEL action level'' to refer to an ''interim ECEL action level'' and to incorporate the interim ECEL action level value described in Unit III.A.1.

Lastly, to provide additional clarity, EPA has revised its proposed descriptions in the preamble of industrial and commercial use of TCE as solvent for open-top or closed-loop batch vapor degreasing for essential aerospace parts and for narrow tubing for medical devices. The revised descriptions appear in Unit IV.B.1.

IV. Provisions of the Final Rule

EPA intends that each provision of this rulemaking be severable. In the event of litigation staying, remanding, or invalidating EPA's risk management approach for one or more conditions of use in this rule, EPA intends to preserve the risk management approaches in the rule for all other conditions of use to the fullest extent possible. The Agency evaluated the risk management options in TSCA section 6(a)(1) through (7) for each condition of use and generally EPA's regulation of one condition of use to address its contribution to the unreasonable risk from TCE functions independently from EPA's regulation of other conditions of use, which may have different characteristics leading to EPA's risk management decisions. Further, the Agency crafted this rule so that different risk management approaches are reflected in different provisions or elements of the rule that are capable of operating independently. Accordingly, the Agency has organized the rule so that if any provision or element of this rule is determined by judicial review or operation of law to be invalid, that partial invalidation will not render the remainder of this rule invalid.

There are many permutations of this. For example, as discussed in Unit IV.B., this final rule prohibits industrial and commercial use of adhesives and sealants that contain TCE (with subsets of this use with a delayed compliance date as described in Unit IV.B.2. or an exemption as described in Unit IV.G.). This final rule also prohibits all consumer uses of TCE as discussed in Unit IV.B.1. To the extent that a court were to find that EPA lacked substantial evidence to support its prohibition of adhesives and sealants or otherwise found legal issues with EPA's approach to that condition of use, it would have no bearing on other similarly situated conditions of use, such as those involving consumer use of TCE, unless the specific issue also applies to the particular facts associated with consumer use. This is reflected in the structure of the rule, which describes the specific prohibitions separately by compliance date. EPA also intends all TSCA section 6(a) risk management elements in this rule to be severable from each TSCA section 6(g) exemption. EPA has the authority to promulgate TSCA section 6(g) exemptions ''as part of a rule promulgated under [TSCA section 6(a)].'' However, EPA's risk management decisions under TSCA sections 6(a) and 6(c) are independent from EPA's consideration of whether it is appropriate, based on the factors in TSCA section 6(g), to exempt specific conditions of use from the requirements of the TSCA section 6(a) risk management elements in the rule. In other words, EPA first decides whether and how to regulate each condition of use, per TSCA sections 6(a) through (c), and only then determines whether an exemption under TSCA section 6(g) is appropriate. Accordingly, the underlying TSCA section 6(a) risk management elements would not be impacted if a TSCA section 6(g) exemption is determined by judicial review or operation of law to be invalid. Rather, the exempted condition of use would become subject to the underlying TSCA section 6(a) risk management element(s).

EPA also notes that there are multiple avenues to ask EPA to revisit issues in this TSCA section 6(a) rulemaking, both before and after the mandatory compliance dates are set consistent with TSCA section 6(d). EPA has the authority under TSCA section 6(g) to consider whether an exemption is appropriate and, consistent with TSCA section 6(g)(1), may propose such exemptions independently from this rulemaking. Additionally, any person could petition EPA to request that EPA issue or amend a rule under TSCA section 6.

A. Applicability

This final rule sets prohibitions and restrictions on the manufacture (including import), processing, distribution in commerce, commercial use, and disposal of TCE to prevent unreasonable risk of injury to health in accordance with TSCA section 6(a), 15 U.S.C. 2605(a). Additionally, pursuant to TSCA section 12(a)(2), this rule applies to TCE even if being manufactured, processed, or distributed in commerce solely for export from the United States because EPA has determined that TCE presents an unreasonable risk to health within the United States.

As discussed in Unit III.D., EPA's final rule is adopting a regulatory threshold of 0.1% of TCE (in the 2023 proposed rule, this was referred to as a de minimis threshold). In other words, the provisions of this rulemaking only apply when TCE is present in a product at 0.1% or greater by weight. Additionally, the provisions of this final rule only apply to chemical substances as defined under TSCA section 3. Notably, TSCA Section 3(2) excludes from the definition of chemical substance ''any food, food additive, drug, cosmetic, or device (as such terms are defined in Section 201 of the Federal Food, Drug, and Cosmetic Act [21 U.S.C. 321]) when manufactured, processed, or distributed in commerce for use as a food, food additive, drug, cosmetic, or device'' and ''any pesticide (as defined in the Federal Insecticide, Fungicide, and Rodenticide Act [7 U.S.C. 136 *et seq.*]) when manufactured, processed, or distributed in commerce for use as a pesticide.'' Additional details regarding TSCA statutory authorities can be found in section 2 of the Response to Comments document (Ref. 11).

As discussed in Unit III.D. of this final rule, TCE that is manufactured as a byproduct (such as during the manufacture of other chemicals) is not considered to be within the condition of use of TCE manufacturing. Relatedly, EPA is excluding from this rule processing of byproduct TCE when that byproduct TCE is processed within a site-limited, physically enclosed system that is part of the same overall manufacturing process from which the byproduct substance was generated. Site-limited means a chemical substance is manufactured and processed only within a site and is not distributed for commercial purposes as a chemical substance or as part of a mixture or product outside the site. In this way, EPA is aligning with the definition of ''site-limited'' in 40 CFR 711.3 and site-limited, physically enclosed systems in 40 CFR 711.10(d)(1).

Finally, as discussed in the 2023 TCE proposed rule, while EPA generally views the disposal condition of use under TSCA broadly, this rule is intended to address identified risks resulting from disposal of TCE to industrial pre-treatment, industrial treatment, or a POTW. Thus, only these limited disposal activities, including remediation methods that would be considered industrial wastewater pretreatment, industrial wastewater treatment, or discharge to a POTW, are included within the disposal condition of use in this rule. A remediation method would need to be considered one of these three types of disposal to fall within the condition of use under TSCA, and if not, would not be subject to the prohibition or other requirements of the rule.

B. Prohibition of Manufacture, Processing, Distribution in Commerce, Use, and Disposal

In general, EPA is finalizing the prohibitions as proposed with some modifications, including for compliance timeframes to provide for reasonable transitions and based on consideration of the public comments, as described in Unit III. This unit describes the prohibitions and associated compliance timeframes EPA is finalizing in this rule. As discussed in Unit IV.A. and in

the Response to Comments document (Ref. 11), the prohibitions do not apply to any substance that is excluded from the definition of ''chemical substance'' under TSCA section 3(2)(B)(ii) through (vi) (Ref. 11).

1. Prohibition of Manufacture, Processing, Distribution, and Industrial and Commercial Use of TCE

The final rule prohibits manufacture, processing, distribution in commerce, and all industrial and commercial use of TCE and TCE-containing products. The final regulation will impose prohibitions in a staggered timeframe, beginning at the top of the supply chain, as proposed. EPA is finalizing as proposed the timeframes for prohibition on manufacturing, processing, distribution in commerce, and industrial and commercial use of TCE unless otherwise specified. These timeframes are: a prohibition on manufacturing (including importing) TCE beginning 90 days from publication of this final rule, a prohibition on processing TCE beginning 180 days from publication of this final rule, a prohibition on distribution in commerce of TCE or TCE-containing products beginning 180 days from publication of this final rule, and a prohibition on industrial or commercial use of TCE and TCE-containing products beginning 270 days after publication of this final rule.

For several conditions of use, EPA is finalizing prohibitions that would take effect over a longer timeframe. After consideration of public comments, EPA is finalizing timeframes longer than proposed for prohibition of manufacture, processing, distribution, and commercial use of TCE for four uses: industrial and commercial use of TCE in energized electrical cleaner; industrial and commercial use of TCE in adhesives and sealants for aerospace applications; laboratory use of TCE in asphalt testing and recovery; and disposal of TCE to industrial pre-treatment, industrial treatment, or POTWs. EPA is finalizing a prohibition after 5 years, a timeframe shorter than proposed, for the industrial and commercial use of TCE as a processing aid for lithium battery separator manufacturing. The details of these and other timeframes for prohibition are described in this unit, and the rationale for these changes from the proposed rule is in Unit III.B.1. and Unit III.C. (EPA notes that for several conditions of use, in consideration of public comments and to provide for reasonable transitions, EPA is finalizing phase-outs ahead of immediate prohibitions (*e.g.,* for the processing of TCE for manufacture of HFC–134a), which are detailed in Units IV.B.3., 4., 5., and 6., or several time limited exemptions under TSCA section 6(g) (*e.g.,* for the industrial and commercial use of TCE for essential laboratory uses), which are detailed in Unit IV.G.)).

For two batch vapor degreasing conditions of use (open-top and closed-loop), EPA is finalizing as proposed the compliance dates for the prohibitions described in this unit. With certain exceptions, the prohibition on manufacturing and processing for this use comes into effect in 180 days for manufacturers and in 270 days for processors, including for processing into a formulation and for recycling. After 1 year, the prohibition on the industrial and commercial uses of TCE in open-top and closed-loop batch vapor degreasers comes into effect (see Unit III.B.1.c.i. and ii. of the 2023 TCE proposed rule for descriptions of these conditions of use and Unit VI.A.1. of the 2023 TCE proposed rule for a rationale for the slightly longer timeframe). As an exception, the use of TCE for batch vapor degreasing by Federal agencies and their contractors for land-based DoD defense systems will be prohibited after 5 years. (For a sub-set of the open-top and closed-loop batch vapor degreasing conditions of use, EPA is finalizing a phase-out for industrial and commercial use of TCE as a solvent for closed-loop batch vapor degreasing for rayon fabric scouring for end use in rocket booster nozzle production for Federal agencies and their contractors, as described in Unit IV.B.4. EPA is also finalizing several exemptions related to vapor degreasing, which are described in Unit IV.G.).

Additionally, for uses not separately distinguished under longer phase-out or exemption timeframes, EPA is finalizing as proposed the compliance dates for the prohibitions on the commercial use of TCE as a processing aid and the relevant upstream uses. Specifically, aside from several exceptions, the prohibitions on manufacturing and processing for this use would come into effect 540 days months after the date of publication for manufacturers and in 2 years for processors. The prohibition would come into effect after 2 years for industrial and commercial use of TCE as a processing aid for several applications (as specified in the condition of use name and description, this includes use of TCE as a processing aid in battery separator manufacturing; process solvent used in polymer fiber spinning, fluoroelastomer manufacture and Alcantara manufacture; extraction solvent used in caprolactam manufacture; and precipitant used in beta-cyclodextrin manufacture) (see Unit III.B.1.c.xvi. of the 2023 TCE proposed rule for a description of this condition of use and Unit V.A.1. of the 2023 TCE proposed rule for a rationale for the different timeframe). For a subset of the industrial and commercial use of TCE as a processing aid, specifically for the use of TCE as a processing aid in lithium battery separator manufacture, EPA is finalizing a longer timeframe of 5 years before prohibition.

EPA is finalizing as proposed the prohibition on manufacturing of TCE for processing as a reactant/intermediate after 540 days and the prohibition for processing TCE as a reactant/intermediate after two years, unless otherwise noted. EPA is finalizing as proposed an extended phase-out for a subset of this condition of use, specifically processing TCE as a reactant/intermediate for the manufacture of HFC–134a, which is detailed in Unit IV.B.3.

As described earlier in this unit, for three conditions of use, EPA is finalizing prohibition timeframes longer than proposed. EPA is providing 3 years after publication of the final rule (rather than within a year, as proposed) for the industrial and commercial use of TCE in energized electrical cleaner, and the manufacture, processing, and distribution in commerce for such use. Additionally, for the industrial and commercial use of TCE in adhesives and sealants for aerospace applications, and the manufacture, processing, and distribution in commerce for such use, prohibitions would take effect 5 years after publication of the final rule (rather than within a year, as proposed). For the industrial and commercial use of TCE in batch vapor degreasing for land-based DoD defense systems by Federal agencies and their contractors, and the manufacture, processing, and distribution in commerce for such use, prohibitions would take effect 5 years after publication of the final rule. These changes are based on consideration of the public comments, and the rationale is detailed in Unit III.C. and the Response to Comments document (Ref. 11).

Also in consideration of public comment, EPA is changing the timeframe for prohibition on the industrial and commercial use of TCE as a processing aid in manufacturing lithium battery separators. EPA had proposed that industrial and commercial use of TCE as a processing aid for all battery separators would, under TSCA section 6(g), be exempt from prohibition for 10 years. As detailed in Unit III.B.1., EPA has modified the exemption to apply only to use of TCE for manufacturing lead-acid

battery separators, and for the industrial and commercial use of TCE as a processing aid in lithium battery separator manufacture, and for its associated upstream uses and disposal, EPA is finalizing a separate prohibition that will take effect in five years.

To aid with implementation of the compliance dates for the prohibitions on manufacturing, processing, and industrial and commercial use of TCE, and ensure that those prohibitions effectively address the unreasonable risk identified, EPA is also finalizing prohibitions on distribution in commerce of TCE. Generally, for most conditions of use EPA is finalizing a compliance date for the prohibition on distribution in commerce of TCE that will come into effect 180 days following publication of the final rule. In instances where EPA is finalizing a prohibition on manufacturing and processing TCE for a particular industrial and commercial use that is later than 180 days after publication of the final rule, the compliance date for the prohibition on distribution in commerce will generally be the same as the compliance date of the prohibition on manufacturing and processing TCE.

In consideration of the irreversible health effects associated with TCE exposure and public comment, EPA is finalizing prohibition timeframes that allow for successful implementation of the prohibitions in a manner that is as soon as practicable while providing for a reasonable transition period, consistent with TSCA section 6(d). EPA has no reasonably available information indicating that the compliance dates are not practicable for the activities that would be prohibited, or that additional time is needed for products to clear the channels of trade.

2. Prohibition of Manufacture, Processing, and Distribution in Commerce for Consumer Use of TCE

The final rule prohibits the manufacture, processing, and distribution in commerce of TCE and TCE-containing products for all consumer use.

EPA emphasizes that the consumer uses evaluated in the 2020 Risk Evaluation for TCE constitute all known, intended, and reasonably foreseen consumer uses of TCE. As described in this unit, EPA is prohibiting all manufacturing (including import) and processing of TCE to address the unreasonable risk to workers and ONUs driven by those conditions of use (Ref. 2). EPA determined any extended phase-outs or 6(g) exemptions are unnecessary for prohibitions on manufacture (including import), processing, or distribution in commerce of TCE for consumer use. EPA notes that all but one of the 24 consumer uses of TCE evaluated in the 2020 Risk Evaluation for TCE contributed to the unreasonable risk determination for TCE (Refs. 1, 2). Additionally, a prohibition on the manufacture (including import) and processing of TCE for consumer uses generally supports reducing risk to workers and ONUs from these upstream uses, as further discussed in Unit V.A. EPA also considered the risk of irreversible health effects associated with TCE exposure when finalizing these compliance dates. For these reasons, including the severity of the hazards of TCE, EPA is prohibiting the manufacturing (including import), processing, and distribution in commerce of TCE for all uses, which includes all consumer uses.

The compliance dates for the final prohibitions described in this unit relevant to consumer uses will come into effect for manufacturers in 90 days, for processors in 180 days, and for distributors (including all retailers) within 180 days. EPA has no reasonably available information indicating these compliance dates are not practicable for the activities that are prohibited or that additional time is needed for products to clear the channels of trade.

EPA emphasizes that retailers are prohibited from distributing any TCE or TCE-containing products after June 16, 2025, including those TCE-containing products that can continue to be distributed or used commercially for a longer period of time. EPA is finalizing as proposed the prohibition on distributing in commerce TCE and all TCE-containing products to consumers, in order to prevent products intended for industrial and commercial use that have longer timeframes before prohibition from being purchased by consumers, and is clarifying that this prohibition applies to distribution by retailers. A retailer is any person or business entity that distributes or makes available products to consumers, including through e-commerce internet sales or distribution. If a person or business entity distributes or makes available any product to at least one consumer, then it is considered a retailer (40 CFR 751.5). For a distributor not to be considered a retailer, the distributor must distribute or make available products solely to commercial or industrial end-users or businesses. Prohibiting manufacturers (including importers), processors, and distributors from distributing TCE, or any products containing TCE, to retailers prevents retailers from making these products available to consumers, which addresses that part of the unreasonable risk from TCE contributed by consumer use.

In consideration of the irreversible health effects associated with TCE exposure and public comment, in this final rule EPA is finalizing prohibition timeframes that allow for successful implementation of the prohibitions in a manner that is as soon as practicable while providing for a reasonable transition period, consistent with TSCA section 6(d). EPA has no reasonably available information indicating these compliance dates are not practicable for the activities that are prohibited or that additional time is needed for products to clear the channels of trade.

3. Phase-Out for Processing TCE as an Intermediate for the Manufacture of HFC–134a

As described in this unit, EPA is finalizing as proposed a longer phase-out timeframe for the manufacturing (including import) and processing of TCE as an intermediate for the manufacture of HFC–134a (1,1,1,2-tetrafluroethane; CASRN 811–97–2). EPA is finalizing an 8.5-year phase-out subject to the requirements discussed in this unit. All other processing of TCE as a reactant/intermediate will be subject to the prohibitions described in Unit IV.B.2. EPA will require a phase-out for processing of TCE as an intermediate for the manufacture of HFC–134a, which EPA will begin at the final rule's publication date and end 8.5 years after the publication of the final rule. Associated with this phase-out, EPA will require the establishment of the TCE WCPP, outlined in Unit IV.C. within 180 days after publication of the final rule, as workplace protections during the period of the phase-out. To set the volume reductions during the phase-out, EPA will require any facility processing TCE as an intermediate to manufacture HFC–134a in the United States to establish a baseline of the annual quantity of TCE processed by the facility as a feedstock to manufacture HFC–134a. EPA is requiring that within 180 days after the publication of the final rule the manufacturer could use the average of any 12 consecutive months in the 3 years preceding the publication of the final rule to calculate their baseline, based on records that demonstrate how the baseline annual volume was calculated. Following the establishment of a baseline volume, the regulated entity will then be required to implement a 4-step phase-out process; specifically, the phase-out will be a 25 percent reduction from the baseline volume every 2 years as follows: (1) 2.5 years after the publication of the final

rule each manufacturer of HFC–134a who processes TCE as an intermediate is not permitted to process TCE as an intermediate at an annual volume greater than 75 percent of the baseline; (2) 4.5 years after the publication of the final rule each manufacturer of HFC–134a who processes TCE as an intermediate is not permitted to process TCE as an intermediate at an annual volume greater than 50 percent of the baseline; (3) 6.5 years after the publication of the final rule each manufacturer of HFC–134a who processes TCE as an intermediate is not permitted to process TCE as an intermediate at an annual volume greater than 25 percent of the baseline; and (4) 8.5 years after the publication of the final rule each manufacturer of HFC–134a is prohibited from processing TCE as an intermediate.

EPA notes that the prohibition for manufacture (including importing), processing, and distribution in commerce of TCE for this condition of use will occur after 8.5 years to account for availability of TCE through the supply chain during the period of the phase-out of processing of TCE as an intermediate for the manufacture of HFC–134a. This timeframe will be longer than the prohibitions on manufacturing and processing TCE described in Unit IV.B.1. of this final rule.

EPA is also finalizing the requirement that regulated entities keep records of the annual quantity of TCE purchased and processed from the year 2023 until the termination of all processing of TCE as an intermediate. These records, along with the records demonstrating how the baseline annual volume was calculated, must be kept until five years after the processing of TCE as an intermediate ends.

EPA notes, per TSCA section 6(c)(2)(C), that although the processing of TCE to produce HFC–134a is prohibited eventually, processing PCE to produce HFC–134a will continue under a WCPP (RIN 2070–AK84). Although PCE is an alternative intermediate for the manufacture of HFC–134a, EPA has found that an 8.5-year phaseout for TCE is necessary because manufacturers who use TCE as an intermediate are not able to simply retrofit plants to use PCE. Therefore, a more immediate prohibition of the use of TCE for this condition of use could abruptly disrupt the domestic supply of HFC–134a and could adversely affect the gradual transition to new technologies driven by the AIM Act. However, EPA believes the transition period is reasonable because over the time period of the phaseout, EPA determined the transition to imported HFC–134a or HFC–134a manufactured with PCE could be made and, as such, the refrigerant would remain available while protecting workers.

4. Phase-Out of Industrial and Commercial Use of TCE as a Solvent for Closed-Loop Batch Vapor Degreasing for Rayon Fabric Scouring for Rocket Booster Nozzle Production

EPA is finalizing as proposed a longer phase-out timeframe for industrial and commercial use of TCE as a solvent for closed-loop batch vapor degreasing for rayon fabric scouring for end use in rocket booster nozzle production by Federal agencies and their contractors. This is the industrial and commercial use of TCE in a closed-loop batch vapor degreaser to clean, or 'scour,' rayon fabric to remove sizing (*i.e.,* protective filler or glaze on textiles), oils, and other contaminants from the rayon fabric that is used to line the inside of rocket booster nozzles; the degreasing is essential in preparing the rayon fabric before a carbonization process ahead of being used in the rocket booster nozzles. If contaminants are not removed properly from the rayon, the result could include nozzle failure (Ref. 44). More information on this use and the rationale for the phase-out are in Unit VI.A.1. of the proposed rule. For this sub-set of the vapor degreasing condition of use, when conducted by Federal agencies and their contractors, EPA is finalizing a 10-year phase-out subject to the requirements discussed in this unit. (All other industrial and commercial use of TCE as a solvent for vapor degreasing, including use of TCE in closed-loop batch vapor degreasing of other parts or materials, will be subject to the prohibitions described in Unit IV.B.2.). For the phase-out, within 5 years of the publication date of the final rule the Federal agency that is the end user of the rayon fabric for rocket booster nozzle production (*e.g.,* the DOD or NASA) will need to conduct a final pre-launch test of rocket boosters without using TCE; this test is further discussed in Unit VI.A.1.a. of the 2023 TCE proposed rule. By 10 years from the publication date of the final rule, the phase-out will be complete and industrial and commercial use of TCE as a solvent for closed-loop batch vapor degreasing, including for rayon fabric scouring for end use in rocket booster nozzle production by Federal agencies and their contractors, is prohibited. As part of this phase-out, EPA is requiring a TCE WCPP, described in Unit IV.C., within 180 days after publication of the final rule, as workplace protections during the period of the phase-out until the full prohibition takes effect. Additionally, this phase-out will include recordkeeping requirements beginning 270 days after publication of the final rule related to the rayon fabric scouring for end use in rocket booster nozzle production. The entity must have records from a Federal agency indicating that their closed-loop batch vapor degreasing with TCE is for rayon fabric scouring for end use in rocket booster nozzle production for a Federal agency or a contractor. Beginning 5 years after the publication of the final rule, to continue to use TCE for closed-loop batch vapor degreasing for this specific use, the user must have records from a Federal agency indicating that a final pre-launch test for the rayon fabric scouring has been conducted with an alternative chemical or process. As a condition of this phase-out, entities will be required to transition from TCE and to switch to use of the tested alternative if it proves to be a suitable alternative.

5. Phase-Out of Laboratory Use of TCE in Asphalt Testing And Recovery

As discussed in more detail in Unit III.C.3., EPA is finalizing a longer phase-out timeframe for industrial and commercial use of TCE in laboratory testing of asphalt. Specifically, EPA is finalizing a phase-out of 10 years for the industrial and commercial use of TCE in asphalt testing and recovery, with a prohibition on use of TCE in manual centrifuge processes at 5 years. As part of this phase-out, EPA is requiring a TCE WCPP, described in Unit IV.C., within 180 days after publication of the final rule, as workplace protections during the period of the phase-out until the full prohibition takes effect.

6. Phase-Out of Disposal of TCE to Industrial Pre-Treatment, Industrial Treatment, or POTWs

EPA is prohibiting the disposal of TCE to industrial pre-treatment, industrial treatment, or publicly owned treatment works, *i.e.,* wastewater that contains TCE that is collected and/or treated on site or transported to a third party site, and includes the mixing of TCE with wastewater and the discharge of TCE-contaminated wastewater (description of disposal for the purposes of this rulemaking is in Units IV.C.1.d. and IV.E.1.). TSCA section 6(a) provides EPA the authority to prohibit or otherwise regulate any manner or method of disposal of a chemical substance by its manufacturer, processor, or any other person who uses or disposes of the chemical substance for commercial purposes. Facilities generating solid waste with TCE concentrations at or above the RCRA

regulatory level of 0.5 mg/L using the Toxicity Characteristic Leaching Procedure (see 40 CFR 261.24) (or solid waste that is otherwise hazardous under RCRA Subtitle C) will need to manage the waste in compliance with all applicable RCRA requirements. This includes a ban on dilution as a substitute for adequate treatment (40 CFR 268.3).

The compliance date for the prohibition described in this unit will be September 15, 2025 for manufacturers, processors, distributors, and industrial and commercial users disposing of TCE to industrial pre-treatment, industrial treatment, or publicly owned treatment works. EPA has no reasonably available information indicating that for the majority of users the proposed compliance dates would not be as soon as practicable and would not provide a reasonable transition period for converting to an alternative disposal method.

For a small set of uses, EPA has determined that wastewater disposal is an essential part of the ongoing industrial and commercial use, as described in Units III.B.1. and III.B.2. EPA is therefore finalizing extended phase-outs of wastewater disposal for certain conditions of use that have extended compliance timeframes or an exemption under TSCA section 6(g). The following conditions of use will be able to continue to dispose of TCE to industrial pre-treatment, industrial treatment, and POTWs: the industrial and commercial use of TCE as a processing aid in lithium battery separator manufacturing will have 5 years after the publication date of the final rule; the industrial and commercial use of TCE as a processing aid for specialty polymeric microporous sheet material manufacturing will have 15 years; and the industrial and commercial use of TCE as a processing aid in lead-acid battery separator manufacturing will have 20 years. During the time these conditions of use are continuing consistent with a TSCA section 6(d) phase-out or 6(g) exemption, EPA is requiring that the industrial pre-treatment and/or industrial treatment of wastewater containing TCE from these conditions of use will also be subject to the WCPP described in Unit IV.C. This is distinct from conditions for workplace requirements for the time-limited exemption under TSCA section 6(g) for disposal of TCE to industrial pre-treatment and/or industrial treatment, to support ongoing critical processing aid uses and to facilitate cleanup projects of TCE-contaminated groundwater and other wastewater generated from the cleanup of historical waste disposal sites, which are described in Unit IV.E.2. POTWs receiving TCE-containing wastewater, regardless of source, will be required to meet the worker protections described in Unit IV.E.3.

C. WCPP for Certain Conditions of Use

1. Applicability

EPA is finalizing a WCPP for those conditions of use that will continue temporarily for more than 1 year under a phase-out or a TSCA section 6(g) exemption. The final WCPP differs in certain aspects from the WCPP as proposed; the rationale for these changes are discussed in Unit III.A. EPA is finalizing the WCPP for the following conditions of use of TCE: domestic manufacturing; import; processing as a reactant/intermediate; processing into formulation, mixture or reaction product; processing by repackaging; recycling; industrial and commercial use as a processing aid in process solvent used in battery manufacture; process solvent used in polymer fabric spinning, fluoroelastomer manufacture and Alcantara manufacture; extraction solvent used in caprolactam manufacture; precipitant used in beta-cyclodextrin manufacture; industrial and commercial use as an adhesive and sealant for essential aerospace applications; industrial and commercial use of in batch vapor degreasing for land-based DoD defense systems; industrial and commercial use in other miscellaneous industrial and commercial uses (laboratory use) industrial and commercial use as a solvent in closed-loop batch vapor degreasing for rayon fabric scouring for end use in rocket booster nozzle production by Federal agencies and their contractors; industrial and commercial use in closed-loop or open-top batch vapor degreasing for essential aerospace parts and narrow tubing used for medical devices; industrial and commercial use for vessels of the Armed Forces and their systems; industrial and commercial use of TCE as a solvent in closed-loop vapor degreasing necessary for rocket engine cleaning by Federal agencies and their contractors; and disposal to industrial pre-treatment, industrial treatment, and POTWs. This Unit provides a description of those uses that will continue for more than 1 year under the WCPP to assist with compliance. In some instances, the description is of a subset of a larger condition of use assessed in the 2020 Risk Evaluation for TCE.

a. Manufacturing (Includes Import)

i. Domestic Manufacture

This condition of use refers to the making or producing of a chemical substance within the United States (including manufacturing for export), or the extraction of a component chemical substance from a previously existing chemical substance or a complex combination of substances. For purposes of this rule, this description does not apply to TCE production as a byproduct, including during the manufacture of 1,2-dichloroethane, which EPA intends to consider in the risk evaluation for 1,2-dichloroethane (Ref. 83).

ii. Import

This condition of use refers to the act of causing a chemical substance or mixture to arrive within the customs territory of the United States.

b. Processing

i. Processing as a Reactant/Intermediate

This condition of use refers to processing TCE in chemical reactions for the manufacturing of another chemical substance or product. Through processing as a reactant or intermediate, TCE serves as a feedstock in the production of another chemical product via a chemical reaction in which TCE is completely consumed. For example, TCE is processed as an intermediate in the production of 1,1,1,2-tetrafluoroethane, an HFC also known as HFC–134a, which is used as a refrigerant and in fluorocarbon blends for refrigerants. This condition of use includes reuse of TCE, including TCE originally generated as a byproduct or residual TCE, as a reactant.

ii. Processing: Incorporation Into a Formulation, Mixture, or Reaction Product

This condition of use refers to when TCE is added to a product (or product mixture) prior to further distribution of the product. Such products include, but are not limited to, solvents (for cleaning or degreasing), adhesives and sealant chemicals, and solvents that become part of a product formulation or mixture (*e.g.,* lubricants and greases, paints and coatings, other uses).

iii. Processing: Repackaging

This condition of use refers to the preparation of a chemical substance for distribution in commerce in a different form, state, or quantity. This includes but is not limited to transferring the chemical from a bulk container into smaller containers.

iv. Processing: Recycling

This condition of use refers to the process of managing used solvents that are collected, either on-site or transported to a third-party site, for commercial purposes other than disposal. Spent solvents can be restored via solvent reclamation/recycling. Waste solvents can be restored to a condition that permits reuse via solvent reclamation/recycling. The recovery process may involve an initial vapor recovery or mechanical separation step followed by distillation, purification, and final packaging.

c. Industrial and Commercial Use

i. Industrial and Commercial Use as a Processing Aid in: Process Solvent Used in Battery Manufacture; Process Solvent Used in Polymer Fabric Spinning, Fluoroelastomer Manufacture and Alcantara Manufacture; Extraction Solvent Used in Caprolactam Manufacture; and Precipitant Used in Beta-Cyclodextrin Manufacture

This condition of use refers to industrial and commercial use of TCE to improve the processing characteristics or the operation of process equipment when added to a process or to a substance or mixture to be processed. The chemical substance is not intended to remain in or to become a part of the reaction product nor has function in the reaction product.

ii. Industrial and Commercial Use as an Adhesive and Sealant for Essential Aerospace Applications

This condition of use refers to the industrial and commercial use of TCE in adhesive and sealant products, *e.g.,* in products to promote bonding between other substances, promote adhesion of surfaces, or prevent seepage of moisture or air, for essential aerospace applications. In particular, this includes use of TCE as an adhesive or sealant in aircraft pneumatic deicing boots; in solvent bonding of plastic components, including on Oxygen Container Assemblies for Passenger Service Unit products used in aircraft; and as an adhesive or sealant for flight-critical equipment on new and existing aircraft, both commercial and military.

iii. Miscellaneous Industrial and Commercial Uses: Laboratory Use

This condition of use refers to the industrial and commercial use of TCE in an established laboratory, for example a laboratory program accredited by the AIHA (*e.g.,* AIHA LAP, LLC Policy Module 2A/B/E of Revision 17.3), or other analogous industry-recognized program for chemical analysis (*e.g.,* to test hot mix asphalt binder content, as a reference standard, etc.), chemical synthesis, extracting and purifying other chemicals, dissolving other substances, and similar activities.

iv. Industrial and Commercial Use as Solvent for Closed-Loop Batch Vapor Degreasing for Rayon Fabric Scouring for End Use in Rocket Booster Nozzle Production

This condition of use refers to the process of heating TCE to its volatilization point and using its vapor to remove dirt, oils, greases, and other surface contaminants (such as drawing compounds, cutting fluids, coolants, solder flux, and lubricants) for rayon fabric scouring for end use in rocket booster nozzle production by Federal agencies and their contractors, in closed-loop batch vapor degreasers.

v. Industrial and Commercial Use as Solvent for Closed-Loop or Open-Top Batch Vapor Degreasing for Essential Aerospace Parts and for Narrow Tubing for Medical Devices

This condition of use refers to the process of heating TCE to its volatilization point and using its vapor to remove dirt, oils, greases, and other surface contaminants (such as drawing compounds, cutting fluids, coolants, solder flux, and lubricants) from essential aerospace parts and components where alternatives present technical feasibility or cleaning performance challenges in meeting Federal agency specifications or long-standing design specifications and from narrow tubing intended for use in medical devices (*e.g.,* tubing where a portion of the outside diameter is 0.625 inches or less), in open-top batch or closed-loop batch vapor degreasers.

vi. Industrial and Commercial Use for Vessels of the Armed Forces and Their Systems, and in the Maintenance, Fabrication, and Sustainment for and of Such Vessels and Systems

This condition of use refers to the industrial and commercial use of TCE for vessels of the Armed Forces and their systems, and in the maintenance, fabrication, and sustainment for and of such vessels and systems: as potting compounds for naval electronic systems and equipment; sealing compounds for high and ultra-high vacuum systems; bonding compounds for materials testing and maintenance of underwater systems and bonding of nonmetallic materials; and cleaning agents to satisfy cleaning requirements (which includes degreasing using wipes, sprays, solvents and vapor degreasing) for: materials and components required for military ordnance testing; temporary resin repairs in vessel spaces where welding is not authorized; ensuring polyurethane adhesion for electronic systems and equipment repair and installation of elastomeric materials; various naval combat systems, radars, sensors, equipment; fabrication and prototyping processes to remove coolant and other residue from machine parts; machined part fabrications for naval systems; installation of topside rubber tile material aboard vessels; and vapor degreasing required for substrate surface preparation prior to electroplating processes.

vii. Industrial and Commercial Use as a Solvent for Closed-Loop Batch Vapor Degreasing Necessary for Rocket Engine Cleaning by Federal Agencies and Their Contractors

This condition of use refers to the process of heating TCE to its volatilization point and using its vapor to remove dirt, oils, greases, and other surface contaminants (such as drawing compounds, cutting fluids, coolants, solder flux, and lubricants), for rocket engine cleaning by Federal agencies and their contractors. This involves cleaning small diameter parts, such as rocket engine nozzle coolant tubes, and removing the fluids used for manufacturing.

viii. Industrial and Commercial Use of TCE for Batch Vapor Degreasing for Land-Based DoD Defense Systems by Federal Agencies and Their Contractors

This condition of use refers to the process of heating TCE to its volatilization point and using its vapor to remove dirt, oils, greases, and other surface contaminants (such as drawing compounds, cutting fluids, coolants, solder flux, and lubricants), for land-based DoD defense systems cleaning by Federal agencies and their contractors.

d. Disposal

This condition of use generally refers to the process of disposing of generated waste streams that are either collected on-site or transported to a third-party site and typically includes both processing for disposal as well as distribution in commerce for disposal. For this rule, this includes the mixing of TCE with wastewater and the discharge of TCE-contaminated wastewater pursuant to a National Pollutant Discharge Elimination System (NPDES) permit, and specifically includes discharge to industrial pre-treatment, industrial treatment, or publicly owned treatment works. The evaluation of the disposal condition of use in the 2020 Risk Evaluation for TCE

(Ref. 1) was limited to the disposal of TCE-containing wastewater and did not address disposal activities not involving TCE in wastewater. Therefore, EPA considers disposal activities not involving TCE in wastewater to be outside of the scope of this rule. This means that, for example, a facility that generates TCE as a byproduct, isolates the TCE from the process for the sole purpose of disposal, and sends it off-site for disposal to a hazardous waste incinerator permitted under RCRA is not covered by this final rule.

2. Overview

A WCPP encompasses inhalation exposure thresholds, includes monitoring and recordkeeping requirements to verify that those thresholds are not exceeded, and may include other components, such as dermal protection. Under a WCPP, owners or operators have some flexibility, within the parameters outlined in this Unit, regarding how they prevent exceedances of the identified EPA exposure limit thresholds. In the case of TCE, EPA has determined that meeting the EPA exposure limit thresholds for certain occupational conditions of use is necessary to protect health from inhalation risks during phaseouts and while exempted activities are ongoing.

Implementation of the WCPP would have to begin by June 16, 2025 or within 30 days of introduction of TCE into the workplace, whichever is later, at which point entities would have to have completed their initial monitoring (as described in Unit IV.C.4.b.). Additionally, EPA requires that each owner or operator ensure that the airborne concentration of TCE does not exceed the interim ECEL for all potentially exposed persons no later than September 15, 2025, and the implementation of any needed exposure controls based on initial monitoring and development of an exposure control plan no later than September 15, 2025 (as described in Unit IV.C.6.).

EPA uses the term ''potentially exposed person'' in this Unit and in the regulatory text to include workers, ONUs, employees, independent contractors, employers, and all other persons in the work area where TCE is present and who may be exposed to TCE under the conditions of use for which a WCPP or specific prescriptive controls would apply. As defined in 40 CFR 751.5, ''*Potentially exposed person* means any person who may be exposed to a chemical substance or mixture in a workplace as a result of a condition of use of that chemical substance or mixture.'' EPA notes that this definition is intended to apply to occupational workspaces as part of implementation of the WCPP and other restrictions. One important reason to define a potentially exposed person for the purposes of a WCPP as any person who may be exposed in the workplace is to emphasize the broad scope of exposures which must be categorized when implementing a WCPP. EPA notes that this definition is intended to apply only in the context of risk management, and specifically in the context of a WCPP (*e.g.,* workers directly using the chemical, workers in the vicinity of the use, students in a laboratory setting). The term is not intended as a replacement for the term Potentially Exposed or Susceptible Subpopulation as defined by TSCA section 3(12). EPA additionally recognizes that other individuals or communities may be exposed to TCE as consumers, members of fenceline communities, or members of the general population, which is separate and apart from those potentially exposed for the purposes of the regulatory requirements of the WCPP. In those instances, where regulatory requirements address exposures unrelated to a WCPP, EPA would use distinct terminology to refer to those other populations. For conditions of use that will continue for longer than 1 year, such as those under a phaseout or a TSCA section 6(g) exemption, EPA requires a comprehensive WCPP, prescriptive controls, or wastewater worker protections to reduce exposures to TCE for potentially exposed persons, *e.g.,* persons directly handling the chemical or in the area where the chemical is being used. Similarly, the 2020 Risk Evaluation for TCE (Ref. 1) did not distinguish between employers, contractors, or other legal entities or businesses that manufacture, process, distribute in commerce, use, or dispose of TCE. For this reason, EPA uses the term ''owner or operator'' to describe the entity responsible for implementing the WCPP, prescriptive controls, or wastewater worker protection provisions in any workplace where an applicable condition of use identified in the following paragraph and subject to the WCPP or controls is occurring. The term includes any person who owns, leases, operates, controls, or supervises such a workplace. While owners or operators remain responsible for ensuring compliance with the WCPP requirements, prescriptive controls, or wastewater worker protections in the workplace, they may contract with others to provide training or implement a respiratory protection program, for example. For the provisions in this rule, any requirement for an owner or operator or an owner and operator is a requirement for any individual that is either an owner or an operator.

EPA emphasizes that this approach is essential for protecting health from the risks presented by TCE during the term of a phaseout or exemption, including to individuals who may not be covered by OSHA requirements, such as volunteers, self-employed persons, and state and local government workers who are not covered by an OSHA-Approved State Plan. EPA uses the term ''owner or operator'' in TSCA programs because the term is used in other EPA programs to describe persons with responsibilities for implementing statutory and regulatory requirements at particular locations. See, for example, section 113 of the Clean Air Act (CAA), 42 U.S.C. 7412, which defines ''owner or operator'' as a person who owns, leases, operates, controls, or supervises a stationary source. There is a similar definition in section 306 of the Clean Water Act (CWA), 33 U.S.C. 1316. EPA understands that the use of this term may result in multiple entities bearing responsibility for complying with provisions of this final rule, including the WCPP. However, this is also the case for workplaces regulated by OSHA, including those regulated under OSHA's general industry standards at 29 CFR part 1910.

OSHA's 1999 Multi-Employer Citation Policy explains which employers should be cited for a hazard that violates an OSHA standard (Ref. 84). The Policy describes four different roles that employers may fill at a workplace and describes who should be cited for a violation based on factors such as whether the employer created the hazard, had the ability to prevent or correct the hazard, and knew or should have known about the hazard. More than one employer may be cited for the same hazard. This final rule will have similar results, in that more than one owner or operator may be responsible for compliance.

The OSHA multi-employer citation policy is an example of a guidance governing situations where more than one regulated entity is present. EPA has received several requests for clarification of the applicability of the term ''owner or operator'' to sites where more than one entity owns, leases, or controls a workplace where a TCE condition of use is ongoing and where implementation of the WCPP is required. EPA understands that there are a wide variety of situations where these questions could arise, and plans to issue guidance consistent with TSCA

authorities that explains how EPA will approach the issue of responsibility for implementation of, and compliance with, the WCPP requirements in practice.

EPA's implementation of the interim ECEL as part of a WCPP aligns with, to the extent possible, certain elements of the existing OSHA standards for regulating toxic and hazardous substances under 29 CFR part 1910, subpart Z. However, EPA is finalizing a new, lower occupational exposure limit for TCE, based on the TSCA 2020 Risk Evaluation for TCE, public comments, and other information as discussed in Unit III.A.1., while aligning with existing requirements wherever possible. For TCE, the WCPP and other workplace controls in this final rule are necessary to protect against health risks from exposures to TCE while conditions of use are being phased out or are ongoing during the term of a TSCA section 6(g) exemption and provide the familiarity of a pre-existing framework for the regulated community.

This Unit includes a summary of the WCPP, including a description of the finalized exposure limits including an interim ECEL and an interim ECEL action level; implementation requirements including monitoring requirements; a description of potential exposure controls in accordance with the hierarchy of controls, including engineering controls, administrative controls, and PPE as it relates to dermal protection and respirator selection; and additional finalized requirements for recordkeeping, workplace participation, and notification. This Unit also describes compliance timeframes revised from the proposed rule, changes by EPA to certain provisions of the WCPP based on public comments, and addition of new provisions in the WCPP based on public comments used to inform this final rule.

3. Interim Existing Chemical Exposure Limit (ECEL), EPA Action Level

As discussed in Unit III.A.1., EPA is finalizing an interim ECEL under TSCA section 6(a) of 0.2 ppm as an 8-hour TWA based on the health effects of TCE, the infeasibility of measuring the proposed ECEL of 0.0011 ppm, and other factors. By interim ECEL, EPA means an ECEL that is in place only for the timeframes indicated for each condition of use, after which prohibitions would take effect. EPA has determined that ensuring exposures remain at or below the 8-hour TWA ECEL of 0.2 ppm is necessary to protect health for those conditions of use that will continue for more than a year.

EPA is also finalizing an interim ECEL action level at half of the 8-hour interim ECEL, or 0.1 ppm as an 8-hour TWA. The interim ECEL action level is a definitive cut-off point below which certain compliance activities, such as periodic monitoring, are not required as described further in this Unit. In this way, EPA's WCPP for TCE aligns with other familiar chemical-specific frameworks in the OSHA standards for regulating toxic and hazardous substances under 29 CFR part 1910, subpart Z that establish an action level. As explained by OSHA, the decision to set the action level at one-half the PEL was based on its successful experience using this fraction as the action level in many standards (*e.g.,* arsenic, ethylene oxide, vinyl chloride and benzene); for most workplaces, the agency found that variability in employee exposures is normally such that an action level set at one-half the TWA PEL is appropriate (Ref. 85).

In summary, this final rule requires owners or operators to ensure the airborne concentration of TCE within the personal breathing zone of potentially exposed persons remains at or below 0.2 ppm as an 8-hour TWA ECEL after September 15, 2025, or beginning 120 days after introduction of TCE into the workplace if TCE use commences after June 16, 2025. EPA is also finalizing an action level of 0.1 ppm as an 8-hour TWA. For the purposes of this rulemaking, EPA will interpret personal breathing zone consistent with how OSHA defines it, as a hemispheric area forward of the shoulders within a six-to-nine-inch radius of a worker's nose and mouth and requires that exposure monitoring air samples be collected from within this space (Ref. 86). EPA is finalizing the interim ECEL for most of those occupational conditions of use that will continue for more than a year to ensure that no person is exposed to inhalation of TCE in excess of these concentrations resulting from those conditions of use (for a small number of occupational conditions of use, EPA is finalizing prescriptive controls or other workplace requirements, as described in more detail in Units IV.D and E). As discussed in Unit III.A.1., one of the considerations in finalizing this interim ECEL is the availability of sampling and analytical methods sufficient to accurately detect TCE concentrations at the proposed ECEL and ECEL action level. OSHA, NIOSH, and EPA sampling methods (both active and passive) with sufficient limits of quantification are available to support WCPP implementation (Ref. 87).

4. Monitoring Requirements

a. In General

Initial monitoring for TCE is critical for establishing a baseline of exposure for potentially exposed persons; similarly, periodic exposure monitoring assures continued compliance over time so that potentially exposed persons are not exposed to levels above the interim ECEL. Exposure monitoring could be suspended if certain conditions described in this Unit are met. Also, in some cases, a change in workplace conditions with the potential to impact exposure levels would warrant additional monitoring, which is also described.

EPA is finalizing with modifications from proposal its requirement that owners or operators determine each potentially exposed person's exposure by either taking a personal breathing zone air sample of each potentially exposed person's exposure or by taking personal breathing zone air samples that are representative of each potentially exposed person with a similar exposure profile to a chemical substance or mixture based on the substantial similarity of tasks performed, the manner in which the tasks are performed, and the materials and processes with which they work (hereinafter identified as an ''exposure group''). Personal breathing zone air samples are representative of the 8-hour TWA of all potentially exposed persons in an exposure group if the samples are of the full shift-exposure of at least one person who represents the highest potential TCE exposures in that exposure group. In addition, the initial monitoring will be required when and where the operating conditions are best representative of each potentially exposed person's work-shift exposures. Personal breathing zone air samples taken during one work shift may be used to represent potentially exposed person exposures on other work shifts where the owner or operator can document that the tasks performed and conditions in the workplace are similar across shifts. Additionally, air sampling is required to measure ambient concentrations for TCE without taking respiratory protections into account as sampling is being performed. For purposes of exposure monitoring requirements, owners and operators are only required to monitor potentially exposed persons that are expected to be present in the workplace.

EPA is also finalizing requirements that the owner or operator ensure, for initial and periodic monitoring, that their exposure monitoring methods are accurate to a confidence level of 95%

and are within (plus or minus) 25% of airborne concentrations of TCE above the 8-hour TWA interim ECEL. To ensure compliance for monitoring activities, EPA is finalizing recordkeeping requirements and will require that owners or operators document their choice of monitoring method outlined in this Unit. As described in Unit III.A.3., EPA is finalizing the requirement that owners or operators meet certain documentation requirements for each monitoring event of TCE, including compliance with GLP Standards in accordance with 40 CFR part 792 or use of a laboratory accredited by the AIHA (*e.g.,* AIHA LAP, LLC Policy Module 2A/B/E of Revision 17.3), or other analogous industry-recognized program. Additionally, as described in Unit III.A.3., EPA is finalizing the requirement that owners or operators must re-monitor within 15 working days after receipt of any exposure monitoring when results indicate non-detect, unless an Environmental Professional as defined at 40 CFR 312.10 or a Certified Industrial Hygienist reviews the monitoring results and determines re-monitoring is not necessary.

For each monitoring event of TCE, EPA is requiring that the owner or operator record relevant information, including but not limited to, the quantity, location(s), and manner of TCE in use at the time of each monitoring event; the dates, durations, and results of each sample taken; and the name, work shift, job classification, work area, and type of respiratory protection (if any) worn by each monitored person. EPA further requires documentation of the following whenever monitoring for the WCPP is required:

(i) All measurements that may be necessary to determine the conditions (*e.g.,* work site temperatures, humidity, ventilation rates, monitoring equipment type and calibration dates) that may affect the monitoring results;

(ii) Identification of all other potentially exposed persons that a monitored person is intended to represent if using a representative sample;

(iii) Use of appropriate sampling and analytical methods;

(iv) Compliance with the GLP Standards at 40 CFR part 792 or any accredited lab including AIHA (*e.g.,* AIHA LAP, LLC Policy Module 2A/B/E of Revision 17.3), or other analogous industry-recognized program;

(v) Information regarding air monitoring equipment, including type, maintenance, calibrations, performance tests, limits of detection, and any malfunctions.

b. Initial Exposure Monitoring

Under the final rule, each owner or operator of a facility engaged in one or more of the conditions of use listed earlier in Unit IV.C.1., except disposal, is required to perform initial exposure monitoring by June 16, 2025 or within 30 days of introduction of TCE into the workplace, whichever is later, to determine the extent of exposure of potentially exposed persons to TCE. Initial monitoring will notify owners and operators of the magnitude of possible exposures to potentially exposed persons with respect to their work conditions and environments. Based on the magnitude of possible exposures in the initial exposure monitoring, the owner or operator may need to increase or decrease the frequency of future periodic monitoring, adopt new exposure controls (such as engineering controls, administrative controls, and/or a respiratory protection program), or to continue or discontinue certain compliance activities such as periodic monitoring. In addition, the initial monitoring will be required when and where the operating conditions are best representative of each potentially exposed person's work-shift exposures. If the owner or operator chooses to use a sample that is representative of potentially exposed persons' work-shift exposures (rather than monitor every individual), such sampling should be representative (*i.e.,* taken from the breathing zone of potentially exposed persons and reflect duration appropriate exposure) of the most highly exposed persons in the workplace. Additionally, EPA expects that owners and operators will conduct initial exposure monitoring representative of all tasks that potential exposed persons are expected to do. EPA understands that certain tasks may occur less frequently or may reflect accidental exposures (for example, due to malfunction).

EPA also recognizes that some entities may already have objective exposure monitoring data. If the owner or operator has monitoring data conducted within five years prior to the publication date of the final rule and the monitoring satisfies all other requirements in Unit IV., including the requirement that the data represents the highest TCE exposures likely to occur under reasonably foreseeable conditions of use, the owner or operator may rely on such earlier monitoring results for the initial baseline monitoring sample. Prior monitoring data cannot be used where there has been a change in work conditions or practices that is expected to result in new or additional exposures.

As described in more detail later in this unit, the owner or operator must conduct periodic monitoring at least once every five years since its last monitoring. This periodic monitoring must be representative of all the potentially exposed persons in the workplace and the tasks that they are expected to do.

c. Periodic Exposure Monitoring

EPA is finalizing as proposed the following periodic monitoring for owners or operators. These finalized requirements are also outlined in Table 1.

- If the samples taken during the initial exposure monitoring reveal a concentration below the interim ECEL action level (<0.1 ppm 8-hour TWA), ECEL periodic monitoring is required at least once every five years, except when additional exposure monitoring (Unit IV.C.4.d.) measurements require it.
- If the most recent exposure monitoring concentration is at or above the interim ECEL action level (≥0.1 ppm 8-hour TWA) but at or below the interim ECEL (≤0.2 ppm 8-hour TWA), the owner or operator must repeat the periodic exposure monitoring within 180 days of the most recent exposure monitoring.
- If the most recent exposure monitoring concentration is above the interim ECEL (>0.2 ppm 8-hour TWA), the owner or operator must repeat the periodic exposure monitoring within 90 days of the most recent exposure monitoring.
- If the most recent (non-initial) exposure monitoring indicates that airborne exposure is below the interim ECEL action level, the owners or operators must repeat such monitoring within 180 days of the most recent monitoring until two consecutive monitoring measurements, taken at least seven days apart, are below the interim ECEL action level (<0.1 ppm 8-hour TWA), at which time the owner or operator must repeat the periodic exposure monitoring at least once every five years.
- In instances where an owner or operator does not manufacture, process, use, or dispose of TCE for a condition of use for which the WCPP is required over the entirety of time since the last required periodic monitoring event, the owner or operator is permitted to forgo the next periodic monitoring event. However, documentation of cessation of use of TCE is required and periodic monitoring must resume when the owner or operator restart any of the conditions of use listed in Unit IV.C.1., except disposal.

TABLE 1—PERIODIC MONITORING REQUIREMENTS

Air concentration condition	Periodic monitoring requirement
If the initial exposure monitoring concentration is below the interim ECEL action level.	Periodic exposure monitoring at least once every 5 years.
If the most recent exposure monitoring concentration is at or above the interim ECEL action level but at or below the interim ECEL.	Periodic exposure monitoring is required every 180 days of the most recent exposure monitoring.
If the most recent exposure monitoring concentration is above the interim ECEL.	Periodic exposure monitoring is required every 90 days of the most recent exposure monitoring.
If the two most recent (non-initial) exposure monitoring measurements, taken at least seven days apart within a 6-month period, indicate that airborne exposure is below the interim ECEL action level (<0.1 ppm 8-hr TWA).	Periodic exposure monitoring is required within five years of the most recent exposure monitoring.
If the owner or operator engages in a condition of use for which WCPP is required but does not manufacture, process, use, or dispose of TCE in that condition of use over the entirety of time since the last required monitoring event.	The owner or operator may forgo the next periodic monitoring event. However, documentation of cessation of use of TCE is required and periodic monitoring is required when the owner or operator resumes the condition of use.

Note: Additional scenarios in which monitoring may be required are discussed in Unit IV.C.4.d.

d. Additional Exposure Monitoring

EPA is finalizing that each owner or operator conduct additional exposure monitoring within 30 days after there has been a change in the production, process, control equipment, personnel or work practices that may reasonably be expected to result in new or additional exposures at or above the interim ECEL action level, or when the owner or operator has any reason to believe that new or additional exposures at or above the interim ECEL action level have occurred, for example if an owner or operator receives information from potentially exposed person(s) suggesting that such new or additional exposures may have occurred. Prior monitoring data cannot be used to meet this requirement. In the event of start-up or shutdown, or spills, leaks, ruptures or other breakdowns or unexpected releases that may lead to exposure to potentially exposed persons, EPA is finalizing that each owner or operator must conduct additional exposure monitoring of potentially exposed persons (using personal breathing zone sampling) within 30 days after the conclusion of the start-up or shutdown and/or the cleanup of the spill or repair of the leak, rupture, or other breakdown. Prior monitoring data cannot be used to meet this requirement. An additional exposure monitoring event may result in an increased frequency of periodic monitoring. For example, if the initial monitoring results from a workplace are above the interim ECEL action level, but below the interim ECEL, periodic monitoring is required every 180 days. If additional monitoring is performed because increased exposures are suspected, and the results are above the interim ECEL, subsequent periodic monitoring would have to be performed every 90 days. The required additional exposure monitoring should not delay implementation of any necessary cleanup or other remedial action to reduce the exposures to persons in the workplace.

5. Regulated Area

EPA is finalizing its requirement that the owner or operator demarcate any area where airborne concentrations of TCE exceeds or are reasonably expected to exceed the interim ECEL by September 15, 2025, or within 90 days after receipt of any exposure monitoring that indicates exposures exceeding the interim ECEL. To provide more clarity regarding how regulated areas must be demarcated, EPA has incorporated the language analogous to OSHA's regulated area requirements under the standards for toxic and hazardous substances (29 CFR part 1910, subpart Z) into this final rule. Owners and operators must demarcate regulated areas from the rest of the workplace in any manner that adequately establishes and alerts potentially exposed persons to the boundaries of the area and minimizes the number of authorized persons exposed to TCE within the regulated area. This can be accomplished using administrative controls (*e.g.,* highly visible signifiers) in multiple languages as appropriate (*e.g.,* whenever potentially exposed persons who are primarily Spanish-speaking are likely to be present, owners and operators should post additional highly visible signifiers in Spanish), placed in conspicuous areas. The owner or operator is required to restrict access to the regulated area from any potentially exposed person who lacks proper training or is otherwise unauthorized to enter.

6. Exposure Control Plan

EPA is finalizing its requirement that owners or operators implementing the WCPP use feasible exposure controls, including one or a combination of elimination, substitution, engineering controls, and administrative controls, prior to requiring the use of PPE (*i.e.,* respirators or gloves) as a means of controlling exposures below EPA's interim ECEL and/or prevent direct dermal contact with TCE for all potentially exposed persons, in accordance with the hierarchy of controls (Ref. 88). As this rule finalizes phaseout or time-limited exemption before prohibition, EPA encourages owners and operators to thoroughly investigate and implement elimination, substitution, and available engineering controls during the phase-out. If an owner or operator chooses to replace TCE with a substitute, EPA recommends careful review of the available hazard and exposure information on the potential substitutes to avoid a substitute chemical that might later be found to present an unreasonable risk of injury to health or the environment or be subject to regulation (sometimes referred to as a ''regrettable substitution''). EPA expects that, for conditions of use for which EPA is finalizing a WCPP, compliance at most workplaces would be part of an established industrial hygiene program that aligns with the hierarchy of controls.

EPA is finalizing the requirement that regulated entities use the hierarchy of controls, instituting one or a combination of controls to the extent feasible, and supplement such protections using PPE, where necessary, including respirators for potentially exposed persons at risk of inhalation exposure above the interim ECEL. If efforts of elimination, substitution, engineering controls, and administrative controls are not sufficient to reduce exposures to or below the interim ECEL for all potentially exposed persons in the workplace, EPA requires that the

owner or operator use feasible controls to reduce TCE concentrations in the workplace to the lowest levels achievable and supplement these controls with respiratory protection and PPE as needed to achieve the interim ECEL before potentially exposed persons enter a regulated area. During the phase-out period, EPA encourages investment in elimination and substitution along with the use of readily available engineering controls. In cases where respiratory PPE is necessary to supplement feasible controls, EPA requires that the owner or operator provide potentially exposed persons reasonably likely to be exposed to TCE by inhalation to concentrations above the interim ECEL with respirators affording sufficient protection against inhalation risk and appropriate training on the proper use of such respirators, to ensure that their exposures do not exceed the interim ECEL, as described in this Unit. Furthermore, EPA also requires that the owner or operator document their efforts in using elimination, substitution, engineering controls, and administrative controls to reduce exposure to or below the interim ECEL in an exposure control plan.

EPA is finalizing its requirement that, no later than December 18, 2025, the owner or operator include and document in the exposure control plan or through any existing documentation of the facility's safety and health program developed as part of meeting OSHA requirements or other safety and health standards, the following:

- Identification in the exposure control plan of available exposure controls and rationale for using or not using available exposure controls in the following sequence (*i.e.,* elimination and substitution, then engineering controls and administrative controls) to reduce exposures in the workplace to either at or below the interim ECEL or to the lowest level achievable, and the exposure controls selected based on feasibility, effectiveness, and other relevant considerations;
- For each exposure control considered, exposure controls selected based on feasibility, effectiveness, and other relevant considerations;
- A description of actions the owner or operator must take to implement exposure controls selected, including proper installation, regular inspections, maintenance, training, or other steps taken;
- A description of each regulated area, how they are demarcated, and persons authorized to enter the regulated areas;
- A description of activities conducted by the owner or operator to review and update the exposure control plan to ensure effectiveness of the exposure controls, identify any necessary updates to the exposure controls, and confirm that all persons are properly implementing the exposure controls; and
- An explanation of the procedures for responding to any change that may reasonably be expected to introduce additional sources of exposure to TCE, or otherwise result in increased exposure to TCE, including procedures for implementing corrective actions to mitigate exposure to TCE.

Under this final rule, owners or operators are prohibited from using rotating work schedules to comply with the interim ECEL 8-hour TWA, in alignment with certain elements of existing OSHA's standards for toxic and hazardous substances under 29 CFR part 1910, subpart Z. Owners or operators must maintain the effectiveness of any engineering controls, administrative controls, or work practices instituted as part of the exposure control plan. They must also review and update the exposure control plan as necessary, but at least every five years, to reflect any significant changes in the status of the owner or operator's approach to compliance with the exposure control requirements. EPA intends that the exposure control plan identify the *available* exposure controls and, for the exposure controls not selected, document the efforts identifying why these are not feasible, not effective, or otherwise not implemented. For entities for which significant amounts of time are needed to verify suitability of alternatives or procure funds or authorization for additional engineering controls, for example, EPA expects that as those controls become available the exposure control plan would be updated accordingly. EPA requires that the exposure control plan be revisited under certain conditions and encourages updates as more sophisticated controls are available.

This final rule requires owners or operators to make the exposure control plan and associated records, including interim ECEL exposure monitoring records, interim ECEL compliance records, and workplace participation records, available to potentially exposed persons and their designated representatives. Owners or operators must notify potentially exposed persons and their designated representatives of the availability of the exposure control plan and associated records within 30 days of the date that the exposure control plan is completed and at least annually thereafter. The notice of the availability of the plan and associated records must be provided in plain language writing to each potentially exposed person in a language that the person understands or posted in an appropriate and accessible location outside the regulated area with an English-language version and a non-English version representing the language of the largest group of workers who do not read English. This final rule also requires the owner or operator to provide the exposure control plan and associated records at a reasonable time, place, and manner to a potentially exposed person or their designated representative upon request. As explained in Unit III.A.4., if the owner or operator is unable to provide the specified records within 15 working days, the owner or operator must inform the potentially exposed person or designated representative requesting the record within 15 working days that reason for the delay and the earliest date when the record can be made available.

7. Personal Protective Equipment (PPE)

Where elimination, substitution, engineering, and administrative controls are not feasible or sufficiently protective to reduce the air concentration to or below the interim ECEL, EPA is finalizing as proposed, with slight modifications to improve clarity or for greater consistency with OSHA's regulations, to require owners and operators to provide PPE, including respiratory protection and dermal protection selected in accordance with the guidelines described in Units IV.C.7.a. and b. and to implement a PPE program described in this Unit. This Unit includes a description of the PPE Program, including required PPE as it relates to respiratory protection, required PPE as it relates to dermal protection, and other requirements such as additional training for respirators and recordkeeping to support implementation of a PPE program. Compliance with these requirements must occur no later than September 15, 2025, or, for requirements related to respiratory protection, within 90 days after the receipt of any exposure monitoring that indicates exposures exceeding the interim ECEL.

a. Respiratory Protection

Where elimination, substitution, engineering, and administrative controls are not feasible or sufficiently protective to reduce the air concentration to or below the interim ECEL, or if inhalation exposure above the interim ECEL is still reasonably likely, EPA is finalizing, with slight modification from the proposed rule, minimum respiratory PPE requirements based on an owner or

operator's most recent measured air concentration for one or more potentially exposed persons and the level of PPE needed to reduce exposure to or below the interim ECEL. In those circumstances, EPA is finalizing requirements for a respiratory protection PPE program with worksite-specific procedures and elements for required respirator use. Owners or operators must develop and administer a written respiratory protection program in accordance with OSHA's respiratory protection standard under 29 CFR 1910.134(c)(1), (c)(3), and (c)(4). EPA is finalizing requirements that owners and operators provide training to all persons required to use respiratory protection consistent with 29 CFR 1910.134(k) prior to or at the time of initial assignment to a job involving potential exposure to TCE. Owners and operators must retrain all persons required to use PPE at least annually, or whenever the owner or operator has reason to believe that a previously trained person does not have the required understanding and skill to properly use PPE, or when changes in the workplace or in PPE to be used render the previous training obsolete.

EPA is finalizing requirements that each owner or operator supply a respirator, selected in accordance with this Unit, to each person who enters a regulated area after September 15, 2025, or within 90 days after the receipt of any exposure monitoring that indicates exposures exceeding the interim ECEL, and thereafter must ensure that all persons within the regulated area are using the provided respirators whenever TCE exposures exceed or can reasonably be expected to exceed the interim ECEL.

EPA is also finalizing requirements that owners or operators who are required to administer a respiratory protection PPE program must supply a respirator selected based on a medical evaluation consistent with the requirements of 29 CFR 1910.134(e). If a potentially exposed person cannot use a negative-pressure respirator, then the owner or operator must provide that person with an alternative respirator. The alternative respirator must have less breathing resistance than the negative-pressure respirator and provide equivalent or greater protection. If the person is unable to use an alternative respirator, then the person must not be permitted to enter the regulated area. Additionally, EPA is requiring owners and operators to select respiratory protection that properly fits each affected person and communicate respirator selections to each affected person in accordance with the requirements of 29 CFR 1910.134(f). Consistent with requirements of 29 CFR 1910.134(g) through (j), EPA is requiring owners and operators to provide, ensure use of, and maintain (in a sanitary, reliable, and undamaged condition), respiratory protection that is of safe design and construction.

EPA is finalizing the requirements to establish minimum respiratory protection requirements, such that any respirator affording a higher degree of protection than the following requirements may be used. In instances where respiratory protection is appropriate, NIOSH Approved® equipment must be used. NIOSH Approved is a certification mark of the U.S. Department of Health and Human Services (HHS) registered in the United States and several international jurisdictions. EPA is finalizing the following requirements for respiratory protection, based on the most recent exposure monitoring concentrations results measured as an 8-hour TWA that exceed the interim ECEL (0.2 ppm):

- If the measured exposure concentration is at or below 0.2 ppm: no respiratory protection is required.
- If the measured exposure concentration is above 0.2 ppm and less than or equal to 2 ppm (10 times interim ECEL): Any NIOSH Approved air-purifying half mask respirator equipped with organic vapor cartridges or canisters; or any NIOSH Approved Supplied-Air Respirator (SAR) or Airline Respirator operated in demand mode equipped with a half mask; or any NIOSH Approved Self-Contained Breathing Apparatus (SCBA) in a demand mode equipped with a half mask [APF 10].
- If the measured exposure concentration is above 2 ppm and less than or equal to 5 ppm (25 times interim ECEL): Any NIOSH Approved Powered Air-Purifying Respirator (PAPR) equipped with a loose-fitting facepiece or hood/helmet equipped with organic vapor cartridges or canisters; or any NIOSH Approved SAR or Airline Respirator in a continuous-flow mode equipped with a loose-fitting facepiece or helmet/hood [APF 25].
- If the measured exposure concentration is above 5 ppm and less than or equal to 10 ppm (50 times interim ECEL): Any NIOSH Approved air-purifying full facepiece respirator equipped with organic vapor cartridges or canisters; any NIOSH Approved PAPR with a half mask equipped with organic vapor cartridges or canisters; any NIOSH Approved SAR or Airline Respirator in a continuous flow mode equipped with a half mask; any NIOSH Approved SAR or Airline Respirator operated in a pressure-demand or other positive-pressure mode with a half mask; or any NIOSH Approved SCBA in demand-mode equipped with a full facepiece or helmet/hood [APF 50].
- If the measured exposure concentration is above 10 ppm and less than or equal to 200 ppm (1,000 times interim ECEL): Any NIOSH Approved PAPR equipped with a full facepiece equipped with organic vapor cartridges or canisters; any NIOSH Approved SAR or Airline Respirator in a continuous-flow mode equipped with full facepiece; any NIOSH Approved SAR or Airline Respirator in pressure-demand or other positive-pressure mode equipped with a full facepiece and an auxiliary self-contained air supply; or any NIOSH Approved SAR or Airline Respirator in a continuous-flow mode equipped with a helmet or hood and has been tested to demonstrate performance at a level of protection of APF 1,000 or greater. [APF 1,000].
- If the measured exposure concentration is greater than 200 ppm (1,000+ times interim ECEL) or the concentration is unknown: Any NIOSH Approved SAR equipped with a full facepiece and operated in a pressure demand or other positive pressure mode in combination with an auxiliary self-contained breathing apparatus operated in a pressure demand or other positive pressure mode [APF 1000+]; or any NIOSH Approved SCBA in a pressure-demand or other positive-pressure mode equipped with a full facepiece or helmet/hood [APF 10,000].
- If the exposure concentration is unknown: Any NIOSH Approved combination supplied air respirator equipped with a full facepiece and operated in pressure demand or other positive pressure mode with an auxiliary self-contained air supply; or any NIOSH Approved SCBA operated in pressure demand or other positive pressure mode and equipped with a full facepiece or hood/helmet [APF 1000+].

Additionally, EPA is finalizing requirements that owners or operators select and provide respirators in accordance with the requirements of 29 CFR 1910.134(d)(1)(iv) and with consideration of workplace and user factors that affect respirator performance and reliability. EPA is requiring that the owner or operator must ensure that all filters, cartridges, and canisters used in the workplace are labeled and color coded per NIOSH requirements and that the label is not removed and remains legible. Consistent with 29 CFR 1910.134(d)(3)(iii), EPA is requiring either the use of NIOSH Approved respirators with an end-of-life service indicator for the contaminant, in this case TCE, or implementation of a

change schedule for canisters and cartridges that ensures that they are changed before the end of their service life. EPA is also requiring owners and operators to ensure that respirators are used in compliance with the terms of the respirator's NIOSH approval.

EPA is finalizing requirements that owners and operators must conduct regular evaluations of the workplace, including consultations with potentially exposed persons using respiratory protection, consistent with the requirements of 29 CFR 1910.134(l), to ensure that the provisions of the written respiratory protection program described in this Unit are being effectively implemented.

EPA is finalizing that owners and operators document respiratory protection used and PPE program implementation. EPA is finalizing requirements that owners and operators document in the exposure control plan or other documentation of the facility's safety and health program information relevant to the respiratory program, including records on the name, workplace address, work shift, job classification, work area, and type of respirator worn (if any) by each potentially exposed person, maintenance, and fit-testing, as described in 29 CFR 1910.134(f), and training in accordance with 29 CFR 1910.132(f) and 29 CFR 1910.134(k).

b. Dermal Protection

This final rule requires owners and operators to provide and require the use of chemically resistant gloves by potentially exposed persons for tasks where TCE is present and dermal exposure can be expected to occur under the conditions of use. Compliance with this requirement must occur no later than September 15, 2025. Owners and operators should also consider other glove factors, such as compatibility of multiple chemicals used simultaneously while wearing TCE-resistant gloves or with glove liners, permeation, degree of dexterity required to perform a task, and temperature, as identified in the Hand Protection section of OSHA's Personal Protection Equipment Guidance (Ref. 89), when selecting appropriate PPE. Owners and operators can select gloves that have been tested in accordance with the American Society for Testing Material F739 ''Standard Test Method for Permeation of Liquids and Gases through Protective Clothing Materials under Conditions of Continuous Contact.''

Owners and operators must provide dermal PPE that is of safe design and construction for the work to be performed and that properly fits each potentially exposed person who is required to use dermal PPE. Owners and operators must also communicate dermal PPE selections to each affected person and ensure that each potentially exposed person who is required by this unit to wear PPE uses and maintains PPE in a sanitary, reliable, and undamaged condition. Activity-specific training (*e.g.,* glove selection (type, material), expected duration of glove effectiveness, actions to take when glove integrity is compromised, storage requirements, procedure for glove removal and disposal, chemical hazards) must be provided in accordance with 29 CFR 1910.132(f).

8. Additional Finalized Requirements

a. Workplace Information and Training

EPA is also finalizing its requirements to implement a training program in alignment with the OSHA Hazard Communication Standard (29 CFR 1910.1200) and chemical-specific standards, such as the OSHA General Industry Standard for Methylene Chloride (29 CFR 1910.1052). To ensure that potentially exposed persons in the workplace are informed of the hazards associated with TCE exposure, EPA is finalizing as proposed with slight modification to require that owners or operators of workplaces subject to the WCPP institute a training and information program by September 15, 2025 for potentially exposed persons and assure their participation in the program. For purposes of workplace information and training, owners and operators are only required to train potentially exposed persons that are expected to be present in the regulated area or to directly handle TCE or handle equipment or materials on which TCE may present.

As part of the training requirement, the owner or operator is required to provide information and comprehensive training in an understandable manner (*i.e.,* plain language), considering factors such as the skills required to perform the work activity and the existing skill level of the staff performing the work, and in multiple languages as appropriate (*e.g.,* based on languages spoken by potentially exposed persons) to potentially exposed persons. This training and information must be provided prior to or at the time of initial assignment to a job involving potential exposure to TCE. Owners and operators are required to provide information and training, as referenced in the OSHA Hazard Communication Standard, to all potentially exposed persons that includes:

- The requirements of the TCE WCPP and how to access or obtain a copy of the requirements of the WCPP, including but not limited to the exposure control plan, monitoring requirements, and PPE program;
- The quantity, location, manner of use, release, and storage of TCE and the specific operations in the workplace that could result in TCE exposure, particularly noting where each regulated area is located;
- Principles of safe use and handling of TCE in the workplace, including specific measures the owner or operator has implemented to reduce inhalation exposure at or below the interim ECEL or prevent dermal contact with TCE, such as work practices and PPE used;
- The methods and observations that may be used to detect the presence or release of TCE in the workplace (such as monitoring conducted by the owner or operator, continuous monitoring devices, visual appearance, or odor of TCE when being released, etc.); and
- The acute and chronic health hazards of TCE as detailed on relevant SDSs.

In addition to providing training at the time of initial assignment to a job involving potential exposure to TCE, owners and operators subject to the TCE WCPP are required to re-train each potentially exposed person annually to ensure they understand the principles of safe use and handling of TCE in the workplace. EPA is finalizing its requirements that owners and update the training as necessary whenever there are changes in the workplace, such as new tasks or modifications of tasks, in particular, whenever there are changes in the workplace that increase exposure to TCE or where potentially exposed persons' exposure to TCE can reasonably be expected to exceed the action level or increase the potential for direct dermal contact with TCE. To support compliance, EPA is finalizing as proposed that each owner or operator of a workplace subject to the WCPP is required to provide to the EPA, upon request, all available materials related to workplace information and training.

b. Workplace Participation

EPA encourages owners and operators to consult with potentially exposed persons and their designated representatives on the development and implementation of exposure control plans and PPE/respirator programs. EPA is finalizing the requirement that owners and operators provide potentially exposed persons and their designated representatives regular access to the exposure control plans, exposure monitoring records, and PPE

program implementation. To ensure compliance with workplace participation, EPA is finalizing its requirement that the owner or operator document the notice to and ability of any potentially exposed person who may reasonably be affected by TCE exposure to readily access the exposure control plans, facility exposure monitoring records, PPE program implementation, or any other information relevant to TCE exposure in the workplace.

c. Notification of Monitoring Results

EPA is finalizing the requirement that the owner or operator must, within 15 working days after receipt of the results of any exposure monitoring, notify each person whose exposures are monitored or who is part of a monitored exposure group and their designated representatives in writing, in plain language, either individually to each potentially exposed person or by posting the information in an appropriate and accessible location, such as public spaces or common areas, for potentially exposed persons outside of the regulated area. The notice is required to identify the exposure monitoring results, the interim ECEL and interim ECEL action level, statement of whether the monitored airborne concentration of TCE exceeds the interim ECEL and the interim ECEL action level, and any corresponding respiratory protection required. If the interim ECEL is exceeded, the notice must also include a description of the actions taken by the owner or operator to reduce inhalation exposures to or below the interim ECEL. The notice must also include the quantity, location, and manner of TCE use at the time of monitoring. The notice must also include identified releases of TCE. The notice must be provided in multiple languages if necessary. Specifically, notice must be provided in a language that each potentially exposed person understands, or posted in a non-English language version representing the language of the largest group of workers who cannot readily comprehend or read English).

d. Recordkeeping

For owners and operators to demonstrate compliance with the WCPP provisions, EPA is requiring that owners and operators must retain compliance records for five years (although this requirement does not supplant any longer recordkeeping retention time periods such as those required under 29 CFR 1910.1020, or other applicable regulations). EPA is requiring the owner or operator to retain records of:

- Exposure control plan;
- Regulated areas and authorized personnel;
- Facility exposure monitoring records;
- Notifications of exposure monitoring results;
- PPE and respiratory protection used and program implementation; and
- Information and training provided by the owner or operator to each potentially exposed person prior to or at the time of initial assignment to a job involving potential exposure to TCE.

EPA emphasizes that all records required to be maintained can be kept in the most administratively convenient form: electronic record form or paper form. The owner or operator is required to document training or re-training of any potentially exposed person as necessary to ensure that, in the event of monitoring results that indicate exposure or possible exposures above the interim ECEL action level, the potentially exposed person has demonstrated understanding of how to use and handle TCE and how to appropriately use required PPE.

D. Prescriptive Controls for Energized Electrical Cleaner

In contrast to the non-prescriptive requirements of the WCPP, where regulated entities would have flexibility to select controls in accordance with the hierarchy of controls to comply with the parameters outlined in Unit IV.C., EPA has found it appropriate for certain activities in certain circumstances to allow owners and operators the choice of either complying with the WCPP or require complying with specific prescriptive controls for certain occupational conditions of use. EPA is finalizing specific prescriptive controls for the industrial and commercial use of TCE in energized electrical cleaner. The rationale for these changes, after consideration of public comments, is in Unit III.C.1. This Unit provides a description of the condition of use subject to specific prescriptive controls, the specific prescriptive control requirements, and the compliance timeframes for the requirements.

Considering the time needed to transition away from this use of TCE, to protect health from inhalation and dermal exposures to TCE from the industrial and commercial use of TCE-containing energized electrical cleaners, which is a sub-use of the industrial and commercial use as an aerosol spray degreaser/cleaner, EPA is requiring owners and operators to comply with either (i) specific prescriptive controls outlined in this Unit, including dermal PPE and respiratory protection, or (ii) implementation of the WCPP outlined in Unit IV.C. As described in Unit III.C.1., EPA's workplace requirements to reduce exposures to TCE in the timeframe before prohibitions for energized electrical cleaner are consistent to the extent possible with existing regulations and best practices for work in electrical spaces. EPA acknowledges the existing OSHA requirements for electrical protective equipment under 29 CFR 1910.137 and determined the requirements in this Unit do not interfere with a potentially exposed person's ability to safely use electrical protective equipment, such as rubber insulating gloves and rubber insulating sleeves, as required under OSHA.

1. Applicability

The industrial and commercial use of TCE in energized electrical cleaner refers to the use of TCE in a product to clean and/or degrease electrical equipment, where cleaning and/or degreasing is accomplished when electrical current exists, or when there is a residual electrical potential from a component, such as a capacitor (*i.e.,* energized equipment use only). In this final rule, energized electrical cleaner does not include general purpose degreaser, electrical cleaner, or electronic cleaner, for example for use in motorized vehicle maintenance and their parts, which is subject to the prohibitions described in Unit IV.B.1.

2. Workplace Requirements for Energized Electrical Cleaner

EPA is requiring that owners or operators must either implement (i) specific prescriptive controls that provide dermal PPE and respiratory protection or (ii) implement the WCPP for industrial and commercial use in energized electrical cleaner. Owners and operators must maintain a statement regarding whether the business is complying with the specified prescriptive controls or with the WCPP.

a. Prescriptive Controls

i. Dermal Protection

This rule requires dermal PPE, including impermeable gloves, in combination with comprehensive training for each potentially exposed person who uses TCE in energized electrical cleaner. For dermal PPE, EPA is requiring that each owner or operator comply with the requirements outlined in Unit IV.C.7.b. for selection of dermal PPE and training for all potentially exposed persons.

ii. Respiratory Protection

This final rule requires the use of specific respiratory protection, in combination with comprehensive training, for use of energized electrical cleaner containing TCE. Specifically, EPA is requiring owners or operators to provide to potentially exposed persons, and potentially exposed persons to use, the following: any NIOSH Approved air-purifying full facepiece respirator equipped with organic vapor cartridges or canisters; any NIOSH Approved PAPR with a half mask equipped with organic vapor cartridges or canisters; any NIOSH Approved SAR or Airline Respirator in a continuous flow mode equipped with a half mask; any NIOSH Approved SAR or Airline Respirator operated in a pressure-demand or other positive-pressure mode with a half mask; or any NIOSH Approved SCBA in demand-mode equipped with a full facepiece or helmet/hood [APF 50]; or any NIOSH Approved respirator affording a higher degree of protection. In providing the specified respirators and training, EPA is requiring owners or operators to administer a PPE program with procedures and elements for required respirator use as described in Unit IV.C.7.a., for proper use, maintenance, fit-testing, medical evaluation, and training. EPA is requiring that the owner or operator must ensure that all filters, cartridges, and canisters used in the workplace are labeled and color coded per NIOSH requirements and that the label is not removed and remains legible.

b. WCPP

EPA understands that there may be instances where a performance-based standard is more appropriate to reduce exposures from the industrial and commercial use of TCE in energized electrical cleaner, instead of the specific prescriptive dermal and respiratory protection requirements described in this Unit. For example, the WCPP may be preferred by owners or operators that regularly use TCE to clean energized electrical equipment onsite at their facility or by owners or operators that are implementing the WCPP at their facility for another condition of use of TCE. In these instances, the final rule permits owners or operators to comply with the WCPP requirements, including the interim ECEL, direct dermal contact controls, and ancillary provisions, outlined in Unit IV.B, instead of the prescriptive controls described in this Unit.

c. Recordkeeping

Owners and operators subject to the energized electrical cleaner requirements must maintain a statement regarding whether the owner or operator is complying with the prescriptive control requirements or the WCPP requirements. They must also maintain records of the dermal and respiratory protection used by each potentially exposed person and of PPE program implementation or the WCPP records described in Unit IV.C.8.d.

Distributors of TCE, including TCE containing products, for use in energized electrical cleaner must retain sale records, including the name of the purchaser, sale date, and quantity sold.

E. Wastewater Worker Protection Provisions

1. Applicability

The disposal of TCE to wastewater refers to the disposal of TCE to industrial pre-treatment, industrial treatment, or publicly owned treatment works, which includes the mixing of TCE with wastewater and the discharge of TCE-contaminated wastewater pursuant to a NPDES permit. EPA is finalizing distinct workplace protection provisions, separate from the WCPP described in Unit IV.C., for owners and operators of facilities or sites involved in the industrial treatment and pre-treatment of TCE wastewater at cleanup sites, that fall under the 50-year TSCA section 6(g) exemption for disposal of TCE for the purposes of facilitating cleanup projects of TCE-contaminated groundwater and other wastewater. EPA is also finalizing distinct workplace protection provisions for owners and operators of publicly owned treatment works who receive wastewater associated with TCE disposal for: industrial and commercial use as a processing aid for lithium battery separator manufacturing, industrial and commercial use of TCE as a processing aid for lead-acid battery separator manufacturing, industrial and commercial use of TCE as a processing aid for specialty polymeric microporous sheet material manufacturing, and facilitating cleanup projects of TCE-contaminated groundwater and other wastewater. Owners and operators of facilities or sites involved in the industrial treatment and pre-treatment sub-categories of TCE wastewater disposal for industrial and commercial conditions of use are not included within these distinct wastewater provisions and are subject to the WCPP described in Unit IV.C. For the purposes of this rulemaking, EPA does not consider wastewater to be a product that is eligible for the regulatory threshold discussed in Units III.D.1 and IV.A. As discussed in Unit III.D.1., EPA finds that a regulatory threshold is necessary to avoid impacts on numerous supply chains, particularly chlorinated organic products. These considerations are not applicable to wastewater disposal.

2. Workplace Requirements for Facilitating Cleanup Projects of TCE-Contaminated Groundwater and Other Wastewater

This final rule requires that owners and operators of facilities or sites involved in disposal of TCE-containing wastewater for the purposes of cleanup projects of TCE-contaminated water and groundwater follow the requirements set forth in 29 CFR 1910.120(c)(5) and (h), known as the Hazardous Waste Operations and Emergency Response standard, with notable modifications: this rule requires that, for those provisions in 29 CFR 1910.120 that reference a PEL, owners and operators will instead comply with the TSCA interim ECEL of 0.2ppm. As explained in Unit III.A.2., owners and operators of these cleanup sites must ensure that potentially exposed persons involved with the activity of removing the wastewater from the location where it was found and treating the removed wastewater on-site are protected to the interim ECEL level of 0.2 ppm and protected from dermal contact with TCE-containing wastewater.

3. Workplace Requirements for Workers at Publicly Owned Treatment Works

To protect workers and facilitate successful implementation, EPA is finalizing the requirement that POTWs must either (i) implement the WCPP or (ii) where there is a reasonable possibility of the presence of TCE screen the wastewater they receive, in a manner consistent with the approach outlined in EPA's 1992 ''Guidance to Protect POTW Workers from Toxic and Reactive Gases and Vapors'' (Ref. 52). Owners and operators must compare the concentration of TCE in wastewater to a screening level that EPA calculated as described in section III.A.2. EPA is finalizing a provision that if the wastewater concentration is equal to or less than 0.00284 mg/L of TCE, the POTW where there is a reasonable possibility of the presence of TCE can assume that the concentration of TCE in air that results from TCE volatilization from wastewater is equal to or less than the interim ECEL. If a POTW's wastewater screening detects TCE at concentration greater than 0.00284 mg/L of TCE then EPA is requiring that owners and operators comply with the

WCPP, as described in Unit IV.C., except that owners and operators do not have to perform initial air monitoring.

F. Other Requirements

1. Recordkeeping

EPA is finalizing as proposed the requirement that manufacturers, processors, industrial and commercial users, and distributors maintain ordinary business records, such as invoices and bills-of-lading, that demonstrate compliance with restrictions and other provisions of this final regulation; and that they maintain such records for a period of five years from the date the record is generated. This requirement begins on February 18, 2025. For enforcement purposes, EPA will have access to such businesses records plus additional records required under 40 CFR 751.323. Recordkeeping requirements ensure that owners or operators can demonstrate compliance with the regulations if necessary.

2. Downstream Notification

EPA is finalizing as proposed the requirements that manufacturers (including importers), processors, and distributors of TCE and TCE-containing products provide downstream notification of certain prohibitions through SDSs by adding the language set forth in § 751.321(c) to sections 1(c) and 15 of the SDS. To provide adequate time to update the SDS and ensure that all products in the supply chain include the revised SDS, EPA's final rule requires manufacturers revise their SDS within 60 days of publication and processors and distributors revise their SDS within 180 days of publication of the final rule.

The intention of downstream notification is to spread awareness throughout the supply chain of the restrictions on TCE under TSCA and to provide information to commercial end-users about the timeframes for use until prohibition.

G. TSCA Section 6(g) Exemptions

Under TSCA section 6(g)(1), EPA may grant an exemption from a requirement of a TSCA section 6(a) rule for a specific condition of use of a chemical substance or mixture if the Agency makes one of three findings. TSCA section 6(g)(1)(A) permits such an exemption if the specific condition of use is a critical or essential use for which no technically and economically feasible safer alternative is available. Under TSCA section 6(g)(1)(B), EPA must find that compliance with the requirement would significantly disrupt the national economy, national security, or critical infrastructure to provide an exemption. Finally, TSCA section 6(g)(1)(C) allows for an exemption based on an EPA finding that the specific condition of use of the chemical substance or mixture, as compared to reasonably available alternatives, provides a substantial benefit to health, the environment, or public safety. This unit presents the TSCA section 6(g) exemptions EPA is finalizing in this rule. See Units V.A.3. and V.B.3. of the 2023 TCE proposed rule for an analysis of the need for such exemptions pursuant to TSCA section 6(g)(2). EPA notes that EPA is able to extend or modify TSCA section 6(g) exemptions by rulemaking as appropriate but is unable to incorporate automatic extensions to TSCA section 6(g) exemptions. Given the nature of Agency rulemaking, EPA notes that such requests to extend or modify a TSCA section 6(g) exemption be submitted to EPA several years in advance of the expiration of the exemption.

Unless otherwise specified, for each condition of use subject to a time-limited TSCA section 6(g) exemption in this final rule, EPA is requiring owners and operators of the location where such use occurs to comply with the WCPP provisions described in Unit IV.C. and the recordkeeping provisions described in Unit IV.F. Additionally, for each condition of use subject to a time-limited TSCA section 6(g) exemption, EPA is requiring manufacturers (including importers) and processors of TCE for such use to comply with the WCPP provisions described in Unit IV.C. until the prohibition compliance date. The prohibition compliance date for the manufacture (including import), processing, and distribution in commerce for each condition of use subject to a time-limited TSCA section 6(g) exemption, except for disposal, is the same as the expiration date of the exemption for that use.

1. 7-Year Exemption for Industrial and Commercial Use of TCE in Closed-Loop and Open-Top Batch Vapor Degreasing for Essential Aerospace Parts and Components and Narrow Tubing Used in Medical Devices

EPA is finalizing a seven-year TSCA section 6(g)(1)(B) exemption from the prohibition for the industrial and commercial use of TCE in batch vapor degreasing for essential aerospace parts and components and a seven-year TSCA section 6(g)(1)(A) exemption from the prohibition for the industrial and commercial use of TCE in batch vapor degreasing for narrow tubing used in medical devices. As described in Unit V.B.3. in the proposed rule, EPA's primary alternative regulatory action described 7-year TSCA section 6(g) exemptions from prohibition for industrial and commercial use of TCE in batch vapor degreasing for essential aerospace parts and components and narrow tubing used in medical devices. EPA is finalizing these exemptions. The specific condition for these exemptions is that TCE can only be used for batch vapor degreasing of: (1) essential aerospace parts and components (including rayon fabric) where cleaning alternatives present technical feasibility or performance challenges to meet specifications from other Federal agencies or other long-standing design specifications that are included in existing contracts, or (2) narrow tubing for medical devices.

2. 7-Year Exemption for Industrial and Commercial Use of TCE as a Solvent in Closed-Loop Batch Vapor Degreasing Necessary for Rocket Engine Cleaning by Federal Agencies and Their Contractors

EPA is finalizing as proposed a 7-year TSCA section 6(g)(1)(B) exemption from the prohibition on the industrial and commercial use of TCE as a solvent in closed-loop vapor degreasing necessary for rocket engine cleaning by Federal agencies and their contractors, and the manufacture (including import), processing, and distribution in commerce of TCE for this use.

3. 10-Year Exemption for TCE for Certain Industrial and Commercial Uses for Vessels of the Armed Forces and Their Systems

EPA is finalizing a 10-year TSCA section 6(g)(1)(B) exemption from the prohibition on industrial and commercial use of TCE for the industrial and commercial use of TCE for vessels of the Armed Forces and their systems, and in the maintenance, fabrication, and sustainment for and of such vessels and systems: as potting compounds for naval electronic systems and equipment; sealing compounds for high and ultra-high vacuum systems; bonding compounds for materials testing and maintenance of underwater systems and bonding of nonmetallic materials; and cleaning agents to satisfy cleaning requirements (which includes degreasing using wipes, sprays, solvents, and vapor degreasing) for: materials and components required for military ordinance testing; temporary resin repairs in vessel spaces where welding is not authorized; ensuring polyurethane adhesion for electronic systems and equipment repair and installation of elastomeric materials; various naval combat systems, radars,

sensors, equipment; fabrication and prototyping processes to remove coolant and other residue from machine parts; machined part fabrications for naval systems; installation of topside rubber tile material aboard vessels; and vapor degreasing required for substrate surface preparation prior to electroplating processes. EPA is finalizing this TSCA section 6(g)(1)(B) exemption as proposed, with the modification of the term ''DoD naval vessels'' to ''vessels of the Armed Forces'' to make it clear that Coast Guard vessels are included in this exemption because they serve similar national security interests.

4. 10-Year Exemption for the Emergency Use of TCE in Furtherance of NASA's Mission

For the reasons discussed in Unit V.A.3.a.vi. of the proposed rule, EPA is finalizing as proposed a 10-year TSCA section 6(g)(1)(A) exemption for emergency use of TCE in furtherance of NASA's mission for the following specific conditions of use:

(1) Industrial and commercial use as solvent for open-top or closed-loop batch vapor degreasing;

(2) Industrial and commercial use as a solvent for cold cleaning;

(3) Industrial and commercial use as a solvent for aerosol spray degreaser/cleaner and mold release;

(4) Industrial and commercial use as a lubricant and grease in tap and die fluid;

(5) Industrial and commercial use as a lubricant and grease in penetrating lubricant;

(6) Industrial and commercial use as an adhesive and sealant in solvent-based adhesives and sealants;

(7) Industrial and commercial use as a functional fluid in heat exchange fluid;

(8) Industrial and commercial use in corrosion inhibitors and anti-scaling agents;

(9) Industrial and commercial use of TCE as a processing aid; and

(10) Manufacturing (including importing) and processing of TCE for the industrial and commercial uses listed in (1) through (9).

EPA is also finalizing as proposed the inclusion of additional requirements as part of the exemption, pursuant to TSCA section 6(g)(4), including required notification and controls for exposure, to the extent feasible: (1) NASA and its contractors must provide notice to the EPA Administrator of each instance of emergency use within 15 days; and (2) NASA and its contractors would have to comply with the WCPP to the extent feasible.

EPA is finalizing to require that NASA notify EPA within 15 days of the emergency use. The notification would include a description of the specific use of TCE in the context of one of the conditions of use for which this exemption is being finalized, an explanation of why the use described qualifies as an emergency, and an explanation with regard to the lack of availability of technically and economically feasible alternatives. EPA notes that in the event that sensitive information relating to national security or critical infrastructure is submitted to EPA, the Agency will protect such information in accordance with applicable authorities.

EPA expects NASA and its contractors have the ability to implement a WCPP as described in Unit IV.C. for the identified uses in the context of an emergency. Therefore, EPA is finalizing the requirement that during emergency use, NASA and its contractors must comply with the WCPP to the extent technically feasible in light of the particular emergency.

Under the finalized exemption, NASA and its contractors will still be subject to the general recordkeeping requirements discussed in Unit IV.F.

5. 20-Year Exemption for Industrial and Commercial Use of TCE as a Processing Aid for Lead-Acid Battery Separator Manufacturing

EPA is finalizing a 20-year TSCA section 6(g)(1)(B) exemption from the prohibition on the industrial and commercial use of TCE as a processing aid, specific to battery separator manufacturing for lead-acid batteries. The conditions for the exemption are: (1) The use of TCE is limited to use as a processing aid for lead-acid battery separator manufacturing; and (2) This specific industrial and commercial use of TCE as a processing aid is required to be conducted at industrial facilities using TCE to manufacture lead acid battery separators prior to February 18, 2025.

6. 15-Year Exemption for Industrial and Commercial Use of TCE as a Processing Aid for Specialty Polymeric Microporous Sheet Materials

EPA is finalizing a 15-year TSCA section 6(g)(1)(A) exemption from the prohibition on TCE for the industrial and commercial use of TCE as a processing aid for specialty polymeric microporous sheet material manufacturing. As described in more detail in Unit III.B.2., while EPA proposed to prohibit industrial and commercial use of TCE as a processing aid for specialty polymeric microporous sheet materials, EPA's primary alternative regulatory action described a 15-year TSCA section 6(g) exemption from prohibition for this use. EPA received substantiative information in public comments to support the finalization of this exemption, as well as support for 15 years as the appropriate timeframe for this exemption.

The conditions for the exemption are: (1) The use of TCE is limited to use as a processing aid for the manufacturing of specialty polymeric microporous sheet materials; (2) This specific industrial and commercial use of TCE as a processing aid can only be used at industrial facilities in which TCE is already in use to manufacture specialty polymeric microporous sheet materials prior to February 18, 2025.

7. 50-Year Exemption for Laboratory Use of TCE for Essential Laboratory Uses

EPA is finalizing a 50-year TSCA section 6(g)(1)(A) exemption from the prohibition on industrial and commercial use of TCE, for industrial and commercial use of TCE in laboratory use for essential laboratory activities, excluding the testing of asphalt which is subject to a ten-year phase-out as described in Units III.C.3. and IV.B.5. The conditions for the exemption are: (1) The use of TCE is limited to use in an industrial or commercial laboratory for essential laboratory activities, including chemical analysis, chemical synthesis, extracting and purifying other chemicals, dissolving other substances, and research and development for the advancement of cleanup activities, and analytical methods for monitoring related to TCE contamination or exposure monitoring, with the exclusion of laboratory testing for asphalt; and (2) Federal agencies and their contractors are permitted to conduct research and development activities, test and evaluation method activities, and similar laboratory activities, provided the use is essential to the agency's mission.

8. 50-Year Exemption for Disposal of TCE to Industrial Pre-Treatment, Industrial Treatment, or Publicly Owned Treatment Works, for the Purposes of Facilitating Cleanup Projects of TCE-Contaminated Water and Groundwater

EPA is finalizing a 50-year TSCA section 6(g)(1)(A) exemption from the prohibition on disposal of TCE to industrial pre-treatment, industrial treatment, or publicly owned treatment works for the purposes of cleanup projects of TCE-contaminated water and

groundwater. The conditions for the exemption are: (1) The disposal of TCE to industrial pre-treatment, industrial treatment, or publicly owned treatment works must only be for the purposes of cleanup projects of TCE-contaminated water and groundwater and is limited to sites undergoing cleanup under CERCLA, RCRA, or other Federal, state, and local government laws, regulations or requirements; and (2) Owners and operators of the cleanup site locations where TCE industrial treatment or pretreatment occurs are required to comply with the wastewater workplace protection requirements described in Unit IV.E.2., and owners and operators of publicly owned treatment works that receive TCE wastewater, are required to comply with the workplace protection requirements described in Unit IV.E.3. Owners and operators of either type of location must comply with the recordkeeping requirements described in Unit IV.F.1. until the expiration of the exemption and the prohibition compliance date. EPA notes that a remediation method would need to be considered one of the previous types of disposal to fall within the condition of use, and if not would be out of scope of this TSCA rule and not subject to the prohibition or other requirements of the rule.

V. TSCA Section 6(c)(2) Considerations

A. Health Effects and the Magnitude of Human Exposure

EPA's analysis of the health effects of TCE and the magnitude of human exposure to TCE are in the 2020 Risk Evaluation for TCE and the 2023 Revised Risk Determination for TCE (Refs. 1, 2). A summary is presented here.

As described in Unit IV. of the 2023 TCE proposed rule, TCE has a large database of human health toxicity data. The 2020 Risk Evaluation for TCE identified several endpoints, such as kidney toxicity, immunotoxicity, or developmental toxicity, and often a single endpoint was examined by multiple studies. For acute exposures, EPA identified non-cancer effects (developmental toxicity and immunosuppression). For chronic exposures, EPA identified non-cancer effects (liver toxicity, kidney toxicity, neurotoxicity, autoimmunity, reproductive toxicity, and developmental toxicity) as well as cancer (liver, kidney, and non-Hodgkin's lymphoma), with kidney cancer identified as acting through a mutagenic mode of action (Ref. 1). The 2020 Risk Evaluation for TCE contains quantitative risk estimates using several points of departure (PODs), including immunotoxicity endpoints as well as the more sensitive developmental toxicity endpoints, specifically fetal cardiac defects, and both demonstrate that TCE presents risk.

Additionally, in developing the 2020 Risk Evaluation for TCE, EPA analyzed the reasonably available information to ascertain whether some human subpopulations may have greater exposure or greater susceptibility than the general population to the hazard posed by the chemical substance. Factors affecting susceptibility examined in the reasonably available studies on TCE include lifestage, sex, genetic polymorphisms, race/ethnicity, preexisting health status, lifestyle factors, and nutrition status. Groups of individuals for which one or several of these factors apply may be considered PESS (Ref. 1).

Because TSCA section 6(c)(2)(B) directs EPA to factor in, to the extent practicable, the health effects of TCE under TSCA section 6(c)(2)(A) when selecting among options, TSCA section 6(c) thereby provides EPA with the flexibility to tailor the regulatory restrictions to account for particular health effects identified in the underlying risk evaluation. With this consideration, EPA found that, in some cases, a regulatory option that could reduce exposures such that they would achieve the benchmark margin of exposure for the most sensitive non-cancer endpoint (developmental toxicity) would address any risk for other non-cancer endpoints. Older pregnant workers and ONUs, who may be especially susceptible to TCE-induced cardiac defects in their developing fetus, are classified as a PESS, and the associated POD and risk estimates were included in the 2020 Risk Evaluation in consideration of PESS groups. EPA has carefully considered the health effects of TCE on pregnant workers and ONUs as part of the Agency's requirements and prohibitions. In order for this rulemaking to appropriately address risk to all workers and ONUs exposed to TCE through occupational conditions of use, EPA has factored in consideration of additional health effects applicable to PESS, including older pregnant workers and ONUs (the group identified as most susceptible to fetal cardiac defects) pursuant to TSCA section 6(c)(2).

In the risk characterization section of the 2020 Risk Evaluation for TCE, EPA acknowledged that fetal cardiac defects are an acute, non-cancer endpoint of concern, particularly for older pregnant women, while also acknowledging uncertainty surrounding the use of this endpoint to inform the determination of whether TCE presents unreasonable risk of injury to health for all affected human populations. In the 2020 Risk Evaluation for TCE, EPA presented the Agency's findings with respect to different endpoints and characterized the immunotoxicity endpoints as the ''best overall'' non-cancer endpoints for use in the risk conclusions and risk determination. The endpoints were characterized in this way precisely because of the quantitative uncertainties surrounding the use of the fetal cardiac defects endpoint and other considerations. Further, as noted in Unit II.D.1. of the 2023 TCE proposed rule, EPA received numerous comments on EPA's 2020 TSCA Risk Evaluation policy choice regarding endpoint selection that have raised concerns pertaining to political interference and scientific integrity, among other issues. EPA received significant feedback on this aspect of the 2020 Risk Evaluation for TCE, including focused attention on this issue from the SACC and public commenters reacting to the draft Risk Evaluation for TCE (Ref. 90). Moreover, based on the discussion included in the peer review report of the 2020 Risk Evaluation, EPA also concluded that reasonable scientists would not disallow the use of the fetal cardiac defects studies, and that therefore other EPA program reliance on the fetal cardiac defects endpoint is scientifically valid (*e.g.,* Integrated Risk Information System (*https://iris.epa.gov*)).

The 2020 Risk Evaluation for TCE identified the developmental toxicity endpoint of fetal cardiac defects, which presents a lower POD than the immunotoxicity endpoints. The magnitude of the unreasonable risk from exposures to TCE would have been greater had the Agency relied upon the developmental toxicity endpoint (Ref. 1). Specifically, EPA identified the risk of fetal cardiac defects most strongly associated with offspring of older mothers, and therefore included risk estimates for fetal cardiac defects that account for susceptible mothers and their offspring in addition to PESS groups with other susceptibilities (*e.g.,* diabetes, infection status, drug exposure, stress, and metabolic sensitivity due to increased enzymatic activity of cytochrome P450 2E1 (CYP2E1) (Ref. 1).

EPA recognizes that among the non-cancer adverse health effects of TCE, the drivers for EPA's whole chemical unreasonable risk determination for TCE under TSCA were identified as immunotoxicity, namely acute immunosuppression and chronic

autoimmunity from inhalation and dermal exposures (Ref. 2).

Regarding the magnitude of human exposure, one factor EPA considers for the conditions of use that contribute to the unreasonable risk is the size of the exposed population, which, for TCE, EPA estimates is 53,210 workers, 14,659 ONUs, and 20,600 consumers (Ref. 3).

In addition to these estimates of numbers of workers, ONUs, consumers, and bystanders to consumer use directly exposed to TCE, EPA recognizes there is exposure to the general population from air and water pathways for TCE. (While bystanders are individuals in proximity to a consumer use of TCE, fenceline communities are a subset of the general population who may be living in proximity to a facility where TCE is being used in an occupational setting). EPA separately conducted a screening analysis to assess whether there may be risks to the general population from these exposure pathways. This analysis is summarized in full in the 2023 TCE proposed rule, which includes information on the SACC peer review of the methodology. This Unit addresses those areas where some risk was indicated with regard to expected exposures to fenceline communities that are associated with conditions of use for which EPA is finalizing longer compliance timeframes (including under a TSCA section 6(g) time-limited exemption).

EPA's analysis was presented to the SACC peer review panel in March 2022, and EPA is including SACC recommendations, as appropriate, in assessing general population exposures in upcoming risk evaluations. Overall, EPA's fenceline analysis for the air and water pathways for TCE did not allow EPA to rule out unreasonable risk to fenceline communities with confidence. Additionally, based on the fenceline analysis for the ambient air and water pathways for TCE, including the strengths, limitations, and uncertainties associated with the information used to inform the analysis, EPA is unable to determine with this analysis whether those risks drive the unreasonable risk of injury to health presented by TCE. Although EPA did not make a determination of unreasonable risk based on the fenceline screening analysis, this final regulatory action is expected to eliminate the potential risks identified in the screening analysis to any general population or fenceline communities close to facilities engaging in TCE manufacturing, processing, or use.

EPA's fenceline analysis for the water pathway for TCE, based on methods presented to the SACC, found potential risks from several occupational exposure scenarios from exposure to drinking water or incidental dermal or incidental oral exposure to ambient waters. The estimated exposure values for the screening level assessed water pathway resulted in estimated acute noncancer, chronic noncancer, or cancer risk relative to their respective benchmark values for various evaluated occupational exposure scenarios (Ref. 91). As described in more detail in Unit VII.A.2. of the 2023 TCE proposed rule, EPA identified potential risks that exceed the benchmark for non-cancer endpoints for several facilities, representing benchmark exceedances for between 1 and 10 occupational exposure scenarios, depending on whether the drinking water, incidental oral, or incidental dermal exposures are considered. In each case for the screening level analysis, risks were identified only for the maximum risk scenarios (or facilities with the highest reported results), and for a relatively small number of facilities. In instances where a facility may be engaging in a condition of use with a longer phaseout, EPA notes that in no instances did EPA identify drinking water intakes within 10 miles of a discharging facility and emphasizes that the scenarios analyzed include significant uncertainties and assumptions within the high-end risk estimates due to reliance on the highest-reported results from several facilities (Ref. 91). Regarding cancer risks, while the analysis identified facilities with some indication of releases and potential drinking water exposure with associated increased cancer risk that exceeds more than 1 in 1,000,000, the analysis did not identify any facilities with a risk exceeding 1 in 10,000; the highest potential risk estimate is in the 1 in 100,000 range (Ref. 91).

Under the regulatory actions finalized in this rule and described in Unit IV., all conditions of use will ultimately be prohibited and so any potential risk indicated by this screening analysis will be eliminated. The potential risks to fenceline communities from exposure through water further strengthen the impetus for EPA's prohibition of TCE. EPA therefore does not intend to revisit the water pathway for TCE as part of a supplemental risk evaluation.

EPA's fenceline analysis for the air pathway for TCE, using the methodology presented to SACC, and the multi-year analysis conducted in response to SACC feedback indicated potential exposure and associated risks to select populations within the general population at particular facilities (Ref. 92). As described in the 2023 TCE proposed rule, EPA conducted an ambient air analysis to assess non-cancer and cancer risk for real and generic, or modeled, facilities. The three components of the ambient air fenceline analysis were: (1) A single-year ambient air analysis; (2) A multi-year ambient air analysis; and (3) A land use analysis. After doing an initial screen (the single year ambient air screening analysis) that did not rule out unreasonable risk, EPA conducted additional analyses (the multi-year ambient air analysis). The single year ambient air screening analysis and the multi-year ambient air analysis allow EPA to mathematically calculate a cancer risk in fenceline communities. The Agency then conducted a land use analysis as part of both the single-year and multi-year analyses to determine if EPA could reasonably expect an exposure to fenceline communities to occur within the modeled distances for facilities where there was an indication of risk. This review consisted of a visual analysis using aerial imagery and interpreting land/use zoning practices around each facility to identify where residential, industrial/commercial businesses, or other public spaces are present within those radial distances indicating risk (as opposed to uninhabited areas), as well as whether the radial distances lie outside the boundaries of the facility.

There are some uncertainties associated with the fenceline analysis for the air pathway for TCE. The TRI dataset used for the single- and the multi-year fenceline analysis and land use analysis does not include actual release point locations, which can affect the estimated concentrations at varying distances modeled. To identify the release location for each facility, EPA used a local-coordinate system based on latitude/longitude coordinates reported in TRI. The latitude/longitude coordinates may represent the mailing address location of the office building associated with a very large facility or some other area of the facility rather than the actual release location (*e.g.,* a specific process stack). This discrepancy between the coordinates reported in TRI and the actual release point could result in an exposure concentration that does not represent the actual distance where fenceline communities may be exposed. The fenceline analysis also evaluated the most ''conservative exposure scenario'' that consists of a facility that operates year-round (365 days per year, 24 hours per day, 7 days per week) in a South Coastal meteorologic region and a rural topography setting (Ref. 92). Therefore, the modeled exposures to people who live in fenceline

communities may be overestimated if there are fewer exposure days per year or hours per day.

Additionally, the ambient air fenceline analysis (as well as the water pathway analysis, described in Unit VII.A.2.) organizes facilities and associated risks by Occupational Exposure Scenario (OES) and generally crosswalks each OES with the associated condition of use of TCE (Ref. 92). For some OES, EPA identified the associated conditions of use to the category level in the November 2020 Risk Evaluation for TCE, but, for the air pathway, was unable to identify the conditions of use to the subcategory level due to limited information on activities and use of TCE reported under TRI. Therefore, some OES indicating increased risk from ambient air exposures to TCE in the air fenceline analysis may be associated with one or more conditions of use of TCE. See Unit VII.A.1. of the 2023 TCE proposed rule for additional information on this analysis.

EPA's analysis included inhalation hazard values for cancer and non-cancer risk (acute and chronic immunological and developmental endpoints). Because risk estimates did not exceed the benchmarks for any risks of non-cancer effects, the results presented focus on cancer risks. Standard cancer benchmarks used by EPA and other regulatory agencies are an increased cancer risk above benchmarks ranging from 1 in 1,000,000 (one in a million) to 1 in 10,000 (*i.e.,* 1×10^{-6} to 1×10^{-4}). For example, when setting standards under CAA section 112(f)(2), EPA uses a two-step process, with ''an analytical first step to determine an 'acceptable risk' that considers all health information, including risk estimation uncertainty, and includes a presumptive limit on maximum individual risk (MIR) of approximately 1-in-10 thousand'' (Ref. 93). In this fenceline analysis for the ambient air pathway for TCE, estimates of risk to fenceline communities were calculated using 1×10^{-6} as the benchmark for cancer risk in fenceline communities. While EPA is unable to determine, based on the screening level fenceline analysis, whether risks to the general population drive the unreasonable risk, as a matter of risk management policy EPA typically considers the range of 1×10^{-6} to 1×10^{-4} as the appropriate benchmark for increased cancer risk for the general population, including fenceline communities. The benchmark value is not a bright line, and the Agency considers a number of factors when determining unreasonable risk, such as the endpoint under consideration, the reversibility of effect, and exposure-related considerations (*e.g.,* duration, magnitude, or frequency of exposure, or population exposed).

The multi-year analysis evaluated 217 facilities and found risk estimates above one in a million for cancer for 133 of those facilities at a distance of 100 meters from the releasing facility. Based on the multi-year analysis, 58 of these 133 facilities either had cancer risks above one in a million at distances farther than 100 meters when compared to the single year analysis or are facilities that were not captured in the single-year analysis. The analysis did not identify any facilities with risk exceeding 1 in 10,000 at a distance greater than 100 meters; the highest risk estimate is in the 1 in 100,000 range (Ref. 92).The land use analysis of the 58 facilities indicating risk in the multi-year fenceline analysis (*i.e.,* facilities where cancer risk estimates were above one in a million at distances farther out when compared to the single-year analysis or facilities that were not captured in the single year analysis) identified a total of 55 facilities with expected exposure to fenceline communities. Those facilities represent 10 occupational exposure scenarios and include: degreasing (open-top batch vapor degreasing; closed-loop batch vapor degreasing; conveyorized vapor degreasing; web vapor degreasing; cold cleaning); formulation of aerosol and non-aerosol products; industrial processing aid; manufacturing; metalworking fluids; other industrial uses; process solvent recycling and worker handling of wastes; processing as a reactant; recycling and disposal; and repackaging (Ref. 92).

Under this regulatory action, each of the conditions of use that indicate risk relative to the one in a million cancer risk benchmark will ultimately be prohibited, many of them within one year. As a result, exposures to any fenceline communities from these facilities will be eliminated under the prohibitions in this rulemaking. The risks to fenceline communities from TCE exposure further strengthens the impetus for EPA's prohibition of TCE. As described earlier in this Unit, EPA notes that TSCA section 6(c)(2) provides for the consideration of health effects in promulgating a rule under TSCA section 6(a).

EPA recognizes that there are some facilities for which the screening analysis estimates that cancer risks are indicated that may exceed one in a million and with expected exposure to fenceline communities. These facilities may be associated with the following conditions of use that EPA is prohibiting under longer compliance timeframes: degreasing (open-top batch vapor degreasing; closed-loop batch vapor degreasing); industrial processing aid; manufacturing; and processing as a reactant. For processing as a reactant, EPA notes that while the analysis identified facilities with some indication of releases and potential exposure with associated increased cancer risk that exceeds one in a million at a distance of 100 meters from the releasing facility, the analysis did not identify any facilities exceeding the 1 in 10,000 benchmark; the highest risk estimate is in the 1 in 100,000 range. For this and other conditions of use that may be associated with facilities that indicate risks with expected exposure to fenceline communities, the rule requires strict workplace exposure controls via implementation of a WCPP as described in Unit IV.C., until the prohibition compliance date.

In the instances where efforts to reduce exposures in the workplace to levels below the interim ECEL could lead to adoption of engineering controls that ventilate more TCE outside, EPA expects that in some situations potential exposure may be limited through facility compliance with existing National Emissions Standards for Hazardous Air Pollutants (NESHAP) that cover TCE or through state-issued air permits that limit TCE emissions. Potentially applicable NESHAP include: 40 CFR part 63, subpart F, Synthetic Organic Chemical Manufacturing Industry; 40 CFR part 63, subpart DD, Off-Site Waste and Recovery Operations; 40 CFR part 63, subpart VVV, Publicly Owned Treatment Works; 40 CFR part 63, subpart VVVVVV, Chemical Manufacturing Area Sources; 40 CFR part 63, subpart GG, Aerospace Manufacturing and Rework Facilities; and 40 CFR part 63, subpart T, Halogenated Solvent Cleaning. NESHAP impose emission standards and/or work practice requirements reflecting maximum achievable control technology or impose emission standards and/or work practice requirements reflecting generally available control technology. The CAA requires residual risk reviews for standards reflecting maximum achievable control technologies, and technology reviews are required every 8 years for all NESHAP.

In the 2023 TCE proposed rule, EPA requested comment on any anticipated increases or decreases in future releases of TCE, as well as any modifications to requirements in the exposure control plan to account for air monitoring or fenceline impacts. As described in more detail in Section 8.1 of the Response to

Comments document (Ref. 11), several commenters provided input on EPA's fenceline analysis, with some stating their position that the fenceline analysis is not suitable for purposes of risk determination and should not be used to inform risk management (Refs. 35, 81, 78, 94), while other commenters stated that EPA's fenceline analysis insufficiently considered increased susceptibility to harm from TCE exposures in populations more likely to experience adverse health effects (Ref. 95). Regarding the management of any risks to fenceline communities from ambient air or water exposures, several commenters emphasized the need to protect fenceline communities at risk from TCE exposure related to conditions of use with longer phase-out periods (Ref. 45) and described their efforts, as a local government agency, to protect community members at risk of releases of TCE from neighboring businesses (Ref. 47). Several commenters stated they would support a requirement for additional monitoring or attesting in a WCPP that controls would not increase TCE emissions and impact fenceline communities (Refs. 31, 45, 44, 96). Industry commenters disagreed, stating that attestations or monitoring would be burdensome or redundant with requirements under NESHAP that regulate TCE (Refs. 39, 38, 78). Instead, these commenters recommended that any necessary release information should instead be documented through the results of the sampling done when processes change.

As discussed in more detail in the Response to Comments document (Ref. 11), EPA agrees that the screening level fenceline analyses for the water pathway and ambient air pathway for TCE do not allow EPA to conclude whether those risks of injury to fenceline communities contribute to the unreasonable risk because those fenceline screening methodologies were not developed for that purpose. EPA is eventually prohibiting all of the conditions of use that are associated with facilities that indicate potential exposure to fenceline communities, which would eventually address such exposure. Additionally, EPA determined facility resources should be focused on transitioning as quickly as possible to alternatives for TCE. Requiring owners and operators to attest to whether and why the exposure controls they have selected would not result in increased air releases of TCE from the workplace could divert resources from transitioning to alternatives. Therefore, in the WCPP requirements in this final rule, EPA is not requiring owners and operators to attest to whether and why the exposure controls they have selected would not result in increased air releases of TCE from the workplace and keep records of that statement as part of the WCPP exposure control plan. EPA emphasizes that the ultimate prohibition of manufacture, processing, distribution in commerce, use, and disposal of TCE is expected to address the risks identified in the screening analysis to any general population or fenceline communities close to facilities engaging in TCE use. EPA therefore does not intend to revisit the air pathway for TCE as part of a supplemental risk evaluation.

B. Environmental Effects and the Magnitude of Environmental Exposure

EPA's analysis of the environmental effects of TCE and the magnitude of exposure of the environment to TCE are in the 2020 Risk Evaluation for TCE (Ref. 1). The unreasonable risk determination for TCE is based solely on risks to human health (Ref. 2); based on the TSCA 2020 Risk Evaluation for TCE, EPA determined that exposures to the environment did not drive the unreasonable risk. A summary is presented here.

For all conditions of use, amphibian, fish, and aquatic invertebrate acute and chronic exposures to TCE do not drive the unreasonable risk. To characterize the exposure to TCE by aquatic organisms, EPA assessed environmental exposures derived from predicted and measured concentrations of TCE in surface water in the United States. Specifically, the aquatic exposures associated with the industrial and commercial conditions of use were predicted through modeling, and the aquatic exposure assessment also includes an analysis of collected measured surface water concentrations from monitoring data. EPA considered the biological relevance of the species to determine the concentrations of concern for the location of surface water concentration data to produce risk quotients, as well as frequency and duration of the exposure. EPA determined that the evaluation does not support an unreasonable risk determination based on risk to aquatic organisms.

The toxicity of TCE to sediment-dwelling invertebrates is similar to the toxicity to aquatic invertebrates. TCE is expected to remain in aqueous phases and not adsorb to sediment due to its water solubility and low partitioning to organic matter. TCE has relatively low partitioning to organic matter and biodegrades slowly, so TCE concentrations in sediment pore water are expected to be similar to the concentrations in the overlying water or lower in the deeper part of sediment where anaerobic condition prevails. Thus, the TCE detected in sediments is likely from the pore water. Therefore, for sediment-dwelling organisms, the risk estimates, based on the highest ambient surface water concentration, do not support an unreasonable risk determination based on risk to sediment-dwelling organisms from acute or chronic exposures.

For terrestrial organisms, TCE exposure is expected to be low since physical-chemical properties do not support an exposure pathway through water and soil pathways to these organisms. Therefore, for terrestrial organisms, the risk estimates for acute or chronic exposures, based on the EPA 2003 Guidance for Ecological Soil Screening Levels, do not support an unreasonable risk determination.

C. Benefits for Various Uses

As described in the 2023 TCE proposed rule, TCE has a wide range of uses, including as an intermediate during the manufacture of refrigerants, specifically HFC–134a, and is also used as a solvent, frequently in cleaning and degreasing (including spot cleaning, vapor degreasing, cold cleaning, and aerosol degreasing). A variety of consumer and commercial products use TCE as adhesives and sealants, in paints and coatings, and in other miscellaneous products. TCE is subject to Federal and State regulations and reporting requirements.

The largest uses of TCE, by production volume, are for processing as a reactant/intermediate as well as aerosol and vapor degreasing uses. Based on the 2020 Risk Evaluation for TCE, over 84% of the production volume of TCE is processed as a reactant/intermediate. The majority of the volume is for TCE processed as an intermediate in the production of HFC–134a, a refrigerant widely used in a broad range of applications. The second largest use of TCE is in industrial and commercial uses for aerosol and vapor degreasing. TCE is a relatively inexpensive solvent useful for cleaning contaminated metal parts and other fabricated materials (Ref. 1).

TCE has many other uses, which, based on the 2020 Risk Evaluation for TCE, collectively constitute about 1% of the production volume (Ref. 1). In battery separator manufacturing, TCE is used as an extraction solvent to produce the desired porosity in lead-acid and lithium battery separators, which are essential to power vehicles and systems in the U.S. supply chain.

D. Reasonably Ascertainable Economic Consequences of the Final Rule

1. Likely Effect of the Rule on the National Economy, Small Business, Technological Innovation, the Environment, and Public Health

The reasonably ascertainable economic consequences of this rule include several components, all of which are described in the Economic Analysis for this rule (Ref. 3). With respect to the anticipated effects of this rule on the national economy, EPA considered the number of businesses and workers that would be affected and the costs and benefits to those businesses and workers and did not find that there would be an impact on the national economy (Ref. 3). The economic impact of a regulation on the national economy becomes measurable only if the economic impact of the regulation reaches 0.25% to 0.5% of Gross Domestic Product (GDP) (Ref. 3). Given the current (real) GDP [of $60.4 trillion (2022)], this is equivalent to a cost of $151 billion to $302 billion. Therefore, because EPA has estimated that the monetized costs of the rule at $64.1 million annualized over 20 years at a 2% discount rate, $ 71.2 million annualized over 20 years at a 3% discount rate, and $102.4 million annualized over 20 years at a 7% discount rate, EPA has concluded that this action is highly unlikely to have any measurable effect on the national economy (Ref. 3). EPA does not have data to quantify employment impacts of the final rule. Instead, workers currently using TCE are expected to continue employment while shifting away from TCE use and towards alternatives. However, EPA acknowledges that transitional employment impacts may be experienced by some workers at facilities that opt to close or shift operations abroad instead of complying with requirements at the facilities currently using TCE. EPA considered the employment impacts of this final rule and found that the direction of change in employment is uncertain, but EPA expects the short-term and longer-term employment effects to be small.

Of the small businesses potentially impacted by this rule, 98.5% are expected to have impacts of less than 1% to their firm revenues, 0% are expected to have impacts between 1 and 3% to their firm revenues, and 1.5% are expected to have impacts greater than 3% to their firm revenues. The largest segment of businesses that will be affected by this regulation are commercial users of liquid and aerosol degreasers. Costs of alternatives were found to be both higher and lower than products containing TCE. For most product types, alternatives with similar efficacy are available with costs that both lower and higher than TCE products. However, there may be some applications where TCE is more effective, reducing labor time and wait time, and/or where extensive safety testing might be required. EPA was unable to quantify these costs.

With respect to this rule's effect on technological innovation, EPA expects this action to spur more innovation than it will hinder. A prohibition or significant restriction on the manufacture, processing, and distribution in commerce of TCE for uses covered in this final rule may increase demand for safer chemical substitutes. This rule is not likely to have significant effects on the environment because TCE does not present an unreasonable risk to the environment, though this rule does present the potential for small reductions in air emissions and soil contamination associated with improper disposal of products containing TCE. The effects of this rule on public health are estimated to be positive, due to the reduced risk of cancer and other non-cancer endpoints from exposure to TCE.

2. Costs and Benefits of the Regulatory Action and of the One or More Primary Alternative Regulatory Actions Considered by the Administrator

The costs and benefits that can be monetized for this rule are described at length in in the Economic Analysis (Ref. 3). The monetized costs for this rule are estimated to range from $64.1 million annualized over 20 years at a 2% discount rate, $71.2 million annualized over 20 years at a 3% discount rate, and $102.4 million annualized over 20 years at a 7% discount rate. The monetized benefits are estimated to range from $22.9 to $23.2 million annualized over 20 years at a 2% discount rate, $18.2 to $18.3 million annualized over 20 years at a 3% discount rate and $8.7 to $8.9 million annualized over 20 years at a 7% discount rate.

EPA considered the estimated costs to regulated entities as well as the cost to administer and enforce an alternative regulatory action. Estimated costs for regulatory alternative can be found in the Economic Analysis for this final rule (Ref. 3).

This final rule is expected to achieve health benefits for the American public, some of which can be monetized and others that, while tangible and significant, cannot be monetized. EPA determined that the balance of costs and benefits of this rule cannot be fairly described without considering the additional, non-monetized benefits of mitigating the non-cancer adverse effects. These effects may include neurotoxicity, kidney toxicity, liver toxicity, immunological and hematological effects, reproductive effects, and developmental effects. The multitude of adverse effects from TCE exposure can profoundly impact an individual's quality of life, as discussed in the proposed rule in Unit II.A. (overview), in this rule in Unit II.C.3. (description of the unreasonable risk), Unit V.A. (discussion of the health effects), and the 2020 Risk Evaluation for TCE. Chronic adverse effects of TCE exposure include both cancer and the non-cancer effects listed in this paragraph. Acute effects of TCE exposure could be experienced for a shorter portion of life but are nevertheless significant in nature. The incremental improvements in health outcomes achieved by given reductions in exposure cannot be quantified for non-cancer health effects associated with TCE exposure, and therefore cannot be converted into monetized benefits. The qualitative discussion throughout this rulemaking and in the Economic Analysis highlights the importance of the non-cancer effects. The value of reducing these effects includes willingness-to-pay to avoid illness, which includes cost of illness and other personal costs such as pain and suffering. Considering only monetized benefits underestimates the impacts of TCE adverse outcomes and therefore underestimates the benefits of this rule.

3. Cost Effectiveness of the Regulatory Action and of One or More Primary Alternative Regulatory Actions Considered by the Administrator

Cost effectiveness is a method of comparing certain actions in terms of the expense per item of interest or goal. A goal of this regulatory action is to prevent unreasonable risk resulting from exposure to TCE. The final rule would cost $15.4 million per potential prevented cancer case while the alternative regulatory action would cost $18.6 million using annualized costs for the 2 percent discount rate and cancer cases avoided from one year of reduced exposure under the policy options (the average across the 20-year analytical timeframe). Thus, the final rule has a lower cost per cancer case avoided compared to the alternative option, making it the most cost-effective of the two options considered. The primary differences between the final and alternative option are that the alternative includes fewer TSCA section 6(g) exemptions delaying prohibitions

on some uses which fall under interim WCPP in the final rule and a lower interim ECEL (0.0011 ppm). EPA received multiple public comments providing information on the impacts of a lower ECEL level and the need for longer duration and additional limited exemptions.

VI. TSCA Section 9 Analysis and Section 14 and 26 Considerations

A. TSCA Section 9(a) Analysis

TSCA section 9(a) provides that, if the Administrator determines, in the Administrator's discretion, that an unreasonable risk may be prevented or reduced to a sufficient extent by an action taken under a Federal law not administered by EPA, the Administrator must submit a report to the agency administering that other law that describes the risk and the activities that present such risk. TSCA section 9(a) describes additional procedures and requirements to be followed by EPA and the other Federal agency after submission of the report. As discussed in this Unit, the Administrator does not determine that unreasonable risk from TCE under the conditions of use may be prevented or reduced to a sufficient extent by an action taken under a Federal law not administered by EPA. EPA's section 9(a) analysis can be found in full in Unit VIII.A. of the 2023 TCE proposed rule, and responses to comments on that 9(a) analysis can be found in the Response to Comments document, section 9.1 (Ref. 11).

TSCA section 9(d) instructs the Administrator to consult and coordinate TSCA activities with other Federal agencies for the purpose of achieving the maximum enforcement of TSCA while imposing the least burden of duplicative requirements. For this rulemaking, EPA has coordinated with appropriate Federal executive departments and agencies including but not limited to OSHA and the Consumer Product Safety Commission (CPSC), to, among other things, identify their respective authorities, jurisdictions, and existing laws with regard to the risk evaluation and risk management of TCE.

As discussed in more detail in the 2023 TCE proposed rule, OSHA requires that employers provide safe and healthful working conditions by setting and enforcing standards and by providing training, outreach, education, and assistance. OSHA, in 1971, established a PEL for TCE of 100 ppm of air as an 8-hour TWA with an acceptable ceiling concentration of 200 ppm and an acceptable maximum peak above the acceptable ceiling concentration for an eight-hour shift of 300 ppm, with a maximum duration of 5 minutes in any 2 hours. However, the exposure limits established by OSHA are higher than the exposure limit that EPA determined will be sufficient to address the unreasonable risk identified under TSCA from occupational inhalation exposures associated with certain conditions of use. Gaps exist between OSHA's authority to set workplace standards under the OSH Act and EPA's obligations under TSCA section 6 to eliminate unreasonable risk presented by chemical substances under the conditions of use. The U.S. CPSC, under authority provided to it by Congress in the CPSA, protects the public from unreasonable risk of injury or death associated with consumer products. Under the CPSA, CPSC has the authority to regulate TCE in consumer products, but not in other sectors such as automobiles, some industrial and commercial products, or aircraft for example.

EPA therefore concludes that TSCA is the only regulatory authority able to prevent or reduce unreasonable risk of TCE to a sufficient extent across the range of conditions of use, exposures, and populations of concern. An action under TSCA is also able to address occupational unreasonable risk and would reach entities that are not subject to OSHA. Moreover, the timeframe and any exposure reduction as a result of updating OSHA or CPSC regulations for TCE cannot be estimated, while TSCA imposes a much more accelerated two-year statutory timeframe for proposing and finalizing requirements to address unreasonable risk. Regulating TCE's unreasonable risk utilizing TSCA authority will also avoid the situation where a patchwork of regulations among several Agencies using multiple laws and differing legal standards would occur and is therefore a more efficient and effective means of addressing the unreasonable risk of TCE. Finally, as discussed in greater detail in the 2023 TCE proposed rule, the 2016 amendments to TSCA altered both the manner of identifying unreasonable risk and EPA's authority to address unreasonable risk, such that risk management is increasingly distinct from provisions of the CPSA, FHSA, or OSH Act. For these reasons, in the Administrator's discretion, the Administrator has analyzed this issue and does not determine that unreasonable risk from TCE may be prevented or reduced to a sufficient extent by an action taken under a Federal law not administered by EPA.

B. TSCA Section 9(b) Analysis

If EPA determines that actions under other Federal laws administered in whole or in part by EPA could eliminate or sufficiently reduce a risk to health or the environment, TSCA section 9(b) instructs EPA to use these other authorities to protect against that risk ''unless the Administrator determines, in the Administrator's discretion, that it is in the public interest to protect against such risk'' under TSCA. In making such a public interest finding, TSCA section 9(b)(2) states: ''the Administrator shall consider, based on information reasonably available to the Administrator, all relevant aspects of the risk . . . and a comparison of the estimated costs and efficiencies of the action to be taken under this title and an action to be taken under such other law to protect against such risk.''

Although several EPA statutes have been used to limit TCE exposure (Ref. 10), regulations under those EPA statutes largely regulate releases to the environment, rather than occupational or consumer exposures. While these limits on releases to the environment are protective in the context of their respective statutory authorities, regulation under TSCA is also appropriate for occupational and consumer exposures and in some cases can provide upstream protections that would prevent the need for release restrictions required by other EPA statutes (*e.g.,* RCRA, CAA, CWA). Updating regulations under other EPA statutes would not be sufficient to address the unreasonable risk of injury to the health of workers, occupational non-users, consumers, and bystanders who are exposed to TCE under its conditions of use. EPA's section 9(b) analysis can be found in full in Unit VIII.B. of the 2023 TCE proposed rule, and EPA's responses to comments on that section 9(b) analysis can be found in the Response to Comments document, section 9.2 (Ref. 11).

For these reasons, the Administrator does not determine that unreasonable risk from TCE under its conditions of use, as evaluated in the 2020 Risk Evaluation for TCE (Ref. 1), could be eliminated or reduced to a sufficient extent by actions taken under other Federal laws administered in whole or in part by EPA.

C. TSCA Section 14 Requirements

EPA is also providing notice to manufacturers, processors, and other interested parties about potential impacts to CBI. Under TSCA sections 14(a) and (b)(4), if EPA promulgates a rule pursuant to TSCA section 6(a) that

establishes a ban or phaseout of a chemical substance, the protection from disclosure of any CBI regarding that chemical substance and submitted pursuant to TSCA will be ''presumed to no longer apply,'' subject to the limitations identified in TSCA section 14(b)(4)(B)(i) through (iii). Pursuant to TSCA section 14(b)(4)(B)(iii), the presumption against protection from disclosure will apply only to information about the specific conditions of use that this rule prohibits or phases out. Per TSCA section 14(b)(4)(B)(i), the presumption against protection will not apply to information about certain emergency uses that this rule exempts from a ban or phaseout pursuant to TSCA section 6(g). Manufacturers or processors seeking to protect such information may submit a request for nondisclosure as provided by TSCA sections 14(b)(4)(C) and 14(g)(1)(E). Any request for nondisclosure must be submitted within 30 days after receipt of notice from EPA under TSCA section 14(g)(2)(A) stating EPA will not protect the information from disclosure. EPA anticipates providing such notice via the Central Data Exchange.

D. TSCA Section 26 Considerations

As explained in the 2023 TCE proposed rule, EPA fulfilled TSCA section 26(h) by using scientific information, technical procedures, measures, methods, protocols, methodologies, and models consistent with the best available science. Comments received on the proposed rule about whether EPA adequately assessed reasonably available information under TSCA section 26 on the risk evaluation, and responses to those comments, can be found in the Response to Comments document, sections 2.1 and 3.1 (Ref. 11).

VIII. Statutory and Executive Order Reviews

Additional information about these statutes and executive orders can be found at *https://www.epa.gov/laws-regulations/*laws-and-executive-orders.

A. Executive Order 12866: Regulatory Planning and Review and Executive Order 14094: Modernizing Regulatory Review

This action is a ''significant regulatory action'' as defined in Executive Order 12866 (58 FR 51735, October 4, 1993), as amended by Executive Order 14094 (88 FR 21879, April 11, 2023). Accordingly, EPA submitted this action to the Office of Management and Budget (OMB) for Executive Order 12866 review. Documentation of any changes made in response to Executive Order 12866 review is available in the docket. EPA prepared an analysis of the potential costs and benefits associated with this action (Ref. 3), which is available in the docket and summarized in Unit I.E.

B. Paperwork Reduction Act (PRA)

The information collection activities in this final rule have been submitted to OMB for approval under the PRA, 44 U.S.C. 3501 *et seq.* The Information Collection Request (ICR) document that EPA prepared has been assigned EPA ICR No. 2775.02 and OMB Control No. 2070–0232 (Ref. 97). The ICR is in the docket and is briefly summarized here. The information collection requirements are not enforceable until OMB approves them.

There are two primary provisions of the rule that may increase burden under the PRA. The first is downstream notification, which is required to be carried out by updates to the relevant SDS and required for manufacturers, processors, and distributors in commerce of TCE, who would provide notice to companies downstream upon shipment of TCE about the prohibitions. The information submitted to downstream companies through the SDS would provide knowledge and awareness of the restrictions to these companies. The second primary provision of the rule that may increase burden under the PRA is WCPP-related information generation, recordkeeping, and notification requirements (including development of exposure control plans; exposure level monitoring and related recordkeeping; development of documentation for a PPE program and related recordkeeping; development of documentation for a respiratory protection program and related recordkeeping; development and notification to potentially exposed persons (employees and others in the workplace) about how they can access the exposure control plans, exposure monitoring records, PPE program implementation documentation, and respirator program documentation; and development of documentation demonstrating eligibility for an exemption from the prohibitions, and related recordkeeping).

Respondents/affected entities: Persons that manufacture (including import), process, distribute in commerce, use, or dispose of TCE or products containing TCE. See also Unit I.A.

Respondent's obligation to respond: Mandatory (TSCA section 6(a) and 40 CFR part 751).

Estimated number of respondents: 23,070.

Frequency of response: On occasion.

Total estimated burden: 38,625 hours (per year). Burden is defined at 5 CFR 1320.3(b).

Total estimated cost: $7,953,367 (per year), includes $5,351,750 annualized capital or operation and maintenance costs.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. The OMB control numbers for EPA regulations in 40 CFR are listed in 40 CFR part 9. When OMB approves this ICR, the OMB control number will be included on the approved collection instruments and added to 40 CFR part 9 to display the valid OMB control number assigned to the approved information collection activities contained in this final rule.

C. Regulatory Flexibility Act (RFA)

Pursuant to sections 603 and 609(b) of the RFA, 5 U.S.C. 601 *et seq.,* EPA prepared an IRFA for the 2023 TCE proposed rule (Ref. 20) and convened a SBAR Panel to obtain advice and recommendations from SERs that potentially would be subject to the rule's requirements. Summaries of the IRFA and Panel recommendations are presented in the 2023 TCE proposed rule, and copies of the related documents are in the docket.

As required by section 604 of the RFA, EPA prepared a FRFA for this action (Ref. 21). The FRFA addresses the issues raised by public comments on the IRFA for the proposed rule. The complete FRFA is available in the docket and is summarized here.

1. Statement of Need and Rule Objectives

Under TSCA section 6(a) (15 U.S.C. 2605(a)), if EPA determines after a TSCA section 6(b) risk evaluation that a chemical substance presents an unreasonable risk of injury to health or the environment, without consideration of costs or other non-risk factors, including an unreasonable risk to a PESS identified as relevant to the risk evaluation, under the conditions of use, EPA must by rule apply one or more requirements listed in TSCA section 6(a) to the extent necessary so that the chemical substance or mixture no longer presents such risk. TCE was the subject of a risk evaluation under TSCA section 6(b)(4)(A) that was issued in November 2020. In addition, in January 2023, EPA issued a revised unreasonable risk determination that TCE as a whole chemical substance presents an unreasonable risk of injury to health under the conditions of use. As a result, EPA is taking action to the extent necessary so that TCE no longer presents such risk.

EPA developed this final rule after considering EPA's unreasonable risk determination for TCE, information provided in public comments on the proposed rule, findings from and comments on the SBAR Panel, other required consultations, and additional public outreach. More information on the 2023 TCE proposed rule, SBAR Panel, and outreach efforts for this action, is available in the docket for this rulemaking.

To address the identified unreasonable risk, this rule (1) prohibits the manufacture (including import), processing, and distribution in commerce of TCE for all uses (including all consumer uses), with longer timeframes for manufacture and processing related to certain uses and time-limited TSCA 6(g) exemptions for certain conditions of use; (2) requires strict workplace controls, including a TCE WCPP, which would include requirements for an inhalation exposure limit and glove requirements to limit dermal exposure to TCE, for conditions of use with long term phase-outs or time-limited exemptions under TSCA section 6(g); (3) establishes recordkeeping and downstream notification requirements; and (4) provides certain time-limited exemptions from requirements for conditions of use of TCE that are critical and essential, for which no technically and economically feasible, safer alternative is available, or where compliance with the requirement would significantly disrupt the national economy, national security, or critical infrastructure.

2. Significant Issues Raised by the Public Comments in Response to the IRFA and EPA Response

A summary of significant issues raised by comments about the IRFA (Ref. 20) and EPA's response is in the Response to Comments document (Ref 11), section 10.2.

3. SBA Office of Advocacy Comments and EPA Response

SBA Office of Advocacy provided comments on the proposed rule (EPA–HQ–OPPT–2020–0624). A summary of these comments and EPA's response is in section 3 of the FRFA (Ref. 21).

4. Estimate of the Number of Small Entities to Which the Final Rule Applies

This final rule potentially affects small manufacturers (including importers), processors, distributors, retailers, users of TCE or of products containing TCE, and entities engaging in disposal. EPA estimates that the rule would affect approximately 21,599 overall firms, of which 98.5% small entities have estimated impacts of less than 1% of revenues. End users with economically and technologically feasible alternatives are estimated to only incur costs associated with rule familiarization. For a full description of the estimated number of small entities affected by this rule, see the FRFA (Ref. 21).

5. Projected Reporting, Recordkeeping, and Other Compliance Requirements of the Final Rule

a. Compliance Requirements

EPA is prohibiting all conditions of use of TCE. As described in the final rule, EPA is prohibiting all manufacturing (including import), processing, and distribution in commerce of TCE for all uses (including all consumer uses), as described in Unit IV.B.2. with longer compliance timeframes for manufacture and processing related to certain uses and TSCA section 6(g) exemptions for certain conditions of use. EPA is also requiring strict workplace controls, including compliance with a TCE WCPP, which would include requirements for an interim ECEL, as well as dermal protection, to limit exposure to TCE, for conditions of use with long term phase-outs or time-limited exemptions under TSCA section 6(g), as described in Units IV.B., IV.E., and IV.G. After December 17, 2024, prohibitions on manufacturing, processing, and distribution in commerce of TCE for consumer use will occur in 90 days for manufacturers (*i.e.,* on March 17, 2025), 180 days for processors and distributors (*i.e.,* on June 16, 2025), and 270 days for industrial and commercial users and disposal (*i.e.,* on September 15, 2025), except as specified in paragraphs (b)(4) through (25) of section 751.305.

An interim WCPP encompasses inhalation exposure thresholds, includes monitoring and recordkeeping requirements to verify that those thresholds are not exceeded, and other components, such as dermal protection, while EPA determined that prohibition of all conditions of use is ultimately necessary to address the unreasonable risk.

b. Classes of Small Entities Subject to the Compliance Requirements

The small entities that would be potentially directly regulated by this rule are small businesses that manufacture (including import), process, distribute in commerce, use, or dispose of TCE, including retailers of TCE for end-consumer uses.

c. Professional Skills Needed To Comply

Entities subject to this rule that manufacture (including import), process, or distribute TCE in commerce will be required to cease such activity. The entity will be required to modify their SDS or develop another way to inform their customers of the prohibition on manufacture, processing, and distribution of TCE. They are also required to maintain ordinary business records, such as invoices and bills-of-lading, that demonstrate compliance with the prohibitions, restrictions, and other provisions of this regulation. These are all routine business tasks that do not require specialized skills or training.

Entities that use TCE in any industrial and commercial capacity will be required to cease, with some timeframes for prohibitions longer than others. Restriction or prohibition of these uses would likely require the implementation of an alternative chemical or the cessation of use of TCE in a process or equipment that may require persons with specialized skills, such as engineers or other technical experts. Instead of developing an alternative method themselves, commercial users of TCE may choose to contract with another entity to do so.

Entities that are permitted, on a time-limited basis until prohibition, to continue to manufacture, process, distribute, or use TCE are required to implement a WCPP for continued use of TCE. A transition to a WCPP may require persons with specialized skills such as an engineer or health and safety professional. Instead of implementing the WCPP, entities that use TCE may choose to contract with another entity to do so. Records have to be maintained for compliance with a WCPP, as applicable. While this recording activity itself may not require a special skill, the information to be measured and recorded may require persons with specialized skills such as an industrial hygienist.

6. Steps Taken To Minimize Economic Impact to Small Entities

a. SBAR Panel

As required by section 609(b) of the RFA, EPA conducted outreach to small entities and convened a SBAR Panel to obtain advice and recommendations of representatives of the small entities that potentially would be subject to the rule's requirements. The Panel solicited input on all aspects of these proposed regulations. Six potentially impacted small entities served as small-entity representatives (SERs) to the Panel, representing a broad range of small entities from diverse geographic locations. The Panel Report was signed on April 4, 2023 (Ref. 19).

Consistent with the RFA requirements, the Panel evaluated the assembled materials and small-entity comments on issues related to elements of the regulatory flexibility analysis. It is important to note that the Panel's findings and discussion were based on the information available at the time the final report was prepared. For the full list of Panel recommendations, see Section 8.A. of the FRFA (Ref. 21).

EPA detailed the SBAR Panel's request for comment on these specific topics in the IRFA and proposed rule and solicited comment from the public. During the comment period, the public provided comment on some of these areas. Those comments and others received on the proposed rule and EPA's responses are in the Response to Comments document (Ref. 11).

b. Alternatives Considered

EPA analyzed alternative regulatory approaches to identify which would be feasible, reduce burden to small businesses, and achieve the objective of the statute (*i.e.,* applying one or more requirements listed in TSCA section 6(a) to the extent necessary so that the chemical substance or mixture no longer presents an unreasonable risk). As described in more detail in Unit VI. of the proposed rule, and Unit II.D. of the final rule, EPA considered several factors, in addition to identified unreasonable risk, when selecting among possible TSCA section 6(a) requirements. To the extent practicable, EPA factored into its decisions: the effects of TCE on health and the environment, the magnitude of exposure to TCE of human beings and the environment, the benefits of TCE for various uses, and the reasonably ascertainable economic consequences of the rule. As part of this analysis, EPA considered—in addition to the prohibitions described in Unit IV.—a wide variety of control measures to address the unreasonable risk from TCE such as a WCPP, weight fractions, a certification and limited access program, and prescriptive controls. EPA's analysis of these risk management approaches is detailed in Unit VI.A.3. of the proposed rule.

Based on consideration of public comments received on the proposed rule, EPA has made some changes from the proposed rule to the final rule. These changes include aspects of the WCPP, longer compliance timeframes for certain uses, and TSCA section 6(g) exemptions for certain conditions of use. EPA is also requiring strict workplace controls, including compliance with a TCE WCPP, which would include requirements for an interim ECEL, as well as dermal protection, to limit exposure to TCE, for conditions of use with long term phase-outs or time-limited exemptions. Additional changes to the rule based on consideration of public comments are detailed in Unit III. of the final rule and include identification of a regulatory threshold for TCE. For additional information and rationale towards alternative actions, see Unit III.D. of this final rule and Section 8.B. of the FRFA (Ref. 21).

In addition, EPA is preparing a Small Entity Compliance Guide to help small entities comply with this rule. EPA expects that this guide will be made available on the EPA website prior to the effective date of this final rule.

D. Unfunded Mandates Reform Act (UMRA)

This action does not contain an unfunded mandate of $100 million (in 1995 dollars and adjusted annually for inflation) or more as described in UMRA, 2 U.S.C. 1531–1538, and does not significantly or uniquely affect small governments. The action will affect entities that use TCE. It is not expected to affect State, local, or Tribal governments because the use of TCE by government entities is minimal. The costs involved in this action are estimated not to exceed $183 million in 2023$ ($100 million in 1995$ adjusted for inflation using the GDP implicit price deflator) in any one year for State, local, and Tribal governments, in the aggregate, or for the private sector. Accordingly, this action is not subject to the requirements of sections 202, 203, or 205 of UMRA.

E. Executive Order 13132: Federalism

EPA has concluded that this action has federalism implications, as specified in Executive Order 13132 (64 FR 43255, August 10, 1999), because regulation under TSCA section 6(a) may preempt

state law. EPA provides the following federalism summary impact statement. The Agency consulted with state and local officials early in the process of developing the proposed action to permit them to have meaningful and timely input into its development. This included a consultation meeting on July 22, 2021, and a background presentation on September 9, 2020. EPA invited the following national organizations representing State and local elected officials to these meetings: Association of State Drinking Water Administrators, National Association of Clean Water Agencies, Western States Water Council, National Water Resources Association, American Water Works Association, Association of Metropolitan Water Agencies, Association of Clean Water Administrators, Environmental Council of the States, National Association of Counties, National League of Cities, County Executives of America, U.S. Conference of Mayors, and National Association of Attorneys General. A summary of the meeting with these organizations, including the views that they expressed, is available in the docket (Ref. 13). EPA provided an opportunity for these organizations to provide follow-up comments in writing but did not receive any such comments.

F. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

This action does not have Tribal implications as specified in Executive Order 13175 (65 FR 67249, November 9, 2000) because it will not have substantial direct effects on Tribal governments, on the relationship between the Federal Government and the Indian Tribes, or on the distribution of power and responsibilities between the Federal Government and Indian Tribes. TCE is not manufactured, processed, or distributed in commerce by Tribes and, therefore, this rulemaking would not impose substantial direct compliance costs on Tribal governments. Thus, Executive Order 13175 does not apply to this action.

Notwithstanding the lack of Tribal implications as specified by Executive Order 13175, EPA consulted with Tribal officials during the development of this action, consistent with the EPA Policy on Consultation and Coordination with Indian Tribes, which EPA applies more broadly than Executive Order 13175.

The Agency held a Tribal consultation from June 3, 2021, to August 20, 2021, with meetings on June 16 and July 6, 2021. Tribal officials were given the opportunity to meaningfully interact with EPA concerning the current status of risk management. During the consultation, EPA discussed risk management under TSCA section 6(a), findings from the 2020 Risk Evaluation for TCE, types of information to inform risk management, principles for transparency during risk management, and types of information EPA sought from Tribal officials. EPA briefed Tribal officials on the Agency's risk management considerations and Tribal officials raised no related issues or concerns to EPA during or in follow-up to those meetings (Ref. 14). EPA received no written comments as part of this consultation.

G. Executive Order 13045: Protection of Children From Environmental Health Risks and Safety Risks

Executive Order 13045 (62 FR 19885, April 23, 1997) directs Federal agencies to include an evaluation of the health and safety effects of the planned regulation on children in Federal health and safety standards and explain why the regulation is preferable to potentially effective and reasonably feasible alternatives. While the environmental health or safety risks addressed by this action present a disproportionate risk to children due to TCE's developmental toxicity, this action is not subject to Executive Order 13045 because it is not a significant regulatory action under section 3(f)(1) of Executive Order 12866. However, because there is evidence of an association between TCE and developmental toxicity, the prohibitions and restrictions on TCE in this final rule are expected to strengthen protection of children's health. In addition, EPA's *Policy on Children's Health* applies to this action. Information on how the policy was applied is available in Unit II.D.2.c.

H. Executive Order 13211: Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution or Use

This action is not a ''significant energy action'' under Executive Order 13211 (66 FR 28355, May 22, 2001) because it is not likely to have a significant adverse effect on the supply, distribution or use of energy and has not been designated by the Administrator of the Office of Information and Regulatory Affairs as a significant energy action.

I. National Technology Transfer and Advancement Act (NTTAA)

Pursuant to the NTTAA section 12(d), 15 U.S.C. 272, the Agency has determined that this rulemaking involves environmental monitoring or measurement, specifically for occupational inhalation exposures to TCE. Consistent with the Agency's Performance Based Measurement System (PBMS), EPA will not require the use of specific, prescribed analytic methods. Rather, the Agency will allow the use of any method that meets the prescribed performance criteria. The PBMS approach is intended to be more flexible and cost-effective for the regulated community; it is also intended to encourage innovation in analytical technology and improved data quality. EPA is not precluding the use of any method, whether it constitutes a voluntary consensus standard or not, as long as it meets the performance criteria specified.

For this rulemaking, the key consideration for the PBMS approach is the ability to accurately detect and measure airborne concentrations of TCE at the interim ECEL and the interim ECEL action level. Some examples of methods which meet the criteria are included in appendix B of the ECEL memo (Ref. 98). EPA recognizes that there may be voluntary consensus standards that meet the criteria (Ref. 98).

J. Executive Order 12898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations and Executive Order 14096: Revitalizing Our Nation's Commitment to Environmental Justice for All

EPA believes that the human health and environmental conditions that exist prior to this action result in or have the potential to result in disproportionate and adverse human health or environmental effects on communities with EJ concerns in accordance with Executive Order 14096 (88 FR 25251, April 26, 2023) (building on and supplementing Executive Order 12898 (59 FR 7629, February 16, 1994). As described more fully in the Economic Analysis for this rulemaking (Ref. 3), EPA conducted an analysis to characterize the baseline conditions faced by communities and workers affected by the regulation to identify the potential for disproportionate impacts on communities with environmental justice concerns using information about the facilities, workforce, and communities potentially affected by the regulatory options under current conditions, before the regulation would go into effect. The analysis drew on publicly available data provided by EPA and the U.S. Census Bureau, including data from the Toxics Release Inventory (TRI), Chemical Data Reporting (CDR), National Emissions Inventory (NEI), the American Community Survey (ACS), and the Quarterly Workforce Indicators

(QWI). The baseline characterization suggests that workers in affected industries and regions, as well as residents of nearby communities, are more likely to be people of color than the general population in affected states, although this varied by use assessed. Based on reasonably available information, EPA determined that there are potential environmental justice concerns in communities surrounding facilities subject to this regulation (Ref. 3).

EPA believes that this action is likely to reduce existing disproportionate and adverse effects on communities with environmental justice concerns. While this regulatory action applies requirements to the extent necessary so that TCE no longer presents an unreasonable risk, EPA is not able to quantify the distribution of the change in risk for affected populations. EPA is also unable to quantify the changes in risks for affected populations from non-TCE-using technologies or practices that firms may adopt in response to the regulation to determine whether any such changes could pose environmental justice concerns. Data limitations that prevent EPA from conducting a more comprehensive analysis are summarized in the Economic Analysis (Ref. 3).

EPA additionally identified and addressed potential EJ concerns by conducting outreach to advocates of communities that might be subject to disproportionate exposure to TCE. On June 16, 2021, and July 6, 2021, EPA held public meetings as part of this consultation (Ref. 18). See also Unit II.D. These meetings were held pursuant to Executive Order 12898 and Executive Order 14008, Tackling the Climate Crisis at Home and Abroad (86 FR 7619, February 1, 2021). EPA received three written comments following the EJ meetings, in addition to oral comments provided during the consultations (Refs. 15, 16, 17). In general, commenters supported strong regulation of TCE to protect lower-income communities and workers. Commenters supported strong outreach to affected communities, encouraged EPA to follow the hierarchy of controls, favored prohibitions, and noted the uncertainty, and, in some cases, inadequacy, of PPE.

The information supporting this Executive Order review is contained in Unit II.D., as well as in the Economic Analysis (Ref. 3). EPA's presentations, a summary of EPA's presentation and public comments made, and fact sheets for the EJ consultations related to this rulemaking are available at *https://www.epa.gov/assessing-and-managing-chemicals-under-tsca/materials-june-and-july-2021-environmental-justice*. These materials are also available in the docket for this rulemaking.

K. Congressional Review Act (CRA)

This action is subject to the CRA, 5 U.S.C. 801 *et seq.,* and the EPA will submit a rule report to each House of the Congress and to the Comptroller General of the United States. This action is not a ''major rule'' as defined by 5 U.S.C. 804(2).

List of Subjects in 40 CFR Part 751

Environmental protection, Chemicals, Export notification, Hazardous substances, Import certification, Reporting and recordkeeping.

Michael S. Regan,

Administrator.

Therefore, for the reasons stated in the preamble, 40 CFR chapter I is amended to read as follows:

PART 751—REGULATION OF CERTAIN CHEMICAL SUBSTANCES AND MIXTURES UNDER SECTION 6 OF THE TOXIC SUBSTANCES CONTROL ACT

■ 1. The authority citation for part 751 continues to read as follows:

Authority: 15 U.S.C. 2605, 15 U.S.C. 2625(l)(4).

■ 2. Add subpart D to read as follows:

Subpart D—Trichloroethylene (TCE)

Sec.

751.301 General.
751.303 Definitions.
751.305 Prohibitions of manufacturing, processing, distribution in commerce, use and disposal.
751.307 Phase-out of processing trichloroethylene to manufacture of HFC–134a.
751.309 Phase-out of trichloroethylene use in vapor degreasing for booster rocket nozzles.
751.311 Phase-out of TCE use in the industrial and commercial use of TCE in laboratory use in asphalt testing and recovery.
751.313 Phase-out of disposal of TCE to industrial pre-treatment, treatment, or publicly owned treatment works.
751.315 Workplace chemical protection program.
751.317 Workplace requirements for energized electrical cleaner.
751.319 Workplace requirements for wastewater.
751.321 Downstream notification.
751.323 Recordkeeping requirements.
751.325 Exemptions.

Subpart D—Trichloroethylene (TCE)

§ 751.301 General.

(a) *Applicability.* This subpart sets certain restrictions on the manufacture (including import), processing, distribution in commerce, use, and disposal of trichloroethylene (TCE) (CASRN 79–01–6) to prevent unreasonable risk of injury to health in accordance with TSCA section 6(a).

(b) *Regulatory threshold.* Unless otherwise specified in this subpart, the prohibitions and restrictions of this subpart do not apply to products containing TCE at thresholds less than 0.1 percent by weight. This threshold does not apply to wastewater.

(c) *Byproducts within site-limited, physically enclosed systems.* Unless otherwise specified in this subpart, the prohibitions and restrictions of this subpart do not apply to TCE processed as a byproduct when that byproduct TCE is processed within a site-limited, physically enclosed system that is part of the same overall manufacturing process from which the byproduct TCE was generated. This exclusion does not permit TCE to be present in any product that results from such site-limited, physically enclosed systems, except as permitted by paragraph (b) of this section.

(d) *Owner and operator requirements.* Any requirement for an owner or operator or an owner and operator is a requirement for any individual that is either an owner or an operator.

§ 751.303 Definitions.

The definitions in subpart A of this part apply to this subpart unless otherwise specified in this section. In addition, the following definitions apply:

Distribute in commerce has the same meaning as in section 3 of the Act, except that the term does not include retailers for purposes of § 751.321 and § 751.323.

Interim ECEL means a concentration of airborne TCE of 0.2 parts per million (ppm) calculated as an eight (8)-hour time weighted average (TWA) that will be in place only for the timeframes indicated for specified conditions of use, after which prohibitions would take effect.

Interim ECEL action level means a concentration of airborne TCE of 0.1 parts per million (ppm) calculated as an eight (8)-hour time-weighted average (TWA).

Site-limited has the same meaning as in 40 CFR 711.3.

§ 751.305 Prohibitions of manufacturing, processing, distribution in commerce, use and disposal.

(a) Applicability. The provisions of this section apply to the following:

(1) Manufacturing (including importing and manufacturing for export);

(2) Processing (including processing for export);

(3) All industrial and commercial uses;

(4) All consumer uses;

(5) Distribution in commerce; and

(6) Disposal of TCE to industrial pre-treatment, industrial treatment, or publicly owned treatment works.

(b) Prohibitions. (1) After March 17, 2025, all persons are prohibited from manufacturing (including importing and manufacturing for export) TCE, except as specified for manufacturing in paragraphs (b)(5) through (25) of this section.

(2) After June 16, 2025, all persons are prohibited from processing (including processing for export) and distributing in commerce (including making available) TCE, including any TCE-containing products, except as specified for processing or distributing in commerce in paragraphs (b)(5) through (25) of this section, and all retailers are prohibited from distributing in commerce (including making available) TCE for any use.

(3) After September 15, 2025, all persons are prohibited from industrial and commercial use of TCE, including any TCE-containing products, except as specified for industrial or commercial use in paragraphs (b)(5) through (25) of this section.

(4) After September 15, 2025, all persons manufacturing (including importing), processing, and using TCE are prohibited from disposal of TCE to industrial pre-treatment, industrial treatment, or publicly owned treatment works except as specified in paragraphs (b)(14), (23) (24), and (26) of this section.

(5) After June 16, 2025, all persons are prohibited from manufacturing (including importing) TCE for industrial and commercial use for batch vapor degreasing in open-top and closed-loop degreasing equipment, except for the use specified in paragraphs (b)(11), (15), (16), (17), (20), and (21) of this section.

(6) After September 15, 2025, all persons are prohibited from processing TCE for industrial and commercial use for batch vapor degreasing in open-top and closed-loop degreasing equipment, except for the use specified in paragraphs (b)(11), (15), (16), (17), (20), and (21) of this section.

(7) After December 18, 2025, all persons are prohibited from the industrial and commercial use of TCE for batch vapor degreasing in open-top and closed-loop degreasing equipment, except for the use specified in paragraphs (b)(11), (15), (16), (17), (20), and (21) of this section.

(8) After June 10, 2026, all persons are prohibited from manufacturing (including importing) TCE for: (i) Processing of TCE as a reactant/intermediate, except for the use as specified in paragraph (b)(18) of this section; and (ii) Processing TCE for the industrial and commercial use of TCE as a processing aid for: process solvent used in battery manufacture; process solvent used in polymer fiber spinning, fluoroelastomer manufacture and Alcantara manufacture; extraction solvent used in caprolactam manufacture; precipitant used in beta-cyclodextrin manufacture, except for those uses specified in paragraphs (b)(14), (23) and (24) of this section.

(9) After December 18, 2026, all persons are prohibited from: (i) Processing TCE as a reactant/intermediate, except for the use as specified in paragraph (b)(18) of this section; and (ii) Processing for and industrial and commercial use of TCE as a processing aid in: process solvent used in battery manufacture; process solvent used in polymer fiber spinning, fluoroelastomer manufacture and Alcantara manufacture; extraction solvent used in caprolactam manufacture; precipitant used in beta-cyclodextrin manufacture, except for those uses specified in paragraphs (b)(14), (23) and (24) of this section.

(10) After December 18, 2027, all persons are prohibited from industrial and commercial use of TCE in energized electrical cleaners and from the manufacturing (including importing), processing, and distribution in commerce of TCE for such a use.

(11) After December 18, 2029, all persons are prohibited from the industrial and commercial use of TCE as a solvent in closed-loop batch vapor degreasing for rayon fabric scouring for end use in producing rocket booster nozzles for Federal agencies and their contractors, and manufacturing (including importing), processing, and distribution in commerce of TCE for such use. If such persons obtain and maintain the records required by §§ 751.309 and 751.323 demonstrating that a final pre-launch test was completed using an alternative to TCE in the production of the rocket booster nozzles, the industrial and commercial use of TCE as a solvent in closed-loop batch vapor degreasing for rayon fabric scouring for end use in producing rocket booster nozzles for Federal agencies and their contractors, and manufacturing (including importing), processing, and distribution in commerce of TCE for such use may continue beyond December 18, 2029.

(12) After December 18, 2029, all persons are prohibited from industrial and commercial use of TCE in adhesives and sealants for essential aerospace applications, and from the manufacturing (including importing), processing, and distribution in commerce of TCE for such uses.

(13) After December 18, 2029, all persons are prohibited from the industrial and commercial use of TCE as a laboratory chemical for asphalt testing and recovery using manual centrifuge processes, and manufacturing (including importing), processing, and distribution in commerce of TCE for such use, as further detailed in § 751.311.

(14) After December 18, 2029, all persons are prohibited from the industrial and commercial use of TCE as a processing aid for lithium battery separator manufacturing, and the manufacturing (including importing), processing, and distribution in commerce of TCE for such use as well as the disposal of TCE from such industrial or commercial use to industrial pre-treatment, industrial treatment, or publicly owned treatment works.

(15) After December 18, 2029, all persons are prohibited from the industrial and commercial use of TCE for batch vapor degreasing for land-based DoD defense systems by Federal agencies and their contractors, and from the manufacturing (including importing), processing, and distribution in commerce of TCE for such use.

(16) After December 18, 2031, all persons are prohibited from the industrial and commercial use of TCE as a solvent in closed-loop batch vapor degreasing necessary for rocket engine cleaning by Federal Agencies and their contractors as described in § 751.325(b)(1) and the manufacturing (including importing), processing, and distribution in commerce of TCE for such use.

(17) After December 18, 2031, all persons are prohibited from the industrial and commercial use of TCE as a solvent in closed-loop and open-top batch vapor degreasing for essential aerospace parts and components and narrow tubing for medical devices, and manufacturing (including importing), processing, and distribution in commerce of TCE for such use as described in § 751.325(b)(2).

(18) After June 18, 2033, all persons are prohibited from the industrial and commercial use of TCE as an intermediate for manufacturing hydrofluorocarbon 134-a, also known as 1,1,1,2-tetrafluroethane (HFC–134a: CASRN 811–97–2), and manufacturing (including importing), processing, and distribution in commerce for such use as described in § 751.307.

(19) After December 18, 2034, all persons are prohibited from the industrial and commercial use of TCE in laboratory use for asphalt testing and recovery, and manufacturing (including importing), processing, and distribution in commerce of TCE for such use, as described in § 751.311.

(20) After December 18, 2034, all persons are prohibited from the industrial and commercial use of TCE as a solvent in closed-loop batch vapor degreasing for rayon fabric scouring for end use in producing rocket booster nozzles for Federal agencies and their contractors, and manufacturing (including importing), processing, and distribution in commerce of TCE for such use.

(21) After December 18, 2034, for vessels of the Armed Forces and their systems, and in the maintenance, fabrication, and sustainment for and of such vessels and systems, prohibit the industrial and commercial use of TCE as (and manufacturing (including importing), processing, and distribution in commerce of TCE for): potting compounds for naval electronic systems and equipment; sealing compounds for high and ultra-high vacuum systems; bonding compounds for materials testing and maintenance of underwater systems and bonding of nonmetallic materials; and cleaning agents to satisfy cleaning requirements (which includes degreasing using wipes, sprays, solvents and vapor degreasing) for: materials and components required for military ordnance testing; temporary resin repairs in vessel spaces where welding is not authorized; ensuring polyurethane adhesion for electronic systems and equipment repair and installation of elastomeric materials; various naval combat systems, radars, sensors, equipment; fabrication and prototyping processes to remove coolant and other residue from machine parts; machined part fabrications for naval systems; installation of topside rubber tile material aboard vessels; and vapor degreasing required for substrate surface preparation prior to electroplating processes.

(22) After December 18, 2034, all persons are prohibited from manufacturing (including import), processing, distribution in commerce, or use of TCE, including any TCE containing products, for industrial or commercial use in an emergency by NASA or its contractors as described in § 751.325(b)(4), and manufacturing (including importing), processing, and distribution in commerce of TCE for such use.

(23) After December 18, 2044, all persons are prohibited from the industrial and commercial use of TCE as a processing aid for lead-acid battery separator manufacturing, and the manufacturing (including importing), processing, and distribution in commerce of TCE for such use, as well as the disposal of TCE from such industrial or commercial use to industrial pre-treatment, industrial treatment, or publicly owned treatment works.

(24) After December 18, 2039, all persons are prohibited from the industrial and commercial use of TCE as a processing aid for specialty polymeric microporous sheet materials manufacturing, and the manufacturing (including importing), processing, and distribution in commerce of TCE for such use, as well as the disposal of TCE from such industrial or commercial use to industrial pre-treatment, industrial treatment, or publicly owned treatment works.

(25) After December 18, 2074, all persons are prohibited from industrial and commercial uses of TCE for the laboratory uses described in § 751.325(b)(7), and from the manufacturing (including importing), processing, and distribution in commerce of TCE for such uses.

(26) After December 18, 2074, all persons are prohibited from disposal of TCE to industrial pre-treatment, industrial treatment, or publicly owned treatment works for the purposes of cleanup projects of TCE-contaminated water and groundwater as described in § 751.325(b)(8).

§ 751.307 Phase-out of processing trichloroethylene to manufacture of HFC–134a.

(a) Baseline. Before June 16, 2025, each manufacturer of HFC–134a who processes TCE as an intermediate must establish a baseline annual volume of TCE processed as an intermediate.

(1) The manufacturer must use the average annual volume of any 12 consecutive months in the 3 years preceding December 17, 2024 to calculate the baseline.

(2) The manufacturer must retain records that demonstrate how the baseline annual volume was calculated, in accordance with § 751.323(d)(1).

(b) Phase-out. (1) Beginning June 7, 2027, each manufacturer of HFC–134a who processes TCE as an intermediate is not permitted to process TCE as an intermediate at an annual volume greater than 75 percent of the baseline.

(2) Beginning June 18, 2029, each manufacturer of HFC–134a who processes TCE as an intermediate is not permitted to process TCE as an intermediate at an annual volume greater than 50 percent of the baseline.

(3) Beginning June 18, 2031, each manufacturer of HFC–134a who processes TCE as an intermediate is not permitted to process TCE as an intermediate at an annual volume greater than 25 percent of the baseline so established.

(4) Beginning June 18, 2033, each manufacturer of HFC–134a who processes TCE as an intermediate is prohibited from processing TCE as an intermediate.

(c) Workplace chemical protection program. The owner or operator of the location where TCE is processed as an intermediate in accordance with this section, and manufacturers (including importers) and processors of TCE for such use, must comply with § 751.315.

(d) *Recordkeeping.* The owner or operator of the location where TCE is processed as an intermediate in accordance with this section must comply with the recordkeeping requirements in § 751.323.

§ 751.309 Phase-out of trichloroethylene use in vapor degreasing for rocket booster nozzles.

(a) In accordance with § 751.305(b)(11), until December 18, 2029, TCE may be used as a solvent in closed-loop batch vapor degreasing for rayon fabric scouring for end use in producing rocket booster nozzles for Federal agencies and their contractors, and manufactured (including imported), processed, and distributed in commerce for such use.

(b) From December 18, 2029, until December 18, 2034, TCE may only be used as a solvent in closed-loop batch vapor degreasing for rayon fabric scouring for end use in producing rocket booster nozzles, and manufactured (including imported), processed, and distributed in commerce for such use, by Federal agencies and their contractors who maintain records demonstrating that a final pre-launch test of rocket booster nozzles without using TCE was completed.

(c) If a suitable alternative to TCE is identified and validated before the end of this phase-out period, Federal agencies and their contractors must transition to that alternative.

(d) The owner or operator of the location where TCE is used as a solvent in closed-loop batch vapor degreasing for rayon fabric scouring for end use in producing rocket booster nozzles in accordance with this section, and manufacturers (including importers) and processors of TCE for such use, must comply with § 751.315.

(e) The owner or operator of the location where TCE is used as a solvent in closed-loop batch vapor degreasing for rayon fabric scouring for end use in producing rocket booster nozzles in accordance with this section must comply with the recordkeeping requirements in § 751.323.

§ 751.311 Phase-out of TCE use in the industrial and commercial use of TCE in laboratory use for asphalt testing and recovery.

(a) In accordance with § 751.305(b)(18), until December 18, 2034, TCE may be manufactured (including imported), processed, distributed in commerce, and used in industrial and commercial use of TCE in laboratory use for asphalt testing and recovery.

(b) From December 18, 2029, until December 18, 2034, TCE is only permitted to be manufactured (including imported), processed, distributed in commerce, and used in industrial and commercial use of TCE in laboratory use for asphalt testing and recovery for methods that do not include manual centrifuge processes.

(c) The use of TCE as a laboratory chemical must be performed on the premises of a laboratory.

(d) The owner or operator of the location where such use of TCE as a laboratory chemical occurs, and manufacturers (including importers) and processors of TCE for such use, must comply with the Workplace Chemical Protection Program provisions in § 751.315.

(e) The owner or operator of the location where such use of TCE as a laboratory chemical occurs must comply with the recordkeeping requirements in § 751.323.

§ 751.313 Phase-out of disposal of TCE to industrial pre-treatment, treatment, or publicly owned treatment works.

(a) After September 15, 2025, all persons manufacturing (including importing), processing, and using TCE are prohibited from disposal of TCE to industrial pre-treatment, industrial treatment, or publicly owned treatment works except as specified in the other subsections of this unit.

(b) After December 18, 2029, all industrial and commercial users of TCE for lithium battery separator manufacturing are prohibited from disposal of TCE to industrial pre-treatment, industrial treatment, or publicly owned treatment works.

(c) After December 18, 2039, all industrial and commercial users of TCE for specialty polymeric microporous sheet materials manufacturing are prohibited from disposal of TCE to industrial pre-treatment, industrial treatment, or publicly owned treatment works.

(d) After December 18, 2044, all industrial and commercial users of TCE for lead-acid battery separator manufacturing are prohibited from disposal of TCE to industrial pre-treatment, industrial treatment, or publicly owned treatment works.

(e) The owner or operator of the location where disposal of TCE to industrial pre-treatment, treatment, or to a publicly owned treatment works occurs must comply with the Workplace Chemical Protection Program provisions in § 751.315.

(f) The owner or operator of the publicly owned treatment works where disposal of TCE occurs must comply with the wastewater workplace protections in § 751.319.

(g) The owner or operator of the location where such use of TCE occurs must comply with the recordkeeping requirements in § 751.323.

§ 751.315 Workplace chemical protection program.

(a) Applicability. The provisions of this section apply to the following conditions of use of TCE when permitted to continue beyond December 18, 2025, pursuant to accordance with §§ 751.305(b)(8) through (25), 751.307, 751.309, and 751.311:

(1) Manufacturing (domestic manufacture);

(2) Manufacturing (import);

(3) Processing as a reactant/intermediate;

(4) Processing into formulation, mixture, or reaction product;

(5) Processing (repackaging);

(6) Processing (recycling);

(7) Industrial and commercial use of TCE as a processing aid in: process solvent used in battery manufacture; process solvent used in polymer fiber spinning, fluoroelastomer manufacture and Alcantara manufacture; extraction solvent used in caprolactam manufacture; precipitant used in beta-cyclodextrin manufacture;

(8) Industrial and commercial use of TCE as an adhesive and sealant for essential aerospace applications;

(9) Industrial and commercial use of TCE in other miscellaneous industrial and commercial uses (laboratory use);

(10) Industrial and commercial use of TCE as a solvent in closed-loop batch vapor degreasing for rayon fabric scouring for end use in rocket booster nozzle production by Federal agencies and their contractors;

(11) Industrial and commercial use of TCE in closed-loop or open-top batch vapor degreasing for essential aerospace parts and components and narrow tubing used for medical devices;

(12) Industrial and commercial use of TCE for vessels of the Armed Forces and their systems, and in the maintenance, fabrication, and sustainment for and of such vessels and systems; as potting compounds for naval electronic systems and equipment; sealing compounds for high and ultra-high vacuum systems; bonding compounds for materials testing and maintenance of underwater systems and bonding of nonmetallic materials; and cleaning agents to satisfy cleaning requirements (which includes degreasing using wipes, sprays, solvents and vapor degreasing) for: materials and components required for military ordnance testing; temporary resin repairs in vessel spaces where welding is not authorized; ensuring polyurethane adhesion for electronic systems and equipment repair and installation of elastomeric materials; various naval combat systems, radars, sensors, equipment; fabrication and prototyping processes to remove coolant and other residue from machine parts; machined part fabrications for naval systems; installation of topside rubber tile material aboard vessels; and vapor degreasing required for substrate surface preparation prior to electroplating processes;

(13) Industrial and commercial use of TCE as a solvent in closed-loop batch vapor degreasing necessary for rocket engine cleaning by Federal agencies and their contractors;

(14) Industrial and commercial use of TCE in batch vapor degreasing for land-based DoD defense systems by Federal agencies and their contractors; and

(15) Disposal of TCE to industrial pre-treatment, industrial treatment, or publicly owned treatment works, except to the extent that the activity is covered by the workplace protections in § 751.319.

(b) Interim existing chemical exposure limit (interim ECEL)—(1) Applicability. The provisions of this paragraph (b) apply to any workplace engaged in the conditions of use listed in paragraphs (a)(1) through (15) of this section.

(2) *Interim ECEL.* Beginning September 20, 2027 for Federal agencies and Federal contractors acting for or on behalf of the Federal government, or by September 15, 2025 for non-Federal owners and operators, or beginning 120 days after introduction of TCE into the workplace if TCE use commences after June 16, 2025, the owner or operator must ensure that no person is exposed to an airborne concentration of TCE in excess of the interim ECEL, consistent with the requirements of paragraph (c)

of this section and, if necessary, paragraph (e)(1) of this section.

(3) *Exposure monitoring*—(i) *General.* (A) Owners or operators must determine each potentially exposed person's exposure, without regard to respiratory protection, by either:

(*1*) Taking a personal breathing zone air sample of each potentially exposed person's exposure; or

(*2*) Taking personal breathing zone air samples that are representative of the 8-hour TWA of each exposure group.

(B) Personal breathing zone air samples are representative of the 8-hour TWA of all potentially exposed persons in an exposure group if the samples are of at least one person's work-shift exposure who represents the highest potential TCE exposures in that exposure group. Personal breathing zone air samples taken during one work shift may be used to represent potentially exposed person exposures on other work shifts where the owner or operator can document that the tasks performed and conditions in the workplace are similar across shifts.

(C) Exposure samples must be analyzed using an appropriate analytical method by a laboratory that complies with the Good Laboratory Practice Standards in 40 CFR part 792 or a laboratory accredited by the American Industrial Hygiene Association (AIHA) or another industry-recognized program.

(D) Owners or operators must ensure that methods used to perform exposure monitoring produce results that are accurate, to a confidence level of 95 percent, to within plus or minus 25 percent for airborne concentrations of TCE.

(E) Owners and operators must re-monitor within 15 working days after receipt of any exposure monitoring when results indicate non-detect unless an Environmental Professional as defined at 40 CFR 312.10 or a Certified Industrial Hygienist reviews the monitoring results and determines re-monitoring is not necessary.

(ii) *Initial monitoring.* By June 21, 2027 for Federal agencies and Federal contractors acting for or on behalf of the Federal government, or by June 16, 2025 for non-Federal owners and operators or within 30 days of introduction of TCE into the workplace, whichever is later, each owner or operator covered by this section must perform initial monitoring of potentially exposed persons. Where the owner or operator has monitoring results from monitoring conducted within five years prior to February 18, 2025 and the monitoring satisfies all other requirements of this section, the owner or operator may rely on such earlier monitoring results to satisfy the requirements of this paragraph.

(iii) *Periodic monitoring.* The owner or operator must establish an exposure monitoring program for periodic monitoring of exposure to TCE in accordance with Table 1.

TABLE 1 TO § 751.311(B)(3)(III)—PERIODIC MONITORING REQUIREMENTS

Air concentration condition	Periodic monitoring requirement
If initial exposure monitoring is below the interim ECEL action level (<0.1 ppm 8-hour TWA).	Periodic exposure monitoring is required at least once every five years.
If the most recent exposure monitoring indicates that airborne exposure is at or above the interim ECEL action level but at or below the interim ECEL (≥0.1 ppm 8-hour TWA, ≤0.2 ppm 8-hour TWA).	Periodic exposure monitoring is required within 180 days of the most recent exposure monitoring.
If the most recent exposure monitoring indicates that airborne exposure is above the interim ECEL (<0.2 ppm 8-hour TWA).	Periodic exposure monitoring is required within 90 days of the most recent exposure monitoring.
If the two most recent (non-initial) exposure monitoring measurements, taken at least seven days apart within a six-month period, indicate that airborne exposure is below the interim ECEL action level (<0.1 ppm 8-hour TWA).	Periodic exposure monitoring is required within five years of the most recent exposure monitoring.
If the owner or operator engages in a condition of use for which compliance with the WCPP is required but does not manufacture, process, use, or dispose of TCE in that condition of use over the entirety of time since the last required monitoring event.	The owner or operator may forgo the next periodic monitoring event. However, documentation of cessation of use of TCE is required; and periodic monitoring is required when the owner or operator resumes the condition of use.

(iv) *Additional monitoring.* (A) The owner or operator must conduct the exposure monitoring required by paragraph (b)(3)(ii) of this section within 30 days after there has been a change in the production, process, control equipment, personnel or work practices that may reasonably be expected to result in new or additional exposures above the interim ECEL action level or when the owner or operator has any reason to believe that new or additional exposures above the interim ECEL action level have occurred. Prior monitoring data cannot be used to meet this requirement.

(B) Whenever start-ups or shutdown, or spills, leaks, ruptures, or other breakdowns or unexpected releases occur that may lead to exposure to potentially exposed persons, the owner or operator must conduct the exposure monitoring required by paragraph (b)(3)(ii) of this section within 30 days after the conclusion of the start-up or shut down and/or the cleanup of the spill or repair of the leak, rupture, or other breakdown. Prior monitoring data cannot be used to meet this requirement.

(v) *Observation of monitoring.* (A) Owners and operators must provide potentially exposed persons or their designated representatives an opportunity to observe any monitoring of occupational exposure to TCE that is conducted under this section and designed to characterize their exposure.

(B) When monitoring observation requires entry into a regulated area, the owner or operator must provide the observers with the required PPE.

(C) Only persons who are authorized to have access to facilities classified in the interest of national security must be permitted to observe exposure monitoring conducted in such facilities.

(vi) *Notification of monitoring results.* (A) The owner or operator must inform each person whose exposures are monitored or who is part of a monitored exposure group, and their designated representative, of any monitoring results within 15 working days of receipt of those monitoring results.

(B) This notification must include the following:

(*1*) Exposure monitoring results;

(*2*) Identification and explanation of the interim ECEL and interim ECEL action level;

(*3*) Statement of whether the monitored airborne concentration of TCE exceeds the interim ECEL action level or interim ECEL;

(*4*) If the interim ECEL is exceeded, descriptions of any exposure controls implemented by the owner or operator

to reduce exposure to or below the interim ECEL;

(*5*) Explanation of any respiratory protection provided in accordance with paragraphs (b)(4) and I of this section;

(*6*) Quantity of TCE in use at the time of monitoring;

(*7*) Location(s) of TCE use at the time of monitoring;

(*8*) Manner of TCE use at the time of monitoring; and

(*9*) Identified releases of TCE.

(C) Notice must be written, in plain language, and either provided to each potentially exposed person individually in a language that the person understands, or posted in an appropriate and accessible location outside the regulated area with an English-language version and a non-English language version representing the language of the largest group of workers who do not read English.

(4) *Regulated areas*—(i) *Establishment.* By September 20, 2027 for Federal agencies and Federal contractors acting for or on behalf of the Federal government, or by September 15, 2025 for non-Federal owners and operators, or within 90 days after receipt of any exposure monitoring that indicates exposures exceeding the interim ECEL, the owner or operator must establish and maintain a regulated area wherever airborne concentrations of TCE exceed or can reasonably be expected to exceed the interim ECEL.

(ii) *Access.* The owner or operator must limit access to regulated areas to authorized persons.

(iii) *Demarcation.* The owner or operator must demarcate regulated areas from the rest of the workplace in a manner that adequately establishes and alerts persons to the boundaries of the area and minimizes the number of authorized persons exposed to TCE within the regulated area.

(iv) *Provision of respirators.* (A) The owner or operator must ensure that each person who enters a regulated area is supplied with a respirator selected in accordance with paragraph I(e) of this section and must ensure that all persons within the regulated area are using the provided respirators whenever TCE exposures may exceed the interim ECEL, except as provided in paragraph (B) of this section.

(B) An owner or operator who has implemented all feasible controls as required in paragraph (c)(1)(i) of this section, and who has established a regulated area as required by paragraphs (b)(4)(i) of this section where TCE exposure can be reliably predicted to exceed the interim ECEL only on certain days (for example, because of work or process schedule) must have persons use respirators in that regulated area on those days.

(v) *Prohibited activities.* (A) The owner or operator must ensure that, within a regulated area, persons do not engage in non-work activities which may increase TCE exposure.

(B) The owner or operator must ensure that while persons are wearing respirators in the regulated area, they do not engage in activities which interfere with respirator performance.

(c) *Interim ECEL control procedures and plan—(1) Methods of compliance.* (i) By December 17, 2027 for Federal agencies and Federal contractors acting for or on behalf of the Federal government, or by December 18, 2025, for non-Federal owners and operators, the owner or operator must institute one or a combination of elimination, substitution, engineering controls or administrative controls to reduce exposure to or below the interim ECEL except to the extent that the owner or operator can demonstrate that such controls are not feasible as an interim measure, in accordance with the hierarchy of controls.

(ii) If the feasible controls required under paragraph (c)(1)(i) of this section that can be instituted do not reduce exposures for potentially exposed persons to or below the interim ECEL, then the owner or operator must use such controls to reduce exposure to the lowest levels achievable by these controls and must supplement those controls by the use of respiratory protection that complies with the requirements of paragraph (e) of this section.

(iii) Where an owner or operator cannot demonstrate exposure to TCE has been reduced to or below the interim ECEL through the use of controls required under paragraphs (c)(1)(i) and (ii) of this section, and has not demonstrated that it has appropriately supplemented feasible exposure controls with respiratory protection that complies with the requirements of paragraph (e) of this section, this will constitute a failure to comply with the interim ECEL.

(2) *Exposure control plan.* By December 17, 2027 for Federal agencies and Federal contractors acting for or on behalf of the Federal government, or by December 18, 2025, for non-Federal owners and operators, each owner and operator must establish and implement an exposure control plan.

(i) *Exposure control plan contents.* The exposure control plan must include documentation of the following:

(A) Identification of exposure controls that were considered, including those that were used or not used to meet the requirements of paragraph (c)(1)(i) of this section, in the following sequence: elimination, substitution, engineering controls and administrative controls;

(B) For each exposure control considered, a rationale for why the exposure control was selected or not selected based on feasibility, effectiveness, and other relevant considerations;

(C) A description of actions the owner or operator must take to implement exposure controls selected, including proper installation, regular inspections, maintenance, training, or other actions;

(D) A description of each regulated area, how they are demarcated, and persons authorized to enter the regulated areas;

(E) Description of activities conducted by the owner or operator to review and update the exposure control plan to ensure effectiveness of the exposure controls, identify any necessary updates to the exposure controls, and confirm that all persons are properly implementing the exposure controls;

(F) An explanation of the procedures for responding to any change that may reasonably be expected to introduce additional sources of exposure to TCE, or otherwise result in increased exposure to TCE, including procedures for implementing corrective actions to mitigate exposure to TCE.

(ii) *Exposure control plan requirements.* (A) The owner or operator must not implement a schedule of personnel rotation as a means of compliance with the interim ECEL.

(B) The owner or operator must maintain the effectiveness of any controls instituted under this paragraph (c).

(C) The exposure control plan must be reviewed and updated as necessary, but at least every 5 years, to reflect any significant changes in the status of the owner or operator's approach to compliance with paragraphs (b) and (c) of this section.

(iii) *Availability of exposure control plan.* (A) Owners or operators must make the exposure control plan and associated records, including interim ECEL exposure monitoring records, interim ECEL compliance records, and workplace participation records available to potentially exposed persons and their designated representative.

(B) Owners or operators must notify potentially exposed persons and their designated representatives of the availability of the exposure control plan and associated records within 30 days of the date that the exposure control plan is completed and at least annually thereafter.

(C) Notice of the availability of the exposure control plan and associated records must be provided in plain language writing to each potentially exposed person in a language that the person understands or posted in an appropriate and accessible location outside the regulated area with an English-language version and a non-English language version representing the language of the largest group of workers who do not read English.

(D) Upon request by the potentially exposed person or their designated representative(s), the owner or operator must provide the specified records at a reasonable time, place, and manner. If the owner or operator is unable to provide the requested records within 15 working days, the owner or operator must, within those 15 working days, inform the potentially exposed person or designated representative(s) requesting the record(s) of the reason for the delay and the earliest date when the record will be made available.

(d) *Workplace information and training.* (1) By September 20, 2027 for Federal agencies and Federal contractors acting for or on behalf of the Federal government, or by September 15, 2025 for non-Federal owners and operators, the owner or operator must institute a training program and ensure that persons potentially exposed to TCE participate in the program according to the requirements of this paragraph (d).

(2) The owner or operator must ensure that each potentially exposed person is trained prior to or at the time of initial assignment to a job involving potential exposure to TCE.

(3) The owner or operator must ensure that information and training is presented in a manner that is understandable to each person required to be trained.

(4) The following information and training must be provided to all persons potentially exposed to TCE:

(i) The requirements of this section, as well as how to access or obtain a copy of these requirements in the workplace;

(ii) The quantity, location, manner of use, release, and storage of TCE and the specific operations in the workplace that could result in exposure to TCE, particularly noting where each regulated area is located;

(iii) Methods and observations that may be used to detect the presence or release of TCE in the workplace (such as monitoring conducted by the owner or operator, continuous monitoring devices, visual appearance, or odor of TCE when being released);

(iv) The acute and chronic health hazards of TCE as detailed on relevant Safety Data Sheets; and

(v) The principles of safe use and handling of TCE and measures potentially exposed persons can take to protect themselves from TCE, including specific procedures the owner or operator has implemented to protect potentially exposed persons from exposure to TCE, such as appropriate work practices, emergency procedures, and personal protective equipment to be used.

(5) The owner or operator must re-train each potentially exposed person annually to ensure that each such person maintains the requisite understanding of the principles of safe use and handling of TCE in the workplace.

(6) Whenever there are workplace changes, such as modifications of tasks or procedures or the institution of new tasks or procedures, that increase exposure, and where those exposures exceed or can reasonably be expected to exceed the interim ECEL action level, the owner or operator must update the training and ensure that each potentially exposed person is re-trained.

(e) *Personal protective equipment (PPE)—(1) Respiratory protection.* (i) By September 20, 2027 for Federal agencies and Federal contractors acting for or on behalf of the Federal government, or by September 15, 2025 for non-Federal owners and operators, or within 90 days after receipt of any exposure monitoring that indicates exposures exceeding the interim ECEL, or, if an owner or operator is required to provide respiratory protection pursuant to paragraphs (b)(4)(iv) and (c)(1)(ii) of this section, the owner or operator must ensure that each potentially exposed person is provided with a respirator according to the requirements of this section.

(ii) For purposes of this paragraph (e)(1) of this section, cross-referenced provisions in 29 CFR 1910.134 applying to an ''employee'' apply equally to potentially exposed persons and cross-referenced provisions applying to an ''employer'' also apply equally to owners or operators. Other terms in cross-referenced provisions in 29 CFR 1910.134 that are defined in 29 CFR 1910.134(b) have the meaning assigned to them in that paragraph.

(iii) By September 20, 2027 for Federal agencies and Federal contractors acting for or on behalf of the Federal government, or by September 15, 2025 for non-Federal owners and operators, or within 90 days after receipt of any exposure monitoring that indicates exposures exceeding the interim ECEL, if an owner or operator is required to provide respiratory protection pursuant to paragraph (b)(4)(iv) or (c)(1)(ii), the owner or operator must develop and administer a written respiratory protection program consistent with the requirements of 29 CFR 1910.134(c)(1), (c)(3) and (c)(4).

(iv) Owners and operators must select respiratory protection based on a medical evaluation consistent with the requirements of 29 CFR 1910.134(e). If a potentially exposed person cannot use a negative-pressure respirator that would otherwise be required, then the owner or operator must provide that person with an alternative respirator. The alternative respirator must have less breathing resistance than the negative-pressure respirator and provide equivalent or greater protection. If the person is unable to use an alternative respirator, then the person must not be permitted to enter the regulated area.

(v) Owners and operators must select respiratory protection that properly fits each affected person and communicate respirator selections to each affected person consistent with the requirements of 29 CFR 1910.134(f).

(vi) Owners and operators must provide, ensure use of, and maintain (in a sanitary, reliable, and undamaged condition) respiratory protection that is of safe design and construction for the applicable condition of use consistent with the requirements of 29 CFR 1910.134(g) through (j).

(vii) Prior to or at the time of initial assignment to a job involving potential exposure to TCE, owners and operators must provide training to all persons required to use respiratory protection consistent with 29 CFR 1910.134(k).

(viii) Owners and operators must retrain all persons required to use PPE at least annually, or whenever the owner or operator has reason to believe that a previously trained person does not have the required understanding and skill to properly use PPE, or when changes in the workplace or in PPE to be used render the previous training obsolete.

(ix) Owners or operators must select and provide to persons appropriate respirators as indicated by the most recent monitoring results as follows:

(A) If the measured exposure concentration is at or below 0.2 ppm (200 ppb): no respiratory protection is required.

(B) If the measured exposure concentration is above 0.2 ppm (200 ppb) and less than or equal to 2 ppm (2,000 ppb) (10 times interim ECEL): Any National Institute for Occupational Safety and Health (NIOSH) Approved air-purifying half mask respirator equipped with organic vapor cartridges or canisters; or any NIOSH Approved Supplied-Air Respirator (SAR) or

Airline Respirator operated in demand mode equipped with a half mask; or any NIOSH Approved Self-Contained Breathing Apparatus (SCBA) in a demand mode equipped with a half mask [APF 10].

(C) If the measured exposure concentration is above 2 ppm and less than or equal to 5 ppm (25 times interim ECEL): Any NIOSH Approved Powered Air-Purifying Respirator (PAPR) equipped with a loose-fitting facepiece or hood/helmet equipped with organic vapor cartridges or canisters; or any NIOSH Approved SAR or Airline Respirator in a continuous-flow mode equipped with a loose-fitting facepiece or helmet/hood [APF 25].

(D) If the measured exposure concentration is above 5 ppm and less than or equal to 10 ppm (50 times interim ECEL): Any NIOSH Approved air-purifying full facepiece respirator equipped with organic vapor cartridges or canisters; any NIOSH Approved PAPR with a half mask equipped with organic vapor cartridges or canisters; any NIOSH Approved SAR or Airline Respirator in a continuous flow mode equipped with a half mask; any NIOSH Approved SAR or Airline Respirator operated in a pressure-demand or other positive-pressure mode with a half mask; or any NIOSH Approved SCBA in demand-mode equipped with a full facepiece or helmet/hood [APF 50].

(E) If the measured exposure concentration is above 10 ppm and less than or equal to 200 ppm (1,000 times interim ECEL): Any NIOSH Approved PAPR equipped with a full facepiece equipped with organic vapor cartridges or canisters; any NIOSH Approved SAR or Airline Respirator in a continuous-flow mode equipped with full facepiece; any NIOSH Approved SAR or Airline Respirator in pressure-demand or other positive-pressure mode equipped with a full facepiece and an auxiliary self-contained air supply; or any NIOSH Approved SAR or Airline Respirator in a continuous-flow mode equipped with a helmet or hood and that has been tested to demonstrated performance at a level of a protection of APF 1,000 or greater [APF 1000].

(F) If the measured exposure concentration is greater than 200 ppm (1,000+ times interim ECEL): Any NIOSH Approved SCBA equipped with a full facepiece or hood/helmet and operated in a pressure demand or other positive pressure mode; air supply [APF 10,000+].

(G) If the exposure concentration is unknown: Any NIOSH Approved combination SAR equipped with a full facepiece and operated in pressure demand or other positive pressure mode with an auxiliary self-contained air supply; or any NIOSH Approved SCBA operated in pressure demand or other positive pressure mode and equipped with a full facepiece or hood/helmet [APF 1000+].

(x) Owners and operators must select and provide respirators consistent with the requirements of 29 CFR 1910.134(d)(1)(iv), and with consideration of workplace and user factors that affect respirator performance and reliability.

(xi) Owners and operators who select air-purifying respirators must either:

(A) Select NIOSH Approved respirators that have an end-of-service-life indicator (ESLI) appropriate for TCE; or

(B) Implement a change schedule for canisters and cartridges based on objective information or data that ensures that canisters and cartridges are changed before the end of their service life. The written respiratory protection program required by paragraph (e)(1)(iii) of this section must include a description of the information and data relied upon, the basis for reliance on the information and data, and the basis for the canister and cartridge change schedule.

(xii) Owners and operators must, consistent with 29 CFR 1910.134(j), ensure that all respirator filters, cartridges, and canisters used in the workplace are labeled and color coded per NIOSH requirements and that the label is not removed and remains legible.

(xiii) Owners and operators must ensure that respirators are used in compliance with the terms of the respirator's NIOSH approval.

(xiv) Owners and operators must conduct regular evaluations of the workplace, including consultations with potentially exposed persons using respiratory protection, consistent with the requirements of 29 CFR 1910.134(l), to ensure that the provisions of the written respiratory protection program required under paragraph (e)(1)(iii) of this section are being effectively implemented.

(xv) The respiratory protection requirements in this paragraph represent the minimum respiratory protection requirements, such that any respirator affording a higher degree of protection than the required respirator may be used.

(2) *Dermal protection.* (i) By September 20, 2027 for Federal agencies and Federal contractors acting for or on behalf of the Federal government, or by September 15, 2025 for non-Federal owners and operators, owners and operators must supply and require the donning of gloves by potentially exposed persons that are chemically resistant to TCE where dermal exposure to TCE can be expected to occur, after application of the requirements in paragraph (c) of this section, in accordance with the hierarchy of controls.

(ii) Owners and operators must provide gloves that are of safe design and construction for the work to be performed and that properly fit each person who is required to use gloves.

(iii) Owners and operators must communicate glove selections to each affected person and ensure that each person who is required to wear gloves uses and maintains them in a sanitary, reliable, and undamaged condition.

(iv) Owners and operators must provide activity-specific dermal PPE training in accordance with 29 CFR 1910.132(f) to all persons required to use gloves prior to or at the time of initial assignment to a job involving potential dermal exposure to TCE. For the purposes of this paragraph (e)(4)(iv), provisions in 29 CFR 1910.132(f) applying to an ''employee'' also apply equally to potentially exposed persons, and provisions applying to an ''employer'' also apply equally to owners or operators.

(v) Owners and operators must retrain each person required to use gloves annually or whenever the owner or operator has reason to believe that a previously trained person does not have the required understanding and skill to properly use the gloves, or when changes in the workplace or in PPE to be used render the previous training obsolete.

§ 751.317 Workplace requirements for energized electrical cleaner.

(a) *Applicability.* The provisions of this section apply to the industrial and commercial use of TCE in energized electrical cleaner.

(b) *Energized electrical cleaner requirements—(1) Personal Protective Equipment (PPE).* (i) The provisions of this paragraph (b) apply after September 15, 2025.

(ii) Owners or operators must ensure that all potentially exposed persons using TCE, including any TCE-containing products, are provided with dermal PPE and training on proper use of PPE as outlined in § 751.315(e)(2).

(iii) Owners or operators must ensure that all persons using TCE, including any TCE containing products, are provided with respiratory PPE and training on proper use of PPE in accordance with § 751.315(e)(1), except that instead of selecting appropriate respirators based on monitoring results

pursuant to paragraph (e)(1)(ix), owners or operators must select from and provide the following types of respirators: any NIOSH Approved air-purifying full facepiece respirator equipped with organic vapor cartridges or canisters; any NIOSH Approved Powered Air-Purifying Respirator (PAPR) with a half mask equipped with organic vapor cartridges or canisters; any NIOSH Approved Supplied-Air Respirator (SAR) or Airline Respirator in a continuous flow mode equipped with a half mask; any NIOSH Approved Supplied-Air Respirator (SAR) or Airline Respirator operated in a pressure-demand or other positive-pressure mode with a half mask; any NIOSH Approved SCBA in demand-mode equipped with a full facepiece or helmet/hood [APF 50]; or any respirator affording a higher degree of protection.

(2) *Alternative to PPE Requirements.* (i) As an alternative to the requirements in paragraph (b)(1) of this section, the owner or operator may choose to follow the Workplace Chemical Protection Program (WCPP) provisions in § 751.315.

(ii) Owners or operators who choose to follow the WCPP as an alternative to the requirements in paragraph (b)(1) of this section must:

(A) Document and maintain a statement that they are electing to comply with the WCPP.

(B) Comply with the WCPP provisions in § 751.315 and document compliance in accordance with § 751.323(b).

§ 751.319 Workplace requirements for wastewater.

(a) Applicability. The provisions of this section apply to the following disposal sub-conditions of use for their respective phaseouts, in accordance with § 751.305 (b) (14), (23), (24), and (26):

(1) Cleanup of sites with TCE water contamination; and,

(2) Publicly owned treatment works.

(b) Cleanup sites. Beginning September 15, 2025 the owner or operator of the location where potentially exposed persons are involved in the disposal of TCE to industrial pre-treatment, industrial treatment, or publicly owned treatment works for the purposes of facilitating cleanup projects of TCE-contaminated water and groundwater must ensure that potentially exposed persons involved with the activity of removing the TCE-contaminated water and groundwater from the location where it was located and treating the removed TCE-contaminated water and groundwater on site are protected to the interim ECEL level of 0.2 ppm and protected from dermal contact with TCE-containing wastewater in accordance with the following requirements. For the purposes of this paragraph (b) of this section, cross-referenced provisions in 29 CFR 1910.120 applying to an ''employee'' apply equally to potentially exposed persons and cross-referenced provisions applying to an ''employer'' also apply equally to owners or operators.

(1) *Written site-specific safety and health plan.* Owners and operators must have a site-specific safety and health plan that addresses the health hazards presented by TCE to potentially exposed persons involved in the disposal of TCE-containing wastewater and that contains elements consistent with 29 CFR 1910.120(b)(4)(ii)(A), (B), (C), (E) and (F).

(2) *Training.* Owners and operators must provide training consistent with § 751.315(d) to potentially exposed persons prior to or at the time of initial assignment to a cleanup site job that involves the disposal of TCE-containing wastewater.

(3) *Engineering controls, work practices and PPE.* Engineering controls, work practices, and, if necessary, PPE must be implemented and provided in compliance with 40 CFR 751.315(c)(1) and (e).

(4) *Exposure monitoring.* (i) By September 15, 2025 or upon initial entry to a cleanup site, whichever is later, owners and operators must perform representative air monitoring consistent with 29 CFR 1910.120(h)(2) to identify any exposures to airborne TCE above the interim ECEL.

(ii) Owners and operators must perform periodic air monitoring consistent with 29 CFR 1910.120(h)(3) when there is any indication that exposures may have exceeded the interim ECEL since prior monitoring.

(iii) Owners and operators must monitor the exposures of those persons likely to have the highest exposures to airborne TCE above the interim ECEL by using personal air sampling frequently enough to characterize their exposures consistent with 29 CFR 1910.120(h)(4).

(iv) Owners and operators must perform exposure monitoring at least once every five years.

(c) Publicly owned treatment works. By September 15, 2025 owners or operators of publicly owned treatment works, where there is a reasonable possibility of the presence of TCE, must comply with one of the following:

(1) *Water screening level.* (i) Screen industrial wastewater discharge received at publicly owned treatment works by sampling and analyzing for a water concentration of TCE.

(ii) If the TCE concentration in wastewater exceeds 0.00284 mg/L of TCE, owners or operators must comply with the Workplace Chemical Protection Program provisions in § 751.315, except for the initial monitoring requirements in paragraph § 751.315(b)(3)(ii).

(2) *Alternative to water screening level.* (i) As an alternative to the requirements in paragraph (1) of this section, the owner or operator may choose to follow the Workplace Chemical Protection Program (WCPP) provisions in § 751.315.

(ii) Owners or operators who choose to follow the WCPP as an alternative to the requirements in paragraph (1) of this section must comply with the WCPP provisions in § 751.315 and document compliance in accordance with § 751.323(b).

§ 751.321 Downstream notification.

(a) Beginning on February 18, 2025, each person who manufactures (including imports) TCE for any use must, prior to or concurrent with the shipment, notify companies to whom TCE is shipped, in writing, of the restrictions described in this subpart in accordance with paragraph (c) of this section.

(b) Beginning on June 16, 2025, each person who processes or distributes in commerce TCE or any TCE-containing products for any use must, prior to or concurrent with the shipment, notify companies to whom TCE is shipped, in writing, of the restrictions described in this subpart in accordance with paragraph (c) of this section.

(c) The notification required under paragraphs (a) and (b) of this section must occur by inserting the following text in section 1(c) and 15 of the Safety Data Sheet (SDS) provided with the TCE or with any TCE-containing product:

After June 16, 2025, this chemical/product is and can only be domestically manufactured, imported, processed, or distributed in commerce for the following purposes until the following prohibitions take effect: (1) Processing as an intermediate a) for the manufacture of HFC–134a until June 18, 2033, and b) for all other processing as a reactant/intermediate until December 18, 2026; (2) Industrial and commercial use as a solvent for open-top batch vapor degreasing until December 18, 2025; (3) Industrial and commercial use as a solvent for closed-loop batch vapor degreasing until December 18, 2025, except for industrial and commercial use in batch vapor degreasing for land-based DoD defense systems by Federal agencies and their contractors until December 18, 2029, and except for industrial and commercial use as a solvent for closed-loop batch vapor degreasing necessary for rocket engine cleaning by Federal agencies and their contractors until December 18, 2031, and except for industrial and commercial use of

TCE in closed-loop and open-top batch vapor degreasing for essential aerospace parts and components and narrow tubing used in medical devices until December 18, 2031, and except for industrial and commercial use as a solvent for closed-loop batch vapor degreasing for rayon fabric scouring for end use in rocket booster nozzle production by Federal agencies and their contractors until December 18, 2034; (4) Industrial and commercial use in processing aid (a) for lithium battery separator manufacturing until December 18, 2029, and (b) for lead-acid battery separator manufacturing until December 18, 2044, and (c) for specialty polymeric microporous sheet material manufacturing until December 18, 2039, and (d) in process solvent used in battery manufacture; in process solvent used in polymer fiber spinning, fluoroelastomer manufacture and Alcantara manufacture; in extraction solvent used in caprolactam manufacture; and in precipitant used in beta-cyclodextrin manufacture until December 18, 2026; (5) Industrial and commercial uses for vessels of the Armed Forces and their systems, and in the maintenance, fabrication, and sustainment for and of such vessels and systems until December 18, 2034; and (6) Industrial and commercial use for laboratory use (a) for essential laboratory activities until December 18, 2074 and (b) for asphalt testing and recovery using manual centrifuge processes until December 18, 2029 and for asphalt testing and recovery until December 18, 2034.

§ 751.323 Recordkeeping requirements.

(a) General records. After February 18, 2025, all persons who manufacture, process, distribute in commerce, or engage in industrial or commercial use of TCE or TCE-containing products must maintain ordinary business records, such as invoices and bills-of-lading related to compliance with the prohibitions, restrictions, and other provisions of this subpart.

(b) Workplace chemical protection program compliance. (1) Interim ECEL exposure monitoring. For each monitoring event, owners or operators subject to the interim ECEL described in § 751.315(b) must document the following:

(i) Dates, duration, and results of each sample taken;

(ii) The quantity, location(s), and manner of TCE in use at the time of each monitoring event;

(iii) All measurements that may be necessary to determine the conditions that may affect the monitoring results;

(iv) Name, workplace address, work shift, job classification, work area, and type of respiratory protection (if any) by each monitored person;

(v) Identification of all potentially exposed persons that a monitored person is intended to represent if using a representative sample, consistent with § 751.315(b)(3)(i)(A) and (B);

(vi) Sampling and analytical methods used as described in § 751.315(b)(3)(i)(D);

(vii) Compliance with the Good Laboratory Practice Standards in accordance with 40 CFR part 792, or use of a laboratory accredited by the AIHA or another industry-recognized program as required by § 751.315(b)(3)(i)(C);

(viii) Information regarding air monitoring equipment, including: type, maintenance, calibrations, performance tests, limits of detection, and any malfunctions;

(ix) Re-monitoring determinations conducted by an Environmental Professional as defined at 40 CFR 312.10 or a Certified Industrial Hygienist, if results indicated non-detect; and

(x) Notification of exposure monitoring results in accordance with § 751.315(b)(3)(vi).

(2) *Interim ECEL compliance.* Owners or operators subject to the interim ECEL described in § 751.315(b) must retain records of:

(i) Exposure control plan as described in § 751.315(c)(2).

(ii) Implementation of the exposure control plan described in § 751.315(c)(2), including:

(A) Any regular inspections, evaluations, and updating of the exposure controls to maintain effectiveness;

(B) Confirmation that all persons are implementing the exposure controls; and

(C) Each occurrence and duration of any start-up, shutdown, or malfunction of the facility that causes an exceedance of the interim ECEL and any subsequent corrective actions taken by the owner or operator during the start-up, shutdown, or malfunctions to mitigate exposures to TCE.

(iii) Respiratory protection used by each potentially exposed person and PPE program implementation as described in § 751.315(e), including:

(A) The name, workplace address, work shift, job classification, and work area of each potentially exposed person, and the type of respiratory protection provided to each potentially exposed person;

(B) The basis for the specific PPE selection in accordance with § 751.315(e); and

(C) Fit testing and training in accordance with § 751.315(e).

(iv) Information and training provided as required in § 751.315(d).

(3) *Workplace participation.* Owners or operators must document the notice to and ability of any potentially exposed person who may reasonably be affected by TCE inhalation exposure and their designated representative to readily access the exposure control plans, facility exposure monitoring records, PPE program implementation records, or any other information relevant to TCE exposure in the workplace.

(c) *Records related to exemptions.* To maintain eligibility for an exemption described in § 751.325, owners or operators must maintain records related to, and demonstrating compliance with, the specific conditions of the exemption.

(d) *Records related to phase-outs.* (1) Beginning February 18, 2025, each manufacturer of HFC–134a who uses TCE as an intermediate under § 751.307 must maintain records of the annual quantity of TCE purchased and processed until the termination of all processing of TCE as an intermediate and, beginning June 16, 2025, must maintain records that demonstrate how the baseline annual volume was calculated, in accordance with § 751.307(a)(1).

(2) Beginning September 15, 2025, each person using TCE under § 751.309 for industrial and commercial use as a solvent for closed-loop batch vapor degreasing for rayon fabric scouring for end use in rocket booster nozzle production by Federal agencies and their contractors must maintain records demonstrating that the end use is in rocket booster nozzle production for Federal agencies and their contractors.

(3) Beginning September 15, 2025, each person using TCE under § 751.311 for industrial and commercial use in laboratory use for asphalt testing and recovery must maintain records demonstrating compliance with the use of TCE as specified in § 751.311.

(4) After December 18, 2029, each person using TCE under § 751.311 for industrial and commercial use in laboratory use for asphalt testing and recovery must maintain records demonstrating compliance with the provision in § 751.311 that the use of TCE in laboratory use for asphalt testing and recovery be in methods that do not include manual centrifuge processes.

(5) After December 18, 2029, each person using TCE under § 751.309 for industrial and commercial use as a solvent for closed-loop batch vapor degreasing, specifically for rayon fabric scouring, must maintain records that demonstrate that a final pre-launch test of rocket booster nozzles without using TCE was completed.

(e) *Records related to workplace requirements for energized electrical cleaner.* (1) Owners and operators subject to the energized electrical cleaner requirements described in § 751.317 must retain records of:

(i) Statement regarding whether the owner or operator is complying with the prescriptive PPE requirements described in § 751.317(b)(1) or with the WCPP described in § 751.317(b)(2).

(ii) Dermal and respiratory protection used by each potentially exposed person and program implementation as described in § 751.317(b)(1) or WCPP records described in § 751.323(b).

(2) Distributors of TCE, including TCE containing products, for use in energized electrical cleaning must retain sale records, including:

(i) Name of purchaser;

(ii) Date of sale; and

(iii) Quantity of TCE or TCE containing products sold.

(f) *Records related to wastewater workplace protection requirements.* (1) Owners and operators subject to the wastewater workplace protection requirements for cleanup sites described in § 751.319 must retain records related to and demonstrating compliance with the provisions of § 751.319 and 29 CFR 1910.120 that are applicable to the particular site and records related to and demonstrating compliance with the interim ECEL.

(2) Publicly owned treatment works must retain records related to and demonstrating compliance with the wastewater screening and other requirements described in § 751.319, and if applicable must retain records for the WCPP as described in § 751.323(b).

(g) Minimum record retention periods. The records required under this section must be retained for at least 5 years from the date that such records were generated, except for the records required under paragraph (d)(1), which must be retained for at least 5 years after the use of TCE covered by the records has ceased.

§ 751.325 Exemptions.

(a) *In general.* (1) The time-limited exemptions described in this section are established in accordance with 15 U.S.C. 2605(g).

(2) In order to be eligible for the exemptions described in this section, regulated parties must comply with all conditions established for such exemptions in this section.

(b) *Exemptions—(1) Closed-loop batch vapor degreasing necessary for rocket engine cleaning by Federal agencies and their contractors until December 18, 2031.* The following are specific conditions of the exemption for industrial and commercial use of TCE as a solvent for closed-loop vapor degreasing necessary for rocket engine cleaning by Federal agencies and their contractors described in § 751.305(b)(15):

(i) The use of TCE in industrial and commercial as a solvent for closed-loop vapor degreasing is limited to the closed-loop batch vapor degreasing necessary for rocket engine cleaning by Federal agencies and their contractors.

(ii) The owner or operator of the location where such use occurs, and manufacturers (including importers) and processors of TCE for such use, must comply with the Workplace Chemical Protection Program provisions in § 751.315.

(iii) The owner or operator of the location where such use of TCE occurs, and manufacturers (including importers) and processors of TCE for such use, must comply with the recordkeeping requirements in § 751.323.

(2) *Closed-loop and Open-top batch vapor degreasing for essential aerospace parts and components and narrow tubing for medical devices until December 18, 2031.* The following are specific conditions of the exemption for vapor degreasing described in § 751.305(b)(16):

(i) The use of TCE for closed-loop and open-top batch vapor degreasing is limited to the cleaning of:

(A) Essential aerospace parts and components where cleaning alternatives present technical feasibility or performance challenges to meet specifications from Federal agencies or other long-standing design specifications included in existing contracts; and

(B) Narrow tubing for medical devices.

(ii) The owner or operator of the location where such use of TCE occurs, and manufacturers (including importers) and processors of TCE for such use, must comply with the Workplace Chemical Protection Program provisions in § 751.315.

(iii) The owner or operator of the location where such use of TCE occurs must comply with the recordkeeping requirements in § 751.323.

(3) *Certain industrial and commercial uses of TCE for vessels of the Armed Forces and their systems, and in the maintenance, fabrication, and sustainment for and of such vessels and systems until December 18, 2034.* The following are specific conditions of the exemption for industrial and commercial uses of TCE for vessels of the Armed Forces and their systems, and in the maintenance, fabrication, and sustainment for and of such vessels and systems described in § 751.305(b)(20):

(i) The industrial and commercial use of TCE must be limited for vessels of the Armed Forces and their systems, and in the maintenance, fabrication, and sustainment for and of such vessels and systems: as potting compounds for naval electronic systems and equipment; sealing compounds for high and ultra-high vacuum systems; bonding compounds for materials testing and maintenance of underwater systems and bonding of nonmetallic materials; and cleaning agents to satisfy cleaning requirements (which includes degreasing using wipes, sprays, solvents and vapor degreasing) for: materials and components required for military ordnance testing; temporary resin repairs in vessel spaces where welding is not authorized; ensuring polyurethane adhesion for electronic systems and equipment repair and installation of elastomeric materials; various naval combat systems, radars, sensors, equipment; fabrication and prototyping processes to remove coolant and other residue from machine parts; machined part fabrications for naval systems; installation of topside rubber tile material aboard vessels; and vapor degreasing required for substrate surface preparation prior to electroplating processes.

(ii) The owner or operator of the location where such use occurs, and manufacturers (including importers) and processors of TCE for such use, must comply with the Workplace Chemical Protection Program provisions in § 751.315.

(iii) The owner or operator of the location where such use of TCE occurs must comply with the recordkeeping requirements in § 751.323.

(4) *Use of TCE or TCE-containing products in an emergency by the National Aeronautics and Space Administration and its contractors operating within the scope of their contracted work until December 18, 2034*—(i) *Applicability.* This exemption shall apply to the following specific conditions of use:

(A) Industrial and commercial use as solvent for open-top or closed-loop batch vapor degreasing.

(B) Industrial and commercial use as solvent for cold cleaning.

(C) Industrial and commercial use as a solvent for aerosol spray degreaser/cleaner and mold release.

(D) Industrial and commercial use as a lubricant and grease in tap and die fluid.

(E) Industrial and commercial use as a lubricant and grease in penetrating lubricant.

(F) Industrial and commercial use as an adhesive and sealant in solvent-based adhesives. and sealants.

(G) Industrial and commercial as a functional fluid in heat exchange fluid.

(H) Industrial and commercial use in corrosion inhibitors and anti-scaling agents.

(I) Industrial and commercial use of TCE as a processing aid.

(J) Manufacturing (including importing) and processing of TCE for the industrial and commercial uses listed in paragraphs (b)(4)(i)(A) through (I) of this section.

(ii) *Emergency use.* (A) *In general.* An emergency is a serious and sudden situation requiring immediate action, within 15 days or less, necessary to protect:

(*1*) Safety of NASA's or their contractors' personnel;

(*2*) NASA's missions;

(*3*) Human health, safety, or property, including that of adjacent communities; or

(*4*) The environment.

(B) *Duration.* Each emergency is a separate situation; if use of TCE exceeds 15 days, then justification must be documented.

(iii) *Eligibility.* To be eligible for the exemption, the NASA and its contractors must:

(A) Select TCE because there are no technically and economically feasible safer alternatives available during the emergency.

(B) Perform the emergency use of TCE at locations controlled by NASA or its contractors.

(C) Comply with the following conditions:

(1) Notification. Within 15 working days of the emergency use by NASA and its contractors, NASA must provide notice to the EPA Assistant Administrators of both the Office of Enforcement and Compliance Assurance and the Office of Chemical Safety and Pollution Prevention that includes the following:

(*i*) Identification of the conditions of use detailed in paragraph (b)(4)(i) of this section that the emergency use fell under;

(*ii*) An explanation for why the emergency use met the definition of emergency in paragraph (b)(4)(i)(B) of this section; and

(*iii*) An explanation of why TCE was selected, including why there were no technically and economically feasible safer alternatives available in the particular emergency.

(2) Exposure control. The owner or operator must comply with the Workplace Chemical Protection Program provisions in § 751.315, to the extent technically feasible in light of the particular emergency.

(3) Recordkeeping. The owner or operator of the location where the use takes place must comply with the recordkeeping requirements in § 751.323.

(5) *Lead-acid battery separator manufacturing until* December 18, 2044. The following are specific conditions of the exemption for use as a processing aid in the manufacturing of lead-acid battery separators described in § 751.305(b)(22):

(i) The use of TCE as a processing aid for battery separator manufacturing must be limited to lead acid battery separator manufacturing.

(ii) This specific industrial and commercial use of TCE as a processing aid can only be used at industrial facilities in which TCE is in use for the manufacture of lead acid battery separators prior to February 18, 2025.

(iii) The owner or operator of the location where such use occurs, and manufacturers (including importers) and processors of TCE for such use, must comply with the Workplace Chemical Protection Program provisions in § 751.315.

(iv) The owner or operator of the location where such use of TCE occurs must comply with the recordkeeping requirements in § 751.323.

(6) *Industrial and commercial use of TCE as a processing aid for specialty polymeric microporous sheet materials manufacturing until* December 18, 2039. The following are specific conditions of the exemption for industrial and commercial use as a processing aid at § 751.305(b)(23):

(i) The use of TCE as a processing aid must be limited to specialty polymeric microporous sheet materials manufacturing.

(ii) This specific industrial and commercial use of TCE as a processing aid can only be used at industrial facilities in which TCE is in use for the manufacture of specialty polymeric microporous sheet materials prior to February 18, 2025.

(iii) The owner or operator of the location where such use occurs, and manufacturers (including importers) and processors of TCE for such use, must comply with the Workplace Chemical Protection Program provisions in § 751.315.

(iv) The owner or operator of the location where such use of TCE occurs must comply with the recordkeeping requirements in § 751.323.

(7) *Laboratory use for essential laboratory activities until December 18, 2074.* The following are specific conditions of the exemption for laboratory use at § 751.305(b)(24):

(i) The industrial and commercial use of TCE as a laboratory chemical must only be for essential laboratory activities. Essential laboratory activities are:

(A) Laboratory activities associated with cleanup and exposure monitoring activities, including chemical analysis, chemical synthesis, extracting or purifying other chemicals, dissolving other substances, research and development for the advancement of cleanup activities, and as an analytical standard for monitoring related to TCE contamination or exposure monitoring.

(B) Laboratory activities conducted by Federal agencies and their contractors, other than those described in paragraph (b)(7)(i)(A) of this section, and similar laboratory activities, provided the use is essential to the agency's mission.

(ii) The use of TCE as a laboratory chemical for testing asphalt is regulated under § 751.311, and is not considered an essential laboratory activity.

(iii) The use of TCE as a laboratory chemical must be performed on the premises of a laboratory.

(iv) The owner or operator of the location where such use of TCE occurs, and manufacturers (including importers) and processors of TCE for such use, must comply with the Workplace Chemical Protection Program provisions in § 751.315.

(v) The owner or operator of the location where such use of TCE occurs must comply with the recordkeeping requirements in § 751.323.

(8) *Disposal of TCE to industrial pre-treatment, industrial treatment, or publicly owned treatment works for the purposes of cleanup projects of TCE-contaminated water and groundwater until December 18, 2074.* The following are specific conditions of the exemption for disposal at § 751.305(b)(25):

(i) The disposal of TCE to industrial pre-treatment, industrial treatment, or publicly owned treatment works must only be for the purposes of cleanup projects of TCE-contaminated water and groundwater, and is limited to sites undergoing cleanup under CERCLA, RCRA, or other Federal, state, and local government laws, regulations, or requirements.

(ii) The owner or operator of the cleanup site location where TCE industrial treatment or pretreatment occurs must comply with the wastewater worker protection requirements in § 751.319.

(iii) The owner or operator of publicly owned treatment works that receive TCE wastewater must comply with the worker protection requirements in § 751.319.

(iv) The owner or operator of the location where such disposal of TCE occurs must comply with the recordkeeping requirements in § 751.323.

BILLING CODE 6560–50–P

FEDERAL REGISTER

Vol. 89 Tuesday,
No. 242 December 17, 2024

Part IX

Department of Justice

Drug Enforcement Administration

Final Adjusted Aggregate Production Quotas for Schedule I and II Controlled Substances and Assessment of Annual Needs for the List I Chemicals Ephedrine, Pseudoephedrine, and Phenylpropanolamine for 2024; Established Aggregate Production Quotas for Schedule I and II Controlled Substances and Assessment of Annual Needs for the List I Chemicals Ephedrine, Pseudoephedrine, and Phenylpropanolamine for 2025; Notices

DEPARTMENT OF JUSTICE

Drug Enforcement Administration

[Docket No. DEA–1228F]

Final Adjusted Aggregate Production Quotas for Schedule I and II Controlled Substances and Assessment of Annual Needs for the List I Chemicals Ephedrine, Pseudoephedrine, and Phenylpropanolamine for 2024

AGENCY: Drug Enforcement Administration, Department of Justice.

ACTION: Final order.

SUMMARY: This final order establishes the final adjusted 2024 aggregate production quotas for controlled substances in schedules I and II of the Controlled Substances Act and the assessment of annual needs for the list I chemicals ephedrine, pseudoephedrine, and phenylpropanolamine.

DATES: This order is effective December 17, 2024.

FOR FURTHER INFORMATION CONTACT: Heather E. Achbach, Regulatory Drafting and Policy Support Section, Diversion Control Division, Drug Enforcement Administration; Mailing Address: 8701 Morrissette Drive, Springfield, VA 22152, Telephone: (571) 362–3261.

SUPPLEMENTARY INFORMATION:

Legal Authority

Section 306 of the Controlled Substances Act (CSA) (21 U.S.C. 826) requires the Attorney General to establish production quotas for each basic class of controlled substances listed in schedules I and II and for ephedrine, pseudoephedrine, and phenylpropanolamine. The Attorney General has delegated this function to the Administrator of the Drug Enforcement Administration (DEA) pursuant to 28 CFR 0.100.

Background

DEA published the 2024 established aggregate production quotas (APQs) for controlled substances in schedules I and II and for the assessment of annual needs (AAN) for the list I chemicals ephedrine, pseudoephedrine, and phenylpropanolamine in the **Federal Register** (FR) on January 3, 2024.[1] This notice stated that the Administrator would adjust, as needed, the established APQ in 2024 in accordance with 21 CFR 1303.13 and 21 CFR 1315.13. DEA is committed to preventing and limiting diversion by enforcing laws and regulations regarding controlled substances and the list I chemicals ephedrine, pseudoephedrine, and phenylpropanolamine, while meeting the legitimate medical, scientific, and export needs of the United States.

The 2024 proposed adjusted APQ for controlled substances in schedules I and II and AAN for the list I chemicals ephedrine, pseudoephedrine, and phenylpropanolamine were subsequently published in the **Federal Register** on September 25, 2024[2] after consideration of the criteria outlined in that notice. All interested persons were invited to comment on or object to the proposed APQs and AANs on or before October 25, 2024. Prior to this notice, DEA also published a final order to increase the 2024 APQ for lisdexamfetamine and d-amphetamine (for conversion).[3] Therefore, DEA proposed no additional changes for those substances.

Comments Received

DEA received 20 timely comments in response to the September **Federal Register** notice, from chronic pain patients and DEA-registered entities. The comments included requests to ensure sufficient availability in the APQ for select schedule I and schedule II controlled substances including increasing specific APQs if necessary; requests that DEA utilize its regulatory authority in additional ways; opioid shortage concerns; and comments outside the scope of this final order. DEA restricted three comments from public view due to confidential business information and/or confidential personal identifying information.

DEA's Regulatory Authority

Issue: DEA-registered manufacturers requested the APQs for 4-Anilino-N-Phenethyl-4-Piperidine, fentanyl, hydromorphone, morphine (for conversion), oxymorphone (for conversion), and sufentanil be reviewed for sufficiency and adjusted if necessary.

DEA Response: DEA sets the APQs in a manner to meet the estimated medical, scientific, research, industrial needs of the United States, lawful export requirements, and for the establishment and maintenance of reserve stocks. As of the date the comment period closed for the proposed adjusted 2024 APQ and AAN, DEA believes that the proposed adjusted 2024 APQs are sufficient to meet the current estimated 2024 legitimate medical, scientific, research, and industrial needs of the United States, for lawful export requirements, and to provide for adequate reserve stock.

Issue: A DEA-registered manufacturer suggested several changes that it believes are necessary to deter companies from using the quota process to gain competitive advantage and to ensure that quota is available when supply chain circumstances change. Among these, the commenter suggested that DEA needs to obtain authority to reallocate manufacturing quota from one registered bulk manufacturer to another in the event that a finished dosage form manufacturer wishes, midyear, to procure bulk material from a different bulk manufacturer than originally planned.

DEA Response: This comment is outside the scope of the current action, but DEA notes the commenter's suggestion for future consideration. DEA currently can reallocate or revoke quotas in specific circumstances as discussed in 21 CFR 1303.26 and 1303.36.

Issue: The same commenter who raised the immediately preceding issue also suggested that DEA should change the procurement quota application form (DEA Form 250) so that applicants can specify multiple suppliers from which they may procure a basic class of bulk controlled substance, as well as the estimated timeframe for receipt of the basic class from each supplier.

DEA Response: The current procurement quota application form (DEA Form 250) allows for the applicants to specify multiple suppliers from which they may procure a basic class of bulk controlled substance, as well as the estimated timeframe for receipt of the basic class from each supplier.

Issue: The same commenter who raised the two immediately preceding issues suggested that DEA specify, when granting quota, to which specific finished dosage forms the quota is to be applied and the proportion of the authorized amount that is to be used toward each identified dosage form. The manufacturer further requested that DEA verify during DEA inspections the manufacturer's compliance with the details specified in the quota grant.

DEA Response: In 21 U.S.C. 826(a)(2), Congress granted DEA the authority to delineate quota by pharmaceutical dosage form (tablets, capsules, oral

[1] Established Aggregate Production Quotas for Schedule I and II Controlled Substances and Assessment of Annual Needs for the List I Chemicals Ephedrine, Pseudoephedrine, and Phenylpropanolamine for 2024, 89 FR 407.

[2] Proposed Adjustments to the Aggregate Production Quotas for Schedule I and II Controlled Substances and Assessment of Annual Needs for the List I Chemicals Ephedrine, Pseudoephedrine, and Phenylpropanolamine for 2024, 89 FR 78764 (September 25, 2024).

[3] Adjustment to the Aggregate Production Quota for Lisdexamfetamine and d-Amphetamine (for Conversion) for 2024, 89 FR 72424 (Sept. 5, 2024).

liquids, etc.) if DEA determines it will assist in avoiding overproduction, shortages, or diversion of a controlled substance. DEA currently believes the designation of quota by dosage forms at the bulk manufacturing level could lead to unforeseen circumstances such as interference with production schedules or hindrance of the supply chain. Moreover, in compliance with Congress's directive, DEA would need to consider whether the application of such detail to quotas would assist in avoiding overproduction, shortages, or diversion.

When a manufacturer has several customers that use the same active pharmaceutical ingredient (API) to manufacture similar dosage forms (*i.e.* brand and generic formulations), the terms of the contractual agreements govern the transaction in normal circumstances. DEA does not grant quota to fulfill specific business contracts between registrants; rather, DEA grants quota to meet the legitimate medical, scientific, research, and export requirements while ensuring the ability to maintain adequate reserve stock.

Issue: The same commenter who raised the three immediately preceding issues suggested that DEA assess ''quota usage'' on a quarterly or semi-annual basis to verify that manufacturers timely distribute materials that they are authorized under quota to manufacture, and to require companies to surrender unused quotas so that those unused amounts can be reassigned to others who can then supply the market.

DEA Response: DEA has in the past and will continue to ask manufacturers to surrender quota that they will not be able to utilize in a timely manner (*e.g.,* due to production scheduling issues, malfunctioning of manufacturing lines, etc.). While DEA will note for potential future consideration the commenter's suggestion that DEA periodically assess quota usage, in a series of meetings held in the spring of 2024, numerous API and dosage form manufacturers informed DEA that a requirement to utilize quota quarterly would not be feasible because of limited capacity of production lines and manufacturers' strict adherence to production schedules. As a result of the discussion, DEA is allotting commercial manufacturing procurement quotas for Schedule II non-injectable products on a semi-annual basis.

Opioid Shortage Concerns

Issue: Nine commenters expressed general concerns regarding a perceived nationwide shortage of opioid medication due to patients experiencing intermittent out-of-stock or back-ordered situations at pharmacies while attempting to fill their prescriptions.

DEA Response: DEA utilizes the available, reliable data and information received by the agency in advance of publication; however drug shortages may occur due to factors outside of DEA's control such as manufacturing and quality problems, processing delays, supply chain disruptions, or discontinuations. In such circumstances, if the drug manufacturer notifies the U.S. Food and Drug Administration (FDA) Drug Shortage Staff, FDA will coordinate with DEA to address and minimize the impact of drug shortages if both agencies believe action is warranted. Currently, FDA has not issued notice of any nationwide shortages of the type of opioid medications mentioned by these commenters.

Out of Scope Comments: DEA received other comments that were general in nature and raised issues with respect to specific medical illnesses and medical treatments. All of the issues raised are outside of the scope of this final order for 2024 and do not impact the analysis involved in finalizing the 2024 APQs.

Analysis for Final Adjusted 2024 Aggregate Production Quotas and Assessment of Annual Needs

In determining the final adjusted 2024 APQs and AANs, DEA has considered the above comments relevant to this final order for calendar year 2024, along with the factors set forth in 21 CFR 1303.13 and 21 CFR 1315.13, in accordance with 21 U.S.C. 826(a). DEA has also considered other relevant factors, including the 2023 year-end inventories, initial 2024 manufacturing and import quotas, 2024 export requirements, actual and projected 2024 sales, research and product development requirements, additional applications received, and the extent of any diversion of the controlled substance in the class. Based on all of the above, the Administrator is finalizing the adjusted APQs in the same amounts as proposed.

On July 29, 2024, DEA published a temporary scheduling order placing N-desethyl isotonitazene and N-piperidinyl etonitazene in schedule I of the CSA,[4] and on October 25, 2024, DEA published a final rule placing ethylphenidate in schedule I of the CSA,[5] making all regulatory controls pertaining to schedule I controlled substances applicable to the manufacture of these substances, including the requirement to establish an APQ pursuant to 21 U.S.C. 826 and 21 CFR part 1303. This final order establishes an APQ for these substances for the first time.

Pursuant to the above, the Administrator hereby finalizes the 2024 APQs for the following schedule I and II controlled substances and the 2024 AANs for the list I chemicals ephedrine, pseudoephedrine, and phenylpropanolamine, expressed in grams of anhydrous acid or base, as follows:

BILLING CODE 4410–P

[4] Schedules of Controlled Substances: Temporary Placement of N-Desethyl Isotonitazene and N-Piperidinyl Etonitazene in Schedule I, 89 FR 60817.

[5] Schedules of Controlled Substances: Placement of Ethylphenidate in Schedule I, 89 FR 84281.

Basic Class	Final Adjusted 2024 Quotas (g)
Schedule I	
-[1-(2-Thienyl)cyclohexyl]pyrrolidine	20
1-(1-Phenylcyclohexyl)pyrrolidine	30

Ephedrine (for sale)	3,933,336
Phenylpropanolamine (for conversion)	14,878,320
Phenylpropanolamine (for sale)	7,990,000
Pseudoephedrine (for conversion)	1,000
Pseudoephedrine (for sale)	186,617,466

BILLING CODE 4410–C

The Administrator also establishes that APQs for all other schedule I and II controlled substances included in 21

CFR 1308.11 and 1308.12 remain at zero.

Signing Authority

This document of the Drug Enforcement Administration was signed on December 13, 2024, by Administrator Anne Milgram. That document with the original signature and date is maintained by DEA. For administrative purposes only, and in compliance with requirements of the Office of the Federal Register, the undersigned DEA Federal Register Liaison Officer has been authorized to sign and submit the document in electronic format for publication, as an official document of DEA. This administrative process in no way alters the legal effect of this document upon publication in the **Federal Register**.

Heather Achbach,

Federal Register Liaison Officer, Drug Enforcement Administration.

[FR Doc. 2024–30019 Filed 12–16–24; 8:45 am]

BILLING CODE 4410–09–P

DEPARTMENT OF JUSTICE

Drug Enforcement Administration

[Docket No. DEA–1413E]

Established Aggregate Production Quotas for Schedule I and II Controlled Substances and Assessment of Annual Needs for the List I Chemicals Ephedrine, Pseudoephedrine, and Phenylpropanolamine for 2025

AGENCY: Drug Enforcement Administration, Department of Justice.

ACTION: Final order.

SUMMARY: This final order establishes the initial 2025 aggregate production quotas for controlled substances in schedules I and II of the Controlled Substances Act and the assessment of annual needs for the list I chemicals ephedrine, pseudoephedrine, and phenylpropanolamine.

DATES: This order is effective December 17, 2024.

FOR FURTHER INFORMATION CONTACT: Heather E. Achbach, Regulatory Drafting and Policy Support Section, Diversion Control Division, Drug Enforcement Administration; Mailing Address: 8701 Morrissette Drive, Springfield, VA 22152, Telephone: (571) 776–3882.

SUPPLEMENTARY INFORMATION:

I. Legal Authority

Section 306 of the Controlled Substances Act (CSA) (21 U.S.C. 826) requires the Attorney General to establish production quotas for each basic class of controlled substance listed in schedule I and II and ephedrine, pseudoephedrine, and phenylpropanolamine. The Attorney General has delegated this function to the Administrator of the Drug Enforcement Administration (DEA) pursuant to 28 CFR 0.100.

II. Background

The 2025 aggregate production quotas (APQ) and assessment of annual needs (AAN) represent those quantities of schedule I and II controlled substances and the list I chemicals ephedrine, pseudoephedrine, and phenylpropanolamine that may be manufactured in the United States in 2025, in order to provide for the estimated medical, scientific, research, and industrial needs of the U.S., lawful export requirements, and the establishment and maintenance of reserve stocks. These quotas include imports of ephedrine, pseudoephedrine, and phenylpropanolamine, but do not include imports of controlled substances for use in industrial processes.

On September 25, 2024, a notice titled ''Proposed Aggregate Production Quotas for Schedule I and II Controlled Substances and Assessment of Annual Needs for the List I Chemicals Ephedrine, Pseudoephedrine, and Phenylpropanolamine for 2025'' was published in the **Federal Register**.[1] This notice proposed the 2025 APQs for each basic class of controlled substance listed in schedules I and II and the 2025 AANs for the list I chemicals ephedrine, pseudoephedrine, and phenylpropanolamine. All interested persons were invited to comment on or object to the proposed APQs and the proposed AANs on or before October 25, 2024.

III. Comments Received

Within the public comment period, DEA received 1,882 comments from DEA registrants, chronic pain patients, patients with attention deficit/hyperactivity disorder (ADHD), pain advocacy associations, U.S. professional associations, U.S. doctors and nurses, and others. The comments included concerns about potential domestic opioid drug shortages due to further quota reductions; patient difficulty filling authorized opioid prescriptions; increases in drug overdose deaths despite a continued decrease in production quotas; requests for an extension to the comment period; stimulant drug shortages in the United States; concerns that medical professionals might be impeded from exercising their medical expertise regarding opioid prescriptions; requests for a public hearing; and comments not pertaining to DEA-regulated activities. While all comments were posted to regulations.gov, DEA restricted the attachments to 10 comments from public view due to confidential business information and/or confidential personal identifying information.

Opioid Adequacy

Issue (National Production Levels of Proposed APQs for Opioids Compared to 2024 levels): DEA received a significant number of comments from pain advocacy groups, hospital associations, health professionals, and others who raised concerns over the proposed APQs for certain opioids in 2025, which were proposed at a level lower than the established production levels for 2024. The commenters suggested that the proposed APQ levels could exacerbate shortages experienced in 2024.

DEA Response: DEA considers numerous factors in determining an APQ, including total net disposal of the class by all manufacturers during the current and two preceding years, trends in the national rate of net disposal of the class, total actual or estimated inventories of the class and of all substances manufactured from the class, information obtained from the Food and Drug Administration (FDA), and changes in the currently accepted medical use in treatment. 21 U.S.C. 826(a); 21 CFR 1303.11(b). Additional factors considered can be found in 21 CFR 1303.11(b). After considering all of the relevant factors, DEA has determined that the proposed APQs for the five covered controlled substances—fentanyl, hydrocodone, hydromorphone, oxycodone and oxymorphone—are sufficient to meet the forecasted legitimate domestic and foreign needs and allow for maintenance of reserve stocks. These considerations also lead DEA to conclude that U.S. manufacturers will need to manufacture approximately the same amount of those opioids in 2025 as in 2024 in order to meet legitimate needs.

Accordingly, DEA proposed the 2025 APQs for those five substances at the same level as in DEA's proposed revised APQs for 2024 published on September

[1] Proposed Aggregate Production Quotas for Schedule I and II Controlled Substances and Assessment of Annual Needs for the List I Chemicals Ephedrine, Pseudoephedrine, and Phenylpropanolamine for 2025, 89 FR 78772 (September 25, 2024).

25, 2024.[2] In that publication, DEA proposed minor reductions to the 2024 APQs for 4 of the 5 substances to reflect DEA's updated calculations of diversion, as required by Congress. Specifically, Congress requires DEA to make appropriate quota reductions ''from the quota [DEA] would have otherwise established had such diversion not been considered.'' [3] DEA applied the same estimates of diversion in proposing and finalizing the 2025 APQs and has reduced the 2025 APQs accordingly. The APQs for those five controlled substances are lower than the initial 2024 established APQs by approximately 0.1% combined. These decreases in the APQs will not affect the ability of the APQs to provide all material necessary for the estimated medical, scientific, research, and industrial needs of the U.S., lawful export requirements, and the establishment and maintenance of reserve stocks.

Issue (Medication Out of Stock at Pharmacy Level): DEA received comments questioning whether the 2025 proposed APQs for Schedule II opioids will be adequate to meet legitimate medical needs of patients. Commenters said that because of decreases in APQs for specific opioids, they have had difficulty filling legitimate prescriptions at pharmacies. These issues have negatively impacted their quality of life and caused mental health-related issues, including the possibility of suicide.

DEA Response: DEA is committed to ensuring an adequate and uninterrupted supply of controlled substances in order to meet legitimate medical, scientific, and export needs of the United States. DEA sets the APQs for controlled substances based on the available data and information received at that specific point in time; however, subsequent factors outside of DEA's control, including changes to manufacturers' business practices may emerge afterwards and potentially contribute to a temporary lack of inventory of controlled substances at the point of dispensation. In recent years, these factors have included labor shortages and a lack of production capacity. In such circumstances, DEA, in coordination with FDA, can utilize tools under the CSA to try to prevent or alleviate drug shortages so that patients are able to fill legitimate prescriptions for controlled substances without undue delay. Additionally, if patients are faced with a delay in receiving their medications, the patients may request a one-time transfer of initial dispensing of an electronic prescription for Schedules II—V controlled substances from one retail pharmacy to another retail pharmacy if authorized under state law.[4] If the medication is a controlled substance in Schedules III—V and includes authorized refills, the refills can also be transferred with the initial prescription to the receiving pharmacy.

Issue (Nationwide Opioid Shortages): DEA received many comments stating there is a nationwide shortage of opioid medication because the commenters' local pharmacies were often out of stock, forcing the commenters to spend significant time contacting additional pharmacies, and traveling further to get prescriptions filled. Commenters stated that many times they were unsuccessful in their attempts to fill the prescription.

DEA Response: Drug shortages may occur due to factors outside of DEA's control such as manufacturing and quality problems, processing delays, supply chain disruptions, or discontinuations. In such circumstances, if the drug manufacturer notifies the FDA Drug Shortage Staff, FDA will coordinate with DEA to address and minimize the impact of drug shortages if both agencies believe action is warranted. Currently, FDA has not issued notice of any nationwide shortages of the types of opioid medications mentioned by these commenters.

Issue (Failure to Acknowledge Drug Shortages): One commenter expressed that DEA is failing to acknowledge and address opioid drug shortages that are complicating access to prescribed medications, effectively creating conditions such as ''pharmacy deserts.''

DEA Response: DEA is aware of specific product shortages of pain medicines and works with FDA and DEA-registered manufacturers to alleviate them. Patients and medical professionals may notice specific drug products are out of stock in particular areas; however, DEA cannot dictate DEA registrants' distributions of drug products. If a drug manufacturer notifies FDA of a manufacturing-related shortage, FDA and DEA can take additional steps to help alleviate the shortage if action is warranted.

Issue (Patients Switching to Illicit Fentanyl or Medications Obtained from Illegal Sources): Several commenters expressed concerns that because of DEA's reduction of quotas for pain relieving controlled substances, chronic pain sufferers who were unable to fill their legitimate prescriptions eventually turned to illegal fentanyl or medications obtained from illegitimate sources as a substitute relief that could increase the risk of overdose death. These commenters stated that overdose deaths in the United States continue to rise because of illegal fentanyl or illegitimate medications, not from pharmaceutical medications prescribed to chronic pain patients.

DEA Response: While overdose deaths may occur because of use of illicit substances, DEA's quota regulations have been implemented to prevent misuse and diversion of pharmaceutical controlled substances. In this way, these quotas can reduce the occurrence of overdose and death from the use of legitimate controlled substances. Patients should work closely with their providers to utilize other FDA-approved medications for their conditions and fill their prescriptions only from DEA-registered pharmacies. The only safe medications containing controlled substances are ones prescribed by a trusted, DEA-registered medical professional and dispensed by a licensed pharmacist at a DEA-registered pharmacy. The medications received from unregistered internet sources may, in fact, be manufactured or laced with illicit substances including illicit fentanyl, which contributes to rates of overdose deaths.

Issue (Opioid Prescribing Hesitancy): Many commenters, mostly self-identified chronic pain patients, expressed that the goal of the 2016 Centers for Disease Control and Prevention Guidelines was to decrease opioid overdoses, but instead there has been an increase in overdoses nationwide of over 400 percent due to illegal fentanyl or illegally manufactured pain pills. Commenters stated that many chronic pain patients have been harmed, and some have died by suicide, due to the inability to get prescriptions because of the APQ reductions made by DEA. Many commenters also stated that restrictions imposed by DEA have caused opioid medications to be under-prescribed due to fear of prosecution. Commenters said doctors should have latitude in making treatment decisions to prescribe opioid pain medications based on individual patient needs.

DEA Response: Pursuant to 21 U.S.C. 826(i), DEA is mandated to estimate diversion for 5 controlled substances—

[2] *See* Proposed Adjustments to the Aggregate Production Quotas for Schedule I and II Controlled Substances and Assessment of Annual Needs for the List I Chemicals Ephedrine, Pseudoephedrine, and Phenylpropanolamine for 2024, 89 FR 78764 (Sept. 25, 2024).

[3] 21 U.S.C. 826(i)(1)(C).

[4] *See Revised Regulation Allows DEA-Registered Pharmacies to Transfer Electronic Prescriptions at a Patient's Request,* DEA.gov (Sept. 1, 2023), *https://www.dea.gov/stories/2023/2023-09/2023-09-01/revised-regulation-allows-dea-registered-pharmacies-transfer.*

fentanyl, hydrocodone, hydromorphone, oxycodone and oxymorphone—and this estimation includes the consideration of rates of overdose deaths. While overdose deaths may occur as a result of the use of illegal fentanyl or illegally manufactured pain medications, quotas are being set by DEA to prevent misuse and diversion of pharmaceutical controlled substances, and thus reduce the occurrence of overdose and death from the use of legitimate controlled substances. Additionally, DEA's regulations do not impose restrictions on the amount and the type of medication that licensed practitioners can prescribe. DEA has consistently emphasized and supported the authority of individual practitioners under the CSA to administer, dispense, and prescribe controlled substances for the legitimate treatment of pain within acceptable medical standards, as outlined in DEA's policy statement published in the **Federal Register** on September 6, 2006, titled ''Dispensing Controlled Substances for the Treatment of Pain.'' [5]

Attention Deficit/Hyperactivity Disorder (ADHD) Medication

Issue (Shortage): DEA received comments expressing general concerns regarding the ongoing drug shortages for stimulant medications used in the treatment of ADHD.

DEA Response: DEA is committed to ensuring an adequate and uninterrupted supply of controlled substances in order to meet the estimated legitimate medical, scientific, research, and industrial needs of the United States, for lawful export requirements, and for the establishment and maintenance of reserve stocks. DEA sets the APQs to provide for all legitimate medical purposes and for anticipated foreign demand. Additionally, DEA and FDA coordinate efforts to prevent or alleviate drug shortages. Such efforts may include the adjustment of the APQs and individual domestic manufacturers' quotas, FDA's approval of additional market competitors, and coordination between the agencies to allow importation of foreign-manufactured drug products that meet FDA approval. If the actual prescribing rates of these substances are significantly higher than the 2025 estimates of medical needs, the Administrator has the authority to increase the aggregate production quota at any time. 21 CFR 1303.13(a).

Insufficient Gamma Hydroxybutyric Acid (GHB)

Issue (GHB APQ Insufficient to Support New FDA-Approved Generic Medications Entering the Market as well as Existing Branded Drug Products): DEA received one comment from a law firm that voiced concern that the proposed 2025 GHB APQ will be insufficient to provide for existing branded products on the market as well as emerging generic products with anticipated FDA-approval dates near the end of calendar year 2025. The commenter noted that FDA has expanded the conditions for which the branded products can be prescribed as part of an effective treatment.

DEA response: DEA is aware of the current FDA-approved GHB branded drug products and their exclusivity timelines as well as the numerous generic drug applications that are pending before FDA for approval. The 2025 APQ for GHB is being finalized at 49,675,266 grams, which is 20,258,266 grams higher than the 2024 APQ. This equates to an almost 70 percent increase in the amount of bulk active pharmaceutical ingredient (API) that can be made available in 2025 to provide for legitimate medical need, as compared to 2024. This additional API can be utilized in the manufacture of existing drug products on the market, product development activities leading to FDA-approved generic drugs, as well as inventory necessary to begin calendar year 2026 without shortages. The 2025 APQ is based on all available data including company-submitted information, U.S. export data, U.S. import data, and FDA drug data highlighting emerging and changing drug products containing GHB prescribed to the relevant patient population.

Diversion Estimates

Issue (Impact of Diversion Estimate on Opioids): Commenters voiced concern with the ''red flags'' associated with diversion data gathered from state Prescription Drug Monitoring Program (PDMP) data, which DEA uses to estimate diversion for the five covered controlled substances. Commenters worried that repeated attempts to fill prescriptions would be shown in the state PDMP data and result in concerns that they were engaged in ''doctor shopping,'' and their conduct could be misperceived as a ''red flag'' of actively seeking prescribed covered controlled substances from three or more prescribers in a 90-day period. Commenters were concerned that such misperceptions could render them unable to fill validly issued prescriptions.

DEA Response: In the event that a patient's general pharmacy does not have sufficient stock of a particular drug, a patient visiting multiple pharmacies to fill a single prescription would not be included in the ''red flag'' metric of patients actively seeking prescribed covered controlled substances from three or more prescribers in a 90-day period. The state PDMP data submitted was adequate to allow DEA to draw reliable inferences regarding the state and U.S. populations. The sample is large enough to allow DEA to accurately generalize the data to the whole population of the United States for use in the calculation of estimated national levels of diversion of the covered controlled substances. DEA developed the metric of patients prescribed covered controlled substances from three or more prescribers in a 90-day period to identify potential doctor shopping, a common technique used to obtain large amounts of controlled substances for the purpose of abuse or diversion. Federal administrative and criminal case law demonstrates that multiple prescriptions from multiple prescribers in a short timeframe is a reliable indicator of diversion.[6] In addition, DEA did not consider prescriptions written for the five covered controlled substances in quantities lower than 240 morphine milligram equivalents (MME) daily because some patients, including oncology patients in particular, have legitimate medical needs for covered controlled substance prescriptions in excess of 90 MME daily. DEA did not wish to inadvertently include legitimate prescriptions for these patients in its calculation of diversion. Daily dosages higher than 240 MME place individuals at a higher risk of overdose and death, and correlate with a heightened risk of diversion. DEA received aggregated data from state PDMPs that reflected only individual filled prescriptions.

Data Collection and Analysis

Issue (Data Accuracy): Several commenters stated that FDA's estimation of medical needs and DEA's data collection process are flawed and inaccurate.

DEA Response: FDA utilizes a variety of data sources in developing its estimates of domestic medical needs. When determining the 2025 APQs, DEA considered the estimation of domestic medical needs data provided by FDA,

[5] Dispensing Controlled Substances for the Treatment of Pain, 71 FR 52716 (September 6, 2006).

[6] The Medicine Shoppe, 29 FR 59504, 59507, 59512–13 (2014); Holiday CVS, LLC, d/b/a CVS Pharmacy Nos. 219 and 5195, 57 FR 62316 (2012).

and also considered other data sources including prescriptions dispensed in prior and current years reported in IQVIA, research and clinical trial information from DEA-registered researchers and manufacturers, information provided in quota applications from DEA-registered manufacturers, as well as historic and current year export data and future estimations of export requirements. DEA is actively reevaluating and improving the data collection process to ensure that the APQs are set at an adequate level to meet legitimate medical, scientific, research, and export needs while establishing and maintaining reserve stocks.

Issue (Lack of Data Transparency): Two commenters stated that there is a lack of transparency in the quota setting process.

DEA Response: DEA is considering methods that might increase transparency in its quota setting process. Future regulatory proposals may include steps such as public notification and an opportunity for public input when prescribing rates for controlled substances substantially deviate from FDA's estimate of medical needs. DEA must strike a balance between increasing transparency and complying with the applicable laws and regulations aimed at protecting confidential business and patient information.

Comments and Quota Applications From DEA-Registered Manufacturers

Issue: DEA received additional quota applications as well as comments from DEA-registered manufacturers regarding a specific schedule I controlled substance, requesting the APQs be established at a sufficient level to allow for their manufacturing to meet medical and scientific needs.

DEA Response: DEA considered the additional quota applications and comments from DEA-registered manufacturers and determined that DEA's APQ for dimethyltryptamine (DMT) should be increased to support legitimate research and scientific efforts toward an FDA-approved drug product. The increase is reflected below in the section titled, ''Determination of 2025 Aggregate Production Quotas and Assessment of Annual Needs.''

Request for Hearing and Extension of Comment Period

Issue: Several individual commenters suggested that DEA consider holding a public hearing regarding the APQs and AANs.

DEA Response: The decision whether to grant a hearing on the issues raised by the commenters lies solely within the discretion of the Administrator.[7] While hearings are required when requested by states in certain situations, these requests were not submitted by states. These requests did not include any evidence that would lead to the conclusion that a hearing is necessary or warranted. DEA has addressed specific points raised by the commenters in the issues and responses above.

Issue: DEA received three comments requesting an extension of the comment period so the commenters can better research the issues and submit additional comments.

DEA Response: DEA declines to extend the comment period. The number and scope of comments indicate that the provided 30 days was adequate. Additionally, DEA may propose to adjust these established APQs and AANs at any time after they have been established, at which time additional comments will be accepted.[8]

Out of Scope Comments

DEA received comments that are outside the scope of this order. The comments were general in nature and raised issues with respect to specific medical illnesses, medical treatments and medication costs. These comments do not impact the analysis involved in establishing the 2025 APQs.

IV. Determination of 2025 Aggregate Production Quotas and Assessment of Annual Needs

In determining the established 2025 APQs and AANs, DEA has considered the above comments along with the factors set forth in 21 CFR 1303.11 and 21 CFR 1315.11, in accordance with 21 U.S.C. 826(a). These factors include, but are not limited to, the 2024 manufacturing quotas, current 2024 sales and inventories, anticipated 2025 export requirements, industrial use, additional applications for 2025 quotas, and information on research and product development requirements.

On October 25, 2024, DEA published a final rule placing ethylphenidate in schedule I of the CSA,[9] making all regulatory controls pertaining to schedule I controlled substances applicable to the manufacture of these substances, including the requirement to establish an aggregate production quota pursuant to 21 U.S.C. 826 and 21 CFR part 1303. This final order establishes an aggregate production quota for this substance.

Estimates of Diversion

As specified in the proposal, and as required by 21 U.S.C. 826(i), DEA calculated a national diversion estimate for each of the five covered controlled substances. This data, which remains unchanged, was published in the *Proposed Aggregate Production Quotas for Schedule I and II Controlled Substances and Assessment of Annual Needs for the List I Chemicals Ephedrine, Pseudoephedrine, and Phenylpropanolamine for 2025.*[10]

In accordance with 21 U.S.C. 826, 21 CFR 1303.11, and 21 CFR 1315.11, the Administrator hereby establishes the 2025 APQs for the following schedule I and II controlled substances and the 2025 AANs for the list I chemicals ephedrine, pseudoephedrine, and phenylpropanolamine, expressed in grams of anhydrous acid or base, as follows:

BILLING CODE P

[7] 21 CFR 1303.11(c).

[8] 21 CFR 1303.13.

[9] Schedules of Controlled Substances: Placement of Ethylphenidate in Schedule I, 89 FR 84281 (October 22, 2024).

[10] 89 FR 78772 (Sept. 25, 2024).

Basic Class	Established 2025 Quotas (g)
Schedule I	
-[1-(2-Thienyl)cyclohexyl]pyrrolidine	20
1-(1-Phenylcyclohexyl)pyrrolidine	30
1-(2-Phenylethyl)-4-phenyl-4-acetoxypiperidine	10
1-(5-Fluoropentyl)-3-(1-naphthoyl)indole (AM2201)	30
1-(5-Fluoropentyl)-3-(2-iodobenzoyl)indole (AM694)	30
1-[1-(2-Thienyl)cyclohexyl]piperidine	15
2'-fluoro 2-fluorofentanyl	30
1-Benzylpiperazine	25
1-Methyl-4-phenyl-4-propionoxypiperidine	10
2-(2,5-Dimethoxy-4-ethylphenyl)ethanamine (2C-E)	30
2-(2,5-Dimethoxy-4-methylphenyl)ethanamine (2C-D)	30
2-(2,5-Dimethoxy-4-nitro-phenyl)ethanamine (2C-N)	30
2-(2,5-Dimethoxy-4-n-propylphenyl)ethanamine (2C-P)	30
2-(2,5-Dimethoxyphenyl)ethanamine (2C-H)	100
2-(4-Bromo-2,5-dimethoxyphenyl)-N-(2-methoxybenzyl)ethanamine (25B-NBOMe; 2C-B-NBOMe; 25B; Cimbi-36)	30
2-(4-Chloro-2,5-dimethoxyphenyl)ethanamine (2C-C)	30
2-(4-Chloro-2,5-dimethoxyphenyl)-N-(2-methoxybenzyl)ethanamine (25C-NBOMe; 2C-C-NBOMe; 25C; Cimbi-82)	25
2-(4-Iodo-2,5-dimethoxyphenyl)ethanamine (2C-I)	30
2-(4-Iodo-2,5-dimethoxyphenyl)-N-(2-methoxybenzyl)ethanamine (25I-NBOMe; 2C-I-NBOMe; 25I; Cimbi-5)	30
2,5-Dimethoxy-4-ethylamphetamine (DOET)	25
2,5-Dimethoxy-4-n-propylthiophenethylamine	25
2,5-Dimethoxyamphetamine	25
2-[4-(Ethylthio)-2,5-dimethoxyphenyl]ethanamine (2C-T-2)	30
2-[4-(Isopropylthio)-2,5-dimethoxyphenyl]ethanamine (2C-T-4)	30
3,4,5-Trimethoxyamphetamine	30
2-Methyl AP-237	30
3,4-Methylenedioxyamphetamine (MDA)	12,000
3,4-Methylenedioxymethamphetamine (MDMA)	12,000
3,4-Methylenedioxy-N-ethylamphetamine (MDEA)	40
3,4-Methylenedioxy-N-methylcathinone (methylone)	5,200
3,4-Methylenedioxypyrovalerone (MDPV)	35
3-FMC; 3-Fluoro-N-methylcathinone	25
3-Methylfentanyl	30
3-Methylmethcathinone	30

3-Methylthiofentanyl	30
4,4′-Dimethylaminorex	30
4-Bromo-2,5-dimethoxyamphetamine (DOB)	30
4-Bromo-2,5-dimethoxyphenethylamine (2-CB)	5,100
4-Chloro-alpha-pyrrolidinovalerophenone (4-chloro-alpha-PVP)	25
4-CN-Cumyl-Butinaca	25
4-Fluoroisobutyryl fentanyl	30
4F–MDMB–BINACA	30
4-FMC; Flephedrone	25
4-MEC; 4-Methyl-N-ethylcathinone	25
4-Methoxyamphetamine	150
4-methyl-1-phenyl-2-(pyrrolidin-1-yl)pentan-1-one (alpha-PiHP)	30
4-Methyl-2,5-dimethoxyamphetamine (DOM)	25
4-Methylaminorex	25
4-Methyl-N-methylcathinone (mephedrone)	45
4-Methyl-alpha-ethylaminopentiophenone (4-MEAP)	25
4-Methyl-alpha-pyrrolidinohexiophenone (MPHP)	25
4′-Methyl acetyl fentanyl	30
4-Methyl-α-pyrrolidinopropiophenone (4-MePPP)	25
4F–MDMB–BUTICA	30
5-(1,1-Dimethylheptyl)-2-[(1R,3S)-3-hydroxycyclohexyl]-phenol	50
5-(1,1-Dimethyloctyl)-2-[(1R,3S)-3-hydroxycyclohexyl]-phenol (cannabicyclohexanol or CP-47,497 C8-homolog)	40

Title 3—

The President

Memorandum of December 12, 2024

Establishment of the China Censorship Monitor and Action Group

Memorandum for the Heads of Executive Departments and Agencies

By the authority vested in me as President by the Constitution and the laws of the United States of America, and to monitor and address the effects of any efforts by the People's Republic of China (PRC), either directly or through proxies, to censor or intimidate any United States person, it is hereby ordered as follows:

Section 1. *Policy.* Consistent with section 5515(b) of the James M. Inhofe National Defense Authorization Act for Fiscal Year 2023 (Public Law 117–263, 22 U.S.C. 3363(b)) (the ''Act''), I am directing the Assistant to the President for National Security Affairs and the Director of the National Economic Council to lead an interagency effort to oversee the development and execution of an integrated Federal Government strategy to monitor and address the effects of any efforts by the PRC to censor or intimidate, in the United States or in any of its possessions or territories, any United States person, including a United States company that conducts business in the PRC, exercising its freedom of speech.

Sec. 2. *Establishment.* There is established within the Executive Office of the President the China Censorship Monitor and Action Group (Task Force).

Sec. 3. *Membership.* (a) The Task Force shall be chaired by the Assistant to the President for National Security Affairs, or his or her designee, and vice-chaired by the Director of the National Economic Council, or his or her designee.

(b) In addition to the Chair and the Vice Chair, the Task Force shall consist of representatives from the following executive departments and agencies (agencies), the heads of which shall designate or appoint personnel at the level of Assistant Secretary or above to participate in the Task Force:

(i) the Department of State;

(ii) the Department of the Treasury;

(iii) the Department of Defense;

(iv) the Department of Justice;

(v) the Department of Agriculture;

(vi) the Department of Commerce;

(vii) the Department of Education;

(viii) the Department of Homeland Security;

(ix) the Office of the Director of National Intelligence;

(x) the Office of the United States Trade Representative;

(xi) the Central Intelligence Agency;

(xii) the Federal Bureau of Investigation; and

(xiii) other agencies and offices as the President may, from time to time, designate.

Sec. 4. *Mission and Function.* The Task Force shall meet not less frequently than twice per year to oversee the development and execution of the integrated Federal Government strategy described in section 5515(b)(3)(A) of the Act (22 U.S.C. 3363(b)(3)(A)). That strategy shall reflect the collective views of the members of the Task Force and shall be informed by consultations with agencies and independent agencies that are not represented on the Task Force; relevant stakeholders in the private sector and the media; and relevant stakeholders among foreign allies and partners of the United States.

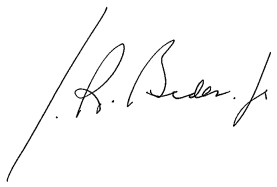
Sec. 5. *Annual Report of the Task Force.* (a) Within 120 days of the date of this memorandum, the Task Force shall submit to the President and the appropriate congressional committees, as defined in section 5515(a)(1) of the Act (22 U.S.C. 3363(a)(1)), the strategy described in section 5515(b)(3)(A) of the Act.

(b) Within 180 days of the date of this memorandum, the Task Force shall submit to the President and the appropriate congressional committees, and make publicly available to the extent consistent with national security and other executive branch confidentiality interests, the first annual report described in section 5515(b)(6)(A)–(B) of the Act (22 U.S.C. 3363(b)(6)).

(c) Within 1 year of submitting the first annual report described in subsection (b) of this section, and every year thereafter, the Task Force shall submit to the President and the appropriate congressional committees, and make publicly available to the extent consistent with national security and other executive branch confidentiality interests, the required follow-on annual reports described in section 5515(b)(6)(A)–(B) of the Act, until the requirement terminates as specified in section 5515(d) of the Act (22 U.S.C. 3363(d)).

Sec. 6. *Definition.* For purposes of this memorandum, the term ''United States person'' shall have the meaning provided in section 5515(a)(3) of the Act (22 U.S.C. 3363(a)(3)).

Sec. 7. *General Provisions.* (a) Nothing in this memorandum shall be construed to impair or otherwise affect:



(i) the authority granted by law to an executive department or agency, or the head thereof; or

(ii) the functions of the Director of the Office of Management and Budget relating to budgetary, administrative, or legislative proposals.

(b) This memorandum shall be implemented consistent with applicable law and subject to the availability of appropriations.

(c) This memorandum is not intended to, and does not, create any right or benefit, substantive or procedural, enforceable at law or in equity by any party against the United States, its departments, agencies, or entities, its officers, employees, or agents, or any other person.

(d) The Attorney General is authorized and directed to publish this memorandum in the *Federal Register*.

Presidential Documents

Memorandum of December 12, 2024

Establishment of the Countering Economic Coercion Task Force

Memorandum for the Heads of Executive Departments and Agencies

By the authority vested in me as President by the Constitution and the laws of the United States of America, and to improve efforts to respond to coercive economic practices of countries of concern, including the People's Republic of China (PRC), it is hereby ordered as follows:

Section 1. *Policy.* Consistent with section 5514 of the James M. Inhofe National Defense Authorization Act for Fiscal Year 2023 (Public Law 117–263, 22 U.S.C. 3362) (the ''Act''), I am directing the Assistant to the President for National Security Affairs and the Director of the National Economic Council to oversee an interagency effort to address the increasing use of economic coercion by countries of concern, including the PRC; to assess potential vulnerabilities of countries, including within their private sectors, to such coercion; and to develop concrete recommendations for a comprehensive, effective, and, as appropriate, multilateral response, including to deter future coercive economic behavior.

Sec. 2. *Establishment.* There is established within the Executive Office of the President the Countering Economic Coercion Task Force (Task Force).

Sec. 3. *Membership.* (a) The Task Force shall be chaired by the Assistant to the President for National Security Affairs, or his or her designee, and vice-chaired by the Director of the National Economic Council, or his or her designee.

(b) In addition to the Chair and the Vice Chair, the Task Force shall consist of representatives from the following executive departments and agencies (agencies), the heads of which shall designate or appoint personnel at the level of Assistant Secretary or above to participate in the Task Force:

(i) the Department of State;

(ii) the Department of the Treasury;

(iii) the Department of Defense;

(iv) the Department of Justice;

(v) the Department of Agriculture;

(vi) the Department of Commerce;

(vii) the Department of Labor;

(viii) the Department of Health and Human Services;

(ix) the Department of Energy;

(x) the Department of Homeland Security;

(xi) the Office of the Director of National Intelligence;

(xii) the Office of the United States Trade Representative;

(xiii) the Central Intelligence Agency;

(xiv) the United States Agency for International Development;

(xv) the Export-Import Bank of the United States;

(xvi) the Trade and Development Agency;

(xvii) the United States International Development Finance Corporation; and

(xviii) other agencies and offices as the President may, from time to time, designate.

Sec. 4. *Mission and Function.* The Task Force shall work across agencies and offices to oversee the development and implementation of an integrated United States Government strategy to respond to and deter coercive economic practices by countries of concern, including the PRC. That strategy shall include the elements outlined in section 5514(c)(1)(A) of the Act (22 U.S.C. 3362(c)(1)(A)) and shall, consistent with section 5514(c)(2) of the Act (22 U.S.C. 3362(c)(2)), be informed by consultations with relevant stakeholders, including, as necessary and appropriate, stakeholders in the private sector, agencies that are not represented on the Task Force, and foreign allies and partners of the United States. The Task Force shall also perform the other responsibilities set forth in section 5514(c)(1) of the Act (22 U.S.C. 3362(c)(1)).

Sec. 5. *Reporting on the Work and Recommendations of the Task Force.* (a) Within 180 days of the date of this memorandum, the Task Force shall submit to the Congress the initial report described in section 5514(e)(1) of the Act (22 U.S.C. 3362(e)(1)).

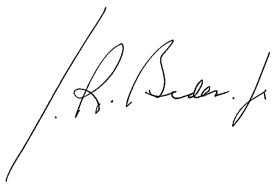
(b) Within 1 year of submitting the initial report described in subsection (a) of this section, the Task Force shall submit to the Congress the first interim report described in section 5514(e)(2)(A) of the Act (22 U.S.C. 3362(e)(2)(A)).

(c) Within 1 year of submitting the first interim report described in subsection (b) of this section, the Task Force shall submit to the Congress the second interim report described in section 5514(e)(2)(B) of the Act (22 U.S.C. 3362(e)(2)(B)).

(d) Within 30 days of submitting the second interim report described in subsection (c) of this section, the Task Force shall submit to the Congress the final report described in section 5514(e)(3) of the Act (22 U.S.C. 3362(e)(3)).

(e) The Task Force shall also consolidate any input received and submit periodic recommendations to the President on policies and regulatory actions to address systemic harms from PRC economic coercion.

Sec. 6. *General Provisions.* (a) Nothing in this memorandum shall be construed to impair or otherwise affect:



(i) the authority granted by law to an executive department or agency, or the head thereof; or

(ii) the functions of the Director of the Office of Management and Budget relating to budgetary, administrative, or legislative proposals.

(b) This memorandum shall be implemented consistent with applicable law and subject to the availability of appropriations.

(c) This memorandum is not intended to, and does not, create any right or benefit, substantive or procedural, enforceable at law or in equity by any party against the United States, its departments, agencies, or entities, its officers, employees, or agents, or any other person.

(d) The Attorney General is authorized and directed to publish this memorandum in the *Federal Register*.

LIST OF PUBLIC LAWS

Note: No public bills which have become law were received by the Office of the Federal Register for inclusion in today's **List of Public Laws**.

Last List December 16, 2024

Public Laws Electronic Notification Service (PENS)

PENS is a free email notification service of newly enacted public laws. To subscribe, go to *https://portalguard.gsa.gov/__*layouts/PG/register.aspx.

Note: This service is strictly for email notification of new laws. The text of laws is not available through this service. **PENS** cannot respond to specific inquiries sent to this address.
