their authorized validity period. Some of these commenters said this grace period is essential to allowing H-2 workers sufficient time to respond to the unexpected loss of employment by seeking new H-2 employment, exploring their legal options, or organizing their departure from the United States. A joint submission said that this new provision would improve worker mobility and reduce the administrative burden on workers and employers. A professional association stated that in situations usually outside of the worker’s control, the H-2 worker should be allowed to seek new employment. A union in support of this provision stated that, without time to search for and secure new employment, visa portability would not be practically accessible for H-2 workers. The aforementioned union and professional association, said the proposal is consistent with the benefits offered by other nonimmigrant classifications.

Multiple commenters, including a couple of unions, a joint submission, and an advocacy group, supported the proposed grace period because it would enhance worker autonomy, flexibility, and mobility to leave unfair, unsafe, or abusive employment conditions and apply for alternative employment without the risk of losing their visa. A group of Federal elected officials stated that guest workers have a well-founded fear of retaliation from employers that often prevents them from speaking out and advocating for better working conditions, and it is extremely challenging for workers to change employers, even when employers break the law. Likewise, an advocacy group said this grace period is especially critical when workers are terminated from employment in retaliation for exercising their rights and will lessen the power of bad-faith employers to leverage the immigration system as a tool of retaliation. The commenter stated that the proposed rule complements existing anti-retaliation provisions in DOL regulations governing the H-2 programs, and in Federal and State law. The commenter also welcomed DHS’s application of this flexibility to any termination rather than attempting to limit it to retaliatory firings, as determining whether a termination constitutes retaliation often requires a fact-intensive and time-consuming legal inquiry. The commenter went on to say that workers need the 60-day post-employment grace period to assess any potential violations of their rights and take legal action if necessary.

A couple of trade associations supported the specification that workers

would not accrue any period of unlawful presence solely based on cessation of employment. These commenters also agreed with the proposal that workers would not have to notify DHS or USCIS to take advantage of the new grace period. The commenters added that DHS should not consider employer notification to be conclusive evidence regarding a worker’s status or trigger the start date of the 60-day grace period, and that when an extension is filed the petitioner should provide information or evidence regarding the cessation of employment to demonstrate status maintenance.

Response: DHS appreciates the commenters’ support for this grace period, which is intended to improve worker flexibility, mobility, and protections. DHS confirms that this grace period will apply regardless of the reason for the H-2 worker’s termination (subject to the worker’s maximum period of stay). DHS further confirms that an employer’s notification under 8 CFR 214.2(h)(5)(vi)(B) and 8 CFR 214.2(h)(6)(i)(F) will not be considered conclusive evidence regarding a worker’s status.

e. Concerns With the 60-Day Grace Period Following Cessation of Employment

Comment: Multiple commenters, including several trade associations, expressed concern over the 60-day cessation of work grace period as proposed, stating that it could be abused if H-2 workers, in whom employers have invested considerable time and expense resources, immediately quit to spend 60 days, without risk, consequence, or penalty, to look for another H-2 job. Some of these commenters cited data indicating that most H-2 employers do not take advantage of their workforce, nor are they removed from the program, asserting that, while the 60-day grace period might be warranted if the Department revokes a bad-actor H-2 employer’s petition, it is not necessary or justified for the majority of H-2 employers. A trade association wrote that the uncertainty associated with this proposal would have a detrimental impact on labor-intensive American agriculture. Another trade association stated that their industry’s peak harvest generally lasts 60 to 90 days and that a worker unexpectedly leaving in the last 60 days of the contract would be devastating. Another commenter urged DHS “to be aware of perverse incentives” created by this new grace period and to consider how it “would affect worker behavior, and the economic cost of such impact on

employers should they experience turnover.”

Response: DHS will finalize the grace period for a cessation of employment at 8 CFR 214.2(h)(13)(i)(C) as proposed. Without this new grace period, an already financially vulnerable H–2 worker facing an abusive employment situation or hazardous working conditions must choose between remaining in a bad employment situation or facing the harsh consequences of losing wages, benefits, and legal status from their H–2 employment. As other commenters have noted, some H–2 employers leverage a potential loss of status to coerce workers into continued employment, creating a power imbalance that allows forced labor and trafficking to occur in the H–2 programs. Thus, this grace period of up to 60 days is an important step towards addressing the systemic power imbalance between H–2 workers and their employers by giving H–2 workers a more realistic option of leaving a bad employer.

DHS acknowledges that an H–2 employer, like any employer in a free labor market, risks losing valuable time, resources, and/or manpower when a worker leaves employment. However, the new grace period is not expected to provide a significant “perverse incentive” for H–2 workers to cease employment without good cause. DHS does not agree with the commenters that an H–2 worker who ceases employment does so without risk, consequence, or penalty. Whenever a H–2 worker ceases employment, they face several risks and consequences including the loss of wages and benefits that come from that employment, such as housing for H–2A workers and certain H–2B workers. And as other commenters have noted, the ability of H–2 workers to cease employment, especially when faced with a harmful work environment, will help improve equality of wages and working conditions with U.S. workers.

It is important to emphasize that the new grace period will not authorize a beneficiary to lawfully work in the United States, but only ensure that USCIS will not consider a beneficiary to have failed to maintain nonimmigrant status or to have accrued unlawful status “solely on the basis of a cessation of the employment.” New 8 CFR 214.2(h)(13)(i)(C). As stated in the NPRM, the limitation that the grace period will apply “solely on the basis of a cessation of employment” should mitigate the risk that some workers would try to use this grace period to engage in unauthorized employment or other unlawful behavior. 88 FR 65040, 65065 (Sept. 20, 2023). This aspect of

the grace period serves as an important disincentive for H–2 workers to abuse this provision. Considering the risks an H–2 worker incurs when leaving their employer, such as losing wages and other benefits, DHS disagrees that this grace period provides a “perverse incentive” for an H–2 worker to start and immediately quit employment unless there was good reason to do so. While DHS cannot completely eliminate all risk that an H–2 worker who might not be deserving would still benefit from the new grace period, for the reasons stated above, DHS maintains that such a situation would likely be rare and that the importance of protecting H–2 workers overall substantially outweighs the risk. *Id.*

f. Requested Changes to Proposed 60-Day Grace Period Following Cessation of Employment

Comment: Several commenters suggested that the proposed grace period following cessation of employment should only apply in certain circumstances, stating that workers can voluntarily quit for a number of reasons unrelated to an abusive or hazardous employment situation. For instance, a joint submission concluded that it would be appropriate to exclude beneficiaries terminated for cause from taking advantage of the 60-day grace period in order to protect subsequent employers from potentially dangerous or problematic behavior (for example, if workers were terminated for committing violent acts, sexual harassment, or other infractions that may pose a risk to the health, safety, and well-being of others). The commenter understood the basis for “casting a wide net” but said it is improbable that workers in an abusive or unsafe situation would nonetheless remain employed and also engage in behavior that would lead to their for-cause termination. The commenter said this is particularly the case in light of both DOL’s parallel rulemaking that would narrow the scope of permissible circumstances in which workers may be terminated for cause and DHS’s “very lenient” grace period proposal. A trade association said DHS should consider adding language defining a process by which employers and workers can document workplace claims and the efforts made to resolve the concern. This commenter stated that this provision is needed to provide a pathway for those working for H–2 employers that have taken advantage of their workforce, but added that a clearly defined process to utilize this type of grace period is needed to avoid unnecessary abuse of the provision. A few trade associations

stated that there should be an affirmative duty of the H–2 worker to attempt to resolve workplace claims or concerns with the employer prior to quitting since the employer has committed time and expense in exchange for the worker’s ability to enter and work in the United States, and that there should be less concern about reprisal if an H–2 worker ceases employment because they would have a 60-day grace period to seek other H–2 employment if they are unable to resolve the dispute with their sponsoring employer. Other trade associations expressed concern that providing a 60-day grace period after an employer has incurred the expense of bringing a worker to the United States could lead to workers arriving and quitting to spend 60 days searching for a higher paying H–2 job elsewhere, stating that there should be associated consequences for the worker who violates their contract instead of a “reward” by allowing the worker to stay in the United States to pursue another contract.

A business association urged DHS to consider options to ensure that workers do not take advantage of this grace period in a manner that harms employers and suggested an option of foreclosing an H–2 worker’s ability to avail themselves of the 60-day grace period within the first month of their entry into the U.S to help diminish the potential for mischief involving the 60-day grace period. Another commenter asked whether DHS should impose “a presumption of intent to defraud an employer if the H–2 worker arrives and leaves within a short period of time without trying to resolve any workplace dispute.”

Response: As proposed, the new grace period for cessation of employment will apply regardless of the reason for cessation. DHS declines to create a new discretionary process by which USCIS would determine whether to grant or deny a request for a grace period on a case-by-case basis, such as granting a grace period only when an H–2 worker can document that they made good faith efforts to resolve a workplace claim or that a workplace is hazardous, or denying a grace period when a beneficiary was terminated for cause (for example, if the beneficiary was terminated for committing a violent act, sexual harassment, or other infractions that may pose a risk to the health, safety, and well-being of others). The main reason why DHS did not propose—and now declines to adopt—a discretionary grace period similar to the one under 8 CFR 214.1(l)(2) is to provide more certainty to affected H–2

workers. As stated in the NPRM, giving more certainty of the length of the grace period could help alleviate some fears held by H-2 workers who are facing abusive employment situations, or otherwise wish to change jobs, but are reluctant to leave such employment due to uncertainty surrounding whether they would benefit from a grace period and how long the grace period would be. 88 FR 65040, 65064 (Sept. 20, 2023). Namely, “termination for cause” is both a law and fact-specific inquiry and workers may not have sufficient understanding of the concept to know with certainty where USCIS may land on such an inquiry in a subsequent adjudication, and therefore adding this limitation on the use of the grace period would likely create a chilling effect that would undermine the policy objective of this provision.

It would also be impracticable for USCIS to set up a separate process outside petition adjudication for approving grace periods on a case-by-case basis. USCIS would need to create a form for requesting grace periods, as well as a legal framework for determining whether a worker was terminated for cause and allow for the submission of evidence and rebuttal evidence. DHS believes that, even if DHS were inclined to adopt the commenter’s suggestion, the regulated public should have an opportunity to comment on any such framework and process, including on the feasibility of workers complying with such a process. More importantly, even if feasible, such an adjudication could take a considerable amount of time, potentially undermining the utility of the grace period for a terminated worker who most likely would not know the outcome of the adjudication until the end or close to the end of the grace period, which as explained above would likely lead to a chilling effect of workers even attempting to use the 60-day grace period. Regarding the commenter’s concern about the grace period possibly benefiting workers who were terminated for committing violent acts, sexual harassment, or other infractions that may pose a risk to the health, safety, and well-being of others, DHS believes that state and local judicial systems provide avenues to address such and similar serious criminal and civil infractions, and that limiting the use of the finite 60-day grace periods is therefore not necessary for that purpose. In addition, criminal charges may separately affect a worker’s ability to remain in the United States.

DHS declines to adopt the suggested alternative of foreclosing an H-2 worker’s ability to avail themselves of

the grace period of up to 60 days within the first month of their entry. Similarly, DHS declines to impose “a presumption of intent to defraud an employer” if the H-2 worker arrives and leaves within a short period of time without trying to resolve any workplace dispute. As previously explained, the limitation that the grace period would apply “solely on the basis of a cessation of employment” and the fact that the H-2 worker would be unable to work during this grace period absent any pending H-2 petition filed on their behalf should mitigate the risk that some workers would try to use this grace period for unlawful purposes. Again, while DHS cannot completely eliminate all risk that an H-2 worker who might not be deserving would still benefit from the new grace period, DHS maintains that such a situation would likely be rare and that the importance of protecting H-2 workers overall substantially outweighs the risk. 88 FR 65040, 65065 (Sept. 20, 2023).

Comment: Several commenters urged DHS to revise the length of the proposed grace period at 8 CFR 214.2(h)(13)(i)(C) to 30 days. A commenter stated that while 60 days is consistent with other nonimmigrant classifications, the H-2 programs are unique which warrants some differences, noting that H-2 programs impose substantial costs on employers compared to other nonimmigrant classifications. The commenter said a 30-day grace period for cessation of employment would reduce the likelihood of worker departure for “arbitrary or transient” reasons while accommodating workers who are in an unsafe or abusive employment relationship. The commenter also said a 30-day grace period for cessation would be congruent to the 30 days afforded to workers at the expiration of the petition validity, noting that it makes little sense for workers who successfully complete a period of employment to only have a 30-day grace period while affording workers terminated for cause an extra month. Lastly, the commenter said the unique low and unskilled nature of many H-2 occupations better lends itself to a shorter grace period as employers in labor-intensive industries are more likely than “white collar” employers to fill job positions quickly, whereas a 60-day grace period may be more appropriate for highly skilled visa classifications (for example, E-1, E-2, E-3, H-1B, L-1, O-1, and TN) that typically command higher pay and benefits, are subject to less frequent turnover, and are not associated with extensive employer cost obligations.

A couple of business associations similarly stated that the creation of a

new separate 60-day grace period adds unnecessary complexity and confusion regarding a beneficiary’s legal status and work authorization. The commenters recommended a standard 30-day grace period applicable in all situations for ensuring uniformity and simplicity in understanding and complying with the requirements.

Response: DHS declines to shorten the length of the proposed grace period at 8 CFR 214.2(h)(13)(i)(C) to 30 days. Thirty days likely would not allow sufficient time for a worker to respond to sudden or unexpected changes related to their employment, such as by searching for possible new employment or, if necessary, planning their departure from the United States. A longer period of up to 60 days would better allow affected H-2 workers to seek and secure new H-2 employment, assess any potential violations of their rights and explore legal actions, if necessary, and/or organize their departure from the United States. While DHS agrees that the H-2 program is unique in the sense that these programs impose some cost obligations (such as certain housing and subsistence costs) that not all employers in other nonimmigrant programs are responsible for, DHS does not agree that these differences warrant a shortening of the grace period to 30 days. Instead, because H-2 workers are a particularly vulnerable population, a 30-day grace period likely would not be sufficient for affected workers to respond to sudden or unexpected changes related to their employment. As other commenters have noted, H-2 guest workers are uniquely vulnerable given that they are temporary workers, rely on their employers for basic needs, often have a language barrier, and may live in isolated environments where their access to information and resources is limited, among other factors.

DHS acknowledges that this means an H-2 worker who successfully completes a period of employment will only have a 30-day grace period, while H-2 workers who cease employment before the end of their validity period will have a longer grace period by up to another month. However, this is reasonable as workers who cease employment before the end of their validity period may have such cessation of employment occur unexpectedly and thus would need more time to plan their next steps. Workers who successfully complete their period of employment would know the end date of their employment in advance and would have had more time to plan for their next steps.

g. 60-Day Grace Period Following Revocation of Approved H-2 Petition

Comment: Multiple commenters, including several trade associations, a joint submission, and a professional association, specifically supported the proposal to provide a new 60-day grace period following the revocation of an approved H-2 petition, with most citing a similar rationale as above relating to cessation of employment. Several of these commenters said that this grace period would provide protection and stability in circumstances beyond the petitioner's or worker's control. An advocacy group said H-2 workers do not control the petition or their employers' conduct and cannot prevent laws or violations that might lead to a revocation. For example, the commenter stated that both current and proposed rules call for petition revocation in the event of a determination that an H-2 petitioner or its agent has charged a recruitment fee or other prohibited fee. While supporting these consequences, the commenter said that H-2 workers who lose their jobs because of this would bear the brunt of their employer's violation. The commenter concluded that the proposed grace period would lessen the undue harm that a revoked H-2 petition causes workers.

A professional association agreed with proposed provision 8 CFR 214.2(h)(11)(iv) allowing H-2 beneficiaries to remain in lawful status for 60 days or the end of their H-2B petition, whichever is shorter.

Response: DHS agrees that this new grace period will lessen some of the harm to an H-2 worker who loses their job and H-2 status caused by a revoked H-2 petition.

h. Work Authorization During the 60-Day Grace Periods

Comment: Multiple commenters urged DHS to provide work authorization during the 60-day grace period, stating that not doing so would limit workers' ability to take advantage of the grace period and the flexibility this measure seeks to create. Specifically, several advocacy groups recommended that DHS automatically issue interim work authorization to H-2 workers. These commenters noted the financial situations of most H-2 workers, such as often living paycheck to paycheck, frequently arriving at their United States worksites already deeply indebted, and not having the savings to support the time needed to identify, apply to, and travel to new H-2 job opportunities. One of these commenters detailed a suggested process through which H-2 workers who experience an

early cessation of employment for any reason during an H-2 contract period, and who seek interim employment authorization, could directly notify DHS of this cessation of employment and receive a receipt at an address they would specify in their notice. Then, DHS could issue guidance (as it currently does for H-2A employers who are eligible to take advantage of the limited portability provisions) to potential employers of H-2 workers during the grace period stating that the employee's unexpired Form I-94 indicating their H-2 status, combined with the receipt of notification of early cessation of employment, would constitute sufficient proof the worker's employment authorization. DHS would then instruct employers to make any notation necessary on the I-9 to convey the limited 60-day period. The commenter said this process would be consistent with INA sec. 214(c)(1), as well as with DHS's broad authority to define the time periods and conditions of any nonimmigrant's admission to the United States under section 214(a)(1) of the INA. Another advocacy group supported this commenter's proposal. A couple of advocacy groups also stated that to the extent DHS has continued doubts about the appropriateness of providing interim employment authorization to all H-2 workers who experience an unexpected cessation of employment before the end of the contract period, DHS should at a minimum provide interim work authorization to workers who lose their employment due to the revocation of their employer's petition by no fault of the worker, as well as workers who are involved in an ongoing labor dispute with the H-2 employer that is the subject of an investigation by DOL or another relevant agency.

Response: As proposed and now finalized, none of the grace periods would independently authorize the beneficiary to work. As stated in the NPRM at 65065–65066, to the extent that such work authorization is permissible, there are also operational challenges and costs associated with providing work authorization documentation to H-2 workers who have ceased employment. While commenters provided suggestions that could have alleviated some operational challenges, other operational challenges would have remained. For example, setting up a process for beneficiaries to directly notify DHS of a cessation of employment and receive a receipt at an address would still require the agency to set up a new notification process for beneficiaries and mail out a physical

receipt notice, all of which takes time and resources which the agency would not recover without imposing a new fee.

DHS acknowledges that not providing work authorization upon cessation of employment makes it difficult for affected H-2 workers to support themselves, thus potentially limiting their ability, as a practical matter, to leave their current employment. DHS notes, however, that the new portability provisions may offer help to affected H-2 workers who wish to begin employment sooner if they find a new petitioning employer. In addition, as previously noted, other forms of relief such as deferred action may be possible depending on the circumstances.

Providing employment authorization to only some, but not all, H-2 workers also would not be feasible. As discussed above, it would not be operationally feasible for USCIS to “adjudicate” a grace period within the context of the H-2 petition process. Similarly, it is not operationally feasible for USCIS, using current processes, to determine who would be eligible for interim employment authorization within the limited timeframe of such a grace period; there is no current mechanism in which DHS could provide interim work authorization, or issue such proof of employment authorization, for only some H-2 workers, such as those whose employment was terminated “by no fault of their own.” In addition, as noted in the NPRM, DHS determined that the creation of a process whereby, upon cessation of employment, a worker would file, with fee, a request for work authorization for a limited period of 60 days and receive evidence of that work authorization before the 60-day period had elapsed, likely would not be an attractive option for the filer nor operationally feasible for the agency. 88 FR 65040, 65066 (Sept. 20, 2023). Finally, while DHS acknowledges the commenters' legitimate concern, the Department notes that not allowing for interim work authorization during the grace period is consistent with longstanding policy.⁹⁴

i. Requests To Extend the 60-Day Grace Periods

Comment: A couple of advocacy groups said DHS should allow at least

⁹⁴ See, e.g., “Modernizing H-2 Program Requirements, Oversight, and Worker Protections,” 88 FR 65040, 65065–65066 (Sept. 20, 2023) (“It has long been the policy of DHS that grace periods do not authorize employment.”); “Retention of EB-1, EB-2, and EB-3 Immigrant Workers and Program Improvements Affecting High-Skilled Nonimmigrant Workers,” 81 FR 82398, 82439 (Nov. 18, 2016) (“Consistent with longstanding policy, DHS declines to authorize individuals to work during these grace periods.”).

a 90-day grace period for all H-2 workers who experience an unexpected end to their employment, with injured workers granted extensions beyond the initial 90-day period. An advocacy group expounded that H-2 workers need a longer grace period because of the acuteness and prevalence of abusive labor practices in the H-2 programs; their isolated living and working conditions; and their typically lower levels of income, education, and web access. In addition, the commenter said DHS should also provide for situations in which workers may need to remain in the United States for a longer period due to work-related injury or illness. The commenter stated that H-2 workers often are unable to take advantage of their workers' compensation benefits because they are forced to return to their home countries after a workplace injury or illness by retaliatory employers. The commenter noted that 60 days is insufficient for most workers to receive necessary treatment through workers' compensation because medical treatment and associated interactions can be time-consuming. Further, injured workers are unlikely to find new H-2 employment during a 60-day grace period, and therefore will be faced with the unfortunate choice between overstaying or returning home to forfeit medical care and benefits. The commenter suggested that DHS clarify that grace periods and the post-contract admission period may be extended for workers who need to remain in the United States to receive medical treatment related to an injury or illness covered by a workers' compensation claim. Relatedly, the commenter said DHS should also provide for a straightforward parole process for injured workers who have already departed the United States but need to return to seek medical care.

A couple of commenters, including an advocacy group and a research organization, recommended a 120-day grace period following loss of employment. One of these commenters provided similar rationale as above, stating that a 60-day grace period would often be too short for workers to seek care or find new employment, particularly given the geographic, social, and cultural isolation of H-2A workers. A research organization stated that, while it had previously urged that DHS should at least grant H-2 workers the same in-petition 60-day grace period as is granted to H-1B workers, given the "bureaucratic realities of the H-2 programs," 60 days is insufficiently short. The commenter cited data indicating that the median U.S. worker

took almost exactly 60 days to find a new job, but those workers could accept any job, not just seasonal jobs from employers willing to undergo the H-2 process. Additionally, the commenter said the H-1B petition DOL process takes only a week, while H-2 DOL processes take much longer. Citing data, the commenter stated that, assuming that an H-2B worker finds a new employer that is not already participating in the H-2B process, it will take over 100 days to complete the steps to join the program. Even in the case of the H-2A process, which takes about a month, the commenter said this month should be added to the median of 60 days it takes to find a new job to begin with.

Response: DHS declines to extend the grace period beyond 60 days. While commenters expressed legitimate concerns about why 60 days may not be sufficient (including TLC delays), DHS must balance these concerns with other concerns about potential abuse of the grace period if it were extended beyond 60 days. Also, the longer the grace period, the more concerns DHS would have with beneficiaries engaging in unlawful employment during the grace period.

DHS also declines to provide a longer grace period for only certain beneficiaries such as those who experienced an "unexpected" end to their employment or suffered a work-related injury or illness. As noted above, it would not be operationally feasible for USCIS to "adjudicate" a grace period within the context of the H-2 petition process using the current processes and mechanisms, or in a context separate from the H-2 petition process. Absent an adjudication, USCIS would not be able to provide a longer grace period only to certain H-2 beneficiaries. DHS again highlights that H-2 workers involved in labor disputes may request DHS to exercise prosecutorial discretion,⁹⁵ which may offer some relief for certain workers who were terminated for an unlawful reason or suffered a work-related injury or illness. Other avenues of relief, such as requesting a change of status to visitor status (B-2), may also be available to H-2 workers who need to receive medical treatment related to a workplace injury or illness.

⁹⁵ USCIS, "DHS Support of the Enforcement of Labor and Employment Laws," <https://www.uscis.gov/working-in-the-united-states/information-for-employers-and-employees/dhs-support-of-the-enforcement-of-labor-and-employment-laws> (last updated Apr. 11, 2024).

j. Grace Period at the End of 3-Year Period of Stay

Comment: Multiple trade associations expressed concern that H-2 workers who continue three successive contracts (that is, workers whose final contract within their 3-year authorization ends at the very end of that authorization period) would be left with no time to prepare to leave the country after their third contract expires. These commenters stated that DHS should consider providing an additional minimum grace period, such as 5 days, in those situations to ensure workers do not inadvertently overstay due to waiting for the employer-scheduled transportation or for delayed or canceled flights. The commenters said adding a minimum grace period would benefit H-2 workers and allow them to return to the United States without any unauthorized stay.

A research organization similarly stated that DHS should provide a grace period of at least 10 days at the end of the 3-year period of stay to avoid inadvertent periods where people lose status to give people time to line up their transportation home. The commenter said this would match the NPRM's proposed 10-day grace period to enter the country.

Response: By regulation, an H-2 worker's maximum period of stay is limited to 3 years. See 8 CFR 214.2(h)(5)(viii)(C); 8 CFR 214.2(h)(13)(iv)-(v). DHS did not propose to change the maximum period of stay for H-2 workers and will not provide an additional grace period beyond that 3-year limit in this final rule. Further, as new 8 CFR 214.2(h)(5)(viii)(B) and 8 CFR 214.2(h)(6)(vii) already provides a post-validity grace period of up to 30 days, it is unclear why the suggested additional 10-day grace period is necessary. It is the petitioner's burden to be aware of when their H-2 workers' status will end and arrange their return transportation accordingly.

k. Employer Obligations During Grace Periods

Comment: Several trade associations that were generally supportive of the proposed grace periods requested that DHS consider and provide clarity surrounding the obligations of parties during the grace periods, specifically whether an H-2 employer is required to provide housing and meals during those periods of time. These commenters opposed requiring a petitioner to provide housing and meals for a worker who is no longer employed, regardless of the circumstances of the end of

employment. The commenters also noted the impact of and asked DHS to clarify the situation when the worker quits mid-contract, and an employer may need to seek an emergency labor certification to hire new workers and have housing available for them. The commenters said DHS should evaluate and plan for how a worker who ceases to be employed has access to resources such as housing and food without placing those obligations on an employer following the abandonment, termination, revocation, or expiration of a petition period.

A research organization stated that DHS should clarify that all employer obligations toward the worker end when the worker exercises their rights to use the in-petition grace period, and DHS or the worker or both should be required to notify the employer that they have exercised the right to use the grace period. The commenter said employers should not be forced to provide housing, pay, food, and other benefits when a worker is no longer employed for them.

Response: H-2 employers must abide by applicable DOL regulations concerning their obligations to provide housing, pay, food, and other benefits when a worker's employment has terminated as described in DOL regulations.⁹⁶ DHS is not imposing any new obligations on an H-2 employer by virtue of providing these new grace periods or extending existing ones.

Comment: Several advocacy groups suggested that, in addition to granting H-2 workers work authorization during the grace period, DHS should also "clarify that otherwise eligible workers can qualify for unemployment benefits during the grace period."

Response: DHS declines to provide the requested clarification, as DHS does not adjudicate or otherwise regulate eligibility for unemployment benefits for H-2 nonimmigrants.

1. Restriction on Multiple Grace Periods During a Single Period of Admission

Comment: A few commenters including advocacy groups said that DHS should remove the restriction on multiple grace periods during a single period of admission, which would leave at-risk workers with no grace period in which they could leave a second abusive job. Specifically, the commenters said DHS should clarify H-2 workers' access to a 60-day (or 120-day) grace period in case of a second unforeseen cessation of employment. Commenters said workers need access to multiple grace periods during a single

period of admission if they have multiple employers due to the widespread nature of violations in H-2 industries, which DHS itself acknowledges. The commenters said workers who have previously changed employers would experience the same risks of labor abuse that are endemic to the H-2 program as workers who have not changed employers, and they should be able to access the same grace period.

Response: DHS believes the commenters' concerns may be based on a misunderstanding of the phrase "once during each authorized period of admission," as used in the NPRM and retained in this final rule at new 8 CFR 214.2(h)(13)(i)(C). DHS appreciates the opportunity to clarify this point.

As noted in the NPRM, the phrase "authorized period of admission" refers to the time period noted on a worker's I-94, which will normally have an end date 30 days after the end of the corresponding petition's validity period to account for the 30-day grace period at 8 CFR 214.2(h)(5)(viii)(B) or 8 CFR 214.2(h)(6)(vii). In the scenario described by the commenters, in which a worker is the beneficiary granted an extension of stay based on a petition by a new employer, the worker will have been granted a new "authorized period of admission" (and therefore, a new I-94) based on the approval of the new employer's petition.⁹⁷ Notably, 8 CFR 214.2(h)(13)(i)(C) allows a 60-day grace period for a cessation of employment "once during each authorized period of admission" (emphasis added). Accordingly, notwithstanding a worker's prior use of the 60-day grace period for cessation of employment in connection with a prior petition, such a worker would not be considered to have failed to maintain nonimmigrant status, and would not accrue any period of unlawful presence under section 212(a)(9) of the Act (8 U.S.C. 1182(a)(9)), solely on the basis of a cessation of the new employment for 60 days or until the end of the new authorization period, whichever is shorter.

2. Transportation Costs for Revoked H-2 Petitions

Comment: A few commenters expressed support for the proposed provision requiring H-2A employers to pay for the beneficiary's reasonable costs of return transportation in the event of petition revocation. A professional association elaborated that

this provision is consistent with other nonimmigrant visa categories, including H-1B, O, and P, and that it ensures the worker has the means to return to their home country upon separation from employment. Another professional association remarked that this requirement would create uniformity between H-2A and H-2B and is fair and efficient. Conversely, a professional association and a trade association stated that the proposed provision is redundant with other existing regulations that are already in place.

A trade association and a few other commenters commented that they have no concerns regarding the proposed provision. A joint submission remarked that they have no objections to the proposed provision since the Department is making a conforming change and is not changing the underlying substantive requirements. The joint submission further commented that the proposed provision does not alter existing program obligations under applicable DOL regulations.

Response: DHS appreciates the support and confirmation that these revisions do not represent a change in an employer's obligation and conform with other nonimmigrant classifications. DHS is not making any additional revisions based on these comments.

3. Portability and Extension of Stay Petitions

a. Positive Impacts on Employers, Workers, Program Operability, and the Economy

Comment: A professional association stated that the proposed portability provisions were "sound" from both employers' and H-2B workers' perspectives. While expressing support for the proposal to allow workers to begin employment upon the filing of a nonfrivolous petition, a trade association stated that the proposal would provide employers with the ability to employ workers in a timely manner, and provide beneficiaries with expanded job opportunities. A joint submission and a trade association also expressed support for the portability provisions, reasoning that permitting workers to begin employment in the same classification upon receipt of the non-frivolous petition would help avoid gaps in employment and potential hardships to workers, and allow workers to capitalize on their presence in the United States to earn income rather than waiting for a petition to be finalized. The commenters also stated that the provisions would benefit employers because employers seeking to

⁹⁶ See generally, 20 CFR 655.20(j)(ii), 20 CFR 655.122(h)(2).

⁹⁷ When a Form I-129 petition with a request for extension is approved, the Form I-797 approval notice includes a Form I-94. The approval notice instructs the petitioner that the lower portion of the notice, including the Form I-94, should be provided to the beneficiary(ies).

employ transferred workers would have access to workers, and have already demonstrated that they have a temporary need for labor or services. Similarly, a trade association expressed support for the portability provisions, reasoning that current timelines frustrate both workers seeking employment and employers who need workers, but that the proposed provisions would allow workers to immediately help employers that are in need of assistance. A professional association expressed support for making permanent the portability provisions that were in place during the COVID-19 pandemic, reasoning it would allow employers to fully staff their workforce when the petition was valid rather than having the workers remain idle until petitions were approved.

A joint submission added that the provisions would positively impact the U.S. economy since workers pay taxes and purchase goods and services, which would be lost if workers faced employment gaps. An advocacy group expressed support for the portability provisions, reasoning it would give workers the flexibility they desire while benefiting U.S. regions with varied agriculture profiles.

A couple of advocacy groups expressed support for the proposed portability provisions on the grounds that they would curtail the coercive power employers have over H-2 workers. Discussing abuse faced by H-2 workers, the commenters said that some H-2 employers leverage a loss of status to coerce workers into continued employment, creating a power imbalance that allows forced labor and trafficking to proliferate in the H-2 programs. The commenter stated that permanent portability would help address trafficking, violations, and other abuses in the H-2 program. Similarly, a union and an advocacy group expressing support for the proposal stated that visa status is at the center of the power imbalance between employers and workers that enables exploitation within the H-2 program, and the portability provisions would help restore a balanced relationship between workers and employers. A group of Federal elected officials stated that workers' dependency on their employers to live and work in the United States creates a "well-founded fear of retaliation" that prevents workers from speaking out against abuse and advocating for better working conditions. The commenter stated that under DHS's current rules, it is "extremely" challenging for workers to change employers, even when the

employers break the law, which the proposed rule would ameliorate. A joint submission also stated that existing procedures fail to allow H-2 workers to pursue alternative employment free from employer control and retaliation.

A research organization expressed support for the portability provisions, reasoning that the ability to change employers was a basic freedom, that it was important for human and labor rights, and that it would empower workers. A couple of advocacy groups and a joint submission also expressed support for the proposal, reasoning that workers who face abusive conditions or are unjustly fired would have a greater chance of finding alternative employment. A religious organization stated the proposed provisions would provide stronger protections for workers to switch employers. A union expressed support for the portability provisions' goal to empower and prevent hardships to workers.

A trade association expressed support for the portability provisions, reasoning it would establish a consistent policy between H-2A and H-2B program regulations and help remove confusion in the complexity of the regulations governing the H-2 programs. A trade association expressed support for the portability provisions, reasoning it would establish a consistent policy between H-2A and H-2B program regulations and help remove confusion in the complexity of the regulations governing the H-2 programs.

Response: DHS agrees with the commenters about the intended benefits of portability, including empowering H-2 workers and providing H-2 employers with the ability to employ workers in a timely manner.

b. Negative Impacts on Employers and Program Operability

Comment: A few trade associations expressed support for the flexibility that the changes to the proposed extension of stay petition and E-Verify requirements created, but said that the language of the proposal was too broad when coupled with the other sections in the rule, such as the section on grace periods. The commenters expressed concern that workers would be encouraged to violate the terms of their contracts with employers. The commenters also discussed the "significant" financial investments employers make prior to hiring H-2 workers. A trade association added that in exchange for these investments, employers require a level of certainty that workers are to remain employed with them for the life of their contract. This commenter and another trade

association said that the proposed rule could cause economic harm to employers by allowing workers to abandon their employers and leave them in situations where they do not have enough workers to perform their harvest. A few trade associations recommended that in instances where a worker voluntarily abandons their job for reasons not related to a hazardous work environment, there should be consequences for workers who violate their contracts. A trade association recommended that DHS require that workers attempt to resolve workplace claims and concerns with employers before quitting a contract, and that it only provide workers the ability to port to a new contract when either the contract had been revoked, the employer is found to have violated the contract, the worker provides evidence of a hazardous workplace, or the worker completes their previous contract. A couple of trade associations also suggested that the Department could consider a requirement that a worker report to the Department that they are voluntarily abandoning employment as a mechanism to ensure the worker also meets their contractual obligations. The trade associations added that such a notification would serve as a consequence for a worker who violates their contract, and assist in tracking grace period timelines and lawful presence.

Similarly, a trade association added that while employees may voluntarily abandon employment for a variety of reasons, allowing workers to leave their primary employer for economic or social reasons would be detrimental to the program. The commenter urged the Department to develop "more rigid" language surrounding the conditions under which an employee may exercise the portability provisions in cases of voluntary abandonment. The commenter also suggested the Department develop a "review and qualifications system using a series of escalation and opportunities for corrective actions" to be enacted prior to permitting an employee to voluntarily abandon their primary employer. The commenter added that this system should be open to public comment prior to the Department moving forward with the portability provisions.

An attorney expressed opposition to the portability provisions, reasoning that the provisions would set up a bidding war to employ workers, where the initial employer is subject to "poaching" attempts by other employers who are able to pay higher wages and did not incur travel costs for the employee.

Response: DHS will not make changes to the portability provision. While DHS appreciates the commenters' concerns regarding the negative impacts on an employer when an H-2 employee ports to another employer, DHS does not agree that these concerns justify requiring an H-2 worker to stay with that employer for the life of their contract or imposing other limitations on an H-2 worker's ability to change employers. Nor does DHS agree that these concerns justify requiring workers to report to DHS when they leave employment as a mechanism to ensure that workers meet contractual obligations. As other commenters have noted, worker mobility is important to improving the ability of workers to leave an abusive employer without fearing retaliation. Worker portability helps to correct the power imbalance that has led to abusive employment practices within the H-2 programs as a result of a petitioning employer's control over the employee's legal status.

Implementing a "review and qualifications system using a series of escalation and opportunities for corrective actions" or another similar process prior to permitting an employee to port, as suggested by commenters, would be counter to the central aims of the portability policy. Such a mechanism would potentially require a lengthy, fact-intensive adjudication that would delay an H-2 worker from leaving an abusive or hazardous employment situation, undermining the benefit of the portability provision in the first place.

DHS declines to exclude from portability H-2 workers who voluntarily left their petitioning employer for economic or social reasons, as suggested by another commenter. Portability provides benefits even for workers not in an abusive employment situation. As other commenters have noted, the ability for H-2 workers to change workers for economic reasons may incentivize employers to offer better wages and working conditions in order to retain their H-2 workers, which in turn would raise labor standards for these workers as well as U.S. workers. Portability also benefits employers that have already demonstrated that they have a temporary need for workers to hire H-2 workers more quickly and avoid gaps in employment. For petitioners seeking workers under the cap-subject H-2B classification, this would also serve as an alternative for those who have not been able to find U.S. workers and have not been able to obtain H-2B workers subject to the statutory numerical limitations. 88 FR 65040, 65068 (Sept. 20, 2023). Although

portability could create instability or increase costs for some employers that lose or risk losing H-2 workers porting to another employer, this is not unlike the situation that any employer in the labor market may face or situations when an employer files an H-2 petition for another employer's workers in the same classification, but just has to wait until the petition is approved before such workers can start working. Further, some of these costs may be offset by the benefits and savings to employers of being able to have replacement workers start work more quickly to avoid loss of income due to lack of workers, and potentially averting some cap-related issues in the H-2B program.

c. Mixed Comments on Portability Provision

Comment: While suggesting an "at-will" visa that allows employees to move between employers without contractual commitments, an association of State Governments stated that the portability provisions in the proposed rule aim to create a similar dynamic. As such, the commenter expressed support for the portability provisions. The commenter reasoned that if the portability allowance permitted employees to immediately begin new employment, the changes to portability would allow employers to fill labor gaps, which is the purpose of an employer petitioning to receive H-2 employees in the first place. The commenter stated that this would impact the overall success of the program. However, they also noted that it could create instability and uncertainty for some employers, and expressed concern that the ability for employees to leave in the middle of a harvest could result in losses for employers. The commenter requested clarity on the "immediate" effectiveness of portability without consideration for the approval of the petition, except in cases of "blatant misuse or the program or abuse of an agricultural employee by the petitioner."

Response: Under new 8 CFR 214.2(h)(2)(i)(I), an eligible H-2 nonimmigrant on whose behalf a nonfrivolous H-2A or H-2B petition is filed requesting the same classification that the nonimmigrant noncitizen currently holds is authorized to start new employment upon the proper filing of the petition, or as of the requested start date, whichever is later. The eligible H-2 nonimmigrant does not need to wait until the approval of the portability petition to start working, and the H-2 nonimmigrant is authorized to work pursuant to the portability petition until the adjudication or withdrawal of

such petition. During the pendency of the petition, the H-2 nonimmigrant will not be considered to have been in a period of unauthorized stay or employed in the United States without authorization solely on the basis of employment pursuant to the portability petition, even if such petition is subsequently denied or withdrawn.

A portability petition must be properly filed and non-frivolous. While these standards are intended to prevent a petitioner that is misusing the program or abusing their workers from taking advantage of portability provisions, DHS recognizes that these determinations will not be made until USCIS has adjudicated the petition, meaning that an H-2 worker may have worked under the portability petition even if it is ultimately denied as frivolous. However, other provisions being finalized in this rule, such as the strengthened site visit provisions and the new mandatory or discretionary denial provisions, are intended to address the concern of "blatant misuse or the program or abuse of an agricultural employee by the petitioner" including the types of potential abuses noted by the commenters.

d. Portability and the H-2B Cap

Comment: A professional association said that the portability provisions would provide employers with "significant cap relief," reasoning that an H-2B worker could "seek employment, remain longer, and not count towards" toward the H-2B statutory cap. The commenter added this was a "win-win" for employers and employees. Similarly, a couple of trade associations and advocacy groups stated that the portability provisions appeared to be helpful in providing cap relief to a "vastly oversubscribed" H-2B program, but expressed concern that an employer could be left without a workforce if an employee moves to another employer that is "capped out."

Response: Under current practice, which DHS will not change in this final rule, workers in the United States in H-2B status who extend their stay, change employers, or change the terms and conditions of employment generally will not be subject to the cap.⁹⁸ Similarly, H-2B workers who have previously been counted against the cap in the same fiscal year that the proposed employment begins generally will not be subject to the cap if the employer names them on the petition and

⁹⁸ USCIS, "Cap Count for H-2B Nonimmigrants," <https://www.uscis.gov/working-in-the-united-states/temporary-workers/h-2b-non-agricultural-workers/cap-count-for-h-2b-nonimmigrants> (last updated Mar. 8, 2024).

indicates that they have already been counted.⁹⁹ It is therefore not clear what the commenter's concern is regarding an employer that "could be left without a workforce if an employee moves to another employer that is 'capped out'" because in that scenario, a petition filed by a porting employer seeking an extension of stay for a worker already in the United States in H-2B status generally would not be subject to the cap.

Comment: An advocacy group and a couple of unions stated that the Department must ensure H-2B petitions filed on behalf of transferring employees are subject to the statutory cap, reasoning that portability must not be implemented in a way that allows employers to work around the statutory H-2B cap. The commenters added that if the cap on petitions was already reached in a given fiscal year, the Department could count the positions against the cap in the following fiscal year. A union said that DHS could also deny petitioners if the cap had already been reached. Alternatively, another union suggested employers be instructed to only offer H-2B positions to transferring workers when there are still available positions under the current year's cap. The union further stated that regulatory flexibilities have been used to bypass the statutory cap in the past without increased accountability. Citing the INA's annual cap, the commenter added that if the provisions effectively created cap-exempt H-2B positions, it would result in a violation of congressional intent.

Similarly, while expressing support for the portability provisions, a research organization stated that they must not be implemented in a way that enables employers to circumvent the H-2B program cap. The commenter expressed concern that the NPRM did not consider the impact of the portability provisions on the growth and size of the program and that it did not put in place safeguards to ensure employers do not circumvent the H-2B cap. The commenter said that because the proposed portability provisions would allow employers to evade the statutory cap limit, the "true size" of the H-2B program would increase to three times the size of the total cap, which would be inconsistent with congressional intent. The commenter stated that as a result, the Department must subject workers who are continuing employment, either by transferring employers or extending their employment with the same employer, to the H-2B annual cap. The commenter

concluded that the simplest way to implement this requirement is to count an approved continuing petition against the annual cap for the following fiscal year. The advocacy group and a union added that keeping the program closer to the size that Congress originally intended would incentivize employers to improve pay and working opportunities, so employees do not leave for better opportunities.

Response: This rulemaking does not make any changes to DHS's longstanding method of counting the H-2B cap, and DHS will not make changes to its cap counting methodology. DHS will continue its longstanding practice of not counting against the statutory cap any petition seeking to extend the stay of an H-2B worker in the United States in H-2B status who has already been counted against the cap, which includes portability petitions. This longstanding practice is codified at 8 CFR 214.2(h)(8)(ii)(A) ("Requests for petition extension or extension of an alien's stay shall not be counted for the purpose of the numerical limit") and is also articulated on USCIS' "Cap Count for H-2B Nonimmigrants" website.¹⁰⁰

DHS does not agree with the commenters that its cap counting methodology is inconsistent with congressional intent. Pursuant to INA sec. 214(g)(1), "[T]he total number of aliens who may be issued visas or otherwise provided nonimmigrant status during any fiscal year . . . under section 101(a)(15)(H)(ii)(b) of this Act may not exceed 66,000." An individual would be considered to have been "otherwise provided" H-2B nonimmigrant status upon admission into the United States without a visa or through change of status to H-2B while already in the United States. On the other hand, H-2B workers in the United States seeking an extension of H-2B stay, whether or not with the same employer, will not be counted against the cap because they have already been "otherwise provided" such H-2B status, either at the time of their admission to this country or in conjunction with their current H-2B grant of status. Further, since the beneficiaries of a porting petition requesting an extension of their H-2B stay are already in H-2B status, they are not changing their status from another nonimmigrant classification. Thus, H-2B workers seeking an extension of H-2B stay are not counted against the cap consistent with INA sec. 214(g)(1).

¹⁰⁰ USCIS, "Cap Count for H-2B Nonimmigrants," <https://www.uscis.gov/working-in-the-united-states/temporary-workers/h-2b-non-agricultural-workers/cap-count-for-h-2b-nonimmigrants> (last updated Mar. 8, 2024).

These longstanding H-2B cap procedures have been codified at 8 CFR 214.2(h)(8)(ii) for over two decades.¹⁰¹ This methodology has also been consistently and clearly documented in numerous reports that USCIS has submitted to Congress.¹⁰² The commenters did not acknowledge USCIS' longstanding cap counting methodology as codified in 8 CFR 214.2(h)(8)(ii) and, other than citing to INA sec. 214(g)(1)(B), did not cite to anything else to support their assertions that USCIS' cap counting methodology with respect to portability petitions and other petitions for extensions of status is inconsistent with congressional intent.

Comment: Several commenters generally supported the permanent portability provision but expressed concerns that an employer that paid transportation and filing fees could be left paying those significant costs and still be unable to find a replacement workforce. These commenters asked whether subsequent employers could be made to reimburse the costs paid by their previous employers.

Response: DHS will not adopt the suggestion to require a subsequent porting employer to reimburse the preceding employer its transportation and petition filing costs. Such a requirement could discourage the use of portability, or even discourage situations that are allowed by longstanding regulations, such as an H-2 nonimmigrant starting work for another employer once USCIS approves a petition that has been filed on their behalf. And while an H-2 employer that paid transportation and filing fees risks losing those costs if the worker leaves, this is not unlike the situation that any

¹⁰¹ See, e.g., 8 CFR 214.2 version as of January 1, 2002, <https://www.govinfo.gov/content/pkg/CFR-2002-title8-vol1/xml/CFR-2002-title8-vol1-sec214-2.xml>.

⁹⁹ *Id.*

employer in the labor market may face when a worker leaves and the employer loses costs already paid to hire that worker (for example, recruitment and training costs, relocation expenses, hiring bonuses).

e. Portability Within Same Classification

Comment: A joint submission, an advocacy group, and a trade association expressed support for the Department's proposal to extend portability to workers performing different jobs within the same classification, rather than limiting employment to the initial conditions of their authorization. Similarly, a professional association and a trade association expressed support that portability would be permanent and applied to new work in the same classification with the same or different employer, reasoning it would not limit workers' employment to the initial authorization, allowing the worker to have successive petitions and perform other jobs. A trade association and advocacy group reasoned that requiring beneficiaries to only work in the "exact same job" that they were initially approved for would be restrictive and undermine the provisions' goals.

Response: DHS appreciates these commenters' support for allowing H-2 workers to port to different jobs within the same classification.

Comment: An advocacy group suggested that the Department allow H-2 workers to switch between H-2A and H-2B program categories. The commenter noted that although transferring from H-2A status to H-2B status would cause administrative hurdles as the status change would require adherence to the H-2B cap, the commenter reasoned it would significantly improve H-2A worker mobility by allowing them to accept seasonal non-agriculture positions.

Response: While portability is intended to improve worker mobility, DHS will not adopt the suggestion to allow portability for H-2 workers to "switch between H-2A and H-2B program categories" and start working merely upon the filing of a portability petition. As proposed, new 8 CFR 214.2(h)(2)(i)(I) specifies that portability, or the ability to work while a petition remains pending, will only apply to new employment (with the same or different employer) in "the same classification that the nonimmigrant alien currently holds."

There is an important distinction between a change of status and an extension of stay. A worker in H-2A nonimmigrant status seeking to change to an H-2B employer (for example) would need to change their status, not

merely extend their stay. Unlike extensions of stay that fall under DHS regulations at 8 CFR 214.1, changes of status are governed by INA sec. 248, 8 U.S.C. 1258, which, unlike 8 CFR 214.1, specifically authorizes a nonimmigrant to change to any other nonimmigrant classification only if they are "continuing to maintain that status." It is not clear how a nonimmigrant worker seeking to change to another nonimmigrant classification will continue to maintain their current status as required by INA sec. 248 while their change of status petition is pending if they have ported to new employment based on the new petition requesting a different status. Further, porting between H-2A and H-2B nonimmigrant classifications may raise issues related to administration of the H-2B cap if an H-2A worker starts working while the petition seeking to change to H-2B nonimmigrant status, which is subject to numerical limitations under INA sec. 214(g)(1)(B) and (10), is accepted by USCIS and remains pending.

f. Employment Authorization While an Application for a Temporary Labor Certification Is Pending

Comment: Discussing the Department's proposal to consider beneficiaries who are employed in the United States while their petition is pending to be in a period of authorized stay, a joint submission stated that the proposal was necessary to maximize the portability provision and for it to be implemented and function properly. Similarly, a research organization expressed support for the NPRM's proposal to permit an H-2 worker to be employed while their petition is pending, reasoning that it would make it faster to change employers and complement the grace period proposal. However, the research organization suggested that USCIS should further authorize employment while a labor certification application is pending with the DOL. The commenter stated that given the high percentage of H-2 TLC approvals, it was "sensible" to allow workers to be employed pending the outcome of their "initial application," adding that it would decrease unlawful employment and make the portability provisions more "workable." The commenter further suggested that the Department exempt workers already in the United States from the labor certification process. The commenter reasoned that because they are already in the United States, they do not have to be "imported" and thus should not be subject to the H-2 labor certification statute, and that because they are transferring between employers, they do

not increase the total amount of labor market competition.

Response: DHS will not implement the suggestion to authorize employment while a labor certification application is pending with the DOL. Allowing portability to occur upon the filing of an application with a TLC would present integrity and operational issues due to the TLC being adjudicated by another agency. The mere filing of a TLC application does not guarantee that the labor market test with respect to the particular job in question has been satisfied nor does it ensure that the TLC application is non-frivolous and that DOL will approve it. In addition, allowing portability to occur upon the mere filing of an application with a TLC could incentivize frivolous TLC applications. DHS would not be able to determine if the TLC was frivolous, nor would DHS be able to codify a standard for whether a TLC filing is frivolous (or another similar requirement) through this rule, as such a regulation would necessarily have to be done by DOL and would be beyond the scope of this rule and DHS's expertise.

Allowing portability to occur upon the filing of an application with a TLC would also present integrity issues due to the potential for abuse or fraud inherent in allowing employment authorization without proper documentation. Because the TLC does not specifically name a worker, employers would face difficulties in satisfying the employment verification requirements of section 274A of the Act. Also, the mere filing of a TLC does not guarantee that the employer will actually file an H-2 petition based on that TLC. Without a signed and filed petition naming the porting worker accompanied by evidence of the certified TLC, DHS would be unable to identify the porting worker and verify their eligibility. Further, without a petition, DHS and DOL would not have evidence of the petitioner's agreement to employ the porting worker consistent with the requirements of the applicable H-2 program, including the employer's agreement to comply with all the obligations and assurances that serve to protect the porting worker (and U.S. workers). Thus, allowing portability to occur upon the filing of an application with a TLC could also undermine this rule's goal of improving worker protections.

g. Removal of E-Verify Requirement From H-2A Portability

Comment: Several commenters, including trade associations, advocacy groups, and a professional association, expressed support for removing the E-

Verify requirement from H-2A portability. A couple of advocacy groups reasoned that the E-Verify requirement had limited the number of H-2A jobs that qualified for the flexibility offered through permanent portability, with a few trade associations stating that its removal would open up the use of transfer petitions within the H-2A program. A joint submission stated that removing the E-Verify requirement from H-2A portability would provide many benefits, including improving worker flexibility and mobility, helping workers avoid gaps in employment and potential hardship and putting their U.S. presence to productive use rather than forcing them to sit on the sidelines unable to earn an income while the petition is pending. The submission also stated that this would benefit employers that have already demonstrated that they have a temporary labor need for such workers' labor or services (that is, by virtue of having an approved labor certification from DOL), and would benefit the U.S. economy overall, as such workers are earning, purchasing goods and services from local businesses, and paying taxes.

Response: DHS appreciates the commenters' support for the benefits of expanding H-2A portability beyond E-Verify participating employers.

Comment: A couple of commenters expressed support for removing the E-Verify requirement but expressed concern that the increased fee schedule in another DHS rulemaking, "USCIS Fee Schedule and Changes to Certain Other Immigration Benefit Request Requirements," will "chill" the use of the proposal by increasing the cost of filing a named petition. The commenters expressed opposition to the fee increase, stating that it will hamper their ability to take advantage of in-country transfers. Similarly, a trade association expressed opposition to the fee increase, reasoning that the increased fee will negate the benefits of removing the E-Verify requirement.

Response: On January 31, 2024, DHS published a final rule, *U.S. Citizenship and Immigration Services Fee Schedule and Changes to Certain Other Immigration Benefit Request Requirements*, 88 FR 6194, with an effective date of April 1, 2024. The final fee rule raised the Form I-129 filing fee for H-2A named beneficiaries from \$460 to \$1090 (or \$545 for small employers and nonprofits), and the Form I-129 filing fee for H-2B named beneficiaries from \$460 to \$1080 (or \$540 for small employers and nonprofits).¹⁰³ It also

raised the Form I-129 filing fee for H-2A unnamed beneficiaries from \$460 to \$530 (or \$460 for small employers and nonprofits), and from \$460 to \$580 for H-2B unnamed beneficiaries (or \$460 for small employers and nonprofits).¹⁰⁴ To the extent that the commenter is suggesting changes to the USCIS Fee Rule, those comments are outside the scope of this rulemaking. In addition, while H-2A and H-2B filers for named beneficiaries (excluding small employers and nonprofits) will pay significantly higher petition filing fees compared to H-2A and H-2B filers for unnamed beneficiaries, DHS is not persuaded that the increased filing fees will significantly negate the benefits of portability for employers. Employers will still benefit from portability in the form of the ability to employ workers earlier since portability petitions are for workers who are already in the United States in H-2 status and will not need to wait for petition approval and visa issuance. By obtaining H-2 workers faster, these employers may avoid financial hardships due to lack of workers to perform time-sensitive labor. Further, the porting employer will benefit by not paying for inbound transportation for the H-2 worker, since those costs will have already been paid by the preceding employer. The commenters did not account for these benefits, nor did they provide data to support the assertion that the increased filing fees will negate these benefits.

Comment: A research organization expressed opposition to DHS's proposal to remove the requirement that H-2A workers can only port to an employer who participates in good standing in E-Verify. The commenter said that the Department's initial goal to incentivize E-Verify's use and reduce unauthorized workers in the agricultural sector was still important. The commenter instead suggested DHS extend the requirement to all employers who petition for workers in the H-2 program, reasoning that E-Verify participation has "negligible costs and significant benefits to employers." The commenter added that E-Verify reduces the risk employers would hire unauthorized workers and provides them with a rebuttable presumption to section 274A of the INA if they do. The commenter also said that E-Verify participation reduces the likelihood that employers engage in misconduct, because employers who

filing-fees/frequently-asked-questions-on-the-uscis-fee-rule (last visited Apr. 11, 2024). These amounts represent the Form I-129 filing fees and do not include the additional asylum fee, if applicable.

¹⁰⁴ *Id.* These amounts represent the Form I-129 filing fees and do not include the additional asylum fee, if applicable.

misuse E-Verify are subject to "significant" criminal and civil liability.

Similarly, a joint submission from former DHS senior officials expressed opposition to the removal of the E-Verify requirement, reasoning that the NPRM was missing a justification for its removal. Referencing statistics associated with the "speed and accuracy" of the E-Verify program, the commenters stated that E-Verify is a "signature enforcement program" that deters undocumented immigration and serves as a "key indicator" that an employer is fairly dealing with its employees. The commenters said that the NPRM does not justify the proposal to remove the requirement and that it does not seek alternatives because the use of E-Verify is contrary to the goals of the Administration and is viewed as a barrier to legal immigration. While stating that there has been an increase in the number of noncitizens arriving at the U.S. border, the commenters expressed concern that "a tool with a proven track record of effectiveness" was being eliminated. The commenters added that the removal of the requirements "illustrates" the Administration's "contentment with illegal employment" in the United States, and concluded that the provision was arbitrary and capricious and that it should be struck from the final rule.

Response: DHS disagrees with the commenters. Permanently making portability available to all H-2 employers is expected to increase worker mobility and employer flexibility; it is not related to alleged "contentment with illegal employment" nor to the utility of E-Verify as a general enforcement tool. As stated in the NPRM, DHS remains committed to promoting the use of E-Verify to ensure a legal workforce. 88 FR 65040, 65067 (Sept. 20, 2023). However, DHS no longer believes it is appropriate to restrict the benefit of portability to H-2A workers seeking employment with E-Verify employers, particularly given the need to increase these workers' mobility and the various measures enhancing program integrity that are established in this rulemaking. For instance, other provisions being finalized in this rule will improve program integrity and deter harmful or illegal conduct by petitioners. These provisions include the strengthened site visit authority provisions at new 8 CFR 214.2(h)(5)(vi)(A) and 8 CFR 214.2(h)(6)(i)(F) and the mandatory and discretionary denial provisions at new 8 CFR 214.2(h)(10). These new provisions are targeted to address a petitioner's misbehavior within the H-2 programs, which a petitioner's E-Verify status may

¹⁰³ USCIS, "Frequently Asked Questions on the USCIS Fee Rule," <https://www.uscis.gov/forms/>

or may not reveal. As also noted in the NPRM, this provision is not anticipated to reduce E-Verify enrollment. This is because other incentives or even legal requirements exist for E-Verify participation outside of the H-2 programs.

Regarding the suggestion to expand the E-Verify requirement to all employers who petition for workers in the H-2 program (regardless of whether such employers are requesting the benefit of portability), such an expansion of the E-Verify program within the H-2 programs was not proposed in the NPRM and is beyond the scope of this rule. It would also be inconsistent with this rulemaking's goal of improving worker mobility, particularly as H-2B employers have never before been required to participate in E-Verify program in order to benefit from portability.

For all of the above reasons, DHS declines to make any changes to the proposed portability flexibility for the H-2A and H-2B programs that is permanently implemented in this final rule.

h. Additional Suggestions Related to Portability Provisions

Comment: A few advocacy groups and a union generally supported the portability provisions but noted that, while the portability and grace period provisions represent an improvement over the current status quo, they will not fully achieve their goals unless H-2 workers have better ways of obtaining accurate or real-time information about other available H-2 employment opportunities. These commenters suggested that the Department implement additional measures to ensure that H-2 workers are aware of existing employment opportunities. For example, the commenters suggested DHS:

- Work with DOL to improve the SeasonalJobs.dol.gov platform so that this website would provide accurate, real-time information about available job opportunities;
- Facilitate communication between workers and employers during the recruitment process, the pendency of the petition, and when porting between jobs, either through the enhancement of Seasonal Jobs or another platform, which would be an important step towards a just recruitment model through which workers would be able to connect directly with vetted, legitimate employers through a multilingual and accessible government database of verified job offers;

- Work with State workforce agencies' job services to H-2 workers seeking alternative employment;
- Consider the idea of allowing additional flexibility to match workers with other employers that are in need of staffing support;
- Create a process for H-2A workers in the United States to notify USCIS that they are seeking employment. These workers could be added to a database accessible by prospective H-2A employers for the duration of the worker's visa validity and grace period (although the list should not include any personal identifying information that may be used to retaliate or discriminate against workers, such as name, age, or gender). Such a process could also allow workers to rebut fraudulent abscondment or termination reports filed by their employers;
- Require employers who have not made job offers to domestic or prospective H-2 workers outside of the country to offer employment to an H-2 worker or prospective H-2 worker seeking new employment that qualifies for the position.

Response: DHS will not implement these suggestions in this final rule. While DHS appreciates the commenters' concerns about the need to provide workers with information about available job opportunities in order to improve the utility of the new portability provision, it is beyond DHS's purview to match or otherwise facilitate recruitment between an H-2 worker and a prospective H-2 employer. Working with DOL to enhance its SeasonalJobs.dol.gov platform or working with State workforce agencies is outside the scope of this DHS rule. However, DHS may continue to consider some of these suggestions and other ways to enhance worker mobility outside of the regulatory process.

Comment: Some commenters expressed concerns that true job portability would not be fully realized without a mechanism for H-2 workers to obtain information about a portability petition filed on their behalf. These commenters stated that, currently, an H-2 beneficiary's knowledge of their status depends entirely upon their employer's representations, and that existing procedures leave an H-2 worker vulnerable to unscrupulous employers and labor contractors who withhold or misrepresent petition status information. The commenters further stated that current procedures increase the worker's risk of labor exploitation, abuse, trafficking, blacklisting, or other forms of employer retaliation. These commenters made various recommendations on how DHS could

improve the benefits of portability by improving an H-2 worker's access to status information. These commenters recommended DHS:

- Directly notify H-2 workers of their continued lawful status and employment authorization status where an H-2 employer represents that it has filed an I-129 petition identifying them as a beneficiary;
- Provide I-129 petition and other immigration information to H-2 beneficiaries;
- Establish mechanisms for H-2 workers to independently confirm they are the beneficiaries of petitions and receive information about their immigration process;
- Communicate immigration status information through WhatsApp;
- Work with DOL to improve seasonal.jobs to provide H-2 workers with full and accurate information about the terms and conditions of offered H-2 employment and any agents authorized to recruit on behalf of the employer.

Response: DHS appreciates these comments. In the NPRM, DHS stated that it was seeking preliminary public input on ways to provide H-2 and other Form I-129 beneficiaries with notice of USCIS actions taken on petitions filed on their behalf as well as other suggestions regarding ways to ensure adequate notification to beneficiaries of actions taken with respect to petitions filed on their behalf. DHS is not making any regulatory changes as a result of the request for preliminary input in this final rule but will seriously consider the input provided by these commenters as it continues to research and consider the feasibility, benefits, and costs of various options separate and apart from this final rule.

4. Effect on an H-2 Petition of Approval of a Permanent Labor Certification, Immigrant Visa Petition, or the Filing of an Application for Adjustment of Status or an Immigrant Visa

a. General Support

Comment: A couple of trade associations expressed support for USCIS' elimination of the "dual intent" provision. Similarly, several trade associations and an advocacy group expressed support for the proposal to allow H-2 workers to have a "dual intent" of being both a noncitizen and an immigrant for purposes of obtaining a Green Card. A trade association expressed support for a "clearly defined path" for H-2 workers with a "dual intent" of obtaining a Green Card. Similarly, a business association expressed support for the provisions,

reasoning it would “form the beginning of a ‘dual intent’ regime.”

Numerous commenters, including advocacy groups, professional associations, and a research organization, expressed support for the proposed rule’s clarification that H–2 workers may take steps to become lawful permanent residents while maintaining lawful immigration status. A farming entity regarded proposed 8 CFR 214.2(h)(16)(ii) as “a significant and much-needed improvement to the current regulations governing H–2A workers” that recognizes the dynamic nature of immigration intents, aligns with broader policy goals, and promotes both flexibility and fairness in the H–2A program.

Other commenters expressed support for the proposed changes to H–2 workers’ ability to seek lawful permanent resident status on the basis that it would be beneficial for employers and H–2 workers. A trade association said that the proposed change would benefit workers who have followed H–2 program requirements and employers who want to offer promotions to those workers. A farming entity wrote that the proposed changes would provide a mechanism for improved stability in struggling rural communities and farms, which face challenges in securing full-time employees and working within the immigration system. Similarly, a trade association said that due to domestic labor shortages, employers’ options for permanent agricultural employees are limited. The commenter stated that the proposed rule’s clarification would allow employers to promote workers into permanent positions and expand opportunities for worker mobility. Similarly, a union said the changes would increase worker mobility and thus decrease the vulnerabilities faced by H–2 workers. A professional association stated that the proposed changes would allow for more worker flexibility and would help them obtain permanent residence. The commenter stated that while DHS would scrutinize the conversion of the employer’s job position from a seasonal need to a permanent need, this conversion would assist employers and workers with ongoing labor needs and stability. Another trade association said the proposed change would allow employers to sponsor employees who have an interest in moving to the United States year-round roles in their business.

A group of Federal elected officials said that the proposed rule would empower H–2 workers to seek permanent residence without fear that they would lose their H–2 program

status while they do so. Similarly, a couple of trade associations expressed support that H–2 beneficiaries who seek lawful permanent resident status through a petition related to the permanent labor certification program would not jeopardize their eligibility in the H–2 program in the interim. While expressing support for amending 8 CFR 214.2(h)(16)(ii) to incorporate elements of “dual intent,” a professional association said that the proposal reflected the reality that agricultural and nonagricultural employment could be temporary and permanent and that the employer’s need should not be “imputed” on a worker’s intention regarding employment or future permanent status. The commenter stated that because existing regulations allow approval of a permanent labor certification or filing an H–2 petition to be used as a reason to deny a worker’s extension of stay, the process deters employers and employees from taking steps toward permanent residence due to fear that future H–2 status could be denied based on the worker’s intent. The commenter added that the proposal does not undermine the integrity of the H–2 program because the requirement that employers demonstrate a temporary or seasonal need remains covered by 8 CFR 214.2(h)(5)(iv) and 8 CFR 214.2(h)(6)(ii), respectively.

A few commenters, including a farming entity, an attorney, and an individual commenter, expressed support for the proposed provision based on the necessary contributions of H–2 workers to U.S. businesses and the economy. For example, the individual commenter and the attorney said that under current regulations, workers who support U.S. businesses and the U.S. economy are dissuaded from pursuing lawful permanent residence due to the risk of losing eligibility for H–2 status once the permanent labor certification is certified. A couple of commenters added that the potential loss of nonimmigrant status leaves workers with the “impossible” choice between pursuing the long-term goal of U.S. lawful permanent residence and sustaining the immediate need for seasonal income. Such concerns, the commenters concluded, drive potential full-time employees to Canada, harming U.S. businesses that rely on H–2 workers. An attorney and farming entity additionally reasoned that both nonimmigrants and businesses rely on the maintenance of seasonal positions, adding that workers fully intend to abide by the temporary nature of their placement while they wait “in line” to pursue permanent residence through the

employment-based (EB)-3 category and other worker categories. The farming entity wrote that the proposed provisions would enhance the ability of workers to contribute to the United States while respecting the integrity of the immigration system and would address the “overly restrictive” nature of regulations that penalize workers for pursuing a more stable future in the United States. Echoing the above remarks, an individual commenter also expressed support for Section IV.B.4. of the proposed rule (“Effect on an H–2 Petition of Approval of a Permanent Labor Certification, Immigrant Visa Petition, or the Filing of an Application for Adjustment of Status or an Immigrant Visa”) and urged DHS to maintain the proposed language in the final rule.

Response: DHS thanks these commenters and will finalize 8 CFR 214.2(h)(16)(ii) as proposed. As DHS explains further below, the proposal and the finalized regulation do not change the requirements that the H–2 petitioner’s need be temporary or seasonal in nature, that an H–2 beneficiary has a foreign residence that he/she has no intention of abandoning, or that the H–2 worker be in this country temporarily to perform labor or services. Rather, 8 CFR 214.2(h)(16)(ii) clarifies that taking certain steps in seeking lawful permanent residence, by itself, will not violate H–2 status.

b. Opposition on the Basis of Legal Authority

Comment: A couple of commenters, including a joint submission from former DHS senior officials and a research organization, opposed the proposed changes to clarify that an H–2 worker may take steps toward becoming a lawful permanent resident while still maintaining lawful nonimmigrant status. These commenters asserted that the proposal will transform the H–2A and H–2B programs into “dual intent” visa programs and claimed that the proposed change is *ultra vires*, as it is unlawful for agencies to act in violation of their own regulations or enabling statutory authority. The research organization said that both the H–2A and H–2B visa programs are “single intent” visa programs that do not allow beneficiaries to intend to take steps to adjust their status to that of a lawful permanent resident. The commenter asserted that, under the statute, H–2A and H–2B applicants must demonstrate that they are not coming to the United States to reside permanently, as immigrants, but will return home at the end of their authorized period of stay. The

commenter stated that proposed 8 CFR 214.2(h)(16)(i) is inconsistent with statute and must be withdrawn, asserting that if a noncitizen enters the United States on a “single intent” visa but nevertheless intends to apply for a Green Card during the workers’ time in the United States, this indicates that the noncitizen misrepresented their intention at the time they entered the United States. The commenter concluded that it is both *ultra vires* and inappropriate for the Executive Branch to actively encourage H–2A and H–2B workers to take steps towards adjustment of status in violation of the INA. Stating similar rationale, the joint submission from former DHS senior officials said the Department seeks to undermine unambiguous statutory language that the H–2 programs provide for temporary admission. The commenter said, pursuant to clear statutory construction, admission of an H–2 beneficiary cannot be granted when the beneficiary has an intent to abandon a foreign residence. The commenter indicated the proposed provision conflicts with the proposed regulation and violates the first prong of *Chevron*.¹⁰⁵ As further evidence of the asserted *ultra vires* nature of the proposal, the commenter said Congress specifically provided for dual intent of certain nonimmigrants but did not include H–2 classification. The commenter concluded that this proposed rule seeks to create a pathway for admission as a dual-intended H–2 beneficiary that is contrary to the law, asserting that DHS must withdraw these provisions from the proposed rule.

Response: New 8 CFR 214.2(h)(16)(ii) is consistent with the plain language of section 101(a)(15)(H)(ii)(a) of the INA. This provision does not exempt an H–2 worker from the statutory requirement that the worker have a residence in a foreign country which he or she has no intention of abandoning, nor from the requirement that the worker be coming temporarily to the United States to perform H–2 services or labor. This statutory provision includes the phrase “having a residence in a foreign country which he has no intention of abandoning.” Implicit in that phrase is discretion to determine, as a factual matter, whether the noncitizen meets

the definition for classification as an H–2A or H–2B nonimmigrant based, in part, on the noncitizen’s intent, since the statute does not address how such intent is to be ascertained; for example, by setting out facts or factors the Government is to consider.¹⁰⁶ Given that other sections of the INA delegate authority to the Secretary of Homeland Security to administer immigration laws, promulgate regulations regarding the same, and specifically authorize the Secretary to prescribe regulations for the admission of nonimmigrants,¹⁰⁷ DHS is well within its authority to establish which factors it will consider to ascertain the noncitizen’s intent, including whether any of those factors will *de facto* preclude the noncitizen from being classified as an H–2A or H–2B nonimmigrant. Therefore, final 8 CFR 214.2(h)(16)(ii) effectuates the authority Congress delegated to the Secretary to fill in details necessary to carry out the statutory scheme. As finalized, 8 CFR 214.2(h)(16)(ii) simply clarifies that certain H–2 worker’s actions seeking lawful permanent resident status will not, standing alone, be the basis for denying an H–2 benefit. This provision is, in fact, consistent with established binding precedent.¹⁰⁸ DHS is not persuaded that taking steps

¹⁰⁶ See *Loper Bright Enters. v. Raimondo*, 144 S. Ct. 2244, 2263 (2024) (“In a case involving an agency, of course, the statute’s meaning may well be that the agency is authorized to exercise a degree of discretion. Congress has often enacted such statutes. For example, some statutes ‘expressly delegate’ to an agency the authority to give meaning to a particular statutory term. Others empower an agency to prescribe rules to fill up the details of a statutory scheme, or to regulate subject to the limits imposed by a term or phrase that leaves agencies with flexibility, such as ‘appropriate’ or ‘reasonable.’”) (cleaned up).

¹⁰⁷ As discussed in the Legal Authority section of this final rule’s preamble as well as in the proposed rule, under INA sec. 103(a) and (a)(3), 8 U.S.C. 1103(a) and (a)(3), the Secretary has explicit authority to administer and enforce the immigration and naturalization laws and establish regulations necessary to carry out that authority. Furthermore, under INA sec. 214(a)(1), 8 U.S.C. 1184(a)(1), the Secretary has explicit authority to promulgate regulations prescribing the conditions for the admission of nonimmigrants, including explicitly “to insure that at the expiration of such time or upon failure to maintain the status under which he was admitted, or to maintain any status subsequently acquired . . . , such alien will depart from the United States.” In addition, INA sec. 214(c), 8 U.S.C. 1184(c), provides the Secretary with explicit authority to prescribe the form and content of a nonimmigrant visa petition, and to determine the eligibility for the H–2 nonimmigrant classifications.

¹⁰⁸ See *Matter of Hosseinpour*, 15 I&N Dec. 191 (BIA 1975) (noting that “a desire to remain in this country permanently in accordance with the law, should the opportunity to do so present itself, is not necessarily inconsistent with lawful nonimmigrant status [citing cases]” and holding that “the filing of an application for adjustment of status is not necessarily inconsistent with the maintenance of lawful nonimmigrant status.”).

described in new 8 CFR 214.2(h)(16)(ii) to secure lawful permanent resident status necessarily demonstrates that the H–2 worker misrepresented their intent when entering the United States or that the H–2 worker does not intend to abide by the rules applicable to H–2A or H–2B temporary status. An unexpected opportunity can arise after admission.

The fact that DHS is amending 8 CFR 214.2(h)(16)(ii) to revise the language put into place by its 1990 regulations regarding the significance of the approval of a permanent labor certification and the filing of an immigrant petition or adjustment of status application with respect to the noncitizen’s H–2 status does not call into question DHS’s statutory authority to do so. As stated in the proposed rule, the current regulation conflates the beneficiary’s nonimmigrant intent with the nature of the employer’s need. 88 FR 65040, 65068 (Sept. 20, 2023). Further, while the agency in previous rulemaking stressed the importance of not allowing petitioners to circumvent the requirement to demonstrate a temporary need by petitioning for permanent status on behalf of the worker even in a different job, DHS continues to maintain, as it did in the NRPM, that such a prohibition is overly broad and that it is important to increase H–2 workers’ mobility to the extent legally possible, particularly given the vulnerability of H–2 workers to potential intimidation and threats made on the basis of their nonimmigrant status. 55 FR 2606, 2619 (Jan. 26, 1990).

Significantly, the provision does not create a “dual-intent” classification or otherwise encourage H–2 workers to seek lawful permanent resident status. It also does not create a new, direct pathway to lawful permanent residence deriving from H–2 status or otherwise contradict any statutory provisions applicable to the H–2A or H–2B classifications. Rather, it allows an H–2 worker to avail themselves of existing lawful pathways by clarifying that approval of a permanent labor certification, the filing of an immigrant petition for a noncitizen (family sponsored or employment-based), or an application by a noncitizen to seek lawful permanent residence or an immigrant visa, will not, standing alone, be the basis for denying an H–2 petition, a request to extend such a petition, or an application for admission in, change of status to, or extension of stay in H–2 status. DHS is also slightly revising the provision, as proposed in the NRPM, to explicitly include those seeking benefits as an immediate relative or under the diversity visa program, as it was not DHS’s intention to exclude

¹⁰⁵ Subsequent to receiving this comment, the Supreme Court in *Loper Bright Enterprises v. Raimondo*, 144 S. Ct. 2244 (2024), overruled *Chevron U.S.A. Inc. v. Natural Resources Defense Council*, 467 U.S. 837 (1984). In its decision in *Loper Bright*, the Court recognized that in certain cases Congress has given agencies authority to exercise discretion, including by defining certain terms or promulgating rules to fill in details of a statutory scheme.

those benefits. *See* new 8 CFR 214.2(h)(16)(ii). DHS will consider these actions, together with all other facts presented, in determining whether the H-2 nonimmigrant is maintaining their H-2 status and whether the noncitizen has a residence in a foreign country which he or she has no intention of abandoning. For these reasons, DHS is finalizing this provision with slight revisions relating to immediate family and diversity visa programs described above.

c. Limited Impact of Proposed Provision

Comment: Some of the commenters who are in support of allowing H-2 workers to pursue lawful permanent residence specifically commented on DHS's data, stating that such data show that "the regulation will have a minimal impact due to the low number of workers who apply for permanent resident status" and that "the proposed rule would not expand the underlying eligibility of H-2 workers for lawful permanent resident status."

A research organization stated that few H-2 workers ever obtain lawful permanent resident status through the EB pathway. The commenter stated that Congress must address this issue, as there are insufficient pathways for workers in low-wage jobs and without advanced degrees to obtain lawful permanent resident status or become naturalized. Referencing statistics associated with employment-based lawful permanent residence, the commenter said that only 1 percent of total approved certifications by employers for employment-based lawful permanent residence were for H-2 workers. The commenter attributed this to DHS's interpretation of nonimmigrant intent, which the commenter stated has deterred employers who would otherwise apply to permanently hire H-2 workers.

Response: Congress has defined various employment-based immigrant classifications. This rule is not the place to address the applicability of those categories to H-2 workers. As noted in the proposed rule, this provision does not expand the underlying eligibility of H-2 workers for lawful permanent resident status and is consistent with longstanding precedent. *See Matter of Hosseinpour*, 15 I&N Dec. 191, 192 (BIA 1975).

d. Temporary Need Requirement

Comment: A trade association expressed support for the proposed rule's clarification that an employer may petition for permanent status on behalf of an H-2 employee while still being able to demonstrate a temporary need.

Similarly, a joint submission expressing support for this proposed change stated that it would have no substantive impact on the current temporary need requirements of the H-2 programs and that it would improve the flexibility and mobility of individual beneficiaries. The commenter said that the current framework conflates the beneficiary's intent and the temporary or permanent nature of the employer's need. The commenter concluded that it was in the best interest of the United States and its businesses for the Department to not preclude H-2 status for beneficiaries that are at some point in the lawful permanent residence process and urged the Department to incorporate the provision in the final rule.

Response: DHS appreciates these comments and agrees that a more nuanced approach to actions in pursuit of lawful permanent residence is important for both H-2 workers and employers. As noted in the proposed rule, the requirements that an H-2A or H-2B petitioner must establish temporary need remain covered by the provisions at 8 CFR 214.2(h)(5)(iv) and 8 CFR 214.2(h)(6)(ii), respectively. Removing the language of the prior regulation that mandates stringent consequences for an H-2 worker who takes certain action to obtain lawful permanent resident status creates flexibility for employers to promote H-2 workers.

e. Sponsoring of Lawful Permanent Resident Status by H-2 Employers

Comment: Several commenters, including several trade associations and a few advocacy groups, suggested the Department clarify whether employers can sponsor H-2 workers for permanent positions within their business even if they are the same or similar role that the employer is petitioning for. Some of the commenters reasoned that this was important because some positions are structured the same but while some employees are needed year-round, others are only needed for certain seasonal periods, as they have a reduced need for staff in the off-season. Several trade associations and an advocacy group added that this would allow employers to sponsor H-2 workers more frequently. An advocacy group added that this would provide clarity for workers and employers. Similarly, a business association stated that the proposed changes would provide welcome relief and certainty to H-2 workers and employers if immigrant visa petitions did not preclude workers from obtaining or maintaining H-2 status. However, the commenter also requested that the Department clarify

that the employer that files a permanent immigrant visa petition for an H-2 worker could also be that worker's employer on their H-2 visa.

Another trade association suggested that an additional clarification needed to be proposed for public comment that would allow employers to sponsor H-2 workers for permanent positions within their operation regardless of whether the position corresponds to the employment outlined in the H-2 petition.

Response: DHS appreciates the desire for greater clarity but is not proposing or making any change to how it views an employer's temporary need. As noted in the proposed rule, the requirements that an H-2A or H-2B petitioner must establish temporary and/or seasonal need, as applicable, remain covered by the provisions at 8 CFR 214.2(h)(5)(iv) and 8 CFR 214.2(h)(6)(ii), respectively.

f. Other Feedback and Suggestions on the Impact of Seeking Lawful Permanent Resident Status

Comment: A union and a research organization expressed support for the proposed change, reasoning that it would increase the ability of H-2 workers to adjust their status to become lawful permanent residents. However, the commenters urged the Department to clarify that the change would apply to workers seeking permanent residence through both employment-based and family-based petitions.

Response: DHS appreciates the opportunity to clarify that the provision at 8 CFR 214.2(h)(16)(ii) does indeed apply to workers seeking permanent residence through both employment-based and family-based, as well as diversity visa, petitions. The provision at 8 CFR 214.2(h)(16)(ii), as revised in this final rule, clarifies that the fact that an individual has taken certain specified steps toward becoming a permanent resident will not by itself be a basis for denying an H-2 petition, a request to extend an H-2 petition, or an application for admission in, change of status to, or extension of stay in H-2 status, but will instead be considered together with all other facts presented in determining whether the individual is maintaining H-2 status and has a residence in a foreign country which he or she has no intention of abandoning. DHS is making minor revisions to the final rule to include all immigrant petitions, instead of just preference petitions, to avoid inadvertently omitting immediate relative petitions under INA sec. 204(a)(1)(I)(i) or diversity visa petitions filed with DOS. *See* new 8 CFR 214.2(h)(16)(ii). Among the steps covered in the revised provision is "the filing of an immigrant petition" on the

individual's behalf. The phrase "immigrant petition" in this context refers to any immigrant petition filed under INA secs. 204(a), 8 U.S.C. 1154(a), and 201(b)(2)(A)(i), 8 U.S.C. 1151(b)(2)(A)(i) ("Immediate Relatives"), 203(a), 8 U.S.C. 1153(a) ("Preference allocation for family-sponsored immigrants"), or INA sec. 203(b), 8 U.S.C. 1153(b) ("Preference allocation for employment-based immigrants"), as well as INA sec. 203(c), 8 U.S.C. 1153(c) ("Diversity immigrants"), and thus includes both family-based and employment-based petitions as well as the diversity visa program. Similarly, the provision covers the filing of an application to seek "lawful permanent residence or an immigrant visa" without specifying limitations as to the basis for the permanent residence application or the immigrant visa application.

Comment: While expressing support for the proposed change, a research organization stated in the interest of fairness to applicants in other programs, the change should not be limited to the H-2 program and should be codified generally. Similarly, an advocacy group suggested there be no barriers to legal migration and changes of status for H-2 workers.

In response to proposed 8 CFR 214.2(h)(16)(ii), a research organization requested that DHS provide an explanation as to why it decided to "partially address the barriers to citizenship by H-2A visa participation" rather than incentivizing citizenship. As an alternative to the proposed approach outlined in the NPRM, the organization suggested an approach to establish a clear pathway to citizenship, while incentivizing workers to return to their country of origin. Specifically, citing research, the organization suggested that new immigrants could work during an initial period under a provisional visa, during which they earn the benefit of permanent residence through "a continuous and productive working career" and through payment of taxes. The suggested approach would additionally entail a measure whereby workers would post a bond to an escrow account through their wages, and the bond would be forfeited if the worker becomes a resident.

Response: While DHS appreciates the comment, any new visa program or pathway to citizenship would require legislation. The suggestion about applying the language in new 8 CFR 214.2(h)(16) beyond the H-2 program is beyond the scope of this rule. The commenter's suggestion "that there be no barriers to legal migration and change of status for H-2 workers" is

unclear. However, DHS notes that it proposed numerous changes to improve the efficiency of the H-2 programs and to reduce barriers to use of those programs. For example, DHS proposed to remove the eligible countries lists and to simplify the regulatory provisions regarding the effect of a departure from the United States. These provisions are part of this final rule and are discussed below.

Comment: While expressing support for an immigration process that permits H-2 workers in good standing to apply for permanent residence or citizenship, an association of State Governments questioned whether this change would cause additional administrative burdens for employers and employees, and for the requirements for lawful permanent resident status. The commenter requested the Department clarify the details of this immigration process in the final rulemaking.

Response: DHS does not expect the provision at 8 CFR 214.2(h)(16)(ii) to result in any additional administrative burden for H-2 employers or employees. The provision at 8 CFR 214.2(h)(16)(ii) is not creating a new program for lawful permanent residence or citizenship and does not create any new obligation for H-2 employers or employees; it merely clarifies that, standing alone, the fact that an individual has taken certain steps to pursue permanent residence will not be considered a violation of H-2 status or show an intent to abandon a foreign residence. It is important to note that, for those employers who choose to file an immigrant petition on behalf of a current or former H-2 nonimmigrant—or those H-2 workers who choose to pursue permanent residence through another avenue (whether employment-based or family-sponsored, or on the basis of diversity)—the provision at 8 CFR 214.2(h)(16)(ii) does not change the existing immigration process or eligibility requirements. The provision also does not revise existing eligibility requirements or procedures for adjustment to lawful permanent resident status.

Comment: A business association referenced the consular review process that H-2 workers face when they leave the United States and return on another H-2 visa. The commenter stated that the "dual intent" regulations would help the individuals if they were reviewed by DHS, but that the regulations would not hold sway over consular officials under the State Department. The commenter suggested DHS work with the State Department to "harmonize their respective regulations and guidance documents" to avoid conflictual

applications of the two agencies' policies.

A professional association and a trade association expressed support for the Department's clarification but stated DHS's reasoning for the clarification, that an H-2 worker taking steps to become a permanent resident would not show an intent to abandon their foreign residence, appeared to be counterintuitive.

Response: DHS disagrees that the provision is counterintuitive. An H-2 worker may seek to eventually adjust status to that of a lawful permanent resident while maintaining a current intent to leave the United States at the end of their authorized period of stay and continuing to have a foreign residence that they have no current intention of abandoning. As the rule provides, the approval of a permanent labor certification, filing of a preference or other immigrant visa petition, or filing of an application for adjustment of status or an immigrant visa will be considered, together with all other facts presented, in determining whether the H-2 nonimmigrant is maintaining his or her H-2 status and whether the alien has a residence in a foreign country which he or she has no intention of abandoning. See new 8 CFR 214.2(h)(16)(ii). Standing alone, such filing will not, however, be sufficient basis to conclude that the H-2 nonimmigrant has failed to maintain his or her H-2 status or has the intent to abandon the person's residence in a foreign country. As noted above, the provision is consistent with longstanding precedent, *Matter of Hosseinpour*, 15 I&N Dec. 191, 192 (BIA 1975) ("[C]ourts have held that a desire to remain in this country permanently in accordance with the law, should the opportunity to do so present itself, is not necessarily inconsistent with lawful nonimmigrant status.").

DHS agrees that coordination with DOS is important, and notes that the Foreign Affairs Manual (FAM) is not inconsistent with new 8 CFR 214.2(h)(16)(ii). The FAM, which constitutes guidance to DOS employees, is not binding on DHS and does not indicate that certain actions seeking lawful permanent resident status, standing alone, warrant denial of the visa.¹⁰⁹

¹⁰⁹ Currently, the FAM states, in pertinent part: "Unlike H-1B nonimmigrants, H-1B1, H-2, and H-3 nonimmigrants are subject to INA sec. 214(h). Under INA 101(a)(15)(H)(ii)-(iii), an applicant is not classifiable as an H-2A, H-2B, or H-3 nonimmigrant unless the applicant has a residence abroad and no intention to abandon that residence."

5. Removal of “Abscondment,” “Abscond,” and Its Other Variations, and Notification to DHS

a. Removal of “Abscondment,” “Abscond,” and Its Other Variations

Comment: A few commenters expressed support for DHS’s proposed technical change. Several commenters, including a few trade associations, an advocacy group, a joint submission, and a professional association, expressed that they have no concerns or objections to DHS’s proposal to remove the words “abscondment,” “abscond,” and its other variations from the H–2 regulations and replace the word “absconds” with the phrase “does not report for work for a period of 5 consecutive workdays without the consent of the employer.” A trade association stated that it was “agnostic” as to whether the Department should remove the terms “abscondment” and “abscond” from the regulations. A joint submission stated that it has no objections to the Department’s proposal to the extent that it does not substantively change any existing program obligations. The joint submission commented that it considers this a reasonable change to the regulatory text and supports the Department’s rulemaking on this front. The joint submission concurred with the Department that workers deserve to be treated fairly. They further commented that in their experience, though rare, workers do leave employment for legitimate reasons, and in isolation, the act of separating employment should not adversely affect that worker’s ability to secure subsequent employment if done through lawful processes. Similarly, a professional association stated that workers leave their employment for various reasons, the majority of which are entirely legitimate, including to undergo medical procedures, injury, pregnancy, emergencies back home, or to assume more advantageous employment elsewhere. The commenter remarked that it is critical to ensure that DHS uses appropriate and fair language when describing those workers who leave their employment for valid reasons since the negative connotation surrounding these words can negatively impact the workers’ ability to obtain future U.S. immigration benefits.

A professional association noted that some people have a negative connotation of the words “abscond” and “abscondment” and recognized that workers may have valid reasons for leaving their contracts. Two advocacy groups welcomed the Department’s removal of the words “abscondment,” “abscond,” and its other variations from the H–2 regulations as these words convey wrongdoing by the worker, without regard for the reality of their working and living conditions. The advocacy groups stated that there are many reasons why an H–2 worker may not report for work, including illness, injury, unsafe working conditions, and transportation issues. The commenters remarked that replacing these words is a positive step in the recognition of the imbalance of power between workers and employers since it is not uncommon for employers to use the threat of reporting abscondment to prevent workers from asserting their rights.

Response: DHS appreciates the support expressed by these commenters for removing terms “abscondment,” “abscond,” and its other variations from the H–2 regulations. These terms have negative connotations which suggest wrongdoing on the part of H–2 workers who may have a wholly valid reason to leave their employment prior to the end of a work contract. As explained in the supporting comments, in many instances, workers leave employment early for wholly valid reasons, such as safety concerns, medical issues, or emergencies that require their presence in their home countries. In finalizing the proposals to remove these terms, DHS reaffirms its recognition of the many legitimate reasons why workers may leave employment early.

b. Notification Requirements

Comment: A couple of advocacy groups urged the Department to reevaluate its decision to maintain the notification requirements in 8 CFR 214.2(h)(5)(vi)(B) and 8 CFR 214.2(h)(6)(i)(F). The advocacy groups stated that these requirements often function as another avenue of exploitation for abusive employers, who can rely on the threat of reporting a worker as having “absconded” to retaliate against workers seeking to leave. The commenters added that the coercive effect of the threat is intensified by the current policy that bars some absconded workers from the H–2A program for 5 years, and USCIS does not have the resources to verify the accuracy of these reports. The commenters asked that the Department amend this notification system or

include avenues for worker notification and opportunities for workers to respond. The commenters concluded that including workers in the process will minimize the chances that H–2 employment-related reports will be used to retaliate against workers who have exercised their rights or to coerce them into remaining in an abusive or exploitative working environment.

Response: DHS appreciates the commenters’ concerns regarding the potential for the H–2 notification requirements to be used by employers in a coercive or retaliatory manner. As demonstrated by the worker protection provisions finalized in this rule, the Department is strongly committed to addressing all forms of abuse in the H–2 programs, including coercive actions and threats of retaliation committed by employers. The Department has chosen not to substantially change or eliminate the notification requirements in 8 CFR 214.2(h)(5)(vi)(B) and 8 CFR 214.2(h)(6)(i)(F), because these information collections continue to have value for both DHS and DOL. The Department reiterates, however, that it does not consider the information provided in an employer notification, alone, to be conclusive evidence indicating the worker is immediately out of status. As noted in the proposed rule, in subsequent petitions on the workers’ behalf, information or evidence may be requested regarding a worker’s date of cessation to demonstrate maintenance of status. This is one reason, in addition to operational limitations, DHS is not adopting the suggestion that affected workers be made aware of and provided an opportunity to respond to notifications submitted by their employers.

Comment: A trade association expressed its concerns about what it described as the burdens, “ineffective safeguards,” and unequal regulatory requirements placed on employers who avail themselves of the H–2 program, such as notification requirements when a beneficiary does not report for work. The commenter stated that employers must continue to satisfy notification requirements when a beneficiary does not report for work, which is yet another requirement for which employers must comply. While the notifications may permit an employer to file for a replacement worker, this is a marginal benefit, reasoned the commenter, noting that a harvesting season may be nearly over before a replacement worker can arrive. On the other hand, the commenter continued, failure to provide such notification could result in sanctions on the petitioner, including that DOL may find the employer liable

Thus, the fact that an H–2 or H–3 nonimmigrant has sought or plans to seek permanent residence may be considered evidence of the applicant’s intention to abandon foreign residence.” DOS, Foreign Affairs Manual 9 FAM 402.10–10(A) (emphasis added), https://fam.state.gov/FAM/09FAM/09FAM040210.html#M402_10_10_A.

to pay wages for up to three-quarters of the hours offered to a worker who abandoned the job. The commenter also suggests that “[H–2] regulating agencies show they are more concerned that employer submits an email than whether a beneficiary maintains their status.” The commenter added that “the Department must do better to ensure beneficiaries maintain status—either by completing job contracts or porting to another eligible job opportunity.”

Response: The commenter does not offer a clear supportive position on retention of petitioner notification requirements other than to suggest that it is important that employers notify DHS when workers have “abandoned” their jobs. The commenter also does not clearly oppose retention of these notification requirements or offer suggestions for revising the related regulatory provisions. Instead, the commenter appears to suggest that the current notification requirements are not “equitable,” as the burdens of complying with them fall heavily on petitioners yet these notification requirements only provide “marginal benefits” to petitioners. While DHS understands that the burdens of compliance fall on the petitioner, DHS believes these information collections continue to have value. For example, information that an H–2 worker is no longer working for a petitioner could be useful for public safety reasons and to maintain the integrity of the H–2 programs (or any other nonimmigrant visa programs) as well.

With regard to the commenter’s suggestion that “[H–2] regulating agencies show they are more concerned that employer submits an email than whether a beneficiary maintains their status,” DHS strongly disagrees with these unfounded assertions. The Department also declines to make any changes with respect to the comment’s statement that DHS must do even more to ensure beneficiaries maintain their status either by completing job contracts or porting to another eligible job opportunity. DHS is finalizing robust worker flexibility provisions in this rule, including expanded grace periods and access to portability, to help ensure H–2 beneficiaries can maintain status if situations arise where they need to find new employment.

F. Program Efficiencies and Reducing Barriers to Legal Migration

1. Eligible Countries Lists

a. Support for Eliminating Eligible Countries Lists

Comment: Multiple commenters expressed general support for the

Department’s removal of the H–2 eligible countries lists. While expressing their support, a professional association and a business association stated that the Department’s rationale for the removal—improving efficiency and removing burdens for the Department and employers—seems appropriate. Another professional association remarked that removing the lists provides another efficiency to the H–2 program. A joint submission concurred with the Department that the existing national interest waiver framework is burdensome, a waste of resources, and difficult to administer, while adding that it unfairly punishes foreign nationals for circumstances involving their home country’s government that are out of their control. The commenter agreed with the Department’s assessment that the costs of the eligible countries lists outweigh its benefits to U.S. geopolitical interests. A professional association applauded the proposed removal of the eligible countries lists, stating that it would reduce burdens on DHS, USCIS, and H–2 employers, while also enhancing the accessibility of the H–2 programs. A research organization welcomed the change to remove the eligible countries lists, stating that the INA provides no authority to impose a presumptive bar to entire nationalities from participating in these programs. The commenter stated that banning certain countries can cause overstay rates from those countries to increase, citing Haiti as an example. An individual commenter expressed general support for the regulations’ stance on reducing barriers to legal migration, and stated that the authorization of a select few countries/foreigners to work in the United States temporarily creates domestic labor shortages and diminishes opportunities for both foreign workers and U.S. industries.

An advocacy group remarked that the proposed provision would free up resources to be used on other pressing projects across DHS and the DOS, as well as reduce the burden on petitioners that seek to hire H–2 workers from ineligible countries. The commenter further stated that the provision would increase access to workers who are potentially available to businesses that utilize the H–2 programs.

Response: DHS appreciates the support from these commenters and agrees that eliminating the eligible countries lists reduces administrative burdens and avoids consequences for potentially blameless workers as a result of the actions of the countries they come from. DHS also appreciates the commenter’s referral to a blog post

discussing the increase in the Haitian overstay rate when at the time Haitian H–2A workers likely suspected that Haiti would be removed from the lists.¹¹⁰ The author of the blog post infers that one reason H–2A overstays rates are typically so low is that noncitizen workers can usually count on returning to H–2 work each year if they abide by the program’s requirements, therefore limiting the incentive to overstay their visa. The author believes that the perceived threat of a country’s nationals becoming ineligible for employment under the H–2 programs may lead to some individuals choosing to overstay rather than risk being unable to return to H–2 employment the following year, as he claims likely happened in the case of Haitian workers in 2016. While the assumptions in that blog post are speculative, it is, if true, an argument supporting the removal of the eligible countries lists.¹¹¹ DHS is retaining the removal of the eligible countries lists in this final rule.

Comment: While expressing support for the proposed rule and specifically its provisions related to reducing paperwork burden by allowing employers to request workers from multiple countries within the same petition, a professional association suggested that DHS explore additional streamlining measures for returning applicants who have favorable reviews from previous employers.

Response: DHS appreciates the general support. However, as the commenter did not provide specific suggestions for additional streamlining measures for certain returning applicants, DHS is not making any changes as a result of this comment.

b. Opposition to Elimination of Eligible Countries Lists

Comment: A couple of commenters, including a joint submission from former DHS senior officials and a research organization, expressed

¹¹⁰ Alex Nowrasteh, CATO Institute, “Haitian Guest Workers Overstayed their Visas Because the Government Cancelled the Program for Them” (Jan. 18, 2018), <https://www.cato.org/blog/haitian-guest-workers-overstayed-their-visas-because-government-cancelled-program-them>.

¹¹¹ DHS removed Haiti from the eligible countries list on January 18, 2018. See 83 FR 2646. It added Haiti back to the list on November 10, 2021, while noting that some factors, including nonimmigrant visa overstay and removal rates that precipitated Haiti’s removal from the H–2 programs in 2018 remain a concern. See “Identification of Foreign Countries Whose Nationals Are Eligible To Participate in the H–2A and H–2B Nonimmigrant Worker Programs,” 86 FR 62559, 62562 (Nov. 10, 2021). Thus, as this example shows, the eligible countries list has not proven to be an especially effective tool in preventing nonimmigrant overstays and punishing recalcitrant countries.

opposition to the proposed provision. The joint submission from former DHS senior officials stated that the eligible countries lists are important tools in preventing nonimmigrant overstays. The commenter remarked that the concerns regarding time spent on adjudication of waiver requests and the compilation of data prior to the lists being generated do not form a basis to “jettison” the entire lists. The commenter stated that the data in the entry-exit report pinpoint which countries’ citizens are more routine abusers of nonimmigrant visas, information that should be used when evaluating which nationalities should be eligible recipients of the visas. While expressing the perceived importance of the lists to national security, public safety, and immigration enforcement, the commenter further remarked that removing one of the greatest punitive measures against a recalcitrant country would breed further non-cooperation. Additionally, the joint submission notes that it would not support the possible alternative to allow less frequent publication of the lists by providing that they remain in effect for up to 3 years instead of automatically expiring after 1 year, as it would be insufficient to combat the overstay rates and would still “allow free passes for recalcitrant countries” in years when no list is published. The commenter concluded that there was no attempt to find alternatives that would keep the lists in place, such as exempting returning workers from the lists in subsequent years.

A research organization strongly recommended that DHS maintain and strengthen the regulatory requirement that the Secretary designate countries whose nationals are eligible to participate in the H-2 programs. The commenter stated that it serves the interests of foreign workers and the U.S. government to bar participation from countries who fail to cooperate with U.S. laws and policies or abuse the visa programs. The commenter reasoned that limiting H-2 eligibility to nationals of countries who meet specific standards enables DHS to reduce risks of fraud and abuse in the H-2 programs and illegal immigration to the United States, all of which harm the integrity of the immigration system and labor conditions in the United States generally. The commenter cited the removal of the Philippines and the Dominican Republic from the list of eligible countries in 2019 as an example of the potential harms that continued inclusion could pose to the H-2 programs. The research organization disagreed with DHS that program

reforms made under this proposed rulemaking will be sufficient to guard against harms such as illegal immigration and human trafficking. The commenter requested that DHS publicize the information it considered regarding agency resource allocation for making program eligibility determinations.

The research organization recommended the following additional requirements for country eligibility:

- DHS should determine that a country’s inclusion in the visa programs would not negatively affect U.S. law enforcement and security interests;
- Participating countries should make similar forms of temporary work visas available to U.S. citizens; and
- Participating countries should enter into agreements with the United States to share information regarding whether citizens or nationals of the country represent a threat to the security or welfare of the United States or its citizens.

Response: DHS shares the commenters’ concerns about recalcitrant countries but does not anticipate that retaining the eligible countries lists would significantly reduce overstays or encourage countries to cooperate with the United States on immigration matters. DHS reviewed the Congressional Research Service report¹¹² shared by one commenter. That report addresses INA sec. 243(d) visa sanctions in general,¹¹³ rather than focusing on the eligible countries list within the context of the H-2 programs.¹¹⁴ Most significantly, the report concludes that there are several alternatives to visa sanctions, and that both DHS and DOS “reported success in achieving cooperation without resorting to visa sanctions, resulting in countries being removed from the recalcitrant or [at risk of non-compliance (ARON)] lists.”

DHS notes that other provisions in the rule address labor trafficking, including worker portability, whistleblower protections, and mandatory and

discretionary denials for employers with certain violations. In addition, DOL recently finalized a rule that increases oversight of the program, including protections for advocacy and labor organizing, worker protections, and enhancing transparency from employers. 89 FR 33898 (Apr. 29, 2024).

DHS appreciates the suggested alternative to exempt returning employees from the lists in subsequent year to address the DHS’s concerns with the lists; however, DHS disagrees that this suggestion would address all of those concerns. As noted in the proposed rule, eliminating the lists frees up DHS resources which currently are devoted to developing and publishing the lists in the **Federal Register**, and collaborating between several DHS components and agencies as well as DOS. DHS would also still incur the burden of adjudicating waiver requests, as are currently allowed, for nationals of countries not on the lists who are not returning workers. Similarly, employers would still incur the extra burdens of preparing a petition that requests a national from a country not on the lists who is not a returning worker.¹¹⁵ While exempting returning workers could reduce some of the burdens, those that remain are not outweighed by the benefits of retaining the lists when, as discussed above, alternative visa sanctions and diplomatic efforts have been shown to be effective in encouraging cooperation with U.S. immigration laws by other countries.

As DHS declines to retain the eligible countries lists for the reasons discussed above, it also declines to add the new factors the commenter suggested for when DHS is deciding on which countries to include on the lists.

Regarding the request that DHS publicize the information it considered regarding agency’s resource allocation for making program eligibility determinations, the NPRM already described the burdens associated with adjudicating waiver requests as well as the significant collaboration needed between several DHS components and agencies and DOS to come to these yearly eligibility determinations. 88 FR 65040, 65069–70, 65089–90 (Sept. 20, 2023). For example, the NPRM stated that it takes “months of work to gather recommendations and information from

¹¹² Jill H. Wilson, Congressional Research Service, “Immigration: ‘Recalcitrant’ Countries and Use of Visa Sanctions to Encourage Cooperation with Alien Removals,” (July 10, 2020), <https://crsreports.congress.gov/product/pdf/IF/IF11025>.

¹¹³ Section 243(d) of the INA, 8 U.S.C. 1253(d), provides for the Department of State’s discontinuation of the granting of immigrant visas and/or nonimmigrant visas to citizens, subjects, nationals, and residents of a specified country upon DHS notification that such country denies or unreasonably delays in accepting repatriation requests.

¹¹⁴ For example, the report discusses sanctions applied to tourist and business visas for certain government officials while vaguely referencing sanctions on a “broader set of visa categories and applicants.”

¹¹⁵ See 8 CFR 214.2(h)(2)(ii) (petitions for workers from designated countries and undersigned countries “should be filed separately”); see also USCIS, “Form I-129 Instructions for Petition for a Nonimmigrant Worker” (recommending that H-2A and H-2B petitions for workers from countries not listed on the respective eligible countries lists be filed separately), <https://www.uscis.gov/sites/default/files/document/forms/i-129instr.pdf>.

offices across ICE, U.S. Customs and Border Protection (CBP), and USCIS, compile statistics and cooperate closely with DOS.” 88 FR 65040, 65089. DHS is unable to provide more specific data beyond the information already provided in the NPRM, as it is not possible to quantify all the time and resources involved in these types of robust agency collaborations and the unique foreign policy considerations required for each analysis.

c. Mixed Feedback on Elimination of Eligible Countries Lists

Comment: A foreign government expressed mixed views on the removal of the eligible countries lists. The commenter expressed that the rationale for removing the list has merit, considering that the limited data available indicated that during FY 2022, the majority of countries currently on the lists did not participate in the H-2 programs. However, the commenter remarked that the elimination of the list may lead to workers from countries with high populations and rates of unemployment flooding the H-2 programs, which would serve as a disadvantage to smaller states that are already in the program. The commenter recommended the implementation of a mechanism to protect the participation of smaller countries, such as a quota system that provides for a minimum level of participation by countries meeting specific criteria.

Response: DHS appreciates the commenter’s support for removing the eligible countries lists and concerns with the impact of doing so on smaller countries. DHS does not anticipate that elimination of the lists will result in the adverse impacts mentioned, however, as elimination of the country lists is country-neutral, and it is speculative that smaller countries would be adversely affected by the elimination of the lists.

2. Eliminating the “Interrupted Stay” Calculation, Reducing the Period of Absence for Resetting the 3-Year Stay Clock

a. General Support for the Provisions

Comment: Commenters expressed support for the proposed changes for a variety of reasons. Several commenters, including a business association, a professional association, and a joint submission expressed support for DHS simplifying the interrupted stay calculation and shortening the period of absence that will reset H-2 workers’ 3-year limit of stay. A professional association said that shortening the period of absence to 60 days is a

welcome change because H-2 workers satisfy a significant economic need for the United States, and therefore it is important to remove unnecessary hurdles to their contributions. A few commenters, including professional, business, and trade associations, expressed support for simplifying the interrupted stay calculation due to the current calculations being confusing for employers and workers. While expressing their support, a few trade organizations noted that this change would simplify the process of determining an H-2 worker’s remaining length of stay. Additionally, a business association said that simplifying the interrupted stay calculation and shortening the period of absence that would reset the 3-year limit of stay should work well when H-2 workers leave the United States via an airport. A joint submission wrote that the proposed changes would improve certainty and predictability for H-2 workers and are a “step towards improving H-2B workers’ ability to seek legal support if needed.”

While describing DHS’s proposed changes to the interrupted stay provisions and the 3-year clock, a joint submission concurred with DHS’s justification for this change, writing that the existing standards are confusing, burdensome, and difficult to implement. The commenters provided an example of how named petitions to extend a beneficiary’s stay require significant documentation, which the commenters said creates administrative work and lengthens the adjudication timeline. This joint submission also noted that reducing the time to reset the 3-year limit of stay to 60 days would not only accomplish the Department’s policy objectives and reduce the burden on workers and employers but also foster interagency harmony, as this would bring DHS’s standards in line with the DOL’s “10-month rule” for evaluating temporary need. The commenters further stated that many H-2A employers utilize the full 10-month period of need, which can result in cases where workers reach their 3-year limit and are ineligible for an extension of stay in H-2A status. The commenters wrote that the proposed change would make it easier for employers with longer periods of need to extend their H-2A workers’ stay as necessary. Similarly, a trade association wrote that for workers who return to their home countries every year, this change would align DHS’s requirements with the maximum possible season of 10 months and clarify the dates for when workers can return to the United States. A professional

association also expressed support for the proposed change to the interrupted stay calculation, as it would create uniformity between the two H-2 programs and increase efficiency and opportunity for workers.

Response: DHS appreciates the commenters’ support for these changes. DHS agrees that these changes will simplify the process for determining an individual’s remaining available time in H-2 status and will reduce confusion for employers. DHS also anticipates that the change will simplify USCIS adjudications, resulting in fewer requests for evidence and greater efficiency in adjudicating H-2 petitions.

b. Opposition to the Provisions

Comment: An advocacy group expressed opposition to the proposed changes. The commenters reasoned that if a worker left the United States, reducing the time to reset the 3-year limit of stay to 60 days would neither pause the period of stay clock nor extend the time a worker could work in H-2 status upon returning. The advocacy group wrote that this could harm workers and prevent them from seeing their families and taking care of them, when necessary, thereby potentially harming the workers’ health.

While a professional association noted that current regulations regarding the 3-year limit and interrupted stay calculation are complicated for employers and workers to understand, the commenter stated that eliminating the interrupted stay calculation was not the correct solution. Instead, the commenter suggested allowing employees to maintain the ability to return to the United States if they had “spent less time in H-2 status given potential ‘interrupted status.’”

Response: DHS does not agree that this provision will harm workers. Under current regulations, a period of absence from the United States will interrupt the stay of H-2 workers only in the following circumstances:

- If the accumulated stay is 18 months or less, an absence is interruptive if it lasts for at least 45 days.
- If the accumulated stay is greater than 18 months, an absence is interruptive if it lasts for at least 2 months.

Under the final rule, USCIS no longer recognizes certain absences as an “interrupted stay” for purposes of pausing the calculation of the 3-year limit of stay. Specifically, H-2 workers who have an accumulated stay of less than 18 months and have an absence from the United States of 45 to 59 days will no longer have their period of stay

“interrupted.” DHS recognizes that this subset of H-2 workers may not benefit from these changes, but as it relates to the H-2 program as a whole, the change to simplify the calculations and shorten the time to “reset” the clock will benefit H-2 workers and employers and help improve program efficiency overall. Further, this subset population of H-2 workers may still benefit from the reduced period for resetting their H-2 clock if they extend their stay outside of the United States for at least 60 days. Rather than “interrupting” the stay, an absence for the designated period of at least 60 days would in all cases “reset” the H-2 clock (instead of, per current regulations, just “pausing” the H-2 clock), and thus, allowing for an additional 3 years in the United States in H-2 status upon the worker’s readmission. Moreover, this change does not in any way prevent an H-2 worker from making short trips outside the United States and returning to the United States in H-2 status. Therefore, the basis of the commenters’ concerns about “harm to the family and health of the worker” and “leaving in the ability for employees to return to the United States” is unclear.

To the extent that these commenters are suggesting that any period of absence should interrupt the H-2 period of stay, similar to the current “recapture” provision for H-1B beneficiaries codified at 8 CFR 214.2(h)(13)(iii)(C), DHS explained in the NPRM that it considered and rejected this alternative. As explained in the NPRM, DHS determined that implementing a provision similar to the H-1B “recapture” provision would be only a minimally less confusing calculation for petitioners and H-2 workers, as well as for USCIS adjudicators. DHS believes a single, consistent standard under which an uninterrupted absence of at least 60 days would reset the 3-year limitation represents the best way to reduce confusion, resulting in fewer RFEs and greater efficiency in adjudicating H-2 petitions. Therefore, DHS declines to adopt the commenters’ suggestions and is finalizing the provision without change.

c. Other Feedback and Recommendations Regarding the Interrupted Stay Provisions

Comment: While expressing support for simplifying the interrupted stay calculation, a union suggested the period of absence to reset H-2 workers’ 3-year limit of stay remain at 90 days. The commenter reasoned that H-2 programs are temporary, and therefore a 90-day period of absence aligns better

with the purpose of the program. The commenter added that program reform must advance both U.S. and migrant workers’ interests, and that creating rules employers could misuse as year-round labor solutions would not be an acceptable outcome.

Response: DHS maintains that a 60-day period of absence is sufficient to ensure that an H-2 worker’s stay is temporary in nature, while at the same time affording employers and workers the flexibility to fill an employer’s temporary needs. Further, the commenter did not specifically explain why a 90-day period of absence would better align with the purpose of the program as opposed to 60 days.¹¹⁶ DHS therefore declines to make any changes based on this comment. DHS maintains that a 60-day period of absence is sufficient to ensure that an H-2 worker’s stay is temporary in nature, while at the same time affording employers and workers the flexibility to fill employers’ temporary needs.

Comment: In the context of expressing support for the interrupted stay provisions, several business associations suggested that the Department implement a method for tracking land border crossings, which are not currently tracked, reasoning that this could prevent issues when H-2 workers who cross the border with Mexico return to the United States. A few business associations recommended incorporating this tracking method into the CBP One application so that workers could log their exit when leaving the

United States for Mexico. Another business association expressed concern with the Department’s ability to enforce the current and proposed requirements, reasoning that the Department does not currently have a way to track land border crossings and thus, a way of tracking the H-2A workers that cross the land border with Mexico. Like other commenters, the business association suggested including a function in the CBP One application to allow H-2A workers to log their location when returning to Mexico.

A business association provided a recommendation regarding the use of the CBP One application to track land border crossings. The commenter suggested that the Department build out the application’s capabilities so that H-2 workers are responsible for recording their exit from the United States. Alternatively, the commenter suggested a two-step process where an employer first records the end of an H-2 worker’s employment, and the employee then logs their official exit on the CBP One application when they leave the country.

Response: DHS notes that the burden of proof to establish eligibility for an immigration benefit is on the petitioner or applicant.¹¹⁷ In the NPRM and final rule, DHS has provided a non-exhaustive list of evidence that may be provided to document relevant absences from the United States, including arrival and departure records, copies of tax returns, and records of employment abroad. While DHS appreciates the commenters’ suggestions, DHS did not propose a method for tracking land border crossings or any changes or additions to the CBP One application in the NPRM. Because DHS did not propose any changes with respect to tracking land border crossings or the CBP One application, these comments are outside the scope of this rulemaking. Therefore, DHS declines to adopt these suggestions as part of this final rule. The Department continues to make improvements to the accuracy and reliability of the entry/exit system, and may consider these suggestions as it does so.

G. Severability

Comment: A professional association and a business association expressed support for the Department’s proposal for the regulations to be severable. Another professional association remarked that it has no objection to including severability in the rule proposal.

¹¹⁶ As noted in the NPRM, DHS did not provide specific policy reasons for setting the period of absence at “3 months” in prior regulations, noting only that it was reducing that period from 6 months “in order to reduce the amount of time employers would be required to be without the services of needed workers, while not offending the fundamental temporary nature of employment under the H-2A program.” *Modernizing H-2 Program Requirements, Oversight, and Worker Protections*, 88 FR 65040, 65072 (Sept. 20, 2023); *Changes to Requirements Affecting H-2A Nonimmigrants*, 73 FR 8230, 8235 (Feb. 13, 2008) (proposing the reduction to 3 months); *Changes to Requirements Affecting H-2A Nonimmigrants*, 73 FR 76891, 76904 (Dec. 18, 2008) (adopting the proposed reduction in waiting time without change and agreeing with comments stating that 3 months would “enhance the workability of the H-2A program for employers while not offending the fundamental temporary nature of employment under the H-2A program”); *Changes to Requirements Affecting H-2B Nonimmigrants and Their Employers*, 73 FR 49109, 49111 (Aug. 20, 2008) (proposing to reduce the required absence period to 3 months to “reduce the amount of time employers would be required to be without the services of needed workers while not offending the fundamental temporary nature of employment under the H-2B program”); *Changes to Requirements Affecting H-2B Nonimmigrants and Their Employers*, 73 FR 78104 (Dec. 19, 2008) (adopting the proposed reduction in waiting time without change).

¹¹⁷ See, e.g., INA sec. 291, 8 U.S.C. 1361; 8 CFR 103.2(b)(1), 214.1(a)(3).

Response: DHS appreciates these comments and is finalizing the severability provision with minor clarifying edits. DHS intends for the provisions of this rule to be severable from each other such that if a court were to hold that any provision is invalid or unenforceable as to a particular person or circumstance, the rule will remain in effect as to any other person or circumstance. While, as discussed in the NPRM and in this preamble, the various provisions of this rule, taken together, will provide maximum benefit with respect to strengthening program integrity, increasing worker flexibility, and improving program efficiency, none of the provisions are interdependent and unable to operate separately. In the severability clause contained in this final rule, DHS has identified the second level paragraphs (for example, (h)(6)) in which the severable amended provisions contained in this final rule can be found. These references along with the date of the final rule are intended to better identify the severable provisions and differentiate them from the existing provisions in 8 CFR 214.2 that are not being impacted by this final rule.

H. Input on Future Actions/Proposals for Beneficiary Notification

Comment: Multiple commenters suggested that the Department implement an electronic notification system of beneficiary and employer statuses, while also recommending that the Department implement an electronic filing process. A business association suggested using a system like DOL's Foreign Labor Application Gateway (FLAG) system, which would reduce cost and time burdens for employers and DHS. A trade association remarked that electronic filing is a necessary efficiency, and it would be a "disservice" to employers and beneficiaries to not implement electronic filing for H-2A petitions. A couple of trade associations, an advocacy group, and a business association recommended that the Department implement an electronic notification system through the technology the Department currently possesses, while also proposing to make the entire filing process electronic to reduce cost and time burdens to employers and the Department. The commenters added that it is inconceivable that employers must still file their petitions on paper, given they will be transcribed and entered into the Department's electronic system. A trade association stated that the paper petitions currently used are costly, time consuming, and inefficient, especially

given that the Department already stores a large amount of information electronically.

A couple of commenters, including a professional association and a business association remarked that moving USCIS systems into the digital age as quickly as possible would be welcomed by H-2A workers, employers, and the Department itself.

A professional association stated that using email with digitized notices and enhancing website capabilities with real-time information would be the most effective, efficient, and affordable method of communication between beneficiaries, petitioners, and DHS. Another professional association recommended that the Department add an email section to Attachment-1 of Form I-129, which would allow USCIS to email the beneficiary that someone applied to amend their status. The commenter stated that at times, this may result in more work for employers, agents, and associations, but it would be an efficiency that would benefit the worker.

A joint submission concurred with DHS's reasoning on providing notifications directly to beneficiaries, but cautioned the Department not to implement a process that requires significant information collection or disclosure on the part of the employer. The commenter added that it would advocate against any process that makes the contact information of beneficiaries, such as email address, a mandatory field on petition forms. The commenter concluded that failure to provide beneficiary contact information should not serve as a basis for petition rejection or denial.

Another joint submission concurred with DHS that more notice and transparency is beneficial, and limiting notifications to the petitioning employer may restrict the beneficiary's options to transfer to subsequent employment or extend or change their status. The commenter expressed opposition to any changes to the Form I-129 that would dramatically increase the transaction cost associated with a named petition, such as the inclusion of multiple new fields or additional pages. The commenter recommended adding an optional email address field to Attachment-1 and using this information to copy the beneficiary on any notifications. The commenter concluded that a copy of notifications could be mailed to beneficiaries if an email address is not available since the Attachment-1 already requires U.S. and foreign addresses.

Response: DHS appreciates these comments. In the NPRM, DHS stated

that it was seeking preliminary public input on ways to provide H-2 and other Form I-129 beneficiaries with notice of USCIS actions taken on petitions filed on their behalf as well as other suggestions regarding ways to ensure adequate notification to beneficiaries of actions taken with respect to petitions filed on their behalf. As indicated in the NPRM, the feedback was being sought to inform a potential future action, and DHS did not propose a particular approach in the NPRM. Therefore, DHS is not making any regulatory changes as a result of the request for preliminary input in this final rule but will take into serious consideration the input provided by these commenters as it continues to research and consider the feasibility, benefits, and costs of various options separate and apart from this final rule.

I. Other Comments Related to the Rule or H-2 Programs/Requirements

1. Alternatives and Other General Comments on the Proposed Rule

Comment: Some commenters provided broad recommendations to improve H-2 worker conditions while supporting USCIS for its efforts to protect H-2 workers' rights. For example, an advocacy group stated that in the longer term, additional changes would be needed to shift the balance of power in the employer-worker relationship in favor of workers' rights. A couple of individual commenters provided additional suggestions, requesting that the proposed rule establish safe and clean housing for workers and their families, a minimum wage for workers, access to healthy food, medical care, English language learning opportunities, and education for both adult workers and their children. An individual commenter stated, without elaboration, that H-2 workers should be well compensated for their labor, must have adequate rest periods and opportunities to organize for fair wages, and should have their living conditions and safety monitored.

Response: DHS appreciates the broad support for efforts to protect H-2 workers' rights. However, while DHS appreciates these holistic analyses of the H-2 programs, DHS declines to make any changes in response to these comments as they do not address specific elements outlined in this rulemaking or suggest specific changes. Further, issues involving housing standards, access to housing, H-2 wages, access to healthy foods, and rest periods, generally are better addressed by local, State, and Federal labor agencies such as DOL and are outside

the scope of this rule. Similarly, other concerns with the need for medical care, English language learning opportunities, and education for both adult workers and their children, are outside the scope of this rule.

Comment: An individual commenter requested that any employers who abuse H-2 workers face swift prosecution.

Response: DHS is committed to protecting all workers from exploitation and abuse. However, though it is not entirely clear what the commenter was referring to, DHS notes that the term “prosecution” generally relates to criminal proceedings.¹¹⁸ As this rulemaking does not directly involve criminal proceedings, the comment is beyond the scope of this rulemaking.

Comment: A research organization requested that USCIS prioritize the selection of H-2B petitions in industries with the greatest need for workers in order to curtail fraud and abuse in the program.

Response: DHS appreciates the comment but is not making any changes in response to this comment because the comment is beyond the scope of this rulemaking. In any event, it is also unclear how an industry-based H-2B prioritization scheme would curtail fraud and abuse in the program.

2. Implementation

Comment: An advocacy group recommended developing a “multi-pronged communications strategy to ensure that workers are aware of the changes related to worker flexibility and program integrity once implemented” including clearly communicating all implemented changes related to aligning admissions periods and grace periods to H-2 workers, ensuring workers are aware they may stay in the United States for 60 days following unexpected termination of H-2 employment and for 30 days following the validity period of their H-2 contract. The commenter also requested that DHS partner with worker leaders, organizers, and trusted community organizations to communicate the changes in the proposed rule as well as workers’ rights in the United States more broadly.

Response: DHS has worked diligently to develop a communications strategy in preparation for this final rule. After the publication of this final rule, DHS will announce various stakeholder events it intends to hold, which will be open to the public, to raise awareness of the final rule.

Comment: An individual commenter encouraged USCIS to improve the

clarity and readability of the regulatory text through the use of plain language, active voice, bullet points, lists, examples, and illustrations. The commenter suggested, for example, that USCIS replace terms such as “petitioner,” “beneficiary,” “certifying officer,” or “administrative law judge” with simpler terms, such as “employer,” “worker,” “DHS official,” or “judge.” The commenter concluded that these adjustments would enhance the ability of employers and workers to understand and comply with program regulations.

Response: DHS/USCIS is dedicated to improving its communications with the public. We support the Plain Writing Act of 2010 and have an internal plain language program.¹¹⁹ We strive to use plain language where it is possible to do so; however, often times it is necessary to use precise terms such as “petitioner” and “beneficiary” because these are the words that appear in related and corresponding regulatory text and have established meaning, and using alternate words would introduce ambiguity or confusion.

3. Employer/Petitioner Requirements, Processes, and Fees

Comment: A professional association expressed support for the provision in the proposed rule that would allow for the substitution of H-2A beneficiaries after admission and urged the Department to extend it to H-2B beneficiaries. The commenter said that not extending the provision to H-2B employers would place them on a different footing than H-2A employers and hinders H-2B employers who were looking for foreign labor assistance because they could not find domestic labor.

Response: The provision at 8 CFR 214.2(h)(5)(ix) that allows substitution of H-2A beneficiaries after admission is an existing provision to which DHS did not propose substantive changes. Rather, DHS proposed minor revisions to the provision to remove and replace the negatively charged terms “abscond” and “absconded” with more neutral terms. 88 FR 65040, 65068 (Sept. 20, 2023). Therefore, the commenter’s suggestion is out of scope of this rulemaking.

4. Validity Period and 3-Year Maximum Period of Stay

Comment: A research organization suggested that the Department extend the 3-year maximum stay provision to 6 years, stating that easing the maximum

stay provision would increase the availability of H-2 workers, reduce agency and employer burdens, and improve the bargaining power of workers. The commenter elaborated that the current limit imposes “unnecessary burdens” on agencies by requiring them to vet a new group of workers to replace those subject to the 3-year limit, which would expose the country to “avoidable security risks.” The commenter further elaborated that the current 3-year limit imposes burdens on employers, as employers are harmed by turnover caused by workers leaving the country during their jobs and are potentially blocked from rehiring returning workers whom they have already trained on their operations. The commenter also noted that workers nearing the end of their stay would not be able to change employers, thus giving their employers “excessive leverage in setting wages and working conditions.” The commenter added that the current maximum limit on stay exacerbates the shortage of H-2B workers because H-2B hires who are already in the United States are exempt from the H-2B cap, and that extending the maximum stay provision to 6 years would lead to a lower portion of the H-2 workforce receiving extensions. The commenter also added that the NPRM’s grace periods proposal may radically increase the percentage of workers who reach their 3-year limit. Finally, the commenter stated that the NPRM’s proposal to limit H-2 workers to a maximum of 3 years with H-2 status unless they have departed the United States for an uninterrupted period of 60 days has no basis in law. Referencing the regulatory history associated with the 3-year limit, and the statutory history of the 6-year limit applicable to the H-1B classification maximum period of admission, the commenter concluded that there is “statutory ground” for extending the provision to 6 years. Specifically, the commenter indicated that Congress had defined “coming temporarily” in the H-1B context as up to 6 years.

Response: DHS declines to extend the 3-year maximum period of stay provision to 6 years. First, the NPRM did not propose to substantively change the 3-year maximum period of stay, but rather, proposed to eliminate the “interrupted stay” calculation and reduce the period of absence to restart the 3-year maximum period of stay clock. Second, it is not necessary to change this longstanding regulatory standard which, as the commenter stated has existed since 1964,¹²⁰ was

¹¹⁸ *Prosecution* definition, Black’s Law Dictionary (11th ed., 2019).

¹¹⁹ USCIS, “About Us: USCIS Plain Language,” <https://www.uscis.gov/about-us/uscis-plain-language> (last viewed May 6, 2024).

¹²⁰ 29 FR 11956, 11958 (Aug. 21, 1964). As promulgated in that rulemaking, 8 CFR 214.2(h)(3),

again referenced in the 1987 final rule, and is intended to ensure that a person's stay in H-2 status is in fact temporary, as required under section 101(a)(15)(H)(ii)(a) of the INA.¹²¹ DHS further disagrees with the commenter that because Congress defined what "coming temporarily" means for purposes of the H-1B program, this provision should be applied in the H-2 context or provide support for similar treatment of H-2s. There is no requirement that the maximum period of stay for the H-2 classification be the same as that for the H-1B classification.

The new provisions being finalized in this rule, including the provisions to reduce the period of absence required to reset the worker's maximum period of stay and provide portability flexibility permanently, will alleviate many of the commenter's concerns about rehiring returning workers, pressures on employers due to the H-2B cap, and improving the bargaining power of workers. DHS does not agree with the commenter's concerns about agency burdens. The maximum validity period on an H-2 petition remains unchanged; each H-2 petition may only be approved for a validity period not to exceed 1 year (except for an H-2B petition approved for a one-time occurrence under 8 CFR 214.2(h)(6)(ii)(B)(1)). An employer seeking to employ an H-2 worker beyond the end of the petition validity period would still have to file another H-2 petition requesting an extension of stay for that worker. USCIS would still need to adjudicate each extension petition, at which time USCIS would screen the beneficiary for continued eligibility, and thus keeping the 3-year limit would not lead to "avoidable security risks" as suggested by the commenter.

J. Statutory and Regulatory Requirements

1. Administrative Procedure Act (APA)

Comment: Numerous commenters, including multiple trade associations, a joint submission from numerous industry associations, State Government agencies, and Federal elected officials, expressed general disappointment with the lack of extension or requested a 30-

or 60-day extension to the comment period for the proposed rule. Many commenters reasoned that they and their members or constituents are limited in their ability to review and provide meaningful feedback on the proposed changes, as the comment period aligns with peak harvesting season or peak seasonal business needs. Additionally, multiple commenters reasoned that the comment period overlaps with multiple recent administrative actions—including public comment opportunities with the DOL and the USDA, and other agencies—that impact the same stakeholders and that require input during or around the same period. The commenters concluded that an extension would be necessary for the regulated community to analyze the full impact of the proposed changes, submit comments based on a comprehensive review of the rule, and meaningfully participate in the rulemaking process. A trade association expressed concern that because the proposed regulation does not acknowledge the existing legal investigative and enforcement structure for H-2 employment conditions, that the public cannot properly evaluate or comment on the proposal.

Response: As DHS noted in a November 3, 2023, letter that it posted to the rule's electronic docket (USCIS–2023–0012) for public viewing, DHS takes seriously the requirements under the Administrative Procedure Act to provide an opportunity for members of the public to participate in the rulemaking process by submitting data, views, or arguments on the proposed agency action. In that letter, DHS stated that it decided not to extend the comment period beyond 60 days, that is, past November 20, 2023, the last day of the comment period, noting that a 60-day comment period is generally considered sufficient for the public to provide input in response to proposed rulemaking actions. DHS has provided 60 days for public comment for other comprehensive rulemakings like this one in the past, and that duration has routinely been sufficient as evidenced by the volume and substance of public comments received. The letter emphasized that DHS believes the 60-day comment period for the 2023 H-2 NPRM provides sufficient time and a reasonable opportunity for the public to comment. DHS noted too that USCIS had engaged stakeholder groups over the past several years and incorporated comments and suggestions from these engagements into the 2023 H-2 NPRM.

As stated above, some commenters raised specific concerns with the comment period because it aligned with

peak harvesting season or certain peak seasonal business needs, and because it overlapped with public comment opportunities for administrative actions by other agencies that could impact the same stakeholders. While the noted circumstances may have rendered the 60-day comment period a busier time for certain stakeholders, DHS believes it was sufficient to afford the public a meaningful opportunity to participate in the rulemaking process. Indeed, neither of these circumstances appears to have limited the public's ability to meaningfully engage in the notice and comment period. DHS notes that nearly two thousand commenters—including many stakeholders impacted by the harvest season and other agencies' administrative actions—submitted substantive comments during the 60-day comment period.

Comment: Several commenters, including an advocacy group, a professional association, and a business association, expressed appreciation for the opportunity to meaningfully comment on the proposed rulemaking. A joint submission from a union and numerous advocacy organizations urged USCIS to expedite finalization of the rule immediately following the standard 60-day comment period.

Response: DHS appreciates these commenters' support and the significant response and feedback it received on the published H-2 NPRM. Given the importance of the issues addressed herein, DHS has worked diligently to timely finalize the rule after carefully reviewing public comments and making appropriate changes based on public feedback.

Comment: A few commenters, including an advocacy group, a trade association, and a business association, urged USCIS to engage stakeholders more generously, such as through providing more details for comment, publishing another notice to the **Federal Register** with more detail, or other direct communication with stakeholders. One of these commenters indicated that the NPRM lacked sufficient explanation of the prohibited fees and denial provisions needed to properly apprise stakeholders of what is to be expected of them under this proposed rule. A State Government agency recommended USCIS offer forums for recruiters or hirers of foreign workers to express concerns earlier in the rulemaking process.

Response: DHS appreciates the suggestions from these commenters but disagrees that the NPRM lacked specificity necessary to apprise stakeholders of how the various proposal would operate or what would

the header for which read, "Admission and extension," stated "An alien defined in section 101(a)(15)(H)(ii) of the Act shall not be granted an extension which would result in an unbroken stay in the United States of more than 3 years." It is notable that while this regulation generally applied to all H classifications, the 3-year limit was specifically applied only to H-2s.

¹²¹ "Nonimmigrant Classes," 52 FR 20554, 20555 (June 1, 1987) (interim final rule codifying the 3-year limit noting that "[t]here has traditionally been a three year limit on an H-2 alien's uninterrupted stay").

be required of the public to comply. Nonetheless, as discussed in the section addressing, for example, prohibited fees, DHS has further refined these provisions to address requests for further clarification received from commenters, and has made other responsive edits to the regulation in response to public comments. The number and quality of public comments received on the NPRM further demonstrate that most commenters both understood the proposals and were able to provide salient feedback on those proposals. Therefore, DHS believes that the opportunity for notice and comment has been sufficient. In addition, following publication of the final rule, DHS will consider ways to effectively engage the regulated community on its new H-2 provisions and provide further guidance, if needed, to assist program participants with compliance.

Comment: A joint submission from former DHS senior officials stated that the proposed rulemaking violates the APA as it is “both arbitrary and capricious” and because USCIS must consider alternative options.

Response: DHS disagrees that the proposed changes in the NPRM, which are finalized in this rule, are arbitrary, capricious, and fail to consider alternatives. The NPRM and this final rule provide a reasonable basis for each of the changes proposed and made. To the extent possible and available, DHS has cited studies and data in support of the proposed changes and has used available data to assess the impact of the proposals, and where applicable, regulatory alternatives. In addition, where possible, DHS generated and considered specific alternative approaches to the changes made and explained why it was not proposing such alternatives. For example, DHS explained that rather than eliminating the eligible country list as proposed, it considered keeping the list in place until it is replaced by a new list and extending the timeframe for review from every 1 year to every 2 years. It then explained the shortcomings of this alternative as reasons for not proposing it. 88 FR 65040, 65070 (Sept. 20, 2023). In addition, as an alternative to the complicated calculations needed to determine an interrupted stay under the current H-2 framework, DHS considered adopting an interrupted stay provision similar to the current “recapture” provision for H-1B beneficiaries. Ultimately, DHS chose not to match the H-1B provision because it believes the H-1B provision to “recapture time” would be only a minimally less confusing calculation for petitioners and H-2 workers, as well as

for USCIS adjudicators. 88 FR 65040, 65072. In addition, in the Initial Regulatory Flexibility Analysis in the NPRM, DHS discussed alternatives to the proposed regulation.¹²²

Finally, in this final rule, DHS has considered and addressed alternatives proposed by commenters. For example, in this final rule DHS explains why it is not adopting the alternatives commenters proposed to the elimination of the exception to the prohibition on charging workers fees. As explained more fully in the responses to comments relating to prohibited fees, the prohibited fee provisions in this final rule are intended to complement DOL rules. DHS also explained how inconsistency between DHS’s and DOL’s H-2 rules may cause confusion and could discourage law-abiding employers from using the H-2 program to address labor shortages. As discussed elsewhere in this preamble, this final rule further clarifies the employer obligations related to prohibited fees to ensure that employers understand what is expected of them and are not discouraged from using the H-2 program to fill their legitimate temporary need for workers.

2. Regulatory Impact Analysis (RIA) (E.O. 12866 and E.O. 13563)

a. Impacts on Nonimmigrants/Workers or Their Representatives

Comment: An advocacy group responded to the request for comment on “the prevalence, population, and cost of prohibited fees and their impacts on H-2 workers.” The advocacy group stated that despite regulations prohibiting the requesting or receiving of payments or recruitment fees from workers in exchange for activity related to H-2A employment, workers are still vulnerable to fraud. The commenter provided an example of H-2A workers being asked to pay recruitment fees of between \$3,000 and \$4,000 per person as a condition for their employment. The commenter also referenced other federal court cases and reports of recruiters or employers charging prohibited fees, and referred to statistics suggesting the average payment issued by workers is \$590 per person.¹²³ The

¹²² 88 FR 65040, 65098, subsection f, (Sept. 20, 2023). (“Description of Any Significant Alternatives to the Proposed Rule That Accomplish the Stated Objectives of Applicable Statutes and That Minimize Any Significant Economic Impact of the Proposed Rule on Small Entities.”).

¹²³ As examples of the reports of prohibited fees, the commenter cited *Ulloa v. Fancy Farms, Inc.*, 762 Fed. Appx. 859 (2019 U.S. App.), *Palma Ulloa v. Fancy Farms, Inc.*, 274 F. Supp. 3d 1287 (2017 U.S. Dist.), and ICE, “3 Indicted in Immigration Fraud Scheme That Exploited Immigrant Farm Workers By Charging Prohibited Fees For Visas, Living Expenses” (May 17, 2018), <https://www.ice.gov/news/releases/3-indicted-immigration-fraud-scheme-exploited-immigrant-farm-workers-charging>. As support for the statistics suggesting an average prohibited fee payment of \$590, the commenter cited to Centro de los Derechos del Migrante, “Recruitment Revealed” (2018), https://cdmigrante.org/wp-content/uploads/2018/02/Recruitment_Revealed.pdf.

advocacy group added that predatory actions such as charging workers prohibited fees can contribute to human trafficking, because H-2A workers often arrive to the United States in debt from unreimbursed costs and fees, putting them at greater risk of trafficking.

Response: DHS appreciates the commenters’ input regarding the average amount of prohibited fees H-2 workers are being asked to pay. While DHS cannot independently verify the provided statistics, the input is nevertheless valuable as generally demonstrating the prevalence of the practice of charging prohibited fees despite current regulations that prohibit them. This final rule attempts to mitigate, to the extent possible, the harm to H-2 workers resulting from the imposition or threat of prohibited fees by those engaged in the practices described by the commenters.

b. Impacts on Employers/Petitioners or Their Representatives

Comment: An attorney remarked that while 88 FR 65040, 65045, n. 1 (Sept. 20, 2023) states that “USCIS does not expect any additional costs to H-2B employers as, generally, they do not have to provide housing for workers,” amusement industry employers have had to bear additional costs related to housing provision since 2016. The commenter then stated that USCIS has not conducted a cost-benefit analysis on this matter.

Response: DHS acknowledges that, while there is no statutory requirement for H-2B employers to provide housing, there are regulatory prohibitions against deductions from wages for the cost of housing by an H-2B employer when it is provided primarily for the benefit or convenience of the employer, such as in the context of an employer with a need for a mobile workforce. See 20 CFR 655.20(b), (c); 29 CFR 531.3(d)(1); 80 FR 24042, 24063 (Apr. 29, 2015). This rule’s regulatory impact analysis of costs and benefits is being revised to acknowledge that certain H-2B employers in this limited scenario may face additional costs such as for housing, but because DHS does not have data on the population of H-2B employers that this provision would affect at this granular of a level, monetized impacts cannot be estimated.

news/releases/3-indicted-immigration-fraud-scheme-exploited-immigrant-farm-workers-charging. As support for the statistics suggesting an average prohibited fee payment of \$590, the commenter cited to Centro de los Derechos del Migrante, “Recruitment Revealed” (2018), https://cdmigrante.org/wp-content/uploads/2018/02/Recruitment_Revealed.pdf.

Comment: An association of State Governments expressed concern that the proposed rule could cause administrative delays to the H-2B program and higher costs for agricultural employers. In particular, the association suggested that a shortage of labor exacerbated by the proposed rule could cause producers to turn to producing less labor-intensive agricultural products or turn the costs of restructuring their businesses onto consumers.

Response: It is speculative that this rule will exacerbate labor shortages and cause higher costs for agricultural employers and consumers. It is also speculative that this rule will cause administrative delays to the H-2B program. Insofar as the rule codifies new requirements for petitioners and new protections for workers, it does so in furtherance of program integrity.

c. Impacts on Small Entities (Regulatory Flexibility Act, Initial Regulatory Flexibility Analysis (IRFA))

Comment: An association of State Governments expressed concern that the proposed rule would adversely impact small agricultural employers who may lack resources needed to understand the regulatory requirements of the H-2B program. The commenter urged USCIS to specifically contact small entities to describe the proposed changes. A trade association remarked that small employers who rely on agents for recruiting workers and unintentionally violate the proposed stricter standards for prohibited fees could be disproportionately harmed, and some small growers could be put out of business.

Response: DHS appreciates the comment but declines to contact all possibly affected small businesses. DHS emphasizes that all regulatory requirements and procedures will be explained and analyzed through multiple channels (the promulgation of this rule as evidenced by publication after consideration of comments received during the notice and comment period, relevant form instructions, and established communication materials such as the “Small Entity Compliance Guide”). Additionally, DHS believes that marginal burdens being placed on small entities in order to ensure that they comply with program requirements and worker protections is justified by the benefits of increased program integrity (as discussed above in the preamble).

d. Impacts on the Economy, U.S. Citizens/Taxpayers/Consumers

Comment: A research organization expressed concern that USCIS does not provide an impact assessment of the proposed permanent and expanded portability in the NPRM, stating that this prevents the public from comprehending the impact of the proposed rule on the U.S. labor market.

Response: The comment that the NPRM did not provide an impact assessment of the proposed permanent and expanded portability is inaccurate. In the NPRM, DHS provided a detailed explanation of the expected impact of the portability provision. 88 FR 65040, 65044, 65084–65089 (Sept. 20, 2023). Additionally, in this final rule DHS is has provided additional data showing the number of approved H-2B petitions and beneficiaries extending stay with and without a change in employer pursuant to the commenter’s request (see Table 2 and Table 3, respectively).

Comment: A joint submission of former DHS senior officials stated that the economic analysis in the NPRM does not consider administrative costs of the proposed rule on U.S. workers, namely that the average wage for H-2B workers is lower than the national mean wage in several job categories. The joint submission remarked that this could make H-2B employees more favorable to employers than U.S. citizens.

Response: DHS appreciates the comment but disagrees with the commenters’ conclusions regarding H-2B wages and making H-2B workers more favorable to employers than U.S. citizens. A certified TLC issued by the DOL is a necessary condition for the approval of a Form I-129 petition for H-2B workers. The TLC certifies that the employer has already attested and demonstrated that a qualified U.S. worker was not available to fill the petitioning H-2B employer’s job opportunity and that the H-2B worker’s employment in said job will not adversely affect the wages and working conditions of similarly employed workers in the United States. See INA sec. 214(c)(1), 8 U.S.C. 1184(c)(1); 8 CFR 214.2(h)(5)(ii), (h)(6)(iii)(A), and (h)(6)(v).

K. Out of Scope

DHS received numerous comments that were unrelated to the proposed revisions in the NPRM. Many of these comments would require Congressional action or additional regulatory action by DHS that was not proposed in the NPRM. Other comments suggested revisions within the purview of DOL or other Federal, State, or local agencies.

Although DHS has summarized the comments it received below (and in some cases, noted them above), DHS is not providing substantive responses to those comments as they are beyond the scope of this rulemaking. Comments from the public outside the scope of this rulemaking concerned the following issues:

- Comments specifically regarding DOL’s rulemaking for H-2A workers, or comments specifically directed to DOL asking them to undertake certain actions;
- Suggestions related to H-2 wages, such as increasing H-2 wages or that farm workers should receive 8 hours of pay for a 4-hour workday;
- Comments to improve or expand the functionality of DOL’s website, SeasonalJobs.dol.gov, or another similar resource to facilitate H-2 workers seeking new jobs;
- Comments asking DHS to engage in interagency efforts with DOJ, the Equal Employment Opportunity Commission, and the Department of Housing and Urban Development, in addressing discriminatory recruitment, labor trafficking, retaliation, and substandard housing;
- Comments to improve DOS’s visa process;
- A suggestion that DOL allow certifications of H-2A and H-2B recurring jobs for up to 3 years, which would allow DHS to approve these workers’ status for up to 3 years;
- A suggestion that DHS reduce the number of petitions an employer needs to make for a given season, including increasing the number of beneficiaries allowed per petition from 25 workers to at least 35 workers;
- Comments advocating for domestic solutions to the aging services staffing crisis, including a guest worker program for eldercare healthcare providers;
- Comments about increasing filing fees for H-2 petitions;
- Suggesting that “employers without violations in the previous 5 years should be able to receive a 3-year labor certification rather than a single-year certification;”
- A request that DHS consider permitting for-profit, non-attorney agents who are not eligible to file a Form G-28, Notice of Entry of Appearance, to communicate with USCIS on behalf of employers if authorized to do so, and allow partial accreditation for this purpose;
- Comments about the annual statutory cap for H-2B visas;
- Comments about the exclusion of certain occupations from the H-2B program;

- General concerns with unauthorized immigration and its negative impacts on the United States;
- A request to close the U.S. southern border and force individuals who entered without authorization to work;
- A request to adjust fees based on the size or type of the employer, allocate visas based on employer and worker needs, and expand the list of eligible occupations based on market demand or worker availability;
- Requests to create a pathway to citizenship;
- Requests to create a clear path to “legal permanent residency” in the United States for H–2 workers;
- Suggestion to create a renewable seasonal visa;
- Comments about deferred action or parole;
- Comments about an ICE policy memorandum relating to enforcement actions in or near protected areas;
- Requests to authorize work employment for spouses of H–2 workers;
- Suggestions to make year-round work easier, including allocating a certain number of year-round temporary visas and increasing the 2-week maximum period for emergent circumstances for H–2A workers;
- Suggestions to create a way for H–2 workers to self-petition for their visas and connect directly with certified employers through a multilingual, government-hosted database of available jobs.

V. Statutory and Regulatory Requirements

A. Executive Order 12866 (Regulatory Planning and Review) and Executive Order 13563 (Improving Regulation and Regulatory Review)

Executive Orders 12866 (Regulatory Planning and Review), as amended by Executive Order 14094 (Modernizing Regulatory Review), and 13563 (Improving Regulation and Regulatory Review) direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. Executive Order (E.O.) 12866 (Regulatory Planning and Review), E.O. 13563 (Improving Regulation and Regulatory Review) and E.O. 14094 (Modernizing Regulatory

Review) direct agencies to assess the costs and benefits of available regulatory alternatives. If a regulation is necessary, these Executive Orders direct that, to the extent permitted by law, agencies ensure that the benefits of a regulation justify its costs and select the regulatory approach that maximizes net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. It explicitly draws attention to “equity, human dignity, fairness, and distributive impacts,” values that are difficult or impossible to quantify. All of these considerations are relevant in this rulemaking.

The Office of Management and Budget (OMB) has designated this rule a “significant regulatory action” under section 3(f) of Executive Order 12866, as amended by Executive Order 14094, however it is not significant under section 3(f)(1) because its annual effects on the economy do not exceed \$200 million in any year of the analysis. Accordingly, OMB has reviewed this regulation.

1. Summary of Major Provisions of the Regulatory Action

As discussed in the preamble, DHS is amending its regulations affecting temporary agricultural and temporary nonagricultural workers within the H–2 programs, and their employers. The final rule seeks to better ensure the integrity of the H–2 programs, enhance protection for workers, and clarify requirements and consequences of actions incongruent with the intent of H–2 employment. The provisions of this final rule subject to this regulatory analysis are grouped into four categories: (1) integrity and worker protections; (2) worker flexibilities; (3) improving H–2 program efficiencies and reducing barriers to legal migration; and (4) forms and technical updates.

2. Summary of Costs and Benefits of the Final Rule

This final rule will impose new direct costs on petitioners in the form of opportunity costs of time to complete and file H–2 petitions and time spent to familiarize themselves with the rule. The quantifiable costs of this rule that will impact petitioners consistently and directly are the increased opportunity cost of time to complete Form I–129 H Classification Supplement and opportunity costs of time related to the rule’s portability provision. Over the 10-

year period of analysis, DHS estimates the total costs of the final rule will be approximately \$16,905,113 to \$22,607,100 (undiscounted). DHS estimates the annualized costs of this final rule will range from \$1,825,104 to \$2,438,679 at a 3-percent discount rate and \$2,014,389 to \$2,686,606 at a 7-percent discount rate. In addition, DHS expects the rule will result in transfers from consumers to a limited number of H–2A and H–2B workers who may choose to supply additional labor (consumers pay for the goods made available by the marginal labor provided). The total annualized transfer amounts are estimated to be \$2,918,958 in additional earnings at the 3-percent and 7-percent discount rate and related tax transfers of \$337,122 (\$168,561 from these workers + \$168,561 from employers). Fees paid for Form I–129 and premium processing as a result of the final rule’s portability provision constitute a transfer of \$884,180 from petitioners of porting workers to USCIS (3- and 7-percent annualized equivalent).

Certain petitioners may also incur other costs that are difficult to quantify. For example, certain petitioners may incur additional opportunity costs of time should they be selected for a compliance review or a site visit. Other petitioners may face stricter consequences for charging prohibited fees, and/or may opt to transport and house H–2A beneficiaries earlier than they would have otherwise based on the proposed extension of the pre-employment grace period from 7 to 10 days. In general, petitioners that are found to be noncompliant with the provisions of the rule or other existing authorities (for example, H–2 program violators subject to mandatory and discretionary grounds for denial) may incur costs related to lost sales, productivity, or profits as well as additional opportunity costs of time spent attempting to comply with the rule. Moreover, USCIS may incur increased opportunity costs of time for adjudicators to review information regarding debarment and other past violation determinations more closely, issue RFEs or NOIDs, and for related computer system updates.

The benefits of this final rule will be diverse, though most are difficult to quantify. The final rule extends portability to H–2 workers lawfully present in the United States who are seeking to extend their stay regardless of a porting petitioner’s E-Verify standing, allowing for greater consistency across portability regulations and other nonimmigrant worker categories. Beneficiaries will also benefit from the

extended grace periods, the permanent ability to port, the clarification that employers who employ porting workers must continue to abide by all H-2 requirements regarding worker benefits and protections, and the elimination of the interrupted stay provisions and

instead reducing the period of absence out of the country to reset the 3-year maximum period of stay. The Federal Government will also enjoy benefits, mainly through bolstering existing program integrity activities and providing a greater ability for USCIS to

deny or revoke petitions for issues related to program compliance. Table 4 provides a more detailed summary of the final provisions and their impacts.

BILLING CODE 91111-97-P

Table 4: Summary of Provisions and Impacts

Provision	Purpose of Provision	Expected Impact of the Provision
8 CFR 214.2(h)(5)(vi)(A) and 8 CFR 214.2(h)(6)(i)(F)	DHS is adding stronger language requiring petitioners or employers to both consent to and fully comply with any USCIS audit, investigation, or other program integrity activity and clarify USCIS' authority to deny/revoke a petition if unable to verify information related to the petition, including due to lack of cooperation from the petitioner or employer during a site visit or other compliance review.	Costs: - Cooperation during a site visit or compliance review may result in opportunity costs of time for petitioners to provide information to USCIS during these compliance reviews and inspections. On average, USCIS site visits last 1.7 hours, which is a reasonable estimate for the marginal time that a petitioner may need to spend in order to comply with a site visit. - Employers that do not cooperate will face denial or revocation of their petition(s), which could result in costs to those businesses. Benefits: - USCIS will have clearer authority to deny or revoke a petition if unable to verify information related to the petition. The effectiveness of existing USCIS program integrity activities will be improved through increased cooperation from employers. More effective program integrity activities may benefit domestic workers, compliant petitioners, and H-2 workers.
8 CFR 214.2(h)(20)	DHS is providing H-2A and H-2B workers with "whistleblower protection" comparable to the protection currently offered to H-1B workers.	Costs: Employers may face increased RFEs, denials, or other actions on their H-2 petitions, or other program integrity mechanisms available under this rule or existing authorities, as a result of H-2 workers' cooperation in program integrity activity due to whistleblower protections. Such actions may result in potential costs such as lost productivity and profits to employers whose noncompliance with the program is revealed by whistleblowers. Benefits: Such protections may afford workers the ability to expose issues that harm workers or are not in line with the intent of the H-2 programs while also offering protection to such workers (therefore potentially improving overall working conditions for both U.S. and noncitizen workers), but the extent to which this would occur is unknown.
8 CFR 214.2(h)(5)(xi)(A), 8 CFR 214.2(h)(5)(xi)(C),	DHS is significantly revising the provisions relating to prohibited fees to strengthen the existing	Costs: Enhanced consequences for petitioners who charge prohibited fees could lead to increased

8 CFR 214.2(h)(6)(i)(B), 8 CFR 214.2(h)(6)(i)(C), and 8 CFR 214.2(h)(6)(i)(D)	prohibition on, and consequences for, charging certain fees to H-2A and H-2B workers, including new bases for denial for some H-2 petitions.	financial losses and extended ineligibility from participating in H-2 programs. Benefits: • Possibly increase compliance with provisions regarding prohibited fees and thus reduce the occurrence and burden of prohibited fees on H-2 beneficiaries. • More effective application of provisions regarding prohibited fees benefits domestic workers, compliant petitioners, and H-2 beneficiaries.
8 CFR 214.2(h)(10)(iv)	DHS is instituting certain mandatory and discretionary grounds for denial of an H-2A or H-2B petition.	Costs: • USCIS adjudicators may require additional time associated with reviewing information regarding debarment and other past violation determinations more closely, issuing RFEs or NOIDs, and conducting the discretionary analysis for relevant petitions. • The expansion of violation determinations that could be considered during adjudication, as well as the way debarments and other violation determinations would be tracked, would require some computer system updates resulting in costs to USCIS. • Expanding the grounds for denial could lead to increased financial losses and extended ineligibility from participating in H-2 programs for affected petitioners. Benefits: • Expected to increase compliance with H-2 program requirements, thereby increasing protection of H-2 workers directly and indirectly benefiting domestic workers and compliant petitioners.
8 CFR 214.2(h)(2)(ii) and (iii), 8 CFR 214.2(h)(5)(i)(F), and 8 CFR 214.2(h)(6)(i)(E)	Eliminate the lists of countries eligible to participate in the H-2 programs.	Costs*: • None expected. Benefits: • Employers and the Federal Government will benefit from the simplification of Form I-129 adjudications by eliminating the “national interest” portion of the adjudication that USCIS is currently required to conduct for beneficiaries from countries that are not on the lists. • Remove petitioner burden to provide evidence for beneficiaries from countries not on the lists. • Petitioners may have increased access to workers potentially available to the H-2 programs. • Free up agency resources currently devoted to developing and publishing the eligible country lists in the <i>Federal Register</i> every year.
8 CFR 214.2(h)(5)(viii)(B) and 8 CFR 214.2(h)(6)(vii)(A)	Change grace periods such that they will be the same for both H-2A and H-2B Programs. Create a 60-day grace period following any H-2A or H-2B	Costs**: • H-2A employers may face additional costs such as for housing, but employers likely would weigh those costs against the benefit of providing employees with additional time to prepare for the start of work.

8 CFR 214.2(h)(11)(iv) and 8 CFR 214.2(h)(13)(i)(C)	revocation or cessation of employment during which the worker will not be considered to have failed to maintain nonimmigrant status and will not accrue any unlawful presence solely on the basis of the revocation or cessation.	Benefits: - Provides employees (and their employers) with extra time to prepare for the start of work. Provides clarity for adjudicators and makes timeframes consistent for beneficiaries and petitioners. - Provides workers additional time to seek other employment or depart from the United States if their employer faces a revocation or if they cease employment.
8 CFR 214.2(h)(11)(iv)	Clarify responsibility of H-2A employers for reasonable costs of return transportation for beneficiaries following a petition revocation.	Costs: - None expected since H-2A petitioning employers are already generally liable for the return transportation costs of H-2A workers. Benefits: - Beneficiaries will benefit in the event that clarified employer responsibility decreases the incidence of workers having to pay their own return travel costs in the event of a petition revocation.
8 CFR 214.2(h)(16)(i)	Clarify that H-2 workers may take certain steps toward becoming a lawful permanent resident of the United States while still maintaining lawful nonimmigrant status.	Costs: - None expected. Benefits: - DHS expects this to enable some H-2 workers who have otherwise been dissuaded to take certain steps towards becoming a lawful permanent residence with the ability to do so without concern over becoming ineligible for H-2 status based solely on taking these steps.
8 CFR 214.2(h)(5)(viii)(C), 8 CFR 214.2(h)(6)(vii), and 8 CFR 214.2(h)(13)(i)(B)	Eliminate the “interrupted stay” calculation and instead reduces the period of absence to reset an individual’s 3-year period of stay.	Costs: - Workers in active H-2 status considering making trips abroad for periods of fewer than 60 days but more than 45 days, may be disincentivized to make such trips. Benefits: - Simplifies and reduces the burden to calculate beneficiary absences for petitioners, beneficiaries, and adjudicators. - May reduce the number of RFEs related to 3-year periods of stay. Transfers: - As a result of a small number of H-2 workers at the 3-year maximum stay responding to the shorter absence requirement by working 30 additional days, DHS estimates upper bound annual transfer payment of \$2,918,958 in additional earnings from consumers to H-2 workers and \$337,122 in tax transfers from these workers and their employers to tax programs (Medicare and Social Security).
8 CFR 214.2(h)(2)(i)(D), 8 CFR 214.2(h)(2)(i)(I), and 8 CFR 274a.12(b)(21)	Make portability permanent for H-2B workers and remove the requirement that H-2A workers can only port to an E-Verify employer.	Costs: The total estimated annual opportunity cost of time to file Form I-129 by human resource specialists is approximately \$42,186. The total estimated annual opportunity cost of time to file

		Form I-129 and Form G-28 will range from approximately \$93,628 if filed by in-house lawyers to approximately \$161,434 if filed by outsourced lawyers. • The total estimated annual costs associated with filing Form I-907 if it is filed with Form I-129 is \$4,728 if filed by human resource specialists. The total estimated annual costs associated with filing Form I-907 will range from approximately \$9,006 if filed by an in-house lawyer to approximately \$15,527 if filed by an outsourced lawyer. • The total estimated annual costs associated with the portability provision ranges from \$144,636 to \$216,633, depending on the filer. • DHS may incur some additional adjudication costs as more petitioners will likely file Form I-129. However, these additional costs to USCIS are expected to be covered by the fees paid for filing the form. Benefits: • Enabling H-2 workers present in the United States to port to a new petitioning employer affords these workers agency of choice at an earlier moment in time consistent with other portability regulations and more similar to other workers in the labor force. • Replacing the E-Verify requirement for employers wishing to hire porting H-2A workers with strengthened site visit authority and other provisions that maintain program integrity will aid porting beneficiaries in finding petitioners without first needing to confirm if that employer is in good standing in E-Verify. Although this change impacts an unknown portion of new petitions for porting H-2A beneficiaries, no reductions in E-Verify enrollment are anticipated. • An H-2 worker with an employer that is not complying with H-2 program requirements will have additional flexibility in porting to another employer's certified position. Transfers: • Annual undiscounted transfers of \$884,180 from filing fees for Form I-129 combined with Form I-907 from petitioners to USCIS.
8 CFR 214.2(h)(2)(i)(I)(3)	DHS is clarifying that a beneficiary of an H-2 portability petition is considered to have been in a period of authorized stay during the pendency of the petition and that the petitioner must still abide by all H-2 program requirements.	Costs: • None expected. Benefits: • Provides H-2 workers with requisite protections and benefits as codified in the rule in the event that a porting provision is withdrawn or denied.
Cumulative Impacts of Proposed Regulatory Changes		

DHS is making changes to the Form I-129, to effectuate the proposed regulatory changes.	Costs: • The time burden to complete and file Form I-129, H Classification Supplement, will increase by 0.23 hours as a result of the proposed changes. The estimated opportunity cost of time for each petition by type of filer will be \$11.72 for an HR specialist, \$26.26 for an in-house lawyer, and \$45.28 for an outsourced lawyer. The estimated total annual opportunity costs of time for petitioners or their representatives to file H-2 petitions under this final rule ranges from \$571,700 to \$755,946.
Petitioners and/or their representatives will familiarize themselves with the rule.	Costs: • Petitioners and/or their representatives will need to read and understand the final rule at an estimated opportunity cost of time that ranges from \$9,741,753 to \$12,881,310, incurred during the first year of the analysis.
Source: USCIS analysis. Notes: * DHS notes that there were comments advising of possibly adverse costs from the removal of the eligible countries list, notably that the list provides an important incentive for other countries to cooperate with the United States, such as by accepting repatriation of their nationals who are subject to a final order of removal. DHS disagrees with those comments, as discussed above in the preamble. ** DHS does not expect any significant additional costs to H-2B employers as, generally, they do not have to provide housing for workers. Employers are required to provide housing at no cost to H-2A workers. See INA sec. 218(c)(4), 8 U.S.C. 1188(c)(4). There is no similar statutory requirement for employers to provide housing to H-2B workers, although there are regulatory prohibitions against deductions from wages for the cost of housing by an H-2B employer when it is provided primarily for the benefit or convenience of the employer. See 20 CFR 655.20(b), (c); 29 CFR 531.3(d)(1); 80 FR 24042, 24063 (Apr. 29, 2015).	

OMB A-4 Accounting Statement (\$ Millions, FY 2022) Time Period: FY 2024 through FY 2033

BILLING CODE 91111-97-C

Furthermore, a limited number of changes have been made to the final rule relative to the NPRM. First, the final rule has been updated to reflect the publication of the USCIS Fee Rule.¹²⁴ Second, the final rule has been updated to reflect the publication of the most recent H-2B Supplemental Cap Temporary Final Rule.¹²⁵ Both updates affected the final rule's costs and transfers due to changes to the analytical baseline depicting the world absent the impacts of this rule rather than policy changes from the NPRM. Additionally, some small methodological changes were made to the calculation for the number of marginal Form I-129 filings due to the rule's portability provision.

3. Summary of Comments Related to the Regulatory Impact Analysis and Associated Responses

DHS requested comments from the public on several topics discussed in the NPRM. Several of those comments discussed issues related to the regulatory impact analysis and the economic impacts of the rule. These comments, and their responses, are discussed at length in the preamble but, in the interest of transparency, are also discussed here.

a. Impacts on the Economy, U.S. Citizens/Taxpayers/Consumers

Comment: A research organization expressed concern that USCIS does not provide an impact assessment of the proposed permanent and expanded portability in the NPRM and that, in failing to do so, USCIS prevents the public from comprehending the impact of the proposed rule on the U.S. labor market.

Response: The comment that the NPRM did not provide an impact assessment of the proposed permanent and expanded portability is inaccurate. In the NPRM, DHS provided a detailed explanation of the expected impact of the portability provision. 88 FR 65044, 65084–65089 (Sept. 20, 2023).

¹²⁴ See “U.S. Citizenship and Immigration Services Fee Schedule and Changes to Certain Other Immigration Benefit Request Requirements; Final Rule,” 89 FR 6194 (31 Jan. 2024).

¹²⁵ See “Exercise of Time-Limited Authority to Increase the Numerical Limitation for FY 2024 for the H-2B Temporary Nonagricultural Worker Program and Portability Flexibility for H-2B Workers Seeking To Change Employers; Temporary Final Rule,” 88 FR 80394 (17 Nov. 2023).

Additionally, in this final rule DHS has provided additional historical data showing the number of approved H-2B petitions and beneficiaries extending stay with and without a change in employer (*see* Table 2 and Table 3, respectively) pursuant to the commenter's request.

Comment: A joint submission of former DHS senior officials stated that the economic analysis in the NPRM does not consider administrative costs of the proposed rule on U.S. workers, namely that the average wage for H-2B workers is lower than the national mean wage in several job categories. The joint submission remarked that this could make H-2B employees more favorable to employers than U.S. citizens and therefore could have negative impacts on the domestic labor force.

Response: DHS appreciates the comment but disagrees with the commenter's conclusions regarding H-2B wages and making H-2B workers more attractive relative to the domestic labor force. A certified TLC is a necessary condition for the approval for a Form I-129 for H-2B workers and, as such, any prospective H-2B employer has legally attested that they have already attempted to hire domestic labor and that any H-2B beneficiaries will not adversely impact wages and working conditions of similar workers already in the United States.¹²⁶

Comment: A research organization expressed concern that the NPRM does not discuss important aspects of the H-2B program, including extensions of stay, and therefore does not properly address the “true” size of the program. The commenter discussed concerns regarding publicly available data and that the program has grown beyond its statutorily mandated parameters.

Response: DHS appreciates the comment but notes that much of the comment's substance focuses on aspects of the H-2 program that would not be affected by the rule and therefore should not be considered as an impact of the rule. DHS provided an in-depth analysis regarding the annual impacts of the final rule's portability provision.

Furthermore, DHS also provided additional data in this final rule to address the commenter's concerns regarding extensions of stay (*see* Table 2 and Table 3). In summary, the

¹²⁶ See 20 CFR 655.1(a); *see also* INA sec. 214(c)(1), 8 U.S.C. 1184(c)(1); 8 CFR 214.2(h)(5)(i)(A) and (ii), (h)(6)(iii)(A), and (h)(6)(v).

Department did not receive comments related to the RIA or the rule's economic impacts that necessitated changing the population calculation methodology or analytical content of the RIA present in the NPRM.

4. Background and Purpose of the Rule

The purpose of this rulemaking is to modernize and improve the regulations relating to the H-2A temporary agricultural worker program and the H-2B temporary nonagricultural worker program (collectively “H-2 programs”). Through this final rule, DHS seeks to strengthen worker protections and the integrity of the H-2 programs, provide greater flexibility for H-2A and H-2B workers, and improve program efficiency and reduce barriers to legal migration.

The H-2A temporary agricultural nonimmigrant classification allows U.S. employers unable to find sufficient able, willing, qualified, and available U.S. workers to bring foreign nationals to the United States to fill seasonal and temporary agricultural jobs. To qualify as seasonal, employment must be tied to a certain time of year by an event or pattern, such as a short annual growing cycle or specific aspect of a longer cycle and requires labor levels far above those necessary for ongoing operations. To qualify as temporary, the employer's need to fill the position will, except in extraordinary circumstances, last no longer than 1 year.

The H-2B visa classification program was designed to serve U.S. businesses that are unable to find a sufficient number of qualified U.S. workers to perform nonagricultural work of a temporary nature, which may be a one-time occurrence, a seasonal need, a peakload need, or an intermittent need.¹²⁷ For an H-2A or H-2B nonimmigrant worker to be admitted into the United States under one of these nonimmigrant classifications, the hiring employer is required to: (1) obtain a TLC from DOL (or, in the case of H-2B employment on Guam, from the Governor of Guam); and (2) file Form I-129, Petition for a Nonimmigrant Worker, with DHS. The temporary nature of the services or labor described on the approved TLC is subject to DHS

¹²⁷ See 8 CFR 214.2(h)(6)(ii).

review during adjudication of Form I–129.¹²⁸

For the H–2B program there is a statutory cap of 66,000 visas allocated per fiscal year, with up to 33,000 allocated in each half of a fiscal year, for the number of nonimmigrants who may be granted H–2B nonimmigrant status.^{129 130} Any unused numbers from the first half of the fiscal year will be available for employers seeking to hire H–2B workers during the second half of the fiscal year. However, any unused H–2B numbers from one fiscal year do not carry over into the next and will therefore not be made available.¹³¹

5. Population

The final rule will impact petitioners (employers) that file Form I–129 seeking to bring foreign nationals (beneficiaries or workers) to the United States to fill

temporary agricultural and nonagricultural jobs through the H–2A and H–2B visa programs, respectively. This rule also will have additional impacts on employers and workers presently in the United States under the H–2A and H–2B programs by permanently providing “portability” to all H–2A and H–2B workers. Portability, for purposes of this proposed rule, is the ability to begin new qualifying employment upon the filing of a nonfrivolous petition rather than upon petition approval. Workers may transfer, or “port,” to a qualifying new job offer that is in the same nonimmigrant classification that the worker currently holds. Porting, as described in this final rule, does not include transferring from one H-visa classification to another such as, for example, transferring from a H–

2A nonimmigrant status to an H–2B nonimmigrant status, or vice versa. The new job offer may be through the same employer that filed the petition or a different employer after an H–2B petition is filed. This provision will apply to all H–2A and H–2B workers on a permanent basis, whereas currently portability applies to only certain H–2A workers and on a time-limited basis to all H–2B workers.¹³² Portability allows H–2A and H–2B workers to continue to earn wages and gaining employers to continue obtaining necessary workers. Table 5 and Table 6 present the total populations this final rule would impact. For provisions impacting a subset of these populations, the analysis provides separate population totals, when possible, for more specific analysis.

Table 5: Total H-2A Petitions Received Using Form I-129 for Total Beneficiaries with Total Approved H-2A Petitions and Beneficiaries, FY 2013 through FY 2022.				
Fiscal Year	Total Petitions Received	Total Number of Beneficiaries	Total Petitions Approved	Total Beneficiaries Approved
2013	7,332	105,095	7,280	104,487
2014	8,226	123,328	8,189	122,816

Source: USCIS Office of Policy and Strategy -- C3, Electronic Immigration System (ELIS) USCIS Data System as of Oct. 18, 2022.				

As shown in Table 5, the number of Form I–129 H–2A petitions increased from 7,332 in FY 2013 to 24,370 in FY 2022 while approved petitions increased from 7,280 in FY 2013 to 23,704 in FY 2022.¹³³ The number of beneficiaries also increased over this

period from 105,095 to 415,229 with approved beneficiaries increasing from 104,487 to 396,255. Note that petitioners can petition for multiple beneficiaries on one petition, hence the much larger number of beneficiaries compared to petitions received and approved. On

average, 13,722 H–2A petitions were received for an average 240,853 beneficiaries and 13,504 H–2A petitions

¹²⁸ Revised effective January 18, 2009 (73 FR 78104).
¹²⁹ See INA sec. 214(g)(1)(B), (g)(10), 8 U.S.C. 1184(g)(1)(B), (g)(10).
¹³⁰ In addition to the statutorily available 66,000 H–2B visas per fiscal year, DHS and DOL have also generally provided supplemental visas when granted that authority by Congress. See, e.g., 88 FR 80394.

¹³¹ A TLC approved by DOL must accompany an H–2B petition. The employment start date stated on the petition generally must match the start date listed on the TLC. See 8 CFR 214.2(h)(6)(iv)(A) and (D).
¹³² See “Exercise of Time-Limited Authority To Increase the Numerical Limitation for FY 2023 for the H–2B Temporary Nonagricultural Worker Program and Portability Flexibility for H–2B Workers Seeking To Change Employers,” 87 FR

76816 (Dec. 15, 2022) (providing temporary H–2B portability to petitioners and H–2B nonimmigrant workers initiating employment through the end of January 24, 2024).
¹³³ DHS notes that the number of filed H–2A petitions has grown by a compound average growth rate of approximately 12.76 percent between FY2013 and FY2022. DHS acknowledges that potential costs may be underestimated in this analysis if historical growth rates continue.

were approved for an annual average of 234,865 beneficiaries.

Table 6: Total H-2B Petitions Received Using Form I-129 for Total Beneficiaries with Total Approved H-2B Petitions and Beneficiaries, FY 2013 through FY 2022.				
Fiscal Year	Total Petitions Received	Total Number of Beneficiaries	Total Petitions Approved	Total Beneficiaries Approved¹³⁴
2013	4,720	81,220	4,546	78,532

Source: USCIS, Office of Performance and Quality -- SAS PME C3 Consolidated, as of Sept. 09, 2023, TRK 12921				

Table 6 shows that the number of Form I-129 H-2B petitions and number of beneficiaries increased from FY 2013 through FY 2019, declined in FY 2020 due to labor market conditions during COVID-19, and then increased again in FY 2021 and FY 2022.¹³⁵ As previously discussed, the total number of H-2B visas is constrained in recent fiscal years by statutory numerical limits, or “caps,” with some exceptions, on the total number of noncitizens who may be issued an initial H-2B visa or otherwise granted H-2B status during each fiscal year.¹³⁶ Whereas the exact statutory limits (including any supplemental limits) on H-2B visas are unknown for FY 2025 and beyond, the receipts and approvals seen in FY 2022 are assumed

to be a reasonable estimate of future H-2B petitions and beneficiaries.

As these tables show, U.S. employers and foreign temporary workers have been increasingly interested in the H-2A and H-2B programs from FY 2013 to FY 2022 as evidenced by an increasing number of petitions filed for an increasing number of beneficiaries. However, the H-2B program remains constrained by the statutory cap of 66,000 visas allocated per fiscal year, provided for under INA sec. 214(g)(1)(B), 8 U.S.C. 1184(g)(1)(B), though Congress, through time-limited legislation, has allowed, to date, supplemental allocations beyond that 66,000 visa cap.¹³⁷ The supplements allocate additional visas for nonimmigrants who may be granted H-

2B nonimmigrant status in each half of a fiscal year.¹³⁸

6. Cost-Benefit Analysis

The provisions of this final rule subject to this regulatory analysis are grouped into the following four categories: (1) integrity and worker protections; (2) worker flexibilities; (3) improving H-2 program efficiencies and reducing barriers to legal migration; and (4) forms and technical updates. Each subsection that follows explains the proposed provision, its population if available, and its potential impacts.

a. Integrity and Worker Protections

To improve the integrity of the H-2 programs, the final rule will: (1) provide clearer requirements for USCIS compliance reviews and inspections; (2)

¹³⁴ This number includes workers who are exempt from the H-2B cap and those who were approved under any applicable temporary supplemental cap. This number reflects the number of H-2B workers who are in petitions that have been approved by DHS (including ones that have not yet been issued an H-2B visa or otherwise acquired H-2B status).

¹³⁵ Although Congress provided the Secretary of Homeland Security with the discretionary authority to increase the H-2B cap in FY 2020, the Secretary did not exercise that authority. See 86 FR 28202 (May 25, 2021).

¹³⁶ On November 17, 2023, DHS made available to employers an additional 64,716 H-2B temporary nonagricultural worker visas for fiscal year 2024. See 88 FR 80394.

¹³⁷ See section 543 of Division F of the Consolidated Appropriations Act, 2017, Public Law 115-31; section 205 of Division M of the Consolidated Appropriations Act, 2018, Public Law 115-141; section 105 of Division H of the Consolidated Appropriations Act, 2019, Public Law 116-6; section 105 of Division I of the Further Consolidated Appropriations Act, 2020, Public Law 116-94; section 105 of Division O of the Consolidated Appropriations Act, 2021, Public Law 116-260 (FY 2021 Omnibus); section 105 of Division O of the Consolidated Appropriations Act, 2021, FY 2021 Omnibus, sections 101 and 106(3) of Division A of Public Law 117-43, Continuing Appropriations Act, 2022, and section 101 of Division A of Public Law 117-70, Further Continuing Appropriations Act, 2022; section 204

of Division O of the Consolidated Appropriations Act, 2022, Public Law 117-103, and section 101(6) of Division A of Public Law 117-180, Continuing Appropriations and Ukraine Supplemental Appropriations Act, 2023, and section 303 of Division O, Consolidated Appropriations Act, 2023, Public Law 117-328; Public Law 118-15, Continuing Appropriations Act, 2024 and Other Extensions Act, Division A, sections 101(6) and 106 (extending into 2024 DHS funding and other authorities, including the authority to issue supplemental H-2B visas that was provided under title III of Division O of Pub. L. 117-328, through November 17, 2023).

¹³⁸ See INA sec. 214(g)(1)(B), (g)(10), 8 U.S.C. 1184(g)(1)(B), (g)(10).

provide H-2A and H-2B workers with “whistleblower protections;” (3) include provisions relating to prohibited fees; and (4) institute certain mandatory and discretionary grounds for denial of an H-2A or H-2B petition. We address each of these provisions in turn below.

(1) USCIS Compliance Reviews and Inspections

The final rule includes provisions that codify USCIS’ authority to conduct compliance reviews and inspections within the H-2A and H-2B programs, clarify the scope of such reviews and inspections, and specify the consequences of a refusal or failure to fully cooperate with such compliance reviews and inspections. While no inspection that the USCIS FDNS conducts is mandatory, if an inspection is conducted, this provision will make the successful completion of an inspection required for a petition’s approval.¹³⁹ Inspections can include site visits, telephone interviews, or correspondence (both electronic and mail).¹⁴⁰ This regulatory change will apply to both pre- and post-adjudication petitions, which will codify USCIS’ ability to either deny or revoke petitions accordingly. This final rule will provide USCIS with a greater ability to obtain compliance from petitioners and employers. Outside of this final rulemaking, USCIS is planning to conduct future site visits for both H-2A and H-2B work sites, some of which are expected to occur in later fiscal years.

Data on H-2 program inspections are limited and generally consist of site visits. USCIS has conducted only 189 H-2A program site visits associated with fraud investigations since calendar year 2004. With respect to H-2B program inspections, USCIS conducted a limited pilot program in FY 2018 and FY 2019 in which USCIS conducted site visits and inspections at 364 (randomly selected) H-2B employment sites.¹⁴¹ Of the site visits USCIS conducted, USCIS officers were unable to make contact with employers or workers over 12 percent of the time (45 instances).¹⁴² On

average, each site visit took 1.7 hours.¹⁴³ Of the limited number of site visits USCIS has conducted thus far, non-cooperation exists in at least some cases. Cooperation is crucial to USCIS’ ability to verify information about employers and workers, and the overall conditions of employment.

This final rule will provide a clear disincentive for petitioners who do not cooperate with compliance reviews and inspections while giving USCIS a greater ability to access and confirm information about employers and workers as well as identify fraud. Employers who may be selected to participate in such inspections may incur costs related to the opportunity cost of time to provide information to USCIS instead of performing other work. As discussed above, FDNS data on previous H-2B site visits show that the average site visit takes 1.7 hours. DHS believes that, due to the rule’s provisions clarifying the consequences of a refusal or failure to fully cooperate with compliance reviews and inspections, the rate of “inconclusive” site visits will be negligible. As such, each site visit that warrants a conclusive finding under the rule that would have warranted an “inconclusive” finding under the baseline scenario would therefore cause a 1.7-hour time burden to accrue to the respective petitioner due to the petitioner having to expend time cooperating that they would not have under the baseline.

DHS cannot quantify these costs, however, because the relevant hourly opportunity cost of time is highly specific to the affected petitioner and, as such, any average would likely not be informative. However, DHS expects the benefit of participation in the H-2 program would outweigh these costs. Additionally, employers who do not cooperate would face denial or revocation of their petition(s), which could result in costs to those businesses.

DHS does not expect this provision to result in additional costs to the Federal Government because it will not require additional resources or time to perform compliance reviews and inspections and, at the same time, USCIS is not seeking to establish a particular number of compliance reviews and inspections to complete annually or increase the number of compliance reviews and inspections or the number of H-2 program site visits. A benefit is that USCIS will have regulations to clearly

refer to its existing authority to deny or revoke a petition if unable to verify information related to the petition. Additionally, existing USCIS program integrity activities will be made more effective by additional cooperation from employers. More effective program integrity activities may benefit domestic workers, compliant petitioners, and H-2 workers.

(2) Whistleblower Protections

This final rule provides H-2A and H-2B workers with “whistleblower protections” comparable to the protections currently offered to H-1B workers.¹⁴⁴ For example, if an H-1B worker: (1) is a beneficiary of a petition seeking to extend their H-1B status or change their nonimmigrant status; (2) indicates that they faced retaliatory action from their employer because they reported a labor condition application violation; and (3) lost or failed to maintain their H-1B status related to such violation, USCIS may consider this situation to be an instance of “extraordinary circumstances” as defined by sections 8 CFR 214.1(c)(4) and 248.1(b). In addition, H-1B workers normally are not eligible to extend or change their status if they have lost or failed to maintain their H-1B status. However, if they can demonstrate “extraordinary circumstances,” USCIS may use its discretion to excuse this loss or failure to maintain H-1B status on a case-by-case basis.

DHS does not currently have specific data related to whistleblower protections for the H-1B program nor does it have data on other similar types of reports on worker issues from the H-2 populations.¹⁴⁵ Therefore, it is possible that whistleblower protections may afford H-2 workers the ability to expose issues that harm beneficiaries or are not congruent with the intent of H-2 employment. This impact could, potentially, improve working conditions but the extent to which H-2 workers would cooperate in program integrity activities as a direct result of prohibitions on specified employer

¹³⁹ For more information on site visits, see USCIS, “Administrative Site Visit and Verification Program” (Sept. 9, 2019), <https://www.uscis.gov/about-us/directorates-and-program-offices/fraud-detection-and-national-security/administrative-site-visit-and-verification-program>.

¹⁴⁰ The expected time burden to comply with audits conducted by DHS and OFLC is 12 hours. The number in hours for audits was provided by USCIS, Service Center Operations. See 87 FR 76816 (Dec. 15, 2022).

¹⁴¹ The H-2B petitions were randomly selected so they do not represent a population that data led USCIS to believe were more vulnerable to fraud or abuse.

¹⁴² Site visits can be categorized as “inconclusive” for a variety of reasons including,

but not limited to, noncooperation or a lack of personnel (petitioner, beneficiary, or other relevant personnel) present at the respective site.

¹⁴³ Data from USCIS FDNS, Reports and Analysis Branch.

¹⁴⁴ See USCIS, “Combating Fraud and Abuse in the H-1B Visa Program” (Feb. 9, 2021), <https://www.uscis.gov/scams-fraud-and-misconduct/report-fraud/combating-fraud-and-abuse-in-the-h-1b-visa-program>.

¹⁴⁵ WHD prohibits retaliation and publishes fact sheets and other resources online. See, e.g., WHD, “Retaliation,” <https://www.dol.gov/agencies/whd/retaliation> (last visited Jun. 17, 2024); WHD, “Fact Sheet #77D: Retaliation Prohibited under the H-2A Temporary Visa Program” (Apr. 2012), <https://www.dol.gov/agencies/whd/fact-sheets/77d-h2a-prohibiting-retaliation>; WHD, “Fact Sheet #78H: Retaliation Prohibited under the H-2B Temporary Visa Program,” <https://www.dol.gov/agencies/whd/fact-sheets/78h-h2b-retaliation-prohibited> (last visited Jun. 17, 2024).

retaliations is unknown. It is also possible that employers may face increased RFEs, denials, or other actions on their H-2 petitions, or other program integrity mechanisms available under this rule or existing authorities, as a result of H-2 workers' cooperation in program integrity activity due to whistleblower protections. Such actions may result in potential costs such as lost productivity and profits to employers whose noncompliance with the program is revealed by whistleblowers.

(3) Prohibited Fees

The final rule includes provisions relating to prohibited fees that strengthen the existing prohibitions on, and consequences for, charging certain fees to H-2A and H-2B workers, including new grounds for denial for some H-2 petitions. The economic impacts of these changes are difficult to assess because USCIS currently does not have the means to track or identify petitions associated with the payment of prohibited fees. Prohibited fees are paid by a worker and include, but are not limited to, withholding or deducting workers' wages; directly or indirectly paying a recruiter, employer, agent, or anyone else in the recruitment chain agent; or paying for other work-related expenses the employer is required by statute or regulation to cover.

USCIS generally has no direct interaction with beneficiaries, so it currently depends in significant part on findings by DOS consulates to determine if prohibited fees have been paid, usually in relation to applicant interviews or investigations. For example, the DOS Office of Fraud Prevention, in collaboration with several consulates in Mexico, confirmed they do not have data on the average number of prohibited fees charged nor the amount paid.¹⁴⁶ A consulate in Mexico shared that during visa interviews beneficiaries may disclose the payment of prohibited fees, but typically these admissions are for fees paid to previous facilitators or employers from returning applicants who are going to work for a new employer.¹⁴⁷ This is likely due to disincentives to admitting to the payment of fees for current petitions for fear of losing the proffered job opportunity in the United States.¹⁴⁸ DOS assumes it only receives reports from a small fraction of the workers who

pay prohibited fees because they still are able to obtain work and make more money in the United States than they would in Mexico regardless of whether they pay fees or not leading some workers to choose not to report the prohibited fees.¹⁴⁹ Further, DOS also noted that workers usually only report paying prohibited fees when fees are increased, when they do not have the money to pay the fee in a current year, or they are excluded from being listed on a petition.

Moreover, DOS noted that prohibited fees are commonplace and pervasive in the H-2 program, but that this issue largely goes unreported.¹⁵⁰ Consular employees noted, in their experience, that fees ordinarily range from \$800 to \$1,000 for a beneficiary to be included on a petition but that non-monetary transfers may also occur.¹⁵¹

Data on the prevalence of prohibited fees are very limited. However, according to one non-profit organization that conducted a survey, about 58 percent of H-2 workers reported paying a prohibited fee.¹⁵² Since data on the prevalence of prohibited fees are very limited, we use the 58 percent estimate as a primary estimate of beneficiaries that may be subject to some form of prohibited fee. Using this estimated percentage, we can multiply by the total number of FY 2022 beneficiaries to consider the potential population impacted by prohibited fees.¹⁵³ If we assume 58 percent of beneficiaries pay an average fee of \$900,¹⁵⁴ we estimate that prohibited fees (including those incurred both within and outside of the United States) may have cost H-2A workers around \$216.7 million and H-2B workers around \$96.9 million in FY 2022.¹⁵⁵ If prohibited fees are a prevalent problem on such an economically significant scale, it may not be reasonable to assume that this

rule would stop all fees paid by H-2 workers. However, for beneficiaries who currently pay prohibited fees or could pay them in the future, this final rule provision seeks to minimize the occurrence and burden of prohibited fees on H-2 beneficiaries.

It is difficult to estimate the specific impacts that this regulatory change will have, but DHS expects that enhanced consequences for petitioners would act as a deterrent to charge or collect prohibited fees from H-2 workers. In addition, the harsher consequences for employers charging prohibited fees could, in conjunction with whistleblower protections that are to be implemented with this rule, reduce disincentives for workers to report that prohibited fees had been charged. However, DHS is not able to estimate whether and to what extent those disincentives are expected to be reduced. Consequently, under this final rule, there will be additional unquantifiable and non-monetizable reductions in indenture and harms from other more serious abuses such as those discussed in section III, Background. Furthermore, the more effective and consistent application of provisions regarding prohibited fees will benefit domestic workers, compliant petitioners, and H-2 beneficiaries by reducing the ability of noncompliant firms to abuse the H-2 programs.

(4) Mandatory and Discretionary Grounds for Denial

As another integrity measure and deterrent for petitioners that have been found to have committed labor law violations or abused the H-2 programs, DHS will institute certain mandatory and discretionary grounds for denial of an H-2A or H-2B petition. The impacts of these provisions are targeted at H-2 petitioners that have committed serious violations or have otherwise not complied with H-2 program requirements.

To understand the baseline, DHS has data on current DOL debarments.¹⁵⁶ DHS relies on debarment data shared by DOL to determine the eligibility of certain H-2 petitions. As of December 19, 2022, there were 76 active debarments for both the H-2A and H-2B programs. Historically, from FY 2013 through FY 2022, USCIS has tracked a total of 326 recorded debarments for a company, individual, or agent as provided by DOL. USCIS regularly performs additional research to confirm

¹⁴⁶ Information from email discussions. See DOS Emails Re_Prohibited fees (H-2) (Sept. 19, 2022).

¹⁴⁷ *Id.*

¹⁴⁸ Workers have a disincentive to report prohibited fees since regulations stipulate that a visa should be denied to those admitting to paying these fees.

¹⁴⁹ Information from email discussions. See DOS Emails Re_Prohibited fees (H-2) (Sept. 19, 2022).

¹⁵⁰ *Id.*

¹⁵¹ In addition to the non-exhaustive list of prohibited fees, there are also other types of non-fee payments, including favors, meals, or even the transfer of livestock.

¹⁵² See Centro de los Derechos del Migrante, "Recruitment Revealed: Fundamental Flaws in the H-2 Temporary Worker Program and Recommendations for Change," https://cdmigrante.org/wp-content/uploads/2018/02/Recruitment_Revealed.pdf (last accessed Mar. 31, 2023).

¹⁵³ FY 2022 Total H-2A beneficiaries 415,229×0.58=240,833 (rounded); FY 2022 Total H-2B beneficiaries 185,700×0.58=107,706 (rounded).

¹⁵⁴ We take an average of the range provided by the consular office in Mexico: (\$800+\$1000)/2=\$900.

¹⁵⁵ Calculations: Half of FY 2022 H-2A beneficiaries 240,833×\$900 fee = \$216.7 million (rounded); Half of FY 2022 H-2B beneficiaries 107,706×\$900 fee=\$96.9 million (rounded).

¹⁵⁶ Please note that impacts from this provision are based on debarment data from DOL. DHS cannot accurately estimate the impact of other mandatory and discretionary denials due to a lack of data, as explained in this section.

debarment and petitioner information to assist in adjudications. For the period of debarment, a petition covered by the debarment cannot be approved where the debarred organization—or its successor-in-interest in some limited circumstances, whether or not having the same name as that listed—is the petitioner or employer.

Costs under this provision of the final rule will be borne by such petitioners or their successor in interest through denials that preclude participation in the H-2 program during the debarment period which can range between 1 to 5 years. More petitioners may face financial losses as a result of these new grounds for denial because they may lose access to labor for extended periods. While DHS expects program participants to comply with program requirements, however, those who do not could experience significant impacts due to this final rule such as experiencing too few workers, loss of revenue, and possibly going out of business.

DHS also notes that the final rule encompasses more than debarments as grounds for mandatory or discretionary denials, including but not limited to USCIS findings of fraud or willful misrepresentation, violation(s) under section 274(a) of the Act, the revocation of an approved TLC, and final revocations by USCIS on the basis of a variety of prohibited behaviors. However, DHS does not have data on the total population of employers that these mandatory and discretionary denial provisions would affect at this granular of a level, or what the impact of potential economic losses could be given the heterogeneity of H-2 employers and the specific fact-patterns in each instance where new mandatory or discretionary grounds for denial could apply.¹⁵⁷ Monetized impacts therefore cannot be estimated. Although monetized impacts cannot be estimated, DHS expects these provisions to provide various benefits. For instance, DHS expects that the final rule will hold certain petitioners more accountable for

violations, including certain findings of labor law and other violations, and will result in fewer instances of worker exploitation and safer working environments for beneficiaries. As is the case with other program integrity provisions of the final rule, DHS believes that these provisions benefit H-2 workers directly and benefit domestic workers and compliant petitioners indirectly by reducing the ability of noncompliant firms to abuse the H-2 programs.

The Federal Government may experience costs associated with implementing these provisions. Specifically, USCIS adjudicators may require additional time associated with reviewing petitioner information relating to debarment by DOL (in the case of H-2A and H-2B debarments) and GDOL (in the case of H-2B debarments), and other determinations of past violations more closely (as they will now be able to consider past noncompliance in the current adjudications), issuing an RFE or NOID, and, if the violation determination is covered under the discretionary bar provision, including when debarment has concluded, conducting the discretionary analysis for relevant petitions. Additionally, the expansion of grounds for denial based on debarment as well as the need to improve the way debarments are tracked in current USCIS systems would require additional inter-agency coordination and information sharing.

b. Worker Flexibilities

This final rule provides greater flexibility to H-2A and H-2B workers by implementing grace periods, clarifying the responsibility of H-2A employers for reasonable costs of return transportation for beneficiaries following a petition revocation, clarifying expressly that H-2 workers may take steps toward becoming a permanent resident of the United States while still maintaining lawful nonimmigrant status, and expanding job portability. We address each of the provisions regarding these worker flexibilities in turn below.

(1) Grace Periods

DHS will provide increased flexibility for H-2 workers by extending grace periods. Workers will not experience an increase in work time due to these extended grace periods because these grace periods do not authorize employment. More specifically, this rule will provide the same 10-day grace period prior to a petition's validity period that H-2B nonimmigrants currently receive to H-2A

nonimmigrants, resulting in the extension of the initial grace period of an approved H-2A petition from 1 week to 10 days. The updated initial grace period will also apply to their dependents in the H-4 visa classification. DHS does not have data on how early H-2 workers arrive in the United States prior to a petition's validity period. As a result, we do not know how many H-2B workers currently or historically arrive up to 10 days prior to their employment start date, nor do we know how many H-2A workers currently or historically arrive a full week (7 days) early. Further, the portion of the H-2A populations that may benefit from this provision is unknown. Extending the grace period prior to a petition's validity period for H-2A workers by 3 days may result in additional costs to employers, such as for housing.¹⁵⁸ However, since H-2A employers pay for and normally arrange transportation to the worksite, DHS assumes employers will weigh the costs of providing additional days of housing to H-2A workers against the benefit of providing their employees with additional time to prepare for the start of work. For example, it may be beneficial for an employer to provide workers additional time to adjust to a new time zone or climate. DHS will also extend the grace period following the expiration of their petition from 10 days to 30 days for H-2B nonimmigrants, subject to the 3-year maximum limitation of stay. DHS does not have data on the length of time H-2A or H-2B workers typically spend in the United States following the validity period of a petition because departures from the United States are not always tracked. Unlike the general practice regarding entries, departures are not always tracked and do not typically require an encounter with U.S. Customs and Border Protection, so it is difficult to determine when nonimmigrants leave the United States. Furthermore, DHS notes that while there is no statutory requirement for H-2B employers to provide housing, there are regulatory prohibitions against deductions from wages for the cost of housing by an H-2B employer when it is provided primarily for the benefit or convenience of the employer. See 20 CFR 655.20(b), (c); 29 CFR 531.3(d)(1); 80 FR 24042, 24063 (Apr. 29, 2015). DHS acknowledges that H-2B employers who are subject to this provision may face additional costs if they opt to keep

¹⁵⁷ For example, DHS possesses limited data from DOL on H-2B violators with violation findings in FY 2020 through FY 2023 as a result of the H-2B TFRs from FY 2022 through FY 2024. DOL Wage and Hour Division publishes enforcement data on several worker programs at <https://enforcedata.dol.gov/homePage.php>. This data alone cannot reliably predict how many of these employers might be subject to a discretionary denial under this rule, because DHS will apply multiple factors to consider whether to approve or deny a petition, as noted above. Furthermore, these data cannot be relied upon here to determine the possible population of violators because the parameters of the violations are more limited than the violations that could be covered under the new discretionary provision.

¹⁵⁸ H-2A workers must be provided housing. See WHD, "H-2A: Temporary Agricultural Employment of Foreign Workers," <https://www.dol.gov/agencies/whd/agriculture/h2a> (last visited Jun. 17, 2024).

workers in the United States for a longer period due to the extended post-validity grace period. DHS does not have data on the population of employers that this provision would affect at this granular level, however, so monetized impacts cannot be estimated. Therefore, the population that may be affected by this provision is unknown due to a lack of available data. Lack of data notwithstanding, DHS does not expect any significant additional costs to accrue to employers as this final rule will extend only the H-2B grace period and, except for the limited scenario described above, H-2B employers are not required to provide housing for their workers during the time of employment or during the grace period. The extended grace period for H-2B workers will benefit the workers by providing additional time to prepare for departure or seek alternative work arrangements such as applying for an extension of stay based on a subsequent offer of employment or porting to a new employer. Additionally, this provision will align the grace periods for H-2A and H-2B workers so that they both are afforded 10 days prior to the approved validity period and 30 days following

the expiration of an H-2 petition, thereby reducing confusion for potential employers and better ensuring consistency in granting workers the grace periods.

DHS will also provide a new 60-day grace period following a cessation of H-2 employment or until the end of the authorized period of admission, whichever is shorter. DHS does not have data on H-2 employment cessations and, therefore, the impact of this provision on the portion of the H-2A and H-2B populations is unknown. However, this provision will likely offer H-2 workers time to respond to sudden or unexpected changes related to their employment, regardless of the reason for employment cessation. The time could be used to seek new employment, prepare for departure from the United States, or seek a change of status to a different nonimmigrant classification.

(2) Transportation Costs for Revoked H-2 Petitions

This final rule adds language clarifying that upon revocation of an H-2A or H-2B petition, the petitioning employer will be liable for the H-2 beneficiary's reasonable costs of return

transportation to their last place of foreign residence abroad. Under 20 CFR 655.20(j)(1)(ii) and 20 CFR 655.122(h)(2), as well as prior 8 CFR 214.2(h)(6)(i)(C) and existing 8 CFR 214.2(h)(6)(vi)(E), petitioning employers are already generally liable for the return transportation costs of H-2 workers, so this final change will not result in any additional costs to employers.

(3) Effect on an H-2 Petition of Approval of a Permanent Labor Certification, Immigrant Visa Petition, or the Filing of an Application for Adjustment of Status or Immigrant Visa

This final rule clarifies that H-2 workers may take certain steps toward becoming lawful permanent residents of the United States while still maintaining lawful nonimmigrant status. The population impacted by this provision can be seen in Table 7. Historical receipts data for Form I-485 (Application to Register Permanent Residence or Adjust Status) show a 5-year total of 9,748 receipts from applicants with H-2A and H-2B status. The annual average is 1,950 receipts.

Table 7: Form I-485 Receipts from Applicants with H-2A and H-2B Status, FY 2018 through FY 2022

Fiscal Year	Receipts	Approved	Denied	Admin Close/Withdraw
2018	1,294	240	22	2
2019	1,698	1,032	81	2
2020	2,491	1,366	87	1
2021	2,701	2,411	97	2
2022	1,564	1,832	138	6
Total	9,748	6,881	425	13
5-Year Average	1,950	1,376	85	3

Source: USCIS Office of Policy and Strategy -- C3, ELIS USCIS Data System as of Nov. 4, 2022.

DHS does not have information on how many H-2 workers have been deemed to have violated their H-2 status or abandoned their foreign residence. However, DHS expects this could enable some H-2 workers who have otherwise been dissuaded to pursue certain steps toward lawful permanent residence with the ability to do so without concern over becoming ineligible for H-2 status. This final rule will not expand the underlying eligibility of H-2 workers for lawful permanent resident status.

(4) Portability

This final rule permanently provides portability for eligible H-2A and H-2B nonimmigrants. The population affected by this provision are nonimmigrants in H-2A and H-2B status who are present in the United States on whose behalf a nonfrivolous H-2 petition for new employment has been filed, with a request to amend or extend the H-2A or H-2B nonimmigrant's stay in the same classification they currently hold, before their period of stay expires and who have not been employed without authorization in the United States from the time of last admission through the filing of the petition for new employment. Codifying this provision

in regulation for H-2 nonimmigrants will provide stability and job flexibility to the beneficiaries of approved H-2 visa petitions. This portability provision facilitates the ability of individuals to move to more favorable employment situations and/or extend employment in the United States without being tied to one position with one employer. Additionally, the final rule clarifies that H-2 employers must comply with all H-2 program requirements and responsibilities (such as worker protections) in the event that a petition for a porting worker is withdrawn or denied.

Previously, portability was available on a permanent basis to H-2A workers, but it was limited to E-Verify employers.¹⁵⁹ E-Verify is a DHS web-based system that allows enrolled employers to confirm the identity and eligibility of their employees to work in the United States by electronically matching information provided by employees on the Employment Eligibility Verification (Form I-9) against records available to DHS and the Social Security Administration.¹⁶⁰ DHS does not charge a fee for employers to participate in E-Verify and create cases to confirm the identity and employment eligibility of newly hired employees. Under this final rule, employers petitioning for a porting H-2A worker will no longer need to be enrolled in E-Verify, but will remain subject to all program requirements based on the approved TLC and the filing of the H-2 petition.

Although there is no fee to use E-Verify, this requirement could result in savings to newly enrolling employers. Employers that newly enroll in E-Verify to hire H-2 workers incur startup enrollment or program initiation costs as well as additional opportunity costs of time for users to participate in webinars and learn about and incorporate any new features and system updates that E-Verify may have every year. DHS assumes that most employers that are currently participating in E-Verify will not realize cost savings of these expenses since they previously incurred enrollment costs and will continue to participate in webinars and incorporate any new E-Verify features and system changes regardless of this final rule.¹⁶¹ Additionally, DHS expects that only those employers who enroll for the

explicit purpose of petitioning on behalf of a porting employee will realize a cost savings for verifying the identity and work authorization of all their newly hired employees, including any new H-2A workers as a result of this final rule. For employers currently enrolled in E-Verify that choose to hire an H-2A worker, the final rule will not result in a cost savings to such employers since they already must use E-Verify for all newly hired employees as of the date they signed the E-Verify Memorandum of Understanding (MOU).¹⁶² Therefore, with or without the final rule, an employer already enrolled in E-Verify that chooses to hire a porting H-2A worker will continue to incur the opportunity cost of time to confirm the employment authorization of any newly hired employees.

Participating in E-Verify and remaining in good standing requires employers to enroll in the program online,¹⁶³ electronically sign the associated MOU with DHS that sets the terms and conditions for participation and create E-Verify cases for all newly hired employees. The MOU requires employers to abide by lawful hiring procedures and to ensure that no employee will be unfairly discriminated against as a result of E-Verify.¹⁶⁴ If an employer violates the terms of this agreement, it can be grounds for immediate termination from E-Verify.¹⁶⁵ Additionally, employers are required to designate and register at least one person that serves as an E-Verify administrator on their behalf.

For this analysis, DHS assumes that each employer participating in E-Verify designates one HR specialist to manage the program on its behalf. Based on the most recent Paperwork Reduction Act (PRA) Information Collection Package for E-Verify, DHS estimates the time burden for an HR specialist to undertake the tasks associated with E-Verify. DHS estimates the time burden for an HR specialist to complete the enrollment process is 2 hours 16 minutes (2.26 hours), on average, to provide basic company information, review and sign

the MOU, take a new user training, and review the user guides.¹⁶⁶ Once enrolled in E-Verify, DHS estimates the time burden is 1 hour to users who may participate in voluntary webinars and learn about and incorporate new features and system updates to E-Verify annually.¹⁶⁷ This may be an overestimate in some cases as webinars are not mandatory, but we recognize that some recurring burden to users exists to remain in good standing with E-Verify.

Cost savings due to this provision relate only to the opportunity costs of time to petitioners associated with the time an employer will save by not newly enrolling or participating in E-Verify. In this analysis, DHS uses an hourly compensation rate for estimating the opportunity cost of time for an HR specialist. DHS uses this occupation as a proxy for those who might prepare and complete the Form I-9, Employment Eligibility Verification, and create the E-Verify case for an employer. DHS notes that not all employers may have an HR specialist, but rather some equivalent occupation may prepare and complete the Form I-9 and create the E-Verify case.

According to Bureau of Labor Statistics (BLS) data, the average hourly wage rate for HR specialists is \$35.13.¹⁶⁸ DHS accounts for worker benefits by calculating a benefits-to-wage multiplier using the most recent BLS report detailing the average employer costs for employee compensation for all civilian workers in major occupational groups and industries. DHS estimates the benefits-to-wage multiplier is 1.45 and is able to estimate the full opportunity cost per E-Verify user, including employee wages and salaries and the full cost of benefits such as paid leave, insurance, and retirement, etc.¹⁶⁹

¹⁵⁹ While unrelated to this final rule, we note that on April 20, 2020, a TFR was published to temporarily amend its regulations to allow H-2A workers to immediately work for any new H-2A employer to mitigate the impact on the agricultural industry due to COVID-19. This TFR was effective from April 20, 2020, through August 18, 2020. See 85 FR 21739. Another TFR published August 20, 2020, again allowing H-2A workers to immediately work for any new H-2A employer. That TFR was effective from August 19, 2020, through August 19, 2023 and allowed employers to request the flexibilities under this TFR by filing an H-2A petition on or after August 19, 2020, and through December 17, 2020. See 85 FR 51304.

¹⁶⁰ See DHS, "About E-Verify," <https://www.e-verify.gov/about-e-verify> (last updated Apr. 10, 2018).

¹⁶¹ Employers already participating in E-Verify likely already attend webinars and learn about and incorporate new features and system changes annually because they voluntarily chose to enroll or because of rules or regulations beyond the scope of this proposed rule. DHS anticipates that such employers would continue to use E-Verify regardless of their decision to hire H-2A workers or not.

¹⁶² See DHS, "About E-Verify, Questions and Answers," <https://www.e-verify.gov/about-e-verify/questions-and-answers?tid=All&page=0> (last updated Sept. 15, 2022).

¹⁶³ See DHS, "Enrolling in E-Verify, The Enrollment Process," <https://www.e-verify.gov/employers/enrolling-in-e-verify/the-enrollment-process> (last updated Aug. 9, 2022).

¹⁶⁴ An employer that discriminates in its use of E-Verify based on an individual's citizenship status or national origin may also violate the INA's anti-discrimination provision, at 8 U.S.C. 1324b.

¹⁶⁵ See USCIS, "The E-Verify Memorandum of Understanding for Employers" (June 1, 2013), http://www.uscis.gov/sites/default/files/USCIS/Verification/E-Verify/E-Verify_Native_Documents/MOU_for_E-Verify_Employer.pdf.

¹⁶⁶ The USCIS Office of Policy and Strategy, PRA Compliance Branch estimates the average time burdens. See PRA E-Verify Program (OMB Control Number 1615-0092) (Mar. 30, 2021). The PRA Supporting Statement can be found at https://www.reginfo.gov/public/do/PRAViewDocument?ref_nbr=202103-1615-015, under Question 12 (last accessed Apr. 4, 2023).

¹⁶⁷ *Id.*

¹⁶⁸ See BLS, Occupational Employment and Wages, May 2022, Human Resources Specialists (13-1071), <https://www.bls.gov/oes/2022/may/oes131071.htm>.

¹⁶⁹ The benefits-to-wage multiplier is calculated as follows: (Total Employee Compensation per hour) ÷ (Wages and Salaries per hour) = \$42.48 ÷ \$29.32 = 1.45 (rounded). See BLS, Economic News Release, *Employer Cost for Employee Compensation—December 2022*, Table 1. Employer costs per hour worked for employee compensation and costs as a percent of total compensation: Civilian workers, by major occupational and industry group (Mar. 17, 2023), https://www.bls.gov/news.release/archives/ecec_03172023.pdf.

Therefore, DHS calculates an average hourly compensation rate of \$50.94 for HR specialists.¹⁷⁰ Applying this average hourly compensation rate to the estimated time burden of 2.26 hours for the enrollment process, DHS estimates an average opportunity cost of time savings for a new employer to enroll in E-Verify is \$115.12.¹⁷¹ DHS assumes the estimated opportunity cost of time to enroll in E-Verify is a one-time cost to employers. In addition, DHS estimates an opportunity cost of time savings associated with 1 hour of each E-Verify user to attend voluntary webinars and learn about and incorporate new features and system changes for newly enrolled entities would be \$50.94 annually in the years following enrollment.

Newly enrolled employers will also incur opportunity costs of time savings

from not having to enter employee information into E-Verify to confirm their identity and employment authorization. DHS estimates the time burden for an HR specialist to create a case in E-Verify is 7.28 minutes (or 0.121 hours).¹⁷² Therefore, DHS estimates the opportunity cost of time savings would be approximately \$6.57 per case.¹⁷³ These employers will not be able to verify the employment eligibility information of newly hired employees against government data systems if they fail to register and use E-Verify.

Table 8 shows the number of Form I-129 H-2A petitions filed for extensions of stay due to change of employer and Form I-129 H-2A petitions filed for new employment for FY 2018 through FY 2022. The average rate of extension of stay due to change of employer compared to new employment was

approximately 6.7 percent over this time period. USCIS also considered the number of beneficiaries that correspond to the Form I-129 H-2A petitions that filed extensions of stay due to a change of employer to estimate the average number of beneficiaries per petition of six. Table 8 also shows that although petitions have been increasing for extension of stay due to change of employer, the number of beneficiaries on each petition has declined from FY 2018 to FY 2022. This indicates that it may be harder for petitioners to find porting workers. One reason may be because petitioners face certain constraints such as the ability for petitioners to access workers seeking to port or a limited number of workers seeking to port.

Table 8: Number of Form I-129 H-2A Petitions and Beneficiaries Filed for Extension of Stay due to Change of Employer and Form I-129 H-2A Petitions Filed for New Employment, FY 2018 – FY 2022.

Fiscal Year	Form I-129 H-2A Petitions Filed for Extension of Stay Due to Change of Employer	Form I-129 H-2A petitions filed for new employment	Rate of extension to stay due to change of employer filings relative to new employment filings	Number of Beneficiaries Corresponding to Form I-129 H-2A Extension of Stay Petitions Filed	Average Number of Beneficiaries Per Petition Filed for Extension of Stay Due to Change of Employer
	A	B	C=A/B	D	E=D/A
2018	425	10,841	0.039	3,566	8
2019	626	12,177	0.051	4,265	7
2020	915	12,989	0.070	5,995	7
2021	1,334	15,128	0.088	7,226	5
2022	1,526	18,093	0.084	7,250	5
Total	4,826	69,228		28,302	
5-Year Average	965	13,846	0.067	5,660	6

Source: USCIS, Office of Policy and Strategy -- C3, ELIS USCIS Data System, as of Oct. 18, 2022 and USCIS Analysis.

¹⁷⁰ Calculation: \$35.13 average hourly wage rate for HR specialists × 1.45 benefits-to-wage multiplier = \$50.94 (rounded).

¹⁷¹ Calculation: 2.26 hours for the enrollment process × \$50.94 total compensation wage rate for an HR specialist = \$115.12.

¹⁷² The USCIS Office of Policy and Strategy, PRA Compliance Branch estimates the average time burdens. See PRA E-Verify Program (OMB Control Number 1615-0092), Mar. 30, 2021. The PRA Supporting Statement can be found at https://www.reginfo.gov/public/do/PRAViewDocument?ref_nbr=202103-1615-015 under Question 12 (last accessed Apr. 4, 2023).

¹⁷³ Calculation: 0.121 hours to submit a query × \$50.94 total compensation wage rate for an HR specialist = \$6.57 (rounded).

DHS expects that existing H-2A petitioners will continue to participate in E-Verify and thus will not realize a cost savings due to this final rule. Employers that do not yet port H-2A workers, but do obtain TLCs from DOL, will experience a cost-savings relevant to avoiding enrollment and participation in E-Verify. However, they will not be able to verify the employment eligibility information of newly hired employees against government data systems. However, for employers that do not yet port H-2A workers and do not yet obtain TLCs, the cost-savings will be offset by their need to submit DOL's Employment and Training Administration (ETA) Form 9142A. The public reporting burden for Form ETA-9142A is estimated to average 3.63 hours per response for H-2A.¹⁷⁴ Depending on the filer, the cost to submit Form ETA-9142A is estimated at \$184.91 for an HR specialist, \$414.44 for an in-house lawyer, and \$714.57 for an out-sourced lawyer.¹⁷⁵ Compared to the absolute minimum opportunity cost of time to enroll in, participate in an hour of training, and submit one query in E-Verify of \$172.63,¹⁷⁶ regardless of the filer, a new H-2A porting employer needing to obtain TLCs will not

experience a cost-savings in the first year following this rule.¹⁷⁷

By removing the requirement for a petitioner to participate in E-Verify to benefit from portability, this provision may result in increased demand for H-2A petitioners to petition to port eligible H-2A workers. DHS expects H-2A petitioners that already hire porting H-2A beneficiaries to continue to use E-Verify in the future. However, DHS is unable to estimate the number of future employers that will opt not to enroll in E-Verify in the future as a result of this rule or how many would need to obtain TLCs. DHS does not expect any reduction in protection to the legal workforce as a result of this rule as some H-2A petitioners will continue to use E-Verify. Any new petitioners for porting H-2A workers will still be required to obtain TLCs through DOL, these H-2A employers will be subject to the site visit requirements and comply with the terms and conditions of H-2 employment set forth in this final rule and under other related regulations, and the porting worker will have already been approved to legally work in the United States as an H-2A worker.

Temporary portability for H-2B workers has been provided as recently as the FY 2025 H-2B Supplemental Cap TFR and was available under previous supplemental caps dating back to FY 2021. 89 FR 95626 (Dec. 2, 2024). However, data show that there is a longer history of extensions of stay due to changes of employer for H-2B petitions filed even in years when portability was not authorized.¹⁷⁸ Since it is difficult to isolate the impacts of inclusion of temporary portability provisions in the FY 2021 through FY 2025 H-2B Supplemental Cap TFRs from the extensions of stay due to changes of employer that are expected in the absence of this provision, we reproduce the FY 2025 H-2B Supplemental Cap TFR's analysis here.¹⁷⁹ Additionally, DHS is unclear

how many additional H-2B visas Congress will allocate in future fiscal years beyond the 66,000 statutory cap for H-2B nonimmigrants.

The population affected by this provision are nonimmigrants in H-2B status who are present in the United States and the employers with valid TLCs seeking to hire H-2B workers. In the FY 2025 H-2B Supplemental Cap TFR, USCIS uses the population of 66,000 H-2B workers authorized by statute and the 64,716 additional H-2B workers authorized by the rule as a proxy for the H-2B population that could be currently present in the United States.¹⁸⁰ DHS uses the number of Form I-129 petitions filed for extension of stay due to change of employer relative to the number of petitions filed for new employment from FY 2011 through FY 2020. This includes the 10 years prior to the implementation of the first portability provision in an H-2B Supplemental Cap TFR. Using these data, we estimate the baseline rate and compare it to the average rate from FY 2011 through FY 2020 (Table 9). We find that the average rate of extension of stay due to change of employer compared to new employment from FY 2011 through FY 2020 is approximately 10.5 percent.

workers to immediately work for any new H-2B employer to mitigate the impact on nonagricultural services or labor essential to the U.S. food supply chain due to COVID-19. Since the analysis is based on annual fiscal years, data from the months between May and September 2020 are not able to be separated out to determine those early impacts on portability. See 85 FR 28843 (May 14, 2020).

¹⁸⁰ This number may overestimate H-2B workers who have already completed employment and departed and may underestimate H-2B workers not reflected in the current cap and long-term H-2B workers. In FY 2022, USCIS approved 522 requests for change of status to H-2B, and Customs and Border Protection (CBP) processed 1,217 crossings of visa-exempt H-2B workers. See USCIS, "Characteristics of H-2B Nonagricultural Temporary Workers FY2022 Report to Congress" (Apr. 17, 2022), https://www.uscis.gov/sites/default/files/document/data/USCIS_H2B_FY22_Characteristics_Report.pdf. DHS assumes some of these workers, along with current workers with a valid H-2B visa under the cap, could be eligible to port under this provision. DHS does not know the exact number of H-2B workers who would be eligible to port at this time but uses the cap and supplemental cap allocations as a possible proxy for this population.

¹⁷⁴ See DOL, Form ETA-9142A, "H-2A Application for Temporary Employment Certification," OMB Control Number 1205-0466, (Expires Oct. 31, 2025). The PRA Supporting Statement can be found at https://www.reginfo.gov/public/do/PRAViewDocument?ref_nbr=202303-1205-002 under Question 12 (Last accessed Apr. 4, 2023); See also DOL, Supplementary Documents, Appendix—Breakdown of Hourly Burden Estimates, H-2A Application for Temporary Employment Certification Form ETA-9142A (OMB Control Number 1205-0537), *Id.* at Section C. (Last accessed Apr. 4, 2023). DOL estimates the time burden for completing Form ETA-9142A is 3.63 hours, including 0.33 hours to complete Form ETA-9142A, 1.33 hours to H-2ALC Filing Requirements, 0.50 hours to complete Waiver for Emergency Situations, 0.25 hours to complete Modify Application/Job Order, 0.50 hours to complete Amend Application/Job Order, and 0.50 hours to complete Herder Variance Request.

¹⁷⁵ Calculations: HR specialist: \$50.94 hourly wage × 3.63 hours = \$184.91 (rounded). In-house lawyer: \$114.17 hourly wage × 3.63 hours = \$414.44 (rounded); Out-sourced lawyer = \$196.85 hourly wage × 3.63 hours = \$714.57 (rounded).

¹⁷⁶ Calculation: \$115.12 enrollment + \$50.94 annual training + \$6.57 query submission = \$172.63.

¹⁷⁷ DHS recognizes that the opportunity cost of time would be higher than this absolute minimum because employers would have more than one employee and E-Verify participants are required to query every new employee.

¹⁷⁸ *Id.*

¹⁷⁹ On May 14, 2020, a final rule published to temporarily amend its regulations to allow H-2B

Table 9: Numbers of Form I-129 H-2B Petitions Filed for Extension of Stay due to Change of Employer and Form I-129 H-2B Petitions Filed for New Employment, FY 2011–FY 2020.

Fiscal Year	Form I-129 H-2B petitions filed for extension of stay due to change of employer	Form I-129 H-2B petitions filed for new employment	Rate of extension to stay due to change of employer filings relative to new employment filings
2011	360	3,891	9.3
2012	294	3,690	8.0
2013	264	4,123	6.4
2014	314	4,671	6.7
2015	415	4,596	9.0
2016	427	5,750	7.4
2017	556	5,298	10.5
2018	744	5,136	14.5
2019	812	6,252	13.0
2020	804	3,997	20.1
FY 2011–2020 Total	4,990	47,404	10.5
Source: USCIS, Office of Performance and Quality -- SAS PME C3 Consolidated, as of Sept. 09, 2023, TRK 12921			

In FY 2021, the first year an H–2B Supplemental Cap TFR included a portability provision, there were 1,113 petitions filed using Form I–129 for extension of stay due to change of employer compared to 7,206 petitions filed for new employment.¹⁸¹ In FY 2022, there were 1,795 petitions filed using Form I–129 for extension of stay due to change of employer compared to 9,231 petitions filed for new employment.¹⁸² In FY 2023, there were 2,113 petitions filed using Form I–129 for extension of stay due to change of employer compared to 9,579 petitions filed for new employment.¹⁸³ Over the period when a portability provision was

in place for H–2B workers, the rate of petitions filed using Form I–129 for extension of stay due to change of employer relative to new employment was 19.3 percent.¹⁸⁴ This is above the 10.5 percent rate of filings expected when there was no portability provision in place. We estimate that a rate of about 19.3 percent should be expected in periods with portability.

In order to estimate the number of marginal Forms I–129 filed as a result of the final rule’s portability provision, DHS must first estimate the number of beneficiaries per petition. As discussed above, DHS has provided supplemental H–2B visa allocations each year since

FY 2021. These supplemental allocations are based on time-limited authority granted by Congress, however, and should not be included in any prospective analysis as their existence is not certain. As such, the proper reference population for calculating the marginal impact of the portability provision is the annual statutory cap of 66,000 H–2B visas. Table 10 contains the total petitions, total beneficiaries, and beneficiaries per petition for H–2B Forms I–129 filed under the statutory cap for fiscal year 2019 through fiscal year 2023.

¹⁸¹ USCIS, Office of Performance and Quality—SAS PME C3 Consolidated, as of Sep. 09, 2023, TRK 12921.

¹⁸² *Id.*

¹⁸³ *Id.*

¹⁸⁴ Calculation, Step 1: 1,113 Form I–129 petitions for extension of stay due to change of employer FY 2021 + 1,795 Form I–129 petitions for

extension of stay due to change of employer in FY 2022 + 2,113 Form I–129 petitions for extension of stay due to change of employer in FY 2023 = 5,021 Form I–129 petitions filed extension of stay due to change of employer in portability provision years.

Calculation, Step 2: 7,206 Form I–129 petitions filed for new employment in FY 2021 + 9,231 Form I–129 petitions filed for new employment in FY 2022 + 9,579 Form I–129 petitions filed for new

employment in FY 2022 = 26,016 Form I–129 petitions filed for new employment in portability provision years.

Calculation, Step 3: 5,021 extensions of stay due to change of employment petitions + 26,016 new employment petitions = 19.3 percent rate of extension of stay due to change of employment to new employment.

Table 10: Forms I-129 H-2B Receipts and Beneficiaries under Annual Statutory Cap, FY 2019- FY 2023

Fiscal Year	Total Petitions	Total Beneficiaries ¹⁸⁵	Beneficiaries per Petition
2019	3,130	74,384	23.76
2020	3,378	73,552	21.77
2021	3,454	73,682	21.33
2022	4,020	80,374	19.99
2023	4,154	74,364	17.9
Average	3,627	75,271	20.75

Source: USCIS, Office of Performance and Quality -- SAS PME C3 Consolidated, as of Sept. 09, 2023, TRK 12921

Using 3,627 as our estimate for the number of petitions filed using Form I-129 for H-2B new employment in FY 2024, we estimate that 381 petitions for extension of stay due to change of employer will be filed in absence of this rulemaking's portability provision.¹⁸⁶ With the rule's portability provision in effect, we estimate that 700 petitions will be filed using Form I-129 for extension of stay due to change of employer.¹⁸⁷ As a result of this provision, we estimate 319 additional petitions using Forms I-129 will be filed.¹⁸⁸ DHS acknowledges that any future legislation that provides a supplemental allocation of H-2B visas will necessarily increase the number of Forms I-129 filed as a result of the final rule's portability provision. As such, the estimates presented here should be interpreted as a reasonable lower bound for the impact of the final rule's portability provision.

As shown in Table 17, an average 45.84 percent of Form I-129 petitions will be filed by an in-house or

outsourced lawyer. Therefore, we expect that a lawyer will file 146 of these petitions and an HR specialist will file the remaining 173.¹⁸⁹ Similarly, we estimated that about 93.57 percent of petitions using Form I-129 for H-2B beneficiaries are filed with Form I-907 to request premium processing. As a result of this portability provision, we expect that an additional 298 requests using Form I-907 will be filed.¹⁹⁰ We expect lawyers to file 137 requests using Forms I-907 and HR specialists to file the remaining 161 requests.¹⁹¹

Petitioners seeking to hire H-2B nonimmigrants who are currently present in the United States in lawful H-2B status will need to file Form I-129 and pay the associated fees. Additionally, if a petitioner is represented by a lawyer, the lawyer must file Form G-28; if premium processing is desired, a petitioner must file Form I-907 and pay the associated fee. We expect these actions to be performed by an HR specialist, in-house lawyer, or an outsourced lawyer. Moreover, as previously stated, we expect that about 45.84 percent of petitions using Form I-129 would be filed by an in-house or outsourced lawyer. Therefore, we expect that 146

petitions will be filed by a lawyer and the remaining 173 petitions will be filed by an HR specialist. The opportunity cost of time to file a Form I-129 H-2B petition will be approximately \$243.85 for an HR specialist; and the opportunity cost of time to file a Form I-129 H-2B petition with accompanying Form G-28 will be approximately \$641.29 for an in-house lawyer and \$1,105.71 for an outsourced lawyer.¹⁹² Therefore, we estimate the cost of the additional petitions filed using Form I-129 from the portability provision for HR specialists will be approximately \$42,186.¹⁹³ The estimated cost of the additional petitions filed using Form I-129 accompanied by Forms G-28 from the portability provision for lawyers will be about \$93,628 if filed by in-house lawyers and \$161,434 if filed by outsourced lawyers.¹⁹⁴

We previously stated that about 93.57 percent of Form I-129 H-2B petitions are filed with Form I-907 for premium processing. As a result of this provision, we expect that an additional 298

¹⁸⁵ This number includes beneficiaries who are exempt from the H-2B cap and reflects the number of H-2B workers who are in petitions that have been approved by DHS (including ones that have not yet been issued an H-2B visa or otherwise acquired H-2B status).

¹⁸⁶ Calculation: 3,627 Form I-129 H-2B petitions filed for new employment $\times$ 10.5 percent = 381 estimated number of Form I-129 H-2B petitions filed for extension of stay due to change of employer, no portability provision.

¹⁸⁷ Calculation: 3,627 Form I-129 H-2B petitions filed for new employment $\times$ 19.3 percent = 700 estimated number of Form I-129 H-2B petitions filed for extension of stay due to change of employer, with a portability provision.

¹⁸⁸ Calculation: 700 estimated number of Form I-129 H-2B petitions filed for extension of stay due to change of employer, with a portability provision—381 estimated number of Form I-129 H-2B petitions filed for extension of stay due to change of employer, no portability provision = 319 Form I-129 H-2B petition increase as a result of portability provision.

¹⁸⁹ Calculation, Lawyers: 319 additional Form I-129 due to portability provision $\times$ 45.84 percent of Form I-129 for H-2B positions filed by an attorney or accredited representative = 146 (rounded) estimated Form I-129 filed by a lawyer.

Calculation, HR specialist: 319 additional Form I-129 due to portability provision—146 estimated Form I-129 filed by a lawyer = 173 estimated Form I-129 filed by an HR specialist.

¹⁹⁰ Calculation: 316 Form I-129 H-2B petitions $\times$ 93.57 percent premium processing filing rate = 298 (rounded) Forms I-907.

¹⁹¹ Calculation, Lawyers: 298 Forms I-907 $\times$ 45.84 percent filed by an attorney or accredited representative = 137 Forms I-907 filed by a lawyer.

Calculation, HR specialists: 298 Forms I-907—137 Forms I-907 filed by lawyer = 161 Forms I-907 filed by an HR specialist.

¹⁹² Calculation, HR Specialist: \$50.94 hourly opportunity cost of time $\times$ 4.787-hour time burden for form I-129 = \$243.85 estimated cost to file a Form I-129 H-2B petition.

Calculation, In-house lawyer: \$114.17 hourly opportunity cost of time $\times$ 5.617-hour time burden for form I-129 and Form G-28 = \$641.29 estimated cost to file a Form I-129 H-2B petition.

Calculation, outsourced lawyer: \$196.85 hourly opportunity cost of time $\times$ 5.617-hour time burden for form I-129 and Form G-28 = \$1,105.71 (rounded) estimated cost to file a Form I-129 H-2B petition.

¹⁹³ Calculation, HR specialist: \$243.85 estimated cost to file a Form I-129 H-2B petition $\times$ 173 petitions = \$42,186 (rounded).

¹⁹⁴ Calculation, In-house Lawyer: \$641.29 estimated cost to file a Form I-129 H-2B petition and accompanying Form G-28 $\times$ 146 petitions = \$93,628 (rounded).

Calculation, Outsourced Lawyer: \$1,105.71 estimated cost to file a Form I-129 H-2B petition and accompanying Form G-28 $\times$ 146 petitions = \$161,434 (rounded).

requests for premium processing using Form I-907 will be filed.¹⁹⁵ We expect 136 of those requests will be filed by a lawyer and the remaining 160 will be filed by an HR specialist.¹⁹⁶ The estimated opportunity cost of time to file Form I-907 will be about \$18.85 for an HR specialist; and the estimated opportunity cost of time for an in-house lawyer to file Form I-907 will be approximately \$42.24 and for an outsourced lawyer it will be about \$72.83.¹⁹⁷ The estimated annual cost of

filing additional requests for premium processing using Form I-907 if HR specialists file will be approximately \$3,035.¹⁹⁸ The estimated annual cost of filing additional requests for premium processing using Form I-907 will be about \$5,787 if filed by in-house lawyers, and approximately \$9,978 if filed by outsourced lawyers.¹⁹⁹

The estimated annual cost of this provision ranges from \$144,636 to \$216,633 depending on what share of

the forms are filed by in-house or outsourced lawyers.²⁰⁰

The transfer payments from filing petitions using Form I-129 for an H-2B beneficiary include the filing costs to submit the form. USCIS' current fee rule was published on January 31, 2024, and became effective on April 1, 2024. 89 FR 6194, 6246–6248; 89 FR 20101 (Apr. 1, 2024). Table 11 shows the current fee schedule for Form I-129 requesting H-2A workers.

Table 11: Fee Summary Table for Form I-129 H-2A Petitioners

Benefit Request	Entities with more than 25 Full-Time Equivalent (FTE) Workers	Entities with 25 or Fewer FTE Workers	Nonprofit Entities
H-2A – Named Beneficiaries	\$1,090	\$545	\$545
H-2A – Unnamed Beneficiaries	\$530	\$460	\$460

Furthermore, certain petitioners must pay the \$600 Asylum Program Fee. Small employers with 25 or fewer employees pay a reduced Asylum Program Fee of \$300 while nonprofits

are exempt from the Asylum Program Fee. Therefore, total filing fees for H-2A petitioners range from \$1,690 to \$460 depending on the characteristics of the petitioner.²⁰¹

Similarly, Table 12 shows the base filing fees for petitioners requesting H-2B workers.

Table 12: Fee Summary Table for Form I-129 H-2B Petitioners

Benefit Request	Entities with more than 25 FTE Workers	Entities with 25 or Fewer FTE Workers	Nonprofit Entities
H-2B – Named Beneficiaries	\$1,080	\$540	\$540
H-2B – Unnamed Beneficiaries	\$580	\$460	\$460

As was the case to H-2A petitioners, certain H-2B petitioners also must pay the \$600 Asylum Program Fee. Small employers with 25 or fewer employees pay a reduced Asylum Program Fee of \$300 while nonprofits are exempt from

the Asylum Program Fee. Additionally, petitioners requesting H-2B workers must submit a \$150 Fraud Prevention and Detection Fee. Therefore, total filing fees for H-2B petitioners range from

\$1,830 to \$610 depending on the characteristics of the petitioner.²⁰²

For the purposes of this analysis, USCIS assumes that all marginal Forms I-129 filed due to the final rule's portability provision request named

¹⁹⁵ Calculation: 319 estimated additional Form I-129 H-2B petitions × 93.57 percent accompanied by Form I-907 = 298 (rounded) additional Form I-907.

¹⁹⁶ Calculation, Lawyers: 298 additional Form I-907 × 45.84 percent = 136 (rounded) Form I-907 filed by a lawyer. Calculation, HR specialists: 298 Form I-907—136 Form I-907 filed by a lawyer = 160 Form I-907 filed by an HR specialist.

¹⁹⁷ Calculation, HR Specialist: \$50.94 hourly opportunity cost of time × 0.37-hour time burden to file Form I-907 = \$18.85 cost to file Form I-907.

Calculation, In-house lawyer: \$114.17 hourly opportunity cost of time × 0.37-hour time burden to file Form I-907 = \$42.24 cost to file Form I-907.

Calculation, outsourced lawyer: \$196.85 hourly opportunity cost of time × 0.37-hour time burden to file Form I-907 = \$114.17 cost to file Form I-907.

¹⁹⁸ Calculation, HR specialist: \$18.85 to file a Form I-907 × 161 forms = \$3,035 (rounded).

¹⁹⁹ Calculation, In-house lawyer: \$42.24 to file a Form I-907 × 137 forms = \$5,787 (rounded).

Calculation for an outsourced lawyer: \$72.72 to file a Form I-907 × 137 forms = \$9,978 (rounded).

²⁰⁰ Calculation for HR specialists and in-house lawyers: \$42,186 for HR specialists to file Form I-129 H-2B petitions + \$90,554 for in-house lawyers to file Form I-129 and the accompanying Form G-28 + \$4,728 for HR specialists to file Form I-907

+ \$9,006 for in-house lawyers to file Form I-907 = \$144,636.

Calculation for HR specialists and outsourced lawyers: \$42,186 for HR specialists to file Form I-129 H-2B petitions + \$156,132 for outsourced lawyers to file Form I-129 and the accompanying Form G-28 + \$4,728 for HR specialists to file Form I-907 + \$15,527 for outsourced lawyers to file Form I-907 = \$216,633.

²⁰¹ See USCIS, Form G-1055, "USCIS Fee Schedule," <https://www.uscis.gov/sites/default/files/document/forms/g-1055.pdf> (last accessed Apr. 18, 2024).

²⁰² *Id.*

beneficiaries and that the petitioners are representative of the greater Form I-129 filing population.²⁰³ More specifically, we assume that of the 319 marginal Form I-129 petitions that were filed as a result of the final rule's portability provision, 30 percent have 26 or more employees, 55 percent have 25 or fewer employees, and that 15 percent have non-profit status.²⁰⁴ This equates to 96 "large" petitioners, 175 "small" petitioners, and 48 non-profit petitioners.²⁰⁵ These petitioners will pay total fees of \$1,830, \$990, and \$690, respectively.²⁰⁶ These filing fees are not a cost to society or an expenditure of new resources but a transfer from the petitioner to USCIS in exchange for agency services. The annual value of transfers from petitioners to the Government for filing Form I-129 due to the final rule's portability provision will be approximately \$382,050.²⁰⁷

Additionally, employers may use Form I-907 to request premium processing of Form I-129 petitions for H-2B visas. The filing fee for Form I-907 to request premium processing for H-2B petitions is \$1,685.²⁰⁸ Based on historical trends, DHS expects that 93.57 percent of petitioners will file a Form I-907 with Form I-129. Applying that rate to the expected number of

filings of Form I-129 petitions will result in 298 requests for premium processing using Form I-907 filed due to the rule.²⁰⁹ We estimate that the annual transfers from petitioners to the Federal Government related to filing Form I-907 due to the rule will be approximately \$502,130.²¹⁰ The undiscounted annual transfers from petitioners to the Federal Government due to the rule are \$884,180.^{211 212}

Portability is a benefit to employers that cannot find U.S. workers, and as an additional flexibility for H-2 employees seeking to begin work with a new H-2 employer. This rule allows petitioners to immediately employ certain H-2 workers who are present in the United States in H-2 status without waiting for approval of the H-2 petition.

c. Improving H-2 Program Efficiencies and Reducing Barriers to Legal Migration

This section is divided into two subheadings where each provision and its expected impacts are discussed. The final rule includes the following: (1) removing the eligible countries lists; and (2) eliminating the calculation of interrupted stays and reducing the period of absence that will reset an individual's 3-year maximum period of stay.

(1) Eligible Countries Lists

DHS will remove the lists that designate certain countries as eligible to participate in the H-2 programs. Currently, nationals of countries that are not eligible to participate in the H-2 programs may still be named as beneficiaries on an H-2A or H-2B petition. However, petitioners must: (1) name each beneficiary who is not from an eligible country; and (2) provide evidence to show that it is in the U.S. interest for the individual to be the beneficiary of such a petition. USCIS also recommends that H-2A and H-2B petitions for workers from countries not listed on the respective eligible countries lists be filed separately.²¹³

²⁰⁹ Calculation: 319 petitions $\times$ 93.57 Form I-907 rate = 298 Forms I-907 (rounded).

²¹⁰ Calculation: \$1,685 per petition $\times$ 298 Forms I-907 = \$502,130.

²¹¹ Calculation: \$382,050 + \$502,130 = \$884,180.

²¹² It is possible that the combination of porting workers and workers availing themselves of increased grace periods may increase tax transfers from workers to the Federal Government. DHS cannot estimate the magnitude of these transfers, however, because of a lack of detailed data regarding the workers utilizing these provisions separately or jointly.

²¹³ See USCIS, Form I-129, "Instructions for Petition for Nonimmigrant Worker Department of Homeland Security," OMB Control Number 1615-0009 (expires Feb. 28, 2027), <https://www.uscis.gov/sites/default/files/document/forms/i-129instr.pdf>.

To understand the population of beneficiaries who come from countries not on the eligible countries lists and the petitioners who apply for these workers, we considered historical data from FY 2013 through FY 2022 on the beneficiary country of birth for both H-2A and H-2B receipts by fiscal year.²¹⁴ The data are extremely limited, with an average of 77 percent and 75 percent of H-2A and H-2B receipts, respectively, missing the beneficiary's country of birth. Data are primarily limited because of the high percentage of H-2 petitions filed requesting unnamed beneficiaries. Additionally, these data are input manually, with only certain fields entered. Country of birth is not a mandatory field and tends to be blank.

On the eligible countries lists published November 10, 2021, FY 2022 data did not identify any H-2A beneficiaries with a country of birth from 55 of 85 eligible countries.²¹⁵ Additionally, 30 petitions with 141 beneficiaries from 12 countries were not on the eligible countries list. Of the 86 eligible countries for H-2B beneficiaries, the FY 2022 data did not identify any beneficiaries with a country of birth from 43 of these countries. It also showed that there was only a total of 12 petitions with 79 beneficiaries from five countries not on the eligible countries list.

From these limited data, we can see that USCIS does receive petitions for beneficiaries outside of those on the eligible countries lists. However, it is unclear if the lists may act as a deterrent with the additional burden on petitioners. The data provide some insight into the potential concentration of H-2 visas in FY 2022, where the greatest number of petitions had beneficiaries listed with Mexico as their country of birth (1,628 petitions and 30,075 H-2A beneficiaries, and 1,523 petitions and 21,136 H-2B beneficiaries, respectively). However, because only about 12 percent of H-2A beneficiaries and 29 percent of H-2B beneficiaries in FY 2022 had a country of birth listed, it is difficult to draw any strong conclusions.

As stated earlier, USCIS recommends that H-2A and H-2B petitions for

²¹⁴ Country of citizenship data are available for about 20 percent of the H-2A category but not for the H-2B category. For consistency and because there are slightly more data available, we use country of birth data in this analysis.

²¹⁵ The publication of the eligible countries lists for H-2A and H-2B visa programs referred to here was published on November 10, 2022. 87 FR 67930. For the purpose of this analysis, we rely on the eligible countries lists from 2021 because we have data from FY 2022 that would include any impacts of that prior lists on the behavior of petitioners and their beneficiaries.

²⁰³ Per Form I-129 instructions, beneficiaries must be named if they are currently in the United States. Therefore, a Form I-129 petition filed as a result of the final rule's portability provision would necessarily be for named beneficiaries. See USCIS, Form I-129, "Instructions for Petition for Nonimmigrant Worker Department of Homeland Security," OMB Control Number 1615-0009, (expires Feb. 28, 2027), <https://www.uscis.gov/sites/default/files/document/forms/i-129instr.pdf>.

²⁰⁴ See 89 FR 6194, 6246-6248, Table 25 (Jan. 31, 2024); 89 FR 20101 (Apr. 1, 2024).

²⁰⁵ Calculation, "Large" Petitioners: 319 marginal Form I-129 filings $\times$ 0.3 rate of "large" petitioners = 96 "large" petitioners (rounded).

"Small" Petitioners: 319 marginal Form I-129 filings $\times$ 0.55 rate of "small" petitioners = 175 "small" petitioners (rounded).

Non-profit petitioners: 319 marginal Form I-129 filings $\times$ 0.15 rate of non-profit petitioners = 48 non-profit petitioners (rounded).

²⁰⁶ Fees for "large" petitioner: \$1,080 base filing fee + \$600 Asylum Program Fee + \$150 Fraud Prevention and Detection Fee = \$1,830.

Fees for "Small" Petitioner: \$540 base filing fee + \$300 Asylum Program Fee + \$150 Fraud Prevention and Detection Fee = \$990.

Fees for Non-profit Petitioner: \$540 base filing fee + \$150 Fraud Prevention and Detection Fee = \$690.

For more information regarding the fee schedule for Forms I-129, please see <https://www.uscis.gov/sites/default/files/document/forms/g-1055.pdf> (accessed Apr. 29, 2024).

²⁰⁷ Calculation: (96 "large" petitioners $\times$ \$1,830 total fees) + (175 "small" petitioners $\times$ \$990 total fees) + (48 nonprofit petitioners $\times$ \$690 total fees) = \$382,050.

²⁰⁸ See USCIS, Form I-907, "Instructions for Request for Premium Processing Service," OMB Control Number 1615-0048, <https://www.uscis.gov/sites/default/files/document/forms/i-907instr.pdf> (last accessed Apr. 15, 2024).

workers from countries not listed on the respective eligible countries lists be filed separately. DHS does not have data on the number of H-2 employers that file petitions separately for workers from countries not listed on the respective eligible countries lists from those on the eligible countries lists. For those that file separately, though, this provision will result in saved fees.²¹⁶ As discussed above, total filing fees for H-2A petitioners range from \$460 to \$1,690 depending on the characteristics of the petitioner while total filing fees for H-2B petitioners range from \$610 to \$1,830 depending on the characteristics of the petitioner.²¹⁷ Therefore, employers currently filing separate petitions could save \$460 to \$1,640 per H-2A petition and \$610 to \$1,830 per H-2B petition.²¹⁸

To produce the eligible countries lists each year, several DHS components and agencies provide data, collaboration, and research. For DHS, this includes months of work to gather recommendations and information from offices across ICE, CBP, and USCIS, compile statistics, and cooperate closely with DOS. Research in these efforts focuses on topics including overstays, fraud, human trafficking concerns, and more. However, some of the work involved in creating the eligible countries lists is duplicative, time-consuming, and limited in its response to ever-changing global dynamics. For example, DOS already performs regular national interest assessments and would not approve H-2 work visas that it deems problematic regardless of the country's standing on the eligible countries lists.

Benefits of this provision include freeing up resources currently dedicated to publishing the eligible countries lists every year, which could be used more effectively on other pressing projects

across DHS and DOS. This change also will reduce the burden on petitioners that seek to hire H-2 workers from countries not designated as eligible since they will no longer need to meet additional criteria showing that it is in the U.S. interest to employ such workers. This provision also will increase access to workers potentially available to businesses that use the H-2 programs.

(2) Eliminating the "Interrupted Stay" Calculation and Reducing the Period of Absence To Reset an Individual's 3-Year Period of Stay

DHS is eliminating the "interrupted stay" calculation and reduce the period of absence from the United States from 3 months to 60 days to reset an individual's 3-year period of stay.²¹⁹ Under current regulations, an individual's total period of stay in H-2A or H-2B nonimmigrant status may not exceed 3 years. Currently, an individual who has spent 3 years in H-2A or H-2B status may not seek extension, change status, or be readmitted to the United States in H-2 status unless the individual has been outside of the United States for an uninterrupted period of 3 months. In the final rule, the total period of stay of 3 years remains unchanged, but the period of absence that resets an individual's 3-year period of stay will be reduced. For ease of understanding, the term "clock" is used in this section to describe the 3-year maximum period of stay for an H-2 worker and the term "absence" generally is used in place of "interruption." As critical context, the estimated population impacted by this change is constrained because the DOL-certified seasonal or temporary nature of H-2A and H-2B labor needs means that, currently, most beneficiaries' clocks are effectively reset each year upon completion of the first and only petitioner's labor need and subsequent

departure from the country. Instructions on DOL's Foreign Labor Application Gateway (FLAG) state that petitioners' certified seasonal or temporary labor needs must not exceed 9 months for H-2B labor certifications and should not normally exceed 10 months for H-2A certifications, so there will be no direct impacts nor costs to an employer from the simplifications to the existing definition of absence for the purpose of resetting the 3-year clock.²²⁰

Additionally, under this simplification, DHS will no longer recognize certain absences as an "interrupted stay" for purposes of pausing the calculation of the 3-year limit of stay. Thus, if a worker leaves the United States for less than 60 days, the absence will not pause the 3-year maximum period of stay clock nor extend the timeframe in which a worker could work in H-2 status upon their return from abroad. This change to the calculation of interrupted stay is not expected to impact the two current subset populations of H-2A and H-2B workers whose accumulated stay is 18 months or less and whose clock currently pauses when leaving the United States for at least 45 days but less than 3 months, and those whose accumulated stay is greater than 18 months but less than 3 years. Under this rule, the 3-year clock will no longer pause when an individual leaves the United States for the period of time specified in rows 2 and 3 of Table 13; rather, the 3-year clock will reset following an uninterrupted absence of 60 days, irrespective of the individual's period of accumulated stay in the United States.

²²⁰ See DOL, "H-2A Temporary Labor Certification for Agriculture Workers," <https://flag.dol.gov/programs/H-2A> (last visited May 31, 2023) ("The need for the work must be seasonal or temporary in nature [. . .] normally lasting 10 months or less" for H-2A Temporary Certification For Agriculture Workers); DOL, "H-2B, Temporary Labor Certification for Non-Agriculture Workers," <https://flag.dol.gov/programs/H-2B> (last visited May 31, 2023) ("The employer's job opportunities must be . . . [t]emporary (9 months or less, except one-time occurrences)"). DOL regulations at 20 CFR 655.6(b) limit an H-2B period of need to 9 months, except where the employer's need is based on a one-time occurrence, but due to an appropriations rider that is currently in place, DOL uses the definition of temporary need as provided in 8 CFR 214.2(h)(6)(ii)(B), which does not list a 9-month limit. Consolidated Appropriations Act 2023, Pub. L. 117–328, Division H, Title I, Sec. 111.

²¹⁶ See USCIS, "Calculating Interrupted Stays for the H-2 Classifications, What do I need to know if I choose to file separate petitions for H-2 workers?" (May 6, 2020), <https://www.uscis.gov/working-in-the-united-states/temporary-workers/h-2a-agricultural-workers/calculating-interrupted-stays-for-the-h-2-classifications>.

²¹⁷ See USCIS, Form G–1055, "Fee Schedule," <https://www.uscis.gov/sites/default/files/document/forms/g-1055.pdf>, (last accessed Apr. 18, 2024).

²¹⁸ See USCIS, Form I–129, "Instructions for Petition for Nonimmigrant Worker Department of Homeland Security," OMB Control Number 1615–0009 (expires Feb. 28, 2027), <https://www.uscis.gov/sites/default/files/document/forms/i-129instr.pdf>.

²¹⁹ USCIS officers use the term "interrupted stay" when adjudicating extension of stay requests in the H-2A and H-2B nonimmigrant classifications. It refers to certain periods of time an H-2 worker spends outside the United States during an authorized period of stay that do not count toward the noncitizen's maximum 3-year limit in the classification. See USCIS, "Calculating Interrupted Stays for the H-2 Classifications" (May 6, 2020), <https://www.uscis.gov/working-in-the-united-states/temporary-workers/h-2a-agricultural-workers/calculating-interrupted-stays-for-the-h-2-classifications>.

Table 13: H-2 Clock and Absences from the United States During a 3-Year Maximum Period of Stay				
	Current	Proposal and Impact to H-2 Workers and Employers		
Time Worked in H-2 Status	Clock Reset or Interruption*	Proposed Absence Counted as Reset	Cost	Benefit
3 years	Reset at 3 months	Reset at 60 days	N/A	30 fewer days required to reset clock
18 months or less	Interruption pause accrues at 45 days, but less than 3 months	Reset at 60 days	N/A	N/A
More than 18 months, but less than 3 years	Interruption pause accrues at 2 months, but less than 3 months	Reset at 60 days	N/A	N/A
Source: USCIS analysis. *An interruption is when the 3-year clock is paused, meaning the period of time outside the United States, the absence, isn't counted towards 3-year maximum period of stay.				

DHS next considers a potential subpopulation of workers who, under the baseline, might port from one petitioning employer with a labor certification to a subsequent petitioner with a TLC three or more times to maximize earnings over the 3-year (1,095 days) limit. DHS does not have data on the size of the H-2A or H-2B worker populations that currently leave the United States while in H-2 status or for how long. Without information on the number of workers who experience absences from the United States, it is not possible to predict additional impacts to the behavior of H-2 visa holders and the petitioners with DOL-certified seasonal or temporary labor needs, however, the present observed rates of porting shown in Tables 6 and 7 suggest beneficiaries porting more than 3 times without leaving the country is small to non-existent. DOL requires H-2A and H-2B employers to pay workers at least the highest of the prevailing wage rate obtained from the ETA or the applicable Federal, State, or local minimum wage.²²¹ Additionally, the Fair Labor Standards Act covers requirements for all workers in the United States with respect to overtime and a job offer must always be

consistent with Federal, State, and local laws.²²²

To estimate the potential impacts from a small number of H-2 workers choosing to provide 30 additional days of labor every 3 years, we first consider wages. The Federal minimum wage is currently \$7.25.²²³ While using the Federal minimum wage may be appropriate in some instances, DHS recognizes that many States have higher minimum wage rates than the Federal minimum wage. Therefore, DHS believes that a more accurate and timely estimate of wages is available via data from the DOL, BLS National Occupational Employment and Wage Estimates. DHS believes that the unweighted, 10th percentile wage estimate for all occupations of \$13.14 per hour is a reasonable lower bound for the population in question.²²⁴ DHS accounts for worker benefits by calculating a benefits-to-wage multiplier using the most recent BLS report detailing the average employer costs for employee compensation for all civilian

workers in major occupational groups and industries. DHS estimates the benefits-to-wage multiplier is 1.45 and, therefore, is able to estimate the full opportunity cost per applicant, including employee wages and salaries and the full cost of benefits such as paid leave, insurance, and retirement, etc.²²⁵ Although the Federal minimum wage could be considered a lower bound income for the population of interest, DHS calculates the total rate of compensation for the 10th percentile hourly wage is \$19.05, which is 81.3 percent higher than the Federal minimum wage.²²⁶

DHS does not rule out the possibility that some portion of H-2A and H-2B employees might earn more than the 10th percentile wage, but without empirical information, DHS believes that including a range with the lower bound relying on the 10th percentile

²²⁵ The benefits-to-wage multiplier is calculated as follows: (Total Employee Compensation per hour) ÷ (Wages and Salaries per hour) = \$42.48 ÷ \$29.32 = 1.450 = 1.45 (rounded). See BLS, Economic News Release, "Employer Cost for Employee Compensation—December 2022," Table 1. Employer costs per hour worked for employee compensation and costs as a percent of total compensation: Civilian workers, by major occupational and industry group (Mar. 17, 2023), https://www.bls.gov/news.release/archives/eccec_03172023.pdf.

²²⁶ Calculations (1) for lower bound compensation: \$13.14 lower bound wage × 1.45 total compensation factor = \$19.05 (rounded to 2 decimal places); (2) ((\$19.05 wage—\$10.51 wage) ÷ \$10.51) wage = 0.813, which rounded and multiplied by 100 = 81.3 percent.

²²¹ See WHD, "Fact Sheet #26: Section H-2A of the Immigration and Nationality Act (INA)" (Feb. 2010), <https://www.dol.gov/sites/dolgov/files/WHDLegacy/files/whdfs26.pdf>, and "Fact Sheet #78C: Wage Requirements under the H-2B Program" (Apr. 2015), <https://www.dol.gov/sites/dolgov/files/WHDLegacy/files/whdfs78c.pdf>.

²²² See WHD, "Wages and the Fair Labor Standards Act," <https://www.dol.gov/agencies/whd/flsa> (last visited Dec. 15, 2022).

²²³ See 29 U.S.C. 206; See also WHD, "Minimum Wage," <https://www.dol.gov/general/topic/wages/minimumwage> (the minimum wage in effect as of Dec. 15, 2022).

²²⁴ See Occupational Employment and Wage Estimates United States, May 2022. BLS, "Occupational Employment and Wage Statistics program, All Occupations," https://www.bls.gov/oes/2022/may/oes_nat.htm#00-0000 (last visited July 28, 2023).

wage with benefits of \$19.05 is justifiable for both H-2A and H-2B workers. For H-2A workers, DHS uses an upper bound wage specific to agricultural workers of \$17.04.²²⁷ DHS calculates the average total rate of compensation for agricultural workers as \$24.71 per hour, where the mean hourly wage is \$17.04 per hour worked and average benefits are \$7.67 per hour.²²⁸ For H-2B workers, DHS relies on the average wage rate for all occupations of \$29.76 as an upper bound in consideration of the variance in average wages across professions and States.²²⁹ Therefore, DHS calculates the average total rate of compensation for all occupations as \$43.15 per hour, where the mean hourly wage is \$29.76 per

hour worked and average benefits are \$13.39 per hour.²³⁰

Since DHS calculates absences from the United States based on calendar days, and wage estimates are specifically linked to hours, we apply the scalar developed as follows. Calendar days are transformed into workdays to account for the actuality that typically, 5 out of 7 days of the calendar week, or 71.4 percent, is allotted to work-time, and that a workday is typically 8 hours.²³¹ Thus, in limited instances, individuals resetting their clock at or immediately after the 1,095th day of the 3-year limitation may be afforded an opportunity to work 30 additional calendar days, or approximately 21 days of H-2. DHS notes that some H-2

workers may work more days or hours per week in some instances. Additionally, if overtime hours are worked, DHS has no basis for which to measure the extent to which this may occur among these populations. Based on the 10th percentile wage (lower bound), each calendar day generates about \$108.81 in relevant earnings for potential H-2 workers. It follows that for the upper wage bounds that each calendar day generates about \$141.14 per H-2A worker and about \$246.47 per H-2B worker in relevant earnings.²³² Over 30 potential workdays, this equates to a lower bound of \$3,264 in additional earnings with upper bounds of \$4,234 for H-2A workers and \$7,394 for H-2B workers (see Table 14).²³³

Table 14: Earnings Estimates for H-2 Workers with 30 Additional Days.

	Hourly Wage	Calendar Day Scalar	Work Hours	Daily Additional Wages	Additional Wages for 30 Days	Additional Taxes
	A	B	C	D=A×B×C	E=D×30	F=E×15.3%
Lower Bound	\$19.05	0.714	8	\$108.81	\$3,264	0 *
H-2A Upper Bound	\$24.71			\$141.14	\$4,234	0 *
H-2B Upper Bound	\$43.15			\$246.47	\$7,394	\$1,131

Source: USCIS analysis.

* H-2A workers and employers are not subject to U.S. social security and Medicare taxes

In instances where an employer with a DOL-certified temporary labor need cannot transfer the 21 days of work onto other H-2 workers, DHS acknowledges that this additional work may result in additional tax revenue to the government. It is difficult to quantify income tax transfers because individual tax situations vary widely,²³⁴ but DHS estimates the potential payments to

other employment tax programs, namely Medicare and Social Security, which have a combined tax rate of 7.65 percent (6.2 percent and 1.45 percent, respectively).²³⁵ While H-2A wages are exempt from these taxes, H-2B wages are not.²³⁶ With both the employee and employer paying their respective portion of Medicare and Social Security taxes, the total estimated tax transfer for

Medicare and Social Security is 15.3 percent.²³⁷ DHS recognizes this quantified estimate is not representative of all potential tax losses by Federal, State, and local governments and we make no claims this quantified estimate includes all tax losses. We continue to acknowledge the potential for additional Federal, State, and local government tax losses in the scenario where a company

²²⁷ The average wage for agricultural workers is found at BLS, Occupational Employment and Wages—May 2022 (Apr. 25, 2023), Table 1. National employment and wage data from the Occupational Employment and Wage Statistics survey by occupation, May 2022, https://www.bls.gov/news.release/archives/ocwage_04252023.pdf. DHS notes that the agricultural wages contained in the OEWS survey represent a subset all agricultural workers.

²²⁸ Calculation of the weighted mean hourly wage for agricultural workers: \$17.04 per hour × 1.45 benefits-to-wage multiplier = \$24.71 (rounded).

²²⁹ The average wage for all occupations is found at BLS, Occupational Employment and Wages—May 2022 (Apr. 25, 2023), Table 1. National employment and wage data from the Occupational Employment and Wage Statistics survey by occupation, May 2022, https://www.bls.gov/news.release/archives/ocwage_04252023.pdf.

²³⁰ The calculation of the weighted mean hourly wage for applicants: \$29.76 per hour × 1.45

benefits-to-wage multiplier = \$43.15 (rounded) per hour.

²³¹ USCIS did review DOL disclosure data on basic number of hours and found the average number of hours per week to be around 40 hours. For this reason, we assume a typical 40-hour workweek for both H-2A and H-2B workers for this analysis.

²³² Calculations: 10th percentile wage (lower bound): 0.714 × 8 hours per day × \$19.05 wage = \$108.81 (rounded). H-2A average wage for agricultural workers (upper bound): 0.714 × 8 hours per day × \$24.71 wage = \$141.14 (rounded). H-2B average wage for all occupations (upper bound): 0.714 × 8 hours per day × \$43.15 wage = \$246.47 rounded.

²³³ Calculations: 10th percentile wage (lower bound): \$108.81 × 30 days = \$3,264 (rounded).

H-2A average wage for agricultural workers (upper bound): \$141.14 × 30 days = \$4,234 (rounded).

H-2B average wage for all occupations (upper bound): \$246.47 × 30 days = \$7,394 (rounded).

²³⁴ See Quentin Fottrell, MarketWatch, “More than 44 percent of Americans pay no federal income tax,” (Aug. 28, 2019), <https://www.marketwatch.com/story/81-million-americans-wont-pay-any-federal-income-taxes-this-year-heres-why-2018-04-16>.

²³⁵ The various employment taxes are discussed in more detail at <https://www.irs.gov/businesses/small-businesses-self-employed/understanding-employment-taxes>. See Internal Revenue Service Publication 15, Circular E, “Employer’s Tax Guide” (Dec. 16, 2021), <https://www.irs.gov/pub/irs-pdf/p15.pdf>, for specific information on employment tax rates.

²³⁶ See IRS, “Federal Income Tax and FICA Withholding for Foreign Agricultural Workers with an H-2A Visa,” <https://www.irs.gov/pub/irs-pdf/p5144.pdf> (last accessed July 31, 2023).

²³⁷ Calculation: (6.2 percent Social Security + 1.45 percent Medicare) × 2 employee and employer losses = 15.3 percent total estimated tax transfer payment to government.

cannot transfer additional work onto current employees and cannot hire replacement labor for the position the H-2 worker is absent. As seen in Table 14, tax transfers could range from \$0 for H-2A workers to as much as \$1,131 for H-2B workers over a 30-day period. One benefit of this provision is that it will make it easier for DHS, petitioners, and beneficiaries to calculate when a beneficiary reaches their 3-year limit on stay, irrespective of how long the individual has been in the United States in H-2 status. As described earlier, to accurately demonstrate when an

individual's limit on H-2 status will be reached, employers and workers currently need to monitor and document the accumulated time in H-2 status and calculate the total time in H-2 status across multiple time periods following interruptive absences. USCIS adjudicators must also make these same determinations in adjudicating H-2 petitions with named workers to assess whether a beneficiary is eligible for the requested period of stay. No longer needing to monitor absences from the United States of less than 60 days simplifies calculations for employers,

workers, and adjudicators. Additionally, DHS expects that USCIS adjudicators may issue fewer RFEs related to the 3-year maximum period of stay to workers with absences, which would reduce the burden on employers, workers, and adjudicators and save time in processing petitions. As shown in Table 15, RFEs related to the 3-year maximum period of stay have increased since FY 2020 for H-2A workers and have generally remained stable at between 200 to 300 each year since FY 2020 for H-2B workers.

Table 15: RFEs Relating to 3-Year Maximum Stay for H-2 Workers.		
Fiscal Year	H-2A	H-2B
2018	63	134
2019	53	649
2020	22	207
2021	272	292
2022	436	208
Total	846	1,490
5-Year Average	169	298
Source: USCIS Office of Policy and Strategy -- C3, ELIS USCIS Data System as of Oct. 8, 2022.		

While it is not clear how many RFEs are directly related to the calculation of interruptions while in H-2 status, as opposed to RFEs for those who may be reaching the maximum 3-year period of stay generally, DHS anticipates that eliminating the calculation for interrupted stays will at least render some RFEs unnecessary.²³⁸ This will in turn reduce the burden on employers, workers, and adjudicators associated with calculating interruptions and through subsequent RFEs and petitions could be processed more expeditiously. Collectively, Tables 6, 7, and 10 indicate very few H-2 workers approach the 3-year limitation despite existing potential to port from certified temporary labor need for 3 years before exiting the country for 90 days. Nevertheless, DHS has considered as an

upper bound, possible additional earnings and related labor market impacts should workers already approaching the 3-year limit respond to this proposed change by working 30 additional days at the end of their 1,095 days or at the start of their subsequent 3-year period. Recall that if the worker intended to return to their home country before 3-years, as most do upon completing their temporary labor for the initial petitioner, this change has no impact to the employer nor to wages earned by the worker. Multiplying the H-2A population of 169 in Table 15 by \$4,234 in additional wages for 30 days in Table 14 bounds potential additional annual earnings at \$715,546. Additionally, the H-2B population of 298 in Table 15 multiplied by \$7,394 in Table 14 bounds additional annual H-2B earnings at \$2,203,412 with estimated tax transfers of \$337,122. For H-2A and H-2B workers, the total impact from this change is approximately \$2,918,958 in additional earnings and about \$337,122 in tax transfers (\$168,561 from workers + \$168,561 from employers).

d. Other Impacts of the Final Rule
(1) Form I-129 Updates
The costs for filing Form I-129 include the opportunity costs of time to complete and file the form. The estimated time needed to complete and file Form I-129 is 2.487 hours.²³⁹ There is also an estimated time burden of 2.07 hours for petitioners to complete the H classification supplement for Form I-129. The total time burden of 4.557 hours for Form I-129 also includes the time for reviewing instructions, to file and retain documents, and submit the request. In this final rule, only the estimated burden to complete the H classification supplement will change. This rule will increase the public reporting burden for the H Classification Supplement by 0.23 hours, for a total of 2.3 hours. The increased time burden will result in a total time burden of 4.787 hours for Form I-129 H-2

²³⁸ On July 25, 2022, USCIS extended its COVID-19-related flexibilities for responding to RFEs through October 23, 2022. This provided recipients an additional 60 calendar days after the due date on an RFE to provide a response. Ultimately, while this flexibility may have been helpful to petitioners it also added up to an additional 2 months of time to the adjudication process. See USCIS, "USCIS Extends COVID-19-related Flexibilities" (July 25, 2022), <https://www.uscis.gov/newsroom/alerts/uscis-extends-covid-19-related-flexibilities>.

²³⁹ The public reporting burden for this form is 2.487 hours for Form I-129 and an additional 2.07 hours for H Classification Supplement. See USCIS, Form I-129, "Instructions for Petition for Nonimmigrant Worker Department of Homeland Security," OMB Control Number 1615-0009 (expires Feb. 28, 2027), <https://www.uscis.gov/sites/default/files/document/forms/i-129instr.pdf>.

petitioners. The petition must be filed by a U.S. employer, a U.S. agent, or a foreign employer filing through the U.S. agent. 8 CFR 214.2(h)(2). DHS was unable to obtain data on the number of Form I-129 H-2A and H-2B petitions filed directly by a petitioner and those that are filed by a lawyer on behalf of the petitioner. Therefore, DHS presents a range of estimated costs, including if only HR specialists file Form I-129 or if only lawyers file Form I-129.²⁴⁰ Further, DHS presents cost estimates for lawyers filing on behalf of petitioners based on whether all Form I-129 petitions are filed by in-house lawyers or by outsourced lawyers.²⁴¹ DHS presents an estimated range of costs assuming that only HR specialists, in-house lawyers, or outsourced lawyers file these forms, though DHS recognizes that it is likely that filing will be conducted by a combination of these different types of filers.

To estimate the total opportunity cost of time to petitioners who complete and file Form I-129, DHS uses the mean hourly wage rate of HR specialists of \$35.13 as the base wage rate.²⁴² If

applicants hire an in-house or outsourced lawyer to file Form I-129 on their behalf, DHS uses the mean hourly wage rate of \$78.74 as the base wage rate.²⁴³ DHS multiplied the average hourly U.S. wage rate for HR specialists and for in-house lawyers by the benefits-to-wage multiplier of 1.45 to estimate the full cost of employee wages. The total per hour wage is \$50.94 for an HR specialist and \$114.17 for an in-house lawyer.²⁴⁴ In addition, DHS recognizes that an entity may not have in-house lawyers and therefore, seek outside counsel to complete and file Form I-129 on behalf of the petitioner. Therefore, DHS presents a second wage rate for lawyers labeled as outsourced lawyers. DHS estimates the total per hour wage is \$196.85 for an outsourced lawyer.²⁴⁵ If a lawyer submits Form I-129 on behalf of the petitioner, Form G-28, Notice of Entry of Appearance as Attorney or Accredited Representative, must accompany the Form I-129 submission.²⁴⁷ DHS estimates the time

burden to complete and submit Form G-28 for a lawyer is 50 minutes (0.83 hours, rounded).²⁴⁸

Since only the time burden for the H Classification Supplement will change, this analysis only considers the additional opportunity cost of time for 0.23 hours as a direct cost of this rule. Therefore, the estimated additional opportunity cost of time for an HR specialist to complete and file Form I-129 for an H-2 petition is \$11.72, for an in-house lawyer to complete and file is \$26.26, and for an outsourced lawyer to complete and file is \$45.28.²⁴⁹

DHS expects this rule to impose costs on the population of employers that currently petition for H-2 workers, an estimated 36,762 petitioners.²⁵⁰ We expect filing the relevant forms will be performed by an HR specialist, in-house lawyer, or outsourced lawyer, with the assumption that this will be done at the same rate as petitioners who file a Form G-28.

To properly account for the costs associated with filing across the entire H-2 population, DHS must calculate a weighted average rate for G-28 filing across the separate H-2A and H-2B populations. Table 16 and Table 17 show the recent G-28 filing trends for each separate H-2 population.

²⁴⁸ See USCIS, Form G-28, "Instructions for Notice of Entry of Appearance as Attorney or Accredited Representative," OMB Control Number 1615-0105 (expires May 31, 2021), <https://www.uscis.gov/sites/default/files/document/forms/g-28instr.pdf>.

²⁴⁹ HR specialist calculation: $\$50.94 \times (0.23 \text{ hours}) = \$11.72$.

In-house lawyer calculation: $\$114.17 \times (0.23 \text{ hours}) = \$26.26$.

Outsourced lawyer calculation: $\$196.85 \times (0.23 \text{ hours}) = \$45.28$ (rounded).

²⁵⁰ Calculation: $24,370 \text{ H-2A} + 12,392 \text{ H-2B} = 36,762$ H-2 petitioners in FY 2022 as estimated as the population who would be most likely be affected by this rule.

²⁴⁰ For the purposes of this analysis, DHS assumes an HR specialist, or some similar occupation, completes and files these forms as the employer or petitioner who is requesting the H-2 worker. However, DHS understands that not all entities have HR departments or occupations and, therefore, recognizes equivalent occupations may prepare these petitions.

²⁴¹ For the purposes of this analysis, DHS adopts the terms "in-house" and "outsourced" lawyers as they were used in ICE, *Final Small Entity Impact Analysis: Safe-Harbor Procedures for Employers Who Receive a No-Match Letter*, at G-4 (posted Nov. 5, 2008), <http://www.regulations.gov/document/ICEB-2006-0004-0922>. The ICE analysis highlighted the variability of attorney wages and was based on information received in public comment to that rule. We believe the distinction between the varied wages among lawyers is appropriate for our analysis.

²⁴² See BLS, Occupational Employment and Wages, May 2022, Human Resources Specialists (13-1071), <https://www.bls.gov/oes/2022/may/oes131071.htm>.

²⁴³ See BLS, Occupational Employment and Wages, May 2022, Lawyers (23-1011), <https://www.bls.gov/oes/2022/may/oes231011.htm>.

²⁴⁴ Calculation for the total wage of an in-house lawyer: $\$78.74 \times 1.45 = \$114.17$ (rounded).

²⁴⁵ Calculation: Average hourly wage rate of lawyers $\times$ Benefits-to-wage multiplier for outsourced lawyer = $\$78.74 \times 2.5 = \$196.85$ (rounded).

²⁴⁶ The ICE "Safe-Harbor Procedures for Employers Who Receive a No-Match Letter" used a multiplier of 2.5 to convert in-house attorney wages to the cost of outsourced attorney based on information received in public comment to that rule. We believe the explanation and methodology used in the Final Small Entity Impact Analysis for that rule remains sound for using 2.5 as a multiplier for outsourced labor wages in this rule, see ICE, "Small Entity Impact Analysis (Final): Supplemental Proposed Rule 'Safe-Harbor Procedures for Employers Who Receive a No-Match Letter,'" p. G-4 (Sept. 1, 2015), <https://www.regulations.gov/document/ICEB-2006-0004-0922>.

²⁴⁷ USCIS, "Filing Your Form G-28" (Aug. 10, 2020), <https://www.uscis.gov/forms/filing-your-form-g-28>.

Table 16: Form I-129 H-2A Petition Receipts That Were Accompanied by a Form G-28, FY 2017-2021.

Fiscal Year	Number of Form I-129 H-2A petitions accompanied by a Form G-28	Total Number of Form I-129 H-2A petitions received	Percent of Form I-129 H-2A petitions accompanied by a Form G-28
2017	1,648	11,602	14.20%
2018	2,166	13,444	16.11%
2019	2,617	15,509	16.87%
2020	2,854	17,012	16.78%
2021	3,322	20,323	16.35%
2017 - 2021 Total	12,607	77,890	16.19%

Source: USCIS, Office of Policy & Strategy-- C3, ELIS USCIS Data System

Table 17: Form I-129 H-2B Petition Receipts That Were Accompanied by a Form G-28, FY 2018-2022.

Fiscal Year	Number of Form I-129 H-2B petitions accompanied by a Form G-28	Total Number of Form I-129 H-2B petitions received	Percent of Form I-129 H-2B petitions accompanied by a Form G-28
2018	2,625	6,148	42.70%
2019	3,335	7,461	44.70%
2020	2,434	5,422	44.89%
2021	4,228	9,160	46.16%
2022	5,983	12,392	48.28%
2018 - 2022 Total	18,605	40,583	45.84%

Source: USCIS, Office of Performance and Quality -- SAS PME C3 Consolidated, as of Sept. 09, 2023, TRK 12921

Using the data from Table 16 and Table 17, DHS calculates that the weighted average rate of G-28 filing across the entire H-2 population is 26.35 percent.²⁵¹

Therefore, we estimate that 9,687 lawyers will incur additional filing costs, and 27,075 HR specialists will incur additional filing costs.²⁵²

The estimated total opportunity cost of time for 27,075 HR specialists to file

petitions under this final rule is approximately \$317,319.²⁵³ The estimated annual opportunity cost of time for 9,687 lawyers to file petitions under this rule is approximately \$254,381 if all are in-house lawyers and \$438,627 if all are outsourced lawyers.²⁵⁴ Therefore, the estimated annual opportunity costs of time for petitioners or their representatives to file H-2 petitions under this rule will range from \$571,700 to \$755,946.²⁵⁵

(2) Technical Definitional Updates

As a technical update in this rule, DHS is removing the phrase “abscond” and the definition “abscondment” for clarification purposes. DHS expects these changes will have only marginal impacts.

(3) Familiarization Costs

DHS expects this rule will impose one-time familiarization costs associated with reading and understanding this rule on the population of employers that currently petition for H-2 workers, an estimated 36,762 petitioners.²⁵⁶ We expect familiarization with the rule will be performed by a HR specialist, in-house lawyer, or outsourced lawyer,

²⁵¹ Calculation: Step 1. 12,607 H-2A petitions with G-28 + 18,605 H-2B petitions with G-28 = 31,212 H-2 petitions with G-28; Step 2. 77,890 total H-2A petitions + 40,583 total H-2B petitions = 118,473 total H-2 petitions; Step 3. 31,212 H-2 petitions with G-28 ÷ 118,473 total H-2 petitions = 0.2635 (rounded).

²⁵² Calculation for lawyers: 36,762 H-2 petitioners × 26.35 percent represents by a lawyer = 9,687 (rounded) represented by a lawyer. Calculation for HR specialists: 36,762 H-2 petitioners – 9,687 represented by a lawyer = 27,075 represented by a HR specialist.

²⁵³ Calculation: \$11.72 additional burden × 27,075 HR specialists = \$317,319.

²⁵⁴ Calculations: \$26.26 additional burden × 9,687 in-house lawyers = \$254,381; \$45.28 additional burden × 9,687 outsourced lawyers = \$438,627 (rounded).

²⁵⁵ Calculation: HR specialists \$317,319 + in-house lawyers \$254,381 = \$571,700; HR specialists \$317,319 + outsourced lawyers \$438,627 = \$755,946.

²⁵⁶ Calculation: 24,370 H-2A + 12,392 H-2B = 36,762 H-2 petitioners in FY 2022 as estimated as the population who would be most likely to read this rule.

with the assumption that this will be done at the same rate as petitioners who file a Form G–28. An estimated 26.34 percent will be performed by lawyers and the remaining 73.66 percent by an HR specialist. Therefore, we estimate that 27,075 HR specialists and 9,687 lawyers will incur familiarization costs.²⁵⁷

To estimate the cost of rule familiarization, we estimate the time it would take to read and understand the rule by assuming a reading speed of 238 words per minute.²⁵⁸ This rule has approximately 56,000 words.²⁵⁹ Using a reading speed of 238 words per minute, DHS estimates it will take approximately 3.92 hours to read and become familiar with this rule.²⁶⁰ The estimated hourly total compensation for a HR specialist, in-house lawyer, and outsourced lawyer are \$50.94, \$114.17, and \$196.85, respectively. The estimated opportunity cost of time for each of these filers to familiarize themselves with the rule are \$199.68, \$447.55, and \$771.65, respectively.²⁶¹ The estimated total opportunity cost of time for 27,075 HR specialists to familiarize themselves with this rule is approximately \$5,406,336. Additionally, the estimated total opportunity cost of time for 9,687 lawyers to familiarize themselves with this rule is approximately \$4,335,417 if all are in-house lawyers or \$7,474,974 if all are outsourced lawyers. Thus, the estimated total opportunity costs of time for petitioners or their representatives to familiarize themselves with this rule ranges from \$9,741,753 to \$12,881,310,

which we assume will be incurred in the first year of the period of analysis.²⁶²

e. Total Costs of the Rule

In the previous sections, we presented the estimates of the impacts of the final rule. The quantifiable costs of this rule that will impact petitioners consistently and directly are the costs associated with an increased opportunity cost of time to complete Form I–129 H Classification Supplement and opportunity costs of time related to the rule's portability provision. Annual costs due to the rule range from \$716,336 to \$972,579 depending on the filer.²⁶³ Over the 10-year period of analysis, DHS estimates the total costs of the final rule will be approximately \$16,905,113 to \$22,607,100 (undiscounted).²⁶⁴ DHS estimates the annualized costs of this final rule will range from \$1,825,104 to \$2,438,679 at a 3-percent discount rate, with a midpoint of \$2,131,891, and \$2,012,604 to \$2,686,606 at a 7-percent discount rate, with a midpoint of \$2,349,605. The midpoints of these ranges are presented as the primary estimates.

In addition, the rule results in transfers from consumers of goods and services to a limited number of H–2A and H–2B workers that may choose to supply additional labor. The total annualized transfer is approximately \$2,918,958 in additional earnings at the 3-percent and 7-percent discount rate and related tax transfers are approximately \$337,122 (\$168,561 from these workers + \$168,561 from employers).

²⁶² Calculation, lower bound: \$5,406,336 familiarization costs, HR Representative + \$4,335,417 familiarization costs, in-house lawyer = \$9,741,753.

Calculation, upper bound: \$5,406,336 familiarization costs, HR Representative + \$7,474,974 familiarization costs, outsourced lawyer = \$12,881,310.

²⁶³ Calculation, lower bound: \$571,700 annual costs from marginal OCT to file Forms I–129 + \$144,636 in costs due to the portability provision = \$716,336 annual costs in years 1 through 10.

Calculation, upper bound: \$755,946 annual costs from marginal OCT to file Forms I–129 + \$216,633 in costs due to the portability provision = \$972,579 annual costs in years 1 through 10.

²⁶⁴ Calculation, lower bound: familiarization costs of \$9,741,753 (year 1) + \$716,336 annual costs due to the rule (year 1–10) = \$16,905,113 over 10-year period of analysis.

Calculation, upper bound: familiarization costs of \$12,881,310 (year 1) + \$972,579 annual costs due to the rule (year 1–10) = \$22,607,100 over 10-year period of analysis.

B. Regulatory Flexibility Act

The Regulatory Flexibility Act of 1980 (RFA), as amended by the Small Business Regulatory Enforcement Fairness Act of 1996, requires Federal agencies to consider the potential impact of regulations on small businesses, small governmental jurisdictions, and small organizations during the development of their rules. The term “small entities” comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. An “individual” is not defined by the RFA as a small entity and costs to an individual from a rule are not considered for RFA purposes. In addition, the courts have held that the RFA requires an agency to perform an initial regulatory flexibility analysis of small entity impacts only when a rule directly regulates small entities. Consequently, any indirect impacts from a rule to a small entity are not considered to be costs for RFA purposes.

This final rule may have direct impacts to those entities that petition on behalf of H–2 workers. Generally, petitions are filed by a sponsoring employer who would incur some additional costs from the Form I–129 H Classification Supplement burden change and familiarization of the rule. Petitioning employers may also incur costs they would not have otherwise incurred if they opt to transport and house H–2A workers earlier as well as opportunity costs of time if they are selected to participate in compliance reviews or inspections that are necessary for the approval of a petition. Therefore, DHS examines the direct impact of this rule on small entities in the analysis that follows.

Small entities primarily impacted by this final rule are those that will incur additional direct costs to complete an H–2 petition. DHS conducted an analysis using a statistically valid sample of H–2 petitions to determine the number of small entities directly impacted by this final rule. These costs are related to the additional opportunity cost of time for a selected small entity to complete the updated Form I–129 H Classification Supplement in this rule.

²⁵⁷ Calculation for lawyers: 36,762 H–2 petitioners × 44.43 percent represents by a lawyer = 9,687 (rounded) represented by a lawyer. Calculation for HR specialists: 36,762 H–2 petitioners – 9,687 represented by a lawyer = 27,075 represented by a HR specialist.

²⁵⁸ Marc Brysbaert, “How many words do we read per minute? A review and meta-analysis of reading rate,” (Apr. 12, 2019) <https://doi.org/10.1016/j.jml.2019.104047> (accessed Dec. 15, 2022). We use the average speed for silent reading of English nonfiction by adults.

²⁵⁹ Please note that the actual word count of the final rule may differ from the estimated length presented here.

²⁶⁰ Calculation: 56,000 words ÷ 238 words per minute = 235 (rounded) minutes. 235 minutes ÷ 60 minutes per hour = 3.92 (rounded) hours.

²⁶¹ Calculation: Total respective hourly compensation HR \$50.94 × 3.92 hours = \$199.68, In-house Lawyer \$114.17 × 3.92 = \$447.55, or Outsourced Lawyer \$196.85 × 3.92 hours = \$771.65.

Final Regulatory Flexibility Analysis (FRFA)

1. A Statement of the Need for, and Objectives of, the Rule

The purpose of this rulemaking is to modernize and improve the regulations relating to the H-2A temporary agricultural worker program and the H-2B temporary nonagricultural worker program. Through this rule, DHS seeks to strengthen worker protections and the integrity of the H-2 programs, provide greater flexibility for H-2A and H-2B workers, and improve program efficiency.

2. A Statement of the Significant Issues Raised by the Public Comments in Response to the IRFA, a Statement of the Assessment of the Agency of Such Issues, and a Statement of Any Changes Made in the Proposed Rule as a Result of Such Comments

DHS requested comments on the IRFA as part of the NPRM and received several specific to the IRFA. A brief summary of those comments and USCIS' response are below.²⁶⁵

Comment: Various stakeholders expressed concern that affected small entities may lack resources needed to understand the rule's changes and may unintentionally violate certain provisions, harming such entities in a disproportionate manner.

Response: DHS acknowledged the comments but declines to implement any changes to the rule as a result of this comment. DHS emphasizes that all regulatory requirements and procedures will be explained and analyzed through multiple channels (the promulgation of this rule as evidenced by publication after consideration of comments received during the notice and comment period, relevant form instructions, and established communication materials such as the "Small Entity Compliance Guide"). Additionally, DHS believes

that marginal burdens being placed on small entities in order to ensure that they comply with program requirements and worker protections is justified by the benefits of increased program integrity discussed in the preamble.

3. The Response of the Agency to Any Comments Filed by the Chief Counsel for Advocacy of the Small Business Administration in Response to the Proposed Rule

The Chief Counsel for Advocacy of the Small Business Administration did not provide any comments on the IRFA.

4. A Description and an Estimate of the Number of Small Entities to Which the Rule Will Apply or an Explanation of Why No Such Estimate Is Available

DHS conducted the analysis using a statistically valid sample of H-2 petitions to determine the maximum potential number of small entities directly impacted by this final rule. DHS used a subscription-based online database of U.S. entities—Hoovers Online—as well as two other open-access, free databases of public and private entities—Manta and Cortera—to determine the North American Industry Classification System (NAICS) code, revenue, and employee count for each entity.²⁶⁶ In order to determine the size of a small entity, DHS first classified each entity by its NAICS code, and then used Small Business Administration (SBA) guidelines to note the requisite revenue or employee count threshold for each entity.²⁶⁷ Some entities were

²⁶⁶ The Hoovers website can be found at <http://www.hoovers.com/>; the Manta website can be found at <http://www.manta.com/>; and the Cortera website can be found at <https://www.cortera.com/>. NAICS 2017 classifications were used for the purpose of this analysis as provided by these databases.

²⁶⁷ The SBA has developed size standards to carry out the purposes of the Small Business Act and those size standards can be found in 13 CFR, section 121.201. At the time this analysis was conducted, NAICS 2017 classifications were in effect. SBA size standards effective August 19, 2019, <https://www.sba.gov/sites/default/files/2019->

classified as "small" based on their annual revenue and some by number of employees.

Using FY 2018 to FY 2022 data on H-2A petitions, DHS collected internal data for each filing organization.²⁶⁸ Each entity may make multiple filings. For instance, there were 90,658 H-2A petitions filed over the 5-fiscal-year period of analysis, but only 13,244 unique entities that filed H-2A petitions. DHS developed a methodology to conduct the small entity analysis based on a representative, random sample of the potentially impacted population. To achieve a 95 percent confidence level and a 5 percent confidence interval on a population of 13,244 entities, DHS determined that a minimum sample size of 374 entities was necessary. However, DHS drew a sample size 10 percent greater than the minimum statistically valid sample for a sample size of 411 to increase the likelihood that our matches would meet or exceed the minimum required sample.²⁶⁹ Of the 411 entities sampled, 387 instances resulted in entities defined as small (*see* Table 18). Of the 387 small entities, 344 entities were classified as small by revenue or number of employees. The remaining 63 entities were classified as small because information was not found (either no petitioner name was found, or not enough information was found in the databases). A total of 24 entities were classified as not small. Therefore, of the 13,244 entities that filed at least one Form I-129 in FY 2018 through FY 2022, DHS estimates that 96 percent or 12,714 entities are considered small based on SBA size standards.²⁷⁰

Notes:

^a The SBA has developed size standards to carry out the purposes of the Small Business Act and those size standards can be found in 13 CFR, section 121.201. At the time this analysis was conducted, NAICS 2017 classifications were in effect.

DHS used the same methodology developed for H-2A petitions for analyzing H-2B petitions. Using FY 2018 to FY 2022 data on H-2B petitions, DHS collected internal data for each filing organization.²⁷¹ Each entity may make multiple filings. For instance, there were 40,579 H-2B petitions filed over these 5 fiscal years by 8,506 unique entities. DHS devised a methodology to conduct the small entity analysis based on a representative, random sample of the potentially impacted population. To achieve a 95 percent confidence level

and a 5 percent confidence interval on a population of 8,506 entities, DHS determined that a minimum sample size of 368 entities was necessary. DHS created a sample size 10 percent greater than the minimum statistically valid sample for a sample size of 368 in order to increase the likelihood that our matches would meet or exceed the minimum required sample.²⁷² Of the 405 entities sampled, 384 instances resulted in entities defined as small (*see* Table 20). Of the 384 small entities, 307 entities were classified as small by

revenue or number of employees. The remaining 46 entities were classified as small because information was not found (either no petitioner name was found, or not enough information was found in the databases). A total of 21 entities were classified as not small. Therefore, of the 8,506 entities that filed at least one Form I-129 in FY 2018 through FY 2022, DHS estimates that 95 percent or 8,081 entities are considered small based on SBA size standards.²⁷³

²⁷¹ USCIS Office of Policy and Strategy, C3, ELIS (Oct. 19, 2022).

²⁷² Calculation: $368 + (368 \times 10 \text{ percent}) = 405$.

²⁷³ Calculation: $8,506 \text{ entities} \times 95 \text{ percent} = 8,081 \text{ small entities (rounded)}$.

Table 20: Summary and Results of Small Entity Analysis of H-2B Petitions.		
Parameter	Quantity	Proportion of Sample (percent)
Population — H-2B petitions	40,579	-
Population — Unique H-2B Entities	8,506	-
Minimum Required Sample	368	-
Selected Sample	405	100
Entities Classified as “Not Small”		
by revenue	20	5
by number of employees	1	0

Note:

^a The SBA has developed size standards to carry out the purposes of the Small Business Act and those size standards can be found in 13 CFR section 121.201. At the time this analysis was conducted, NAICS 2017 classifications were in effect.

BILLING CODE 9111-97-C

As stated above, petitioning employers may incur costs they would not have otherwise incurred if they are selected to participate in compliance reviews or inspections that are necessary for the approval of a petition, but fail or refuse to comply with such reviews or inspections. Because the random sample is drawn from the H-2 petitioner population at-large, it is not practical to estimate small entities' representation within this noncooperative subpopulation. Thus, the FRFA assumes 12 percent of small entities, like larger entities, may have underestimated the reasonable, existing compliance burden of site visits and thus incur some additional compliance costs.

Petitioner-employers are not expected to be impacted by changes to the interrupted stay calculation. DHS cannot determine how beneficiaries' behavior would change as a result of this simplification to the calculation. Similarly, DHS does not expect flexibilities that allow beneficiaries to arrive in-country earlier would impose any compliance costs upon industries that choose to petition for or employ H-2 workers.

Table 5 shows that an average 13,722 H-2A petitions are received annually. Table 18 shows that 96 percent of

entities that petition for H-2A workers are considered small based on SBA size standards. Therefore, DHS reasonably assumes that of the 13,722 H-2A petitions received, 13,500²⁷⁴ petitions are submitted by small entities.

Table 6 shows that USCIS receives an average of 6,867 H-2B petitions annually. Table 20 shows that 95 percent of entities that petition for H-2B workers are considered small based on SBA size standards. Therefore, DHS reasonably assumes that of the 6,867 H-2B petitions received, 6,524 petitions are submitted by small entities.²⁷⁵

5. A Description of the Projected Reporting, Recordkeeping, and Other Compliance Requirements of the Rule, Including an Estimate of the Classes of Small Entities That Will Be Subject to the Requirement and the Types of Professional Skills Necessary for Preparation of the Report or Record

This final rule does not impose any new or additional direct "reporting" or "recordkeeping" requirements on filers of H-2 petitions. The final rule does not

²⁷⁴ Calculation: 13,722 petitions received annually × 96 percent = 13,173 submitted by small entities (rounded).

²⁷⁵ Calculation: 6,867 annually selected petitions × 95 percent = 6,524 submitted by small entities (rounded).

require any new professional skills for reporting. As discussed, to the extent that existing statutorily and regulatorily authorized site visits described in the current Form I-129 instructions result in neither a finding of compliance nor noncompliance (described throughout this rule as noncooperation), the provision to revoke or deny petitions may result in unquantified additional compliance burdens to those petitioners that underestimate the reasonable burden of compliance with unannounced site visits. Under the final rule, a petitioner that was selected for a site visit and would not have cooperated under the baseline would face (up to) a 1.7-hour marginal time burden (on average) in order to comply with the provisions of the rule. Also, the provisions of this final rule regarding prohibited fees and labor law violations (see 8 CFR 214.2(h)(5)(xi)(A) through (C), 8 CFR 214.2(h)(6)(i)(B) through (D) regarding prohibited fees, and 8 CFR 214.2(h)(10)(iv) regarding labor law violations and other violations) will subject petitioners, including small entities, to petition denials should they engage in activities that are prohibited by the final rule.

Denial or revocation of petitions for noncooperation with existing site visit and verification requirements is

expected to impact 12 percent of petitioners who, despite agreeing to permit the statutorily and regulatorily authorized site visits on their Form I-129 petition, yielded inconclusive (“not defined”) site visit results. Petitioners that do not cooperate with all site visit requirements may have underestimated the reasonable compliance burden they assented to, and, due to this final rule, would experience or expect to experience additional compliance burden associated with unchanged site visits and verification activities. DHS notes that employers who do not cooperate would face denial or revocation of their petition(s), which could result in costs to those businesses such as potential lost revenue or potential lost profits due to not having access to workers.

Furthermore, the final rule causes direct costs to accrue to affected petitioners due to opportunity costs of time from both marginal time burden increases (for H Classification Supplement to Form I-129) and increased filing volumes (additional Forms I-129 filed due to the rule’s portability provision).

The increase in cost per petition to file the H classification supplement for Form I-129 on behalf of an H-2 worker is the additional opportunity cost of time of 0.23 hours. As previously stated in Section d(1) of the regulatory impact analysis, this final rule will add \$11.72 in costs if an HR specialist files, \$26.26 in costs if an in-house lawyer files, and \$45.28 in costs if an outsourced lawyer files.²⁷⁶ USCIS acknowledges that the rule could impose other indirect costs on small entities including, but not limited to, the time required to comply with site visits and any actions required to remain compliant with the rule’s strengthened worker provisions. These indirect impacts are not explicitly included within the RFA because of uncertainty related to how many small entities would be affected and the degree to which affected entities would be impacted. The Regulatory Impact Analysis included above contains more in-depth analysis of those possible impacts and how they may impact small entities. Those entities not in compliance with the program would experience direct impacts as a result of this rule; DHS does not know how many entities are noncompliant.

In all instances, DHS acknowledges that several aspects of the rule impose

costs on affected entities. DHS has determined, however, that these costs are outweighed by the benefits of increased program integrity and compliance. DHS has considered opportunities to achieve the rule’s stated objectives while minimizing costs to small entities.

6. A Description of the Steps the Agency Has Taken To Minimize the Significant Economic Impact on Small Entities Consistent With the Stated Objectives of Applicable Statutes, Including a Statement of the Factual, Policy, and Legal Reasons for Selecting the Alternative Adopted in the Final Rule and Why Each of the Other Significant Alternatives to the Rule Considered by the Agency Was Rejected

DHS considered alternatives to elements of the final rule that would minimize the impact on small entities while still accomplishing the rule’s objectives, such as improving the integrity and efficiency of the H-2 program. First, DHS acknowledges that, as discussed above, the vast majority (approximately 96 percent of H-2A petitioners and 95 percent of H-2B petitioners) of affected petitioners are small businesses. Therefore, costs due to the rule would necessarily be borne by those small businesses. Minimizing any costs due to the rule would therefore compromise the ability of this regulation to effectively address the goals stated in the preamble.

DHS considered not proposing regulations that would revoke or deny petitioners refusing to cooperate with current statutorily and regulatorily authorized USCIS site visit and verification activities. Roughly 12 percent of current H-2 site visits are inconclusive due to noncooperation on the part of petitioners. USCIS’ inability to reach a conclusion concerning compliance or noncompliance concerning petitioners that triggered a site visit is critical to oversight of the program and integrity measures. The compliance burden for a small entity is not the duration of the site visit and verification activities, but rather the discrepancy between what USCIS and the assenting petitioner estimated such reasonable compliance burdens to be. DHS will not consider permitting any small entity to willfully violate the statutory and regulatory requirements explained in the existing Form I-129 instructions, thus the IRFA alternative considered was rejected for failing to meet the rule’s objective of improving H-2 program integrity. Furthermore, 12 percent of USCIS resources dedicated toward investigating noncompliance with H-2 program requirements are

sunk, resulting in no findings. USCIS investigative officers are an important tool and a scarce resource. These investigatory resources could be made more effective if, at some additional compliance costs to would-be noncooperative small entities, USCIS was able to reach a finding. For this reason, DHS rejected the IRFA alternative for failing to meet the rule’s objective of improving H-2 efficiency with respect to USCIS investigative resources.

Finally, an additional objective of the rule is enhancement of worker protections. The IRFA alternative of minimizing additional compliance burdens to 12 percent of entities from site visits and verification activities was rejected because it risks undermining the impacts of other proposed provisions of this rule that are expected to achieve greater protections for workers who report violations. Furthermore, DHS considered not expanding porting to minimize those impacts to small entities, but concluded that the availability of porting is integral to accomplishing the objectives of enhancing program integrity and increasing worker protections.

C. Unfunded Mandates Reform Act of 1995

The Unfunded Mandates Reform Act of 1995 (UMRA) is intended, among other things, to curb the practice of imposing unfunded Federal mandates on State, local, and Tribal governments. Title II of UMRA requires each Federal agency to prepare a written statement assessing the effects of any Federal mandate in a final rule, or final rule that may result in a \$100 million or more expenditure (adjusted annually for inflation) in any one year by State, local, and Tribal governments, in the aggregate, or by the private sector. 2 U.S.C. 1532(a).

In addition, the inflation-adjusted value of \$100 million in 1995 is approximately \$192 million in 2022 based on the Consumer Price Index for All Urban Consumers (CPI-U).²⁷⁷

²⁷⁷ See BLS, “Historical Consumer Price Index for All Urban Consumers (CPI-U): U.S. city average, all items, by month,” <https://www.bls.gov/cpi/tables/supplemental-files/historical-cpi-u-202403.pdf> (last visited Apr. 29, 2024). Calculation of inflation: (1) Calculate the average monthly CPI-U for the reference year (1995) and the current year (2022); (2) Subtract reference year CPI-U from current year CPI-U; (3) Divide the difference of the reference year CPI-U and current year CPI-U by the reference year CPI-U; (4) Multiply by 100 = [(Average monthly CPI-U for 2022 – Average monthly CPI-U for 1995) ÷ (Average monthly CPI-U for 1995)] × 100 = [(292.655 – 152.383) ÷ 152.383] × 100 = (140.272 ÷ 152.383) × 100 = 0.92052263 × 100 = 92.05 percent = 92 percent (rounded). Calculation

Continued

²⁷⁶ Calculations: HR specialist calculation: \$50.94 × (0.23 hours) = \$11.72 (rounded).

In-house lawyer calculation: \$114.17 × (0.23 hours) = \$26.26 (rounded).

Outsourced lawyer calculation: \$196.85 × (0.23) = \$45.28 (rounded).

The term “Federal mandate” means a Federal intergovernmental mandate or a Federal private sector mandate. See 2 U.S.C. 1502(1), 658(6). The term “Federal intergovernmental mandate” means, in relevant part, a provision that would impose an enforceable duty upon State, local, or Tribal governments (except as a condition of Federal assistance or a duty arising from participation in a voluntary Federal program). 2 U.S.C. 658(5). The term “Federal private sector mandate” means, in relevant part, a provision that would impose an enforceable duty upon the private sector (except as a condition of Federal assistance or a duty arising from participation in a voluntary Federal program). 2 U.S.C. 658(7).

This final rule does not contain such a mandate, because it does not impose any enforceable duty upon any other level of government or private sector entity. Any downstream effects on such entities would arise solely due to their voluntary choices, and the voluntary choices of others, and would not be a consequence of an enforceable duty imposed by this rule. Similarly, any costs or transfer effects on State and local governments would not result from a Federal mandate as that term is defined under UMRA. 2 U.S.C. 1502(1), 658(6). The requirements of title II of UMRA, therefore, do not apply, and DHS has not prepared a statement under UMRA. DHS has, however, analyzed many of the potential effects of this action in the regulatory impact analysis above.

D. Congressional Review Act

The Office of Information and Regulatory Affairs has determined that this final does not meet the definitional criteria outlined in 5 U.S.C. 804(2), for purposes of Congressional review of agency rulemaking pursuant to the Congressional Review Act, Pub. L. 104–121, title II, sec. 251 (Mar. 29, 1996), 110 Stat. 868 (codified at 5 U.S.C. 801–808). This rule will not result in an annual effect on the economy of \$100 million or more.

DHS will send this final rule to Congress and to the Comptroller General as required by 5 U.S.C. 801(a)(1).

E. Executive Order 13132 (Federalism)

This final rule would not have substantial direct effects on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in

accordance with section 6 of Executive Order 13132, it is determined that this final rule does not have sufficient federalism implications to warrant the preparation of a federalism summary impact statement.

F. Executive Order 12988 (Civil Justice Reform)

This final rule was drafted and reviewed in accordance with E.O. 12988, Civil Justice Reform. This final rule was written to provide a clear legal standard for affected conduct and was carefully reviewed to eliminate drafting errors and ambiguities, so as to minimize litigation and undue burden on the Federal court system. DHS has determined that this final rule meets the applicable standards provided in section 3 of E.O. 12988.

G. Executive Order 13175

This final rule does not have Tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it does not have a substantial direct effect on one or more Indian Tribes, on the relationship between the Federal Government and Indian Tribes, or on the distribution of power and responsibilities between the Federal Government and Indian Tribes.

H. National Environmental Policy Act (NEPA)

DHS and its components analyze proposed actions to determine whether the National Environmental Policy Act²⁷⁸ (NEPA) applies to them and, if so, what degree of analysis is required. DHS Directive 023–01, Rev. 01 (Directive) and Instruction Manual 023–01–001–01, Rev. 01 (Instruction Manual)²⁷⁹ establish the procedures DHS and its components use to comply with NEPA and the Council on Environmental Quality (CEQ) regulations for implementing NEPA. See 40 CFR parts 1500 through 1508. The CEQ regulations allow Federal agencies to establish in their NEPA implementing procedures categories of actions (“categorical exclusions”) that experience has shown normally do not individually or cumulatively have a significant effect on the human environment and, therefore, do not

require preparation of an Environmental Assessment or Environmental Impact Statement. See 40 CFR 1501.4(a). Instruction Manual, Appendix A, Table 1 lists the DHS categorical exclusions.

Under DHS NEPA implementing procedures, for an action to be categorically excluded, it must satisfy each of the following three conditions: (1) The entire action clearly fits within one or more of the categorical exclusions; (2) the action is not a piece of a larger action; and (3) no extraordinary circumstances exist that create the potential for a significant environmental effect.²⁸⁰

This final rule amends administrative and procedural requirements to modernize and improve H–2 programs. The final rule will improve program integrity while increasing flexibility, efficiency, and improving access to the H–2 programs. Specifically, DHS is clarifying which fees are prohibited to be collected under H–2 regulations, strengthening the prohibition on collecting or agreeing to collect such fees from H–2 workers, extending grace periods for H–2 workers to give them the same amount of flexibility to come to the United States early and prepare for employment, and to remain in the United States after their employment ends to prepare for departure or seek new employment. The final rule also includes a new, longer grace period for H–2 workers whose employment terminated early. DHS is also making portability permanent in the H–2 programs, and allowing H–2 workers to take certain steps toward becoming permanent residents of the United States while still maintaining lawful nonimmigrant status. DHS is also codifying additional efficiencies in the H–2 programs by eliminating the H–2 eligible countries lists and the H–2 “interrupted stay” provisions, and by reducing the period of absence needed to reset a worker’s 3-year maximum period of stay.

DHS is not aware of any significant impact on the environment, or any change in environmental effect from current H–2 program rules, that will result from the final rule changes. DHS therefore finds that this final rule clearly fits within categorical exclusion A3 established in the Department’s implementing procedures in Instruction Manual, Appendix A.

The amendments contained in this final rule are stand-alone rule changes for USCIS H–2 programs and are not a part of any larger action. In accordance with its implementing procedures, DHS finds no extraordinary circumstances

²⁷⁸ See Pub. L. 91–190, 42 U.S.C. 4321 through 4347.

²⁷⁹ See DHS, Directive 023–01, Rev 01, “Implementation of the National Environmental Policy Act,” (Oct. 31, 2014), and DHS Instruction Manual 023–01–001–01, Revision 01, “Implementation of the National Environmental Policy Act (NEPA)” (Nov. 6, 2014), <https://www.dhs.gov/publication/directive-023-01-rev-01-and-instruction-manual-023-01-001-01-rev-01-and-catex>.

²⁸⁰ See Instruction Manual, section V.B.2 (a–c).

associated with this final rule that may give rise to significant environmental effects requiring further environmental analysis and documentation. Therefore, this action is categorically excluded and no further NEPA analysis is required.

I. Paperwork Reduction Act

Under the Paperwork Reduction Act of 1995, Pub. L. 104–13, all agencies must submit to OMB, for review and approval, any reporting requirements inherent in a rule, unless they are exempt.

In compliance with the PRA, DHS requested comments to the information collection associated with this rulemaking in the NPRM published in the **Federal Register** on September 20, 2023. DHS would have addressed any comments received on information collection activities in Section IV. of this final rule. After the publication of the NPRM, DHS published the Fee Schedule Final Rule (“Fee Rule”) on January 31, 2024, and that rule went into effect on April 1, 2024. 89 FR 6194. Subsequently, DHS updated the information collection and the baseline estimated total number of respondents and the amount of time estimated for an average respondent to respond, to reflect the changes to the information collection approved in connection with the Fee Rule. As a result, the estimated total public burden in hours and cost associated with the information collection has changed since the publication of the NPRM.²⁸¹

Overview of information collection:

(1) *Type of Information Collection:* Revision of a Currently Approved Collection.

(2) *Title of the Form/Collection:* Petition for a Nonimmigrant Worker.

(3) *Agency form number, if any, and the applicable component of the DHS sponsoring the collection:* I–129; USCIS.

(4) *Affected public who will be asked or required to respond, as well as a brief abstract:* Primary: Business or other for-profit. USCIS uses the data collected on this form to determine eligibility for the requested nonimmigrant petition and/or requests to extend or change nonimmigrant status. An employer (or agent, where applicable) uses this form to petition USCIS for a noncitizen to temporarily enter as a nonimmigrant worker. An employer (or agent, where applicable) also uses this form to request an extension of stay or change of status on behalf of the nonimmigrant worker. The form serves the purpose of

standardizing requests for nonimmigrant workers and ensuring that basic information required for assessing eligibility is provided by the petitioner while requesting that beneficiaries be classified under certain nonimmigrant employment categories. It also assists USCIS in compiling information required by Congress annually to assess effectiveness and utilization of certain nonimmigrant classifications.

(5) *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond:* The estimated total number of respondents for the information collection I–129 is 572,606 and the estimated hour burden per response is 2.487 hours; the estimated total number of respondents for the information collection E–1/E–2 Classification Supplement to Form I–129 is 12,050 and the estimated hour burden per response is 0.67 hours; the estimated total number of respondents for the information collection Trade Agreement Supplement to Form I–129 is 12,945 and the estimated hour burden per response is 0.67 hours; the estimated total number of respondents for the information collection H Classification Supplement to Form I–129 is 471,983 and the estimated hour burden per response is 2.3 hours; the estimated total number of respondents for the information collection H–1B and H–1B1 Data Collection and Filing Fee Exemption Supplement is 398,936 and the estimated hour burden per response is 1 hour; the estimated total number of respondents for the information collection L Classification Supplement to Form I–129 is 40,358 and the estimated hour burden per response is 1.34 hours; the estimated total number of respondents for the information collection O and P Classifications Supplement to Form I–129 is 28,434 and the estimated hour burden per response is 1 hour; the estimated total number of respondents for the information collection Q–1 Classification Supplement to Form I–129 is 54 and the estimated hour burden per response is 0.34 hour; and the estimated total number of respondents for the information collection R–1 Classification Supplement to Form I–129 is 6,782 and the estimated hour burden per response is 2.34 hours.

(6) *An estimate of the total public burden (in hours) associated with the collection:* The total estimated annual hour burden associated with this collection is 3,023,717 hours. This is a 108,556 increase from the current estimate of 2,915,161 burden hours annually. The overall change in burden

estimates reflects the changes in the rule related to the removal of the list of countries of citizenship section on the form and eligible countries list from the instructions, addition of question on exception to the 3-year limit and requests for evidence, rewriting of questions and instructional content on prohibited fees and evidence and other H–2A and H–2B violations, addition of clarifying language to H–2A and H–2B petitioner and employer obligations questions, addition of questions and reformatting for the joint employer section, removal of E-Verify and corresponding H–2A petitions instructions, addition of instructional content in the recruitment of H–2A and H–2B workers section, removal of instructional content on interrupted stays, and addition of clarifying language to the notification requirements instructional content.

(7) *An estimate of the total public burden (in cost) associated with the collection:* The estimated total annual cost burden associated with this collection of information is \$294,892,090.

List of Subjects

8 CFR Part 214

Administrative practice and procedure, Aliens, Cultural exchange program, Employment, Foreign officials, Health professions, Reporting and recordkeeping requirements, Students.

8 CFR Part 274a

Administrative practice and procedure, Aliens, Cultural exchange program, Employment, Penalties, Reporting and recordkeeping requirements, Students.

Accordingly, DHS is amending chapter I of title 8 of the Code of Federal Regulations as follows:

PART 214—NONIMMIGRANT CLASSES

■ 1. The authority citation for part 214 continues to read as follows:

Authority: 6 U.S.C. 202, 236; 8 U.S.C. 1101, 1102, 1103, 1182, 1184, 1186a, 1187, 1188, 1221, 1281, 1282, 1301–1305, 1357, and 1372; sec. 643, Pub. L. 104–208, 110 Stat. 3009–708; Pub. L. 106–386, 114 Stat. 1477–1480; section 141 of the Compacts of Free Association with the Federated States of Micronesia and the Republic of the Marshall Islands, and with the Government of Palau, 48 U.S.C. 1901 note and 1931 note, respectively; 48 U.S.C. 1806; 8 CFR part 2; Pub. L. 115–218, 132 Stat. 1547 (48 U.S.C. 1806).

■ 2. Section 214.2 is amended by:

■ a. Revising paragraph (h)(2)(i)(D);

²⁸¹ In the NPRM, DHS estimated that the total estimated number of respondents for the information collection I–129 was 294,751 and the estimated hour burden per response was 2.34 hours.

- b. Redesignating paragraph (h)(2)(i)(I) as paragraph (h)(2)(i)(J) and adding a new paragraph (h)(2)(i)(I);
- c. Revising paragraphs (h)(2)(ii) and (iii);
- d. Removing paragraph (h)(5)(i)(F);
- e. Removing and reserving paragraph (h)(5)(iii)(B);
- f. Revising and republishing paragraph (h)(5)(vi);
- g. Revising paragraphs (h)(5)(viii)(B) and (C) and adding (D);
- h. Revising paragraphs (h)(5)(ix) and (xi);
- i. Removing paragraph (h)(5)(xii);
- j. Revising and republishing paragraph (h)(6)(i);
- m. Revising paragraph (h)(6)(vii);
- n. Adding paragraph (h)(10)(iv);
- o. Adding paragraph (h)(11)(iv);
- p. Revising paragraphs (h)(13)(i), (iv), and (v);
- q. Revising paragraph (h)(16)(ii) and adding (h)(16)(iii);
- r. Revising paragraph (h)(20); and
- s. Adding paragraph (h)(30).

The revisions and additions read as follows:

§ 214.2 Special requirements for admission, extension, and maintenance of status.

* * * * *

(h) * * *

(2) * * *

(i) * * *

(D) *Change of employers.* If the alien is in the United States and seeks to change employers, the prospective new employer must file a petition for a nonimmigrant worker requesting classification and an extension of the alien's stay in the United States. If the new petition is approved, the extension of stay may be granted for the validity of the approved petition. The validity of the petition and the alien's extension of stay must conform to the limits on the alien's temporary stay that are prescribed in paragraph (h)(13) of this section. Except as provided in paragraph (h)(2)(i)(I) of this section, 8 CFR 274a.12(b)(21), or section 214(n) of the Act, 8 U.S.C. 1184(n), the alien is not authorized to begin the employment with the new petitioner until the petition is approved. An H-1C nonimmigrant alien may not change employers.

* * * * *

(I) *H-2A and H-2B portability.* An eligible H-2A or H-2B nonimmigrant is authorized to start new employment upon the proper filing, in accordance with 8 CFR 103.2(a), of a nonfrivolous H-2A or H-2B petition on behalf of such alien requesting the same classification that the nonimmigrant alien currently holds, or as of the requested start date, whichever is later.

(1) *Eligible H-2A or H-2B nonimmigrant.* For H-2A and H-2B portability purposes, an eligible H-2A or H-2B nonimmigrant is defined as an alien:

(i) Who has been lawfully admitted into the United States in, or otherwise provided, H-2A or H-2B nonimmigrant status;

(ii) On whose behalf a nonfrivolous H-2A or H-2B petition for new employment has been properly filed, including a petition for new employment with the same employer, with a request to amend or extend the H-2A or H-2B nonimmigrant's stay in the same classification that the nonimmigrant currently holds, before the H-2A or H-2B nonimmigrant's period of stay authorized by the Secretary of Homeland Security expires; and

(iii) Who has not been employed without authorization in the United States from the time of last admission through the filing of the petition for new employment.

(2) *Length of employment.*

Employment authorized under this paragraph (h)(2)(i)(I) automatically ceases upon the adjudication or withdrawal of the H-2A or H-2B petition described in paragraph (h)(2)(i)(I)(1)(ii) of this section.

(3) *Application of H-2A or H-2B program requirements during the pendency of the petition.* The petitioner and any employer is required to comply with all H-2A or H-2B program requirements, as applicable under the relevant program, with respect to an alien who has commenced new employment with that petitioner or employer based on a properly filed nonfrivolous petition and while that petition is pending, even if the petition is subsequently denied or withdrawn. During the pendency of the petition, the alien will not be considered to have been in a period of unauthorized stay or employed in the United States without authorization solely on the basis of employment pursuant to the new petition, even if the petition is subsequently denied or withdrawn.

(4) *Successive H-2A or H-2B portability petitions.* (i) An alien maintaining authorization for employment under this paragraph (h)(2)(i)(I), whose status, as indicated on the Arrival-Departure Record (Form I-94), has expired, will be considered to be in a period of stay authorized by the Secretary of Homeland Security for purposes of paragraph (h)(2)(i)(I)(1)(ii) of this section. If otherwise eligible under this paragraph (h)(2)(i)(I), such alien may begin working in a subsequent position upon the filing of another H-

2A or H-2B petition in the same classification that the nonimmigrant alien currently holds or from the requested start date, whichever is later, notwithstanding that the previous H-2A or H-2B petition upon which employment is authorized under this paragraph (h)(2)(i)(I) remains pending and regardless of whether the validity period of an approved H-2A or H-2B petition filed on the alien's behalf expired during such pendency.

(ii) A request to amend the petition or for an extension of stay in any successive H-2A or H-2B portability petition requesting the same classification that the nonimmigrant alien currently holds cannot be approved if a request to amend the petition or for an extension of stay in any preceding H-2A or H-2B portability petition in the succession is denied, unless the beneficiary's previously approved period of H-2A or H-2B status remains valid.

(iii) Denial of a successive portability petition does not affect the ability of the H-2A or H-2B beneficiary to continue or resume working in accordance with the terms of an H-2A or H-2B petition previously approved on behalf of the beneficiary if that petition approval remains valid, and the beneficiary has either maintained H-2A or H-2B status, as appropriate, or been in a period of authorized stay and has not been employed in the United States without authorization.

* * * * *

(ii) *Multiple beneficiaries.* Up to 25 named beneficiaries may be included in an H-1C, H-2A, H-2B, or H-3 petition if the beneficiaries will be performing the same service, or receiving the same training, for the same period, and in the same location. If more than 25 named beneficiaries are being petitioned for, an additional petition is required.

(iii) *Naming beneficiaries.* H-1B, H-1C, and H-3 petitions must include the name of each beneficiary. Except as provided in this paragraph (h), all H-2A and H-2B petitions must include the name of each beneficiary who is currently in the United States, but need not name any beneficiary who is not currently in the United States. Unnamed beneficiaries must be shown on the petition by total number. USCIS may require the petitioner to name H-2B beneficiaries where the name is needed to establish eligibility for H-2B nonimmigrant status. If all of the beneficiaries covered by an H-2A or H-2B temporary labor certification have not been identified at the time a petition is filed, multiple petitions for subsequent beneficiaries may be filed at

different times but must include a copy of the same temporary labor certification. Each petition must reference all previously filed petitions associated with that temporary labor certification.

* * * * *

(5) * * *

(vi) *Petitioner consent and notification requirements*—(A) *Consent*. In filing an H-2A petition, a petitioner and each employer consents to allow Government access to all sites where the labor is being or will be performed and where workers are or will be housed and agrees to fully cooperate with any compliance review, evaluation, verification, or inspection conducted by USCIS, including an on-site inspection of the employer's facilities, review of the employer's records related to the compliance with immigration laws and regulations, and interview of the employer's employees and any other individuals possessing pertinent information, which may be conducted in the absence of the employer or the employer's representatives, as a condition for the approval of the petition. The interviews may be conducted on the employer's property, or as feasible, at a neutral location agreed to by the employee and USCIS away from the employer's property. If USCIS is unable to verify facts, including due to the failure or refusal of the petitioner or employer to cooperate in an inspection or other compliance review, then such inability to verify facts, including due to failure or refusal to cooperate, may result in denial or revocation of any H-2A petition for H-2A workers performing services at the location or locations that are a subject of inspection or compliance review.

(B) *Agreements*. The petitioner agrees to the following requirements:

(1) To notify DHS, within 2 workdays, and beginning on a date and in a manner specified in a notice published in the **Federal Register** if:

(i) An H-2A worker does not report for work within 5 workdays of the employment start date on the H-2A petition or within 5 workdays of the start date established by their employer, whichever is later;

(ii) The agricultural labor or services for which H-2A workers were hired is completed more than 30 days earlier than the employment end date stated on the H-2A petition; or

(iii) The H-2A worker does not report for work for a period of 5 consecutive workdays without the consent of the employer or is terminated prior to the completion of agricultural labor or services for which they were hired.

(2) To retain evidence of such notification and make it available for inspection by DHS officers for a 1-year period beginning on the date of the notification. To retain evidence of a different employment start date if it is changed from that on the petition by the employer and make it available for inspection by DHS officers for the 1-year period beginning on the newly-established employment start date.

(3) To pay \$10 in liquidated damages for each instance where the employer cannot demonstrate that it has complied with the notification requirements, unless, in the case of an untimely notification, the employer demonstrates with such notification that good cause existed for the untimely notification, and DHS, in its discretion, waives the liquidated damages amount.

(C) *Process*. If DHS has determined that the petitioner has violated the notification requirements in paragraph (h)(5)(vi)(B)(1) of this section and has not received the required notification, the petitioner will be given written notice and 30 days to reply before being given written notice of the assessment of liquidated damages.

(D) *Failure to pay liquidated damages*. If liquidated damages are not paid within 10 days of assessment, an H-2A petition may not be processed for that petitioner or any joint employer shown on the petition until such damages are paid.

(vii) *Validity*. An approved H-2A petition is valid through the expiration of the relating certification for the purpose of allowing a beneficiary to seek issuance of an H-2A nonimmigrant visa, admission or an extension of stay for the purpose of engaging in the specific certified employment.

(viii) * * *

(B) *Period of admission*. An alien admissible as an H-2A nonimmigrant will be admitted for the period of the approved petition. Such alien will be admitted for an additional period of up to 10 days before the beginning of the approved period for the purpose of travel to the worksite, and up to 30 days subject to the 3-year limitation in paragraph (h)(5)(viii)(C) of this section following the expiration of the H-2A petition for the purpose of departure or to seek an extension based on a subsequent offer of employment. Unless authorized under 8 CFR 274a.12, the alien may not work except during the validity period of the petition.

(C) *Limits on an individual's stay*. Except as provided in paragraph (h)(5)(viii)(B) of this section, an alien's stay as an H-2A nonimmigrant is limited by the period of time stated in an approved petition. An alien may

remain longer to engage in other qualifying temporary agricultural employment by obtaining an extension of stay. However, an individual who has held H-2A or H-2B status for a total of 3 years may not again be granted H-2A status until such time as they remain outside the United States for an uninterrupted period of at least 60 days. Eligibility under this paragraph (h)(5)(viii)(C) will be determined during adjudication of a request for admission, change of status or extension. An alien found eligible for a shorter period of H-2A status than that indicated by the petition due to the application of this paragraph (h)(5)(viii)(C) will only be admitted for that shorter period.

(D) *Period of absence*. An absence from the United States for an uninterrupted period of at least 60 days at any time will result in the alien becoming eligible for a new 3-year maximum period of H-2 stay. To qualify, the petitioner must provide evidence documenting the alien's relevant absence(s) from the United States, such as, but not limited to, arrival and departure records, copies of tax returns, and records of employment abroad.

(ix) *Substitution of beneficiaries after admission*. An H-2A petition may be filed to replace H-2A workers whose employment was terminated earlier than the end date stated on the H-2A petition and before the completion of work; who do not report for work within 5 workdays of the employment start date on the H-2A petition or within 5 workdays of the start date established by their employer, whichever is later; or who do not report for work for a period of 5 consecutive workdays without the consent of the employer. The petition must be filed with a copy of the temporary labor certification, a copy of the approval notice covering the workers for which replacements are sought, and other evidence required by paragraph (h)(5)(i)(D) of this section. It must also be filed with a statement giving the name, date and country of birth, termination date, and the reason for termination, if applicable, for such worker and the date that USCIS was notified that the worker was terminated or did not report for work for a period of 5 consecutive workdays without the consent of the employer. A petition for a replacement will not be approved where the requirements of paragraph (h)(5)(vi) of this section have not been met. A petition for replacements does not constitute the notification required by paragraph (h)(5)(vi)(B)(1) of this section.

* * * * *

(xi) *Treatment of petitions and alien beneficiaries upon a determination that fees were collected from alien beneficiaries*—(A) *Denial or revocation of petition for prohibited fees.* As a condition of approval of an H-2A petition, no job placement fee, fee or penalty for breach of contract, or other fee, penalty, or compensation (either direct or indirect), related to the H-2A employment (collectively, “prohibited fees”) may be collected at any time from a beneficiary of an H-2A petition or any person acting on the beneficiary’s behalf by a petitioner, a petitioner’s employee, agent, attorney, facilitator, recruiter, or similar employment service, or by any employer (if different from the petitioner) or any joint employer, including a member employer if the petitioner is an association of U.S. agricultural producers. The term “similar employment service” refers to any person or entity that recruits or solicits prospective beneficiaries of the H-2A petition. The passing of a cost to the beneficiary that, by statute or applicable regulations, is the responsibility of the petitioner, constitutes the collection of a prohibited fee. This provision does not prohibit petitioners (including their employees), employers or any joint employers, agents, attorneys, facilitators, recruiters, or similar employment services from receiving reimbursement from the beneficiary for costs that are the responsibility and primarily for the benefit of the worker, such as government-required passport fees. This provision does not prohibit employers from allowing workers to initially incur fees or expenses that the employers are required to subsequently reimburse, where such arrangement is specifically permitted by, and performed in compliance with statute or regulations governing the H-2A program.

(1) If USCIS determines that the petitioner or any of its employees, whether before or after the filing of the H-2A petition, has collected, or entered into an agreement to collect, a prohibited fee related to the H-2A employment, USCIS will deny or revoke the H-2A petition filed on or after January 17, 2025 on notice unless the petitioner demonstrates through clear and convincing evidence that: the petitioner made ongoing, good faith, reasonable efforts to prevent and learn of the prohibited fee collection or agreement by its employees throughout the recruitment, hiring, and employment process; extraordinary circumstances beyond the petitioner’s control resulted in its failure to prevent collection or entry into agreement for

collection of prohibited fees; the petitioner took immediate remedial action as soon as it became aware of the payment of or agreement to pay the prohibited fee; and the petitioner fully reimbursed all affected beneficiaries or, only if such beneficiaries cannot be located or are deceased, it fully reimbursed the beneficiaries’ designees.

(2) If USCIS determines that the beneficiary has paid or agreed to pay a prohibited fee related to the H-2A employment, whether before or after the filing of the H-2A petition, to any agent, attorney, employer, facilitator, recruiter, or similar employment service, or any joint employer, including a member employer if the petitioner is an association of U.S. agricultural producers, USCIS will deny or revoke the H-2A petition filed on or after January 17, 2025 on notice unless the petitioner demonstrates to USCIS through clear and convincing evidence that: the petitioner made ongoing, good faith, reasonable efforts to prevent and learn of the prohibited fee collection or agreement by such parties throughout the recruitment, hiring, and employment process; the petitioner took immediate remedial action as soon as it became aware of the payment of or agreement to pay the prohibited fee; and that all affected beneficiaries, or their designees only if such beneficiaries cannot be located or are deceased, have been fully reimbursed. A written contract between the petitioner and the agent, attorney, facilitator, recruiter, similar employment service, or member employer stating that such fees were prohibited will not, by itself, be sufficient to meet this standard of proof.

(3) For purposes of paragraph (h)(5)(xi) of this section, a designee must be an individual or entity for whom the beneficiary has provided the petitioner or its successor in interest prior written authorization to receive such reimbursement, as long as the petitioner or its successor in interest, or its agent, employer, or any joint employer, attorney, facilitator, recruiter, or similar employment service would not act as such designee or derive any financial benefit, either directly or indirectly, from the reimbursement.

(B) *One-year denial period of subsequent H-2A petitions.* USCIS will deny any H-2A petition filed by the same petitioner or a successor in interest within 1 year after the decision denying or revoking on notice an H-2B or H-2A petition on the basis of paragraph (h)(6)(i)(B) or (h)(5)(xi)(A), respectively, of this section, provided that the denied or revoked petition was filed on or after January 17, 2025. In addition, USCIS will deny any H-2A

petition filed by the same petitioner or successor in interest within 1 year after withdrawal of an H-2A or H-2B petition filed on or after January 17, 2025, that was withdrawn following USCIS issuance of a request for evidence or notice of intent to deny or revoke the petition on the basis of paragraph (h)(5)(xi)(A) or (h)(6)(i)(B), respectively, of this section.

(C) *Reimbursement as condition of approval of future H-2A petitions*—(1) *Additional 3-year denial period of subsequent H-2A petitions.* For an additional 3 years after the 1-year period described in paragraph (h)(5)(xi)(B) of this section, USCIS will deny any H-2A petition filed by the same petitioner or successor in interest, unless the petitioner or successor in interest demonstrates to USCIS that the petitioner, successor in interest, or the petitioner’s or successor in interest’s agent, facilitator, recruiter, or similar employment service, or any joint employer, including a member employer if the petitioner is an association of U.S. agricultural producers, reimbursed in full each beneficiary, or the beneficiary’s designee only if such beneficiary cannot be located or is deceased, of the denied or revoked petition from whom a prohibited fee was collected. USCIS will deny H-2A petitions under this provision based on the denial or revocation decision(s) issued pursuant to paragraph (h)(5)(xi)(A) or (h)(6)(i)(B) of this section on a prior petition filed on or after January 17, 2025.

(2) *Successor in interest.* For the purposes of paragraphs (h)(5)(xi)(B) and (C) of this section, successor in interest means an employer that is controlling and carrying on the business of a previous employer regardless of whether such successor in interest has succeeded to all of the rights and liabilities of the predecessor entity. The following factors may be considered by USCIS in determining whether an employer is a successor in interest; no one factor is dispositive, but all of the circumstances will be considered as a whole:

(i) Substantial continuity of the same business operations;

(ii) Use of the same facilities;

(iii) Substantial continuity of the work force;

(iv) Similarity of jobs and working conditions;

(v) Similarity of supervisory personnel;

(vi) Whether the former management or owner retains a direct or indirect interest in the new enterprise;

(vii) Similarity in machinery, equipment, production methods, or assets required to conduct business;

(viii) Similarity of products and services;

(ix) Familial or close personal relationships between predecessor and successor owners of the entity; and

(x) Use of the same or related remittance sources for business payments.

(6) * * *

(i) *Petition*—(A) *H-2B nonagricultural temporary worker*. An H-2B nonagricultural temporary worker is an alien who is coming temporarily to the United States to perform temporary services or labor without displacing qualified United States workers available to perform such services or labor and whose employment is not adversely affecting the wages and working conditions of United States workers.

(B) *Denial or revocation of petition for prohibited fees*. As a condition of approval of an H-2B petition, no job placement fee, fee or penalty for breach of contract, or other fee, penalty, or compensation (either direct or indirect), related to the H-2B employment (collectively, “prohibited fees”) may be collected at any time from a beneficiary of an H-2B petition or any person acting on the beneficiary’s behalf by a petitioner, a petitioner’s employee, agent, attorney, facilitator, recruiter, or similar employment service, or any employer (if different from the petitioner). The term “similar employment service” refers to any person or entity that recruits or solicits prospective beneficiaries of the H-2B petition. The passing of a cost to the beneficiary that, by statute or applicable regulations is the responsibility of the petitioner, constitutes the collection of a prohibited fee. This provision does not prohibit petitioners (including their employees), employers, agents, attorneys, facilitators, recruiters, or similar employment services from receiving reimbursement from the beneficiary for costs that are the responsibility and primarily for the benefit of the worker, such as government-required passport fees. This provision does not prohibit employers from allowing workers to initially incur fees or expenses that the employers are required to subsequently reimburse, where such arrangement is specifically permitted by, and performed in compliance with, statute or regulations governing the H-2B program.

(1) If USCIS determines that the petitioner or any of its employees, whether before or after the filing of the H-2B petition, has collected or entered

into an agreement to collect a prohibited fee related to the H-2B employment, USCIS will deny or revoke the H-2B petition filed on or after January 17, 2025 on notice unless the petitioner demonstrates through clear and convincing evidence that: the petitioner made ongoing, good faith, reasonable efforts to prevent and learn of the prohibited fee collection or agreement throughout the recruitment, hiring, and employment process; extraordinary circumstances beyond the petitioner’s control resulted in its failure to prevent collection or entry into agreement for collection of prohibited fees; the petitioner took immediate remedial action as soon as it became aware of the payment of or agreement to pay the prohibited fee; and the petitioner fully reimbursed all affected beneficiaries or, only if such beneficiaries cannot be located or are deceased, it fully reimbursed their designees.

(2) If USCIS determines that the beneficiary has paid or agreed to pay any employer, agent, attorney, facilitator, recruiter, or similar employment service a prohibited fee related to the H-2B employment, whether before or after the filing of the H-2B petition, USCIS will deny or revoke the H-2B petition filed on or after January 17, 2025 on notice unless the petitioner demonstrates to USCIS through clear and convincing evidence that: the petitioner made ongoing, good faith, reasonable efforts to prevent and learn of the prohibited fee(s) collection or agreement by such parties throughout the recruitment, hiring, and employment process; the petitioner took immediate remedial action as soon as it became aware of the payment of the prohibited fee or agreement; and all affected beneficiaries, or their designees only if such beneficiaries cannot be located or are deceased, have been fully reimbursed. A written contract between the petitioner and the facilitator, recruiter, or similar employment service stating that such fees were prohibited will not, by itself, be sufficient to meet this standard of proof.

(3) For purposes of paragraph (h)(6)(i) of this section, a designee must be an individual or entity for whom the beneficiary has provided the petitioner or its successor in interest prior written authorization to receive such reimbursement, as long as the petitioner or its successor in interest, or its agent, employer, attorney, facilitator, recruiter, or similar employment service would not act as such designee or derive any financial benefit, either directly or indirectly, from the reimbursement.

(C) *One-year denial period of subsequent H-2B petitions*. USCIS will

deny any H-2B petition filed by the same petitioner or a successor in interest within 1 year after the decision denying or revoking on notice an H-2B or H-2A petition on the basis of paragraph (h)(6)(i)(B) or (h)(5)(xi)(A), respectively, of this section, provided that the denied or revoked petition was filed on or after January 17, 2025. In addition, USCIS will deny any H-2B petition filed by the same petitioner or successor in interest within 1 year after withdrawal of an H-2B or H-2A petition filed on or after January 17, 2025, that was withdrawn following USCIS issuance of a request for evidence or notice of intent to deny or revoke the petition on the basis of paragraph (h)(6)(i)(B) or (h)(5)(xi)(A), respectively, of this section.

(D) *Reimbursement as condition of approval of future H-2B petitions*—(1) *Additional 3-year denial period of subsequent H-2B petitions*. For an additional 3 years after the 1-year period described in paragraph (h)(6)(i)(C) of this section, USCIS will deny any H-2B petition filed by the same petitioner or successor in interest, unless the petitioner or successor in interest demonstrates to USCIS that the petitioner or successor in interest, or the petitioner’s or successor in interest’s agent, facilitator, recruiter, or similar employment service, reimbursed in full each beneficiary, or the beneficiary’s designee only if such beneficiary cannot be located or is deceased, of the denied or revoked petition from whom a prohibited fee was collected. USCIS will deny H-2B petitions under this provision based on the denial or revocation decision(s) issued pursuant to paragraph (h)(6)(i)(B) or (h)(5)(xi)(A) of this section on a prior petition filed on or after January 17, 2025.

(2) *Successor in interest*. For the purposes of paragraphs (h)(6)(i)(C) and (D) of this section, successor in interest means an employer that is controlling and carrying on the business of a previous employer regardless of whether such successor in interest has succeeded to all of the rights and liabilities of the predecessor entity. The following factors may be considered by USCIS in determining whether an employer is a successor in interest; no one factor is dispositive, but all of the circumstances will be considered as a whole:

(i) Substantial continuity of the same business operations;

(ii) Use of the same facilities;

(iii) Substantial continuity of the work force;

(iv) Similarity of jobs and working conditions;

(v) Similarity of supervisory personnel;

(vi) Whether the former management or owner retains a direct or indirect interest in the new enterprise;

(vii) Similarity in machinery, equipment, production methods, or assets required to conduct business;

(viii) Similarity of products and services;

(ix) Familial or close personal relationships between predecessor and successor owners of the entity; and

(x) Use of the same or related remittance sources for business payments.

(E) [Reserved]

(F) *Petitioner agreements and notification requirements*—(1) *Agreements*. The petitioner must notify DHS, within 2 workdays, and beginning on a date and in a manner specified in a notice published in the **Federal Register** if: An H-2B worker does not report for work within 5 workdays after the employment start date stated on the petition; the nonagricultural labor or services for which H-2B workers were hired were completed more than 30 days early; or an H-2B worker does not report for work for a period of 5 consecutive workdays without the consent of the employer or is terminated prior to the completion of the nonagricultural labor or services for which they were hired. The petitioner must also retain evidence of such notification and make it available for inspection by DHS officers for a 1-year period beginning on the date of the notification.

(2) *Consent*. In filing an H-2B petition, the petitioner and each employer (if different from the petitioner) consent to allow Government access to all sites where the labor is being or will be performed and agrees to fully cooperate with any compliance review, evaluation, verification, or inspection conducted by USCIS, including an on-site inspection of the employer's facilities, review of the employer's records related to the compliance with immigration laws and regulations, and interview of the employer's employees and any other individuals possessing pertinent information, which may be conducted in the absence of the employer or the employer's representatives, as a condition for the approval of the petition. The interviews may be conducted on the employer's property, or as feasible, at a neutral location agreed to by the employee and USCIS away from the employer's property. If USCIS is unable to verify facts, including due to the failure or refusal of the petitioner or employer to cooperate

in an inspection or other compliance review, then such inability to verify facts, including due to failure or refusal to cooperate, may result in denial or revocation of any H-2B petition for H-2B workers performing services at the location or locations that are a subject of inspection or compliance review.

* * * * *

(vii) *Admission*—(A) *Period of admission*. An alien admissible as an H-2B nonimmigrant will be admitted for the period of the approved petition. Such alien will be admitted for an additional period of up to 10 days before the beginning of the approved period for the purpose of travel to the worksite, and up to 30 days subject to the 3-year limitation in paragraph (h)(6)(vii)(B) of this section following the expiration of the H-2B petition for the purpose of departure or to seek an extension based on a subsequent offer of employment. Unless authorized under 8 CFR 274a.12, the alien may not work except during the validity period of the petition.

(B) *Limits on an individual's stay*. Except as provided in paragraph (h)(6)(vii)(A) of this section, an alien's stay as an H-2B nonimmigrant is limited by the period of time stated in an approved petition. An alien may remain longer to engage in other qualifying temporary nonagricultural employment by obtaining an extension of stay. However, an individual who has held H-2A or H-2B status for a total of 3 years may not again be granted H-2B status until such time as they remain outside the United States for an uninterrupted period of at least 60 days. Eligibility under this paragraph (h)(6)(vii)(B) will be determined during adjudication of a request for admission, change of status or extension of stay. An alien found eligible for a shorter period of H-2B status than that indicated by the petition due to the application of this paragraph (h)(6)(vii)(B) will only be admitted for that shorter period.

(C) *Period of absence*. An absence from the United States for an uninterrupted period of at least 60 days at any time will result in the alien becoming eligible for a new 3-year maximum period of H-2 stay. The limitation in paragraph (h)(6)(vii)(B) of this section will not apply to H-2B aliens who did not reside continually in the United States and whose employment in the United States was seasonal or intermittent or was for an aggregate of 6 months or less per year. In addition, the limitation in paragraph (h)(6)(vii)(B) of this section will not apply to aliens who reside abroad and regularly commute to the United States

to engage in part-time employment. To qualify, the petitioner must provide evidence documenting the alien's relevant absence(s) from the United States, such as, but not limited to, arrival and departure records, copies of tax returns, and records of employment abroad.

(D) *Traded professional H-2B athletes*. In the case of a professional H-2B athlete who is traded from one organization to another organization, employment authorization for the player will automatically continue for a period of 30 days after the player's acquisition by the new organization, within which time the new organization is expected to file a new application or petition for H-2B nonimmigrant classification. If a new application or petition is not filed within 30 days, employment authorization will cease. If a new application or petition is filed within 30 days, the professional athlete will be deemed to be in valid H-2B status, and employment will continue to be authorized, until the petition is adjudicated. If the new petition is denied, employment authorization will cease.

* * * * *

(10) * * *
(iv) *H-2A and H-2B violators*. (A) USCIS will deny any H-2A or H-2B petition filed by a petitioner, or the successor in interest of a petitioner as defined in paragraphs (h)(5)(xi)(C)(2) and (h)(6)(i)(D)(2) of this section, that has been the subject of one or more of the following actions:

(1) A final administrative determination by the Secretary of Labor under 20 CFR part 655, subpart A or B, or 29 CFR part 501 or 503 debarring the petitioner from filing or receiving a future labor certification, or a final administrative determination by the Governor of Guam debarring the petitioner from issuance of future labor certifications under applicable Guam regulations and rules, if the petition is filed on or after January 17, 2025 and during the debarment period, or if the debarment occurs during the pendency of the petition filed on or after January 17, 2025, and the final administrative determination debarring the petitioner is made on or after January 17, 2025; or

(2) A final USCIS denial or revocation decision issued during the pendency of the petition or within 3 years prior to filing the petition that includes a finding of fraud or willful misrepresentation of a material fact with respect to a previously filed H-2A or H-2B petition. This provision will only apply if the final denial or revocation decision was issued on a petition filed on or after January 17, 2025; or

(3) A final determination of violation(s) under section 274(a) of the Act during the pendency of the petition or within 3 years prior to filing the petition if the final determination of violation(s) under section 274(a) of the Act is made on or after January 17, 2025 and the petition is filed on or after January 17, 2025.

(B) Except as provided in paragraph (h)(10)(iv)(A) of this section, USCIS may deny any H-2A or H-2B petition filed by a petitioner, or the successor in interest of a petitioner as defined in paragraphs (h)(5)(xi)(C)(2) and (h)(6)(i)(D)(2) of this section on or after January 17, 2025, that has been the subject of one or more of the following actions during the pendency of the petition or within 3 years prior to filing the petition, regardless of whether the action(s) or underlying violation(s) occurred before, on, or after January 17, 2025. USCIS may deny such a petition if it determines that the petitioner or successor has not established its intention and/or ability to comply with H-2A or H-2B program requirements. The violation(s) underlying the following actions that may call into question a petitioner's or successor's intention and/or ability to comply include:

(1) A final administrative determination by the Secretary of Labor or the Governor of Guam with respect to a prior H-2A or H-2B temporary labor certification that includes:

(i) Revocation of an approved temporary labor certification under 20 CFR part 655, subpart A or B, or applicable Guam regulations and rules;

(ii) Debarment under 20 CFR part 655, subpart A or B, or 29 CFR part 501 or 503, or applicable Guam regulations and rules, if the debarment period has concluded prior to filing the petition; or

(iii) Any other administrative sanction or remedy under 29 CFR part 501 or 503, or applicable Guam regulations and rules, including assessment of civil money penalties as described in those parts.

(2) A final USCIS decision revoking the approval of a prior petition that includes one or more of the following findings: the beneficiary was not employed by the petitioner in the capacity specified in the petition; the statement of facts contained in the petition or on the application for a temporary labor certification was not true and correct, or was inaccurate; the petitioner violated terms and conditions of the approved petition; or the petitioner violated requirements of section 101(a)(15)(H) of the Act or this paragraph (h); or

(3) Any final administrative or judicial determination (other than one described in paragraph (h)(10)(iv)(A) of this section) that the petitioner violated any applicable employment-related laws or regulations, including health and safety laws or regulations.

(C) In determining whether the underlying violation(s) in paragraph (h)(10)(iv)(B) of this section calls into question the intention and/or ability of the petitioner or its successor in interest to comply with H-2A or H-2B program requirements, USCIS will consider all relevant factors, including, but not limited to:

(1) The recency and number of violations;

(2) The egregiousness of the violation(s), including how many workers were affected, and whether it involved a risk to the health or safety of workers;

(3) Overall history or pattern of prior violations;

(4) The severity or monetary amount of any penalties imposed;

(5) Whether the final determination, decision, or conviction included a finding of willfulness;

(6) The extent to which the violator achieved a financial gain due to the violation(s), or the potential financial loss or potential financial injury to the workers;

(7) Timely compliance with all penalties and remedies ordered under the final determination(s), decision(s), or conviction(s); and

(8) Other corrective actions taken by the petitioner or its successor in interest to cure its violation(s) or prevent future violations.

(D) For purposes of paragraph (h)(10)(iv) of this section, a criminal conviction or final administrative or judicial determination against any one of the following individuals will be treated as a conviction or final administrative or judicial determination against the petitioner or successor in interest:

(1) An individual acting on behalf of the petitioning entity, which could include, among others, the petitioner's owner, employee, or contractor; or

(2) With respect to paragraph (h)(10)(iv)(B) of this section, an employee of the petitioning entity who a reasonable person in the H-2A or H-2B worker's position would believe is acting on behalf of the petitioning entity.

(E)(1) With respect to denials under paragraph (h)(10)(iv)(A) of this section, USCIS will inform the petitioner of the right to appeal the denial under 8 CFR 103.3, and indicate in the denial notice that the mandatory ground of denial

will also apply in the adjudication of any other pending or future H-2 petition filed by the petitioner or a successor in interest during the applicable time period.

(2) With respect to denials under paragraph (h)(10)(iv)(B) of this section, USCIS will inform the petitioner of the right to appeal the denial under 8 CFR 103.3, and indicate in the denial notice that the discretionary ground of denial may also apply in the adjudication of any other pending or future H-2 petition filed by the petitioner or a successor in interest during the applicable time period.

(F) If USCIS has determined in the course of a prior adjudication that a petitioner (or the preceding entity, if the petitioner is a successor in interest) has established its intention and ability to comply with H-2A or H-2B program requirements notwithstanding relevant violation determination(s) under paragraph (h)(10)(iv)(B) of this section, USCIS will not seek to deny a subsequent petition under paragraph (h)(10)(iv)(B) based on the same previous violation determination(s) unless USCIS becomes aware of a new material fact or finds that its previous determination was based on a material error of law.

(11) * * *

(iv) *Effect of H-2A or H-2B petition revocation.* Upon revocation of the approval of an employer's H-2A or H-2B petition, the beneficiary and their dependents will not be considered to have failed to maintain nonimmigrant status, and will not accrue any period of unlawful presence under section 212(a)(9) of the Act (8 U.S.C. 1182(a)(9)), solely on the basis of the petition revocation for a 60-day period following the date of the revocation, or until the end of the authorized period of admission, whichever is shorter. During such a period, the alien may only work as otherwise authorized under 8 CFR 274a.12. The employer will be liable for the alien beneficiary's reasonable costs of return transportation to their last place of foreign residence abroad, unless such alien obtains an extension of stay based on an approved petition in the same classification filed by a different employer.

* * * * *

(13) * * *

(i) *General.* (A) An H-3 beneficiary will be admitted to the United States for the validity period of the petition, plus a period of up to 10 days before the validity period begins and 10 days after the validity period ends. The beneficiary may not work except during the validity period of the petition.

(B) When an alien in an H classification has spent the maximum allowable period of stay in the United States, a new petition under section 101(a)(15)(H) or (L) of the Act may not be approved unless that alien has resided and been physically present outside the United States, except for brief trips for business or pleasure, for the time limit imposed on the particular H classification. Brief trips to the United States for business or pleasure during the required time abroad are not interruptive, but do not count toward fulfillment of the required time abroad. A certain period of absence from the United States of H-2A and H-2B aliens, as set forth in 8 CFR 214.2(h)(5)(viii)(D) and 8 CFR 214.2(h)(6)(vii)(C), respectively, will provide a new total of 3 years that H-2A or H-2B status may be granted. The petitioner must provide information about the alien's employment, place of residence, and the dates and purposes of any trips to the United States during the period that the alien was required to reside abroad.

(C) An alien admitted or otherwise provided status in H-2A or H-2B classification and their dependents will not be considered to have failed to maintain nonimmigrant status, and will not accrue any period of unlawful presence under section 212(a)(9) of the Act (8 U.S.C. 1182(a)(9)), solely on the basis of a cessation of the employment on which the alien's classification was based, for 60 consecutive days or until the end of the authorized period of admission, whichever is shorter, once during each authorized period of admission. During such a period, the alien may only work as otherwise authorized under 8 CFR 274a.12.

(D) An alien in any authorized period described in paragraph (C) of this section may apply for and be granted an extension of stay under 8 CFR 214.1(c)(4) or change of status under 8 CFR 248.1, if otherwise eligible.

(iv) *H-3 limitation on admission.* An H-3 alien participant in a special education program who has spent 18 months in the United States under sections 101(a)(15)(H) and/or (L) of the Act; and an H-3 alien trainee who has spent 24 months in the United States under sections 101(a)(15)(H) and/or (L) of the Act may not seek extension, change status, or be readmitted to the United States under sections 101(a)(15)(H) and/or (L) of the Act unless the alien has resided and been physically present outside the United States for the immediate prior 6 months.

(v) *Exceptions.* The limitations in paragraphs (h)(13)(iii) and (iv) of this

section will not apply to H-1B and H-3 aliens who did not reside continually in the United States and whose employment in the United States was seasonal or intermittent or was for an aggregate of 6 months or less per year. In addition, the limitations will not apply to aliens who reside abroad and regularly commute to the United States to engage in part-time employment. To qualify for this exception, the petitioner and the alien must provide clear and convincing proof that the alien qualifies for such an exception. Such proof shall consist of evidence such as arrival and departure records, copies of tax returns, and records of employment abroad.

* * * * *

(16) * * *

(ii) *H-2A or H-2B classification.* The approval of a permanent labor certification, the filing of an immediate relative or preference petition for or by an alien or a diversity visa petition with the Department of State, or an application by an alien to seek lawful permanent residence or an immigrant visa, will not, standing alone, be the basis for denying an H-2 petition, a request to extend such a petition, or an application for admission in, change of status to, or extension of stay in H-2 status. The approval of a permanent labor certification, filing of an immediate relative petition, preference petition, or diversity visa petition, or filing of an application for adjustment of status or an immigrant visa will be considered, together with all other facts presented, in determining whether the H-2 nonimmigrant is maintaining his or her H-2 status and whether the alien has a residence in a foreign country which he or she has no intention of abandoning.

(iii) *H-3 classification.* The approval of a permanent labor certification, or the filing of a preference petition for an alien currently employed by or in a training position with the same petitioner, will be a reason, by itself, to deny the alien's extension of stay.

* * * * *

(20) *Retaliatory action claims.* (i) If credible documentary evidence is provided in support of a petition seeking an extension of H-1B stay in or change of status to another classification indicating that the beneficiary faced retaliatory action from their employer based on a report regarding a violation of that employer's labor condition application obligations under section 212(n)(2)(C)(iv) of the Act, USCIS may consider a loss or failure to maintain H-1B status by the beneficiary related to such violation as due to, and commensurate with, "extraordinary

circumstances" as defined by 8 CFR 214.1(c)(4) and 8 CFR 248.1(b).

(ii) If credible documentary evidence is provided in support of a petition seeking an extension of H-2A or H-2B stay in or change of status to another classification indicating that the beneficiary faced retaliatory action from their employer based on a reasonable claim of a violation or potential violation of any applicable program requirements or based on engagement in another protected activity, USCIS may consider a loss or failure to maintain H-2A or H-2B status by the beneficiary related to such violation as due to, and commensurate with, "extraordinary circumstances" as defined by 8 CFR 214.1(c)(4) and 8 CFR 248.1(b). USCIS will determine the reasonableness of any claim from the perspective of a reasonable person in the H-2A or H-2B worker's position.

* * * * *

(30) *Severability.* The Department intends that should any of the revisions effective on January 17, 2025, to provisions in paragraphs (h)(2), (5), (6), (10), (11), (13), (16) and (20) of this section or to the provision in 8 CFR 274a.12(b)(21) be held to be invalid or unenforceable by their terms or as applied to any person or circumstance they should nevertheless be construed so as to continue to give the maximum effect to the provision(s) permitted by law, unless any such provision is held to be wholly invalid and unenforceable, in which event the provision(s) should be severed from the remainder of the provisions and the holding should not affect the other provisions or the application of those other provisions to persons not similarly situated or to dissimilar circumstances.

* * * * *

PART 274a—CONTROL OF EMPLOYMENT OF ALIENS

■ 3. The authority citation for part 274a is revised to read as follows:

Authority: 8 U.S.C. 1101, 1103, 1105a, 1324a; 48 U.S.C. 1806; Pub. L. 101-410, 104 Stat. 890, as amended by Pub. L. 114-74, 129 Stat. 599; Title VII of Pub. L. 110-229, 122 Stat. 754; Pub. L. 115-218, 132 Stat. 1547; 8 CFR part 2.

■ 4. Section 274a.12 is amended by revising paragraph (b)(21) to read as follows:

§ 274a.12 Classes of aliens authorized to accept employment.

* * * * *

(b) * * *

(21) A nonimmigrant alien within the class of aliens described in 8 CFR 214.2(h)(1)(ii)(C) or 8 CFR

214.2(h)(1)(ii)(D) for whom a nonfrivolous petition requesting an extension of stay is properly filed pursuant to 8 CFR 214.2 and 8 CFR 103.2(a) requesting the same classification that the nonimmigrant alien currently holds. Pursuant to 8 CFR 214.2(h)(2)(i)(I), such alien is authorized

to start new employment upon the proper filing of the nonfrivolous petition requesting an extension of stay in the same classification, or as of the requested start date, whichever is later. The employment authorization under this paragraph (b)(21) automatically ceases upon the adjudication or

withdrawal of the H-2A or H-2B petition;

Defense Federal Acquisition Regulation Supplement: Small Business Innovation Research Program Data Rights (DFARS Case 2019–D043)

AGENCY: Defense Acquisition Regulations System, Department of Defense (DoD).

ACTION: Final rule.

SUMMARY: DoD is issuing a final rule amending the Defense Federal Acquisition Regulation Supplement (DFARS) to implement the data rights portions of the Small Business Innovation Research Program and Small Business Technology Transfer Program Policy Directives.

DATES: Effective January 17, 2025.

FOR FURTHER INFORMATION CONTACT: Mr. David Johnson, telephone 202–913–5764.

SUPPLEMENTARY INFORMATION:**I. Background**

DoD published a proposed rule in the *Federal Register* at 87 FR 77680 on December 19, 2022, to implement in the DFARS the intellectual property (e.g., data rights) portions of the Small Business Administration's (SBA's) revised Small Business Innovation Research (SBIR) Program and Small Business Technology Transfer (STTR) Program Policy Directive. DoD had previously published an advance notice of proposed rulemaking (ANPR) at 85 FR 53758 on August 31, 2020. Six respondents submitted written public comments in response to the proposed rule.

II. Discussion and Analysis

DoD reviewed the public comments submitted in writing and discussed by the attendees at the virtual public meetings on February 2, 2023, and March 2, 2023, in the development of the final rule. A discussion of the comments and the changes made to the rule as a result of those comments is provided, as follows:

A. Summary of Significant Changes From the Proposed Rule

Based on the comments received, the following DFARS guidance, contract

clauses, and solicitation provisions are revised:

- DFARS 227.7104–1 is revised to further explain the scope of SBIR/STTR Phase III work to which the SBIR/STTR data rights clauses apply.
- DFARS 227.7104–2 is revised to provide a list of applicable clauses and policies that govern the Government's license rights in any data that are not SBIR/STTR data.
- The following provision and clauses are revised to ensure consistent definitions of the term “SBIR/STTR data” and the term “generated”: DFARS 252.227–7013, Rights in Technical Data—Other Than Commercial Products or Commercial Services; 252.227–7014, Rights in Other Than Commercial Computer Software and Other Than Commercial Computer Software Documentation; 252.227–7017, Identification and Assertion of Use, Release, or Disclosure Restrictions; and 252.227–7018, Rights in Other Than Commercial Technical Data and Computer Software—Small Business Innovation Research Program and Small Business Technology Transfer Program.
- DFARS 252.227–7018(c)(2)(ii)(B) is revised to remove language that may have been misinterpreted to imply that special licenses may be negotiated prior to contract award when the standard license rights are SBIR/STTR data rights.
- The provision at DFARS 252.227–7040, Additional Preaward Requirements for Small Business Technology Transfer Program, and the clause at DFARS 252.227–7041, Additional Postaward Requirements for Small Business Technology Transfer Program, are revised to clarify STTR program requirements regarding consistency between the clause at DFARS 252.227–7018 and written agreements between the offeror and a research institution, and regarding written representations related to the written agreements in preaward submissions and postaward updates.
- Proposed changes to the marking requirements related to restrictions on third-party recipients of technical data and computer software (in the clauses at DFARS 252.227–7013, 252.227–7014, and 252.227–7018) have been removed from this rule. Proposed changes regarding restrictive markings on technical data related to commercial technology in the clause at DFARS 252.227–7015, Technical Data—Commercial Products and Commercial Services, have also been removed from this rule.

*B. Analysis of Public Comments***1. Restrictive Marking Requirements**

Comment: Several respondents provided comments and recommended revisions to proposed changes to restrictive marking requirements in DFARS 252.227–7013, 252.227–7014, 252.227–7015, and 252.227–7018.

Response: As discussed in the ANPR, DoD proposed revisions to address the SBIR/STTR Policy Directive's emphasis on requiring restrictive markings for SBIR/STTR data, while ensuring appropriate procedures to address the inadvertent omission of restrictive markings by SBIR/STTR contractors. These issues are addressed by clarifying that the long-standing requirements for identification and marking of deliverable other than commercial technical data and software, including the procedures to address inadvertent omission of restrictive markings, apply to SBIR/STTR data. For example, this final rule adds references to the clause at DFARS 252.227–7018 at DFARS 227.7103–10 and 227.7103–12 for other than commercial technical data and DFARS 227.7203–10 and 227.7203–12 for other than commercial computer software; and incorporating such procedures into all associated clauses at DFARS 252.227–7013, 252.227–7014, and 252.227–7018).

As discussed in the proposed rule, DoD proposed further revisions to address additional related matters regarding the absence of restrictive markings (e.g., the lack of an unlimited rights marking), and to address additional public comments and recent case precedent regarding requirements, restrictions, and procedures for correcting nonconforming markings, in cases of commercial markings and markings directed to non-Government, third-party recipients of marked data. The vast majority of the public comments were directed to complex matters related to these additional markings issues, rather than the more limited markings topics addressed in the SBIR/STTR Policy Directive. To expedite implementation of the primary SBIR/STTR policy elements of this DFARS case while enabling further consideration of comments and recommendations from the public on proposed revisions directed to such additional important marking requirements in these clauses, these regulatory changes related to marking requirements have been removed from this final rule (e.g., unlimited rights markings, markings for commercial technical data, and markings directed to third-party recipients).

2. Scope and Applicability of Clauses and Scope of License Rights

a. Applicability Section of the Clauses

Comment: Several respondents recommended removal or revision of the proposed applicability sections in the data rights clauses. A respondent asserted that proposed applicability sections of the clauses should indicate that the SBIR/STTR clauses are no longer applicable to SBIR/STTR data once the related product becomes commercial. Other respondents recommended revisions to the proposed applicability sections to remove applicability of DFARS 252.227–7013 to portions of a commercial item that was developed in any part at Government expense. Lastly, other respondents recommended moving the applicability sections to a later section of the clauses to reduce the administrative burden on contractors resulting from changes in paragraph numbering in restrictive markings.

Response: In view of DFARS drafting conventions, DoD added applicability sections to paragraph (b) of the clauses and the associated guidance to contracting officers to clarify contractors' and contracting officers' understanding of the scope of DFARS 252.227–7013, 252.227–7014, 252.227–7015, and 252.227–7018. These revisions reflect the existing prescriptive guidance found in DFARS 227.7102–4, 227.7104, and the SBIR/STTR Policy Directive, none of which exclude or limit the applicability of the SBIR/STTR program requirements once the related product becomes commercial. These revisions will ensure proper application of the SBIR/STTR data rights clause, as prescribed in the SBIR/STTR Policy Directive, and other clauses. For this reason, DoD has not adopted the respondents' recommendations for removal or revision of the applicability sections.

b. Guidance on Scope of SBIR/STTR Contracts, Including Phase III Work

Comment: One respondent asserted that part 227 should be revised to define the scope of SBIR/STTR contracts by referencing the definition in the SBIR/STTR Policy Directive. Another respondent recommended clarifying the scope of Phase III work.

Response: DoD has partially adopted these recommendations. Based on guidance from the SBIR/STTR Policy Directive, DFARS 227.7104–1 is revised to further clarify the scope of applicability of SBIR/STTR data rights and the scope of SBIR/STTR Phase III work.

c. Guidance on the SBIR Protection Period

Comment: A respondent recommended providing guidance on how the SBIR protection period applies to multiple awards at various SBIR phases.

Response: DFARS 227.7104–2(a)(2) provides the guidance recommended by the respondent. In addition, DFARS Procedures, Guidance, and Information 227.7104–2 provides examples and guidance on how the SBIR or SBIR/STTR protection period applies in each example.

d. Guidance on Applicability of Commercial Computer Software Licenses

Comment: A respondent recommended revising DFARS 227.7104–4 to discuss the applicability of commercial computer software licenses.

Response: DoD has adopted this recommendation. DFARS 227.7104–2 is revised to provide a list of applicable clauses and policies that govern the Government's license rights in any data that are not SBIR/STTR data. DFARS 227.7104–2 references commercial computer software and the applicability of licenses customarily provided to the public, in accordance with DFARS 227.7202–3.

e. New STTR Provision and Clause

Comment: A respondent recommended edits to DFARS 252.227–7040 and DFARS 252.227–7041 regarding potential conflicts with DFARS 252.227–7018 in the STTR agreements and associated representation.

Response: DoD has adopted this recommendation. DFARS 252.227–7040 and DFARS 252.227–7041 are revised to clarify requirements for written agreements between the offeror and a research institution, preaward submissions, and postaward updates.

f. Consistent Inclusion of Definitions in the Clauses

Comment: A respondent asserted that DFARS 252.227–7013, 252.227–7014, 252.227–7017, and 252.227–7018 should consistently include definitions of the term “SBIR/STTR” data and “generated” when referenced in the clauses. In addition, a respondent asserted that the definition of the term “generated” in the clause at DFARS 252.227–7013 should not reference computer software.

Response: DFARS 252.227–7013, 252.227–7014, 252.227–7017, and 252.227–7018 are revised to ensure consistent inclusion of the definitions of

the terms “SBIR/STTR data” and “generated.” However, DoD has not adopted the second recommendation. For the sake of consistency, the definition of the term “generated” is the same in both DFARS 252.227–7013 and 252.227–7014.

g. License Rights in Computer Software Documentation Under DFARS 252.227–7018

Comment: A respondent asserted that computer software documentation should not be a separate category of unlimited rights data in paragraph (c)(1) of DFARS 252.227–7018. The respondent asserted that the edits to DFARS 252.227–7018 expand the scope of the Government's license rights in computer software documentation.

Response: Under both DFARS 252.227–7014 and DFARS 252.227–7018, the Government has an unlimited rights license in computer software documentation. The edits to DFARS 252.227–7018(c)(1) do not expand the scope of the Government's existing license rights in computer software documentation. For the sake of clarity, these edits align the format of the “unlimited rights” license grant in DFARS 252.227–7014 with DFARS 252.227–7018. The Government's unlimited rights license in computer software documentation is based in the requirements of 10 U.S.C. 3771(b)(3) (see 60 FR 33464, 33467 (June 28, 1995)). The statute at 10 U.S.C. 3771 provides an unlimited rights license in technical data necessary for operation, maintenance, installation, or training purposes. Computer software documentation is technical data. It is defined narrowly to include only owner's manuals, user's manuals, installation instructions, operating instructions, and similar items that explain the capabilities of computer software or provide instructions for using the software. Such data are necessary for operation, maintenance, installation, or training. Consequently, under 10 U.S.C. 3771, a contractor may not restrict the Government's rights to release or disclose computer software documentation or to permit others to use the data. Accordingly, these revisions to DFARS 252.227–7018(c) are aligned with the Government's license rights to computer software documentation in 10 U.S.C. 3771 and DFARS 252.227–7014.

h. Assertion Requirements

Comment: Several respondents commented that the identification and assertion requirements in DFARS 252.227–7017 should not be applied to SBIR/STTR data. Another respondent

recommended that this provision should include permission for SBIR contractors to add new assertions after contract award.

Response: The assertion requirements are necessary to identify and protect the intellectual property interests of contractors and subcontractors under SBIR/STTR contracts, because they provide a practical document that specifically identifies deliverable technical data and software to be furnished with restrictions. These procedures help ensure appropriate protections for deliverable technical data and software, and these protections should be equally applicable to SBIR/STTR data. In addition, these procedures will help clarify the protection period(s) applicable to deliverable SBIR/STTR data (e.g., see discussion at section II.2.c. of this preamble). In addition, DFARS 252.227–7018 already permits post-award revisions to the assertions table “when based on new information or inadvertent omissions unless the inadvertent omissions would have materially affected the source selection decision.” For these reasons, DoD has not adopted the respondent’s recommendations.

3. Evaluation of Proposals and Post-Award Negotiations of SBIR/STTR Data Rights

a. Evaluation of Proposals in SBIR/STTR Contracts

Comment: Respondents asserted that the revisions to DFARS 227.7104–1(c) are inconsistent with the SBIR/STTR Policy Directive because they imply that the Government may reject a proposal due to SBIR data rights. A respondent asserted that the effect of this language will be inconsistent with the intent of the SBIR/STTR Policy Directive and may result in violations of the Directive.

Response: The rule revises DFARS 227.7104–1 to mirror the policies at DFARS 227.7103–10(a)(5) and DFARS 227.7203–10(a)(5), and it adds cross-references at DFARS 227.7104–1 to policies at DFARS 227.7103–10 and DFARS 227.7203–10. These instructions expressly prohibit contracting officers from requiring offerors to relinquish SBIR/STTR data rights or from rejecting offerors solely due to SBIR/STTR data rights restrictions. The guidance also indicates that, during the source selection process, the Government may evaluate the impact of restrictions on the Government’s ability to use or disclose technical data or computer software in a manner consistent with acquisition preferences and other

guidance applicable to SBIR/STTR offerors.

b. Negotiation in SBIR/STTR Contracts

Comment: A respondent recommended revisions to DFARS 252.227–7018(c)(2)(ii)(B). The respondent asserted that the proposed rule may be misinterpreted to imply that special licenses may be negotiated prior to contract award where the standard license rights are SBIR/STTR data rights.

Response: DFARS 252.227–7018(c)(2)(ii)(B) is revised to remove this language. In addition, DFARS 227.7104–2(c) is added to indicate that the Government and the SBIR/STTR contractor or subcontractor may negotiate special license rights only after contract award. Note that DFARS Case 2018–D071, Negotiation of Price for Technical Data and Preference for Specially Negotiated Licenses, addresses proposed DFARS revisions to implement policies and procedures regarding negotiation of special licenses, including applicable SBIR/STTR policies and procedures.

4. Guidance in the SBIR/STTR Policy Directive Outside of the Scope of Part 227

a. Restrictions on Prototypes

Comment: Some respondents recommended applying the marking requirements to prototypes, end items, or products themselves.

Response: The ANPR, proposed rule, and this final rule recognize and reference the SBIR/STTR Policy Directive guidance on prototypes in DFARS 227.7104–2(c). Because the license rights and marking requirements prescribed in DFARS Part 227 apply only to technical data and computer software rather than hardware, DoD has not adopted the respondents’ recommended revision to Part 227 and the associated clauses.

b. Guidance From SBIR/STTR Policy Directive Not Related to Data Rights

Comment: Respondents recommended revising part 227 to include guidance from the SBIR/STTR Policy Directive that is not related to data rights, including guidance on agency notices of intent to award, SBA notices of intent to appeal, SBA appeals, suspensions of work, and sole-source awards.

Response: The respondents’ recommendations are not related to license rights to technical data or software. Therefore, they are beyond the scope of part 227 and this rule.

C. Other Changes

Editorial changes were made, including updates to comport with DFARS content and formatting conventions. The rule also adds cross-references at DFARS 227.7104–1 for SBIR/STTR technical data and software to the policies at DFARS 227.7103–9 through 227.7103–12 and 227.7203–9 through 227.7203–12 related to other than commercial technical data and other than commercial computer software. These policies have also been revised to clarify their applicability to SBIR/STTR data.

III. Applicability to Contracts at or Below the Simplified Acquisition Threshold, for Commercial Products (Including Commercially Available Off-the-Shelf Items), and for Commercial Services

The rule clarifies the following DFARS solicitation provision and contract clauses to reflect the objectives of the SBIR/STTR Policy Directive: 252.227–7013, Rights in Technical Data—Other Than Commercial Products and Commercial Services; 252.227–7014, Rights in Other Than Commercial Computer Software and Other Than Commercial Computer Software Documentation; 252.227–7015, Technical Data—Commercial Products and Commercial Services; 252.227–7016, Rights in Bid or Proposal Information; 252.227–7017, Identification and Assertion of Use, Release, or Disclosure Restrictions; 252.227–7018, Rights in Other Than Commercial Technical Data and Computer Software—Small Business Innovation Research Program and Small Business Technology Transfer Program; and 252.227–7025, Limitation on the Use or Disclosure of Government-Furnished Information Marked with Restrictive Legends.

DFARS clauses 252.227–7013, 252.227–7015, and 252.227–7037 will continue to apply to contracts at or below the SAT and for the acquisition of commercial products, including COTS items, and commercial services. In addition, DFARS 252.227–7018 applies to contracts at or below the SAT and for the acquisition of commercial products, including COTS items, and commercial services.

This rule also creates a new provision and a new clause: (1) DFARS 252.227–7040, Additional Preaward Requirements for Small Business Technology Transfer Program, and (2) DFARS 252.227–7041, Additional Postaward Requirements for Small Business Technology Transfer Program. The new provision and clause apply to

acquisitions at or below the SAT and to acquisitions of commercial products, including COTS items, and commercial services. Not applying this provision and clause to contracts at or below the SAT and for the acquisition of commercial products, including COTS items, and commercial services would exclude contracts intended to be covered by this rule and undermine the overarching purpose of the rule. Consequently, the rule applies to contracts at or below the SAT and for the acquisition of commercial products, including COTS items, and commercial services.

IV. Expected Impact of the Rule

The SBIR/STTR Policy Directive updates the SBIR/STTR data protection period to a single, non-extendable 20-year period, rather than an extendable 5-year period. The rule also provides the Government with perpetual government purpose rights license after the expiration of the SBIR/STTR data protection period, rather than unlimited rights. In addition, the rule implements STTR-unique requirements in the SBIR/STTR Policy Directive related to allocation of intellectual property rights between partnering institutions and contractors under the STTR program. The rule removes an alternate clause for DFARS 252.227–7018, which previously allowed the Government to elect not to exercise its right to publish or authorize others to publish SBIR data.

This rule therefore impacts the Government's license rights in SBIR/STTR data. The SBIR/STTR Policy Directive emphasizes the need to protect the intellectual property interests of small businesses. This rule provides a transparent and consistent framework that protects the intellectual property interests of our small-business industry partners.

V. Executive Order 12866 and 13563

Executive Orders (E.O.s) 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). E.O. 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. This is not a significant regulatory action and, therefore, was not subject to review under section 6(b) of E.O. 12866, Regulatory Planning and Review, as amended.

VI. Congressional Review Act

As required by the Congressional Review Act (5 U.S.C. 801–808) before an interim or final rule takes effect, DoD will submit a copy of the interim or final rule with the form, Submission of Federal Rules Under the Congressional Review Act, to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States. A major rule under the Congressional Review Act cannot take effect until 60 days after it is published in the **Federal Register**. The Office of Information and Regulatory Affairs has determined that this rule is not a major rule as defined by 5 U.S.C. 804.

VII. Regulatory Flexibility Act

A final regulatory flexibility analysis has been prepared consistent with the Regulatory Flexibility Act, 5 U.S.C. 601, *et seq.* and is summarized as follows:

DoD is amending the DFARS to implement the data-rights portions of the revised SBA Small Business Innovation Research (SBIR) Program and Small Business Technology Transfer (STTR) Program Policy Directive. The final combined SBA SBIR/STTR Policy Directive became effective on May 2, 2019. The objectives of this rule are to implement the data-rights portions of the SBA SBIR/STTR Policy Directive. Accordingly, the rule provides the following:

- A single, non-extendable, 20-year SBIR/STTR data protection period, rather than a 5-year period that can be extended indefinitely;
- Perpetual government purpose rights license rights after the expiration of the SBIR/STTR data protection period, rather than unlimited rights; and
- Definitions that harmonize terminology used in the Policy Directive and the Federal Acquisition Regulation and DFARS implementations.

The rule provides a new DFARS solicitation provision and a contract clause applicable to STTR awards where no such coverage has existed. Further, the rule updates the following DFARS provision and clauses: 252.227–7013, Rights in Technical Data—Other Than Commercial Products and Commercial Services; 252.227–7014, Rights in Other Than Commercial Computer Software and Other Than Commercial Computer Software Documentation; 252.227–7015, Technical Data—Commercial Products and Commercial Services; 252.227–7016, Rights in Bid or Proposal Information; 252.227–7017, Identification and Assertion of Use, Release, or Disclosure Restrictions; 252.227–7018, Rights in Other Than Commercial Technical Data and

Computer Software—Small Business Innovation Research Program and Small Business Technology Transfer Program; 252.227–7019, Validation of Asserted Restrictions—Computer Software; and 252.227–7025, Limitations on the Use or Disclosure of Government-Furnished Information Marked with Restrictive Legends.

The SBIR/STTR Policy Directive emphasizes the need to protect the intellectual property interests of small businesses. The rule provides a transparent and consistent framework that protects the intellectual property interests of our small-business industry partners.

DoD received no comments in response to the initial regulatory flexibility analysis.

This rule will apply to small entities that have contracts with DoD requiring delivery of data, including technical data and computer software. Based on data from Electronic Data Access for fiscal year (FY) 2022 through FY 2024, DoD estimates that 3,341 contractors may be impacted by the changes in this final rule. Of those entities, approximately 3,258 (98 percent) are small entities.

This rule imposes new reporting, recordkeeping, or other compliance requirements for small entities participating in the STTR program. This rule adds a requirement for offerors responding to solicitations under the STTR program to submit, to be eligible for award, both a written agreement and a written representation to the contracting officer for review. Further, the rule requires STTR contractors to submit both an updated written agreement and an updated written representation to the contracting officer as occasioned by postaward modifications of the written agreement. Based on data from SBA for FY 2022 through FY 2024, DoD estimates that an average of 618 unique small entities are awarded an average of 359 STTR contract actions on an annual basis. DoD estimates that senior employees are necessary to prepare the written agreement and written representation because of the complexity of the matter, and the written representation requires execution by an employee authorized to bind the company.

There are no known, significant, alternative approaches that would meet the requirements.

VIII. Paperwork Reduction Act

This final rule contains information collection requirements that have been approved by the Office of Management and Budget (OMB) under the Paperwork Reduction Act (44 U.S.C. chapter 35).

This information collection requirement has been assigned OMB Control Number 0750-0010, Defense Federal Acquisition Regulation Supplement Part 227, Patents, Data, and Copyrights; Small Business Technology Transfer Program.

List of Subjects in 48 CFR Parts 212, 227, and 252

Government procurement.

Jennifer D. Johnson,

Editor/Publisher, Defense Acquisition Regulations System.

Therefore, the Defense Acquisition Regulations System amends 48 CFR parts 212, 227, and 252 as follows:

■ 1. The authority citation for 48 CFR parts 212, 227, and 252 continues to read as follows:

Authority: 41 U.S.C. 1303 and 48 CFR chapter 1.

PART 212—ACQUISITION OF COMMERCIAL PRODUCTS AND COMMERCIAL SERVICES

■ 2. Amend section 212.301 by revising paragraph (f)(xii) to read as follows:

212.301 Solicitation provisions and contract clauses for the acquisition of commercial products and commercial services.

* * * * *

(f) * * *

(xii) *Part 227—Patents, Data, and Copyrights.* (A) Use the clause at 252.227-7013, Rights in Technical Data—Other Than Commercial Products and Commercial Services, as prescribed in 227.7102-4(b) and 227.7103-6(a). Use the clause with its Alternate I as prescribed in 227.7103-6(b)(1). Use the clause with its Alternate II as prescribed in 227.7103-6(b)(2), to comply with 10 U.S.C. 8687 and 17 U.S.C. 1301, *et seq.*

(B) Use the clause at 252.227-7015, Technical Data—Commercial Products and Commercial Services, as prescribed in 227.7102-4(a)(1), to comply with 10 U.S.C. 3772(a). Use the clause with its Alternate I as prescribed in 227.7102-4(a)(2), to comply with 10 U.S.C. 8687 and 17 U.S.C. 1301, *et seq.*

(C) Use the clause at 252.227-7018, Rights in Other Than Commercial Technical Data and Computer Software—Small Business Innovation Research Program and Small Business Technology Transfer Program, as prescribed in 227.7104-4(a)(1).

(D) Use the clause at 252.227-7037, Validation of Restrictive Markings on Technical Data, as prescribed in 227.7102-4(c).

(E) Use the provision at 252.227-7040, Additional Preaward Requirements for Small Business

Technology Transfer Program, as prescribed in 227.7104-4(c)(1).

(F) Use the clause at 252.227-7041, Additional Postaward Requirements for Small Business Technology Transfer Program, as prescribed in 227.7104-4(c)(2).

* * * * *

PART 227—PATENTS, DATA, AND COPYRIGHTS

■ 3. Amend section 227.7103-5—

■ a. In paragraph (b)(4) introductory text, by removing “government may” and adding “Government may” in its place;

■ b. In paragraph (b)(4)(i), by removing “non-disclosure” and adding “nondisclosure” in its place;

■ c. By revising paragraphs (b)(5) and (6) and (c)(4).

The revisions read as follows:

227.7103-5 Government rights.

* * * * *

(b) * * *

(5) When technical data marked with government purpose rights legends will be released or disclosed to a Government contractor performing a contract that does not include the clause at 252.227-7025, the contract may be modified, prior to release or disclosure, to include that clause in lieu of requiring the contractor to complete a use and nondisclosure agreement.

(6) Contracting activities shall establish procedures to assure that technical data marked with government purpose rights legends are released or disclosed, including a release or disclosure through a Government solicitation, only to persons subject to the use and nondisclosure restrictions. Public announcements in the System for Award Management or other publications must provide notice of the use and nondisclosure requirements. Class use and nondisclosure agreements (e.g., agreements covering all solicitations received by the XYZ company within a reasonable period) are authorized and may be obtained at any time prior to release or disclosure of the government purpose rights data. Documents transmitting government purpose rights data to persons under class agreements shall identify the technical data subject to government purpose rights and the class agreement under which such data are provided.

(c) * * *

(4) When the person asserting limited rights permits the Government to release, disclose, or have others use the data subject to restrictions on further use, release, or disclosure, or for a release under paragraph (c)(2)(i), (ii), or

(iii) of this section, the intended recipient must complete the use and nondisclosure agreement at 227.7103-7, or receive the data for performance of a Government contract that contains the clause at 252.227-7025, Limitations on the Use or Disclosure of Government-Furnished Information Marked with Restrictive Legends, prior to release or disclosure of the limited rights data.

* * * * *

■ 4. Amend section 227.7103-6 in paragraph (a) by revising the second sentence and adding a new third sentence to read as follows:

227.7103-6 Contract clauses.

(a) * * * Do not use the clause when the only deliverable items are computer software or computer software documentation (see 227.72), commercial products or commercial services developed exclusively at private expense (see 227.7102-4), existing works (see 227.7105), or special works (see 227.7106). When contracting under the Small Business Innovation Research (SBIR) Program or the Small Business Technology Transfer (STTR) Program, see 227.7104-4(a). * * *

* * * * *

■ 5. Amend section 227.7103-7—

■ a. By revising the section heading and paragraph (a);

■ b. In paragraph (b) and paragraph (c) introductory text, by removing “non-disclosure” and adding “nondisclosure” in its place;

■ e. In the agreement “Use and Non-Disclosure Agreement”, by revising the agreement heading, paragraphs (1) and (5) of the agreement, and the parenthetical clause at the end of the agreement.

The revisions read as follows:

227.7103-7 Use and nondisclosure agreement.

(a) Except as provided in paragraph (b) of this section, technical data or computer software delivered to the Government with restrictions on use, modification, reproduction, release, performance, display, or disclosure may not be provided to third parties, unless the intended recipient completes and signs the use and nondisclosure agreement at paragraph (c) of this section prior to release or disclosure of the data.

(1) The specific conditions under which an intended recipient will be authorized to use, modify, reproduce, release, perform, display, or disclose technical data subject to limited rights or SBIR/STTR data rights, or computer software subject to restricted rights or SBIR/STTR data rights must be

stipulated in an attachment to the use and nondisclosure agreement.

(2) For an intended release, disclosure, or authorized use of technical data or computer software subject to special license rights, modify paragraph (1)(d) of the use and nondisclosure agreement in paragraph (c) of this section to enter the conditions, consistent with the license requirements, governing the recipient's obligations regarding use, modification, reproduction, release, performance, display, or disclosure of the data or software.

* * * * *

Use and Nondisclosure Agreement

* * * * *

(1) The Recipient shall—

(a) Use, modify, reproduce, release, perform, display, or disclose Data marked with government purpose rights or SBIR/STTR data rights legends (after expiration of the SBIR/STTR data protection period provided in the SBIR/STTR data rights legend) only for government purposes and shall not do so for any commercial purpose. The Recipient shall not release, perform, display, or disclose these Data, without the express written permission of the contractor whose name appears in the restrictive legend (the “Contractor”), to any person other than its subcontractors or suppliers, or prospective subcontractors or suppliers, who require these Data to submit offers for, or perform, contracts with the Recipient. The Recipient shall require its subcontractors or suppliers, or prospective subcontractors or suppliers, to sign a use and nondisclosure agreement prior to disclosing or releasing these Data to such persons. Such agreement must be consistent with the terms of this agreement.

(b) Use, modify, reproduce, release, perform, display, or disclose technical data marked with limited rights legends or SBIR/STTR data rights legends only as specified in the attachment to this Agreement. Release, performance, display, or disclosure to other persons is not authorized unless specified in the attachment to this Agreement or expressly permitted in writing by the Contractor. The Recipient shall promptly notify the Contractor of the execution of this Agreement and identify the Contractor's Data that has been or will be provided to the Recipient, the date and place the Data were or will be received, and the name and address of the Government office that has provided or will provide the Data.

(c) Use computer software marked with restricted rights or SBIR/STTR data

rights legends only in performance of Contract Number ____ [*insert contract number(s)*]. The recipient shall not, for example, enhance, decompile, disassemble, or reverse engineer the software; time share, or use a computer program with more than one computer at a time. The recipient may not release, perform, display, or disclose such software to others unless expressly permitted in writing by the licensor whose name appears in the restrictive legend. The Recipient shall promptly notify the software licensor of the execution of this Agreement and identify the software that has been or will be provided to the Recipient, the date and place the software were or will be received, and the name and address of the Government office that has provided or will provide the software.

(d) Use, modify, reproduce, release, perform, display, or disclose Data marked with special license rights legends. [*To be completed by the contracting officer. See 227.7103–7(a)(2). Omit if none of the data requested is marked with special license rights legends.*]

* * * * *

(5) The Recipient agrees to indemnify and hold harmless the Government, its agents, and employees from every claim or liability, including attorneys' fees, court costs, and expenses arising out of, or in any way related to, the misuse or unauthorized modification, reproduction, release, performance, display, or disclosure of Data received from the Government with restrictive legends by the Recipient or any person to whom the Recipient has released or disclosed the Data.

* * * * *

(End of use and nondisclosure agreement)

■ 6. Revise section 227.7103–9 to read as follows:

227.7103–9 Copyright.

(a) *Copyright license.* (1) The clauses at 252.227–7013, Rights in Technical Data—Other Than Commercial Products and Commercial Services, and 252.227–7018, Rights in Other Than Commercial Technical Data and Computer Software—Small Business Innovation Research Program and Small Business Technology Transfer Program, require a contractor to grant or obtain for the Government license rights which permit the Government to reproduce data, distribute copies of the data, publicly perform or display the data or, through the right to modify data, prepare derivative works. The extent to which the Government, and others acting on its behalf, may exercise these rights varies

for each of the standard data rights licenses obtained under the clauses. When non-standard license rights in technical data will be negotiated, negotiate the extent of the copyright license concurrent with negotiations for the data rights license. Do not negotiate a copyright license that provides less rights than the standard limited rights license in technical data.

(2) The clauses at 252.227–7013 and 252.227–7018 do not permit a contractor to incorporate a third party's copyrighted data into a deliverable data item unless the contractor has obtained an appropriate license for the Government and, when applicable, others acting on the Government's behalf, or has obtained the contracting officer's written approval to do so. Grant approval to use third-party copyrighted data in which the Government will not receive a copyright license only when the Government's requirements cannot be satisfied without the third-party material or when the use of the third-party material will result in cost savings to the Government which outweigh the lack of a copyright license.

(b) *Copyright considerations—acquisition of existing and special works.* See 227.7105 or 227.7106 for copyright considerations when acquiring existing or special works that are not SBIR/STTR data.

■ 7. Amend section 227.7103–10—

■ a. In paragraph (a)(3), by revising the third sentence;

■ b. By revising paragraphs (a)(5) and (b);

■ c. In paragraph (c)(1), by removing “subsection” and adding “section” in its place;

■ d. In paragraph (c)(2) introductory text, by removing “six months” and adding “6 months” in its place; and

■ e. In paragraph (c)(2)(ii), by removing “clause at 252.227–7013” and adding “clauses at 252.227–7013 and 252.227–7018” in its place.

The revisions read as follows:

227.7103–10 Contractor identification and marking of technical data to be furnished with restrictive markings.

(a) * * *

(3) * * * Subsequent to contract award, the clauses at 252.227–7013, Rights in Technical Data—Other Than Commercial Products and Commercial Services, and 252.227–7018, Rights in Other Than Commercial Technical Data and Computer Software—Small Business Innovation Research Program and Small Business Technology Transfer Program, permit the contractor to make additional assertions under certain conditions. * * *

* * * * *

(5) Information provided by offerors in response to the solicitation provision may be used in the source selection process to evaluate the impact on evaluation factors that may be created by restrictions on the Government's ability to use or disclose technical data. However, contracting officers shall not—

(i) Prohibit offerors from offering products for which the offeror is entitled to provide the technical data with restrictions; or

(ii) Require offerors, either as a condition of being responsive to a solicitation or as a condition for award, to sell or otherwise relinquish rights in technical data except for the standard rights specified in the applicable clauses.

(b) *Contractor marking requirements.* The clauses at 252.227–7013, Rights in Technical Data—Other Than Commercial Products and Commercial Services, and 252.227–7018, Rights in Other Than Commercial Technical Data and Computer Software—Small Business Innovation Research Program and Small Business Technology Transfer Program—

(1) Require a contractor that desires to restrict the Government's rights in technical data to place restrictive markings on the data, provide instructions for the placement of the restrictive markings, and authorize the use of certain restrictive markings; and

(2) Require a contractor to deliver, furnish, or otherwise provide to the Government any technical data in which the Government has previously obtained rights with the Government's preexisting rights in that data unless the parties have agreed otherwise or restrictions on the Government's rights to use, modify, reproduce, release, perform, display, or disclose the data have expired. When restrictions are still applicable, the contractor is permitted to mark the data with the appropriate restrictive legend for which the data qualified.

* * * * *

■ 8. Amend section 227.7103–11—

■ a. By revising paragraph (a); and
■ b. In paragraph (b), by removing “Technical Data requires” and adding “Technical Data, requires” in its place. The revision reads as follows:

227.7103–11 Contractor procedures and records.

(a) The clauses at 252.227–7013, Rights in Technical Data—Other Than Commercial Products and Commercial Services, and 252.227–7018, Rights in Other Than Commercial Technical Data and Computer Software—Small Business Innovation Research Program

and Small Business Technology Transfer Program, require a contractor, and its subcontractors or suppliers that will deliver technical data with other than unlimited rights, to establish and follow written procedures to assure that restrictive markings are used only when authorized and to maintain records to justify the validity of asserted restrictions on delivered data.

* * * * *

■ 9. Amend section 227.7103–12 by revising paragraph (a)(1) to read as follows:

227.7103–12 Government right to establish conformity of markings.

(a) * * *

(1) Authorized markings are identified in the clauses at 252.227–7013, Rights in Technical Data—Other Than Commercial Products and Commercial Services, and 252.227–7018, Rights in Other Than Commercial Technical Data and Computer Software—Small Business Innovation Research Program and Small Business Technology Transfer Program. All other markings are nonconforming markings. An authorized marking that is not in the form, or differs in substance, from the marking requirements in the clauses at 252.227–7013 and 252.227–7018 is also a nonconforming marking.

* * * * *

227.7103–16 [Amended]

■ 10. Amend section 227.7103–16 in paragraph (b) by removing “non-disclosure” and adding “nondisclosure” in its place.

■ 11. Revise section 227.7104 to read as follows:

227.7104 Contracts under the Small Business Innovation Research Program and Small Business Technology Transfer Program.

■ 12. Add sections 227.7104–1, 227.7104–2, 227.7104–3, and 227.7104–4 to read as follows:

* * * * *

Sec.

227.7104–1 Policy.
227.7104–2 Rights in SBIR or STTR data.
227.7104–3 STTR program requirements.
227.7104–4 Solicitation provisions and contract clauses.

* * * * *

227.7104–1 Policy.

(a) Do not require an offeror, either as a condition of being responsive to a solicitation or as a condition for award, to sell or otherwise relinquish to the Government any rights in technical data related to items, components, or processes developed under a SBIR/STTR contract or any rights in computer

software generated under a SBIR/STTR contract except for the standard rights identified at 227.7104–2.

(b) Do not prohibit contractors and offerors from furnishing or offering to furnish items, components, or processes developed under a SBIR/STTR contract or computer software generated under a SBIR/STTR contract solely because the Government's rights to use, modify, release, reproduce, perform, display, or disclose such computer software or technical data pertaining to those items, components, or processes may be restricted.

(c) Consistent with the guidance in this section, 227.7103–10(a)(5), 227.7203–10(a)(5), and other acquisition guidance applicable to SBIR/STTR solicitations, the Government may use information provided by offerors in response to a solicitation in the source selection process to evaluate the impact of proposed restrictions on the Government's ability to use or disclose technical data or computer software.

(d) SBIR/STTR data rights apply to SBIR/STTR data that are delivered, developed, or generated in the performance of a contract or agreement that is covered by SBIR/STTR policies, including contracts and subcontracts that include phase III work. Phase III work refers to work that derives from, extends, or completes an effort made under prior SBIR/STTR contracts or agreements, and is funded by sources other than SBIR/STTR programs (see PGI 227.7104–1).

(e) For SBIR/STTR data that is other than commercial technical data, and other than commercial computer software and computer software documentation, see—

(1) 227.7103–9 and 227.7203–9 for guidance on copyright licenses;

(2) 227.7103–10 and 227.7203–10 for guidance on contractor identification and marking of technical data and computer software to be furnished with restrictive markings;

(3) 227.7103–11 and 227.7203–11 for guidance on maintenance of contractor records; and

(4) 227.7103–12 and 227.7203–12 for guidance on nonconforming and unjustified markings.

227.7104–2 Rights in SBIR or STTR data.

(a) Under the clause at 252.227–7018, Rights in Other Than Commercial Technical Data and Computer Software—Small Business Innovation Research Program and Small Business Technology Transfer Program, the Government obtains the following standard license rights:

(1) Unlimited rights in the technical data and computer software listed in paragraph (c)(1) of the clause.

(2) SBIR/STTR data rights in all other technical data and computer software developed or generated under the phase I, II, or III SBIR/STTR contract or subcontract and marked with the SBIR/STTR data rights marking. SBIR/STTR data rights provide the Government limited rights in such technical data and restricted rights in such computer software during the SBIR/STTR data protection period commencing on the date of contract award and ending 20 years after that date unless, after award, the agency and the contractor negotiate for some other protection period for the SBIR/STTR data. Upon expiration of the SBIR/STTR data protection period, the Government has government purpose rights in the SBIR/STTR data. These government purpose rights do not expire. See 252.227–7018 for the definition of the SBIR/STTR data protection period and PGI 227.7104–2 for additional guidance on the SBIR/STTR data protection period.

(b) During the SBIR/STTR data protection period, the Government may not release or disclose technical data or computer software that is subject to SBIR/STTR data rights to any person except as authorized for limited rights technical data or restricted rights computer software, respectively.

(c) The Government and contractor or subcontractor may negotiate special license rights only after contract award. The Government shall not make contract award conditional on the contractor or subcontractor negotiating or consenting to negotiate special license rights. Negotiation of special license rights is authorized only after contract award by mutual agreement of the parties.

(d) The Small Business Administration's SBIR and STTR Program Policy Directive (effective May 3, 2023) provides for special consideration regarding the handling (e.g., disclosure, reverse engineering) of prototypes generated under SBIR and STTR awards, to avoid effects that may appear to be inconsistent with the SBIR and STTR program objectives and to allow the SBIR/STTR awardee to retain rights in SBIR/STTR data during the SBIR/STTR data protection period.

(e) The clause at 252.227–7018 governs the Government's license rights in SBIR/STTR data. However, the following clauses or guidance governs the Government's license rights in any data that are not SBIR/STTR data:

(1) For technical data pertaining to other than commercial products or commercial services or to any portion of

a commercial product or commercial service that was developed in any part at Government expense, the clause at 252.227–7013, Rights in Technical Data—Other Than Commercial Products and Commercial Services, governs such technical data in accordance with 227.7102–4(b).

(2) For technical data pertaining to any portion of a commercial product or commercial service that was developed exclusively at private expense, the clause at 252.227–7015, Technical Data—Commercial Products and Commercial Services, governs such technical data, in accordance with 227.7102–4(b).

(3) For other than commercial computer software or computer software documentation, the clause at 252.227–7014, Rights in Other Than Commercial Computer Software and Other Than Commercial Computer Software Documentation, governs such software and computer software documentation, in accordance with 227.7203–6(a)(1).

(4) For commercial computer software and computer software documentation, the license customarily provided to the public governs such software and documentation, in accordance with 227.7202–3.

227.7104–3 STTR program requirements.

(a) Before award of a contract under the STTR program requirements only, the provision at 252.227–7040, Additional Preaward Requirements for Small Business Technology Transfer Program, requires offerors to submit, as part of their proposal, a written agreement between the offeror and a research institution that allocates any rights in intellectual property and the offeror's written representation that the offeror is satisfied with the agreement. The contracting officer shall review the agreement to ensure it does not conflict with the requirements of the solicitation or any right to carry out follow-on research. If such conflicts exist and cannot be resolved, the submitted proposal is not eligible for award.

(b) At contract award for STTR program requirements, in accordance with the clause at 252.227–7041, Additional Postaward Requirements for Small Business Technology Transfer Program, the contracting officer shall attach to the contract the accepted written agreement and representation provided by the contractor pursuant to the provision at 252.227–7040.

(c) After contract award, for any modification to the written agreement between the contractor and research institution, the contracting officer shall review the agreement and representation to ensure the modified

agreement adheres to the requirements of 252.227–7041. If acceptable, the contracting officer shall attach the modified agreement to the contract.

227.7104–4 Solicitation provisions and contract clauses.

(a)(1) Use the clause at 252.227–7018, Rights in Other Than Commercial Technical Data and Computer Software—Small Business Innovation Research Program and Small Business Technology Transfer Program, in solicitations and contracts, including solicitations and contracts using FAR part 12 procedures for the acquisition of commercial products and commercial services, when SBIR/STTR data are delivered, developed, or generated during contract performance, and when any portion of contract performance is governed by SBIR or STTR policies (e.g., performance of one or more subcontracts qualifies as a phase III SBIR or STTR award). See 227.7104–1(d) for guidance on contracts or subcontracts governed by SBIR or STTR policies.

(2) For the remainder of the technical data or computer software that is delivered, developed, or generated under the contract, use the following clauses as applicable, in accordance with the prescriptions for those clauses:

(i) 252.227–7013, Rights in Technical Data—Other Than Commercial Products and Commercial Services.

(ii) 252.227–7014, Rights in Other Than Commercial Computer Software and Other Than Commercial Computer Software Documentation.

(iii) 252.227–7015, Technical Data—Commercial Products and Commercial Services.

(b) Use the following provision in solicitations and the following clauses in solicitations and contracts that include the clause at 252.227–7018, in accordance with the prescriptions for the provision and clauses:

(1) 252.227–7016, Rights in Bid or Proposal Information.

(2) 252.227–7017, Identification and Assertion of Use, Release, or Disclosure Restrictions.

(3) 252.227–7019, Validation of Asserted Restrictions—Computer Software.

(4) 252.227–7025, Limitations on the Use or Disclosure of Government-Furnished Information Marked with Restrictive Legends.

(5) 252.227–7028, Technical Data or Computer Software Previously Delivered to the Government.

(6) 252.227–7030, Technical Data—Withholding of Payment.

(7) 252.227–7037, Validation of Restrictive Markings on Technical Data

(paragraph (e) of the clause contains information that must be included in a challenge).

(c)(1) Use the provision at 252.227–7040, Additional Preaward Requirements for Small Business Technology Transfer Program, in solicitations that contain the clause at 252.227–7041.

(2) Use the clause at 252.227–7041, Additional Postaward Requirements for Small Business Technology Transfer Program, in solicitations and contracts, including solicitations and contracts using FAR part 12 procedures for the acquisition of commercial products and commercial services, for acquisitions under the STTR program.

227.7108 [Amended]

■ 13. Amend section 227.7108 in paragraph (a)(5) by removing “non-disclosure” and adding “nondisclosure” in its place.

■ 14. Amend section 227.7203–5—

■ a. In paragraph (b)(5), by removing “non-disclosure” and adding “nondisclosure” in its place; and

■ b. By revising paragraph (b)(6) to read as follows:

227.7203–5 Government rights.

* * * * *

(b) * * *

(6) Contracting activities shall establish procedures to assure that computer software or computer software documentation marked with government purpose rights legends are released or disclosed, including a release or disclosure through a Government solicitation, only to persons subject to the use and nondisclosure restrictions. Public announcements in the System for Award Management or other publications must provide notice of the use and nondisclosure requirements. Class use and non-disclosure agreements (e.g., agreements covering all solicitations received by the XYZ company within a reasonable period) are authorized and may be obtained at any time prior to release or disclosure of the government purpose rights software or documentation. Documents transmitting government purpose rights software or documentation to persons under class agreements shall identify the specific software or documentation subject to government purpose rights and the class agreement under which such software or documentation are provided.

* * * * *

■ 15. Amend section 227.7203–6 by revising the section heading to read as follows:

227.7203–6 Solicitation provisions and contract clauses.

* * * * *

■ 16. Amend section 227.7203–9—

■ a. In paragraph (a)(1), by revising the first sentence; and

■ b. By revising paragraphs (a)(2) and (b).

The revisions read as follows:

227.7203–9 Copyright.

(a) * * *

(1) The clauses at 252.227–7014, Rights in Other Than Commercial Computer Software and Other Than Commercial Computer Software Documentation, and 252.227–7018, Rights in Other Than Commercial Technical Data and Computer Software—Small Business Innovation Research Program and Small Business Technology Transfer Program, require a contractor to grant, or obtain for the Government license rights which permit the Government to reproduce the software or documentation, distribute copies, perform or display the software or documentation and, through the right to modify data, prepare derivative works. * * *

(2) The clauses at 252.227–7013, Rights in Technical Data—Other Than Commercial Products and Commercial Services, and 252.227–7018, Rights in Other Than Commercial Technical Data and Computer Software—Small Business Innovation Research Program and Small Business Technology Transfer Program, do not permit a contractor to incorporate a third party’s copyrighted software into a deliverable software item unless the contractor has obtained an appropriate license for the Government and, when applicable, others acting on the Government’s behalf, or has obtained the contracting officer’s written approval to do so. Grant approval to use third-party copyrighted software in which the Government will not receive a copyright license only when the Government’s requirements cannot be satisfied without the third-party material or when the use of the third-party material will result in cost savings to the Government which outweigh the lack of a copyright license.

(b) *Copyright considerations—special works.* See 227.7205 for copyright considerations when acquiring special works that are not SBIR/STTR data.

■ 17. Amend section 227.7203–10—

■ a. In paragraph (a)(3), by revising the third sentence;

■ b. By revising paragraphs (a)(5) and (b);

■ c. In paragraph (c)(1), by removing “subsection” and adding “section” in its place;

■ d. In paragraph (c)(2) introductory text, by removing “six months” and adding “6 months” in its place; and

■ e. In paragraph (c)(2)(ii), by removing “clause at 252.227–7014” and adding “clauses at 252.227–7014 and 252.227–7018” in its place.

The revisions read as follows:

227.7203–10 Contractor identification and marking of computer software or computer software documentation to be furnished with restrictive markings.

(a) * * *

(3) * * * Subsequent to contract award, the clauses at 252.227–7014, Rights in Other Than Commercial Computer Software and Other Than Commercial Computer Software Documentation, and 252.227–7018, Rights in Other Than Commercial Technical Data and Computer Software—Small Business Innovation Research Program and Small Business Technology Transfer Program, permit a contractor to make additional assertions under certain conditions. * * *

* * * * *

(5) Information provided by offerors in response to the solicitation provision at 252.227–7017 may be used in the source selection process to evaluate the impact on evaluation factors that may be created by restrictions on the Government’s ability to use or disclose computer software or computer software documentation. However, contracting officers shall not—

(i) Prohibit offerors from offering products for which the offeror is entitled to provide the computer software with restrictions; or

(ii) Require offerors, either as a condition of being responsive to a solicitation or as a condition for award, to sell or otherwise relinquish rights in computer software except for the standard rights specified in the applicable clauses.

(b) *Contractor marking requirements.* The clauses at 252.227–7014, Rights in Other Than Commercial Computer Software and Other Than Commercial Computer Software Documentation, and 252.227–7018, Rights in Other Than Commercial Technical Data and Computer Software—Small Business Innovation Research Program and Small Business Technology Transfer Program—

(1) Require a contractor who desires to restrict the Government’s rights in computer software or computer software documentation to place restrictive markings on the software or documentation, provide instructions for the placement of the restrictive markings, and authorize the use of certain restrictive markings. When it is

anticipated that the software will or may be used in combat or situations which simulate combat conditions, do not permit contractors to insert instructions into computer programs that interfere with or delay operation of the software to display a restrictive rights legend or other license notice; and

(2) Require a contractor to deliver, furnish, or otherwise provide to the Government any computer software or computer software documentation in which the Government has previously obtained rights with the Government's preexisting rights in that software or documentation unless the parties have agreed otherwise or restrictions on the Government's rights to use, modify, produce, release, or disclose the software or documentation have expired. When restrictions are still applicable, the contractor is permitted to mark the software or documentation with the appropriate restrictive legend.

* * * * *

■ 18. Amend section 227.7203–11 by revising paragraph (a) to read as follows:

227.7203–11 Contractor procedures and records.

(a) The clauses at 252.227–7014, Rights in Other Than Commercial Computer Software and Other Than Commercial Computer Software Documentation, and 252.227–7018, Rights in Other Than Commercial Technical Data and Computer Software—Small Business Innovation Research Program and Small Business Technology Transfer Program, require a contractor, and its subcontractors or suppliers that will deliver computer software or computer software documentation with other than unlimited rights, to establish and follow written procedures to assure that restrictive markings are used only when authorized and to maintain records to justify the validity of restrictive markings.

* * * * *

■ 19. Amend section 227.7203–12 by revising paragraph (a)(1) to read as follows:

227.7203–12 Government right to establish conformity of markings.

(a) * * *

(1) Authorized markings are identified in the clauses at 252.227–7014, Rights in Other Than Commercial Computer Software and Other Than Commercial Computer Software Documentation, and 252.227–7018, Rights in Other Than Commercial Technical Data and Computer Software—Small Business Innovation Research Program and Small Business Technology Transfer Program.

All other markings are nonconforming markings. An authorized marking that is not in the form, or differs in substance, from the marking requirements in the clauses at 252.227–7014 and 252.227–7018 is also a nonconforming marking.

* * * * *

PART 252—SOLICITATION PROVISIONS AND CONTRACT CLAUSES

■ 20. Amend section 252.227–7013—

■ a. By revising the introductory text and clause date;

■ b. By revising paragraph (a);

■ c. By redesignating paragraphs (b) through (k) as paragraphs (c) through (l), respectively;

■ d. By adding a new paragraph (b);

■ e. By revising newly redesignated paragraphs (c) introductory text, (c)(2), (c)(3)(i) and (iv), and (c)(4) through (c)(6);

■ f. In newly redesignated paragraph (e), by removing “paragraph (b)” and adding “paragraph (c)” in its place;

■ g. In newly redesignated paragraph (f)(2), by removing “(e)(3)” and adding “(f)(3)” in its place;

■ h. In newly redesignated paragraph (f)(3)—

■ i. By removing “Identification and Assertion of Restrictions on the Government's Use, Release, or Disclosure of Technical Data.”;

■ ii. By adding a heading to the table; and

■ iii. In note 3, by removing “SBIR” and adding “SBIR/STTR” in its place;

■ j. In newly redesignated paragraph (f)(4), by removing “of the Validation of Restrictive Markings on Technical Data” and adding “in the DFARS 252.227–7037, Validation of Restrictive Markings on Technical Data,” in its place;

■ k. By revising newly redesignated paragraph (g);

■ l. In newly redesignated paragraph (i)(1), by removing “Validation of Restrictive Markings on Technical Data” and adding “DFARS 252.227–7037, Validation of Restrictive Markings on Technical Data,” in its place;

■ m. By revising newly redesignated paragraph (i)(2);

■ n. In newly redesignated paragraph (k)(2), by removing “(j)(1)” and adding “(k)(1)” in its place;

■ o. By revising newly redesignated paragraph (l);

■ p. In alternate I—

■ i. By revising the clause date and the introductory text;

■ ii. By redesignating paragraph (l) as paragraph (m);

■ iii. In newly redesignated paragraph (m)(2), by removing “paragraph (l)” and “twenty-four (24)” and adding

“paragraph (m)” and “24” in their places, respectively;

■ q. In alternate II by—

■ i. Revising the clause date and the introductory text; and

■ ii. Redesignating paragraphs (a)(17) and (b)(7) as paragraphs (a) and (c)(7), respectively.

The revisions and additions read as follows:

252.227–7013 Rights in Technical Data—Other Than Commercial Products and Commercial Services.

As prescribed in 227.7102–4(b) and 227.7103–6(a), use the following clause:

Rights in Technical Data—Other Than Commercial Products or Commercial Services (JAN 2025)

(a) *Definitions.* As used in this clause—

Computer data base means a collection of data recorded in a form capable of being processed by a computer. The term does not include computer software.

Computer program means a set of instructions, rules, or routines recorded in a form that is capable of causing a computer to perform a specific operation or series of operations.

Computer software means computer programs, source code, source code listings, object code listings, design details, algorithms, processes, flow charts, formulae and related material that would enable the software to be reproduced, recreated, or recompiled. Computer software does not include computer data bases or computer software documentation.

Computer software documentation means owner's manuals, user's manuals, installation instructions, operating instructions, and other similar items, regardless of storage medium, that explain the capabilities of the computer software or provide instructions for using the software.

Covered Government support contractor means a contractor (other than a litigation support contractor covered by 252.204–7014) under a contract, the primary purpose of which is to furnish independent and impartial advice or technical assistance directly to the Government in support of the Government's management and oversight of a program or effort, rather than to directly furnish an end item or service to accomplish a program or effort, provided that the contractor—

(1) Is not affiliated with the prime contractor or a first-tier subcontractor on the program or effort, or with any direct competitor of such prime contractor or any such first-tier subcontractor in furnishing end items or services of the

type developed or produced on the program or effort; and

(2) Receives access to technical data or computer software for performance of a Government contract that contains the clause at 252.227–7025, Limitations on the Use or Disclosure of Government-Furnished Information Marked with Restrictive Legends.

Detailed manufacturing or process data means technical data that describe the steps, sequences, and conditions of manufacturing, processing or assembly used by the manufacturer to produce an item or component or to perform a process.

Developed means that an item, component, or process exists and is workable. Thus, the item or component must have been constructed or the process practiced. Workability is generally established when the item, component, or process has been analyzed or tested sufficiently to demonstrate to reasonable people skilled in the applicable art that there is a high probability that it will operate as intended. Whether, how much, and what type of analysis or testing is required to establish workability depends on the nature of the item, component, or process, and the state of the art. To be considered “developed,” the item, component, or process need not be at the stage where it could be offered for sale or sold on the commercial market, nor must the item, component, or process be actually reduced to practice within the meaning of Title 35 of the United States Code.

Developed exclusively at private expense means development was accomplished entirely with costs charged to indirect cost pools, costs not allocated to a Government contract, or any combination thereof.

(1) Private expense determinations should be made at the lowest practicable level.

(2) Under fixed-price contracts, when total costs are greater than the firm-fixed-price or ceiling price of the contract, the additional development costs necessary to complete development shall not be considered when determining whether development was at Government, private, or mixed expense.

Developed exclusively with Government funds means development was not accomplished exclusively or partially at private expense.

Developed with mixed funding means development was accomplished partially with costs charged to indirect cost pools and/or costs not allocated to a government contract, and partially with costs charged directly to a government contract.

Form, fit, and function data means technical data that describe the required overall physical, functional, and performance characteristics (along with the qualification requirements, if applicable) of an item, component, or process to the extent necessary to permit identification of physically and functionally interchangeable items.

Generated means, with regard to technical data or computer software, first created in the performance of this contract.

Government purpose means any activity in which the United States Government is a party, including cooperative agreements with international or multi-national defense organizations, or sales or transfers by the United States Government to foreign governments or international organizations. Government purposes include competitive procurement, but do not include the rights to use, modify, reproduce, release, perform, display, or disclose technical data for commercial purposes or authorize others to do so.

Government purpose rights means the rights to—

(1) Use, modify, reproduce, release, perform, display, or disclose technical data within the Government without restriction; and

(2) Release or disclose technical data outside the Government and authorize persons to whom release or disclosure has been made to use, modify, reproduce, release, perform, display, or disclose that data for United States Government purposes.

Limited rights means the rights to use, modify, reproduce, release, perform, display, or disclose technical data, in whole or in part, within the Government. The Government may not, without the written permission of the party asserting limited rights, release or disclose the technical data outside the Government, use the technical data for manufacture, or authorize the technical data to be used by another party, except that the Government may reproduce, release, or disclose such data or authorize the use or reproduction of the data by persons outside the Government if—

(1) The reproduction, release, disclosure, or use is—

(i) Necessary for emergency repair and overhaul; or

(ii) A release or disclosure to—

(A) A covered Government support contractor in performance of its covered Government support contract for use, modification, reproduction, performance, display, or release or disclosure to a person authorized to receive limited rights technical data; or

(B) A foreign government, of technical data other than detailed manufacturing or process data, when use of such data by the foreign government is in the interest of the Government and is required for evaluational or informational purposes;

(2) The recipient of the technical data is subject to a prohibition on the further reproduction, release, disclosure, or use of the technical data; and

(3) The contractor or subcontractor asserting the restriction is notified of such reproduction, release, disclosure, or use.

Small Business Innovation Research/Small Business Technology Transfer (SBIR/STTR) data means all technical data or computer software developed or generated in the performance of a phase I, II, or III SBIR/STTR contract or subcontract.

Technical data means recorded information, regardless of the form or method of the recording, of a scientific or technical nature (including computer software documentation). The term does not include computer software or financial, administrative, cost or pricing, or management information, or information incidental to contract administration.

Unlimited rights means rights to use, modify, reproduce, perform, display, release, or disclose technical data in whole or in part, in any manner, and for any purpose whatsoever, and to have or authorize others to do so.

(b) *Applicability.* (1) Except as provided in paragraph (b)(2) of this clause—

(i) This clause governs all technical data pertaining to other than commercial products or commercial services or to any portion of a commercial product or commercial service that was developed in any part at Government expense; and

(ii) The clause at Defense Federal Acquisition Regulation Supplement (DFARS) 252.227–7015, Technical Data—Commercial Products and Commercial Services, governs the technical data pertaining to any portion of a commercial product or commercial service that was developed exclusively at private expense.

(2) The clause at DFARS 252.227–7018, Rights in Other Than Commercial Technical Data and Computer Software—Small Business Innovation Research Program and Small Business Technology Transfer Program, governs technical data that are SBIR/STTR data.

* * * * *

(c) *Rights in technical data.* The Contractor grants or shall obtain for the Government the following royalty free,

worldwide, nonexclusive, irrevocable license rights in technical data other than computer software documentation (see the DFARS 252.227-7014, Rights in Other Than Commercial Computer Software and Other Than Commercial Computer Software Documentation, clause of this contract for rights in computer software documentation):

* * * * *

(2) *Government purpose rights.* (i) The Government shall have government purpose rights for a 5-year period, or such other period as may be negotiated, in technical data—

(A) That pertain to items, components, or processes developed with mixed funding except when the Government is entitled to unlimited rights in such data as provided in paragraphs (c)(1)(ii) and (c)(1)(iv) through (c)(1)(ix) of this clause; or

(B) Created with mixed funding in the performance of a contract that does not require the development, manufacture, construction, or production of items, components, or processes.

(ii) The 5-year period, or such other period as may have been negotiated, shall commence upon execution of the contract, subcontract, letter contract (or similar contractual instrument), contract modification, or option exercise that required development of the items, components, or processes or creation of the data described in paragraph (c)(2)(i)(B) of this clause. Upon expiration of the 5-year or other negotiated period, the Government shall have unlimited rights in the technical data.

(iii) The Government shall not release or disclose technical data in which it has government purpose rights unless—

(A) Prior to release or disclosure, the intended recipient is subject to the nondisclosure agreement at DFARS 227.7103-7; or

(B) The recipient is a Government contractor receiving access to the data for performance of a Government contract that contains the clause at DFARS 252.227-7025, Limitations on the Use or Disclosure of Government-Furnished Information Marked with Restrictive Legends.

(iv) The Contractor has the exclusive right, including the right to license others, to use technical data in which the Government has obtained government purpose rights under this contract for any commercial purpose during the time period specified in the government purpose rights legend prescribed in paragraph (g)(3) of this clause.

* * * * *

(3) * * *

(i) Except as provided in paragraphs (c)(1)(ii) and (c)(1)(iv) through (c)(1)(ix) of this clause, the Government shall have limited rights in technical data—

(A) Pertaining to items, components, or processes developed exclusively at private expense and marked with the limited rights legend prescribed in paragraph (g) of this clause; or

(B) Created exclusively at private expense in the performance of a contract that does not require the development, manufacture, construction, or production of items, components, or processes.

* * * * *

(iv) The Contractor acknowledges that—

(A) Limited rights data are authorized to be released or disclosed to covered Government support contractors;

(B) The Contractor will be notified of such release or disclosure;

(C) The Contractor (or the party asserting restrictions as identified in the limited rights legend) may require each such covered Government support contractor to enter into a nondisclosure agreement directly with the Contractor (or the party asserting restrictions) regarding the covered Government support contractor's use of such data, or alternatively, that the Contractor (or party asserting restrictions) may waive in writing the requirement for a nondisclosure agreement; and

(D) Any such nondisclosure agreement shall address the restrictions on the covered Government support contractor's use of the limited rights data as set forth in the clause at DFARS 252.227-7025, Limitations on the Use or Disclosure of Government-Furnished Information Marked with Restrictive Legends. The nondisclosure agreement shall not include any additional terms and conditions unless mutually agreed to by the parties to the nondisclosure agreement.

(4) *Specifically negotiated license rights.* The standard license rights granted to the Government under paragraphs (c)(1) through (c)(3) of this clause, including the period during which the Government shall have government purpose rights in technical data, may be modified by mutual agreement to provide such rights as the parties consider appropriate but shall not provide the Government lesser rights than are enumerated in the definition of "limited rights" of this clause. Any rights so negotiated shall be identified in a license agreement made part of this contract.

(5) *Prior government rights.* Technical data that will be delivered, furnished, or otherwise provided to the Government

under this contract, in which the Government has previously obtained rights shall be delivered, furnished, or provided with the preexisting rights, unless—

(i) The parties have agreed otherwise; or

(ii) Any restrictions on the Government's rights to use, modify, reproduce, release, perform, display, or disclose the data have expired or no longer apply.

(6) *Release from liability.* The Contractor agrees to release the Government from liability for any release or disclosure of technical data made in accordance with the definition of "limited rights" or paragraph (c)(2)(iii) of this clause, in accordance with the terms of a license negotiated under paragraph (c)(4) of this clause, or by others to whom the recipient has released or disclosed the data and to seek relief solely from the party who has improperly used, modified, reproduced, released, performed, displayed, or disclosed Contractor data marked with restrictive legends.

* * * * *

(f) * * *
(3) * * *

Identification and Assertion of Restrictions on the Government's Use, Release, or Disclosure of Technical Data

* * * * *

(g) *Marking requirements.* The Contractor, and its subcontractors or suppliers, may only assert restrictions on the Government's rights to use, modify, reproduce, release, perform, display, or disclose technical data to be delivered under this contract by marking the deliverable data subject to restriction. Except as provided in paragraph (g)(6) of this clause, only the following legends are authorized under this contract: the government purpose rights legend at paragraph (g)(3) of this clause; the limited rights legend at paragraph (g)(4) of this clause; the special license rights legend at paragraph (g)(5) of this clause; and a notice of copyright as prescribed under 17 U.S.C. 401 or 402.

(1) *General marking instructions.* The Contractor, or its subcontractors or suppliers, shall conspicuously and legibly mark the appropriate legend on all technical data that qualify for such markings. The authorized legends shall be placed on the transmittal document or storage container and, for printed material, each page of the printed material containing technical data for which restrictions are asserted. When only portions of a page of printed material are subject to the asserted

restrictions, such portions shall be identified by circling, underscoring, with a note, or other appropriate identifier. Technical data transmitted directly from one computer or computer terminal to another shall contain a notice of asserted restrictions. Reproductions of technical data or any portions thereof subject to asserted restrictions shall also reproduce the asserted restrictions.

(2) *Omitted markings.* (i) Technical data delivered or otherwise provided under this contract without restrictive markings will be presumed to have been delivered with unlimited rights. To the extent practicable, if the Contractor has requested permission (see paragraph (g)(2)(ii) of this clause) to correct an inadvertent omission of markings, the Contracting Officer will not release or disclose the technical data pending evaluation of the request.

(ii) The Contractor may request permission to have conforming and justified restrictive markings placed on unmarked technical data at its expense. The request must be received by the Contracting Officer within 6 months following the furnishing or delivery of such technical data, or any extension of that time approved by the Contracting Officer. The Contractor shall—

(A) Identify the technical data that should have been marked;

(B) Demonstrate that the omission of the marking was inadvertent, the proposed marking is justified and conforms with the requirements for the marking of technical data contained in this clause; and

(C) Acknowledge, in writing, that the Government has no liability with respect to any disclosure, reproduction, or use of the technical data made prior to the addition of the marking or resulting from the omission of the marking.

(3) *Government purpose rights markings.* Data delivered or otherwise furnished to the Government with government purpose rights shall be marked as follows:

Government Purpose Rights

Contract Number _____
Contractor Name _____
Contractor Address _____
Expiration Date _____

The Government's rights to use, modify, reproduce, release, perform, display, or disclose these technical data are restricted by paragraph (c)(2) of the DFARS 252.227–7013, Rights in Technical Data—Other Than Commercial Products or Commercial Services, clause contained in the above identified contract. No restrictions apply after the expiration date shown

above. Any reproduction of technical data or portions thereof marked with this legend must also reproduce the markings.

(End of legend)

(4) *Limited rights markings.* Data delivered or otherwise furnished to the Government with limited rights shall be marked as follows:

Limited Rights

Contract Number _____
Contractor Name _____
Contractor Address _____

The Government's rights to use, modify, reproduce, release, perform, display, or disclose these technical data are restricted by paragraph (c)(3) of the DFARS 252.227–7013, Rights in Technical Data—Other Than Commercial Products or Commercial Services, clause contained in the above identified contract. Any reproduction of technical data or portions thereof marked with this legend must also reproduce the markings. Any person, other than the Government, who has been provided access to such data must promptly notify the above named Contractor.

(End of legend)

(5) *Special license rights markings.* (i) Data in which the Government's rights stem from a specifically negotiated license shall be marked as follows:

Special License Rights

The Government's rights to use, modify, reproduce, release, perform, display, or disclose these data are restricted by Contract Number [Insert contract number], License Number [Insert license identifier]. Any reproduction of technical data or portions thereof marked with this legend must also reproduce the markings.

(End of legend)

(ii) For purposes of this clause, special licenses do not include government purpose license rights acquired under a prior contract (see paragraph (c)(5) of this clause).

(6) *Preexisting data markings.* If the terms of a prior contract or license permitted the Contractor to restrict the Government's rights to use, modify, reproduce, release, perform, display, or disclose technical data deliverable under this contract, and those restrictions are still applicable, the Contractor may mark such data with the appropriate restrictive legend for which the data qualified under the prior contract or license. The Contractor shall

follow the marking procedures in paragraph (g)(1) of this clause.

* * * * *

(i) * * *
(2) *Nonconforming technical data markings.* A nonconforming marking is a marking placed on technical data delivered or otherwise furnished to the Government under this contract that is not in the format authorized by this contract. Correction of nonconforming markings is not subject to the DFARS 252.227–7037, Validation of Restrictive Markings on Technical Data, clause of this contract. If the Contracting Officer notifies the Contractor of a nonconforming marking and the Contractor fails to remove or correct such marking within 60 days, the Government may ignore or, at the Contractor's expense, remove or correct any nonconforming marking.

* * * * *

(l) *Subcontractors or suppliers.* (1) The Contractor shall ensure that the rights afforded its subcontractors and suppliers under 10 U.S.C. 3771–3775, 10 U.S.C. 3781–3786, 15 U.S.C. 638(j)(1)(B)(iii) and (v), and the identification, assertion, and delivery processes of paragraph (f) of this clause are recognized and protected.

(2) Whenever any technical data for other than commercial products or commercial services, or for commercial products or commercial services developed in any part at Government expense, are to be obtained from a subcontractor or supplier for delivery to the Government under this contract, the Contractor shall use the following clauses in the subcontract or other contractual instrument, including subcontracts or other contractual instruments for commercial products or commercial services, and require its subcontractors or suppliers to do so, without alteration, except to identify the parties;

(i)(A) Except as provided in paragraph (l)(2)(ii) of this clause, use this clause to govern the technical data pertaining to other than commercial products and commercial services or to any portion of a commercial product or commercial service that was developed in any part at Government expense.

(B) Use the clause at DFARS 252.227–7015, Technical Data—Commercial Products and Commercial Services, to govern the technical data pertaining to any portion of a commercial product or commercial service that was developed exclusively at private expense.

(ii) Use the clause at DFARS 252.227–7018, Rights in Other Than Commercial Technical Data and Computer Software—Small Business Innovation

Research Program and Small Business Technology Transfer Program, to govern technical data that are SBIR/STTR data.

(3) No other clause shall be used to enlarge or diminish the Government's, the Contractor's, or a higher-tier subcontractor's or supplier's rights in a subcontractor's or supplier's technical data.

(4) Technical data required to be delivered by a subcontractor or supplier shall normally be delivered to the next higher-tier contractor, subcontractor, or supplier. However, when there is a requirement in the prime contract for data which may be submitted with other than unlimited rights by a subcontractor or supplier, then said subcontractor or supplier may fulfill its requirement by submitting such data directly to the Government, rather than through a higher-tier contractor, subcontractor, or supplier.

(5) The Contractor and higher-tier subcontractors or suppliers shall not use their power to award contracts as economic leverage to obtain rights in technical data from their subcontractors or suppliers.

(6) In no event shall the Contractor use its obligation to recognize and protect subcontractor or supplier rights in technical data as an excuse for failing to satisfy its contractual obligations to the Government.

* * * * *

Alternate I (JAN 2025). As prescribed in 227.7103–6(b)(1), add the following paragraph (m) to the basic clause:

* * * * *

Alternate II (JAN 2025). As prescribed in 227.7103–6(b)(2), add the following definition of “Vessel design” in alphabetical order to paragraph (a) and add paragraph (c)(7) to the basic clause:

* * * * *

■ 21. Amend section 252.227–7014—

- a. By revising the clause date and paragraph (a);
- b. By redesignating paragraphs (b) through (k) as paragraphs (c) through (l), respectively;
- c. By adding a new paragraph (b);
- d. By revising newly redesignated paragraphs (c)(2), (c)(3), (c)(4)(i), (c)(5) introductory text, and (c)(6);
- e. In newly redesignated paragraph (e) introductory text, by removing “paragraph (b)” and adding “paragraph (c)” in its place;
- f. In newly redesignated paragraph (f)(2), by removing “paragraph (e)(3)” and adding “paragraph (f)(3)” in its place;
- g. In newly redesignated paragraph (f)(3)—
- i. By removing “Identification and Assertion of Restrictions on the

Government's Use, Release, or Disclosure of Technical Data.”;

- ii. By revising newly redesignated paragraph (f)(3) table;
- h. In newly redesignated paragraph (f)(4), by removing “of the Validation of Asserted Restrictions—Computer Software” and adding “in the DFARS 252.227–7019, Validation of Asserted Restrictions—Computer Software,” in its place;
- i. By revising newly redesignated paragraph (g);
- j. By revising newly redesignated paragraph (i);
- k. In newly redesignated paragraph (k)(2), by removing “(j)(1)” and adding “(k)(1)” in its place;
- l. By revising newly redesignated paragraph (l);
- m. In alternate I—
- i. By revising the clause date and the introductory text;
- ii. By redesignating paragraph (l) as paragraph (m); and
- iii. In newly redesignated paragraph (m)(2), by removing “paragraph (l)” and “twenty-four (24)” and adding “paragraph (m)” and “24” in their places, respectively.

The revisions and additions read as follows:

252.227–7014 Rights in Other Than Commercial Computer Software and Other Than Commercial Computer Software Documentation.

* * * * *

Rights in Other Than Commercial Computer Software and Other Than Commercial Computer Software Documentation (JAN 2025)

(a) *Definitions.* As used in this clause—

Commercial computer software means software developed or regularly used for nongovernmental purposes which—

- (1) Has been sold, leased, or licensed to the public;
- (2) Has been offered for sale, lease, or license to the public;
- (3) Has not been offered, sold, leased, or licensed to the public but will be available for commercial sale, lease, or license in time to satisfy the delivery requirements of this contract; or
- (4) Satisfies a criterion expressed in paragraph (1), (2), or (3) of this definition and would require only minor modification to meet the requirements of this contract.

Computer database means a collection of recorded data in a form capable of being processed by a computer. The term does not include computer software.

Computer program means a set of instructions, rules, or routines, recorded

in a form that is capable of causing a computer to perform a specific operation or series of operations.

Computer software means computer programs, source code, source code listings, object code listings, design details, algorithms, processes, flow charts, formulae, and related material that would enable the software to be reproduced, recreated, or recompiled. Computer software does not include computer databases or computer software documentation.

Computer software documentation means owner's manuals, user's manuals, installation instructions, operating instructions, and other similar items, regardless of storage medium, that explain the capabilities of the computer software or provide instructions for using the software.

Covered Government support contractor means a contractor (other than a litigation support contractor covered by 252.204–7014) under a contract, the primary purpose of which is to furnish independent and impartial advice or technical assistance directly to the Government in support of the Government's management and oversight of a program or effort (rather than to directly furnish an end item or service to accomplish a program or effort), provided that the contractor—

(1) Is not affiliated with the prime contractor or a first-tier subcontractor on the program or effort, or with any direct competitor of such prime contractor or any such first-tier subcontractor in furnishing end items or services of the type developed or produced on the program or effort; and

(2) Receives access to technical data or computer software for performance of a Government contract that contains the clause at 252.227–7025, Limitations on the Use or Disclosure of Government-Furnished Information Marked with Restrictive Legends.

Developed means that—

(1) A computer program has been successfully operated in a computer and tested to the extent sufficient to demonstrate to reasonable persons skilled in the art that the program can reasonably be expected to perform its intended purpose;

(2) Computer software, other than computer programs, has been tested or analyzed to the extent sufficient to demonstrate to reasonable persons skilled in the art that the software can reasonably be expected to perform its intended purpose; or

(3) Computer software documentation required to be delivered under a contract has been written, in any medium, in sufficient detail to comply with requirements under that contract.

Developed exclusively at private expense means development was accomplished entirely with costs charged to indirect cost pools, costs not allocated to a government contract, or any combination thereof.

(1) Private expense determinations should be made at the lowest practicable level.

(2) Under fixed-price contracts, when total costs are greater than the firm-fixed-price or ceiling price of the contract, the additional development costs necessary to complete development shall not be considered when determining whether development was at government, private, or mixed expense.

Developed exclusively with government funds means development was not accomplished exclusively or partially at private expense.

Developed with mixed funding means development was accomplished partially with costs charged to indirect cost pools and/or costs not allocated to a government contract, and partially with costs charged directly to a government contract.

Generated means, with regard to technical data or computer software, first created in the performance of this contract.

Government purpose means any activity in which the United States Government is a party, including cooperative agreements with international or multi-national defense organizations or sales or transfers by the United States Government to foreign governments or international organizations. Government purposes include competitive procurement, but do not include the rights to use, modify, reproduce, release, perform, display, or disclose computer software or computer software documentation for commercial purposes or authorize others to do so.

Government purpose rights means the rights to—

(1) Use, modify, reproduce, release, perform, display, or disclose computer software or computer software documentation within the Government without restriction; and

(2) Release or disclose computer software or computer software documentation outside the Government and authorize persons to whom release or disclosure has been made to use, modify, reproduce, release, perform, display, or disclose the software or documentation for United States government purposes.

Minor modification means a modification that does not significantly alter the nongovernmental function or purpose of the software or is of the type

customarily provided in the commercial marketplace.

Other than commercial computer software means software that does not qualify as commercial computer software under the definition of “commercial computer software” of this clause.

Restricted rights apply only to other than commercial computer software and mean the Government’s rights to—

(1) Use a computer program with one computer at one time. The program may not be accessed by more than one terminal or central processing unit or time shared unless otherwise permitted by this contract;

(2) Transfer a computer program to another Government agency without the further permission of the Contractor if the transferor destroys all copies of the program and related computer software documentation in its possession and notifies the licensor of the transfer. Transferred programs remain subject to the provisions of this clause;

(3) Make a reasonable number of copies of the computer software required for the purposes of safekeeping (archive), backup, modification, or other activities authorized in paragraphs (1), (2), and (4) through (7) of this definition;

(4) Modify computer software provided that the Government may—

(i) Use the modified software only as provided in paragraphs (1) and (3) of this definition; and

(ii) Not release or disclose the modified software except as provided in paragraphs (2), (5), (6), and (7) of this clause;

(5) Use, and permit contractors or subcontractors performing service contracts (see 37.101 of the Federal Acquisition Regulation) in support of this or a related contract to use, computer software to diagnose and correct deficiencies in a computer program, to modify computer software to enable a computer program to be combined with, adapted to, or merged with other computer programs or when necessary to respond to urgent tactical situations, provided that—

(i) The Government notifies the party which has granted restricted rights that any such release or disclosure to particular contractors or subcontractors was made;

(ii) Such contractors or subcontractors are subject to the use and nondisclosure agreement at 227.7103–7 of the Defense Federal Acquisition Regulation Supplement (DFARS) or are Government contractors receiving access to the software for performance of a Government contract that contains the clause at DFARS 252.227–7025, Limitations on the Use or Disclosure of

Government-Furnished Information Marked with Restrictive Legends;

(iii) The Government shall not permit the recipient to decompile, disassemble, or reverse engineer the software, or use software decompiled, disassembled, or reverse engineered by the Government pursuant to paragraph (4) of this definition, for any other purpose; and

(iv) Such use is subject to the limitations in paragraphs (1) through (3) of this definition;

(6) Use, and permit contractors or subcontractors performing emergency repairs or overhaul of items or components of items procured under this or a related contract to use, the computer software when necessary to perform or overhaul, or to modify the computer software to reflect the emergency repairs or overhaul made, provided that—

(i) The intended recipient is subject to the use and nondisclosure agreement at DFARS 227.7103–7 or is a Government contractor receiving access to the software for performance of a Government contract that contains the clause at DFARS 252.227–7025, Limitations on the Use or Disclosure of Government-Furnished Information Marked with Restrictive Legends;

(ii) The Government shall not permit the recipient to decompile, disassemble, or reverse engineer the software, or use software decompiled, disassembled, or reverse engineered by the Government pursuant to paragraph (4) of this definition, for any other purpose; and

(iii) Such use is subject to the limitations in paragraphs (1) through (3) of this definition; and

(7) Use, modify, reproduce, perform, display, or release or disclose computer software to a person authorized to receive restricted rights computer software for management and oversight of a program or effort, and permit covered Government support contractors in the performance of covered Government support contracts that contain the clause at 252.227–7025, Limitations on the Use or Disclosure of Government-Furnished Information Marked with Restrictive Legends, to use, modify, reproduce, perform, display, or release or disclose the computer software to a person authorized to receive restricted rights computer software, provided that—

(i) The Government shall not permit the covered Government support contractor to decompile, disassemble, or reverse engineer the software, or use software decompiled, disassembled, or reverse engineered by the Government pursuant to paragraph (4) of this definition, for any other purpose; and

(ii) Such use is subject to the limitations in paragraphs (1) through (4) of this definition.

Small Business Innovation Research/Small Business Technology Transfer (SBIR/STTR) data means all technical data or computer software developed or generated in the performance of a phase I, II, or III SBIR/STTR contract or subcontract.

Unlimited rights means rights to use, modify, reproduce, release, perform, display, or disclose computer software or computer software documentation in whole or in part, in any manner and for any purpose whatsoever, and to have or authorize others to do so.

(b) *Applicability.* This clause governs all other than commercial computer software or other than commercial computer software documentation, except that the clause at DFARS 252.227–7018, Rights in Other Than Commercial Technical Data and Computer Software—Small Business Innovation Research Program and Small Business Technology Transfer Program, governs any computer software or computer software documentation that is SBIR/STTR data.

(c) * * *

(2) *Government purpose rights.*

(i) Except as provided in paragraph (c)(1) of this clause, the Government shall have government purpose rights in computer software development with mixed funding.

(ii) Government purpose rights shall remain in effect for a period of 5 years unless a different period has been negotiated. Upon expiration of the 5-year or other negotiated period, the Government shall have unlimited rights in the computer software or computer software documentation. The government purpose rights period shall commence upon execution of the contract, subcontract, letter contract (or similar contractual instrument), contract modification, or option exercise that required development of the computer software.

(iii) The Government shall not release or disclose computer software in which it has government purpose rights to any other person unless—

(A) Prior to release or disclosure, the intended recipient is subject to the use and nondisclosure agreement at DFARS 227.7103–7; or

(B) The recipient is a Government contractor receiving access to the software or documentation for performance of a Government contract that contains the clause at DFARS

252.227–7025, Limitations on the Use or Disclosure of Government Furnished Information Marked with Restrictive Legends.

(3) *Restricted rights.* (i) The Government shall have restricted rights in other than commercial computer software required to be delivered or otherwise provided to the Government under this contract that were developed exclusively at private expense.

(ii) The Contractor, its subcontractors, or suppliers are not required to provide the Government additional rights in other than commercial computer software delivered or otherwise provided to the Government with restricted rights. However, if the Government desires to obtain additional rights in such software, the Contractor agrees to promptly enter into negotiations with the Contracting Officer to determine whether there are acceptable terms for transferring such rights. All other than commercial computer software in which the Contractor has granted the Government additional rights shall be listed or described in a license agreement made part of the contract (see paragraph (c)(4) of this clause). The license shall enumerate the additional rights granted the Government.

(iii) The Contractor acknowledges that—

(A) Restricted rights computer software is authorized to be released or disclosed to covered Government support contractors;

(B) The Contractor will be notified of such release or disclosure;

(C) The Contractor (or the party asserting restrictions, as identified in the restricted rights legend) may require each such covered Government support contractor to enter into a nondisclosure agreement directly with the Contractor (or the party asserting restrictions) regarding the covered Government support contractor's use of such software, or alternatively, that the Contractor (or party asserting restrictions) may waive in writing the requirement for a nondisclosure agreement; and

(D) Any such nondisclosure agreement shall address the restrictions on the covered Government support contractor's use of the restricted rights software as set forth in the clause at DFARS 252.227–7025, Limitations on the Use or Disclosure of Government-Furnished Information Marked with Restrictive Legends. The nondisclosure agreement shall not include any

additional terms and conditions unless mutually agreed to by the parties to the nondisclosure agreement.

(4) * * *

(i) The standard license rights granted to the Government under paragraphs (c)(1) through (3) of this clause, including the period during which the Government shall have government purpose rights in computer software, may be modified by mutual agreement to provide such rights as the parties consider appropriate but shall not provide the Government lesser rights in computer software than are enumerated in the definition of “restricted rights” of this clause, or lesser rights in computer software documentation than are enumerated in the definition of “limited rights” of the DFARS 252.227–7013, Rights in Technical Data—Other Than Commercial Products and Commercial Services, clause of this contract.

* * * * *

(5) *Prior government rights.* Computer software or computer software documentation that will be delivered, furnished, or otherwise provided to the Government under this contract, in which the Government has previously obtained rights shall be delivered, furnished, or provided with the preexisting rights, unless—

* * * * *

(6) *Release from liability.* The Contractor agrees to release the Government from liability for any release or disclosure of computer software made in accordance with the definition of “restricted rights” or paragraph (c)(2)(iii) of this clause, in accordance with the terms of a license negotiated under paragraph (c)(4) of this clause, or by others to whom the recipient has released or disclosed the software, and to seek relief solely from the party who has improperly used, modified, reproduced, released, performed, displayed, or disclosed Contractor software marked with restrictive legends.

* * * * *

(f) * * *

(3) * * *

Identification and Assertion of Restrictions on the Government's Use, Release, or Disclosure of Computer Software

The Contractor asserts for itself, or the persons identified below, that the Government's rights to use, release, or disclose the following computer software should be restricted:

Computer software to be furnished with restrictions ¹	Basis for assertion ²	Asserted rights category ³	Name of person asserting restrictions ⁴
(LIST)	(LIST)	(LIST)	(LIST)

¹ Generally, development at private expense, either exclusively or partially, is the only basis for asserting restrictions on the Government's rights to use, release, or disclose computer software.

² Indicate whether development was exclusively or partially at private expense. If development was not at private expense, enter the specific reason for asserting that the Government's rights should be restricted.

³ Enter asserted rights category (e.g., restricted or government purpose rights in computer software, government purpose license rights from a prior contract, rights in SBIR/STTR data generated under another contract, or specifically negotiated licenses).

⁴ Corporation, individual, or other person, as appropriate.

Date _____
Printed Name and Title _____
Signature _____

(End of identification and assertion)
* * * * *

(g) *Marking requirements.* The Contractor, and its subcontractors or suppliers, may only assert restrictions on the Government's rights to use, modify, reproduce, release, perform, display, or disclose computer software by marking the deliverable software or documentation subject to restriction. Except as provided in paragraph (g)(6) of this clause, only the following legends are authorized under this contract: the government purpose rights legend at paragraph (g)(3) of this clause; the restricted rights legend at paragraph (g)(4) of this clause; the special license rights legend at paragraph (g)(5) of this clause; and a notice of copyright as prescribed under 17 U.S.C. 401 or 402.

(1) *General marking instructions.* The Contractor, or its subcontractors or suppliers, shall conspicuously and legibly mark the appropriate legend on all computer software that qualify for such markings. The authorized legends shall be placed on the transmitted document or software storage container and each page, or portions thereof, of printed material containing computer software for which restrictions are asserted. Computer software transmitted directly from one computer or computer terminal to another shall contain a notice of asserted restrictions. However, instructions that interfere with or delay the operation of computer software in order to display a restrictive rights legend or other license statement at any time prior to or during use of the computer software, or otherwise cause such interference or delay, shall not be inserted in software that will or might be used in combat or situations that simulate combat conditions, unless the Contracting Officer's written permission to deliver such software has been obtained prior to delivery. Reproductions of computer software, or any portions thereof subject to asserted restrictions, shall also reproduce the asserted restrictions.

(2) *Omitted markings.* (i) Computer software or computer software documentation delivered or otherwise provided under this contract without restrictive markings will be presumed to have been delivered with unlimited rights. To the extent practicable, if the Contractor has requested permission (see paragraph (g)(2)(ii) of this clause) to correct an inadvertent omission of markings, the Contracting Officer will not release or disclose the software or documentation pending evaluation of the request.

(ii) The Contractor may request permission to have conforming and justified restrictive markings placed on unmarked computer software or computer software documentation at its expense. The request must be received by the Contracting Officer within 6 months following the furnishing or delivery of such software or documentation, or any extension of that time approved by the Contracting Officer. The Contractor shall—

(A) Identify the software or documentation that should have been marked;

(B) Demonstrate that the omission of the marking was inadvertent, the proposed marking is justified and conforms with the requirements for the marking of computer software or computer software documentation contained in this clause; and

(C) Acknowledge, in writing, that the Government has no liability with respect to any disclosure, reproduction, or use of the software or documentation made prior to the addition of the marking or resulting from the omission of the marking.

(3) *Government purpose rights markings.* Computer software delivered or otherwise furnished to the Government with government purpose rights shall be marked as follows:

Government Purpose Rights

Contract Number _____
Contractor Name _____
Contractor Address _____
Expiration Date _____

The Government's rights to use, modify, reproduce, release, perform, display, or disclose this software are

restricted by paragraph (c)(2) of the DFARS 252.227–7014, Rights in Other Than Commercial Computer Software and Other Than Commercial Computer Software Documentation, clause contained in the above identified contract. No restrictions apply after the expiration date shown above. Any reproduction of the software or portions thereof marked with this legend must also reproduce the markings.

(End of legend)

(4) *Restricted rights markings.* Software delivered or otherwise furnished to the Government with restricted rights shall be marked as follows:

Restricted Rights

Contract Number _____
Contractor Name _____
Contractor Address _____

The Government's rights to use, modify, reproduce, release, perform, display, or disclose this software are restricted by paragraph (c)(3) of the DFARS 252.227–7014, Rights in Other Than Commercial Computer Software and Other Than Commercial Computer Software Documentation, clause contained in the above identified contract. Any reproduction of computer software or portions thereof marked with this legend must also reproduce the markings. Any person, other than the Government, who has been provided access to such software must promptly notify the above named Contractor.

(End of legend)

(5) *Special license rights markings.* (i) Computer software or computer documentation in which the Government's rights stem from a specifically negotiated license shall be marked as follows:

Special License Rights

The Government's rights to use, modify, reproduce, release, perform, display, or disclose this software are restricted by Contract Number [Insert contract number], License Number [Insert license identifier]. Any reproduction of computer software, computer software documentation, or portions thereof marked with this

marking must also reproduce the markings.

(End of legend)

(ii) For purposes of this clause, special licenses do not include government purpose license rights acquired under a prior contract (see paragraph (c)(5) of this clause).

(6) *Preexisting markings.* If the terms of a prior contract or license permitted the Contractor to restrict the Government's rights to use, modify, release, perform, display, or disclose computer software or computer software documentation and those restrictions are still applicable, the Contractor may mark such software or documentation with the appropriate restrictive legend for which the software qualified under the prior contract or license. The Contractor shall follow the marking procedures in paragraph (g)(1) of this clause.

* * * * *

(i) *Removal of unjustified and nonconforming markings.* (1) *Unjustified computer software or computer software documentation markings.* The rights and obligations of the parties regarding the validation of restrictive markings on computer software or computer software documentation furnished or to be furnished under this contract are contained in the DFARS 252.227-7019, Validation of Asserted Restrictions—Computer Software, and the DFARS 252.227-7037, Validation of Restrictive Markings on Technical Data, clauses of this contract, respectively. Notwithstanding any provision of this contract concerning inspection and acceptance, the Government may ignore or, at the Contractor's expense, correct or strike a marking if, in accordance with the procedures of those clauses, a restrictive marking is determined to be unjustified.

(2) *Nonconforming computer software or computer software documentation markings.* A nonconforming marking is a marking placed on computer software or computer software documentation delivered or otherwise furnished to the Government under this contract that is not in the format authorized by this contract. Correction of nonconforming markings is not subject to the DFARS 252.227-7019, Validation of Asserted Restrictions—Computer Software, or the DFARS 252.227-7037, Validation of Restrictive Markings on Technical Data, clause of this contract. If the Contracting Officer notifies the Contractor of a nonconforming marking or markings and the Contractor fails to remove or correct such markings within 60 days, the Government may ignore or, at the

Contractor's expense, remove or correct any nonconforming markings.

* * * * *

(l) *Subcontractors or suppliers.* (1)(i) Except as provided in paragraph (l)(1)(ii) of this clause, whenever any other than commercial computer software or computer software documentation is to be obtained from a subcontractor or supplier for delivery to the Government under this contract, the Contractor shall use this clause in its subcontracts or other contractual instruments, and require its subcontractors or suppliers to do so, without alteration, except to identify the parties.

(ii) The Contractor shall use the clause at DFARS 252.227-7018, Rights in Other Than Commercial Technical Data and Computer Software—Small Business Innovation Research Program and Small Business Technology Transfer Program, to govern computer software or computer software documentation that is SBIR/STTR data.

(iii) No other clause shall be used to enlarge or diminish the Government's, the Contractor's, or a higher tier subcontractor's or supplier's rights in a subcontractor's or supplier's computer software or computer software documentation.

(2) The Contractor and higher tier subcontractors or suppliers shall not use their power to award contracts as economic leverage to obtain rights in computer software or computer software documentation from their subcontractors or suppliers.

(3) The Contractor shall ensure that subcontractor or supplier rights are recognized and protected in the identification, assertion, and delivery processes required by paragraph (f) of this clause.

(4) In no event shall the Contractor use its obligation to recognize and protect subcontractor or supplier rights in computer software or computer software documentation as an excuse for failing to satisfy its contractual obligation to the Government.

* * * * *

Alternate I (JAN 2025). As prescribed in 227.7203-6(a)(2), add the following paragraph (m) to the basic clause:

* * * * *

■ 22. Amend section 252.227-7015—

- a. By revising the clause date and paragraph (a);
- b. By redesignating paragraphs (b) through (e) as paragraphs (c) through (f), respectively;
- c. By adding a new paragraph (b);
- d. In newly redesignated paragraph (c)(2) introductory text, by removing

“paragraph (b)(1)” and adding “paragraph (c)(1)” in its place;

■ e. By revising newly redesignated paragraph (c)(3);

■ f. By revising newly redesignated paragraph (f);

■ g. In alternate I by—

■ i. Revising the clause date and the introductory text; and

■ ii. Redesignating paragraphs (a)(6) and (b)(4) as paragraphs (a) and (c)(4), respectively.

The revisions and addition read as follows:

252.227-7015 Technical Data—Commercial Products and Commercial Services.

* * * * *

Technical Data—Commercial Products and Commercial Services (JAN 2025)

(a) *Definitions.* As used in this clause—

Commercial product and commercial service includes commercial components and commercial processes but does not include commercial computer software.

Covered Government support contractor means a contractor (other than a litigation support contractor covered by 252.204-7014) under a contract, the primary purpose of which is to furnish independent and impartial advice or technical assistance directly to the Government in support of the Government's management and oversight of a program or effort (rather than to directly furnish an end item or service to accomplish a program or effort), provided that the contractor—

(1) Is not affiliated with the prime contractor or a first-tier subcontractor on the program or effort, or with any direct competitor of such prime contractor or any such first-tier subcontractor in furnishing end items or services of the type developed or produced on the program or effort; and

(2) Receives access to technical data or computer software for performance of a Government contract that contains the clause at 252.227-7025, Limitations on the Use or Disclosure of Government-Furnished Information Marked with Restrictive Legends.

Form, fit, and function data means technical data that describe the required overall physical, functional, and performance characteristics (along with the qualification requirements, if applicable) of an item, component, or process to the extent necessary to permit identification of physically and functionally interchangeable items.

Technical data means recorded information, regardless of the form or method of recording, of a scientific or

technical nature (including computer software documentation). The term does not include computer software or financial, administrative, cost or pricing, or management information, or information incidental to contract administration.

(b) *Applicability.* This clause governs the technical data pertaining to any portion of a commercial product or commercial service that was developed exclusively at private expense. If the commercial product or commercial service was developed in any part at Government expense—

(1) The clause at Defense Federal Acquisition Regulation Supplement (DFARS) 252.227–7018, Rights in Other Than Commercial Technical Data and Computer Software—Small Business Innovation Research Program and Small Business Technology Transfer Program, governs technical data that are generated during any portion of performance that is covered under the Small Business Innovation Research (SBIR) Program or Small Business Technology Transfer (STTR) Program; and

(2) The clause at DFARS 252.227–7013, Rights in Technical Data—Other Than Commercial Products and Commercial Services, governs the technical data pertaining to any portion of a commercial product or commercial service that was developed in any part at Government expense and is not covered under the SBIR or STTR program.

(c) * * *

(3) The Contractor acknowledges that—

(i) Technical data covered by paragraph (c)(2) of this clause are authorized to be released or disclosed to covered Government support contractors;

(ii) The Contractor will be notified of such release or disclosure;

(iii) The Contractor (or the party asserting restrictions as identified in a restrictive legend) may require each such covered Government support contractor to enter into a nondisclosure agreement directly with the Contractor (or the party asserting restrictions) regarding the covered Government support contractor's use of such data, or alternatively, that the Contractor (or party asserting restrictions) may waive in writing the requirement for a nondisclosure agreement; and

(iv) Any such nondisclosure agreement shall address the restrictions on the covered Government support contractor's use of the data as set forth in the clause at DFARS 252.227–7025, Limitations on the Use or Disclosure of Government-Furnished Information

Marked with Restrictive Legends. The nondisclosure agreement shall not include any additional terms and conditions unless mutually agreed to by the parties to the nondisclosure agreement.

* * * * *

(f) *Subcontractors or suppliers.* (1) The Contractor shall recognize and protect the rights afforded its subcontractors and suppliers under 10 U.S.C. 3771–3775, 10 U.S.C. 3781–3786, and 15 U.S.C. 638(j)(1)(B)(iii) and (v).

(2) Whenever any technical data related to commercial products or commercial services developed in any part at private expense will be obtained from a subcontractor or supplier for delivery to the Government under this contract, the Contractor shall use this clause in the subcontract or other contractual instrument, including subcontracts and other contractual instruments for commercial products or commercial services, and require its subcontractors or suppliers to do so, without alteration, except to identify the parties. This clause will govern the technical data pertaining to any portion of a commercial product or commercial service that was developed exclusively at private expense, and the Contractor shall use the following clauses to govern the technical data pertaining to any portion of a commercial product or commercial service that was developed in any part at Government expense:

(i) Use the clause at DFARS 252.227–7013, Rights in Technical Data—Other Than Commercial Products and Commercial Services, to govern any technical data that are not generated during any portion of performance that is covered under the SBIR or STTR program.

(ii) Use the clause at 252.227–7018, Rights in Other Than Commercial Technical Data and Computer Software—Small Business Innovation Research Program and Small Business Technology Transfer Program, to govern technical data that are generated during any portion of performance that is covered under the SBIR or STTR program.

* * * * *

Alternate I (JAN 2025). As prescribed in 227.7102–4(a)(2), add the following definition of “Vessel design” in alphabetical order to paragraph (a) and add (c)(4) to the basic clause:

* * * * *

■ 23. Amend section 252.227–7016 by revising the introductory text and clause date and paragraphs (a) and (c)(2) to read as follows:

252.227–7016 Rights in Bid or Proposal Information.

As prescribed in 227.7103–6(e)(1), 227.7104–4(b)(1), or 227.7203–6(b), use the following clause:

Rights in Bid or Proposal Information (JAN 2025)

(a) *Definitions.* As used in this clause—

Computer software is defined in—

(1) The 252.227–7014, Rights in Other Than Commercial Computer Software and Other Than Commercial Computer Software Documentation, clause of this contract; or

(2) If this is a contract awarded under the Small Business Innovation Research Program or Small Business Technology Transfer Program, the 252.227–7018, Rights in Other Than Commercial Technical Data and Computer Software—Small Business Innovation Research Program and Small Business Technology Transfer Program, clause of this contract.

Technical data is defined in—

(1) The 252.227–7013, Rights in Technical Data—Other Than Commercial Products and Commercial Services, clause of this contract; or

(2) If this is a contract awarded under the Small Business Innovation Research Program or Small Business Technology Transfer Program, the 252.227–7018, Rights in Other Than Commercial Technical Data and Computer Software—Small Business Innovation Research Program and Small Business Technology Transfer Program, clause of this contract.

* * * * *

(c) * * *

(2) The Government's right to use, modify, reproduce, release, perform, display, or disclose information that is technical data or computer software required to be delivered under this contract are determined by the Defense Federal Acquisition Regulation Supplement (DFARS) 252.227–7013, Rights in Technical Data—Other Than Commercial Products and Commercial Services; DFARS 252.227–7014, Rights in Other Than Commercial Computer Software and Other Than Commercial Computer Software Documentation; or DFARS 252.227–7018, Rights in Other Than Commercial Technical Data and Computer Software—Small Business Innovation Research Program and Small Business Technology Transfer Program, clause of this contract.

* * * * *

■ 24. Amend section 252.227–7017 by—
 ■ a. Revising the introductory text and the provision date;
 ■ b. Revising paragraphs (a) and (b);

■ c. Removing from paragraph (d) introductory text “suppliers shall” and adding “suppliers, shall” in its place; and

■ d. Revising the paragraph (d) table.

The revisions read as follows:

252.227–7017 Identification and Assertion of Use, Release, or Disclosure Restrictions.

As prescribed in 227.7103–3(b), 227.7104–4(b)(2), or 227.7203–3(a), use the following provision:

Identification and Assertion of Use, Release, or Disclosure Restrictions (JAN 2025)

(a) *Definitions.* As used in this provision—

Computer software is defined in—

(1) The 252.227–7014, Rights in Other Than Commercial Computer Software and Other Than Commercial Computer Software Documentation, clause of this solicitation; or

(2) If this solicitation contemplates a contract under the Small Business Innovation Research Program or Small Business Technology Transfer Program, the 252.227–7018, Rights in Other Than

Commercial Technical Data and Computer Software—Small Business Innovation Research Program and Small Business Technology Transfer Program, clause of this solicitation.

SBIR/STTR data is defined in the 252.227–7018, Rights in Other Than Commercial Technical Data and Computer Software—Small Business Innovation Research Program and Small Business Technology Transfer Program, clause of this solicitation.

Technical data is defined in—

(1) The 252.227–7013, Rights in Technical Data—Other Than Commercial Products and Commercial Services, clause of this solicitation; or

(2) If this solicitation contemplates a contract under the Small Business Innovation Research Program or Small Business Technology Transfer Program, the 252.227–7018, Rights in Other Than Commercial Technical Data and Computer Software—Small Business Innovation Research Program and Small Business Technology Transfer Program, clause of this solicitation.

(b) The identification and assertion requirements in this provision apply

only to technical data, including computer software documentation, or computer software to be delivered with other than unlimited rights. For contracts to be awarded under the Small Business Innovation Research (SBIR) Program or Small Business Technology Transfer Program (STTR) Program, these requirements apply to SBIR/STTR data that will be generated under the resulting contract and will be delivered with SBIR/STTR data rights and to any other data that will be delivered with other than unlimited rights. Notification and identification are not required for restrictions based solely on copyright.

* * * * *

(d) * * *

Identification and Assertion of Restrictions on the Government's Use, Release, or Disclosure of Technical Data or Computer Software

The Offeror asserts for itself, or the persons identified below, that the Government's rights to use, release, or disclose the following technical data or computer software should be restricted:

Technical data or computer software to be furnished with restrictions ¹	Basis for assertion ²	Asserted rights category ³	Name of person asserting restrictions ⁴
(LIST) ⁵	(LIST)	(LIST)	(LIST)

¹For technical data (other than computer software documentation) pertaining to items, components, or processes developed at private expense, identify both the deliverable technical data and each such item, component, or process. For computer software or computer software documentation identify the software or documentation.

²Generally, development at private expense, either exclusively or partially, is the only basis for asserting restrictions. For technical data, other than computer software documentation, development refers to development of the item, component, or process to which the data pertain. The Government's rights in computer software documentation generally may not be restricted. For computer software, development refers to the software. Indicate whether development was accomplished exclusively or partially at private expense. If development was not accomplished at private expense, or for computer software documentation, enter the specific basis for asserting restrictions.

³Enter asserted rights category (*e.g.*, government purpose license rights from a prior contract, rights in SBIR/STTR data generated under a contract resulting from this solicitation or under another contract, limited, restricted, or government purpose rights under a contract resulting from this solicitation or under a prior contract, or specially negotiated licenses).

⁴Corporation, individual, or other person, as appropriate.

⁵Enter “none” when all data or software will be submitted without restrictions.

Printed Name and Title _____
Signature _____

(End of identification and assertion)

* * * * *

■ 25. Amend section 252.227–7018—

■ a. By revising the section heading, introductory text, clause title, and clause date;

■ b. By revising paragraph (a);

■ c. By redesignating paragraphs (b) through (k) as paragraphs (c) through (l), respectively;

■ d. By adding a new paragraph (b);

■ e. By revising newly redesignated paragraph (c);

■ f. In newly redesignated paragraph (e) introductory text, by removing “paragraph (b)” and adding “paragraph (c)” in its place;

■ g. In newly redesignated paragraph (f)(2), by removing “paragraph (e)(3)” and adding “paragraph (f)(3)” in its place;

■ h. By revising the newly redesignated paragraph (f)(3) table;

■ i. In newly redesignated paragraph (f)(4), by removing “of the Validation of Asserted Restrictions—Computer Software and/or Validation of Restrictive Markings on Technical Data” and adding “in the DFARS 252.227–7019, Validation of Asserted Restrictions—Computer Software, and/or DFARS 252.227–7037, Validation of Restrictive Markings on Technical Data,” in its place;

■ j. By revising newly redesignated paragraphs (g) and (i);

■ k. In newly redesignated paragraph (k)(2) introductory text, by removing “(j)(1)” and adding “(k)(1)” in its place;

■ l. By revising newly redesignated paragraph (l); and

■ m. By removing Alternate I.

The revisions and addition read as follows:

252.227–7018 Rights in Other Than Commercial Technical Data and Computer Software—Small Business Innovation Research Program and Small Business Technology Transfer Program.

As prescribed in 227.7104–4(a)(1), use the following clause:

Rights in Other Than Commercial Technical Data and Computer Software—Small Business Innovation Research Program and Small Business Technology Transfer Program (JAN 2025)

(a) *Definitions.* As used in this clause—

Commercial computer software means software developed or regularly used for nongovernmental purposes which—

(1) Has been sold, leased, or licensed to the public;

(2) Has been offered for sale, lease, or license to the public;

(3) Has not been offered, sold, leased, or licensed to the public but will be available for commercial sale, lease, or license in time to satisfy the delivery requirements of this contract; or

(4) Satisfies a criterion expressed in paragraph (1), (2), or (3) of this definition and would require only minor modification to meet the requirements of this contract.

Computer database means a collection of recorded data in a form capable of being processed by a computer. The term does not include computer software.

Computer program means a set of instructions, rules, or routines, recorded in a form that is capable of causing a computer to perform a specific operation or series of operations.

Computer software means computer programs, source code, source code listings, object code listings, design details, algorithms, processes, flow charts, formulae, and related material that would enable the software to be reproduced, re-created, or recompiled. Computer software does not include computer databases or computer software documentation.

Computer software documentation means owner's manuals, user's manuals, installation instructions, operating instructions, and other similar items, regardless of storage medium, that explain the capabilities of the computer software or provide instructions for using the software.

Covered Government support contractor means a contractor (other than a litigation support contractor covered by 252.204–7014) under a contract, the primary purpose of which is to furnish independent and impartial advice or technical assistance directly to the Government in support of the Government's management and oversight of a program or effort (rather than to directly furnish an end item or service to accomplish a program or effort), provided that the contractor—

(1) Is not affiliated with the prime contractor or a first-tier subcontractor on

the program or effort, or with any direct competitor of such prime contractor or any such first-tier subcontractor in furnishing end items or services of the type developed or produced on the program or effort; and

(2) Receives access to the technical data or computer software for performance of a Government contract that contains the clause at 252.227–7025, Limitations on the Use or Disclosure of Government-Furnished Information Marked with Restrictive Legends.

Detailed manufacturing or process data means technical data that describe the steps, sequences, and conditions of manufacturing, processing or assembly used by the manufacturer to produce an item or component or to perform a process.

Developed means—

(1) (Applicable to technical data other than computer software documentation.) An item, component, or process, exists and is workable. Thus, the item or component must have been constructed or the process practiced. Workability is generally established when the item, component, or process has been analyzed or tested sufficiently to demonstrate to reasonable people skilled in the applicable art that there is a high probability that it will operate as intended. Whether, how much, and what type of analysis or testing is required to establish workability depends on the nature of the item, component, or process, and the state of the art. To be considered “developed,” the item, component, or process need not be at the stage where it could be offered for sale or sold on the commercial market, nor must the item, component or process be actually reduced to practice within the meaning of Title 35 of the United States Code;

(2) A computer program has been successfully operated in a computer and tested to the extent sufficient to demonstrate to reasonable persons skilled in the art that the program can reasonably be expected to perform its intended purpose;

(3) Computer software, other than computer programs, has been tested or analyzed to the extent sufficient to demonstrate to reasonable persons skilled in the art that the software can reasonably be expected to perform its intended purpose; or

(4) Computer software documentation required to be delivered under a contract has been written, in any medium, in sufficient detail to comply with requirements under that contract.

Developed exclusively at private expense means development was accomplished entirely with costs

charged to indirect cost pools, costs not allocated to a government contract, or any combination thereof.

(1) Private expense determinations should be made at the lowest practicable level.

(2) Under fixed-price contracts, when total costs are greater than the firm-fixed-price or ceiling price of the contract, the additional development costs necessary to complete development shall not be considered when determining whether development was at government, private, or mixed expense.

Developed exclusively with government funds means development was not accomplished exclusively or partially at private expense.

Developed with mixed funding means development was accomplished partially with costs charged to indirect cost pools and/or costs not allocated to a government contract, and partially with costs charged directly to a government contract.

Form, fit, and function data means technical data that describe the required overall physical, functional, and performance characteristics (along with the qualification requirements, if applicable) of an item, component, or process to the extent necessary to permit identification of physically and functionally interchangeable items.

Generated means, with respect to technical data or computer software, first created in the performance of this contract.

Government purpose means any activity in which the United States Government is a party, including cooperative agreements with international or multi-national defense organizations or sales or transfers by the United States Government to foreign governments or international organizations. Government purposes include competitive procurement, but do not include the rights to use, modify, reproduce, release, perform, display, or disclose technical data or computer software for commercial purposes or authorize others to do so.

Government purpose rights means the rights to—

(1) Use, modify, reproduce, release, perform, display, or disclose technical data or computer software within the Government without restriction; and

(2) Release or disclose technical data or computer software outside the Government and authorize persons to whom release or disclosure has been made to use, modify, reproduce, release, perform, display, or disclose that data for United States Government purposes.

Limited rights means the rights to use, modify, reproduce, release, perform,

display, or disclose technical data, in whole or in part, within the Government. The Government may not, without the written permission of the party asserting limited rights, release or disclose the technical data outside the Government, use the technical data for manufacture, or authorize the technical data to be used by another party, except that the Government may reproduce, release, or disclose such data or authorize the use or reproduction of the data by persons outside the Government if—

(1) The reproduction, release, disclosure, or use is—

(i) Necessary for emergency repair and overhaul; or

(ii) A release or disclosure to—

(A) A covered Government support contractor in performance of its covered Government support contracts for use, modification, reproduction, performance, display, or release or disclosure to a person authorized to receive limited rights technical data; or

(B) A foreign government, of technical data other than detailed manufacturing or process data, when use of such data by the foreign government is in the interest of the Government and is required for evaluational or informational purposes;

(2) The recipient of the technical data is subject to a prohibition on the further reproduction, release, disclosure, or use of the technical data; and

(3) The contractor or subcontractor asserting the restriction is notified of such reproduction, release, disclosure, or use.

Minor modification means a modification that does not significantly alter the nongovernmental function or purpose of computer software or is of the type customarily provided in the commercial marketplace.

Other than commercial computer software means software that does not qualify as commercial computer software under the definition of “commercial computer software” of this clause.

Restricted rights apply only to other than commercial computer software and mean the Government’s rights to—

(1) Use a computer program with one computer at one time. The program may not be accessed by more than one terminal or central processing unit or time shared unless otherwise permitted by this contract;

(2) Transfer a computer program to another Government agency without the further permission of the Contractor if the transferor destroys all copies of the program and related computer software documentation in its possession and notifies the licensor of the transfer.

Transferred programs remain subject to the provisions of this clause;

(3) Make a reasonable number of copies of the computer software required for the purposes of safekeeping (archive), backup, modification, or other activities authorized in paragraphs (1), (2), and (4) through (7) of this definition;

(4) Modify computer software provided that the Government may—

(i) Use the modified software only as provided in paragraphs (1) and (3) of this definition; and

(ii) Not release or disclose the modified software except as provided in paragraphs (2), (5), (6), and (7) of this definition;

(5) Use, and permit contractors or subcontractors performing service contracts (see 37.101 of the Federal Acquisition Regulation) in support of this or a related contract to use, computer software to diagnose and correct deficiencies in a computer program, to modify computer software to enable a computer program to be combined with, adapted to, or merged with other computer programs or when necessary to respond to urgent tactical situations, provided that—

(i) The Government notifies the party which has granted restricted rights that any such release or disclosure to particular contractors or subcontractors was made;

(ii) Such contractors or subcontractors are subject to the nondisclosure agreement at 227.7103–7 of the Defense Federal Acquisition Regulation Supplement or are Government contractors receiving access to the software for performance of a Government contract that contains the clause at 252.227–7025, Limitations on the Use or Disclosure of Government-Furnished Information Marked with Restrictive Legends;

(iii) The Government shall not permit the recipient to decompile, disassemble, or reverse engineer the software, or use software decompiled, disassembled, or reverse engineered by the Government pursuant to paragraph (a)(18)(iv) of this clause, for any other purpose; and

(iv) Such use is subject to the limitations in paragraphs (1) through (3) of this definition;

(6) Use, and permit contractors or subcontractors performing emergency repairs or overhaul of items or components of items procured under this or a related contract to use, the computer software when necessary to perform the emergency repairs or overhaul, or to modify the computer software to reflect the repairs or overhaul made, provided that—

(i) The intended recipient is subject to the nondisclosure agreement at

227.7103–7 or is a Government contractor receiving access to the software for performance of a Government contract that contains the clause at 252.227–7025, Limitations on the Use or Disclosure of Government-Furnished Information Marked with Restrictive Legends;

(ii) The Government shall not permit the recipient to decompile, disassemble, or reverse engineer the software, or use software decompiled, disassembled, or reverse engineered by the Government pursuant to paragraph (4) of this definition, for any other purpose; and

(iii) Such use is subject to the limitations in paragraphs (1) through (3) of this definition; and

(7) Use, modify, reproduce, perform, display, or release or disclose computer software to a person authorized to receive restricted rights computer software for management and oversight of a program or effort, and permit covered Government support contractors in the performance of covered Government support contracts that contain the clause at 252.227–7025, Limitations on the Use or Disclosure of Government-Furnished Information Marked with Restrictive Legends, to use, modify, reproduce, perform, display, or release or disclose the computer software to a person authorized to receive restricted rights computer software, provided that—

(i) The Government shall not permit the covered Government support contractor to decompile, disassemble, or reverse engineer the software, or use software decompiled, disassembled, or reverse engineered by the Government pursuant to paragraph (4) of this definition, for any other purpose; and

(ii) Such use is subject to the limitations in paragraphs (1) through (4) of this definition.

Small Business Innovation Research/Small Business Technology Transfer (SBIR/STTR) data means all technical data or computer software developed or generated in the performance of a phase I, II, or III SBIR/STTR contract or subcontract.

SBIR/STTR data protection period means the time period during which the Government is obligated to protect SBIR/STTR data against unauthorized use and disclosure in accordance with SBIR/STTR data rights. The SBIR/STTR data protection period begins on the date of award of the contract under which the SBIR/STTR data are developed or generated and ends 20 years after that date unless, after the award, the agency and the Contractor negotiate for some other protection period for the SBIR/STTR data

developed or generated under that contract.

SBIR/STTR data rights means the Government's rights, during the SBIR/STTR data protection period, in SBIR/STTR data covered by paragraph (c)(5) of this clause, as follows:

(1) Limited rights in such SBIR/STTR technical data; and

(2) Restricted rights in such SBIR/STTR computer software.

Technical data means recorded information, regardless of the form or method of the recording, of a scientific or technical nature (including computer software documentation). The term does not include computer software or financial, administrative, cost or pricing, or management information, or information incidental to contract administration.

Unlimited rights means rights to use, modify, reproduce, release, perform, display, or disclose, technical data or computer software in whole or in part, in any manner and for any purpose whatsoever, and to have or authorize others to do so.

(b) *Applicability*. This clause governs all SBIR/STTR data. For any data that are not SBIR/STTR data—

(1) The clause at Defense Federal Acquisition Regulation Supplement (DFARS) 252.227–7013, Rights in Technical Data—Other Than Commercial Products and Commercial Services, governs the technical data pertaining to other than commercial products and commercial services or to any portion of a commercial product or commercial service that was developed in any part at Government expense, and the clause at DFARS 252.227–7015, Technical Data—Commercial Products and Commercial Services, governs the technical data pertaining to any portion of a commercial product or commercial service that was developed exclusively at private expense;

(2) The clause at DFARS 252.227–7014, Rights in Other Than Commercial Computer Software and Other Than Commercial Computer Software Documentation, governs other than commercial computer software and other than commercial computer software documentation; and

(3) A license consistent with DFARS 227.7202 governs commercial computer software and commercial computer software documentation.

(c) *Rights in technical data and computer software*. The Contractor grants or shall obtain for the Government the following royalty-free, worldwide, nonexclusive, irrevocable license rights in technical data or other than commercial computer software. All

rights not granted to the Government are retained by the Contractor.

(1) *Unlimited rights*. The Government shall have unlimited rights in technical data or computer software, including such data generated under this contract, that are—

(i) Form, fit, and function data;

(ii) Necessary for installation, operation, maintenance, or training purposes (other than detailed manufacturing or process data);

(iii) Corrections or changes to Government-furnished technical data or computer software;

(iv) Otherwise publicly available or have been released or disclosed by the Contractor or a subcontractor without restrictions on further use, release, or disclosure other than a release or disclosure resulting from the sale, transfer, or other assignment of interest in the technical data or computer software to another party or the sale or transfer of some or all of a business entity or its assets to another party;

(v) Technical data or computer software in which the Government has acquired previously unlimited rights under another Government contract or as a result of negotiations

(vi) Technical data or computer software furnished to the Government, under this or any other Government contract or subcontract thereunder, with license rights for which all restrictive conditions on the Government have expired; and

(vii) Computer software documentation generated or required to be delivered under this contract.

(2) Government purpose rights.

(i) The Government shall have government purpose rights for the period specified in paragraph (c)(2)(ii) of this clause in data that are—

(A) Not SBIR/STTR data, and are—

(1) Technical data pertaining to items, components, or processes developed with mixed funding, or are computer software developed with mixed funding, except when the Government is entitled to unlimited rights in such data as provided in paragraph (c)(1) of this clause;

(2) Created with mixed funding in the performance of a contract that does not require the development, manufacture, construction, or production of items, components, or processes; or

(B) SBIR/STTR data, upon expiration of the SBIR/STTR data protection period.

(ii)(A) For the non-SBIR/STTR data described in paragraph (c)(2)(i)(A) of this clause, the Government shall have government purpose rights for a period of 5 years, or such other period as may be negotiated. This period shall

commence upon award of the contract, subcontract, letter contract (or similar contractual instrument), or contract modification (including a modification to exercise an option) that required development of the items, components, or processes, or creation of the data described in paragraph (c)(2)(i)(A)(2) of this clause. Upon expiration of the 5-year or other negotiated period, the Government shall have unlimited rights in the data.

(B) For the SBIR/STTR data described in paragraph (c)(2)(i)(B) of this clause, the Government shall have government purpose rights perpetually. This Government purpose rights period commences upon the expiration of the SBIR/STTR data protection period.

(iii) The Government shall not release or disclose data in which it has government purpose rights unless—

(A) Prior to release or disclosure, the intended recipient is subject to the nondisclosure agreement at DFARS 227.7103–7; or

(B) The recipient is a Government contractor receiving access to the data for performance of a Government contract that contains the clause at DFARS 252.227–7025, Limitations on the Use or Disclosure of Government-Furnished Information Marked with Restrictive Legends.

(iv) The Contractor has the exclusive right, including the right to license others, to use technical data in which the Government has obtained government purpose rights under this contract for any commercial purpose during the time period specified in the government purpose rights marking prescribed in paragraph (g)(3) of this clause.

(3) *Limited rights*. The Government shall have limited rights in technical data that were not generated under this contract, pertain to items, components, or processes developed exclusively at private expense, and are marked, in accordance with the marking instructions in paragraph (g)(1) of this clause, with the legend prescribed in paragraph (g)(4) of this clause.

(4) *Restricted rights in computer software*. The Government shall have restricted rights in other than commercial computer software required to be delivered or otherwise furnished to the Government under this contract that were developed exclusively at private expense and were not generated under this contract.

(5) *SBIR/STTR data rights*. Except for technical data, including computer software documentation, or computer software in which the Government has unlimited rights under paragraph (c)(1) of this clause, the Government shall

have SBIR/STTR data rights, during the SBIR/STTR data protection period of this contract, in all SBIR/STTR data developed or generated under this contract. This protection period is not extended by any subsequent SBIR/STTR contracts under which any portion of that SBIR/STTR data is used or delivered. The SBIR/STTR data protection period of any such subsequent SBIR/STTR contract applies only to the SBIR/STTR data that are developed or generated under that subsequent contract. The SBIR/STTR data protection period is governed by the version of this clause that is incorporated in the contract under which the SBIR/STTR data are developed or generated. If the SBIR/STTR data were developed or generated under a contract that included a previous version of this clause, then the SBIR/STTR data protection period is governed by that previous version of this clause.

(6) *Specifically negotiated license rights.* After contract award, the standard license rights granted to the Government under paragraphs (c)(1) through (5) of this clause may be modified by mutual agreement to provide such rights as the parties consider appropriate but shall not provide the Government lesser rights in technical data, including computer software documentation, than are enumerated in the definition of “limited rights” of this clause or lesser rights in computer software than are enumerated in the definition of “restricted rights” of this clause. Any rights so negotiated shall be identified in a license agreement made part of this contract.

(7) *Prior government rights.* Technical data, including computer software documentation, or computer software that will be delivered, furnished, or otherwise provided to the Government under this contract, in which the Government has previously obtained rights shall be delivered, furnished, or provided with the preexisting rights, unless—

(i) The parties have agreed otherwise; or

(ii) Any restrictions on the Government’s rights to use, modify, release, perform, display, or disclose the technical data or computer software have expired or no longer apply.

(8) *Release from liability.* The Contractor agrees to release the Government from liability for any release or disclosure of technical data, computer software, or computer software documentation made in accordance with the definitions of “Government purpose,” “other than commercial computer software,” or paragraph (c)(5) of this clause, or in accordance with the terms of a license negotiated under paragraph (c)(6) of this clause, or by others to whom the recipient has released or disclosed the data, software, or documentation and to seek relief solely from the party who has improperly used, modified, reproduced, released, performed, displayed, or disclosed Contractor data or software marked with restrictive legends.

(9) *Covered Government support contractors.* The Contractor acknowledges that—

(i) Limited rights technical data and restricted rights computer software are authorized to be released or disclosed to

covered Government support contractors;

(ii) The Contractor will be notified of such release or disclosure;

(iii) The Contractor may require each such covered Government support contractor to enter into a nondisclosure agreement directly with the Contractor (or the party asserting restrictions as identified in a restrictive legend) regarding the covered Government support contractor’s use of such data or software, or alternatively that the Contractor (or party asserting restrictions) may waive in writing the requirement for a nondisclosure agreement; and

(iv) Any such nondisclosure agreement shall address the restrictions on the covered Government support contractor’s use of the data or software as set forth in the clause at DFARS 252.227–7025, Limitations on the Use or Disclosure of Government-Furnished Information Marked with Restrictive Legends. The nondisclosure agreement shall not include any additional terms and conditions unless mutually agreed to by the parties to the nondisclosure agreement.

(3) * * *

Identification and Assertion of Restrictions on the Government’s Use, Release, or Disclosure of Technical Data or Computer Software

The Contractor asserts for itself, or the persons identified below, that the Government’s rights to use, release, or disclose the following technical data or computer software should be restricted:

Technical data or computer software to be furnished with restrictions ¹	Basis for assertion ²	Asserted rights category ³	Name of person asserting restrictions ⁴
(LIST)	(LIST)	(LIST)	(LIST)

¹ If the assertion is applicable to items, components, or processes developed at private expense, identify both the technical data and each such item, component, or process.

² Generally, development at private expense, either exclusively or partially, is the only basis for asserting restrictions on the Government’s rights to use, release, or disclose technical data or computer software. Indicate whether development was exclusively or partially at private expense. If development was not at private expense, enter the specific reason for asserting that the Government’s rights should be restricted.

³ Enter asserted rights category (e.g., limited rights, restricted rights, or government purpose rights from a prior contract, SBIR/STTR data rights under this or another contract, or specifically negotiated licenses).

⁴ Corporation, individual, or other person, as appropriate.

Date _____
Printed Name and Title _____
Signature _____

(End of identification and assertion)

* * * * *

(g) *Marking requirements.* The Contractor, and its subcontractors or suppliers, may only assert restrictions on the Government’s rights to use, modify, reproduce, release, perform, display, or disclose technical data or

computer software to be delivered under this contract by marking the deliverable data or software subject to restriction. Except as provided in paragraph (g)(8) of this clause, only the following markings are authorized under this contract: the government purpose rights marking at paragraph (g)(3) of this clause; the limited rights legend at paragraph (g)(4) of this clause; the restricted rights legend at paragraph

(g)(5) of this clause; the SBIR/STTR data rights legend at paragraph (g)(6) of this clause; or the special license rights legend at paragraph (g)(7) of this clause; and a notice of copyright as prescribed under 17 U.S.C. 401 or 402.

(1) *General marking instructions.* The Contractor, or its subcontractors or suppliers, shall conspicuously and legibly mark the appropriate legend to all technical data and computer

software that qualify for such markings. The authorized legends shall be placed on the transmittal document or storage container and, for printed material, each page of the printed material containing technical data or computer software for which restrictions are asserted. When only portions of a page of printed material are subject to the asserted restrictions, such portions shall be identified by circling, underscoring, with a note, or other appropriate identifier. Technical data or computer software transmitted directly from one computer or computer terminal to another shall contain a notice of asserted restrictions. However, instructions that interfere with or delay the operation of computer software in order to display a restrictive rights legend or other license statement at any time prior to or during use of the computer software, or otherwise cause such interference or delay, shall not be inserted in software that will or might be used in combat or situations that simulate combat conditions, unless the Contracting Officer's written permission to deliver such software has been obtained prior to delivery. Reproductions of technical data, computer software, or any portions thereof subject to asserted restrictions shall also reproduce the asserted restrictions.

(2) *Omitted markings.* (i) Technical data, computer software, or computer software documentation delivered or otherwise provided under this contract without restrictive markings shall be presumed to have been delivered with unlimited rights. To the extent practicable, if the Contractor has requested permission (see paragraph (g)(2)(ii) of this clause) to correct an inadvertent omission of markings, the Contracting Officer will not release or disclose the technical data, software, or documentation pending evaluation of the request.

(ii) The Contractor may request permission to have conforming and justified restrictive markings placed on unmarked technical data, computer software, or computer software documentation at its expense. The request must be received by the Contracting Officer within 6 months following the furnishing or delivery of such technical data, software, or documentation, or any extension of that time approved by the Contracting Officer. The Contractor shall—

(A) Identify the technical data, software, or documentation that should have been marked;

(B) Demonstrate that the omission of the marking was inadvertent, the proposed marking is justified and

conforms with the requirements for the marking of technical data, computer software, or computer software documentation contained in this clause; and

(C) Acknowledge, in writing, that the Government has no liability with respect to any disclosure, reproduction, or use of the technical data, software, or documentation made prior to the addition of the marking or resulting from the omission of the marking.

(3) *Government purpose rights markings.* Technical data or computer software delivered or otherwise furnished to the Government with government purpose rights shall be marked as follows:

Government Purpose Rights

Contract Number _____
Contractor Name _____
Contractor Address _____
Expiration Date _____

The Government's rights to use, modify, reproduce, release, perform, display, or disclose these technical data or computer software are restricted by paragraph (c)(2) of the DFARS 252.227–7018, Rights in Other Than Commercial Technical Data and Computer Software—Small Business Innovation Research Program and Small Business Technology Transfer Program, clause contained in the above identified contract. No restrictions apply after the expiration date shown above. Any reproduction of technical data or computer software or portions thereof marked with this restrictive marking must also reproduce the markings.

(End of legend)

(4) *Limited rights markings.* Technical data not generated under this contract that pertain to items, components, or processes developed exclusively at private expense and delivered or otherwise furnished with limited rights shall be marked as follows:

Limited Rights

Contract Number _____
Contractor Name _____
Contractor Address _____

The Government's rights to use, modify, reproduce, release, perform, display, or disclose these technical data are restricted by paragraph (c)(3) of the DFARS 252.227–7018, Rights in Other Than Commercial Technical Data and Computer Software—Small Business Innovation Research Program and Small Business Technology Transfer Program, clause contained in the above identified contract. Any reproduction of technical data or portions thereof marked with this legend must also reproduce the markings. Any person, other than the

Government, who has been provided access to such data must promptly notify the above named Contractor.

(End of legend)

(5) *Restricted rights markings.* Computer software delivered or otherwise furnished to the Government with restricted rights shall be marked as follows:

Restricted Rights

Contract Number _____
Contractor Name _____
Contractor Address _____

The Government's rights to use, modify, reproduce, release, perform, display, or disclose this software are restricted by paragraph (c)(4) of the DFARS 252.227–7018, Rights in Other Than Commercial Technical Data and Computer Software—Small Business Innovation Research Program and Small Business Technology Transfer Program, clause contained in the above identified contract. Any reproduction of computer software or portions thereof marked with this legend must also reproduce the markings. Any person, other than the Government, who has been provided access to such software must promptly notify the above named Contractor.

(End of legend)

(6) *SBIR/STTR data rights markings.* Except for technical data or computer software in which the Government has acquired unlimited rights under paragraph (c)(1) of this clause or negotiated special license rights as provided in paragraph (c)(6) of this clause, technical data or computer software generated under this contract shall be marked as follows. The Contractor shall enter the expiration date for the SBIR/STTR data protection period on the legend:

SBIR/STTR Data Rights

Contract Number _____
Contractor Name _____
Contractor Address _____
Expiration of SBIR/STTR Data Protection Period _____
Expiration of the Government Purpose Rights Period _____

The Government's rights to use, modify, reproduce, release, perform, display, or disclose technical data or computer software marked with this legend are restricted during the period shown as provided in paragraph (c)(5) of the DFARS 252.227–7018, Rights in Other Than Commercial Technical Data and Computer Software—Small Business Innovation Research Program and Small Business Technology Transfer Program, clause contained in the above identified contract. After the

SBIR/STTR data protection period expiration date shown above, the Government has perpetual government purpose rights as provided in paragraph (c)(4) of that clause, unless otherwise indicated by the government purpose rights expiration date shown above. Any reproduction of technical data, computer software, or portions thereof marked with this legend must also reproduce the markings.

(End of legend)

(7) *Special license rights markings.* (i) Technical data or computer software in which the Government's rights stem from a specifically negotiated license shall be marked as follows:

Special License Rights

The Government's rights to use, modify, reproduce, release, perform, display, or disclose this technical data or computer software are restricted by Contract Number *[Insert contract number]*, License Number *[Insert license identifier]*. Any reproduction of technical data, computer software, or portions thereof marked with this marking must also reproduce the markings.

(End of legend)

(ii) For purposes of this clause, special licenses do not include government purpose license rights acquired under a prior contract (see paragraph (c)(7) of this clause).

(8) *Preexisting data markings.* If the terms of a prior contract or license permitted the Contractor to restrict the Government's rights to use, modify, reproduce, release, perform, display, or disclose technical data or computer software, and those restrictions are still applicable, the Contractor may mark such data or software with the appropriate restrictive legend for which the data or software qualified under the prior contract or license. The Contractor shall follow the marking procedures in paragraph (g)(1) of this clause.

* * * * *

(i) *Removal of unjustified and nonconforming markings.* (1)

Unjustified markings. The rights and obligations of the parties regarding the validation of restrictive markings on technical data or computer software furnished or to be furnished under this contract are contained in the DFARS 252.227–7037, Validation of Restrictive Markings on Technical Data, and the DFARS 252.227–7019, Validation of Asserted Restrictions—Computer Software, clauses of this contract, respectively. Notwithstanding any provision of this contract concerning inspection and acceptance, the

Government may ignore or, at the Contractor's expense, correct or strike a marking if, in accordance with the applicable procedures of those clauses, a restrictive marking is determined to be unjustified.

(2) *Nonconforming markings.* A nonconforming marking is a marking placed on technical data or computer software delivered or otherwise furnished to the Government under this contract that is not in the format authorized by this contract. Correction of nonconforming markings is not subject to the DFARS 252.227–7037, Validation of Restrictive Markings on Technical Data, or the DFARS 252.227–7019, Validation of Asserted Restrictions—Computer Software, clause of this contract. If the Contracting Officer notifies the Contractor of a nonconforming marking or markings and the Contractor fails to remove or correct such markings within 60 days, the Government may ignore or, at the Contractor's expense, remove or correct any nonconforming markings.

* * * * *

(l) *Subcontractors or suppliers.* (1) The Contractor shall assure that the rights afforded its subcontractors and suppliers under 10 U.S.C. 3771–3775, 10 U.S.C. 3781–3786, 15 U.S.C. 638(j)(1)(B)(iii) and (v), and the identification, assertion, and delivery processes required by paragraph (f) of this clause are recognized and protected.

(2) Whenever any other than commercial technical data or computer software is to be obtained from a subcontractor or supplier for delivery to the Government under this contract, the Contractor shall use the following clause(s) in the subcontract or other contractual instrument, and require its subcontractors or suppliers to do so, without alteration, except to identify the parties:

(i) Except as provided in paragraph (l)(2)(ii) of this clause, use this clause to govern SBIR/STTR data.

(ii) For data that are not SBIR/STTR data—

(A) Use the clause at DFARS 252.227–7013, Rights in Technical Data—Other Than Commercial Products and Commercial Services, to govern the technical data pertaining to other than commercial products or commercial services or to any portion of a commercial product or commercial service that was developed in any part at Government expense, and use the clause at DFARS 252.227–7015, Technical Data—Commercial Products and Commercial Services, to govern the technical data pertaining to any portion

of a commercial product or commercial service that was developed exclusively at private expense;

(B) Use the DFARS clause at 252.227–7014, Rights in Other Than Commercial Computer Software and Other Than Commercial Computer Software Documentation, to govern other than commercial computer software and computer software documentation; and

(C) Use the license under which the data are customarily provided to the public, in accordance with DFARS 227.7202, for commercial computer software and commercial computer software documentation.

(iii) No other clause shall be used to enlarge or diminish the Government's, the Contractor's, or a higher tier subcontractor's or supplier's rights in a subcontractor's or supplier's technical data or computer software.

(3) Technical data required to be delivered by a subcontractor or supplier shall normally be delivered to the next higher tier contractor, subcontractor, or supplier. However, when there is a requirement in the prime contract for technical data which may be submitted with other than unlimited rights by a subcontractor or supplier, then said subcontractor or supplier may fulfill its requirement by submitting such technical data directly to the Government, rather than through a higher tier contractor, subcontractor, or supplier.

(4) The Contractor and higher tier subcontractors or suppliers shall not use their power to award contracts as economic leverage to obtain rights in technical data or computer software from their subcontractors or suppliers.

(5) In no event shall the Contractor use its obligation to recognize and protect subcontractor or supplier rights in technical data or computer software as an excuse for failing to satisfy its contractual obligation to the Government.

* * * * *

■ 26. Amend section 252.227–7019—

■ a. By revising the introductory text and clause date;

■ b. By revising paragraphs (a) and (d)(2)(i)(B);

■ c. In paragraph (e)(1), by revising the second sentence;

■ d. In paragraph (f)(1)(ii), by removing “sixty (60) days” and adding “60 days” in its place;

■ e. In paragraph (f)(1)(iv), by removing “three-year” and adding “3-year” in its place;

■ f. In paragraph (f)(7), by removing “provides the contractor” and adding “provides the Contractor” in its place; and

- g. By revising paragraph (g).
The revisions read as follows:

252.227–7019 Validation of Asserted Restrictions—Computer Software.

As prescribed in 227.7104–4(b)(3) or 227.7203–6(c), use the following clause:

Validation of Asserted Restrictions—Computer Software (JAN 2025)

(a) *Definitions.* As used in this clause—

Contractor, unless otherwise specifically indicated, means the Contractor and its subcontractors or suppliers.

Other terms are defined in the 252.227–7014, Rights in Other Than Commercial Computer Software and Other Than Commercial Computer Software Documentation, clause of this contract.

* * * * *

(d) * * *

(2) * * *

(i) * * *

(B) Return the computer software to the Contractor for correction at the Contractor's expense. If the Contractor fails to correct or strike the unjustified restrictions and return the corrected software to the Contracting Officer within 60 days following receipt of the software, the Contracting Officer may correct or strike the markings at the Contractor's expense;

* * * * *

(e) * * *

(1) * * * Except for software that is publicly available, has been furnished to the Government without restrictions, or has been otherwise made available without restrictions, the Government may exercise this right only within 3 years after the date(s) the software is delivered or otherwise furnished to the Government, or 3 years following final payment under this contract, whichever is later.

* * * * *

(g) *Contractor appeal—Government obligation.* (1) The Government agrees that, notwithstanding a Contracting Officer's final decision denying the validity of an asserted restriction and except as provided in paragraph (g)(3) of this clause, it will honor the asserted restriction—

(i) For a period of 90 days from the date of the Contracting Officer's final decision to allow the Contractor to appeal to the appropriate Board of Contract Appeals or to file suit in an appropriate court;

(ii) For a period of 1 year from the date of the Contracting Officer's final decision if, within the first 90 days following the Contracting Officer's final

decision, the Contractor has provided notice of an intent to file suit in an appropriate court; or

(iii) Until final disposition by the appropriate Board of Contract Appeals or court of competent jurisdiction, if the Contractor has—

(A) Appealed to the Board of Contract Appeals or filed suit in an appropriate court within 90 days; or

(B) Submitted, within 90 days, a notice of intent to file suit in an appropriate court and filed suit within 1 year.

(2) The Contractor agrees that the Government may strike, correct, or ignore the restrictive markings if the Contractor fails to—

(i) Appeal to a Board of Contract Appeals within 90 days from the date of the Contracting Officer's final decision;

(ii) File suit in an appropriate court within 90 days from such date; or

(iii) File suit within 1 year after the date of the Contracting Officer's final decision if the Contractor had provided notice of intent to file suit within 90 days following the date of the Contracting Officer's final decision.

(3)(i) The agency head, on a nondelegable basis, may determine that urgent or compelling circumstances do not permit awaiting the filing of suit in an appropriate court, or the rendering of a decision by a court of competent jurisdiction or Board of Contract Appeals. In that event, the agency head shall notify the Contractor of the urgent or compelling circumstances.

Notwithstanding paragraph (g)(1) of this clause, the Contractor agrees that the agency may use, modify, reproduce, release, perform, display, or disclose computer software marked with—

(A) Government purpose legends for any purpose, and authorize others to do so; or

(B) Restricted or special license rights for government purposes only.

(ii) The Government agrees not to release or disclose such software unless, prior to release or disclosure, the intended recipient is subject to the use and nondisclosure agreement at Defense Federal Acquisition Regulation Supplement (DFARS) 227.7103–7, or is a Government contractor receiving access to the software for performance of a Government contract that contains the clause at DFARS 252.227–7025, Limitations on the Use or Disclosure of Government-Furnished Information Marked with Restrictive Legends. The agency head's determination may be made at any time after the date of the Contracting Officer's final decision and shall not affect the Contractor's right to damages against the United States, or other relief provided by law, if its

asserted restrictions are ultimately upheld.

* * * * *

■ 27. Amend section 252.227–7025—

■ a. By revising the introductory text and clause date;

■ b. By adding paragraph (a) introductory text;

■ c. By revising paragraphs (a)(3) and (b)(1) through (4);

■ d. In paragraph (b)(5)(iii), by removing “thirty (30) days” and adding “30 days” in its place;

■ e. By revising paragraph (b)(5)(iv);

■ f. in paragraph (c)(2), by removing “third party beneficiary” and adding “third-party beneficiary” in its place;

■ g. In paragraph (d), by removing “non-disclosure” and adding “nondisclosure” in its place; and

■ h. By adding “(End of clause)” at the end of the clause.

The revisions and addition read as follows:

252.227–7025 Limitations on the Use or Disclosure of Government-Furnished Information Marked with Restrictive Legends.

As prescribed in 227.7103–6(c), 227.7104–4(b)(4), or 227.7203–6(d), use the following clause:

Limitations on the Use or Disclosure of Government-Furnished Information Marked With Restrictive Legends (JAN 2025)

(a) *Definitions.* As used in this clause—

* * * * *

(3) For Small Business Innovation Research (SBIR) Program and Small Business Technology Transfer (STTR) Program contracts, the terms “covered Government support contractor,” “government purpose rights,” “limited rights,” “restricted rights,” and “SBIR/STTR data rights” are defined in the clause at 252.227–7018, Rights in Other Than Commercial Technical Data and Computer Software—Small Business Innovation Research Program and Small Business Technology Transfer Program.

(b) * * *

(1) *GFI marked with limited rights, restricted rights, or SBIR/STTR data rights legends.* (i) The Contractor shall use, modify, reproduce, perform, or display technical data received from the Government with limited rights legends, computer software received with restricted rights legends, or SBIR/STTR technical data or computer software received with SBIR/STTR data rights legends (during the SBIR/STTR data protection period) only in the performance of this contract. The Contractor shall not, without the

express written permission of the party whose name appears in the legend, release or disclose such data or software to any unauthorized person.

(ii) If the Contractor is a covered Government support contractor, the Contractor is also subject to the additional terms and conditions at paragraph (b)(5) of this clause.

(2) *GFI marked with government purpose rights legends.* The Contractor shall use technical data or computer software received from the Government with government purpose rights legends for government purposes only. The Contractor shall not, without the express written permission of the party whose name appears in the restrictive legend, use, modify, reproduce, release, perform, or display such data or software for any commercial purpose or disclose such data or software to a person other than its subcontractors, suppliers, or prospective subcontractors or suppliers, who require the data or software to submit offers for, or perform, contracts under this contract. Prior to disclosing the data or software, the Contractor shall require the persons to whom disclosure will be made to complete and sign the nondisclosure agreement at 227.7103-7 of the Defense Federal Acquisition Regulation Supplement (DFARS).

(3) *GFI marked with specially negotiated license rights legends.* (i) The Contractor shall use, modify, reproduce, release, perform, or display technical data or computer software received from the Government with specially negotiated license legends only as permitted in the license. Such data or software may not be released or disclosed to other persons unless permitted by the license and, prior to release or disclosure, the intended recipient has completed the nondisclosure agreement at DFARS 227.7103-7. The Contractor shall modify paragraph (1)(c) of the nondisclosure agreement to reflect the recipient's obligations regarding use, modification, reproduction, release, performance, display, and disclosure of the data or software.

(ii) If the Contractor is a covered Government support contractor, the Contractor may also be subject to some or all of the additional terms and conditions at paragraph (b)(5) of this clause, to the extent such terms and conditions are required by the specially negotiated license.

(4) *GFI technical data marked with commercial restrictive legends.* (i) The Contractor shall use, modify, reproduce, perform, or display technical data that are or pertain to a commercial product or commercial service and are received

from the Government with a commercial restrictive legend (*i.e.*, marked to indicate that such data are subject to use, modification, reproduction, release, performance, display, or disclosure restrictions) only in the performance of this contract. The Contractor shall not, without the express written permission of the party whose name appears in the legend, use the technical data to manufacture additional quantities of the commercial products or commercial services, or release or disclose such data to any unauthorized person.

(ii) If the Contractor is a covered Government support contractor, the Contractor is also subject to the additional terms and conditions at paragraph (b)(5) of this clause.

(5) * * *

(iv) The Contractor will enter into a nondisclosure agreement with the party whose name appears in the legend, if required to do so by that party, and that any such nondisclosure agreement will implement the restrictions on the Contractor's use of such data or software as set forth in this clause. The nondisclosure agreement shall not include any additional terms and conditions unless mutually agreed to by the parties to the nondisclosure agreement; and

* * * * *

(End of clause)

■ 28. Revise the section 252.227-7028 heading and introductory text to read as follows:

252.227-7028 Technical Data or Computer Software Previously Delivered to the Government.

As prescribed in 227.7103-6(d), 227.7104-4(b)(5), or 227.7203-6(e), use the following provision:

* * * * *

■ 29. Revise the section 252.227-7030 heading and introductory text to read as follows:

252.227-7030 Technical Data—Withholding of Payment.

As prescribed at 227.7103-6(e)(2) or 227.7104-4(b)(6), use the following clause:

* * * * *

■ 30. Revise the section 252.227-7037 introductory text to read as follows:

252.227-7037 Validation of Restrictive Markings on Technical Data.

As prescribed in 227.7102-4(c), 227.7103-6(e)(3), 227.7104-4(b)(7), or 227.7203-6(f), use the following clause:

* * * * *

■ 31. Add sections 252.227-7040 and 252.227-7041 to read as follows:

252.227-7040 Additional Preaward Requirements for Small Business Technology Transfer Program.

As prescribed in 227.7104-4(c)(1), use the following provision:

Additional Preaward Requirements for Small Business Technology Transfer Program (JAN 2025)

(a) *Definitions.* As used in this provision, the terms “research institution” and “United States” have the meaning given in the 252.227-7041, Additional Postaward Requirements for Small Business Technology Transfer Program, clause of this solicitation.

(b) Offers submitted in response to this solicitation shall include the following:

(1) The written agreement between the Offeror and a research institution, which shall contain—

(i) A specific allocation of ownership, rights, and responsibilities for intellectual property (including inventions, patents, technical data, and computer software) resulting from the Small Business Technology Transfer (STTR) Program award;

(ii) Identification of which party to the written agreement may obtain United States or foreign patents or otherwise protect any inventions that result from a STTR award; and

(iii) No terms or conditions that conflict with the requirements of the clause at 252.227-7018, Rights in Other Than Commercial Technical Data and Computer Software—Small Business Innovation Research Program and Small Business Technology Transfer Program, or this provision, including the rights of the United States, the Offeror, and the research institution regarding intellectual property, and regarding any right to carry out follow-on research.

(2) The Offeror's written representation that—

(i) The Offeror is satisfied with its written agreement with the research institution; and

(ii) The written agreement does not conflict with the requirements of this solicitation.

(c) The Offeror shall submit the written representation required by paragraph (b)(2) of this provision as an attachment to its offer, dated and signed by an official authorized to contractually obligate the Offeror.

(d) The Offeror's failure to submit the written agreement or written representation required by paragraph (b) of this provision with its offer may render the offer ineligible for award.

(e) If the Offeror is awarded a contract, the Contracting Officer will include the written agreement and written representation required by

paragraph (b) of this provision in an attachment to that contract.

(End of provision)

252.227–7041 Additional Postaward Requirements for Small Business Technology Transfer Program.

As prescribed in 227.7104–4(c)(2), use the following clause:

Additional Postaward Requirements for Small Business Technology Transfer Program (JAN 2025)

(a) *Definitions.* As used in this clause—

Research institution means an institution or entity that—

(1) Has a place of business located in the United States;

(2) Operates primarily within the United States or makes a significant contribution to the U.S. economy through payment of taxes or use of American products, materials, or labor; and

(3) Is either—

(i) A nonprofit institution that is owned and operated exclusively for scientific or educational purposes, no part of the net earnings of which inures to the benefit of any private shareholder or individual (section 4(3) of the Stevenson-Wydler Technology Innovation Act of 1980); or

(ii) A federally-funded research or research and development center as identified by the National Science Foundation (<https://www.nsf.gov/statistics/ffrdclist/>) in accordance with the guidance at Federal Acquisition Regulation 35.017.

United States means the 50 States and the District of Columbia, the territories and possessions of the Government, the Commonwealth of Puerto Rico, the Republic of the Marshall Islands, the Federated States of Micronesia, and the Republic of Palau.

(b) *Preaward submissions.* Attached to this contract are the following documents, submitted by the Contractor pursuant to Defense Federal Acquisition Regulation Supplement (DFARS) 252.227–7040, Additional Preaward Requirements for Small Business Technology Transfer Program:

(1) The written agreement between the Contractor and a research institution.

(2) The Contractor's written representation that the Contractor is satisfied with that written agreement, which does not conflict with the clause at DFARS 252.227–7018, Rights in Other Than Commercial Technical Data and Computer Software—Small Business Innovation Research Program and Small Business Technology Transfer Program, or this clause.

(c) *Postaward updates.* The Contractor shall not allow any modification to its written agreement with the research institution, unless the written agreement, as modified, contains—

(1) A specific allocation of ownership, rights, and responsibilities for intellectual property (including inventions, patents, technical data, and computer software) resulting from performance of this contract;

(2) Identification of which party to the written agreement may obtain United States or foreign patents or otherwise protect any inventions that result from a Small Business Technology Transfer Program award;

(3) The Contractor's written, dated, and signed representation that—

(i) The Contractor is satisfied with its written agreement with the research institution, as modified; and

(ii) The written agreement, as modified, does not conflict with the clause at DFARS 252.227–7018, Rights in Other Than Commercial Technical Data and Computer Software—Small Business Innovation Research Program and Small Business Technology Transfer Program, or this clause; and

(4) No terms and conditions that conflict with the clause at DFARS 252.227–7018, Rights in Other Than Commercial Technical Data and Computer Software—Small Business Innovation Research Program and Small Business Technology Transfer Program, or this clause, including the rights of the United States, the Contractor, and the research institution regarding intellectual property, and regarding any right to carry out follow-on research.

(d) *Submission of updated agreement.* Within 30 days of execution of the modified written agreement described in paragraph (b)(1) of this clause, the Contractor shall submit a copy of that updated written agreement and the updated written representation described in paragraph (b)(2) of this clause to the Contracting Officer for review and attachment to this contract.

(End of clause)

Defense Acquisition Regulations System

48 CFR Part 216

[Docket DARS–2024–0023]

RIN 0750–AL80

Defense Federal Acquisition Regulation Supplement: Task Order and Delivery Order Contracting for Architectural and Engineering Services (DFARS Case 2023–D007)

AGENCY: Defense Acquisition Regulations System, Department of Defense (DoD).

ACTION: Final rule.

SUMMARY: DoD is issuing a final rule amending the Defense Federal Acquisition Regulation Supplement (DFARS) to implement a section of the National Defense Authorization Act for Fiscal Year 2023 that provides directions for awarding architectural and engineering service task orders and delivery orders under multiple-award contracts.

DATES: Effective December 18, 2024.

FOR FURTHER INFORMATION CONTACT: Ms. Kimberly R. Ziegler, telephone 703–901–3176.

SUPPLEMENTARY INFORMATION:

I. Background

DoD published a proposed rule in the **Federal Register** at 89 FR 60853 on July 29, 2024, to implement section 802 of the National Defense Authorization Act (NDAA) for Fiscal Year (FY) 2023 (Pub. L. 117–263), which amends 10 U.S.C. 3406. Section 802 added a requirement at 10 U.S.C. 3406(h)(1) for DoD contracting officers to use qualification-based selections when awarding task orders and delivery orders for architectural and engineering (AE) services in accordance with Federal Acquisition Regulation (FAR) subpart 36.6 and 40 U.S.C. chapter 11 (The Brooks Architect Engineer Act). Section 802 also added, at 10 U.S.C. 3406(h)(2), direction that prevents contracting officers from routinely requesting additional information regarding qualifications when awarding task orders or delivery orders under a multiple-award contract. Two respondents submitted public comments in response to the proposed rule.

II. Discussion and Analysis

DoD reviewed the public comments in the development of the final rule. A

discussion of the comments is provided, as follows:

A. Summary of Significant Changes From the Proposed Rule

There are no significant changes from the proposed rule.

B. Analysis of Public Comments

1. Support for the Rule

Comment: A respondent expressed support for timely implementation of the final rule.

Response: DoD acknowledges support for the rule.

2. Concern Regarding the Text of the Rule

Comment: A respondent expressed concern that the rule text did not mirror the statutory language.

Response: The rule implements the statutory language using the drafting conventions of the FAR and its supplements, including the DFARS.

III. Applicability to Contracts At or Below the Simplified Acquisition Threshold (SAT) and for Commercial Services and Commercial Products, Including Commercially Available Off-the-Shelf (COTS) Items

This final rule does not create any new solicitation provisions or contract clauses. It does not impact any existing solicitation provisions or contract clauses or their applicability to contracts valued at or below the simplified acquisition threshold, for commercial products including COTS items, or for commercial services.

IV. Expected Impact of the Rule

DoD does not expect the final rule to have a significant impact on the public because the rule maintains the status quo regarding procedures for awarding task orders or delivery orders for AE services under multiple-award contracts. The FAR currently provides those procedures at subpart 36.6. This DFARS final rule points to those procedures.

The final rule also adds language to prevent contracting officers from requesting unnecessary information regarding qualifications. Therefore, this final rule may reduce the resubmission of qualification information when competing for AE services under multiple-award contracts. Contracting officers will request additional information only when necessary to determine the most qualified offeror for a task order or delivery order.

V. Executive Orders 12866 and 13563

Executive Orders (E.O.s) 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). E.O. 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. This is not a significant regulatory action and, therefore, was not subject to review under section 6(b) of E.O. 12866, Regulatory Planning and Review, as amended.

VI. Congressional Review Act

As required by the Congressional Review Act (5 U.S.C. 801–808) before an interim or final rule takes effect, DoD will submit a copy of the interim or final rule with the form, Submission of Federal Rules Under the Congressional Review Act, to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States. A major rule under the Congressional Review Act cannot take effect until 60 days after it is published in the **Federal Register**. The Office of Information and Regulatory Affairs has determined that this rule is not a major rule as defined by 5 U.S.C. 804.

VII. Regulatory Flexibility Act

A final regulatory flexibility analysis has been prepared consistent with the Regulatory Flexibility Act, 5 U.S.C. 601, *et seq.* and is summarized as follows:

This rule amends the DFARS to implement section 802 of the National Defense Authorization Act (NDAA) for Fiscal Year (FY) 2023 (Pub. L. 117–263), which amends 10 U.S.C. 3406. Section 802 requires DoD contracting officers to use qualification-based selections when awarding task orders and delivery orders for architectural and engineering (AE) services (10 U.S.C. 3406(h)(1)), a requirement that is already in Federal Acquisition Regulation (FAR) 16.500(d), 16.505(a)(9), and 36.600. Section 802 also prevents contracting officers from routinely requesting additional information regarding qualifications when awarding task orders or delivery orders under a multiple-award contract (10 U.S.C. 3406(h)(2)).

The objective of the rule is to ensure DoD contracting officers follow the new direction provided by 10 U.S.C. 3406(h)(2) when awarding task orders

and delivery orders for AE services in accordance with current regulations and 10 U.S.C. 3406(h)(1).

There were no significant issues raised by the public in response to the initial regulatory flexibility analysis.

This final rule will apply to small entities performing AE services under multiple-award contracts, which includes indefinite-delivery, indefinite-quantity contracts. The final rule is expected to reduce the burden on small entities by preventing contracting officers, when awarding task orders or delivery orders, from requiring the submittal of qualification information that was previously submitted and evaluated for the award of the basic multiple-award contract. The contracting officer may now request qualification information that is necessary to determine the most qualified offer for the particular task order or delivery order.

Data obtained from the Federal Procurement Data System for FY 2020, 2021, and 2022 indicates that DoD awards an average of 4,600 task orders and delivery orders for AE services annually. Of the estimated 4,600 orders, an average of approximately 2,600 awards are made annually to an estimated 453 unique small entities. For each task order or delivery order award, DoD estimates that 3 multiple-award contract awardees will submit an offer in response to a request for proposals. As a result, it is estimated that approximately 1,359 small entities will benefit from any reduction in burden provided by the final rule.

The final rule does not impose any new reporting, recordkeeping, or compliance requirements.

There are no practical alternatives that will accomplish the objectives of the statute.

VIII. Paperwork Reduction Act

This final rule does not contain any information collection requirements that require the approval of the Office of Management and Budget under the Paperwork Reduction Act (44 U.S.C. chapter 35).

List of Subjects in 48 CFR Part 216

Government procurement.

Jennifer D. Johnson,

Editor/Publisher, Defense Acquisition Regulations System.

Therefore, the Defense Acquisition Regulations System amends 48 CFR part 216 as follows:

PART 216—TYPES OF CONTRACTS

■ 1. The authority citation for 48 CFR part 216 continues to read as follows:

Authority: 41 U.S.C. 1303 and 48 CFR chapter 1.

■ 2. Add section 216.500 to subpart 216.5 to read as follows:

216.500 Scope of subpart.

(d)(i) When awarding task orders or delivery orders for architect-engineer services under a multiple-award contract, follow the procedures for the selection of contractors and placement of orders at FAR 36.6 to implement 10 U.S.C. 3406(h)(1).

(ii) Contracting officers shall not request additional information related to contractor qualifications, unless it is necessary to determine the most highly qualified contractor for the particular task order or delivery order (10 U.S.C. 3406(h)(2)).

Application of Certain Mandatory Bars in Fear Screenings; Final Rule

DEPARTMENT OF HOMELAND SECURITY**8 CFR Part 208**

[CIS No. 2776–24; DHS Docket No. USCIS–2024–0005]

RIN 1615–AC91

Application of Certain Mandatory Bars in Fear Screenings**AGENCY:** U.S. Citizenship and Immigration Services, DHS.**ACTION:** Final rule.

SUMMARY: The Department of Homeland Security (DHS or Department) is amending its regulations to allow asylum officers (AOs) to consider the potential applicability of certain bars to asylum and statutory withholding of removal during credible fear and reasonable fear screenings, including credible fear screenings where the Circumvention of Lawful Pathways or Securing the Border rules apply. The rule is intended to enhance operational flexibility and help DHS more swiftly remove certain noncitizens who are barred from asylum and statutory withholding of removal.

DATES: This final rule is effective January 17, 2025.

FOR FURTHER INFORMATION CONTACT: Daniel Delgado, Acting Deputy Assistant Secretary for Immigration Policy, Office of Strategy, Policy, and Plans, U.S. Department of Homeland Security; telephone (202) 447–3459 (not a toll-free call).

I. Background**A. Mandatory Bars NPRM**

On May 13, 2024, DHS issued a notice of proposed rulemaking (NPRM) that proposed to allow AOs to consider the potential applicability of certain bars to asylum and statutory withholding of removal during certain credible and reasonable fear screenings. Application of Certain Mandatory Bars in Fear Screenings, 89 FR 41347 (May 13, 2024).

Following careful consideration of public comments received, the Department has not made substantive modifications to the regulatory text proposed in the NPRM, 89 FR 41347 (May 13, 2024), but has made clarifying amendments. The rationale and the reasoning provided in the proposed rule preamble remain valid, except where a new or supplemental rationale is reflected in this Final Rule.

B. Securing the Border

After DHS issued the NPRM, on June 3, 2024, the President signed Presidential Proclamation 10773, *Securing the Border*, under sections 212(f) and 215(a) of the INA, 8 U.S.C. 1182(f) and 1185(a), finding that because the border security and immigration systems of the United States were unduly strained, the entry into the United States of certain categories of noncitizens was detrimental to the interests of the United States, and suspending and limiting the entry of such noncitizens. 89 FR 48487, 48487–91 (June 7, 2024) ("June 3 Proclamation"). The June 3 Proclamation directed DHS and DOJ to promptly consider issuing any regulations "as may be necessary to address the circumstances at the southern border, including any additional limitations and conditions on asylum eligibility that they determine are warranted, subject to any exceptions that they determine are warranted." 89 FR at 48491 (sec. 3(d)).

DHS and DOJ subsequently published an Interim Final Rule (IFR) on June 7, 2024, during the comment period of this rule, to implement the policies and objectives of the June 3 Proclamation. 89 FR 48710 (June 7, 2024) (*Securing the Border IFR*). The *Securing the Border IFR* effectuated three key changes to the process for those noncitizens who are encountered at the southern border during the emergency border circumstances giving rise to the suspension and limitation on entry under the June 3 Proclamation: (1) adding a limitation on asylum eligibility; (2) rather than asking specific questions of every noncitizen encountered and processed for expedited removal, providing general notice regarding the process for seeking asylum and related protection and referring a noncitizen for a credible fear interview only if the noncitizen manifests a fear of return, expresses an intention to apply for asylum or protection, or expresses a fear of persecution or torture or a fear of return to his or her country or the country of removal; and (3) for those found not to have a credible fear of persecution for

asylum purposes because of the IFR's limitation on asylum eligibility, screening for statutory withholding of removal and CAT protection under a "reasonable probability" standard. *Id.* at 48718. In the credible fear screening context, if there is not a significant possibility that the noncitizen could demonstrate that the limitation on asylum eligibility does not apply to them or could demonstrate by a preponderance of the evidence that they are eligible for an exception to the limitation (*i.e.*, there is not a significant possibility that the noncitizen could establish eligibility for asylum), the AO will enter a negative credible fear determination with respect to the noncitizen's asylum claim. 8 CFR 208.35(b)(1). The AO then screens the noncitizen for statutory withholding of removal and protection under CAT by determining whether there is a reasonable probability the noncitizen would face persecution or torture in the country (or countries) of removal. 8 CFR 208.35(b)(2). The reasonable probability standard is defined as "substantially more than a 'reasonable possibility' but somewhat less than more likely than not." 8 CFR 208.35(b)(2)(i).

On September 27, 2024, the President issued a proclamation amending the June 3 Proclamation. 89 FR 80351 (Oct. 2, 2024) (September 27 Proclamation). The September 27 Proclamation amended the calculations for when the suspension and limitation on entry established in the June 3 Proclamation would be discontinued, continued, or reactivated. *Id.* On October 7, 2024, the Departments published a final rule responding to public comments on the IFR and implementing changes that parallel those made in the September 27 Proclamation. Securing the Border Final Rule, 89 FR 81156 (Oct. 7, 2024) (Securing the Border final rule).¹

II. Legal Authority

The Secretary of Homeland Security's (Secretary) authority for this rule is found in various provisions of the Immigration and Nationality Act (INA), 8 U.S.C. 1101 *et seq.*, as amended by the Homeland Security Act of 2002 (HSA), Public Law 107–296, 116 Stat. 2135, as amended. The INA charges the Secretary "with the administration and enforcement of [the INA] and all other laws relating to the immigration and naturalization of aliens," except insofar as those laws assign functions to the President or other agencies. INA sec.

103(a)(1), 8 U.S.C. 1103(a)(1). The INA also authorizes the Secretary to establish regulations and take other actions "necessary for carrying out" the Secretary's authority to administer and enforce the immigration laws. INA secs. 103(a)(1) and (3), 8 U.S.C. 1103(a)(1) and (3); *see also* 6 U.S.C. 202 (authorities of the Secretary), 271(a)(3) (conferring authority on U.S. Citizenship and Immigration Services (USCIS) Director to establish "policies for performing [immigration adjudication] functions").

Under the INA, DHS has authority to adjudicate asylum applications and to conduct credible fear interviews, make credible fear determinations in the context of expedited removal, and to establish procedures for further consideration of asylum applications after an individual is found to have a credible fear. INA sec. 103(a)(1), (a)(3), 8 U.S.C. 1103(a)(1), (a)(3); INA sec. 208(b)(1)(A), (d)(1), (d)(5)(B), 8 U.S.C. 1158(b)(1)(A), (d)(1), (d)(5)(B); INA sec. 235(b)(1)(B), 8 U.S.C. 1225(b)(1)(B); *see also* 6 U.S.C. 271(b) (providing for the transfer of the Commissioner of Immigration and Naturalization's functions relating to adjudication of asylum and refugee applications to the Director of the Bureau of Citizenship and Immigration Services, now USCIS); 6 U.S.C. 557 (providing that references to any officer from whom functions are transferred under the HSA are to be understood as referring to the Secretary of Homeland Security). Within DHS, the Secretary has delegated some of those authorities to the Director of USCIS. USCIS AOs conduct credible fear interviews, make credible fear determinations, and determine whether a noncitizen's² asylum application should be granted, all of which are subject to review by a supervisory AO. *See* DHS, Delegation to the Bureau of Citizenship and Immigration Services, No. 0150.1 (June 5, 2003); 8 CFR 208.2(a), 208.9, 208.14(b), 208.30(b), (e)(6)(i), (e)(8).

The INA also authorizes the Secretary and Attorney General to publish regulatory amendments governing their respective roles regarding inspection and admission, detention and removal, withholding of removal, and deferral of removal. *See* INA secs. 235, 236, 241, 8 U.S.C. 1225, 1226, 1231.

The United States is a party to the 1967 Protocol Relating to the Status of Refugees, January 31, 1967, 19 U.S.T. 6223, 606 U.N.T.S. 268 ("Refugee

Protocol"), which incorporates Articles 2 through 34 of the 1951 Convention Relating to the Status of Refugees, July 28, 1951, 19 U.S.T. 6259, 189 U.N.T.S. 150 ("Refugee Convention"). Article 33 of the Refugee Convention generally prohibits parties to the Convention from expelling or returning ("refouler") "a refugee in any manner whatsoever to the frontiers of territories where his life or freedom would be threatened on account of his race, religion, nationality, membership of a particular social group or political opinion." *Id.*

Congress has implemented U.S. non-refoulement obligations under the 1967 Protocol through the INA, as amended by the Refugee Act of 1980, Public Law 96–212, 94 Stat. 102, extending the form of protection from removal now known as statutory withholding of removal. *See* INA sec. 241(b)(3), 8 U.S.C. 1231(b)(3) (formerly 8 U.S.C. 1253(h) (1952)); *see also* *Sale v. Haitian Ctrs. Council, Inc.*, 509 U.S. 155, 174–77 (1993) (describing the history of the statutory withholding provision and the Refugee Act amendments). The Supreme Court has long recognized that the United States implements its non-refoulement obligations under Article 33 of the Refugee Convention (via the Refugee Protocol) through the statutory withholding of removal provision in section 241(b)(3) of the INA, 8 U.S.C. 1231(b)(3), which provides that a noncitizen may not be removed to a country where their life or freedom would be threatened because of one of the protected grounds listed in Article 33 of the Refugee Convention. *See* INA sec. 241(b)(3), 8 U.S.C. 1231(b)(3), 8 CFR 208.16, 1208.16; *see also* *INS v. Cardoza-Fonseca*, 480 U.S. 421, 429–30 (1987) (discussing the statutory precursor to section 241(b)(3) of the INA—former section 243(h), 8 U.S.C. 1253(h) (1952)); *INS v. Stevic*, 467 U.S. 407, 414–22 (1984) (same). The INA also authorizes the Secretary and the Attorney General to implement statutory withholding of removal under section 241(b)(3) of the INA, 8 U.S.C. 1231(b)(3). *See* INA sec. 103(a)(1) and (3), (g)(1) and (2), 8 U.S.C. 1103(a)(1) and (3), (g)(1) and (2).

DHS and DOJ also have authority to implement U.S. obligations under Article 3 of the Convention Against Torture and Other Cruel, Inhuman or Degrading Treatment or Punishment, December 10, 1984, S. Treaty Doc. No. 100–20, 1465 U.N.T.S. 85 (entered into force for United States Nov. 20, 1994) (CAT). The Foreign Affairs Reform and Restructuring Act of 1998 (FARRA) provides the Secretary with the authority to "prescribe regulations to implement the obligations of the United

¹ This rule refers generally to the "Securing the Border rule" when it is not necessary to specify between the Securing the Border IFR or Securing the Border final rule.

² For purposes of this preamble, DHS uses the term "noncitizen" to be synonymous with the term "alien" as it is used in the INA. *See* INA sec. 101(a)(3), 8 U.S.C. 1101(a)(3); *Barton v. Barr*, 590 U.S. 222, 226 n.2 (2020).

States under Article 3 of the [CAT], subject to any reservations, understandings, declarations, and provisions contained in the United States Senate resolution of ratification of the Convention.” Public Law 105–277, div. G, sec. 2242(b), 112 Stat. 2681, 2681–822 (8 U.S.C. 1231 note). DHS and DOJ have implemented U.S. obligations under Article 3 of the CAT in their respective immigration regulations, consistent with FARRA. *See, e.g.*, 8 CFR 208.16(c) through 208.18, 1208.16(c) through 1208.18; 64 FR 8478 (Feb. 19, 1999) (“Regulations Concerning the Convention Against Torture”), as corrected by 64 FR 13881 (Mar. 23, 1999).

Overall, this rule is authorized because Congress has conferred upon the Secretary express rulemaking power to create certain procedures for screening for and adjudicating asylum claims. INA sec. 103(a)(1), (a)(3), 8 U.S.C. 1103(a)(1), (a)(3); INA sec. 208(b)(1)(A), (b)(2)(C), (d)(5)(B), 8 U.S.C. 1158(b)(1)(A), (b)(2)(C), (d)(5)(B); INA sec. 235(b)(1), 8 U.S.C. 1225(b)(1).

III. Provisions of the Final Rule and Revisions From the NPRM

The rule amends provisions at 8 CFR 208.30(e), 208.31, and 208.33(b) that effectuate the following changes to the credible fear and reasonable fear screening procedures:

- The rule provides AOs the discretion to consider mandatory bars to asylum under INA sec. 208(b)(2)(A)(i)–(v), 8 U.S.C. 1158(b)(2)(A)(i)–(v) or to statutory withholding of removal under INA sec. 241(b)(3)(B), 8 U.S.C. 1231(b)(3)(B) (mandatory bars) in credible fear screenings if the AO finds the noncitizen is able to establish a credible fear of persecution but not a credible fear of torture.

- The rule provides that when the mandatory bars are considered, the AO will find a noncitizen to have a credible fear of persecution if there is a significant possibility that the noncitizen can establish eligibility for asylum or withholding of removal, including the AO’s determination that no bar applies or will be applied by the AO in that case.

- The rule allows AOs to enter a negative credible fear finding with regard to the noncitizen’s eligibility for asylum or withholding of removal under INA sec. 208, 8 U.S.C. 1158, INA sec. 241(b)(3), 8 U.S.C. 1231(b)(3), or 8 CFR 208.16(c) if the AO determines there is not a significant possibility the noncitizen would be able to establish by a preponderance of the evidence that the mandatory bars do not apply.

- The rule provides AOs the discretion to consider mandatory bars when conducting credible fear screenings under the additional procedures in 8 CFR 208.33(b)(2).

- The rule provides that DHS will issue a Form I–862, Notice to Appear, if an AO conducting a credible fear screening under the additional procedures in 8 CFR 208.33(b)(2) determines that the noncitizen established a reasonable possibility of persecution with respect to the identified country or countries of removal and, to the extent bars were considered, that there is a reasonable possibility that none of the mandatory bars apply, or if the noncitizen established a reasonable possibility of torture.

- The rule provides that an AO will enter a negative credible fear determination when conducting a credible fear screening under the additional procedures in 8 CFR 208.33(b)(2) if the AO determines that the noncitizen failed to show a reasonable possibility that a mandatory bar does not apply and was unable to demonstrate a reasonable possibility of torture.

- The rule provides AOs the discretion to consider mandatory bars to statutory withholding of removal under INA sec. 241(b)(3)(B), 8 U.S.C. 1231(b)(3)(B), in reasonable fear screenings.

- The rule provides that, if an AO considers the mandatory bars to statutory withholding of removal under INA sec. 241(b)(3)(B), 8 U.S.C. 1231(b)(3)(B), a noncitizen will be found to have a reasonable fear of persecution if there is a reasonable possibility that the noncitizen would be persecuted on account of their race, religion, nationality, membership in a particular social group or political opinion, and the noncitizen has established a reasonable possibility that no bar applies.³

This Final Rule makes the following clarifying edits to the regulatory text proposed in the NPRM:

- The rule adds the phrase “in a proceeding on the merits” to 8 CFR

³ As described in the NPRM, this rule makes a non-substantive change to 8 CFR 208.31(g) and replaces the last sentence of 8 CFR 208.31(g) and paragraphs (g)(1)–(2). 89 FR at 41355 n.39. Because those provisions describe the procedures for immigration judge review of an AO’s reasonable fear finding and are duplicative with the corresponding provision governing immigration court procedures at 8 CFR 1208.31(g), they are not needed in the DHS regulations in chapter I of title 8 of the CFR. Accordingly, this rule replaces those provisions in 8 CFR 208.31(g) with a short statement that informs the reader that the immigration judge review procedures are set forth at 8 CFR 1208.31(g).

208.30(e)(5)(ii)(A) and (B) to clarify how AOs will apply in credible fear screenings the “significant possibility” standard with respect to mandatory bars to asylum and statutory withholding of removal, that is, by determining whether there is a significant possibility that, in a proceeding on the merits, the noncitizen would be able to establish by a preponderance of the evidence that such bar(s) do not apply.

- The rule removes the phrase “persecution or” from the last sentence of 8 CFR 208.31(c) to clarify that the sentence concerns “reasonable fear of torture” only, as “reasonable fear of persecution” is defined earlier in the paragraph.

IV. Response to Public Comments on the Proposed Rule

A. Summary of Comments on the Proposed Rule

In response to the proposed rule, DHS received 4,293 comments during the 30-day public comment period.

Approximately 3,864 of the comments were letters submitted through mass mailing campaigns, and 297 comments were unique submissions. Primarily, individuals and anonymous entities submitted comments, as did multiple advocacy groups and legal services providers. Other commenters included attorneys, religious and community organizations, elected officials, and research and educational institutions, among others.

Comments received during the 30-day comment period are organized by topic below. DHS reviewed the public comments received in response to the proposed rule and addresses relevant comments in this Final Rule, grouped by subject area. DHS does not address comments seeking changes in U.S. laws, regulations, or agency policies that are unrelated to the changes made by this rule. This Final Rule does not resolve issues that are outside the scope of this rulemaking. A brief summary of comments DHS deemed to be out of scope or unrelated to this rulemaking, making a substantive response unnecessary, is provided at the end of the section. Comments may be reviewed at <https://www.regulations.gov>, docket number USCIS–2024–0005.

Following careful consideration of public comments received, DHS in this Final Rule has not made substantive modifications to the regulatory text proposed in the NPRM but has made clarifying edits as described in Part III above. The rationale for the proposed rule and the reasoning provided in the background section of that rule remain valid with respect to the regulatory

amendments made by this Final Rule, except where a new or supplemental rationale is reflected in this Final Rule.

B. General Feedback on the Proposed Rule

1. General Support for the Proposed Rule

a. Positive or Minimal Impacts on Noncitizens and Their Support Systems

Comment: A commenter said that the proposed rule would not increase the risk of erroneous denials, stating that most of the people requesting asylum are economic migrants.

Response: DHS appreciates the commenter's support for the rule and agrees that the rule will not increase the risk of erroneous determinations. DHS believes the rule will result in AOs issuing negative fear determinations in certain cases where there is evidence that a mandatory bar applies to a noncitizen, there is a lack of evidence that the bar should not be applied (e.g., due to an exception to the bar or the application of an exemption to the bar, such as an exemption applied pursuant to INA sec. 212(d)(3)(B)(i), 8 U.S.C. 1182(d)(3)(B)(i)) and the noncitizen is not otherwise able to establish a positive fear of torture at the applicable standard. The rule will provide the Department greater flexibility to quickly screen out noncitizens with non-meritorious protection claims and swiftly remove noncitizens who present a national security or public safety concern. The Department does not otherwise rely on the commenter's assertion—that most people requesting asylum are economic migrants—as a justification for the rule.

b. Positive Impacts on Immigration System and Government Operations and Resources

Comment: Some commenters expressed support for the proposed rule and were concerned about abuse of the asylum system. These commenters expressed concern about fraudulent asylum claims and high levels of unlawful entry. These commenters also believe that noncitizens are exploiting the immigration processes and that application of the mandatory bars at the screening stage will eliminate removal delays. One commenter stated that AOs are capable of assessing mandatory bars at the credible fear stage and that AOs are well-trained in asylum law. One comment supported the proposed rule, agreeing that it will help avoid unnecessary detention of noncitizens and enhance public safety.

Response: DHS appreciates the commenters' support for the rule. DHS

believes it is appropriate to authorize additional procedures by which to deliver swift decisions on non-meritorious claims and consequences for irregular migration,⁴ rather than allowing ineligible individuals to further tax limited resources. DHS agrees that AOs are highly capable of assessing mandatory bars at the credible fear screening stage, as well as the reasonable fear screening stage, based on their specialized training in asylum law, including in applying mandatory bars.⁵

DHS agrees with the commenter that the rule will help avoid unnecessary detention and enhance public safety by prioritizing the speedy removal of noncitizens who may pose security threats. Noncitizens who may have otherwise remained in detention throughout the immigration court process for a full adjudication on the merits of their claim, despite the existence of easily verifiable evidence showing that they would be subject to a mandatory bar, will be quickly removed, thereby conserving the government's detention capacity.

2. General Opposition to the Proposed Rule

a. Conflicts With Humanitarian Values

Comment: Numerous commenters expressed concerns that the rule conflicts with humanitarian values. These commenters asserted that U.S. immigration policy should embody the values of compassion and humanitarianism and affirm the right to asylum and that the rule does not do so. These commenters stated that the rule would violate the international and universal right to safety and asylum. These commenters also stated that the rule is immoral and contrary to U.S. values, as they believe it would return asylum seekers to countries without meaningful protection and where they would still be in harm's way. These commenters believe the rule would contradict the United States' long-standing history of welcoming immigrants and supporting the international asylum system. Several commenters believe the proposed rule would have negative impacts on asylum seekers who are at risk of persecution in

their home countries and have experienced hardships to reach the border. Another commenter stated that the proposed rule undermines the current asylum system and could send noncitizens with legitimate asylum claims back to danger. A few commenters said that the right to seek asylum is crucial to the safety and justice of all people, and that the immigration system should be more welcoming instead of limiting asylum access. Other commenters remarked that the asylum system needs to be reformed to make it fair and just because denying asylum could endanger those who are seeking safety. Another commenter stated that people do not willingly leave their homes and family to seek asylum. Some commenters believe that U.S. policies have created the conditions in other countries that force individuals to flee from their homes. Some commenters believe that deterrence policies and detention of noncitizens seeking asylum is immoral and that the rule is based on racism and xenophobia. One commenter believes the rule would serve more as a barrier to asylum than as a measure to protect U.S. national security.

Response: DHS disagrees with these commenters' claims concerning the rule. This rule focuses on enhancing DHS's ability to swiftly remove noncitizens who are ineligible for asylum and statutory withholding of removal and are enforcement priorities: those who present a threat to national security or public safety, while maintaining DHS's authority to create and implement safe, orderly, and humane migration pathways. As explained in the NPRM, the population to which this rule will apply is likely to be relatively small, as informed by the number of cases identified as potentially implicating mandatory bars that are flagged by USCIS during screenings.⁶ The U.S. government has implemented, and will continue to implement, a number of measures designed to enhance and expand lawful pathways and processes for noncitizens seeking to enter the United States, including to seek asylum. Examples of lawful pathways include: the Uniting for Ukraine process, which allows Ukrainian nationals to receive humanitarian parole into the United States, enabling them to travel by air to the United States and be resettled;⁷ the multilateral Safe Mobility initiative, currently operating in Colombia, Costa Rica, Ecuador, and Guatemala, which

⁴ In this preamble, "irregular migration" refers to the movement of people into another country without authorization.

⁵ See, e.g., USCIS, "RAIO Directorate—Officer Training: Mandatory Bars" (May 9, 2013); USCIS, "RAIO Directorate—Officer Training: Definition of Persecution and Eligibility Based on Past Persecution" (Apr. 24, 2024); USCIS, "RAIO Directorate—Officer Training: Nexus and the Protected Grounds" (Apr. 24, 2024); USCIS, "RAIO Directorate—Officer Training: Well-Founded Fear" (Apr. 24, 2024).

⁶ 89 FR 41347, 41351–52 (May 13, 2024).

⁷ See U.S. Citizenship and Immigration Services, Uniting for Ukraine, <https://www.uscis.gov/ukraine> (last visited Sept. 25, 2024).

provides access to information and education about other lawful pathways to the United States and partner countries, local integration, and, for eligible individuals, expedited refugee processing to the United States;⁸ the new processes for up to 30,000 Cuban, Haitian, Nicaraguan, and Venezuelan (CHNV) nationals per month to apply for advance authorization to seek parole into the United States, enabling them to travel by air to the United States;⁹ and country-specific family reunification parole processes for certain nationals of Colombia, Cuba, Ecuador, El Salvador, Guatemala, Haiti, and Honduras who have U.S. citizen relatives in the United States.¹⁰ DHS and its interagency partners have also increased H-2B nonimmigrant visa availability¹¹ and refugee processing for countries within the Western Hemisphere.¹² Noncitizens who do not avail themselves of these pathways can schedule an appointment through the Customs and Border Protection (CBP) One app, a scheduling tool used by noncitizens to present themselves at a southwest land border port of entry (POE).¹³ The use of the CBP One app for scheduling has contributed to U.S. Customs and Border Protection's efforts to expand its southwest border POE migrant processing capacity well beyond the 2010–2016 daily POE

average,¹⁴ resulting in increased access for noncitizens to POEs.

b. Due Process Concerns

Comment: Many commenters expressed general due process concerns. Commenters stated that individual due process protections are critical and that, under the proposed rule, DHS would undermine or abandon due process in order to expedite the asylum process. Commenters stated that to alleviate due process concerns, the Department should refrain from implementing the rule.

Response: The Department disagrees with these commenters' claims concerning due process. This rule does not affect the provisions that address who DHS may refer for a credible fear screening or reasonable fear screening. See INA sec. 235(b)(1)(A)(ii), 8 U.S.C. 1225(b)(1)(A)(ii), 8 CFR 235.3(b)(4), 8 CFR 235.15(b)(4), 208.30(b), and 208.31(b). This rule does not impinge noncitizens' statutory right to representation in the credible and reasonable fear processes. See, e.g., 8 CFR 208.30(d)(4), 8 CFR 208.31(c), 8 CFR 235.15(b)(4)(i)(B). Additionally, noncitizens in credible fear may continue to consult with persons of their choosing. 8 CFR 208.30(d)(4); 8 CFR 235.15(b)(4)(i)(B). Further, the rule does not alter the preexisting rights or opportunities for noncitizens in credible or reasonable fear proceedings to seek immigration judge review of negative credible fear or reasonable fear determinations. See 8 CFR 208.30(g)(1), 208.31(g), 208.33(b)(2), 208.35(b)(2) 1003.42, 1208.31(g), 1208.33(b). Accordingly, the rule preserves noncitizens' process rights as provided in the INA. See *DHS v. Thuraissigiam*, 591 U.S. 103, 140 (2022) (reaffirming that noncitizens who arrive at U.S. ports of entry or are encountered shortly after unlawfully crossing the U.S. border and are placed in expedited removal proceedings, including those in the credible fear screening process, have "only those rights regarding admission that Congress has provided by statute").

Comment: Many commenters expressed concerns regarding access to legal counsel under the proposed rule. Commenters voiced concerns that the rule would inhibit access to legal counsel. Commenters noted that the credible fear process occurs shortly after individuals reach the United States, and they lack access to an attorney or have experienced trauma. Commenters also

noted that individuals in the asylum process need sufficient time to find legal counsel and that as a result of the proposed rule, individuals would not be able to pass the initial credible fear screening and would be removed before even being able to secure legal representation. Some commenters pointed to the low representation rates of detained asylum seekers stemming from the reliance on telephone access from remote detention facilities to obtain counsel and the rapid timelines associated with screening determinations. Commenters believe that attempts to provide legal representation to detained individuals in screenings have been compromised or obstructed. A commenter said that it is hard to establish a credible fear of persecution and some noncitizens are not prepared to address the nuances asked of them in screenings; thus, they need lawyers to help them understand the law. Several commenters remarked on the particular need for access to counsel if AOs were to consider mandatory bars because challenging the applicability of a bar would be difficult without an attorney. A commenter stated that every noncitizen whose case is flagged with a possible mandatory bar should be notified of their right to counsel and allowed time to secure an attorney, and contrasted the reported difficulty of securing an attorney during the expedited removal process with the relative ease of doing so in section 240 removal proceedings.

Response: The Department disagrees with the commenters' claims that this rule inhibits access to counsel. As an initial matter, because this rule does not alter procedures governing consultation or representation, commenters' concerns regarding those issues are outside the scope of this rulemaking. Procedures regarding consultation and representation are governed by other DHS regulations, guidance, and policies. See 8 CFR 235.3(b)(4)(ii); 208.30(d)(4), 8 CFR 208.31(c).

This rule does not amend the pre-existing rights of noncitizens regarding their rights to representation during fear screenings. Specifically, during credible fear screenings, the INA provides that a noncitizen "may consult with a person or persons of the [noncitizen]'s choosing prior to the interview or any review thereof, according to regulations prescribed by the Attorney General," provided that "[s]uch consultation shall be at no expense to the Government and shall not unreasonably delay the process." INA 235(b)(1)(B)(iv), 8 U.S.C. 1225(b)(1)(B)(iv). This statutory right to consult does not attach until a noncitizen becomes eligible for a

credible fear interview, and it does not guarantee an absolute right to retain counsel. *See id.* The credible fear review regulations further provide that a noncitizen “may consult with a person or persons of the [noncitizen’s] choosing prior to the interview or any review thereof,” “[s]uch consultation shall be at no expense to the Government and shall not unreasonably delay the process,” and that the person(s) with whom the noncitizen consulted “may be present at the interview and may be permitted, in the discretion of the asylum officer, to present a statement at the end of the interview.” 8 CFR 208.30(d)(4). During the reasonable fear screening process, individuals may be represented by an attorney or an accredited representative at no cost to the government.

Individuals who may be subject to a mandatory bar will have the opportunity to show that the bar does not apply during the screening interview. Credible fear and reasonable fear screening determinations are based on non-adversarial interviews that occur in an expedited manner, such that the scope of representation is necessarily limited when compared to a lengthy adversarial hearing before EOIR. In addition to substantive training on applying mandatory bars, AOs receive training and have practical experience conducting non-adversarial interviews, eliciting testimony, working with interpreters, cross-cultural communication, and working with vulnerable populations.¹⁵ AOs regularly assess the mandatory bars in affirmative asylum adjudications and asylum merits interviews (AMIs); therefore, it is not unusual for AOs to consider these issues. Accordingly, AOs are well-suited in a screening interview to develop the record regarding a potential mandatory bar and to ensure the noncitizen has an opportunity to provide evidence as to why a given bar does not apply at the appropriate standard of proof. Moreover, all credible fear and reasonable fear determinations are reviewed by a supervisory AO for procedural and substantive accuracy and completeness before becoming

final.¹⁶ DHS also believes that the non-adversarial nature of credible fear and reasonable fear screenings, in contrast with adversarial section 240 removal proceedings, sufficiently mitigates the commenters’ concerns about the more compressed timeframe noncitizens have to secure an attorney during the expedited removal process, and challenges of accessing counsel in detention.

Finally, DHS disagrees that the consideration of mandatory bars is categorically more complex than the consideration of the full array of issues that are currently presented in screening cases on a routine basis. For example, determining whether a noncitizen’s testimony is credible, whether harm experienced or feared was or would be inflicted on account of a protected ground, or whether torture feared would be inflicted with the consent or acquiescence of a person acting in an official capacity are all potentially complex issues that AOs regularly consider and analyze in fear screenings. As such, and in view of AOs’ training and experience previously described, the Department does not agree that a noncitizen’s ability to obtain counsel for such an interview presents new or greater concerns than those presented by a screening interview where mandatory bars are not considered.

Comment: A commenter expressed concern that AOs would rely on evidence such as Interpol Red Notices issued by authoritarian regimes as a basis for considering the applicability of bars.

Response: The Department has implemented measures to combat the impact of abusive or unwarranted INTERPOL notices separate and apart from this rule. For example, DHS has issued internal guidance on the appropriate handling of INTERPOL notices that are suspected of having been issued by a country for the purpose of persecuting an individual or otherwise appear to be prohibited or noncompliant.

Comment: A few commenters expressed concern regarding the ability to collect and present evidence during credible fear screenings. The commenters stated that the inability to compile evidence would adversely impact noncitizens, as they would not be able to gather evidence disputing the application of a bar. Commenters stated that consideration of the bars to asylum and statutory withholding of removal in

credible fear or reasonable fear interviews does not afford an asylum seeker the opportunity to present the extensive evidence needed to rebut a finding that one of the asylum bars applies. Commenters stated that the expedited removal process does not afford sufficient opportunity for noncitizens to gather the evidence needed to demonstrate a bar does not apply to them and that the rule would require noncitizens to understand highly complex bars to eligibility that newly arriving people cannot be expected to understand. Commenters asserted that often, the evidence these bars apply comes from unverified or difficult-to-verify sources. Several commenters opposed the proposed rule on the basis that detained noncitizens in expedited removal proceedings would have difficulty discussing or adequately defending themselves against the application of mandatory bars because of the effect of trauma resulting from past harm or their journey to the United States, hunger, and linguistic or cultural barriers.

Response: The Department disagrees that this rule would negatively impact noncitizens in this manner. AOs have a duty to elicit all relevant and useful information on a fear claim. *See, e.g.,* 8 CFR 208.30(d). Credible testimony alone may be the basis of a positive fear determination without the need for any corroborative documentary evidence. Where an AO exercises discretion to consider a mandatory bar in a fear screening, the AO will provide the noncitizen with an opportunity to present evidence that the bar does not apply, and credible testimony alone may be sufficient evidence to make that showing. As noted above, AOs have training and experience in the substantive application of mandatory bars and in non-adversarial interviewing and eliciting testimony and are therefore well-positioned to develop and evaluate the record in such cases, including weighing the reliability and probative value of available evidence.¹⁷ Further, all credible fear and reasonable fear determinations undergo supervisory review prior to service.

Noncitizens undergoing fear screenings where a bar is considered would be able to demonstrate that the bar does not apply at the relevant standard. For example, in credible fear under 8 CFR 208.30, a noncitizen must

¹⁵ See USCIS, RAO Directorate—Officer Training: Mandatory Bars (May 9, 2013); USCIS, RAO Directorate—Officer Training: Interviewing—Introduction to the Non-Adversarial Interview (Apr. 24, 2024); USCIS, RAO Directorate—Officer Training: Interviewing—Eliciting Testimony (Apr. 24, 2024); USCIS, RAO Directorate—Officer Training: Interviewing—Working with an Interpreter (Apr. 24, 2024); USCIS, RAO Directorate—Officer Training: Cross-Cultural Communication and Other Factors That May Impede Communication at an Interview (Apr. 24, 2024); USCIS, RAO Directorate—Officer Training: Interviewing Survivors of Torture and Other Severe Trauma (Apr. 24, 2024).

¹⁶ See 8 CFR 208.30(e)(8); *see also* Memorandum for the Record, from Ted Kim, Assoc. Dir., Refugee, Asylum, and Int’l Operations Directorate, USCIS, Re: Asylum Division Training, Staffing, Capacity, and Credible Fear Procedures (Sept. 26, 2024).

¹⁷ See USCIS, RAO Directorate—Officer Training: Mandatory Bars (May 9, 2013); USCIS, RAO Directorate—Officer Training: Interviewing—Introduction to the Non-Adversarial Interview (Apr. 24, 2024); USCIS, RAO Directorate—Officer Training: Interviewing—Eliciting Testimony (Apr. 24, 2024).

demonstrate that there is a significant possibility that they could establish that the bar does not apply by a preponderance of evidence at a future proceeding. Similarly, noncitizens would need to establish a reasonable possibility that the bar does not apply in credible fear screenings under 8 CFR 208.33, or in reasonable fear screenings under 8 CFR 208.31, and noncitizens need to establish a reasonable probability that the bar does not apply in credible fear screenings conducted under 8 CFR 208.35. The screening standards themselves ensure a fair process in that the noncitizen need only meet the significant possibility, reasonable possibility, or reasonable probability standard in order to pass through the screening process. These standards, which are either lower or the same as the standards that apply in full adjudications of asylum and statutory withholding of removal requests, do not require the presentation of the same extent of evidence that would be needed in a full merits hearing or interview. Furthermore, this rule does not create a complicated process requiring full evidence gathering and determinations to be made on possible bars to eligibility. Rather, AOs will only consider a bar in those cases where there is easily verifiable (as opposed to unverified or difficult-to-verify) evidence available to the AO that, in their discretion, warrants an inquiry into a bar, and the AO can consider that bar efficiently at the screening stage. AOs are trained to elicit all relevant testimony in a non-adversarial manner¹⁸ to ensure noncitizens have a fair opportunity to provide any evidence necessary to evaluate their claim, which under this rule may include the applicability of any bars or the availability of any exceptions or exemptions.

DHS rejects the notion that it is categorically more difficult for a noncitizen to discuss issues surrounding mandatory bars than it is to discuss other issues that are already the subject of screening interviews. AOs are trained to work with noncitizens who are experiencing the effects of trauma and to communicate across cultural and linguistic barriers.¹⁹ AOs routinely interview noncitizens in protection

screening interviews on matters that many find challenging to discuss, including torture, sexual assault, familial violence, and the deaths of family members.

The permissive nature of the rule is also well-tailored to a situation where the noncitizen is unable to testify in depth due to the effects of trauma, or a situation where the noncitizen may be better able to provide evidence that a mandatory bar does not apply to them in a full hearing. As explained in the proposed rule, AOs should only apply a mandatory bar in a screening interview where there is “easily verifiable information” that the bar may apply, and even then, to only do so if the inquiry can be done efficiently. 89 FR at 41354. Should the AO determine that the issue would be better considered at a later stage, they retain the discretion under this proposed rule to decline to consider mandatory bars during the screening determination.

Comment: Many commenters expressed concerns regarding the application of mandatory bars by AOs and officer discretion, emphasizing that the application of the bars is complex, and asserting that immigration judges—not AOs—should evaluate the complex legal issues associated with the application of the mandatory bars. Several commenters noted that bars to asylum and statutory withholding of removal can involve complex factual and legal inquiries, with some pointing out that DHS itself, in a prior rulemaking removing bars from consideration in credible fear screenings, concluded that such a “fact-intensive inquiry requiring complex legal analysis [] would be more appropriate in a full adjudication before an asylum officer or in section 240 proceedings with the availability of judicial review than in credible fear screenings.” 87 FR 18078, 18093 (Mar. 29, 2022) (“Asylum Processing IFR”). Commenters argued that DHS’s representation that AOs would consider bars only in those cases where there is easily verifiable evidence available to the AO that in their discretion warrants an inquiry into a bar and where the AO is confident that they can consider that bar efficiently is insufficient given the complexity of this area of the law.

Commenters stated that the bars could be applied incorrectly, arbitrarily, or unfairly, endangering individuals. Commenters also stated that the application of bars may be based on evidence from foreign entities, which U.S. immigration officials cannot independently verify and which may be inaccurate. Commenters stated that noncitizens in credible and reasonable

fear processes should be subject to the same rules and that individuals are entitled to a transparent, humane process. Commenters also stated that AOs could be more likely to issue negative determinations of credible fear as a result of the proposed rule, especially if they do not listen to a noncitizen fully or fairly.

A few commenters discussed officer bias or misconduct during the screening process. Commenters stated that, according to a complaint filed with the DHS Office for Civil Rights and Civil Liberties, AOs scheduled credible fear interviews without notifying the attorney of the interview; incorrectly applied standards when evaluating claims; used adversarial interview techniques on individuals; subjected noncitizens to interviews in languages in which they are not fluent; and failed to provide noncitizens with appropriate language interpreters. Commenters stated that there would be no mechanisms for upholding accountability under the proposed rule. Other commenters stated that the proposed rule would yield an asylum process that is less consistent and transparent, in part because of the discretion with which AOs would ask questions, and the lack of consistency and transparency would thwart efforts to monitor the process.

A commenter asserted that the rule would confuse the role of AOs during the screening process with that of a final adjudicator. According to the commenter, although the proposed rule may purport to avoid adverse outcomes by making the application of the bars at the fear screening stage discretionary instead of mandatory, the distinction would be negligible.

Response: The Department disagrees with the claim that only immigration judges, not both immigration judges and AOs, should evaluate or apply the mandatory bars. DHS also rejects the notion that the consideration of mandatory bars is categorically more complex than the consideration of the full array of issues that AOs address on a routine basis. AOs regularly assess the mandatory bars in affirmative asylum adjudications and asylum merits interviews (AMIs); therefore, it is not unusual for AOs to consider these issues.²⁰

The Department also rejects the assertion that the rule should not be implemented due to potential officer bias or misconduct in the interview and

¹⁸ See USCIS, “RAIO Directorate—Officer Training: Interviewing—Eliciting Testimony” (Dec. 20, 2019).

¹⁹ See USCIS, “RAIO Directorate—Officer Training: Cross-Cultural Communication and Other Factors That May Impede Communication at an Interview” (Apr. 24, 2024); USCIS, “RAIO Directorate—Officer Training: Interviewing Survivors of Torture and Other Severe Trauma” (Apr. 24, 2024).

²⁰ As noted in the NPRM, see 89 FR at 41353 n.30, DHS has long applied in the expedited removal process the “safe-third-country” bar to eligibility to apply for asylum at INA 208(a)(2)(A), 8 U.S.C. 1158(a)(2)(A). See 8 CFR 208.30(e)(6).

lack of accountability through the process. AOs are capable of conducting thorough screening interviews, applying the mandatory bars when applicable, and maintaining fairness throughout the process, as is required by their role.²¹ AOs are well trained in asylum law, and all credible fear and reasonable fear determinations are reviewed by a supervisory asylum officer (SAO) for accuracy and legal sufficiency.²² As explained above, AOs receive training in and have experience in non-adversarial interviewing and eliciting testimony, in addition to substantive training on applying mandatory bars and experience applying mandatory bars in full asylum adjudications.²³

The Department also rejects the claim that this new process will confuse the role of the AO with a final adjudicator. At the start of the screening interview, the AO will introduce themselves and explain the interview process so as to avoid confusion about roles or procedures. Noncitizens are also provided with an information sheet on the credible or reasonable fear process that explains the purpose and nature of the screening interview, including possible outcomes and what to expect following the interview. In addition, making a determination regarding a mandatory bar, when considered, does not make an AO any more or less of a final adjudicator than making a determination regarding substantive eligibility, as is currently done and is unaffected by this rule.

Furthermore, the Department disagrees with the claims that, as a

result of the complexity of analyzing the mandatory bars, AOs may apply the bars incorrectly or unfairly. Considering the training and experience AOs possess, they are well-suited to exercise discretion to apply mandatory bars in the screening context and, where evidence related to a mandatory bar is too complex to be fully explored in the screening context, to exercise their discretion not to apply the bar in the screening determination. AOs will continue to issue positive fear determinations where a noncitizen demonstrates a credible or reasonable fear at the applicable screening standard, even where there may be indicia of a mandatory bar but the available evidence at the screening stage as to the bar or any available exception or exemption is limited.

DHS acknowledges that properly analyzing bars to asylum and statutory withholding of removal can involve complicated, extensive factfinding and legal analysis. Furthermore, some aspects of this area of law remain unsettled, and different courts have come to different conclusions on certain legal questions related to these bars. USCIS Asylum Officers must follow precedent Board of Immigration Appeals (BIA) and Attorney General decisions, except when they have been modified or overruled by subsequent decisions of the BIA or the Attorney General, or there is a conflicting published opinion on the issue by the U.S. Supreme Court or by the U.S. Court of Appeals with jurisdiction over the matter.²⁴ It is not the case that the considerations relating to legal analysis hold true in every case in which a mandatory bar arises. For example, a noncitizen who claims to fear persecution by the government of Colombia on account of political opinion, but who credibly testifies to being a current member of the Revolutionary Armed Forces of Colombia—People's Army, would clearly be barred from both asylum and withholding of removal pursuant to INA sec. 208(b)(2)(A)(v), 8 U.S.C. 1158(b)(2)(A)(v) and INA sec. 241(b)(3)(B), 8 U.S.C. 1231(b)(3)(B), as a current member of a designated foreign terrorist organization,²⁵ regardless of whether the noncitizen could demonstrate they are a refugee or would be persecuted on account of a protected ground if returned to Colombia. DHS disagrees that AOs should be

categorically foreclosed from determining there is no significant possibility or reasonable possibility such an individual could establish eligibility for these forms of relief or protection in a full merits hearing. This rule allows, but does not require, an AO encountering such a scenario to consider the applicable bar in a fear screening and to enter a negative determination with regard to the noncitizen's eligibility for asylum or statutory withholding of removal, preventing the noncitizen from entering a potentially years-long immigration court process in pursuit of relief for which they are ineligible and allowing DHS and EOIR resources that would have been expended on such processes to be conserved for potentially meritorious cases.

Comment: Many commenters expressed concerns with AOs considering mandatory bars during the fear screening stage, instead of immigration judges during section 240 removal proceedings. Commenters stated that applying mandatory bars at the credible fear screening stage would preclude individuals from a full hearing that would provide them the opportunity to prepare their cases, present witnesses and evidence, and allow a court to determine the true nature of foreign convictions, which are often a part of the persecution that the noncitizen experienced in their home country for voicing dissent against an authoritarian government. Commenters stated these decisions should be made by immigration judges and that individuals should be able to appear before an immigration judge or have a fair hearing, be it at the onset of seeking status in the United States or when trying to overturn an order of removal. Commenters asserted that eliminating hearings at an earlier stage would deny noncitizens who have strong or pressing cases and that the proposed rule would increase negative determinations in credible fear and expedited removals.

Several commenters additionally discussed the accuracy of negative credible fear determinations, stating that negative credible fear determinations are often dismissed or reversed after review by an immigration judge. A commenter referenced multiple examples when courts have questioned the reliability and value afforded to credible fear interviews, reasoning that rulings or removal orders have been overturned in part because of unreliable information elicited during the interviews. According to the commenter, the proposed rule would restrict asylum by placing even greater value on screenings that are already

²¹ See USCIS, "RAIO Directorate—Officer Training: Mandatory Bars" (May 9, 2013); USCIS, "RAIO Directorate—Officer Training: Interviewing—Introduction to the Non-Adversarial Interview" (Apr. 24, 2024); USCIS, "RAIO Directorate—Officer Training: Interviewing—Eliciting Testimony" (Apr. 24, 2024); USCIS, "RAIO Directorate—Officer Training: Interviewing—Working with an Interpreter" (Apr. 24, 2024); USCIS, "RAIO Directorate—Officer Training: Cross-Cultural Communication and Other Factors That May Impede Communication at an Interview" (Apr. 24, 2024).

²² See 8 CFR 208.30(e)(8); see also Memorandum for the Record, from Ted Kim, Assoc. Dir., Refugee, Asylum, and Int'l Operations Directorate, USCIS, *Re: Asylum Division Training, Staffing, Capacity, and Credible Fear Procedures* (Sept. 26, 2024).

²³ See USCIS, "RAIO Directorate—Officer Training: Mandatory Bars" (May 9, 2013); USCIS, "RAIO Directorate—Officer Training: Interviewing—Introduction to the Non-Adversarial Interview" (Apr. 24, 2024); USCIS, "RAIO Directorate—Officer Training: Interviewing—Eliciting Testimony" (Apr. 24, 2024); USCIS, "RAIO Directorate—Officer Training: Interviewing—Working with an Interpreter" (Apr. 24, 2024); USCIS, "RAIO Directorate—Officer Training: Cross-Cultural Communication and Other Factors That May Impede Communication at an Interview" (Apr. 24, 2024); USCIS, "RAIO Directorate—Officer Training: Interviewing Survivors of Torture and Other Severe Trauma" (Apr. 24, 2024).

²⁴ See 8 CFR 103.10(b), 1003.1(g); see also USCIS, "RAIO Directorate—Officer Training: Reading and Using Case Law" 14 (April 24, 2024).

²⁵ See INA secs. 212(a)(3)(B)(i)(V), 237(a)(4)(B), 8 U.S.C. 1182(a)(3)(B)(i)(V), 1227(a)(4)(B); see also 86 FR 68294 (Dec. 1, 2021).

unreliable, and the bars would be applied without the safeguards afforded by section 240 removal proceedings. The commenter further stated that both the Biden and Trump administrations have distanced credible fear interviews from the low screening standard framed by Congress.

Response: The Department disagrees with the claim that the mandatory bars should only be considered during section 240 removal proceedings before an immigration judge. As discussed above, AOs receive training in and have experience in non-adversarial interviewing and eliciting testimony, in addition to substantive training on applying mandatory bars and experience applying mandatory bars in full asylum adjudications.²⁶

In addition, the Department disagrees that applying the bars earlier would preclude noncitizens from fully presenting their case compared to if the bars were only applied in a subsequent section 240 removal proceeding. Where evidence related to a mandatory bar is too complex to be fully explored in the screening context or where there is additional evidence that the noncitizen may not be subject to the bar because of an exception or exemption, AOs may exercise their discretion not to apply the mandatory bar in the screening determination. In those cases, if the noncitizen establishes a fear of persecution or torture at the applicable standard, the AO will issue a positive determination so that the bar may be further explored by the immigration judge. Where there is evidence available to the AO that triggers an inquiry into an applicable mandatory bar, and the AO determines that they can address that bar efficiently at the credible fear or reasonable fear interview, then the AO will give the noncitizen the opportunity to establish, at the relevant standard, that the bar would not apply. The Department believes this discretion will ensure that application of the mandatory bars in fear screenings only occurs in cases where USCIS can effectively and accurately apply the bar without creating inefficiencies or frustrating the streamlined nature of the

screening process. This rule will allow AOs to, in their discretion, consider bars in the issuance of negative fear determinations only in certain cases where there is sufficient, easily verifiable evidence that a bar applies to a noncitizen, there is a lack of evidence that no bar applies or shall be applied, and the noncitizen is not otherwise able to establish a positive fear of torture at the applicable standard.

Finally, the Department disagrees with comments that question the accuracy and reliability of the screening interviews and determinations and the claim that this rule will restrict asylum. AOs are trained to conduct thorough, fair, and non-adversarial interviews, and AOs play an integral role in the credible fear and reasonable fear screening process. Regarding immigration judge review of AOs' credible fear or reasonable fear determinations, DHS notes that immigration judges have the authority to conduct de novo review of negative credible fear and reasonable fear determinations. 8 CFR 1003.42; 8 CFR 1208.31(g). Otherwise, the procedures for immigration judge decisions vacating screening determinations are outside the scope of this rulemaking.

Comment: Several commenters objected to the proposed rule on the basis that the rule would curtail the avenues for review of application of the mandatory bars. While the noncitizen would be able to seek review of an AO's negative determination by an immigration judge, they would not be able to appeal the immigration judge's decision to the Board of Immigration Appeals (BIA) or the Federal Court system. Commenters also stated the rule forecloses judicial review.

Commenters wrote that the rule's provisions for immigration judge review provide insufficient protections against erroneous negative screening determinations and raise due process concerns. One commenter indicated immigration judges, who frequently do not cite any law in their fear review denials, do not have time to devote to in-depth analysis with an additional layer of complexity added to hearings. A commenter stated that AOs' credible fear determinations would be reversed more frequently if immigration judge review included basic due process protections, such as access to counsel. Another stated noncitizens might not know that immigration judge review of negative fear determination is available unless an AO tells them.

Response: Negative screening determinations of all types are subject to review by an immigration judge. See 8 CFR 208.30(g)(1), 208.31(g),

208.33(b)(2), 208.35(b)(2). Should an immigration judge make a negative credible fear determination, no appeal of that determination is available. See 8 CFR 1003.42(f)(2), 8 CFR 1208.31(g)(1). Nothing in the proposed rule alters these procedures, although the rule would allow AOs to base a negative determination on the application of a mandatory bar.

The comments that the rule forecloses review of negative determinations are incorrect, as the regulations establish procedures for referring negative determinations for review by an immigration judge. Noncitizens are provided written notification of their right to request an immigration judge's review of the AO's credible fear determination. 8 CFR 235.3(b)(4)(i)(C). Where a noncitizen is issued a negative credible fear determination, they are served by asylum office staff with one of the following forms: Form I-869, Record of Negative Credible Fear Finding and Request for Review by Immigration Judge (where the negative credible fear determination is issued pursuant to 208.30); Form I-869B, Record of Negative Credible Fear and Reasonable Possibility Finding and Request for Review by Immigration Judge for Noncitizens Subject to the Condition on Asylum Eligibility Pursuant to 8 CFR 208.33(a); or Form I-869SB, Record of Negative Credible Fear and Reasonable Probability Finding and Request for Review by Immigration Judge for Noncitizens Subject to the Limitation on Asylum Eligibility Pursuant to 8 CFR 208.35(a). In all negative determinations, the form is read to the noncitizen aloud at service of the decision in a language they understand (via an interpreter if necessary) and includes an explanation of the noncitizen's right to request immigration judge review of the negative determination, pursuant to 8 CFR 208.30(g)(1), 208.33(b)(2)(iii), or 208.35(b)(2)(iii).²⁷ The noncitizen selects on the Form I-869, Form I-869B, or Form I-869SB, whether they request immigration judge review of the negative determination and signs the form, which also includes the signature of the interpreter, where applicable (or where the interpretation was via a USCIS telephonic contract interpreter, the interpreter ID number is recorded).²⁸

²⁷ See Memorandum for the Record, from Ted Kim, Assoc. Dir., Refugee, Asylum, and Int'l Operations Directorate, USCIS, *Re: Asylum Division Training, Staffing, Capacity, and Credible Fear Procedures* (Sept. 26, 2024).

²⁸ See Memorandum for the Record, from Ted Kim, Assoc. Dir., Refugee, Asylum, and Int'l Operations Directorate, USCIS, *Re: Asylum Division*

²⁶ See USCIS, "RAIO Directorate—Officer Training: Mandatory Bars" (May 9, 2013); USCIS, "RAIO Directorate—Officer Training: Interviewing—Introduction to the Non-Adversarial Interview" (Apr. 24, 2024); USCIS, "RAIO Directorate—Officer Training: Interviewing—Eliciting Testimony" (Apr. 24, 2024); USCIS, "RAIO Directorate—Officer Training: Interviewing—Working with an Interpreter" (Apr. 24, 2024); USCIS, "RAIO Directorate—Officer Training: Cross-Cultural Communication and Other Factors That May Impede Communication at an Interview" (Apr. 24, 2024); USCIS, "RAIO Directorate—Officer Training: Interviewing Survivors of Torture and Other Severe Trauma" (Apr. 24, 2024).

An immigration officer who refers a noncitizen subject to expedited removal to an AO for a credible fear interview will provide the noncitizen with a written disclosure describing, among other things, the right to request a review by an immigration judge of the AO's credible fear determination. 8 CFR 235.3(b)(4)(i).

Where a noncitizen is issued a negative reasonable fear determination, they are served by asylum office staff with a Form I-898, Record of Negative Reasonable Fear Finding and Request for Review by Immigration Judge, which is read to them aloud in a language they understand (via an interpreter if necessary) and includes an explanation of the noncitizen's right to request immigration judge review of the negative determination, pursuant to 8 CFR 208.31(f)–(g). The noncitizen selects on the Form I-898 whether they request immigration judge review and signs the form, which also includes the signature of the interpreter, where applicable (or where the interpretation was via a USCIS telephonic contract interpreter, the interpreter ID number is recorded).²⁹

DHS disagrees with the commenters stating that the rule's provisions for immigration judge review are inadequate to ensure that sufficient procedural safeguards are provided or protect against erroneous screening determinations. Immigration judges are familiar with applying bars to asylum and statutory withholding of removal, as well as the applicable standards of proof involved in both fear screenings and full merits adjudications of asylum, statutory withholding of removal, and protection under the CAT.³⁰ As discussed above, multiple provisions in title 8 of the Code of Federal Regulations provide notice of the right to access counsel.³¹

Furthermore, review of negative credible fear determinations is limited under INA sec. 235(b)(2)(C), 8 U.S.C. 1225(b)(2)(C), to the review by an immigration judge previously described, so DHS has no authority to create additional mechanisms for a noncitizen to appeal a credible fear determination made during the expedited removal process pursuant to INA sec. 235(b), 8

U.S.C. 1225(b).³² DHS acknowledges that, before this rule, mandatory bars were only applied during a full adjudication of the noncitizen's application for asylum or withholding of removal, and any such decision on a bar was subject to review by both the BIA and the relevant Federal court. See 8 CFR 1003.1(b)(3), INA sec. 242, 8 U.S.C. 1252. Under this rule, however, noncitizens who receive negative credible fear determinations solely because of the applicability of a bar and who have those determinations affirmed by an immigration judge will be removed. However, as discussed elsewhere in this preamble, the Department considers the safeguards in place sufficient to ensure against erroneous removals, and the benefits of allowing DHS and EOIR resources that would have been expended on potentially years-long immigration court processes involving noncitizens pursuing relief for which they are ineligible to be conserved for potentially meritorious cases outweigh the loss to this small population of noncitizens of these additional avenues for appeal or review.

As mentioned above, DHS rejects the suggestion in these comments that determinations based on mandatory bars are categorically more complex as a factual or legal matter than other issues routinely decided in screening interviews and subject to these same review provisions.

Comment: Commenters stated that noncitizens would be denied protections at the border and could be unjustly removed; lack of transparency would leave no way to assess whether the process would lead to erroneous removals; and an expedited removal process would rush individuals through credible fear interviews that unfairly require individuals to disclose personal information about fear or trauma to officials and without the presence of an attorney. In line with the above remarks, a commenter encouraged DHS to retain current due process protections to prevent the erroneous return of people to countries where their lives would be threatened.

Response: The Department acknowledges the concern relating to the possibility for erroneous removals but assesses the possibility to be rare. AOs are trained in asylum law and are well-suited to apply mandatory bars in the screening context in their discretion and, where evidence related to a mandatory bar is limited or unavailable, or analysis would be too complex to be fully explored in the screening context,

to exercise their discretion not to apply the bar in the screening determination. AOs will continue to issue positive fear determinations where a noncitizen demonstrates a credible or reasonable fear at the applicable screening standard, even where there may be indicia of a mandatory bar but the available evidence at the screening stage as to the mandatory bar or available exceptions or exemptions is limited. Retaining this discretion will safeguard against erroneous applications of the mandatory bars. In addition to substantive training on analyzing mandatory bars, AOs are trained to conduct non-adversarial interviews, to elicit testimony, and to work with interpreters.³³ The Department also rejects the assertion that noncitizens will be unfairly required to disclose trauma and will not have access to counsel. AOs are trained to work with noncitizens who are experiencing the effects of trauma and to communicate across cultural and linguistic barriers.³⁴ AOs routinely interview noncitizens during protection screening interviews involving sensitive matters that many may find challenging to discuss, including torture, sexual assault, familial violence, and the deaths of family members. Additionally, noncitizens in the credible and reasonable fear processes may be represented by an attorney at no cost to the government. 8 CFR 208.30(d)(4), 8 CFR 208.31(c). Finally, noncitizens in credible fear may consult with persons of their choosing. 8 CFR 208.30(d)(4).

By their nature, the application of the mandatory bars may result in the possible removal of noncitizens to countries where they fear harm. This is consistent with both domestic law and international standards identified in section II of this preamble. DHS also notes that nothing in the rule would affect protections available to noncitizens under regulations implementing U.S. obligations under Article 3 of the CAT.

Comment: Commenters asserted that language access issues in general, and particularly for speakers of rare or indigenous languages, impede

Training, Staffing, Capacity, and Credible Fear Procedures (Sept. 26, 2024).

³⁴ See USCIS, "RAIO Directorate—Officer Training: Cross-Cultural Communication and Other Factors That May Impede Communication at an Interview" (Apr. 24, 2024); USCIS, "RAIO Directorate—Officer Training: Interviewing Survivors of Torture and Other Severe Trauma" (Apr. 24, 2024).

noncitizens' ability to demonstrate a bar does not apply to them.

Response: 8 CFR 208.30(d)(5) requires AOs to provide for the assistance of an interpreter in credible fear interviews where the noncitizen is unable to effectively proceed in English and the AO is unable to proceed competently in a language the noncitizen speaks and understands. 8 CFR 208.31(c) imposes the same requirement for reasonable fear interviews. Furthermore, USCIS has developed a language access plan to ensure that limited English proficient individuals have meaningful access to the agency's services and information.³⁵ USCIS has also issued guidance to AOs on providing language access in credible fear interviews.³⁶ This guidance provides for situations where the AO is unable to communicate with the noncitizen because their preferred language is not serviced by an asylum interpreter contract and, if applicable, the noncitizen does not agree to proceed with the credible fear interview in another language for which the AO confirms understanding. In such a situation, the Asylum Office issues a Form I-862, Notice to Appear (NTA), and refers the noncitizen to removal proceedings without making a credible fear determination in such situations. DHS is confident these measures are sufficient to ensure limited English proficient noncitizens, including speakers of rare and indigenous languages, are able to effectively understand the screening process and participate in credible fear and reasonable interviews, including addressing the applicability of any bars. Furthermore, DHS notes that limitations in communicating in English or with an interpreter in a language other than the noncitizen's preferred language would weigh against an AO exercising discretion to consider the bars, since they could limit testimony and impede efficiency.

c. Impacts on Specific Vulnerable Populations

Comment: Some commenters expressed opposition to the proposed rule, stating that it would increase the odds that people would have to return to countries where their political beliefs, sexual orientation or gender identity are under threat. A commenter urged the

Department to not make the process more difficult for women who are fleeing from the abuse of a partner. Another commenter said that the proposed rule could make it more difficult for those seeking to flee authoritarian governments and countries where they face marginalization and persecution. A commenter stated that their clients include indigent, black, brown, indigenous, and LGBTQI+ (lesbian, gay, bisexual, transgender, queer, and intersex) noncitizens who often have no other avenue to seek safety than to come to the United States. The commenter stated that the rule depends on the discretion of AOs to decide when to apply mandatory bars to asylum eligibility during screenings, which would disproportionately penalize some noncitizens based on their race, nationality, religion, LGBTQI+ identity, or disability status because those who have been criminalized for these statuses could be barred from asylum.

Response: The Department disagrees with the commenters' claims regarding the Final Rule's impact on particularly vulnerable individuals. Under this rule, AOs will have the flexibility in screenings to apply mandatory bars that relate to an individual's participation in the persecution of others, or national security, criminal, or other public safety concerns. The Department does not believe that this rule would penalize any of the vulnerable populations commenters identified. AOs are trained to elicit testimony in a non-adversarial and sensitive manner and to work with vulnerable populations.³⁷ AOs are also trained to apply the mandatory bars and analyze available evidence, including the circumstances surrounding arrests and criminal records outside the United States, which may, in certain instances, demonstrate a pretextual or discriminatory intent by a foreign government.³⁸ Indeed, AOs regularly analyze mandatory bars, including criminal bars, in asylum adjudications and are experienced in evaluating context related to arrests, criminal charges, and foreign convictions, which, in some circumstances, may be evidence that an individual has suffered

persecution, rather than evidence of a mandatory bar.³⁹ Accordingly, considering the training and experience AOs possess, they are well-suited to apply mandatory bars in the screening context in their discretion and, where evidence related to a mandatory bar is too limited or unavailable, or the analysis of the bar would be too complex to be fully explored in the screening context, to exercise their discretion not to apply the bar in the screening determination.

AOs will continue to issue positive fear determinations where a noncitizen demonstrates a credible or reasonable fear at the applicable screening standard, even where there may be indicia of a mandatory bar but the available evidence at the screening stage as to the bar or available exceptions or exemptions is limited. By preserving AO discretion in the application of the mandatory bars, the rule will protect vulnerable noncitizens who may have complicated evidentiary and legal issues involving a mandatory bar.

d. Other/General Negative Impacts on Noncitizens and Their Support Systems

Comment: Many commenters expressed concerns about the hardships noncitizens face in their home countries, on the journey to the United States, and throughout the immigration process. A commenter stated that the proposed rule does not serve long-term migrants who are waiting on a resolution for their cases, or new migrants who deserve to be treated with fairness. A commenter believes that the number of migrants attempting to enter the United States is the "result of global political and climate crises," and that solutions should be targeted towards those issues. Further, the commenter stated that the proposed rule would increase the suffering of noncitizens, while not addressing the underlying problems that drive migration. Another commenter discussed the need to ensure that noncitizens with similar claims would not experience different outcomes based on the constraints of government resources. A nonprofit organization opposed the rule because it would impose additional burdens on their resources. Finally, several commenters expressed the importance of access to asylum for vulnerable noncitizens.

Response: The Department acknowledges the commenters' concerns for noncitizens who may be fleeing harm in their home countries or otherwise face hardships. To that end, the U.S. government has implemented,

³⁷ See USCIS, "RAIO Directorate—Officer Training: Interviewing—Introduction to the Non-Adversarial Interview" (Apr. 24, 2024); USCIS, "RAIO Directorate—Officer Training: Interviewing—Eliciting Testimony" (Apr. 24, 2024).

³⁸ See USCIS, "RAIO Directorate—Officer Training: Mandatory Bars" (May 9, 2013); USCIS, "RAIO Directorate—Officer Training: Guidance for Adjudicating Lesbian, Gay, Bisexual, Transgender, and Intersex (LGBTI) Refugee and Asylum Claims" (Apr. 24, 2024); USCIS, "RAIO Directorate—Officer Training: Definition of Persecution and Eligibility Based on Past Persecution" (Apr. 24, 2024).

³⁹ See *id.*

a number of measures designed to enhance and expand lawful pathways and processes for noncitizens seeking to enter the United States, including to seek asylum or other protection. Examples of lawful pathways include: the Uniting for Ukraine process, which allows Ukrainian nationals to receive humanitarian parole into the United States, enabling them to travel by air to the United States; the Safe Mobility initiative;⁴⁰ the new CHNV processes;⁴¹ and country-specific family reunification parole processes.⁴² DHS and its interagency partners have also increased H-2B nonimmigrant visa availability⁴³ and refugee processing for Western Hemisphere countries.⁴⁴ Noncitizens who are not eligible for these pathways can schedule an appointment to present themselves at a southwest land border port of entry through the CBP One app.⁴⁵ The Department agrees with the comment that we must address the underlying drivers of migration. For example, the *U.S. Strategy for Addressing the Root Causes of Migration in Central America*, directed by the President in Executive Order 14010, 86 FR 8267 (Feb. 5, 2021), focuses on a coordinated, place-based approach to improve the underlying causes that push Central Americans to migrate, and it takes into account, as appropriate, the views of bilateral, multilateral, and private sector partners, as well as civil society.⁴⁶ The strategy

includes addressing economic, governance, and security challenges through five pillars: (1) addressing economic insecurity and inequality; (2) combating corruption and strengthening democratic governance; (3) promoting human rights and labor rights; (4) countering and preventing violence; and (5) combating sexual and gender-based violence.⁴⁷ In March 2024, the White House announced that the Administration is on track to meet its commitment in the root causes strategy to provide \$4 billion to the region over four years.⁴⁸

The Department disagrees with the comment that the rule will increase suffering of noncitizens and negatively impact both new and long-term noncitizens waiting on case resolutions. Instead, the Department believes the rule will increase efficiencies for noncitizens and decrease the time noncitizens must wait for a final decision on their protection claim, including those who may be in detention. Noncitizens who are subject to a bar but would nevertheless receive a positive fear determination absent this rule may, under this rule, be more swiftly removed instead of being detained throughout their removal proceedings, and therefore spend less time in detention. The Department is committed to conducting screening interviews with fairness, and AOs are trained to review each case on its own merits, even when there are similarities between claims.

DHS acknowledges the comment regarding burden on nonprofit resources and has included a description of impacts of the Final Rule in Section V.B. of this preamble. This rule does not directly regulate any organizations, and consistent with longstanding case law, a regulatory flexibility analysis is not required when a rule has only indirect effects on small entities, rather than directly regulating those entities. *See, e.g., Mid-Tex Elec. Co-op., Inc. v. FERC*, 773 F.2d 327, 342–43 (D.C. Cir. 1985).

e. Negative or Minimal Impacts on Immigration System and Government Operations and Resources

Comment: Many commenters expressed concerns that considering mandatory bars during the fear

screening stage would introduce complexities, inconsistencies, and inefficiencies in the fear screening process, and the asylum system needs fair and comprehensive reform. One commenter stated that the proposed rule would make the asylum process more complicated for noncitizens and AOs, while also putting noncitizens in danger. One commenter expressed concerns that applying bars during fear interviews could slow down the fear screening process and become arduous for AOs to consider. One commenter expressed concerns that AOs may not be able to make these decisions with clarity, empathy, or fairness, while also potentially causing officers psychological distress.

In line with the above remarks, a commenter stated that the proposed rule would not increase efficiency because a small number of people would be impacted, and that given this small numeric impact, the Department should weigh the adverse fairness implications that the proposed rule would impose on the few cases where the mandatory bars are applied. In addition, they wrote that AOs face pressure to make findings with limited resources, which would leave doubt that the rule would increase efficiency. The same commenter further stated that the consideration of the bars, a step not systematically taken in the credible fear process, requires extensive factual development and legal analysis that would lengthen credible fear and reasonable fear interviews, thereby undermining the purported efficiency goals of the proposed rule. Citing an interview with a representative for USCIS AOs, the commenter raised concerns with the proposed rule's impact on the agency's limited time and resources for conducting fear interviews. The commenter warned that if the proposed rule were finalized, the application of complex mandatory bars at the screening stage would drain more time and resources from already strained AOs.

Response: The Department disagrees with the commenters' concerns that consideration of the mandatory bars would be inefficient due to time and resource constraints and that AOs would have difficulty making decisions with clarity and fairness. As noted by commenters, the Department expects only a small percentage of screening cases to be impacted by the mandatory bars; therefore, the length of interviews would not increase across all credible and reasonable fear interviews. The Department also believes that while a small number of people would be impacted by this rule, those individuals would be enforcement priorities because

⁴⁸ *Id.*

of national security and public safety concerns.⁴⁹ Safeguarding national security is one of the Department's highest priorities, and this rule will allow the Department to efficiently identify and remove noncitizens who are found subject to one of the outlined mandatory bars without subjecting them to lengthy proceedings. AOs interview noncitizens with complex cases on a regular basis and are trained in interviewing noncitizens in credible fear and reasonable fear screenings, as well as in interviewing affirmative asylum applicants.⁵⁰ AOs are capable of conducting thorough screening interviews, applying the mandatory bars when applicable, and maintaining fairness throughout the process, as is required by their roles.

Comment: Commenters suggested that DHS look elsewhere to improve the immigration system, such as employing and training more immigration officers, or focusing on adjudicating pending cases in the backlog instead of imposing additional burdens on officers who are performing fear screenings. One commenter stated that backlogs at USCIS and the Executive Office for Immigration Review (EOIR) would make the successful implementation of this rule difficult, and it is unclear where the resources would come from to execute the proposed rule fairly. A few other commenters stated that resources should be spent creating accessible pathways to citizenship and policies that reduce poverty and violence in the countries from which noncitizens are fleeing.

Response: The Department continues to expand its workforce to meet different priorities and believes that resources can be, and are being, allocated to both reducing the backlog and increasing efficiencies in the credible and reasonable fear processes.⁵¹ While the Department

appreciates the resource allocation suggestions made by some commenters and would direct those commenters to E.O. 14010,⁵² which aims to address root causes of migration and create a strategy for managing migration, and E.O. 14012,⁵³ which aims to identify and eliminate barriers to immigration access and improve the naturalization process, the Department also notes that these suggestions are outside the scope of this rule. Finally, the comment suggesting increased immigration judge hiring and training is outside the scope of this rule.

Comment: Several commenters expressed concern that the proposed rule could exacerbate the existing inequities in asylum processing, which they stated served neither noncitizens nor the U.S. government's need to manage the border. One commenter stated that the mandatory bars are very complex and that in a screening interview where the noncitizen is unlikely to have legal representation, applying those bars will lead to inconsistent and erroneous outcomes. Commenters indicated the rule leaves excessive discretion to AOs to determine whether to consider bars to asylum and withholding of removal in credible fear and reasonable fear screenings, which would lead to inconsistent results and undermine the efficiency of screenings. Commenters predicted the discretion the rule accords to AOs to consider bars in fear screenings will lead to discrimination and inequity, including profiling on the basis of race, religion, or nationality.

Response: The Department disagrees with the comment that the rule will exacerbate inequities in the asylum system and does not serve border management needs. The commenters did not explain what they were referring to as existing inequities in asylum processing. The Department has outlined its commitment to increase access and equity in the immigration process in the DHS Equity Action Plan.⁵⁴ The Department also disagrees that the rule does not serve noncitizens or the U.S. government's border management needs. The rule will allow DHS to quickly screen out certain non-meritorious claims and remove those noncitizens who pose a national security or public safety threat more expeditiously. This serves both

government and noncitizen needs, as it safeguards national security while allowing the Department to use resources more efficiently. Applying the mandatory bars earlier in the process means that the Department can more effectively use its resources to adjudicate other cases in a more expedient manner.

The Department disagrees that application of the mandatory bars during the screening process will lead to erroneous and inconsistent decisions. AOs are trained to analyze and apply the mandatory bars in affirmative asylum cases; therefore, they are well-suited to exercise discretion to apply mandatory bars in the screening context. If evidence related to a mandatory bar is too complex to be fully explored in the screening context, the rule will allow AOs to exercise their discretion not to apply the bar in the screening determination. In those cases, AOs will continue to issue positive fear determinations where a noncitizen demonstrates a credible or reasonable fear at the applicable screening standard, even where there may be indicia of a mandatory bar but the available evidence at the screening stage as to the bar or any available exception or exemption is limited.

DHS disagrees that providing discretion to AOs to consider bars in fear screenings will lead to inconsistent or inequitable results. AOs already receive standardized training on how to apply the bars to asylum in full adjudications. The five bars to statutory withholding of removal that could be considered under this rule generally correspond to five of the six mandatory bars to asylum. *See* INA secs. 208(b)(2)(A)(i)–(v), 241(b)(3)(B)(i)–(iv) and (b)(3)(B), 8 U.S.C. 1158(b)(2)(A)(i)–(v), 1231(b)(2)(B)(i)–(iv) and (b)(3)(B). Therefore, AOs understand the types of evidence that would indicate the potential applicability of these bars to both forms of relief. AOs are also trained, in cases where there is evidence a bar may apply, to note the possible applicability of the bar in the credible fear or reasonable fear determination.⁵⁵ Such training helps to ensure consistent application of AO discretion in determining whether to consider bars in fear screenings.

DHS also disagrees that providing AOs discretion to consider bars will

undermine the efficiency of screenings. It is precisely this concern for efficiency that, in part, motivates the Department's decision not to require AOs to consider bars in every screening conducted, but rather permit them to do so in those cases where there is easily verifiable evidence available to the AO that, in their discretion, warrants an inquiry into a bar, and the AO can consider that bar efficiently.

DHS further disagrees that providing AOs this discretion will lead to discrimination and profiling on the basis of race, religion, or nationality. Such discrimination is not only unlawful and against USCIS policy,⁵⁶ but contrary to the fundamental purpose of fear screenings, which exist to ensure the United States does not return eligible noncitizens to torture or to persecution on account of race, religion, nationality, membership in a particular social group, or political opinion. Furthermore, AOs are trained to be neutral decisionmakers,⁵⁷ to conduct interviews in a non-adversarial manner, to not let personal biases interfere with their work, and to treat each individual who appears before them with courtesy, professionalism, and respect.⁵⁸

Comment: One commenter opposed the rule for doing too little to address the high level of border crossings, and address the asylum and immigration court pending caseload, describing it as too narrow in scope and containing numerous loopholes that would do little to stem what they described as the tide of asylum fraud that plagues the system.

Response: The rule is not intended to address high levels of border crossings, or primarily, to address backlogs in the immigration system. Neither is it intended to address fraud in the asylum system. While the Department does expect the rule to conserve some government resources that may be used on other cases, it does not expect that the rule will substantially decrease the pending caseload at the immigration courts or at USCIS.

f. Negative Impacts on the U.S. Economy and Workforce, U.S. Citizens, Public Health and Safety

Comment: Several commenters expressed opposition to the proposed rule, stating that it would raise

additional barriers to gaining asylum during a time when noncitizens could help strengthen the United States and increase government tax revenue. A commenter noted that immigrants help the economy. Another commenter added that there could be concerns with accommodating large numbers of noncitizens, but the pros outweigh the cons. Several commenters stated that the U.S. population and workforce is projected to decline, so the United States should be accepting noncitizens to help fill gaps in the workforce. Some commenters stated that noncitizens are often eager to rebuild their lives and contribute to their communities. Other commenters noted that noncitizens are resourceful, which is why we should welcome them. A commenter stated that because of the many hazards that noncitizens have faced, they will become strong model citizens.

Response: The Department agrees that immigrants contribute significantly to the U.S. economy and workforce. This rule does not curtail access to the immigration system for individuals who are eligible for protection or relief from removal. By allowing AOs to apply certain mandatory bars in screenings, the Department is working to ensure that individuals who will not ultimately be eligible for protection or relief from removal are not unnecessarily consuming U.S. Government resources during their pursuit of non-meritorious protection claims.

g. Other Opposition to the Rule

Comment: Several commenters remarked that this is the incorrect approach to dealing with the asylum system. Further, a commenter said that the current immigration policy is costly and traumatizing, especially to those who are vulnerable. Another commenter remarked that those seeking asylum should not be criminalized, since noncitizens seeking asylum are fleeing oppressive environments. A commenter urged the Department to withdraw the proposed rule in its entirety to instead adopt humane solutions to the humanitarian and operational challenges at the border. They offered several alternatives, such as increasing capacity at ports of entry; engaging civil society entities to provide respite services; improving communication and cooperation between civil society, State and local governments, and Federal agencies; ending detention and monitoring of asylum seekers; and providing legal representation and social services to asylum seekers. A few commenters expressed disappointment towards the Biden administration

because of the restrictiveness of the proposed rule.

Response: The Department disagrees with the commenters' claims and declines to adopt their suggestions, which are beyond the scope of this rulemaking in any event. With this rule, the Department is considering the application of mandatory bars at an earlier stage in the process. Concerning legal representation, the Department notes that during the credible and reasonable fear processes, noncitizens may be represented by an attorney at no cost to the government. Additionally, noncitizens in credible fear may consult with persons of their choosing. 8 CFR 208.30(d)(4). Noncitizens who are referred to USCIS for a credible fear or reasonable fear interview are provided with an information sheet related to the applicable screening interview process (e.g., M-444, Information About Credible Fear Interview; M-488, Information About Reasonable Fear Interview; Information About Credible Fear Interview Sheet (for credible fear cases referred to USCIS under the Securing the Border rule)), in addition to a list of free or low-cost legal service providers. Certain suggestions, including those to increase processing capacity at ports of entry, strengthening communication and cooperation between civil society, State and local governments, and Federal agencies, ending the detention and monitoring of asylum seekers, and providing legal and social services to newly arrived asylum seekers, are outside the scope of this rule.

Comment: One commenter opposed the proposed rule stating that a future "more overtly hostile anti-immigrant administration" could abuse the discretion that the rule allows AOs, such as if a future administration sought to expand the use of expedited removal across the country.

Response: The Department emphasizes that the NPRM and this rule allow AOs to exercise discretion to consider a mandatory bar during a fear screening interview. The discretion the rule provides is not unbounded. AOs should only expend resources considering mandatory bars where there is easily verifiable evidence that a bar may apply and where they determine that they can address the issue efficiently in the context of a screening interview.

Under section 235(b)(1) of the INA, 8 U.S.C. 1225(b)(1), DHS may remove certain noncitizens without a hearing before an immigration judge through expedited removal proceedings. The INA also grants the Secretary authority to apply expedited removal procedures

⁵⁶ See 42 U.S.C. 1983; see also USCIS, "USCIS Policy Manual," Vol. 1, Part A, Ch.9, Section (D)(1), <https://www.uscis.gov/policy-manual>.

⁵⁷ See USCIS, "RAIO Directorate—Training Module: Decision Making" (Apr. 4, 2024).

⁵⁸ See USCIS, RAIO Directorate—Officer Training: Interviewing—Introduction to the Non-Adversarial Interview (Apr. 24, 2024) and USCIS, RAIO Directorate—Training Module: Core Values and Guiding Principles for RAIO Employees (Apr. 24, 2024).

(by designation) to “any or all” noncitizens referred to in the statute as “certain other aliens.” INA 235(b)(1)(A)(iii)(I), 8 U.S.C. 1225(b)(1)(A)(iii)(I). A noncitizen is within the class of “certain other aliens” if the noncitizen “has not been admitted or paroled into the United States, and . . . has not affirmatively shown, to the satisfaction of an immigration officer, that the alien has been physically present in the United States continuously for the 2-year period immediately prior to the date of the determination of inadmissibility.” INA 235(b)(1)(A)(iii)(II), 8 U.S.C. 1225(b)(1)(A)(iii)(II). Such designation “shall be in the sole and unreviewable discretion” of the Secretary and “may be modified at any time.” INA 235(b)(1)(A)(iii)(I), 8 U.S.C. 1225(b)(1)(A)(iii)(I); 8 CFR 235.3(b)(1)(ii).

In case of a hypothetical future policy choice to expand the use of expedited removal to additional contexts, DHS emphasizes that noncitizens found under this rule to lack a credible fear or reasonable fear of persecution due to the application of a mandatory bar would ultimately be ineligible for the underlying relief in a merits hearing if they were instead placed into immigration court proceedings directly through service of a Notice to Appear.

Moreover, the concerns about future administrations abusing their discretion by, for example, expanding expedited removal’s use across the country, are misplaced. The application of expedited removal is not geographically limited by statute. *See* INA 235(b)(1), 8 U.S.C. 1225(b)(1). Currently, the regulations implementing expedited removal allow for its use if a noncitizen has failed to establish they have been continuously present in the United States for at least two years prior to their date of inadmissibility, but there is no limit as to its nationwide use. 8 CFR 235.3(b)(ii).

Comment: One commenter faulted the proposed rule for allegedly seeking to deter asylum seekers from entering the United States.

Response: DHS rejects this characterization. The rule is not designed to deter noncitizens from seeking asylum. The rule simply is intended to provide flexibility to AOs to apply the covered mandatory bars where there is easily verifiable evidence so that, when possible, noncitizens who would otherwise ultimately be found ineligible for relief or protection after a lengthy immigration process may instead have their cases handled more efficiently. In addition, this flexibility allows DHS to more expeditiously remove some noncitizens who pose a

threat to the safety or security of the United States. As noted above, DHS has established numerous new pathways to facilitate the lawful entry of noncitizens into the United States, which enables noncitizens to more easily seek asylum or other immigration benefits in appropriate cases.

Comment: One commenter criticized the rule as a reinstatement of the “Asylum Ban” and characterized it as going against President Biden’s campaign promises.

Response: This rule is not equivalent to an “asylum” ban or any other sort of categorical ban. As discussed elsewhere in this preamble, this rule is intended to simply provide AOs with the discretionary authority to consider certain statutory bars to asylum and withholding of removal during fear screenings when doing so could increase efficiency. Individuals subject to these bars are already ineligible for asylum or withholding of removal as relevant, but, without the rule, the bars are only fully applied at a later stage in a noncitizen’s immigration proceedings.

C. Legal Authority and Background

1. DHS Legal Authority

Comment: Many commenters asserted that the proposed rule is in contravention of international and domestic law regarding refugee protection and non-refoulement. In support of this assertion, several commenters cited the 2003 Office of the U.N. High Commissioner for Refugees (UNHCR) Guidelines, which direct that exclusion clauses only be considered during regular refugee determinations proceedings and not during expedited proceedings. A commenter stated that the proposed provisions in the rule will create barriers to asylum and withholding of removal for asylum seekers and violates the 1967 Protocol Relating to the Status of Refugees.

Response: DHS disagrees with the assertion that the proposed rule is in contravention of applicable law. The INA provides mandatory bars to applying for asylum at section 208(a)(2) of the INA, 8 U.S.C. 1158(a)(2); to asylum eligibility at section 208(b)(2)(A) of the INA, 8 U.S.C. 1158(b)(2)(A); and to eligibility for withholding of removal at section 241(b)(3)(B) of the INA, 8 U.S.C. 1231(b)(3)(B) (referred to collectively as “mandatory bars”). Further, as explained above, Congress has conferred upon the Secretary express rulemaking power to create certain procedures for screening for and adjudicating asylum claims. INA sec. 103(a)(1), (a)(3), 8 U.S.C. 1103(a)(1), (a)(3); INA sec. 208(b)(1)(A), (b)(2)(C),

(d)(5)(B), 8 U.S.C. 1158(b)(1)(A), (b)(2)(C), (d)(5)(B); INA sec. 235(b)(1), 8 U.S.C. 1225(b)(1).

There are no bars to deferral of removal under the regulations implementing U.S. obligations under Article 3 of the CAT. Prior to being granted asylum or statutory withholding of removal in the United States, noncitizens are required to show that the mandatory bars do not apply to them.

The relevant statutory provisions are silent as to the consideration of the mandatory bars during screening interviews. All relevant domestic legal provisions on this topic have taken the form of regulatory action. The former Immigration and Naturalization Service issued a rule in 2000 precluding, in response to comments, consideration of the asylum bars at the credible fear stage.⁵⁹ Additional regulatory action on this subject was taken in 2020 and 2022. *See* 85 FR 80274, 80278 (Dec. 11, 2020) (“Global Asylum Rule”); 87 FR at 18221–22. In none of these actions that precluded consideration of bars has the government concluded that considering mandatory bars at the screening stage would violate statutory provisions or other legal requirements. Instead, the basis of these rules, when it has been articulated, has focused primarily on efficiency of eliciting testimony related to and analyzing the mandatory bars at the screening stage. *See* 87 FR 18078, 18093 (Mar. 29, 2022). This rule is based on a judgment by DHS that, under certain limited circumstances, the consideration of the mandatory bars at the screening stage represents an appropriate expenditure of resources.

DHS notes that while international guidelines represent helpful interpretative guidance, they are not binding authority on DHS. As such, the 2003 UNHCR guidance⁶⁰ does not carry the force of law. The guidance raised by the commenters states that

it is essential that rigorous procedural safeguards are built into the exclusion determination procedures. Exclusion decisions should in principle be dealt with

⁵⁹ *See* 65 FR 76121, 76129 (Dec. 6, 2000) (“Asylum Procedures”) (codifying the statement in 8 CFR 208.30 that a noncitizen who appears to be subject to one or more of the mandatory bars would nevertheless be referred to section 240 removal proceedings for full consideration of their claim and explaining that this change was done in response to comments suggesting such a referral “regardless of any apparent statutory ineligibility under section 208(a)(2) or 208(b)(2)(A) of the Act”).

⁶⁰ UNHCR, “Guidelines on International Protection No. 5, Application of the Exclusion Clauses: Article 1F of the 1951 Convention relating to the Status of Refugees” (Sept. 4, 2003), <https://www.unhcr.org/us/media/guidelines-international-protection-no-5-application-exclusion-clauses-article-1f-1951>.

in the context of the regular refugee status determination procedure and not in either admissibility or accelerated procedures, so that a full factual and legal assessment of the case can be made.⁶¹

We note that the guidance speaks generally (“in principle”) and is not a categorical prohibition against considering exclusion provisions in a screening interview. DHS screening procedures do contain “rigorous procedural safeguards,” including 100% supervisory review of all decisions⁶² and the right to review of any negative decision by an immigration judge.⁶³ Additionally, noncitizens in screening interviews have the right to consult with an individual of their choosing, including counsel, at no cost to the government, the right to have a consultant or counsel attend the interview, the right to provide evidence in their native language or a language that they are comfortable with, and the right to a non-adversarial interview with an AO. 8 CFR 208.30(d); 208.31(c).

Furthermore, the rule instructs that the AO should only consider any possible mandatory bar when the noncitizen does not establish a fear of torture and when there is easily verifiable evidence indicating that the noncitizen could be subject to a mandatory bar and, where the noncitizen is unable to establish at the relevant standard that the bar would not apply. As the standards of proof for screening interviews are lower than those applicable at the merits stage, the AO would only enter a negative fear determination if the noncitizen were unable to demonstrate at the applicable screening standard that a mandatory bar does not apply. Furthermore, if there are significant factual or legal issues that would necessitate further development at a later stage, AOs may exercise discretion to not apply the mandatory bar at the screening stage.

DHS disagrees that the rule will create barriers to asylum and withholding of removal for noncitizens with potentially meritorious claims. In the current fear screening process, AOs already identify possible mandatory bars. The rule simply permits an AO to apply the bars at the screening stage when there is evidence that a bar may apply, the AO determines that the bar can be addressed efficiently at the interview,

and the noncitizen is unable to demonstrate at the applicable standard of proof that the bar does not apply or that the noncitizen qualifies for an exception or exemption to the bar. Further, any noncitizen who is subject to one of the mandatory bars that this rule permits AOs to consider at the screening stage would already be ineligible for asylum or withholding of removal, as relevant.

Comment: Several commenters stated that DHS lacks the statutory authority to enact the proposed rule as the expedited removal statute does not mention mandatory bars to asylum and instructs the agency to find a credible fear whenever an asylum seeker demonstrates a “significant possibility” that they “could” be eligible for asylum.

Response: DHS disagrees with the assertion that it lacks the authority to enact the proposed rule. The legal authorities for this rule are described in section II of this preamble.

As mentioned earlier, the consideration of mandatory bars in screening interviews has been the subject of several prior rulemaking actions. Under INA sec. 235(b)(1)(B)(v), 8 U.S.C. 1225(b)(1)(B)(v), the term “credible fear of persecution” means that there is a “significant possibility, taking into account the credibility of the statements made by the [noncitizen] in support of the [noncitizen]’s claim and such other facts as are known to the [asylum] officer, that the [noncitizen] could establish eligibility for asylum under” INA sec. 208, 8 U.S.C. 1158. Section 208(b)(2)(A)(i)–(vi) of the INA contains the mandatory bars to asylum and states that the eligibility conditions for granting asylum at section 208(b)(1) of the INA, 8 U.S.C. 1158(b)(1), “shall not apply” to a noncitizen if one of the mandatory bars is determined to apply. As such, if the noncitizen is subject to one of the mandatory bars, they are not eligible for asylum. It follows that when considering whether a noncitizen has a significant possibility of establishing eligibility for asylum, an AO may consider factors that would render the noncitizen ineligible for asylum.

Comment: Many commenters stated that consideration of the mandatory bars at the screening stage is inconsistent with congressional intent that the “significant possibility” standard be a low threshold to avoid the risk that people would erroneously be screened out and remarked that making decisions on mandatory bars is too complex to be done fairly under the circumstances during screening interviews.

Response: Nothing in this rule modifies the standard of proof for any of the screening interviews that would

be affected by the rule. DHS believes that the rule is consistent with Congress’ intent for expedited removal proceedings. In the Asylum Processing NPRM, DHS and DOJ explained that Congress created a “low screening standard” for expedited removal proceedings and stated that it may be inconsistent with Congress’ intent for the Departments to “creat[e] a complicated screening process that requires full evidence gathering and determinations to be made on possible bars to eligibility.” 86 FR 46906, 46914 (Aug. 20, 2021).⁶⁴ This rule, however, does not create any such process because AOs have the discretion, but are not required, to consider a mandatory bar in those cases where there is easily verifiable evidence that a bar may apply. If the AO determines that they can consider that bar efficiently at the screening stage, the AO could then, in their discretion, make a further inquiry into the mandatory bar. DHS does not believe Congress’ intent that the expedited removal process be swift requires reading the statute to forbid the application of mandatory bars during fear screenings in all cases, particularly where, as here, DHS will apply those bars in a manner that would not increase the length of the expedited removal process except in those cases in which there is evidence indicating that a mandatory bar may apply. Accordingly, this rule is consistent with Congress’s intent for expedited removal proceedings and DHS and DOJ’s prior statements regarding that intent.

DHS rejects the assertion that the mandatory bars present issues that are inherently more complex than other issues that are regularly considered in screening interviews. While the Department acknowledges that certain issues in the consideration of mandatory bars can present complex factual and legal issues, it also believes that other issues routinely considered by AOs as part of a credible fear or reasonable fear determination, including, for example, the viability of certain particular social groups, whether certain types of harm rise to the level of persecution, complex issues surrounding the motivation of the persecutor, whether the noncitizen has provided credible testimony, and whether certain types of feared harm would constitute torture if carried out, also involve complex legal and factual determinations.

⁶⁴ See also 87 FR at 18135 (“The Departments agree with these commenters that a complicated process requiring full evidence gathering and determinations to be made on possible bars to eligibility is incompatible with the function of the credible fear interview”).

⁶¹ *Id.*

⁶² USCIS “Credible Fear Procedures Manual,” Section III.I, <https://www.uscis.gov/sites/default/files/document/guides/CredibleFearProceduresManual.pdf>; USCIS, “Reasonable Fear Procedures Manual,” Section III.F.3, <https://www.uscis.gov/sites/default/files/document/guides/ReasonableFearProceduresManual.pdf>.

⁶³ 8 CFR 208.30(g) and 208.31(g).

Furthermore, because the rule allows for permissive consideration of the mandatory bars, it is well-tailored to address cases that present particularly complex legal or factual issues. The NPRM explained that AOs should consider mandatory bars only in situations where there is easily verifiable information that the bar may apply, and even then, to only do so if the inquiry can be done efficiently. If applying a mandatory bar would require extensive legal research, or would require extensive fact gathering, it would not be appropriate for the AO to consider that bar as part of a noncitizen's credible fear or reasonable fear interview under this rule.

Comment: Several commenters stated that the proposed rule conflicts with the decision in *Pangea Legal Servs. v. Dep't of Homeland Sec.*, 512 F. Supp. 3d 966 (N.D. Cal. 2021). Commenters noted that the consideration of mandatory bars during credible fear screening was at issue, and the court blocked that effort.

Response: DHS disagrees with commenters on these points. First, this rule is distinguishable from the Global Asylum Rule, which was at issue in *Pangea Legal Servs.* and which required the mandatory consideration of bars during credible fear screenings. See 85 FR 80274 (Dec. 11, 2020). This rule is different as it affords discretion to consider bars when there is easily verifiable evidence available but does not mandate their consideration in any particular case. Moreover, the district court in *Pangea Legal Servs.* did not opine on the merits of the substance of the Global Asylum Rule, including its provisions regarding the consideration of mandatory bars by AOs. Instead, as noted in the proposed rule, the *Pangea* court concluded that the plaintiffs were likely to succeed on the merits of their claim that the Global Asylum Rule “was done without authority of law” because the court found that the DHS official who approved it, then-Acting Secretary Chad Wolf, was not properly designated as Acting Secretary. 512 F. Supp. 3d at 975.

Comment: Several commenters objected to the proposed rule by pointing to DHS's historical practice, dating back to the 2000 implementing regulations for expedited removal, of not applying mandatory bars in protection screenings. Many commenters pointed to DHS's previous rejection of considering mandatory bars in protection screening interviews in the Asylum Processing IFR, where DHS stated that applying asylum bars in screenings would hurt efficiency by making interviews longer while also undermining due process rights of

asylum seekers. Several commenters objected to the proposed rule as arbitrary, capricious, and/or an abuse of discretion not in accordance with the law due to DHS's failure to properly explain its change in position from the 2022 Asylum Processing IFR despite no change in circumstance or law.

One commenter wrote that while the Department claims the rule is narrow and will impact a small number of people, in fact, the rule amounts to a significant change to asylum processing. The commenter further argued that that while DHS claims that the current credible fear process would remain the same, AOs have never been permitted to apply bars during the screening process since its creation, and accordingly, the rule actually significantly alters the expedited removal screening process created by Congress over 25 years ago.

Response: DHS acknowledges its historical policy choice to not consider the mandatory bars in screening interviews. The Department notes that the practice established by the 2000 regulations was enacted without substantive explanation. See *Asylum Procedures*, 65 FR at 76129 (Dec. 6, 2000) (codifying in 8 CFR 208.30 that a noncitizen who appears to be subject to one or more of the mandatory bars would nevertheless be referred to section 240 removal proceedings for full consideration of their claim and explaining that this change was done in response to comments suggesting such a referral “regardless of any apparent statutory ineligibility under section 208(a)(2) or 208(b)(2)(A) of the Act”).

DHS recognizes that the inclusion of mandatory bars in credible fear screenings has been a focus of several rules since 2020 that have made numerous changes in this area, as explained in the NPRM. The Global Asylum Rule instructed adjudicators for the first time to apply the statutory mandatory bars in INA secs. 208(b)(2)(A) and 241(b)(3), 8 U.S.C. 1158(b)(2)(A) and 1231(b)(3), during credible fear interviews. 85 FR at 80390. Subsequently, in 2022, DHS and DOJ rejected the consideration of all statutory mandatory bars during credible fear screenings and recodified the prior practice of not doing so. 87 FR at 18092–94, 18134–36; see also 86 FR at 46914–15. DHS and DOJ reasoned that applying the mandatory bars during all credible fear screening interviews would make those credible fear screenings less efficient,⁶⁵ which could jeopardize DHS's ability to use

expedited removal,⁶⁶ undermine Congress' intent that the expedited removal process be swift,⁶⁷ and undermine procedural fairness.⁶⁸ The Departments did not, however, conclude that applying the mandatory bars would lead to these potentially negative repercussions in all, or even most, cases. See 87 FR at 18093 (stating that the factual and legal inquiries required to consider the mandatory bars were “*in general and depending on the facts*, most appropriately made in the context of a full merits interview or hearing”) (emphasis added). Although the Departments' policy choices in this area have shifted over time, all these choices have remained consistent with the Department's longstanding statutory authority to manage asylum and related fear screenings, as discussed in Section II.

DHS acknowledges that this rule implements a policy choice that is different from its position in 2022 but believes that this rule is not inconsistent with that earlier position. The 2022 rule rejected the consideration of the mandatory bars in screening interviews due primarily to concerns of inefficiency. The permissive nature of the current rule obviates those prior concerns about inefficient use of resources. The Department believes, just as it did in 2022, that the consideration of mandatory bars in instances where evidence related to a mandatory bar is too limited or is unavailable, or where the analysis of the bar would be too complex to be fully explored in the screening context, would constitute an inefficient use of resources. However, in cases where the evidence is clear, consideration of mandatory bars in a screening interview will help preserve the government's resources by allowing decisions to be made at the earliest possible stage.

DHS disagrees that the rule significantly changes asylum processing or expedited removal. As explained in the NPRM, under this rule, the current credible fear process will remain the same. The only aspect of the determination that will change is that the AO will have the discretion to consider the application of mandatory bars to asylum (other than firm resettlement) and statutory withholding of removal when screening the noncitizen for a credible fear of persecution or to consider the potential

⁶⁶ See 87 FR 18078, 18093 (Mar. 29, 2022) (“Asylum Processing IFR”).

⁶⁷ See 86 FR 46906, 46914 (Aug. 20, 2021) (“Asylum Processing NPRM”); 87 FR 18078, 18094, 18134–35 (“Asylum Processing IFR”).

⁶⁸ 87 FR 18078, 18093–94, 18097 (“Asylum Processing IFR”).

⁶⁵ See 87 FR 18078, 18093, 18134 (Mar. 29, 2022) (“Asylum Processing IFR”); 88 FR 11704, 11744 (Feb. 23, 2023) (“Lawful Pathways NPRM”).

application of the mandatory bars to statutory withholding of removal. Also, as also noted in the NPRM, the Department has experience applying both the Third-Country-Transit Bar and the CLP presumption of ineligibility for asylum. See 89 FR at 41354. Further, since the Securing the Border IFR's publication, the Department has experience applying the Securing the Border rule's limitation on eligibility for asylum during the credible fear stage. See 8 CFR 208.35, 1208.35. Although these limitations on asylum eligibility differ from the mandatory bars that AOs will have discretion to consider under this rule, AOs' demonstrated ability to apply them of asylum ineligibility in credible fear screenings supports the Department's assessment that certain statutory mandatory bars that may be easily verifiable can be effectively applied in screening interviews. Additionally, DHS remains confident that the population to which this rule will apply is likely to be relatively small, as informed by the number of cases with bars flagged by USCIS during screenings conducted during FY 2020–FY 2024. Please refer to Section V.A.2 and Table 4 below. Furthermore, the Department believes that the permissive nature of the rule obviates the due process concerns that were articulated in the 2022 Asylum Processing IFR. Under the current rule, AOs will only consider the mandatory bars where there is easily verifiable evidence that a mandatory bar applies, and AOs will retain the discretion to decline to consider a mandatory bar if they determine that the evidence is not easily verifiable, that they cannot efficiently gather sufficient information to make a determination on a mandatory bar, or if they believe that the evidence is such that the issue would be more fairly considered at a later stage.

This rule will not require the expenditure of resources in most screening interviews. Instead, it will rather serve as an operational flexibility when the AO determines that there is easily verifiable information that a mandatory bar applies and that they can efficiently handle the issue in the context of a screening interview. Thus, DHS does not believe that the current rule is inconsistent with the central concerns that drove USCIS' historical practice and does not represent a reversal of prior judgment. Instead, the rule will allow for consideration of mandatory bars in limited instances where applying the bar at the earliest possible stage would enhance public safety or national security and overall operational efficiency.

Comment: One commenter stated that the proposed rule would permit “AOs to violate the non-refoulement mandate so long as an ‘indicia’ of the five bars is present.”

Response: DHS believes this comment misstates the provisions of the proposed rule. Prior to conducting a more fulsome consideration of a mandatory bar, the AO would determine whether there is easily verifiable information in the record that the mandatory bar applies to the noncitizen. However, under the rule, before the issuance of a negative determination, the AO would need to elicit all relevant testimony to provide the noncitizen an opportunity to demonstrate the relevant likelihood that the bar does not apply, or that an exception or exemption to the bar applies, and determine that the noncitizen failed to so demonstrate at the appropriate standard of proof.⁶⁹ In the credible fear context, for example, the evidence would need to be sufficient to show that there is not a significant possibility that the bar would not apply and that there is not a significant possibility that an exemption or an exception applies, including, for example, that the noncitizen can establish a reasonable possibility of torture. The application of this standard of proof is substantially different from AOs issuing negative screening determinations based on “an indicia [sic]” that one of the bars might apply.

Further, the application of the statutory bars to a noncitizen's claim does not violate the United States' non-refoulement obligations as discussed earlier in this section IV.C.1.

Comment: One commenter opposed the proposed rule on the basis of their belief that current USCIS policy for overcoming mandatory bars requires that the noncitizen show by a preponderance of the evidence that the ground does not apply, if the evidence indicated that a ground for mandatory denial or referral exists. The commenter's stated understanding is that the rule would contradict congressional intent and Federal court ruling that apply a significant possibility standard to credible fear screenings.

Response: Nothing in this proposed rule modifies the standard of proof that applies to any of USCIS' screenings. In the credible fear context, the significant possibility standard of proof would continue to apply to all questions related to asylum, including the

possible application of the mandatory bars. These include, where applicable, whether there is a significant possibility a noncitizen could demonstrate they are not subject to or are excepted from the CLP rule's presumption of ineligibility for asylum (or that they could rebut the presumption), or whether there is a significant possibility they could demonstrate they are not subject to or are excepted from the Securing the Border rule's limitation on asylum eligibility. DHS acknowledges that noncitizens subject to the CLP rule's presumption of ineligibility for asylum or to the Securing the Border rule's limitation on eligibility for asylum would be screened for statutory withholding of removal, including mandatory bars (if considered), and protection under the CAT at the reasonable possibility and reasonable probability standards, respectively.

2. DHS's Justification, Background, and Statements on Need for the Rule

Comment: One commenter objected to the proposed rule for not adequately explaining how AOs would reliably be able to apply the mandatory bars during screening interviews without wasting resources or making unwarranted negative findings.

Response: AOs regularly receive training on screening and adjudication, including the application of mandatory bars. AOs will consider the mandatory bars only in cases where the evidence is easily verifiable that a bar may apply, and where they believe they can efficiently address the issue during the screening interview. Determinations by AOs are subject to review within USCIS, including review by a supervisory asylum officer. See, e.g., 8 CFR 208.30(e)(8). Noncitizens also have the right to request immigration judge review of any negative screening determination.

Comment: Several commenters argued that DHS's reliance on its success in implementing the CLP rule to help justify this proposed rule is misplaced because the application of the CLP rule has resulted in unlawful refoulement of noncitizens.

Response: DHS's experience with the CLP rule is relevant to this rule as it demonstrates that AOs are able to fairly and efficiently apply a rebuttable presumption of asylum ineligibility as part of a screening interview. The CLP rule and complementary measures have been in effect since May 11, 2023, and DHS and DOJ have been able to implement it without interruption. This experience has helped DHS significantly increase its capacity to screen noncitizens encountered at the border

⁶⁹ See 8 CFR 208.30(d) (“The purpose of the interview shall be to elicit all relevant and useful information bearing on whether the alien can establish a credible fear of persecution or torture.”).

under expedited removal and move them through the process more quickly than before the rule and complementary measures.⁷⁰ Now that it is clear a rebuttable presumption of asylum ineligibility can be applied effectively during the credible fear process, the Department wishes to provide the AOs with discretion to apply certain mandatory statutory bars that may be easily verifiable in screening interviews.

The Department disputes the assertion that noncitizens have been unlawfully removed from the United States due to the application of the CLP rule. Under the CLP rule, noncitizens have several protections against removal, including demonstrating exceptionally compelling circumstances at the time of entry to rebut the presumption of ineligibility for asylum, as well as screening for statutory withholding of removal and protection under the regulations implementing U.S. obligations under Article 3 of the CAT.⁷¹ In addition, as noted above, the United States has implemented its non-refoulement obligations through statutory withholding of removal under INA sec. 241, 8 U.S.C. 1231, not the discretionary asylum provisions in section 208 of the INA, 8 U.S.C. 1158. Accordingly, it is not unlawful, or a violation of the United States' non-refoulement obligations, to remove a noncitizen found ineligible for asylum because they lack a credible fear under CLP and further found not to have demonstrated a reasonable possibility of persecution or torture for the purposes of statutory withholding of removal or protection under the Convention Against Torture regulations.

Comment: Several commenters opposed the justification for the proposed rule stating that if at most 4 percent of the cases would be affected, the proposed rule would not result in a meaningful portion of the EOIR caseload being eliminated. Similarly, several commenters objected to the justification for the proposed rule stating that the extremely limited number of cases it would apply to does not justify the unfairness of expecting newly arrived and often unrepresented noncitizens to

prove that mandatory bars do not apply to them.

Response: The proposed rule is not intended primarily as a backlog reduction tool. The rule expands DHS's ability to more quickly remove noncitizens who are enforcement priorities: those who present national security or public safety threats.

DHS does believe that the rule will conserve interagency government resources. Most significantly, noncitizens who are subject to the mandatory bars often must be detained throughout their removal proceedings. By issuing a decision at the earliest possible stage, Immigration and Customs Enforcement's (ICE's) detention resources are conserved in these cases. In addition, the rule would prevent some non-meritorious cases from adding to the immigration court pending caseload.

The Department acknowledges, however, that this rule will apply only to a small subset of cases, as explained in section V.A.3 of this preamble describing the low percentage of credible fear and reasonable fear cases in which AOs have flagged the possible applicability of mandatory bars and is therefore not likely to result in a significant reduction in EOIR's caseload. See Section V.A.2 and Table 4 below. Nevertheless, in the context of an immigration system that lacks the full resources needed to handle its workload, even small efficiency gains are important and may result in speedier decisions for other noncitizens.

Comment: One commenter took issue with the justification for the proposed rule based on efficiency gains, stating that the proposed rule "will most certainly increase the time spent interviewing and writing up a decision for those asylum officers who choose to consider a bar in any given credible or reasonable fear interview and for their supervisors." The same commenter stated that the proposed rule is silent on scheduling procedures for cases potentially impacted by the proposed rule, and does not acknowledge that the additional time spent considering bars will contribute to the asylum backlog. Another commenter similarly stated that by adding time to screening interviews, the proposed rule does not save resources so much as frontload the expenditure of resources on issues that may end up being relitigated at a later stage.

Response: DHS disagrees with the commenter that the rule will significantly increase the time spent on screening interviews and decision making by USCIS. As the rule allows for permissive consideration of the

mandatory bars, AOs will only expend additional resources interviewing when there is easily verifiable evidence that a mandatory bar may apply and the AO believes they can efficiently address the issue during a screening interview. Under current procedures, AOs are already required to ask questions regarding the mandatory bars in all screenings. DHS expects that, in the majority of cases, no additional new questions will need to be asked under this rule.

DHS does not anticipate the need to change the way it schedules screening interviews as a result of this rule. Scheduling procedures must be able to be quickly modified due to changes in workflow and are not managed through regulations.

The Department recognizes that where AOs exercise discretion to apply a mandatory bar at the screening stage because they believe the bar can efficiently and effectively be addressed in the screening, AOs may need to devote additional time developing the record as to that bar and analyzing the bar in the written determination. At the same time, where the AO bases a negative credible fear of persecution determination on the application of a mandatory bar, they will not have to perform a written credible fear of persecution analysis as to the merits of the persecution claim. Additionally, the Department believes that, in those cases, any possible added time will be offset by the efficiency gain to the broader immigration system as a whole of preventing noncitizens who are subject to a mandatory bar and would not otherwise be able to establish eligibility for protection under CAT from being placed in removal proceedings.

Comment: One commenter objected to the amount of discretion for individual AOs provided by the proposed rule, coupled with the lack of guidance provided by the proposed rule regarding when AOs should consider mandatory bars. The commenter stated that this amount of discretion could lead to impermissible discrimination or profiling based on characteristics of the noncitizen. Another commenter objected to the lack of guidance or examples provided in the proposed rule about when the permissive consideration of bars would be appropriate, stating that AOs would need to "prophesy that such consideration would be fair and efficient before spending the time to delve into all the nuances of the case."

Response: The rule provides discretion for AOs to consider mandatory bars as a tool to maximize operational flexibility. However, AOs'

⁷⁰ For example, as discussed in the Securing the Border IFR, CBP placed, on average, more than 970 individuals encountered at and between POEs each day into expedited removal between May 12, 2023, and March 31, 2024, and USCIS conducted a record number of credible fear interviews (more than 152,000) resulting from such cases. 89 FR at 48724. This is more interviews from SWB encounters at and between POEs during the same time span than in any full fiscal year prior to 2023, and more than twice as many as the annual average from FY 2010 to FY 2019. *Id.*

⁷¹ See 88 FR at 31452; *Moncrieffe v. Holder*, 569 U.S. 184, 187 n.1 (2013).

discretion under the rule is not unbounded. All of the determinations made by AOs in a screening interview are subject to supervisory review, and, for negative determinations, to review by immigration judges if requested by the noncitizen.

Decisions on whether the evidence of a mandatory bar present in the case is easily verifiable and can be dealt with efficiently in the context of a screening interview is necessarily fact specific. AOs are trained to consider evidence⁷² in the context of where and from whom the noncitizen claims fear, to assess the reliability of that evidence, and to consider testimonial evidence from the noncitizen. Moreover, AOs are well-versed in evaluating evidence as it relates to applying mandatory bars in the context of the affirmative asylum caseload and in conducting fear determinations generally; accordingly, they are well-positioned to make the discretionary decision whether it would be efficient and effective to apply a mandatory bar in an individual fear screening, given the evidence available in the record.

Comment: Several commenters stated that DHS failed to provide any basis for what they described as a conclusory statement that the juncture at which the bars' applicability is considered would have any bearing on public safety or national security merely because those issues are the subject of the relevant mandatory bars.

Response: Quickly removing noncitizens who may constitute a public safety or security threat is a high priority for the Department. Many of the noncitizens who would ultimately be subject to the mandatory bars that AOs may consider under this rule could, based on the same evidence, be considered public safety or national security threats. By prioritizing decisions and consequences for these noncitizens, the Department hopes to create disincentives to other noncitizens who may constitute public safety or national security threats who may be considering travelling to the United States.

D. Proposed Application of Mandatory Bars

1. Noncitizens in Credible Fear and Reasonable Fear Screenings (8 CFR 208.30 and 8 CFR 208.31)

Comment: One commenter expressed concerns over potential limitations of telephonic credible and reasonable fear interviews, including privacy during the interview and the ability of the AO to

assess non-verbal cues. Some commenters expressed concern that noncitizens in the screening process do not have adequate time to rest and prepare for their interviews.

Response: Concerns about privacy during screening interviews and the limitations of telephonic interviews are outside the scope of this rulemaking, as this rulemaking will not affect the mechanics how DHS conducts credible fear and reasonable fear interviews. AOs already elicit information related to potential mandatory bars during screening interviews, and screening interviews are protected by regulations governing confidentiality. 8 CFR 208.6, 1208.6. For detained noncitizens, DHS provides private spaces so that noncitizens may speak freely to the AO during their interview, although, in some facilities, an officer may be present on site for safety purposes.⁷³ Telephonic credible fear and reasonable fear interviews are the current, longstanding policy,⁷⁴ and while AOs are not able to assess all nonverbal cues telephonically, they are able to assess some, such as tone of voice, inflection, and other auditory nonverbal communications. The Department notes that it, along with DOJ, addressed similar comments related to the conditions in which credible fear interviews are conducted in the Securing the Border Final Rule.⁷⁵

2. Noncitizens Subject to CLP Presumption of Ineligibility, Statutory Withholding of Removal Screening (§ 208.33)

Comment: A few commenters expressed opposition to the proposed rule's inclusion of noncitizens subject to the CLP presumption of eligibility. One such commenter wrote that the provision to assess certain bars when the CLP rule applies could detrimentally affect the most vulnerable, including those fleeing oppressive regimes, adding that people fleeing countries where they face persecution do not have the time or means to navigate the complex and, at times,

inaccessible legal pathways to asylum in the United States. The commenter also stated that empowering AOs to apply the bars would defy basic principles of fairness, increasing barriers for those subject to both the CLP rule and this proposed rule.

Response: The Department rejects the commenters' claims that analysis of the mandatory bars alongside the application of CLP could disproportionately impact certain vulnerable populations and that the rule defies principles of fairness. Commenters did not provide any explanation for why applying mandatory bars in the context of screenings under the CLP rule, which is intended to promote lawful, safe, and orderly pathways to the United States and to benefit particularly vulnerable groups by removing the incentive to make a dangerous irregular migration journey, would disproportionately impact any class of noncitizens. See 88 FR at 31314. Further, as noted elsewhere, this rule does not change substantive eligibility for asylum or for withholding of removal, so the discretionary authority of AOs provided by this rule to consider the covered statutory bars in CLP screening interviews will not affect the ultimate forms of relief available to a noncitizen. The Department will apply the rule fairly and emphasizes that the Department believes that this rule will impact a relatively small number of individuals who are not eligible for protection because they present a national security or public safety threat.

To the extent that commenters' concerns regard the merits of the CLP limitation on asylum eligibility, such concerns are outside the scope of this rule. The Department previously accepted comments on that rule and responded to those in the CLP final rule. 88 FR at 31324–441.

3. Inclusion of Specific Bars (e.g., Particularly Serious Crimes Bar, Security Bar)

Comment: Some commenters expressed concerns over the potential application of the persecutor bar with the limited time available for a screening interview. A commenter wrote that the persecutor bar should not be applied in fear screenings because it involves complex factual inquiries and has unsettled legal questions. Some commenters wrote that key questions of fact and law remained as to whether international treaty obligations required the consideration of duress in determinations involving the persecutor bar, or as to whether the failure to recognize the duress exception unfairly

⁷² USCIS, RAIO Directorate—Officer Training: Evidence (Apr. 24, 2024).

⁷³ Credible Fear Procedures Manual, Section III.D.3 (May 10, 2023); Perryman, Brian R. INS Office of Field Operations, Security and Privacy Provisions for Credible Fear Interviews Under Expedited Removal, Memorandum to Regional Directors, District Directors, Assistant District Directors for Detention and Deportation and Asylum Office Directors (Washington, DC: 1 July 1997).

⁷⁴ See USCIS “Credible Fear Procedures Manual,” Section III.E.1, <https://www.uscis.gov/sites/default/files/document/guides/CredibleFearProceduresManual.pdf>; USCIS, “Reasonable Fear Procedures Manual,” Section III.E.1, <https://www.uscis.gov/sites/default/files/document/guides/ReasonableFearProceduresManual.pdf>.

⁷⁵ See 89 FR at 81201–02.

harms bona fide asylum seekers, among other issues. Commenters also stated that AOs would need to make a prompt assessment of whether the duress exception applies, an area of law that is unsettled. The result, the commenter stated, would be erroneous applications of the bar based on poor factual development and rushed legal analysis. These commenters wrote that this analysis should occur at the merits stage, not in the expedited removal setting.

Response: The Department understands the complexities of the persecutor bar,⁷⁶ but it disagrees with the commenters' statements that analysis of the persecutor bar is legally and factually too complex to be analyzed in a screening interview and that the extensive factual development required would lead to erroneous application of the bar. AOs already inquire into the potential applicability of mandatory bars, including the persecutor bar, during credible fear and reasonable fear screenings, noting any relevant information in the record. While many cases implicating the persecutor bar involve complex factual and legal issues, not all do. For example, a noncitizen who admits in credible testimony under oath to having voluntarily forced a woman to abort a pregnancy as part of the noncitizen's work as a health ministry official charged with enforcing the Chinese government's "one child policy" when it was in effect would clearly be barred from asylum and statutory withholding of removal as a persecutor.⁷⁷

Furthermore, the persecutor bar shares multiple elements with the refugee definition at section 101(a)(42)(A) of the INA, 8 U.S.C. 1101(a)(42)(A), that officers must analyze in every asylum case, including

whether the harm at issue rises to the level of persecution and whether it was or would be inflicted on account of one of the five protected grounds. The only additional considerations in the persecutor bar analysis involve analyzing the applicant's participation in (rather than experience or fear of) persecution, that is, whether the applicant ordered, incited, assisted, or otherwise participated in the persecution, and analyzing whether the applicant had the requisite knowledge that the persecution was being or would be carried out. While these additional elements may in some cases introduce a level of complexity that would counsel against consideration of the persecutor bar in a screening context, they do not necessarily do so in every case. This significant overlap with the refugee definition analysis, which AOs must routinely conduct in both credible fear screenings and affirmative asylum adjudications, demonstrates that considering the persecutor bar need not involve complex legal or factual issues in every case in which it arises and that in some cases where there is clear evidence it does apply, AOs will be able to address it efficiently in credible fear or reasonable fear screenings.

Where there is evidence available to the AO that triggers an inquiry into an applicable mandatory bar, and the AO can address that bar efficiently at the screening interview, then the noncitizen will be given the opportunity to establish, at the relevant standard, that the bar would not apply. Under this rule, AOs will have the flexibility to apply certain mandatory bars during screenings as it relates to eligibility for asylum and statutory withholding of removal, and the individual will continue to have the opportunity to establish a credible or reasonable fear of torture. Notably, this rule would not require AOs to consider applicability of mandatory bars as part of a fear determination.⁷⁸ Such a requirement would reduce operational flexibility by potentially adding hours to interviews in which there are indicia that a bar might apply, but for which applicability is unclear.⁷⁹ Moreover, this proposed

rule would not disturb the long-standing regulation establishing that in making credible fear determinations, AOs "shall consider whether the [] case presents novel or unique issues that merit consideration in a full hearing before an immigration judge." 8 CFR 208.30(e)(4). This rule also preserves the option for noncitizens to be placed in an AMI or in proceedings before an immigration judge when evidence surrounding a possible mandatory bar needs to be further developed, as is currently the practice. Likewise, ICE will retain the ability to detain or otherwise monitor the noncitizen in those cases. See INA sec. 235(b)(1)(B)(ii), 8 U.S.C. 1225(b)(1)(B)(1)(ii); 8 CFR 208.9; see also INA sec. 212(d)(5)(A), 8 U.S.C. 1182(d)(5)(A); 8 CFR 212.5(d), 235.3(b)(4)(ii). The Department believes this discretion will safeguard against erroneous application of the bar when it is clear that further evidence or interviews are needed. This is why preserving the AO's discretion in analyzing the mandatory bars is integral to the rule.

Comment: Some commenters also stated that the particularly serious crime bar is legally and factually complex and thus is inappropriate for inclusion in screening interviews. Commenters added that, since the bar is different for asylum and statutory withholding of removal, applying this bar in both credible fear and reasonable fear interviews would be confusing for AOs who are assigned to do both types of screenings. A commenter further reasoned that there is no indication that the application of the particularly serious crime bar would have any meaningful impact on screening interview efficiency because the particularly serious crime provision applies in circumstances where an individual has a conviction inside the United States, and most people undergoing a credible fear interview will not have been present in the United States previously and thus are unlikely to have been convicted of such a crime. Instead, the commenter wrote, this bar would likely only apply in the reasonable fear context to narrow subset of individuals. The commenter suggested that, if the Department moves forward with this proposed rule, it should, at minimum, remove the application of this bar from the factors to be considered.

Response: The Department disagrees with commenters' statements that the particularly serious crime bar analysis is

⁷⁶ For example, the possible "duress exception" referenced by commenters has had multiple interpretations over the years from the Board of Immigration Appeals and the Attorney General. See *Negusie v. Holder*, 555 U.S. 511 (2009) ("*Negusie I*") (overruling a prior Board decision finding the plain language of the statute not allowing for a duress defense or exception and declaring the persecutor bar ambiguous as to consideration of duress or coercion); *Matter of Negusie*, 27 I&N Dec. 347 (BIA 2018) ("*Negusie II*") (interpreting the persecutor bar for asylum as including a narrow duress defense); *Matter of Negusie*, 28 I&N Dec. 120 (A.G. 2020) ("*Negusie III*") (finding the plain language of the persecutor bar as not allowing for consideration of duress); *Matter of Negusie*, 28 I&N Dec. 399 (A.G. 2021) ("*Negusie IV*") (ordering the Board to refer *Negusie*'s case to the Attorney General and staying *Negusie*'s case pending the Attorney General's review). The Attorney General's decision in *Negusie III* remains in effect, and any further review remains pending.

⁷⁷ See *Xie v. INS*, 434 F.3d 136, 143 (2d Cir. 2006) (holding that "transporting captive women to undergo forced abortions" pursuant to the one-child policy was assistance in persecution).

⁷⁸ The Global Asylum Rule took a different approach than this proposal, requiring that AOs consider multiple mandatory bars. See 85 FR 80274, 80278 (Dec. 11, 2020) ("DHS requires asylum officers to determine . . . whether an alien is subject to one or more of the mandatory bars"). This proposed rule would not require such consideration.

⁷⁹ Because credible fear screenings are conducted at the significant possibility standard, in cases where the application of a bar is not obvious, requiring the AO to consider application of a bar would likely result in significantly extended interviews with no meaningful outcome because

relevant information might not be available to the officer at screening even with a significantly extended interview.

legally and factually too complex to be analyzed in a screening interview and that any factual development required during a screening interview would lead to erroneous application of the bar. AOs already inquire into the potential applicability of mandatory bars, including the particularly serious crime bar, during credible fear and reasonable fear screenings, noting any relevant information in the record. The Department also disagrees with the comment that because the particularly serious crime bar is applied differently in asylum and withholding of removal, it will be confusing for AOs to analyze. As previously stated, AOs are highly capable of assessing mandatory bars at the credible fear screening, based on their specialized training in asylum law. AOs will also retain discretion not to analyze the bars, especially where it is clear that further evidence and fact-gathering is needed. AOs receive continuous training on relevant topics to ensure their ability to conduct thorough interviews and make legally sufficient determinations.

The Department also disagrees with the comment that the rule will lack meaningful impact on interview efficiency because the particularly serious crime bar applies to U.S. convictions and is unlikely to impact many noncitizens. The particularly serious crime bar may apply to both U.S. and foreign convictions, depending on the facts surrounding the noncitizen's conviction, the noncitizens' immigration history, and when a fear claim is made. See 8 CFR 208.13(c); INA secs. 208(b)(2)(A)(ii), 241(b)(3)(B)(ii), 8 U.S.C. 1158(b)(2)(A)(ii), 1231(b)(3)(B)(ii). While the Department believes this rule will impact a very small number of noncitizens who will be removed early on in the immigration process, this impact is still meaningful because it will free resources further in the process, specifically with EOIR, ICE, and CBP to process other cases more expeditiously. Inclusion of the particularly serious crime bar in this rule serves a Department priority: to protect the public from noncitizens who pose national security and public safety concerns.

Comment: Some commenters expressed concern with the application of the serious nonpolitical crime bar. Another wrote that the serious nonpolitical crime bar is not defined in the INA and does not require an arrest or conviction and the application of this bar is legally and factually intensive and contingent on the reliability of the available evidence. A commenter stated the reliability of the evidence would be subject to the circumstances of

hundreds of different legal systems from around the world. Some commenters expressed concern that the analysis of the bar is too complex for screening interviews and applying this bar could require extensive factual development and review of evidence by AOs, which would further delay findings or lead to erroneous application of the bar. A commenter is contingent on available and reliable evidence from foreign legal authorities.

Response: While the INA does not define the phrase “serious nonpolitical crime,” there is substantial case law involving the serious nonpolitical crime bar⁸⁰ that provides guidelines for AOs when they encounter potential bar concerns. AOs already inquire into the potential applicability of mandatory bars, including the serious nonpolitical crime bar, during credible fear and reasonable fear screenings, noting any relevant information in the record. The Department appreciates the concerns noted in some of the comments, namely that application of the serious nonpolitical crime bar is legally and factually intensive and that, if improperly applied, noncitizens may be denied due process or returned to places of persecution. The Department is aware that analysis of the bar requires a case-by-case evaluation of the facts and circumstances presented, but as previously stated, AOs retain discretion to analyze the mandatory bars, and may choose not to analyze the bar when it is clear in a given case that additional analysis is needed. The Department is fully committed to providing sufficient procedural safeguards consistent with the purpose of the expedited removal process and believes that where the potential bar analysis requires more fact-gathering and analysis than can be completed during the screening interview, the noncitizen may be placed in the AMI process or section 240 removal proceedings before an immigration judge so that further analysis can occur. Furthermore, not every case involving the serious nonpolitical crime bar is factually and legally complex. For example, if the record contains an authenticated record of conviction of the noncitizen for rape from the government of the United Kingdom, such easily verifiable evidence could be efficiently considered by an AO in the context of a credible fear or reasonable fear screening.

Comment: Commenters also expressed concerns regarding the inclusion of the statutory security bars at INA secs. 208(b)(2)(A)(iv) and

241(b)(3)(B)(iv), 8 U.S.C. 1158(b)(2)(A)(iv) and 1231(b)(3)(B)(iv). A commenter expressed concern about expecting AOs to assess whether an individual poses what the commenter called a “true security threat” to the United States during a screening interview. Citing case law, the commenter stated there is unanimous agreement among foreign courts, international law experts, and Congress’ legislative history that this bar was conceived as a narrow exception to non-refoulement obligations. In considering the high threshold for meeting the bar, the commenter said Congress did not intend to allow DHS to improperly subject asylum seekers to this bar and remove “otherwise-eligible asylees who do not present genuine security threats to the United States,” citing *Hernandez v. Sessions*, 884 F.3d 107, 113 (2d Cir. 2018). Echoing other comments on the bars, the commenter additionally stated that the security bar requires a factual and legal analysis that would substantively lengthen the time and resources that AOs need. Furthermore, the commenter wrote, the risk of misapplying this bar would be great.

Response: The Department rejects the concerns about AOs’ ability to assess whether a noncitizen poses a danger to the security of the United States, that bar analysis will increase time and resources needed, and that the risk of misapplication of the bar is great. As previously stated, AOs will retain discretion to consider the bars at the screening interview. AOs already inquire into the potential applicability of mandatory bars, including the danger to the security of the United States bar, during credible fear and reasonable fear screenings, noting any relevant information in the record. Furthermore, while the danger to the security of the United States bar often involves complex factual and legal analysis, not every case in which it arises does. For example, testimony under oath by a noncitizen who admits to being an agent of a hostile foreign government who attempted to irregularly enter the United States for the sole purpose of conducting espionage targeting U.S. military bases would clearly indicate the bar may apply. Faced with such evidence, AOs should not be precluded from considering the applicability of the bar in a screening interview.

Comment: Commenters also expressed concern over the inclusion of the terrorism-related statutory bars at INA secs. 208(b)(2)(A)(v) and 241(b)(3)(B)(iv), 8 U.S.C. 1158(b)(2)(A)(v) and 1231(b)(3)(B)(iv). A commenter stated that the terrorism bars have a history of wrongfully labeling

⁸⁰ See *INS v. Aguirre-Aguirre*, 526 U.S. 415 (1999); *Matter of E-A-*, 26 I&N Dec. 1 (BIA 2012).

individuals as terrorists and barring them from protection in the United States, writing that these provisions have been used against Afghan individuals and have been a vehicle for family separation. The commenter concluded that applying the terrorism bars at the credible fear interview and reasonable fear screening stage neither complies with domestic and international refugee law, nor comports with U.S. national security interests.

Response: The Department disagrees with the comment that applying the terrorism bars in the screening interview neither complies with domestic and international refugee law, nor comports with U.S. national security interests. One of the Department's primary purposes is to maintain national security by securing U.S. borders and protecting the country from national security threats, including terrorism. As previously mentioned, the number of noncitizens impacted by this rule is expected to be modest. The Department believes that identifying and removing noncitizens subject to the bars early in the process increases efficiencies in the immigration system while also maintaining national security. The U.S. government works to protect national security while upholding our humanitarian mandates, in accordance with our domestic and international obligations. In applying the terrorism bars, the Department also considers numerous exceptions or discretionary exemptions to the bars that may apply, including, for example, situational exemptions for insignificant material support, certain limited material support, exemptions for Afghan allies and civil servants, and group-based exemptions.⁸¹ These exemptions are a reflection of the Department's understanding that mandatory bar application is a case-by-case analysis and that noncitizens seeking protection may have faced unique circumstances that may warrant a discretionary exemption from the mandatory bar if threshold requirements are met and an exemption is warranted in the totality of the circumstances. The Department again states that the AO would retain discretion to analyze a mandatory bar at

the screening stage and if further evidence, interviews, or analysis are needed, may opt not to analyze that bar during the screening. Instead, if the noncitizen receives a positive determination, the bar would be fully explored in an AMI or in front of the immigration judge. Finally, the claim that the terrorism bars have wrongfully labelled noncitizens as terrorists, and specifically has been used against Afghan noncitizens and as a vehicle for family separation, is inapposite, as this rule does not substantively amend the contours of who may be subject to this statutory bar.

4. Exclusion of the Bars To Applying for Asylum and of the "Firm Resettlement" Bar, INA Secs. 208(a)(2), (b)(2)(A)(vi)

Comment: A few commenters expressed appreciation that the firm resettlement bar is excluded from this rule. A few commenters expressed concern that the rule excludes consideration of the firm resettlement bar and believe that officers should be required to consider all bars during the screening process. Another commenter expressed concern that the rule excludes consideration of the safe third country exception. A commenter found the decision to not extend the consideration of the firm resettlement bar to protection screenings selective and makes the decision to consider the other bars at this stage "questionable." A commenter suggested DHS should require AOs to consider all bars to asylum and statutory withholding of removal in fear screenings, including the bars to applying for asylum at INA sec. 208(a)(2), 8 U.S.C. 1158(a)(2). The comment stated that it is arbitrary to exclude all the bars from the rule. A commenter expressed concern that analysis of the firm resettlement bar in particular is complex and it will be difficult to properly analyze the bar during the screening process.

Response: DHS declines to include consideration of the bars to applying for asylum—other than the safe third country bar as already provided in 8 CFR 208.30(e)(6) for purposes of implementing the U.S.-Canada Safe Third Country Agreement—and the firm resettlement bar in fear screenings. Doing so would undermine the efficiency of fear screenings and would not be a productive use of Department resources. The overwhelming majority of noncitizens placed into the expedited removal process who are referred for credible fear screenings appear before an AO within days or weeks of arrival in the United States and are therefore not subject to the 1-year filing requirement at INA sec. 208(a)(2)(B), 8

U.S.C. 1158(a)(2)(B). Furthermore, the safe third country bar to applying for asylum at INA sec. 208(a)(2)(A), 8 U.S.C. 1158(a)(2)(A) currently only applies to certain noncitizens arriving from Canada. The regulation at 8 CFR 208.30(e)(6) already provides procedures for credible fear screening of such noncitizens, so doing so in this rule would be duplicative. The bar to applying for asylum based on the noncitizen having previously applied for and been denied asylum at INA sec. 208(a)(2)(C), 8 U.S.C. 1158(a)(2)(C) is subject to an exception for changed circumstances materially affecting eligibility for asylum codified at INA sec. 208(a)(2)(D), 8 U.S.C. 1158(a)(2)(D). The necessity of exploring the applicability of this exception during a credible fear interview would undermine the efficiency of the screening, which is designed to quickly identify noncitizens without a legal basis to remain in the United States and ensure those with viable claims are able to pursue them in a full merits hearing or AMI. In addition, these bars do not serve the same public safety purpose as the bars that AOs will have the discretion to consider under this rule.

The Department acknowledges the comments expressing appreciation that the Department did not include the firm resettlement bar in this rule, DHS disagrees with comments that the firm resettlement bar should be included and that AOs should be required to analyze all bars. One of the purposes of this rule is to give AOs discretion, at the earliest stage possible, to consider whether a noncitizen is unlikely to be able to establish eligibility for asylum or statutory withholding of removal because of a mandatory bar that relates to participation in persecution, or national security, criminal, or other public safety concerns. The Department believes that ignoring these serious concerns runs counter to its policy goals. The firm resettlement bar, however, does not fall into one of the categories listed above. Moreover, although firm resettlement constitutes a mandatory bar to asylum eligibility, it is not a bar to eligibility for statutory withholding.

Furthermore, as DHS explained in the NPRM, 89 FR at 41355, the firm resettlement regulations currently in effect, 8 CFR 208.15, 1208.15 (2020), include a burden-shifting framework that requires the Department to bear the initial "burden of presenting prima facie evidence of an offer of firm resettlement" that can be rebutted by the noncitizen. *Matter of A-G-G-*, 25 I&N Dec. 486, 501 (BIA 2011). This framework differs from the analytical

⁸¹ See USCIS, "Terrorism-Related Inadmissibility Grounds—Group-Based Exemptions," <https://www.uscis.gov/laws-and-policy/other-resources/terrorism-related-inadmissibility-grounds-trig/terrorism-related-inadmissibility-grounds-trig-group-based-exemptions> (last visited Aug. 29, 2024); and USCIS, "Terrorism-Related Inadmissibility Grounds—Situational Exemptions," <https://www.uscis.gov/laws-and-policy/other-resources/terrorism-related-inadmissibility-grounds-trig/terrorism-related-inadmissibility-grounds-trig-situational-exemptions> (last visited Aug. 29, 2024).

framework for the security-related bars that are the subject of this rulemaking. The *Matter of A-G-G* framework and firm resettlement definition could make it difficult for AOs to easily verify whether a noncitizen is subject to the bar. This difficulty would also undermine the efficiency of credible fear screenings, which is contrary to the intent of Congress and the purpose of this rule.

5. Exclusion of CAT Screenings (Withholding of Removal) (§§ 208.30(e)(3), 208.33(b)(2)(i), 208.35(b)(2)(i))

Comment: A commenter expressed concern that noncitizens found ineligible for asylum and withholding of removal because of a mandatory bar will only be eligible for protection under CAT. This commenter believes that CAT protection is an inadequate form of protection. Another commenter expressed concern that the rule would provide AOs too much discretion to consider mandatory bars and requested limiting discretion as related to trafficking victims and those seeking protection under CAT.

Response: This rule does not change the underlying grounds of eligibility for asylum, withholding of removal, or protection under the Convention Against Torture. The rule only amends the credible fear and reasonable fear interview processes to allow AOs to apply certain statutory mandatory bars earlier in the process—at the interview stage rather than at a later full merits adjudication—than would occur without this rule. Accordingly, a noncitizen who is determined to only be eligible for CAT protection would also only be eligible for CAT protection absent this rule. For these reasons, the Department declines to further address commenters' concerns that CAT protection is "inadequate" as they are outside the scope of this rule's changes.

The Department disagrees with the claim that the rule will provide AOs with too much discretion to consider mandatory bars and that discretion should be limited as related to certain noncitizens. As previously stated, AOs will have discretion to analyze the mandatory bars, but where more information or evidence is needed concerning the bar and the determination is positive, the noncitizen would proceed to an AMI or a hearing before an immigration judge. Furthermore, AOs are trained not only in asylum law but also to recognize signs of trafficking and follow

procedures to assist potential trafficking victims.⁸²

6. Other/General Comments on the Application of Bars

Comment: A commenter stated that the rule should not apply to family units in the Family Expedited Removal Management (FERM) program⁸³ because family units often lack legal counsel, may speak uncommon languages, and may not have enough time to gather evidence for their interviews.

Response: DHS currently places certain non-detained family units in the credible fear process in the FERM program. FERM leverages alternatives to detention to process families through expedited removal, including credible fear screenings, in a non-detained setting. FERM is designed to ensure family units in the credible fear process participate in a timely credible fear interview and any requested review by an immigration judge without being detained.⁸⁴ Placement in the FERM program has no impact on the substantive credible fear screening nor changes the applicable legal standards. This rule applies to credible fear screenings in the non-detained FERM program the same as it applies to credible fear screenings that take place in detention. As with any other noncitizen in the credible fear screening process, AOs have the discretion to apply certain mandatory bars pursuant to this rule at the credible fear screening and if applied, noncitizens will have the opportunity to present evidence that the bar does not apply at the appropriate standard depending on the case. The concerns noted in this comment are no different than those mentioned by other commenters about the overall population of noncitizens in the screening process. As previously stated, noncitizens in credible fear may be represented by an attorney at no cost to the government and may consult with persons of their choosing. INA sec. 235(b)(1)(B)(iv), 8 U.S.C. 1225(b)(1)(B)(iv), 8 CFR 235.3(b)(4)(ii); 208.30(d)(4), 8 CFR 208.31(c). The Department also provides government-contracted interpreters if the noncitizen

is unable to proceed with the interview in English. 8 CFR 208.30(d)(5). The Department emphasizes that the rule does not require AOs to consider applicability of the bars in the fear determination, including FERM cases, and that the Department estimates this will impact a relatively small number of individuals who are not eligible for protection.

7. Screening Procedures, AO Determinations, Immigration Judge Review of Negative Fear Determinations

Comment: A few commenters expressed concern with the proposal to make AOs' consideration of the bars at the fear screening stage discretionary. For example, commenters expressed concern that the opacity of the screening interview process and the discretion given to AOs would make it impossible to verify DHS's implied claim that there is an easily identifiable population of individuals who are ineligible for asylum but are nonetheless subject to screening interviews. The commenters indicated this dynamic necessarily means the rule's effects would ultimately be obscure and unaccountable to the public.

Response: DHS disagrees that the processes under which it conducts screening interviews are opaque. Regulations governing credible fear and reasonable fear screenings conducting by DHS are published at 8 CFR 208.30, 208.31, 208.33, 208.35, 235.3, and 235.15. USCIS maintains information about credible fear and reasonable fear screenings on its public website.⁸⁵ Individuals undergoing credible fear screenings receive written disclosures about the process. 8 CFR 235.3(b)(4)(i) and 235.15(b)(4)(i)(B). AOs are required to determine that noncitizens undergoing reasonable fear screenings understand the reasonable fear determination process. 8 CFR 208.31(c). Noncitizens have the right to consult with a person or persons of their choosing before undergoing a credible fear interview, and such person or persons may also be present at the interview. 8 CFR 208.30(d)(4).

⁸³ DHS—ICE, "ICE announces new process for placing family units in expedited removal," <https://www.ice.gov/news/releases/ice-announces-new-process-placing-family-units-expedited-removal> (May 10, 2023).

⁸⁴ DHS—ICE, "ICE announces new process for placing family units in expedited removal," <https://www.ice.gov/news/releases/ice-announces-new-process-placing-family-units-expedited-removal> (May 10, 2023).

⁸⁵ See USCIS, "Credible Fear Screenings," <https://www.uscis.gov/humanitarian/refugees-and-asylum/asylum/credible-fear-screenings> (last visited June 24, 2024); USCIS, "Questions and Answers: Credible Fear Screening," <https://www.uscis.gov/humanitarian/refugees-and-asylum/asylum/questions-and-answers-credible-fear-screening> (last visited June 24, 2024); USCIS, "Reasonable Fear Screenings," <https://www.uscis.gov/humanitarian/refugees-and-asylum/asylum/reasonable-fear-screenings> (last visited June 24, 2024); and USCIS, "Questions and Answers: Reasonable Fear Screenings," <https://www.uscis.gov/humanitarian/refugees-and-asylum/asylum/questions-and-answers-reasonable-fear-screenings> (last visited June 24, 2024).

Noncitizens undergoing reasonable fear interviews may be represented by counsel or an accredited representative at the interview. 8 CFR 208.31(c). After an AO conducts a credible fear screening, the officer issues the noncitizen a record of the credible fear determination, including copies of the AO's notes, the summary of the material facts, and other materials upon which the determination was based. 8 CFR 208.30(f), (g), 208.33(b)(2)(v), 208.35(b)(2)(v). Noncitizens determined to lack a credible fear of persecution or torture may have such determinations reviewed by an immigration judge. 8 CFR 208.30(g), 208.33(b)(2), 208.35(b)(2), 1003.42, and 1208.30(g). Noncitizens determined to lack a reasonable fear of persecution or torture are informed of the decision in writing and may request review of the decision by an immigration judge. 8 CFR 208.31(f) and (g). Supervisors review all credible fear and reasonable fear determinations for legal sufficiency and compliance with applicable procedures before such determinations are issued.⁸⁶ These measures and others ensure the credible fear and reasonable fear screening processes are transparent and subject to accountability through review, including before an immigration judge at the noncitizen's request.

DHS disagrees with comments asserting that the discretion the rule provides to AOs would make it impossible to verify the implied premise of the rule that there is an easily identifiable population of individuals who are ineligible for asylum but are nonetheless subject to screening interviews and that the effects of the rule would be obscure and unaccountable to the public. As discussed in the NPRM and in this rule, the premise of the rule is that there are certain cases where there is information at the screening stage to show that the noncitizen is both (1) subject to a mandatory bar to asylum and/or withholding of removal and (2)

otherwise unable to meet the requisite screening standard for protection under CAT and it is those cases that the Department seeks to screen out at an earlier stage, rather than having them move forward in the process. 89 FR 41351. The Department has been fully transparent and clear about the potential impact of this rule as limited to cases where application of a mandatory bar to asylum and statutory withholding of removal results in a negative credible fear of persecution determination or application of a mandatory bar to statutory withholding of removal results in a negative reasonable fear of persecution determination, and the noncitizen is otherwise unable to establish a fear of torture at the requisite screening standard, since application of a mandatory bar will only be outcome determinative if the noncitizen is otherwise unable to establish a fear of torture. 89 FR 41351.

In individual cases, the application of a mandatory bar resulting in a negative credible fear or reasonable fear determination will be documented in the record and available for a noncitizen and their representative to review. For example, where an AO issues a negative credible fear determination with respect to asylum and statutory withholding of removal based on the application of a mandatory bar, the AO will provide the noncitizen with a written notice of decision and issue the noncitizen a record of the credible fear determination, including copies of the AO's notes, the summary of the material facts, and other materials upon which the determination was based. *See* 8 CFR 208.30(g)(1). In any screening determination where the negative credible fear or reasonable fear of persecution determination is based on the application of a mandatory bar, these materials documenting the determination that are served on the noncitizen and their representative (if applicable) will provide transparency into how application of the mandatory bar resulted in a negative credible fear or reasonable fear of persecution determination, in addition to why the noncitizen also failed to establish a credible fear or reasonable fear of torture.

Comment: Commenters indicated that the rule provides insufficiently clear guidance on how AOs will determine whether a noncitizen is clearly ineligible for relief because of a mandatory bar, whether there is easily verifiable evidence that warrants inquiry into a mandatory bar, or whether the AO can efficiently address the bar in a screening interview. A commenter noted that that DHS did not

include in the regulatory text the limitation that AOs would only consider bars in cases where a noncitizen is clearly ineligible and there is easily verifiable evidence of bar and did not define "clearly ineligible" and "easily verifiable" in the regulatory text. One commenter suggested that the sort of easily verifiable evidence envisioned in the rule is a fiction, pointing specifically to foreign legal records as problematic given the possibility that they are part of a pretextual prosecution. This commenter suggested that there is not a single situation of evidence that might appear to be easily verifiable where the asylum officer should be confident that they can consider that bar efficiently.

Response: The Department notes that under current practice, AOs do not apply mandatory bars to eligibility for asylum and withholding of removal during fear screenings, but in cases where there is evidence a bar may apply, AOs note the possible applicability of the bar in the record. In some such cases, the evidence that a bar applies is clear. For example, a noncitizen undergoing a reasonable fear interview may have been ordered removed from the United States due to a conviction by a final judgment for an aggravated felony under 18 U.S.C. 1956 (money laundering), if the amount of funds exceeds \$10,000 and the noncitizen received a sentence of at least five years' imprisonment. If DHS records confirm the noncitizen's identity matches that of the convicted person, the noncitizen would clearly be barred from statutory withholding of removal due to their conviction for an aggravated felony under INA 101(a)(43)(D), 8 U.S.C. 1101(a)(43)(D), and aggregate term of imprisonment of at least 5 years. *See* INA sec. 241(b)(3)(B)(ii), (iv), 8 U.S.C. 1231(b)(3)(B)(ii), (iv). This rule ends the practice of having the AO set aside the bar in making the reasonable fear determination in such a case and allows the AO to enter a negative determination if the noncitizen is unable to establish a reasonable possibility that the bar does not apply or is unable to establish a reasonable fear of torture.

AOs must complete screenings efficiently and there is no incentive for them to consider bars in the absence of easily verifiable evidence. DHS believes the regulatory text, along with the guidance in this preamble and that of the NPRM, is sufficient to alert the public about how AOs will determine whether to consider mandatory bars in fear screenings without defining the terms "clearly ineligible" and "easily verifiable" in regulatory text. Although

⁸⁶ 89 FR 41347, 41353 (May 13, 2024) ("Rather this rule would create the flexibility for the AO to exercise discretion—with supervisory review of any decision—on the applicability of bars during the screening stage."); *see also* USCIS, "Semi-Monthly Credible Fear and Reasonable Fear Receipts and Decisions" ("All credible fear and reasonable fear screening determinations were reviewed by either a supervisory asylum officer, occupational series 0930 or one of a small number of supervisory refugee officers, occupational series 1801, serving in the capacity of supervisory asylum officers. The supervisory refugee officers are either former asylum officers or have been trained and have experience consistent with the regulatory and statutory requirements to conduct reviews of these cases."), <https://www.uscis.gov/tools/reports-and-studies/semi-monthly-credible-fear-and-reasonable-fear-receipts-and-decisions> (last visited June 17, 2024).

the Department acknowledges that the type of easily verifiable evidence envisioned by this rule may not be available in every case, DHS disagrees with the assertion that such evidence is never present in a case. AOs are trained to evaluate criminal convictions, including the possibility that an arrest or conviction may be the result of a pretextual prosecution.⁸⁷ The rule provides that, where such easily verifiable evidence exists, the AO may consider gathering additional information about the possible application of a mandatory bar, including evidence of any exemption or exception to the bar that the noncitizen may present.

Comment: A commenter suggested that noncitizens be provided with a complete copy of all information relied on by the AO in applying a bar to their claim. Another stated DHS should be required to provide evidence to the person seeking asylum regarding any potential bar in advance of the credible fear interview.

Response: DHS believes the procedures under current regulations provide noncitizens sufficient information about the basis for the screening determination. Following the credible fear interview, noncitizens receive a copy of all the items required by regulation, including copies of the AO's notes, the summary of the material facts, and other materials upon which the determination was based. 8 CFR 208.30(f)–(g). In any case where the application of a mandatory bar to asylum or statutory withholding of removal is outcome determinative to the credible fear or reasonable fear determination, the AO will provide a written analysis related to the application of the mandatory bar in the record, which will be served on the noncitizen. If the noncitizen has a properly executed Form G–28 on file, a copy of the relevant documents will be provided to their legal representative.⁸⁸ For negative determinations referred to the IJ for review, USCIS will file copies of outcome determinative documents with the immigration court.⁸⁹

The Department declines to adopt the commenter's suggestion related to sharing information in advance of a credible fear interview. USCIS does not share information that may relate to

mandatory bars with noncitizens in advance of their screening determinations or asylum adjudications. Rather, when evidence related to a mandatory bar is known to USCIS, the noncitizen is given an opportunity to address the evidence during the interview. 8 CFR 208.9(e). When information related to a mandatory bar is present in the record for a credible fear or reasonable fear screening, the AO will ask the noncitizen about the information, and the noncitizen will be given an opportunity to address any concerns and provide evidence that the mandatory bar does not apply.

Comment: A commenter wrote that it is inappropriate to allow AOs to consider bars to statutory withholding of removal because AOs do not make decisions on applications for withholding of removal. Commenters noted the difference in treatment of aggravated felonies in relation to the particularly serious crime bar to withholding of removal under INA sec. 241(b)(3)(B)(ii), 8 U.S.C. 1231(b)(3)(B)(ii) and the particularly serious crime bar to asylum under INA sec. 208(b)(2)(A)(ii), 8 U.S.C. 1158(b)(2)(A)(ii).

Response: DHS acknowledges that in the context of the particularly serious crime bar to withholding of removal, the statute requires that noncitizens convicted of aggravated felonies for which the noncitizen has been sentenced to an aggregate term of imprisonment of at least 5 years be considered to have been convicted of particularly serious crimes, while leaving to the Attorney General's discretion the ability to consider as particularly serious crimes convictions for aggravated felonies for which the noncitizen has been sentenced to an aggregate term of imprisonment of less than 5 years. INA sec. 241(b)(3)(B), 8 U.S.C. 1231(b)(3)(B). The particularly serious crime bar to asylum contains no such discretion, requiring that noncitizens convicted of any aggravated felony, without reference to any sentence imposed, be considered to have committed a particularly serious crime. INA sec. 208(b)(2)(B)(i), 8 U.S.C. 1158(b)(2)(B)(i). An AO encountering a noncitizen in a fear screening with a conviction for an aggravated felony for which a sentence of less than 5 years was imposed would likely be unable to efficiently address the particularly serious crime bar to statutory withholding of removal and would therefore not exercise their discretion to consider the bar.

However, DHS disagrees that it is inappropriate as a general matter for AOs to consider bars to statutory withholding of removal in fear

screenings. As noted above, the five bars to statutory withholding of removal that AOs may consider under this rule generally correspond to five of the six mandatory bars to asylum, on which AOs receive training and which they consider in affirmative asylum and asylum merits (AMI) adjudications. See INA secs. 208(b)(2)(A)(i)–(v), 241(b)(3)(B)(i)–(iv) and (b)(3)(B), 8 U.S.C. 1158(b)(2)(A)(i)–(v), 1231(b)(2)(B)(i)–(iv) and (b)(3)(B). Moreover, AOs conducting AMIs also make determinations on eligibility for statutory withholding of removal pursuant to 8 CFR 208.16, including the consideration of bars at 8 CFR 208.16(d)(2). 8 CFR 208.9(b). Therefore, DHS is confident in AOs' ability to exercise their discretion to consider and correctly apply bars to statutory withholding of removal in credible fear and reasonable fear screenings.

Comment: Some commenters recommended requiring AOs to consider bars in fear screenings. One commenter suggested that leaving such consideration to the discretion of AOs where there is easily verifiable evidence of a bar and the AO is confident they can address the bar efficiently, fails to consider the years that otherwise inadmissible noncitizens would spend in the country if referred to removal proceedings and the additional fiscal and time burdens to ICE and EOIR to handle such cases. These burdens, the commenter argued, create strains on public resources and potential danger to officers.

Response: DHS disagrees that requiring AOs to apply bars in fear screenings in all cases would necessarily reduce the burdens on ICE, EOIR, or public resources. Imposing a blanket requirement for AOs to consider bars in fear screenings would result, in many cases, in protracted screening interviews to fully explore the complex factual and legal considerations that often arise in connection with bars to asylum and statutory withholding of removal.⁹⁰ Doing so would reduce the number of fear screenings DHS is able to conduct, resulting in more noncitizens being referred for section 240 removal proceedings without any screening at all. While DHS appreciates the commenter's concern for officer safety, the Department is confident in its ability to protect its personnel, and the commenter provides no evidence to indicate otherwise.

8. Burden and Standard of Proof

Comment: A commenter wrote in support of requiring individuals in the

⁸⁷ See USCIS, "RAIO Directorate—Officer Training: Mandatory Bars to Asylum" (May 9, 2013).

⁸⁸ Credible Fear Procedures Manual (CFPM), Section III.J; Reasonable Fear Procedures Manual (RFPM), Section III.I.

⁸⁹ Credible Fear Procedures Manual (CFPM), Section III.K; Reasonable Fear Procedures Manual (RFPM), Section III.J.

⁹⁰ See 87 FR 18093–94.

asylum process to bear the burden of proof, reasoning that if the individual's claim is real, they could easily provide the evidence. Commenters suggested that the government should bear the burden of proof to demonstrate the applicability of any bars, rather than requiring noncitizens to bear the burden of proof.

Response: The Department agrees to the extent that it is appropriate to require noncitizens to bear the burden of proof to demonstrate they have a credible fear or reasonable fear determination, and notes that this is the current standard and will not change under this regulation. Under INA sec. 291, 8 U.S.C. 1361, the burden of proof is generally on the person requesting an immigration benefit to establish their eligibility for the benefit.⁹¹ Because mandatory bars to asylum and withholding of removal exclude noncitizens from eligibility for those forms of relief or protection, noncitizens must demonstrate that such bars do not apply according to the relevant legal standard. The purpose of fear screenings is to identify noncitizen who may be eligible for particular benefits or forms of relief or protection from removal, and it is consistent with the INA to place the burden of proof on noncitizens to establish a bar considered by the AO in the fear screening does not apply.

DHS believes it is reasonable in fear screenings to require noncitizens to bear the burden of proof to demonstrate at the applicable standard that a mandatory bar, if considered, does not apply to them. This approach is consistent with requiring noncitizens in credible fear and reasonable fear screenings to demonstrate at the applicable standard that they could establish, in a proceeding on the merits, eligibility for asylum or that they would be persecuted on account of a protected ground. The commenters' suggestion would represent a departure from this longstanding framework and introduce a burden-shifting element that could unnecessarily complicate and prolong screening interviews. DHS also notes that requiring noncitizens to bear the burden of proof in credible fear and reasonable fear screenings to demonstrate a bar, if considered, does not apply them, is analogous to the requirement in proceedings on the merits that applicants bear the burden of proof to demonstrate eligibility for any immigration benefit or relief sought under INA sec. 291, 8 U.S.C. 1361.

⁹¹ The same is true in removal proceedings under section 240 of the INA, 8 U.S.C. 1229a. See INA 240(c)(4)(A), 8 U.S.C. 1229a(c)(4)(A).

Comment: One commenter, in noting that a noncitizen whom an AO determines may be a threat to national security would be given the opportunity to show that they are not, stated that it is extremely difficult to prove one is not a threat.

Response: AOs conducting fear screenings would only consider a mandatory bar in those cases where there is easily verifiable evidence available to the AO that a mandatory bar may apply, and the AO can consider that bar efficiently at the credible fear stage. The rule would not require noncitizens to prove generally that they are not a threat. Rather, it allows AOs the discretion to consider particular statutory bars to asylum and withholding of removal where evidence that such a bar may apply exists and is easily verifiable. The Department considers it fair and appropriate to provide such discretion to AOs and to remove noncitizens without a legal basis to remain in the United States when screenings determine they would not be able to establish eligibility in a full merits hearing before an immigration judge or AMI before an AO. Furthermore, noncitizens already bear the burden of proof in merits determinations to demonstrate a bar does not apply. The commenter did not explain how allowing AOs to consider mandatory bars in fear screenings is more problematic than this current posture.

Comment: Commenters asserted that the rule requires noncitizens in fear screenings to meet the preponderance of the evidence standard to demonstrate a bar does not apply. Commenters indicated the significant possibility standard should apply uniformly to all aspects of credible fear interviews. A commenter asserted that allowing the consideration of bars to asylum and statutory withholding of removal in the context of other recent rulemakings that provide for different standards of proof for the different forms of relief for which noncitizens are screened in credible fear interviews will create confusion and increase the risk of erroneous fear determinations. One commenter wrote that the differing standards for consideration of exceptions to the mandatory bars—a significant possibility for an exception to an asylum bar and a reasonable possibility for an exception to a statutory withholding of removal bar—will create confusion among noncitizens and AOs and increase the likelihood of erroneous determinations.

Response: The rule does not require noncitizens in fear screenings to meet the preponderance of the evidence

standard to demonstrate a bar does not apply. Rather, in credible fear screenings under 8 CFR 208.30, it requires them to show a significant possibility that they would be able to demonstrate by a preponderance of the evidence (in the context of a full merits hearing) that a mandatory bar to asylum does not apply. 8 CFR 208.30(e)(5)(ii)(A) and (B). Noncitizens screened for statutory withholding of removal under the application of the CLP rule's presumption of ineligibility for asylum must demonstrate that there is a reasonable possibility that no mandatory bar applies, if the AO has considered the applicability of a bar. 8 CFR 208.33(b)(2)(i). Noncitizens subject to the Securing the Border rule's limitation on asylum eligibility must demonstrate a reasonable probability. 8 CFR 208.35(b)(2), 208.33(b)(2)(i). In the reasonable fear context, if the AO considers the applicability of a bar, the noncitizen must demonstrate there is a reasonable possibility that the bar does not apply. 8 CFR 208.31(c). All of these standards are lower than the preponderance of the evidence standard applicable to asylum applications being considered in full merits hearings.

DHS disagrees that screening for mandatory bars under varying standards of proof will create confusion and increase the risk of erroneous screening determinations. As stated above, AOs are trained to properly apply the different standards of proof in screening interviews and full adjudications,⁹² and AOs and have extensive experience applying different standards in the course of a case and across their workloads. The non-adversarial nature of screening interviews, along with the AO's duty to elicit testimony from noncitizens and examine other evidence in the record, including the results of security checks and country conditions, combined with 100-percent supervisory review of screening determinations and the availability of immigration judge review for negative determinations, all ensure the correct standard of proof is applied to the various forms of relief being screened in credible fear and reasonable interviews and minimize the risk of erroneous determinations.

DHS disagrees that shifting standards of proof applied during fear screenings will create prejudicial confusion among noncitizens. AOs are trained to elicit all relevant information from the noncitizen, including eliciting testimony to assist the noncitizen with

⁹² See USCIS, RAIO Directorate—Officer Training: Evidence (Apr. 24, 2024). USCIS will develop additional training on this rule prior to its implementation, including guidance on standards of proof for AOs tasked with implementing the rule.

meeting their burden of proof in a given determination or adjudication.⁹³ The comment appears to contemplate a noncitizen calibrating their response to an inquiry based on the standard of proof, rather than working with the AO to provide all the available evidence on an issue. Given the non-adversarial nature of screening interviews and AOs' duty to elicit the testimony needed to determine whether a noncitizen has met the applicable standard of proof, DHS believes the commenter misapprehends the dynamics of screening interviews.

DHS acknowledges the commenter's suggestion that the significant possibility standard should apply uniformly to all aspects of credible fear interviews. However, this rule does not change the standards applicable in credible fear interviews.

DHS acknowledges that the CLP rule and Securing the Border Interim Final Rule (IFR) and final rule impacted the credible fear review procedures (but not reasonable fear procedures), including, in some cases, the standards of proof applicable to certain noncitizens in credible fear screenings. See 8 CFR 208.33(b), 208.35(b). DHS and DOJ explained in the CLP and Securing the Border rules why the reasonable possibility and reasonable probability standards, respectively, are needed in the context of screening for statutory withholding of removal and CAT protection, even though it might be more straightforward to apply the significant possibility standard across the board. This rule, however, does not make any further changes to these standards of proof, nor were such changes proposed in the NPRM. Instead, it maintains the status quo.

DHS disagrees that providing discretion to AOs to consider bars in fear screenings in the context of the varying standards of proof implemented by these other rules will cause confusion and result in erroneous fear determinations. AOs have been effectively implementing the CLP rule for over a year and have demonstrated their ability to apply the significant possibility and reasonable possibility standards accurately in accordance with DHS regulations. Early indications suggest the same for the Securing the Border IFR and final rule. DHS has no reason to believe that providing AOs the discretion to consider mandatory bars in fear screenings where information makes it clear that a bar may apply, and the AO can analyze the bars efficiently,

will undermine the integrity of these screenings.

Furthermore, this rule does not require noncitizens undergoing fear screenings where bars are considered to demonstrate by a preponderance of the evidence that the bars do not apply. That is the standard of proof to demonstrate eligibility for asylum in a full merits hearing or AMI, not in the credible fear context. The standards of proof applicable to the consideration of bars in fear screenings will remain the same as those for the other eligibility criteria for the forms of relief or protection considered in credible fear and reasonable fear screenings under current regulations.

Comment: A commenter stated that the "reasonable probability" standard implemented under the Securing the Border IFR would create a difficult standard to administer and understand, and that under the IFR, certain noncitizens will be screened under a higher standard than that applied to similarly situated noncitizens under the CLP rule. The commenter wrote that the "reasonable probability" standard does not appear in the INA and is not defined clearly. Commenters noted that DHS's new regulations have created overlapping and inconsistent legal standards and were unsure whether this rule would conform to the IFR standard.

Response: This rule does not propose changes to the substantive screening standards by which AOs make their fear determinations. See generally 89 FR at 41347–61. Instead, this rule amends the regulations to provide AOs discretion to consider mandatory bars at the appropriate standard of proof that applies to the type of screening they are conducting.

Regarding the "reasonable probability" standard specifically, as discussed above in Section I.B, the Securing the Border IFR established that standard at 8 CFR 208.35(b)(2). Specifically, in cases where the AO first finds that the noncitizen is subject to the Securing the Border limitation on asylum eligibility and accordingly does not have a credible fear with respect to the noncitizen's asylum claim, the AO then assesses whether the noncitizen has established a "reasonable probability" of persecution or torture for the purposes of eligibility for withholding of removal or protection under the Convention Against Torture. 8 CFR 208.35(b)(2). When this rule is implemented, the AO may consider the applicability of the covered mandatory bars as part of this "reasonable probability" determination in cases where the Securing the Border rule's limitation on asylum eligibility is found

to apply. Should the Securing the Border rule's limitation on asylum eligibility not apply to a noncitizen in a credible fear screening, either because there is a significant possibility the noncitizen could demonstrate either they are not subject to the limitation or they are eligible for an exception to the limitation, the AO would consider the mandatory bars under this rule at the "significant possibility" standard in line with credible fear determinations made pursuant to 8 CFR 208.30, or, if appropriate, the "reasonable possibility" standard, if the noncitizen is subject to a presumption of asylum ineligibility under 8 CFR 208.33.

In all cases, the AO will only consider mandatory bars under this rule as a matter of discretion and only when there is easily verifiable information that a mandatory bar applies to the noncitizen and when the AO can handle the issue efficiently at the screening stage.

To the extent that commenters' concerns regard the merits of the "reasonable probability" standard in general, such concerns are outside the scope of this rule. Comments regarding the reasonable probability standard are addressed in Section III.C.3 of the Securing the Border final rule preamble. 87 FR at 81245–50.

9. Other General/Mixed Feedback and Suggested Alternatives

Comment: One commenter stated that while they understand the rule's intention to streamline the asylum process and uphold the integrity of the immigration system, they have recommendations for improvements. The commenter suggested increased training for AOs to better understand global issues, exceptions to applicability of the rule for specific vulnerable populations, access to legal counsel in the screening process, increased transparency around the screening process, and periodic review and public reporting on the rule's impact. One commenter expressed concern that noncitizens may face exploitation, and many other commenters suggested increasing capacity and resources, including AOs and immigration judges, so that noncitizens face shorter wait times and receive thorough interviews. One commenter suggested that increased use of Temporary Protected Status, parole processes such as the processes for Cubans, Haitians, Nicaraguans, and Venezuelans, and humanitarian parole could reduce the number of border crossings. One commenter recommended that the Department disincentivize border crossings by expanding its use of

⁹³ See *id.*; see also USCIS, "RAIO Directorate—Officer Training: Interviewing—Eliciting Testimony" (Apr. 24, 2024); USCIS, "RAIO Directorate—Officer Training: Evidence" (Apr. 24, 2024).

expedited removal, rescinding ICE enforcement priorities memos, and raising the legal standards applied in screening cases.

Response: The Department emphasizes that AOs are trained in asylum law, receive regular trainings in specific areas of asylum law, and are experienced in analyzing mandatory bars.⁹⁴

The Department declines the suggestion to create exceptions to applicability of the rule for certain vulnerable populations because all applicants for asylum, regardless of population, are subject to all mandatory bars.

An explanation of access to counsel in the screening process is provided in section 2(b), due process concerns, of this rule.

The Department appreciates the suggestion to increase transparency and provide periodic review and public reporting on the rule's impact. USCIS already provides certain asylum statistics to the public through its website and reports to Congress on a variety of immigration initiatives and statistics. The Department will take this suggestion under consideration.

The Department also continues to use a variety of processes, including parole, to discourage unlawful entries into the United States and safeguard against exploitation of noncitizens.

The Department acknowledges the recommendation to increase capacity and resources by hiring more AOs and immigration judges. The Department continues to expand its workforce to meet the growth in immigration benefit applications and requests, but staffing and hiring of AOs is out of the scope of this rule, as is the staffing and hiring of immigration judges, which is managed by the Department of Justice. This rule is intended to provide DHS additional operational flexibility in screening determinations and, as explained in the NPRM preamble, the Department anticipates that it will also expand its ability to more quickly remove noncitizens who present national security or public safety threats, may provide efficiencies for ICE Office of the

Principal Legal Advisor (OPLA) and ICE Enforcement and Removal Operations (ERO), and may reduce referrals to EOIR in cases in which a negative fear determination can be made at the screening stage for an individual who the Department would otherwise place into potentially lengthy proceedings in immigration court, including possible appeals to the BIA.

Certain suggestions, specifically those to disincentivize unlawful border crossings by expanding the use of expedited removal and removing ICE enforcement priorities, are outside the scope of this rule. This rule encompasses USCIS regulations and procedures and does not amend ICE regulations and procedures.

Finally, regarding the suggestion to increase the legal standards applied in screening cases in order to disincentivize unlawful border crossings, the Department emphasizes that this rule does not affect the standard of proof applicable in screening procedures. Furthermore, the intent of this rule is to increase efficiency and enhance public safety, rather than to function as a broader deterrence measure.

Comment: A commenter stated that to speed removal of high enforcement priorities and reduce the EOIR pending caseload and the burden on OPLA and ERO, DHS failed to consider policies that it can exercise in its discretion to not prosecute non-priority cases at a greater scale.

Response: DHS acknowledges the comment and has provided an estimated reduction in EOIR workload after the implementation of this rule. See section V.A.3.c of this preamble. The regulation will prevent noncitizens from entering a potentially years-long immigration court process in pursuit of relief for which they are ineligible, and it will allow DHS and EOIR resources that would have been expended on such processes to be conserved for potentially meritorious cases. However, the main purpose of this rule is not to reduce EOIR pending caseload or the burden on ICE OPLA and ERO. Instead, as explained in the NPRM and in this preamble, the purpose of this rule is to facilitate efficiency in the expedited removal process by providing AOs additional operational discretion to choose to apply certain mandatory bars during fear screenings. The commenter's suggestions are outside the scope of this rule.

E. Other Issues Relating to the Rule

1. Coordination With DOJ in the Rulemaking

Comment: A commenter suggested that the lack of a corresponding proposed rule by DOJ demonstrates that DHS failed to coordinate with EOIR, undermining DHS's claims that the rule will promote efficiency and consistency and betraying a lack of preparedness to promulgate a final rule. Similarly, another commenter suggested that the lack of a corresponding DOJ rule highlights the irregular nature of this proposed rulemaking.

Response: As an initial matter, the Department emphasizes that it has the authority to pursue this rulemaking independently and without a corresponding rule issued by DOJ. As the rule pertains to the procedures AOs follow, no DOJ rule is necessary to implement the changes described in the rule.

Nevertheless, DHS emphasizes that DOJ was consulted during the development of the NPRM and this rule. As a significant rule, OIRA conducted a review of this rule under Executive Order 12866. 58 FR 51735 (Oct. 4, 1993).⁹⁵ OIRA review includes the coordination of interagency Executive Branch review of significant rules, including review by the Department of Justice.⁹⁶

Finally, as noted in the NPRM, DOJ may issue its own separate rule to clarify the procedures immigration judges will follow when reviewing the findings of AOs in credible fear or reasonable fear review proceedings. 89 FR at 41355 n.37.

Comment: One commenter suggested that the lack of a corresponding rulemaking by the DOJ may cause immigration judges to waste valuable time and resources trying to comprehend whether they are required to apply the rule and if so how to do so. Similarly, another commenter objected that the proposed rule does not contain any discussion of how or why this change will not impact review of a negative credible fear determination or whether that review will now encompass immigration judge review of a mandatory bar determination at this stage. A commenter also stated that the lack of a corresponding rule from the

⁹⁶ See Office of Information and Regulatory Affairs, Frequently Asked Questions: What is OIRA's Role in the Rulemaking Process?, <https://www.reginfo.gov/public/jsp/Utilities/faq.myjsp?oira> (last reviewed Sept. 26, 2024).

DOJ leaves open the question of whether immigration judges have the authority to consider a mandatory bar in the first instance when reviewing negative credible fear screenings where the AO declined to consider a mandatory bar.

Response: The procedures for immigration judge review of AOs' credible fear and reasonable fear decisions are set out at 8 CFR 1003.42, 1208.30, 1208.31, 1208.33, and 1208.35. In general, DHS notes that immigration judges have the authority to review negative credible fear and reasonable fear determinations of AOs de novo, and such review is available for all negative fear determinations. *See, e.g.,* 8 CFR 1003.42(d); 8 CFR 1208.30(g). Should DOJ determine that further clarity is needed, DHS again notes that the DOJ may issue its own rule to clarify the procedures for immigration judge review.

2. Security Bars Rulemaking

Comment: Some commenters wrote that it was not clear whether this rule would result in AOs applying the additional public-health related bars in the Security Bars final rule in fear screenings, should that rule go into effect.

A commenter expressed concern that the proposed rule would interact with the Security Bars final rule when it goes into effect December 31, 2024, by reinforcing or endorsing the applicability of what the commenter characterized as that rule's illegal interpretation of the security bars during credible and reasonable fear screenings. The commenter stated the Security Bars final rule is incompatible with non-refoulement obligations under international law and the INA, citing case law and noting that there is no public health exception to non-refoulement obligations. After recommending redrafting, the commenter encouraged DHS to at least amend the proposed rule to clarify that public health considerations would not be tasked to AOs under the proposed rule, suggesting a statement in both the rule and its preamble that it does not enable decisions of public health issues in the fear screening process under the guise of "security."

Another commenter expressed concern that the proposed rules could interact with the Security Bars final rule by complicating pre-screening procedures that are already highly complex and recommended that the Department rescind the Security Bars rule to avoid causing or worsening inefficiencies in the U.S. immigration system.

A commenter wrote that the proposed rule could become more broadly applicable if the Security Bars final rule goes into effect as scheduled on December 31, 2024, and expressed concern that asylum opportunities would be severely limited as a result. The commenter urged the Department to rescind both the Security Bars final rule along with the proposed rule to provide greater support for noncitizens seeking protection in the United States.

Finally, a commenter expressed concern that the proposed rule would automate the wrongful removal of asylum seekers if this proposed rule were finalized and the Security Bars final rule goes into effect. The commenter provided an example of a noncitizen who may be subject to a statutory bar to asylum due to the public health provision in the Security Bars final rule.

Response: As an initial matter, DHS emphasizes that comments related to the substance, legality, merits, or other specific issues focused on the Security Bars final rule itself are outside the scope of this rulemaking.

On December 23, 2020, DHS and DOJ jointly published the Security Bars final rule to clarify that the Departments may consider emergency public health concerns based on communicable disease (not limited to COVID-19) when determining whether a noncitizen is subject to the existing statutory bars to asylum and withholding of removal at INA secs. 208(b)(2)(A)(iv) and 241(b)(3)(B)(iv), 8 U.S.C. 1158(b)(2)(A)(iv) and 1231(b)(3)(B)(iv), for noncitizens for whom "there are reasonable grounds to believe" that they are "a danger to the security of the United States" (commonly known as the "security bars").⁹⁷ Specifically, the Security Bars final rule delineates certain circumstances when, in the context of a public health emergency under Federal law or regarding a communicable disease of public health significance as defined at 42 CFR 34.2(b), a noncitizen would be ineligible for asylum under the statutory security bars. *See* 85 FR at 84193 (amending 8 CFR 208.13(c)).

The Security Bars Final Rule is scheduled to become effective on December 31, 2024. 87 FR 79789 (Dec. 28, 2022). However, DHS emphasizes that DHS and DOJ continue to consider further action related to the security bars final rule,⁹⁸ and OIRA received a

rule on this topic on December 3, 2024 for review under Executive Order 12866.

In addition, no public health emergency relevant to the Security Bars final rule currently exists. As a result, there would be no direct, immediate impact on eligibility for asylum or other protection if the Security Bars final rule were to go into effect because there is no existing relevant public health situation that would trigger the bars.

As explained in the NPRM and elsewhere in this preamble, DHS considers it appropriate to provide AOs discretion to consider security- and public safety-related bars to asylum and statutory withholding of removal in fear screenings to facilitate the swift removal of noncitizens who pose security and public safety risks and are clearly ineligible for asylum or withholding of removal. DHS therefore declines to rescind this rule, limit AOs' discretion regarding the statutory security bars, or provide other restrictions related to the statutory security bars, including the pending Security Bars final rule, in credible fear and reasonable fear screenings.

Finally, the Department disagrees with the claim that the rule will "automate" the removal of noncitizens if the Security Bars final rule also goes into effect. Under this rule, AOs consider any mandatory bar on a case-by-case basis with respect to the specific facts presented in a case. The AO will not automatically apply a bar in any case.

3. Other Out of Scope Comments

Comment: Commenters provided feedback and suggestions outside the scope of this rulemaking. Examples of these out-of-scope comments include the following. Commenters:

- suggested if immigration lawyers are opposed to this regulation, they should provide their services for free.
- stated that locals in Ecuador laughed and joked about a headline related to this rulemaking.
- suggested building and staffing something like what was done at Ellis Island.
- suggested creating a resettlement program for asylum seekers, while others suggested creating paths to citizenship for immigrants.
- noted the positive impacts of immigrants on our nation and its economy.
- urged that migrants be treated fairly and with dignity.
- expressed opposition to President Biden's Proclamation on Securing the Border.

⁹⁷ Security Bars and Processing, 85 FR 84160 (Dec. 23, 2020).

⁹⁸ *See, e.g.,* OIRA, Spring 2024 Unified Agenda, Asylum Eligibility and Public Health (RIN 1615-AC57), <https://www.reginfo.gov/public/do/eAgendaViewRule?pubId=202404&RIN=1615-AC57>.

- criticized purported shortcomings of the CBP One mobile app.
- expressed concern for the wellbeing of LGBTQI+ persons and torture survivors.
- urged a pathway to citizenship for Deferred Action for Childhood Arrivals students and their families.
- urged Congress to build a more welcoming immigration system and provide increased legal representation for asylum seekers, additional resources for government entities that administer the immigration system, and more accessible pathways to citizenship.
- stated that all criminals should be deported immediately.
- called for hiring and training more immigration judges.

Response: DHS acknowledges these comments but declines to address them, as they are outside the scope of this rulemaking.

F. Statutory and Regulatory Requirements

1. Administrative Procedure Act

Comment: Commenters raised concerns that this rule violated the Administrative Procedure Act's (APA's) requirements, as set forth in 5 U.S.C. 553(b) through (d). Commenters stated that the 30-day comment period was not sufficient and that, at a minimum, the comment period should have been 60 days. Numerous commenters requested that DHS extend the comment period. In support, commenters referenced Executive Orders 12866⁹⁹ and 13563,¹⁰⁰ both of which recommend providing the public a meaningful opportunity to comment with a comment period of not less than 60 days in most cases. Commenters stated that the NPRM's complexity and length, its departure from long-standing agency policy, its interaction with other policy and regulatory issues, and its impact on asylum-seekers and those supporting them demonstrate the 30-day comment period was insufficient.

Other commenters stated that 30 days was an insufficient period to collect information and evidence of the rule's impact or to develop alternatives to the changes made by the rule, particularly because providing comments on the rule requires organizations to divert resources away from assisting migrants.

Commenters disagreed with DHS's statements that a 30-day comment period was reasonable and appropriate because the rule relates to a discrete topic, is relatively short, and has been addressed in multiple recent notice-and-

comment rulemakings. Commenters stated that the proposed rule addresses a complex topic that involves Federal and international law, and that, because the rule did not provide sufficient notice of how AOs would exercise their discretion, the scope of the rule could not be determined. Commenters also stated that the rule interacts with recent regulatory and policy changes in complex ways that could not have been considered during earlier notice-and-comment rulemakings that addressed the same topic. Commenters specifically stated that additional time was needed to analyze the proposed rule in relation to the CLP rule including the ramifications of the proposed rule if the CLP rule is vacated or modified as a result of legal challenges against it, and in relation to the Securing the Border IFR, which was published and became effective during the comment period for this rule.

Commenters also contend that because this rule repeals or reverses existing policy, DHS has a greater burden to justify providing a comment period that is shorter than the 60-day period that was provided for the Procedures for Credible Fear Screening and Consideration of Asylum, Withholding of Removal, and CAT Protection Claims by Asylum Officers rule, which rescinded regulations applying mandatory bars during credible fear screenings. 87 FR 18078 (Mar. 29, 2022).

Commenters stated that DHS justified the 30-day comment period, in part, on its stated interest in acting quickly to provide an additional tool and operational flexibility to more promptly remove noncitizens who pose public safety and national security risks. Commenters stated that the desire to act quickly cannot be a justification to shorten the comment period, and some commenters expressed concern that the process would not leave DHS sufficient time to fully consider public comments before issuing a final rule. Further, commenters asserted that DHS did not present evidence of an urgent security threat or other exigent circumstance, did not explain why it did not propose the rule earlier, and did not justify the 30-day period in consideration of its expectation that the affected population will be relatively small.

Finally, commenters stated that the 30-day comment period was not justified in view of the potential consequences of implementing the rule without sufficient consideration of public comments, namely, that an erroneous application of the bars could result in individuals being returned to

countries where they face persecution or torture.

Response: DHS disagrees with commenters' statements that the 30-day comment period was inadequate and that the changes being made are overly complex, do not involve minimal regulatory changes, and do not relate to a discrete change describing when an AO has the discretion to consider certain mandatory bars earlier in the fear screening process than has normally been the case.

The APA does not require a specific comment period length, *see* 5 U.S.C. 553(b), (c), and although Executive Orders 12866 and 13563 recommend a comment period of at least 60 days, a 60-day period is not required. The APA only requires that an agency provide interested persons "an opportunity to participate in the rule making through submission of written data, views, or arguments." 5 U.S.C. 553(c). For example, the D.C. Circuit has stated that, although a 30-day period is often the "shortest" period that will satisfy the APA, such a period is generally "sufficient for interested persons to meaningfully review a proposed rule and provide informed comment," even when "substantial rule changes are proposed." *Nat'l Lifeline Ass'n v. FCC*, 921 F.3d 1102, 1117 (D.C. Cir. 2019) (citing *Petry v. Block*, 737 F.2d 1193, 1201 (D.C. Cir. 1984)).

Here, the comment period spanned 30 days, from May 13, 2024, through June 12, 2024, which DHS believes was sufficient to allow for meaningful participation, as evidenced by the almost 4,300 public comments received, including numerous detailed comments from interested organizations. Many of the comments expressing opposition to this rule are similar in their nature and raise many of the same issues or concerns. The fact that the commenters raise the same issues and concerns reflects the narrow scope of the rule and a common recognition and understanding of the substance in the rule and the issues raised therein. There were also many instances of commenters providing more than one comment. Commenters who submitted more than one comment generally submitted an initial comment at the beginning of the comment period arguing against the 30-day comment period (during which the Department received a number of substantive comments on the proposed rule itself), and then submitted a subsequent comment later in the comment period commenting on additional issues they have with the proposed rule, but also reiterating many of the same comments and arguments that were previously

⁹⁹ 58 FR 51735 (Oct. 4, 1993).

¹⁰⁰ 76 FR 3821 (Jan. 21, 2011).

made in the initial comment. Submitting multiple comments in this way is an indication that commenters had sufficient time to provide comments and then revisit those comments during the course of the comment period. Additionally, many of the comments are duplicative and indicative of a mass mailing campaign, which demonstrates that the public had sufficient time to coordinate their efforts, collaborate on and draft uniform responses, disseminate such responses among interested individuals and organizations, and for those individuals and organizations to submit those comments in an organized and collective manner via the **Federal Register**. The number of comments received and the content of those comments all indicate that the public was provided the opportunity to, and did in fact, meaningfully engage with this rulemaking.

DHS disagrees with the comments asserting that a 30-day comment period for a rule that reverses the existing policy—under which AOs do not apply mandatory bars during credible fear screenings—requires more justification. The cases cited in support of this assertion do not require that an agency provide a comment period equal to or greater than the period for the initial rule, nor do they impose heightened requirements for an agency's decision to provide a shorter comment period for a rescission; rather, they identify the lack of parity in those rulemakings as a supporting factor for their conclusions that the agencies failed to satisfy the APA requirements for notice and comment.¹⁰¹ The Sixth Circuit examined these decisions and observed that “the feature of the challenged rescissions that ran afoul of the APA in both [cases] was the agency's imposition of content restrictions on the comments that interested parties could submit during the comment window.” *Chamber of Commerce of U.S. v. SEC*, 115 F.4th 740, 756 (6th Cir. 2024) (finding that the 31-day comment period for a proposed rescission of a rule was sufficient under the APA, even though the initial rulemaking offered a 60-day comment period). There is no such content restriction at issue here. As stated above, the APA does not require a specific comment period length, *see* 5 U.S.C. 553(b), (c). For the reasons described here and in the NPRM, DHS believes that the 30-day comment

period provided the public a meaningful opportunity to participate. *See* 89 FR 41347, 41358 (May 13, 2024).

DHS reiterates that the rule does not involve an overly complex topic that necessitates a comment period beyond 30 days. Fundamentally, the changes do not affect the substantive analysis of those bars, they only move forward the point in time at which certain mandatory bars will be considered and allow AOs to consider those certain mandatory bars during the fear screening process as a threshold issue, making the process more efficient. Additionally, DHS will provide sub-regulatory guidance to asylum officers regarding their exercise of discretion.

The 30-day comment period also afforded adequate time for commenters to consider the combined effects of this rule with other DHS rules and policy changes. Commenters stated that additional time was needed to analyze the proposed rule in relation to the CLP rule, including the ramifications on the proposed rule if the CLP rule is vacated or modified as a result of pending legal challenges. The CLP rule became effective May 11, 2023, now over 15 months ago. 88 FR 31314 (May 16, 2023). DHS described in specific detail how this rule would interact with the CLP rule in section IV.C. of the NPRM. There it was explained that 8 CFR 208.33(b)(2)(i) was being amended to provide AOs with the discretion to consider the applicability of the bars to withholding of removal contained in INA sec. 241(b), 8 U.S.C. 1231(b), when determining whether there is a reasonable possibility that the noncitizen would suffer persecution or torture in the country of removal. If an AO determines that the presumption of asylum ineligibility under the CLP rule applies, and there is evidence of a mandatory bar to withholding of removal and the noncitizen is unable to demonstrate there is a reasonable possibility that the mandatory bar does not apply, the AO may base a negative credible fear of persecution determination on a mandatory bar to statutory withholding of removal pursuant to 8 CFR 208.33 if there is evidence in the record that it would be more efficient to do so. 89 FR 41347, 41357 (May 13, 2024).

DHS also disagrees that the 30-day comment period prohibited commentators from considering the combined impact of this rule and the Securing the Border IFR, which was issued June 6, 2024, during the comment period for this rule and became effective on June 5, 2024. 89 FR 48710 (June 7, 2024). This rule interacts similarly with the Securing the Border

IFR as it does with the CLP rule, which has been in place since May 2023 and which uses the same general framework. As explained in the Securing the Border IFR, the “reasonable probability” standard would apply to determinations involving a noncitizen who is subject to the Securing the Border IFR's limitation on asylum eligibility. 89 FR at 48739 n.186. The Securing the Border IFR places a limitation on asylum eligibility for noncitizens who enter across the southern border in violation of the suspension and limitation on entry created by the June 3 Presidential Proclamation, unless they are excepted under section 3(b) of the Proclamation or eligible for an exception based on exceptionally compelling circumstances. 8 CFR 208.35(a), 1208.35(a). Additionally, noncitizens who cross the southern border and are processed for expedited removal while the limitation is in effect will only be referred for a credible fear screening with an AO if they manifest or express a fear of return to their country or country of removal, a fear of persecution or torture, or an intention to apply for asylum. 8 CFR 235.15(b)(4). Finally, under the Securing the Border FR the United States will continue to adhere to its international obligations and commitments by screening individuals who manifest a fear and do not qualify for an exception to the Securing the Border rule for statutory withholding of removal and CAT protections at a “reasonable probability” of persecution or torture standard—a standard that is higher than the “reasonable possibility” standard currently applied under the CLP rule. 8 CFR 208.35(b)(2). Again, this rule allows an AO the discretion to consider evidence indicating that a mandatory bar applies and to apply that mandatory bar during fear screening.

Although DHS expressed a desire to act as quickly as possible to make this rule's regulatory changes when explaining the 30-day comment period, the desire for quick action was not the sole justification for the 30-day comment period. Rather, in reviewing the nature of the rule and the fact that the rule was narrow in scope, addressed a discrete topic, and made modest changes to the regulatory text, DHS determined that a 30-day comment period would be sufficient for the public to engage with the rule, provide comments, and participate in the rulemaking. Having recognized that a 30-day comment period is sufficient for meaningful public engagement, DHS expressed its desire to finalize the rule quickly to provide AOs with this additional tool to more promptly

¹⁰¹ *See N. Carolina Growers' Ass'n, Inc. v. United Farm Workers*, 702 F.3d 755, 770 (4th Cir. 2012); *California by & through Becerra v. U.S. Dep't of the Interior*, 381 F. Supp. 3d 1153, 1176 (N.D. Cal. 2019).

remove noncitizens who pose public safety and national security risks, and thus set the comment period at 30 days. To the extent that commenters argue that a desire for swift action cannot be a valid consideration when setting the comment period, DHS disagrees. Although the Department expects that the number of cases when AOs would consider a mandatory bar under this rule to be relatively small, as discussed further below in Section V.A.1, DHS believes it is important to act expeditiously to increase efficiency wherever possible, especially in light of the current strains on processing and capacity at the southern border. *See generally* 89 FR 48710 (June 7, 2024) (DHS and DOJ describing the emergency circumstances necessitating the Securing the Border IFR).

Finally, the length of the comment period, whether 30 days or longer, has no bearing on the amount of time or level of consideration that DHS will give when evaluating, addressing, and responding to public comments before issuing a final rule. DHS has carefully and appropriately considered the comments it received from the public on this rule.

Comment: Commenters stated that DHS failed to consider significant reliance interests engendered by legal service organizations under the existing policy and detrimental impacts that the proposed rule would have on those organizations.

Commenters stated that legal service providers that assist noncitizens during fear screenings have relied on the previous policy—under which screenings did not entail adjudication of legally and factually complex matters, such as the application of mandatory bars—in developing their internal protocols, preparing informational materials, and delivering legal services to clients during credible and reasonable fear screenings. They stated that the changes will require legal services providers to dedicate financial and human resources to train their staff and volunteers and to revise, translate, and publish updated guidance for noncitizens.

A legal services provider commented that it would be adversely impacted as an organization that primarily serves noncitizens whose cases are being processed at an asylum office. The commenter stated that implementing the rule would likely result in more experienced AOs being detailed away from the local asylum office to conduct screening interviews at the southwest border, which would leave fewer, or less skilled, AOs in the local asylum office. Consequently, the commenter stated

that cases would be processed more slowly in asylum offices, exacerbating existing backlogs. The commenter also stated that these changes would disrupt allocation of finite resources for non-profit organizations and that the increased complexity and processing times would increase the difficulty of recruiting pro bono attorneys and constrain its ability to serve potential clients.

Another commenter stated that because its legal services program is primarily designed to assist asylum seekers after they have been placed in full removal proceedings, it has a reliance interest in ensuring that noncitizens with asylum claims are able to pass their fear screenings.

Response: DHS has broad authority to establish and amend regulations and to take other actions “necessary for carrying out” the Secretary’s authority to administer and enforce the immigration laws. *See* INA sec. 103(a)(1), (3), 8 U.S.C. 1103(a)(1), (3) (granting the Secretary the authority to establish regulations and take other actions “necessary for carrying out” the Secretary’s authority under the immigration laws); *see also* 6 U.S.C. 202 (authorities of the Secretary); *Motor Vehicle Mfrs. Ass’n of U.S., Inc. v. State Farm Mut. Auto. Ins. Co.*, 463 U.S. 29, 42 (1983) (emphasizing that agencies “must be given ample latitude to adapt their rules and policies to the demands of changing circumstances” (quotation marks omitted)); *and see* Section II of this preamble.

When an agency changes a policy position, it must provide a reasoned explanation for the change, but “need not always provide a more detailed justification than what would suffice for a new policy created on a blank slate,” so long as it can show “good reasons” for the change. *FCC v. Fox Television Stations, Inc.*, 556 U.S. 505, 515 (2009). If the established policy has engendered serious reliance interests, the agency’s reasoned explanation must take those interests into account. *Id.*

DHS has considered the commenters’ asserted reliance interests but believes that their concerns do not outweigh DHS’s reasons for implementing these changes. As discussed in the NPRM, *see* 89 FR 41347, 41350 (May 13, 2024), the applicability of mandatory bars during credible fear screenings has been the subject of numerous regulatory actions since 2020, including the Global Asylum rule, the Security Bars rule, and the Asylum Processing IFR. Although the Global Asylum rule did not go into effect because of the preliminary injunction against implementation of the Global Asylum Rule, and the

Security Bars rule has not yet gone into effect because the Departments have delayed its effective date, their promulgation weighs against commenters’ assertions of long-settled reliance interests in the status quo. *See Pangea Legal Servs. v. DHS*, 512 F. Supp. 3d 966, 977 (N.D. Cal. 2021). DHS and DOJ published the Asylum Processing IFR rescinding the requirement to apply mandatory bars during credible fear screenings on March 29, 2022, and it became effective on May 31, 2022. *See* 87 FR 18078 (Mar. 29, 2022). During the 2-year period between publication of the Asylum Processing IFR and the publication of the NPRM for this rule, the Departments published and implemented the CLP rule, which made significant changes to credible fear screenings. 88 FR 31314 (May 16, 2023). Although the CLP rule did not alter the practice of not applying mandatory statutory bars at the credible fear stage, it did establish a rebuttable presumption of asylum ineligibility that AOs apply, when applicable, during credible fear screenings. These recent changing circumstances undermine the assertions that legal service providers have engendered significant reliance interests under the current policy. Rather, changing circumstances involving irregular immigration and the efforts DHS has employed to respond to the issue at the southwest land border demonstrate that the processes and procedures surrounding credible fear screenings remain fluid as DHS continues to respond to these challenges; as a result, the opportunity to develop a strong reliance interest in the status quo when it comes to the credible fear screening process is limited.

DHS acknowledges that policy changes often require training and other efforts within organizations, including its own. *See* section IV of this preamble, explaining the training that AOs will receive upon implementation of this rule. Nonetheless, these impacts do not alone preclude an agency from changing its position when it has good reasons to do so. In the NPRM for this rule, DHS described the reasons why the Department had pursued the different regulatory changes affecting the application of mandatory bars during fear screenings. *See* 89 FR 41347, 41353–54 (May 13, 2024). The common thread between these changes has been the Department’s pursuit of greater efficiency in the fear screening process in furtherance of Congress’ intent that the administrative removal processes be swift. *See* 85 FR 36264, 36272; 85 FR 41201, 41210; 87 FR 18078, 18134–36;

and 89 FR 41347, 41351. DHS's position on the application of mandatory bars during credible fear screenings has evolved since implementing the CLP rule, and the NPRM for this rule explained that the Department identified a previously unconsidered alternative that would decrease the costs of applying the mandatory bars while maintaining many of the benefits—namely, conducting a factual and legal inquiry into the bars only in those cases for which doing so is likely to be an efficient and appropriate use of resources. 89 FR 41347, 41354 (May 13, 2024). DHS believes that the anticipated benefits of this rule outweigh the commenters' concerns for the administrative impact on their organizations.

DHS also disagrees that some of the claimed reliance interests are cognizable. The assertion that this rule will increase backlogs or other staffing changes at local asylum offices and, ultimately, impede legal service providers' ability to serve their clients is based on a series of suppositions about the rule's effects on asylum office operations and staffing. Without factual support for the hypothetical chain of events, the Department finds this comment to be unpersuasive.

The comment asserting legal service providers' reliance interest in ensuring that noncitizens with asylum claims are able to pass their fear screenings does not explain how implementation of this rule would upset that claimed interest. As the NPRM states, this rule will allow DHS to quickly screen out certain non-meritorious protection claims by allowing AOs to promptly issue negative fear determinations in cases in which there is easily verifiable evidence indicating that the noncitizen could be subject to a bar; the noncitizen is unable to establish, at the relevant standard, that the bar would not apply; and the noncitizen is not otherwise able to establish a credible or reasonable fear of torture. See 89 FR 41347, 41351 (May 13, 2024). The regulation will prevent noncitizens from entering a potentially years-long immigration court process in pursuit of relief for which they are ineligible, and it will allow DHS and EOIR resources that would have been expended on such processes to be conserved for potentially meritorious cases. *Id.* It is unclear how such an outcome would adversely impact a legal services organization that serves noncitizens in immigration court proceedings or what reliance interest would have been engendered under the status quo.

2. Regulatory Impact Analysis Impacts and Benefits (E.O. 12866 and E.O. 13563)

a. Impacts to Noncitizens (e.g., Individuals in the Credible Fear or Reasonable Fear Process)

Comment: A commenter stated that the proposed provisions in the NPRM will make a marginal reduction in EOIR pending caseload at the cost of the broader impact on asylum seekers. The commenter further added that the process of applying mandatory bars is extremely complex factually and legally and will lead to erroneous negative credible fear and reasonable fear determinations with no legal recourse available to asylum seekers.

Response: The final rule allows AOs the discretion to consider particular statutory bars to asylum and statutory withholding of removal where evidence that such a bar may apply is easily verifiable. The final rule will enable the Department to more swiftly remove individuals who are not eligible for protection in the United States based on national security or public safety concerns, preventing such cases from using valuable government resources to complete their adjudication beyond screening determinations. DHS considers it fair and appropriate to provide such discretion to AOs and to remove noncitizens without a legal basis to remain in the United States when screenings determine they would not be able to establish eligibility in a full merits hearing before an immigration judge or an AMI before an AO. As explained in section IV.B.2.b of this preamble, DHS has assessed that the possibility of erroneous removals is low. In analyzing any evidence that a bar to asylum or statutory withholding of removal may apply, this rule would allow AOs the flexibility to choose to consider a bar based on the individual facts and circumstances and information available to the AO to avoid erroneous negative determinations. Nothing in this rule alters the ability of a noncitizen who is the subject of a negative credible fear or reasonable fear determination to seek review of such determination by an immigration judge.

Comment: A commenter stated that the NPRM will lead to longer detention times and increase likelihood of family separation due to disparities in credible fear determinations among family members and an increase in negative credible fear determinations. Another commenter stated that the rule could lead to family separations and disregards the impact on vulnerable families.

Response: Commenters' concerns regarding the impact of this rule on family separations are highly speculative. The current regulations provide a process for the consideration of family units in expedited removal. Specifically, under 8 CFR 208.30(c), a spouse or child of a principal asylum seeker who arrived in the United States concurrently with the principal asylum seeker is included in that asylum seeker's positive credible fear evaluation and determination, unless the principal asylum seeker or the spouse or child declines such inclusion. The AO must complete background and security checks for each family member and screen each family member for mandatory bars to asylum eligibility. If the family unit is placed into section 240 removal proceedings, the Department serves an NTA on each family member and file an NTA for each family member with EOIR. If the AO finds that the principal noncitizen does not have a credible fear of persecution or torture, then the AO must interview the other family members to determine if any other family member can establish a credible fear. If the AO finds any family unit member positive for credible fear, then the AO does not interview the remaining family members except to screen for mandatory bars. The other family members do not need separate credible fear determinations and may be included in the positive family member's determination in the officer's discretion for purposes of family unity on a case-by-case basis, unless they indicate they wish to receive a separate determination.¹⁰²

In other words, regardless of this rule, any family member subject to a mandatory bar is ineligible for the relevant form of relief or protection. This rule does not change the underlying merits of the family unit members' claims or the ability of other family members to ultimately qualify for asylum or withholding of removal.

b. Impacts on U.S. Economy, Taxpayers, Public Safety

Comment: A commenter described the additional time burden on asylum seekers to gather evidence, on stakeholder organizations involved in providing direct services, such as preparing asylum seekers for credible fear and reasonable fear interviews; and psychological costs imposed on asylum seekers by the NPRM.

¹⁰² USCIS, "Credible Fear Procedures Manual," Section III.E, <https://www.uscis.gov/sites/default/files/document/guides/CredibleFearProceduresManual.pdf> (last accessed July 31, 2024).

Response: DHS acknowledges this comment and has included a description of impacts of the Final Rule under Executive Order 12866 and Executive Order 13563 in Section V.A. of this preamble.

Comment: A commenter stated that the rule will increase the asylum application backlog and detention times because of the time required for an AO to apply mandatory bars while also considering exemptions and waivers, and the time required for an AO to determine at the credible fear and reasonable fear stage if an asylum seeker has committed a particularly serious crime. The commenter argued the law is unclear about whether there is an exception to the persecutor bar for individuals forced to engage in persecution under duress; that asylum seekers face the challenge of lack of access to legal counsel in CBP custody and other detention facilities, and insufficient time to gather evidence; and that a consequence of the rule will be erroneous negative credible fear or reasonable fear determinations, leading to wrongful deportation and separation of families in certain situations.

Response: DHS has described procedures used by AOs to identify possible mandatory bars while screening noncitizens for credible fear claims. Nothing in this rule alters the ability of a noncitizen who is the subject of a negative credible fear or reasonable fear determination to seek review of such determination by an immigration judge. DHS anticipates that cases raising such novel or complex legal questions would not be appropriate for AOs to use their discretion to consider the bar at issue, as it is unlikely the AO could do so efficiently in a screening interview. DHS disagrees that the rule will lead to additional erroneous negative credible fear or reasonable fear determinations, as the rule only allows AOs to enter a negative credible fear determination if the AO determines there is not a significant possibility the noncitizen would be able to establish by a preponderance of the evidence that the mandatory bars to asylum under INA sec. 208(b)(2)(A)(i)–(v), 8 U.S.C. 1158(b)(2)(A)(i)–(v) or to statutory withholding of removal under INA sec. 241(b)(3)(B), 8 U.S.C. 1231(b)(3)(B) do not apply. Further, as explained in the description of impacts of the Final Rule under Executive Order 12866 and

Executive Order 13563 in Section V.A. of this preamble, noncitizens who receive a negative credible fear or reasonable fear determination because of the application of mandatory bars may spend less time in detention since they are deemed ineligible for relief at the screening stage. This rule would conserve DHS resources to the extent it precludes additional or more extended detention or monitoring of individuals in cases in which an AO has determined at the screening stage that a mandatory bar applies.

c. Benefits and Cost Savings

Comment: A commenter stated that given the relatively small number of cases the rule would affect and the difficulty of analyzing mandatory bars, the risk of mistaken removal far outweighs DHS's claimed expediency.

Response: As previously explained, DHS disagrees that the rule will lead to erroneous determinations. The Department is confident in the ability of AOs to apply the provisions of the rule correctly and in the safeguards in place—including 100-percent supervisory review and the ability of noncitizens to request immigration judge review of negative fear determinations—to ensure fear determinations and any resulting removals are conducted in accordance with the law. DHS has provided a detailed description of impacts of the Final Rule under Executive Order 12866 and Executive Order 13563 in Section V.A. of this preamble.

V. Statutory and Regulatory Requirements

A. Executive Order 12866 (Regulatory Planning and Review) and Executive Order 13563 (Improving Regulation and Regulatory Review)

Executive Order 12866 (“Regulatory Planning and Review”), as amended by Executive Order 14094 (“Modernizing Regulatory Review”), and Executive Order 13563 (“Improving Regulation and Regulatory Review”) direct agencies to assess the costs and benefits of available regulatory alternatives and, if a regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health, and safety effects, distributive impacts, and equity). Executive Order 13563 emphasizes the importance of

quantifying both costs and benefits, reducing costs, harmonizing rules, and promoting flexibility.

The Office of Management and Budget (OMB) has designated this rule a “significant regulatory action” as defined under section 3(f) of E.O. 12866, as amended by Executive Order 14094, but it is not significant under section 3(f)(1) because its annual effects on the economy do not exceed \$200 million in any year of the analysis. Accordingly, OMB has reviewed this rule.

1. Summary of Costs and Benefits of the Final Rule

DHS is amending its regulations governing credible fear and reasonable fear screenings by allowing AOs the discretion to consider of mandatory bars to asylum contained in INA sec. 208(b)(2)(A)(i)–(v), 8 U.S.C. 1158(b)(2)(A)(i)–(v), or the mandatory bars to statutory withholding of removal in INA sec. 241(b)(3)(B), 8 U.S.C. 1231(b)(3)(B), and, consequently, reducing the amount of time that some noncitizens who are subject to those bars remain in the United States. AOs would have the discretion to consider the potential application of certain mandatory bars to asylum and statutory withholding of removal when screening the noncitizen for a credible fear of persecution (including cases where the CLP rule’s presumption of asylum ineligibility applies and no exception or rebuttal is established, as well as credible fear determinations subject to the limitation on asylum eligibility pursuant to the Securing the Border rule where no exception is established) or reasonable fear of persecution.

The final rule changes and streamlines the adjudicatory process for affected asylum or statutory withholding of removal claims arising out of the expedited removal process, as well as reinstatement of removal and certain final administrative removal order processes. By providing USCIS AOs flexibility to apply the public safety and national security statutory bars, the rule could enhance the public safety of the United States with the swift removal of some noncitizens from the country who pose a threat to public safety or national security.

Table 1 provides a detailed summary of estimated quantifiable and unquantifiable impacts of the Final Rule’s provisions.

TABLE 1—SUMMARY OF THE EXPECTED IMPACTS OF THE FINAL RULE

Population impacted	Annual population estimate	Expected impacts
Noncitizens issued credible fear determinations by USCIS.	USCIS credible fear determinations have ranged from 28,000 to 125,000 noncitizens per year in the last 5 fiscal years (see Table 3).	- Noncitizens who receive a positive credible fear determination and are referred to EOIR by USCIS might benefit from less time waiting for an immigration judge's decision on their protection claims. This is a benefit in terms of equity and fairness, for noncitizens. - Noncitizens who receive a negative credible fear determination due to application of mandatory bars may spend less time in detention, if they do not otherwise establish potential eligibility for protection under the Convention Against Torture. - Noncitizens who receive a negative credible fear determination due to application of mandatory bars might lose the opportunity to gather evidence during the period of time between the fear screening and the merits immigration judge hearing. The noncitizen might either contest application of mandatory bars in full merits proceedings, or seek appellate review of the adjudicator's application of the bar during a merits proceeding. - Noncitizens who receive a positive reasonable fear determination and are referred to EOIR by USCIS might benefit from shorter waiting times for an immigration judge's decision on withholding or deferral of removal only.
Noncitizens issued reasonable fear determinations by USCIS.	USCIS reasonable fear determinations have ranged from 3,400 to 8,000 noncitizens per year in the last 5 fiscal years (see Table 3).	- Noncitizens who receive a negative reasonable fear determination due to application of mandatory bars may spend less time in detention, if they do not otherwise establish potential eligibility for protection under the Convention Against Torture. - Noncitizens who receive a negative reasonable fear determination due to application of mandatory bars might lose the opportunity to gather evidence during the period of time between the fear screening and the merits immigration judge hearing. The noncitizen might either contest application of mandatory bars, or seek appellate review of the adjudicator's application of the bar during a merits proceeding.
DHS-USCIS	850 AOs onboard as of Aug. 15, 2024 ¹⁰³ .	In credible/reasonable fear cases where the AO exercises discretion to apply one of the mandatory bars, additional time may be spent developing the record as to the mandatory bar during fear screening interviews and conducting the written analysis related to the mandatory bar for the fear determination. This additional time may be offset to an extent by not having to include a separate analysis on the merits of the persecution claim in the fear determination where the negative credible or reasonable fear of persecution finding rests solely on the application of a mandatory bar. SAOs, in turn, may also spend additional time reviewing mandatory bar analyses in fear determinations where AOs exercise discretion to apply a mandatory bar at the screening stage.
EOIR	734 immigration judges at end of FY 2023, as well as support staff and other personnel ¹⁰⁴ .	Potential non-budgetary cost savings if time worked on credible fear cases and reasonable fear cases decreases due to a reduction of referrals of credible fear and reasonable fear cases for full proceedings on the merits before immigration judges.

In addition to the impacts summarized above, and as required by

OMB Circular A–4, Table 2 presents the prepared accounting statement showing

the costs and benefits to individuals affected by this rule.¹⁰⁵

TABLE 2—OMB A–4 ACCOUNTING STATEMENT TIME PERIOD: FY 2019 THROUGH FY 2023

BENEFITS				
Monetized Benefits	N/A	N/A	N/A	RIA
Annualized quantified, but unmonetized, benefits.	N/A	N/A	N/A	RIA
Unquantified Benefits	The final rule will enable some asylum seekers to move through the asylum process more quickly than may be the case currently, with potential decreases in adjudication timelines, thus promoting both fairness with potentially less time in confinement for those noncitizens subject to a bar, if they do not otherwise establish potential eligibility for protection under the Convention Against Torture regulations and equity for those noncitizens in removal proceedings who are not subject to a mandatory bar. In this rule the swift removal of these noncitizens may create disincentives for other noncitizens who would be subject to these mandatory bars when considering attempting to enter the United States. The final rule might enhance the public safety of the United States due to swift removal of some noncitizens from the country who pose a threat to public safety or national security.			RIA
COSTS

DHS is unable to quantify the impact of this rule with respect to the consideration of the mandatory bars for noncitizens who are a danger to the security of the United States at INA secs. 208(b)(2)(A)(iv) and 241(b)(3)(B)(iv), 8 U.S.C. 1158(b)(2)(A)(iv) and 1231(b)(3)(B)(iv), should the Security Bars rule go into effect. 85 FR 84160. Because the Departments have delayed the effective date of that rule and it has never been implemented, the Department is unable to draw on historical data where this public health-related security bar has been flagged in credible fear and reasonable fear screenings. Furthermore, as explained above in Section IV.E.2, the bars to asylum and withholding of removal promulgated under the Security Bars rule would only apply in particular public health-related circumstances. *See* 85 FR at 84193 (amending 8 CFR 208.13(c)).¹⁰⁶ Because those

¹⁰⁶ Specifically, the Security Bars rule would apply to a noncitizen if a communicable disease has triggered an ongoing declaration of a public health emergency under Federal law and they (1) have symptoms indicating that they are afflicted with the disease or (2) have come into contact with the disease within the number of days equivalent to the longest known incubation and contagion period for the disease, both per guidance issued by the Secretary or the Attorney General, as appropriate. 85 FR at 84193. The rule would also allow the Secretary and the Attorney General jointly, in consultation with the Secretary of Health and

circumstances are not currently in effect, DHS is unable to assess the potential population of noncitizens who would be subject to the provisions of the Security Bars and Processing rule under this rule. Finally, it is impossible to predict the number of cases when an AO would choose to use their discretion afforded by this rule to apply the security bars during a credible fear or reasonable fear screening.

2. Background and Purpose of the Rule

A DHS immigration officer who encounters a noncitizen subject to expedited removal may order the noncitizen to be “removed from the United States without further hearing or review” unless the noncitizen indicates “an intention to apply for asylum” or “a fear of persecution” or torture. INA sec. 235(b)(1)(A)(i), 8 U.S.C. 1225(b)(1)(A)(i); *see* 8 CFR 235.3(b)(4). If the noncitizen indicates such an intention or fear, the immigration officer must refer the noncitizen for an interview by an AO to determine whether the noncitizen has a “credible fear of persecution.” INA sec. 235(b)(1)(A)(ii), (B)(ii), 8 U.S.C.

Human Services, to apply the bars in other circumstances, such as where a noncitizen “comes” from a place where a communicable disease of public health significance is prevalent or epidemic and traveled within a period determined by the Secretary and Attorney General. *Id.*

1225(b)(1)(A)(ii), (B)(ii). A credible fear is defined by statute as a “significant possibility” that the noncitizen could establish eligibility for asylum. INA sec. 235(b)(1)(B)(v), 8 U.S.C. 1225(b)(1)(B)(v). Under current regulations, a credible fear of persecution is a “significant possibility” that a noncitizen can establish eligibility for asylum under INA sec. 208, 8 U.S.C. 1158 or for statutory withholding of removal under INA sec. 241(b)(3), 8 U.S.C. 1231(b)(3). 8 CFR 208.30(e)(2). A credible fear of torture is a “significant possibility” that a noncitizen can establish that the noncitizen is eligible for withholding of removal or deferral of removal under the Convention Against Torture, pursuant to 8 CFR 208.16 or 8 CFR 208.17. 8 CFR 208.30(e)(3).¹⁰⁷ Certain noncitizens are prohibited from contesting removability before an immigration judge or from seeking any relief from removal. *See* INA sec. 238(b)(5), 8 U.S.C. 1228(b)(5) and INA sec. 241(a)(5), 8 U.S.C. 1231(a)(5). If such an individual, who is ordered removed under INA sec. 238(b), 8 U.S.C. 1228(b) or whose order of removal is reinstated under INA sec. 241(a)(5), 8

¹⁰⁷ USCIS, “Questions and Answers: Credible fear screenings,” <https://www.uscis.gov/humanitarian/refugees-and-asylum/asylum/questions-and-answers-credible-fear-screening>. (last accessed July 31, 2024).

U.S.C.1231(a)(5), expresses a fear of return to the country to which they have been ordered removed, the case must be referred to an AO, who will determine whether the individual has a “reasonable fear” of persecution or torture. 8 CFR 208.31(a) and (b). A reasonable fear of persecution or torture is a reasonable possibility that the noncitizen would be persecuted on account of their race, religion, nationality, membership in a particular social group or political opinion, or a reasonable possibility that they would be tortured in the country of removal. 8 CFR 208.31(c).

Though mandatory bars to asylum and withholding of removal had no impact on a credible fear or reasonable fear of persecution or torture determination before the current rulemaking, pursuant to existing procedures, AOs elicit testimony related to possible mandatory bars in credible fear and reasonable fear interviews.¹⁰⁸ Under existing procedures, when information in the record indicates that a mandatory bar may apply to a noncitizen, the AO identifies the possible bar,¹⁰⁹ and if, after consultation with a supervisory AO, there are reasonable grounds to believe a mandatory bar (other than firm resettlement) applies to a noncitizen, the AO completes a Memo of Adverse Information that is forwarded to ICE to notify ICE of the potential bar.¹¹⁰ Identifying any one of the possible

mandatory bars does not affect the determination of whether a noncitizen has a credible fear or reasonable fear of persecution or torture.¹¹¹ In credible fear cases, regardless of whether the AO flags a mandatory bar to asylum or withholding of removal, where the AO issues a positive credible fear determination, USCIS issues the noncitizen a Form I–862, Notice to Appear (NTA), for section 240 removal proceedings for further consideration of the noncitizen’s claim. 8 CFR 208.30(e)(5). In reasonable fear cases, regardless of whether the AO flags a mandatory bar to withholding of removal, where the AO issues a positive reasonable fear determination, USCIS issues the noncitizen a Form I–863, Notice of Referral to the Immigration Judge, for consideration of the noncitizen’s request for withholding of removal only. 8 CFR 208.31(e).

Table 3 illustrates the total credible fear determinations (positive and negative) issued by USCIS, the total credible fear completions by USCIS (including administrative closures), the total reasonable fear determinations (positive and negative) issued by USCIS, and the total reasonable fear completions by USCIS (including administrative closures) for FY 2019 through FY 2023. From FY 2019 through FY 2023, in the aggregate and excluding administrative closures, the majority of credible fear determinations made by USCIS resulted in positive determinations: 68.76 percent of credible fear determinations issued by USCIS were positive,¹¹² and 31.24

percent were negative.¹¹³ When administrative closures are included in the aggregate for that same period, 62.63 percent of credible fear completions resulted in positive determinations,¹¹⁴ 28.45 percent resulted in negative determinations,¹¹⁵ and 8.92 percent were administratively closed.¹¹⁶ For reasonable fear determinations issued by USCIS from FY 2019 to FY 2023, in the aggregate and excluding administrative closures, 36.52 percent resulted in positive determinations,¹¹⁷ and 63.48 percent resulted in negative determinations.¹¹⁸ For those same years, if administrative closures are included, 25.73 percent of reasonable fear completions by USCIS resulted in positive determinations,¹¹⁹ 44.72 percent resulted in negative determinations,¹²⁰ and 29.55 percent were administratively closed.¹²¹

BILLING CODE 9111–97–P

¹¹³ 105,608 total negative credible fear determination/338,087 FY 2019–FY 2023 all positive and negative credible fear determinations = 31.24%

Notes: Fiscal Year refers to Case Completion Year.

BILLING CODE 9111-97-C

Table 4 presents instances where AOs flagged a potential bar to asylum or withholding of removal in a screening interview. It illustrates the distribution of possible mandatory bars across credible fear and reasonable fear completions. Without accounting for the “firm resettlement” bar, these mandatory bars protect the public from individuals who have persecuted others, have been convicted of significant crimes, represent a danger to the public, or have engaged in terrorist activity.

Currently, flagging of any of the mandatory bars does not affect the credible or reasonable fear determination. Records show that of 232,479 total positive credible fear determinations and 10,334 total positive reasonable fear determinations for FY 2019 through FY 2023, AOs flagged mandatory bars in 15,982 total positive credible fear determinations (6.87 percent¹²²) and 2,598 total positive reasonable fear determinations (25.14 percent¹²³). In some instances, AOs

may have flagged multiple mandatory bars in one case. Of those determinations, AOs flagged a mandatory bar other than the firm resettlement bar in 7,653 positive credible fear determinations and 2,407 positive reasonable fear determinations. Overall, AOs flagged a mandatory bar, other than the firm resettlement bar, in 3.29 percent¹²⁴ of total positive credible fear determinations and 23.29 percent¹²⁵ of total positive reasonable fear determinations.

TABLE 4—FEAR DETERMINATIONS BY SPECIFIC POSSIBLE MANDATORY BARS
[FY 2019 through FY 2023 total]

5-Year total	Positive credible fear determination	Negative credible fear determination	Positive reasonable fear determination	Negative reasonable fear determination
Total Determinations Flagging Mandatory Bars	15,982	8,923	2,598	5,242
Total Determinations Flagging Mandatory Bars Excl. Firm Resettlement Bar	7,653	4,004	2,407	4,979
Total Determinations *	232,479	105,608	10,334	17,960
Mandatory Bars as % of Total Determinations	6.87%	8.45%	25.14%	29.19%
Possible Mandatory Bars Excl. Firm Resettlement as % of Total Determinations	3.29%	3.79%	23.29%	27.72%

Source: USCIS Refugee, Asylum, and International Operations (“RAIO”) Directorate, Global (queried Sept. 9, 2024).

Note: Fiscal Year refers to Case Completion Year. Cases can have more than one possible bar. * Total Determinations row derived from Table 3: Credible Fear and Reasonable Fear Data (FY 2019 through FY 2023), 5-year totals.

¹²² Calculation: 15,982 total positive credible fear determination with possible mandatory bars/ 232,479 FY 2019–FY2023 total positive credible fear determination = 6.87%

¹²³ Calculation: 2,598 total positive reasonable fear determinations with possible mandatory bars/

10,334 FY 2019–FY2023 total positive reasonable fear determinations = 25.14%

¹²⁴ Calculation: 7,653 total positive credible fear determination with mandatory bar excluding firm resettlement/232,479 FY 2019–FY2023 total positive credible fear determination = 3.29%

¹²⁵ Calculation: 2,407 total positive reasonable fear determinations with mandatory bar excluding firm resettlement/10,334 FY 2019–FY2023 total positive reasonable fear determinations = 23.29%

During removal proceedings, the immigration judge determines whether a mandatory bar applies. ICE OPLA may consider and further develop the information identified by the AO when litigating before EOIR, and EOIR may consider this information along with other relevant factors in the case during

the adjudication in immigration court proceedings.¹²⁶ ICE ERO and EOIR may rely upon the identification of the potential bar in making custodial determinations.¹²⁷ In Table 5, USCIS illustrates the EOIR pending caseload over the last five fiscal years. As of FY 2023, there were approximately 2.47

million pending cases. The EOIR pending caseload is a cumulative effect of multiple factors, such as, though not limited to, pending cases from previous years, new cases filed by DHS, the number of immigration judges onboard to adjudicate cases, and the space available on each judge's docket.¹²⁸

TABLE 5—PENDING CASES, INITIAL RECEIPTS AND TOTAL COMPLETIONS AT EXECUTIVE OFFICE FOR IMMIGRATION REVIEW (EOIR)
[FY 2019 through FY 2023]

Fiscal year	Pending cases at end of fiscal year ¹	Initial receipts ²	Total completions ³
2019	1,088,606	547,289	277,078
2020	1,261,077	369,705	232,296
2021	1,408,801	244,277	115,941
2022	1,791,493	707,589	314,696
2023	2,469,960	1,206,201	526,203
5-Year Total	8,019,937	3,075,061	1,466,214
5-Year Annual Average	1,603,987	615,012	293,243

Source: EOIR, "Pending Cases, New Cases, and Total Completions, Data Generated: July 19, 2024" <https://www.justice.gov/eoir/media/1344791/dl?inline> last accessed Oct. 3, 2024).

Notes: ¹ Pending cases equals removal, deportation, exclusion, asylum-only, and withholding only.

² Initial receipts equals removal, deportation, exclusions, asylum-only, and withholding only.

³ Total completions equals initial case completions plus subsequent case completions.

The purpose of this rule is to allow for consideration of mandatory bars during the credible fear of persecution screening process for certain noncitizens who are placed into expedited removal under INA sec. 235(b)(1), 8 U.S.C. 1225(b)(1) and have been referred to USCIS for a fear screening pursuant to 8 CFR 208.30, 208.33, 208.35, INA sec. 235(b)(1)(A)(ii), 8 U.S.C. 1225(b)(1)(A)(ii), and to allow for the consideration of mandatory bars during the reasonable fear screening process for certain noncitizens who have been ordered removed under INA sec. 238(b), 8 U.S.C. 1228(b), or whose deportation, exclusion, or removal order has been reinstated under INA sec. 241(a)(5), 8 U.S.C. 1231(a)(5) and who are referred to USCIS for a reasonable fear screening pursuant to 8 CFR 208.31. The rule would allow AOs discretion to consider certain mandatory bars during a screening interview and, if an AO exercises that discretion, require AOs to enter a negative fear determination where there is evidence the mandatory bar may apply, the noncitizen is unable to establish at the relevant standard that the bar does not apply, and the

noncitizen is otherwise unable to demonstrate a fear of torture at the applicable standard in a given case. The specific mandatory bars this rule would allow AOs to consider are those relating to public safety and/or national security threats, with the intent of allowing the Department flexibility in some cases to more quickly remove individuals who present such concerns. As the rule is not changing the current treatment of the "firm resettlement" mandatory bar, any fear screening determination will not be affected by information in the record related to a possible firm resettlement bar.¹²⁹

The rule does not apply to unaccompanied children statutorily exempted from placement into expedited removal. It also does not apply to individuals already residing in the United States and whose presence in the United States is outside the coverage of noncitizens designated by the Secretary as subject to expedited removal, provided such individuals have not been ordered removed under INA sec. 238(b), 8 U.S.C. 1228(b), or have not had an order of removal are reinstated under INA sec. 241(a)(5), 8 U.S.C. 1231(a)(5). The rule also does not

apply to stowaways or noncitizens who are physically present in or arriving in the Commonwealth of the Northern Mariana Islands (CNMI). Those classes of noncitizens will continue to be referred to asylum/withholding-only hearings before an immigration judge under 8 CFR 208.2(c).

3. Impacts of the Rule

a. Impacts on the Population Screened for Credible Fear or Reasonable Fear

The final rule will impact certain individuals who undergo credible fear or reasonable fear screenings. These individuals are noncitizens who, where an AO exercises discretion to consider certain mandatory bars to asylum or statutory withholding of removal, are unable to establish at the relevant standard of proof that the bar or bars at issue do not apply to them and are otherwise unable to establish a fear of torture at the applicable standard for the given case. The type of credible fear or reasonable fear screenings where this rule could be outcome-determinative is limited to cases where a noncitizen is not found to have a credible fear or reasonable fear of torture and would

¹²⁶ See *Matter of D-R*, 25 I&N Dec. 445, 458 (BIA 2011) ("In immigration proceedings, the sole test for admission of evidence is whether the evidence is probative and its admission fundamentally fair." (quotation marks omitted)); *Matter of Velasquez*, 19 I&N Dec. 377, 380 (BIA 1986) (same).

¹²⁷ *Matter of R-A-V-P*, 27 I&N Dec. 803, 805 (BIA 2020) ("The immigration judge may also consider the likelihood that relief from removal will be granted in determining whether [a noncitizen] warrants bond.").

Strategic Plan. Available at <https://www.justice.gov/eoir/strategic-plan/strategic-context/current-operating-environment>. (last accessed Oct. 23, 2024).

¹²⁹ This rule will not change current treatment of the "firm resettlement" bar at INA sec. 208(b)(2)(A)(vi), 8 U.S.C. 1158(b)(2)(A)(vi).

have been found to have a credible fear of persecution or a reasonable fear of persecution but for the application of a bar under this rule. The type of credible or reasonable fear determination where this rule will not be outcome-determinative are cases where a positive credible or reasonable fear of torture is found. Table 6 shows positive credible fear of persecution only cases and

positive reasonable fear of persecution only cases; and a subset of those cases that were identified during the last five fiscal years as having mandatory bars other than the firm resettlement bar. For FY 2019 through FY 2023, USCIS records indicated that of total positive credible fear of persecution determinations, USCIS identified a potential mandatory bar (other than firm

resettlement) in 2.56 percent of total cases with a positive credible fear of persecution determination. From FY 2019 through FY 2023, USCIS identified a potential bar to withholding of removal in 17.61 percent of positive reasonable fear of persecution determinations.

TABLE 6—POSITIVE CREDIBLE FEAR OF PERSECUTION, POSITIVE REASONABLE FEAR OF PERSECUTION, POSSIBLE MANDATORY BAR FLAG EXCLUDING FIRM RESETTLEMENT
[FY 2019 through FY 2023]

Fiscal year	Credible fear of persecution			Reasonable fear of persecution		
	Positive determination		Possible mandatory bar excl. firm resettlement as share of credible fear of persecution cases (%)	Positive determination		Possible mandatory bar excl. firm resettlement as share of reasonable fear of persecution cases (%)
	Possible mandatory bar excluding firm resettlement	Total credible fear of persecution cases		Possible mandatory bar excluding firm resettlement	Total reasonable fear of persecution cases	
2019	898	50,074	1.79	173	1,333	12.98
2020	357	8,887	4.02	56	394	14.21

Source: USCIS RAIO Directorate, Global (queried Sept. 9, 2024).
Note: Fiscal Year refers to Case Completion Year.
Note: Table 6 excludes Credible Fear of Torture and Reasonable Fear of Torture cases.

Table 6 does not include positive credible fear of torture and positive reasonable fear of torture determinations. This rule will not impact credible or reasonable fear cases that receive a positive fear of torture determination, since the screening for torture encompasses screening for deferral of removal under CAT, for which there are no bars. Likewise, this rule will not affect negative credible or reasonable fear determinations where the AO did not flag a mandatory bar because in those cases, the application of a mandatory bar would not change the outcome. For the latter two categories, AOs will continue to identify bars where they may be evident in the record, even if they are not outcome determinative in a given case. Based on the information provided in Table 6, the additional annualized population that could receive a negative credible fear of persecution determination in a typical year is 808, and the additional annualized population that could receive a negative reasonable fear of persecution determination is 174 due to this rule. The Department expects that AOs would choose to apply a mandatory bar to an even smaller subset of these flagged cases, because not all flagged cases have sufficient supporting evidence easily available to the AO.

Under the rule, noncitizens subject to the above cited bars will be more quickly removed from the United States, freeing up the Department’s resources to safely, humanely, and effectively enforce and administer the immigration laws. The public safety of the United States may be enhanced as some noncitizens who have engaged in certain criminal activity, persecuted others, or been involved in terrorist activities are quickly removed from the country. The swift removal of these noncitizens may create disincentives for other noncitizens who would be subject to these mandatory bars when considering attempting to enter the United States.

The pending caseload at EOIR (see Table 5) leads to extended wait times for noncitizens who received a positive credible fear determination and were then referred to EOIR by USCIS, which creates uncertainty for a subset of those ultimately determined to merit asylum and other forms of humanitarian protection. This rule might help such noncitizens experience shorter wait times, advancing equity for those noncitizens in removal proceedings who are not subject to a mandatory bar, less detention time for those noncitizens to whom a bar is applied and who otherwise have not been able to

establish potential eligibility for protection under the Convention Against Torture regulations, and fairness.

Noncitizens would primarily bear the costs of the final rule. Noncitizens to whom an AO would apply the above-cited bars in credible fear and reasonable fear screenings would lose the opportunity to contest the application of the mandatory bars in a full section 240 merits hearing before an immigration judge or to seek appellate review of the immigration judge’s decision should the immigration judge determine that a mandatory bar applies and affirm the negative determination. Such noncitizens would experience a shorter period of time between the fear screening before USCIS and removal under the final rule than they currently do. Therefore, they would lose the opportunity to gather additional evidence to show that the mandatory bar in question should not be applied in their case.

b. Impacts to USCIS

AOs will have the discretion to consider certain mandatory bars, while evaluating whether the noncitizen has met the requisite standard of proof with respect to their eligibility for asylum or statutory withholding of removal, as

applicable, when making credible fear determinations and reasonable fear determinations under this rule. Under this rule, noncitizens will still be able to seek review of negative credible fear or reasonable fear determinations before an immigration judge. AOs already identify potential mandatory bars in credible fear or reasonable fear determinations, and under this rule will only consider a bar in those cases where there is easily verifiable evidence available to the AO that a mandatory bar may apply, and the AO can consider that bar efficiently during a screening interview.

In some cases, the final rule will result in AOs spending additional time during fear screenings to inquire into the applicability of mandatory bars, additional time documenting the mandatory bar analysis for the credible or reasonable fear determination, and additional time spent by SAOs to review any mandatory bar analysis. This additional time may be offset to an extent by not having to include a separate persecution analysis in the fear determination where the negative credible or reasonable fear of persecution finding rests solely on the application of a mandatory bar. AOs will have discretion whether to consider such bars at the screening stage and could therefore minimize the government costs associated with the final rule in cases where the additional development of the record and analysis would not be outcome determinative or an otherwise effective use of resources.

The benefits of the final rule are expected to include a modest, unquantified reduction of the resources expended to detain noncitizens subject to the above cited mandatory bars for potentially lengthy periods of time while their cases are considered by immigration courts.

c. Impacts to EOIR

Where application of this rule results in a negative credible fear or reasonable fear determination that would have otherwise been a positive credible fear of persecution or reasonable fear of persecution determination, those cases will not be referred to EOIR for removal proceedings. This rule is therefore expected to reduce the number of credible fears of persecution and reasonable fear of persecution cases being referred to EOIR for removal proceedings. Additionally, immigration judges will continue to conduct de novo review of a negative credible fear and reasonable fear determinations when requested by a noncitizen. Preventing certain cases where a mandatory bar applied at the screening stage from

being placed into removal proceedings before EOIR, may create additional capacity for immigration judges to work on their existing caseloads and other high-priority matters.

Accordingly, every such positive credible fear or reasonable fear of persecution determination that would have been referred to EOIR for removal proceedings that, instead, results in a negative determination under this rule will constitute a direct reduction in new cases that EOIR would have to adjudicate. If the negative determination is concurred upon by an immigration judge where a review is requested. Given EOIR's significant pending caseload of approximately 2.47 million cases (*see* Table 5), reducing the number of positive credible fear of persecution cases referred to EOIR by 2.56 percent¹³⁰ and positive reasonable fear of persecution cases referred to EOIR by 17.61 percent¹³¹ (*see* Table 6) as upper bound estimates, will enable EOIR to focus limited resources on existing pending cases and reduce the overall pending caseload.

The estimated reduction in new cases is based on positive credible or reasonable fear of persecution cases referred to EOIR from FY 2019 through FY 2023 and should be considered as an upper bound due to (a) lack of sufficient supporting evidence of application of mandatory bars except for firm resettlement available to AOs during the screening stage and (b) conversion of a subset of fear of persecution cases to fear of torture cases after application of mandatory bars. A reduction in the pending caseload will reduce the overall time required for adjudications because dockets would not have to be set as far into the future. This reduction in turn would better enable EOIR to meet its mission of fairly, expeditiously, and uniformly interpreting and administering the Nation's immigration laws, including granting relief or protection to noncitizens who are eligible.

B. Regulatory Flexibility Act

The Regulatory Flexibility Act of 1980 (RFA), 5 U.S.C. 601–612, as amended by the Small Business Regulatory Enforcement Fairness Act of 1996 (SBREFA), Public Law 104–121 (March 29, 1996), requires Federal agencies to

¹³⁰ Calculation: 808 5-Year Average of Positive credible fear of persecution cases with a flag of mandatory bar excluding “firm resettlement”/31,576 5-Year Average of Positive credible fear of persecution cases = 2.56 percent.

¹³¹ Calculation: 174 5-Year Average of Positive credible fear of persecution cases with a flag of mandatory bar excluding “firm resettlement”/986 5-Year Average of Positive credible fear of persecution cases = 17.61 percent.

consider the potential impact of regulations on small businesses, small governmental jurisdictions, and small organizations during the development of their rules. The term “small entities” comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, or governmental jurisdictions with populations of less than 50,000.¹³²

DHS has reviewed this rule in accordance with the RFA, Public Law 96–354, 94 Stat. 1164 (1980), as amended (codified at 5 U.S.C. 601–612) and has certified that this rule would not have a significant economic impact on a substantial number of small entities. The rule would not regulate “small entities” as that term is defined in 5 U.S.C. 601(6). Only individuals, rather than entities, are eligible to apply for asylum or are otherwise placed in immigration proceedings.

C. Unfunded Mandates Reform Act of 1995

The Unfunded Mandates Reform Act of 1995 (UMRA) is intended, among other things, to curb the practice of imposing unfunded Federal mandates on State, local, and Tribal governments. Title II of UMRA requires each Federal agency to prepare a written statement assessing the effects of any Federal mandate in a proposed rule, or final rule for which the agency published a proposed rule, which includes any Federal mandate that may result in a \$100 million or more expenditure (adjusted annually for inflation) in any one year by State, local, and Tribal governments, in the aggregate, or by the private sector.¹³³ The inflation adjusted value of \$100 million in 1995 is approximately \$200 million in 2023 based on the Consumer Price Index for All Urban Consumers (CPI-U).¹³⁴

¹³² A small business is defined as any independently owned and operated business not dominant in its field that qualifies as a small business per the Small Business Act, 15 U.S.C. 632.

¹³³ *See* Public Law 104–4, 109 Stat. 48; *see also* 2 U.S.C. 1532(a).

¹³⁴ *See* Bureau of Labor Statistics, “Historical Consumer Price Index for All Urban Consumers (CPI-U): U.S. city average, all items, by month,” <https://www.bls.gov/cpi/tables/supplemental-files/historical-cpi-u-202312.pdf> (last visited Jan. 17, 2024). Calculation of inflation: (1) Calculate the average monthly CPI-U for the reference year (1995) and the current year (2023); (2) Subtract reference year CPI-U from current year CPI-U; (3) Divide the difference of the reference year CPI-U and current year CPI-U by the reference year CPI-U; (4) Multiply by 100 = [(Average monthly CPI-U for 2023 – Average monthly CPI-U for 1995) ÷ (Average monthly CPI-U for 1995)] × 100 = [(304.702–152.383) ÷ 152.383] = (152.319/152.383) = 0.99958001 × 100 = 99.96 percent = 100 percent (rounded). Calculation of inflation-adjusted value:

Continued

The term “Federal mandate” means a Federal intergovernmental mandate or a Federal private sector mandate.¹³⁵ The term “Federal intergovernmental mandate” means, in relevant part, a provision that would impose an enforceable duty upon State, local, or Tribal governments (except as a condition of Federal assistance or a duty arising from participation in a voluntary Federal program).¹³⁶ The term “Federal private sector mandate” means, in relevant part, a provision that would impose an enforceable duty upon the private sector except (except as a condition of Federal assistance or a duty arising from participation in a voluntary Federal program).¹³⁷

This rule does not contain such a mandate, because it does not impose any enforceable duty upon any other level of government or private sector entity. Any downstream effects on such entities would arise solely due to their voluntary choices and would not be a consequence of an enforceable duty. Similarly, any costs or transfer effects on State and local governments would not result from a Federal mandate as that term is defined under UMRA.¹³⁸ The requirements of title II of UMRA, therefore, do not apply, and DHS has not prepared a statement under UMRA.

D. Small Business Regulatory Enforcement Fairness Act of 1996 (Congressional Review Act)

The Congressional Review Act (CRA) was included as part of SBREFA by section 804 of SBREFA, Public Law 104–121, 110 Stat. 847, 868, *et seq.* The Office of Information and Regulatory Affairs has determined that this rule does not meet the criteria set forth in 5 U.S.C. 804(2). DHS has complied with the CRA’s reporting requirements and has sent this rule to Congress and to the Comptroller General as required by 5 U.S.C. 801(a)(1).

E. Executive Order 13132 (Federalism)

Executive Order 13132 was issued to ensure the appropriate division of policymaking authority between the States and the Federal Government and to further the policies of UMRA. This rule will not have substantial direct effects on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with section 6 of

Executive Order 13132, it is determined that this rule does not have sufficient federalism implications to warrant the preparation of a federalism summary impact statement.

F. Executive Order 12988 (Civil Justice Reform)

This rule was drafted and reviewed in accordance with Executive Order 12988, Civil Justice Reform. DHS has determined that this rule meets the applicable standards provided in section 3 of Executive Order 12988.

G. Family Assessment

DHS has reviewed this rule in line with the requirements of section 654 of the Treasury and General Government Appropriations Act, 1999,¹³⁹ enacted as part of the Omnibus Consolidated and Emergency Supplemental Appropriations Act, 1999.¹⁴⁰ DHS has systematically reviewed the criteria specified in section 654(c)(1), by evaluating whether this regulatory action: (1) impacts the stability or safety of the family, particularly in terms of marital commitment; (2) impacts the authority of parents in the education, nurture, and supervision of their children; (3) helps the family perform its functions; (4) affects disposable income or poverty of families and children; (5) only financially impacts families, if at all, to the extent such impacts are justified; (6) may be carried out by State or local government or by the family; or (7) establishes a policy concerning the relationship between the behavior and personal responsibility of youth and the norms of society. If the agency determines a regulation may negatively affect family well-being, then the agency must provide an adequate rationale for its implementation.

DHS has determined that this rule will not negatively affect family well-being or the autonomy or integrity of the family as an institution, as it does not change the process for family credible fear screenings.

H. Executive Order 13175 (Consultation and Coordination With Indian Tribal Governments)

This rule does not have Tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it does not have a substantial direct effect on one or more Indian Tribes, on the relationship between the Federal Government and Indian Tribes, or on the distribution of power and

responsibilities between the Federal Government and Indian Tribes.

I. Executive Order 13045 (Protection of Children From Environmental Health Risks and Safety Risks)

Executive Order 13045 requires agencies to consider the impacts of environmental health risks or safety risks that may disproportionately affect children. DHS has reviewed this rule and have determined that this rule is not a covered regulatory action under Executive Order 13045. The rule is not considered significant under Section 3(f)(1) of Executive Order 12866 and would not create an environmental risk to health or risk to safety that might disproportionately affect children.

J. National Environmental Policy Act

DHS and its components analyze final actions to determine whether the National Environmental Policy Act (NEPA), 42 U.S.C. 4321 *et seq.*, applies to them and, if so, what degree of analysis is required. DHS Directive 023–01 Rev. 01 and Instruction Manual 023–01–001–01 Rev. 01 (Instruction Manual)¹⁴¹ establish the policies and procedures that DHS and its components use to comply with NEPA.

NEPA implementing procedures allow Federal agencies to establish categories of actions (“categorical exclusions”) that experience has shown do not, individually or cumulatively, have a significant effect on the human environment and, therefore, do not require an environmental assessment (EA) or environmental impact statement (EIS).¹⁴² An agency is not required to prepare an EA or EIS for a proposed action “if the proposed agency action is excluded pursuant to one of the agency’s categorical exclusions.” 42 U.S.C. 4336(a)(2). The Instruction Manual, Appendix A lists the DHS Categorical Exclusions.¹⁴³

Under DHS NEPA implementing procedures, for an action to be categorically excluded, it must satisfy each of the following three conditions: (1) the entire action clearly fits within one or more of the categorical exclusions; (2) the action is not a piece of a larger action; and (3) no extraordinary circumstances exist that

\$100 million in 1995 dollars × 2.00 = \$200 million in 2023 dollars.

¹³⁵ See 2 U.S.C. 1502(1), 658(6).

¹³⁶ 2 U.S.C. 658(5).

¹³⁷ 2 U.S.C. 658(7).

¹³⁸ See 2 U.S.C. 1502(1), 658(6).

¹³⁹ See 5 U.S.C. 601 note.

¹⁴⁰ Public Law 105–277, 112 Stat. 2681 (1998).

¹⁴¹ The Instruction Manual contains DHS’s procedures for implementing NEPA and was issued November 6, 2014, available at DHS, “Implementing the National Environmental Policy Act,” <https://www.dhs.gov/publication/directive-023-01-rev-01-and-instruction-manual-023-01-001-01-rev-01-and-catex> (last visited July 25, 2024).

¹⁴² 40 CFR 1507.3(e)(2)(ii) and 1501.4.

¹⁴³ See Appendix A, Table 1.

create the potential for a significant environmental effect.¹⁴⁴

The rule allows AOs to apply certain bars to asylum and statutory withholding of removal at the fear screening stage. DHS has determined that the promulgation of this rule satisfies all three requirements for a categorical exclusion. First, the rule fits clearly within categorical exclusion A3 of the Instruction Manual, Appendix A, for the promulgation of rules that “interpret or amend an existing regulation without changing its environmental effect.” The rule only changes the point in time at which certain statutory bars are considered but would not change any environmental effect of the bars. Second, this rule is a standalone rule and is not part of any larger action. Third, DHS is not aware of any extraordinary circumstances that would cause a significant environmental impact. Therefore, this rule is categorically excluded, and no further NEPA analysis or documentation is required.

K. Paperwork Reduction Act

This rule does not propose new, or revisions to existing, “collection[s] of information” as that term is defined under the Paperwork Reduction Act of 1995 (Pub. L. 104–13, 109 Stat. 163, 44 U.S.C. chapter 35) and its implementing regulations, 5 CFR part 1320.

List of Subjects in 8 CFR Part 208

Administrative practice and procedure, Aliens, Immigration, Reporting and recordkeeping requirements.

Accordingly, for the reasons set forth in the preamble, the Secretary of Homeland Security amends 8 CFR part 208 as set forth below.

■ 1. The authority citation for part 208 continues to read as follows:

Authority: 8 U.S.C. 1101, 1103, 1158, 1226, 1252, 1282; Title VII of Pub. L. 110–229; 8 CFR part 2; Pub. L. 115–218.

■ 2. Amend § 208.30 by revising the first sentence of paragraph (e)(2) and revising paragraph (e)(5) to read as follows:

§ 208.30 Credible fear determinations involving stowaways and applicants for admission found inadmissible pursuant to section 212(a)(6)(C) or 212(a)(7) of the Act.

* * * * *

(e) * * *

(2) An alien will be found to have a credible fear of persecution if there is a significant possibility, taking into account the credibility of the statements made by the alien in support of the alien’s claim and such other facts as are known to the officer, that the alien can establish eligibility for asylum under section 208 of the Act or for withholding of removal under section 241(b)(3) of the Act, including that the alien is not subject to a mandatory bar, if considered under paragraph (e)(5)(ii) of this section. * * *

* * * * *

(5) Except as provided in paragraph (e)(6) or (7) of this section:

(i) If an alien is able to establish a credible fear of persecution or torture but appears to be subject to one or more of the mandatory bars to applying for, or being granted, asylum contained in section 208(a)(2) and (b)(2)(A)(vi) of the Act, the Department of Homeland Security shall nonetheless issue a Notice to Appear or retain jurisdiction over the alien’s case for further consideration of the alien’s claim pursuant to paragraph (f) of this section, if the alien is not a stowaway.

(ii) If an alien, who is unable to establish a credible fear of torture, is able to establish a credible fear of persecution but appears to be subject to one or more of the mandatory bars to being granted either asylum or withholding of removal, as set forth in section 208(b)(2)(A)(i) through (v) of the Act or section 241(b)(3)(B) of the Act, respectively, the asylum officer may consider the applicability of such bar(s) as part of the asylum officer’s credible fear determination.

(A) The asylum officer shall issue a negative credible fear finding with regard to the alien’s eligibility for asylum or withholding of removal under the Act if the asylum officer determines there is not a significant possibility that, in a proceeding on the merits, the alien would be able to establish by a preponderance of the evidence that such bar(s) do not apply.

(B) The asylum officer shall issue a Notice to Appear or retain jurisdiction over the alien’s case for further consideration of the alien’s claim pursuant to paragraph (f) of this section, if the asylum officer finds that there is a significant possibility that, in a proceeding on the merits, the alien would be able to establish by a preponderance of the evidence that such bar(s) do not apply.

(iii) In all cases, if the alien is a stowaway and the Department would otherwise initiate proceedings under paragraphs (e)(5)(i) and (ii) of this

section, the Department shall place the alien in proceedings for consideration of the alien’s claim pursuant to § 208.2(c)(3) and shall not retain jurisdiction over the case for further consideration nor issue a Notice to Appear.

* * * * *

■ 3. Amend § 208.31 by revising paragraphs (c) and (g) to read as follows:

§ 208.31 Reasonable fear of persecution or torture determinations involving aliens ordered removed under section 238(b) of the Act and aliens whose removal is reinstated under section 241(a)(5) of the Act.

* * * * *

(c) *Interview and procedure.* The asylum officer shall conduct the interview in a non-adversarial manner, separate and apart from the general public. At the time of the interview, the asylum officer shall determine that the alien has an understanding of the reasonable fear determination process. The alien may be represented by counsel or an accredited representative at the interview, at no expense to the Government, and may present evidence, if available, relevant to the possibility of persecution or torture. The alien’s representative may present a statement at the end of the interview. The asylum officer, in his or her discretion, may place reasonable limits on the number of persons who may be present at the interview and the length of the statement. If the alien is unable to proceed effectively in English, and if the asylum officer is unable to proceed competently in a language chosen by the alien, the asylum officer shall arrange for the assistance of an interpreter in conducting the interview. The interpreter may not be a representative or employee of the applicant’s country or nationality, or if the applicant is stateless, the applicant’s country of last habitual residence. The asylum officer shall create a summary of the material facts as stated by the applicant. At the conclusion of the interview, the officer shall review the summary with the alien and provide the alien with an opportunity to correct errors therein. The asylum officer shall create a written record of his or her determination, including a summary of the material facts as stated by the applicant, any additional facts relied on by the officers, and the officer’s determination of whether, in light of such facts, the alien has established a reasonable fear of persecution or torture. The alien shall be determined to have a reasonable fear of persecution if the alien establishes a reasonable possibility that he or she would be persecuted on account of his

¹⁴⁴ DHS, “Instruction Manual 023–01–001–01, Revision 01, Implementation of the National Environmental Policy Act (NEPA),” V.B(2)(a)–(c), https://www.dhs.gov/sites/default/files/publications/DHS_Instruction%20Manual%20023-01-001-01%20Rev%2001-508%20Admin%20Rev.pdf.

or her race, religion, nationality, membership in a particular social group or political opinion, unless the alien appears to be subject to one or more of the mandatory bars to being granted withholding of removal under the Act contained in section 241(b)(3)(B) of the Act and the alien fails to show that there is a reasonable possibility that no mandatory bar applies, if the asylum officer considers such bars. The alien shall be determined to have a reasonable fear of torture if the alien establishes a reasonable possibility that he or she would be tortured in the country of removal.

* * * * *

(g) *Review by immigration judge.* The asylum officer's negative decision regarding reasonable fear shall be subject to review by an immigration judge upon the alien's request. If the alien requests such review, the asylum officer shall serve him or her with a Notice of Referral to Immigration Judge. The record of determination, including copies of the Notice of Referral to Immigration Judge, the asylum officer's notes, the summary of the material facts, and other materials upon which the determination was based shall be provided to the immigration judge with the negative determination. The immigration judge's review shall proceed under the procedures set forth in 8 CFR 1208.31(g).

■ 4. Amend § 208.33 by revising paragraphs (b)(2)(i) through (iii) to read as follows:

§ 208.33 Lawful pathways condition on asylum eligibility.

* * * * *

- (b) * * *
- (2) * * *

(i) In cases in which the asylum officer enters a negative credible fear determination under paragraph (b)(1)(i) of this section, the asylum officer will assess whether the alien has established a reasonable possibility of persecution (meaning a reasonable possibility of being persecuted because of their race, religion, nationality, membership in a particular social group, or political opinion) or torture, with respect to the identified country or countries of removal identified pursuant to section 241(b) of the Act. As part of this reasonable possibility determination, if there is evidence that the alien is subject to one or more of the mandatory bars to being granted withholding of removal under the Act contained in section 241(b)(3)(B) of the Act, the asylum officer may consider the applicability of such bar(s).

(ii) In cases described in paragraph (b)(2)(i) of this section, if the alien establishes a reasonable possibility of persecution with respect to the identified country or countries of

removal and, to the extent bars are considered, that there is a reasonable possibility that no mandatory bar applies, the Department will issue a Form I-862, Notice to Appear. If the alien establishes a reasonable possibility of torture with respect to the identified country or countries of removal, the Department will issue a Form I-862, Notice to Appear.

(iii) In cases described in paragraph (b)(2)(i) of this section, if an alien fails to establish a reasonable possibility of persecution with respect to the identified country or countries of removal or, to the extent bars are considered, fails to establish that there is a reasonable possibility that no mandatory bar applies, and fails to establish a reasonable possibility of torture with respect to the identified country or countries of removal, the asylum officer will provide the alien with a written notice of decision and inquire whether the alien wishes to have an immigration judge review the negative credible fear determination.

Secretary, U.S. Department of Homeland Security.

FEDERAL REGISTER

Vol. 89

Wednesday,

No. 243

December 18, 2024

Part VI

Department of Transportation

Federal Aviation Administration

14 CFR Part 120

Drug and Alcohol Testing of Certificated Repair Station Employees Located Outside of the United States; Final Rule

DEPARTMENT OF TRANSPORTATION**Federal Aviation Administration****14 CFR Part 120**

[Docket No.: FAA–2012–1058; Amdt. No. 120–3]

RIN 2120–AK09

**Drug and Alcohol Testing of
Certificated Repair Station Employees
Located Outside of the United States**

AGENCY: Federal Aviation Administration (FAA), Department of Transportation (DOT).

ACTION: Final rule.

SUMMARY: This final rule requires certificated repair stations located outside the territory of the United States (U.S.) whose employees perform safety-sensitive maintenance functions on certain air carrier aircraft to conduct alcohol and controlled substance testing in a manner acceptable to the Administrator and consistent with the applicable laws of the country in which the repair station is located. The final rule directs the repair station to comply with the requirements of the Drug and Alcohol Testing Program published by the FAA and the Procedures for Transportation Workplace Drug Testing Programs published by the Department of Transportation, as proposed. However, this final rule also allows foreign governments, on behalf of certificated repair stations within their territories, and individual foreign repair stations subject to the rule to obtain the Administrator's recognition of a compatible alternative that contains minimum criteria in lieu of compliance with certain components of the Drug and Alcohol Testing Program.

DATES: This rule is effective January 17, 2025, except for amendatory instructions 3, 8, and 11, which are effective December 20, 2027. The compliance date for this final rule is December 20, 2027.

ADDRESSES: For information on where to obtain copies of rulemaking documents and other information related to this final rule, see “How to Obtain Additional Information” in the **SUPPLEMENTARY INFORMATION** section of this document.

FOR FURTHER INFORMATION CONTACT: Nancy Rodriguez Brown, Office of

I. Executive Summary

This final rule implements section 308(d)(2) of the FAA Reauthorization

Act of 2012 (codified in 49 U.S.C. 44733) by requiring certificated part 145 repair stations located outside the territory of the United States (U.S.) to ensure that employees who perform safety-sensitive maintenance functions on part 121 air carrier aircraft are subject to an alcohol and controlled substances testing program determined acceptable to the FAA Administrator and consistent with the applicable laws of the country in which the repair station is located.

The NPRM proposed a foreign repair station subject to the rule (*i.e.*, a foreign repair station that performs safety-sensitive maintenance on part 121 air carrier aircraft) would need to implement an alcohol and drug testing program that meets the requirements of 14 CFR part 120 and 49 CFR part 40, which is adopted as proposed in this final rule. In addition, in response to feedback received during the comment period of the proposed rulemaking, the final rule establishes a process for foreign governments, on behalf of certificated repair stations within their territories, and individual foreign repair stations subject to the rule to obtain a waiver based on the Administrator's recognition of a country or foreign repair station's existing requirements or testing program(s) promulgated under the laws of the country as a compatible alternative that contains minimum elements of 14 CFR part 120.

Affected foreign repair stations that receive a waiver based on recognition by the Administrator will be relieved from comprehensive compliance with subparts E and F of 14 CFR part 120 (in turn, providing relief from 49 CFR part 40) and will not need to seek further waivers or exemptions from 14 CFR part 120 or 49 CFR part 40 under this final rule. All other foreign repair stations subject to the rule will be required to meet 14 CFR part 120 and 49 CFR part 40, subject to any waivers or exemptions that a repair station may obtain. Foreign repair stations subject to the rule must comply not later than December 20, 2027. After this date, part 121 operators will be prohibited from using a foreign repair station employee to perform safety-sensitive maintenance outside the U.S. who is not covered by a waiver based on recognition by the Administrator or an FAA-mandated drug and alcohol testing program.

This rulemaking will affect approximately 977 part 145 repair stations in about 65 foreign countries.¹ Since the rule provides several pathways for compliance, the FAA estimated low and high-cost cases. The low-cost case assumes all countries with certificated repair stations will submit a request for a waiver based on recognition. The total unadjusted unit cost to the industry and the FAA to submit one request is \$2,569. At a seven percent discount rate, the adjusted total cost for all 65 countries to submit this request is \$116,690, \$64,540 annualized, and \$123,459 at a three percent discount rate, \$64,521 annualized. In the high-cost case, costs to foreign repair stations

consist of developing an FAA-mandated drug and alcohol testing program, training, testing of safety-sensitive maintenance employees for drug and alcohol, and annual reporting. The total present value cost to foreign repair stations over five years, at a seven percent discount rate sums to \$49.6 million or \$12.1 million annualized. At a three percent discount rate, the present value total cost to foreign repair stations is \$55.6 million or \$12.1 million annualized.

In the high-cost case, the FAA will incur costs associated with documenting these foreign repair stations and performing oversight and surveillance for those complying with

FAA-mandated drug and alcohol testing requirements under part 120 and 49 CFR part 40. These costs only apply to compliance with the rule and not if a country or repair station has an approved waiver based on recognition.² Total cost to FAA over five years, at seven percent present value, sums to \$6.5 million with an annualized cost of \$1.6 million. At three percent present value, total cost is \$7.4 million with an annualized cost of \$1.6 million.

The table below shows the estimated costs to both part 145 repair stations and FAA over five years. The estimated total cost of the final rule, at seven percent present value, is \$56.1 million and \$63.0 million at 3 percent present value.

TABLE 1—COST TO PART 145 FOREIGN REPAIR STATIONS AND FAA OVER 5 YEARS

[Millions—2022 U.S. dollars]*

Year	Program, training development, & maintenance	Training	Testing (drug and alcohol)	Annual reports	FAA oversight costs	Total cost (7% PV)	Total cost (3% PV)
1	\$0.3	\$7.6	\$0.0	\$2.1	\$0.0	\$9.4	\$9.8
2	0.3	1.0	4.5	6.8	2.1	12.8	13.8
3	0.3	1.0	4.5	6.8	2.1	12.0	13.5
4	0.3	1.0	4.6	6.9	2.1	11.3	13.1
5	0.3	1.0	4.6	6.9	2.1	10.6	12.8
Total	1.6	11.7	18.2	29.4	8.2	56.1	63.0

* These numbers are subject to rounding error.

II. Authority for This Rulemaking

The FAA's authority to issue rules on aviation safety is found in Title 49 of the United States Code. Subtitle I, section 106 describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the FAA's authority. The FAA's authority to issue rules on alcohol and drug testing is in 49 U.S.C. 45102, which directs the Administrator to prescribe regulations that establish a program requiring air carriers and foreign air carriers to conduct certain alcohol and controlled substances testing.

This final rule is further promulgated under section 308 of the FAA Modernization and Reform Act of 2012 (the Act), 49 U.S.C. 44733. Specifically, 49 U.S.C. 44733(d)(2), titled "Alcohol and Controlled Substances Testing Program Requirements," requires the FAA to "promulgate a proposed rule requiring that all part 145 repair station

employees responsible for safety-sensitive maintenance functions on part 121 air carrier aircraft [be] subject to an alcohol and controlled substances testing program determined acceptable by the [FAA] Administrator and consistent with the applicable laws of the country in which the repair station is located." Additionally, this final rule is promulgated under section 2112 of the FAA Extension, Safety, and Security Act of 2016, (the 2016 Act), which directed publication of a notice of proposed rulemaking in accordance with 49 U.S.C. 44733. The 2016 Act also required that the notice of proposed rulemaking be finalized. Further, section 302(b) of the FAA Reauthorization Act of 2024 (Pub. L. 118–63) requires that within 18 months of enactment of that Act, the Administrator shall issue a final rule carrying out the requirements of section 2112(b) of the FAA Extension, Safety, and Security Act of 2016.

estimates (as of March 2023, the rule would affect approximately 962 part 145 repair stations in about 66 foreign countries), the 2021 numbers are used in the regulatory evaluation and Regulatory Impact Assessment to estimate cost.

² For those foreign governments or repair stations that receive a waiver based on recognition, FAA will rely on the foreign government or repair station

III. Background

A. History

The FAA and the Office of the Secretary of Transportation (OST) have long engaged in a regulatory partnership regarding drug and alcohol testing of persons in the aviation industry. These regulations are promulgated under 14 CFR part 120 and 49 CFR part 40. The preamble to the NPRM provided a full history of the FAA and OST regulations.³

B. Legislative and Rulemaking Actions

1. FAA Modernization and Reform Act of 2012

In 2012, Congress passed the FAA Modernization and Reform Act of 2012 (2012 Act).⁴ Section 308(d)(2) of the 2012 Act, implemented in 49 U.S.C. 44733, requires that the Administrator publish a proposed rule requiring that all part 145 repair station employees responsible for safety-sensitive

to ensure compliance with the recognized programs and notify FAA when the standards or conditions change.

³ Drug and Alcohol Testing of Certificated Repair Station Employees Located Outside of the United States, 88 FR 85137, 85139 (Dec. 7, 2023).

⁴ Public Law 112–95 (Feb. 14, 2012).

¹ These estimates are current as of April 2021 and sourced from the National Vital Information Subsystem (NVIS). NVIS is a subsystem of the Flight Standards Automation System, a comprehensive information system used primarily by inspectors to record and disseminate data associated with inspector activity and aviation environment. While there are more current

maintenance functions on part 121 air carrier aircraft outside the U.S. to be subject to an alcohol and controlled⁵ substances testing program determined acceptable by the Administrator and consistent with the applicable laws of the country in which the repair station is located. The FAA considers all maintenance functions performed on part 121 air carrier aircraft to be safety-sensitive under 14 CFR 120.105 and 120.215.

2. Advance Notice of Proposed Rulemaking

In response to the congressional mandate, the FAA published an advance notice of proposed rulemaking (ANPRM) on March 17, 2014.⁶ The comment period for the ANPRM closed July 17, 2014. The FAA received 74 substantive comments of both support and opposition. The FAA discussed and responded to the comments received as part of the NPRM.⁷

3. FAA Extension, Safety, and Security Act of 2016

After the FAA published the ANPRM, Congress enacted the FAA Extension, Safety, and Security Act of 2016 (2016 Act),⁸ which reemphasized Congress's prioritization of drug and alcohol programs for foreign repair station employees in section 2112. Specifically, section 2112 directed the FAA to (1) ensure that an NPRM pursuant to 49 U.S.C. 44733(d)(2) is published within 90 days of the date of the enactment of the 2016 Act and (2) ensure that the rulemaking is finalized within a year of

the NPRM publication.⁹ The NPRM was promulgated in accordance with such direction.

4. FAA Reauthorization Act of 2024

After the FAA published the NPRM, Congress enacted the FAA Reauthorization Act of 2024 (2024 Act),¹⁰ which again reemphasized Congress's prioritization of drug and alcohol programs for foreign repair station employees who perform maintenance on part 121 air carrier aircraft. Specifically, section 302(b) directed the FAA to issue a final rule within 18 months of the date of the enactment of the 2024 Act that carries out the requirements of section 2112(b) of the 2016 Act.

IV. Discussion of the Final Rule

A. Testing Under 14 CFR Part 120 and 49 CFR Part 40

In the NPRM, the FAA proposed to fulfill Congress's mandate by requiring certificated part 145 repair stations located outside the territory of the U.S. whose employees perform safety-sensitive maintenance functions on part 121 air carrier aircraft to obtain and implement a drug and alcohol testing program, consistent with the applicable laws of the country in which the repair station is located.¹¹ Specifically, the FAA proposed to require a part 145 repair station located outside the territory of the U.S. to implement a drug and alcohol testing program meeting the requirements of 49 CFR part 40 and 14 CFR part 120, covering employees who perform maintenance functions on part 121 air carrier aircraft. If a part 145 repair station located outside the U.S. could not meet one or all requirements in 49 CFR part 40 (*i.e.*, DOT's requirements), the FAA noted that the part 145 repair station could apply for an exemption using the existing process described in 49 CFR 40.7. Similarly, if a part 145 repair station located outside the U.S. could not meet one or all requirements in 14 CFR part 120 (*i.e.*, the FAA's requirements), the FAA proposed that the repair station may apply for a waiver in accordance with proposed 120.9.

1. Application of 14 CFR Part 120 and 49 CFR Parts 40 Through 145 Certificated Repair Stations Located Outside the Territory of the United States (§§ 120.1, 120.123 and 120.227)

To effectuate this testing framework, the FAA proposed three revisions to 14 CFR 120.1, which are all adopted in this

final rule. Specifically, § 120.1(c) will specify that paragraph (c) applies to those part 145 certificate holders located in the territory of the U.S. who elect to implement a drug and alcohol testing program under 14 CFR part 120. New paragraph (d) will expand the applicability of domestic 14 CFR part 120 to all part 145 certificate holders outside the territory of the U.S. who perform safety-sensitive maintenance functions on part 121 air carrier aircraft, effective on the compliance date of December 20, 2027. Finally, current 14 CFR 120.1(d) is redesignated as paragraph (e).

The FAA proposed adding specific instructions to affected part 145 repair stations outside the territory of the U.S. on how to meet the necessary requirements to implement a drug and alcohol testing program to 14 CFR 120.117 (Drug Testing Program Requirements) and 120.225 (Alcohol Testing Program Requirements), which are adopted by this final rule. First, § 120.117(a)(5) will specify that the requirements in that paragraph, which permit a repair station to elect to implement a testing program, are applicable only to part 145 certificate holders located inside the territory of the U.S. New § 120.117(a)(6) within the table will require a part 145 repair station located outside the territory of the U.S. whose employees perform safety-sensitive maintenance functions on part 121 air carrier aircraft to obtain an OpSpec A449 in their Operations Specifications by contacting the repair station's Principal Maintenance Inspector. In turn, current 14 CFR 120.117(a)(6) is redesignated as paragraph (a)(7).

Similarly, this final rule revises 14 CFR 120.117(c)(1) to specify the requirements in that paragraph are applicable only to part 145 certificate holders located inside the territory of the U.S. New paragraph (c)(2) will require the applicable repair station located outside the territory of the U.S. to (1) obtain an OpSpec A449 in their Operations Specifications by contacting the repair station's Principal Maintenance Inspector, (2) implement the drug testing program no later than three years from the publication date of this final rule,¹² and (3) meet the

⁵ As noted in the NPRM, the legislation specifically used the term "controlled substances." This term is also used in 49 U.S.C. 45102, which originally charged the FAA with prescribing regulations for air carriers and foreign air carriers to conduct certain drug and alcohol testing (*i.e.*, eventual 14 CFR part 120). Title 49 U.S.C. chapter 447 does not include a definition for "controlled substance." However, the FAA finds that given (1) the deference to the FAA Administrator to determine program acceptability in 49 U.S.C. 44733 and (2) the FAA's firmly established drug and alcohol testing regulations based off the original authority in 49 U.S.C. 45102, "controlled substances" should be intended to mean the FAA's current definition of "drug" as based off the definition of "controlled substances" provided by 49 U.S.C. 45101. Specifically, 49 U.S.C. 45101 states that the definition of "controlled substance" means any substance under section 102 of the Comprehensive Drug Abuse Prevention and Control Act of 1970 specified by the Administrator of the FAA.

⁶ Drug and Alcohol Testing of Certain Maintenance Provider Employees Located Outside of the United States ANPRM, 79 FR 14621 (Mar. 17, 2014). Drug and Alcohol Testing of Certain Maintenance Provider Employees Located Outside of the United States; Extension of Comment Period, 79 FR 24631 (May 1, 2014).

⁷ 88 FR 85137 at 85140.

⁸ Public Law 114–190 (Jul. 15, 2016).

⁹ Section 2112(b) of Public Law 114–190.

¹⁰ Public Law 118–63 (May 16, 2024).

¹¹ 88 FR 85137.

¹² The NPRM proposed that a foreign repair station beginning operations more than one year after the effective date of the regulation implement a drug testing program no later than the date the repair station begins operations. The final rule removes this language because it is superfluous. As revised, 14 CFR 117(c)(2) requires all affected foreign repair stations to implement a drug testing program no later than three years from the publication date of the final rule. Accordingly, an affected foreign repair station that begins operations

requirements of 14 CFR part 120, subpart E. In turn, current 14 CFR 120.117(c)(2) is redesignated as paragraph (c)(3).

This final rule adopts similar amendments to the implementation tables set forth in 14 CFR 120.225(a) and (c). Specifically, in 14 CFR 120.225(a), this final rule: revises the introductory language of paragraph (a)(5) to specify that paragraph is applicable to part 145 certificate holders located inside the territory of the U.S.; adds new paragraph (a)(6) to include the requirements for a part 145 repair station located outside the territory of the U.S. that performs safety-sensitive maintenance functions on part 121 air carrier aircraft; and redesignates current paragraph (a)(6) as paragraph (a)(7). Likewise, in 14 CFR 120.225(c), this final rule: revises paragraph (c)(1) to specify the requirements in that paragraph are applicable only to part 145 certificate holders located inside the territory of the U.S.; adds new paragraph (c)(2) to require the applicable repair station located outside the territory of the U.S. to (1) obtain an OpSpec A449 in its Operations Specifications by contacting the repair station's Principal Maintenance Inspector, (2) implement the alcohol testing program no later than three years from the publication date of this final rule,¹³ and (3) meet the requirements of 14 CFR part 120, subpart E; and redesignates current paragraph (c)(2) as paragraph (c)(3).

Relatedly, this final rule adopts minor grammatical changes to the headings of the table set forth in 14 CFR 120.117(c) and 14 CFR 120.225(c) and introductory text of 120.117(c)(1) and (3) and 120.225(c)(1) and (3) to conform with the heading revisions. This final rule also adopts the correct introductory text in § 120.225(d), which is currently and inadvertently blank in the regulations.

Finally, the FAA notes that, in light of the expanded flexibilities for waivers based on recognition, subsequently discussed in section IV.B of this preamble, this final rule makes technical corrections to the regulatory text in §§ 120.117 and 120.225. These revisions are discussed in that section.

more than three years after the publication date of the final rule must immediately comply with this requirement, regardless of whether they are starting operations as a new part 145 repair station.

¹³ This final rule implements the same non-substantive revisions described in footnote 11 to the alcohol testing program requirements set forth in 14 CFR 120.225(c)(2).

2. Conforming Amendments To Facilitate Drug and Alcohol Procedures Outside the United States (§§ 120.123 and 120.227)

This final rule adopts conforming amendments to 14 CFR 120.123 and 120.227, which currently effectively restrict any drug and alcohol programs from implementation outside of the U.S. Specifically, this final rule adds language at the beginning of 14 CFR 120.123(a), 120.123(a)(1), 120.123(b), 120.227(a), 120.227(a)(1), and 120.227(b) that would except persons under adopted 14 CFR 120.1(d) from applicability of those regulations restricting drug and alcohol testing outside the territory of the U.S.

3. Exemptions and Waivers to Drug and Alcohol Program Requirements (120.5 and 120.9)

As previously discussed in the NPRM, the FAA seeks to avoid situations whereby the regulations of the FAA are inconsistent with laws in other sovereign countries and acknowledges there are many unique scenarios associated with the establishment and implementation of drug and alcohol testing programs outside of the U.S. Therefore, the FAA explained in the NPRM that a part 145 repair station could apply for an exemption from 49 CFR part 40 using exemption processes existing therein. In turn, the FAA proposed to add language to 14 CFR 120.5 to clarify that an employer's drug and alcohol testing conducted pursuant to 14 CFR part 120 must comply with the procedures set forth in 49 CFR part 40, to include any exemptions issued to that employer in accordance with 49 CFR 40.7. To streamline and efficiently address potential international legal conflicts between foreign laws and the FAA's own regulations, the FAA proposed to add waiver authority in new 14 CFR 120.9 to allow repair stations located outside of the U.S. to request waivers from specific provisions of 14 CFR part 120. The FAA maintains that the existing exemption process in 49 CFR part 40 in tandem with the proposed waiver process in new 14 CFR 120.9 would provide sufficient pathways to work with part 145 certificated repair stations outside the territory of the U.S. to ensure these repair stations are not in violation of the laws of the country within which they are situated. Therefore, these provisions are adopted as proposed.

4. Effective and Compliance Date

In the NPRM, the FAA proposed to require the applicable repair station located outside the territory of the U.S.

to obtain an OpSpec A449 and implement a drug and alcohol testing program no later than one year from the effective date of the regulation (or, if a foreign repair station begins operations more than one year after the effective date of the regulation, implement a drug testing program no later than the date the repair station begins operations). The FAA received comments on the compliance date and reevaluated the amount of time that would be necessary to come into compliance with the regulations adopted by this final rule (see section IV.C.3 of this preamble for further discussion on the effective date comments). Commenters raised valuable implementation and operational concerns including time for a foreign repair station to prepare and submit waiver or exemption requests, time for the FAA to hire and train new employees, and time for the FAA and DOT to process a potentially large volume of waiver and/or exemption requests. With the introduction of expanded flexibilities for waivers based on recognition, the FAA expects a foreign government or an individual repair station seeking relief will need more time than proposed to prepare and submit a request.

Based on these comments, the FAA has set the effective date of this rule to January 17, 2025 and will extend the delay for compliance for three years from the date of publication. Accordingly, the compliance date for affected foreign repair stations is December 20, 2027. The FAA has made changes to the regulatory text to ensure requests are received with sufficient time for the FAA to respond to requests for waivers. If a repair station's existing program is not recognized pursuant to 14 CFR 120.10 and it does not have a testing program that meets the requirements of 14 CFR part 120 and 49 CFR part 40 or an approved waiver and/or exemption for these parts, the repair station will be prohibited from performing safety-sensitive maintenance functions on part 121 air carrier aircraft and the part 121 air carrier is prohibited from using the part 145 repair station to perform aircraft maintenance. The FAA encourages those seeking a waiver or an exemption to do so as early as possible. This is especially important during the final year before the compliance date, considering the large number of requests the FAA and DOT expect to receive during that period.

The FAA acknowledges DOT has a separate process for granting exemptions from 49 CFR part 40. Under 49 CFR part 5, DOT requires an exemption request to be submitted at least 60 days before the proposed

effective date of the exemption, unless good cause is shown in that petition. Because FAA and DOT may need to coordinate on requests that involve a waiver and exemption from the same repair station, the FAA recommends foreign repair stations requiring an exemption make their request at least 90 days before the compliance date of this rule, December 20, 2027, or 90 days before a repair station intends to perform safety-sensitive maintenance functions on part 121 air carrier aircraft after the compliance date.

B. Recognition of Existing Requirements or Testing Programs

The FAA acknowledges that the relief in the proposed waiver program was insufficient and expanding the waiver eligibility is appropriate and consistent with the foundational intent of the Congressional mandate, particularly given the overwhelming number of comments the FAA received in response to the NPRM urging the FAA to, first, recognize the sovereignty of foreign nations and their individual legal contexts and, second, work more collaboratively with foreign country governments to achieve the ends of the legislation.¹⁴ To be clear, as previously discussed, this final rule maintains the option for a foreign repair station to implement an alcohol and drug testing program that meets the requirements of 14 CFR part 120 and 49 CFR part 40 as proposed in the NPRM. However, the final rule also expands on the flexibilities in the proposed waiver program in response to these public comments. To avoid potential duplication and unnecessary paperwork due to multiple waiver requests, the FAA is enabling direct engagements with foreign governments that represent the interests of foreign repair stations in their territories by establishing a process in new § 120.10 for foreign governments, on behalf of repair station operators within their territories, to obtain a waiver for those operators based on the Administrator's recognition of existing requirements promulgated under the laws of the country as a compatible alternative subject to minimum criteria. Proposed waiver section 120.9 contained a requirement that a foreign repair station submit "[a] description of the alternative means that will be used to achieve the objectives of the provision that is the subject of the waiver." Based on consideration of that provision and comments received, in § 120.10, the FAA is expanding the opportunity for

foreign governments and foreign repair stations to rely on existing programs as demonstrations of the alternative means used to meet the objectives of part 120, provided certain criteria are met. Foreign governments, and foreign repair stations subject to foreign governance, are in the best position to assess and explain the laws imposed within their borders. The FAA anticipates foreign governments will pursue this waiver option to relieve individual foreign repair stations from the compliance burdens, unnecessary duplication, and potential conflicts between U.S. requirements and foreign laws where the U.S. and the foreign government share an objective of an alcohol- and drug-free workplace when performing safety-sensitive duties. However, if a foreign government chooses not to avail itself of this option, § 120.10 will provide an individual foreign repair station discretion to make its own waiver request based on recognition of an existing testing program that meets the criteria identified in the regulation. If an individual foreign repair station demonstrates its existing program contains the criteria outlined in § 120.10, the Administrator will issue a waiver.

Therefore, the FAA finds this waiver based on recognition will alleviate the burdens associated with the difficulties of identifying conflicts between foreign laws and the regulations. Specifically, this final rule adopts new § 120.10. Waiver based on recognition of a foreign government's existing requirements or an existing testing program of a part 145 repair station outside the territory of the U.S. This section will set forth the general requirements to obtain the waiver, including: the compatibility elements, process and procedures for the request, disposition of the request, effect and validity, and compliance measures.

General. Section 120.10(a) will provide that a foreign government may request a waiver on behalf of repair stations within its territory based on the Administrator's recognition of the country's existing requirements (e.g., an existing testing regime) as a compatible alternative that meets the minimum key elements set out in § 120.10(b) (subsequently explained). In the event a foreign government chooses not to make a request on behalf of the repair stations in its country, § 120.10 also allows individual foreign repair stations to follow this process to similarly request a waiver based on recognition of an existing testing program by demonstrating the program is a compatible alternative that meets the key elements set out in the regulation.

By requiring that a compatible alternative contain the criteria set forth in § 120.10(b), the FAA intends to ensure a foreign government's existing requirements meet the same safety intent¹⁵ of the FAA's regulations regarding drug and alcohol testing for safety-sensitive employees, including those that perform maintenance on part 121 air carrier aircraft. To note, if granted a waiver based on recognition of a compatible alternative, a foreign repair station will be required to comply with the recognized existing testing program.

Compatibility. The criteria a foreign government's existing requirements or testing program must contain to obtain a waiver are set forth in § 120.10(b) and include:

- A testing protocol or established consequences used to detect or deter, or both, employees who are responsible for safety-sensitive maintenance on part 121 air carrier aircraft from misusing alcohol and using drugs.¹⁶
- An education or training program or materials that explain the impact and consequences of misusing alcohol and using drugs while performing safety-sensitive maintenance.
- The method used to rehabilitate and ensure that safety-sensitive maintenance employees who return to work on part 121 air carrier aircraft after a drug or alcohol test violation or consequence no longer misuse alcohol or use drugs.

Similar to the proposed and finalized waiver element in § 120.9 that requires an applicant to provide "a description of the alternative means that will be used to achieve the objectives of the provision that is the subject of the waiver," the FAA finds these criteria acceptable to ensure the proposed compatible alternative meets the same safety intent of the existing rules regarding drug and alcohol testing for safety-sensitive employees in the U.S., including those that perform maintenance on part 121 air carrier aircraft. The FAA acknowledges the laws and requirements of a country will impact how a government or foreign repair station meets these criteria. The following discussion on each element

¹⁵ See 14 CFR 120.3, stating the purpose of part 120 is to establish a program designed to help prevent accidents and injuries resulting from the use of prohibited drugs or the misuse of alcohol by employees who perform safety-sensitive functions in aviation.

¹⁶ The FAA recognizes that each country may present a range of drug laws or requirements, and may indicate testing of drugs that differ from those tested for within the U.S. The term "drugs" is intended to broadly address the category of drugs tested for by a foreign government or individual foreign repair station.

¹⁴ These comments are summarized and adjudicated in section V.A of this preamble.

may help a foreign government or an individual repair station demonstrate how its own requirements or testing program meet these elements.

Effective testing protocols or established consequences.

The circumstances under which a foreign repair station conducts testing or applies consequences for prohibited conduct are critical to detecting or deterring, or both, employees from misusing alcohol and using drugs while at work and performing safety-sensitive maintenance on part 121 air carrier aircraft. Testing may include pre-employment, post-accident, reasonable suspicion, or random. Pre-employment drug testing acts as a gatekeeper and critical tool for identifying and keeping drug users out of safety-sensitive positions in the aviation industry. Post-accident drug and alcohol testing assists regulated employers in determining if drugs and/or alcohol are contributing factors to an accident. Employers conduct reasonable cause/suspicion drug and alcohol testing when there is credible evidence and direct observations by a trained supervisor indicating an employee may be using drugs or misusing alcohol while performing safety-sensitive duties. Random drug and alcohol testing contributes as an effective deterrent discouraging safety-sensitive employees from using drugs or alcohol while at work. These methods of testing have made a long-standing positive impact on the FAA's domestic program, but the FAA notes they may not be the only means for detection and deterrence that ensures safety-sensitive maintenance personnel are not using drugs or misusing alcohol. Because laws permitting testing and circumstances may vary from country to country, this nonexhaustive list provides examples of the types of testing that may be recognized as part of a compatible alternative under § 120.10.

If a foreign government or an individual repair station indicates it conducts testing, a request for waiver based on recognition of a compatible alternative must include a description of the testing protocols (see new § 120.10(c)(1), detailing documentation necessary in a recognition package). As an example, the U.S. domestic testing program is standardized to ensure the integrity and identity of the specimen, and scientific accuracy of the test result. The testing must include strict specimen collection procedures to minimize the opportunity an individual would have to tamper with their specimen. Another system safeguard includes a regimented process to document the handling and storage of a

specimen from the time it is collected until the time it is released to the facility that conducts the analysis. A properly documented collection process links donors to their specimen and provides proof of all specimen activity between collection and analysis. The FAA's domestic testing protocols and specimen analysis are established in 49 CFR part 40 and are consistent with the U.S. Department of Health and Human Service's laboratory protocols. The FAA acknowledges that testing protocols identified in a request for waiver based on recognition may depart from the requirements of 49 CFR part 40; however, requestors must thoroughly explain how those testing protocols ensure the integrity and identity of the specimen, and scientific accuracy of any test results.

As noted, while testing is the most efficient method for detection and deterring employees from using drugs and misusing alcohol while performing safety-sensitive maintenance, it may not be the only means. As reiterated by commenters to the NPRM, established consequences for drug use or alcohol misuse can be an effective deterrent when testing is limited by the laws of the foreign country. For example, established consequences may include laws providing for the vigorous detection, prosecution, and punishment (e.g., imprisonment) of drug use or alcohol misuse. Several commenters identified such consequences and their deterrent effects.¹⁷ If a request for waiver based on recognition relies on established consequences, the FAA would anticipate receiving information from a foreign government or a foreign repair station demonstrating either its own testing systems and protocols or its laws and regulations limit or do not permit testing of the repair station's safety-sensitive maintenance employees.

An education or training program or materials.

It is imperative to safety that safety-sensitive maintenance employees understand the personal consequences of drug use and alcohol misuse and the professional consequences of failing to comply with the requirements of their employer's drug and alcohol policies. In the U.S., for drug testing, an employer must conduct initial training for safety-sensitive employees that includes the effects and consequences of drug use on personal health, safety, and work environment, as well as the manifestations and behavioral cues that may indicate drug use and abuse.¹⁸ Similarly, for alcohol testing, each

employer must provide each employee with educational materials that explain the alcohol misuse requirements and the employer's policies and procedures with respect to meeting those requirements.¹⁹ Employee training in the U.S. is a one-time requirement; however, the FAA believes it is a good practice to provide employees with new information when it changes and remind them of the requirements when performing covered functions. While the FAA does not offer its own training materials for employers to use, training and its materials can take many forms (e.g., virtual or in-person instruction, handouts). The FAA expects an acceptable training and education program required under § 120.10(b)(2) would ensure employees and their supervisors understand the safety risk of drug use and alcohol misuse, as well as the consequences of a drug and/or alcohol testing violation. The FAA understands a request for waiver based on recognition may not include the actual training or materials intended for use with safety-sensitive maintenance employees. However, the request must include what topics the training and/or materials will cover.

Method to rehabilitate and ensure that safety-sensitive maintenance employees who return to work on part 121 air carrier aircraft after a drug or alcohol test violation or consequence no longer misuse alcohol or use drugs.

In a country where it is permissible for a safety-sensitive maintenance employee to return to work after using drugs or misusing alcohol, pursuant to § 120.10(b)(3), a request for waiver based on recognition must include a process for treatment and/or education. Further evaluation or testing is critical to ensure the employee does not return to perform maintenance on part 121 air carrier aircraft and continue to use drugs and/or misuse alcohol. The FAA's domestic program allows a safety-sensitive employee to be evaluated by a qualified substance abuse professional (SAP) after failing a drug or alcohol test or refusing a test. Once the employee demonstrates successful compliance with the SAP's treatment and/or education, the employee may return to performing safety-sensitive functions after passing a return-to-duty test conducted by their employer.²⁰ After returning to work, the employer must conduct the unannounced follow-up testing for a minimum of one year or up to five years, depending on the SAP's

¹⁷ See section V.E. of this preamble.

¹⁸ 14 CFR 120.115(c).

¹⁹ 14 CFR 120.223(a).

²⁰ 14 CFR 120.109(e) and 120.217(e).

directions.²¹ The return-to-duty process, including unannounced follow-up testing, functions to reduce the probability of recurrence through monitoring that employee to ensure the behavior does not repeat. If an employee fails another required drug or alcohol test or there is evidence of on-duty use, the safety-sensitive maintenance employee is permanently disqualified from performing maintenance for any employer regulated under 14 CFR part 120.²²

Because of the potential for repeated risk, the request for waiver based on recognition must describe or demonstrate what methods are used to ensure safety-sensitive maintenance employees who return to work on part 121 air carrier aircraft after a drug or alcohol test violation or consequence are monitored to detect or deter, or both, repeat behavior.

Requests for recognition (§ 120.10(c)). This section will require certain information to be included in a request for waiver based on recognition, including the name, title, address, email address, and telephone number of the primary person to be contacted regarding review of the request (§ 120.10(c)(1)(i)); documentation of the foreign government's existing requirements demonstrating that the requirements contain the key elements of part 120 as described in paragraph (b), including, if appropriate, copies of applicable laws, regulations, and other requirements carrying the force of law (§ 120.10(c)(1)(ii)); any appropriate data, records, or supporting explanation for the Administrator to consider in determining whether the foreign government's existing requirements contain those key elements (§ 120.10(c)(1)(iii)); and a statement that the requestor intends to notify the Administrator within 30 days of changing any key elements as described in paragraph (b) that form the basis of the Administrator's recognition and describe those change(s) to the key elements (§ 120.10(c)(1)(iv)). Requests must be submitted to the FAA's Office of Aerospace Medicine, Drug Abatement Division (§ 120.10(c)(2)) at least 90 days before the waiver needs to take effect (§ 120.10(c)(3)). The FAA plans to update the website shortly after publication of the final rule to facilitate submission of information that a foreign government or foreign repair station needs to provide for FAA to consider a waiver based on recognition.

Disposition (§ 120.10(d)). If a foreign government's request complies with

§ 120.10(c) and demonstrates its requirements meet the key elements described in § 120.10(b), the FAA will recognize the country's requirements as a compatible alternative, pursuant to § 120.10(d) and issue a waiver. To note, the FAA may request additional information from the foreign government or the foreign repair station to fully understand and evaluate the alternative testing program or consequence to ensure the information meets the requirements, and under § 120.10(d)(1) will retain authority to make such inquiries. The FAA envisions such a request as a collaborative process with the requestor.

Effect and Validity (§ 120.10(e)). A waiver based on recognition in the form of an FAA-issued letter will be provided to the requestor if the request is accepted. If the requestor is a foreign government, the waiver will apply to all FAA-certificated foreign repair stations that are in the territory of that country and subject to the recognized compatible alternative. The FAA expects the foreign government to distribute the FAA-issued letter to all foreign repair stations in its territory so each is aware of the waiver based on recognition and can maintain a copy. Pursuant to § 120.10(e)(2), the Administrator's waiver based on recognition will remain valid so long as the compatible alternative retains the key elements that formed the basis of the Administrator's decision.

Compliance (§ 120.10(f)). If granted waiver based on recognition of a compatible alternative, a foreign government would ensure that foreign repair stations subject to its authority comply with the recognized existing requirements (*i.e.*, follow the laws in their own country). As previously explained, the FAA will issue a letter indicating the waiver based on recognition to a government or a foreign repair station. Foreign repair stations that have obtained a waiver based on recognition of an existing testing program, or that are covered by a foreign government's recognized compatible alternative pursuant to § 120.10(e)(1), must maintain the FAA-issued letter on file documenting the waiver in accordance with § 120.10(f)(1). The letter serves as documentation the certificated repair station's safety-sensitive maintenance employees are either subject to a testing protocol or established consequences, or both, deemed acceptable to the FAA Administrator and may be provided to a part 121 air carrier as program documentation of compliance. Finally, pursuant to § 120.10(f)(2), the FAA may modify, suspend, or withdraw its waiver

based on recognition by the Administrator when it is no longer valid (*e.g.*, if the recognized existing requirements are changed to remove key elements that were previously acceptable to the Administrator); when a foreign repair station fails to implement a testing program consistent with its recognition (*e.g.*, if a repair station obtains recognition based on certain key elements but then fails to implement those elements in a testing program); or when the FAA determines that a foreign government or foreign repair station has not provided the notification within 30 days of changes to the key elements that form the basis of the Administrator's recognition, as described in § 120.10(c)(1)(iv).

Conforming Amendments. In the applicability section for part 120, § 120.1, the final rule includes a new exception in § 120.1(d), which clarifies that § 120.5 and subparts E and F of 14 CFR part 120 do not apply to part 145 certificate holders outside the territory of the United States who perform safety-sensitive maintenance functions on part 121 air carrier aircraft that have obtained a waiver based on recognition pursuant to § 120.10.

In the tables in §§ 120.117(a) and (c) and §§ 120.225(a) and (c), the final rule clarifies that the information does not apply to a part 145 repair station that has obtained a waiver based on recognition by the Administrator of existing requirements or a testing protocol or established consequences (or both) pursuant to new § 120.10 as adopted by this final rule. The sections now more clearly explain that a foreign repair station that has not received a waiver based on recognition of existing requirements promulgated under the laws of their country must meet the requirements of 14 CFR part 120 as if it was an employer as defined in the regulation, and in accordance with any applicable waivers as described under § 120.9 or any exemptions granted under 49 CFR 40.7. This final rule does not change the meaning of these sections from what was proposed; however, with the introduction of expanded flexibilities for waivers, the FAA found it necessary to clarify that this language will not apply to foreign repair stations that are covered under a waiver based on recognition by the Administrator issued pursuant to 14 CFR 120.10.

V. Responses to Comments

The NPRM published on December 7, 2023, with the original comment period closing on February 5, 2024. On January 16, 2024, a coalition of 15 organizations requested to extend the comment period

²¹ 49 CFR 40.307(d).

²² 14 CFR 120.111(e) and 120.221(b).

an additional 90 days. In response, the FAA extended the comment period by an additional 60 days to April 5, 2024.²³ This extension provided a total of one hundred twenty (120) days for comment submission.

The FAA received 74 comment submissions in response to the NPRM during the 120-day comment period, including two requests for an extension of the comment period and two out-of-scope comments. Of the 70 remaining comments germane to the rulemaking, 17 generally supported the NPRM, 40 generally opposed the NPRM, and 13 stated no position but provided their comments and concerns or asked questions about the proposal. These comments addressed multiple aspects of the proposal and are further summarized alongside the FAA's responses in the sections that follow. The 17 supporting commenters included two airline mechanics unions (International Brotherhood of Teamsters (Teamsters) and Transportation Trades Department, AFL-CIO (TTD)), a pilots' union (Allied Pilots Association (APA)), a transit employee union (Transport Workers Union of America (TWU)), a trade association (National Drug & Alcohol Screening Association (NDASA)), a Substance Abuse Professional (SAP) Directory service (SAPList), a software provider (Nexus 33 Group LLC), and 10 individuals.

The 40 opposing commenters included thirteen foreign repair stations (Air New Zealand Limited, Chromalloy, Excel Aerospace Pte, HAECO Component Overhaul, Hong Kong Aero Engine Services Limited, IHI Corporation, JAL Engineering Company Limited, MTU Maintenance Zhuhai, Panasonic Avionics Corp-Line, Taikoo Shandong Aircraft Engineering Co., Taikoo Xiamen Aircraft Engineering Co., Taikoo Xiamen Landing Gear Services, and Elbe Flugzeugwerke), five trade associations (Aeronautical Repair Station Association (ARSA), Airlines for America (A4A), Cargo Airline Association (CAA), General Aviation Manufacturers Association (GAMA), and Regional Airline Association (RAA)), four airline manufacturers (AIRBUS Commercial Aircraft, The Boeing Company, Boeing Research and Technology, and GE Aerospace), three foreign trade associations (Airlines for Europe (A4E), Bundesverband der Deutschen Luft- und Raumfahrtindustrie e.V./German Aerospace Industries Association

(BDLI), and International Air Transport Association (IATA)), three foreign airlines (Deutsche Lufthansa AG, EL AL Israel Airlines, and Qantas Airways Limited), two foreign governmental aviation organizations (European Commission Directorate General for Mobility and Transport (DG MOVE) and UK Department for Transport (UK DFT)), one charter airline (Capital City Jet Center), one maintenance provider (MRO Holdings, Inc.), one manufacturer (MOOG Inc.), one U.S. repair station (Fortner Engineering & Manufacturing, Inc.),²⁴ and six individuals.

The 13 commenters that did not state an overt position on the NPRM included seven foreign repair stations (Airfoil Services, Goodrich THY TEKNİK SERVİS MERKEZİ LTD. ŞTİ, Honeywell do Brasil, Seman Peru, Sharp Aviation K Inc.,²⁵ ST Engineering Aerospace Services Company, and Tamagawa Aero Systems), one employment screening services provider (New Era Drug Testing), one SAP service provider (American Substance Abuse Professional, Inc.), and three individuals.

The following sections summarize and respond to comments received on the NPRM.

A. Sovereignty of Other Nations and Existing Programs

Thirty-one commenters, including ARSA, Air New Zealand Limited, Airbus Commercial Aircraft, A4A, A4E, Deutsche Lufthansa AG, EL AL Israel Airlines Ltd., GE Aerospace, GAMA, BDLI, IATA, Qantas Airlines, The Boeing Company, and UK DFT, raised the issue of national sovereignty as a basis for their opposition to the NPRM. These commenters generally disagreed with the NPRM's approach to implementing the statutory mandate. Commenters including A4A, RAA, IATA, ARSA, and EL AL Israel Airlines commented that the proposal's drug and alcohol testing program requirement may conflict or be inconsistent with the laws of other sovereign nations. In their view, the proposal failed to consider these pre-existing, complex, and diverse legal contexts that operate outside the United States. Commenters provided numerous examples of conflicts between various foreign laws and the requirements of 49 CFR part 40 and 14 CFR part 120, which are discussed in

section IV.D of this preamble. These commenters argued that the statutory mandate prohibits the FAA from proposing regulations on persons outside the territory of the U.S. that would facially conflict with the laws of sovereign nations. They also argued that the statute does not permit the FAA to shift the burden of avoiding inconsistencies with foreign laws to the part 145 repair stations that would need to seek waivers or exemptions.

A4A and IATA further encouraged the FAA to directly engage with foreign governments that have different methods of deterring drug and alcohol use and abuse that may accomplish the FAA's objectives by other means, stating the imposition of testing obligations in some countries may run contrary to, or be unnecessary in consideration of, the country's cultural context and its various laws. A4A commented the FAA should establish a process through which a foreign repair station may request that the U.S. government and the respective government of the repair station cooperate and come to an agreement to ensure subject repair stations in those countries be compliant with all illicit drug and alcohol abuse laws, both foreign and domestic. Airbus also commented that U.S. authorities should issue exemptions and waivers at the level of each country without involving each part 145 certificated repair station to minimize the administrative burden and associated costs. Similarly, ARSA suggested the FAA find another country's laws acceptable with no further action if the country has an existing program or has harsh laws or other deterrents for drug and alcohol use. Capital City Jet Center in Canada also stated the FAA should either work to develop a standard or require proof a repair station is covered by their governing country's existing testing program. Given the variations in these laws from country to country, commenters including The Boeing Company generally agreed that a "one-size-fits-all" approach would be impossible to implement and enforce, and that FAA should instead accept local testing regimes and defer to local authorities. To summarize, these commenters urged the FAA to consider accepting a government's determination of compliance and acceptability.

Several commenters, including A4A, ARSA, and IATA, suggested that the proposal would shift the burden of understanding and complying with foreign laws and regulations from the FAA to foreign citizens, which would violate national sovereignty. Specifically, ARSA stated, "the congressional directive was clear: the

²³ Drug and Alcohol Testing of Certificated Repair Station Employees Located Outside of the United States; NPRM extension of comment period, 89 FR 4584 (Jan. 26, 2024).

²⁴ ARSA and Fortner Engineering & Manufacturing, Inc. submitted nearly identical comments with no substantive differences. Because these comments originated with ARSA, the final rule refers to these separate submissions as ARSA's comments.

²⁵ Sharp Aviation K Inc provided two comments on the NPRM.

rule on its face cannot conflict with a sovereign nation's laws. Placing the burden on a certificate holder to prove its laws conflict with the proposed aviation safety regulations is an unacceptable application of legislative plain language." Commenters further argued that the public is unable to assess the legal ramifications of extending 14 CFR part 120 and 49 CFR part 40 beyond the boundaries of the U.S., and that foreign repair station and maintenance facility owners are citizens, not international legal experts capable of competently seeking waivers and exemptions from the regulations. Commenters stated that placing this burden on a certificate holder to prove its laws conflict with the proposal is an unacceptable application of legislative plain language. They would like to see the government make the determination of compliance and acceptability, not the foreign citizen.

Conversely, the Teamsters and APA, who supported the rule as proposed, stated the FAA should not expand the NPRM to allow a foreign repair station to present an existing or equivalent testing program to meet the requirements of the proposed rule. The Teamsters stated DOT's reliance on existing standards to address the use of alcohol and controlled substances for domestic covered employees necessitates an identical application for any further employees entered in the testing program. Another supporting commenter, NDASA, agreed the requirements for foreign repair stations should mirror those drug and alcohol programs in the United States. They further stated already existing testing programs and advances in international testing in the 30 years since the FAA originally proposed testing outside of the U.S. will make this rulemaking easier to implement.

The FAA disagrees that the NPRM's approach fails to consider the legal contexts of foreign nations, resulting in conflict and inconsistency. Section 44733(d)(2) explicitly required the proposed rule requiring an alcohol and controlled substances testing program determined acceptable by the Administrator to be promulgated consistent with the applicable laws of the country in which the repair station is located. The FAA maintains that the proposed rule considered legal contexts of foreign nations because the FAA proposed a pathway under which a foreign repair station could be consistent with both the FAA drug and alcohol testing regulations and the laws of the country. Specifically, the FAA proposed (and this final rule adopts) a pathway that would allow a foreign

repair station to apply for exemptions and waivers under 49 CFR part 40 and 14 CFR part 120, respectively, to facilitate compliance with the consistency requirement. Therefore, the FAA maintains that this rulemaking does not, as commenters suggested, impose rigid requirements without regard to local legal contexts. Nor does the NPRM's approach improperly burden the owners of foreign repair stations with responsibility for understanding and complying with FAA regulations. Affected foreign repair stations must hold an FAA-issued part 145 certificate to be subject to the regulations promulgated in this rule. Accordingly, these foreign repair stations must already understand and comply with the requirements of 14 CFR part 145 concerning aircraft maintenance, repair, and operation organizations. The FAA separately addresses commenters' arguments concerning the burdens of seeking waivers and exemptions below.

However, the FAA acknowledges each country impacted by this rule may have existing testing protocols or consequences under local laws that could meet the safety intent of the FAA's domestic requirements to detect or deter, or both, employees who are responsible for safety-sensitive maintenance functions from misusing alcohol and using drugs.

Further, the FAA acknowledges the discrepancy between legal contexts of a foreign country and FAA regulations, some of which may be so complex that a singular means of compliance may not be adequately covered solely by that proposed in the NPRM. Therefore, as previously discussed, this final rule includes more flexible waivers whereby a foreign government, on behalf of its repair station operators within its territory, may seek a waiver based on recognition of the foreign government's existing requirements or testing program. As explained, the waiver is also available to an individual foreign repair station, which may seek recognition of an existing testing program promulgated under the laws of the country or present consequences under local laws as a compatible alternative that demonstrate it meets the intent of the regulation. Section IV.B of this preamble discussed this waiver option, including the necessary criteria to demonstrate a testing program or consequences that meet the intent of the existing rules regarding drug and alcohol testing for safety-sensitive employees and the procedures to seek such recognition. The FAA finds that this more flexible waiver option comprehensively considers the unique

laws and sovereignty of other countries and responds to commenters' concerns of this nature.

B. Final Rule Effective and Compliance Date

In the NPRM, the FAA proposed to require the applicable repair station located outside the territory of the U.S. to obtain an OpSpec A449 and implement a drug and alcohol testing program no later than one year from the effective date of the regulation (or, if a foreign repair station begins operations more than one year after the effective date of the regulation, implement a drug testing program no later than the date the repair station begins operations). A4A requested the compliance date of this final rule should be held in abeyance for repair stations seeking waivers or exemptions, regardless of whether the FAA adopts the option for a government to make a request on behalf of its repair stations. If a government makes the request on behalf of its repair stations, A4A stated the compliance date of the regulations should be held in abeyance in a country until a final agreement has been made and becomes effective. They argued this would help avoid a scenario where one repair station in a country must comply with the FAA testing requirements where another does not because they are waiting on a decision, avoids requiring a repair station to set up intermittent costly processes that must later be revised to conform to the agreement, and avoids a situation where a repair station may be out of compliance with a local or FAA regulation while waiting on a pending request, which may put the repair station in difficult contractual or insurance policy non-compliance situations. For similar reasons, A4A requested the FAA fully adhere to its statutory limitation through a waiver/exemption process that ensures all inconsistencies are addressed before it imposes its program on foreign repair stations. They stated the one-year delay in compliance date proposed is based on no supporting data the FAA and DOT have the resources or ability to adjudicate hundreds to thousands of requests. CAA also had concerns with the waiver process, stating that the FAA needs to properly address whether the proposed rule's final compliance date will be substantially far enough in the future to accommodate the hundreds of exemption requests, and the agency should not arbitrarily enforce the regulations while exemption applications are pending or delayed at the hands of the agency.

The FAA acknowledges the concern regarding the rule's compliance date

and agrees with commenters that more time is needed to implement the requirements of this rule. With the introduction of waivers based on recognition of the foreign government's existing requirements or testing program, the FAA expects a foreign government or an individual repair station seeking relief will need sufficient time to prepare and submit a request, and the FAA and DOT will need additional time to create a new FAA International Compliance and Enforcement Branch, and to process waiver and exemption requests. The FAA disagrees, however, that compliance with these regulations by a foreign repair station should be held in abeyance if their request for a waiver from 14 CFR part 120 is pending with the FAA, or if their request for an exemption is pending with DOT. The extended three-year compliance date and the requirement to make a request at least 90 days before a waiver is needed will provide sufficient time to make and/or respond to requests made pursuant to §§ 120.9 and 120.10, and no abeyance will be necessary.

As discussed in section IV.A of this preamble, the FAA has set the effective date of this rule to January 17, 2025 and set the compliance date to December 20, 2027. The FAA has made changes to the regulatory text to ensure requests are received with sufficient time to respond to requests for waivers requested pursuant to §§ 120.9 and 120.10.

C. Government Resources

Commenters including A4A, A4E, ARSA, CAA, EL AL Airlines, and IHI expressed concern that the DOT and the FAA do not have the ability to manage the number of waivers and exemptions submitted with their own resources, or to respond to requests in a timely manner. Further, these commenters explained that delays in obtaining waivers and exemptions could increase the costs of implementing a testing program. Specifically, A4A stated their concern the FAA and DOT do not have the expertise and ability to fully adjudicate the impact of foreign laws and inconsistency with the FAA program and would like the FAA to recognize it will give full deference to the determination of foreign authorities regarding the inconsistency of laws for the purpose of compliance with FAA's program.

The FAA acknowledges commenters' concerns regarding the burden on the FAA and DOT because of waiver and exemption requests associated with this rule. In response to concerns regarding burden and for reasons discussed above, the FAA has expanded waiver eligibility

allowing a foreign government, on behalf of the repair stations in its country, or an individual foreign repair station to provide a written request for a waiver based on recognition of an existing testing program promulgated under the laws of the country as a compatible alternative that meets the minimum key elements set out in the regulation. The FAA finds this expansion of the waiver option will sufficiently recognize deference to foreign governments, their sovereignty, and their existing laws and requirements as an acceptable means of ensuring an alcohol and drug-free workplace. The FAA expects the expanded waiver options to reduce the burden on foreign citizens and on FAA and DOT by reducing the number of waivers and exemptions received.

D. Specific Conflicts With Foreign Laws

Commenters including ARSA, Air New Zealand Limited, Airbus Commercial Aircraft, A4A, A4E, Deutsche Lufthansa AG, EL AL Israel Airlines Ltd., GE Aerospace, GAMA, BDLI, IATA, Qantas Airlines, The Boeing Company, DG MOVE, UK DFT, and individuals specifically raised issues of labor and employment laws, human rights laws, union policies and laws protecting the privacy rights of employees. Commenters also noted that in countries that already permit some type of drug and alcohol testing, the existing methodologies vary greatly.

The FAA received comments regarding existing laws that may conflict with the proposed rule in several countries including the United Kingdom, Ireland, Germany, the European Union, China, Singapore, Peru, and Japan. GE Aerospace provided a copy of their comments submitted to the ANPRM, which contained some current regulatory requirements for Hungary, Korea, Singapore, the UK, China, Australia, and Brazil.

Chile. An individual commented it is necessary to verify the impact of the policy according to the local law in Chile and that the policy must not conflict with the employments contracts, employment legislation, or labor legislation.

China. The FAA received 6 comments from Chinese repair stations HAECO Component Overhaul Xiamen Ltd., Hong Kong Aero Engine Services Limited, MTU Maintenance Zhuhai, Taikoo Xiamen Aircraft Engineering Co. Ltd, Taikoo Xiamen Landing Gear Services Co. Ltd, and Taikoo Shandong Aircraft Engineering Co., Ltd. These repair stations, along with The Boeing Company, stated the People's Republic of China has very strict management

and control of the illegal use of drugs, forbidding any misuse of prohibited drugs. Taikoo Shandong Aircraft Engineering Co., Ltd. noted that the laws of the People's Republic of China cover all the prohibited drugs listed in 49 CFR part 40. Commenters also stated that drug testing is not commonly requested by a business company in China and can only be conducted by police when drug use is suspected or when an individual is in recovery from drug use. The repair stations stated that they instead have internal procedures that effectively control alcohol misuse, including training/education and daily checks.

EU. DG MOVE commented that the EU has robust safety management provisions in place for maintenance stations and a verifiable track record demonstrating that drug and alcohol abuse do not represent a safety concern requiring further regulatory action. The issue is covered by EU aviation safety regulations, in addition to EU Member States' employment laws. DG MOVE stated that since 2003 and the adoption and application of EU legislation pertaining to the continuing airworthiness of aircraft and aeronautical products, parts and appliances, and on the approval of organizations and personnel involved in these tasks, all EASA part 145 maintenance organizations are required to establish a Safety and Quality policy and a compliance monitoring system. Moreover, since December 2022 (date of applicability of Commission Implementing Regulation (EU) 2021/19632), all EASA part 145 maintenance organizations are required to establish a safety management system compliant with International Civil Aviation Organization (ICAO) Annex 19 provisions. Such policy mandates the conduct of random independent audits of all aspects of the organization ability to carry out maintenance to the required standard, including checks of all maintenance personnel's training and performance in relation to human factor issues, which could influence their ability to safely and properly exercise their tasks, explicitly including the issue of abuse of alcohol or drugs. DG MOVE states the new burdensome control measures implied by the proposed rule are in no way justified with regard to the EU and its Member States. DG MOVE also pointed to the existing U.S.-EU BASA, which is addressed in section V.G of this preamble.

Germany. The BDLI and Lufthansa Group stated random testing for drugs and alcohol is not compatible with the laws in Germany. A German foreign

repair station, Elbe Flugzeugwerke GmbH, commented that a general testing of alcohol and drugs without concrete suspicion is not permitted under German local law and that the local personal rights of the employee are in contradiction with the general requirement for testing, therefore, this rule cannot be implemented in Germany.

Ireland. MOOG Inc. commented that, legally, organizations in Ireland cannot force staff to undergo mandatory workplace drug testing or alcohol consumption exams and to do so could cause controversy. MOOG Inc. also mentioned privacy issues and human rights conflicts because presently there is no requirement in the Safety Health and Welfare at Work Act, 2005 clause 13(1)(c), which allows regulations to be made for testing for intoxicants.

Israel. EL AL Israel Airlines (EL AL) commented that Israeli law prohibits companies from performing random drug and alcohol testing on employees, though local law provides for testing based on suspicion or need. EL AL further asserted that Israeli law codifies a person's right to bodily autonomy and privacy and prohibits compelled medical examinations without a person's consent. EL AL also suggested that Israeli data privacy laws may deem regular and random drug and alcohol testing as illegal and illegitimate spying and as a violation of privacy. EL AL stated retaining the required consent for processing of Personal Information is a struggle for the airline and, even if obtained may not withstand proportionality tests as there may be other disciplinary measures with a lesser effect on the employee's privacy.

Japan. The FAA received comments from repair stations in Japan, including Panasonic Avionics Corp-Line Maintenance, who stated labor laws in Japan do not allow companies to conduct drug investigations. Another commenter, JAL Engineering Company Limited, stated the strict prohibition of drugs in Japan and its enforcement means the prevalence of drug use among the Japanese population is significantly lower than in the United States and Europe. The commenter also stated the Japan Civil Aviation Bureau mandates alcohol testing for maintenance personnel before the start of their shifts. Another Japanese repair station, IHI Corporation, commented that alcohol testing may be feasible, but drug testing causes concerns with the protection of personal information and consent to test. They also stated drug possession and its use are illegal in Japan and the consequences are expected to achieve

the goal of the implementation of the drug testing rule.

Mexico. Chromalloy, a repair station located in Mexico, stated the aviation laws in Mexico already include an alcohol and drugs testing as part of the medical examination required to obtain/renew aviation maintenance license and this medical examination is in accordance with ICAO recommendations. Furthermore, the commenter indicated under Article 47 of Mexico's Federal Labor Law, employees are prohibited from arriving at work intoxicated or under the influence of a narcotic or drug (with medical exception).

Peru. Seman Peru Sac, a foreign repair station, stated some aspects of the proposed rule are not in accordance with the reality of the country. For example, they stated there is no substantial consumption rate of amphetamines, heroin, and opioids in Peru. The most widely used drugs are cocaine, marijuana, and alcohol. They also stated drug testing at their location has been always negative because they follow the Advisory Circular DGAC Peru 91.010–2019, requiring unannounced detection of 10% of personnel once a year.

Singapore. The FAA received a comment from Excel Aerospace in Singapore which stated Singapore has extremely strict drug and alcohol regulations.

Türkiye. A repair station in Türkiye, GOODRICH THY TEKNİK SERVİS MERKEZİ LTD. ŞTİ, commented that drug and alcohol testing can only be requested if an individual is under the influence within the workplace or there is a suspicion, or if the nature of the job requires testing (e.g., drivers). They also stated employees who are notified of testing must be informed about the method, scope, and purpose of the test, and personal data must be protected, and explicit consent must be given before an employer allows employees to undergo alcohol and drug tests.

United Kingdom (UK). The UK DFT commented that the NPRM contains elements that overlap with domestic UK provisions, including the Railways and Transport Safety Act 2003 and the Employment Rights Act 1996. UK DFT stated aircraft maintenance personnel are required by the terms of their licenses and those of their organizations not to work whilst under the influence of drugs or alcohol. The Railways and Transport Safety Act 2003 sets out prescribed limits for people involved in aviation activities, including flight crew, ground crew and air traffic controllers. The Act does not contain provisions giving the power to conduct random

drug and/or alcohol testing without the consent of the test subject, which UK DFT states is contrary to the NPRM and has the potential to impose on UK sovereignty. UK DFT further states U.S. employment law is different from UK employment law, which is set out in the Employment Rights Act 1996. UK DFT stated the requirement of a program that complies with extremely detailed and onerous criteria that can be applied to U.S. repair stations presents practical difficulties if implemented on UK repair stations. It is likely to present problems in some cases of a clash between the requirements of the NPRM and UK domestic law on unfair dismissal under the Employment Rights Act 1996. UK DFT further discussed its responsibility for the British Overseas Territories, which do not have the same provisions as those contained in the Railways and Transport Safety Act 2003 or the Employment Rights Act 1996 but do have robust Employment Laws and regulatory enforcement mechanisms in place, including suspension and/or revocation of any license, certificate, or approval, within each individual Territories' own legal framework. UK DFT stated the measures suggested in the NPRM are unnecessary and disproportionately burdensome with the potential to encroach on UK sovereignty.

The FAA acknowledges each country impacted by this rule may have different laws on labor, employment, privacy, etc., which the repair stations in that country must follow. The FAA appreciates the information provided by other countries and individual foreign repair stations to help illustrate this point. As described previously, the FAA has expanded waiver eligibility to a foreign government, on behalf of its repair station operators within its territory, and the individual repair stations. This waiver based on recognition allows a foreign government or an individual repair station to provide the FAA with a written request for waiver based on recognition of an existing testing program or consequences promulgated under the laws of the country that meets the minimum criteria set forth in new § 120.10. Absent a waiver based on recognition, the foreign repair stations must meet the requirements of 14 CFR part 120 and 49 CFR part 40, with the option to request a waiver or exemption for those discrete regulations that may present an obstacle.

E. Human Rights Concerns

GAMA commented that the rule raises human rights concerns because it may result in outcomes inconsistent with

widely recognized norms of justice. Specifically, GAMA stated that foreign governments may use a positive test result obtained through a repair station's drug and alcohol testing program to prosecute a station employee. GAMA further asserted that station employees in some countries may face criminal conviction and excessive punishment, up to and including capital punishment, due to a test required under this rule. ARSA similarly commented that some countries impose harsh penalties for alcohol and drug use. CAA raised a concern of risks to employees of foreign repair stations where the host country's strict drug use laws carry severe punishments, and CAA questioned whether compliance with the rule would cause difficulty in retaining and hiring employees who fear criminal sanctions for their drug use.

The FAA acknowledges these concerns about the potential human rights implications of the rule's testing requirements. However, Congress has directed the FAA to promulgate a rule requiring that foreign repair stations ensure employees who perform safety-sensitive maintenance on part 121 air carrier aircraft are subject to a drug and alcohol testing program. Further, GAMA's concern about countries' ability to use positive tests resulting from this rule's requirements to obtain convictions and to impose excessive punishments is difficult to assess without additional information. These consequences turn on a country's laws, its criminal justice system, prosecutorial decision-making and discretion within that system, and several other factors that are beyond the FAA's understanding. The FAA acknowledges that certain safety-sensitive maintenance employees that engage in illegal drug use or alcohol misuse may be deterred from employment with a foreign repair station if testing pursuant to the final rule would uncover such conduct. The FAA lacks sufficient information to assess the extent of impacts on retention and hiring associated with an employee's fear of being sanctioned for drug use by their employer's government. In cases where a foreign government receives a waiver based on recognition of existing requirements, this final rule would not impose additional testing or requirements beyond what the foreign government requires.

GAMA also asked the FAA to reconsider issuing the rule if it could result in harsh, cruel, or unusual punishments in other countries. GAMA implored the FAA to, at a minimum, work with the U.S. Department of State or other appropriate government

agencies to reduce the likelihood of inhumane outcomes. The FAA notes that the waiver based on recognition option provided in the final rule would not impose additional testing or requirements beyond what the foreign government requires. Furthermore, the waiver based on recognition will permit countries and individual repair stations to seek recognition of a foreign government's existing requirements or testing program that may mitigate certain downstream risks associated with testing for drug use and alcohol misuse. The FAA notes that it regularly engages in inter-agency collaboration, such as with the U.S. Department of State, and would continue to do so to the extent any specific concerns are raised in the implementation of this rule.

F. Waivers and Exemptions

1. Waiver Burdens

ARSA asked the FAA to consider offering a blanket waiver from the requirements of 14 CFR part 120 in some circumstances, including where a foreign government has similar drug and alcohol testing requirements. ARSA stated that compliance with 49 CFR part 40 would not be required if the FAA issued a blanket waiver to 14 CFR part 120. The Teamsters, a supporting commenter, explained that the FAA has satisfied these concerns via the proposed waiver and exemption process.

The FAA disagrees that the proposed regulations improperly burden foreign repair stations that would be subject to the rule. As explained previously, the regulations as proposed comply with 49 U.S.C. 44733(d)(2): they require the relevant foreign repair stations to implement a testing program; they establish acceptable baseline requirements for a testing program; and they include mechanisms for compliance and adaptation, specifically through waivers and exemptions, to address inconsistencies with local laws. The FAA reasonably determined that the regulated community is best situated to seek relief from 49 CFR part 40 and 14 CFR part 120 to ensure consistency with local laws, which led the FAA to expand the waiver opportunities, as previously discussed in this final rule.

However, the FAA finds seeking such relief may require more time than the NPRM's proposed one-year implementation period. Accordingly, the FAA will set the effective date to 30 days while extending the compliance date to three years to provide existing foreign repair stations up to three years to comply with the pathways adopted

by this final rule. These measures provide foreign repair stations with sufficient time and flexibility to implement an appropriate drug and alcohol testing program consistent with any waivers. Additional explanation for the extension of the compliance date of the rule is included in sections IV.A and V.B.

2. Waiver Standard and Requirements

Several commenters raised concerns about the NPRM's proposed processes and applicable standards for issuing waivers and exemptions. A4A stated the proposed processes for issuance of waivers and exemptions is ambiguous and vague because it does not offer a standard under which the FAA will approve a waiver. A4A alleged that the process is therefore arbitrary and capricious, and it requested the FAA explain the process and standards for FAA waivers and DOT exemptions and give the public an opportunity to comment on the standards. The Lufthansa Group commented that waivers and exemptions would be reviewed through an unspecified process and rely on an individual's judgment rather than a particular standard. ARSA similarly commented that the NPRM failed to provide an objective standard for obtaining an exemption or waiver.

A4A stated the FAA asks for more than what Congress required within the waiver request process (*i.e.*, the "reasons why granting the waiver would not adversely affect the prevention of accidents and injuries resulting from the use of prohibited drugs or the misuse of alcohol" and a "description of the alternative means that will be used to achieve the objectives of the provision that is the subject of the waiver, or, if applicable a justification of why it would be impossible to achieve the objective of the provision in any way").²⁶ A4A stated these items should not be part of the waiver process since the FAA cannot impose a program that is inconsistent with the applicable laws of the country in which the repair station is located, making this information irrelevant. Both A4A and ARSA suggested that the FAA and DOT must automatically grant a waiver or exemption when there is an inconsistency in the law. They argued that the proposed process indicates the FAA could deny waivers despite the clear Congressional mandate to avoid inconsistencies with foreign laws, and the FAA offered no standards for making these decisions in the proposed rule. ARSA provided suggested

²⁶ Proposed § 120.9(b)(5) and (6).

amendments to the regulatory text consistent with its comments. Some commenters including IHI Corporation, a repair station in Japan, would like to see more flexibility on the approval of a waiver, considering the context of the country's laws and regulations and their customs.

Alternatively, supporting commenters including TWU noted the waiver and exemption process outlined in the NPRM is appropriately tailored and urged the FAA to maintain a narrow view of what necessitates an exemption or waiver. The TTD agreed, stating the FAA must carefully review each request, examine the country's laws, and weigh the potential costs of relaxing important safety regulations. The Teamsters commented on the proposed requirements for requesting a waiver and stated maintaining a narrow process for granting waivers or exemptions is necessary for the pursuit of one level of safety across maintenance providers. They stated the elements the FAA requires to grant a waiver provide a high bar, and the FAA should maintain that high bar, not taking revenue or workforce size into account. They asked the FAA to maintain a narrow interpretation of what an "inconsistency" with another country's law is and require the requestor to cite laws that are explicitly inconsistent with the regulation. They also stated any request for a waiver or exemption will adversely affect accidents and injuries unless categorically proven otherwise. The Teamsters also stated it would be inappropriate and inconsistent with Congressional intent to only apply 14 CFR part 120 and 49 CFR part 40 in part.

The FAA recognizes that the different laws and regulations of some countries may place limitations on drug and alcohol testing, prohibit it entirely, or place conditions on how testing would be done. Congress contemplated this potential barrier in 49 U.S.C. 44733(d)(2) as evidenced by the language requiring the drug and alcohol program to be both acceptable to the Administrator and consistent with the applicable laws of the country in which the repair station is located. As explained in the NPRM, the FAA proposed to avoid situations whereby the regulations of the FAA are inconsistent with laws in other sovereign countries through waivers and exemptions.

To ensure that a waiver based on an inconsistent law results in an acceptable drug and alcohol testing program, § 120.9(b) requires the foreign repair station to explain why granting the waiver "would not adversely affect the

prevention of accidents and injuries resulting from the use of prohibited drugs or the misuse of alcohol by employees," and describe "alternative means that will be used to achieve the objectives of the provision that is the subject of the waiver or, if applicable, a justification of why it would be impossible to achieve the objectives of the provision in any way".²⁷ These elements of a request will inform the FAA's assessment of whether a waiver is appropriate upon a showing of an inconsistent law, and whether any conditions or mitigation would be appropriate to further the purposes and objectives of the drug and alcohol requirements already deemed acceptable to the Administrator.

The FAA recognizes that the varied laws of foreign countries could conflict with the drug and alcohol testing requirements in complex ways. Some asserted conflicts may be clear. For example, some countries may completely bar on privacy grounds any pre-employment drug testing, which is required by § 120.109(a), or random drug testing, which is required by § 120.109(b). More difficult conflicts may arise when a country's existing drug and alcohol testing requirements are inconsistent, though not outright barred, with the demands of the rule. These circumstances understandably result in uncertainty about how the FAA will address specific requests for waivers, but that uncertainty is inherent in the balance struck by Congress when it directed the FAA to require drug and alcohol testing in a manner acceptable to the Administrator and consistent with diverse foreign laws. The NPRM provided a standard that was deemed appropriate to the Administrator that will result in waivers to accommodate foreign laws upon a showing of inconsistency, though the FAA retains the authority to advance the purposes and objectives of the existing testing scheme to the greatest extent possible through appropriate conditions and limitations that still preserve consistency with foreign laws.

Supporting commenters NDASA and APA suggested modifications to the proposed rule text regarding waiver requirements. First, NDASA suggested that FAA include a requirement that copies of foreign laws provided to the FAA are translated in English. Although English is the expectation for any submitted documentation, the FAA does not find this distinction needs to be included in the regulatory text.

NDASA and APA recommended the modification of § 120.9(b)(6) to change

from "if applicable, a justification of why it would be impossible to achieve the objectives of the provision in any way" to instead state, "if applicable, an explanation of how the safety objectives of the provision will be met with procedures that create an equivalent level of safety." They asserted this change would always include safety, so it cannot be considered impossible to achieve. The FAA does not revise the adopted regulatory text to reflect this recommended revision in this final rule. As the FAA has acknowledged, each country impacted by this rule may have different laws on labor, employment, privacy, etc., which the repair stations in that country must follow. The FAA must consider the diversity of laws and ensure the regulatory language allows a repair station to remain consistent with the applicable laws of the country in which the repair station is located. Additionally, the element of safety is further explicitly accounted for in paragraph (b)(3), which requires an explanation of why granting the waiver would not adversely affect the prevention of accidents and injuries resulting from the use of prohibited drugs or the misuse of alcohol by employees.

NDASA suggested adding a regulatory provision in 49 CFR part 40 to correspond with the NPRM's proposed § 120.9, likening the addition to the existing stand down waiver process, which has regulatory references in both § 40.21 and § 120.125. The FAA determined this recommendation is outside the scope of this rulemaking, which is limited to amending part 120.

3. Eliminating Waivers and Exemptions

NDASA and APA commented they preferred to see no waiver or exemption option. APA stated all safety-sensitive work on part 121 aircraft should be required to adhere to the same, or at least substantially similar, stringent criteria as required for part 121 maintenance personnel located within the United States to maintain a consistent minimum level of safety. APA further stated the FAA should prohibit part 121 operators from having maintenance performed in countries with laws that prohibit testing or make it impractical. They stated there is no logic behind permitting a knowing acceptance of reduced safety standards. NDASA agreed with APA's comment, asserting that if a country cannot meet the criteria, the safest approach would be to prohibit the U.S. carrier from having safety-sensitive maintenance functions performed within that country.

²⁷ Proposed § 120.9(b)(3) and (6).

APA and NDASA commented that the exemption process proposed in the NPRM is not the correct mechanism for allowing a foreign repair station to opt out of the rule, and the waiver process in part 120 is more appropriate. They both stated the exemption process should be removed for three reasons: (1) part 40 should be followed as written regardless of where testing occurs due to the quality, consistency, and protections it affords; (2) exemptions should only be granted when there are “special or exceptional circumstances, not likely to be generally applicable and not contemplated in connection with the rulemaking”, and (3) it is contrary to the Administrative Procedure Act and the DOT’s position on exemptions to make a regulation inviting exemptions from potentially 192 of the ICAO signatory countries and/or the individual repair stations in those countries. They stated that since the rule anticipates receiving petitions for exemption, the situation is not unusual and has been contemplated in the rulemaking, making the waiver process more appropriate. The commenters suggested deleting § 120.5 from the proposed rule and making this a waiver process under § 120.9 only.

The FAA appreciates the commenters’ concerns about exemptions under 49 CFR part 40 being used to accommodate foreign laws applicable to foreign repair stations that are inconsistent with the part’s requirements. The FAA agrees that compliance with those requirements would ensure consistent, high-quality testing occurs when required by this rule. However, the FAA lacks the authority to grant an exemption in whole or in part from 49 CFR part 40 under § 40.7 or implement a waiver process for relief from 49 CFR part 40. The exemption process described in 49 CFR part 5 is DOT’s established process for granting relief from 49 CFR part 40. Furthermore, because the availability of exemptions may be critical to compliance with the statutory mandate’s consistency requirement in some circumstances, the FAA defers to DOT to honor Congress’s intent if any appropriate exemptions are sought. As commenters noted, an exemption will only be granted under § 40.7 if the requestor documents special or exceptional circumstances (e.g., a country’s law) that make compliance with a specific provision of 49 CFR part 40 impracticable. These circumstances may not be generally applicable nor contemplated in connection with the rulemaking that finalized 49 CFR part 40,²⁸ and, considering the unique context of each

country’s laws, the FAA concludes that exemptions would not be generally applicable outside the foreign repair station’s country. Also, there is no evidence to suggest that DOT contemplated in the rulemaking finalizing 49 CFR part 40 the specific special or exceptional circumstances that may arise when a foreign law conflicts with the part’s requirements.

APA and NDASA were also concerned granting waivers or exemptions to foreign repair stations may open the door to granting similar waivers to domestic employers and may have an impact on long-standing international testing required by the Federal Railroad Administration, the Federal Motor Carrier Safety Administration, and the Coast Guard. These commenters requested the FAA address the potential impact on the DOT agencies that require testing.

The FAA does not find that the implementation of this final rule would have an impact on the testing requirements of another Federal agency requiring testing in accordance with 49 CFR part 40. Each regulating agency and DOT has the authority to determine the applicability of their respective regulation and whether to consider providing relief from their respective regulation either in part or in whole. Further, the waiver option presented in this rule is specifically applicable to foreign repair stations that perform safety-sensitive maintenance on part 121 air carrier aircraft. The FAA is not extending this option to domestic employers regulated under 14 CFR part 120.

4. Department of Transportation (DOT) Authority

A4A argued Congress did not confer authority to the FAA to impose a program over which it does not control, noting that 49 CFR part 40 is a DOT regulation and the FAA cannot grant exemptions to it. A4A also commented the FAA’s reliance on DOT’s exemptions far exceeds the Congressional limitations placed on the FAA, and the FAA cannot force the DOT to agree that an inconsistency meets the thresholds provided in 49 CFR part 5.

As a general matter, the FAA has broad statutory authority to promulgate regulations to implement programs established by statute and administered by the FAA. Under section 106 of title 49 of the United States Code, the Administrator “is authorized to issue, rescind, and revise such regulations as are necessary to carry out” the Administrator’s and the FAA’s functions. Those functions include

administering alcohol and drug testing programs codified in 49 U.S.C. chapter 451. Specifically, the FAA’s authority to issue rules on alcohol and drug testing is in 49 U.S.C. 45102, which directs the Administrator to prescribe regulations that establish a program requiring air carriers and foreign air carriers to conduct certain drug and alcohol testing. In addition to these authorities, the final rule is promulgated under section 308 of the 2012 Act, 49 U.S.C. 44733(d)(2), which directs the FAA to extend drug and alcohol testing requirements to foreign repair stations with employees that perform safety-sensitive maintenance functions on part 121 air carrier aircraft. Section 309 of the 2012 Act further requires that such testing requirements be acceptable to the Administrator. The FAA maintains that the standards set forth in 14 CFR part 120 and 49 CFR part 40, which are cooperatively administered by the FAA and DOT, respectively, are acceptable drug and alcohol testing programs as applied to persons that perform safety-sensitive maintenance functions at U.S.-based repair stations. Because the FAA lacks the data or studies to support a deviation from the current program requirements, for purposes of 49 U.S.C. 44733(d)(2), the Administrator finds that the current drug and alcohol testing scheme is acceptable as applied to foreign repair stations.

As the NPRM explained, the FAA and DOT have long engaged in a regulatory partnership regarding drug and alcohol testing of persons in the aviation industry.²⁹ This partnership has resulted in linked regulations that generally govern DOT agencies’—including the FAA’s—drug and alcohol testing procedures in 49 CFR part 40, and more specific FAA regulations on the same subjects in 14 CFR part 120. The FAA’s existing drug and alcohol testing regulatory framework functions through both DOT’s and FAA’s regulations.³⁰ As noted previously, the FAA has broad statutory authority to carry out its functions. Neither 49 U.S.C. 44733(d)(2) nor any other statute limits the FAA’s authority to promulgate regulations on drug and alcohol testing that are consistent with the long-established regulatory framework. Commenters offered no authority or analysis to suggest otherwise. They also did not explain how the FAA’s lack of control over DOT’s exemption process is relevant to the FAA’s statutory authority

²⁹ 88 FR at 85138.

³⁰ 49 CFR 40.1(a) states that 49 CFR part 40 applies to and instructs “all parties who conduct drug and alcohol tests required by [DOT] agency regulations how to conduct these tests and what procedures to use.”

²⁸ See 49 CFR 40.7(b).

to require a drug and alcohol testing program. The proposed regulations fall well within the FAA's statutory authority, and the FAA's continued reliance on 49 CFR part 40 is necessary to ensure consistency across the existing regulatory framework in which drug and alcohol testing conducted under this rule would occur.³¹ If an exemption from 49 CFR part 40 is necessary, a part 145 repair station must request it in writing from DOT under the provisions and standards of 49 CFR part 5. While the FAA lacks control over DOT's exemption process, the FAA and DOT may coordinate on these requests as they relate to implementation of a drug and alcohol testing program required by 14 CFR part 120, particularly if the foreign repair station concurrently requests a waiver from this part 120.

5. Department of Health and Human Services (HHS) Authority

A4A and ARSA stated the FAA did not address the requirements of the HHS that may apply to the testing program and whether repair stations may obtain relief from these requirements when inconsistent with foreign laws. The FAA disagrees with commenters that relief may need to be granted by HHS as part of this rule. Because requirements that connect to the HHS mandatory guidelines (e.g., laboratory certifications) are included in 49 CFR part 40, any relief needed by a foreign repair station, or its government, may be granted by DOT as part of the exemption process.³²

6. Waiver Cost

Commenters including ARSA, DG MOVE, MRO Holdings, and EL AL Israel Airlines expressed concern with the cost to request a waiver or exemption, stating the process is burdensome and will require the foreign citizen to obtain the services of experts in the fields of

international law as well as HHS, DOT, and FAA regulations to decipher whether compliance with each section of the rules can be achieved. Commenters stated the cost of this is not included in the NPRM.

Relatedly, CAA commented that the rulemaking fails to accurately account for the costly challenges if the rule was implemented as proposed and underestimates the practical and legal feasibility of implementing the conceived exemption process. They also stated that, as noted in the NPRM, over 900 repair stations in over 30 countries would come under this rulemaking and even if only half applied for exemptions, there is no proper accounting by the FAA of the personnel, time, cost, and inherent delays for processing hundreds of exemptions involving explanation of local law, expertise of additional personnel, time, and cost to the applicant.

The FAA acknowledges concerns regarding the cost of submitting waivers and exemptions. In the NPRM, the FAA, because of the uncertainty of how many repair stations would apply for a waiver or exemption, assumed that all repair stations would comply with the rule. The cost of creating and maintaining a drug and alcohol program is more expensive than the cost of all repair stations submitting a waiver or exemption. Therefore, the estimated cost in the NPRM is a conservative case in which the cost of the rule is higher. In response to comment, in the final rule, the FAA has expanded waiver eligibility to foreign governments, which FAA anticipates will mitigate the burden on foreign repair stations identified by commenters. Because of this addition, the FAA also added a second scenario that estimates the cost of all countries applying for this alternative means of compliance.

G. Bilateral Aviation Safety Agreements

In the NPRM, the FAA invited comments on whether any Bilateral Aviation Safety Agreements (BASAs) conflict with the requirements of the proposed rule. Though responsive commenters provided views on various BASAs, few offered evidence of direct conflicts with the requirements of those agreements. For example, BDLI commented that countries with existing BASAs already contain prohibitions and requirements regarding the consumption of drugs and alcohol in the workplace and any violation of these prohibitions would result in sanctions by the aviation authority and in serious cases criminal prosecution but did not explicitly provide which BASAs would conflict. Many commenters reiterated

concerns that were submitted in response to the ANPRM.³³ For example, commenters encouraged the FAA to honor the intent of the BASAs and to rely on them to implement aspects of the rule, focused on the need for consultation with BASA parties, and identified the potential for retaliation.

As the NPRM explained, the FAA has been directed by Congress to promulgate regulations requiring part 145 repair stations outside the U.S. to have a drug and alcohol testing program for their employees who perform work on part 121 aircraft. To the extent that BASA provisions concerning notice and consultation are applicable to the proposed regulations, the FAA intends to follow those provisions.

1. Governmental Commenters

Two foreign government transportation agencies representing the interests of the United Kingdom and the European Union commented in opposition to the NPRM and raised concerns about the BASAs between the United States and their respective jurisdictions. The UK DFT asserted that the US-UK BASA, Maintenance Implementation Procedure (MIP), and Maintenance Agreement Guidance (MAG) would need to be amended if the FAA finalized the NPRM as proposed and made it effective in the UK. In the UK DFT's view, the FAA would be in breach of the MIP if it refused to certify a UK-based part 145 repair station for failure to comply with the NPRM's proposed requirements. UK DFT also noted that the FAA did not consult on the proposal under the terms of the UK-US BASA prior to publication. Finally, the UK DFT encouraged the FAA to accept the UK aviation maintenance system as a whole and not seek to make changes to parts of it. The UK DFT further asked the FAA to respect the principles of trust, cooperation, communication, and safety culture which underpin the UK-US BASA.

For the European Union, DG MOVE commented that a full account should be taken of the mutual trust and equivalency principles that underlie the US-EU BASA, and the existing requirements in place within the European Union. DG MOVE stated the BASA provides for a privileged exchange on regulatory developments, which was not done prior to the issuance of the proposed rule. DG MOVE asked the FAA to honor the long-standing cooperative relationship between Europe and the United States,

³¹ While the final rule amends 14 CFR 120.5 to require regulated entities to comply with exemptions issued under part 40, the final rule makes no changes to the longstanding requirement that those entities "having a drug and alcohol testing program under this part must ensure that all drug and alcohol testing conducted pursuant to [part 120] complies with the procedures set forth in 49 CFR part 40."

³² Although HHS has no authority to regulate the transportation industry, the DOT does have such authority. DOT is required by law to develop requirements for its regulated industry that "incorporate the Department of Health and Human Services scientific and technical guidelines dated April 11, 1988, and any amendments to those guidelines . . ." See 49 U.S.C. 20140(c)(2). In carrying out its mandate, DOT requires by regulation at 49 CFR part 40 that its federally-regulated employers use only HHS-certified laboratories in the testing of employees, 49 CFR 40.81, and incorporates the scientific and technical aspects of the HHS Mandatory Guidelines.

³³ The ANPRM published at 79 FR 14621. The FAA responded to these comments in the NPRM, 88 FR at 85141.

to minimize economic burden on their respective aviation industries from redundant oversight, and to adhere to the comprehensive system of regulatory cooperation in civil aviation safety an environmental testing and approvals based on continuous communication and mutual confidence.

The FAA acknowledges the concerns raised by UK DFT and DG MOVE, particularly with respect to prior notice and consultation concerning the NPRM and the requirements now finalized in the rule. The FAA is committed to honoring the principles of trust and cooperation embodied in the BASAs between the United States and the United Kingdom, the European Union, and other signatory partners. The final rule amends the proposal to address some of the concerns raised by UK DFT and DG MOVE. Specifically, the FAA has revised the waiver and provided an additional waiver option that gives foreign governments the ability to obtain a waiver on behalf of repair stations in its territory based on recognition of its program. The FAA is confident that the changes to the waiver options made in response to comment will allow for a streamlined process for further productive discussions and, if appropriate, the recognition of a country's existing requirements as a compatible alternative pursuant to § 120.10. As explained previously, the FAA has set the effective date of this rule to January 17, 2025 and includes a three-year compliance period to provide existing foreign repair stations up to three years to comply with the pathways adopted by this final rule. The FAA will further consult with parties to BASAs, where appropriate, on the impact of the final rule's requirements on the relevant agreements during this three-year implementation period.

2. Labor, Trade, and Industry Commenters

Fourteen labor organizations, airline trade organizations, and companies in the airline and maintenance industry commented on the NPRM's impact on the BASAs. Like the governmental commenters, the labor, trade, and industry commenters raised concerns about consultation and honoring the BASAs' purposes and requirements. For example, Airbus commented that the FAA should take special care with countries where a BASA is in force, including engaging in in-person consultations on a regular basis to understand the legal, practical, and cultural issues related to drug and alcohol testing, and the measures already in place that may mitigate the need to deploy this rule. In addition,

several commenters raised the potential for retaliation by foreign governments against repair stations located in the United States if the NPRM were to be finalized as proposed.

Commenters including A4A, IATA, and ARSA argued that the rulemaking attempts an end-around of BASAs by including the proposal under 14 CFR part 120 instead of part 145. They also requested the FAA generally follow directives on bilateral agreements and procedures required by treaties. ARSA and A4A stated that drug and alcohol testing requirements would need to be included as amendments to the special conditions of certain BASAs, and that those changes should be made in accordance with the State Department's sanctioned process associated with bilateral partners. A4A further suggested that FAA's drug and alcohol testing program should be applied through part 145 rather than part 120. A4A asserted that this change would respect comity and reciprocity by clarifying that any compliance issues would be processed through existing BASA provisions for special conditions. Accordingly, A4A explained that the proposed drug and alcohol testing requirements would automatically apply only in foreign jurisdictions without reciprocal recognition of the foreign repair station certificate (*i.e.*, a BASA). IATA stated their agreement with these comments, adding that the proposed rule disregards the relevance of existing BASAs which recognize part 145 repair stations that are certificated by the safety regulator where the facility is located. IATA recommended that the FAA instead accept a country's drug and alcohol testing requirements if there is a BASA in place that already addresses drug and alcohol testing. IATA asserted that a BASA should be renegotiated if there is no provision for drug and alcohol testing in an existing agreement. BDLI suggested that the FAA should treat as equivalent and sufficient any prohibitions and requirements regarding drug and alcohol consumption in a BASA party state. Airbus and Lufthansa Group alleged that the NPRM is incompatible with the U.S.-EU BASA. Airbus further noted that the U.S.-EU BASA Maintenance Annex Guide (MAG) is silent on drug and alcohol testing programs, but argued that this silence does not mean the NPRM would avoid conflict with the U.S.-EU BASA MAG. In their comment supporting the NPRM, the Teamsters noted opposing commenters have not provided evidence demonstrating that international obligations (*i.e.*, BASAs) are inherently in conflict with the NPRM and that the

FAA should not permit these concerns to impact the rulemaking.

The FAA disagrees with the commenters' characterization of the NPRM as an attempt to circumvent the requirements or purposes of the BASAs. To the extent BASAs address repair stations, including through annexes and special conditions, those BASAs concern how the parties will inspect, evaluate, and certify that maintenance organizations meet the requirements of part 145 and its equivalent in the foreign jurisdiction. The FAA's drug and alcohol testing regulations do not contain any maintenance standards that would be subject to special conditions.³⁴ As the Teamsters correctly noted, commenters have not identified a specific conflict between the NPRM and the BASAs. However, the FAA agrees with the governmental commenters who suggested that further consultations and amendments to address the change of circumstances may be appropriate, consistent with the consultation provisions under applicable BASAs. The FAA is committed to doing so if a provision is identified warranting such.

Opposing commenters argued that the FAA should transfer drug and alcohol testing requirements to part 145 for the limited purpose of ensuring that those requirements would be subject to the special conditions process under current BASAs. However, BASA parties have other means to address concerns about the requirements finalized in this rule, including provisions in each BASA allowing for consultation between the parties on amendments to address either party's revisions to its regulations, procedures, or standards (including those outside of part 145). For these reasons, the FAA concludes that relocating the drug and alcohol testing requirements applicable to part 145 repair stations is not appropriate or necessary.

Some labor, trade, and industry commenters also raised concerns about retaliation against U.S.-based repair stations if drug and alcohol testing were extended beyond U.S. borders. For example, A4A and IATA commented that the NPRM's impact on BASAs could increase the risk that foreign governments impose reciprocal and retaliatory drug and alcohol testing or other requirements on U.S.-based repair stations outside of a BASA's mutual and cooperative certification regime. GAMA

³⁴ For example, the UK-US BASA MIP defines "special conditions" to mean the requirements of "14 CFR parts 43 and 145 or in the (UK) Part-145 that have been found, based on a comparison of the regulatory maintenance systems, not to be common to both systems and which are significant enough that they must be addressed." US-UK BASA 1.7(h)

warned that the FAA should not take any action that may dissuade other countries from entering into these agreements. MOOG Inc. similarly commented that the NPRM could result in backlash within current BASAs and limit the possibility of future agreements. The FAA acknowledges the commenters' concerns and has taken steps in the final rule to lessen the burdens on foreign governments and repair stations that could incentivize retaliation. As explained above, the FAA anticipates that the waiver changes made in response to comments in the final rule will facilitate recognition of a foreign government's existing requirements as a compatible alternative that contains the minimum key elements of 14 CFR part 120.

H. Safety Case

1. Lack of Sufficient Data or Risk

Twenty commenters including ARSA, IATA, MOOG Inc., and Lufthansa Group stated that there is insufficient statistical data (*i.e.*, no safety case) to justify a rule requiring drug and alcohol testing programs at foreign repair stations. Several commenters continue to question the safety risk that would make issuance of a new regulation necessary, with A4A asserting safety measures must be data-driven and risk-based because the FAA fosters the industry's success with its scientifically-based and data-driven safety regulations and programs. Because there have been no accidents or incidents related to safety-sensitive maintenance personnel using drugs or alcohol, A4A argued Congress requires this rule, not the FAA's safety mandate. Commenters asserted the FAA has no data showing evidence that drug use or alcohol misuse has ever caused or contributed to a maintenance function-related accident or incident, ergo there are no "proven accidents and incidents" involving drug use or alcohol misuse by maintenance personnel in the United States, European Union, and beyond. Some commenters argued that the absence of data indicates that there is no safety risk or productivity justification for the rule.

Commenters including Airbus Commercial Aircraft, ARSA, IATA, CAA, and RAA emphasized how the FAA acknowledged in the NPRM there have been no accidents or incidents related to safety-sensitive maintenance personnel using drugs or alcohol and that the FAA could not determine whether the rule would have any additional impact on safety because the FAA does not have testing data or knowledge of existing testing programs in other countries. Some commenters,

including GAMA and MOOG Inc., confirmed they have no records showing an issue with safety records and quality performance. Similarly, commenters from China (including Taikoo Shandong Aircraft Engineering Co., Ltd, Taikoo Xiamen Aircraft Engineering Co. Ltd, Taikoo Xiamen Landing Gear Services Co. Ltd, and HAECO Component Overhaul Xiamen Ltd.).

BDLI, IHI Corporation, and JAL Engineering provided information that there is no record of an accident or incident that can be attributed to drug use or alcohol misuse. DG MOVE and UK DFT commented that there have been no occurrences of safety data at the United States level or the European Union level to substantiate the need to extend the current requirements to the EU. DG MOVE noted that a review of the European Central Repository looking at all incidents, serious incidents, and accidents in the EU Member States/EEA States between 2015–2023 showed only 4 references to maintenance engineers who were suspected of consuming alcohol before work. In addition, IATA commented that between 1970 and 2012, there were no occurrence reports of drug or alcohol intake at maintenance facilities in the ICAO Accident Data Reporting system. IHI Corporation would like the FAA to show how much flight safety will improve by conducting this testing, to ensure the cost is worth the benefit. BDLI stated lack of training, failure to follow instructions, overconfidence, distraction, fatigue, or a non-ergonomic workplace are far more likely to be named as potential sources of danger.

The FAA acknowledges that it continues to have insufficient data to estimate a baseline level of safety risk associated with drug use and/or alcohol misuse at foreign repair states by safety-sensitive maintenance personnel. The FAA believes that the safety data showing the number of positive test results for maintenance personnel subject to testing under the FAA's domestic program offers strong support for this rulemaking. Based on the data reported to the FAA from all regulated domestic employers from 2005–2017, maintenance employees were subject to 1,343,887 drug tests (including all test types). Of those tests, 17,046 resulted in a verified positive drug test result for one or more of the drugs tested. From 2009–2017, employers reported that maintenance employees were subject to 568,156 alcohol tests (including all test types), and 1,516 of those tests had a confirmed alcohol concentration of 0.04 or greater. As the FAA has stated in

previous rules,³⁵ the FAA does not believe it should wait until there is an actual loss of human life before taking action to ensure safety-sensitive maintenance personnel are subject to testing. Only one link in the safety chain would have to fail for an accident to occur. Therefore, although the FAA cannot determine the quantitative impact on safety, Congressional intent has determined there is a safety benefit and the FAA has scoped this final rule to address the specific statutory mandates in 49 U.S.C. 44733(d)(2) and 49 U.S.C. 44733.

2. Existing Regulations

Many commenters noted that drug use and alcohol misuse in the aviation industry is sufficiently addressed through existing regulations of sovereign nations (including the European Union), as well as by the policies of employers within the industry. For example, DG MOVE commented they have robust safety management provisions in place for maintenance stations and the issue is covered by EU aviation safety regulations, in addition to Member States' employment laws. RAA mentioned the industry has been successful implementing Safety Management Systems including drug and alcohol abatement programs, which foster scientifically-based and data-driven approaches as well as voluntary reporting programs.

Boeing Research and Technology commented that stringent drug and alcohol monitoring policies are already in place in many countries and the existing policies are designed to ensure the safety and reliability of aviation maintenance work, often exceeding the requirements proposed by the FAA. They also stated that in some countries, laws are not standardized at the national level, but instead vary by state or province; they also may vary by the class of driver.

The FAA received 2 comments from South Korean company Sharp Aviation K which requested an exemption and waiver from the rule due to the strict drug policy of South Korea. The company stated that South Korea's citizens are prohibited from using drugs and drug testing is already mandatory for every worker as pre-employment requirements including foreign workers prior to visa issuance.

Two commenters from Singapore questioned whether their existing processes were acceptable to meet the requirements of this rule. One individual questioned if a repair station

³⁵ For example, 71 FR 1666.

that already sends personnel for drug and alcohol testing during their pre-employment checkup needs to comply. The second, ST Engineering Aerospace Services Company Pte. Ltd., a foreign repair station, commented that Singapore already has a very strong policy against the sale and consumption of drugs, and their CAAS or local National Aviation Authorities (NAA) also has a bilateral agreement with FAA. They also stated they have a written policy on drug and alcohol testing which is accepted by other NAAs. They questioned whether their current policy is acceptable.

The FAA appreciates the few commenters that provided information about their countries' own testing laws, regulations, and/or requirements. This type of information helped the FAA better understand how countries impacted by this rule may have existing drug and alcohol testing requirements and local laws that could meet the same safety intent of the domestic requirements. As described previously, in response to comments, this final rule provides a waiver option allowing a foreign government, on behalf of all repair stations in the country, to submit an existing testing program for acceptance by the Administrator. An individual foreign repair station may also seek a waiver based on the laws of its country and current testing regimes or consequences that exist and meet the intent of the mandate. If a foreign repair station or its government, on behalf of all repair stations in the country, does not submit a request for waiver based on recognition of an existing testing program, the foreign repair stations must meet the requirements of 14 CFR part 120 and 49 CFR part 40, with the option to request a waiver or exemption as proposed in the NPRM.

3. Alleviate Public Safety Concerns

Twelve commenters who supported the NPRM noted the increased safety benefit the rule would bring and the need for a single level of safety domestically and in foreign countries. These commenters included the Teamsters, TTD, TWU, APA, NDASA, a software provider (Nexus 33 Group), and six individuals. The Teamsters argued for a single level of safety, stating the current "two-tiered" system of regulation is inappropriate and fundamentally unsafe. They also stated the ability of air carriers to evade regulatory responsibilities and the attendant costs of those responsibilities has played a role in the continued outsourcing of heavy maintenance. TTD stated it is a glaring and troubling loophole in the regulation that workers

at domestic facilities must undergo extensive drug and alcohol testing while foreign mechanics working on U.S. aircraft are exempt. One individual commenter stated the benefit to safety outweighs any cost to foreign repair stations to implement these programs and potential obstacles of implementation. Nexus 33 Group LLC commented that safety is a team effort regardless of location and a drug free workplace is essential to safety. They stated that they recognize that many international repair stations already have a drug free workplace in place, and this would simply confirm their current enforcement of internal policies with oversight. An individual commented that airlines should always strive to keep their operations as safe as possible, and this NPRM could bring an additional "cushion" towards that. Another individual commented that they have seen the benefits of enhanced safety protocols as they relate to a sound workplace drug and alcohol testing program in the U.S., and it makes sense from a safety standpoint to expand a similar program to further ensure the safety of the traveling public. APA commented that although there have been no instances of an accident due to drug or alcohol use by someone in a safety-sensitive position, it is not an effective approach to safety to wait for something to happen before taking steps to prevent it from happening. APA further stated safety is not negatively impacted by these drug and alcohol programs, so there is no downside to implementing them from a safety perspective.

As previously discussed in the NPRM, the FAA does not have sufficient data to estimate a baseline level of safety risk associated with drug use and/or alcohol misuse at foreign repair stations. The FAA received minimal explicit quantitative or qualitative information pertaining to foreign countries' laws and regulations, program elements of acceptable drug and alcohol testing, and existing drug and alcohol testing programs in other countries. The FAA also continues to recognize the number of accidents and incidents involving drug use and/or alcohol misuse by safety-sensitive maintenance personnel at foreign repair stations is unknown. Because the FAA does not have sufficient testing data or knowledge of existing testing programs in other countries, the FAA is unable to estimate the impact of the final rule in detecting and deterring drug use and/or alcohol misuse. However, the FAA acknowledges commenters that asserted a public safety concern with foreign

repair stations and agrees with commenters that acknowledged the safety benefits of drug and alcohol testing programs in the U.S. The FAA supports such programs to further ensure safety of the traveling public.

I. Financial, Technical, and Operational Concerns

1. Benefits and Costs

Nineteen commenters mentioned the necessity of considering whether the benefits of mandating drug and alcohol testing programs in foreign repair stations outweigh the costs. Many commenters believed this rulemaking would create an excessive economic burden on the company without a significant benefit, including BDLI. Moreover, several commenters stated such a program would impose excessive costs on business operations, which would ultimately be transferred to customers, placing an additional burden on domestic operators.

Airbus Commercial Aircraft commented that the lack of testing alternatives may convince some foreign repair stations to surrender their certificate because the volume of their activities with domestic operators no longer justifies their investment. A4A commented similarly, stating the FAA must consider the indirect competitive cost implications of the NPRM to the United States airline industry and assess the NPRM's indirect costs to domestic airlines if foreign repair stations refuse to comply and forgo their part 145 certification. Commenters generally expressed concern that the rulemaking will result in aircraft maintenance becoming unavailable to domestic air carriers at repair stations or in countries with few repair stations and will give an unfair competitive advantage to foreign air carriers. A4A asked the FAA to consider the likelihood of the loss of maintenance operations overseas for U.S. air carriers and the resulting economic and competitive impact for U.S. air carriers and the public that rely on their transportation. A4A stated the possibility is very real and included data on the strain on airline operations that currently struggle to obtain the necessary volume of maintenance services on a global scale.

Several commenters from China including HAECO Component Overhaul Xiamen Ltd., Hong Kong Aero Engine Services Limited, and Taikoo Xiamen Landing Gear Services Co. Ltd stated that such a program would provide no additional benefit while imposing excessive costs on their business operations, which would ultimately be

transferred to customers, placing an additional burden on U.S. operators.

The FAA acknowledges the commenters' concerns regarding the primary and secondary cost impacts to the industry. Given that the FAA is offering in the final rule an expanded waiver and an exemption option, foreign repair stations will be afforded several avenues to achieve compliance with the rule and maintain current operations without consequential additional costs.

2. Cost Data Based on U.S. Costs

Commenters including A4A, DG MOVE and ARSA expressed concerns about the accuracy of the cost data included in the NPRM, stating the FAA has not comprehensively assessed the practical and economic implications of the rule implementation in foreign countries. These commenters believed a complex and costly testing program of non-U.S. based personnel should be supported by solid data, including a comprehensive cost basis that is reflective of the local, regional situation and not based on United States pricing. DG MOVE stated the cost of implementation cannot be solely based on the cost for domestic organizations to comply since there are practicalities of implementation specific to foreign organizations that can have a large influence on cost, which cannot be reliably estimated. DG MOVE further stated the impact assessment is incomplete and does not allow for a relevant cost-benefit analysis. ARSA stated that the cost estimate does not include the cost of compliance if the rule cannot be implemented as if the repair station was in the United States.

The FAA acknowledges the commenters' concern with respect to using data denominated in U.S. dollars such data does not represent costs in local and regional situations. However, there is no country- or region-specific data available. Therefore, the FAA has converted the costs from U.S. dollars to exchange rates based on the Purchasing Power Parity (PPP). The FAA acknowledges this adjustment only accounts for exchange rates and heterogeneous price levels and not heterogeneous additional costs countries may incur as compared to complying with the rule within the jurisdiction of the United States, such as translation or legal services. However, the FAA does not have the data to estimate all the different cases that may arise in all the affected countries.

With respect to the practical and economic implications of the rule implementation in foreign countries, the FAA has considered the heterogeneous

impact this rule will have in different countries and has concluded that an analysis of such implications would be impracticable due to its complexity, uncertainty, and lack of necessary data. Furthermore, as previously noted, legal challenges may limit some countries from complying with the rule. Because of this uncertainty, the FAA is providing a waiver option that will allow countries or individual repair stations to demonstrate they have met the intent of the rule if they have testing standards that meet the elements set forth in this rule.

3. Costs Based on Compliance With HHS Requirements

Several commenters argued that the NPRM failed to account for the costs of compliance with HHS requirements that are incorporated through 49 CFR part 40. Among other things, ARSA commented that the FAA must assess the costs of obtaining HHS approval of laboratories and personnel, use of approved testing equipment, and transportation of specimens if necessary. ARSA argued that the FAA must review cost assessments included in the earlier rulemaking proceeding promulgating HHS requirements that would be applicable to foreign repair stations under the rule.

The FAA acknowledges the commenters' concerns regarding compliance with HHS requirements, which are included in 49 CFR part 40. However, the FAA regulatory impact analysis (RIA) assumed all repair stations would send their testing samples to already-approved HHS laboratories, which are all in the U.S. and Canada, and would not elect to request HHS approval of a laboratory in their own country. Therefore, the cost of laboratory approval is not included in the RIA.

As previously discussed, in this final rule the FAA is allowing a foreign government to obtain a waiver by requesting recognition of an existing testing program promulgated under the laws of the country that meets the minimum key elements set out in the regulation. If a foreign government chooses not to avail itself of this option, an individual foreign repair station may make its own request for a waiver based on recognition of an existing testing program. Under this option, the FAA may provide a waiver based on recognition of an existing testing protocol to the country as a whole or to an individual repair station, which would require no additional cost estimate.

4. Small Business and Subcontractor Costs

ARSA commented that the FAA must consider all tiers of small business that must comply with the current and proposed regulations and that the impact on small entities will be at least four times the amount estimated. They stated each repair station must evaluate whether their contractors and subcontractors will need to be included in their own programs to conduct aircraft maintenance, and the FAA failed to include the impact to contractors and subcontractors in the cost of the rule. Further, because they were not included, ARSA contended that these contractors and subcontractors did not have reasonable time to comment on the proposal. A4A agreed with the comments made by ARSA regarding the FAA's cost-benefit analysis.

The FAA acknowledges the impact to small businesses and their subcontractors. The FAA has included an analysis on the impact to small entities in the Regulatory Flexibility Act section.

With respect to subcontractors, this rule applies to foreign repair stations who perform maintenance on part 121 air carrier aircraft outside the U.S. The FAA did not estimate the cost to subcontractors because if a foreign repair station decides to contract with another non-certificated maintenance provider to perform safety-sensitive aircraft maintenance functions on a part 121 air carrier aircraft, the certificated repair station must include the personnel performing aircraft maintenance functions in their testing program. This rule does not require or allow a non-certificated contractor or subcontractor to implement its own FAA or DOT drug and alcohol testing program, which is why these parties are not accounted for in the rule. While this is different than how FAA applies testing within the U.S., the mandate for testing does not extend to non-certificated contractors or subcontractors that perform maintenance on part 121 air carrier aircraft outside the U.S.

5. Quantitative and Qualitative Benefits

APA and NDASA addressed the lack of economic data provided to the FAA, stating the lack of data does not nullify the safety benefit of the rule. NDASA suggested the FAA use a qualitative economic analysis for the rule, rather than a quantitative analysis. NDASA further commented the domestic program is effective as a deterrent, and the efficacy of drug and alcohol testing

programs is well-proven and without question. The history of the domestic program proves the deterrent effect of Federally mandated drug and alcohol testing. NDASA asserted the more than 35 years of effective deterrence is an important consideration that should be used to evaluate the costs and benefits of this rulemaking.

NDASA further commented that if a quantitative analysis is needed, the FAA should assess the costs of illicit drug use and substance abuse disorders rather than the cost of equivalent testing programs in other countries. NDASA referred to “Injury Costs” and the “Substance Abuse Cost Calculator” on the National Safety Council website and the calculator for workplace costs of substance use disorders on the National Institute of Health’s National Library of Medicine 2017 article from the Journal of Occupational Medicine for data.

The FAA agrees that drug and alcohol testing has certain qualitative benefits that are discussed in other sections of this preamble and the regulatory impact analysis supporting this final rule. With respect to quantitative data, the FAA declines to rely on the commenter’s proposed sources of data for a quantitative analysis. Those sources provide aggregated U.S.-based statistics and tools without a basis for extrapolation to aviation-sector employers in foreign countries. Furthermore, as noted in the NPRM and supporting documents, there are no documented cases in which an accident was connected to a repair station employee. Therefore, it is not possible to conduct a quantitative benefits analysis for this rule. The quantitative cost analysis the FAA conducted, as discussed herein and in the NPRM, accounts for the costs of implementing and maintaining an alcohol and drug testing program and the cost associated with submitting and reviewing requests for waivers and exemptions.

6. Economic Equity Between Domestic and Foreign Repair Stations

TWU and one individual noted the NPRM would level the economic playing field between foreign and domestic repair stations helping to correct an imbalance that benefits foreign repair stations. TWU stated the current regulatory requirements have created a loophole benefitting foreign repair stations by enabling and effectively encouraging the offshoring of aircraft maintenance jobs. Because foreign repair stations are not required to meet the same regulatory requirements as domestic repair stations, TWU claimed the number of foreign repair stations has grown more

than 40% since 2016, and approximately 56% of the total workforce maintaining, repairing, and overhauling U.S.-flagged aircraft is based outside of the United States. TWU pointed out China specifically, stating they employ more than 7% of the global workforce doing this work. They stated exempting these foreign repair stations from the regulation creates a relative advantage for those firms that are directly competing against the U.S. workforce.

In addition to the safety benefits, the FAA acknowledges that an alcohol and drug testing program for foreign repair stations that is equal to those programs required in the jurisdiction of the FAA would create uniform standards for all repair stations. The FAA further acknowledges the pathways provided in the final rule (*e.g.*, waivers pursuant to §§ 120.9 and 120.10) will not create a uniform standard for all foreign repair stations or between domestic and foreign repair stations. The purpose of these regulations is to obtain safety benefits equal to those required in the U.S. to the extent permissible under the Congressional mandate, which requires a balance between the safety benefits of domestic testing requirements deemed acceptable by the Administrator and conflicting foreign requirements.

7. Specific Implementation Concerns

A number of commenters believed costs of implementation for a domestic repair station are minimal compared to the burden on the government and the foreign citizens because of the drug and alcohol testing requirements. A4A pointed out such obstacles may be so unreasonable to overcome or present such burdens that the cost of compliance far outweighs any measurable benefit and asked the FAA to strongly consider any obstacles that may result in validity issues, unfairly threaten the careers of qualified maintenance employees, or make compliance unreasonably burdensome for a repair station. RAA agreed with this comment and asked the FAA to address how the FAA envisions small repair stations to implement the program, especially in remote locations. Commenters including ARSA and IATA pointed out many examples of requirements of 49 CFR part 40 that will be difficult to implement in a foreign country, such as the dependence upon qualifications and training for service agents (*e.g.*, Medical Review Officers, collectors, and substance abuse professionals) that are specific to the United States, or equipment such as alcohol screening devices that may not be readily available in every country.

IATA commented that these testing devices also have very specific use and care requirements that can only be performed by its manufacturer or a certificated maintenance representative. New Era Drug Testing, MRO Holdings, and ASAP addressed the need for established training for collectors and other personnel in the testing process, including collectors and MROs. New Era also brought up the need for multilingual translators for MROs during donor interviews. ASAP further stated the FAA needs to do further engagement with foreign governments and stakeholders to fully understand the practical challenges of adapting the procedures. Airbus Commercial Aircraft commented that not all maintenance personnel should be automatically subject to alcohol and controlled substance testing because this could lead to organizations circumventing the costs associated with the establishment and maintenance of a testing program. Specifically, Airbus stated that some organizations maintaining components off wing may be tempted to deliver their components to distributors who do not hold a part 145 certificate, or to establish such a company to distribute their components. MOOG Inc., also stated that aircraft undergoing maintenance may have components removed and replaced by new or maintained articles which, as produced under FAA part 21 requirements, are not subject to drug and alcohol programs, meaning a component removed from a part 121 aircraft and replaced with a new component will not be manufactured with a drug and alcohol program compliant to 14 CFR part 120 and 49 CFR part 40.

Commenters including A4A, DG MOVE, MRO Holdings, Airbus, and New Era expressed concern for the lack of laboratories certified by the Department of Health and Human Services under the National Laboratory Certification Program outside of the United States and the significant burden associated with shipping specimen to a laboratory in the United States in a manner that complies with HHS’s strict chain of custody requirements, or attempting to get a local laboratory certified, which they stated is not a cost accounted for in the rule. A4A and MRO Holdings also noted the possibility of specimen validity and the potential for a sample to be exposed to extreme temperature variances, causing distortion if repair stations are required to ship specimens across borders. Other commenters mentioned foreign repair station operations in remote locations where available individuals qualified to

perform collections as well as access to timely resources and shipping options are limited. Airbus commented it is unclear why the flexibility provision applicable to the domestic repair stations not electing to implement a drug and alcohol testing program is not equally offered to foreign part 145 certificated repair stations and the lack of suitable solutions may convince some part 145 certificated repair stations located outside the U.S. to surrender their certificate, for example, because the volume of their activities with U.S. operators no longer justifies their investment.

A SAP directory service that supported the rule, *SAPlist.com*, also brought attention to the difficulty outside of cost to implementing the return-to-duty process outside of the U.S., citing language barriers, exams, time differences, and international referrals for substance abuse professionals. The commenter raised several questions regarding the SAP process, including whether the SAP must be in the U.S. or in the foreign country. If the SAP is in the U.S. and provides a virtual assessment, the commenter asked how a SAP could make referrals for treatment in another country, noted language differences, online resources being in another language, time differences, and virtual assessments requiring certain technologies. If the SAP is in the foreign country, the commenter raised the issue of ensuring the SAP is qualified to DOT standards with no qualification training or exams in another language than English, and SAP credentials outside the U.S. The commenter also asked whether DOT will provide the regulations in other languages. DG MOVE also mentioned the cost of training and qualification of SAPs. ASAP raised similar questions about international SAP qualifications; the availability of international SAPs and treatment programs that understand the local requirements and U.S. regulations; the geographical, logistical, and legal challenges of international telehealth services, international substance use treatment protocols; and whether repair stations will need to make international referrals. ASAP commented adapting part 40 requirements for use in foreign certificated repair stations involves careful consideration of the local legal systems, cultural norms, and available substance abuse treatment resources.

A4A recommended the FAA undertake a full cost-benefit analysis of the burdens of implementation as recommended by OMB Circular No. A-4, which states analysis should “look beyond the obvious benefits and costs of

your regulation and consider any important additional benefits or costs, when feasible.” A4A requested a supplemental proposal to minimize these obstacles and present an updated regulatory impact analysis.

The FAA acknowledges commenters’ extensive concerns about implementing the requirements of 14 CFR part 120 and 49 CFR part 40 outside the territories of the U.S. Further, the FAA acknowledges commenters’ concerns that some testing or procedural requirements in the regulations would be especially burdensome and costly to meet for a part 145 repair station located outside the territory of the U.S. (e.g., use of HHS-certified laboratories). As discussed above, this final rule expands waiver options to foreign governments on behalf of repair station operators within its territory. The waiver option is now also available to an individual foreign repair station, which may seek a waiver based on recognition of an existing testing program promulgated under the laws of the country as a compatible alternative that meets the key elements set out in the regulation. By obtaining a waiver based on recognition, a foreign repair station may meet the requirements of this final rule without applying 14 CFR part 120 and 49 CFR part 40 directly. It will allow them to present a program or other requirements that exist in their country’s existing framework to the Administrator for recognition as the basis for the waiver, which will eliminate the need to meet requirements in 14 CFR part 120 and 49 CFR part 40 that have been identified by commenters as exceedingly difficult to implement.

The FAA also acknowledges the commenters’ concerns regarding the secondary cost impacts to the industry. Given that FAA has provided more flexibility for the waiver options and there are exemption options in the final rule, there will be several avenues for foreign repair stations to comply with the rule and maintain current operations without consequential additional costs. The regulatory impact analysis has been updated to reflect the additional means of compliance included in the final rule.

J. Extending Testing to Part 121 Maintenance Personnel

In the NPRM, the FAA sought comments as to whether the testing requirements should be extended to foreign aircraft mechanics working directly for part 121 carriers. Commenters were asked to submit data that would allow the FAA to quantify the benefits and costs of expanding drug

and alcohol testing requirements to these mechanics.

Three commenters who supported the NPRM, including the Teamsters, stated that if the goal of the NPRM is to eliminate an aviation maintenance ecosystem in which the ability to uphold a single level of safety is predicated on the geographic location of the maintenance facility, all aircraft mechanics working on part 121 aircraft should be captured in the rulemaking. The Teamsters and TWU warned that without this coverage, the rule may create an incentive for part 121 carriers to move maintenance from a contracted part 145 repair station to an in-house facility where the airline can evade the regulatory costs associated with compliance. NDASA pointed out the statute does not explicitly restrict the FAA from including part 121 mechanics, and adding them to the rule is consistent with the statute. Airbus Commercial Aircraft commented that the absence of drug and alcohol testing requirements for employees of part 121 certificate holders located outside the United States may create an inconsistent treatment of maintenance personnel working at the same location and result in a weakness of a safety net.

Opposing commenters also commented on the proposal to include part 121 air carrier employees who perform aircraft maintenance, with A4A stating FAA’s safety data does not support an expansion of the rule and the FAA has not adequately considered or analyzed the costs and benefits of an expansion. A4A and GAMA noted that the FAA should stay within the confines of the statutory mandate and not expand the scope without support from safety data. By contrast, ARSA argued that the FAA must explain why it is not extending testing requirements to similarly-situated part 121 employees in foreign countries, and the failure to apply drug and alcohol testing in a uniform and consistent manner belies the FAA’s requirement to ensure aviation safety. A4E also commented on the differing treatment of employees from part 145 repair stations and part 121 operators, noting that the proposed regulations would not “level the playing field” for these entities because maintenance personnel employed by part 121 operators outside the U.S. are not subject to drug and alcohol testing while employees serving the same function for part 145 repair stations outside the U.S. would be under these regulations. The Lufthansa Group similarly commented that the proposal would not create a “level playing field.”

In response to the NPRM, the FAA received no safety data justifying the

benefits and costs of expanding drug and alcohol testing requirements to foreign aircraft mechanics working directly for part 121 carriers. Because the statutory mandate specifically required all part 145 repair station employees responsible for safety-sensitive maintenance functions on part 121 air carrier aircraft outside the U.S. to be subject to an alcohol and controlled substances testing program determined acceptable by the Administrator and consistent with the applicable laws of the country in which the repair station is located, and because the FAA lacks safety data to support an expansion of the rule, this final rule does not expand the scope of the rule to foreign aircraft mechanics working directly for part 121 carriers.

The FAA acknowledges comments noting that the final rule may result in differing treatment of part 145 and part 121 employees outside of the U.S. but finds the commenters' arguments unpersuasive. As discussed above, the FAA does not have an articulable safety basis to extend drug and alcohol testing to part 121 employees outside the U.S., and Congress has not instructed the FAA to do so. By contrast, Congress has mandated the FAA to require such testing of part 145 employees. Accordingly, though commenters suggested that the FAA must extend testing requirements to part 121 employees to ensure equivalent treatment to part 145 employees, the FAA concludes that the suggestion is misplaced because the record before the agency does not support an extension.

K. EU and International Civil Aviation Organization (ICAO)

A4E commented a European Union-wide solution is preferable for waivers and exemptions. The Lufthansa Group commented they would like to see a waiver option established at the European Union level, since they have multiple repair stations located outside of Germany but within the European Union, each with its own defined labor law rules, regulations, and restrictions. This process should allow for bilateral discussions and negotiations and conclude with a formal agreement that expressly recognizes the laws of each country and appropriately addresses any inconsistencies at the country level, rather than the individual repair station level. They stated this will allow the foreign government to provide a single and unified position on its laws versus the potential for individual repair stations to inconsistently interpret the laws of their country, which may result in contrary waivers or exemptions for repair stations in the same country, and

thereby reducing the number of waiver and exemption requests the FAA and DOT would receive. Commenters stated this cooperation between governments would foster safety, the respective rights of individuals, consistency, and operational, administrative, and implementation efficiency regarding maintenance operations and employees.

Although some commenters suggested an EU-wide option for submitting waivers and exemptions, the FAA has not implemented this option. An EU-wide option is also not available for the second pathway of compliance with this rule where a foreign government, on behalf of its repair station operators within its territory, or an individual repair station may request a waiver based on recognition of an existing testing program promulgated under the laws of the country as a compatible alternative. Because each country has its own individual laws and requirements that may impact its drug and alcohol testing programs, each foreign government is in the best position to know the laws imposed on their own citizens.

Eighteen commenters including A4E, IATA, CAA, BDLI, GE Aerospace, Airbus Commercial Aircraft, and GAMA stated that the appropriate vehicle through which to require drug and alcohol testing at foreign repair stations would be a new ICAO initiative. These commenters believed consultation and coordination with ICAO member States is the only way to ensure the FAA meets the statutory requirement to be "consistent with the applicable laws of the country where the repair station is located." Specifically, the DG MOVE called upon the FAA to bring this issue to the attention of ICAO to examine the safety case and pursue a global solution through the establishment of international standards, where warranted.³⁶ GAMA stated ICAO should issue Standards and Recommended Practices (SRPs) governing such testing to ensure a single Member State does not violate the national sovereignty of others and that consultation and coordination through ICAO and with ICAO member states is the only method that can ensure the final rule is consistent with the applicable laws of a foreign repair station's country. Commenters believed an ICAO initiative

would set a common baseline for safety with adequate flexibility for varying customs and laws, which governments could follow when issuing their own regulations. A4A noted the single request the FAA made for countries to support ICAO action to establish alcohol and controlled substance testing requirements may have been compliant with the mandate, but it is not enough to reflect the FAA's support for international standardization. A4A mentioned other countries have continued their push for ICAO action on minimum standards for drug and alcohol testing, and they encouraged the FAA to continue efforts at ICAO for an international standard in lieu of the proposed rule. IATA also commented that an agreement through ICAO would preclude extraterritorial mandates and violations of local laws while providing the framework for a global solution and that without such a solution, they are concerned that the FAA's current extraterritorial proposal would invite retaliation by other governments.

A supporting commenter, APA, stated that approaches to working with other countries and ICAO to develop joint guidelines have yielded little progress in implementing or enforcing drug and alcohol standards internationally. They stated that despite jointly developed ICAO standards in Annex 1 to the Convention on International Civil Aviation and various countries' aviation regulations prohibiting the use of drugs and alcohol, many countries either do not mandate compliance testing for aviation personnel or they exclude maintenance personnel from testing.

The FAA has supported the development of international drug and alcohol testing standards since the Congressional mandate was first introduced and believes that they could help deter and detect drug use and alcohol misuse that could compromise aviation safety. In addition to promulgating a proposed rulemaking, the FAA Modernization and Reform Act of 2012 sought to direct the Secretaries of State and Transportation, acting jointly, to request the governments of foreign countries that are members of ICAO to establish an international standard for alcohol and controlled substances testing of persons who perform safety-sensitive work on commercial air carriers. The Department of State sent a cable to all embassies on October 19, 2012. Although the response was minimal, most of the member states that did respond supported these efforts. However, as explained in the NPRM, ICAO standards still do not require ICAO Member States to establish (or direct industry to

³⁶ The FAA notes that, after the comment period closed, the FAA engaged in a meeting with DG MOVE and EASA for the Bilateral Oversight Board for the U.S.-EU Safety Agreement on June 11, 2024. At that time, DG MOVE reiterated its concerns with the proposal and specifically suggested collaboration with the FAA at ICAO to pursue a more global approach on the issue. The FAA uploaded a Memorandum to the docket summarizing the interaction as of July 8, 2024.

establish) testing programs to deter or detect drug use and alcohol misuse by aviation personnel in the performance of safety-sensitive functions. Although the ICAO standards set forth in Annex 1 and many countries' aviation regulations prohibit the use of drugs and alcohol by certain aviation personnel when use may threaten aviation safety, many countries either do not require testing of aviation personnel to verify compliance or do not extend testing to safety-sensitive maintenance personnel. Should ICAO adopt drug and alcohol program standards in the future, it is FAA policy to conform to ICAO SARPs to the maximum extent practicable in keeping with U.S. obligations under the Convention on International Civil Aviation.

The FAA reconsidered and expanded its waiver options for the final rule, whereby a foreign government, on behalf of its repair station operators, or an individual foreign repair station, may seek a waiver based on the laws of the country. This alternative to meeting the requirements of 14 CFR part 120 and 49 CFR part 40 will allow a repair station to operate a testing program based on the laws of its country and current testing regimes or consequences that exist. The FAA publishes this final rule in accordance with the Act's statutory mandate in an area within which there are no applicable ICAO SARPs. The FAA expects this waiver to more easily allow for the application of a testing program that is in alignment with any future SARPs.

L. Scope of Safety-Sensitive Functions

Commenters requested clarification on what qualifies as an aircraft maintenance function. A4E argued the FAA failed to define the term in its regulation and has left it up to the Flight Standards Service of the FAA to determine, causing significant confusion. Airbus stated they believe only maintenance personnel performing tasks that could result in a failure, malfunction, or defect endangering the safe operation of the aircraft if not performed properly or if improper parts or materials are used should be considered for testing, and GAMA specified the testing should only apply to those performing "heavy maintenance" to meet the language of the statute. Some foreign repair station commenters expressed confusion about whether their repair station performs aircraft maintenance functions or stated they do not perform it, such as Excel Aerospace in Singapore and Honeywell in Brazil. There was also confusion among commenters about the status of manufacturing and whether it is

considered maintenance, and IHI Corporation requested examples of target roles of safety-sensitive maintenance functions. Airfoil Services in Malaysia sought clarification if they need a program because they perform maintenance on components that are delivered to a customer to be assembled later. Another foreign repair station, Tamagawa Aero Systems in Japan, asked which employee category they fall under in § 120.105. ARSA also commented the FAA is targeting maintenance providers, and no other type of safety-sensitive function regulated under 14 CFR part 120 is required to test at "any tier" in the contract.

Further, Airbus proposed limiting this rule to individuals with the authority to designate (identification/callout), implement, and/or perform inspection of Required Inspection Items (RII), which they state would make the requirements match the direction given by Congress. Airbus stated that when the FAA defined persons involved in aircraft maintenance (broad sense) with safety-sensitive functions, it implied that all personnel involved in maintenance carry out aviation safety-related aircraft maintenance. It stated the FAA should exclude maintenance personnel that are involved in aircraft maintenance that does not put aviation safety at risk.

Airbus also commented with respect to maintenance and preventive maintenance duties, stating it is unclear whether the qualifying term 'aircraft' is to refer to aircraft maintenance in the broad sense (e.g., aircraft maintenance vs. airport maintenance) or maintenance performed on aircraft (i.e., on-wing), excluding maintenance on articles and components not installed on an aircraft (i.e., off-wing). Airbus proposed a regulatory text change to 14 CFR 120.105(a) and 120.215(a) to read: "Duties related to required inspections of maintenance and alteration items of aircraft" instead of "aircraft maintenance and preventive maintenance duties." They stated this wording would allow the Administrator to use any appropriate designation, free from ambiguity, to target a precise population of personnel involved in maintenance and alteration of aircraft.

The FAA disagrees that further explanation or definition of aircraft maintenance functions are necessary in the rule. The drug and alcohol testing regulations intentionally do not differentiate between heavy or safety critical and non-safety critical forms of maintenance. When determining whether a safety-sensitive employee performs aircraft maintenance duties,

whether under a foreign or domestic repair station, impacted parties should consider the duties of their employees as they relate to the FAA's definition of maintenance under 14 CFR 1.1 and 14 CFR part 43. According to 14 CFR 1.1, maintenance includes inspection, overhaul, repair, preservation, and the replacement of parts, but excludes preventive maintenance. For example, a manufacturer that performs a test on a component to determine the extent of repairs necessary or the serviceability of a component is performing maintenance since the testing performed on the aircraft component may be part of an inspection requirement in the technical data being used in the testing process. The Flight Standards Service aviation maintenance inspectors are the experts in determining what functions meet the definitions of aircraft maintenance. The Flight Standards Service and the Drug Abatement Division in the FAA's Office of Aerospace Medicine developed guidance about the most common functions that are considered aircraft maintenance, which is provided in FAA Advisory Circular (AC) 120–126.³⁷ If an impacted party needs further guidance after reviewing the definitions and examples provided in FAA's AC 120–126, they should consult with the Flight Standards Service or their FAA Principal Maintenance Inspector (PMI). The FAA has made no regulatory changes to the definition of aircraft or maintenance based on these comments.

M. Miscellaneous Comments

Out of Scope Comments. One individual commenter stated the FAA should require testing and maintain the same standards as in the U.S., even if the laws of a country do not allow it. The FAA can override neither, first, the sovereignty of another country, nor, second, the Congressional direction in 49 U.S.C. 44733 to promulgate a rule requiring part 145 repair station employees be subject to an alcohol and controlled substances testing program that is consistent with the applicable laws of the country in which the repair station is located. One individual commenter stated the FAA should include truck drivers from Mexico and Canada when crossing the border to the U.S. The comments are outside the scope of the Congressional mandate and this rulemaking.

Excluded Countries. A4E commented on their concern for the creation of a

³⁷ FAA Advisory Circular 120–126, Guidelines to Establish, Implement, and Maintain a DOT/FAA Drug and Alcohol Testing Program (Jul. 10, 2024). https://www.faa.gov/regulations_policies/advisory_circulars/index.cfm/go/document/information/documentID/1042452

level playing field since the NPRM will not apply to countries without a requirement for a part 145 repair station certificate (e.g., Canada). Like part 121 employees outside the U.S. discussed in section IV.J, the FAA does not have an articulable safety basis to extend drug and alcohol testing generally to employees performing safety-sensitive maintenance functions for an organization that does not hold a part 145 repair station certificate located outside the territory of the U.S., and Congress has not instructed the FAA to do so. Instead, Congress has mandated the FAA to require such testing of part 145 repair station employees responsible for safety-sensitive maintenance functions on part 121 air carrier aircraft. Accordingly, though the commenter suggested that the FAA must extend testing requirements to non-certificated maintenance organizations that perform safety-sensitive maintenance, the FAA concludes that the suggestion is misplaced because the record before the agency does not support an extension.

Oral Fluid Testing. NDASA stated they believe the use of oral fluid testing will make implementation of part 40 easier outside of the U.S. once there are oral fluid laboratories available. Specifically, it may reduce the number of petitions for waiver or exemption from the rule since other countries may deem oral fluid testing less intrusive from a privacy perspective than urine testing. They stated oral fluid testing is preferred in Australia, New Zealand, and other countries. The FAA acknowledges this comment and agrees that the use of oral fluid drug testing may make drug testing collection more accessible to foreign repair stations.

Guidance. Airbus commented that it was unclear who is the principal maintenance inspector for European Approved Maintenance Organizations (AMOs) that obtained their U.S. part 145 repair station certificate under the U.S.-EU BASA MAG. Airbus recommended that guidance material should be developed, reviewed, and tested with several affected AMOs before the entry into force of the final rule of this rulemaking proposal to ensure a smooth implementation. The FAA acknowledges this comment and will work with AMOs to the extent necessary to comply with the final rule.

Random Testing Rates. MRO Holdings expressed concern as to how the FAA will calculate the random pool testing rate. The rate is determined by reviewing the positive rate for the “entire industry,” but these rates will differ from country to country, which could cause countries with low rates to

have burdensome and costly tests that are not aligned with usage rates of that country. Foreign repair stations that are required to meet the requirements of 14 CFR part 120 and 49 CFR part 40 may be required to submit an annual report of testing statistics in accordance with 14 CFR 120.119(a) and 120.219(b)(1), which allows the FAA to determine the positive rate for the entire industry. Because the Administrator’s decision to increase or decrease the minimum annual percentage rate for random drug testing is based on the reported positive rate for the entire industry, testing data submitted by foreign repair stations will be included in this calculation. Foreign repair stations with a waiver under section 120.10 are exempt from the obligations under subparts E and F of 14 CFR part 120; therefore, data will not be provided or considered in a random testing rate.

Addition of Unannounced Inspections. One individual commented that the FAA should mandate all foreign Aviation Maintenance Inspection and Repair on all U.S.-registered commercial aircraft, components, and articles to also mirror the U.S. by allowing unannounced inspections by the FAA and requiring duty time limitations. The commenter further stated that the NPRM’s current provisions, though promising, may benefit from a more granular examination to enhance the effectiveness of the proposed rule and address potential loopholes that might arise in practical implementation. The final rule implements a statutory mandate to require acceptable drug and alcohol testing of certain part 145 repair station employees outside the U.S. consistent with local laws where the repair station is located. Because this mandate does not include any changes to inspections or duty time limitations, this comment is outside the scope of this rulemaking.

More Inclusive Mandate. An individual commented that they advocate for a more inclusive mandate to mirror current U.S. regulations to ensure that the final regulations are not only effective but also resilient to the evolving landscape of Commercial Aviation Maintenance, Inspection and Repair to include both aircraft, components, and articles of all parts 121 and 145 entities outside of the U.S. This comment is outside the scope of the Congressional mandate and this rulemaking. This final rule implements a mandate to require acceptable drug and alcohol testing of certain part 145 repair station employees responsible for safety-sensitive maintenance on part 121 air carrier aircraft outside the U.S. consistent with local laws where the

repair station is located. Congress did not direct the FAA to comprehensively regulate entities or activities outside the U.S.

Withdrawal of the Rule. ARSA commented that the FAA may comply with the statutory mandate by withdrawing the NPRM. The FAA disagrees. Section 302 of the 2024 Act directed the FAA to issue a final rule that carries out the requirements of section 2112(b) of the 2016 Act within 18 months of the 2024 Act’s enactment. Conversely, the 2016 Act required a rulemaking to be “finalized.” Accordingly, Congress has directed the FAA to publish these regulations, and withdrawal would not be considered publication of a final rule.

Definitions. An anonymous commenter requested the FAA define the term “part 121 air carrier aircraft,” specifically asking whether it means the aircraft needs to be on the part 121 Operations Specifications, and if it needs to be in revenue service. The commenter believed a definition is necessary, and that the explanation in the preamble to the rule was insufficient. The FAA disagrees that a definition of “part 121 air carrier aircraft” is needed in this rule. Historically, testing applies to maintenance personnel who repair aircraft or aircraft parts listed on the part 121 air carrier’s Operations Specifications (D085).

V. Severability

As discussed earlier in the final rule, Congress directed the FAA to issue a final rule that requires all part 145 repair station employees responsible for safety-sensitive maintenance functions on part 121 air carrier aircraft outside the U.S. to be subject to an alcohol and controlled substances testing program determined acceptable by the Administrator and consistent with the applicable laws of the country in which the repair station is located. 49 U.S.C. 44733(d)(2).³⁸ Consistent with that mandate, the FAA is requiring foreign repair stations to comply with 14 CFR part 120 and 49 CFR part 40, subject to any waivers and exemptions. However, the FAA recognizes that these distinct pathways for compliance and certain provisions of this final rule will affect foreign repair stations and various stakeholders in different ways. Therefore, the FAA finds that the various provisions of this final rule are severable and able to operate functionally if severed from each other.

³⁸ Section 302 of the 2024 Act directed the FAA to issue a final rule implementing Congress’s mandate in 49 U.S.C. 44733(d)(2).

In the event a court were to invalidate one or more of this final rule’s provisions, the remaining provisions should stand, thus allowing the FAA to continue to carry out Congress’s statutory commands and objectives concerning the safety of maintenance on part 121 air carrier aircraft conducted by certificated repair stations located outside the U.S.

VI. Regulatory Notices and Analyses

Federal agencies consider the impacts of regulatory actions under a variety of requirements. First, Executive Order 12866, Executive Order 13563, and Executive Order 14094 (“Modernizing Regulatory Review”) direct that each Federal agency shall propose or adopt a regulation only upon a reasoned determination that the benefits of the intended regulation justify the costs. Second, the Regulatory Flexibility Act of 1980 (Pub. L. 96–354) requires agencies to analyze the economic impact of regulatory changes on small entities. Third, the Trade Agreements Act (Pub. L. 96–39) prohibits agencies from setting standards that create unnecessary obstacles to the foreign commerce of the United States. Fourth, the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4) requires agencies to prepare a written assessment of the costs, benefits, and other effects of proposed or final rules that include a Federal mandate that may result in the expenditure by State, local, and Tribal governments, in the aggregate, or by the private sector, of \$100 million or more (adjusted annually for inflation) in any one year. The current threshold after adjustment for inflation is \$183 million using the most current (2023) Implicit Price Deflator for the Gross Domestic Product. The FAA has provided a detailed Regulatory Impact Analysis (RIA) in the docket for this rulemaking. This portion of the preamble summarizes the FAA’s analysis of the economic impacts of this rule.

In conducting these analyses, the FAA has determined that this rule: will result in benefits that justify costs; is not a significant regulatory action under section 3(f)(1) of Executive Order 12866 but raises legal or policy issues for

which centralized review would meaningfully further the President’s priorities or the principles set forth in section 3(f) of Executive Order 12866, as amended by Executive Order 14094; will create unnecessary obstacles to the foreign commerce of the United States; and will not impose an unfunded mandate on State, local, or tribal governments, or on the private sector. These analyses are summarized below.

A. Summary of the Regulatory Impact Analysis

Total Benefits and Costs of This Rule

In response to Congressional direction, the FAA requires certificated part 145 repair stations located outside the U.S. and its territories whose employees perform safety-sensitive maintenance functions on part 121 air carrier aircraft to ensure those employees are subject to a controlled substances and alcohol testing program consistent with the applicable laws of the country in which the repair station is located. This rule requires a part 145 repair station located outside the territory of the U.S. to cover its employees performing safety-sensitive maintenance functions on part 121 air carrier aircraft under its own testing program that meets the requirements of 49 CFR part 40 and 14 CFR part 120. However, if a part 145 repair station cannot meet one or all requirements in 49 CFR part 40 (e.g., the laws of the country where the repair station is located are inconsistent with the regulations), it may apply for an exemption using the process described in 49 CFR 40.7. Similarly, if a part 145 repair station cannot meet one or all requirements in 14 CFR part 120, it may apply for a waiver in accordance with the waiver authority established in this rule. In addition, foreign governments, on behalf of their repair station operators within their territories, may request a waiver based on recognition of existing requirements promulgated under the laws of the country as a compatible alternative that contains the minimum key elements of 14 CFR part 120. However, if a foreign government chooses not to avail itself of this option, § 120.10 will provide that an individual foreign repair station may make its own

request for waiver based on recognition of an existing testing program that meets the key elements identified in the regulation.

Although the FAA was unable to identify any quantifiable benefits to this rulemaking at this time, this rulemaking applies the FAA’s existing primary tool for detecting and deterring substance abuse by safety-sensitive aviation employees, especially illegal drug use, throughout the international aviation community to enhance aviation safety.

Since the rule provides multiple opportunities for waiver, the FAA estimated low- and high-cost cases. The low-cost case assumes all countries with certificated repair stations will submit a request for waiver based on recognition. The total undiscounted cost is \$129,012 with the cost to industry at \$48,129 and \$80,882 to the FAA. At a seven percent discount rate, the total cost is \$116,690, \$64,540 annualized, and \$123,459 at a three percent discount rate, \$64,521 annualized. The benefits remain the same in the low-case as in the high-case. In the high-cost case the total cost, at seven percent present value, of this rule equals the foreign repair station cost of \$62 million, plus FAA cost of \$6.5 million for a total of \$68.5 million (\$69.8 million at three percent present value) over five years. The FAA has placed the Regulatory Impact Analysis for this rule in the docket for this rulemaking.

Who is potentially affected by this rule?

- Part 145 Certificated Foreign Repair Stations outside the U.S. that perform safety-sensitive maintenance functions on part 121 aircraft.
- The FAA Office of Aerospace Medicine.

Costs of This Rule

Part 145 certificated foreign repair stations outside the U.S. and the FAA will incur the cost of this final rule. In the low-cost case the FAA assumes all countries with certificated repair stations will submit a request for a waiver based on recognition. The cost to the industry consists of reporting and submission costs for the request. The cost to the FAA consists of review of the request.

TABLE 2—PRICE LEVEL ADJUSTED COST FOR THE WAIVER BASED ON RECOGNITION
[2022 U.S. dollars]

Year	Industry	FAA	Total	Discounted costs (7%)	Discounted Costs (3%)
1	\$24,468	\$41,063	\$65,532	\$61,244	\$63,623
2	23,661	39,819	63,480	55,446	59,836

TABLE 2—PRICE LEVEL ADJUSTED COST FOR THE WAIVER BASED ON RECOGNITION—Continued
[2022 U.S. dollars]

Year	Industry	FAA	Total	Discounted costs (7%)	Discounted Costs (3%)
Total	48,129	80,882	129,012	116,690	123,459
Annualized				64,540	64,521

In the high-cost case, the estimated cost of the final rule to part 145 certificated foreign repair stations are the costs to implement a drug and alcohol testing program that adheres to U.S. domestic testing standards. Cost to foreign repair stations will consist of

developing a drug and alcohol testing program, training, testing safety sensitive maintenance employees for drugs and alcohol, and documentation. Total cost to foreign repair stations over five years, at seven percent present value, sums to \$49.6 million with an

annualized cost of \$12.1 million. At three percent present value, estimated total cost to foreign repair stations is \$55.6 million with an annualized cost of \$12.1 million.

TABLE 3—COST TO PART 145 FOREIGN REPAIR STATIONS OVER 5 YEARS
[\$Millions]*

Year	Program and training development & maintenance	Training	Testing (drug and alcohol)	Annual reports	Total cost (7% PV)	Total cost (3% PV)
1	\$0.4	\$7.6	\$0.0	\$2.1	\$9.4	\$9.8
2	0.3	1.0	4.5	6.8	11.0	11.9
3	0.3	1.0	4.5	6.8	10.4	11.6
4	0.3	1.0	4.6	6.9	9.7	11.3
5	0.3	1.0	4.6	6.9	9.1	11.0
Total	1.6	11.7	18.2	29.4	49.6	55.6

*These numbers are subject to rounding error.

Cost to the FAA would include inspections and the necessary documentation associated with monitoring these repair stations. Total cost to FAA over five years, at seven percent present value, sums to \$6.5 million with an annualized cost of \$1.6 million. At three percent present value, total cost is \$7.4 million with an annualized cost of \$1.6 million.

Benefits of This Rule

Congress mandated that the FAA propose a rule that establishes drug and alcohol testing programs for foreign repair stations. Any benefits of the regulations would result from potential reductions in safety risks, any improvements in safety in detecting and deterring drug use and/or alcohol misuse, and reductions in lost worker productivity. The FAA concludes that two specific sets of benefits may accrue from this rulemaking:

- The prevention of potential injuries and fatalities and property losses resulting from accidents attributed to controlled substances use/alcohol misuse or neglect or error on the part of individuals whose judgement or motor skills may be impaired by the presence of alcohol or drugs; and

- The potential reduction in absenteeism, lost worker productivity, and other cost to employers, as well as improved general safety in the workplace, by the deterrence of drug use and/or alcohol misuse.

However, the FAA lacks sufficient data to estimate a baseline level of safety risk associated with a drug and alcohol testing program at part 145 certificated foreign repair stations that perform safety-sensitive maintenance on part 121 aircraft. Additionally, it is difficult to estimate (and the FAA does not have data on) the impact of the final rule in detecting and deterring drug use and/or alcohol misuse. To estimate safety and productivity benefits that would result from the proposed rule, the FAA would need estimates of the following:

- Baseline risks attributable to drug use and/or alcohol misuse;
- Effectiveness of the rule; and
- Value of the reduction in risk of affected outcomes.

The FAA sought comments on this issue and did not receive any data. The FAA also requested that commenters submit data that would allow it to quantify the safety and productivity benefits of extending the proposed rule to foreign aircraft mechanics employed

directly by part 121 certificate holders and did not receive any data.

Baseline Risks Attributable to Drug Use and/or Alcohol Misuse

The FAA does not have data to estimate a baseline level of safety risk associated with safety-sensitive maintenance personnel drug use and/or alcohol misuse. The FAA acknowledges it is aware of no accidents or incidents related to safety-sensitive maintenance personnel using drugs or misusing alcohol. The FAA may use accidents or incidents related to part 121 aircraft that list maintenance as either a cause or factor in the accident report as a proxy to assess the decreased risk of injuries, fatalities, and property losses. However, it is difficult to attribute an accident or incident that occurs months after the maintenance was completed to poor maintenance work related to drug use and/or alcohol misuse.

Effectiveness of the Rule

The FAA would also need data on the effect of the rule on maintenance workers' drug use and/or alcohol misuse and the resulting effect on job performance. For example, drug and alcohol programs may serve as a

deterrent, resulting in less drug use and/or alcohol misuse by employees and higher productivity. However, it would be difficult to analyze the direct causal effect of less drug use and/or alcohol misuse to improved productivity. The FAA would need to retrieve extensive data, such as employees' health levels, employees' sleep patterns, changes to operating procedures, levels of education and training, and staffing levels, amongst other factors, to isolate the direct effect of a decrease in drug use or alcohol misuse on productivity levels. Additionally, even if this data were available, the analysis would be extensive and there would be academic questions regarding whether the causal effect was properly measured.

Additionally, as mentioned above, there are no accidents or incidents directly related to drug use and/or alcohol misuse to estimate the effect of the rule on injuries, fatalities, or property loss. Therefore, there is a lack of information to establish a baseline.

Value of Risk Reduction

The safety risks from drug use and/or alcohol misuse are increased risk of injuries and fatalities in the event of an accident or incident. The FAA values the reductions in such risks using the value of statistical life (VSL) for fatalities and fractions of the VSL based on the Maximum Abbreviated Injury Scale (MAIS) for injuries. The Department of Transportation guidance on valuing reductions in fatalities and injuries³⁹ could be used to monetize and quantify estimates of the potential safety benefits associated with this rulemaking.

Alternatives Considered

Alternative 1—the Status Quo—The status quo represents a situation in which the FAA would not propose to require part 145 foreign repair stations to test their safety-sensitive maintenance personnel for drugs and alcohol. This alternative is counter to Congressional direction and, therefore, rejected.

Alternative 2—The FAA would work through ICAO to create an international standard for drug and alcohol testing of maintenance personnel at repair stations. While the FAA is willing to work with ICAO, 49 U.S.C. 44733(d)(2) requires the FAA to expeditiously proceed with this rulemaking. In other

words, Congress directed the FAA to establish a program acceptable to the Administrator; working through ICAO to create an international standard may not expeditiously meet this intention given the time, resources, and scope of the adoption of an international standard. This alternative may not meet Congressional direction due to the multitude of Member State equities considered in the implementation of an ICAO standard.

B. Regulatory Flexibility Act

The Regulatory Flexibility Act (RFA) of 1980, (5 U.S.C. 601–612), as amended by the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121) and the Small Business Jobs Act of 2010 (Pub. L. 111–240), requires Federal agencies to consider the effects of the regulatory action on small business and other small entities and to minimize any significant economic impact. The term “small entities” comprises small businesses and not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000.

The FAA published an Initial Regulatory Flexibility Analysis (IRFA) in the proposed rule to aid the public in commenting on the potential impacts to small entities. The FAA considered the public comments in developing the final rule and this Final Regulatory Flexibility Analysis (FRFA). A FRFA must contain the following:

- (1) A statement of the need for, and objectives of, the rule;
- (2) A statement of the significant issues raised by the public comments in response to the IRFA, a statement of the assessment of the agency of such issues, and a statement of any changes made in the proposed rule as a result of such comments;
- (3) The response of the agency to any comments filed by the Chief Counsel for Advocacy of the Small Business Administration (SBA) in response to the proposed rule, and a detailed statement of any change made to the proposed rule in the final rule as a result of the comments;
- (4) A description of and an estimate of the number of small entities to which the rule will apply or an explanation of why no such estimate is available;
- (5) A description of the projected reporting, recordkeeping, and other compliance requirements of the proposed rule, including an estimate of the classes of small entities which will be subject to the requirement and the type of professional skills necessary for preparation of the report or record;

(6) A description of the steps the agency has taken to minimize the significant economic impact on small entities consistent with the stated objectives of applicable statutes, including a statement of the factual, policy, and legal reasons for selecting the alternative adopted in the final rule and why each of the other significant alternatives to the rule considered by the agency which affect the impact on small entities was rejected.

1. A Statement of the Need for, and Objectives of, the Rule

This rule requires certificated part 145 repair stations located outside the territory of the United States (U.S.) to ensure that employees who perform aircraft maintenance on part 121 air carrier aircraft are subject to a drug and alcohol testing program. A part 145 repair station located outside the territory of the U.S. will cover its employees performing maintenance functions on part 121 air carrier aircraft under its own testing program meeting the requirements of 49 CFR part 40 and 14 CFR part 120. If a part 145 repair station cannot meet one or all requirements in 49 CFR part 40 (e.g., the laws of the country where the repair station is located are inconsistent with the regulations), the part 145 repair station may apply for an exemption using the process described in 49 CFR 40.7. Similarly, if a part 145 repair station cannot meet one or all requirements in 14 CFR part 120, they may apply for a waiver in accordance with waiver authority established in this rule.

In addition, foreign governments may request a waiver, on behalf of their repair station operators within their territories, based on recognition of existing requirements promulgated under the laws of the country as a compatible alternative that contains the minimum key elements of 14 CFR part 120. However, if a foreign government chooses not to avail itself of this option, § 120.10 provides that an individual foreign repair station may request its own waiver based on recognition of an existing testing program that meets the key elements identified in the regulation.

The FAA's authority to issue rules on aviation safety is found in Title 49 of the United States Code (49 U.S.C.), specifically 49 U.S.C. 106 and 49 U.S.C. 45102. This final rule is further promulgated under section 308 of the FAA Modernization and Reform Act of 2012 (49 U.S.C. 44733); section 2112 of the FAA Extension, Safety, and Security Act of 2016 (the 2016 Act), which directed publication of a notice of

³⁹ DOT Departmental Guidance on Valuation of a Statistical Life. Economic Analyses. Office of the Secretary of Transportation. <https://www.transportation.gov/office-policy/transportation-policy/valued-departmental-guidance-on-valuation-of-a-statistical-life-in-economic-analysis>.

proposed rulemaking in accordance with 49 U.S.C. 44733; and section 302 of the FAA Reauthorization Act of 2024, which directed the issuance of a final rule carrying out the requirements of section 2112 of the 2016 Act.

2. Significant Issues Raised in Public Comments in Response to the Initial Regulatory Flexibility Analysis

The FAA received a comment summarized and acknowledged above concerning impacts to small entities. In response to commenters concerns, in this final rule, the FAA allows foreign governments, on behalf of certificated repair stations within their territories, and individual foreign repair stations subject to the rule, to obtain a waiver based on recognition of a compatible alternative that contains minimum key elements in lieu of compliance with

certain components of the Drug and Alcohol Testing Program.

3. A Response to SBA Comments

The FAA did not receive comments from the Chief Counsel for Advocacy of the SBA in response to the Initial Regulatory Flexibility Analysis provided in the proposed rule.

4. Small Entities To Which the Rule Will Apply

This rule will impact part 145 repair stations located outside the territory of the U.S. that perform safety-sensitive maintenance functions on part 121 air carrier aircraft. The Regulatory Flexibility Act defines a small business as “a business entity organized for profit, with a place of business located in the United States, and which operates primarily within the United States or which makes a significant contribution

to the U.S. economy through payment of taxes or use of American products, materials or labor.”⁴⁰ While the regulatory flexibility determination does not require small foreign entities to be considered, foreign repair stations may be using U.S. components or labor, especially if they are working on U.S.-manufactured aircraft; therefore, the FAA assumes the RFA applies.

The SBA established size standards for various types of economic activities, or industries, under the North American Industry Classification System (NAICS).⁴¹ These size standards generally define small businesses based on the number of employees or annual receipts. Table 4 shows the SBA size standard, based on the NAICS code, applicable to repair stations, as it encompasses air transport support activities to include aircraft maintenance and repair services.

TABLE 4—SMALL BUSINESS SIZE STANDARDS: AIRCRAFT MAINTENANCE AND REPAIR SERVICES

NAICS code	Description	Size standard
488190	Other Support Activities for Air Transportation	\$40.0 million.

Source: SBA.

NAICS = North American Industrial Classification System.

SBA = Small Business Administration.

Although the FAA was able to identify a size standard for repair stations to be considered small, the FAA lacks financial data to determine if foreign repair stations meet the applicable size standard. Instead, the FAA provides an analysis estimating the total cost to small entities based on available data for domestic repair stations. A 2011 antidrug and alcohol misuse prevention rule for domestic repair stations analyzed the effect on domestic repair stations that were small entities and subcontractors those entities used. That rule based the

regulatory flexibility determination analysis on a Transportation Security Administration (TSA) study that used Dun & Bradstreet data to estimate the share of domestic repair stations that would be considered small entities.⁴² The findings show that 93.28% of domestic repair stations would be classified as small entities. Extrapolating this estimate to the 977 foreign repair stations used in the analysis of this rulemaking results in 912 foreign repair stations that could be considered small entities.⁴³

5. Projected Reporting, Recordkeeping, and Other Compliance Requirements

Based on the total nominal cost of the rule to repair stations, \$60.9 million, the cost per repair station is \$62,331.⁴⁴ Multiplying the cost per repair station by the estimated 912 repair stations that are small entities results in a total cost to small entities of \$56.8 million over five years. Table 5 shows the estimated annualized compliance costs by category.

TABLE 5—AVERAGE COST OF COMPLIANCE AND SMALL ENTITIES

Category	Number of small entities	Average annualized cost per repair station
Program and Training Development & Maintenance Cost	912	\$322.52
Training	912	1,942.83
Testing Cost	912	3,027.79
Paperwork	912	4,897.96

1. Based on a baseline of existing practices and using a 7% discount rate.

⁴⁰ 13 CFR 121.105(a)(1). The Regulatory Flexibility Act defines a “small business” as having the same meaning as “small business concern” under section 3 of the Small Business Act. 5 U.S.C. 601(3). Section 121.105 of 13 CFR contains the Small Business Administration’s implementing regulations clarifying the definition of “small business concern.”

⁴¹ Small Business Administration (SBA). 2019. Table of Size Standards. Effective August 12, 2019. <https://data.sba.gov/dataset/small-business-size-standards/resource/d89a5f17-ab8e-4698-9031-dfeb34d0a773>.

⁴² Final Rule, Supplemental Regulatory Flexibility Determination, Antidrug and Alcohol

Misuse Prevention Programs for Personnel Engaged in Specified Aviation Activities: Supplemental Regulatory Flexibility Determination, 76 FR 12559 (Mar. 8, 2011).

⁴³ The calculation is as follows: $977 \times .9328 = 911.31$. This estimate is rounded up to 912.

⁴⁴ $\$60,896,928 / 977 = \$762,330.53$.

The final rule also allows foreign governments, on behalf of certificated repair stations within their territories, and individual foreign repair stations subject to the rule, to obtain a waiver based on recognition of a compatible alternative that contains minimum key elements in lieu of compliance with certain components of the Drug and Alcohol Testing Program. Entities that choose this means of compliance will incur \$1,325 in one-time costs.

6. Significant Alternatives Considered

Alternative 1—the Status Quo—The status quo represents a situation in which the FAA would not require part 145 foreign repair stations to test their safety-sensitive maintenance personnel for drugs and alcohol. This alternative is counter to Congressional direction and, therefore, rejected.

Alternative 2—The FAA would work through ICAO to create an international standard for drug and alcohol testing of maintenance personnel at repair stations. While the FAA is willing to work with ICAO, 49 U.S.C. 44733(d)(2) requires the FAA to expeditiously proceed with this rulemaking. In other words, Congress directed the FAA to establish a program acceptable to the Administrator; working through ICAO to create an international standard may not expeditiously meet this intention given the time, resources, and scope of the adoption of an international standard.

C. International Trade Impact Assessment

The Trade Agreements Act of 1979 (Pub. L. 96–39), as amended by the Uruguay Round Agreements Act (Pub. L. 103–465), prohibits Federal agencies from establishing standards or engaging in related activities that create unnecessary obstacles to the foreign commerce of the U.S. Pursuant to these Acts, the establishment of standards is not considered an unnecessary obstacle to the foreign commerce of the U.S., so long as the standard has a legitimate domestic objective, such as the protection of safety, and does not operate in a manner that excludes imports that meet this objective. The statute also requires consideration of international standards and, where appropriate, that they be the basis for U.S. standards. This rulemaking is congressionally mandated. The FAA assessed the potential effect of this rule and determined that it ensures the safety of the American public. Several commenters including organizations representing the interests of foreign governments, the commercial aviation industry, aviation workers, and foreign

repair stations voiced their opposition to an FAA drug and alcohol testing standard for foreign repair stations. As discussed in this preamble, these commenters cited failure to recognize each nation's sovereignty. They also noted that ICAO would be the more appropriate vehicle to set worldwide standards. As a result, this rulemaking could create an obstacle or retaliation to foreign commerce.

D. Unfunded Mandates Assessment

Title II of the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4) requires each Federal agency to prepare a written statement assessing the effects of any Federal mandate in a proposed or final agency rule that may result in an expenditure of \$100 million or more (in 1995 dollars) in any one year by State, local, and tribal governments, in the aggregate, or by the private sector; such a mandate is deemed to be a “significant regulatory action.” The FAA currently uses an inflation-adjusted value of \$183.0 million in lieu of \$100 million. This rule does not contain such a mandate; therefore, the requirements of title II of the Act do not apply.

E. Paperwork Reduction Act

The Paperwork Reduction Act of 1995 (44 U.S.C. 3507(d)) requires that the FAA consider the impact of paperwork and other information collection burdens imposed on the public. According to the 1995 amendments to the Paperwork Reduction Act (5 CFR 1320.8(b)(2)(vi)), an agency may not collect or sponsor the collection of information, nor may it impose an information collection requirement unless it displays a currently valid Office of Management and Budget (OMB) control number.

This action contains the following amendments to the existing information collection requirements previously approved under OMB Control Number 2120–0535. As required by the Paperwork Reduction Act of 1995 (44 U.S.C. 3507(d)), the FAA submitted these information collection amendments to OMB for its review.

Summary: Under §§ 120.1, 120.123 and 120.227, this rule extends the drug and alcohol testing regulations beyond the territory of the U.S. certificated part 145 repair stations located outside the territory of the United States to implement a drug and alcohol testing program in accordance with 14 CFR part 120 and 49 CFR part 40 to cover their employees who perform safety-sensitive maintenance functions on part 121 air carrier aircraft. Each repair station would be required to obtain an Antidrug and Alcohol Misuse Prevention Program

Operations Specification. In addition, each repair station located outside the territory of the U.S. would be required to provide drug and alcohol testing program management information system (MIS) data.

In addition, the final rule establishes a waiver process for foreign governments, on behalf of certificated repair stations within their territories, and individual foreign repair stations subject to the rule to obtain a waiver based on recognition of a country or foreign repair station's existing requirements or testing program(s) promulgated under the laws of the country as a compatible alternative that contains minimum elements of 14 CFR part 120. Affected foreign repair stations that receive a waiver based on recognition by the Administrator will be relieved from comprehensive compliance with subparts E and F of 14 CFR part 120 (in turn, providing relief from 49 CFR part 40) and will not need to seek further waivers or exemptions from 14 CFR part 120 or 49 CFR part 40.

Use: The information will be used by the part 145 repair station located outside of the territory of the U.S. to certify implementation and maintenance of a drug and alcohol testing program. The FAA's Drug Abatement Compliance and Enforcement Inspectors will use this information to identify those foreign repair stations with an active program for inspection scheduling. Inspections are used to verify compliance with the drug and alcohol testing regulations and requirements. In addition, the Drug Abatement Division will use the annual MIS data reported to calculate the annual random drug and alcohol testing rates in the aviation industry.

Under the expanded waiver option, *i.e.*, a waiver based on recognition, the information will be used by foreign governments, on behalf of their repair stations within their territories, or foreign repair stations if their regulating country does not avail themselves of this option, to demonstrate the foreign government or the part 145 repair stations located outside of the territory of the U.S. existing requirements promulgated under the laws of the country as a compatible alternative that contains the minimum key elements of 14 CFR part 120.

Respondents (including number of): There are currently 977 part 145 certificated repair stations located in 65 countries.

Frequency: Part 145 repair stations located outside the territory of the U.S. will provide information for program certification only once; however, these repair stations will also incur annual

program maintenance: *e.g.*, updates to the programs per new guidance; the random pool list; and the overall testing process. The aggregate annual testing data would be provided electronically

through the Department of Transportation's Drug and Alcohol Management Information System. For a waiver based on recognition, foreign governments, or part 145 repair stations located outside the territory of

the U.S. if their regulating country does not avail themselves of this option, will provide information for the Administrator's approval only once.

Annual Burden Estimate:

1. BURDEN FOR PROGRAM CERTIFICATION AND ANNUAL PROGRAM MAINTENANCE

Documentation	Number of repair stations	Hours per repair station	Hourly wage	Total cost
Antidrug and Alcohol Misuse Prevention Program Operations Specification	977	16.2 ⁴⁵	\$29.43 ⁴⁶	\$465,800

2. BURDEN FOR ANNUAL TEST DATA

Documentation	Total records ⁴⁷	Time per record (hours)	Hourly wage	Total cost	Average yearly cost ⁴⁸
Training records	544,176	0.25	⁴⁹ \$33.57	\$2,756,696	\$551,339
Records related to the alcohol and drug collection process, test results, refusal to test, employee dispute records, SAP reports, follow-up tests	262,384	5.0	34.47	26,584,052	5,316,810
Total	806,560	N/A	N/A	29,340,748	5,868,150

To calculate the number of drug and alcohol training records, the FAA took the 2021 data showing 147,194 mechanics and 29,439 supervisors and accounted for a 0.49 percent growth rate over five years. Accounting for these rates results in an initial first year total of 148,637 mechanics and 29,728 supervisors. This is a total of 178,365 employees. In the first year all mechanics and supervisors will take anti-drug and alcohol training. These are two separate trainings. This requirement will result in 178,365 records for anti-drug training and 178,365 for alcohol training. In addition, supervisors will have to take an additional supervisor reasonable cause/reasonable suspicion determinations training for drugs and alcohol. This requirement will add another 59,456 records since they are two separate trainings as well.⁵⁰ Therefore, in the first year, there will be a total of 416,186 records.⁵¹

For year two and beyond, for drug records, the total records reflect the increase in new mechanics and supervisors which will be required to take the drug training. Using the growth

rate this results in 727 mechanics and 145 supervisors for a total of 872 records. The 145 new supervisors will also have to take the reasonable cause/reasonable suspicion determinations for drugs training. In addition, there is recurrent reasonable cause/reasonable suspicion determinations for drugs training that all supervisors will have to take every 12 to 18 months. In year two, this results in 29,728 supervisors taking the recurring trainings. Thus, the records for drug training in year two is 30,745.⁵² In addition, new mechanics and supervisors will be required to take alcohol training and supervisors will have to take the reasonable cause/reasonable suspicion determinations for alcohol training. This adds another 1,017 records. There is no recurrent alcohol training for supervisors. Therefore, in year two the total records are 31,762.⁵³

The same calculation for year two is repeated for years three through five. There are 31,919 records in year three, 32,075 in year four, and 32,234 in year five. This results in a total of 544,176 total training records over the five years.⁵⁴

To calculate the number of records related to alcohol and drug collection, the FAA sums the number of pre-employment drug tests, random drug and alcohol tests, and post-accident, reasonable cause, return to duty, and follow-up drug and alcohol tests per year beginning in year two. First, for drug testing, every new employee performing maintenance will be required to take a pre-employment drug test but not an alcohol test. Second, the FAA estimates 25 percent of current employees performing maintenance will be randomly drug tested per year. Third, there will be post-accident, reasonable cause, return to duty, or follow-up testing. The FAA estimates 1.70 percent of employees tested in a given year will be tested again under this category. The total drug tests over the five years is 187,202.⁵⁵

For alcohol testing, no pre-employment alcohol testing is required. The other two categories of alcohol testing will be the same as for drug testing. However, the FAA estimates random drug testing will occur at a rate of 10 percent of current employees and 4.10 percent for post-accident,

⁴⁵ Based on the previous PRA, the FAA assumes 16 hours in the first year to establish the testing program and one hour to register with the FAA's Drug Abatement Division. Therefore, 17 hours are required for the first year. For each year after, the recurring time to update and maintain the testing list will be 16 hours. The average over five years results in the 16.2 hours per year.

⁴⁶ Office and Administrative Support Workers (SOC 43-9199), May 2022; Mean Hourly Wage \$20.75 <http://www.bls.gov/oes/2022/May/oes439199.htm>. The total wage includes BLS compensation data. For 2020, BLS has wages at 70.5 percent total compensation while benefits are 29.5

percent. Employer Costs for Employee Compensation—December 2022. https://www.bls.gov/news.release/archives/ecec_03172023.htm.

⁴⁷ Estimated number of records from 2018 to 2022.

⁴⁸ Average yearly cost is calculated by dividing total cost by five years.

⁴⁹ Information and Records Clerks (SOC 43-4000), May 2022; Mean Hourly Wage \$23.67 https://www.bls.gov/oes/2022/may/naics3_481000.htm#43-4000. The total wage includes BLS compensation data. For 2022, BLS has wages at 70.5 percent total compensation while benefits are 29.5 percent.

Employer Costs for Employee Compensation—December 2022. https://www.bls.gov/news.release/archives/ecec_03172023.htm.

⁵⁰ $29,728 * 2 = 59,456.0$

⁵¹ $178,365 + 178,365 + 59,456 = 416,186$.

⁵² $872 + 145 + 29,728 = 30,745$.

⁵³ $30,745 + 1,017 = 31,762$

⁵⁴ $416,186 + 31,762 + 31,919 + 32,075 + 32,234 = 544,176$

⁵⁵ This is broken down by category as 3,516 pre-employment drug tests, 180,558 random drug tests, 3,128 post-accident, reasonable cause, return to duty, and follow-up tests.

reasonable cause, return to duty, and follow-up tests. The total alcohol tests

over the five years is 75,182.⁵⁶ Taking the sum of drug and alcohol tests results

in 262,384 records related to alcohol and drug collection.

WAIVER BASED ON RECOGNITION

Documentation	Total submissions ⁵⁷	Time per submission ⁵⁸	Hourly wage ⁵⁹	Total cost
Request for a Waiver Based on Recognition	65	20	\$66.25	\$86,124

The FAA assumes that every foreign government that regulates part 145 repair stations located outside the territory of the U.S. will submit a request for a waiver based on recognition. There are 65 countries that have part 145 repair stations within their territories so there will be 65 submissions. Each submission will require 20 hours at an hourly wage of \$66.25. Thus, the total cost for all 65 of the submissions is \$86,124. This will be one time cost.

F. International Compatibility

In keeping with U.S. obligations under the Convention on International Civil Aviation, it is FAA policy to conform to ICAO Standards and Recommended Practices to the maximum extent practicable. The FAA has determined that there are no ICAO Standards and Recommended Practices that correspond to these proposed regulations.

G. Environmental Analysis

FAA Order 1050.1F identifies FAA actions that are categorically excluded from preparation of an environmental assessment or environmental impact statement under the National Environmental Policy Act (NEPA) in the absence of extraordinary circumstances. The FAA has determined this rulemaking action qualifies for the categorical exclusion identified in paragraph 5–6.6f for regulations and involves no extraordinary circumstances.

VII. Executive Order Determinations

A. Executive Order 13132, Federalism

The FAA has analyzed this final rule under the principles and criteria of Executive Order (E.O.) 13132, Federalism. The FAA has determined

that this action will not have a substantial direct effect on the States, or the relationship between the Federal Government and the States, or on the distribution of power and responsibilities among the various levels of government, and, therefore, will not have federalism implications.

B. Executive Order 13211, Regulations That Significantly Affect Energy Supply, Distribution, or Use

The FAA analyzed this final rule under E.O. 13211, Actions Concerning Regulations that Significantly Affect Energy Supply, Distribution, or Use (May 18, 2001). The FAA has determined that it is not a “significant energy action” under the executive order and is not likely to have a significant adverse effect on the supply, distribution, or use of energy.

C. Executive Order 13609, Promoting International Regulatory Cooperation

Executive Order 13609, Promoting International Regulatory Cooperation, promotes international regulatory cooperation to meet shared challenges involving health, safety, labor, security, environmental, and other issues and reduce, eliminate, or prevent unnecessary differences in regulatory requirements. The FAA has analyzed this action under the policy and agency responsibilities of Executive Order 13609 and has determined that this action could create differences in international regulatory requirements. The FAA acknowledges that a foreign government may ask the FAA to revisit certain international agreements, as discussed in section IV.I, to accommodate this action.

VIII. Additional Information

A. Electronic Access and Filing

A copy of the NPRM, all comments received, this final rule, and all background material may be viewed online at <https://www.regulations.gov> using the docket number listed above. A copy of this final rule will be placed in the docket. Electronic retrieval help and guidelines are available on the website. It is available 24 hours each day, 365 days each year. An electronic copy of this document may also be downloaded from the Office of the Federal Register’s website at <https://www.federalregister.gov> and the Government Publishing Office’s website at <https://www.govinfo.gov>. A copy may also be found on the FAA’s Regulations and Policies website at https://www.faa.gov/regulations_policies.

Copies may also be obtained by sending a request to the Federal Aviation Administration, Office of Rulemaking, ARM–1, 800 Independence Avenue SW, Washington, DC 20591, or by calling (202) 267–9677. Commenters must identify the docket or notice number of this rulemaking.

All documents the FAA considered in developing this final rule, including economic analyses and technical reports, may be accessed in the electronic docket for this rulemaking.

B. Small Business Regulatory Enforcement Fairness Act

The Small Business Regulatory Enforcement Fairness Act (SBREFA) of 1996 requires the FAA to comply with small entity requests for information or advice about compliance with statutes and regulations within its jurisdiction. A small entity with questions regarding this document may contact its local FAA official or the person listed under the **FOR FURTHER INFORMATION CONTACT**

⁵⁶ This is broken down by category as 72,223 random drug tests and 2,959 post-accident, reasonable cause, return to duty, and follow-up tests.

⁵⁷ Each foreign government that regulates part 145 repair stations will provide one submission.

⁵⁸ The total hours per submission is 20 hours and is disaggregated between a government program analyst that will do 15 hours of the work and a government manager that will do 5 hours of work.

⁵⁹ The hourly wage is the weighted average between the wages of the government program analyst and the government manager. Since the government program analyst will do 15 hours of the total 20 hours of work their wage, \$59.93, is multiplied by 0.75 (15/20 = 0.75). The government manager does the other 5 hours of work (5/20 = 0.25) and thus their wage, \$86.41, is multiplied by 0.25. (((\$59.93*0.75) + (\$86.41*0.25)) = \$66.25).

FAA Technical Pay Band, K Band with Washington DC locality; effective Jan. 2022, minimum salary \$131,917. The total loaded salary

of \$179,737 is divided by 2,080 hours to get the \$86.41 hourly wage. https://web.archive.org/web/20220402230925/https://www.faa.gov/sites/faa.gov/files/2022-02/core_salary_with_conversion.xlsx.

FAA Technical Pay Band, I Band with Washington DC locality; effective Jan. 2022, minimum salary \$90,877. The total loaded salary of \$123,820 is divided by 2,080 hours to get the \$59.93 hourly wage. https://web.archive.org/web/20220402230925/https://www.faa.gov/sites/faa.gov/files/2022-02/core_salary_with_conversion.xlsx.

List of Subjects in 14 CFR Part 120

Alcoholism, Air carriers, Alcohol abuse, Alcohol testing, Aviation safety, Drug abuse, Drug testing, Operators, Reporting and recordkeeping requirements, Safety, Safety-sensitive, Transportation.

The Amendment

In consideration of the foregoing, the Federal Aviation Administration amends chapter I of title 14, Code of Federal Regulations as follows:

PART 120—DRUG AND ALCOHOL TESTING PROGRAM

■ 1. The authority citation for part 120 is revised to read as follows:

Authority: 49 U.S.C. 106(f), 40101–40103, 40113, 40120, 41706, 41721, 44106, 44701, 44702, 44703, 44709, 44710, 44711, 44733, 45101–45105, 46105, 46306.

■ 2. Revise and republish § 120.1 to read as follows:

§ 120.1 Applicability.

This part applies to the following persons:

(a) All air carriers and operators certificated under part 119 of this chapter authorized to conduct operations under part 121 or part 135 of this chapter, all air traffic control facilities not operated by the FAA or by or under contract to the U.S. military; and all operators as defined in 14 CFR 91.147.

(b) All individuals who perform, either directly or by contract, a safety-sensitive function listed in subpart E or subpart F of this part.

(c) All part 145 certificate holders located in the territory of the United States who perform safety-sensitive functions and elect to implement a drug and alcohol testing program under this part.

(d) Beginning December 20, 2027, all part 145 certificate holders outside the territory of the United States who perform safety-sensitive maintenance functions on part 121 air carrier aircraft, except that section 120.5 and subparts E and F of this part do not apply to part 145 certificate holders outside the territory of the United States who perform safety-sensitive maintenance functions on part 121 air carrier aircraft that have obtained recognition pursuant to § 120.10.

(e) All contractors who elect to implement a drug and alcohol testing program under this part.

■ 3. Effective December 20, 2027, amend § 120.1 by revising paragraph (d) to read as follows:

§ 120.1 Applicability.

* * * * *

(d) All part 145 certificate holders outside the territory of the United States who perform safety-sensitive maintenance functions on part 121 air carrier aircraft, except that section 120.5 and subparts E and F of this part do not apply to part 145 certificate holders outside the territory of the United States who perform safety-sensitive maintenance functions on part 121 air carrier aircraft that have obtained recognition pursuant to § 120.10.

■ 4. Revise § 120.5 to read as follows:

§ 120.5 Procedures.

Each employer having a drug and alcohol testing program under this part must ensure that all drug and alcohol testing conducted pursuant to this part complies with the procedures set forth in 49 CFR part 40 and any exemptions issued to that employer by the Department of Transportation in accordance with 49 CFR 40.7.

■ 5. Add § 120.9 to read as follows:

§ 120.9 Waivers for Part 145 certificate holders outside the territory of the United States.

(a) A part 145 certificate holder whose employees perform safety-sensitive maintenance functions on part 121 air carrier aircraft outside the territory of the United States may request a waiver from the Administrator from any requirements under 14 CFR part 120, subpart E or F, if specific requirements of subpart E or F are inconsistent with the laws of the country where the repair station is located.

(b) Each waiver request must include, at a minimum, the following elements:

(1) Information about the organization, including the name and mailing address and, if desired, other contact information such as a fax number, telephone number, or email address;

(2) The specific section or sections of this part from which the organization seeks a waiver;

(3) The reasons why granting the waiver would not adversely affect the prevention of accidents and injuries resulting from the use of prohibited drugs and/or the misuse of alcohol by employees;

(4) A copy of the law that is inconsistent with the provision(s) of this part from which a waiver is sought;

(5) An explanation of how the law is inconsistent with the provision(s) of this part from which a waiver is sought; and

(6) A description of the alternative means that will be used to achieve the objectives of the provision that is the subject of the waiver or, if applicable, a justification of why it would be impossible to achieve the objectives of the provision in any way.

(c) Each request for a waiver must be submitted to the Federal Aviation Administration, Office of Aerospace Medicine, in a form and manner acceptable to the Administrator.

(d) Each request for a waiver must be submitted at least 90 days before the organization needs it to take effect.

■ 6. Add § 120.10 to read as follows:

§ 120.10 Waiver based on recognition of a foreign government's existing requirements or an existing testing program of a Part 145 certificate holder outside the territory of the United States.

(a) *General.* A foreign government on behalf of its part 145 certificate holders, or a part 145 certificate holder whose employees perform safety-sensitive maintenance functions on part 121 air carrier aircraft outside the territory of the United States (herein referred to as a foreign repair station), may request a waiver from the Administrator from the requirements of this part in recognition of the foreign government's existing requirements, or the foreign repair station's existing testing program developed consistent with the laws of its home country, as a compatible alternative to the requirements of this part.

(b) *Compatibility.* A request for recognition must demonstrate that the foreign government's existing requirements, or the foreign repair station's existing testing program, contain the following key elements of this part:

(1) A testing protocol or established consequences used to detect or deter, or both, employees who are responsible for safety-sensitive maintenance on part 121 air carrier aircraft from misusing alcohol and using drugs.

(2) An education or training program or materials that explain the impact and consequences of misusing alcohol and using drugs while performing safety-sensitive maintenance.

(3) The method used to rehabilitate and ensure that safety-sensitive maintenance employees who return to work on part 121 air carrier aircraft after a drug or alcohol test violation or consequence no longer misuse alcohol or use drugs.

(c) *Requests for recognition of a foreign government's existing requirements or a foreign repair station's existing testing program.* (1) Each request for recognition of a foreign

government's existing requirements or a foreign repair station's existing testing program must contain:

- (i) The name, title, address, email address, and telephone number of the primary person to be contacted regarding review of the request;
- (ii) Documentation of the foreign government's existing requirements or the foreign repair station's existing testing program demonstrating that the requirements or program contain the key elements of this part described in paragraph (b) of this section, including, if appropriate, copies of applicable laws, regulations, and other requirements carrying the force of law; and
- (iii) Appropriate data, records, or supporting explanation for the Administrator to consider in determining whether the foreign government's existing requirements or the foreign repair station's existing testing program contain the key elements of this part; and
- (iv) A statement that the requestor intends to notify the Administrator within 30 days of any change to the key elements described in paragraph (b) of this section that form the basis of the Administrator's recognition pursuant to paragraph (d)(2) of this section and provide a description of those changes in such notification.

(2) Each request for recognition must be submitted to the Federal Aviation Administration, Office of Aerospace

Medicine, in a form and manner acceptable to the Administrator.

(3) Each request for recognition must be submitted at least 90 days before the organization needs it to take effect.

(d) *Disposition.* (1) The Administrator will evaluate a request for recognition and may request additional information, documentation, or explanation, as needed, to supplement the request.

(2) A foreign government's existing requirements or a foreign repair station's existing testing program will be recognized as a compatible alternative to the requirements of this part if the Administrator determines that:

- (i) The request complies with the requirements of paragraph (c) of this section; and
- (ii) The foreign government's existing requirements, or the foreign repair station's existing testing program, contain the key elements of this part as described in paragraph (b) of this section.

(e) *Effect and validity.* (1) Recognition by the Administrator issued to a foreign government pursuant to paragraph (d)(2) of this section will apply to all foreign repair stations within the territory of the foreign government and subject to the recognized compatible alternative to the requirements of this part.

(2) Recognition by the Administrator will remain valid so long as the foreign government's existing requirements, or the foreign repair station's existing

testing program, retains the key elements of this part that formed the basis of the Administrator's recognition pursuant to paragraph (d)(2) of this section.

(f) *Compliance.* (1) Each foreign repair station subject to existing requirements or an existing testing program recognized as a compatible alternative to the requirements of this part pursuant to paragraph (d)(2) of this section must maintain an FAA-issued letter on file documenting the recognition.

(2) The FAA may modify, suspend, or withdraw recognition by the Administrator when:

- (i) A recognition is no longer valid;
- (ii) A foreign repair station fails to implement a testing program consistent with a recognition issued pursuant to paragraph (d)(2) of this section; or
- (iii) A foreign government or foreign repair station has not provided the notification described in paragraph (c)(1)(iv) of this section.

■ 7. Amend § 120.117 by:

■ a. Revising paragraph (a)(5);

■ b. Redesignating paragraph (a)(6) as paragraph (a)(7);

■ c. Adding new paragraph (a)(6); and

■ d. Revising paragraph (c).

The revisions and additions read as follows:

§ 120.117 Implementing a drug testing program.

(a) * * *

If you are . . .

You must . . .

(5) A part 145 certificate holder located inside the territory of the United States who has your own drug testing program.

Obtain an Antidrug and Alcohol Misuse Prevention Program Operations Specification by contacting your Principal Maintenance Inspector or register with the FAA, Office of Aerospace Medicine, Drug Abatement Division (AAM-800), 800 Independence Avenue SW, Washington, DC 20591, if you opt to conduct your own drug testing program.

(6) A part 145 certificate holder located outside the territory of the United States whose employees perform safety-sensitive maintenance functions on part 121 air carrier aircraft, unless you have received recognition pursuant to § 120.10.

Obtain an Antidrug and Alcohol Misuse Prevention Program Operations Specification by contacting your Principal Maintenance Inspector.

(c) If you are an individual or company that intends to provide safety-sensitive services by contract to a part 119 certificate holder with authority to

operate under part 121 and/or part 135 of this chapter, an operation as defined in § 91.147 of this chapter, or an air traffic control facility not operated by

the FAA or by or under contract to the U.S. military, use the following chart to determine what you must do if you opt to have your own drug testing program.

If you are . . .

You must . . .

(1) A part 145 certificate holder located inside the territory of the United States and opt to conduct your own program under this part.

(i) Have an Antidrug and Alcohol Misuse Prevention Program Operations Specification or register with the FAA, Office of Aerospace Medicine, Drug Abatement Division (AAM-800), 800 Independence Avenue SW, Washington, DC 20591,

If you are . . .	You must . . .
(2) A part 145 certificate holder located outside the territory of the United States whose employees perform maintenance functions on part 121 air carrier aircraft, unless you have received recognition pursuant to § 120.10.	(ii) Implement an FAA drug testing program no later than the date you start performing safety-sensitive functions for a part 119 certificate holder with authority to operate under part 121 or 135, or operator as defined in § 91.147 of this chapter, and (iii) Meet the requirements of this subpart as if you were an employer.
(3) A contractor who opts to implement a testing program under this part.	(i) Obtain an Antidrug and Alcohol Misuse Prevention Program Operations Specification by contacting your Principal Maintenance Inspector. (ii) Implement a drug testing program acceptable to the Administrator no later than December 20, 2027, and (iii) Meet the requirements of this subpart as if you were an employer in accordance with any applicable waivers or exemptions.
	(i) Register with the FAA, Office of Aerospace Medicine, Drug Abatement Division (AAM-800), 800 Independence Avenue SW, Washington, DC 20591, (ii) Implement an FAA drug testing program no later than the date you start performing safety-sensitive functions for a part 119 certificate holder with authority to operate under part 121 or 135, or operator as defined in § 91.147 of this chapter, or an air traffic control facility not operated by the FAA or by or under contract to the U.S. Military, and (iii) Meet the requirements of this subpart as if you were an employer.

* * * * *

■ 8. Effective December 20, 2027, amend § 120.117 by revising paragraph (c)(2) to read as follows:

§ 120.117 Implementing a drug testing program.

* * * * *

(c) * * *

If you are . . .	You must . . .
(2) A part 145 certificate holder located outside the territory of the United States whose employees perform maintenance functions on part 121 air carrier aircraft, unless you have received recognition pursuant to § 120.10.	(i) Obtain an Antidrug and Alcohol Misuse Prevention Program Operations Specification by contacting your Principal Maintenance Inspector. (ii) Implement a drug testing program acceptable to the Administrator, and (iii) Meet the requirements of this subpart as if you were an employer in accordance with any applicable waivers or exemptions.
* * * * *	* * * * *

■ 9. Amend § 120.123 by revising paragraphs (a) introductory text, (a)(1), and (b) to read as follows:

§ 120.123 Drug testing outside the territory of the United States.

(a) Except for those testing processes applicable to persons testing pursuant to § 120.1(d), no part of the testing process (including specimen collection, laboratory processing, and MRO actions) shall be conducted outside the territory of the United States.

(1) Except for those persons testing pursuant to § 120.1(d), each employee

who is assigned to perform safety-sensitive functions solely outside the territory of the United States shall be removed from the random testing pool upon the inception of such assignment.

* * * * *

(b) Except for those persons testing pursuant to § 120.1(d), the provisions of this subpart shall not apply to any individual who performs a function listed in § 120.105 by contract for an employer outside the territory of the United States.

■ 10. Amend § 120.225 by:

■ a. Revising paragraph (a)(5);

■ b. Redesignating paragraph (a)(6) as paragraph (a)(7);

■ c. Adding new paragraph (a)(6); and

■ d. Revising paragraphs (c), (d) introductory text and (d)(1).

The revisions and addition read as follows:

§ 120.225 How to implement an alcohol testing program.

(a) * * *

If you are . . .	You must . . .
(5) A part 145 certificate holder located inside the territory of the United States who has your own alcohol testing program.	Obtain an Antidrug and Alcohol Misuse Prevention Program Operations Specification by contacting your Principal Maintenance Inspector or register with the FAA Office of Aerospace Medicine, Drug Abatement Division (AAM-800), 800 Independence Avenue SW, Washington, DC 20591, if you opt to conduct your own alcohol testing program.
* * * * *	* * * * *

If you are . . .	You must . . .
(6) A part 145 certificate holder located outside the territory of the United States who performs safety-sensitive maintenance functions on part 121 air carrier aircraft, unless you have received recognition pursuant to § 120.10.	Obtain an Antidrug and Alcohol Misuse Prevention Program Operations Specification by contacting your Principal Maintenance Inspector.

* * * * *

* * * * *

(c) If you are an individual or company that intends to provide safety-sensitive services by contract to a part 119 certificate holder with authority to operate under part 121 and/or part 135 of this chapter, or an operator as defined in § 91.147 of this chapter, use the following chart to determine what you must do if you opt to have your own drug testing program.

If you are . . .	You must . . .
(1) A part 145 certificate holder located inside the territory of the United States and opt to conduct your own program under this part.	(i) Have an Antidrug and Alcohol Misuse Prevention Program Operations Specifications or register with the FAA, Office of Aerospace Medicine, Drug Abatement Division (AAM-800), 800 Independence Avenue SW, Washington, DC 20591, (ii) Implement an FAA alcohol testing program no later than the date you start performing safety-sensitive functions for a part 119 certificate holder with the authority to operate under parts 121 and/or 135, or operator as defined in § 91.147 of this chapter, and (iii) Meet the requirements of this subpart as if you were an employer.
(2) A part 145 certificate holder located outside of the territory of the United States who performs maintenance functions on part 121 air carrier aircraft, unless you have received recognition pursuant to § 120.10.	(i) Obtain an Antidrug and Alcohol Misuse Prevention Program Operations Specification by contacting your Principal Maintenance Inspector. (ii) Implement an alcohol testing program acceptable to the Administrator no later than December 20, 2027, and (iii) Meet the requirements of this subpart as if you were an employer in accordance with any applicable waivers or exemptions.
(3) A contractor	(i) Register with the FAA, Office of Aerospace Medicine, Drug Abatement Division (AAM-800), 800 Independence Avenue SW, Washington, DC 20591, (ii) Implement an FAA alcohol testing program no later than the date you start performing safety-sensitive functions for a part 119 certificate holder with authority to operate under parts 121 and/or 135, or operator as defined in § 91.147 of this chapter, and (iii) Meet the requirements of this subpart as if you were an employer.

(d) To obtain an antidrug and alcohol misuse prevention program operations specification:

(1) You must contact your FAA Principal Operations Inspector or Principal Maintenance Inspector.

Provide him/her with the following information:

* * * * *

■ 11. Effective December 20, 2027, amend § 120.225 by revising paragraph (c)(2) to read as follows:

§ 120.225 How to implement an alcohol testing program.

* * * * *

(c) * * *

If you are . . .	You must . . .
(2) A part 145 certificate holder located outside of the territory of the United States who performs maintenance functions on part 121 air carrier aircraft, unless you have received recognition pursuant to § 120.10.	(i) Obtain an Antidrug and Alcohol Misuse Prevention Program Operations Specification by contacting your Principal Maintenance Inspector. (ii) Implement an alcohol testing program acceptable to the Administrator, and (iii) Meet the requirements of this subpart as if you were an employer in accordance with any applicable waivers or exemptions.

* * * * *

■ 12. Amend § 120.227 by revising paragraphs (a) introductory text, (a)(1), and (b) to read as follows:

§ 120.227 Employees located outside the U.S.

(a) Except for those persons testing pursuant to § 120.1(d), no covered employee shall be tested for alcohol

misuse while located outside the territory of the United States.

(1) Except for those persons testing pursuant to § 120.1(d), each covered employee who is assigned to perform safety-sensitive functions solely outside

the territory of the United States shall be removed from the random testing pool upon the inception of such assignment.

* * * * *

(b) Except for those persons testing pursuant to § 120.1(d), the provisions of

this subpart shall not apply to any person who performs a safety-sensitive function by contract for an employer outside the territory of the United States.

Issued under authority provided by 49 U.S.C. 106(f), 45102, 44731(d), in Washington, DC.

Michael Gordon Whitaker,
Administrator.

40 CFR Parts 123, et al.

Clean Water Act Section 404 Tribal and State Assumption Program; Final Rule

ENVIRONMENTAL PROTECTION AGENCY**40 CFR Parts 123, 124, 232, and 233**

[EPA-HQ-OW-2020-0276; FRL-6682-01-OW]

RIN 2040-AF83

Clean Water Act Section 404 Tribal and State Assumption Program**AGENCY:** Environmental Protection Agency (EPA).**ACTION:** Final rule.

SUMMARY: The Environmental Protection Agency (EPA or the Agency) is finalizing the Agency's first comprehensive revisions to the regulations governing Clean Water Act (CWA) section 404 Tribal and State programs since 1988. The primary purpose of the revisions is to respond to longstanding requests from Tribes and States to clarify the requirements and processes for the assumption and administration of a CWA section 404 permitting program for discharges of dredged and fill material. The revisions facilitate Tribal and State assumption and administration of CWA section 404, consistent with the policy of the CWA as described in section 101(b), by making the procedures and substantive requirements for assumption transparent and straightforward. It clarifies the minimum requirements for Tribal and State programs while ensuring flexibility to accommodate individual Tribal and State needs. In addition, the final rule clarifies the criminal negligence standard in the CWA section 404 program, as well as making a corresponding change in the section 402 program. Finally, the final rule makes technical revisions, including removing outdated references associated with the section 404 Tribal and State program regulations.

DATES: This rule is effective on January 17, 2025. The incorporation by reference of certain material listed in the rule is approved by the Director of the Federal Register as of January 17, 2025.

ADDRESSES: EPA has established a docket for this action under Docket ID No. EPA-HQ-OW-2020-0276. All documents in the docket are listed on the <https://www.regulations.gov> website. Although listed in the index, some information is not publicly available, e.g., confidential business information (CBI) or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the internet and will be publicly available in hard copy form. Publicly

available docket materials are available electronically through <https://www.regulations.gov>.

I. Executive Summary

Section 404 of the Clean Water Act (CWA) establishes a program to regulate the discharge of dredged or fill material into navigable waters, defined as

"waters of the United States." 33 U.S.C. 1344. The section 404 program, introduced in the 1972 amendments to the Federal Water Pollution Control Act, is generally administered by the U.S. Army Corps of Engineers ("Corps"). However, in 1977, Congress amended section 404 of the CWA to allow States to administer their own dredged or fill material permitting programs in certain waters of the United States within their jurisdiction, subject to EPA approval. *Id.* at 1344(g). A Tribe or State administering a section 404 program is responsible for permitting discharges of dredged and fill material, authorizing discharges under general permits, taking enforcement actions with respect to unauthorized discharges, and ensuring compliance with the terms and conditions of permits under the Tribe's or State's authority. EPA maintains oversight of Tribal and State section 404 programs.

In 1980, EPA promulgated regulations to establish procedures and criteria for approving or disapproving State programs under section 404(g) and for oversight of State programs after approval. 45 FR 33290 (May 19, 1980). EPA revised the regulations in 1988. 53 FR 20764 (June 6, 1988). The 1988 revisions updated procedures and criteria used in approving, reviewing, and withdrawing approval of section 404 State programs, as well as incorporating section 404 program definitions and section 404(f)(1) exemptions at 40 CFR part 232. Although the Agency made targeted revisions to 40 CFR part 233 in the early 1990s and 2000s in light of other statutory and regulatory changes (e.g., new provisions addressing treatment of Tribes in a similar manner as States), the Agency has not comprehensively revised these regulations since 1988.

Nearly half of States and a few Tribes have expressed some level of interest to EPA over time in assuming the section 404 dredged and fill permit program, but only two States (Michigan and New Jersey) currently administer the program.¹ Tribes and States have identified several barriers to program assumption. One of the barriers they identified is uncertainty regarding the scope of assumable waters. To address this, the Agency convened the Assumable Waters Subcommittee in

¹ Florida obtained EPA's approval to assume the CWA section 404 program on December 17, 2020. On February 15, 2024, the U.S. District Court for the District of Columbia vacated EPA's approval of Florida's program. *Center for Biological Diversity v. Regan*, No. 21-119, 2024 WL 655368 (D.D.C.). Accordingly, only the impacts of this rule on the Michigan and New Jersey programs are discussed in this rule. An appeal of the district court's decision is pending. See No. 24-5101 (D.C. Cir.).

2015 to provide advice and develop recommendations as to how EPA could best clarify the scope of waters over which a Tribe or State may assume CWA section 404 permitting responsibilities, and the scope of waters over which the Corps retains CWA section 404 permitting responsibilities. The final report of the Subcommittee was submitted to the National Advisory Council for Environmental Policy and Technology (NACEPT), which adopted the majority recommendation in the Subcommittee report. In its 2017 letter to the Administrator conveying this recommendation, NACEPT recommended that EPA develop regulations to clarify assumed and retained waters.²

In this rule, the Agency also responds to longstanding requests from Tribes and States to streamline and clarify the requirements and processes for the assumption and administration of a CWA section 404 program as well as EPA oversight.³ The final rule facilitates Tribal and State assumption of the section 404 program, consistent with the policy of the CWA as described in section 101(b), by making program assumption procedures and requirements transparent and straightforward and addresses State-identified barriers to assumption. The final rule clarifies how Tribes and States can ensure their program meets the minimum requirements of the CWA while allowing for flexibility in the way these requirements may be met. It clarifies the criminal enforcement requirements for Tribal and State section 404 programs and makes a corresponding change in section 402 Tribal and State program requirements. The Agency is also finalizing other minor updates and technical revisions in 40 CFR parts 232, 233, and part 124 associated with Tribal and State section 404 programs. This rule is

comprehensive in that EPA has updated all of the provisions in 40 CFR parts 232, 233, and 124 associated with Tribal and State 404 programs that it determined needed to be clarified or updated at this time. This rule does not reopen any other provisions in parts 232, 233, or 124.

II. General Information

A. What action is the agency taking?

Assumption enables Tribes and States to administer the CWA section 404 program, placing them in the primary decision-making position for permitting discharges of dredged or fill material into certain waters of the United States. EPA is revising and modernizing its regulations to clarify requirements for Tribal and State program assumption and administration, reduce barriers to assumption, and make technical corrections to facilitate Tribal and State assumption and administration of the section 404 program. This rule also addresses EPA's procedures and criteria for approving, exercising oversight, and withdrawing Tribal and State programs under CWA section 404(g)–(k) and EPA's implementing regulations at 40 CFR part 233, with one corresponding clarification to CWA section 402 National Pollutant Discharge Elimination System (NPDES) Tribal and State section 402 permitting program requirements for criminal enforcement at 40 CFR 123.27.

B. What is the Agency's authority for taking this action?

The authority for this action is the Federal Water Pollution Control Act, 33 U.S.C. 1251 *et seq.*, including sections 101, 301, 309, 402, 404, 501, and 518.

C. What are the incremental costs and benefits of this action?

The costs and benefits are qualitatively discussed in the *Economic Analysis for the Clean Water Act Section 404 Tribal and State Program Regulation*. The benefits of the final rule are primarily attributable to establishing a process to develop a retained waters description, providing a program effective date, and providing opportunities for Tribal input. The incremental costs of the final rule are primarily attributable to a potential burden increase for Tribes to meet revised judicial review requirements and a potential burden increase to Tribes, States, and permittees from revisions that expand on existing Tribal opportunities to provide input. The Agency expects these benefits to justify the costs. The economic analysis does not quantify these potential incremental

economic impacts, as there is very limited data associated with these changes on which to base estimates.

III. Background

A. Statutory and Regulatory History

1. CWA Section 404

In 1972, Congress amended the Federal Water Pollution Control Act (FWPCA), or the CWA as it is commonly called,⁴ to address longstanding concerns regarding the quality of the nation's waters and the Federal Government's ability to address those concerns under existing law. The objective of the 1972 statutory scheme is "to restore and maintain the chemical, physical, and biological integrity of the Nation's waters." 33 U.S.C. 1251(a). To achieve this objective, Congress provided, "[e]xcept as in compliance with this section and sections 1312, 1316, 1317, 1328, 1342, and 1344 of this title, the discharge of any pollutant by any person shall be unlawful." *Id.* at 1311(a). A "discharge of a pollutant" is defined broadly to include "any addition of any pollutant to navigable waters⁵ from any point source," which includes the discharge of dredged or fill materials from a point source into waters of the United States. *Id.* at 1362(12).

Section 404 of the CWA establishes a permitting program to regulate the discharge of dredged or fill material from a point source into navigable waters, unless the discharge is associated with an activity exempt from section 404 permitting requirements under CWA section 404(f). *Id.* at 1344. Discharges of dredged materials, such as the redeposit of dredged material (other than incidental fallback), and discharges of fill materials, such as rock, sand, or dirt, may be associated with activities such as site development, erosion protection, bridges and piers, linear projects (such as pipelines), natural resource extraction, shoreline stabilization, and restoration projects.

Section 404(a) of the CWA authorizes the Secretary of the Army to issue permits after notice and opportunity for public hearings to discharge dredged or fill material into navigable waters at specified disposal sites. *Id.* at 1344(a). The Act specifies that the Secretary of the Army acts through the Chief of

² Available at <https://www.epa.gov/cwa-404/submission-assumable-waters-subcommittees-final-report> and in the docket for this final rule, Docket ID No. EPA–HQ–OW–2020–0276.

Edmondson, Vice Chair, The Environmental Council of States, to Peter Silva, Assistant Administrator, Office of Water, U.S. Environmental Protection Agency, February 26, 2010; Letter from R. Steven Brown, Executive Director, The Environmental Council of States, to Nancy K. Stoner, Acting Assistant Administrator, Office of Water, U.S. Environmental Protection Agency, July 22, 2011. Subject: Progress Report and Recommended Actions to Further Clarify Section 404 Assumption Application Requirements and Implementation by Tribes and States; Letter from Alexandria Dapolito Dunn, ECOS, Sean Rolland, ACWA, and Jeanne Christie, ASWM to Nancy K. Stoner, Acting Assistant Administrator, Office of Water, U.S. Environmental Protection Agency, April 30, 2014.

⁴ The FWPCA is commonly referred to as the CWA following the 1977 amendments to the FWPCA. Public Law 95–217, 91 Stat. 1566 (1977). For ease of reference, EPA will generally refer to the FWPCA in this document as the CWA or the Act.

⁵ The CWA uses the term "navigable waters," which the statute defines as "the waters of the United States, including the territorial seas." 33 U.S.C. 1362(7).

Engineers, and thus the Corps generally administers the day-to-day permitting program under section 404, unless EPA approves a Tribe's or State's request to do so. *See id.* at 1344(d), (g).

The 1977 Amendments made the regulation of the discharge of dredged or fill material a shared responsibility of the States and the Federal Government.⁶ This partnership is consistent with the policy of CWA section 101(b) that "preserve[s] and protect[s] the primary responsibilities and rights of States to prevent, reduce, and eliminate pollution." and provides for States to "implement the permit programs under sections 1342 and 1344 of this title."⁷ To facilitate State assumption of the section 404 program, Congress structured requirements and procedures to leverage States' existing authority to administer the CWA section 402 program.⁸ *See* section III.A.4 of this preamble for further discussion on the specific statutory provisions that apply to assumed programs.

Under the section 404 program, discharges of dredged or fill material into waters of the United States are authorized by individual or general permits. Individual permits are processed by the permitting agency (*i.e.*, the Corps, or a Tribe or State with an approved program), which evaluates them for consistency with the environmental criteria outlined in the

CWA section 404(b)(1) Guidelines⁹ or corresponding Tribal or State laws or regulations, respectively. General permits developed by the permitting agency may authorize discharges that will have only minimal adverse effects, individually and cumulatively, to the aquatic environment. General permits must be consistent with the environmental review criteria set forth in the CWA section 404(b)(1) Guidelines and may be issued on a nationwide, regional, or programmatic basis for discharges from specific categories of activities. General permits allow activities that meet specified conditions to proceed with little or no delay. For example, a general permit can authorize discharges associated with minor road activities or utility line backfill, if the regulated activities under the general permit will cause only minimal adverse environmental effects when performed separately, will have only minimal cumulative adverse effects on the environment, and the discharge complies with the general permit conditions and the CWA section 404(b)(1) guidelines.

While the Corps is the Federal permitting agency and administers the Federal section 404 program on a day-to-day basis, EPA also plays an important role in the Federal section 404 program. Both agencies develop and interpret policy and guidance and have promulgated section 404 regulations.¹⁰ Both EPA and the Corps have enforcement authorities pursuant to section 404, as specified in sections 301(a), 309, 404(n), and 404(s) of the CWA. In the context of section 404, the Corps does the day-to-day work of conducting jurisdictional determinations,¹¹ making permit decisions, ensuring compliance, and taking enforcement actions, as necessary for the implementation of the Federal section 404 program.

Under section 404, EPA establishes environmental criteria used in

evaluating permit applications (*i.e.*, the CWA section 404(b)(1) Guidelines) in conjunction with the Corps; determines the applicability of section 404(f) exemptions; approves and oversees Tribal and State assumption of the section 404 program (sections 404(g)–(l)); may review and comment on general permits, authorization under general permits, and individual permit applications issued by Tribes, States, or the Corps; may prohibit, deny, or restrict the use of any defined area as a disposal site (section 404(c)); and may elevate Corps issued permits for resolution (section 404(j)).

2. Scope of Tribal and State CWA Section 404(g) Programs

When Congress enacted the CWA in 1972, the Corps had long been regulating "navigable waters of the United States" as defined under the Rivers and Harbors Act of 1899 (RHA). The CWA defined "navigable waters" to mean "the waters of the United States, including the territorial seas." 33 U.S.C. 1362(7). The Corps' initial post-CWA regulations treated the two jurisdictional terms under the two different statutes interchangeably. 39 FR 12115, 12119 (April 3, 1974). In 1975, the U.S. District Court for the District of Columbia found that "waters of the United States" under the CWA exceeds the scope of jurisdiction under the RHA and ordered the Corps to adopt new regulations "clearly recognizing the full regulatory mandate of the Water Act." *Nat. Res. Def. Council, Inc. v. Callaway*, 392 F. Supp. 685, 686 (D.D.C. 1975).

In July 1975, the Corps issued new regulations expanding the section 404 program in phases to cover all waters of the United States, in compliance with the court's order. 40 FR 31320 (July 25, 1975). Phase I, which was effective immediately, regulated discharges of dredged or fill material into coastal waters or inland navigable waters of the United States and wetlands contiguous or adjacent to those waters. Phase II, effective on July 1, 1976, addressed discharges of dredged or fill material into primary tributaries and contiguous or adjacent wetlands, as well as lakes. Phase III, effective after July 1, 1977, addressed discharges of dredged material or fill material into "any navigable water [including intrastate lakes, rivers and streams . . .]." *Id.* at 31326. The intent of the phased approach was to provide time for the Corps to increase staffing and resources to implement the expanded jurisdiction and workload. *Id.* at 31321 ("[i]n view of man-power and budgetary constraints it is necessary that this program be phased in over a two year period.").

⁶ *See, e.g.*, H.R. Report No. 95–830 at 52 (1977) ("Federal agencies are to cooperate with State and local agencies to develop solutions to prevent, reduce and eliminate pollution in concert with programs for managing water resources"). *See also* S. Report No. 95–370 at 78 (1977) ("Several States have already established separate State agencies to control discharges of dredge or fill materials" and "The amendment encourages the use of a variety of existing or developing State and local management agencies."). *See also id.* at 11 ("The provision solves most real problems with section 404: (a) by providing general delegation authority to the States . . ."). The 1977 amendments also introduced exemptions and general permits. *See* 33 U.S.C. 1344(e)–(f).

⁷ *See* S. Report No. 95–370 at 77 (1977) ("The committee amendment is in accord with the stated policy of Public Law 92–500 of 'preserving and protecting the primary responsibilities and rights of States or [stet] prevent, reduce, and eliminate pollution.'").

⁸ *See id.* at 77 ("[The amendment] provides for assumption of the permit authority by States with approved programs for control of discharges for dredged and fill material in accord with the criteria and with guidelines comparable to those contained in 402(b) and 404(b)(1)."). *See also id.* at 77–78 ("By using the established mechanism in section 402 of Public Law 92–500, the committee anticipates the authorization of State management of the permit program will be substantially expedited. At least 28 State entities which have already obtained approval of the national pollutant discharge elimination system under the section should be able to assume the program quickly."). A Tribe or State need not have an approved CWA section 402 program prior to seeking to assume administration of CWA section 404.

⁹ The CWA section 404(b)(1) Guidelines are regulations established by EPA pursuant to CWA section 404(b)(1) in conjunction with the Corps and codified at 40 CFR part 230. They set forth the substantive environmental review criteria used to evaluate permits for discharges of dredged and/or fill material under CWA section 404.

¹⁰ The substantive and procedural requirements applicable to section 404 are detailed in EPA's regulations at 40 CFR parts 230 through 233 and the Corps' regulations at 33 CFR parts 320, 323, 325–328, 330 through 333, and 335 through 338.

¹¹ EPA decisions on jurisdiction do not constitute approved jurisdictional determinations as defined by the Corps regulations at 33 CFR 331.2. EPA has final administrative authority over the scope of CWA jurisdiction. Administrative Authority to Construe § 404 of the Federal Water Pollution Control Act ("Civiletti Memorandum"), 43 Op. Att'y Gen. 197 (1979).

Thus, the phases did not mean all of the waters in the final regulation were not waters of the United States, but rather reflected when the Corps would have capacity to begin regulating activities within each type of jurisdictional water.

Some in Congress were concerned about breadth of the new interpretation of “waters of the United States” under the Corps’ CWA dredged and fill regulatory program. In 1976, the House of Representatives passed H.R. 9560, which would have redefined the CWA term “navigable waters” specifically for the section 404 program (but not the rest of the CWA) as follows:

The term “navigable waters” as used in this section shall mean all waters which are presently used, or are susceptible to use in their natural condition or by reasonable improvement as a means to transport interstate or foreign commerce shoreward to their ordinary high water mark, including all waters which are subject to the ebb and flow of the tide shoreward to their mean high water mark (mean higher high water mark on the west coast).

H.R. Rep. No. 94–1107, at 63 (1976). The House Committee explained that the new definition would mirror the longstanding RHA section 10 definition of “navigable waters of the United States,” except that it would omit the “historical test” of navigability. *Id.* at 19. The House thought that discharges of dredged or fill material occurring in “waters other than navigable waters of the United States . . . are more appropriately and more effectively subject to regulation by the States.” *Id.* at 22.

The Senate disagreed. It declined to redefine “navigable waters” for purposes of the section 404 program and the House bill was not enacted into law. Instead, the Senate addressed the desire for State control by passing a bill allowing States to assume section 404 permitting authority, subject to EPA approval, in Phase II and III waters (as defined in the Corps’ 1975 regulations quoted above). S. Rep. No. 95–370, at 75 (1977).¹² After assumption, the Corps would retain section 404 permitting authority in Phase I waters. This general approach was codified in the final bill, H.R. 3199, referred to as the 1977 CWA Amendments: it did not change the definition of “navigable waters” for the section 404 program, but it allowed States to assume permitting authority in “phase 2 and 3 waters after the approval of a program by [EPA].” H.R. Rep. No.

95–830, at 101 (1977).¹³ The final amendments included a parenthetical phrase in section 404(g)(1) that defined Corps-retained waters using the same language that the House Committee had used in its effort to limit the Corps’ jurisdiction, other than waters that were historically used as a means to transport interstate or foreign commerce but no longer do so, and with the addition of “wetlands adjacent thereto.” H.R. Rep. No. 95–830, at 39. The preamble to the Corps’ 1977 regulations described Corps-retained waters under section 404(g)(1) as “waters already being regulated by the USACE,” *i.e.*, those waters the Corps regulated under section 10 of the RHA, “plus all adjacent wetlands to these waters.” 42 FR 37122, 37124 (July 19, 1977). The legislative history suggests that the Senate expected widespread assumption of the section 404 program, leaving the Corps to regulate only RHA section 10 waters that are currently used as a means to transport interstate or foreign commerce, and adjacent wetlands. S. Rep. No. 95–370, at 77–78, *reprinted in* 4 Legis. History 1977, at 710–11; *see* 33 U.S.C. 1344(g)(1).

3. Overview of CWA Section 404(g) Statutory Requirements for Program Administration and Implementation

Congress laid out general procedures for Tribal¹⁴ and State submissions and EPA’s approval, upon which EPA has further elaborated in regulation, as discussed in section III.A.4 of this preamble below. Pursuant to section 404(g), a Tribe or State seeking to assume the section 404 program must submit to the EPA Administrator a full and complete description of the proposed program and a statement from the attorney general (or attorney for Tribal or State agencies that have independent legal counsel) that it has adequate authority to establish and carry out the proposed program under Tribal or State law. 33 U.S.C. 1344(g)(1). The Administrator has up to ten days after the receipt of the program description and attorney general statement to provide copies to the Secretary of the Army and Secretary of the Interior (acting through the Director of the United States Fish and Wildlife Service), who in turn have up to 90 days from the Administrator’s receipt of a complete program description and

attorney general statement to provide comments to the Administrator.¹⁵ *Id.* at 1344(g)(2)–(3).

Section 404(h) of the Act identifies eight authorities EPA must ensure a Tribe or State has prior to approving a request to assume and administer a section 404 program. *Id.* at 1344(h)(1)(A)–(H). First, a Tribe or State must have the authority to issue permits that apply and assure compliance with the requirements of section 404 (including but not limited to the CWA section 404(b)(1) Guidelines); issue permits for a set duration which cannot exceed five years; and terminate or modify an issued permit. *Id.* at 1344(h)(1)(A). Second, the Tribe or State must have the authority to inspect, monitor, enter and require reports in association with issued permits to the same extent as required under section 1318 of the Act. *Id.* at 1344(h)(1)(B). Third, the Tribe or State must have the authority to provide public notice, provide an opportunity to comment on proposed permits, and provide an opportunity for a public hearing. *Id.* at 1344(h)(1)(C). Fourth, the Tribe or State must have authority to assure EPA receives notice and a copy of each application (unless review is waived). *Id.* at 1344(h)(1)(D). Fifth, the Tribe or State must have authority to provide notice to Tribes and States whose waters may be affected by the permit and for the affected Tribe or State to provide written recommendations. *Id.* at 1344(h)(1)(E). Sixth, a Tribe or State must also have the authority to assure no permit will be issued if it would substantially impede anchorage and navigation of the navigable waters. *Id.* at 1344(h)(1)(F). Seventh, the Tribe or State must have authority to abate violations of permits and the program—including both civil and criminal penalties as well as other ways and means of enforcement. *Id.* at 1344(h)(1)(G). And lastly, the Tribe or State must have authority to assure continued coordination with Federal and Federal-State water-related planning and review processes. *Id.* at 1344(h)(1)(H).

If the EPA Administrator determines that a Tribe or State that has submitted a program request under section 404(g)(1) has the authority set forth in section 404(h)(1) of the CWA, then the Administrator “shall approve” the Tribe’s or State’s request to assume the section 404 program. *Id.* at 1344(h)(2). If the Administrator fails to make a determination with respect to any

¹² The Senate Report is reprinted in Comm. On Env’t & Publ. Works, 95th Cong., 4 A Legislative History of the Clean Water Act of 1977 (Legis. History) at 635, 708 (October 1978).

¹³ The House Report is reprinted in 3 Legis. History 1977, at 185, 285.

¹⁴ The 1987 amendments to the CWA added section 518, which authorizes EPA to treat eligible Indian Tribes in a manner similar to States for a variety of purposes, including administering each of the principal CWA regulatory programs such as CWA section 404. 33 U.S.C. 1377(e).

¹⁵ Per the regulations, a copy is also provided to the National Marine Fisheries Service. *See* 40 CFR 233.15(d).

program request submitted by a Tribe or State within 120 days after the date of receipt of the request, the program shall be deemed approved. *Id.* at 1344(h)(3). The Act also provides for EPA to withdraw assumed programs that are not administered in accordance with the requirements of the Act. *Id.* at 1344(i).

A Tribe or State assuming the section 404 program must have authority under Tribal or State law to assume, administer, and enforce the program; EPA's approval does not delegate authority to issue a permit on behalf of the Federal Government. By assuming administration of the section 404 program under section 404(g), an eligible Tribe or State takes on the primary responsibility of permitting discharges of dredged and/or fill material into certain waters of the United States within its jurisdiction.¹⁶ For section 404 permitting purposes, the Tribe or State must exercise jurisdiction over all assumed waters subject to the CWA except those waters to be retained by the Corps. 33 U.S.C. 1344(g). The Corps retains CWA section 404 permitting authority for all non-assumed waters as well as RHA section 10 permitting authority in all waters subject to RHA section 10. For example, States generally do not assume CWA section 404 authority over Tribal waters or waters in lands of exclusive Federal jurisdiction. Tribal or State programs can also regulate waters that are retained by the Corps, or waters that are not waters of the United States, under Tribal or State law, but the Corps will remain the CWA 404 permitting authority for retained waters.

4. CWA Section 404 Tribal and State Program Regulations

In 1980, in response to the 1977 CWA Amendments, EPA promulgated regulations to establish procedures and criteria to approve or disapprove State programs under section 404(g) and monitor State programs after approval. 45 FR 33290 (May 19, 1980).¹⁷ On June

6, 1988, EPA revised these procedures and criteria used in approving, reviewing, and withdrawing approval of section 404 State programs and codified them at 40 CFR part 233. 53 FR 20764 (June 6, 1988). The 1988 regulations provided States with flexibility in program design and administration while still meeting the requirements and objectives of the CWA. They also incorporated section 404 program definitions and section 404(f)(1) exemptions at 40 CFR part 232.¹⁸

The regulations at 40 CFR part 233 described the assuming Tribe's or State's program requirements, EPA responsibilities, approval and oversight of assumed programs, and requirements for review, modification, and withdrawal of Tribal and State programs (as necessary). Subpart B of the 404 State Program Regulations sets forth the elements of program approval, including the program description, the Attorney General's statement, the Memorandum of Agreement between the Tribe or State and EPA, and the Memorandum of Agreement between the Tribe or State and the Secretary. It also establishes procedures for approving and revising Tribal or State programs. 40 CFR 233.10 through 233.16. Subpart C addresses Permit Requirements, subpart D lays out Program Operation Requirements, subpart E establishes requirements for Compliance Evaluation and Enforcement, and subpart F discusses Federal Oversight authority. *Id.* at 233.20–53. In subpart G, EPA lays out requirements and procedures for Tribal assumption, *id.* at 233.60–62, and subpart H codifies EPA's approval of Michigan and New Jersey's programs and incorporates certain State laws by reference. *Id.* at 233.70–71. These regulations implement key principles of Tribal and State assumption, including that an assumed program must be consistent with and no less stringent than the Act and implementing regulations, allow for public participation, ensure consistency with the CWA 404(b)(1) Guidelines, and have adequate enforcement authority.

Since 1988, the Agency has made several targeted revisions and additions to the CWA section 404 Tribal and State program regulations at 40 CFR part 233. On February 13, 1992, EPA finalized a rule amending the regulations to reflect the newly created Environmental

Appeals Board in Agency adjudications, including revising section 233.53 related to withdrawal. 57 FR 5320 (February 13, 1992). In 1993, the Agency added subpart G to 40 CFR part 233 pursuant to CWA section 518, which required EPA to promulgate regulations specifying how Indian Tribes may qualify for treatment in a similar manner as a State (TAS) for purposes of assuming the section 404 program. 58 FR 8172 (February 11, 1993).¹⁹ The 1993 rule also revised 40 CFR part 232 by adding new definitions for “Federal Indian reservation,” “Indian Tribe,” and “States.” *Id.* The Agency further revised the subpart G regulations regarding Tribal eligibility at sections 233.60, 233.61, and 233.62 in 1994 to improve and simplify the process for Tribes to obtain EPA approval to assume the section 404 program. 59 FR 64339, 64345 (December 14, 1994). Under that rule, known as the Simplification Rule, a Tribe does not need to prequalify for TAS before requesting to assume the section 404 program. Instead, it can establish its TAS eligibility at the program approval stage, subject to EPA notice and comment procedures for State program approval. *Id.* at 64339–40. A 2005 rule on cross-media electronic reporting added section 233.39 on electronic reporting. 70 FR 59848 (October 13, 2005). EPA also codified the approval of the Michigan program on October 2, 1984 (49 FR 38947) and the New Jersey program on March 2, 1994 (59 FR 9933) in subpart H of 40 CFR part 233.

B. Need for Rulemaking Revisions

Although nearly half of the States and a few Tribes have expressed some level of interest to EPA over time in assuming the Federal section 404 dredged and fill permit program, only two States currently administer the program.²⁰ In 2010 and 2011 letters to EPA, the Environmental Council of States

¹⁶ Legislative history makes clear that Congress did not intend Tribal or State assumption under section 404(g) to be a delegation of the permitting program. H.R. Rep. No. 95–830 at 104 (1977). (“The Conference substitute provides for the administration by a State of its own permit program for the regulation of the discharge of dredged or fill material. . . . The conferees wish to emphasize that such a State program is one which is established under State law and which functions in lieu of the Federal program. It is not a delegation of Federal authority.”) The conference report is available at https://www.epa.gov/sites/production/files/2015-11/documents/1977_conf_rept.pdf.

¹⁷ In 1983, EPA reorganized the presentation of the permit programs in the CFR, including moving the regulations for 404 State programs to their current location at 40 CFR part 233, but made no substantive changes to any of the affected sections. 48 FR 14146, 14208 (April 1, 1983).

¹⁸ The 1988 regulations essentially recodified at 40 CFR part 232 the section 404 program definitions and section 404(f)(1) permit exemptions in a new, separate part to eliminate any confusion about their applicability. The section 404 program definitions at 40 CFR part 232 apply to both the Federal and State administered programs.

¹⁹ When the term “State Program” is used in the regulations, it refers to an approved program run by any of the entities described in the definition of “State,” including Tribes. 58 FR 8183 (“State means any of the 50 States, the District of Columbia, Guam, the Commonwealth of Puerto Rico, the Virgin Islands, American Samoa, the Commonwealth of the Northern Mariana Islands, the Trust Territory of the Pacific Islands, or an Indian Tribe, as defined in this part, which meet the requirements of § 233.60. For purposes of this part, the word State also includes any interstate agency requesting program approval or administering an approved program.”).

²⁰ Florida obtained EPA's approval to assume the CWA section 404 program on December 17, 2020. On February 15, 2024, the U.S. District Court for the District of Columbia vacated EPA's approval of Florida's program. *Center for Biological Diversity v. Regan*, No. 21–119, 2024 WL 655368 (D.D.C.). An appeal of the district court's decision is pending. See No. 24–5101 (D.C. Cir.).

recommended further steps to encourage Tribal and State assumption of the program, remove barriers to assumption, and improve the efficiency of the program.²¹ While some Tribes and States have considered assumption, they have expressed to EPA the need for further clarification regarding the regulations, including which waters a Tribe or State may assume and which waters the Corps retains. For example, in a 2014 letter to then-Acting Assistant Administrator Nancy Stoner,²² State associations asked EPA to clarify the scope of assumable waters, citing uncertainty on this issue as a barrier to assuming the program.

In 2015, EPA formed the Assumable Waters Subcommittee under the auspices of the National Advisory Council for Environmental Policy and Technology (NACEPT) to provide advice and develop recommendations as to how EPA could best clarify the scope of waters over which a Tribe or State may assume CWA section 404 permitting responsibilities, and the scope of waters over which the Corps retains CWA section 404 permitting responsibilities. The Subcommittee included 22 members representing States, Tribes, Federal agencies, industry, environmental groups, Tribal and State associations, and academia. The Subcommittee presented its recommendations to NACEPT on May 10, 2017. NACEPT endorsed the Subcommittee report in its entirety and submitted it to former Administrator Scott Pruitt on June 2, 2017, with additional notations and recommendations, such as a preference for clarity through regulation. The “Final Report of the Assumable Waters Subcommittee, May 2017,” recommended that EPA develop policies, guidance, and regulations to clarify assumed and retained waters.²³

Edmonson, Vice Chair, The Environmental Council of States, to Peter Silva, Assistant Administrator, Office of Water, U.S. Environmental Protection Agency. February 26, 2010; Letter from R. Steven Brown, Executive Director, The Environmental Council of States, to Nancy K. Stoner, Acting Assistant Administrator, Office of Water, U.S. Environmental Protection Agency. July 22, 2011. Subject: Progress Report and Recommended Actions to Further Clarify Section 404 Assumption Application Requirements and Implementation by Tribes and States.

²² Letter from Alexandria Dapolito Dunn, ECOS, Sean Rolland, ACWA, and Jeanne Christie, ASWM, to Nancy Stoner, Acting Assistant Administrator, Office of Water, U.S. Environmental Protection Agency. April 30, 2014.

²³ Available at <https://www.epa.gov/cwa-404/submission-assumable-waters-subcommittees-final-report> and in the docket for the final rule, Docket ID No. EPA-HQ-OW-2020-0276.

In addition to the needs identified by Tribes and States, the Agency also recognized the need for other revisions, including several technical revisions to the regulations. For example, while the 1988 regulations recognized that the part 124 regulations do not apply to Tribal or State section 404 programs, the Agency did not make conforming revisions. The regulation also required other revisions throughout 40 CFR part 233 to update cross-references, ensure consistent use of terminology, and facilitate efficient program operation.

On June 11, 2018, the Agency published its 2018 Spring Unified Agenda of Regulatory and Deregulatory Actions²⁴ announcing the Agency was considering a rulemaking to provide the first comprehensive revisions to the section 404 Tribal and State program regulations since 1988.

In September 2018, the Agency sent letters to Tribal leaders and State governors announcing opportunities for Tribes and States to provide input on areas of the regulation that could benefit from additional clarity and revision. Tribes and States provided input on various topics at Tribal and State engagement sessions, including requests for flexibility in assuming and administering the section 404 program and clarification on retained and assumed waters. See section V.E and F of this preamble for further discussion on Tribal and State engagement in this rule effort. In 2023, EPA held informational webinars for States on January 24 and for Tribes on January 2–5 and January 31. At these webinars, EPA provided Tribes and States with an update on the rulemaking effort and an overview of previously received Tribal and State input to EPA. EPA did not seek additional input from Tribes or States at the January 2023 webinars.

The Agency announced a proposed rule to revise the CWA section 404 Tribal and State program regulations on July 19, 2023; the Agency also posted a draft of the proposed rule on its website. On August 14, 2023, the Agency published the proposed rulemaking in the **Federal Register**, 88 FR 55276, which initiated a 60-day public comment period that lasted through October 13, 2023. EPA held a virtual public hearing on September 6, 2023, and hosted input sessions for interested State and Tribal parties throughout August 2023, including one State input session on August 24, 2023, and two Tribal input sessions on August 15 and 30, 2023. In finalizing the proposed

rule, the Agency reviewed 44 comments received on the proposed rulemaking, in addition to input received during pre-proposal, at the public hearing, and at the Tribal and State input sessions. Commenters provided a range of feedback on the proposal. The Agency discusses comments received and responses in the applicable sections of this preamble to the rule. A complete response to comments document is available in the docket for the rule (Docket ID No. EPA-HQ-OW-2020-0276).

The rule addresses many of the issues raised by Tribes and States as challenges to assuming section 404, as well as drawing from EPA’s experience working with Tribes and States pursuing assumption and in program oversight.

IV. Final Rule

EPA is finalizing revisions to the CWA section 404 Tribal and State program regulations at 40 CFR part 233 to provide additional clarity on conflict of interest prohibitions, program approval procedures and requirements, permit requirements, program operations, compliance evaluation and enforcement, Federal oversight, and Tribal provisions. EPA is also finalizing revisions to the criminal enforcement requirements in 40 CFR 123.27 and 40 CFR 233.41, which apply to Tribes and States that administer the CWA section 402 National Pollutant Discharge Elimination System (NPDES) permitting program as well as the section 404 program.

This section of this preamble addresses changes to seven sub-sections in the existing subpart structure of the 40 CFR part 233 regulations: Subpart A—General, Subpart B—Program Approval, Subpart C—Permit Requirements, Subpart D—Program Operations, Subpart E—Compliance Evaluation and Enforcement, Subpart F—Federal Oversight, and Subpart G—Eligible Indian Tribes. Each sub-section contains topics covered under that subpart of the regulation. Within each topic, this preamble includes (1) an overview of the topic and its relevant final rule provision(s) and (2) a summary of the Agency’s final rule rationale and public comments. Where applicable, some topics also address implementation considerations for the final rule provisions. This preamble is structured in a manner intended to clearly convey the relevant changes to the regulatory text. Following this preamble discussion on the final rule provisions, this section of this preamble also includes four sub-sections that discuss the impact of the final rule on existing programs, technical revisions,

²⁴ Available at <https://www.reginfo.gov/public/do/eAgendaViewRule?pubId=201804&RIN=2040-AF83>.

incorporation by reference, and severability.

A. General

1. Conflict of Interest

a. Overview and What the Agency Is Finalizing

The Agency's 1988 regulations for the section 404 Tribal and State program provided a general prohibition that public officers or employees with direct personal or pecuniary interests in a decision must make the interest known and not participate in such decision. In the proposal to this rule, the Agency proposed to clarify to whom the provision applies. The proposal specified that individuals who exercise responsibilities over section 404 permitting and programs may not be involved in any matters in which they have a direct personal or pecuniary interest. The proposal also clarified that this provision applies to decisions by the Tribal or State permitting agency as well as any entity that reviews decisions of the agency.

After reviewing public comments, the Agency is finalizing the revisions to the conflict of interest provision as proposed. EPA is also affirming the importance of ensuring public confidence when a Tribe or State issues a permit to one of its agencies or departments, though has determined that codifying specific processes or requirements to address self-issuance of permits by assuming Tribes and States is unnecessary. This provision does not address or affect Federal or State court review of permitting actions.

b. Summary of Final Rule Rationale and Public Comment

CWA section 404 does not require EPA to establish guidelines on conflicts of interest for Tribal or State programs. In contrast, the CWA requires EPA to establish guidelines for section 402 State programs that prohibit any entity which approves permit applications from having members who receive, or have during the previous two years received, a significant portion of their income from permit holders or applicants for a permit. 33 U.S.C. 1314(i)(D). EPA's section 402 regulations, accordingly, provide that "State NPDES programs shall ensure that any board or body which approves all or portions of permits shall not include as a member any person who receives, or has during the previous 2 years received, a significant portion of income directly or indirectly from permit holders or applicants for a permit." 40 CFR 123.25(c). The provision then defines the terms "board

or body," "significant portion of income," "permit holders or applicants for a permit," and "income." *See id.* at 123.25(c)(1).

In 1984, EPA proposed to codify the section 402 provision in its revisions to the section 404 Tribal and State program regulations. 49 FR 39012 (October 2, 1984). However, EPA ultimately decided not to hold Tribe and State section 404 programs to the same conflict of interest standards as State NPDES programs because of practical differences between the two programs. 53 FR 20764, 20766 (June 6, 1988). At that time, EPA noted that NPDES discharges are usually long-term discharges, often from certain specific types of industrial or municipal facilities. *Id.* In contrast, discharges authorized by section 404 typically tend to be one-time discharges and generated by a broader range of dischargers than NPDES, "ranging from private citizens to large corporations, from small fills for boat docks or erosion prevention to major development projects." *Id.* EPA concluded that an absolute ban on anyone with a financial interest in a permit from serving on a board that approves permits is likely to be more difficult to comply with under the section 404 program because so many people would be considered to be financially interested in section 404 permits and therefore eliminated from the pool of potential board members. *Id.* Instead, EPA provided a general prohibition that public officers or employees with such interests in a decision shall make the interest known and not participate in such decision. *Id.*

Similar distinctions between the sections 402 and 404 programs apply today. For example, if an individual needed a section 404 permit for the discharge of fill material into one lake to install a boat ramp at one point in time, EPA does not think it necessary to permanently preclude that individual from participating in any section 404-related decision-making. The Agency proposed to revise the section 404 conflict of interest provision, however, to further clarify to whom the provision applies. The purpose of this clarification was to ensure that individuals who exercise responsibilities over section 404 permitting and programs are not involved in any matters in which they have a direct personal or pecuniary interest. The proposal also clarified that this provision applies to any section 404-related decisions by the agency as well as any entity that reviews these decisions. For example, if a Tribe or State has established boards or other bodies to advise, oversee, or review appeals of agency decisions, members of

such boards would be subject to this conflict of interest provision even if they are not officers or employees of the Tribe or State agency.

Some commenters expressed concerns that the change in the conflict of interest provision weakens or injects uncertainty into the section 404 assumption process. A commenter argued that the language is too "vague and [its] broad articulation makes it unclear to whom, exactly, this provision applies." EPA disagrees; as explained above, the final rule more clearly articulates who must provide notification of potential conflicts of interest and recuse themselves from any section 404 program decision for which they have a conflict of interest, not just decisions that exceed a monetary threshold. In EPA's view, this new language is clear and does not create uncertainty; EPA presumes that any person participating in a matter subject to a section 404 decision by the agency will be aware that they are doing so, and they should also be aware if they have personal or pecuniary interests in that matter. If a person is uncertain as to whether the conflict of interest provision applies, they can always seek guidance from the Tribal or State agency or from EPA.

With respect to Tribal and State permits being issued for Tribal or State projects, the Agency has determined that distinct procedures to address these types of permits are unnecessary, as all permits must comply with the section 404(b)(1) Guidelines and other requirements of CWA section 404. The CWA does not distinguish between a Tribe or State with an approved program as a permittee and other permittees. Most State permitting entities have experience issuing permits to other agencies within that respective State. For example, States that implement the section 402 program routinely issue NPDES permits to various departments and agencies within that State.²⁵ To the extent the courts have considered this matter, they have found no legal impediment to issuance of an NPDES permit by an authorized State to itself. *See, e.g., West Virginia Highlands Conservancy, Inc. v. Huffman*, 625 F.3d 159 (4th Cir. 2010). EPA is unaware of any significant concerns arising from the issuance of NPDES permits by States to other agencies or departments within that respective State.

²⁵ One territory, the Virgin Islands, and all states except Massachusetts, New Hampshire, New Mexico, are authorized to implement at least some portion of the NPDES program. *See* <https://www.epa.gov/npdes/npdes-state-program-information>.

Likewise, to EPA's knowledge, the agencies in Michigan and New Jersey have been issuing section 404 permits to authorize the agencies' own activities and activities of other agencies within those States for many years without encountering any significant issues. The Florida Department of Environmental Protection did the same between December 2020 and February 2024 without significant conflict of interest issues, to EPA's knowledge. A common example of self-issuance by one State agency to another is when the State water quality agency issues a permit to the State department of transportation for aquatic resource impacts associated with the construction of a State road. Similarly, the Corps issues CWA section 404 permits to other Federal agencies, and EPA does not have—nor did commenters provide—any information that raises concerns on the part of EPA about the integrity and neutrality of these intra-governmental permitting processes.

The Agency did not propose any regulatory text on the self-issuance of permits. The Agency received one comment on this issue, expressing concern that conflicts of interest are presented when private developers or State agencies provide funding to the permitting agencies, which in turn allow the permitting agency to employ permit processors that will handle the permit applications submitted by the same private developers or State agencies. In effect, the commenter stated, the private developer or non-permitting State agency becomes the employer of their permit processor. This rule does require that all permits must comply with the section 404(b)(1) Guidelines and other requirements of CWA section 404. Tribes and States that assume the CWA section 404 program must also follow public notice and comment procedures for permit applications, thereby ensuring transparency and providing the public with an opportunity to submit input to address any concerns. Additionally, the CWA provides EPA with oversight authority of Tribes' and States' assumed section 404 permits, allowing Federal review of assumed programs in general and applications for particular proposed permits, including self-issued permits. To the extent EPA has concerns that permits are not compliant, whether based on its own analysis or based on comments from other agencies or interested parties, EPA may object to the issuance of permits.

Tribes, States, and EPA have the discretion to implement additional measures if, in a particular circumstance, they desire to further

ensure public confidence that certain permits are consistent with the CWA and not the subject of special considerations. For example, an assuming Tribe or State could separate its permit-issuing function from departments or offices that apply for and receive permits or expand public participation requirements for self-issued permits. EPA and an assuming Tribe or State could also agree in the Memorandum of Agreement that EPA would exercise heightened oversight (*i.e.*, would not waive review) over permits issued by and to Tribal or State agencies or departments. EPA encourages Tribes and States to implement measures to ensure transparency in the permitting process based on the specific structures and procedures of their agencies. For all of these reasons, EPA does not find that it is necessary to include in this regulation any additional processes or requirements to address self-issuance of permits by assuming Tribes and States.

2. Compliance With the CWA 404(b)(1) Guidelines

a. Overview and What the Agency Is Finalizing

The CWA section 404(b)(1) Guidelines are the substantive environmental criteria used to evaluate discharges of dredged and/or fill material under CWA section 404. EPA may approve a Tribal or State request for assumption only if EPA determines, among other things, that the Tribe or State has authority to issue permits that comply with the CWA 404(b)(1) Guidelines. 33 U.S.C. 1344(h)(1)(A)(i). The regulations already require that CWA section 404 permits issued by an assuming Tribe or State must comply with the CWA 404(b)(1) Guidelines. However, stakeholders have requested clarity regarding the way in which a Tribe or State wishing to assume the CWA section 404 program can demonstrate that it has authority to issue permits that “apply, and assure compliance with” the CWA 404(b)(1) Guidelines. *See id.* EPA did not propose any new regulatory text on compliance with the CWA 404(b)(1) Guidelines, because the Agency did not want to unintentionally constrain how Tribes and States can demonstrate their authority. But in response to stakeholder requests, EPA discussed various approaches that Tribes and States can undertake to demonstrate that they have sufficient authority to issue permits that apply and assure compliance with the CWA 404(b)(1) Guidelines in this preamble to the proposed rule. After reviewing public

comments, the Agency is finalizing its proposed approach.

b. Summary of Final Rule Rationale and Public Comment

Pursuant to CWA section 404(h)(1)(A)(i), EPA may approve a Tribal or State request for assumption only if EPA determines, among other things, that the Tribe or State has authority “[t]o issue permits which—(i) apply, and assure compliance with, any applicable requirements of this section, including, but not limited to, the guidelines established under subsection [404](b)(1). . . .” The CWA 404(b)(1) Guidelines also direct that “no discharge of dredged or fill material shall be permitted” if there is a less environmentally damaging practicable alternative, so long as the alternative does not have other significant adverse environmental consequences (40 CFR 230.10(a)); if it would cause or contribute to violations of applicable water quality standards taking into account disposal site dilution and dispersion (40 CFR 230.10(b)(1)); if it would violate any applicable toxic effluent standard or prohibition (40 CFR 230.10(b)(2)); if it would cause or contribute to significant degradation of waters of the United States (40 CFR 230.10(c)); or if it would jeopardize the continued existence of listed endangered or threatened species under the Endangered Species Act of 1973 or result in the likelihood of the destruction or adverse modification of designated critical habitat (40 CFR 230.10(b)(3)); or unless appropriate and practicable steps have been taken to minimize potential impacts of the discharge on the aquatic ecosystem. *See* 40 CFR 230 Subpart H; *see also* section IV.B.4 of this preamble for further discussion on mitigation.

Consistent with CWA section 404(h)(1)(A)(i), the section 404 Tribal and State program regulations require that assuming Tribes and States may not impose conditions less stringent than those required under Federal law (40 CFR 233.1(d)); that Tribes and States may not issue permits that do not comply with the requirements of the Act or this part of the regulations, including the CWA 404(b)(1) Guidelines (40 CFR 233.20(a)); that “[f]or each permit the Director shall establish conditions which assure compliance with all applicable statutory and regulatory requirements, including the 404(b)(1) Guidelines” (40 CFR 233.23(a)); and that “The Director will review all applications for compliance with the 404(b)(1) Guidelines and/or equivalent State environmental criteria as well as any other applicable State laws or

regulations” (40 CFR 233.34(a)). Because the regulations already require that CWA section 404 permits issued by an assuming Tribe or State must comply with the CWA 404(b)(1) Guidelines, EPA did not propose adding to the regulatory text.

Several commenters asserted that the only way to ensure that Tribes and States have sufficient authority to issue permits that apply and assure compliance with the CWA 404(b)(1) Guidelines is to require Tribes and States to adopt the CWA 404(b)(1) Guidelines verbatim or incorporate them by reference into the Tribal or State program. To the extent these commenters assert that adoption or incorporation is the most straightforward way for a Tribe or State to demonstrate sufficient authority, EPA agrees. However, while a Tribe or State may choose to adopt verbatim or incorporate into their programs by reference the CWA 404(b)(1) Guidelines or other Federal requirements, nothing in the CWA requires that they do so. *See* 49 FR 39012, 39015 (October 2, 1984); *cf.* 40 CFR 123.25(a) Note.

Requiring Tribes and States to adopt or incorporate the CWA 404(b)(1) Guidelines would complicate efforts by Tribes and States to impose more stringent requirements as part of their CWA section 404 programs. By not requiring that Tribes and States adopt verbatim or incorporate by reference the CWA 404(b)(1) Guidelines, Congress allowed leeway for Tribes and States to craft a Tribal or State program consistent with circumstances specific to that Tribe or State, so long as their permits will assure compliance with the CWA 404(b)(1) Guidelines at least as stringently as permits issued by the Corps.

This flexibility is consistent with the nature of the CWA 404(b)(1) Guidelines themselves. Recognizing that a CWA section 404 permit may be required for a variety of discharges into a wide range of aquatic ecosystems, EPA explained in promulgating the CWA 404(b)(1) Guidelines that they are intended to provide “a certain amount of flexibility,” consisting of tools for evaluating proposed discharges, rather than numeric standards. 45 FR 85336, 85336 (December 24, 1980). EPA further explained in this preamble to the Guidelines: “[c]haracteristics of waters of the United States vary greatly, both from region to region and within a region. . . . As a result, the Guidelines concentrate on specifying the tools to be used in evaluating and testing the impact of dredged or fill material discharges on waters of the United States rather than on simply listing

numerical pass-fail points.” *See id.*; *see also* 40 CFR 230.6.

EPA is not adding further regulatory text addressing how Tribes and States may ensure compliance with the CWA 404(b)(1) Guidelines. The section 404 Tribal and State program regulations as well as CWA section 404(h)(1)(A)(i) already require that Tribal and State permits and environmental review criteria apply and assure compliance with the CWA 404(b)(1) Guidelines while allowing for flexibility as to how Tribes and States wishing to assume implementation of the CWA section 404 program can demonstrate that they have sufficient authority to apply and assure compliance with the CWA 404(b)(1) Guidelines.

Tribes and States can choose to adopt verbatim or incorporate by reference the CWA 404(b)(1) Guidelines. To the extent a Tribe or State wishing to assume the CWA section 404 program desires to incorporate more stringent requirements or otherwise desires to craft a program more tailored to that Tribe’s or State’s circumstances, the Tribe or State should demonstrate clearly in its program description that it has sufficient authority to apply and assure compliance with the CWA 404(b)(1) Guidelines. For example, a Tribe or State could provide a crosswalk between the Tribal or State program and the CWA 404(b)(1) Guidelines or a similar written analysis of the Tribal or State program authority, which it could include in its request to assume the program. A Tribe or State also could develop and include with its program submission a permit checklist or other documentation to be used in connection with each permit decision to document on a case-by-case basis how each permit decision applies the CWA 404(b)(1) Guidelines. Where a Tribe’s or State’s request for assumption relies upon an already established and ongoing dredged and fill permit program under Tribal or State law, that Tribe or State could supplement its program description by demonstrating that the terms and conditions of permits for discharges into waters of the United States that were issued pursuant to the preexisting Tribal or State program complied with the CWA 404(b)(1) Guidelines comparably with or more stringently than Federal permits issued by the Corps for the same discharge.

Several commenters discussed the portion of the preamble to the proposed rule in which EPA suggested various ways that Tribes and States could demonstrate authority to issue permits that apply and assure compliance with the CWA 404(b)(1) Guidelines’ prohibition on authorization of a

discharge if the discharge would jeopardize the continued existence of listed endangered or threatened species under the Endangered Species Act of 1973 (listed species) or result in the likelihood of the destruction or adverse modification of designated critical habitat (40 CFR 230.10(b)(3)). Many of these commenters asserted that the final rule must ensure that listed species and critical habitat receive the same protections under a Tribal or State program as they would if the Corps had processed the permit and engaged in consultation with the U.S. Fish and Wildlife Service or National Marine Fisheries Service (the Services) pursuant to section 7 of the Endangered Species Act (ESA). These commenters proposed various ways of ensuring protection of listed species and critical habitat, including requiring the Tribes and States to undertake ESA section 7 consultation themselves or requiring EPA to consult with the Services on each Tribal or State permit as part of EPA’s oversight. Several commenters asserted that EPA must consult with the Services prior to approving a Tribal or State program. A few commenters noted that Tribal and State permittees must comply with the take provisions of section 10 of the ESA, and one commenter recommended that EPA continue to pursue an approach similar to that associated with EPA’s approval of Florida’s section 404 program whereby EPA and the U.S. Fish and Wildlife Service engaged in a programmatic consultation under ESA section 7 resulting in an incidental take permit covering all permittees in Florida. Other commenters expressed concerns about the protection afforded listed species and critical habitat by Florida’s or other State section 404 programs.

EPA’s approval of Florida’s section 404 program is the subject of ongoing litigation (*see Center for Biological Diversity v. Regan*, No. 24–5101 (D.C. Cir.), and will not be addressed here. EPA’s obligation to undertake ESA section 7 consultation in connection with its approval and/or oversight of a Tribal or State CWA section 404 program is beyond the scope of this rulemaking.

To the extent commenters assert that assuming Tribal and State programs must incorporate the procedural requirements of the ESA, issuance of a permit by a Tribe or State pursuant to an assumed program under CWA section 404(g) is not a Federal action subject to the procedural requirements of the ESA. *See* H.R. Rep. No. 95–830 at 104 (1977) (“The conferees wish to emphasize that such a State program is

one which is established under State law and which functions in lieu of the Federal program”); *see also Chesapeake Bay Foundation v. Virginia State Water Control Bd.*, 453 F. Supp. 122 (E.D. Va. 1978).

Although decisions by Tribal and State section 404 programs do not trigger the Federal consultation process laid out in ESA section 7, Tribes and States must demonstrate that they have sufficient authority to issue permits that comply and assure compliance with 40 CFR 230.10(b)(3), which states that “[no] discharge of dredged or fill material may be permitted if it . . . [j]eopardizes the continued existence of [threatened or endangered species listed under the ESA]” or would adversely modify critical habitat. 40 CFR 230.10(b)(3). A few commenters asserted that the discussion in the preamble to the proposed rule regarding how Tribes and States could demonstrate compliance with this aspect of the CWA 404(b)(1) Guidelines was too generalized and/or insufficiently prescriptive or protective. On the other hand, one commenter asserted that EPA should defer to Tribal and State expertise. The discussion in the preamble to the proposed rule was not intended to be exhaustive or to provide a checklist. Tribes and States retain flexibility to tailor their programs consistent with the types of listed species and critical habitat within their jurisdictions.

EPA recommends that Tribes and States include in the program submission provisions and procedures to protect listed species and habitat. EPA recommends that Tribes and States develop a method for identifying the listed species and areas of designated critical habitat within their geographic boundaries and for determining whether federally listed species or critical habitat are present or would be affected by a particular discharge. Tribes and States also could develop processes for ensuring that their identification of federally listed species and designated critical habitat remains up to date as well as processes to avoid impacts to these resources.

EPA continues to encourage Tribes and States to proactively coordinate with the relevant Services’ regional or field offices when developing their programs. To the extent that Tribes and States coordinate with the Services as they develop their programs, such work would help inform the Services’ review opportunity to comment to EPA on a Tribal or State program submission. *See* 33 U.S.C. 1344(g)(2) and 1344(h)(1); *see also* 40 CFR 233.15(d) and (g). Such work would also facilitate EPA’s

coordination with the Services on permits for which EPA has not waived review. *See* 33 U.S.C. 1344(j).

Several Tribes expressed concern that the preamble to the proposed rule did not provide sufficient guidance regarding how a Tribe or State could demonstrate that it has sufficient authority to apply and assure compliance with subpart F of the CWA 404(b)(1) Guidelines. Pursuant to subpart F (40 CFR 230.50 through 230.54), the permit issuing authority should consider potential effects on human use characteristics, including “areas designated under Federal and State laws or local ordinances to be managed for their aesthetic, educational, historical, recreational, or scientific value,” when making the factual determinations and the findings of compliance or non-compliance under the Guidelines. 40 CFR 230.54(a). These human use considerations encompass, among other things, uses and values of aquatic resources that are important to Tribes and local communities. For example, section 230.51 in subpart F describes considerations regarding potential impacts of dredged or fill material on recreational and commercial fisheries, consisting of “harvestable fish, crustaceans, shellfish, and other aquatic organisms.” *Id.* at 230.51(a). Section 230.52 includes considerations regarding the impact of dredged or fill material on water-related recreation, including harvesting of resources and non-consumptive activities such as canoeing on the water. Section 230.53 addresses potential impacts on aesthetic values of aquatic ecosystems and notes that: “The discharge of dredged or fill material can mar the beauty of natural aquatic ecosystems by degrading water quality, creating distracting disposal sites, including inappropriate development, encouraging unplanned and incompatible human access, and by destroying vital elements that contribute to the compositional harmony or unity, visual distinctiveness, or diversity of an area.” *Id.* at 230.53(b). Section 230.54 discusses considerations regarding “national and historical monuments, national seashores . . . and similar preserves” and where the discharge may “modify the aesthetic, educational, historical, recreational and/or scientific qualities thereby reducing or eliminating the uses for which such sites are set aside and managed.” *Id.* at 230.54(b). Collectively or individually, significantly adverse effects of the discharge of pollutants on these human uses may contribute to the significant degradation of the waters of the United States. *Id.* at 230.10(c).

As with other aspects of the CWA 404(b)(1) Guidelines, Tribes and States have the option of adopting 40 CFR 230.50 through 230.54, but they are not required to do so. To demonstrate sufficient authority to apply and assure compliance with subpart F of the CWA 404(b)(1) Guidelines, a Tribe or State should include in its program description its process and permit review criteria for evaluating and addressing potential permit impacts on historic properties and properties with cultural significance. Such a process could include any agreements with and/or procedures for formal or informal coordination and communication with the State Historic Preservation Officer or Tribal Historic Preservation Office. The Tribe or State also could develop an agreement with the relevant State Historic Preservation Officer or Tribal Historic Preservation Office to establish a process to identify historic properties that may be impacted by the Tribe’s or State’s issuance of section 404 permits and a process for resolving adverse effects. Such an agreement could include the identification of relevant parties with an interest in potential impacts on historic properties (these could correspond to entities that would have a consultative role under the National Historic Preservation Act regulations), duties and responsibilities of the identified parties, and a description of the process to consider any impacts, including the determination and resolution of adverse effects on historic properties. Such an agreement could facilitate EPA’s review of a Tribal or State permit’s impacts on historic properties, consistent with EPA’s oversight of the permits, for which review has not been waived, and authorized program. *See* 40 CFR 233.31. The program description would contain any such agreement(s).

The foregoing, of course, are only examples, and there are likely other means by which a Tribe or State could demonstrate that it has sufficient authority to issue permits that comply and assure compliance with the CWA 404(b)(1) Guidelines. EPA will avoid unnecessarily limiting Tribes and States by imposing a single vehicle or approach for implementing the CWA 404(b)(1) Guidelines. EPA recommends that an assuming Tribe or State consider incorporating into its program description ways to identify and consider impacts to other human use characteristics, such as impacts to waters that support subsistence fishing by the local population or that may have significance for religious or treaty purposes. These could include, for

example, formalizing a process for coordinating with local communities to identify and understand how waters that may be affected by discharges of dredged or fill material are used for subsistence fishing, religious purposes, or other uses important to the local community. Such procedures would demonstrate the Tribe or State's ability to fulfill the intent of the human use characteristics provisions of the section 404(b)(1) Guidelines.

Some Tribes assert that compliance with the CWA 404(b)(1) Guidelines is not an adequate substitute for the input that Tribes can provide through consultation procedures of the National Historic Preservation Act. While the Federal consultation procedures under section 106 of the National Historic Preservation Act do not apply to permits issued by a Tribe or State,²⁶ the final rule expands upon existing opportunities for Tribal input. Section IV.F of this preamble provides detailed discussion on opportunities whereby Tribes may request that EPA review permits that may affect their Tribal rights or interests within or beyond reservation boundaries and Tribes that have status of treatment in a similar manner as a State (TAS) shall receive notice and an opportunity to provide recommendations as an "affected State" for purposes of 40 CFR 233.31. See section IV.F of this preamble. In addition, EPA review of Tribal or State permit applications may not be waived for "[d]ischarges within critical areas established under State or Federal law, including but not limited to . . . sites identified or proposed under the National Historic Preservation Act. . . ." 40 CFR 233.51(b)(6). Moreover, as discussed above, Tribal and State permits must assure compliance with all applicable statutory and regulatory requirements, including the section 404(b)(1) Guidelines as described above. Finally, assuming Tribes and States must provide for judicial review of Tribe- or State-issued permits, which provides another opportunity for interested parties to raise concerns about a permit's failure to comply with the 404(b)(1) Guidelines. See section IV.C.2 of this preamble.

3. No Less Stringent Than

a. Overview and What the Agency Is Finalizing

The Agency's regulations provide that Tribes and States may not impose requirements less stringent than Federal requirements. 40 CFR 233.1(d). While

Tribes and States have flexibility to determine how to best integrate sufficient authority into their programs, there are limits to this flexibility not explicitly spelled out in the prior regulations. Accordingly, the Agency proposed to codify its longstanding principle that a Tribe or State cannot comply with its obligation pursuant to section 510 of the CWA to impose requirements no less stringent than Federal requirements by making one requirement more stringent than federally required as a tradeoff for making another requirement less stringent. The Agency also proposed to clarify its interpretation that an assuming Tribe or State must demonstrate that it will at all times have authority to issue permits for all non-exempt discharges of dredged and fill material to all waters of the United States within its jurisdiction except for discharges to the subset of waters of the United States ("retained waters") over which the Corps retains administrative authority pursuant to CWA section 404(g)(1). To clarify the role of Federal interpretive guidance in Tribal or State programs, such as the Corps' General Regulatory Policies in 33 CFR part 320 or Regulatory Guidance Letters, EPA further proposed to clarify that Tribes and States are not required to incorporate the Corps' or EPA's interpretive guidance into their CWA section 404 programs. Finally, EPA proposed to codify its long-held position that the Tribe or State is responsible for administering all portions of a CWA section 404(g) program. Specifically, where the CWA 404(b)(1) Guidelines or other regulations require that the District Engineer or the Corps of Engineers make certain decisions or take certain actions, the proposed rule provides that the Tribal or State agency will carry out those responsibilities for purposes of the assumed program. After reviewing public comments, the Agency is finalizing this approach as proposed.

b. Summary of Final Rule Rationale and Public Comment

Section 510 of the CWA provides: "[i]f an effluent limitation, or other limitation, effluent standard, prohibition, pretreatment standard, or standard of performance is in effect under this chapter, such State . . . may not adopt or enforce any effluent limitation, or other limitation, effluent standard, prohibition, pretreatment standard, or standard of performance which is less stringent. . . ." 33 U.S.C. 1370. Consistent with CWA section 510, EPA's regulations at 40 CFR 233.1(d) require: "Any approved State Program

shall, at all times, be conducted in accordance with the requirements of the Act and of this part. While States may impose more stringent requirements, they may not impose any less stringent requirements for any purpose." See also 33 U.S.C. 1344(h)(1)(A)(i); 40 CFR 233.20(a), 233.23(a), 233.34(a).

Broadly stated, the goal of those portions of the CWA and its implementing regulations that govern Tribal and State assumption of the CWA section 404 program is to ensure that an assuming Tribe or State will issue permits that assure compliance with the CWA at least as stringently as would a permit for the same discharge if issued by the Corps. Section 404(h)(1)(A)(i) of the CWA and 40 CFR 233.1(d), 233.20(a), 233.23(a), and 233.34(a) expressly require that permits issued by an assuming Tribe or State must apply and assure compliance with the CWA 404(b)(1) Guidelines, as discussed in section IV.A.2 of this preamble. In addition, Tribes and States must demonstrate that their section 404 programs will cover at least the same discharges as the CWA and will issue permits that are not less stringent than other aspects of the CWA beyond the CWA 404(b)(1) Guidelines.

Commenters generally agreed that permits issued by Tribes or States may not be less stringent than a permit for the same discharge if issued by the Corps of Engineers. One commenter characterized this concept as establishing a strong Federal "floor" for Tribal and State permits. As with the CWA 404(b)(1) Guidelines, Tribes and States seeking to assume the section 404 program may choose but are not required to adopt verbatim or incorporate by reference relevant portions of the CWA or its implementing regulations. Where a Tribe or State chooses not to adopt or incorporate by reference portions of the CWA or its implementing regulations, the Tribal or State program description should describe how the Tribal or State program is no less stringent than those provisions.

1. A Tribe or State Cannot Comply With Its Obligation Pursuant to Section 510 of the CWA To Impose Requirements No Less Stringent Than Federal Requirements by Trading Off More Stringent Requirements for Less Stringent Requirements

Most commenters supported EPA's proposal to codify the principle prohibiting tradeoffs between more lenient and more stringent requirements. However, one commenter did not support EPA's proposed approach and expressed concern that

²⁶ See *Menominee Indian Tribe of Wisconsin v. Env't'l Protection Agency*, 947 F.3d 1065, 1073–74 (7th Cir. 2020).

the proposed approach would deprive Tribes and States of flexibility. The Agency agrees that Tribes and States should have flexibility to determine how best to ensure that their permits will apply and assure compliance with the CWA 404(b)(1) Guidelines and be no less stringent than Federal requirements. That said, EPA has long stated that flexibility does not extend to tradeoffs among requirements, as discussed, in the 1988 preamble to the CWA section 404 Tribal and State program regulations. *See* 53 FR 20764, 20766 (June 6, 1988).

EPA is finalizing its proposal to codify this longstanding principle prohibiting tradeoffs between more lenient and more stringent requirements in its section 404 Tribal and State program regulations. As noted above, this clarification does not represent a change in EPA's longstanding position. Additionally, this principle is also articulated in EPA's regulations governing the section 402 program. *See* 40 CFR 123.25(a), Note. EPA sees no reason not to provide similar clarity for section 404 programs.

2. An Assuming Tribe or State Must Regulate at Least All Non-Exempt Discharges to Navigable Waters Within Its Jurisdiction, Except for Discharges to Waters Retained by the Corps

In addition to codifying its longstanding principle against tradeoffs, EPA is clarifying that Tribes and States wishing to assume the section 404 program must demonstrate consistency with aspects of the CWA beyond the CWA 404(b)(1) Guidelines. While a Tribe or State may regulate discharges that are not covered by the CWA, a Tribal or State program must regulate *at least* all non-exempt discharges of dredged and fill material to all navigable waters as defined by CWA section 502(7) ("waters of the United States") within the Tribe's or State's jurisdiction except for discharges to the subset of retained waters. This means that a Tribal or State program may not exempt discharges other than those exempted pursuant to CWA section 404(f). Similarly, when a Tribe or State assumes administration of the CWA section 404 program, it assumes administrative authority to permit discharges to all waters of the United States within its jurisdiction except for the subset of retained waters.²⁷ *See* 33

U.S.C. 1344(g)(1). As noted earlier, EPA has final administrative authority over the scope of "waters of the United States." *See Civiletti Memorandum*.

The subset of waters of the United States over which the Corps retains administrative authority pursuant to CWA section 404(g)(1) is identified in the Memorandum of Agreement between the assuming Tribe or State and the Corps which, among other things, includes a "description of waters of the United States within the State over which the Secretary retains jurisdiction." 40 CFR 233.14(b)(1). *See* section IV.B.2 of this preamble for further discussion on retained waters. To the extent the coverage of the CWA as defined by the term "waters of the United States"²⁸ changes following court decisions or rulemaking, assumption of the section 404 program by a Tribe or State cannot result in a situation in which neither the assuming Tribe or State nor the Corps has authority to issue a permit for discharges to a water of the United States. The requirement that Tribes or States at all times have authority to issue permits for all non-exempt discharges to all waters of the United States within their jurisdiction is therefore generally not governed by 40 CFR 233.16(b), which addresses the modification of Federal statutes or other regulations.

As with the CWA 404(b)(1) Guidelines (*see* section IV.A.2 of this preamble), Tribes and States seeking to assume the section 404 program need not adopt verbatim or incorporate by reference relevant portions of the CWA or its implementing regulations, though they may do so. EPA recommends that Tribes and States identify in the program description (40 CFR 233.10(b) and 233.11) and Attorney General Statement (40 CFR 233.10(c) and 233.12) those provisions of Tribal or State law that will ensure that the Tribe or State will at all times have sufficient authority to issue permits for non-exempt discharges to all waters of the United States within its jurisdiction except for discharges to the subset of waters of the United States over which the Corps retains administrative authority following assumption. A Tribal or State section 404 program may regulate discharges into Tribal or State waters in addition to the jurisdictional CWA waters as well as issue permits for discharges into waters retained by the Corps; however, the Corps remains the CWA section 404 permitting authority for retained waters.

3. Tribes and States May Adopt Federal Interpretive Guidance and the Corps' General Regulatory Policies, But Are Not Required To Do So

EPA also is clarifying here the role of Federal interpretive guidance in Tribal or State programs, such as the Corps' Regulatory Guidance Letters or other interpretive statements issued by the Corps and/or EPA. Nothing in the CWA or 40 CFR part 233 requires that Tribes or States wishing to assume the section 404 program formally adopt or incorporate into their programs Regulatory Guidance Letters or other formal interpretive statements issued by the Corps and/or EPA. Federal agency interpretive guidance may often be helpful in providing transparency, clarity, and consistency in implementation of the Federal program. However, it does not have the effect of legally binding regulation and may not necessarily be applicable, for example, where Tribal or State requirements are more stringent than Federal requirements or the guidance references a procedure not part of the Tribal or State program. Moreover, Federal agency interpretive guidance may evolve over time with changes in case law and other circumstances.

Accordingly, while assuming Tribes and States may consider relevant Federal agency interpretive guidance and may choose to adopt it to aid in program implementation, they are not required to formally adopt Federal agency interpretive guidance. EPA recommends that Tribes and States provide transparency by describing as part of the Tribal or State program description (40 CFR 233.10(b) and 233.11) if and how they will consider Federal agency interpretive guidance.

Several commenters asserted that, in order to issue permits that are not less stringent than permits that would be issued by the Corps for the same discharge, Tribes and States assuming the section 404 program must incorporate the procedural and substantive provisions of the Endangered Species Act, the National Historic Preservation Act, the National Environmental Protection Act and other statutes that apply generally to Federal actions, including to permits issued by the Corps under CWA section 404. Issuance of a permit by a Tribe or State pursuant to an assumed program under CWA section 404(g), however, is not subject to the requirements for Federal actions under those statutes. *See* H.R. No. 95–830 at 104 (1977) ("The conferees wish to emphasize that such a State program is one which is established under State law and which

²⁷ As noted in the 1988 preamble, "States may have a program that is *more . . . extensive* than what is required for an approvable program." 53 FR at 20764, 20766 (June 6, 1988) (emphasis added). As described elsewhere in this preamble, Tribes and States may not assume *less* than what is required under the CWA.

²⁸ *See* 33 U.S.C. 1311(a), 1362(7).

functions in lieu of the Federal program”); *See Chesapeake Bay Foundation v. Virginia State Water Control Bd.*, 453 F. Supp. 122 (E.D. Va. 1978). That said, while the Federal statutory procedural requirements may not apply directly to Tribal or State actions, CWA section 404(h)(1)(A)(i) requires that Tribal and State programs have authority to issue permits that apply and assure compliance with the CWA 404(b)(1) Guidelines, including those provisions that limit permit issuance to the least environmentally damaging practicable alternative, prohibit permitting of a discharge that would jeopardize the continued existence of listed endangered or threatened species under the Endangered Species Act, and require consideration of potential effects on human use characteristics, including “areas designated under Federal and State laws or local ordinances to be managed for their aesthetic, educational, historical, recreational, or scientific value.” *See* section IV.A.2 of this preamble for further discussion on compliance with the CWA 404(b)(1) Guidelines.

Tribal or State adoption of the Corps’ General Regulatory Policies (33 CFR part 320) (including the Corps’ “public interest review” at 33 CFR 320.4(a)) is also not required. The CWA makes no reference to the Corps’ General Regulatory Policies, which, by their own terms, apply to a range of the Corps’ regulatory authority, including, but not limited to, CWA section 404 (*see* 33 CFR 320.2). As described elsewhere, the substantive environmental criteria used to evaluate discharges of dredged and fill material under CWA section 404 are set forth in the CWA 404(b)(1) Guidelines. *See* 40 CFR 230.2. Tribes or States are free, however, to incorporate elements of the Corps’ General Regulatory Policies into their permitting procedures if they choose to do so.

4. Tribes and States That Assume the CWA Section 404 Program Are Responsible for Administering All Portions of the Section 404 Program

Finally, EPA is codifying its long-held position that the Tribe or State is responsible for administering all portions of a section 404(g) program. Certain regulations implementing CWA section 404 were drafted to refer to the authority of the Corps of Engineers without accounting for Tribal or State assumption of the section 404 program. EPA is clarifying that, when a Tribe or State assumes administration of the section 404 program, the Tribe or State becomes responsible for all of the actions under section 404 for which the

Corps would be responsible if it were to issue the permit. The rule clarifies that it is the assuming Tribe or State that is responsible for administering all sections of the approved section 404 program. *See* section IV.B.4 of this preamble for further discussion on mitigation.

EPA also clarifies here that only Tribal, State, or interstate agencies may assume administration of the section 404 program. While a Tribe or State may establish general permits for discharges of dredged or fill material for categories of similar activities that will cause only minimal adverse environmental effects individually or cumulatively, they may not delegate permitting responsibility to non-Tribal or non-State entities, such as counties or municipalities. 33 U.S.C. 1344(g)(1); 40 CFR 233.2 (definition of “State”).

B. Program Approval

1. Partial Program Assumption

a. Overview and What the Agency Is Finalizing

Under 40 CFR 233.1(b), assuming Tribes or States must have authority to regulate all non-exempt discharges to all waters of the United States within their borders except for the subset of waters of the United States over which the Corps retains administrative authority pursuant to CWA section 404(g)(1). Although some States have expressed an interest in being able to assume the authority to issue section 404 permits for just a portion of the section 404 regulated activities, or a portion of the assumable waters within the Tribe’s or State’s jurisdiction, the Agency proposed to maintain its longstanding position that the statute does not authorize partial assumption. After considering public comments, EPA is finalizing its proposed approach to maintain the text at section 233.1(b) which clarifies that partial programs are not approvable under section 404.

b. Summary of Final Rule Rationale and Public Comment

In 1987, Congress added section 402(n) to the CWA, specifically authorizing EPA to approve partial Tribal and State NPDES permit programs that “cover, at a minimum, administration of a major category of the discharges into the navigable waters of the State or a major component of the permit program. . . .” That provision specifies the scope of partial State section 402 programs that may be approved. Congress did not amend CWA section 404 to add a parallel provision authorizing a Tribe or State to assume the authority to issue section

404 permits for just a portion of discharges into assumable waters. Given the absence of a provision in the section 404 program authorizing partial assumption parallel to the provision in the section 402 program, EPA maintains its longstanding interpretation that the best reading of the CWA “requir[es] State programs to have full geographic and activities jurisdiction (subject to the limitation in section 404(g)).” 53 FR 20764 (June 6, 1988). Because of the special status of Indian country, a lack of State authority to regulate activities on Indian lands will not cause the State’s program to be considered a partial program. *See id.*

In addition to concluding that the statute does not authorize partial assumption, EPA also determined that partial assumption would be extremely difficult to implement. Numerous States have expressed an interest in being able to assume the authority to issue section 404 permits for just a portion of the section 404 regulated activities, or a portion of the assumable waters within the Tribe’s or State’s jurisdiction. While some commenters supported the status quo, others supported some form of partial assumption, or encouraged the Agency to explore options to provide additional flexibility. One commenter noted that partial assumption in States with more stringent or protective section 404 programs could advance environmental protection, and another noted that partial assumption of program activities could allow for more Tribal oversight and input in the permitting process.

EPA carefully considered the comments received, evaluating potential approaches to partial assumption, but ultimately concluded that it would be difficult to implement. Partial assumption based on a size threshold for a project would be unworkable because the “footprint” of a project may change during the execution of the project, which could result in the shifting of jurisdiction between the Federal and the assumed program. This outcome could conceivably encourage permittees to increase the footprint or impacts of their proposed project in order to remain with the Corps for the permit review process. Partial assumption based on a geographic area would also be challenging to implement, because Tribes and States could potentially divide watersheds or create a checkerboard of authority that could create problems in determining jurisdiction, as well as mitigation and enforcement. Partial assumption based on type of waterbody would pose difficulties because it might require a waterbody-by-waterbody determination

to identify permitting authority, and a project might impact more than one waterbody, creating confusion as to whether the permitting authority is the Corps or the Tribe or State. Partial assumption that would allow for the assumption of certain aspects of the program, such as a Tribe or State taking on permitting but not enforcement, or vice versa, would cause unavoidable duplication of effort between the Tribe or State and EPA and the Corps. And partial assumption based on activity would pose challenges because the Agency was unable to devise a comprehensive and clear way to define potential activities. Dividing functions between the Federal and Tribal or State governments would also be confusing for the regulated public.

EPA also considered phased assumption of program responsibilities, whereby the Tribe or State would ultimately assume the full program, but in stages or phases. EPA considered this approach but concluded that implementing a phased approach would present all of the challenges listed above regarding identification of the permitting authority. Additionally, there are no tools available to the Agency to ensure that a Tribe or State continues to phase in all portions of the program, or to determine how much time should be allowed for the process; the only mechanism available to the Agency to address a failure to complete phasing-in the full program would be withdrawal of the entire program.

Tribes and States not interested in full assumption can already take on a major role in managing their aquatic resources and in the permitting process even without assuming the section 404 program. A Tribe or State may develop their own dredged or fill material permitting program. Alternatively, the Federal section 404 program provides mechanisms that allow for Tribal and State input in developing permits for specific activities or specific geographic areas within Tribal or State jurisdiction. In 1977, Congress amended section 404 to allow the Corps to issue certain types of general permits, including State Programmatic General Permits (SPGPs). SPGPs are general permits issued by the Corps that provide section 404 authorization for certain discharge activities if the permittee has secured a State permit for that same activity. Some States have worked with the Corps to develop SPGPs, which create permitting efficiencies for certain projects within the State. While the Corps is still the section 404 permitting authority for SPGPs, these permits give the Tribe or State the ability to be actively involved, as well as the opportunity to create

more stringent requirements than the Federal section 404 permitting program, without the burden of assuming and administering the section 404 program.

In sum, EPA has concluded that continuing to interpret the CWA to prohibit partial assumption reflects the best reading of the text of the CWA and will enable the most transparent and consistent implementation of the section 404 program across the nation. This approach provides the most clarity to the public and the regulated community as to which waters are being assumed and whether applicants need a Tribal or State permit or a Federal permit. Conversely, partial assumption would be more likely to cause confusion among interested parties and be more difficult to implement consistently across the country for the reasons discussed earlier in this section.

2. Retained Waters

a. Overview and What the Agency Is Finalizing

As discussed in section III.B.2 of this preamble, the Corps retains authority over certain waters and wetlands adjacent to those waters when a Tribe or State assumes permitting authority. States and Tribes have expressed to EPA the need for further clarification regarding which waters a Tribe or State may assume and which waters the Corps retains. The Agency is finalizing as proposed a procedure for determining the extent of waters over which the Corps would retain administrative authority following Tribal or State assumption of the section 404 program, with certain minor modifications based on comments received. Under the procedure, before the Tribe or State submits its assumption request to EPA, the Tribe or State must submit a request to EPA that the Corps identify the subset of waters of the United States that would remain subject to the Corps' section 404 administrative authority following assumption. The Tribe or State must submit one of the following documents with the request to show that it has taken concrete and substantial steps toward program assumption: a citation or copy of legislation authorizing funding to prepare for assumption, a citation or copy of legislation authorizing assumption, a Governor or Tribal leader directive, a letter from a head of a Tribal or State agency, or a copy of a letter awarding a grant or other funding allocated to investigate and pursue assumption. Within seven days of receiving the request for the retained waters description, EPA will review and respond to the request. If the request

includes the required information, then EPA will transmit the request to the Corps. EPA will also notify members of the public of that transmission and invite input to the Corps and to the Tribe or State within a 60-day period that the Corps may consider in developing its description.

If the Corps notifies the Tribe or State and EPA within 30 days of receiving the request transmitted by EPA that it will provide the Tribe or State with a retained waters description, the Corps has 180 days from the receipt of the request to provide a retained waters description to the Tribe or State. The purpose of the 180-day period is to allow the Corps time and opportunity to follow the process at 40 CFR 233.11(i) to identify those waters over which the Corps will retain section 404 permitting authority while providing a timeframe within which the Tribe or State can expect to receive a retained waters description. If the Corps does not notify the Tribe or State and EPA within 30 days of receipt of the request that it intends to provide a retained waters description, the Tribe or State may prepare a retained waters description. Similarly, if the Corps had originally indicated that it would provide a retained waters description but does not provide one within 180 days of EPA's transmission to the Corps, the Tribe or State may develop the retained waters description using the same approach described above. Alternatively, the Tribe or State and the Corps may mutually agree to extend the period of time for the Corps to develop the list.

The most recently published list of RHA section 10 waters (*see* 33 CFR 329.16) would be the starting point for the retained waters description. The Corps, Tribe, or State would place waters of the United States, or reaches of these waters, from the RHA section 10 list into the retained waters description if they are known to be presently used or susceptible to use in their natural condition or by reasonable improvement as a means to transport interstate or foreign commerce. *See* 33 U.S.C. 1344(g)(1). To the extent feasible and to the extent that information is available, the Corps, Tribe, or State would add other waters or reaches of waters to the retained waters description that are presently used or are susceptible to use in their natural condition or by reasonable improvement as a means to transport interstate or foreign commerce. *See id.* The Corps, Tribe, or State would not place RHA section 10 list waters in the retained waters description if, for example, they were historically used as a means to transport interstate or foreign commerce

and are no longer susceptible to use as such with reasonable improvement.

The description would also describe retained wetlands. The default understanding is that the Corps would retain administrative authority over all jurisdictional wetlands “adjacent” to retained waters, as that term is defined in 40 CFR 120.2(c). A Tribe or State may choose to negotiate an agreement with the Corps to establish an administrative boundary through jurisdictional adjacent wetlands, landward of which the Tribe or State would assume administrative authority. If the Tribe or State and the Corps reach agreement on such a boundary, EPA may consider it when it is submitted with the program submission. As a default, however, the Corps would retain all wetlands adjacent to retained waters. The retained waters description does not need to include a specific list of adjacent wetlands or provide mapping or a description of the lateral extent of those wetlands.

As recognized in EPA’s regulations, in many cases, States lack authority to regulate activities in Indian country. *See* 40 CFR 233.1(b). Thus, the Corps will continue to administer the program in Indian country unless EPA determines that another jurisdiction has authority to regulate discharges into waters in Indian country. *See id.*

EPA is changing the regulatory provision stating that modifications to the extent of the retained waters description always constitute substantial revisions to a Tribal or State program. 40 CFR 233.16(d)(3) (2023). The new provision is more limited in scope: it states that removals of waters from the retained waters description, other than *de minimis* removals, are substantial revisions. In addition, revisions to an approved Tribal CWA section 404 program are substantial where they would add reservation areas to the scope of its approved program. EPA is also providing that the Memorandum of Agreement between the Corps and the Tribe or State must outline procedures whereby the Corps will notify the Tribe or the State of changes to the RHA section 10 list as well as the extent to which these changes implicate the statutory scope of retained waters as described in CWA section 404(g)(1) and therefore necessitate revisions to the retained waters description. The Tribe or State would incorporate the revisions that the Corps has identified, pursuant to the modification provisions agreed upon in the Memorandum of Agreement.

EPA is modifying the program description requirements to provide that the Tribal or State program will

encompass all waters of the United States not retained by the Corps at all times. 40 CFR 233.11(i)(6). EPA is also removing the term “traditionally” from the term “traditionally navigable waters” in the following provision: “[w]here a State permit program includes coverage of those traditionally navigable waters in which only the Secretary may issue 404 permits, the State is encouraged to establish in this Memorandum of Agreement procedures for joint processing of Federal and State permits, including joint public notice and public hearings.” *Id.* at 233.14(b)(2).

b. Summary of Final Rule Rationale and Public Comments

Section 404(g) of the CWA authorizes Tribes and States to assume authority to administer the section 404 program in some, but not all, navigable waters within their jurisdiction. “Navigable waters” is defined at CWA section 502(7) as “waters of the United States, including the territorial seas.” The Corps retains administrative authority over a subset of these waters even after program assumption by a Tribe or State.²⁹ Specifically, section 404(g)(1) states that the Corps retains administrative authority over the subset of waters of the United States consisting of “. . . waters which are presently used, or are susceptible to use in their natural condition or by reasonable improvement as a means to transport interstate or foreign commerce shoreward to their ordinary high water mark . . . including wetlands adjacent thereto.” 33 U.S.C. 1344(g)(1). A Tribe or State assumes section 404 administrative authority over all waters of the United States within its jurisdiction that are not retained by the Corps.

EPA’s prior regulations require that the program description that is part of a Tribal or State assumption request include “[a] description of the waters of the United States within a State over which the State assumes jurisdiction

under the approved program; a description of the waters of the United States within a State over which the Secretary retains jurisdiction subsequent to program approval; and a comparison of the State and Federal definitions of wetlands.” 40 CFR 233.11(h) (2023). In addition, the prior regulations state that the Memorandum of Agreement between a Tribe or State and the Corps required as part of the assumption request shall include a description of the waters of the United States within the Tribe or State for which the Corps will retain administrative authority. 40 CFR 233.14(b)(1) (2023).

Prior to this rule, EPA had not provided guidance on a process for identifying the subset of waters of the United States over which the Corps would retain administrative authority following Tribal or State assumption. Without a clear and practical process, individual States and the Corps districts have had to interpret the extent of retained waters and the meaning of “wetlands adjacent thereto” in the context of case-by-case development of Tribal and State program descriptions for prospective programs and the Memoranda of Agreement that are negotiated between the Corps and the State as part of a program submission. Tribes and States have indicated that confusion about how best to identify the extent of retained waters and adjacent wetlands has been a barrier to assumption and have asked EPA to provide clarity.

As discussed in section III.B of this preamble, EPA convened the Assumable Waters Subcommittee under the auspices of the NACEPT to provide advice and recommendations as to how EPA could best clarify the subset of waters of the United States over which the Corps retains administrative CWA section 404 authority when a Tribe or State assumes the section 404 program. NACEPT adopted the majority recommendation in the Subcommittee report and incorporated it into its recommendations provided to EPA in June 2017. Although at the time of the Subcommittee report, the Corps presented a separate view from the majority of the extent of retained waters and adjacent wetlands for which it would retain administrative authority, the Department of the Army subsequently sent a letter to the Corps supporting the majority recommendation as to the extent of retained waters and adjacent wetlands (though the letter did not define a specific administrative boundary for

²⁹ When a Tribe or State assumes administrative authority for the CWA section 404 program, it assumes authority to permit discharges of dredged and fill material to all “waters of the United States” within the meaning of CWA section 502(7) except for the subset of waters of the United States over which the Corps is required to retain administrative authority under Section 404(g). The scope of CWA jurisdiction is defined by CWA section 502(7) as “waters of the United States,” and is distinct from and broader than the scope of waters over which the Corps retains administrative authority following Tribal or State assumption of the section 404 program. This rule develops a process for identifying the subset of waters of the United States over which the Corps retains administrative authority following approval of a Tribal or State section 404 program. It does not define the broader set of “waters of the United States” within the scope of CWA section 502(7).

adjacent wetlands).³⁰ NACEPT's recommendations, based on the Subcommittee majority recommendation that was subsequently endorsed by the Corps, are discussed below.

i. Subcommittee's Recommendation

The Subcommittee majority recommended that for purposes of identifying the subset of waters of the United States over which the Corps would retain administrative authority following Tribal or State assumption of the CWA section 404 program, existing RHA section 10 lists³¹ be used "with two minor modifications: any waters that are on the section 10 lists based solely on historic use (e.g., historic fur trading routes) are not to be retained (based on the Congressional record and statute), and waters that are assumable by a tribe (as defined in the report) may also be retained by the USACE when a state assumes the program." Final Report of the Assumable Waters Subcommittee at v.³² The Subcommittee also recognized that "waters may be added to Section 10 lists after a state or tribe assumes the program, and recommends in that case, such waters may also be added to lists of USACE-retained waters at that time." *Id.* The majority recommendation was based on its analysis of the text and legislative history of section 404(g), which is discussed in the Background description in section III of this preamble, in which the majority concluded that Congress intended that the Corps retain permitting authority over some RHA section 10 waters. *See id.* at 55–61 (Appendix F.) The majority thought this approach had the benefit of being clear and easy to implement. *See id.* at 17–20.

The Subcommittee majority also addressed the scope of retained adjacent wetlands. It recommended that the Corps retain administrative authority over all wetlands adjacent to retained waters landward to an administrative boundary agreed upon by the Tribe or State and the Corps. This boundary, the recommendation added, "could be negotiated at the state or tribal level . . . if no change were negotiated, a 300-foot national administrative default line

would be used." Final Report of the Assumable Waters Subcommittee at vi. The Subcommittee majority opinion noted that large wetland complexes can extend far from the retained water. *Id.* at 31. Without such an administrative line, the Subcommittee majority noted, assumption could lead to a confusing pattern of USACE and State or Tribal permitting authority across the landscape.

With regard to Tribal considerations during assumption of the section 404 program, the Subcommittee found that "Section 518 of the CWA, enacted as part of the 1987 amendments to the statute, authorizes the EPA to treat eligible Indian tribes in a manner similar to states ('treatment as a State' or TAS) for a variety of purposes, including administering each of the principal CWA regulatory programs [including CWA section 404] and receiving grants under several CWA authorities (81 FR 30183, May 16, 2016)." *Id.* at 3. The Subcommittee majority recommended that "Tribal governments pursuing assumption of the 404 program will follow the same process as states, though it is expected that there will be some nuanced differences; for example, in addressing Tribal Indian Reservation boundaries" and that "[i]n a state-assumed program, states will generally not assume authority for administering the 404 program within Indian country; instead, such authority will generally be retained by the USACE unless the tribe itself is approved by EPA to assume the 404 program." *Id.*

The Subcommittee majority noted that its recommended approach is consistent with "the plain language of Section 404(g) and the legislative history. Congress clearly intended that states and tribes should play a significant role in the administration of Section 404—as they do in other CWA programs—anticipating that many states would assume the Section 404 program." *See id.* at 19.

ii. Final Rule Approach to Retained Waters

1. Contents of the Retained Waters Description

Taking into consideration the majority recommendation of the Subcommittee as well as stakeholder input on the proposed rule, the subset of waters of the United States over which the Corps would retain administrative authority would include the following:

—Waters of the United States, or reaches of those waters, from the RHA section 10 list(s) that are known to be presently used or susceptible to use in

their natural condition or by reasonable improvement as a means to transport interstate or foreign commerce;

—Other waters known by the Corps or identified by the Tribe or State as presently used or susceptible to use in their natural condition or by reasonable improvement as a means to transport interstate or foreign commerce, including all waters which are subject to the ebb and flow of the tide; and

—Retained wetlands that are adjacent to the foregoing waters.

As recognized in EPA's regulations, in many cases, States lack authority under the CWA to regulate activities covered by the section 404 program in Indian country. *See* 40 CFR 233.1(b). Thus, the Corps will continue to administer the program in Indian country unless EPA determines that a State has authority to regulate discharges into waters in Indian country and approves the State to assume the section 404 program over such discharges. *See id.* The Memorandum of Agreement between the Corps and State must address any waters in Indian Country which are to be retained by the Corps upon program assumption by a State. EPA also notes that the Corps would retain jurisdiction over waters located in lands of exclusive Federal jurisdiction in relevant respects (e.g., certain national parks identified in 16 U.S.C. Chapter 1 as having lands of exclusive Federal jurisdiction, such as Denali National Park).

Some commenters supported this approach, outlined in the proposed rule. Others critiqued the Agency's reliance on the RHA section 10 lists as a starting point for identifying retained waters, stating that these lists can be out of date and often lack current information or supporting documentation. Some commenters suggested that RHA section 10 lists should only be relied upon if they have been comprehensively updated within the previous five years. Some commenters would require that the Corps review all judicial determinations involving the subject State to identify additional retained waters.

EPA recognizes that the available RHA section 10 lists may not cover all RHA section 10 waters in the Tribe's or State's jurisdiction and that they may not be updated to reflect current use and characteristics of listed waters. However, EPA agrees with the recommendation of the Assumable Waters Subcommittee that these lists provide a useful starting point for determining the scope of retained waters, given the clear indication in the

³⁰ R.D. James, Memorandum for Commanding General, U.S. Army Corps of Engineers: Clean Water Act Section 404(g)—Non-Assumable Waters (July 30, 2018).

³¹ The RHA section 10 lists are compiled and maintained by the Corps district offices for every State except Hawaii. 33 CFR 329.14 describes the process the Corps follows to make navigability determinations pursuant to the RHA.

³² Available at https://www.epa.gov/sites/default/files/2017-06/documents/awsubcommittee_finalreport_05-2017_tag508_05312017_508.pdf.

legislative history that Congress intended the Corps to generally retain RHA section 10 waters, with some modifications, and that an approach that starts with existing lists will be clear and easy to implement. No commenters proposed implementable alternatives to the RHA section 10 lists as a starting point. Comprehensively reviewing and revising RHA section 10 lists is a multi-year, resource-intensive and relatively rare undertaking, so excluding from use those lists not comprehensively updated within the past five years would cause significant delays in assumption. However, to ensure the retained waters descriptions remain as current and accurate as is feasible, EPA has modified the final rule to provide that whenever RHA section 10 lists are updated, an orderly process exists for incorporating those changes, as appropriate, into a Tribe's or State's retained waters description. Specifically, EPA now requires that the Memorandum of Agreement between the Corps and the Tribe or State outline procedures whereby the Corps will notify the Tribe or the State of changes to the RHA section 10 list that implicate the statutory scope of retained waters and the Tribe or State will incorporate those changes into its retained waters description.

With respect to the suggestion to require review of all judicial decisions related to navigability during the development of the retained waters description, EPA agrees that these should be viewed as resources during the development of the description, as well as information submitted by interested parties, navigability analyses the Corps has conducted since last updating its RHA section 10 list, and other sources of information. However, EPA is declining to define the sources of information for the development of the retained waters description in the regulations because it would be unnecessarily prescriptive and limit the flexibility of the Corps or the relevant Tribe or State.

Some commenters argued that the retained waters description must include waters that have been historically navigable, as historical navigability often indicates whether the waterway can be navigable in its natural condition or with reasonable improvement, which is the statutory criteria for retained waters in section 404(g). EPA agrees that historical navigability can sometimes indicate that a water is navigable in its natural condition or with reasonable improvement. Yet this is not always the case. Sometimes historically navigable waters have been modified—as a result

of dams, water diversions for irrigation, climate change, or other circumstances—and cannot be restored to navigability with reasonable improvements. EPA therefore retains the proposed rule approach, based on the statutory language and consistent with the recommendation of the Assumable Water Subcommittee, which would remove waters or reaches of waters that were historically navigable but that are not currently used as a means to transport interstate or foreign commerce in their natural condition or with reasonable improvement.

EPA also received comments stating that the starting point for the scope of the Corps-retained waters must be documented traditional navigable waters (TNWs) as opposed to RHA section 10 lists. The Corps' minority recommendation in the Assumable Waters Subcommittee Final Report advocated for this approach. *See* Final Report at 21–22. The majority rejected reliance on documented TNWs as a starting point on the basis that using the RHA section 10 lists is clearer and easier to implement as well as more consistent with the legislative history of section 404(g). *See id.* at 17. The majority explained that RHA section 10 lists are “well established, and can be relatively easily labeled on regional maps or GIS systems . . .” thereby allowing members of the public “to readily determine which agency is responsible for Section 404 regulation at a specific location.” *See id.* at 18. In contrast, the majority expressed concerns that the extent of documented TNWs is confusing and less transparent, as they are documented in “multiple regulations, guidance, and procedures,” rather than in one central, public location. *See id.* The majority also noted that because most TNWs have not yet been identified as such and thus lists of documented TNWs could easily and regularly increase, using RHA section 10 lists provides greater certainty and predictability regarding the scope of the Tribal or State program. *See id.* at 19. In addition, the majority viewed Congress as intending to retain Corps authority over RHA section 10 waters, with certain minor exceptions. *See id.* at 55–61; *see also* section III of this preamble. For all of the reasons that the Subcommittee cited, EPA has decided to establish RHA section 10 lists as a starting point for retained waters, rather than documented TNWs. EPA notes that ultimately the Department of the Army transmitted to the Corps its support for the majority recommendation's reliance on RHA section 10 lists. *See* section IV.B.2.b of this preamble.

The retained waters description would acknowledge that wetlands are to be retained if they are adjacent to Corps-retained waters. As noted above, the default understanding is that the Corps would retain administrative authority over all jurisdictional wetlands “adjacent” to retained waters. Some Tribes and States may choose to negotiate with the Corps to establish an administrative boundary through jurisdictional adjacent wetlands, landward of which the Tribe or State would assume administrative authority. If they do so, EPA may consider that part of the program description when it is submitted with the program submission. The default approach, however, is that the Corps would retain all adjacent wetlands. A specific list of all retained adjacent wetlands is not required to be included in the retained waters description, because developing such a list would generally be impracticable at the time of program assumption.

EPA had proposed that Tribes or States and the Corps establish an administrative boundary through adjacent wetlands to delineate between retained and assumed wetlands, and that the default boundary be 300 feet from retained waters. Some commenters expressed support for this approach, stating that it would allow needed flexibility for Tribes, States, and the Corps to develop Tribal or State programs and that the proposal is authorized by the CWA. The significant majority of comments received during the public comment period, however, expressed concerns about an administrative boundary default approach, both with respect to implementation and legal authority.

Concerns expressed about implementation included the lack of a scientific basis for the 300-foot default boundary and the lack of a methodology for applying the default boundary. Some commenters pointed out that an administrative boundary would fragment the permitting in large wetlands complexes, leading to stakeholder confusion, and bifurcate the environmental review process, thereby making it difficult to ensure a holistic evaluation of impacts. These commenters stated that because an administrative boundary would sometimes require two permitting agencies to issue different permits for two parts of the same project, it would unnecessarily duplicate effort on the part of permittees, State agencies, and members of the public. Commenters further noted that it would also burden those seeking to challenge permits, who might need to litigate two separate

permits in two separate fora, potentially on different timelines depending on the State or Tribe's judicial review procedures. Commenters also argued that, because the scope of "adjacent wetlands" significantly narrowed following the Supreme Court's May 2023 decision in *Sackett v. EPA* and the Agency's subsequent August 29, 2023, rulemaking conforming the definition of "waters of the United States" to that case, 88 FR 3004, an administrative boundary is no longer necessary. EPA finds the practical concerns raised by commenters valid. Given the challenges involved in implementing the administrative boundary concept and the reduced need for it, as identified by commenters, EPA decided not to finalize the proposed approach.

Commenters also raised legal objections to the administrative boundary approach. These commenters stated that CWA section 404(g)(1) provides that adjacent wetlands may not be assumed by a State or Tribe and that EPA lacks the authority to approve an administrative boundary that would allow a State to assume authority over any part of wetlands that are adjacent to a retained water. Because EPA has decided not to finalize the administrative boundary proposal due to implementation concerns, addressing the scope of the Agency's legal authority to approve such a boundary is unnecessary. If a State or Tribe chooses to negotiate an administrative boundary with the Corps when developing an assumption request, and the parties reach agreement, EPA may consider issues related to the scope of their proposed program at that time.

A number of commenters asked that EPA provide more clarity as to the "universe of waters that would be retained," including the information and data that the Corps and State or Tribe would use to assess the scope of retained waters. As noted previously, however, these commenters did not generally provide specific suggestions as to how EPA could provide additional clarity. The approach EPA is outlining adopts the recommendation of the Assumable Waters Subcommittee, which spent several years assessing how EPA could best clarify the scope of retained waters.

Moreover, for the purposes of CWA section 404(g)(1), determining which waters are presently used or susceptible to use in their natural condition or by reasonable improvement as a means to transport interstate or foreign commerce, as well as the scope of adjacent wetlands is, to some extent, inherently a case-specific process. While determining whether a water is

retained does not require compliance with the requirements for determining whether a water is subject to RHA section 10, and does not necessarily require a navigability study, the factors used to determine RHA section 10 jurisdiction may still be relevant to determining whether a water should be retained. As noted earlier, however, there are key distinctions between RHA section 10 waters and the scope of retained waters. Specifically, unlike RHA section 10 waters, Corps-retained waters do not include waters that are only used historically for the transport of interstate or foreign commerce but do include adjacent wetlands and, when a State is assuming the program, waters subject to Tribal authority.

EPA's approach to determining the retained waters description reflects its attempt to balance the competing priorities of providing an efficient process for program assumption versus guaranteeing a fully comprehensive and precise description. When a Tribe or State is preparing to request assumption, the Corps or assuming Tribe or State may not know all waters that are presently used or susceptible to use in their natural condition or by reasonable improvement as a means to transport interstate or foreign commerce at the time of assumption. However, requiring a comprehensive assessment of every water within the Tribe's or State's jurisdiction at the time of assumption to determine if they should be retained pursuant to the parenthetical in CWA section 404(g)(1) could pose significant practical and budgetary challenges. Depending on the number of waters within the Tribe's or State's jurisdiction, developing a comprehensive retained waters description could take many years and reduce the Corps' ability to carry out its regulatory obligations. EPA attempts to strike a balance by using the RHA section 10 list as a starting point and by stating that the retained waters description must encompass waters "known" by the Corps, Tribe, or State to meet the statutory criteria.

Further, as discussed in section IV.B.2.b.ii.2 of this preamble below, EPA has added an opportunity for public input. EPA is confident that geographic information systems technology and navigation charts, review of judicial decisions, public input, past jurisdictional determinations, and other sources of information should enable the Corps, Tribe, or State to take significant steps in identifying waters in the Tribe's or State's jurisdiction that should be included in the retained waters description. As discussed further below,

moreover, EPA's regulation allows for the retained waters description and the Memorandum of Agreement between the Corps and Tribe or State to be modified if additional waters are identified after assumption, or if waters included in the description no longer meet the statutory criteria.

2. Procedures for Developing the Retained Waters Description

EPA is facilitating clarity and efficiency in the program assumption process by establishing defined timeframes for the development of the retained waters description. Before a Tribe or State provides an assumption request submission to EPA, the Tribal leader, State Governor, or Tribal or State Director must submit a request to EPA that the Corps identify the subset of waters of the United States over which the Corps would retain administrative authority. The Tribe or State must submit the request with specific additional information that should accompany the request to show that the Tribe or State has taken concrete and substantial steps toward program assumption. One of the following must be included with the Tribe's or State's request that the Corps identify which waters would be retained: a citation or copy of legislation authorizing funding to prepare for assumption, a citation or copy of legislation authorizing assumption, a Governor or Tribal leader directive, a letter from a head of a Tribal or State agency, or a copy of a letter awarding a grant or other funding allocated to investigate and pursue assumption. Within seven days of receiving the request for the retained waters description, EPA will review and respond to the request. If the request includes the required information, then EPA will transmit the request to the Corps. This requirement is intended to provide assurance to the Corps that developing a retained waters description for purposes of program assumption is a worthwhile expenditure of its time and resources.

One commenter opposed the requirement that a Tribe or State provide supporting documentation for its request, stating that knowing the scope of assumed waters is a foundational, and preliminary, piece of information that States need before taking concrete and substantial steps toward assumption. EPA recognizes the importance of understanding the scope of assumed waters to Tribes and States before they consider assumption. EPA seeks to balance the desire of Tribes and States to assess the scope of a potential program prior to embarking on such a program, however, with the desire to

avoid unnecessarily imposing workload burdens on the Corps. If EPA did not impose such a prerequisite, the Corps could be asked to embark upon lengthy assessments of the scope of retained waters at the request of State environmental agency staff, for example, only to find out after having expended significant resources that the State legislature or governor has no intention of pursuing program assumption. EPA is therefore finalizing its requirement that a Tribe or State document it has taken concrete and substantial steps toward program assumption before submitting its request for a retained waters description.

In addition to seeking to facilitate the clarity and efficiency of the program assumption process, EPA also seeks to increase public participation and transparency. To that end, EPA is providing that, upon transmitting a request for a retained waters description to the Corps, the Agency will also post a public notice of that transmission on its website and notify members of the public known to be interested in these matters of that transmission, inviting public input to the Corps as well as the State or Tribe on the scope of the retained waters description within a 60-day period. The Corps (or the Tribe or State if the Corps declines to define the description) may consider submitted information in developing its description. If the Corps were to develop the description, the Tribe or State may provide information to the Corps during that 60-day period. Similarly, if the Tribe or State were to develop the list, the Corps may provide information to the Tribe or State before the end of that 60-day period. Regardless of which entity develops the retained waters description, the Corps and Tribe or State will likely maintain regular communication regarding its development. Yet providing data at the beginning of the description development process will ensure that it can be adequately considered.

This public notice and input provision responds to some commenters' requests for additional opportunities for public participation in the development of the retained waters description, while also retaining the efficiency in the description development process that other commenters requested. EPA is not establishing a public notice and comment period on the final retained waters description distinct from the other procedural steps, as that would lengthen the time period for seeking assumption and impose a substantial burden on the Corps, the assuming State or Tribe, and EPA. A 60-day public

input period, however, would increase public participation in the process of determining which waters the Corps would retain and the Tribe or State would assume, without delaying the assumption process. The Corps (or the Tribe or State) would not be obligated to respond directly to this input but could consider it in compiling its description of retained waters.

Members of the public have another opportunity to provide comment on the retained waters description when reviewing the Tribe's or State's program submission. Some commenters requested a separate public notice and comment process specifically if a State takes on the development of the retained waters description. EPA expects that the public input opportunity offered when EPA transmits a request for a retained waters description to the Corps will be sufficient to provide the Tribe or State with information to assist in developing the description. Moreover, a Tribe or State may provide opportunities for public engagement as it develops its program submission, which would again allow members of the public to provide input on the retained waters description.

If the Corps notifies the Tribe or State and EPA within 30 days of receipt of the request transmitted by EPA that it intends to provide a retained waters description, the Corps would have 180 days from the receipt of the request transmitted by EPA to develop the description. During the 180-day period the Corps would be able to review the current RHA section 10 list(s); place waters of the United States or reaches of those waters from the RHA section 10 list into the retained waters description if they are known to be presently used or susceptible to use in their natural condition or by reasonable improvement as a means to transport interstate or foreign commerce; and to the extent feasible and to the extent that information is available, add other waters or reaches of waters to the retained waters description that are presently used or are susceptible to use in their natural condition or by reasonable improvement as a means to transport interstate or foreign commerce.

If the Corps does not notify the Tribe or State and EPA within 30 days of receipt of the request transmitted by EPA that it intends to provide a retained waters description, the Tribe or State may prepare a retained waters description using the same approach outlined above for the Corps. Similarly, if the Corps had originally indicated that it would provide a retained waters

description but does not provide one within 180 days of EPA's transmission to the Corps, the Tribe or State may develop the retained waters description using the same approach described above. Alternatively, the Tribe or State and the Corps may also mutually agree to provide the Corps additional time to provide a retained waters description.

EPA received a number of comments on the time frame and coordination process outlined in the proposed rule, which it is finalizing in this rule. Some commenters stated that the Corps should be allowed one year to develop a retained waters description to allow sufficient time to conduct the assessments needed to compile a complete description, particularly given that some RHA section 10 lists may be outdated. Some commenters also stated that under no circumstances should a Tribe or State have the opportunity to develop a retained waters description, contending that States lack the authority and expertise to make these determinations. Other commenters stated that 180 days was too long a period to require a State or Tribe to wait prior to finalizing their program submission, and that Congress did not intend States and Tribes to have to wait for this length of time.

EPA decided to finalize its proposed approach of allowing the Corps 180 days to develop a list, which it views as striking a balance between the desire of States and Tribes to understand the scope of a potential program as quickly as possible, and the time the Corps needs to complete the resource-intensive process of assessing those waters that meet the statutory criteria to be retained. Moreover, in response to those commenters who urged EPA to allow the Corps additional time, EPA added a provision that would extend the 180-day time frame if the requesting Tribe or State agrees with the Corps on an extension. In response to the commenters that stated that Tribes or States may never develop a retained waters description, EPA views this rule as providing ample opportunity and encouragement to the Corps to develop the description. However, allowing a Tribe or State opportunity to develop a list if the Corps chooses not to do so is a backstop that is consistent with and helps to implement the statute's intent of facilitating Tribal and State assumption. Nothing in the CWA prohibits the Tribe or State from developing a retained waters description. The Act requires that the Tribe or State submit a description of assumed waters, and it is reasonable for the Agency to allow a Tribe or State to submit such a description for EPA

approval with their program request, if the Corps declines to develop a retained waters description.

EPA disagrees with those commenters who expressed concerns that allowing the Corps 180 days to develop a retained waters description would unduly hamper Tribal or State efforts to develop a program submission. In EPA's experience, States that have considered seeking assumption typically spend at least several years preparing their submissions. Allowing the Corps to spend 180 days developing the description (or more, if an extension is jointly agreed upon) would therefore be unlikely to impede Tribal or State efforts. Moreover, the Corps may need 180 days to allocate staff to this project and conduct the reviews and analyses needed to determine which waters meet the statutory criteria to be retained by the Corps.

The Subcommittee majority recommended that identification of the subset of waters of the United States over which the Corps would retain administrative authority be a collaborative process. EPA anticipates that, when a Tribe or State seeks assumption, the Tribe or State, the Corps, and EPA will engage collaboratively throughout the development of this description of retained waters to be submitted with the program request package for review.

Even if the Corps does not provide a retained waters description to the Tribe or State, the Corps may provide relevant information to the Tribe or State at any time during the Tribe's or State's development of the retained waters description. In addition, the Corps would have two formal opportunities to review the list of retained waters that is produced by the Tribe or State. First, the Memorandum of Agreement between the Corps and the Tribe or State includes a description of retained waters, and thus the Corps would have the opportunity to review the description of retained waters during the drafting process for that memorandum and before signing that memorandum. Second, the Corps would have the opportunity to review and provide comments on the Tribe's or State's program submission materials, which includes the description of retained waters, after the Tribe or State submits a program request to EPA. Similarly, if the Corps provides a retained waters description to the Tribe or State, the Tribe or State would presumably review it to ensure that the retained waters description reflects waters presently used or susceptible to use in their natural condition or by reasonable improvement as a means to

transport interstate or foreign commerce, including all waters which are subject to the ebb and flow of the tide, as well as wetlands that are adjacent to the foregoing waters, to the extent feasible and to the extent that scope of waters is known.

The Subcommittee majority recommended that EPA and the Corps establish a clear dispute resolution procedure to be followed if the Tribe or State and the Corps were not able to complete the retained waters description. Because EPA believes that the proposed approach lays out a clear process for establishing the description, EPA is not specifying such a dispute resolution procedure by regulation. See section IV.E.1 of this preamble for further discussion on dispute resolution. EPA encourages Tribes and States seeking to assume the section 404 program to work collaboratively with the Corps to resolve any issues, and EPA may participate in these discussions to advise and facilitate development of the description.

EPA's process, similar to the one described by the Subcommittee majority, is clear and practical, is based on available and relatively stable and predictable information, and is able to be implemented efficiently at the time a Tribe or State seeks assumption. It is also consistent with the text and history of section 404(g), which reflects Congress' intent that the Corps generally retain permitting authority over certain RHA section 10 waters. See section III.A of this preamble. Because the Agency's approach, consistent with the Subcommittee majority's recommendation, effectuates the language and history of section 404(g) and achieves Congress' goal of providing an implementable approach for assumption, generally speaking, a retained waters description that uses this approach will satisfy the statutory criteria for retained waters. However, the Regional Administrator retains the ultimate authority to determine whether to approve a Tribal or State program. As this approach does not conflict with the approved extent of the Michigan and New Jersey programs, no changes to their existing program scope would be required.

3. Modifying the Extent of Retained Waters

EPA is revising the provision in the prior regulations that currently states that modifications that affect the area of jurisdiction (such as modifications to the retained waters description) always constitute substantial revisions to a Tribal or State program. The prior regulations provide that EPA may

approve non-substantial revisions by letter, but require additional procedures, including public notice, inter-agency consultation, and **Federal Register** publication, for substantial revisions. 40 CFR 233.16(d)(2)–(4) (2023). EPA is modifying this provision to provide that all removals, except *de minimis* removals, from the retained waters description are “substantive,” and therefore trigger the notice requirements for “substantive” program changes.” In addition, changes in geographic scope of an approved Tribal CWA section 404 program that would add reservation areas to the scope of its approved program are substantial program revisions.

EPA had proposed removing the provision stating that modifications affecting the area of jurisdiction always constitute substantial revisions, though also providing that changes in geographic scope of an approved Tribal CWA section 404 program that would add reservation areas to the scope of its approved program are substantial program revisions. The proposed change was based on EPA's experience that retained waters descriptions sometimes require minor tweaks (such as minor modifications to the head of navigation of a particular waterbody) and that requiring a full **Federal Register** notice for such changes is unnecessarily burdensome. Commenters expressed concern, however, that pursuant to the proposed revision waters could be reassigned to State jurisdiction without any public notice or opportunity to comment. These commenters therefore asked that all removals from the retained waters description be viewed as substantial revisions. EPA is accepting this recommendation and finalizing this approach, with the qualification that *de minimis* removals are not substantial. Examples of *de minimis* removals may include a reduction in the length of a retained portion of a waterbody by a hundred feet prompted by a new navigability study or changes resulting from a water infrastructure project, or the removal from the retained waters description of an oxbow lake that sedimentation has severed from a Corps-retained river. EPA thinks this approach will achieve EPA's goal of removing unnecessarily burdensome procedures while providing transparency for interested parties.

While development of the retained waters description involves collaboration between the Corps and the Tribe or State, the Corps remains the agency with sole responsibility for maintaining and modifying any RHA section 10 list. The Subcommittee

majority recognized that the Corps may add waters to RHA section 10 lists after a Tribe or State assumes the program. The Subcommittee majority recommended that in such cases, Tribes or States may revise their retained waters descriptions to add these waters, if consistent with CWA section 404(g)(1). As discussed above, an RHA section 10 list will not necessarily be co-extensive with the retained waters description and changes to RHA section 10 lists do not always warrant changes to the retained waters description. For example, if the Corps adds to its RHA section 10 list a water which was historically used in interstate or foreign commerce but is no longer used or susceptible to use for that purpose, that water would not be added to the retained waters description.

If, however, the Corps were to add waters to its RHA section 10 list that are used or susceptible to use in interstate or foreign commerce, the relevant Tribe or State would add these waters to the retained waters description. To provide a predictable and transparent procedure for such modifications, and to address commenters' concerns that many RHA section 10 lists are not currently up to date, the final rule provides that the Memorandum of Agreement between the Corps and the Tribe or State must outline procedures whereby the Corps will notify the Tribe or the State of changes to the RHA section 10 list as well as the extent to which these changes implicate the statutory scope of retained waters. Pursuant to the Memorandum of Agreement, the Tribe or State would incorporate the changes the Corps has identified as implicating the scope of retained waters into its retained waters description.

Under the final rule, EPA would have discretion to determine whether additions to the area of jurisdiction, which includes the extent of retained waters, are substantial or non-substantial. EPA may then decide whether to approve the modification to the retained waters description consistent with the procedures in 40 CFR 233.16.

This rule clarifies that changes in geographic scope of an approved Tribal CWA section 404 program that would add reservation areas to the scope of its approved program are substantial program revisions. Where a Tribe seeks to include additional reservation areas within the scope of its approved program, the Regional Administrator must determine that the Tribe meets the TAS eligibility criteria for the additional areas and waters. The substantial modification process involves circulating notice to "those persons

known to be interested in such matters, provide opportunity for a public hearing, and consult with the Corps, FWS, and NMFS." 40 CFR 233.16(d)(3). In the case of a change in geographic scope of a Tribal program, known interested persons would typically include representatives of Tribes, States, and other Federal entities located contiguous to the reservation of the Tribe which is applying for TAS. *See, e.g.,* Amendments to the Water Quality Standards Regulation That Pertain to Standards on Indian Reservations, 56 FR 64876, 64884 (December 12, 1991). This clarification is necessary because as discussed above, additions that affect the area of jurisdiction are not always substantial. However, revising a Tribal program to add new reservation land and waters of the United States on that land is substantial because it requires a determination that the Tribe meets the TAS eligibility criteria for such areas, pursuant to 40 CFR part 233, subpart G.

EPA is further amending the procedures associated with approval of program revisions to require EPA to notify the Corps of all approvals of program modifications, whether they are substantial or non-substantial. EPA is also requiring that other Federal agencies be notified of these program modification approvals as appropriate.

4. Additional Clarification

EPA is removing the term "traditionally" from the term "traditionally navigable waters" in the following provision: "Where a State permit program includes coverage of those traditionally navigable waters in which only the Secretary may issue 404 permits, the State is encouraged to establish in this Memorandum of Agreement procedures for joint processing of Federal and State permits, including joint public notices and public hearings." 40 CFR part 233.14(b)(2). EPA is removing the term "traditionally" to align the reference to retained waters with the rest of this preamble and regulations, which refer to retained waters using the statutory language in the section 404(g) parenthetical, and do not refer to retained waters as "traditionally" or "traditional navigable waters." "Traditional navigable waters" are defined in the definition of "waters of the United States" and are not addressed by this rule. *See* 40 CFR part 120.2(a)(1)(i).

3. Program Assumption Requirements

a. Overview and What the Agency Is Finalizing

The Agency proposed changes to better harmonize its program approval requirements with program requirements in other sections of the CFR. To assume the section 404 program, a Tribe or State must be able to demonstrate that it can meet the requirements for permitting, program operation, compliance evaluation and enforcement, and administer a program that is consistent with section 404. EPA is revising the requirements for the program descriptions that Tribes and States submit to EPA when they request approval to assume the section 404 program. First, the revisions clarify that the description of the funding and staff devoted to program administration and compliance evaluation and enforcement must demonstrate that the Tribe or State is able to carry out the existing regulatory requirements for permit review, program operation, and compliance evaluation and enforcement programs, provided in 40 CFR part 233 subparts C through E. In order to do so, the Tribe or State must provide in the program description staff position descriptions and qualifications, program budget and funding mechanisms, and any other information a Tribe, State, or EPA considers relevant. The revisions ensure that when a Tribe or State submits a request to assume the section 404 program, its program submission would demonstrate the Tribe or State has the resources necessary to ensure that the permit decisions comply with permit requirements in 40 CFR part 233 subpart C, as applicable; that its permitting operations would comply with the program operation requirements of 40 CFR part 233 subpart D, as applicable; and that its compliance evaluation and enforcement operations would comply with the compliance evaluation and enforcement requirements of 40 CFR part 233 subpart E, as applicable.

EPA is also revising the requirement that currently provides that if more than one State agency is responsible for the administration of the program, the program description shall address the responsibilities of each agency and how the agencies intend to coordinate administration, compliance, enforcement, and evaluation of the program. This rule adds that the program description must address additional program budget and funding mechanisms for each of these agencies, and how the agencies intend to coordinate program funding.

Similarly, the Agency is revising the requirement that the Tribe or State program description include “[a] description of the scope and structure of the State’s program. . . . [which] should include [the] extent of [the] State’s jurisdiction, scope of activities regulated, anticipated coordination, scope of permit exemptions if any, and permit review criteria.” 40 CFR part 233.11(a) (2023). EPA is clarifying that this description “must” address all of the listed elements in 233.11(a). The rule is also clarifying that the description must provide sufficient information to demonstrate that the criteria are sufficient to meet the permit requirements in 40 CFR 233 subpart C. These revisions do not substantively change the requirements for permit review, program operation, and compliance evaluation and enforcement programs. Rather, they ensure that Tribes or States provide EPA with sufficient information to ensure that Tribal or State programs would be able to meet these requirements.

Finally, EPA is revising the program description requirement that if more than one Tribal or State agency would be administering the program, the program description shall address inter-agency coordination. The revision clarifies that the description of inter-agency coordination must include coordination on enforcement and compliance.

b. Summary of Final Rule Rationale and Public Comment

CWA section 404(h) provides that, before approving a Tribe’s or State’s section 404 program, EPA shall determine whether the Tribe or State has the authority to administer the program, including to issue permits that comply with the CWA 404(b)(1) Guidelines, to provide for public notice and opportunity for comment on permit applications, and to abate violations of the permit or permit program. *See* 33 U.S.C. 1344(h)(1)(A), (C), (G). Section 404(h) refers to a Tribe’s or State’s “authority,” but legal authority would be meaningless without the capacity to implement it. Clarifying that EPA must ensure that Tribes and States have the resources and programs in place to implement their authority best carries out section 404(h).

EPA’s existing regulations effectuate section 404(h) by imposing program requirements for permitting, program operation, and compliance evaluation and enforcement set forth in 40 CFR part 233 subparts C through E to administer a program that is consistent with section 404. A program that lacks the resources to meet these

requirements would not be able to carry out its statutory and regulatory obligations. This rule would not change these existing requirements; rather, it would ensure that the program submission provides information necessary to determine that Tribes and States can meet them.

In the 1988 preamble to the section 404 State program regulations, EPA stated that the program description Tribes and States must submit to EPA “should provide the information needed to determine if the State has sufficient manpower to adequately administer a good program.” 53 FR 20764, 20766 (June 6, 1988). However, 40 CFR part 233 subpart B, which contains the requirements for program approval, does not explicitly state that Tribes and States must demonstrate that they have sufficient resources to meet the requirements for permit issuance, program operation, and compliance and enforcement outlined in subparts C through E. The regulations require that the program description contain “a description” of available funding and manpower (*i.e.*, staffing),³³ 40 CFR 233.11(d) (2023), but did not clearly state that the available funding and staffing must be sufficient to meet the requirements of subparts C through E. In addition, the regulations provide that the program description must include “a description” of the Tribe’s or State’s compliance evaluation and enforcement programs, including a description of how the Tribe or State will coordinate its enforcement strategy with the Corps and EPA, 40 CFR 233.11(g) (2023), but did not clearly state that the Tribe’s or State’s compliance evaluation and enforcement programs must be sufficient to meet the requirements for section 404 program compliance evaluation and enforcement in subpart E. In the absence of these clarifications, the regulations did not provide sufficient guidance as to what kind of demonstration is needed by Tribes and States as they develop their programs. This revision would clarify the subpart B descriptions Tribes or States must submit, consistent with the goal of this rulemaking, to provide more clarity on the program assumption process for Tribes and States. *See* section III.B of this preamble. The purpose of subpart B is to require Tribes and States to demonstrate that they in fact have the capacity to carry out subparts C through E, pursuant to the original intent of the

current regulations, and these changes would better reflect that intent.

This rule requires the program description to identify position descriptions and qualifications as well as budget and funding mechanisms for all responsible Tribal or State agencies because this information is critical to understanding whether a Tribe or State will be able to administer subparts C through E. EPA must be able to determine that the Tribe or State will have sufficient qualified staff and a reliable and sufficient funding mechanism that will be commensurate with the responsibilities it seeks to assume. Given the importance of these elements, Tribes and States should have staffing and budget information readily available, and providing it in the program description should not impose a significant new burden.

Some commenters opposed these revisions, as presented in the proposed rule, arguing that such requirements could result in unnecessary delays or confuse Tribes or States preparing assumption submissions. These commenters also stated that such revisions are unnecessary. For example, one commenter argued that to the extent EPA were to find, for example, staffing levels described in the program description insufficient, the 120-day review period for program submissions would not provide time for a Tribe or State to increase those levels. EPA disagrees with these commenters and has decided to finalize these revisions for the reasons discussed above. In response to the commenter that said that information about staffing levels would not aid EPA, EPA thinks that requiring transparency about staffing levels will encourage Tribes and States to ensure that their staffing levels will be sufficient to carry out their program. Without adequate staff to draft protective permits and inspect and review dredged and fill activity, it is not possible for a program to comply with CWA requirements. For example, EPA cannot assess a Tribe’s or State’s ability to administer CWA section 404 if it does not know whether the Tribe or State will have two permit writers or twenty. Moreover, EPA typically provides extensive technical support to Tribes and States that are preparing program submissions, and Tribes and States may discuss staffing levels with EPA at any time prior to their program submission.

Many commenters supported the revisions in this section. Some asked EPA to require additional information from Tribes or States. One suggested addition was to require budget and funding information for all Tribal or State agencies with program

³³ In this revision, EPA is replacing the term “manpower” with “staffing” and will use the term “staffing” throughout this preamble.

administration responsibilities, not just the lead agency. This suggested requirement is consistent with the budget and funding information EPA proposed to require, and simply addresses a potential ambiguity by clarifying that the budget and funding information EPA requests applies to all Tribal or State agencies with a role in the section 404 program, not just the lead agency. EPA is therefore adopting this suggested requirement in the final rule.

Other program description requirements that commenters asked EPA to finalize include, but are not limited to: Tribes or States seeking to reallocate existing resources must describe the duties that existing staff will no longer perform and the skills and expertise staff have that apply to reallocated tasks; Tribal or State budget descriptions must account for all aspects of the section 404 program, including administrative work, human resources, information technology, training, guidance, leadership, enforcement, compliance, scientific personnel, on-site activities and legal personnel; and Tribes or States must demonstrate that any existing CWA-authorized programs are adequately funded and staffed. EPA considered requiring some or all of the suggested information of Tribes and States, but ultimately concluded that requiring this level of detail is unnecessary. EPA will not always need each of these pieces of information to determine whether a program submission meets the requirements of the CWA. Codifying information requirements with this degree of specificity could limit flexibility on the part of Tribes or States and EPA to design and approve program descriptions reflecting their particular circumstances. However, EPA views this suggested information as helpful guidance to Tribes or States as they assess how best to demonstrate that they have the capacity to administer the section 404 program. Tribes and States are welcome to submit this type of information, and if they do so, it will likely aid EPA's review of the program submission.

EPA recommends that Tribes and States provide other information to the extent it is necessary to demonstrate that they will be able to carry out subparts C through E. Some commenters suggested that if a Tribal or State program submission commits to conduct the same activities as the Corps but with a lower budget or fewer staff people, the submission must provide detailed documentation demonstrating how they will be able to successfully administer the section 404 program. In

fact, one commenter noted that Tribes or States should allocate more money to assumption than the Corps in the first few years of assumption, given the additional costs of starting a program. To the extent Tribes or States can compare resource levels with the Corps', EPA agrees with the commenter that this information would be useful, and strongly encourages Tribes and States to provide such comparisons. EPA is not codifying this requirement, however, as differences in administrative structures may render a direct comparison between Tribe or State funding or staff and Corps funding or staff infeasible. For example, a Corps district may not be able to identify the number of staff focused solely on section 404 permitting or on a single State, if its staff administers the section 404 regulatory program as well as RHA section 10 or other types of permitting programs, and/or if the staff manages permitting for a number of States. The difficulties with direct comparisons could be compounded in States that include multiple Corps districts. An alternative approach could compare the average number of different types of section 404 permits (*i.e.*, individual versus general permits) Corps staff handle in a district to the average number of permits the Tribe or State has or anticipates its staff will handle in an assumed program.

The rule does not prescribe a particular metric that Tribes or States must use to ensure sufficient funding, staffing, or compliance evaluation and enforcement programs. It also does not prescribe the specific position descriptions and qualifications a Tribe or State must have, a minimum budget, or a particular type of funding mechanism. The rule therefore retains a certain amount of flexibility for Tribes and States, recognizing that the section 404 program needs of different Tribes and States can differ. Tribal or State agencies likely have varying procedures for determining sufficient staff and funding levels and may choose to organize their programs in different ways. Furthermore, the necessary section 404 program budget may differ depending on the anticipated workload in the particular Tribe or State, such as the number of permits typically sought, the extent and types of aquatic resources assumed, and the types of compensatory mitigation mechanisms used. In adding clarification to better carry out the requirements of 40 CFR 233.11, this revision does not reopen those requirements.

EPA's clarification, that as part of the program description, the Tribe or State must demonstrate that its permit review criteria are sufficient to carry out the

permitting requirements of 40 CFR part 233 subpart C, has the same goal as the program revisions described above: it would harmonize the requirements for the program description with the requirements for program operation, and facilitate EPA's ability to ensure that Tribal and State permits will comply with the CWA 404(b)(1) Guidelines.

Finally, requiring that the description of Tribal and State agency coordination on program administration must address enforcement and compliance will enable EPA to ensure the Tribe or State can comply with the requirements of 40 CFR part 233 subpart E, which prescribes the enforcement and compliance requirements for assumed programs.

4. Mitigation

a. Overview and what is the Agency finalizing?

The CWA and EPA's implementing regulations provide that every permit issued by a Tribe or State must apply and ensure compliance with the guidelines established under CWA section 404(b)(1).³⁴ 33 U.S.C. 1344(h)(1)(A)(i); 40 CFR 233.20(a), 233.23(c)(9) (2023). Under CWA 404(b)(1) Guidelines, impacts to waters of the United States should be avoided and minimized to the maximum extent practicable before considering compensatory mitigation.³⁵ 40 CFR 230.10(a), (d). In 2008, the Corps and EPA issued joint regulations³⁶ requiring performance standards and establishing criteria for all types of compensatory mitigation including: (1) on- and off-site permittee-responsible compensatory mitigation, (2) mitigation banks, and (3) in-lieu fee programs, to "offset unavoidable impacts to waters of the United States authorized through the issuance of permits by the U.S. Army Corps of Engineers (Corps) pursuant to

³⁴ See section IV.A.2 of this preamble for a discussion on how a Tribe or State can demonstrate that it has the authority to issue permits that apply and assure compliance with aspects of the CWA 404(b)(1) Guidelines other than compensatory mitigation.

³⁵ The term *compensatory mitigation* means "the restoration (re-establishment or rehabilitation), establishment (creation), enhancement, and/or in certain circumstances preservation of aquatic resources for the purposes of offsetting unavoidable adverse impacts which remain after all appropriate and practicable avoidance and minimization has been achieved." 40 CFR 230.92.

³⁶ "Compensatory Mitigation for Losses of Aquatic Resources" 73 FR 19594 (April 10, 2008). (Commonly referred to or known as the "2008 Mitigation Rule"). The 2008 Mitigation Rule was adopted into both EPA and the Corps regulations. See 33 CFR 325.1 and 332.1 through 332.8 and 40 CFR 230.91 through 230.98. The Agency refers to EPA's regulations located at 40 CFR 230.91–98 as subpart J of the 404(b)(1) Guidelines throughout this final rule.

section 404 of the Clean Water Act.” 40 CFR 230.91(a)(1).

The prior regulations reaffirmed that all permits issued by Tribal and State programs must accord with the requirements of the Act or regulations thereunder. 40 CFR 233.1(d), 233.20(a) (2023). As previously described in section IV.A.2 of this preamble, Congress allowed leeway for Tribes and States to craft a Tribal or State program consistent with circumstances specific to that Tribe or State, so long as their permits will assure compliance with the CWA 404(b)(1) Guidelines at least as stringently as permits issued by the Corps. EPA further explained in promulgating the CWA 404(b)(1) Guidelines that they are intended to provide “a certain amount of flexibility,” consisting of tools for evaluating proposed discharges, rather than numeric standards. 45 FR 85336, 85336 (December 24, 1980).

While 40 CFR 233.1(d) of the prior regulations reemphasized that approved Tribe and State programs “may impose more stringent requirements” but “may not impose any less stringent requirements for any purpose,” the regulations did not provide any detail as to how a Tribe or State can demonstrate and ensure compliance with the substantive criteria and requirements of subpart J of the 404(b)(1) Guidelines, as subpart J was developed more than a decade after the Tribal and State section 404 program regulations were revised in 1988. Additionally, the language used in subpart J of the 404(b)(1) Guidelines focuses on Federal concerns regarding permits issued by the Corps; for example, it references the “DA [Department of the Army] permits” and the “district engineer” and does not refer to or account for Tribe- or State-issued permits. *See* 73 FR 19650. These Corps-related references have created confusion. As a result, States have requested clarity on how a Tribe or State can demonstrate that it has authority to issue permits that apply and assure compliance with the substantive criteria for compensatory mitigation set forth in subpart J of the CWA 404(b)(1) Guidelines. States have also requested clarification about the respective roles and responsibilities of the Tribe or State and Federal agencies in connection with compensatory mitigation for impacts to assumed waters.

With respect to subpart J of the 404(b)(1) Guidelines, EPA recognized some terminology and discussion refers to the Corps as the permitting authority. EPA proposed modifying section 233.1(e) to clarify that references to the Corps as the permitting authority (such as references to the “District Engineer”

or “DA Permits”) are to be considered as applying to the Tribal or State permitting agency or decision maker as appropriate. The final rule codifies this proposed approach. 40 CFR 233.1(e).

Secondly, EPA proposed a new provision codifying its interpretation that the Tribe’s or State’s approach may deviate from the specific requirements to the extent necessary to reflect Tribal or State administration of the program as opposed to the Corps’ administration, but that these programs may not be less stringent than the substantive criteria of subpart J. Furthermore, the new provision requires Tribes or States to submit in their program description the Tribe’s or State’s proposed approach to ensuring that all permits they issue will apply and ensure compliance with the substantive criteria for compensatory mitigation consistent with the requirements of subpart J of the CWA 404(b)(1) Guidelines at 40 CFR part 230. EPA is finalizing what was proposed without modification in section 233.11(k).

Finally, EPA proposed to add a new provision to section 233.50 to address EPA’s oversight responsibilities where Tribe or State programs are establishing third-party compensation mechanisms (*i.e.*, mitigation banks or in-lieu fee programs) as part of their section 404 program.³⁷ The proposed process also intended to incorporate input from other relevant agencies, which is analogous to the way the Interagency Review Team (IRT) that oversees mitigation for Corps-issued permits incorporates input from other relevant agencies. *See, e.g.*, 33 U.S.C. 1344(g), (h); 40 CFR 233.20(b) (“No permit shall be issued . . . [w]hen the Regional Administrator has objected to issuance of the permit . . .”); 40 CFR part 233 generally; 40 CFR 230.98(b) (describing Interagency Review Team procedures). The Agency also proposed to revise the section title for section 233.50 to read “Review of and objection to State permits and review of compensatory mitigation instruments.” This revision was intended to reflect the Agency’s role in reviewing Tribal or State compensatory mitigation instruments.

The new provision (*i.e.*, section 233.50(k)) outlines a process which requires Tribes or States to transmit a copy of each draft instrument to EPA, the Corps, the U.S. Fish and Wildlife

Service, and the National Marine Fisheries Service for review prior to approving the final instrument, as well as to any Tribal or State resource agencies to which the Tribe or State committed to send draft instruments in the program description. In the event that EPA has commented that the instrument is not consistent with the 404(b)(1) Guidelines (see section 233.11(k)), the Tribe or State shall not approve the final compensatory mitigation instrument until EPA notifies the Director that the final instrument is consistent with the Guidelines. EPA is finalizing the proposed process along with specific time frames for receiving comments from the reviewing agencies in section 233.50(k).

b. Summary of Final Rule Rationale and Public Comment

i. Clarifying Authority

The final rule, consistent with the proposal, clarifies in the new provision 233.1(e) that when a Tribe or State assumes the section 404 program, references to the Corps as the permitting authority (such as references to the “District Engineer” or “DA Permits”) in subpart J are to be considered as applying to and being implemented by the Tribal or State permitting agency or decision maker. EPA received no comments on this issue.

ii. Ensuring Consistency and Compliance With Subpart J

The new provision 40 CFR 233.11(k) accomplishes three objectives. First, the new provision requires that Tribes or States submit in their program description their approach to ensure that all permits issued will satisfy and be consistent with the substantive standards and criteria of the compensatory mitigation set out in subpart J. This description allows EPA to evaluate whether the Tribe’s or State’s approach can implement a compensatory mitigation program consistent with the requirements of the CWA. Second, the new provision at section 233.11(k) clarifies that the Tribe’s or State’s approach may deviate from the specific requirements of subpart J to the extent necessary to reflect Tribal or State administration of the program. For example, a Tribal or State program may choose to provide for mitigation in the form of banks and permittee responsible compensatory mitigation but may choose not to establish an in-lieu fee program. Lastly, the new provision at section 233.11(k) codifies EPA’s interpretation that Tribal and State section 404 programs must issue permits that are no less stringent

³⁷ This requirement does not include permittee-responsible mitigation plans as those would be reviewed as part of the permit conditions. If the Tribe or State uses permittee-responsible mitigation, the mitigation plan would be reviewed as part of the permit process. After approval, all specifications generally would be presented as permit conditions.

than and consistent with the substantive criteria for compensatory mitigation described in 40 CFR part 230, subpart J. The new provision is consistent with CWA section 404(h)(1)(a), 40 CFR 233.1(e), and 40 CFR 233.20(a).

Commenters were divided on the Agency's proposed approach to this new provision. Commenters opposing the Agency's proposed approach asked the Agency to require Tribes and States to adopt verbatim or by reference the requirements of subpart J of the section 404(b)(1) Guidelines. These commenters asserted that verbatim adoption or incorporation by reference of the mitigation requirements set forth in subpart J would ensure consistency with the 404(b)(1) Guidelines and "promote consistency and ease for the EPA, permittees and citizens." Commenters supporting the proposed approach (*i.e.*, allowing Tribal and State programs to deviate from the substantive criteria of subpart J) asserted that Tribes and States are in a better position to make decisions and design appropriate mitigation approaches for their Tribe or State than the Corps. Some commenters requested that EPA provide clearer direction on its expectations for resource mitigation, including banking and in-lieu fee proposals, greater specificity as to the standards EPA will use to review an applicant's proposed mitigation program, and require additional requirements in mitigation proposals.

The Agency considered these comments and decided to finalize the proposed approach for several reasons. First, while nothing in this rule prohibits Tribes or States from adopting or incorporating the CWA 404(b)(1) Guidelines, requiring Tribes and States to adopt or incorporate the CWA 404(b)(1) Guidelines, including subpart J, would conflict with the leeway Congress provided to Tribes and States to craft a Tribal or State program consistent with circumstances specific to that Tribe or State, so long as their permits will assure compliance with the CWA 404(b)(1) Guidelines at least as stringently as permits issued by the Corps. Recognizing that a CWA section 404 permit may be required for a variety of discharges into a wide range of aquatic ecosystems, EPA explained in promulgating the CWA 404(b)(1) Guidelines that they are intended to provide "a certain amount of flexibility," consisting of tools for evaluating proposed discharges, rather than numeric standards. 45 FR 85336, 85336 (December 24, 1980). Similarly, as described in section IV.A.2 of this preamble, requiring Tribes or States to adopt or incorporate subpart J would

complicate efforts by Tribes and States to impose more stringent requirements as part of their CWA section 404 programs. *See* section IV.A.2 of this preamble for further discussion on 404(b)(1) Guidelines.

Commenters noted that mitigation requirements are tiered (or hierarchical) and insisted EPA should not allow State programs to "pick and choose" between the allowable forms of mitigation (*e.g.*, permittee responsible, mitigation banks, and in-lieu fees). A commenter stated that State programs which "do not provide for all and follow the established hierarchy for their use would have less stringent compensatory mitigation requirements as compared to the federal program." EPA disagrees with this commenter. Tribes and States may not impose requirements less stringent than Federal requirements. Accordingly, Tribes and States must follow the hierarchical approach laid out in subpart J of the 404(b)(1) Guidelines. *See* 40 CFR 230.93(b). But following this approach does not require the establishment of all three mechanisms listed in the hierarchy. Rather, Tribes and States, like the Corps, must apply the hierarchy to available mechanisms to determine the appropriate type of compensatory mitigation.

iii. Third Party Compensatory Mitigation Instrument Oversight and Approval

EPA is finalizing the proposed process, which will implement the Agency's oversight responsibilities of third-party compensatory mitigation instrument approvals (*i.e.*, mitigation banks and in-lieu fee programs), as well as provide opportunities for other agencies to review and comment on third-party compensatory instruments prior to approval. 40 CFR 233.50(k). Under the final process, a Tribe or State must provide EPA, the Corps, the U.S. Fish and Wildlife Service and the National Marine Fisheries Service an opportunity to review and comment on any draft compensatory mitigation instruments before the Tribe or State may establish the proposed instrument. The Tribe or State may also commit in their program description to include Tribal or State resource agencies in the circulation of draft instruments for approval. If EPA comments that the instrument fails to apply or ensure compliance with the section 404(b)(1) Guidelines, the Tribe or State may not approve the final compensatory mitigation instrument until they address EPA's comments and EPA notifies it that the final instrument ensures compliance with this approach.

The Agency expects this instrument review process would be familiar to Tribes and States because it is modeled on, and similar to, the procedures for EPA review of permits, but does not replicate them. This process also facilitates input from other relevant agencies, similar to how an Interagency Review Team provides input to the Corps from other relevant Federal and State agencies on compensatory mitigation instruments. *See, e.g.*, 33 U.S.C. 1344(g), (h); 40 CFR 233.20(b) ("No permit shall be issued . . . [w]hen the Regional Administrator has objected to issuance of the permit . . ."); 40 CFR part 233 generally; 40 CFR 230.98(b) (describing Interagency Review Team procedures). Overall, the Agency believes this review process provides sufficient oversight for Tribal or State compensatory mitigation instruments and provides opportunity for multiple agencies to provide input on the draft compensatory instrument before it is approved. The Agency believes the final requirements outlined in the new provision 233.50(k) strike a balance between Federal oversight responsibility of draft compensatory mitigation instruments while allowing Tribes and States flexibility to solicit input from additional resource agencies.

No commenters opposed the proposed approach. However, one commenter cautioned EPA not to implement a rigid process that would limit Tribes' or States' flexibility in designing their own compensatory mitigation approach. EPA believes that this provision provides such flexibility.

One commenter requested that the Agency expand the list of mitigation instrument reviewers to include relevant Tribal and State agencies (*e.g.*, Tribal- or State-level fish and wildlife services) to the list. The Agency agrees with the commenter and believes that additional reviews from relevant resource agencies would be advantageous by providing local expertise and helping assess the applicability of the mitigation instrument (*e.g.*, including but not limited to the structure of the instrument, design of the proposed projects, proposed loss and benefits, and evaluation of successful instrument), thereby promoting positive outcomes for environmental protections.

The Agency is not requiring circulation to "relevant Tribal or State agencies" because the criteria for "relevancy" is vague. What constitutes a "relevant" agency is susceptible to differing interpretations, especially as Tribes and States organize their authorities under differing or even multiple agencies (*e.g.*, some regulate

wetlands under the State Department of Lands, others regulate them under the State water quality agency). Therefore, imposing mandatory circulation to this category of agencies would create confusion and implementation challenges for the Tribal or State authority. Furthermore, the Agency believes the new provision at section 233.50(k) provides Tribes and States the opportunity to identify and commit to additional instrument reviews from other Tribal or State agencies in their program description. The new provision also allows a Tribe or State to invite other resource agencies not identified in their program description to participate in draft instrument review on a case-by-case basis.

The Agency received one comment requesting that EPA provide clearer direction on its expectations for resource mitigation, including banking and in-lieu fee proposals, and greater specificity as to the standards EPA will use to review an applicant's proposed mitigation program. The commenter also asked that EPA require additional requirements in mitigation proposals. EPA is not reopening the section 404(b)(1) Guidelines in this rule and does not have the authority to impose substantive mitigation requirements on Tribes and States that are more stringent than the mitigation requirements in the section 404(b)(1) Guidelines.

5. Effective Date for Approved Programs

a. What is the Agency finalizing?

Section 404(h) of the CWA addresses the transfer of permitting authority and pending permit applications from the Corps to the Tribe or State following EPA notice of program approval but does not specify an effective date. The prior regulations provided that the transfer of permitting authority could only take effect after notice of EPA's program approval appeared in the **Federal Register**. 40 CFR 233.15(h) (2023). Several States that have contemplated assumption of the section 404 program indicated that a transition period between EPA's approval decision and the date of transfer of responsibility from the Corps to the State would enable them to more effectively prepare for the transition, including securing and allocating the necessary resources to successfully implement the assumed section 404 permitting program if their program is approved.

EPA proposed to establish a presumptive effective date for program assumption of 30 days from the date of publication of the notice of EPA's program approval in the **Federal Register**. The proposal also provided

that if requested and supported by a Tribe or State in its request to assume the program, EPA may specify a later effective date, not to exceed 120 days from the date of notice in the **Federal Register**. A Tribe or State which seeks a later transfer date must provide a sufficient explanation of its need for the additional time as part of its program submission. In all cases, that effective date must be set forth in the Memorandum of Agreement between a Tribe or State and EPA required by 40 CFR 233.14(b)(2) and published in the **Federal Register**. EPA also proposed to require that decisions to approve Tribal and State programs and revisions be posted on EPA's website in addition to publication in the **Federal Register**. After reviewing public comments, the Agency is finalizing its approach as proposed with one modification to allow Tribes or States and EPA to establish a later effective date not to exceed 180 days from the date of notice in the **Federal Register**.

b. Summary of Final Rule Rationale and Public Comments

Section 404(h)(4) of the CWA provides that "[a]fter the Secretary receives notification from the Administrator under paragraph (2) or (3) of this subsection that a State permit program has been approved, the Secretary shall transfer any applications for permits pending before the Secretary for activities with respect to which a permit may be issued pursuant to such State program to such State for appropriate action." 33 U.S.C. 1344(h)(4). Once the State has received those permit applications, and signals to the Corps that it is ready to assume permitting activity, permitting responsibility should transfer. *Id.* at 1344(h)(2). Thus, the administrative process envisioned by Congress is that EPA receives a program request, reviews and approves or denies the program request, then notifies the parties of an approval decision, after which the Corps begins to transfer existing permitting materials. The contrast between the specific time frames the statute provides for EPA's approval of a program and the absence of a time frame for the transfer of permit applications from the Corps suggests that Congress intended some flexibility in the transition to Tribal or State program implementation. However, the fact that the statute describes the transfer of permits as the immediate next step following program approval indicates that Congress intended the transfer to happen relatively quickly.

EPA proposed to modify the regulatory text to clarify when and how

the section 404 program transfers to the Tribe or State following EPA's approval, and that the presumptive date of transfer would be 30 days from the date of notice of program approval in the **Federal Register**, but that Tribes and States that satisfactorily demonstrate a need for more than 30 days to assume and be prepared to fully administer the program could request an effective date of up to 120 days from the date of notice. EPA also proposed that if a Tribe or State requests to assume administration of the program more than 30 days after EPA's approval, the program description must include a description and schedule of the actions that will be taken following EPA approval for the Tribe or State to begin administering the program.

A number of commenters supported EPA's proposal to allow for more than 30 days for program transfer. Most of these commenters, however, requested that the maximum time be longer than EPA's proposed maximum of 120 days, or not specifically limited. These commenters agreed that some Tribes and States, especially smaller ones, may need more time to effectively prepare for program implementation, such as training staff, to successfully implement the assumed section 404 permitting program if their program is approved. One commenter stated that no more than 120 days should be needed if a Tribe or State were sufficiently prepared to assume the program.

EPA finds that a short, clearly defined period of time between program approval and the Tribe or State's assumption of program administration benefits the public and regulated community by providing advance notice of the date of program transfer and supports the smooth transition of program functions. However, EPA agrees that extending the maximum period of time to 180 days could reduce the burden for some Tribes and States, without significantly increasing the uncertainty that might arise from lengthier transition periods.

The final rule allows the effective date to be more than 30 days following approval (though no more than 180 days), when a Tribe or State identifies specific circumstances which support the need for additional time. If the Tribe or State takes advantage of this option to delay the effective date, the Tribe or State's program description should set forth the steps it will take upon program approval, such as specifying the timeline for any assignment and training of staff and ensuring program funding is accessible by the effective date. Generally speaking, a Tribe or State should not wait until EPA approves its

program before initiating hiring and training processes for staff that are committed in its program description and the Tribe or State should be prepared to implement the final steps soon after program approval.

The Agency is finalizing the requirement that the Memorandum of Agreement between a Tribe or State and EPA include the effective date for transfer of the program from the Corps to the Tribe or State, identified as the number of days following the date of publication of program approval in the **Federal Register**. This will provide for the efficient development and administration of the Tribal or State program, while also making the process more predictable for the regulated community and the public. As with the prior regulations, the Corps will continue to process permit applications up until the effective date, but they will also use the time between approval and the effective date to begin transferring permits under review. The Tribe or State would not be authorized to process these permits until the effective date of program transfer. The Tribe or State and the Corps will include procedures for transferring pending section 404 permit applications and other relevant information to the Tribe or State in their Memorandum of Agreement. 40 CFR 233.14(b)(2).

C. Program Operations

1. Five-Year Permits and Long-Term Projects

a. Overview and What the Agency Is Finalizing

Congress limited CWA section 404 permits issued by Tribes or States that assume the section 404 program to five years in duration. 33 U.S.C. 1344(h)(1)(A)(ii).³⁸ The Agency codified this limitation in the permit conditions section of the prior section 404 Tribal and State program regulations. 40 CFR 233.23(b) (2023). However, certain projects by their nature cannot be completed within five years and therefore need more than one five-year permit. Examples of these long-term projects include some residential or commercial developments, linear projects such as transportation corridors, and energy or mining projects. The Agency is concerned that if applicants with long-term projects only submit information about activities

that will occur during one five-year period of their project in their permit application, the permitting agency and members of the public will not have sufficient information to assess the scope of the entire project, or cumulative impacts of the entire project.

To minimize unnecessary effort and paperwork, and provide the Tribe or State and the public with information that can assist with the successful permitting of long-term projects, the Agency proposed that applicants for projects for which the planned schedule extends beyond five years at the time of the initial five-year permit application must submit a 404(b)(1) analysis for the full scope and term of the project with the application for the first five-year permit and modify the 404(b)(1) analysis, as necessary, for subsequent five-year permits. The proposed rule preamble discussed the criteria that the Tribe or State must consider when determining whether the 404(b)(1) analysis needs to be modified. 88 FR 55303. If there has been a change in circumstance related to an authorized activity following approval of the previous five-year permit, the applicant must modify the 404(b)(1) analysis for subsequent five-year permits. If there have been no changes in circumstances related to an authorized activity following approval of the previous five-year permit, the applicant's new permit application may rely upon the most recent 404(b)(1) analysis. Consistent with CWA requirements, the proposal also required that a new permit application must be submitted for projects that exceed a five-year schedule (e.g., based on construction plans), and all aspects of the permit application, public notice, and Tribal or State review requirements set forth in 40 CFR 233.30, 233.32, and 233.34, respectively, apply. To avoid a stoppage in work, the proposal required that an applicant seeking a new five-year permit should apply for the new permit at least 180 days prior to the expiration of the current permit.

In response to public comments, the Agency is revising its proposed approach to require that the permit application and public notice for a subsequent five-year permit application must indicate whether the 404(b)(1) analysis has been updated and that the Tribe or State must provide a written explanation if it does not require an updated 404(b)(1) analysis for a subsequent five-year permit(s). Additionally, EPA is authorizing the Tribe or State to grant permission to submit an application less than 180 days prior to the expiration of the

current permit but no later than the permit expiration date.

b. Summary of Final Rule Rationale and Public Comments

i. Permitting Long-Term Projects

The Agency is finalizing a process for permitting long-term projects in waters assumed by a Tribal or State section 404 program that is consistent with the statutory limitation that permits not exceed five years in duration,³⁹ yet increases predictability for permittees and provides sufficient information for the Tribe or State to consider the full scope of a project's impacts to the aquatic environment. When applying for a permit to discharge dredged or fill material associated with projects⁴⁰ with a planned construction schedule which may extend beyond the five-year permit period, applicants must submit an analysis that demonstrates compliance with the 404(b)(1) Guidelines showing how the complete long-term project complies with the environmental review criteria set forth in the CWA 404(b)(1) Guidelines when they submit the application for the first five-year permit. The 404(b)(1) analysis must provide information demonstrating that the project meets each element of the CWA 404(b)(1) Guidelines for the full term of the project.⁴¹ For example, under this approach, an applicant seeking permit coverage for a 15-year, multi-phase housing development project would provide information about all phases of the project, covering its full 15-year term, in its permit application. If this project were anticipated to involve the construction of two hundred homes in years 0–5, two hundred homes in years 5–10, and two hundred homes in years

³⁹ 33 U.S.C. 1344(h)(1)(A)(ii).

⁴⁰ Per 40 CFR 233.30(b)(5), all activities which the applicant plans to undertake which are reasonably related to the same project should be included in the same permit application.

⁴¹ This information includes, but is not limited to: (i) information describing the purpose, scope, and timeline for the entire project; (ii) an alternatives analysis for the entire project; (iii) information sufficient to demonstrate appropriate and practicable steps that will be taken to avoid and minimize impacts from the entire project; (iv) information sufficient to demonstrate that the project will not cause or contribute to significant degradation of waters of the United States, including factual determinations, evaluations, and tests for the entire project; (v) an assessment of cumulative and secondary effects of the entire project; (vi) information sufficient to demonstrate that the project will not violate applicable state water quality standards or toxic effluent standards, jeopardize the continued existence of federally listed species or adversely modify or destroy critical habitat, or violate protections for marine sanctuaries designated under the Marine Protection, Research, and Sanctuaries Act of 1972; and (vii) a description of compensatory mitigation proposed to offset all unavoidable impacts associated with the entire project. See generally 40 CFR part 230.

³⁸ Corps-issued individual permits are not limited to five years. See 33 CFR 325.6(b), (c) (authorizing certain types of permits for an "indefinite duration" or else a "limited duration" but with no five-year limitation period). General permits issued by the Corps are limited to five years. See 33 U.S.C. 1344(e)(2).

10–15, the permit application would provide information about the construction of all six hundred homes.

Some commenters supported the proposed rule approach without modification. Several commenters supported the proposed rule approach requiring an applicant to submit a 404(b)(1) analysis for the entirety of the project as part of the first five-year permit review period but recommended modifying the proposed rule approach to require an automatic update to the 404(b)(1) analysis at least every five-year permit cycle. According to these commenters, projects may change as they move forward and even small changes may have an impact on water quality, as well as on Tribal rights and resources. Some of these commenters supported a requirement that a written explanation be provided in the event the permitting authority does not require an updated section 404(b)(1) analysis.

EPA has evaluated these comments and concluded that an automatic update to the 404(b)(1) analysis every five-year permitting cycle is unnecessary. Instead, for subsequent five-year permits, EPA is requiring that Tribes or States provide a written explanation if they do not determine that a “change in circumstance” has occurred requiring an updated 404(b)(1) analysis. Adding this requirement provides transparency and ensures the Tribe or State engages in a meaningful analysis of why there has not been a “change in circumstance.” EPA believes this approach strikes the right balance of providing more regulatory certainty for subsequent five-year permits, while also ensuring that the scope of impacts associated with a complete project is factored into the permitting decision for each five-year permit.

One commenter asked EPA to require that sufficient information related to planned impacts for future permitting phases be included in an initial permit application. The rule modifies previous language in 40 CFR 233.30(b)(5), which stated that “[a]ll activities which the applicant plans to undertake which are reasonably related to the same project *must* be included in the same permit application.” (emphasis added). The final rule expands upon this provision and requires, “[f]or projects for which the planned schedule extends beyond five years at the time of the initial five-year permit application, the application for both the first and subsequent five-year permits must include an analysis demonstrating that each element of the 404(b)(1) Guidelines is met, consistent with 40 CFR part 230, for the full term of the project.” The final rule also requires that, “[a]pplicants for

subsequent five-year permits must update the 404(b)(1) Guidelines analysis if there has been a change in circumstance related to the project following approval of the previous five-year permit.”

Some commenters opposed any regulatory changes related to long-term projects. One commenter argued that requiring a comprehensive 404(b)(1) analysis would present a barrier to State assumption and questioned the legality of that approach. EPA disagrees with this commenter. Each State that has assumed the section 404 program has at times expressed interest in allowing for a full project analysis at the time of the first permit application and allowing expediciencies in subsequent rounds of permitting for the same project, as a means of both ensuring comprehensive water quality protections and protecting permit applicants against wasted financial resources. As a legal matter, requiring an analysis of the full project scope is consistent with section 404(b)(1)(A), which provides that Tribes and States must have the authority to issue permits which apply and assure compliance with the 404(b)(1) Guidelines. The Guidelines, in turn, require an evaluation of the potential for adverse impacts on the aquatic ecosystems posed by dredged or fill material discharge activities. 40 CFR 230.10.

This approach is consistent with the Agency’s long-standing position that activities related to the same project should not be split into multiple permits, which can undermine efforts to ensure a complete alternatives analysis, an accurate accounting of all cumulative impacts, an appropriate mitigation plan, and that the public is sufficiently on notice of forthcoming dredged and fill activities. See 40 CFR 233.30(b)(5) (2023). This approach is also similar to the Corps’ requirement that all activities that are reasonably related to the same project be included in the same permit application. 33 CFR 325.1(d)(2). Providing information about all phases of the project does not authorize dredged and fill activity beyond the five-year permit term. Moreover, unless there has been a change in circumstance related to an authorized activity, the same information should be provided in subsequent applications for later stages of the long-term project, such as applications seeking authorization for activity in years 6–10 of the project, years 11–15 of the project, and so forth. Additionally, this approach will improve environmental protections by ensuring that the scope of impacts associated with a complete project is

factored into the permitting decision for each five-year permit.

This approach will also help ensure consistency in permitting decisions associated with the project, thereby providing the applicant with more regulatory certainty than without such a plan. Evaluating the impacts of only the first stage of a long-term project does not make business sense. For example, if a permitting authority evaluating a second- or third-round permit for a mine’s construction or operation were to deny the permit based on those previously unevaluated impacts, the investments made during the first round or two of permit coverage would have been wasted. Foregoing an initial long-term plan would therefore be extremely inefficient.

The issuance of Tribal or State section 404 permits for projects that exceed a five-year schedule only authorizes discharges occurring in the five-year period identified in the permit. Permittees for long-term projects must submit a new permit application for each subsequent five-year permit term. The issuance of a subsequent five-year permit for the same project does not constitute a continuance or modification of the previous permit. Nothing in the final rule affects the process for continuing or modifying permits set forth in an approved Tribal or State section 404 program.

The Agency recognizes that some permittees may expect that a project will be completed within the five-year permit term but ultimately the project takes longer. The Tribe or State administering the section 404 program should make reasonable efforts to verify that all activities that are reasonably related to the same project are included in the same permit and to evaluate whether a project’s schedule extends beyond five years at the time of the initial five-year permit application.

In the event a project anticipated to be completed within five years is not completed during that time, the applicant must apply for a new five-year permit. To avoid a stoppage in work, the Agency is requiring that an applicant seeking a new five-year permit must apply for the new permit at least 180 days prior to the expiration of the current permit to allow sufficient time for the application to be processed. However, consistent with other CWA programs which have a similar 180-day advance application requirement (e.g., 40 CFR 122.21(d)), upon special request the Tribe or State may grant permission to reapply less than 180 days prior to the expiration of the current permit but no later than the permit expiration date. This approach provides time for a

public comment period and any required EPA review of the new permit application.

This final rule approach to five-year permits presents both environmental and financial advantages. It promotes environmental protections by ensuring that the scope of impacts associated with a complete project are factored into the permitting decision for each five-year permit. Tribal or State review of a 404(b)(1) analysis for a five-year permit does not constitute pre-approval of subsequent five-year permits for the project and there is no guarantee that an applicant for a long-term project will receive all of the five-year permits needed to complete the project. That said, including a 404(b)(1) analysis for the full scope of the project with the application for the first five-year permit and modification of the 404(b)(1) analysis, as necessary, for subsequent five-year permits will help ensure consistency in permitting decisions associated with the project, thereby providing the applicant with more regulatory certainty than without such a plan.

ii. Criteria for Modification of 404(b)(1) Analyses

The Agency recognizes that changes in circumstances related to an authorized activity may occur over time. For example, plans for subsequent phases of a long-term project may lack detail at the time an applicant submits a 404(b)(1) analysis for the first five-year permit and adjustments to the description of the project may therefore be required. If there has been a change in circumstance related to an authorized activity following approval of the previous five-year permit, the Agency is finalizing as proposed that the applicant must modify the 404(b)(1) analysis for subsequent five-year permits. A change in circumstance related to the authorized activity includes, but is not limited to, the following:

- Change in project purpose;
- Change in project boundary;
- Change in scope of waters impacted;
- Change in secondary or cumulative impacts;
- Change affecting compensatory mitigation;
- Change in site conditions, including new alternatives or opportunities for minimization of impacts;
- Change in environmental conditions, including the presence or new listing of threatened or endangered species or critical habitat; or
- Change to applicable statutes, regulations, or guidance.

If there have been no changes in circumstances related to an authorized

activity following approval of the previous five-year permit, the applicant's new permit application may rely upon the most recent 404(b)(1) analysis. As discussed above, the permit application and public notice for a subsequent five-year permit application must indicate whether the 404(b)(1) analysis has been updated. A Tribe or State may require that a 404(b)(1) analysis be updated based on a change in circumstances, either on their own motion, at the request of Federal agency reviewers providing comments via EPA or at the request of the public. Federal agency reviewers or members of the public who submit such a request must provide information supporting a change in circumstances for the Tribe or State to consider the request. A change in circumstances may be significant enough that the project no longer meets conditions for approval. Other factors may also weigh in favor of permit denial, such as an applicant's non-compliance with the previous permit. If the Tribe or State does not require an update to the 404(b)(1) analysis, it must provide a detailed written explanation in the record of decision for the permit based on the "change in circumstance" factors listed above and any additional factors identified in the Tribe or State's program description. The Tribe or State must provide this detailed written explanation for not requiring an update to the 404(b)(1) analysis regardless of whether it received a request from Federal agency reviewers or the public.

iii. Clarification Regarding Long-Term Projects

The Agency is finalizing as proposed a clarification that all aspects of the permit application, public notice, and Tribal or State review requirements set forth in 40 CFR 233.30, 233.32, and 233.34, respectively, apply to each permit application, including for projects that exceed a five-year schedule. Such clarification will help ensure that applicants, Tribes, and States comply with the five-year permit limitation set forth in CWA section 404(h)(1)(A)(ii). EPA expects that the permit application process for permits after the initial five-year permit application will be easier and simpler because the applicant and Tribe or State will have already analyzed the full project.

All public notices for long-term permits must satisfy the public notice requirements in 40 CFR 233.32(d). In addition, the scope of information the Tribe or State may consider when reviewing a permit application may not be limited for any application, including applications for each five-year permit of

a project that takes more than five years to complete. Nor may a Tribe or State limit the scope of comments the public may submit in response to the public notice, or public hearing if a hearing is held, to impacts arising from one five-year permit of a long-term project as opposed to impacts from the entirety of the long-term project.

2. Judicial Review and Rights of Appeal

a. Overview and What the Agency Is Finalizing

The prior regulations require the program description to describe the Tribe's or State's judicial review procedure but did not contain an explicit corresponding substantive requirement for Tribal or State programs. The Agency proposed to codify a substantive requirement to match the prior descriptive requirement. After considering comments urging EPA to ensure that States facilitate public participation in the permitting process, EPA is finalizing a provision that would require States seeking to assume the section 404 program to provide an opportunity for judicial review in State court of the final approval or denial of permits by the State that is sufficient to provide for, encourage, and assist public participation in the permitting process. EPA did not propose any judicial review requirement relevant to Tribes in the regulatory text. In a change from proposal, EPA is codifying a requirement that Tribes must provide a commensurate form of citizen recourse for applicants and others affected by Tribe-issued permits.

b. Summary of Final Rule Rationale and Public Comment

This provision gives meaning to the existing regulatory requirement that State program descriptions describe their judicial review procedures. *See* 40 CFR 233.11(b). EPA interprets the existing requirement that States provide "a description of the State's . . . judicial review . . . procedures" to suggest that States must authorize judicial review. The new substantive requirement that States allow for judicial review sufficient to provide for, encourage, and assist public participation in the permitting process makes explicit that States must have authorities in place to form the basis for the existing description requirement.

The provision also carries out the requirement that States have the authority to "abate violations of the . . . permit program" through "ways and means of enforcement." 33 U.S.C. 1344(g). Potential violations of the permit program may include State

permitting actions, such as the issuance of a permit that does not assure compliance with the section 404(b)(1) Guidelines or that has not provided public notice and an opportunity for a hearing. See 33 U.S.C. 1344(h)(1)(A)(i), (h)(1)(C). One of the most effective ways to abate such violations is to allow members of the public to challenge them. Given that EPA has limited resources to expend on oversight of State permitting actions, citizen challenges are a critical complementary tool for abating violations of the permit program.

The judicial review provision also gives meaning to the requirement that States must have adequate authority to ensure that the public “receive[s] notice of each application for a permit and to provide an opportunity for public hearing before a ruling on each such application.” 33 U.S.C. 1344(h)(1)(C). As EPA explained in promulgating a requirement for judicial review in the section 402 program, the United States Court of Appeals for the Fourth Circuit has agreed that “[t]he comment of an ordinary citizen carries more weight if officials know that the citizen has the power to seek judicial review of any administrative decision harming him.” Amendment to Requirements for Authorized State Permit Programs Under Section 402 of the Clean Water Act, 61 FR 20972 (May 8, 1996), *codified at* 40 CFR 123.30, *citing Com. of Virginia v. Browner*, 80 F.3d 869, 879 (4th Cir. 1996).

Without the possibility of judicial review by citizens, public participation before a State administrative agency could become less meaningful. See also 33 U.S.C. 1251(e) (“Public participation in the . . . enforcement of any regulation, standard, effluent limitation, plan, or program established by the Administrator or any State under this chapter shall be provided for, encouraged, and assisted by the Administrator and the States.”); A Legislative History of the Water Pollution Control Act Amendments of 1972, Comm. Print No. 1, 93d Cong., 1st Sess. at 1490 (“The scrutiny of the public . . . is extremely important in insuring . . . a high level of performance by all levels of government and discharge sources.”).

Finally, the proposed approach is consistent with the CWA’s requirement that States issue permits that “apply, and assure compliance with, any applicable requirements” of section 404, 33 U.S.C. 1344(h)(1)(A)(i); and the regulatory provision providing that “[a]ny approved State Program shall, at all times, be conducted in accordance with the requirements of the Act and of

this part.” 40 CFR 233.1(e). As citizens are authorized to challenge the issuance of section 404 permits when the Federal Government administers the program, challenges must also be authorized when a State has assumed the program in order to assure compliance with the applicable requirements of section 404 and to ensure that the State program is not less stringent than the Federal program. Permitting authorities are likely to be particularly careful to address citizens’ input and ensure that issued permits comply with CWA requirements if such permits may be challenged by such citizens. Therefore, ensuring that States provide an opportunity for judicial review helps to ensure compliance with section 404 and all requirements of the CWA. Any of the provisions in 404(g) cited above as authority for the judicial review provision would be independently sufficient to justify finalizing this provision.

EPA proposed the language that it is codifying in this rule, except for the regulatory requirement that Tribes provide a commensurate form of citizen recourse for those affected by permitting decisions. The proposal had also stated that a State would meet the required judicial review standard if it allowed an opportunity for judicial review that is the same as that available to obtain judicial review in Federal court of a federally issued NPDES permit. Further, the proposal stated that a State would not meet this standard if it either narrowly restricted the class of persons who could challenge the approval or denial of permits (such as by limiting standing to people who would suffer pecuniary injury from the permitting decision or to people who own property close to the discharge or receiving waters) or if the State required the losing party to pay attorneys’ fees notwithstanding the merit of its position. See 88 FR 55326.

A number of commenters expressed support for the proposed provision. Some commenters asked that EPA establish broader or more detailed limitations on restrictions or disincentives to judicial review. These commenters emphasized the importance of ensuring that the public has access to courts and discussed the significant chilling effects of State limitations on citizen suit challenges, such as fee-shifting provisions that make the “loser pay” (whether in full, in part, or at the judge’s discretion) and requirements to exhaust administrative remedies that can deplete prospective plaintiffs’ resources before they even initiate a State court challenge. These commenters asked EPA to prohibit

certain requirements more clearly, including any form of fee-shifting and excessive administrative exhaustion requirements.

Other commenters expressed concerns about the proposed rule provision, stating that it would be a significant impediment, if not a complete barrier, to States seeking assumption. These commenters also argued that, as a legal matter, nothing in the CWA authorizes EPA to require judicial review opportunities for section 404 permits. They stated that while Congress does provide for judicial review by any interested person of EPA’s issuance or denial of section 402 permits pursuant to CWA section 509(b)(1), it is silent with respect to judicial review of section 404 permits. This omission, in the commenters’ view, indicates that Congress intentionally did not require a heightened level of review for section 404 permits.

EPA has finalized the requirement that States must provide for judicial review of State-issued permits or permit denials that is sufficient to provide for, encourage, and assist public participation in the permitting process. 40 CFR 233.24. The final requirement is shorter than the proposed requirement and does not specifically detail various examples of unacceptable barriers to judicial review. As noted above, it simply codifies the substantive corollary to the existing program description requirement that States describe their judicial review procedures. EPA disagrees with the commenters that stated EPA lacks authority to impose this requirement. As discussed above, the final requirement is consistent with the CWA’s requirements for public participation in the permitting process and that State programs comply with all requirements of section 404, as well as the regulatory requirement that State programs be no less stringent than the Federal section 404 program. EPA expects that States will have the authority and experience to implement this requirement because it is similar to the section 402 requirement that States authorize judicial review.

EPA removed from the final rule the examples of the ways in which States can demonstrate that they provide for judicial review of State-issued permits or permit denials that is sufficient to provide for, encourage, and assist public participation in the permitting process. Commenters made clear that States can either facilitate or impede judicial review of State-issued permits in a wide variety of ways. Specifically listing just a few of those examples in the regulations would be under-inclusive, but a longer and more prescriptive list

risks intruding into the operations of State courts and State civil procedure, areas traditionally subject to State control. EPA will therefore evaluate State judicial review provisions as part of program submissions on a case-by-case basis to determine whether they provide for judicial review of State-issued permits or permit denials that is sufficient to provide for, encourage, and assist public participation in the permitting process. Finally, in omitting the explicit requirement that States provide judicial review opportunities commensurate with those available for section 402 permits under CWA section 509(b), the provision no longer implicates the commenters' argument that it conflicts with Congress' intentional omission of section 404 permits from the scope of section 509(b) review.

EPA would also look to the State Attorney General's statement to certify that the laws of the State meet the requirements of the regulation. *See* 40 CFR 233.12. States with expansive judicial review opportunities, such as those that allow standing to challenge permits on the part of interested citizens and citizen groups, and that do not require parties who lose lawsuits brought in good faith to pay other parties' legal fees, should meet the regulatory judicial review requirement. As with the section 402 regulations, the provision applies to final actions with respect to modification, revocation and reissuance, and termination of permits, as well as the initial approval or denial of permits.

The final rule approach for the section 404 State program regulations effectuates EPA's policy interest in deferring to State administration of authorized section 404 programs in the same way that EPA defers to State administration of section 402 programs. *See* 61 FR 20974 (May 8, 1996). EPA supports State assumption of the section 404 program and is just as committed to ensuring robust opportunity for citizen participation in that program. In authorizing State programs to act in lieu of the Federal Government, EPA must ensure that the implementation of the State program will be procedurally fair and consistent with the intent of the CWA. This rule provides additional assurance of State program adequacy and fairness by ensuring opportunities for judicial review.

In the proposed rule, EPA stated that the judicial review requirement did not apply to Tribes and did not include any requirement relevant to Tribes in the regulatory text. The preamble to the proposed rule explained that Tribes would need to provide appropriate

recourse for citizens seeking to challenge Tribal permitting actions. One commenter requested clarity on the type of recourse Tribes would need to provide. A few commenters raised concerns that EPA was arbitrarily treating Tribes differently from States. These commenters stated that EPA's concern that requiring Tribes to waive sovereign immunity to judicial review of permitting decisions would disincentivize Tribal assumption applies equally to States. One commenter argued that disappointed permittees or other affected persons would have no recourse from unlawful permitting actions on the part of assuming Tribes if EPA did not require some form of recourse.

In response to these commenters, EPA is codifying the requirement that Tribes must provide a commensurate level of citizen recourse to the judicial review opportunities States must provide for those seeking to challenge permitting actions. Consistent with the requirement applicable to States, it should be sufficient to provide for, encourage, and assist public participation in the permitting process. EPA is not specifying precisely what form this recourse must take, given the diverse forms that Tribal decision-making entities may take. If a Tribe has a judicial system analogous to a State judiciary, the Tribe must provide for judicial review of section 404 permits. If, instead, a Tribe uses another type of decision-making entity to address disputes, that entity must be able to hear permit challenges. Requiring Tribes to provide for citizen recourse commensurate with the judicial review opportunities required of States provides more clarity than the proposal offered and ensures that persons affected by Tribal permitting actions will have recourse.

EPA's decision not to specifically require all Tribal section 404 programs to provide for judicial review of Tribal permitting actions is consistent with EPA's approach in the section 402 judicial review provision that "[t]his requirement does not apply to Indian Tribes" as well as EPA's decision not to require Tribes to provide for judicial review in the same manner as States for purposes of the Clean Air Act Title V Operating Permits Program. *See* 40 CFR 123.30; Indian Tribes: Air Quality Planning and Management, 63 FR 7254, 7261–62 (February 12, 1998); 40 CFR 49.4(p). While EPA does not, as a general matter, think that Tribal procedures should be less rigorous with respect to public participation than State procedures, a specific requirement that Tribes provide judicial review as

the sole option for citizen recourse would raise issues regarding Federal Indian policy and law.

In promulgating the Clean Air Act Tribal rule, EPA recognized that while many Tribes have distinct judicial systems analogous to State judicial systems, some well-qualified Tribes may not have a distinct judiciary and may use non-judicial mechanisms for citizen recourse. *See* 63 FR 7261–62 (February 12, 1998). EPA considered that requiring Tribes to waive sovereign immunity to judicial review of permitting decisions would be a significant disincentive to Tribes to assume the Clean Air Act Title V program. *See id.* EPA recognizes the importance of encouraging Tribal implementation of environmental programs and avoiding creating unnecessary barriers to assumption. In this rule, EPA seeks to strike a balance by ensuring that citizen recourse is available in any approved Tribal section 404 program commensurate with the judicial review opportunities required of State programs, while not restricting qualified Tribes to a single judicial option that may not fit existing Tribal governmental structures. EPA would consider whether commensurate citizen recourse has been provided in the context of reviewing Tribal program applications.

Finally, EPA encourages Tribes and States to establish an administrative process for the review and appeal of permit decisions pursuant to their approved section 404 programs and to describe any such process in the program description. These procedures can conserve resources on the part of permittees, stakeholders, and permitting agencies, by resolving permitting disagreements without the need for litigation in court. EPA is not requiring or prohibiting any specific administrative review procedures, however, because the Agency recognizes that existing Tribal and State administrative procedures may differ across the country.

D. Compliance Evaluation and Enforcement

1. Overview and What the Agency Is Finalizing

The CWA provides for criminal liability based on simple negligence. EPA has determined that the prior regulations describing the *mens rea* applicable to Tribal and State programs at 40 CFR 123.27(a)(3)(ii) and 40 CFR 233.41(a)(3)(ii) do not clearly articulate the best interpretation of the statute. After reviewing public comments, EPA is revising its criminal enforcement requirements in 40 CFR 123.27 and 40

CFR 233.41 to provide that Tribes and States that administer the CWA section 402 NPDES permitting program or the CWA section 404 dredged and fill permitting program, or that seek approval to do so, are required to authorize prosecution based on a *mens rea*, or criminal intent, of any form of negligence, which may include gross negligence.

2. Summary of Final Rule Rationale and Public Comment

The prior regulations describing the *mens rea* applicable to Tribal and State programs at 40 CFR 123.27(a)(3)(ii) and 40 CFR 233.41(a)(3)(ii) do not clearly articulate the best interpretation of the statute. EPA interprets the CWA to authorize the approval of Tribal or State section 402 or 404 programs that allow for prosecution based on a *mens rea* of any form of negligence, including gross negligence. These regulatory revisions more clearly articulate this interpretation.

These amendments provide clarity for Tribes and States that have been approved to administer or seek to obtain EPA's approval to administer their own section 402 or 404 programs under the CWA. EPA anticipates that States that already administer these CWA programs will not need to change their legal authority. Instead, these regulatory clarifications will generally assure approved States that existing negligence *mens rea* authorities comport with the *mens rea* applicable to Tribal and State CWA sections 402 and 404 programs. Additionally, these revisions provide those Tribes and States seeking to administer CWA sections 402 and 404 programs with clarity regarding the legal authorities required for approval by EPA.

a. Background

The CWA provides that Tribes and States seeking approval for a permitting program under CWA section 402 or CWA section 404 must demonstrate adequate authority “[t]o abate violations of the permit or the permit program, including civil and criminal penalties and other ways and means of enforcement.” 33 U.S.C. 1342(b)(7) and 1344(h)(1)(G). EPA's regulations currently provide that a Tribal or State agency administering a program under CWA section 402 must provide for criminal fines to be levied “against any person who willfully or negligently violates any applicable standards or limitations; any NPDES permit condition; or any NPDES filing requirement.” 40 CFR 123.27(a)(3)(ii). Similarly, pursuant to EPA's current regulations any Tribal or State agency

administering a section 404 program must have authority to seek criminal fines against any person who “willfully or with criminal negligence discharges dredged or fill material without a required permit or violates any permit condition issued in section 404” 40 CFR 233.41(a)(3)(ii).⁴²

The regulations implementing both statutory programs also provide that the “burden of proof and degree of knowledge or intent required under State law for establishing violations under paragraph (a)(3) of this section, shall be no greater than the burden of proof or degree of knowledge or intent EPA must bear when it brings an action under the Act.” 40 CFR 123.27(b)(2); 40 CFR 233.41(b)(2). The implementing regulations for CWA section 402 include a note, not present in the CWA section 404 implementing regulations, which states, “[f]or example, this requirement is not met if State law includes mental state as an element of proof for civil violations.” 40 CFR 123.27(b)(2).

In contrast to the statutory language of CWA sections 402 and 404, section 309(c), the general criminal enforcement section of the CWA specifically authorizes misdemeanor criminal liability for violations of federally issued or State-issued section 402 and 404 permits in subsection (c)(1) and a range of penalties for “[n]egligent violations” of specified provisions. It also authorizes felony liability and a higher range of penalties for “knowing violations” of the CWA in subsection (c)(2). Beginning in 1999, four Federal courts of appeal determined that criminal negligence under CWA section 309(c)(1) is “ordinary negligence” rather than gross negligence or any other form of negligence. *U.S. v. Hanousek*, 176 F.3d 1116, 1121 (9th Cir. 1999); *U.S. v. Ortiz*, 427 F.3d 1278, 1282 (10th Cir. 2005); *U.S. v. Pruett*, 681 F.3d 232, 242 (5th Cir. 2012); *U.S. v. Maury*, 695 F.3d 227, 259 (3d Cir. 2012).⁴³ These courts

⁴² Under the section 402 program, EPA's regulations provide that “[t]o the extent that an Indian Tribe is precluded from asserting criminal enforcement authority as required under § 123.27, the Federal Government will exercise primary criminal enforcement responsibility. The Tribe, with the EPA Region, shall develop a procedure by which the Tribal agency will refer potential criminal violations to the Regional Administrator, as agreed to by the parties, in an appropriate and timely manner. This procedure shall encompass all circumstances in which the Tribe is incapable of exercising the enforcement requirements of § 123.27. This agreement shall be incorporated into a joint or separate Memorandum of Agreement with the EPA Region, as appropriate.” 40 CFR 123.34. The section 404 regulations contain a nearly identical provision at 40 CFR 233.41(f).

⁴³ Simple negligence is a failure to use care as a reasonably prudent and careful person would use under similar circumstances. As relevant here, it is used interchangeably with “ordinary negligence.”

did not address whether this provision implicates Tribal or State programs administering CWA section 402 or 404 programs.

On September 10, 2020, the Ninth Circuit Court of Appeals issued an unpublished decision that granted in part and denied in part a petition by the Idaho Conservation League for review of EPA's approval of Idaho's NPDES permitting program. *Idaho Conservation League v. U.S. EPA*, 820 Fed. Appx. 627 (9th Cir. 2020). The League challenged EPA's approval of Idaho's program in part on the grounds that Idaho lacks authority to bring enforcement actions based on a simple negligence *mens rea*, which the League alleged EPA's regulations require. Relying on the Ninth Circuit case law noted above, which holds that EPA's criminal enforcement actions are subject to a simple negligence standard, the court determined that EPA violated its regulations in approving a program authorizing a *mens rea* of gross negligence because it is “‘greater than the burden of proof or degree of knowledge or intent EPA must provide when it brings an action’” 40 CFR 123.27(b)(2).” While the court recognized that “a State program need not mirror the burden of proof and degree of knowledge or intent EPA must meet to bring an enforcement action,” citing EPA's Consolidated Permit Regulations, 45 FR 33290, 33382 (May 19, 1980), the court nevertheless held that EPA's current regulations at 40 CFR 123.27(b)(2) require a “state plan to employ a *mens rea* standard ‘no greater than’ simple negligence, such as strict liability or simple negligence.” *Idaho Conservation League*, 820 Fed. Appx. at 628.

b. Statutory and Regulatory Framework

The general enforcement provisions of the CWA section 309(c)(1), 33 U.S.C. 1319(c)(1), as interpreted by the courts, authorize criminal prosecutions of violations of section 402 and 404 permits committed with a simple negligence *mens rea*. However, the CWA does not state that Tribal or State section 402 or 404 programs must demonstrate such authority as a criterion for program approval to Tribal or State. The CWA provides a list of the authorities Tribes and States must have in order to qualify for section 402 or 404

See, e.g., *U.S. v. Maury*, 695 F.3d 227, 260 (“we are now confronted with a slowly expanding body of law from our sister circuits which indicates that simple or ordinary negligence may be the appropriate standard of *mens rea* under § 1319(c)(1).”) Gross negligence is sometimes defined as the extreme indifference to or reckless disregard for the safety of others.

program approval, respectively, and authority to prosecute criminal violations committed with a simple negligence *mens rea* is not on either list. Rather, with respect to enforcement authorities, the CWA requires that EPA “shall approve” a Tribe or State’s submission to administer a section 402 or 404 program if it demonstrates that it has authority to “abate violations of the permit or the permit program, including civil and criminal penalties and other ways and means of enforcement.” 33 U.S.C. 1342(b)(7); 1344(h)(1)(G). For the reasons described herein, EPA has concluded that the best reading of these statutory provisions is that they do not establish specific *mens rea* requirements for Tribal and State section 404 programs.

In addressing the criminal enforcement requirements for State programs, Congress did not require Tribes and States to have identical enforcement authority to EPA’s. Congress did not use the words “all applicable,” “same,” or any phrase specific to any *mens rea* standard, let alone the Federal standard, as it did in other parts of CWA sections 404(h) or 402(b). See 33 U.S.C. 1344(h), 1342(b). When “Congress includes particular language in one section of a statute but omits it in another section of the same Act, it is generally presumed that Congress acts intentionally and purposely in the disparate inclusion or exclusion.” *Sebelius v. Cloer*, 569 U.S. 369, 378 (2013) (internal quotations omitted). In contrast to the broad authority that CWA sections 404(h)(1)(G) and 402(b)(7) provide to determine whether Tribes and States have demonstrated adequate authority to abate violations, other aspects of Tribal and State programs are explicitly required to have authority that is equivalent to or more stringent than EPA’s authority.

For example, States must have the authority “[t]o inspect, monitor, enter, and require reports to at least the same extent as required in section 1318 of this title.” 33 U.S.C. 1344(h)(1)(B); 1342(b)(2)(B). Similarly, CWA section 404(h)(1)(B) requires Tribe- or State-issued permits to “apply, and assure compliance with, any applicable requirements of this section, including, but not limited to, the guidelines established under subsection (b)(1) of this section, and sections 1317 and 1343 of this title.” 33 U.S.C. 1344(h)(1)(A)(i); and CWA section 402(b)(1)(A) requires Tribes and States to issue permits in compliance with “sections 1311, 1312, 1316, 1317, and 1343 of this title.” 33 U.S.C. 1342(b)(1)(A). By contrast, the more general language used to require

Tribes and States to demonstrate adequate authority to abate violations indicates that Congress intended to allow for some flexibility in EPA’s ability to approve Tribal and State approaches to certain aspects of criminal enforcement. See 33 U.S.C. 1342 (b)(7). EPA proposed to clarify that CWA sections 402 and 404 allow for approved Tribal and State programs to have a somewhat different approach to criminal enforcement than the Federal Government’s approach, namely, that Tribal and State programs do not need authority to prosecute based on a simple negligence *mens rea*. However, the proposed approach required that Tribes and States be able to implement the text of section 309(c), requiring authority to prosecute crimes committed with some form of negligence.

Some commenters on the proposed rule agreed with EPA’s interpretation of the statute. Other commenters disagreed, arguing that the simple negligence criminal prosecution authority in CWA section 309(c) applies to Tribal and State programs. These commenters stated that CWA section 309(c) establishes misdemeanor criminal liability for anyone who violates a CWA section 402 or 404 permit issued by EPA or a State with a *mens rea* of simple negligence. According to the commenters, nothing in CWA section 309 limits this authority to EPA as opposed to State programs.

EPA disagrees with commenters’ arguments that the CWA does not authorize EPA to approve Tribal or State programs that lack authority to prosecute criminal violations committed with a simple negligence *mens rea*. While EPA acknowledges that CWA section 309(c)(1) does mention negligent violations of State permits, that provision provides authority for *Federal* prosecutions, including enforcement of State permit requirements; it does not require or address *State or Tribal* enforcement programs or the standard for approval or assumption for Tribal and State programs. Moreover, when section 309(c)(1) is read alongside sections 402(b) and 404(h)(1), which set forth the requirements for Tribal and State programs, the more specific Tribal and State requirements in sections 402(b) and 404(h)(1) prevail over the CWA’s general enforcement provision in section 309(c). See *RadLAX Gateway Hotel, LLC v. Amalgamated Bank*, 566 U.S. 639, 645 (2012) (“[I]t is a commonplace of statutory construction that the specific governs the general.”) (internal citations omitted.) As described above, the general language used to describe the criminal enforcement authorities Tribe and States

must have indicates Congressional intent to allow greater flexibility for Tribes and States in the criminal enforcement context than they have, for example, in permitting and inspections. This provides appropriate “respect” for “state autonomy in the criminal sector.” *NRDC v. U.S. EPA*, 859 F.2d 156, 180–181 (D.C. Cir. 1988).

Some commenters argued that executive branch agencies may not modify criminal intent standards absent express Congressional authorization. Modifying Congressionally authorized criminal liability standards, in the commenters’ view, is not a power left to the executive branch. EPA disagrees with the premise of this comment; as discussed above, Congress did not mandate that Tribes and States have authority to prosecute criminal violations committed with a simple negligence *mens rea*, so this rule does not modify Congressionally established standards, which continue to apply to Federal enforcement.

EPA’s interpretation that it has the flexibility to approve Tribal or State programs with the authority to prosecute violations committed with a *mens rea* of any form of negligence is consistent with case law. In *NRDC v. U.S. EPA*, the petitioner challenged the validity of 40 CFR 123.27(a)(3) on the theory that it did not require States to have the same maximum criminal penalties as the Federal program. 859 F.2d 156 (D.C. Cir. 1988). The court reasoned that the petitioner’s argument involved a “logical infirmity” because it “presume[d] an unexpressed congressional intent that state requirements must mirror the Federal ones,” which is “inconsistent with the elements of the statutory scheme limiting operation of the provisions to enforcement efforts at the national level and explicitly empowering the Administrator to set the prerequisites for state plans.” *Id.* at 180 (discussing 33 U.S.C. 1314(i)(2)(C)). The D.C. Circuit recognized EPA’s “broad [] discretion to respect state autonomy in the criminal sector” and that the regulations “reflect the balancing of uniformity and state autonomy contemplated by the Act.” *Id.* at 180–81. The court declined to “disturb this ‘reasonable accommodation of manifestly competing interests,’” and upheld the agency’s penalty regulations. *Id.* at 181 (internal citations omitted).

EPA’s interpretation is also consistent with the Ninth Circuit’s decision in *Akiak Native Community v. EPA*, where that court declined to require that States have authority to impose administrative penalties identical to Federal authority. See *Akiak Native Community*, 625 F.3d

1162, 1171–72 (9th Cir. 2010). In that case, the petitioner argued that the State of Alaska did not have adequate authority to abate violations because the State had to initiate a legal proceeding to assess civil penalties, whereas EPA could do so administratively. *Id.* at 1171. The Court held that because “[t]here is no requirement in the CWA . . . that state officials have the authority to impose an administrative penalty” and “[t]he language of the statute says nothing about administrative penalties,” “there is no reason to conclude that Alaska lacks adequate enforcement authorities.” *Id.* 1171–72.

Some commenters argued that the *NRDC* and *Akiak Native Comm’ty* cases are inapposite. Because the *NRDC* case involved penalties and *Akiak Native Comm’ty* was about enforcement mechanisms, they argue neither of these cases bears on criminal intent standards. Commenters also stated that *NRDC* is distinguishable because the court relied on an express Congressional amendment authorizing EPA to allow for certain Tribal and State program departures from CWA statutory civil enforcement monetary penalties, and the CWA contains no such amendment regarding *mens rea*. In their view, the absence of a similar Congressional authorization for the Administrator to depart from criminal liability standards applicable to Tribal and State programs shows that Congress did not grant the Administrator such authority.

Commenters also noted that *NRDC* decision ignored CWA section 402(a)(3), which provides that EPA’s permit program “shall be subject to the same terms, conditions, and requirements as apply to a State permit program and permits issued thereunder under subsection (b) of this section.” 33 U.S.C. 1342(a)(3). These commenters view this language as prohibiting Tribes or States from implementing a program that is any less stringent than a federally run program, including a program lacking authority to prosecute criminal violations committed with a simple negligence *mens rea*. Commenters state that the fact that neither the plaintiffs in that case nor D.C. Circuit considered section 402(a)(3) renders the *NRDC* precedent less persuasive.

Finally, commenters stated that the court in *NRDC* emphasized the importance of State programs being “administered in such a manner that . . . [approval will] provide a much more effective program” than the Federal Government would otherwise administer. 859 F.2d at 175. Commenters emphasized that this language reflects the court’s view that

Congress wanted to create more protective State programs.

EPA disagrees with the commenters stating that *NRDC* and *Akiak Native Comm’ty* do not support the Agency’s view of its authority. These cases hold that EPA may approve State programs if these programs lack certain enforcement authorities that the CWA provides to EPA; this precedent is highly germane to these revisions, even if the precise authorities at issue in those cases were not criminal intent standards. EPA also disagrees that *NRDC* is distinguishable because it did not address CWA section 402(a)(3). The fact that neither the plaintiffs nor the court addressed section 402(a)(3) may merely indicate that they did not find that provision relevant. Nor does EPA. Section 402(a)(3) applies to the terms, conditions, requirements, and permits of a State permit program; the criminal negligence *mens rea* that States are authorized to prosecute is none of these. Section 402(a)(3) is most clearly read to address the permitting process, not the state of mind of criminal violators. Moreover, clearly this provision would not implicate section 404 permits.

As to the 1987 amendments to the CWA, which noted that Tribal and State programs do not need to have the same maximum allowable penalty amount as EPA (see Water Quality Act of 1987, Title III, § 313(b)(2), Public Law 100–4, 101 Stat. 45), the D.C. Circuit in *NRDC* characterized the amendment as simply “confirmation of the broad authority the Administrator already enjoyed in crafting state program requirements.” *NRDC*, 859 F.2d at 180 (emphasis added). In other words, this amendment is additional evidence in support of the Court’s interpretation of the statutory structure that, regardless of the amendment, allows EPA certain flexibility in determining which of its criminal enforcement authorities Tribes and States must adopt if they wish to administer CWA permitting programs.

Finally, EPA agrees with commenters and the D.C. Circuit in *NRDC* about the importance of effective and protective State programs. In this rule EPA is maintaining and strengthening many provisions to help achieve this goal. Specifically with respect to criminal enforcement, EPA views the other requirements for Tribal and State enforcement authority in 40 CFR 123.26, 123.27 and 233.41 as sufficient to ensure that Tribes and States operate compliance and enforcement programs that satisfy the language and purpose of CWA 402(b)(7) and 404(h)(1)(G) to “abate violations of the permit or the permit program, including civil and criminal penalties and other ways and

means of enforcement.” These other provisions require, among other things, that a Tribe or State must maintain a program designed to identify persons subject to regulation who have failed to obtain a permit or to comply with permit conditions, engage in inspections and information gathering, and have the authority to sue to enjoin or seek penalties for violations of sections 402 and 404. As discussed in section IV.B.3 of this preamble, EPA’s modifications to program assumption requirements would further buttress the requirements of 40 CFR 233.41.

EPA has previously argued that Tribes and States do not need authority to prosecute criminal violations based on a simple negligence *mens rea*, including in *Idaho Conservation League*. Yet to the extent EPA’s interpretation is viewed as different from any earlier interpretations of CWA sections 402 and 404 and implementing regulations, EPA has ample authority to change its interpretation to adopt the best reading of the statute. See *Encino Motorcars, LLC v. Navarro*, 136 S. Ct. 2117, 2125 (2016) (“[A]gencies are free to change their existing policies as long as they provide a reasoned explanation for the change.”) (citations omitted).

Though under this rule EPA is not requiring Tribes or States to have the same criminal intent standard that courts have interpreted EPA to have, the Tribal or State standard would still be based on the term “negligence” in the text of CWA section 309(c). Allowing Tribes or States flexibility in the degree of negligence for which they are authorized to bring criminal cases balances the CWA’s priorities of allowing for Tribal or State autonomy with adherence to the purposes of the Act. As noted above, neither CWA section 402(b)(7) nor CWA section 404(h)(1)(G) requires States to abate violations in the same manner as required under CWA section 309(c). The absence of any citation to CWA section 309(c) in CWA sections 402(b) and 404(h) indicates that some degree of variability may be permitted between Federal and Tribal or State approaches to criminal enforcement.

This variability does not detract from the obligation for Tribes and States to operate meaningful programs to abate permit program violations, including through penalties and other ways and means of criminal enforcement, and consistent with the regulatory requirements for Tribal and State criminal enforcement authority. See 33 U.S.C. 1342(b)(7), 1344(h)(1)(G); 40 CFR 233.41. Furthermore, Tribes and States may certainly continue to authorize criminal prosecutions based on a simple

negligence *mens rea*. Tribes or States with that authority may describe it in their program submissions to demonstrate the adequacy of their criminal enforcement programs.

This regulatory clarification reflects EPA's experience in approving and overseeing CWA State programs for over thirty years. Many States administering or seeking to administer the programs do not currently have authority to prosecute based on a simple negligence *mens rea*, and indeed, they may have statutory or other legal barriers to such standards. EPA is unaware of any concrete evidence indicating that the absence of a simple negligence *mens rea* for criminal violations has served as a bar to effective State criminal enforcement programs, and the requirement to have such a standard could dissuade Tribes and States from seeking to administer these programs in the future or potentially motivate States to return their approved programs to EPA. Clarifying that Tribes and States do not need authority to prosecute based on a simple negligence *mens rea* in their criminal enforcement programs therefore advances the purposes of CWA sections 402(b) and 404(g) to balance the need for uniformity with Tribal and State autonomy, *see NRDC*, 859 F.2d at 181 (D.C. Cir. 1988), and to encourage Tribes and States to seek to administer the CWA section 402 or 404 programs consistent with section 101(b) of the statute.

This rule does not change the standard applicable to EPA's criminal enforcement of the CWA. Under CWA section 309, EPA retains its civil and criminal enforcement authority, including where Tribes and States administer permit programs. Notwithstanding Tribe or State *mens rea* authorities, Federal prosecutions are governed by the *mens rea* standards that Congress wrote into the statute in 1987, including that misdemeanor penalties apply to violations resulting from simple negligence and that felony penalties apply to violations resulting from knowing conduct.

Consistent with the CWA's requirement that Tribes and States administering CWA sections 402 or 404 permitting programs have the authority to abate civil and criminal violations, EPA is adding language to 40 CFR 123.27(a) and 233.41(a)(3) indicating that Tribes and States must have the authority to "establish violations," as well as "to assess or sue to recover civil penalties and to seek criminal penalties," which these provisions already state. This new language simply confirms EPA's interpretation of the effect of its current regulations. EPA is

also removing the term "appropriate" from the current references to the degree of knowledge or intent necessary to provide when bringing an action under the "appropriate Act" from the CWA sections 402 and 404 regulations, as these regulations only refer to actions under the CWA and no other statute. Therefore, the term "appropriate" is unnecessary. Finally, in 40 CFR 123.27(a)(3) and 233.41(a)(3), which currently require Tribes and States to have the authority to assess or sue to recover "civil penalties and to seek criminal remedies," EPA is replacing the word "remedies" with "penalties," as "penalties" is a more precise description of the type of relief sought in criminal enforcement actions. None of the changes described in this paragraph are intended to change the substantive effect of the regulations.

E. Federal Oversight

1. Dispute Resolution

a. Overview and What the Agency Is Finalizing

The Agency recognizes that Tribes or States seeking to assume administration of the section 404 permitting program may encounter disputes or disagreements when developing a program or administering an approved section 404 program. For example, Tribes and States could encounter disputes with permittees or other affected parties regarding permitting decisions, as well as disagreements with Federal agencies that could arise in the assumption process or program implementation concerning issues such as the appropriate permitting authority or conditions to avoid or minimize impacts to historic properties, threatened or endangered species, or critical habitat. Specifically, such disputes may occur during the development of the retained waters description, development of a transfer plan for permits currently under review by the Corps, through efforts to address endangered species and historic properties during permit review, and in determining whether a discharge affects another State, as well as in other situations. However, while the prior regulations provided several mechanisms for resolving certain types of disagreements (*e.g.*, addressing EPA's comments, conditions, or objections to potential Tribal or State permits), the prior regulations did not provide a general dispute resolution mechanism or clarify EPA's role in such disputes. Several Tribes and States have requested that EPA help resolve disputes encountered between

themselves and other States, Tribes, or the Federal Government.

The Agency proposed to add a general provision to the purpose and scope section at section 233.1 that would clarify EPA's role in facilitating the resolution of potential disputes between the Federal agencies and the Tribe or State seeking to assume and/or administer a section 404 program. 88 FR 55323. The proposed rule would also provide for resolution or elevation procedures to be specifically articulated in the Tribal or State Memoranda of Agreement or on a case-by-case basis. The provision reaffirms, however, that any dispute resolution or elevation process described in the regulations or in the Tribal or State Memoranda of Agreement must be followed. After reviewing public comments, the Agency is finalizing the dispute resolution provision as proposed at section 233.1(f).

b. Summary of Final Rule Rationale and Public Comment.

The Agency sees facilitating resolution of disputes as critical to establishing and sustaining viable Tribal and State section 404 permitting programs. EPA's engagement as a third party in such discussions can help to resolve impasses and ensure the program is administered consistent with CWA requirements. In this rule, EPA seeks to elucidate its role in resolving such disputes. Rather than attempt to articulate in the regulations all potential areas where a dispute may arise, EPA is adding a general provision to section 233.1 to affirm that EPA may facilitate resolution to potential disputes between the Tribe or State and Federal agencies and provide for resolution or elevation procedures to be specifically articulated in the Tribal or State Memoranda of Agreement or resolved on a case-by-case basis through discussions convened by EPA. EPA views this clarification as consistent with its program approval and oversight authority in CWA sections 404(h)–(j).

Commenters generally supported this clarification of EPA's role in assisting in the resolution of disputes. Some commenters raised concerns that EPA does not articulate any specific "mechanism or final authority," and asked that EPA articulate specific procedures to be included in the Memorandum of Agreement. Another commenter generally encouraged flexibility. One commenter objected to the proposal, arguing that it is not needed. After reviewing public comments, EPA is finalizing the general dispute resolution as proposed, as it provides requested clarity on EPA's role

while maintaining flexibility in the form such assistance may take. EPA is declining to define a specific mechanism or procedures for dispute resolution to accommodate differing Tribal and State program structures and account for the individual circumstances and complexities of a potential disagreement.

Flexibility is also important in light of the various scenarios in which EPA may help facilitate resolution of disputes that may arise between a Tribe or State and other Tribes or States or Federal agencies as they seek to assume and administer a section 404 permit program. For example, EPA may assist in resolving issues raised about the scope of retained waters or situations where the Tribe or State may disagree with the Corps about whether a proposed project would result in discharges to assumed or retained waters. As EPA is responsible for approving the jurisdictional scope of a Tribal or State section 404 program, EPA can help resolve such disputes. Potential disagreements could also arise in other aspects of section 404 programs, including proper approaches to joint project permitting, administration of a compensatory mitigation program (such as mitigation banking or in-lieu fee programs), the determination as to whether a particular permit application implicates a discharge into waters of the United States, and program conditions to avoid or minimize impacts to threatened or endangered federally listed species or historic properties.

Nothing in this new dispute resolution provision alters existing provisions addressing the Agency's review of and objection to State permits located at section 233.50. Congress authorized EPA to serve an oversight role for Tribal and State section 404 programs. EPA's authority encompasses the coordination of Federal comments on draft Tribal or State-issued permits and the ability to review, comment on, or object to these draft permits. 40 CFR 233.50. In this role, EPA, as a practical matter, works to resolve differences between Tribes or States and Federal agencies, particularly when reviewing draft permits. The regulations also establish processes whereby a Tribe or State may address EPA's comments, conditions, or objections to potential Tribal or State permits. *Id.*

2. Withdrawal Provisions

a. Overview and What the Agency Is Finalizing

Section 404(i) provides for EPA to withdraw assumed programs that are

not administered in accordance with the requirements of the Act. 33 U.S.C. 1344(i). The prior regulations, promulgated in 1992, set out a formal adjudicatory process for the withdrawal proceedings. The Agency proposed to simplify the process used by the Agency when withdrawing an assumed section 404 program from a previously authorized Tribe or State. 88 FR 55310. The proposed process at section 233.53 provided that if the Regional Administrator finds that a Tribe or State is not administering the assumed program consistent with the requirements of the CWA and 40 CFR part 233, then the Regional Administrator shall inform the Tribe or State as to the alleged noncompliance and give the Tribe or State 30 days to demonstrate compliance. If compliance is demonstrated within those 30 days, then the Regional Administrator will so notify the Tribe or State and take no further action. If the Tribe or State fails to adequately demonstrate compliance within 30 days, the EPA Administrator will schedule a public hearing to discuss withdrawal of the Tribal or State program. Notice of the hearing will be widely disseminated and will identify the Administrator's concerns. The hearing will be held no less than 30 days and no more than 60 days after publication of the notice of the hearing and all interested parties will have the opportunity to make written or oral presentations. If, after the hearing, the Administrator finds that the Tribe or State is not in compliance, the Administrator will notify the Tribe or State of the specific deficiencies in the Tribal or State program and the necessary remedial actions. The Tribe or State will have 90 days to carry out the required remedial actions to return to compliance or the Administrator will withdraw program approval. If the Tribe or State completes the remedial action within the allotted time, or EPA concludes after the hearing that the Tribe or State is in compliance, the Tribe or State will be notified and the withdrawal proceeding concluded. Where the Administrator determines that the assumed program should be withdrawn, that decision will be published in the **Federal Register**, the Corps will resume permit decision-making under section 404 in all waters of the United States in the affected Tribe or State, and any provision in the CFR addressing that Tribe's or State's assumption will be rescinded.

After reviewing public comments, the Agency is finalizing the approach as proposed, with one revision to require EPA to decide whether to proceed with

withdrawal within 90 days after the conclusion of the hearing process. This final rule approach replaces the adjudicatory hearing process with a public notice and hearing process modeled on the procedures for withdrawal of the Underground Injection Control program as discussed below.

b. Summary of Final Rule Rationale and Public Comments

The previous section 404 Tribal and State program regulations, promulgated in 1992, set out a formal adjudicatory process for the withdrawal proceedings. This formal adjudication process is not required by the statute and its length and complexity impose an unnecessary resource burden and other challenges for the Agency, Tribes and States, and stakeholders. The Agency proposed a streamlined process that is both easier to understand and to administer and encourages participation by interested parties. The process is modeled on the withdrawal procedures for Tribal and State Underground Injection Control programs at 40 CFR 145.34 and revised to accommodate the requirements of section 404. EPA views the Underground Injection Control program's approach as more transparent and efficient than the prior section 404 program withdrawal procedures.

EPA requested comments on all aspects of the revision. Multiple commenters supported the proposed approach as providing a more meaningful backstop to ensure that Tribal or State programs address water pollution consistent with the requirements of section 404. Some commenters opposed the proposed approach, stating that the text of the statute indicates that Congress supports State assumption and intended withdrawal to be an extended adjudicatory process providing maximum due process to the State. These commenters expressed concern that an "easy out" would undermine the stability of program approval and could lead to economic waste of the substantial investments States make in their programs. These commenters also noted that a streamlined withdrawal process could disincentivize Tribal and State assumption generally.

EPA has decided to finalize the proposed approach. As commenters in support of the proposed revision noted, the final rule allows EPA to respond quickly where there are concerns regarding Tribal or State compliance with the assumed program. By eliminating the adjudicatory requirements, it allows both EPA and the Tribe or State to focus on the

substantive requirements of the program. In response to commenters' concerns, the substantive requirements of the final rule are comparable to the prior one but will enhance efficiency of the withdrawal process and better align with EPA's section 404 program approval procedures. Nothing in the CWA requires the Agency to maintain inefficient and burdensome procedures for their own sake. Enhancing administrability does not mean that EPA intends to take program withdrawal lightly, and EPA's experience with both CWA and Underground Injection Control programs reflects that this process has been carefully and rarely used. Consistent with EPA's longstanding practice, the Agency will first seek to resolve program concerns and help enable Tribes and States to administer the section 404 program consistent with the requirements of the CWA and its implementing regulations. EPA is committed to working with Tribes and States through mechanisms such as annual program report reviews, informal program reviews, and formal program reviews to identify program challenges and recommended steps for resolution.

Several commenters asked that EPA add a deadline by which time EPA must decide whether to proceed with withdrawal after the conclusion of the hearing process. These commenters suggested a deadline of no more than 60 days. EPA considered this suggestion and concluded that a deadline for decision would add predictability to the withdrawal process and avoid leaving the relevant Tribe or State and stakeholders in a lengthy state of uncertainty as to whether the Tribe or State will continue to administer the program. However, EPA decided to provide the Agency 90 days to make this decision, rather than 60 days, to allow sufficient time for consideration of concerns raised and the Tribe or State's capacity to address these concerns. The final rule therefore provides for a 90-day mandatory time frame for EPA to make its decision after the conclusion of the hearing process.

3. Program Reporting

a. Overview and What the Agency Is Finalizing

EPA's prior section 404 Tribal and State program regulations require the Tribe or State to provide a self-assessment in an annual report, which must include, among other information, "an assessment of the cumulative impacts of the State's permit program on the integrity of the State regulated waters" and numbers of permits issued

and enforcement actions taken. 40 CFR 233.52(b) (2023). The annual report is meant to provide a robust overview of the Tribe's or State's program and implementation and support continuous improvement such that EPA can ensure the program remains consistent with the Act and these regulations. However, some of the self-assessment requirements for the annual report in the prior regulation lacked the necessary details for a Tribe or State to know EPA's expectations for the annual report.

EPA proposed several revisions at section 233.52(b) to clarify information not previously explicitly required, including specific metrics about compensatory mitigation, program resources and staffing, and a discussion as to how issues identified in the previous annual report or other problems the program has encountered have been resolved. 88 FR 55311. Additionally, the Agency proposed to add the word "final" between "Regional Administrator's" and "comments" in 40 CFR 233.52(e) to acknowledge that some discussion may occur between the Tribe or State and EPA as the annual report is being finalized. Finally, the Agency also proposed to require that the Director make the final annual report publicly available. After reviewing public comments, the Agency is finalizing these revisions as proposed, with one non-substantive revision to replace "as well as" with "and" in the series of items the State must evaluate in the draft annual report located at section 233.52(b).

b. Summary of Final Rule Rationale and Public Comment

EPA requested comment on all aspects of the proposed revision to the annual report requirements. EPA received few comments on this provision. The majority of comments were general in nature, expressing support for the added clarity in the proposal. One commenter opposed the additional requirements, stating that they would increase the burden on States to assume and implement the program. EPA considered these comments and has decided to finalize the regulatory text as proposed, because it adds clarity to what Tribes and States are expected to provide, giving them clear expectations for the annual report and reducing the need for follow-up questions from the Agency as it conducts its program oversight. EPA therefore thinks the revisions will assist Tribes and States, rather than burdening them.

A few commenters requested that EPA require additional reporting about the

costs of administering the program and litigation involving the Tribal or State program. The Agency finds that the proposed requirement to document "resources and staffing" will be sufficient to provide information EPA needs about program budgets. In addition, EPA decided that it does not need a litigation update in order to fulfill its oversight obligations; information already required about unauthorized activities and enforcement actions taken should, as a general matter, provide the litigation-related information most relevant to EPA's oversight. To the extent EPA decides that it needs litigation information on a case-by-case basis, that information would be easy to research or request of the Tribe or State. Thus, the Agency finds it unnecessary to modify the proposed text in light of these comments.

The final rule clarifies and updates the requirements for a Tribe's or State's annual reporting by clarifying that it must identify implementation challenges along with solutions to address the challenges, that evaluations of the program components must include any quantitative reporting, and that it must provide specific metrics related to compensatory mitigation, resources, and staffing. EPA expects these revisions will support a more streamlined process for the State's annual report submittal, EPA's comments and approval, and the State's final report publication. The clarifications will also ensure transparency as to the state of Tribal and State programs and facilitate annual discussions between the Tribe or State and EPA about program implementation and challenges. For EPA, the revisions will improve the Agency's ability to ensure that program operation is consistent with the Act.

Existing programs may make minor revisions to address this change. For example, the 2011 Memorandum of Agreement between Michigan and EPA lists requirements of the annual reports, but the list does not specifically include compensatory mitigation or resources and staffing, which are included in the final regulatory text. The 2011 Michigan EPA Memorandum of Agreement list does not preclude the State reporting other information; however, the Memorandum of Agreement list could be updated to reference section 233.52(b) or match the updated regulatory text. The New Jersey and EPA Memorandum of Agreement includes annual reporting requirements, but references section 233.52(b) rather than listing the requirements, so it may not require distinct updates.

F. Eligible Indian Tribes

a. Overview and What the Agency Is Finalizing

Prior to issuing a permit, a Tribe or State with an approved section 404 program must provide notice to another Tribe or State if a proposed discharge may affect the biological, chemical, or physical integrity of the other Tribal or State waters and provide an opportunity for the Tribe or State to submit written comments and suggest permit conditions. 40 CFR 233.31; *see* 33 U.S.C. 1344(h)(1)(C), (E). If recommendations from the State whose waters may be affected are not accepted by the Tribe or State issuing the permit, the Tribe or State issuing the section 404 permit must notify the affected State and EPA of its decision not to accept the recommendations and reasons for doing so. 40 CFR 233.31(a); *see* 33 U.S.C. 1341(1)(E). EPA's regulation at 40 CFR 233.2 defines the term "State" to include an Indian Tribe which meets the eligibility requirements for a Tribe to assume the section 404 program. Accordingly, these provisions could be read to limit the coordination requirement in section 233.31 to only those affected Tribes that meet the requirements for section 404 program assumption. To date, no Tribe has applied for eligibility to assume the section 404 program, and many Tribes lack the resources to assume the program. However, nearly half of federally recognized Tribes have been approved for TAS for other CWA provisions (*i.e.*, TAS for CWA section 106, section 319, and sections 303(c) and 401) and may have relevant water quality information that could inform the permitting decisions of Tribes or States administering a section 404 program.

In the proposal, the Agency considered three ways to further facilitate Tribal engagement in permitting decisions that may affect Tribal resources. First, the Agency proposed to expand the aforementioned coordination requirement to include affected Tribes that have been approved by EPA for TAS for any CWA provision, as opposed to only Tribes with TAS to assume the section 404 program. Second, the Agency proposed a new TAS opportunity solely for the purpose of receiving a heightened comment opportunity on section 404 permits proposed by other Tribes or States that may affect the biological, chemical, or physical integrity of their reservation waters. Finally, the Agency proposed to provide an opportunity for Tribes to request EPA review of permits that may affect Tribal rights or interests, even if

Federal review has been waived. After reviewing public comments, the Agency is finalizing all three changes as proposed. These revisions are consistent with EPA's authority under CWA sections 404 and 518, as well as the Federal trust relationship and responsibilities to federally recognized Tribes, the policies underlying CWA section 518, and EPA's policies to facilitate Tribal opportunities to actively engage in managing their waters and resources.

In addition to the approaches summarized above to facilitate Tribal engagement in permitting decisions, EPA is also clarifying that when Tribes seek to administer the program in areas where they have not already assumed the section 404 program, Tribes must demonstrate that they meet the TAS criteria for those additional areas. This is a non-substantive clarification because subpart G already provides a process whereby Tribes seeking to assume the section 404 program address the TAS criteria, and this provision would simply clarify that the same TAS application applies if Tribes seek to add a new area to their program.

b. Summary of Final Rule Rationale and Public Comment

i. Enabling Tribes With TAS for Any CWA Provision To Comment as an Affected State

As discussed above, 40 CFR 233.31(a) currently affords specific consideration of comments and suggested permit conditions on draft permits by an affected State and provides an avenue of review if a Tribe or State with an assumed program chooses not to accept the suggested permit conditions. Under the current regulatory definition of "State"—which includes Tribes that have obtained TAS for purposes of assuming the section 404 program—no Tribes are presently eligible to be considered an affected State, as no Tribes have yet obtained TAS status for purposes of assuming the section 404 program.

Section 518 of the CWA authorizes EPA to treat eligible federally recognized Tribes in a similar manner as a State for purposes of implementing and managing various environmental functions under the statute. The requirements for TAS are established in CWA section 518 and are reflected in EPA regulations for various CWA provisions. Generally, the Tribes must be federally recognized, have a governing body that carries out substantial governmental duties and powers, seek to carry out functions pertaining to the management and

protection of reservation water resources, and be capable of carrying out the functions of the particular provision at issue. 33 U.S.C. 1377(e). Of the 574 federally recognized Tribes, over 285 have been granted TAS status for one or more CWA provisions.⁴⁴

The Agency proposed to revise the coordination requirements at section 233.31 to expressly provide that Tribes that have already been approved for TAS by EPA to administer any other CWA programs, such as a water quality standards (WQS) program under CWA section 303(c), or have been approved for TAS for any other CWA purpose, such as receiving section 106 grants to establish and administer programs for the prevention, reduction, and elimination of water pollution, should also have the opportunity to comment on draft permits in the same manner as affected States.

Most commenters supported effective coordination with Tribes on permits that may affect Tribal aquatic resources. EPA agrees with these commenters and finds this provision at 233.31 will enable more Tribes whose waters may be affected by a dredge or fill project to comment on permits to be issued by a Tribe or State in the same manner as other affected States. A Tribe or State with an approved section 404 program will also have to provide an opportunity for Tribes with TAS for any CWA provision to submit written comments within the public comment period and suggest permit conditions as provided in section 233.31(a) of the regulations. As finalized, Tribes and States with an approved section 404 program must consider comments from Tribes with TAS for any CWA provision whose reservation waters may be affected by a proposed discharge. If the recommendations are not accepted by the approved Tribe or State program, the approved Tribe or State program would have to notify the affected Tribe and EPA of its decision not to accept the recommendations and its reasons for not doing so. EPA would then have time to comment upon, object to, or make recommendations regarding the Tribal concerns set forth in the original comment. This is the same opportunity and process provided to affected States.

⁴⁴ EPA maintains a website that lists all Tribes approved for TAS, which is updated bi-annually. Tribes with TAS for regulatory programs and administrative functions can be found at <https://www.epa.gov/tribal/tribes-approved-treatment-state-tas>; Tribes with TAS for section 106 grants can be found at <https://www.epa.gov/water-pollution-control-section-106-grants/tribal-grants-under-section-106-clean-water-act>; Tribes with TAS for section 319 grants can be found at <https://www.epa.gov/nps/current-tribal-ss319-grant-information>.

Some commenters asked EPA to codify specific timelines and notification requirements to ensure such coordination occurs. EPA is declining to mandate a specific process. Rather, EPA has determined that individual Tribes and States should have the flexibility to establish the procedures and coordination approaches that work best for them. EPA encourages States to work together with Tribes whose reservation waters may be affected by a proposed discharge prior to proposal of the relevant permit. Such efforts will improve permitting, protect interests, and build relationships. For example, existing State section 404 programs are already coordinating with affected Tribes per their Memorandum of Agreement with EPA.

Some commenters expressed concern that this provision creates a new authority allowing for Tribes to engage in State permitting in a way that could result in confusion, while another commenter suggested that such opportunity be limited to Tribes with TAS for water quality standards and section 401 certification. EPA disagrees with these commenters. First, EPA disagrees that this provision will result in confusion. Under CWA sections 404 and 518 and EPA's existing regulations, Tribes were already afforded the enhanced opportunity to provide comment as an affected State through the TAS process for section 404. Second, EPA views any Tribe that has TAS status for any CWA purpose as both capable of participating in matters that may affect the chemical, physical, or biological integrity of reservation waters through the enhanced opportunity for comment, and as an appropriate entity to be afforded that opportunity. By receiving TAS for another provision of the CWA, a Tribe has already demonstrated they have met the TAS requirements as articulated in section 518 of the Act and that they are engaged in water quality protection activities under the Act. Accordingly, EPA concludes that Tribes that have already been approved for TAS by EPA to administer other CWA program(s) are capable of commenting on draft permits in the same manner as affected States and are relevant entities to provide input regarding the potential effects on their reservation waters of Tribal and State 404 permitting.

ii. Providing TAS Opportunity Specifically for the Ability To Comment as an Affected State

EPA is finalizing as proposed a process whereby Tribes may apply for TAS for the sole purpose of commenting on Tribe- or State-issued CWA section

404 permits in the same manner as an affected State. Tribes that obtain TAS for this purpose would benefit from the same notification requirements that apply to any other commenting affected "State." This rule enables Tribes that have neither assumed the section 404 program nor have obtained TAS for other CWA programs to obtain TAS solely to provide input on section 404 permits that may affect their reservation waters.

This approach is similar to approaches taken in other EPA programs. For example, the Agency's regulations under the Clean Air Act provide opportunities for interested Tribes to seek TAS authorization for distinct severable elements of programs under that statute. *See* 40 CFR 49.7(c). Under that authority, EPA has authorized TAS for the procedural comment opportunity provided in connection with issuance of certain permits by upwind permitting authorities, without requiring those Tribes to seek authorization for the entire relevant program. *See* 42 U.S.C. 7661d(a)(2). Nothing in the language of section 404 precludes creating this new TAS opportunity. This provision would relate solely to the coordination requirements set forth in section 233.31(a). The opportunity to provide comments and suggest permit conditions established in CWA sections 404(h)(1)(C) and (E) and 40 CFR 233.31 do not require any exercise of regulatory authority by the affected Tribe. Due to the limited nature of TAS solely for purposes of commenting as an affected State, EPA anticipates that the application burden on interested Tribes would, in most circumstances, be minimal and that the process for review of Tribal applications would be straightforward. As with other TAS applications, interested Tribes would submit relevant information demonstrating that they meet the TAS eligibility criteria to the appropriate Regional Administrator, who would process the application in a timely manner. Because, as described above, commenting in the same manner as an affected State does not involve any exercise of regulatory authority by the applicant Tribe, no issues regarding Tribal regulatory authority should be raised or decided in this limited TAS context. In this sense, TAS applications for this purpose would be similar to TAS applications for the purpose of receiving grants, a process that many Tribes have undergone and with which EPA has substantial experience. Similarly, Tribes interested in this TAS opportunity would need to demonstrate

their capability solely for the limited purpose of submitting comments as an affected Tribe. These Tribes would not need to demonstrate capability to administer an assumed section 404 program.

Many commenters supported this provision to fill gaps and facilitate Tribal engagement in permitting that may affect their waters within Indian Country. EPA agrees with these commenters and is finalizing the process as proposed to eliminate unnecessary barriers to Tribal engagement in the 404 process as contemplated by CWA section 518. Some commenters raised a concern that EPA lacks authority to create new Tribal authorities. However, EPA is not creating a new Tribal authority. The CWA and section 404 program regulations already provide Tribes the ability to obtain TAS for the section 404 program and to comment as an affected State. 33 U.S.C. 1377(e). As discussed above, Tribes do not need to have the authorities and resources to fully administer a section 404 program, including issuing permits and enforcing violations, in order to comment as an affected State. Such a requirement would be unnecessarily burdensome with no benefit to Tribes or the environment. Thus, EPA is finalizing this provision to obtain TAS for the sole purpose of commenting on Tribe or State issued section 404 permits.

One commenter suggested that specifically enabling Tribes to request to review all permits within a specified geographic area, including areas outside of reservation land, as the most efficient way of ensuring Tribal engagement in the permit issuance process for areas with cultural and ecological significance. Tribes are free to submit such requests to the permitting authority, and EPA encourages Tribes and States to provide for notifications of permitting in such areas through mechanisms established in regulation, a Memorandum of Understanding, or through the State Historic Preservation Officer and Tribal Historic Preservation Office. EPA is not adding any regulatory revisions on this point as such requests are most efficiently addressed on a case-by-case basis.

Some commenters raised concerns that this provision would allow any Tribe to comment on any permit issued by any State. As stated above, any member of the public, including Tribes, may already comment on any draft permit. This provision simply provides an additional mechanism for eligible Tribes to engage in the same heightened comment process on draft permits that is already available to States and to

Tribes that obtain TAS for the purpose of assuming the section 404 program. Tribes obtaining TAS for this limited purpose would be able to comment in the same manner as affected States on only those permits that may affect the biological, chemical, or physical integrity of the Tribe's waters. Providing a mechanism to obtain TAS for this limited commenting opportunity is consistent with CWA sections 404 and 518, as well as the Federal trust responsibility to federally recognized Tribes and EPA's various Tribal policies seeking to facilitate Tribal opportunities to actively engage in managing their waters and resources and to eliminate unnecessary barriers to such Tribal involvement.

Lastly, some commenters argued that this provision provides Tribes with an opportunity to comment on permits that does not exist in the Federal section 404 program. As discussed above, 40 CFR 233.31(a) already afforded specific consideration of comments and suggested permit conditions on draft permits by an affected State, which includes Tribes that have obtained TAS for purposes of assuming the section 404 program. This final rule merely provides that Tribes may apply for TAS for the sole purpose of commenting on Tribe- or State-issued CWA section 404 permits in the same manner as an affected State. Moreover, under the Corps' administration as well as Tribal or State program administration, any entity may comment on any draft permit.

Some commenters asked EPA to conduct outreach to inform Tribes about the opportunity to apply for TAS for the sole purpose of commenting on 404 permits. EPA agrees that such outreach would be useful and intends to work with Tribes and States to develop implementation tools and conduct outreach informing Tribes, States, and others about this rule, including the opportunity to apply for TAS to comment on 404 permits.

iii. Opportunity for Tribes To Request EPA Review of Permits That May Affect Tribal Rights or Interests

EPA is also revising section 233.51 to codify an opportunity for Tribes to request EPA review of permits potentially affecting Tribal rights or interests. These may include rights or interests both inside and outside of a Tribe's reservation and would facilitate EPA's review of permits that have the potential to impact waters of significance to Tribes. The revisions to section 233.51 enable Tribes to request EPA's review of permits that may affect both rights reserved through treaties,

statutes, or executive orders, as well as Tribal interests in resources that may not be reflected in Federal law, such as those with historical or cultural significance to Tribes. Section 233.51 applies whenever a Tribe asserts that issuance of a particular permit potentially affects its rights or resources; however, EPA's review of a permit pursuant to section 233.51 would not constitute a recognition by EPA that any particular Tribe holds reserved rights.⁴⁵

EPA anticipates that this provision will help address Tribal concerns about the loss of Federal consultation opportunities when permitting authority transfers from the Corps to a Tribe or State. Additionally, this provision will allow coordination on potential impacts to Tribal rights and resources not covered by any other commenting option discussed above in sections IV.F.b.i and IV.F.b.ii of this preamble. Given the TAS provisions discussed above, EPA anticipates that Tribes will use this opportunity in limited circumstances.

Under this provision, a Tribe may notify EPA within 20 days of public notice of a permit application that the application potentially affects Tribal rights or interests, including those beyond reservation boundaries, even if Federal review has been waived. If a Tribe does so, EPA will request the public notice and will proceed in accordance with section 233.50, including providing a copy of the public notice and other information needed for review of the application to the Corps, the U.S. Fish and Wildlife Service, and the National Marine Fisheries Service. Pursuant to section 233.50, if EPA objects to a draft permit, the issuing Tribe or State may not issue the permit unless it has taken steps required by EPA to eliminate the objection. Once EPA removes its objection, EPA may send a copy of the letter removing EPA's objections to a permit at a Tribe's request or pursuant to a prior agreement with the Tribe (or other stakeholders).

Several commenters supported the proposed provision, noting it helps to fill a gap and provide Tribes a mechanism to help ensure an

opportunity to raise concerns regarding potential impacts to Tribal aquatic and cultural resources outside of their reservations. Some commenters expressed concern that there is no reliable instrument for coordinating with States assuming the section 404 program regarding potential impacts on historical and cultural sites or Tribal natural resource rights located outside of reservation lands. These commenters referenced the Federal trust responsibility to Federally recognized Tribes, which forms an important element of the Tribal-federal relationship but which does not apply to States that assume the section 404 program, as well as other aspects of federal law. Additionally, some commenters raised concerns over resource limitations and that following assumption a Tribe would need to take on the burden of reviewing all permit applications statewide for those that may affect Tribal resources. EPA encourages Tribes to work with Tribes and States with approved section 404 programs to develop mechanisms (e.g., Memoranda of Understanding) for notifying Tribes at appropriate times, and EPA may participate in such discussions to aid in coordination efforts, if appropriate.

This rule does not affect other mechanisms that require Tribal and State permitting authorities to protect Tribal interests. For example, CWA section 404 permits for discharges must comply with all applicable State water quality standards (including standards in a downstream jurisdiction) in effect under the CWA. *See* 33 U.S.C. 1311(b)(1)(C); 40 CFR 230.10(b)(1) and 233.20(a). To the extent designated uses require consideration of cultural or traditional uses of water that may be important to Tribes, Tribal or State section 404 programs must consider those during the permitting process.

A few commenters raised a concern that this provision creates an opportunity to comment on permits beyond Indian Country that does not currently exist when the Corps is the permitting authority. As noted above, any member of the public is currently able to comment on any draft permit, and EPA has the authority to review and comment on any draft permit. *See* 33 U.S.C. 1344(h)(1)(C), (j). In addition, the scope of the Corps' Federal section 404 program is outside the scope of this rulemaking. Regardless of the scope of the Corps' engagement with Tribal stakeholders, facilitating Tribal engagement in permitting decisions that affect Tribal resources is a priority to EPA. In its oversight role, EPA is able to review and object to permits; this

⁴⁵ On May 2, 2024, EPA published a final rule entitled "Water Quality Standards Regulatory Revisions to Protect Tribal Reserved Rights." 89 FR 35717 (May 2, 2024). That rule amends EPA's water quality standards regulation, 40 CFR part 131 *et seq.*, to, in pertinent part, define "Tribal reserved rights" for WQS purposes as "any rights to CWA-protected aquatic and/or aquatic-dependent resources reserved by right holders, either expressly or implicitly, through Federal treaties, statutes, or Executive orders." 89 FR 35717. The Tribal Reserved Rights rulemaking does not affect section 233.51 of this section 404 rulemaking, nor does anything in this section 404 rulemaking depend on the Tribal Reserved Rights rulemaking.

provision provides an additional way to inform the Agency as it determines whether to review and object to a potential permit.

G. Impacts to Existing Programs

This preamble section identifies parts of this rule that may affect existing State-assumed section 404 programs by requiring them to modify their procedures or potentially expand the scope of their authority. Whether these changes would require revisions to existing State-assumed programs depends on the existing authority of the States that have assumed the program and their implementation procedures, as well as the interpretation of these authorities and processes by State Attorneys General or State courts. These States may already have some or all of the authority or procedures in place that these provisions require. States that do not have the authority required to administer the provisions of the final rule would need to submit a program revision for EPA approval after issuance of the rule in accordance with 40 CFR part 233.16.

Final rule provisions that could affect existing programs include a provision ensuring opportunity for judicial review of agency decisions (section IV.C.2 of this preamble), updates to the compensatory mitigation requirements for Tribal and State section 404 programs (section IV.B.4 of this preamble), and a revised approach to addressing the five-year limit on permits (section IV.C.1 of this preamble). In addition, clarification as to how Tribes and States can demonstrate that their programs are no less stringent than the Federal section 404 program (section IV.A.3 of this preamble), modification of the conflict of interest prohibition (section IV.A.1 of this preamble), and updated annual reporting requirements (section IV.E.3 of this preamble) may affect existing State programs.

EPA recognizes that “[w]hen an agency changes course . . . it must be cognizant that longstanding policies may have engendered serious reliance interests that must be taken into account.” *Department of Homeland Security v. Regents of the University of California*, 140 S. Ct. 1891, 1913 (2020) (citations and internal quotation marks omitted.) EPA does not view the regulatory changes as undermining serious reliance interests that outweigh the benefits of these changes. EPA’s regulations contain detailed procedures for revising an approved section 404 program. 40 CFR part 233.16. States seeking approval would therefore be well aware that program revisions may be necessary following assumption.

Moreover, the program revision regulations specifically address revisions needed as a result of a change to the section 404 regulations, or to any other applicable statutory or regulatory provision. *Id.* at 233.16(b). The regulations allow Tribes and States one year to make such revisions, or two years if statutory changes are required. *Id.* The 1–2-year revision period supplements the lengthy preliminary period for proposing and finalizing this rule and soliciting and responding to public comments. Tribes and States therefore should anticipate the potential need to revise their programs based on Federal regulatory revisions following assumption. Finally, nothing in CWA section 404 suggests that EPA’s approval of a Tribal or State program terminates the Agency’s ability to update relevant regulations when necessary to effectively administer the Act. The Agency does not think Congress would have intended approvals to carry such a drastic consequence without saying so.

H. Technical Revisions

In addition to revising 40 CFR part 233, EPA is also finalizing technical edits to clarify that the 40 CFR part 124 regulations do not apply to Tribal or State section 404 programs. Specifically, EPA is making targeted revisions and deletions to specific provisions of the regulations at 40 CFR parts 124.1 through 124.3, 124.5, 124.6, 124.8, 124.10 through 124.12, and 124.17 to remove any references to 40 CFR part 233. Prior to 1988, the State section 404 program regulations included references to 40 CFR part 124, which contains consolidated permitting regulations for a variety of programs that EPA administers. *See* 49 FR 39012 (October 2, 1984). The preamble to the 1988 section 404 Tribal and State program regulation clearly stated that the 40 CFR part 124 regulations no longer apply to Tribal or State section 404 programs and announced the Agency’s intention to publish technical edits in the future. 53 FR 20764 (June 6, 1988) (“It is the agency’s intent that 40 CFR part 124 no longer applies to 404 State programs. We will be publishing technical, conforming regulations in the future.”). Although the Agency modified 40 CFR part 233 to remove all references to part 124 in 1988, the Agency did not provide conforming edits to 40 CFR part 124 to remove references to 40 CFR part 233. This rule removes the outdated references to 40 CFR part 233 in part 124. The removal of these references has no substantive impact on the section 404 assumption process or on Tribal or State section 404 programs. They also do not implicate or affect aspects of the

part 124 regulations addressing other EPA permit programs, including the Resource Conservation and Recovery Act (RCRA), Underground Injection Control, and NPDES programs.

EPA is also revising the definitions located at 40 CFR part 233.2 for consistency and clarity. EPA is defining “Indian lands” consistent with the Agency’s long-standing interpretation of “Indian lands” as synonymous with “Indian country” as defined at 18 U.S.C. 1151. *See e.g.*, 40 CFR part 144.3 (defining “Indian lands” as “Indian country” as defined at 18 U.S.C. 1151); 40 CFR part 258.2 (adopting the definition of 18 U.S.C. 1151 for “Indian lands”); U.S. EPA, Underground Injection Control Program: Federally-Administered Programs, 49 FR 45292, 45294 (November 15, 1984) (defining “Indian lands” as used in EPA’s Safe Drinking Water Act Underground Injection Control Program regulations as “Indian country,” explaining that “EPA believes this definition is most consistent with the concept of Indian lands as the Agency has used it in regulations and [Underground Injection Control] program approvals to date.”); *Wash. Dep’t of Ecology v. EPA*, 752 F.2d 1465, 1467 n.1 (9th Cir. 1985) (noting EPA’s position that “Indian lands” is “synonymous with ‘Indian country’, which is defined at 18 U.S.C. 1151”). EPA is also revising the definition of “State 404 program” or “State program” to clarify that Tribes and interstate agencies may also have an approved program. The Agency is removing the “(p)” associated with the cross-reference to 40 CFR part 233.2 in the definition of “State 404 program” or “State program” as the definitions in 40 CFR part 233.2 are no longer listed by letter. Finally, EPA is clarifying the definition for “State regulated waters” in 40 CFR part 232 by replacing the in-text description of retained waters with a reference to the relevant regulatory text at 40 CFR part 233.11(i).

EPA is also finalizing several technical edits throughout 40 CFR part 233 to update cross-references, ensure consistent use of terminology, and facilitate efficient program operation. First, EPA is updating section 233.10(a) and section 233.16(d)(2) to include the term “Tribal leader” where the term “Governor” is referenced. Second, EPA is also removing the use of the masculine pronouns “he” and “his” throughout 40 CFR part 233 and replacing them with “they,” “their,” “the Administrator,” “the Regional Administrator,” or “Director” as appropriate. The purpose of changing masculine pronouns or terms to neutral pronouns and other neutral terms is to

acknowledge the diversity of people who may hold the positions of “the Administrator,” “the Regional Administrator,” “Director,” and program staff. Third, EPA is changing references to assumption “application” to terms including “request to assume,” “program submission,” or “assumption request materials” to more clearly distinguish between permit applications and requests to assume the program throughout the regulations. Fourth, EPA is revising section 233.1(b) to remove the term “individual” from the reference to “State permits,” as States may also regulate discharges using general permits. Fifth, the Agency is changing the “Note” in section 233.1(c) to become section 233.1(d) and adding a cross-reference to the process to identify retained waters and the retained waters description at 233.11(i). Section 233.1(d) will be renumbered as 233.1(e). Sixth, EPA is clarifying in section 233.14(b)(3) that when a State intends to administer general permits issued by the Secretary, any Tribal or State conditions and/or certifications of those general permits transfer when the Tribe or State assumes the program. Seventh, EPA is also adding an effective date for the approved non-substantial program revisions in the letter from the Regional Administrator to the Governor requirement in section 233.16(d)(2). Finally, EPA is also clarifying in section 233.53(a)(1) that when the Tribe or State notifies the Administrator and the Secretary of its intent to voluntarily transfer program responsibilities back to the Secretary, the Tribe or State must also submit the transition plan. The Agency is adding the words “no less than” before the advance notice requirement to clarify that Tribes and States may provide more than 180 days’ notice of intent to transfer the program. An extended transition time would allow the Tribe or State, the Corps, and EPA to discuss any gaps in the plan and ensure a smooth transition from the Tribe or State to the Corps’ administration of the program. The rule requires that files associated with ongoing investigations, compliance orders, and enforcement actions be provided to the Secretary to ensure compliance with these orders and minimize disruptions in administration of section 404 programs. The Agency requested comment on whether to revise the regulations to clarify that electronic mail is an acceptable method of transmitting public notices or documents, in addition to mail. Instead of changing, for example, the word “mail” to “send” throughout the regulations, the Agency wishes to clarify

that that both electronic mail and mail are acceptable methods of transmitting public notices or documents.

I. Incorporation by Reference

Currently, 40 CFR part 233.70 incorporates by reference Michigan’s regulatory and statutory authorities applicable to the State’s approved CWA section 404 program, and 40 CFR part 233.71 incorporates by reference New Jersey’s regulatory and statutory authorities applicable to the State’s approved CWA section 404 program. EPA codified in regulation the approval of the Michigan program on October 2, 1984 (49 FR 38947) and the New Jersey program on March 2, 1994 (59 FR 9933). EPA is updating the incorporation by reference of the Michigan laws in the State’s approved CWA section 404 program as follows:

- The Michigan Administrative Procedures Act of 1969, MCL § 24–201, *et seq.*, in effect as of February 13, 2024 (addresses the effect, processing, promulgation, publication and inspection of State agency determinations, guidelines and rules);
- The Natural Resources and Environmental Protection Act 451 of 1994:
 - Part 31 Water Resources Protection, MCL § 324.31 *et seq.*, in effect as of September 29, 2023 (provides regulatory authority and describes Michigan’s water quality provisions);
 - Part 301 Inland Lakes and Streams, MCL § 324.301 *et seq.*, in effect as of October 20, 2021 (provides authority for Michigan’s inland lakes and streams rules and regulations for the streams and inland lakes portion of the water resources permitting and enforcement program);
 - Part 303 Wetland Protection, MCL § 324.303 *et seq.*, in effect as of April 27, 2019 (provides authority for Michigan’s wetlands rules and regulations for the wetlands portion of the water resources permitting and enforcement program);
 - Part 307 Inland Lake Levels, MCL § 324.307 *et seq.*, in effect as of October 16, 2020 (provides authority for Michigan regulating water levels in inland lakes);
 - Part 315 Dam Safety, MCL § 324.315 *et seq.*, in effect as of September 10, 2004 (provides authority for Michigan regulating dam safety);
 - Part 323 Great Lakes Shorelands Protection and Management, MCL § 324.323 *et seq.*, in effect as of October 20, 2021 (allows the State to issue permit and violation fees); and
 - Part 325 Great Lakes Submerged Lands, MCL § 324.325 *et seq.*, in effect as of October 20, 2021 (provides for and

describes regulating activities in Great Lakes Submerged Lands).

Additionally, EPA is incorporating the most recent versions of Michigan Administrative Code, Department of Environmental Quality, as follows:

- Land and Water Management:
 - Great Lakes Shorelands, R 281.21 through R 281.26 inclusive, in effect as of 2000;
 - Wetlands Protection, R 281.921 through R 281.925 inclusive, in effect as of 2006;
 - Wetland Mitigation Banking, R 281.951 through R 281.961 inclusive, in effect as of 1997;
 - Dam Safety, R 281.1301 through R 281.1313 inclusive, in effect as of 1993; and
- Water Resources Division, Inland Lakes and Streams, R 281.811 through R 281.846 inclusive, in effect as of 2015.

This material contains Michigan’s rules for shoreline protection, inland lakes and streams, wetlands protection, wetland mitigation banking, and dam safety. EPA is updating the name of the implementing State agency to reflect that the current agency implementing the approved Michigan assumed program is the Michigan Department of Environment, Great Lakes, and Energy rather than the Department of Natural Resources in section 233.70. EPA is also updating the description of EPA and Michigan Memorandum of Agreement in section 233.70(c)(1) to reflect the current Memorandum, signed in 2011.

EPA is updating the incorporation by reference of the New Jersey state laws in the State’s approved CWA section 404 program as follows: Freshwater Wetlands Protection Act, New Jersey Statutes Annotated, Title 13: Conservation and Development—Parks and Reservations; Chapter 9B: Freshwater Wetlands, N.J.S.A. 13:9B–1 *et seq.*, effective as of December 23, 1993 (provides the New Jersey Department of Environmental Protection with the authority to regulate and permit activities in freshwater wetlands). Additionally, EPA is incorporating the most recent version of the Freshwater Wetlands Protection Act Rules as follows: Freshwater Wetlands Protection Act Rules, New Jersey Administrative Code, N.J.A.C. 7:7A, amended November 7, 2022 (contains regulations to implement the Freshwater Wetlands Protection Act).

Materials that have been incorporated by reference are reasonably made available to interested parties. Copies of materials incorporated by reference may be obtained or inspected at EPA Docket Center Reading Room, WJC West Building, Room 3334, 1301 Constitution Avenue NW, Washington, DC 20004

(telephone number: 202-566-1744); or send mail to Mail Code 5305G, 1200 Pennsylvania Ave. NW, Washington, DC 20460. Copies of the materials incorporated by reference for Michigan's program can also be accessed at www.legislature.mi.gov/ and www.michigan.gov/lara/bureau-list/moahr/admin-rules; at the Water Division, Environmental Protection Agency, Region 5, 77 West Jackson Boulevard, Chicago, IL 60604 (telephone number: 800-621-8431); or at the Michigan Department of Environment, Great Lakes, and Energy office at 525 W Allegan St., Lansing, MI 48933 (telephone number: 800-662-9278). Copies of the materials incorporated by reference for New Jersey's program can also be accessed at www.epa.gov/cwa404g/us-interactive-map-state-and-tribal-assumption-under-cwa-section-404#nj; at the Library of the Region 2 Regional Office, Ted Weiss Federal Building, 290 Broadway, New York, NY 10007; or at the New Jersey Department of Environmental Protection at 401 East State St., Trenton, NJ 08625 (telephone number: 609-777-3373). EPA is updating the docket location and EPA Region 2 Regional Office location cited at 40 CFR part 233.71(b) to reflect their current addresses.

J. Severability

The purpose of this section is to clarify EPA's intent with respect to the severability of provisions of the final rule. Each provision and interpretation in this rule is capable of operating independently. Once effective, if any provision or interpretation in this rule were to be determined by judicial review or operation of law to be invalid, that partial invalidation would not render the remainder of this rule invalid. Likewise, if the application of any aspect of this rule to a particular circumstance were determined to be invalid, the Agency intends that the rule would remain applicable to all other circumstances. None of the provisions in this rule depend upon any other for effectiveness. Taking as examples the provisions listed at the beginning of this preamble, if the new "conflict of interest" revisions were deemed invalid, the absence of those revisions would in no way affect or undermine the rationale for or the operation of the provisions addressing compliance with the 404(b)(1) Guidelines or being "no less stringent than" Federal requirements. Similarly, taking an example from the end of this preamble, if the Agency's provisions addressing Tribal engagement were deemed invalid, the new program reporting requirements would retain their utility.

V. Statutory and Executive Order Reviews

Additional information about these statutes and Executive Orders can be found at <https://www.epa.gov/laws-regulations/laws-and-executive-orders>.

A. Executive Order 12866: Regulatory Planning and Review and Executive Order 14094: Modernizing Regulatory Review

This action is a "significant regulatory action" as defined in Executive Order 12866, as amended by Executive Order 14094. Accordingly, EPA submitted this action to the Office of Management and Budget (OMB) for Executive Order 12866 review. Documentation of any changes made in response to Executive Order 12866 review is available in the docket for this action. EPA prepared an analysis of the potential costs and benefits associated with this action. This analysis, the Economic Analysis for the Final Rule, is available in the docket for this action (Docket ID No. EPA-HQ-OW-2020-0276) and is briefly summarized below.

The Economic Analysis for the Final Rule is qualitative in nature due to numerous data limitations and uncertainties regarding the potential impacts resulting from the final rule. See Section VI of the Economic Analysis for the Final Rule for further discussion on data limitations and uncertainties. Section IV of the Economic Analysis for the Final Rule summarizes the incremental and cumulative costs and benefits of the final rule for different interested parties, including Tribes, States, permittees, and EPA. Benefits of the final rule are mainly positive impacts resulting from clarification of assumption procedures and substantive requirements. These benefits accrue to Tribes, States, permittee, Federal agencies, and the public. Tribes, States, permittees, and Federal agencies may experience both incremental costs and cost savings as a result of the final rule.

B. Paperwork Reduction Act (PRA)

The information collection activities in this rulemaking have been submitted for approval to the Office of Management and Budget (OMB) under the PRA. The Information Collection Request (ICR) document that EPA prepared has been assigned EPA ICR number 0220.17. You can find a copy of the ICR in the docket for this rule, and it is briefly summarized below. The information collection requirements are not enforceable until OMB approves them.

The type and frequency of information requested varies by

respondent group and activity. For this information collection, EPA classified respondents into one of four categories: (1) States or Tribes seeking program assumption; (2) States or Tribes with an approved program and administering the program; (3) Permittees; and (4) Tribes seeking TAS for the sole purpose of commenting as an affected State. The ICR does not require the collection of any information of a confidential nature or status.

Respondents/affected entities: States or Tribes seeking program assumption; States or Tribes with an approved program and administering the program; Permittees; and Tribes seeking TAS for the sole purpose of commenting as an affected State.

Respondents' obligation to respond: Voluntary (States or Tribes seeking program assumption); Required for program operation and maintenance (States or Tribes with an approved program and administering the program); Required to submit an application to obtain a section 404 permit (Permittee); Voluntary (Tribes seeking TAS for the sole purpose of commenting as an affected State).

Estimated number of respondents: 1 State over 3 years (seeking program assumption); 3 States/year (with an approved program and administering the program, except for program modification); 2 States over 3 years (modifications to an approved program); 1,693 Permittees/year for 3 approved programs; 1 Tribe/year over 3 years (seeking TAS for the sole purpose of commenting as an affected State).

Frequency of response: Once (States or Tribes seeking program assumption); Variable (for States or Tribes with an approved program and administering the program); for each permit application (for Permittees); once (for Tribes seeking TAS for the sole purpose of commenting as an affected State).

Total estimated burden to respondents: 130,725 hours (per year). Burden is defined at 5 CFR 1320.3(b).

Total estimated cost to respondents: \$6,972,139 (per year), includes \$930,831 annualized capital and start-up costs and \$6,041,308 program operation and maintenance costs.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. The OMB control numbers for EPA's regulations in 40 CFR are listed in 40 CFR part 9. When OMB approves this ICR, the Agency will announce that approval in the **Federal Register** and publish a technical amendment to 40 CFR part 9 to display the OMB control number for the

approved information collection activities contained in this final rule.

C. Regulatory Flexibility Act (RFA)

I certify that this final rule will not have a significant economic impact on a substantial number of small entities under the RFA. This action will not impose any requirements on small entities. Section 404(g) of the CWA allows for Tribes and States to assume the section 404 permitting program, and the final rule clarifies assumption requirements for Tribes and States to ensure compliance with CWA 404(b)(1) Guidelines. Without the final rule, entities (both large and small) would still have to comply with the CWA 404(b)(1) Guidelines, regardless of whether the Tribe or State assumes the section 404 program or not and regardless of the changes in the final rule.

D. Unfunded Mandates Reform Act (UMRA)

This action does not contain any unfunded mandate of \$100 million (annually adjusted for inflation) or more (in 1995 dollars) as described in UMRA, 2 U.S.C. 1531–38, and does not significantly or uniquely affect small governments. This action imposes no enforceable duty on any State, local, or Tribal governments or the private sector. See the Economic Analysis for the Final Rule in the docket for this action for further discussion on UMRA.

E. Executive Order 13132: Federalism

Under the technical requirements of Executive Order 13132 (64 FR 43255, August 10, 1999), EPA has determined that this rulemaking does not have federalism implications. EPA believes, however, this rulemaking may be of significant interest to State and local governments. Consistent with EPA's policy to promote communications between EPA and State governments, EPA engaged with State officials early in the process of developing the proposed rule to permit them to have meaningful and timely input into its development.

EPA is finalizing updates to clarify and facilitate the process of State assumption of the section 404 program. This rule does not impose any new costs or other requirements on States, preempt State law, or limit States' policy discretion. This action does not have federalism implications and will not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

The Agency invited written input from State agencies from November 12, 2018, through February 11, 2019,⁴⁶ and hosted an in-person meeting with State officials on December 6, 2018. At the in-person meeting, the Agency provided an overview of the rulemaking effort and the section 404(g) program and led themed discussions for input for the proposed rule, including clarifying assumed and retained waters and adjacent wetlands, enforcement and compliance, partial assumption, and calculating economic costs and benefits of the rule. A summary of stakeholder engagement and written input from States on this action is available in the docket for this final rule. After publishing the proposed rule in the **Federal Register**, stakeholders were encouraged to submit comment letters during a 60-day public comment period and EPA held a public hearing on September 6, 2023, for all stakeholders to provide public comment on the proposed rule. Additionally, EPA hosted one input session specifically for State government representatives on August 24, 2023. Summaries of the public hearing session and of the input received during the State input session can be found in the docket for this rulemaking. Furthermore, EPA reviewed and responded to the public comment letters from State and local governments in a Response to Comments document that can also be found in the docket for this rulemaking. All comment letters and recommendations received by EPA during the public comment period from State and local governments are included in the docket for this action (Docket ID No. EPA–HQ–OW–2020–0276).

F. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

This action may have implications for Tribal governments. However, it will neither impose substantial direct compliance costs on federally recognized Tribal governments, nor preempt Tribal law. This action would expand Tribes' ability to utilize TAS for purposes of commenting as "affected States," and would develop an avenue for EPA review of permits that may impact Tribal rights and resources.

EPA consulted with Tribal officials under the *EPA Policy on Consultation and Coordination with Indian Tribes* early in the process of developing this regulation to permit Tribes to have

meaningful and timely input into its development. EPA has developed a document which further describes EPA's efforts to engage with Tribal representatives and is available in the docket for this rulemaking.

As required by section 7(a), EPA's Tribal Consultation Official has certified that the requirements of the executive order have been met in a meaningful and timely manner. A copy of this certification is included in the docket for this action.

The Agency initiated a Tribal consultation and coordination process before proposing a rule by sending a "Notification of Consultation and Coordination" letter, dated October 19, 2018, to all Tribes federally recognized at that time. The letter invited Tribal leaders and designated representatives to participate in the Tribal consultation and coordination process for this rulemaking. The Agency engaged with Tribes over a 60-day consultation period that concluded on December 21, 2018, including two Tribes-only informational webinars on November 20 and 29, 2018. During this consultation period, EPA participated in in-person meetings with Tribal associations, including a presentation for the National Tribal Water Council on October 24, 2018, and an informational session at the National Congress of American Indians 75th Annual Convention on October 24, 2018. The Agency also attended the EPA Region 9 Regional Tribal Operations Committee (RTOC) meeting on October 31, 2018, the EPA Region 6 RTOC meeting on November 28, 2018, and the EPA Region 7 Enhancing State and Tribal Programs Wetland Symposium on November 5, 2018. At the meetings and webinars, EPA sought input on aspects of the section 404 Tribal and State program regulations and assumption process. The Agency initiated a second Tribal consultation and coordination period on July 18, 2023. The Agency engaged with Tribes over a 60-day period that concluded on September 17, 2023, including two Tribal input sessions on August 15 and 30, 2023. During this consultation period, EPA participated in various meetings with Tribal associations, continued outreach and engagement with Tribes, and sought other opportunities to provide information and hear feedback from Tribes at national and regional Tribal meetings during and after the end of the consultation period. The Agency notes that two Tribes requested government-to-government consultation. However, no responses were received to schedule

⁴⁶ The Agency invited written input from State agencies from November 12, 2018, through January 11, 2019. Due to the lapse in Federal Government funding, EPA accepted input from states until February 2019.

the consultations.⁴⁷ All Tribal and Tribal organization letters and a summary of the Tribal consultation and coordination effort may be found in the docket for this action.

After publishing the proposed rule in the **Federal Register**, stakeholders were encouraged to submit comment letters during a 60-day public comment period and EPA held a public hearing on September 6, 2023, for all stakeholders to provide public comment on the proposed rule. Summaries of the public hearing and of the input received during the Tribal input sessions can be found in the docket for this rulemaking. Furthermore, EPA reviewed and responded to the public comment letters from Tribal representatives in a Response to Comment document that can also be found in the docket for this rulemaking.

G. Executive Order 13045: Protection of Children From Environmental Health and Safety Risks

EPA interprets Executive Order 13045 as applying only to those regulatory actions that concern environmental health or safety risks that EPA has reason to believe may disproportionately affect children, per the definition of “covered regulatory action” in section 2–202 of the Executive Order. Therefore, this action is not subject to Executive Order 13045 because it does not concern an environmental health risk or safety risk. Since this action does not concern human health, EPA’s Policy on Children’s Health also does not apply.

H. Executive Order 13211: Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use

This action is not a “significant energy action” because it is not likely to have a significant adverse effect on the supply, distribution, or use of energy.

I. National Technology Transfer and Advancement Act

This rulemaking does not involve technical standards.

J. Executive Order 12898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations and Executive Order 14096: Revitalizing Our Nation’s Commitment to Environmental Justice for All

EPA believes that the human health and environmental conditions that exist prior to this action do not result in disproportionate and adverse effects on communities with environmental justice concerns. The final rule creates more transparency and clarity for Tribes and States with existing section 404 programs and for those seeking to assume. Environmental justice considerations are potentially addressed through the following topics in the final rule: (1) public notice and hearings, (2) no less stringent than, (3) long-term permitting, (4) judicial review, (5) affected States, and (6) opportunities for Tribes.

First, within the final rule and assumption process, there are multiple opportunities for public engagement through public notice and hearings, including for communities with environmental justice concerns. Second, the section 404 Tribal and State regulations require that Tribes or States with an approved section 404 program may not impose conditions less stringent than those required under Federal law, so the environmental impacts of permitted projects would not increase due to this transfer of authority. Third, the final rule provides an improved ability for communities with environmental justice concerns to participate in the section 404 permitting process for long-term projects. Fourth, the requirements for State-assumed section 404 programs allow for judicial review in State courts, which is an opportunity for affected stakeholders to address concerns through judicial review.

Lastly, EPA additionally identified and addressed potential environmental justice concerns by expanding Tribes’ ability to utilize TAS for purposes of commenting as “affected States” and developing an avenue for EPA review of permits that may impact Tribal rights and resources. The final rule will enable Tribes to have a more significant role in the permit decision-making process than under prior practice. See Section V of the Economic Analysis for the Final Rule for additional information on the final regulations.

The information supporting this Executive Order review is contained in Section V of the Economic Analysis for the Final Rule, which is available in the docket for this action.

K. Congressional Review Act (CRA)

This action is subject to the CRA, and EPA will submit a rule report to each House of Congress and to the Comptroller General of the United States. This action does not meet the criteria as defined by 5 U.S.C. 804(2).

List of Subjects

40 CFR Part 123

Environmental protection, Flood control, Water pollution control.

40 CFR Part 124

Environmental protection, Administrative practice and procedure, Air pollution control, Hazardous waste, Indians—lands, Reporting and recordkeeping requirements, Water pollution control, Water supply.

40 CFR Part 232

Environmental protection, Intergovernmental relations, Water pollution control.

40 CFR Part 233

Environmental protection, Administrative practice and procedure, Incorporation by reference, Indians—lands, Intergovernmental relations, Penalties, Reporting and recordkeeping requirements, Water pollution control.

Michael S. Regan,
Administrator.

For the reasons set forth in this preamble, EPA amends 40 CFR parts 123, 124, 232, and 233 as follows:

PART 123—STATE PROGRAM REQUIREMENTS

■ 1. The authority citation for part 123 continues to read as follows:

Authority: Clean Water Act, 33 U.S.C. 1251 *et seq.*

■ 2. Section 123.27 is amended by:

- a. Revising paragraphs (a) introductory text and (a)(3) introductory text;
- b. Removing the note immediately following paragraph (a)(3)(ii); and
- c. Revising paragraph (b)(2).

The revisions read as follows:

§ 123.27 Requirements for enforcement authority.

(a) Any State agency administering a program shall have the authority to establish the following violations and have available the following remedies and penalties for such violations of State program requirements:

* * * * *

(3) To assess or sue to recover in court civil penalties and to seek criminal penalties as follows:

* * * * *

⁴⁷ During the consultation period prior to the development of the final rule, two requests for government-to-government consultation were received. On July 25, 2023, EPA sent both the Mille Lacs Band of Ojibwe and the Grand Portage Band of Lake Superior Chippewa an invitation to schedule consultation. No responses were received to the invitation to schedule consultation.

(b) * * *

(2) The burden of proof and degree of knowledge or intent required under State law for establishing violations under paragraph (a)(3) of this section, shall be no greater than the burden of proof or degree of knowledge or intent EPA must provide when it brings an action under the Act, except that a State may establish criminal violations based on any form or type of negligence.

Note 3 to paragraph (b)(2): For example, this requirement is not met if State law includes mental state as an element of proof for civil violations.

* * * * *

PART 124—PROCEDURES FOR DECISIONMAKING

■ 3. The authority citation for part 124 continues to read as follows:

Authority: Resource Conservation and Recovery Act, 42 U.S.C. 6901 *et seq.*; Safe Drinking Water Act, 42 U.S.C. 300f *et seq.*; Clean Water Act, 33 U.S.C. 1251 *et seq.*; Clean Air Act, 42 U.S.C. 7401 *et seq.*

■ 4. Amend § 124.1 by revising paragraphs (e) and (f) to read as follows:

§ 124.1 Purpose and scope.

* * * * *

(e) Certain procedural requirements set forth in this part must be adopted by States in order to gain EPA approval to operate RCRA, UIC, and NPDES permit programs. These requirements are listed in 40 CFR 123.25 (NPDES), 145.11 (UIC), and 271.14 (RCRA) and signaled by the following words at the end of the appropriate part 124 section or paragraph heading: (applicable to State programs see 40 CFR 123.25 (NPDES), 145.11 (UIC), and 271.14 (RCRA)). This part does not apply to PSD permits or 404 permits issued by an approved State.

(f) To coordinate decision-making when different permits will be issued by EPA and approved State programs, this part allows applications to be jointly processed, joint comment periods and hearings to be held, and final permits to be issued on a cooperative basis whenever EPA and a State agree to take such steps in general or in individual cases. These joint processing agreements may be provided in the Memorandum of Agreement developed under 40 CFR 123.24 (NPDES), 145.24 (UIC), and 271.8 (RCRA).

■ 5. Amend § 124.2 by:

■ a. In paragraph (a):

■ i. Revising the introductory text;

■ ii. Revising the definitions for “Facility or activity”, “General permit”, “Major facility”, “Owner or operator”, “Permit”, and “SDWA”; and

■ iii. Removing the definition for “Section 404 program or State 404 program or 404”; and

■ iv. Revising the definition for “Site”; and

■ b. Revising paragraph (b).

The revisions read as follows:

§ 124.2 Definitions.

(a) In addition to the definitions given in 40 CFR 122.2 and 123.2 (NPDES), 501.2 (sludge management), 144.3 and 145.2 (UIC), and 270.2 and 271.2 (RCRA), the definitions below apply to this part, except for PSD permits which are governed by the definitions in § 124.41. Terms not defined in this section have the meaning given by the appropriate Act.

* * * * *

Facility or activity means any “HWM facility,” UIC “injection well,” NPDES “point source” or “treatment works treating domestic sewage”, or any other facility or activity (including land or appurtenances thereto) that is subject to regulation under the RCRA, UIC, or NPDES programs.

* * * * *

General permit (NPDES) means an NPDES “permit” authorizing a category of discharges or activities under the CWA within a geographical area. For NPDES, a general permit means a permit issued under 40 CFR 122.28.

* * * * *

Major facility means any RCRA, UIC, or NPDES “facility or activity” classified as such by the Regional Administrator, or, in the case of “approved State programs,” the Regional Administrator in conjunction with the State Director.

Owner or operator means owner or operator of any “facility or activity” subject to regulation under the RCRA, UIC, or NPDES programs.

Permit means an authorization, license or equivalent control document issued by EPA or an “approved State” to implement the requirements of this part and parts 122, 123, 144, 145, 270, and 271 of this chapter. “Permit” includes RCRA “permit by rule” (40 CFR 270.60), RCRA emergency permit (40 CFR 270.61), RCRA standardized permit (40 CFR 270.67), UIC area permit (40 CFR 144.33), UIC emergency permit (§ 144.34), and NPDES “general permit” (40 CFR 122.28). Permit does not include RCRA interim status (40 CFR 270.70), UIC authorization by rule (40 CFR 144.21), or any permit which has not yet been the subject of final agency action, such as a “draft permit” or a “proposed permit.”

* * * * *

SDWA means the Safe Drinking Water Act (Pub. L. 95–523, as amended by Pub. L. 95–1900; 42 U.S.C. 300f *et seq.*).

Site means the land or water area where any “facility or activity” is physically located or conducted, including adjacent land used in connection with the facility or activity.

* * * * *

(b) For the purposes of 40 CFR part 124, the term Director means the State Director or Regional Administrator and is used when the accompanying provision is required of EPA-administered programs and of State programs under 40 CFR 123.25 (NPDES), 145.11 (UIC), and 271.14 (RCRA). The term Regional Administrator is used when the accompanying provision applies exclusively to EPA-issued permits and is not applicable to State programs under these sections. While States are not required to implement these latter provisions, they are not precluded from doing so, notwithstanding use of the term “Regional Administrator.”

■ 6. Amend § 124.3 by revising paragraph (a) heading, and paragraphs (a)(1) and (3) to read as follows:

§ 124.3 Application for a permit.

(a) *Applicable to State programs, see 40 CFR 123.25 (NPDES), 145.11 (UIC), and 271.14 (RCRA).* (1) Any person who requires a permit under the RCRA, UIC, NPDES, or PSD programs shall complete, sign, and submit to the Director an application for each permit required under 40 CFR 270.1 (RCRA), 144.1 (UIC), 40 CFR 52.21 (PSD), and 122.1 (NPDES). Applications are not required for RCRA permits by rule (40 CFR 270.60), underground injections authorized by rules (40 CFR 144.21 through 144.26), and NPDES general permits (40 CFR 122.28).

* * * * *

(3) Permit applications (except for PSD permits) must comply with the signature and certification requirements of 40 CFR 122.22 (NPDES), 144.32 (UIC), and 270.11 (RCRA).

* * * * *

■ 7. Amend § 124.5 by:

■ a. Revising paragraph (a), paragraph (c) heading, and paragraphs (c)(1) and (3);

■ b. Removing paragraph (f); and

■ c. Redesignating paragraph (g) as paragraph (f).

The revision reads as follows:

§ 124.5 Modification, revocation and reissuance, or termination of permits.

(a) *(Applicable to State programs, see 40 CFR 123.25 (NPDES), 145.11 (UIC), and 271.14 (RCRA).)* Permits (other than

PSD permits) may be modified, revoked and reissued, or terminated either at the request of any interested person (including the permittee) or upon the Director's initiative. However, permits may only be modified, revoked, and reissued or terminated for the reasons specified in 40 CFR 122.62 or 122.64 (NPDES), 144.39 or 144.40 (UIC), and 270.41 or 270.43 (RCRA). All requests shall be in writing and shall contain facts or reasons supporting the request.

* * * * *

(c) (*Applicable to State programs, see 40 CFR 123.25 (NPDES), 145.11 (UIC), and 271.14 (RCRA).*) (1) If the Director tentatively decides to modify or revoke and reissue a permit under 40 CFR 122.62 (NPDES), 144.39 (UIC), or 270.41 (other than 40 CFR 270.41(b)(3) or 40 CFR 270.42(c) (RCRA)), he or she shall prepare a draft permit under 40 CFR 124.6 incorporating the proposed changes. The Director may request additional information and, in the case of a modified permit, may require the submission of an updated application. In the case of revoked and reissued permits, other than under 40 CFR 270.41(b)(3), the Director shall require the submission of a new application. In the case of revoked and reissued permits under 40 CFR 270.41(b)(3), the Director and the permittee shall comply with the appropriate requirements in subpart G of this part for RCRA standardized permits.

* * * * *

(3) "Minor modifications" as defined in 40 CFR 122.63 (NPDES), and 144.41 (UIC), and "Classes 1 and 2 modifications" as defined in 40 CFR 270.42 (a) and (b) (RCRA) are not subject to the requirements of this section.

* * * * *

- 8. Amend § 124.6 by:
 - a. Revising paragraphs (a) and (c), paragraph (d) heading and introductory text, paragraphs (d)(1) through (3);
 - b. Removing paragraph (d)(4)(iv);
 - c. Redesignating paragraph (d)(4)(v) as paragraph (d)(4)(iv); and
 - d. Revising the paragraph (e) heading.

The revisions read as follows:

§ 124.6 Draft permits.

(a) (*Applicable to State programs, see 40 CFR 123.25 (NPDES), 145.11 (UIC), and 271.14 (RCRA).*) Once an application is complete, the Director shall tentatively decide whether to prepare a draft permit or to deny the application.

* * * * *

(c) (*Applicable to State programs, see 40 CFR 123.25 (NPDES).*) If the Director tentatively decides to issue an NPDES general permit, he or she shall prepare

a draft general permit under paragraph (d) of this section.

(d) (*Applicable to State programs, see 40 CFR 123.25 (NPDES), 145.11 (UIC), and 271.14 (RCRA).*) If the Director decides to prepare a draft permit, he or she shall prepare a draft permit that contains the following information:

(1) All conditions under 40 CFR 122.41 and 122.43 (NPDES), 144.51 and 144.42 (UIC), or 270.30 and 270.32 (RCRA) (except for PSD permits);

(2) All compliance schedules under 40 CFR 122.47 (NPDES), 144.53 (UIC), or 270.33 (RCRA) (except for PSD permits);

(3) All monitoring requirements under 40 CFR 122.48 (NPDES), 144.54 (UIC), or 270.31 (RCRA) (except for PSD permits); and

* * * * *

(e) (*Applicable to State programs, see 40 CFR 123.25 (NPDES), 145.11 (UIC), and 271.14 (RCRA).*) * * *

* * * * *

- 9. Amend § 124.8 by revising the introductory text and paragraph (a) to read as follows:

§ 124.8 Fact sheet.

(*Applicable to State programs, see 40 CFR 123.25 (NPDES), 145.11 (UIC), and 271.14 (RCRA).*)

(a) A fact sheet shall be prepared for every draft permit for a major HWM, UIC, or NPDES facility or activity, for every Class I sludge management facility, for every NPDES general permit (40 CFR 122.28 of this subchapter), for every NPDES draft permit that incorporates a variance or requires an explanation under 40 CFR 124.56(b), for every draft permit that includes a sewage sludge land application plan under 40 CFR 501.15(a)(2)(ix), and for every draft permit which the Director finds is the subject of wide-spread public interest or raises major issues. The fact sheet shall briefly set forth the principal facts and the significant factual, legal, methodological, and policy questions considered in preparing the draft permit. The Director shall send this fact sheet to the applicant and, on request, to any other person.

* * * * *

- 10. Amend § 124.10 by:

- a. Revising paragraph (a)(1);
- b. Revising the paragraph (b) heading;
- c. Revising the introductory text of paragraph (c), and paragraphs (c)(1)(i), (ii), and (iv);
- d. Removing paragraph (c)(1)(vi);
- e. Redesignating paragraphs (c)(1)(vii) through (xi) as paragraphs (c)(1)(vi) through (x);

- f. Revising paragraph (c)(2)(i);
- g. Revising the paragraph (d) heading, and paragraphs (d)(1)(ii) and (iii);
- h. Removing paragraph (d)(1)(viii);
- i. Redesignating paragraphs (d)(1)(ix) and (x) as paragraphs (d)(1)(viii) and (ix);
- j. Adding at the end of paragraph (d)(2)(ii) the word "and" after the semicolon;
- k. Removing the text "; and" at the end of paragraph (d)(2)(iii) and adding a period in its place;
- l. Removing paragraph (d)(2)(iv); and
- m. Revising paragraph (e).

The revisions read as follows:

§ 124.10 Public notice of permit actions and public comment period.

(a) * * *

(1) The Director shall give public notice that the following actions have occurred:

- (i) A permit application has been tentatively denied under § 124.6(b);
- (ii) (*Applicable to State programs, see 40 CFR 123.25 (NPDES), 145.11 (UIC), and 271.14 (RCRA).*) A draft permit has been prepared under § 124.6(d);

(iii) (*Applicable to State programs, see 40 CFR 123.25 (NPDES), 145.11 (UIC), and 271.14 (RCRA).*) A hearing has been scheduled under § 124.12; or

(iv) An NPDES new source determination has been made under § 122.29 of this subchapter.

* * * * *

(b) *Timing (applicable to State programs, see 40 CFR 123.25 (NPDES), 145.11 (UIC), and 271.14 (RCRA)).*

* * * * *

(c) Methods (applicable to State programs, see 40 CFR 123.25 (NPDES), 145.11 (UIC), and 271.14 (RCRA)). Public notice of activities described in paragraph (a)(1) of this section shall be given by the following methods:

(1) * * *

(i) The applicant (except for NPDES general permits when there is no applicant);

(ii) Any other agency which the Director knows has issued or is required to issue a RCRA, UIC, PSD (or other permit under the Clean Air Act), NPDES, sludge management permit, or ocean dumping permit under the Marine Research Protection and Sanctuaries Act for the same facility or activity (including EPA when the draft permit is prepared by the State);

* * * * *

(iv) For NPDES permits only, any State agency responsible for plan development under CWA section 208(b)(2), 208(b)(4) or 303(e) and the U.S. Army Corps of Engineers, the U.S.

Fish and Wildlife Service and the National Marine Fisheries Service;

* * * * *

(2)(i) For major permits, NPDES general permits, and permits that include sewage sludge land application plans under 40 CFR 501.15(a)(2)(ix), publication of a notice in a daily or weekly newspaper within the area affected by the facility or activity; and for EPA-issued NPDES general permits, in the **Federal Register**;

Note 1 to paragraph (c)(2)(i): The Director is encouraged to provide as much notice as possible of the NPDES draft general permit to the facilities or activities to be covered by the general permit.

* * * * *

(d) *Contents (applicable to State programs, see 40 CFR 123.25 (NPDES), 145.11 (UIC), and 271.14 (RCRA))—*

(1) * * *

(ii) Name and address of the permittee or permit applicant and, if different, of the facility or activity regulated by the permit, except in the case of NPDES draft general permits under 40 CFR 122.28;

(iii) A brief description of the business conducted at the facility or activity described in the permit application or the draft permit, for NPDES general permits when there is no application;

* * * * *

(e) *(Applicable to State programs, see 40 CFR 123.25 (NPDES), 145.11 (UIC), and 271.14 (RCRA).)* In addition to the general public notice described in paragraph (d)(1) of this section, all persons identified in paragraphs (c)(1) (i) through (iv) of this section shall be mailed a copy of the fact sheet or statement of basis (for EPA-issued permits), the permit application (if any) and the draft permit (if any).

■ 11. Revise § 124.11 to read as follows:

§ 124.11 Public comments and requests for public hearings.

(Applicable to State programs, see 40 CFR 123.25 (NPDES), 145.11 (UIC), and 271.14 (RCRA).) During the public comment period provided under § 124.10, any interested person may submit written comments on the draft permit and may request a public hearing, if no hearing has already been scheduled. A request for a public hearing shall be in writing and shall state the nature of the issues proposed to be raised in the hearing. All comments shall be considered in making the final decision and shall be answered as provided in § 124.17.

■ 12. Amend § 124.12 by revising the paragraph (a) heading to read as follows:

§ 124.12 Public hearings.

(a) *(Applicable to State programs, see 40 CFR 123.25 (NPDES), 145.11 (UIC), and 271.14 (RCRA).)*

* * * * *

■ 13. Amend § 124.17 by revising the paragraph (a) heading, and paragraphs (a)(2) and (c) to read as follows:

§ 124.17 Response to comments.

(a) *(Applicable to State programs, see 40 CFR 123.25 (NPDES), 145.11 (UIC), and 271.14 (RCRA).)*

* * * * *

(2) Briefly describe and respond to all significant comments on the draft permit raised during the public comment period, or during any hearing.

* * * * *

(c) *(Applicable to State programs, see 40 CFR 123.25 (NPDES), 145.11 (UIC), and 271.14 (RCRA).)* The response to comments shall be available to the public.

PART 232—404 PROGRAM DEFINITIONS—EXEMPT ACTIVITIES NOT REQUIRING 404 PERMITS

■ 14. The authority citation for part 232 continues to read as follows:

Authority: 33 U.S.C. 1251 *et seq.*

■ 15. Amend § 232.2 by revising the definition of “State regulated waters” to read as follows:

§ 232.2 Definitions.

* * * * *

State regulated waters means those waters of the United States in which the Corps suspends the issuance of section 404 permits upon program assumption by a State, which exclude those identified as retained waters pursuant to 40 CFR 233.11(i). All waters of the United States other than those identified as retained waters in a State with an approved program shall be under jurisdiction of the State program, and shall be identified in the program description as required by 40 CFR part 233.

* * * * *

PART 233—404 STATE PROGRAM REGULATIONS

■ 16. The authority citation for part 233 continues to read as follows:

Authority: 33 U.S.C. 1251 *et seq.*

■ 17. Amend § 233.1 by:

- a. Revising the fourth sentence in paragraph (b);
- b. Removing the note that appears after paragraph (c);
- c. Revising paragraph (d); and
- d. Adding paragraphs (e) and (f).

The revisions and additions read as follows:

§ 233.1 Purpose and scope.

* * * * *

(b) * * * The discharges previously authorized by a Corps’ general permit will be regulated by State permits.

* * *

* * * * *

(d) State assumption of the section 404 program is limited to certain waters, as provided in section 404(g)(1) and as identified through the process laid out in § 233.11(i). The Federal program operated by the Corps of Engineers continues to apply to the remaining waters in the State even after program approval. However, this does not restrict States from regulating discharges of dredged or fill material into those waters over which the Secretary retains section 404 jurisdiction.

(e) Any approved State Program shall, at all times, be conducted in accordance with the requirements of the Act and of this part. While States may impose more stringent requirements, they may not impose any less stringent requirements for any purpose. States may not make one requirement more lenient than required under these regulations as a tradeoff for making another requirement more stringent than required. Where the 404(b)(1) Guidelines (40 CFR part 230) or other regulations affecting State 404 programs suggest that the District Engineer or Corps of Engineers is responsible for certain decisions or actions (e.g., approving mitigation bank instruments), in an approved State Program the State Director carries out such action or responsibility for purposes of that program, as appropriate.

(f) EPA may facilitate resolution of disputes between Federal agencies, Tribes, and States seeking to assume and/or administer a CWA section 404 program. Where a dispute resolution or elevation process is enumerated in this part or in an agreement approved by EPA at the time of assumption or program revision, such process and procedures shall be followed.

■ 18. Amend § 233.2 by:

- a. Adding in alphabetical order the definitions for “Indian lands”, “Retained waters description”, and “RHA section 10 list”; and
- b. Revising the definition “State 404 program or State program”.

The additions and revision read as follows:

§ 233.2 Definitions.

* * * * *

Indian lands means “Indian country” as defined under 18 U.S.C. 1151. That section defines Indian country as:

(1) All land within the limits of any Indian reservation under the jurisdiction of the United States Government, notwithstanding the issuance of any patent, and, including rights-of-way running through the reservation,

(2) All dependent Indian communities within the borders of the United States whether within the original or subsequently acquired territory thereof, and whether within or without the limits of a State, and

(3) All Indian allotments, the Indian titles to which have not been extinguished, including rights-of-way running through the same.

* * * * *

Retained waters description: The subset of waters of the United States over which the Corps retains administrative authority upon program assumption by a State as identified through the process at § 233.11(i). The description shall address, in the case of State assumption, the extent to which waters on Indian lands are retained.

RHA section 10 list: The list of waters determined to be navigable waters of the United States pursuant to section 10 of the Rivers and Harbors Act and 33 CFR part 329 and that are maintained in Corps district offices pursuant to 33 CFR 329.16.

* * * * *

State 404 program or *State program* means a program which has been approved by EPA under section 404 of the Act to regulate the discharge of dredged or fill material into all waters of the United States except those identified in the *retained waters description* as defined in § 233.2.

■ 19. Revise § 233.4 to read as follows:

§ 233.4 Conflict of interest.

Any public officer, employee, or individual with responsibilities related to the section 404 permitting program who has a direct personal or pecuniary interest in any matter that is subject to decision by the agency shall make known such interest in the official records of the agency and shall refrain from participating in any manner in such decision by the agency or any entity that reviews agency decisions.

■ 20. Amend § 233.10 by revising paragraph (a) to read as follows:

§ 233.10 Elements of a program submission.

* * * * *

(a) A letter from the Governor of the State or Tribal leader requesting program approval.

* * * * *

■ 21. Revise § 233.11 to read as follows:

§ 233.11 Program description.

The program description as required under § 233.10 shall include:

(a) A description of the scope and structure of the State’s program. The description must include the extent of the State’s jurisdiction, scope of activities regulated, anticipated coordination, scope of permit exemptions if any, permit review criteria, and a description as to how the permit review criteria will be sufficient to carry out the requirements of 40 CFR part 233 subpart C.

(b) A description of the State’s permitting, administrative, judicial review, and other applicable procedures.

(c) A description of the basic organization and structure of the State agency (agencies) which will have responsibility for administering the program. If more than one State agency is responsible for the administration of the program, the description shall address the responsibilities and additional budget and funding mechanisms of each agency and how the agencies intend to coordinate administration, funding, compliance, enforcement, and evaluation of the program.

(d) A description of the funding and staffing which will be available for program administration, including staff position descriptions and qualifications as well as program budget and funding mechanisms, sufficient to meet the requirements of 40 CFR part 233, subparts C through E.

(e) A description and schedule of the actions that will be taken following EPA approval for the State to begin administering the program if the State makes a request to assume administration of the program more than 30 days after EPA’s approval.

(f) An estimate of the anticipated workload, including but not limited to number of discharges, permit reviews, authorizations and field visits, and decisions regarding jurisdiction.

(g) Copies of permit application forms, permit forms, and reporting forms.

(h) A description of the State’s compliance evaluation and enforcement programs, including staff position descriptions and qualifications as well as program budget and funding mechanisms, sufficient to meet the requirements of 40 CFR part 233,

subpart E, and an explanation of how the State will coordinate its enforcement strategy with that of the Corps and EPA.

(i) A description of the waters of the United States within a State over which the State assumes jurisdiction under the assumed program; a description of the waters of the United States within a State over which the Secretary retains administrative authority subsequent to program approval; and a comparison of the State and Federal definitions of wetlands.

(1) Before a State provides a program submission to the Regional Administrator, the Governor, Tribal leader, or Director shall submit a request to the Regional Administrator that the Corps identify the subset of waters of the United States that would remain subject to Corps administrative authority to include in its program submission. The request shall also include one of the following elements of required information: a citation or copy of legislation authorizing funding to prepare for assumption, a citation or copy of legislation authorizing assumption, a Governor or Tribal leader directive, a letter from the head of a State agency, or a copy of a letter awarding a grant or other funding allocated to investigate and pursue assumption. If the Regional Administrator determines that the request includes the required information, within seven days of receiving the State’s request, the Regional Administrator shall transmit the request for the retained waters description to the Corps. Transmitting the request to the Corps is intended to allow the Corps time to review its RHA section 10 list(s) and prepare a description of retained waters based on that list(s), in accordance with paragraph (i)(4) of this section, if the Corps chooses to do so.

(2) When the Regional Administrator transmits a request for the retained waters description to the Corps, the Regional Administrator shall notify the public of this transmission by posting a notice on its website and circulating notice to those persons known to be interested in such matters of its transmission, inviting public input to the Corps and the State for the subsequent 60 days on the development of the description.

(3) If the Corps does not notify the State and EPA that it intends to provide a retained waters description within 30 days of receiving the State’s request transmitted by EPA, or if it does not provide a retained waters description within 180 days of receiving the State’s request transmitted by EPA, the State may develop a retained waters

description pursuant to the process described in paragraph (i)(4) of this section. Alternatively, the State and the Corps may mutually agree to extend the time period in which the Corps may develop the retained waters description.

(4) The program description in the State's program request to the Regional Administrator shall include a description of those waters of the United States over which the Corps retains administrative authority. The description may be a retained waters description that the Corps provides the State pursuant to paragraph (i)(1) of this section, or, if the Corps did not provide a list to the State, a description that the State prepares pursuant to paragraph (i)(3) of this section. The retained waters description prepared by either the Corps or the State shall be compiled as follows:

(i) Using the relevant RHA section 10 list(s) as a starting point;

(ii) Placing waters of the United States, or reaches of these waters, from the RHA section 10 list into the retained waters description if they are known to be presently used or susceptible to use in their natural condition or by reasonable improvement as a means to transport interstate or foreign commerce;

(iii) To the extent feasible and to the extent that information is available, adding other waters or reaches of waters to the retained waters description that are presently used or are susceptible to use in their natural condition or by reasonable improvement as a means to transport interstate or foreign commerce; and

(iv) Adding a description of retained wetlands that are adjacent to the foregoing waters. A specific listing of each wetland that is retained is not required.

(5) As a general matter, descriptions of retained waters compiled in accordance with the process in paragraph (i)(4) of this section will satisfy the statutory criteria for retained waters. The Regional Administrator ultimately determines whether to approve a State program submission, however.

(6) The State assumes permitting authority over all waters of the United States not retained by the Corps as described in paragraph (i)(4) of this section. The State does not assume permitting authority over waters of the United States in Indian Country and Lands of Exclusive Federal Jurisdiction, as these are outside of the State's jurisdiction. All discharges of dredged or fill material into waters of the United States must be regulated either by the State or the Corps; at no time shall there

be a gap in permitting authority for any water of the United States.

(j) A description of the specific best management practices proposed to be used to satisfy the exemption provisions of section 404(f)(1)(E) of the Act for construction or maintenance of farm roads, forest roads, or temporary roads for moving mining equipment.

(k) A description of the State's approach to ensure that all permits issued satisfy the substantive standards and criteria for the use of compensatory mitigation consistent with the requirements of 40 CFR part 230, subpart J. The State's approach may deviate from the specific requirements of subpart J to the extent necessary to reflect State administration of the program using State processes as opposed to Corps administration. For example, a State program may choose to provide for mitigation in the form of banks and permittee-responsible compensatory mitigation but not establish an in-lieu fee program. A State program may not be less stringent than the requirements of subpart J.

■ 22. Amend § 233.13 by adding paragraph (b)(5) to read as follows:

§ 233.13 Memorandum of Agreement with Regional Administrator.

* * * * *

(b) * * *

(5) Provisions specifying the date upon which the State shall begin administering its program. This effective date shall be 30 days from the date that notice of the Regional Administrator's decision is published in the **Federal Register**, except where the Regional Administrator has agreed to a State's request for a later effective date, not to exceed 180 days from the date of publication of the decision in the **Federal Register**.

■ 23. Amend § 233.14 by revising paragraph (b) to read as follows:

§ 233.14 Memorandum of Agreement with the Secretary.

* * * * *

(b) The Memorandum of Agreement shall include:

(1) A description of all navigable waters within the State over which the Corps retains administrative authority. Retained waters shall be identified in accordance with procedures set forth in § 233.11(i).

(2) Procedures whereby the Secretary will, prior to or on the effective date set forth in the Memorandum of Agreement with the Regional Administrator, transfer to the State pending section 404 permit applications for discharges into State regulated waters and other

relevant information not already in the possession of the Director.

Note 1 to paragraph (b)(2): Where a State permit program includes coverage of those navigable waters in which only the Secretary may issue section 404 permits, the State is encouraged to establish in this Memorandum of Agreement procedures for joint processing of Federal and State permits, including joint public notice and public hearings.

(3) An identification of all general permits issued by the Secretary, the terms and conditions of which the State intends to administer and enforce upon receiving approval of its program, and a plan for transferring responsibility for these general permits to the State, including procedures for the prompt transmission from the Secretary to the Director relevant information not already in the possession of the Director. The information to be transferred includes but is not limited to support files for permit issuance, conditions and certifications placed on the Corps general permits, compliance reports, and records of enforcement actions.

(4) Procedures whereby the Secretary would notify the State of changes to its RHA section 10 list that implicate waters that are presently used, or are susceptible to use in their natural condition or by reasonable improvement as a means to transport interstate or foreign commerce, and the State would then incorporate these changes into its retained waters description, pursuant to the procedures in § 233.16(d).

■ 24. Amend § 233.15 by:

- a. Revising the first sentence of the introductory text of paragraph (e);
- b. Revising the second sentence of paragraph (g); and
- c. Revising paragraph (h).

The revisions read as follows:

§ 233.15 Procedures for approving State programs.

* * * * *

(e) After determining that a State program submission is complete, the Regional Administrator shall publish notice of the State's program submission in the **Federal Register** and in enough of the largest newspapers in the State to attract statewide attention. * * *

* * * * *

(g) * * * The Regional Administrator shall prepare a responsiveness summary of significant comments received and the Regional Administrator's response to these comments. * * *

(h) If the Regional Administrator approves the State's section 404 program, the Regional Administrator shall notify the State and the Secretary of the decision, publish notice in the **Federal Register**, and post notice on

EPA's website. The program for State-assumed waters shall transfer to the State on the date established in the Memorandum of Agreement between the State and Regional Administrator. The Secretary shall suspend the issuance by the Corps of section 404 permits in State regulated waters on such effective date.

* * * * *

■ 25. Amend § 233.16 by revising paragraphs (d)(2) and (3), and (e) to read as follows:

§ 233.16 Procedures for revision of State programs.

* * * * *

(d) * * *

(2) Notice of approval of program changes which the Regional Administrator determines are not substantial revisions may be given by letter from the Regional Administrator to the Governor or the Tribal leader and are effective upon the date in the approval letter. The Regional Administrator will notify the Secretary of the approval of any approved program modifications. The Regional Administrator will also notify other Federal agencies of approved program modifications as appropriate. The Regional Administrator shall post any such approval letters on the relevant pages of EPA's website.

(3) Whenever the Regional Administrator determines that the proposed revision is substantial, the Regional Administrator shall publish and circulate notice to those persons known to be interested in such matters, provide opportunity for a public hearing, and consult with the Corps, FWS, and NMFS. The Regional Administrator shall approve or disapprove program revisions based on whether the program fulfills the requirements of the Act and this part, and shall publish notice of the decision in the **Federal Register**. For purposes of this paragraph, substantial revisions include, but are not limited to, revisions that remove waters from the retained waters description (other than *de minimis* removals), as well as revisions that affect the scope of activities regulated, criteria for review of permits, public participation, or enforcement capability. Revisions to an Indian Tribe's assumed program that would add a new geographic area to the approved program require that the Regional Administrator determine that the Tribe meets the eligibility criteria in § 233.60 with regard to the new geographic area and constitute substantial revisions.

* * * * *

(e) Whenever the Regional Administrator has reason to believe that circumstances have changed with respect to a State's program, the Regional Administrator may request and the State shall provide a supplemental Attorney General's statement, program description, or such other documents or information as are necessary to evaluate the program's compliance with the requirements of the Act and this part.

■ 26. Amend § 233.21 by revising paragraphs (b) and (e)(2) to read as follows:

§ 233.21 General permits.

* * * * *

(b) The Director may issue a general permit for categories of similar activities if the Director determines that the regulated activities will cause only minimal adverse environmental effects when performed separately and will have only minimal cumulative adverse effects on the environment. Any general permit issued shall be in compliance with the section 404(b)(1) Guidelines.

* * * * *

(e) * * *

(2) Once the Director notifies the discharger of the Director's decision to exercise discretionary authority to require an individual permit, the discharger's activity is no longer authorized by the general permit.

■ 27. Amend § 233.23 by revising the introductory text of paragraph (c)(8) to read as follows:

§ 233.23 Permit conditions.

* * * * *

(c) * * *

(8) Inspection and entry. The permittee shall allow the Director, or the Director's authorized representative, upon presentation of proper identification, at reasonable times to:

* * * * *

■ 28. Add § 233.24 to subpart C read as follows:

§ 233.24 Judicial review.

All States that administer or seek to administer a program under this part shall provide an opportunity for judicial review in State Court of the final approval or denial of permits by the State that is sufficient to provide for, encourage, and assist public participation in the permitting process. Indian Tribes must provide a commensurate form of citizen recourse for permit applicants and others affected by Tribe-issued permits.

■ 29. Amend § 233.30 by revising paragraphs (a) and (b)(5) to read as follows:

§ 233.30 Application for a permit.

(a) Except when an activity is authorized by a general permit issued pursuant to § 233.21 or is exempt from the requirements to obtain a permit under § 232.3, any person who proposes to discharge dredged or fill material into State regulated waters shall complete, sign, and submit a permit application to the Director. Applicants for projects that take more than five years to complete must submit a complete application for each five-year permit, and an applicant seeking a new five-year permit must apply for the new permit at least 180 days prior to the expiration of the current permit. The Tribe or State may grant permission to submit an application less than 180 days prior to the expiration of the current permit but no later than the permit expiration date. Persons proposing to discharge dredged or fill material under the authorization of a general permit must comply with any reporting requirements of the general permit.

(b) * * *

(5) All activities which the applicant plans to undertake which are reasonably related to the same project must be included in the same permit application. For projects for which the planned schedule extends beyond five years at the time of the initial five-year permit application, the application for both the first and subsequent five-year permits must include an analysis demonstrating that each element of the 404(b)(1) Guidelines is met, consistent with 40 CFR part 230, for the full term of the project. Applicants for subsequent five-year permits must update the 404(b)(1) Guidelines analysis if there has been a change in circumstance related to the project following approval of the previous five-year permit, and clearly indicate whether the 404(b)(1) Guidelines analysis has been updated.

* * * * *

■ 30. Revise and republish § 233.31 to read as follows:

§ 233.31 Coordination requirements.

(a) If a proposed discharge may affect the biological, chemical, or physical integrity of the waters of any State(s) other than the State in which the discharge occurs, the Director shall provide an opportunity for such State(s) to submit written comments within the public comment period and to suggest permit conditions. If these recommendations are not accepted by the Director, the Director shall notify the affected State and the Regional Administrator in writing prior to permit issuance of the Director's failure to accept these recommendations, together

with the Director's reasons for so doing. The Regional Administrator shall then have the time provided for in § 233.50(d) to comment upon, object to, or make recommendations.

(b) State section 404 permits shall be coordinated with the Federal and Federal-State water related planning and review processes.

(c) For the purposes of § 233.31(a), the definition of "State" in § 233.2 includes Indian Tribes that have been approved by EPA under CWA section 518 and applicable regulations for eligibility to administer any CWA provision as well as Indian Tribes that have been approved by EPA under paragraph (d) of this section for eligibility for the purpose of commenting under § 233.31(a).

(d) An Indian Tribe may apply to the Regional Administrator for a determination that it meets the statutory criteria of section 518 of the CWA, 33 U.S.C. 1377, to be treated in a manner similar to that in which EPA treats a State, for purposes of the coordination requirements of sections 404(h)(1)(C) and (E), 33 U.S.C. 1344(h)(1)(C) and (E), of the CWA and paragraphs (a) and (c) of this section.

(1) The Tribe's application shall concisely describe how:

(i) The Indian Tribe is recognized by the Secretary of the Interior;

(ii) The Indian Tribe has a governing body carrying out substantial governmental duties and powers;

(iii) The functions to be exercised by the Indian Tribe pertain to the management and protection of water resources which are held by an Indian Tribe, held by the United States in trust for Indians, held by a member of an Indian Tribe if such property interest is subject to a trust restriction on alienation, or otherwise within the borders of the Indian reservation; and

(iv) The Indian Tribe is reasonably expected to be capable, in the Regional Administrator's judgment, of carrying out the functions to be exercised in a manner consistent with the terms and purposes of the CWA and applicable regulations.

(2) The Regional Administrator shall promptly notify the Indian Tribe of receipt of an application submitted under this section and shall process such application in a timely manner.

■ 31. Amend § 233.32 by revising the introductory text of paragraph (c)(1) and paragraph (d)(6) to read as follows:

§ 233.32 Public notice.

* * * * *

(c) * * *

(1) By mailing a copy of the notice to the following persons (any person

otherwise entitled to receive notice under this paragraph (c)(1) may waive their rights to receive notice for any classes or categories of permits):

* * * * *

(d) * * *

(6) A paragraph describing the various evaluation factors, including the 404(b)(1) Guidelines or State-equivalent criteria, on which decisions are based. For projects with a planned schedule that extends beyond five years at the time of the initial five-year permit application, the public notice for subsequent five-year permits must indicate whether the 404(b)(1) Guidelines analysis has been updated.

* * * * *

■ 32. Amend § 233.33 by revising paragraph (b) to read as follows:

§ 233.33 Public hearing.

* * * * *

(b) The Director shall hold a public hearing whenever the Director determines there is a significant degree of public interest in a permit application or a draft general permit. The Director may also hold a hearing, at the Director's discretion, whenever the Director determines a hearing may be useful to a decision on the permit application.

* * * * *

■ 33. Amend § 233.34 by revising paragraph (c) to read as follows:

§ 233.34 Making a decision on the permit application.

* * * * *

(c) After the Director has completed review of the application and consideration of comments, the Director will determine, in accordance with the record and all applicable regulations, whether or not the permit should be issued. No permit shall be issued by the Director under the circumstances described in § 233.20. The Director shall prepare a written determination on each application outlining the Director's decision and rationale for the decision. For projects with a planned schedule that extends beyond five years at the time of the initial five-year permit application, if the Director decides not to require an update to the 404(b)(1) Guidelines for a subsequent five-year permit, the Director must provide a detailed written explanation of the decision not to require an update in its determination for the subsequent five-year permit. The determination shall be dated, signed, and included in the official record prior to final action on the application. The official record shall be open to the public.

■ 34. Amend § 233.36 by revising the introductory text of paragraph (a) and revising paragraph (c)(1) to read as follows:

§ 233.36 Modification, suspension or revocation of permits.

(a) *General.* The Director may reevaluate the circumstances and conditions of a permit either on the Director's own motion or at the request of the permittee or of a third party and initiate action to modify, suspend, or revoke a permit if the Director determines that sufficient cause exists. Among the factors to be considered are:

* * * * *

(c) * * *

(1) The Director shall develop procedures to modify, suspend, or revoke permits if the Director determines cause exists for such action (§ 233.36(a)). Such procedures shall provide opportunity for public comment (§ 233.32), coordination with the Federal review agencies (§ 233.50), and opportunity for public hearing (§ 233.33) following notification of the permittee. When permit modification is proposed, only the conditions subject to modification need be reopened.

* * * * *

■ 35. Revise § 233.37 to read as follows:

§ 233.37 Signatures on permit applications and reports.

The application and any required reports must be signed by the person who desires to undertake the proposed activity or by that person's duly authorized agent if accompanied by a statement by that person designating the agent. In either case, the signature of the applicant or the agent will be understood to be an affirmation that the applicant or the agent possesses or represents the person who possesses the requisite property interest to undertake the activity proposed in the application.

■ 36. Amend § 233.41 by revising paragraph (b)(2) to read as follows:

§ 233.41 Requirements for enforcement authority.

(b) * * *

(2) The burden of proof and degree of knowledge or intent required under State law for establishing violations under paragraph (a)(3) of this section, shall be no greater than the burden of proof or degree of knowledge or intent EPA must provide when it brings an action under the Act, except that a State may establish criminal violations based on any form or type of negligence.

* * * * *

■ 37. Amend § 233.50 by:

■ a. Revising the section heading;

- b. Revising paragraphs (d), (e), (f), and (h)(1); and
- c. Adding paragraph (k).

The revisions read as follows:

§ 233.50 Review of and objection to State permits and review of compensatory mitigation instruments.

(d) If the Regional Administrator intends to comment upon, object to, or make recommendations with respect to a permit application, draft general permit, or the Director's failure to accept the recommendations of an affected State submitted pursuant to § 233.31(a), the Regional Administrator shall notify the Director of the Regional Administrator's intent within 30 days of receipt. If the Director has been so notified, the permit shall not be issued until after the receipt of such comments or 90 days of the Regional Administrator's receipt of the public notice, draft general permit, or Director's response (§ 233.31(a)), whichever comes first. The Regional Administrator may notify the Director within 30 days of receipt that there is no comment but that the Regional Administrator reserves the right to object within 90 days of receipt, based on any new information brought out by the public during the comment period or at a hearing.

(e) If the Regional Administrator has given notice to the Director under paragraph (d) of this section, the Regional Administrator shall submit to the Director, within 90 days of receipt of the public notice, draft general permit, or Director's response (§ 233.31(a)), a written statement of the Regional Administrator's comments, objections, or recommendations; the reasons for the comments, objections, or recommendations; and the actions that must be taken by the Director in order to eliminate any objections. Any such objection shall be based on the Regional Administrator's determination that the proposed permit is:

(1) The subject of an interstate dispute under § 233.31(a); and/or

(2) Outside requirements of the Act, these regulations, or the 404(b)(1) Guidelines. The Regional Administrator shall make available upon request a copy of any comment, objection, or recommendation on a permit application or draft general permit to the permit applicant or to the public.

(f) When the Director has received an EPA objection or requirement for a permit condition to a permit application or draft general permit under this section, the Director shall not issue the permit unless the Director has taken the steps required by the Regional

Administrator to eliminate the objection.

* * * * *

(h) * * *

(1) If the Regional Administrator withdraws the objection or requirement for a permit condition, the Director may issue the permit.

* * * * *

(k) If the State establishes third-party compensation mechanisms as part of its section 404 program (e.g., banks or in-lieu fee programs), the Director must transmit a copy of instruments associated with these compensatory mitigation approaches to the Regional Administrator, the Corps, FWS, and NMFS for review prior to issuance, as well as to any other State agencies to the extent the State committed to do so in the program description pursuant to § 233.11(k). To the extent the State deems appropriate, the Director may also send these draft instruments to other relevant State agencies for review. This transmission and review requirement does not apply to permittee-responsible compensatory mitigation. If the Regional Administrator, the Corps, FWS, or NMFS intend to comment upon such instruments they must notify the Director of their intent within 30 days of receipt. If the Director has been so notified, the instrument must not be issued until after the receipt of such comments or after 90 days of receipt of the proposed instrument by the Regional Administrator, the Corps, the FWS, or NMFS. The Director must respond to any comments received within 90 days from the Regional Administrator, the Corps, FWS, NMFS, or State agencies that received the draft instruments pursuant to the State program description and inform the commenting agency of any comments or recommendations not accepted prior to approving the final compensatory mitigation instrument. In the event that the Regional Administrator has commented that the instrument fails to apply or ensure compliance with the requirements of § 233.11(k), the Director must not approve the final compensatory mitigation instrument until the Regional Administrator notifies the Director that the final instrument ensures compliance with § 233.11(k).

■ 38. Amend § 233.51 by adding paragraph (d) to read as follows:

§ 233.51 Waiver of review.

* * * * *

(d) If within 20 days of public notice of a permit application, pursuant to § 233.32, a Tribe notifies EPA that the

application potentially affects Tribal rights or interests, including those beyond reservation boundaries, EPA will request a copy of the public notice for the permit application, even if Federal review of the relevant category of discharge has been waived, and the Regional Administrator and the Director shall then proceed in accordance with § 233.50.

■ 39. Amend § 233.52 by revising paragraphs (b) and (e) to read as follows:

§ 233.52 Program reporting.

* * * * *

(b) The Director shall submit to the Regional Administrator within 90 days after completion of the annual period, a draft annual report evaluating the State's administration of its program identifying problems the State has encountered in the administration of its program, steps taken to resolve these problems, and recommendations for resolving any outstanding problems along with a timeline for resolution. Items that shall be addressed in the annual report include an assessment of the cumulative impacts of the State's permitting program on the integrity of the State regulated waters; identification of areas of particular concern or interest within the State; the number and nature of individual and general permits issued, modified, and denied; the number of violations identified and number and nature of enforcement actions taken; the number of suspected unauthorized activities reported and nature of action taken; an estimate of the extent of activities regulated by general permits; the number of permit applications received but not yet processed; and an assessment of avoidance, minimization, and compensation required for permits issued, including the type and quantity of resources impacted, type and quantity of compensation required (including quantification and rationale for out-of-kind or compensation provided outside the watershed), and a description of why compensation was not required, if applicable. The Annual Report shall briefly summarize resolution of issues identified in the previous Annual Report. Additionally, to the extent appropriate, the Annual Report should analyze program resources and staffing, including staffing changes, training, and vacancy rate since approval or the previous Annual Report.

* * * * *

(e) Within 30 days of receipt of the Regional Administrator's final comments, the Director will finalize the annual report, incorporating and/or

responding to the Regional Administrator's comments, and transmit the final report to the Regional Administrator. The Director shall make a copy of the final annual report, accepted by the Regional Administrator, publicly available.

* * * * *

■ 40. Amend § 233.53 by revising paragraphs (a)(1) and (c) to read as follows:

§ 233.53 Withdrawal of program approval.

(a) * * *

(1) The State shall give the Administrator and the Secretary no less than 180 days' notice of the proposed transfer. With the notice, the State shall submit a plan for the orderly transfer of all relevant program information not in the possession of the Secretary (such as permits, permit files, reports, permit applications, as well as files regarding ongoing investigations, compliance orders, and enforcement actions) which are necessary for the Secretary to administer the program. The notice shall include the proposed transfer date.

* * * * *

(c) The following procedures apply when the Administrator orders the commencement of proceedings to determine whether to withdraw approval of a State program:

(1) *Notice to State.* If the Regional Administrator has cause to believe that a State is not administering or enforcing its assumed program in compliance with the requirements of the CWA and this part, the Regional Administrator shall inform the Director in writing of the specific areas of alleged noncompliance. If the State demonstrates to the Regional Administrator within 30 days of such notification that the State program is in compliance, the Regional Administrator shall take no further action toward withdrawal, and shall so notify the State in writing.

(2) *Public hearing.* If the State has not demonstrated its compliance to the satisfaction of the Regional Administrator within 30 days of notification, the Regional Administrator shall inform the Director of that finding. The Administrator shall then schedule a public hearing to solicit comments on the administration of the State program and its compliance with the Act and this part. Notice of such public hearing shall be published in the **Federal Register**, on EPA's website, and in enough of the largest newspapers and/or news websites in the State to attract statewide attention and mailed or emailed to persons on appropriate Tribal, State, and EPA mailing lists.

This hearing shall be convened not less than 30 days or more than 60 days following the date of publication of the notice of the hearing in the **Federal Register**. Notice of the hearing shall identify the Administrator's concerns. All interested parties shall be given opportunity to make written or oral presentations on the State's program at the public hearing.

(3) *Notice to State of findings.* If the Administrator finds, after the public hearing, that the State is not in compliance, within 90 days of the public hearing the Administrator shall notify the State via letter of the specific deficiencies in the State program, including administration and enforcement, and of necessary remedial actions. Within 90 days of receipt of the above letter, the State shall either carry out the required remedial action(s) or the Administrator shall withdraw program approval. If the State performs all required remedial action(s) in the allotted time or, if the Administrator determines as a result of the hearing that the State is in compliance, the Administrator shall so notify the State in writing and conclude the withdrawal proceedings. If the Administrator makes the determination that the assumed program should be withdrawn, then such determination will be published in the **Federal Register**, and the Administrator shall remove from the CFR, as appropriate, any provision addressing that State's assumed program. The effective date of the withdrawal, and the date upon which the Corps shall be the permitting authority, shall be 30 days after publication of the Administrator's decision in the **Federal Register**.

(4) *Determination to withdraw.* The Administrator's determination to withdraw program approval shall constitute final Agency action within the meaning of 5 U.S.C. 704.

* * * * *

§ 233.60 [Amended]

■ 41. Amend § 233.60 paragraph (c) by removing the word "Untied" and adding in its place the word "United."

■ 42. Amend § 233.61 by revising paragraph (e) to read as follows:

§ 233.61 Determination of Tribal eligibility.

* * * * *

(e) The Administrator may, at the Administrator's discretion, request further documentation necessary to support a Tribal application.

* * * * *

■ 43. Revise and republish § 233.62 to read as follows:

§ 233.62 Procedures for processing an Indian Tribe's application.

(a) The Regional Administrator shall process an application of an Indian Tribe submitted pursuant to § 233.61 in a timely manner. The Regional Administrator shall promptly notify the Indian Tribe of receipt of the application.

(b) The Regional Administrator shall follow the procedures described in § 233.15 in processing a Tribe's request to assume the 404 dredge and fill permit program.

(c) The Regional Administrator shall follow the procedures for substantial program revisions described in § 233.16 in processing a Tribe's request to add additional geographic area(s) to its assumed 404 dredged or fill material permit program that would add reservation areas to the scope of its approved program. A Tribe making such a request shall provide an application meeting the requirements of § 233.61 that describes how the Tribe meets the eligibility criteria in § 233.60 for the new area.

■ 44. Revise § 233.70 to read as follows:

§ 233.70 Michigan.

The applicable regulatory program for discharges of dredged or fill material into waters of the United States in Michigan that are not presently used, or susceptible for use in their natural condition or by reasonable improvement as a means to transport interstate or foreign commerce shoreward to the ordinary high water mark, including wetlands adjacent thereto, except those on Indian lands, is the program administered by the Michigan Department of Environment, Great Lakes, and Energy (previously named Department of Natural Resources, Department of Environmental Quality, and Department of Natural Resources and Environment), approved by EPA, pursuant to section 404 of the CWA. Notice of this approval was published in the **Federal Register** on October 2, 1984; the effective date of this program is October 16, 1984. This program consists of the following elements, as submitted to EPA in the State's program submission and subsequently revised.

(a) *Incorporation by reference.* The Michigan statutes and regulations cited in paragraphs (a)(1) and (2) of this section are incorporated by reference as part of the applicable section 404 Program under the CWA for the State of Michigan. This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. To enforce any edition other than that specified in this section, EPA must

publish a document in the **Federal Register** and the material must be available to the public. This incorporation by reference (IBR) material is available for inspection at EPA and at the National Archives and Records Administration (NARA). Copies of this IBR material also may be obtained from EPA. Contact EPA at: EPA Docket Center Reading Room, WJC West Building, Room 3334, 1301 Constitution Avenue NW, Washington, DC 20004 (phone: 202-566-1744), or send mail to Mail Code 5305G, 1200 Pennsylvania Ave. NW, Washington, DC 20460, and at the Water Division, Environmental Protection Agency, Region 5, 77 West Jackson Boulevard, Chicago, IL 60604. For information on the availability of this IBR material at NARA, visit www.archives.gov/federal-register/cfr/ibr-locations or email fr.inspection@nara.gov. The material may be obtained from the Michigan Department of Environment, Great Lakes, and Energy office at 525 W Allegan St., Lansing, MI 48933, phone: 800-662-9278.

(1) Michigan Statutes Applicable to the State's Approved Clean Water Act Section 404 program (available at www.legislature.mi.gov), as follows:

(i) The Michigan Administrative Procedures Act of 1969, MCL § 24-201 *et seq.*, in effect as of February 13, 2024.

(ii) Natural Resources and Environmental Protection Act 451 of 1994:

(A) Part 31 Water Resources Protection, MCL § 324.31 *et seq.*, in effect as of September 29, 2023.

(B) Part 301 Inland Lakes and Streams, MCL § 324.301 *et seq.*, in effect as of October 20, 2021.

(C) Part 303 Wetland Protection, MCL § 324.303 *et seq.*, in effect as of April 27, 2019.

(D) Part 307 Inland Lake Levels, MCL § 324.307 *et seq.*, in effect as of October 16, 2020.

(E) Part 315 Dam Safety, MCL § 324.315 *et seq.*, in effect as of September 10, 2004.

(F) Part 323 Great Lakes Shorelands Protection and Management, MCL § 324.323 *et seq.*, in effect as of October 20, 2021.

(G) Part 325 Great Lakes Submerged Lands, MCL § 324.325 *et seq.*, in effect as of October 20, 2021.

(2)(i) Michigan Regulations Applicable to the State's Approved Clean Water Act Section 404 program (www.michigan.gov/lara/bureau-list/moahr/admin-rules), Michigan Administrative Code, Department of Environmental Quality, as follows:

(A) Land and Water Management:

(1) Great Lakes Shorelands, R 281.21 through R 281.26 inclusive, in effect as of 2000.

(2) Wetlands Protection, R 281.921 through R 281.925 inclusive, in effect as of 2006.

(3) Wetland Mitigation Banking, R 281.951 through R 281.961 inclusive, in effect as of 1997.

(4) Dam Safety, R 281.1301 through R 281.1313 inclusive in effect as of 1993.

(B) Water Resources Division, Inland Lakes and Streams, R 281.811 through R 281.846 inclusive, in effect as of 2015.

(ii) This material contains Michigan's rules for shoreline protection, inland lakes and streams, wetlands protection, wetland mitigation banking, and dam safety.

(b) *Other Laws.* The following statutes and regulations, although not incorporated by reference, also are part of the approved State-administered program:

(1) Administrative Procedures Act, MCL 24.201 *et seq.*

(2) Freedom of Information Act, MCL 15.231 *et seq.*

(3) Open Meetings Act, MCL 15.261 *et seq.*

(4) Natural Resources and Environmental Protection Act 451 of 1994, Part 17 Michigan Environmental Protection Act, MCL 324.17 *et seq.*

(c) *Memoranda of Agreement.* The following memoranda, although not incorporated by reference also are part of the approved State-administered program:

(1) The Memorandum of Agreement between EPA Region V and the Michigan Department of Natural Resources, signed by EPA Region V Administrator on December 9, 1983. The 1983 Memorandum of Agreement has subsequently been replaced by a Memorandum of Agreement between EPA Region 5 and the Michigan Department of Environmental Quality (now referred to as the Michigan Department of Environment, Great Lakes, and Energy) signed on November 9, 2011.

(2) The Memorandum of Agreement between the U.S. Army Corps of Engineers and the Michigan Department of Natural Resources, signed by the Commander, North Central Division, on March 27, 1984.

(d) *Statement of Legal Authority.* The following documents, although not incorporated by reference, also are part of the approved State administered program:

(1) "Attorney General Certification section 404/State of Michigan", signed by Attorney General of Michigan, as submitted with the request for approval

of "The State of Michigan 404 Program", October 26, 1983.

(e) The Program description and any other materials submitted as part of the original submission or supplements thereto.

■ 45. Amend § 233.71 by:

■ a. Revising the introductory text and paragraph (a);

■ b. Removing paragraph (b); and

■ c. Redesignating paragraphs (c) through (e) as paragraphs (b) through (d).

The revisions read as follows:

§ 233.71 **New Jersey.**

The applicable regulatory program for discharges of dredged or fill material into waters of the United States in New Jersey that are not presently used, or susceptible for use in their natural condition or by reasonable improvement as a means to transport interstate or foreign commerce shoreward to the ordinary high water mark, including wetlands adjacent thereto, except those on Indian lands, is the program administered by the New Jersey Department of Environmental Protection and Energy, approved by EPA, pursuant to section 404 of the CWA. Notice of this approval was published in the **Federal Register** on March 2, 1994; the effective date of this program is March 2, 1994. This program consists of the following elements, as submitted to EPA in the State's program submission and subsequently revised.

(a) *Incorporation by reference.* The New Jersey statutes and regulations cited in paragraphs (a)(1) and (2) of this section are incorporated by reference as part of the applicable 404 Program under the CWA for the State of New Jersey. This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. To enforce any edition other than that specified in this section, EPA must publish a document in the **Federal Register** and the material must be available to the public. This incorporation by reference (IBR) material is available for inspection at EPA and at the National Archives and Records Administration (NARA). Copies of this IBR material also may be obtained from EPA. Contact EPA at: EPA Docket Center Reading Room, WJC West Building, Room 3334, 1301 Constitution Avenue NW, Washington, DC 20004 (phone: 202-566-1744), or send mail to Mail Code 5305G, 1200 Pennsylvania Ave. NW, Washington, DC 20460, and at the Library of the Region 2 Regional Office, Ted Weiss Federal Building, 290 Broadway, New York, NY 10007. For information on the

availability of this IBR material at NARA, visit www.archives.gov/federal-register/cfr/ibr-locations or email fr.inspection@nara.gov. The materials may be obtained from the New Jersey Department of Environmental Protection at 401 East State St., Trenton, NJ 08625; website: www.epa.gov/cwa404g/us-interactive-map-state-and-tribal-assumption-under-cwa-section-404#nj.

(1)(i) New Jersey Statutes Applicable to the State's Approved Clean Water Act Section 404 program as follows:

(A) Freshwater Wetlands Protection Act, New Jersey Statutes Annotated, Title 13: Conservation and Development—Parks and Reservations; Chapter 9B: Freshwater Wetlands, N.J.S.A.13:9B–1 *et seq.*, effective as of December 23, 1993.

(B) [Reserved]

(ii) The Freshwater Wetlands Protection Act provides the New Jersey Department of Environmental Protection with the authority to regulate and permit activities in freshwater wetlands.

(2)(i) New Jersey Regulations Applicable to the State's Approved Clean Water Act Section 404 program as follows:

(A) Freshwater Wetlands Protection Act Rules, N.J.A.C. 7:7A, amended November 7, 2022.

(B) [Reserved]

(ii) This chapter contains regulations to implement the Freshwater Wetlands Protection Act.

Environmental Protection Agency

40 CFR Part 751

Carbon Tetrachloride (CTC); Regulation Under the Toxic Substances Control Act (TSCA); Final Rule

ENVIRONMENTAL PROTECTION AGENCY**40 CFR Part 751**

[EPA-HQ-OPPT-2020-0592; FRL-8206-02-OCSPP]

RIN 2070-AK82

Carbon Tetrachloride (CTC); Regulation Under the Toxic Substances Control Act (TSCA)**AGENCY:** Environmental Protection Agency (EPA).**ACTION:** Final rule.

SUMMARY: The Environmental Protection Agency (EPA or “Agency”) is finalizing a rule to address the unreasonable risk of injury to health presented by carbon tetrachloride (CTC) under its conditions of use. TSCA requires that EPA address by rule any unreasonable risk of injury to health or the environment identified in a TSCA risk evaluation and apply requirements to the extent necessary so that the chemical no longer presents unreasonable risk. EPA’s final rule will establish workplace safety requirements for most conditions of use, including the condition of use related to the making of low Global Warming Potential (GWP) hydrofluoroolefins (HFOs); prohibit the manufacture (including import), processing, distribution in commerce, and industrial/commercial use of CTC for conditions of use where information indicates use of CTC has ceased; and establish recordkeeping and downstream notification requirements. The use of CTC in low GWP HFOs is particularly important in the Agency’s efforts to support the American Innovation and Manufacturing Act of 2020 (AIM Act) and the Kigali Amendment to the Montreal Protocol on Substances that Deplete the Ozone Layer, which was ratified on October 26, 2022.

DATES: This final rule is effective on January 17, 2025.

ADDRESSES: The docket for this action, identified by docket identification (ID) number EPA-HQ-OPPT-2020-0592, is available online at <https://www.regulations.gov>. Additional information about dockets generally, along with instructions for visiting the docket in-person, is available at <https://www.epa.gov/dockets>.

SUPPLEMENTARY INFORMATION:**I. Executive Summary***A. Does this action apply to me?***1. General Applicability**

This action applies to you if you manufacture (defined under TSCA to include import), process, distribute in commerce, use, or dispose of CTC (CASRN 56-23-5). TSCA section 3(9) defines the term “manufacture” to mean “to import into customs territory of the United States (as defined in general note 2 of the Harmonized Tariff Schedule of the United States), produce, or manufacture”. Therefore, unless expressly stated otherwise, importers of CTC are subject to any provisions regulating manufacture of CTC. The following list of North American Industrial Classification System (NAICS) codes is not intended to be exhaustive, but rather provides a guide to help readers determine whether this document applies to them. Potentially affected entities include:

- Chemical Manufacturing (NAICS code 325);
- Nonmetallic Mineral Product Manufacturing (NAICS code 327);
- Primary Metal Manufacturing (NAICS code 331);
- Waste Management and Remediation Services (NAICS code 562);
- Petrochemical Manufacturing (NAICS code 325110);
- Industrial Gas Manufacturing (NAICS code 325120);
- Other Basic Inorganic Chemical Manufacturing (NAICS code 325180);
- Cyclic Crude, Intermediate, and Gum and Wood Chemical Manufacturing (NAICS code 325194);
- All Other Basic Organic Chemical Manufacturing (NAICS code 325199);
- Plastics Material and Resin Manufacturing (NAICS code 325211);
- Pesticide and Other Agricultural Chemical Manufacturing (NAICS code 325320);
- All Other Miscellaneous Chemical Product and Preparation Manufacturing (NAICS code 325998);
- Cement Manufacturing (NAICS code 327310);
- Ground or Treated Mineral and Earth Manufacturing (NAICS code 327992);
- Nonferrous Metal (except Aluminum) Smelting and Refining (NAICS code 331410);

- NAICS code 562211—Hazardous Waste Treatment and Disposal NAICS code 562211); and

- Solid Waste Combustors and Incinerators (NAICS code 562213).

2. Applicability to Importers and Exporters

This action may also affect certain entities subject to import certification, and export notification rules under TSCA (<https://www.epa.gov/tsc-import-export-requirements>). Persons who import any chemical substance in bulk form, as part of a mixture, or as part of an article (if required by rule) are subject to the TSCA section 13 (15 U.S.C. 2612) import certification requirements and the corresponding regulations at 19 CFR 12.118 through 12.127; see also 19 CFR 127.28. Those persons must certify that the shipment of the chemical substance complies with all applicable rules and orders under TSCA. The EPA policy in support of import certification appears at 40 CFR part 707, subpart B.

In addition, any persons who export or intend to export a chemical substance that is the subject of this final rule are subject to the export notification provisions of TSCA section 12(b) (15 U.S.C. 2611(b)), and must comply with the export notification requirements in 40 CFR part 707, subpart D.

B. What is the Agency’s authority for taking this action?

Under TSCA section 6(a) (15 U.S.C. 2605(a)), if the U.S. Environmental Protection Agency, hereinafter referred to as EPA or “the Agency”, determines through a TSCA section 6(b) risk evaluation that a chemical substance presents an unreasonable risk of injury to health or the environment, EPA must by rule apply one or more requirements listed in TSCA section 6(a) to the extent necessary so that the chemical substance or mixture no longer presents such risk.

C. What action is the Agency taking?

Pursuant to TSCA section 6(b), EPA determined that CTC presents an unreasonable risk of injury to health, without consideration of costs or other nonrisk factors, including an unreasonable risk to potentially exposed or susceptible subpopulations (PESS) identified as relevant to the 2020 Risk Evaluation for Carbon Tetrachloride by EPA, under the conditions of use (Refs. 1, 2, 3). A description of the conditions of use that contribute to EPA’s determination that CTC presents an unreasonable risk is in the proposed rule (88 FR 49190) (FRL-8206-01-OCSPP) and Unit IV. Accordingly, to

address the unreasonable risk, EPA is issuing this final rule under TSCA section 6(a) to:

(1) Require a Workplace Chemical Protection Program (WCPP), including an inhalation exposure concentration limit, direct dermal contact controls, and related workplace exposure controls, for the following occupational conditions of use of CTC not prohibited, outlined in Unit IV.B.:

- Domestic manufacture;
- Import;
- Processing as a reactant in the production of hydrochlorofluorocarbons (HCFCs), hydrofluorocarbons (HFCs), HFOs, and perchloroethylene (PCE);
- Incorporation into formulation, mixture or reaction products in agricultural products manufacturing, vinyl chloride manufacturing, and other basic organic and inorganic chemical manufacturing;
- Repackaging for use as a laboratory chemical;
- Recycling;
- Industrial and commercial use as an industrial processing aid in the manufacture of agricultural products and vinyl chloride;
- Industrial and commercial use in the elimination of nitrogen trichloride in the production of chlorine and caustic soda and the recovery of chlorine in tail gas from the production of chlorine; and
- Disposal.

(2) Require use of laboratory ventilation devices, such as fume hoods or glove boxes, and dermal personal protective equipment (PPE) for the industrial and commercial use as a laboratory chemical, as outlined in Unit IV.C.;

(3) Prohibit these additional conditions of use, for which the Agency understands use of CTC has already ceased, as outlined in Unit IV.D.:

- Incorporation into formulation, mixture or reaction products in petrochemical-derived manufacturing except in the manufacture of vinyl chloride (for which EPA is requiring a WCPP);
- Industrial and commercial use as an industrial processing aid in the manufacture of petrochemicals-derived products except in the manufacture of vinyl chloride (for which EPA is requiring a WCPP);
- Industrial and commercial use in the manufacture of other basic chemicals (including manufacturing of chlorinated compounds used in solvents, adhesives, asphalt, and paints and coatings), except for use in the elimination of nitrogen trichloride in the production of chlorine and caustic soda and the recovery of chlorine in tail

gas from the production of chlorine (for which EPA is requiring a WCPP);

- Industrial and commercial use in metal recovery;
- Industrial and commercial use as an additive; and
- Industrial and commercial use in specialty uses by the U.S. Department of Defense (DoD).

(4) Require recordkeeping, as outlined in Unit IV.E.1.

(5) Require manufacturers (including importers), processors, and distributors to provide downstream notification of the requirements, as outlined in Unit IV.E.2.

EPA notes that not all TSCA conditions of use of CTC are subject to this final rule. “Conditions of use” is defined in TSCA section 3(4) to mean the circumstances, as determined by EPA, under which a chemical substance is intended, known, or reasonably foreseen to be manufactured, processed, distributed in commerce, used, or disposed of. As described in the 2020 Risk Evaluation for Carbon Tetrachloride (Ref. 1) and the 2022 Revised Unreasonable Risk Determination for Carbon Tetrachloride (Ref. 3), two conditions of use of CTC do not drive the unreasonable risk: distribution in commerce and processing as a reactant/intermediate in reactive ion etching. EPA is not finalizing any restrictions for the processing of CTC as a reactant/intermediate in reactive ion etching. However, under TSCA section 6(a), EPA may select from among a suite of risk management requirements in TSCA section 6(a), including requirements related to distribution in commerce, as part of its regulatory options to address the unreasonable risk; EPA’s final regulatory action includes prohibitions on the distribution in commerce of CTC for certain downstream conditions of use to address unreasonable risk from those downstream conditions of use. Additionally, as explained in Section 1.4.2.3 of the 2020 Risk Evaluation for Carbon Tetrachloride and Section 2.2.2.1 of the 2018 Problem Formulation of the Risk Evaluation for Carbon Tetrachloride, EPA concluded that the industrial/commercial/consumer uses of CTC in adhesives/sealants, paints/coatings, and cleaning/degreasing solvent products contain only trace amounts of CTC, present only de minimis exposures or otherwise insignificant risks under TSCA, and did not warrant inclusion in the risk evaluation. Therefore, EPA has excluded from the rule’s requirements CTC that is solely present unintentionally in trace quantities with another chemical substance or mixture,

whether as a manufacturing residue, unreacted feedstock, byproduct, or other contaminant. However, EPA notes that the Agency has discretion to further assess trace quantities of CTC under other regulatory authorities, such as the Clean Air Act. Finally, manufacture of CTC as a byproduct was not evaluated in the 2020 Risk Evaluation for Carbon Tetrachloride (Ref. 1); therefore, in this final rule, WCPP requirements applicable to the domestic manufacture of CTC do not apply where CTC is manufactured solely as a byproduct. EPA anticipates that any risks presented by the presence of CTC as a byproduct formed during the manufacturing, processing or use of a parent compound will be considered in the scope of the risk evaluation of such parent compound. For example, EPA will assess the risks of CTC manufactured as a byproduct during the manufacture of 1,2-dichloroethane in the TSCA risk evaluation for 1,2-dichloroethane (Ref. 1).

D. Why is the Agency taking this action?

Under TSCA section 6(a), “[i]f the Administrator determines in accordance with subsection (b)(4)(A) that the manufacture, processing, distribution in commerce, use or disposal of a chemical substance or mixture, or that any combination of such activities, presents an unreasonable risk of injury to health or the environment, the Administrator shall by rule . . . apply one or more of the [section 6(a)] requirements to such substance or mixture to the extent necessary so that the chemical substance or mixture no longer presents such risk.” CTC was the subject of a risk evaluation under TSCA section 6(b)(4)(A) that was issued in November 2020 (Ref. 1). In addition, EPA issued a revised unreasonable risk determination in December 2022 (Ref. 3), determining that CTC, as a whole chemical substance, presents an unreasonable risk of injury to health under the conditions of use. On July 28, 2023, EPA issued a proposed rulemaking (88 FR 49180) (FRL–8206–01–OCSPP) under TSCA section 6(a) to take action to the extent necessary so that CTC no longer presents such risk. The Agency received public comment on the proposal. With this action, EPA is finalizing with modifications the July 2023 proposed rule so that CTC no longer presents an such risk. The conditions of use that contribute to the unreasonable risk from CTC are described in the proposed rule (88 FR 49190) (FRL–8206–01–OCSPP) and Unit IV.

CTC’s hazards are well established. EPA’s 2020 Risk Evaluation for Carbon Tetrachloride considered the hazards

associated with exposure to CTC and determined that CTC presents an unreasonable risk of injury to health due to the significant adverse health effects associated with the exposure of CTC. While some risks of adverse effects from CTC exposure are associated with acute single exposures, other risks are associated with long-term repeated exposures. EPA identified cancer and liver toxicity adverse effects from chronic inhalation and dermal exposures as well as liver toxicity from acute dermal exposures to CTC (Refs. 1, 2, 3). Cancer adverse effects (*e.g.*, liver, pheochromocytoma, neuroblastoma) were identified for chronic inhalation and dermal exposures. Cancer was selected based on the best available science and weight of scientific evidence, and in consideration of the severity of hazards, magnitude of exposure, population exposed, and uncertainties in the November 2020 Risk Evaluation for Carbon Tetrachloride and the December 2022 Revised Risk Determination for Carbon Tetrachloride. EPA identified in the 2020 Risk Evaluation for Carbon Tetrachloride a threshold cancer point of departure (POD) for liver tumors (assuming a margin of exposure of 300), and an inhalation unit risk (IUR) for adrenal tumors, based on effects observed in mice following inhalation exposure. The chronic non-cancer PODs for inhalation exposures are based on a study observing increased fatty changes in rodent livers (fatty changes in the liver are a precursor for liver fibrosis). EPA also identified additional risks associated with other adverse effects (*e.g.*, immediate and temporary depression of the central nervous system, kidney toxicity, reproductive and developmental toxicity, irritation and sensitization, and genetic toxicity) resulting from acute and chronic exposures. For this action, EPA has determined that protecting against liver and adrenal cancer would also address the risk for acute non-cancer, chronic non-cancer, and additional cancer risks from CTC, as identified in the 2020 Risk Evaluation for Carbon Tetrachloride and the Revised Unreasonable Risk Determination for CTC in December 2022 (Ref. 1, 2 and 3).

CTC is primarily used as a feedstock to make products such as refrigerants, aerosol propellants, and foam-blowing agents. Requirements under the Montreal Protocol and Title VI of the Clean Air Act (CAA), which were included in the CAA Amendments of 1990 and are codified at 42 U.S.C. Chapter 85, Subchapter VI, led to a phaseout of CTC production in the

United States for most non-feedstock domestic uses, such as degreasers and fire suppressants. In addition, the Consumer Product Safety Commission (CPSC) banned the use of CTC in household (*i.e.*, consumer) products (excluding unavoidable residues not exceeding 10 ppm atmospheric concentration) in 1970 (see 16 CFR 1500.17(a)(2)). The Agency has considered the benefits of CTC for various uses as required under TSCA section 6(c)(2)(A) and (B) and recognizes that continued use of CTC for some TSCA conditions of use should be maintained for several reasons. The use of CTC may provide benefits that complement the Agency's efforts to address climate-damaging HFCs under the AIM Act and the Kigali Amendment to the Montreal Protocol, supporting human health and environmental protection under these programs. In addition, the use of CTC may provide other benefits due to certain unique properties of CTC (*e.g.*, it does not react with the process gasses when used as a process agent in the manufacture of agricultural products (Ref. 4)). Finally, strict workplace controls can be implemented to address unreasonable risk across many conditions of use. For some workplaces, EPA understands that existing controls may already reduce exposures enough to meet the inhalation exposure concentration limit proposed in this rulemaking or to prevent direct dermal contact with CTC. For many of the conditions of use for which EPA is finalizing workplace controls under a WCPP, data indicating that certain uses could meet the exposure limit and ancillary requirements of an effective WCPP in addressing unreasonable risk were submitted during the risk evaluation, the comment period following publication of the proposed rule, or during stakeholder outreach engagements, and are available in the corresponding public dockets (EPA-HQ-OPPT-2016-0733; EPA-HQ-OPPT-2019-0499; EPA-HQ-OPPT-2020-0592).

Accordingly, EPA is finalizing workplace controls to address the unreasonable risk while allowing continued use for 100% of the production volume of CTC manufactured annually, including the processing of CTC as a reactant in the production of HFOs. The rationale for the final regulatory action, including the TSCA section 6 requirements considered in developing the regulatory action, is described in Units II.D. and III.

E. What are the estimated incremental impacts of this action?

EPA has prepared an Economic Analysis for the potential incremental impacts associated with this rulemaking that can be found in the rulemaking docket (Ref. 5). As described in more detail in the Economic Analysis and in Unit V.D., EPA's estimate of the incremental costs of this final rule is \$19.7 million per year annualized over 20 years at a 3% discount rate and \$19 million per year at a 7% discount rate (Ref. 5). In response to the updated Circular A-4 published in November 2023, the incremental costs of this rule at a 2% discount rate (\$19.9 million annualized over 20 years) are provided in Appendix C of the Economic Analysis (Ref. 5).

These costs include compliance with a WCPP for certain conditions of use, applicable PPE requirements, and notification and recordkeeping costs. EPA was not able to quantify the costs associated with administrative and engineering controls because they are site-specific and depend on the extent to which controls are already in place, which is likely to vary across individual facilities. Thus, for the purpose of estimating costs and benefits, this analysis assumes that PPE is used. Under the WCPP, regulated entities would be required to consider respirators and dermal PPE only after consideration of other more effective strategies in the hierarchy of controls adopted by the Occupational Safety and Health Administration (OSHA) and the National Institute for Occupational Safety and Health (NIOSH) to reduce exposures (Ref. 6). Regulated entities are required first to consider other measures in the hierarchy of controls and then to select PPE based on monitoring results because the Agency recognizes that workplaces have unique processes and equipment in place, and that varying levels of respiratory Assigned Protection Factor (APFs) may be needed for different workplaces.

Industry is expected to incur costs associated with performing inspections, documenting efforts to meet the regulatory requirements associated with the WCPP, including reducing exposure and occurrences of exposure, monitoring, respirators and dermal PPE, training on the use of respirators and dermal PPE, and notification and recordkeeping burdens and costs associated with the WCPP. Industry is also expected to incur equipment costs associated with dermal PPE for laboratory use. EPA assumes that industry would not incur equipment costs associated with the ventilated

laboratory safety requirement for laboratory settings because these requirements are part of baseline industry practices. All manufacturers (including importers), processors, and distributors will bear downstream notification and recordkeeping costs.

The costs are estimated as incremental to baseline conditions, including current use of PPE. The costs represent a high-end estimate of the number of entities and workers affected by the regulation because the high estimates of workers and entities from the 2020 Risk Evaluation for Carbon Tetrachloride were used. To the extent that EPA's approach overestimates the number of entities subject to the regulation, actual realized costs of this action will be lower. More details regarding the provisions of the final rule are in Unit IV.

In addition to the quantified costs, there is an unquantified cost to workers and firms associated with prolonged use of respirators, which could interfere with work tasks. The potential for respirator use to cause discomfort and productivity losses could lead companies to offer higher wages as compensation, but the extent of this effect is unknown and thus unquantified. The Economic Analysis contains additional information about the unquantified costs in Chapter 3 and in the *Estimated Incremental Costs* section of the Executive Summary (Ref. 5).

Unit IV. details which actions apply to specific conditions of use. EPA estimates that 30 firms associated with 72 sites may be manufacturing (including importing), processing, or releasing CTC.

EPA estimates that the final rule would affect at least seven small entities. EPA compared the highest annualized per-facility cost of the final regulatory action with ultimate parent company annual revenues of the affected small businesses. EPA found impacts under 1% of annual revenues for five of the seven small entities. Two small entities were estimated to have a cost-to-revenue impact ratio of between one and three percent.

In alignment with the goals of President Biden's Cancer Moonshot, the rule will protect people from cancer and other adverse health effects of CTC (Ref. 7). The actions in this final rule are expected to achieve health benefits for the American public. The Economic Analysis monetizes benefits to occupational users and non-users of avoiding cases of adrenal and liver cancer due to reduced inhalation exposures that result from implementation of the WCPP. The

magnitude of the cancer benefits from reduced inhalation exposure is estimated assuming companies provide respirators to comply. It is also possible that employees will receive respiratory benefits from other actions on OSHA's hierarchy of controls, such as engineering controls, since regulated entities are required first to consider other measures in the hierarchy of controls and then to select PPE based on monitoring results. However, the Economic Analysis does not estimate the costs of such controls because feasible controls and their costs are site-specific and the amount of additional exposure reduction that could be achieved through any given type of control would depend on the extent to which such controls are already in place, which is likely to vary across individual facilities. This assumption is made for the purpose of estimating costs only and is not an assumption about how facilities would necessarily comply with WCPP requirements. Other human health benefits, including noncancer and additional cancer benefits, while tangible and significant, cannot be monetized due to data and methodology limitations. These include additional cancer benefits from avoided brain tumors, noncancer health benefits, health benefits from avoided dermal exposure, and benefits to the environment. The incremental improvements in health outcomes achieved by given reductions in exposure cannot currently be quantified for non-cancer health effects associated with CTC exposure, and therefore cannot be converted into monetized benefits. Although some benefits cannot be quantified, they are not necessarily less important than the quantified benefits. The primary reason these benefits were not quantified is the difficulty in estimating the relationship between an incremental change in CTC use and the corresponding change to a specific health or environmental outcome.

Adrenal and liver cancer avoidance benefits are calculated based on reductions in inhalation exposure using the 2020 Risk Evaluation for Carbon Tetrachloride (Ref. 1) for those uses which are continuing but with a WCPP in place. Therefore, benefits are only calculated for the WCPP in the final rule, which could include respiratory protection. The estimated monetized benefit of the final rule ranges from approximately \$0.13 to \$0.14 million per year annualized over 20 years at a 3% discount rate and from \$0.06 to \$0.07 million per year at a 7% discount rate. In response to the updated Circular

A-4 published in November 2023, the incremental benefits at a 2% discount rate (\$0.16 to \$0.17 million annualized over 20 years) are provided in Appendix C of the Economic Analysis (Ref. 5). To estimate the costs and benefits of the WCPP, the Economic Analysis generated a likely distribution of air monitoring outcomes at CTC facilities. This distribution was used to project the number of facilities that would require each respirator APF. These estimates are subject to uncertainties, and there could be facilities with higher or lower air exposures than estimated in the Economic Analysis.

Using the high-end estimates for the number of entities and workers affected by the final rule, the monetized net benefit of the final rule, which is negative, is -\$19.6 million per year annualized over 20 years at a 3% discount rate and is -\$18.9 million per year at a 7% discount rate. In response to the updated Circular A-4 published in November 2023, the incremental net benefits at a 2% discount rate (-\$19.7 million annualized over 20 years) are provided in Appendix C of the Economic Analysis (Ref. 5). The range in the monetized net benefits estimate at each discount rate presented in the Economic Analysis reflects uncertainty in cancer risk reductions given the shorter exposure durations being considered and the life stage at which the changes in exposure occur. Although the estimated monetized net benefits are negative, there are also non-monetized benefits due to other avoided adverse health effects associated with CTC exposure, including liver, reproductive, renal, developmental, and central nervous system (CNS) toxicity endpoints. These are serious health endpoints, even though the change in risk due to CTC exposure was not quantified in the 2020 Risk Evaluation for Carbon Tetrachloride.

Section 6.6 of the Economic Analysis, addressing environmental justice impacts, provides sociodemographic data on communities and workers in industries affected by the rule and people who live in proximity to potentially affected facilities. EPA analyzed the baseline conditions facing communities near CTC and HFO manufacturing facilities as well as those of workers in the same industry and county as CTC facilities and HFO manufacturing facilities. The environmental justice analysis found that, across the entire population within 1- and 3-miles of CTC facilities, there are higher percentages of people who identify as Black and living below the poverty line and a similar percentage of people who identify as Hispanic

compared to the national averages. CTC facilities are concentrated in Texas and Louisiana, especially near Houston and Baton Rouge.

II. Background

A. Overview of Carbon Tetrachloride

As described in more detail in the proposed rule, EPA identified liver and adrenal toxicity cancer adverse effects from chronic inhalation and dermal exposures, as well as liver toxicity from acute dermal exposures in the workplace as the basis for the unreasonable risk determination for CTC (Ref. 1, 2, and 3). This final rule is specifically intended to address the unreasonable risk of injury to health EPA identified in the 2020 Risk Evaluation for Carbon Tetrachloride (Ref. 1) and the 2022 Revised Unreasonable Risk Determination for Carbon Tetrachloride (Ref. 3), as described in Unit II.C. CTC is a volatile organic compound that is primarily used as a feedstock in the production of HCFCs, HFCs, and HFOs.

According to data submitted for EPA's 2016 and 2020 Chemical Data Reporting (CDR) Rule, in Reporting Years (RY) 2015 and 2019, between 100 and 250 million pounds of CTC were manufactured or imported in the United States (Refs. 5, 8, 9). CTC's use as a feedstock in the production of HCFCs, HFCs, and HFOs and the description of finalized requirements to address the unreasonable risk are described in Unit IV.B.

B. Regulatory Actions Pertaining to Carbon Tetrachloride

Because of its adverse health effects, CTC is subject to numerous Federal laws and regulations in the United States and is also subject to regulation by some states and other countries. A summary of EPA regulations pertaining to CTC, as well as other Federal, State, and international regulations, is provided in the docket (Refs. 1, 10).

As described in more detail in Unit II.C. of EPA's proposed rule (88 FR 49184, July 28, 2023) (FRL-8206-01-OCSP) and the Response to Public Comments document (Ref. 11), EPA considered the adequacy of the current occupational safety and health standards from the OSHA (29 CFR part 1910) for protection of workers. EPA notes that the standards for chemical hazards that OSHA promulgates under the Occupational Safety and Health (OSH Act) share a broadly similar purpose with the worker protection-related regulations that EPA promulgates under TSCA section 6(a). The control measures OSHA and EPA

require to satisfy the objectives of their respective statutes may also, in many circumstances, overlap or coincide. However, there are important differences between EPA's and OSHA's regulatory approaches and jurisdiction, and EPA considers these differences when deciding whether and how to account for OSHA requirements when evaluating and addressing potential unreasonable risk to workers so that compliance requirements are clearly explained to the regulated community. TSCA risk evaluations are subject to statutory science standards, an explicit requirement to consider risks to potentially exposed or susceptible subpopulations, and a prohibition on considering costs and other non-risk factors when determining whether a chemical presents an unreasonable risk that warrants regulatory actions—all requirements that do not apply to development of OSHA regulations. As such, EPA may find unreasonable risk for purposes of TSCA notwithstanding OSHA requirements. In addition, health standards issued under section 6(b)(5) of the OSH Act must reduce significant risk only to the extent that it is technologically and economically feasible. OSHA's legal requirement to demonstrate that its section 6(b)(5) standards are technologically and economically feasible at the time they are promulgated often precludes OSHA from imposing exposure control requirements sufficient to ensure that the chemical substance no longer presents a significant risk to workers. While it is possible in some cases that the OSHA standards for some chemicals reviewed under TSCA will eliminate unreasonable risk, based on EPA's experience thus far in conducting occupational risk assessments under TSCA, EPA believes that OSHA chemical standards would in general be unlikely to address unreasonable risk to workers within the meaning of TSCA, since TSCA section 6(b) unreasonable risk determinations may account for unreasonable risk to more sensitive endpoints and working populations than OSHA's risk evaluations typically contemplate and EPA is obligated to apply TSCA section 6(a) risk management requirements to the extent necessary so that the unreasonable risk is no longer presented. Because the requirements and application of TSCA and OSHA regulatory analyses differ, it is necessary for EPA to conduct risk evaluations and, where it finds unreasonable risk to workers, develop risk management requirements for chemical substances that OSHA also regulates, and it is expected that EPA's

findings and requirements may sometimes diverge from OSHA's. Additional considerations of OSHA standards in the 2022 Revised Unreasonable Risk Determination for Carbon Tetrachloride are discussed further in the **Federal Register** of December 27, 2022 (87 FR 79303).

EPA intends for this regulation to be as consistent as possible with OSHA regulations for toxic and hazardous substances, with additional requirements as necessary to address the unreasonable risk. Consistent with TSCA section 9(d), EPA consults and coordinates TSCA activities with OSHA and other relevant Federal agencies for the purpose of achieving the maximum enforcement of TSCA while imposing the least burdens of duplicative requirements.

C. Summary of EPA's Risk Evaluation Activities on Carbon Tetrachloride

EPA published the scope of the CTC risk evaluation in July 2017 (82 FR 31592) (FRL-9963-57), and, after receiving public comments, published the problem formulation on June 11, 2018 (83 FR 26998) (FRL-9978-40). In January 2020, EPA published a draft risk evaluation (85 FR 4658, January 27, 2020) (FRL-10003-92), and, after public comment and peer review by the Science Advisory Committee on Chemicals (SACC), EPA issued the Risk Evaluation for Carbon Tetrachloride in November 2020 in accordance with TSCA section 6(b) (Ref. 1) (85 FR 70147, November 4, 2020) (FRL-10015-51). EPA subsequently issued a draft revised TSCA unreasonable risk determination for CTC (87 FR 52766, August 29, 2022) (FRL-9948-01-OCSP), and, after public notice and receipt of comments, published a Revised Unreasonable Risk Determination for Carbon Tetrachloride in December 2022 (Ref. 3) (87 FR 79303, December 27, 2022) (FRL-9948-02-OCSP). The 2020 Risk Evaluation for Carbon Tetrachloride and supplemental materials are in docket EPA-HQ-OPPT-2019-0499, and the December 2022 revised unreasonable risk determination and additional materials supporting the risk evaluation process in docket EPA-HQ-OPPT-2016-0733 available at <https://www.regulations.gov>.

1. 2020 Risk Evaluation

In the 2020 Risk Evaluation for Carbon Tetrachloride, EPA evaluated risks associated with 15 conditions of use within the following categories: manufacture (including import), processing, distribution in commerce, industrial and commercial use, and disposal (Ref. 1). The conditions of use are described in Unit III.B.1. of the

proposed rule (88 FR 49190) (FRL–8206–01–OCSPP) and in Unit IV. of this final rule. The 2020 Risk Evaluation for Carbon Tetrachloride identified significant adverse health effects associated with short-term and long-term exposure to CTC. A further discussion of the hazards of CTC is presented in Unit III.B.3 of the proposed rule (88 FR 49192) (FRL–8206–01–OCSPP) and in Unit V. of this final rule.

2. 2022 Revised Unreasonable Risk Determination

As described in more detail in the proposed rule, EPA revised the original unreasonable risk determination based on the 2020 Risk Evaluation for Carbon Tetrachloride and issued a final revised unreasonable risk determination in December 2022 (Ref. 3). EPA revised the risk determination for the 2020 Risk Evaluation for Carbon Tetrachloride pursuant to TSCA section 6(b) and consistent with Executive Order 13990 (titled “Protecting Public Health and the Environment and Restoring Science to Tackle the Climate Crisis”) and other Administration priorities (Refs. 12, 13, 14). The revisions consisted of making a single risk determination for the whole-chemical substance instead of making the risk determination for each individual condition of use, which resulted in the revised risk determination superseding the prior “no unreasonable risk” determinations for specific conditions of use (Ref. 3), the withdrawal of the associated TSCA section 6(i)(1) “no unreasonable risk” order, and clarification that the risk determination does not reflect an assumption that all workers are always provided and appropriately wear personal protective equipment (PPE) (Ref. 3).

EPA determined that CTC presents an unreasonable risk of injury to health, and EPA did not identify risks of injury to the environment that contribute to the unreasonable risk determination for CTC. The CTC conditions of use that contribute to EPA’s determination that the chemical substance poses unreasonable risk to health are listed in the unreasonable risk determination (Ref. 3) and also in Unit III.B.1. of the proposed rule, with descriptions to aid chemical manufacturers, processors, and users in determining how their particular use or activity would be addressed under the final regulatory action. The descriptions of the conditions of use subject to this final rule are in Unit IV.

The conditions of use that do not drive the unreasonable risk for CTC (distribution in commerce and processing as a reactant/intermediate in

reactive ion etching) are also listed in the unreasonable risk determination (Ref. 3) and in Unit III.B.2. of the proposed rule. EPA’s final rule includes prohibitions on the distribution in commerce of CTC for certain downstream uses, but does not include any restrictions for the processing as a reactant/intermediate in reactive ion etching.

3. Description of Unreasonable Risk

EPA has determined that CTC presents an unreasonable risk of injury to health under the conditions of use, based on cancer and acute and chronic toxicity for non-cancer effects. As described in more detail in the proposed rule, the TSCA section 6(b) 2020 Risk Evaluation for Carbon Tetrachloride, and the July 2022 errata memorandum correcting risk estimates for acute dermal exposures, EPA identified cancer and liver toxicity adverse effects from chronic inhalation and dermal exposures as well as liver toxicity from acute dermal exposures to CTC (Refs. 1, 2, 3). Cancer adverse effects (*e.g.*, liver, pheochromocytoma, neuroblastoma) were identified for chronic inhalation and dermal exposures. For chronic and acute non-cancer inhalation exposure to CTC, liver toxicity due to fatty change in the liver was indicative of cellular damage and selected as the most sensitive non-cancer endpoint. EPA identified additional risks associated with other adverse effects (*e.g.*, immediate and temporary depression of the central nervous system, kidney toxicity, reproductive and developmental toxicity, irritation and sensitization, and genetic toxicity) resulting from acute and chronic exposures (Ref. 1). By establishing protections from liver and adrenal cancer, EPA’s final rule will also prevent the unreasonable risk from other less sensitive endpoints, including acute, chronic non-cancer, and additional cancer risks from CTC (Ref. 15).

EPA considered potentially exposed or susceptible subpopulations identified as relevant to the risk evaluation by the Agency, which are included in the quantitative and qualitative analyses described in the 2020 Risk Evaluation for Carbon Tetrachloride (Ref. 1) and were considered in the determination of unreasonable risk for CTC.

4. Conditions of Use Subject to This Regulatory Action

As noted in Unit I.C., “Conditions of use” is defined in TSCA section 3(4). To assist with the implementation and compliance with the final rule, in Unit IV., EPA has provided a description of

the conditions of use subject to the WCPP and to prescriptive controls, as well as those conditions of use prohibited by this final rule. The descriptions provided were obtained from EPA sources such as CDR codes, the 2020 Risk Evaluation for Carbon Tetrachloride and related documents, as well as the Organisation for Economic Co-operation and Development (OECD) harmonized use codes, and stakeholder engagements. EPA received public comments requesting minor clarifications of the descriptions for some industrial and commercial uses, and EPA has clarified those descriptions in Unit IV. A description of the minor changes can be found in the response to comments document (Ref. 11) and in Unit III.E.

For the purposes of this final rule, “occupational conditions of use” refers to the TSCA conditions of use described in Units IV.B.1., IV.C.1., and IV.D.1. of the final rule. Although EPA identified both industrial and commercial uses in the 2020 Risk Evaluation for Carbon Tetrachloride (Ref. 1) for purposes of distinguishing exposure scenarios, the Agency clarified then and clarifies now that EPA interprets the authority Congress gave to the Agency to “regulat[e] any manner or method of commercial use” under TSCA section 6(a)(5) to reach both industrial and commercial uses.

EPA further notes that this rule does not apply to any substance excluded from the definition of “chemical substance” under TSCA section 3(2)(B)(ii) through (vi). Those exclusions include, but are not limited to, any pesticide (as defined by the Federal Insecticide, Fungicide, and Rodenticide Act) when manufactured, processed, or distributed in commerce for use as a pesticide; and any food, food additive, drug, cosmetic, or device, as defined in section 201 of the Federal Food, Drug, and Cosmetic Act, when manufactured, processed, or distributed in commerce for use as a food, food additive, drug, cosmetic or device.

D. EPA’s Proposed Rule Under TSCA Section 6(a) for Carbon Tetrachloride

1. Description of TSCA Section 6(a) Requirements

Under TSCA section 6(a), if the Administrator determines through a TSCA section 6(b) risk evaluation that a chemical substance presents an unreasonable risk of injury to health or the environment, without consideration of costs or other nonrisk factors, including an unreasonable risk to potentially exposed or susceptible subpopulation identified as relevant to

the Agency's risk evaluation, under the conditions of use, EPA must by rule apply one or more of the TSCA section 6(a) requirements to the extent necessary so that the chemical substance or mixture no longer presents such risk.

The TSCA section 6(a) requirements can include one or more of the following actions alone or in combination:

- Prohibit or otherwise restrict the manufacturing (including import), processing, or distribution in commerce of the substance or mixture, or limit the amount of such substance or mixture which may be manufactured, processed, or distributed in commerce (TSCA section 6(a)(1)).

- Prohibit or otherwise restrict the manufacturing, processing, or distribution in commerce of the substance or mixture for a particular use or above a specific concentration for a particular use (TSCA section 6(a)(2)).

- Limit the amount of the substance or mixture which may be manufactured, processed, or distributed in commerce for a particular use or above a specific concentration for a particular use specified (TSCA section 6(a)(2)).

- Require clear and adequate minimum warnings and instructions with respect to the substance or mixture's use, distribution in commerce, or disposal, or any combination of those activities, to be marked on or accompanying the substance or mixture (TSCA section 6(a)(3)).

- Require manufacturers and processors of the substance or mixture to make and retain certain records, or conduct certain monitoring or testing (TSCA section 6(a)(4)).

- Prohibit or otherwise regulate any manner or method of commercial use of the substance or mixture (TSCA section 6(a)(5)).

- Prohibit or otherwise regulate any manner or method of disposal of the substance or mixture, or any article containing such substance or mixture, by its manufacturer or processor or by any person who uses or disposes of it for commercial purposes (TSCA section 6(a)(6)).

- Direct manufacturers or processors of the substance or mixture to give notice of the unreasonable risk determination to distributors, certain other persons, and the public, and to replace or repurchase the substance or mixture (TSCA section 6(a)(7)).

This unit summarizes the TSCA section 6 considerations for issuing regulations under TSCA section 6(a), and it is consistent with the considerations and analyses presented in the proposed rule to manage the

unreasonable risk from CTC (88 FR 49180, July 28, 2023 (FRL–8206–01–OCSPP)).

As required, EPA developed a proposed regulatory action and an alternative regulatory action, which are described in Units IV.A. and IV.B., respectively, of the proposed rule (88 FR 49193 through 491205 (FRL–8206–01–OCSPP)). To identify and select a regulatory action, EPA considered the two routes of exposure driving the unreasonable risk, inhalation and dermal, and the exposed populations. For occupational conditions of use, EPA considered how it could directly regulate manufacturing (including import), processing, distribution in commerce, industrial and commercial use, or disposal to address the unreasonable risk.

As required by TSCA section 6(c)(2), EPA considered several factors, in addition to the identified unreasonable risk, when selecting among possible TSCA section 6(a) regulatory requirements for the proposed rule. EPA's considerations regarding TSCA section 6(c)(2) and section 6(c)(2)(A) for CTC are discussed in full in Unit VI. of the proposed rule (88 FR 49209) (FRL–8206–01–OCSPP), including the statement of effects with respect to these considerations. After review of the public comments received, EPA has revised its statement of effects considerations in Unit V. of this final rule.

Additionally, as described in more detail in EPA's proposed rule in Unit V.B. (88 FR 49209) (FRL–8206–01–OCSPP), EPA considered the availability of alternatives when finalizing a prohibition or a substantial restriction (TSCA section 6(c)(2)(C)), and in setting final compliance dates in accordance with the requirements in TSCA section 6(d)(1)(B)).

To the extent information was reasonably available, EPA considered pollution prevention strategies and the hierarchy of controls adopted by OSHA and the NIOSH when developing its proposed rule, with the goal of identifying risk management control methods that would be permanent, feasible, and effective. EPA also considered how to address the unreasonable risk while providing flexibility to the regulated community where appropriate, and EPA took into account the information presented in the 2020 Risk Evaluation for Carbon Tetrachloride (Ref. 1), input from stakeholders, insight received during consultations, and anticipated compliance strategies from regulated entities.

Taken together, these considerations led EPA to the proposed regulatory action and alternative action described in Unit II.D.3. The proposed rule presents additional details related to how the requirements described in Unit II.D.1. of this document were incorporated into development of the proposed rule and primary alternative action.

2. Consultations and Other Engagement

a. Consultations

EPA conducted consultations and outreach as part of development of the July 28, 2023 proposed rule (88 FR 49180) (FRL–8206–01–OCSPP). The Agency held a federalism consultation from December 17, 2020, until February 17, 2021, as part of the rulemaking process and pursuant to Executive Order 13132 (Ref. 16).

EPA also consulted with Tribal officials (Ref. 17). The Agency held a Tribal consultation from December 7, 2020, through March 12, 2021, with meetings held on January 6 and 12, 2021 (Ref. 17). EPA received no written comments as part of this consultation.

EPA's Environmental Justice (EJ) consultation occurred from February 2, 2021, through April 2, 2021 (Ref. 18). On February 2 and 18, 2021, EPA held public meetings as part of this consultation. These meetings were held pursuant to Executive Orders 12898 and 14008. EPA received one written comment following the EJ meeting, in addition to oral comments provided during the consultation (Ref. 18).

More information regarding the consultations is presented in Units VIII.E., VIII.F. and VIII.J.

b. Other Stakeholder Consultations

In addition to the formal consultations described in Unit II.D.2.a., EPA held a webinar on December 10, 2020, providing an overview of the TSCA risk management processes and the risk evaluation findings for CTC (Ref. 19). EPA also presented on the TSCA risk management process and the findings in the 2020 Risk Evaluation for Carbon Tetrachloride at a Small Business Administration (SBA) Roundtable on December 4, 2020 (Ref. 20). Attendees of these meetings were given an opportunity to voice their concerns on both the risk evaluation and risk management.

Furthermore, during development of the proposed and final rule, EPA engaged in discussions with representatives from different industries, non-governmental organizations, organized labor, technical experts, and users of CTC, including a

webinar providing an overview of the proposed rule. A list of external meetings held during the development of the 2023 proposed and final rule is available in the docket (Ref. 21); meeting materials and summaries are also in the docket.

c. Children's Environmental Health

The Agency's 2021 Policy on Children's Health (Ref. 22) requires EPA to protect children from environmental exposures by consistently and explicitly considering early life exposures (from conception, infancy, early childhood and through adolescence until 21 years of age) and lifelong health in all human health decisions through identifying and integrating children's health data and information when conducting risk assessments. TSCA section 6(b)(4)(A) also requires EPA to conduct risk evaluations "to determine whether a chemical substance presents an unreasonable risk of injury to health or the environment . . . including an unreasonable risk to a potentially exposed or susceptible subpopulation identified as relevant to the risk evaluation by the Administrator, under the conditions of use." In addition, TSCA section 6(a) requires EPA to apply one or more risk management requirements under TSCA section 6(a) so that CTC no longer presents an unreasonable risk (which includes unreasonable risk to any relevant potentially exposed or susceptible subpopulation). Information on how the Policy was applied and on the health and risk assessments supporting this action is available under Units II.C. II.D. and V.A., as well as in Unit III.A.3. of the July 2023 proposed rule (88 FR 49184 through 49188, 49205 through 49208 and 49190) (FRL-8206-01-OCSPP), the 2020 Risk Evaluation for Carbon Tetrachloride, and the Economic Analysis for this rule (Refs. 1, 5).

3. Proposed Regulatory Action

EPA's proposed rule under TSCA section 6(a) to address the unreasonable risk presented by CTC under its conditions of use included the following:

- Requirements for strict workplace controls, including a CTC WCPP, which would include requirements to meet an inhalation exposure concentration limit and prevent direct dermal contact with CTC, for 9 occupational conditions of use;
- Requirements for prescriptive workplace controls for laboratory use; and
- Prohibition of certain processing, industrial, and commercial conditions

of use and the manufacture, processing, and distribution for those uses.

The proposed rule included timeframes for implementation. The prohibitions EPA proposed would take effect six months after the date of publication of the final rule, except for the prohibition of the industrial and commercial use of CTC in specialty uses by the Department of Defense, which would take effect one year after the date of publication of the final rule. Likewise, for the WCPP, EPA proposed timeframes for phases of compliance, beginning with monitoring at six months and full implementation after 12 months, as described in Unit IV.A.1. of the proposed rule. EPA also proposed a compliance timeframe of six months for prescriptive controls for laboratory use.

Under TSCA section 6(c)(2)(A)(iv)(II) through (III), EPA is mandated to consider one or more alternative regulatory actions. The primary alternative regulatory action was included in the proposed rule in Unit IV.B. (88 FR 49204) (FRL-8206-01-OCSPP). Similar to the proposed regulatory action, the primary alternative regulatory action combined requirements for a WCPP and prescriptive controls to address the unreasonable risk from CTC under its conditions of use.

The primary alternative regulatory action included prescriptive workplace controls, specifically respirators and dermal PPE, for the conditions of use for which EPA had proposed a WCPP. The primary alternative action also included a WCPP for processing, industrial, and commercial uses of CTC that EPA had proposed to prohibit. At the time of proposal, EPA did not have reasonably available information indicating that any of the uses proposed for prohibition were ongoing. EPA requested comment on whether any of the uses the Agency proposed to prohibit are ongoing and if EPA should consider a WCPP for those conditions of use of CTC. For the industrial and commercial use of CTC as a laboratory chemical, the primary alternative regulatory action considered by EPA included the implementation of only the requirements of Direct Dermal Contact Controls (DDCC) of the WCPP in combination with the use of fume hoods in workplace laboratory settings and advanced engineering controls specifically for DoD's use of CTC as a laboratory chemical in chemical weapons destruction. The compliance timeframes for the controls as part of the primary alternative regulatory action were the same as the timeframes proposed.

For a comprehensive overview of the primary alternative regulatory action

refer to Unit IV.B. of the proposed rule, with the rationale for the primary alternative regulatory action provided in Unit V.A.4. of the proposed rule (88 FR 49205 through 49208) (FRL-8206-01-OCSPP).

4. Public Comments Received

EPA requested comment on all aspects of the proposed rule. During the public comment period, EPA held a webinar on August 15, 2023, providing an overview of the proposed rule and TSCA section 6; during the webinar, members of the public had the opportunity to share their perspectives (Ref. 23). The comment period closed on September 11, 2023. EPA received 23 public comments, with a majority received from industry trade organizations. The public comments also include comments from chemical manufacturers, advocacy organizations, laboratory users, a union, an academic institution, members of the regulated community, and individual residents. A summary of the comments as well as EPA's responses is in the docket for this rulemaking (Ref. 11). Additionally, Unit III. contains summaries of public comments that informed EPA's regulatory approach in this final rule.

After the close of the public comment period for the proposed rule, stakeholders, including affected industry and interested groups, requested meetings with EPA. Topics of these meetings included exposure controls, process descriptions, monitoring data, and specific conditions of use. EPA received data as part of and following these stakeholder meetings and has made the information available to the public in the rulemaking docket (EPA-HQ-OPPT-2020-0592) (Ref. 21).

After review of the public comments received from the proposed rule, EPA revised certain preliminary considerations that impacted which conditions of use were proposed by EPA to be prohibited or that could continue under the WCPP or prescriptive controls (Ref. 11). Similarly, based on public comments received, EPA modified for this final rule several proposed compliance timeframes, with details in Unit III.

III. Changes From the Proposed Rule

Unit III. summarizes the main changes from the proposed rule to the final rule, based on the consideration of the public comments.

A. Changes to Requirements for Certain Conditions of Use

As described in Unit III.A.1., when compared to the proposed rule, EPA's final rule no longer prohibits two sub-

uses, under two separate conditions of use that were proposed for prohibition, and now allows them to continue under the WCPP. In addition, this final rule broadens the type of prescriptive controls required for one condition of use (Unit III.A.2.), as compared to the proposed rule. The rationale for these changes is described in this unit. EPA emphasizes that implementation of the WCPP or prescriptive controls can fully address the unreasonable risk from CTC for these conditions of use, and that these changes do not significantly impact the production volume of CTC expected to remain in commerce when compared to the proposed regulatory action. Taken together, EPA estimates that there are 10 facilities involved in the changes of the requirements to the conditions of use described in Units III.A.1. and 2., nine of which use CTC for the industrial and commercial use as a laboratory chemical. In addition, EPA understands that small quantities of CTC are used for the sub-uses that will continue under the WCPP instead of the proposed prohibition (Ref. 24). The two sub-uses which will continue under the WCPP account for approximately 0.4% to 1% of total production volume, based on a comparison of 2019 CDR data on CTC production volume (between 100 million and 250 million lbs.) and information reported to EPA regarding the two sub-uses (Ref. 5, Ref. 24).

1. Changes to the Prohibition of Certain Conditions of Use

EPA's primary alternative regulatory action described in the proposed rule considered regulating several conditions of use under the WCPP as an alternative to the proposed prohibition, including incorporation into formulation, mixtures, or reaction products in petrochemicals-derived manufacturing, and industrial and commercial use as an industrial processing aid in the manufacture of petrochemicals-derived products. In addition, EPA requested comment on whether the Agency should require a WCPP or prescriptive controls, including respirators and dermal PPE, for any of the conditions of use EPA proposed to prohibit.

EPA is finalizing a WCPP for incorporation into formulation, mixtures, or reaction products in vinyl chloride manufacturing and the industrial and commercial use as an industrial processing aid in the manufacture of vinyl chloride, as included in the primary alternative regulatory action of EPA's proposal under the broader categories of processing: incorporation into formulation, mixtures, or reaction products in petrochemical-derived

manufacturing and industrial and commercial use as an industrial processing aid in the manufacture of petrochemical-derived products. EPA proposed to prohibit these sub-uses of CTC due to the lack of information indicating that these uses are ongoing, but requested comment on whether CTC is still used in these and other conditions of use EPA proposed to prohibit, and stated that if EPA received information indicating the continued use of CTC for these conditions of use, the Agency would consider regulating these uses rather than prohibiting them (88 FR at 49202 through 49203, 49205, and 49218). EPA received comments from one entity indicating that the incorporation of CTC into formulation, mixtures, or reaction products in vinyl chloride manufacturing and the industrial and commercial use of CTC as an industrial processing aid in the manufacture of vinyl chloride are ongoing (Ref. 24). The entity indicated that switching to an alternative chemical or process would require replacement of existing infrastructure and result in the temporary loss of revenue. The entity using CTC for these uses provided manufacturing data used in the 2020 Risk Evaluation for Carbon Tetrachloride, indicating that CTC is used by this entity in industrialized and standardized settings that can meet the requirements of the WCPP. Therefore, EPA understands that the entity is able to meet the WCPP requirements for processing: incorporation into formulation, mixtures, or reaction products in vinyl chloride manufacturing and the industrial and commercial use as an industrial processing aid in the manufacture of vinyl chloride as well. Furthermore, EPA understands as a general matter that these uses would occur in highly industrialized settings and controlled and closed processes, suggesting a WCPP could be successfully implemented such that risk of injury to health presented by CTC is no longer unreasonable. CTC was used in other petrochemical-derived manufacturing (other than vinyl chloride manufacturing); however, based on the reasonably available information, such uses of CTC do not appear to be ongoing. Therefore, EPA has concluded that industry has already found feasible alternatives to CTC for these uses, EPA is prohibiting processing: incorporation into formulation, mixtures, or reaction products in the remainder of petrochemical-derived manufacturing and the industrial and commercial use of CTC as a processing aid in the manufacture of remaining

petrochemical-derived products, as proposed, to address the unreasonable risk contributed by these conditions of use.

2. Changes to Restrictions: Prescriptive Controls for Industrial and Commercial Use as a Laboratory Chemical

In general, EPA is finalizing the prescriptive control requirements for the industrial and commercial use of CTC as a laboratory chemical as proposed, with some modifications based on consideration of public comments. As described in the proposed rule, to address the unreasonable risk of injury to health resulting from dermal exposures to CTC for the industrial and commercial use as a laboratory chemical, EPA proposed to require dermal PPE in combination with comprehensive training for tasks related to the use of CTC in a laboratory setting for each potentially exposed person in direct dermal contact with CTC. EPA also proposed to require the use of fume hoods to codify the assumption of existing good laboratory practices that EPA relied upon as a key basis for its evaluation of risk from this condition of use (Ref. 1). EPA requested comment relative to the ability of owners and operators to implement laboratory chemical fume hood and dermal PPE related requirements within six months of publication of the final rule. Under the primary alternative regulatory action, EPA included DDCC for laboratory use and solicited comment on non-prescriptive requirements of DDCC as compared to the prescriptive workplace controls of dermal PPE.

EPA received several comments regarding the industrial and commercial use as a laboratory chemical. One commenter stated that the proposed regulation would result in confusion and duplication with the OSHA standard for occupational exposure to hazardous chemicals in laboratories under 29 CFR 1910.1450 that is already in effect (Ref. 25). A couple of commenters urged EPA to align its requirements for laboratory use of CTC more closely with the OSHA's laboratory standard to reduce compliance burden (Refs. 25, 26). Commenters also requested that EPA include flexibility for engineering controls beyond a fume hood for consistency with the OSHA lab standard, stating that, while fume hoods are considered best practice and commonly used to reduce exposure in laboratories, experiment designs utilizing CTC may not be able to be accommodated within a fume hood (Refs. 25, 27). Commenters described other alternative controls that can be

designed and implemented to reduce exposure, such as glove boxes, exhausted enclosures, ducted biosafety cabinets, and filtration devices.

Based on information provided by commenters related to exposure mitigation controls to comply with the OSHA laboratory standard and best management practices available to laboratories, EPA has determined that requiring laboratory ventilation devices such as fume hoods or glove boxes, would better align with the OSHA laboratory standard and existing good laboratory practices. As described in Unit V.A.2. the proposed rule (88 FR 49201, July 28, 2023) (FRL–8206–01–OCSPP), EPA proposed to require fume hoods in laboratory settings to codify assumptions made in the 2020 Risk Evaluation for CTC, where EPA's risk estimates and determination that inhalation exposures from the industrial and commercial use of CTC as a laboratory chemical did not contribute to the unreasonable risk were predicated on its findings that expected safety practices of using CTC in small amounts under a fume hood reduce the potential for inhalation exposures (Ref. 1). In addition to fume hoods, EPA has determined that other types of ventilation systems or containment devices, when used in compliance with the OSHA laboratory standard at 29 CFR 1910.1450(e)(3), may minimize inhalation exposures in a laboratory setting consistent with the qualitative assumption in the 2020 Risk Evaluation for CTC that the potential for inhalation exposure is low due to expected use of a fume hood. For the industrial and commercial use as a laboratory chemical, EPA concurs with the commenters that indicated EPA's requirements should align more closely with the OSHA laboratory standard wherever possible to prevent confusion. The requirement in this final rule that laboratory ventilation safety devices, such as fume hoods or glove boxes, are in use and functioning properly and that specific measures are taken to ensure proper and adequate performance of such equipment to minimize exposures to persons in the area when CTC is used in a laboratory setting aligns with existing requirements from the OSHA laboratory standard at 29 CFR 1910.1450(e)(3)(iii) while remaining consistent with the assumptions made in the 2020 Risk Evaluation.

As detailed in Unit IV.C. of this final rule, EPA is finalizing the requirements for dermal PPE in combination with comprehensive training for tasks related to the use of CTC in a laboratory setting as proposed. EPA believes these requirements align with OSHA's

laboratory standard and OSHA's General Requirements for Personal Protective Equipment at 29 CFR 1910.132 to the extent possible while still addressing the unreasonable risk of injury to health resulting from dermal exposures to CTC identified for the industrial and commercial use as a laboratory chemical.

B. Changes to WCPP Timeframes

For the conditions of use for which EPA proposed the WCPP, EPA proposed several compliance timeframes, including the following requirements: that initial exposure monitoring be conducted within six months of publication of the final rule in the **Federal Register** (or within 30 days of introduction of CTC into the workplace if CTC use commences at least six months after the date of publication); that each owner or operator ensure that the exposure to CTC does not exceed the ECEL as an 8-hour TWA for all potentially exposed persons within nine months of publication of the final rule in the **Federal Register**; and that owners and operators implement an exposure control plan within 12 months of publication of the final rule in the **Federal Register**. EPA requested comment regarding the ability of owners or operators to comply with the various provisions of the WCPP, including initial exposure monitoring, within the compliance timelines included in the proposal, and anticipated timelines necessary for any procedural adjustments needed to comply with the establishment of a respiratory protection program and development of an exposure control plan. EPA also requested comment regarding the amount of time, if any, it would take the regulated community to develop a method to measure at or below the ECEL over an entire work shift and information on what levels of detection are possible over an entire work shift based on existing monitoring methods, justification for the timeframe of the specific steps needed to develop a more sensitive monitoring method, cost associated with a more sensitive monitoring method, and any additional detailed information related to establishing a monitoring program to reliably measure CTC at or below the ECEL.

Public comments highlighted challenges with the proposed timeframes and suggested longer timeframes for initial exposure monitoring. For example, one commenter stated that the proposed 6-month timeframe to conduct initial exposure monitoring may not be possible because CTC use may be

infrequent and only occur annually or even less frequently, such as maintenance exercises (Ref. 28). Other commenters expressed concern that requirements to comply with a new exposure limit will stress industrial hygiene consultants and laboratories that analyze the samples, and urged EPA to ensure that there is adequate time for consultant firms and laboratories to establish sufficient capacity (Refs. 29, 30, 31). Several commenters stated that the proposed 6-month timeframe for initial monitoring would be untenable and suggested that the deadline be extended to 18 months (Refs. 29, 30, 32). One commenter stated that owners or operators should be given sufficient time to implement any new requirements which could involve substantial investments (Ref. 27). Two of the commenters reasoned that, particularly for CTC, at least 18 months is necessary to revalidate methods and determine whether revision to corporate exposure assessment strategy is necessary to address the new ECEL, including to address the specific implementation and technical feasibility challenges of measuring the CTC ECEL for both full shift and task measurements (Refs. 29, 30). One commenter indicated that they need to develop methods to achieve the detection limit for the proposed ECEL and ECEL action level, to procure professional services to implement the requirements, and most likely require laboratory analytical support (Ref. 33). Additionally, one commenter expressed concern that corporate and facility industrial hygiene resources as well as third party laboratories may also be conducting a reassessment and analysis for the methylene chloride and PCE rules recently promulgated under TSCA section 6(a), thereby requiring additional time for CTC (Ref. 29).

In consideration of public comments and the challenges of initiating the WCPP, even for facilities with industrial hygiene programs in place, and the difference in the occupational exposure limits between the OSHA permissible exposure limit (PEL) and the EPA ECEL and the challenges associated with monitoring to new, lower EPA exposure thresholds that may spur an increase in the need for monitoring or other exposure control assessment infrastructure, EPA has determined that a longer compliance deadline of 540 days is as soon as practicable to conduct initial monitoring for CTC, which likely would require regulated entities to contract new services or realign current industrial hygiene professionals towards WCPP compliance. Providing 540 days

for initial monitoring is intended to (1) prevent professional safety service sectors from being overwhelmed by new EPA requirements; (2) provide time to procure the necessary services while ensuring the preservation of safety quality, standards, and practices; and (3) provide sufficient time for a comprehensive exposure evaluation, increasing the likelihood of successful implementation of the WCPP. Following initial monitoring, EPA is finalizing the requirement that each owner or operator supply a respirator to each person who enters a regulated area within three months after the receipt of any exposure monitoring that indicates exposures exceeding the ECEL. Therefore, each owner or operator must ensure that the exposures to CTC do not exceed the ECEL as an 8-hour TWA for all potentially exposed persons, including by providing respiratory protection, no later than 630 days after December 18, 2024. Given the full WCPP requirements (including the exposure control plan) are required after owners or operators are required to ensure that no person is exposed to an airborne concentration that exceeds the TWA ECEL, EPA acknowledges that compliance with the ECEL may include temporary PPE use (e.g., respiratory protection) until comprehensive engineering and administrative controls are fully implemented. As described in the proposed rule, EPA believes that three months after receipt of exposure monitoring results is as soon as practicable, while also providing a reasonable transition period for entities to evaluate exposure monitoring results, acquire the correct respiratory protection, and establish the PPE program, including training, fit-testing, and medical evaluation.

EPA also received public comment regarding the compliance timeframe for full implementation of the WCPP, including detailing the evaluation steps that would be required to assess a facility and develop, document, and implement an exposure control plan. To allow time for orderly transitions and training to comply with an ECEL (0.03 ppm (8-hr TWA)) that is significantly lower than the OSHA PEL of 10 ppm (8-hr TWA) and the American Conference of Governmental Industrial Hygienists (ACGIH) threshold limit value (TLV) of 5 ppm (8-hr TWA) for CTC, two commenters suggested that EPA adopt a graduated implementation approach for ECEL implementation by first requiring entities that already meet the OSHA PEL to comply with the ACGIH TLV within two years from the effective date of the final rule and then permitting those

facilities meeting the ACGIH standard three years to transition to the ECEL (Refs. 34, 35). Two commenters expressed concern that the proposed timeframes would be insufficient for owners or operators to document their efforts to implement the hierarchy of controls as required under the WCPP, and recommended that the time required to develop the exposure control plan be extended to two years from completion of initial monitoring, for a total of 24 to 36 months from the effective date of the final rule, to provide adequate time for entities to evaluate and implement appropriate compliance approaches that provide flexibility and are the most effective for protecting workers (Refs. 29, 30).

Based on comments, outreach, reasonably available information, and existing OSHA standards, EPA maintains that the majority of the exposure reduction and worker safety infrastructure needed for compliance is currently in place, but recognizes the fundamental challenge of building a new exposure control strategy around the new, lower EPA exposure limit. Additionally, based on consideration of public comment and given that OSHA has not promulgated a detailed standard specific to CTC, EPA has determined that a longer compliance timeframe of 1080 days for development and implementation of an exposure control plan is as soon as practicable to ensure that the regulated community has adequate time to evaluate monitoring data, assess and develop an exposure strategy, procure appropriate control technology and PPE, and implement the required chemical safety program for CTC.

Therefore, EPA is finalizing the compliance timeframes for the WCPP provisions as follows: (1) The requirements for each owner or operator to conduct initial baseline monitoring must be met within 540 days after December 18, 2024, or within 30 days of introduction of CTC into the workplace, whichever is later; (2) the requirements for each owner or operator to ensure that exposure to CTC does not exceed the ECEL as an 8-hour TWA for all potentially exposed persons, including by providing respiratory protection to all potentially exposed persons in the regulated area must be met within 630 days after December 18, 2024, or within three months after receipt of the results of any exposure monitoring that indicates exposures exceeding the ECEL; and (3) the requirements for development and implementation of an exposure control plan must be met within 1,080 days after December 18, 2024. For greater clarity in this final

rule, EPA is also finalizing with slight modification the requirement that owners and operators institute a training and information program for potentially exposed persons and assure their participation in the training and information program, and that this requirement be met within 630 days after December 18, 2024 (see Unit IV.B.7.a.).

EPA understands that certain departments and agencies of the Federal government, as well as Federal contractors acting for or on behalf of the Federal government, need additional time to comply with these timeframes. For example, complying with these timeframes could impact the ability of the Department of Energy (DOE) to perform sampling and groundwater treatment at contaminated plumes and wastewater treatment facilities. While, for example, 29 CFR part 1960 sets forth procedures and guidelines for ensuring that Federal workers are protected in comparable ways to their non-Federal counterparts, EPA believes that compliance with this final rule will require increased and different preparations on the part of Federal agencies. For example, Federal agencies must follow procurement requirements, which will likely result in increased compliance timelines. In addition, these requirements will require support in the Federal budget, which, for some agencies, is a multi-year process. Therefore, EPA is providing additional time for agencies of the Federal government and their contractors, when acting for or on behalf of the Federal government, to comply with the WCPP provisions as follows: (1) The requirements for each owner or operator to conduct initial baseline monitoring must be met within 915 days after December 18, 2024, or within 30 days of introduction of CTC into the workplace, whichever is later; (2) the requirements for each owner or operator to ensure that exposure to CTC does not exceed the ECEL as an 8-hour TWA for all potentially exposed persons, including by providing respiratory protection to all potentially exposed persons in the regulated area, must be met within 1,005 days after December 18, 2024, or within three months after receipt of the results of any exposure monitoring that indicates exposures exceeding the ECEL; (3) the requirements for each owner or operator to ensure all persons are separated, distanced, physically removed, or isolated from direct dermal contact with CTC, including by providing dermal PPE, must be met within 1,005 days after December 18, 2024; (4) the requirements for

development and implementation of an exposure control plan must be met within 1,080 days after December 18, 2024; and (5) the requirement that owners or operators of workplaces subject to the WCPP institute a training and information program for potentially exposed persons and assure their participation in the training and information program within 1,005 days after the date of publication of the final rule in the **Federal Register** (*i.e.*, no later than September 20, 2027).

C. Changes to WCPP Requirements

1. Exposure Monitoring Requirements

As part of the WCPP, EPA proposed to require owners or operators meet certain documentation requirements for each monitoring event of CTC, including compliance with the Good Laboratory Practice (GLP) Standards in accordance with 40 CFR part 792.

Numerous commenters expressed concern regarding the requirement that the WCPP include compliance with the GLP Standards (Refs. 28, 29, 30, 31, 35, 36). Commenters stated that it is atypical, for industrial hygiene purposes, to use this standard for air sampling of CTC (Refs. 29, 30, 31). According to the commenters, it is common practice within the industrial hygiene community to have analyses performed by American Industrial Hygiene Association (AIHA) accredited labs (Ref. 29). One commenter added that collection of occupational monitoring samples need not be conducted under the GLP Standards where planning and collection is overseen by a Certified Industrial Hygienist or Environmental Professional as defined at 40 CFR 312.10 (Refs. 30, 31). Commenters also suggested applying the policy described in typical TSCA section 5(e) orders that establish a New Chemical Exposure Limit (NCEL) under the TSCA New Chemicals Program, which states that compliance with GLP Standards is not required where exposure monitoring samples are analyzed by a laboratory accredited by either: (A) the AIHA Industrial Hygiene Laboratory Accreditation Program; or (B) another comparable program approved in advance in writing by EPA (Refs. 29, 30, 31). Another commenter reasoned that GLP Standards were not intended for air monitoring in a workplace when compliance with such standards would mean that real-time assessments could not be made, as air samples would need to be processed and analyzed in a laboratory (Ref. 28).

EPA agrees with the commenter that the WCPP is incompletely served by solely relying on the GLP Standards

initially put forth in the July 29, 2023 proposed rule (88 FR 49180) (FRL–8206–01–OCSPP). Given the concern from commenters regarding potential increases in demand for professional safety services and sampling laboratories having a negative impact due to anticipated industry strain and sampling limitations (Refs. 29, 30, 31), EPA has broadened the scope of laboratory accreditation accordingly. EPA has considered this laboratory capacity issue, in addition to other revisions for finalization in this rule, so that the additional infrastructure is in place for the regulated community to successfully implement the WCPP. For the final rule, EPA is requiring that exposure samples be analyzed using an appropriate analytical method, and related records retained, by a laboratory that complies with the GLP Standards in 40 CFR part 792 or that otherwise maintains a relevant third-party laboratory accreditation (*e.g.*, under the AIHA Laboratory Accreditation Programs, LLC Policy Module 2A/B/E of Revision 17.3), or other analogous industry-recognized programs.

Another commenter stated that EPA's proposal did not make clear that "personal breathing zone" air samples to monitor exposures are to be taken without regard to respirator use. The commenter noted that OSHA requires exposure monitoring to be conducted without regard to respirator use (citing as an example OSHA's definition of "employee exposure" at 29 CFR 1910.1052(b)) and asserted that this important element of OSHA's monitoring program was omitted from EPA's proposal (Ref. 37). EPA agrees with the commenter that exposure monitoring should be conducted without regard to respiratory protection to inform engineering control options and respiratory protection considerations. Therefore, EPA is finalizing this rule to explicitly state that air sampling is required to measure ambient concentrations for CTC without taking respiratory protections into account when being performed. This will ensure the appropriate degree of protection to potentially exposed persons by logging accurate ambient air concentrations of CTC, thus empowering owners or operators to appropriately consider the hierarchy of controls.

Additionally, as part of the WCPP, EPA proposed to require owners and operators to re-monitor within 15 working days after receipt of any exposure monitoring when results indicated non-detect, unless an Environmental Professional as defined at 40 CFR 312.10 or a Certified

Industrial Hygienist reviews the monitoring results and determines re-monitoring is not necessary. EPA received several comments disagreeing with the proposed requirement to review non-detect air monitoring samples. The commenters stated that facilities use accredited labs to perform industrial hygiene sampling analysis, the results are reviewed by industrial hygiene professionals, and it is an unnecessary step that adds no value to reduce risk to workers (Refs. 29, 30, 31).

EPA disagrees with commenters that expressed the opinion that re-evaluating a non-detect result adds no value and is inappropriate. While in some cases a non-detect result may accurately indicate that the chemical is not present and that air concentrations are below the ECEL action level, in other cases it may not necessarily imply negligible occupational exposure to the chemical. For example, interference from another chemical during sampling may result in an incorrect result of non-detect. This interference may not be recognized at the time of sampling or analysis. Owners and/or operators also may not be using sampling techniques or analytical procedures that are effective or appropriate for the particular chemical of interest. In each of these cases, non-detect results, along with supporting documentation about the sampling and analytical methods used to get those results, is a meaningful part of the potentially exposed person's exposure record required under the WCPP. The WCPP in the proposed rule and in this final rule does not require re-monitoring in all cases. Re-monitoring may be necessary based on a professional evaluation by an Environmental Professional as defined at 40 CFR 312.10 or a Certified Industrial Hygienist. This flexibility allows owners or operators options in terms of revisiting occupational sampling in the event of a non-detect result, or evaluation by a qualified professional.

EPA determined that a non-detect sampling result when effective sampling and analysis procedures are used is valuable to an owner/operator in that it suggests effective implementation of exposure controls. Potentially exposed persons may also use these records in discussions with owner/operators, in collective bargaining situations, or in compliance assistance inquiries to EPA or other federal agencies. Exposure monitoring results may also improve overall workplace health and reducing owner/operator liability in the effective detection, treatment, and prevention of occupational disease or illness. All of the above scenarios are valuable for

owner/operators, potentially exposed persons, and for effective mitigation of occupational exposures. In consideration of these factors, EPA has removed the air monitoring equipment malfunction from the monitoring activities that do not require resampling based on professional evaluation by an Environmental Professional or Certified Industrial Hygienist. While professional discretion may be warranted in determining whether re-monitoring is needed following results that indicate non-detect, EPA has determined this is not appropriate in the event of air monitoring equipment malfunction. This is due to the importance of air monitoring in ensuring that the requirements of the WCPP are met, and the importance of the WCPP in reducing risks from exposures to CTC in the workplace. Monitoring results from malfunctioning air monitoring equipment are not valid monitoring and therefore not sufficient to meet the monitoring requirements under the WCPP.

EPA may consider developing additional guidance regarding occupational monitoring in the future. Therefore, EPA is finalizing the requirement to re-monitor within 15 working days after receipt of any exposure monitoring if results indicated non-detect unless an Environmental Professional as defined at 40 CFR 312.10 or a Certified Industrial Hygienist reviews the monitoring results and determines re-monitoring is not necessary. EPA has updated the recordkeeping requirements associated with the WCPP exposures records required under 40 CFR 751.713(b)(1) to require documentation of the determination by the Environmental Professional as defined at 40 CFR 312.10 or a Certified Industrial Hygienist to be maintained as a record. Occupational monitoring (and associated recordkeeping) is an area that EPA may develop guidance as part of final rule implementation efforts.

2. Designated Representative

EPA proposed to require owners and operators to provide potentially exposed persons regular access to the exposure control plan, exposure monitoring records, and PPE program implementation plan (documenting proper application, wear, and removal of PPE). EPA requested comment on how owners and operators could engage with potentially exposed persons on the development and implementation of an exposure control plan and PPE program. One commenter stated that employees should be engaged in the development and implementation of the exposure

control plan and that the engagement is best performed during the PPE and respirator training (Ref. 27). Another commenter urged EPA to require that owners and operators consult with workers and their designated representatives in developing and implementing their plans (Ref. 37).

EPA received public comment on the role of designated representatives in the WCPP. One commenter, a group of labor unions, urged EPA to incorporate requirements similar to OSHA's access standard at 29 CFR 1910.1020 (entitled, "Access to employee exposure and medical records") in EPA's proposed recordkeeping requirements for the WCPP to ensure that exposure information is promptly and fully shared with both potentially exposed persons and their designated representatives (Ref. 37). The commenter also suggested that EPA include a requirement that employers provide employees or their designated representatives an opportunity to observe monitoring events. The commenter observed that workers and their designated representatives have a critical role to play in ensuring effective control of toxic substances and further noted that, often, unions are the organizations with expertise in understanding occupational exposure information.

Following review of the comments received, EPA recognizes the importance of having the ability for potentially exposed persons and their designated representative(s), such as labor union representatives, to observe exposure monitoring and have prompt access to exposure records. EPA additionally recognizes that, in some instances, individual workers may be hesitant to ask owners or operators for information relating to their chemical exposure or may be less familiar with discipline-specific industrial hygiene practices. EPA determined that it is appropriate in this final rule to establish requirements regarding designated representatives, consistent with existing OSHA precedent in certain 29 CFR part 1910, subpart Z regulations, to allow designated representatives the ability to observe occupational exposure monitoring and have access to exposure monitoring records. In EPA's final rule, the WCPP includes a requirement that owners and operators provide potentially exposed persons or their designated representatives an opportunity to observe any exposure monitoring that is designed to characterize their exposures and is conducted under the WCPP. EPA is also finalizing a requirement that designated representatives have access to relevant

exposure records, similar to provisions in certain OSHA regulations under 29 CFR part 1910, subpart Z, such as 29 CFR 1910.1200 and 29 CFR 1910.1020. EPA is requiring owners and operators to notify potentially exposed persons and their designated representatives of the availability of the exposure control plan and associated records of exposure monitoring and PPE program implementation within 30 days of the date that the exposure control plan is completed and at least annually thereafter. EPA is also requiring, consistent with the proposed requirement for notification of exposure monitoring results, that the notice of the availability of the exposure control plan and associated records be provided in plain language writing to each potentially exposed person in a language that the person understands or posted in an appropriate and accessible location outside the regulated area with an English-language version and a non-English language version representing the language of the largest group of workers who do not read English. While EPA encourages owners or operators to consult with persons that have potential for exposure and their designated representatives on the development and implementation of the exposure control plan, EPA has determined that it is not necessary to include this as a requirement in the final rule, consistent with OSHA, because the involvement of designated representatives in the observation of occupational monitoring and the potential to access exposure records being finalized in this rule provide a productive forum for communicating with owner/operators about the exposure control plan. EPA believes that the notification of the exposure control plan and associated records may help facilitate participation from potentially exposed persons and their designated representatives in the implementation and further development of that plan.

EPA's final rule to address the unreasonable risk of PCE under TSCA section 6(a) (RIN 2070-AK84) established the definition of "designated representative" intended to apply to all TSCA section 6(a) requirements under 40 CFR part 751 at § 751.5. A recognized or certified collective bargaining agent must be treated automatically as a designated representative without regard to written authorization. Additionally, with respect to Federal Government employees, EPA, like OSHA at 29 CFR 1960.2(e), will interpret these designated representative requirements consistent with the Federal Service Labor Management

Relations Statute (5 U.S.C. 7101 *et seq.*), or collective bargaining or other labor-management arrangements that cover the affected employees.

Should a request be initiated for such records by the potentially exposed person or their designated representative(s), the owner or operator will be required to provide the specified records at a reasonable time, place, and manner, analogous to provisions outlined in OSHA's 29 CFR 1910.1020(e)(1)(i). If the owner or operator is unable to provide the requested records within 15 working days, the owner or operator must, within those 15 days, inform the potentially exposed person or designated representative(s) requesting the record of the reason for the delay and the earliest date when the record will be made available. Additionally, in the event that a designated representative is observing exposure monitoring, the owner or operator must ensure that designated representatives are provided with PPE appropriate for the observation of monitoring. Finally, this rule requires owners or operators to provide notice to potentially exposed persons and their designated representatives of exposure monitoring results and of the availability of the exposure control plan and associated records. For purposes of this requirement, the owner or operator is only required to provide notice to those designated representatives that the owner or operator is aware of, such as representatives designated in writing or a recognized collective bargaining agent for the owner or operator's own employees.

3. Other Changes to the WCPP

EPA proposed various requirements under the WCPP for owners or operators to provide PPE, including respiratory protection and dermal protection, to potentially exposed persons and to establish a PPE program. For greater clarity in this final rule, EPA has revised the PPE requirements with respect to the cross-references to the relevant OSHA regulations. While the language appears different than the requirements included in the proposed rule, it remains EPA's intention that owners and operators implement PPE programs that are consistent with OSHA requirements. The PPE requirements as part of the WCPP in this final rule are described in Unit IV.B.6.

D. CTC Unintentionally Present in Trace Quantities in Other Chemical Substances

Several public comments on the proposed rule urged EPA to establish an

explicit "de minimis" weight fraction threshold or add an exemption for impurities or other contaminants from the rule's requirements for small levels of CTC present in other chemical substances or mixtures (Refs. 26, 28, 29, 30, 31, 35, 38, 39). Two commenters raised concerns that absent such exemption, the proposed prohibition on industrial and commercial use of CTC as an industrial processing aid in the manufacture of petrochemicals-derived products would inadvertently prohibit the industrial and commercial use of PCE as a processing aid in catalyst regeneration in petrochemical manufacturing, which EPA is regulating under a WCPP in a separate TSCA section 6(a) rulemaking for PCE, because PCE contains trace amounts of CTC as an impurity or other contaminant (Refs. 26, 38). Two other commenters who supported a de minimis exclusion for impurities noted that prohibiting impurities in downstream products or CTC impurities in feedstocks could severely hamper numerous value chains and stated that establishing a de minimis weight fraction threshold of 0.1% by weight for the CTC restrictions would align with existing requirements under OSHA's Hazard Communication Standard (Refs. 30, 31). One of these commenters stated that a member company imports a product containing a very small amount of CTC as an impurity, then sells the sealed container for rubber processing; this commenter urged EPA to expressly exempt from the WCPP requirement these zero exposure and de minimis scenarios (Ref. 31). Another commenter stated that a member uses some raw materials that contain CTC, primarily chlorinated rubbers and methylene chloride, in the manufacturing of adhesives and coatings, and was concerned that this use would fall under the proposed prohibitions (Ref. 39). Another commenter asserted that any formulated products that contain de minimis concentrations of CTC (*i.e.*, concentrations less than 0.1% by weight) would not pose a risk and should not be covered by the rule (Ref. 29). Two other commenters recommended that EPA include both a de minimis exemption for materials in which CTC may appear at de minimis levels of less than 0.1% by weight, and an exemption for CTC present in a formulation, in an intermediate, or in an end product as an impurity or byproduct, including when present as an unintentional byproduct or impurity in an imported product (Refs. 26, 35). One commenter suggested that EPA

implement a de minimis weight fraction threshold of 0.5% (Ref. 39).

In the final rule, EPA has excluded from the rule's requirements CTC that is solely present unintentionally in trace quantities with another chemical substance or mixture. This exclusion is intended to cover circumstances in which another chemical substance or mixture unintentionally contains trace quantities of CTC that may be present as a manufacturing residue, unreacted feedstock, byproduct, or other contaminant. The Agency determined that this exclusion was appropriate because the conditions of use of CTC that were evaluated in the 2020 Risk Evaluation for Carbon Tetrachloride and determined to contribute to the unreasonable risk presented by CTC did not include scenarios in which trace amounts of CTC is unintentionally present in other chemical substances or mixtures. To the contrary, Section 1.4.2.3 of the Risk Evaluation stated that there were conditions of use that EPA concluded in the 2018 Problem Formulation of the Risk Evaluation for Carbon Tetrachloride would present only de minimis exposures or otherwise insignificant risks from trace amounts of CTC and did not warrant inclusion in the risk evaluation. This conclusion was related specifically to industrial/commercial/consumer uses of CTC in adhesives/sealants, paints/coatings, and cleaning/degreasing solvent products. EPA reserves the right to assess and address potential environmental and health risks of trace quantities of CTC under different authorities such as CAA Title I and VI. The 2020 Risk Evaluation for Carbon Tetrachloride explained that while CTC's use as a process agent in the manufacturing of other chlorinated compounds may result in trace levels of CTC as a manufacturing residue in the chlorinated substances used to manufacture downstream products, those trace amounts are expected to volatilize during the product manufacturing process, such that EPA expected insignificant or unmeasurable concentrations of CTC in the chlorinated substances in commercially available adhesive/sealant, paint/coating, and cleaning/degreasing products. The final rule's exclusion for CTC unintentionally present in trace quantities with another chemical substance or mixture is consistent with this earlier exclusion from the scope of the Risk Evaluation for Carbon Tetrachloride. Any product with CTC concentrations above trace quantities that falls within a condition of use regulated under this rule will be subject to the relevant rule provisions (*e.g.*,

WCPP, prescriptive controls, or prohibition), as appropriate based on the condition of use of CTC.

In addition, any potential occupational risk from the presence of trace quantities of CTC in PCE is expected to be eliminated by the recently promulgated final risk management rule for PCE under TSCA section 6(a) (to be codified at 40 CFR part 751, subpart G). The occupational and consumer protections from exposures to PCE under that final rule, which address the unreasonable risk of injury to health presented by PCE under its conditions of use, would also have the effect of reducing the risk from exposures to trace amounts of CTC that may be present in PCE. For example, the final rule requires a workplace chemical protection program with both an Existing Chemical Exposure Limit of 0.14 ppm of PCE as an 8-hr TWA and direct dermal contact control requirements for the industrial/commercial use of PCE as a processing aid in catalyst regeneration in petrochemical manufacturing. Any engineering controls or PPE used to reduce occupational exposures to PCE for the use as a processing aid in catalyst regeneration in petrochemical manufacturing are expected to reduce workplace exposures to CTC. The limitations on inhalation and dermal exposures to PCE to prevent unreasonable risk of injury to health from that chemical substance are also expected to limit any potential exposure to trace quantities of CTC that may be unintentionally present in the PCE, reducing the risk of injury to health from the CTC, so that that condition of use does not contribute to the unreasonable risk of CTC.

At this time, EPA is not establishing a specific weight fraction or other numerical threshold value for the trace quantities exclusion in the CTC final rule, consistent with existing exclusions of trace quantities of remaining substances from the definitions of “controlled substance” and “transform” under 40 CFR 82.3. Instead, the exclusion is based on the plain meaning of the term, “trace quantities.” If the CTC is intentionally retained in the chemical substance or mixture of which it is a part and provides a desired purpose, then it is not “present unintentionally in trace quantities” and would not be excluded from the rule’s requirements.

E. Other Changes

EPA has revised its proposed description of industrial and commercial use of CTC as a laboratory chemical to provide additional clarity as

suggested by a commenter (Ref. 33). The revised description for industrial and commercial use as a laboratory chemical appears in Unit IV.C.1. In addition, EPA has slightly modified the industrial and commercial use descriptions in 40 CFR 751.705(b)(1)(ii)(B), 751.707(a)(8), and 751.711(c) to clarify that the industrial and commercial use of CTC in the recovery of chlorine in tail gas from the production of chlorine falls under the WCPP rather than the prohibition on industrial and commercial use in the manufacture of other basic chemicals (including manufacturing of chlorinated compounds used in solvents, adhesives, asphalt, and paints and coatings). In the proposed rule, EPA had intended this use of CTC to be captured with the description of “industrial and commercial use in the elimination of nitrogen trichloride in the production of chlorine and caustic soda,” but EPA agrees with two public commenters that it would be clearer to specifically list use of CTC in the recovery of chlorine in tail gas from the production of chlorine in the regulatory text (Refs. 29, 30).

EPA has revised its proposed description of disposal. Based on coordination across Federal programs, for the disposal COU, EPA has determined it is appropriate that owners and operators of cleanup sites where potentially exposed persons are involved in the disposal of CTC-containing wastewater for the purposes of cleanup projects of CTC-contaminated water and groundwater, including industrial pre-treatment and industrial treatment activities, must ensure that potentially exposed persons involved with the activity of removing the groundwater from the location where it was found and treating the removed groundwater on site comply with the WCPP. At cleanup sites, the WCPP, including the ECEL, would apply to any potentially exposed person involved in the disposal of CTC-containing groundwater, which most likely includes a worker who is involved with the activity of removing CTC-containing groundwater from the location where it was found and the on-site treatment of the groundwater, typically referred to as *ex situ* remediation, which is most consistent with the scope of the 2020 CTC Risk Evaluation. *Ex situ* remediation includes both active and passive remediation methods that span traditional (e.g., pump and treat) and less traditional (e.g., phytoremediation) approaches, but only if the remediation method would be considered industrial wastewater pretreatment, industrial

wastewater treatment or discharge to a publicly owned treatment work (POTW). EPA generally considers workers in and around those locations to be potentially exposed persons as that term is defined in 40 CFR 751.5. For example, EPA’s requirements would apply to protect workers conducting remediation through pump and treat systems or workers sampling groundwater in conjunction with groundwater extraction or treatment (e.g., remediation or cleanup) activities. EPA considers only those treatment activities that are performed at the cleanup site on CTC-contaminated wastewater that has been removed from the subsurface, surface water impoundments, or aquifers and that are recognized as industrial treatment, industrial pretreatment, or discharge to a POTW to be covered under the provisions described in Unit IV.B. The provisions of the WCPP for the disposal COU, including the ECEL, are not intended to cover potentially exposed persons who are sampling groundwater to monitor the presence of a plume, but specifically only those sampling at the site of extraction and treatment activities. EPA emphasizes that this standard is only for cleanup sites involved in the active or passive *ex situ* treatment (or disposal) of CTC contaminated groundwater and wastewater from cleanup sites and that no other remedial actions at cleanup sites will be covered or affected. Additionally, while EPA considers solid wastes as part of the waste streams included in the disposal COU, at groundwater remediation sites managed by the Federal government and under existing waste disposal requirements, the WCPP requirements under this rulemaking only apply to water contaminated with CTC, and any other type of CTC-impacted waste will be managed according to relevant existing requirements under RCRA, other statutes, and regulatory agreements.

Additionally, it is not necessary to establish previously proposed Subpart A definitions for “authorized person,” “owner or operator,” “potentially exposed person,” and “regulated area” in this final rule because EPA already established definitions for these terms at 40 CFR 751.5 in the TSCA section 6 final rule for methylene chloride (RIN 2070-AK70) (89 FR 39254, May 8, 2024 (FRL-8155-01-OCSPP)) so that these definitions may be commonly applied to this and other rules under TSCA section 6 that would be codified under 40 CFR part 751. Similarly, it is not necessary to establish previously proposed Subpart A definitions for “direct dermal

contact,” “exposure group,” and “ECEL” in this final rule because EPA already established definitions for these terms at 40 CFR 751.5 in the TSCA section 6 final rule for PCE (RIN 2070-AK84).

EPA proposed to require that the notification to companies to whom CTC is shipped under 40 CFR 751.111(c) identify the uses for which CTC is allowed to be distributed in commerce. To provide greater clarity to downstream users of CTC regarding the provisions of this rule, EPA is modifying the notification to identify the uses prohibited under this regulation.

EPA also made other minor edits to the preamble and regulatory text to provide more clarity to the requirements of the final rule.

IV. Provisions of the Final Rule

EPA intends that each provision of this rulemaking be severable. In the event of litigation staying, remanding, or invalidating EPA’s risk management approach for one or more conditions of use in this rule, EPA intends to preserve the risk management approaches in the rule for all other conditions of use to the fullest extent possible. The Agency evaluated the risk management options in TSCA section 6(a)(1) through (7) for each condition of use and generally EPA’s regulation of one condition of use to address its contribution to the unreasonable risk from CTC functions independently from EPA’s regulation of other conditions of use, which may have different characteristics leading to EPA’s risk management decisions. Further, the Agency crafted this rule so that different risk management approaches are reflected in different provisions or elements of the rule that are capable of operating independently. Accordingly, the Agency has organized the rule so that if any provision or element of this rule is determined by judicial review or operation of law to be invalid, that partial invalidation will not render the remainder of this rule invalid.

There are many permutations of the above. For example, as discussed in Unit IV.D., this final rule prohibits both the industrial and commercial use of CTC in metal recovery, and the industrial and commercial use of CTC as a processing aid in the manufacture of petrochemical-derived products except in the manufacture of vinyl chloride (for which EPA is requiring a WCPP as described in Unit III.A.). To the extent that a court were to find that EPA lacked substantial evidence to support the prohibition of CTC as a processing aid in the manufacture of petrochemical-derived products or otherwise found

legal issues with EPA’s approach to that condition of use, it would have no bearing on other similarly situated conditions of use, such as the industrial and commercial use in metal recovery, unless the specific issue also applies to the particular facts associated with metal recovery. This is reflected in the structure of the rule, which describes the prohibited conditions of use separately under 40 CFR 751.705.

As another example, for the processing of CTC as a reactant in the production of HCFCs, HFCs, HFOs, and PCE and the industrial and commercial use of CTC as a laboratory chemical, EPA took different risk management approaches—application of the WCPP for the processing of CTC as a reactant in the production of HCFCs, HFCs, HFOs, and PCE and specific prescriptive controls for use as a laboratory chemical. To the extent that a court were to find a legal issue with EPA’s approach to the WCPP, impacting the processing of CTC as a reactant in the production of HCFCs, HFCs, HFOs, and PCE, it would have no bearing on EPA’s decision to require specific prescriptive controls for industrial and commercial use as a laboratory chemical, and vice versa. This is reflected in the structure of the rule, which organizes the WCPP and prescriptive controls into different sections of the regulation.

EPA also intends all TSCA section 6(a) risk management requirements in this rule to be severable from each regulatory exclusion from those requirements. For example, to the extent a court were to find a legal issue with excluding trace quantities of CTC from the rule’s requirements pursuant to 40 CFR 751.701(b), or with excluding manufacture of CTC as a byproduct from WCPP requirements pursuant to 40 CFR 751.707(a)(1), the underlying risk management requirements would not be impacted. Rather, the excluded activities would become subject to the underlying TSCA section 6(a) risk management requirements applicable to the condition of use. EPA further notes that the specific examples of severability described in this unit are not intended to be exhaustive, but rather illustrative of a wide variety of scenarios that reflect EPA’s overarching intent that each provision of this rulemaking be severable.

EPA acknowledges that after the issuance of this rule, a person or entity may become aware of important information which indicates a particular use, that would otherwise be prohibited, is ongoing, and could meet the criteria of a WCPP. EPA also notes that there are multiple avenues to ask EPA to revisit issues in this TSCA section 6(a)

rulemaking, both before and after the mandatory compliance dates are set consistent with TSCA section 6(d). EPA has the authority under TSCA section 6(g) to consider whether an exemption is appropriate and, consistent with TSCA section 6(g)(1), may propose such exemptions independently from this rulemaking. Additionally, any person could petition EPA to request that EPA issue or amend a rule under TSCA section 6.

A. Applicability

This final rule sets prohibitions and restrictions on the manufacture (including import), processing, distribution in commerce, commercial use, and disposal of CTC to prevent unreasonable risk of injury to health in accordance with TSCA section 6(a), 15 U.S.C. 2605(a).

Additionally, pursuant to TSCA section 12(a)(2), this rule applies to CTC even if being manufactured, processed, or distributed in commerce solely for export from the United States because EPA has determined that CTC presents an unreasonable risk to health within the United States. Several commenters expressed concern that an unclear statement in the proposed rule preamble appeared to indicate that all manufacture, processing, and distribution for export would be prohibited under the proposed rule (Refs. 29, 30, 32). This was not EPA’s intent. Rather, EPA intended to indicate that because EPA determined that CTC presents an unreasonable risk of injury to health within the United States, manufacturing and processing of CTC for export would not be exempt from any otherwise-applicable TSCA section 6(a) regulatory requirements. Because distribution in commerce did not contribute to EPA’s unreasonable risk determination for CTC, and because this final rule permits manufacturing and processing, including recycling, for various uses to continue under the WCPP, EPA intends this final rule to permit manufacturing and processing in compliance with the WCPP for export, as well as distribution in commerce for export, without regard for the intended use in the destination country. In other words, manufacturing, processing, and distribution for the conditions of use listed in 40 CFR 751.705(a)(1)(i) and (ii) are prohibited where such conditions of use would occur inside the United States, but in instances where such conditions of use would occur solely outside of the United States after export, the upstream manufacturing, processing, and distribution for export would not be prohibited. EPA has clarified the regulatory text at 40 CFR

751.707(a) to make clear that any manufacture and processing for export must be in accordance with the WCPP. In addition, any persons who export or intend to export a chemical substance that is the subject of this final rule are subject to the export notification provisions of TSCA section 12(b) (15 U.S.C. 2611(b)), and must comply with the export notification requirements in 40 CFR part 707, subpart D.

EPA is revising the description of the Disposal COU to clarify the requirements of the WCPP at cleanup sites which would apply to any potentially exposed person involved in the disposal of CTC-containing groundwater to industrial treatment, industrial pre-treatment, or POTWs. A potentially exposed person most likely includes a worker who is involved with the activity of removing CTC-containing groundwater from the location where it was found and the on-site treatment of the groundwater, typically referred to as *ex situ* remediation, which is most consistent with the scope of the 2020 CTC Risk Evaluation. *Ex situ* remediation includes both active and passive remediation methods that span traditional (e.g., pump and treat) and less traditional (e.g., phytoremediation) approaches, but only if the remediation method would be considered industrial wastewater pretreatment, industrial wastewater treatment or discharge to a publicly owned treatment work (POTW).

As discussed in Unit III.D, the prohibitions and restrictions described in this unit do not apply to CTC that is solely present unintentionally in trace quantities with another chemical substance or mixture, whether as a manufacturing residue, unreacted feedstock, byproduct, or other contaminant. Additionally, the provisions of this final rule only apply to chemical substances as defined under TSCA section 3. Notably, TSCA section 3(2) excludes from the definition of chemical substance “any food, food additive, drug, cosmetic, or device (as such terms are defined in Section 201 of the Federal Food, Drug, and Cosmetic Act [21 U.S.C. 321]) when manufactured, processed, or distributed in commerce for use as a food, food additive, drug, cosmetic, or device” and “any pesticide (as defined in the Federal Insecticide, Fungicide, and Rodenticide Act [7 U.S.C. 136 *et seq.*]) when manufactured, processed, or distributed in commerce for use as a pesticide.” Additional details regarding TSCA statutory authorities can be found in section 2 of the response to comments document (Ref. 11).

EPA uses the term “potentially exposed person” in Unit IV. And in the regulatory text to include workers, occupational non-users, employees, independent contractors, employers, and all other persons in the work area where CTC is present and who may be exposed to CTC under the conditions of use for which a WCPP or specific prescriptive controls would apply. (EPA notes that this definition is intended to apply to occupational workspaces as part of implementation of the WCPP and other restrictions, and recognizes that other individuals or communities may be exposed to CTC as members of fenceline communities or members of the general population.) For certain conditions of use, EPA requires a comprehensive WCPP or specific prescriptive controls to address the unreasonable risk from CTC to workers directly handling the chemical or in the area where the chemical is being used. Similarly, the 2020 Risk Evaluation for Carbon Tetrachloride (Ref. 1) did not distinguish between employers, contractors, or other legal entities or businesses that manufacture, process, distribute in commerce, use, or dispose of CTC. For this reason, EPA uses the term “owner or operator” to describe the entity responsible for implementing the WCPP or specified prescriptive controls in any workplace where an applicable condition of use is identified in Unit IV. And subject to the WCPP or prescriptive controls is occurring. The term includes any person who owns, leases, operates, controls, or supervises such a workplace. While owners or operators remain responsible for ensuring compliance with the WCPP or prescriptive controls requirements in the workplace, they may contract with others to provide training or implement a respiratory protection program, for example. EPA is also clarifying its intent that for the provisions in this rule, any requirement for an owner or operator, or an owner and operator, is a requirement for any individual that is either an owner or an operator.

EPA emphasizes that this approach is essential for addressing the unreasonable risk presented by CTC, including to individuals who may not be covered by OSHA requirements, such as, volunteers, self-employed persons, and State, and local government workers who are not covered by a state plan. EPA uses the term “owner or operator” in TSCA programs because the term is used in other EPA programs to describe persons with responsibilities for implementing statutory and regulatory requirements at particular locations. See, for example, CAA section

113, 42 U.S.C. 7412, which defines “owner or operator” as a person who owns, leases, operates, controls, or supervises a stationary source. There is a similar definition in section 306 of the Clean Water Act (CWA), 33 U.S.C. 1316. EPA understands that the use of this term may result in multiple persons’ bearing responsibility for complying with provisions of this final rule, including the WCPP. However, this is also the case for workplaces regulated by OSHA, including those regulated under OSHA’s general industry standards at 29 CFR part 1910. OSHA’s 1999 Multi-Employer Citation Policy explains which employers should be cited for a hazard that violates an OSHA standard (Ref. 40). The Policy describes four different roles that employers may fill at a workplace and describes who should be cited for a violation based on factors such as whether the employer created the hazard, had the ability to prevent or correct the hazard, and knew or should have known about the hazard. More than one employer may be cited for the same hazard. This final rule will have similar results, in that more than one owner or operator may be responsible for compliance.

The OSHA multi-employer citation policy is an example of a guidance governing situations where more than one regulated entity is present. EPA has received several requests for clarification of the applicability of the term “owner or operator” to sites where more than one entity owns, leases, or controls a workplace where a CTC condition of use is ongoing and where implementation of the WCPP or prescriptive controls is required. EPA understands that there are a wide variety of situations where these questions could arise, and plans to issue guidance consistent with TSCA authorities that explains how EPA will approach the issue of responsibility for implementation of, and compliance with, the WCPP requirements in practice.

B. Workplace Chemical Protection Program (WCPP)

1. Applicability

EPA is finalizing the WCPP for all of the conditions of use for which it was proposed, as well as for two additional uses related to vinyl chloride manufacturing within two conditions of use for which prohibition was proposed. EPA is also revising the description of industrial and commercial use of CTC related to chlorine production to clarify that both elimination of nitrogen trichloride in the production of chlorine and caustic soda and recovery of

chlorine in tail gas from the production of chlorine are subject to the WCPP. Additionally, EPA is revising the description of the Disposal COU to clarify the requirements of the WCPP at cleanup sites. Specifically, EPA has determined that at groundwater cleanup sites, the WCPP would apply to any potentially exposed person involved in the disposal of CTC-containing groundwater to industrial treatment, industrial pre-treatment, or POTWs. A potentially exposed person most likely includes a worker who is involved with the activity of removing CTC-containing groundwater from the location where it was found and the on-site treatment of the groundwater, typically referred to as *ex situ* remediation, which is most consistent with the scope of the 2020 CTC Risk Evaluation. *Ex situ* remediation includes both active and passive remediation methods that span traditional (e.g., pump and treat) and less traditional (e.g., phytoremediation) approaches, but only if the remediation method would be considered industrial wastewater pretreatment, industrial wastewater treatment or discharge to a publicly owned treatment work (POTW). EPA's descriptions of changes from the proposed rule in Unit III. The Agency explained why the WCPP addresses the unreasonable risk for certain conditions of use in Unit V. of the proposed rule (88 FR 49180, July 28, 2023) (FRL 8206–01–OCSPP).

EPA is finalizing the WCPP for the following conditions of use where manufacture and processing are not otherwise prohibited: domestic manufacturing (except where CTC is manufactured solely as a byproduct); import; processing as a reactant in the production of HCFCs, HFCs, HFOs, and PCE; processing; incorporation into formulation, mixture or reaction product in agricultural products manufacturing, vinyl chloride manufacturing, and other basic organic and inorganic chemical manufacturing; processing by repackaging for use as a laboratory chemical; recycling; industrial and commercial use as a processing aid in the manufacture of agricultural products and vinyl chloride; industrial and commercial use in the elimination of nitrogen trichloride in the production of chlorine and caustic soda and the recovery of chlorine in tail gas from the production of chlorine; and disposal. This unit provides a description of the conditions of use subject to the WCPP to assist with compliance.

a. Manufacturing

i. Domestic Manufacture

This condition of use refers to making or producing a chemical substance within the United States (including manufacturing for export), including the extraction of a component chemical substance from a previously existing chemical substance or a complex combination of substances. For purposes of this rule, WCPP requirements applicable to the manufacture of CTC do not apply where CTC is manufactured solely as a byproduct, because manufacture of CTC as a byproduct was not evaluated in the 2020 Risk Evaluation for Carbon Tetrachloride (Ref. 1). Under TSCA, EPA uses the term "byproduct" to refer to a chemical substance produced without a separate commercial intent during the manufacture, processing, use, or disposal of another chemical substance(s) or mixture(s) (see, e.g., 40 CFR 710.3(d), 720.3). A byproduct is distinguishable from a coproduct, which is a chemical substance produced for a commercial purpose during the manufacture, processing, use, or disposal of another chemical substance or mixture. CTC could be manufactured as a byproduct during the manufacturing of other chlorinated compounds. EPA anticipates that any risk presented by the presence of CTC as a byproduct will be considered in the scope of the risk evaluation of the parent chemical in future risk evaluations, such as the consideration of CTC as a byproduct in the 1,2-dichloroethane risk evaluation, as explained in Section 1.4.2.3 of the 2020 Risk Evaluation for Carbon Tetrachloride (Refs. 1, 41).

ii. Import

This condition of use refers to the act of causing a chemical substance or mixture to arrive within the customs territory of the United States. This condition of use includes loading/unloading and repackaging associated with import.

b. Processing

i. Processing as a Reactant in the Production of Hydrochlorofluorocarbons, Hydrofluorocarbons, Hydrofluoroolefins, and Perchloroethylene

This condition of use refers to processing CTC in chemical reactions for the manufacturing of another chemical substance or product. Through processing as a reactant or intermediate, CTC serves as a feedstock in the production of another chemical product

via a chemical reaction in which CTC is consumed. Currently, CTC is used as a reactant to manufacture HCFCs, HFCs, HFOs, and PCE, which are used in the making of a variety of products including refrigerants, aerosol propellants, and foam-blowing agents. The specifics of the reaction process (e.g., use and types of catalysts, reaction temperature) vary depending on the product being produced; however, a typical reaction process involves unloading CTC from containers and feeding into the reaction vessel(s), where CTC either completely or partially reacts with other raw materials to form the final product. Following the reaction, the product may be purified to remove unreacted CTC or other materials if needed. This condition of use includes reuse of CTC, including CTC that is not transformed as feedstock in other manufacturing processes, as a reactant.

ii. Processing: Incorporation Into Formulation, Mixtures, or Reaction Products for Agricultural Products Manufacturing; Vinyl Chloride Manufacturing; Other Basic Organic and Inorganic Chemical Manufacturing

This condition of use refers to the process of mixing or blending several raw materials to obtain a single product or preparation or formulation. CTC has historically been incorporated into formulation or mixtures to manufacture hydrochloric acid (HCl), vinyl chloride, ethylene dichloride (EDC), chloroform, hafnium tetrachloride, thiophosgene, and methylene chloride. CTC may be incorporated into various products and formulations at varying concentrations for further distribution. For example, CTC may be unloaded from transport containers either directly into mixing equipment or into an intermediate storage vessel either manually or through automation via a pumping system. Mixing of components can occur in either a batch or continuous system. The mixture that contains CTC may be used as a reactant to manufacture a chlorinated compound that is subsequently formulated into a product or a processing aid used to aid in the manufacture of formulated products. For the purposes of this rulemaking, EPA is allowing under the WCPP the continued incorporation of CTC into formulation, mixtures, or reaction products for agricultural products manufacturing, vinyl chloride manufacturing, the elimination of nitrogen trichloride in the production of chlorine and caustic soda, and the recovery of chlorine in tail gas from the production of chlorine.

iii. Processing: Repackaging for Use as a Laboratory Chemical

This condition of use refers to the physical transfer of a chemical substance or mixture, as is, from one container to another container or containers in preparation for distribution of the chemical substance or mixture in commerce. Depending on the product, formulation products may be filtered prior to packaging. Final packaging occurs either through manual dispensing from transfer lines or through utilization of an automatic system. Typically, repackaging sites receive the chemical in bulk containers and transfer the chemical from the bulk container into another smaller container in preparation for distribution in commerce.

iv. Processing: Recycling

This condition of use refers to the process of treating generated spent chemical (which would otherwise be disposed of as waste) that is collected on-site or transported to third-party sites for reclamation/recycling. Spent chemicals can be restored to a condition that permits reuse via reclamation/recycling. The recovery process may involve an initial vapor recovery or mechanical separation step followed by distillation, purification, and final packaging.

c. Industrial and Commercial Use

i. Industrial and Commercial Use as an Industrial Processing Aid in the Manufacture of Agricultural Products and Vinyl Chloride

A processing aid is a “chemical that is added to a reaction mixture to aid in the manufacture or synthesis of another chemical substance but is not intended to remain in or become part of the product or product mixture.” Additionally, processing agents are intended to improve the processing characteristics or the operation of process equipment, but not intended to affect the function of a substance or article created. CTC is used as a processing aid/agent to aid in the manufacture of formulated products, including agricultural chemicals and vinyl chloride. CTC has historically been used as a processing agent in the manufacture of chlorosulphonated polyolefin; styrene butadiene rubber; endosulfan (insecticide); 1–1 Bis (4-chlorophenyl) 2,2,2-trichloroethanol (dicofol insecticide); and tralomethrin (insecticide) (Ref. 1). For the purposes of this rulemaking, EPA is allowing under the WCPP the continued use of CTC as an industrial processing aid in the

manufacturing of agricultural products and vinyl chloride.

ii. Industrial and Commercial Use in the Elimination of Nitrogen Trichloride in the Production of Chlorine and Caustic Soda and the Recovery of Chlorine in Tail Gas From the Production of Chlorine

This condition of use refers to a specific use of CTC as a processing aid/agent in basic inorganic chemical manufacturing. For purposes of this rulemaking, EPA is allowing under the WCPP the continued use of CTC in the elimination of nitrogen trichloride in the production of chlorine and caustic soda and the recovery of chlorine in tail gas from the production of chlorine.

d. Disposal

This condition of use refers to the process of disposing waste streams of CTC that are collected either onsite (*e.g.* pumped out of the ground for treatment), or transported to a third-party site for treatment or their final disposition, such as waste incineration or landfilling. For this rule, the WCPP for the disposal of CTC-containing water and groundwater for purposes of cleanup projects of CTC-contaminated water and groundwater, including industrial pre-treatment and industrial treatment activities, applies to removing the groundwater from the location where it was located and treating the removed groundwater on site. The requirements of the WCPP apply to any potentially exposed person involved in the disposal of CTC-containing groundwater to industrial treatment, industrial pre-treatment, or POTWs. A potentially exposed person most likely includes a worker who is involved with the activity of removing CTC-containing groundwater from the location where it was found and the on-site treatment of the groundwater, typically referred to as *ex situ* remediation, which is most consistent with the scope of the 2020 CTC Risk Evaluation. *Ex situ* remediation includes both active and passive remediation methods that span traditional (*e.g.*, pump and treat) and less traditional (*e.g.*, phytoremediation) approaches, but only if the remediation method would be considered industrial wastewater pretreatment, industrial wastewater treatment or discharge to a publicly owned treatment work (POTW). A remediation method would need to be considered one of these three types of disposal to fall within the condition of use under TSCA for remediation sites managed by the Federal government and if not, would not be subject to the requirements of the rule. Further, while EPA considers solid

wastes as part of the waste streams included in the disposal COU, at groundwater remediation sites managed by the Federal government and under existing waste disposal requirements, the WCPP requirements under this rulemaking only apply to water contaminated with CTC, and any other type of CTC-impacted waste will be handled according to relevant existing requirements under RCRA and other statutes. The provisions of the WCPP for the disposal COU, including the ECEL, are not intended to cover potentially exposed persons who are sampling groundwater to monitor the presence of a plume, but specifically only those sampling at the site of extraction and treatment activities.

2. Overview

The WCPP for CTC encompasses an inhalation exposure limit and action level, DDCC, and the associated implementation requirements described in this unit, to ensure that the chemical substance no longer presents unreasonable risk. Under a WCPP, owners or operators have the ability to select controls, within the parameters outlined in this unit, regarding how they prevent exceedances of the identified EPA exposure limit thresholds or prevent direct dermal contact. In the case of CTC, meeting the EPA exposure limit threshold and implementing the DDCC requirements for certain occupational conditions of use would address the unreasonable risk to potentially exposed persons from inhalation and dermal exposure.

EPA is finalizing these requirements to apply beginning on June 11, 2026 for non-Federal owners or operators, or by June 21, 2027 for Federal agencies and Federal contractors acting for or on behalf of the Federal government, or within 30 days of introduction of CTC into the workplace, whichever is later, at which point entities would be required to complete initial monitoring (as described in Unit IV.B.3.b.). Additionally, EPA requires that each owner or operator ensure that no person is exposed to an airborne concentration of CTC that exceeds the ECEL as an 8-hour TWA, including by providing respirators to potentially exposed persons in the regulated area, no later than September 9, 2026 for non-Federal owners or operators, or no later than September 20, 2027 for Federal agencies and Federal contractors acting for or on behalf of the Federal government, or beginning four months after introduction of CTC into the workplace, whichever is later. EPA also requires each owner or operator to ensure all persons are separated, distanced,

physically removed, or isolated from direct dermal contact with CTC, including by providing dermal PPE, by June 16, 2025 for non-Federal owners or operators, or no later than September 20, 2027 for Federal agencies and Federal contractors acting for or on behalf of the Federal government. EPA also requires implementation of any needed exposure controls based on initial monitoring and development of an exposure control plan, which requires consideration and documented application of the hierarchy of controls, no later than December 3, 2027 (as described in Unit IV.B.5.).

EPA's implementation of the requirement to meet an ECEL as part of a WCPP aligns with, to the extent possible, certain elements of the existing OSHA standards for regulating toxic and hazardous substances under 29 CFR part 1910, subpart Z. However, EPA is finalizing as proposed a new, lower occupational exposure limit, derived from the TSCA 2020 Risk Evaluation for Carbon Tetrachloride (Refs. 1, 15). For CTC, this final rule will eliminate the unreasonable risk from CTC contributed to by the conditions of use subject to the WCPP, enable continued industry use where appropriate, and provide the familiarity of a pre-existing framework for the regulated community.

EPA's requirements include specific exposure limits and ancillary requirements necessary for successful implementation of an ECEL as part of a WCPP. Taken together, these WCPP requirements apply to the extent necessary so that the unreasonable risk from CTC under the conditions of use listed earlier in this unit would no longer be presented.

Unit IV. includes a summary of the WCPP, including a description of the finalized exposure limits including an ECEL and ECEL action level; implementation requirements including monitoring requirements; a description of potential exposure controls in accordance with the hierarchy of controls, including engineering controls, administrative controls, and PPE as it relates to respirator selection; and additional finalized requirements for recordkeeping and workplace participation. Additionally, Unit IV.B.4. describes DDCC requirements for CTC, including potential exposure controls, which consider the hierarchy of controls; PPE as it relates to dermal protection; and additional requirements finalized for recordkeeping. Unit IV. also describes changes to the proposed compliance timeframes, changes by EPA to certain provisions of the WCPP based on public comments, and addition of new provisions in the WCPP based on

public comments used to inform this final rule.

3. Existing Chemical Exposure Limit (ECEL)

To reduce exposures in the workplace and address the unreasonable risk of injury to health resulting from inhalation exposures to CTC identified under the occupational conditions of use in the TSCA 2020 Risk Evaluation for Carbon Tetrachloride, EPA is requiring an ECEL and ancillary requirements for all of the conditions of use identified in Unit IV.B.1.

a. ECEL and ECEL Action Level (AL)

EPA is finalizing as proposed an ECEL under TSCA section 6(a) of 0.03 ppm (0.2 mg/m³) for inhalation exposures to CTC as an 8-hour TWA based on the threshold POD for liver cancer (assuming a margin of exposure of 300) and the IUR for adrenal cancer. The ECEL memo includes linear risk calculations for adrenal gland tumors in the equation for "Cancer risk for other tumor types (e.g., adrenal glands) at the ECEL," showing that the ECEL is protective of all tumor types, including adrenal gland and brain tumors (Ref. 15). EPA has determined that ensuring exposures remain at or below the 8-hour TWA ECEL of 0.03 ppm will eliminate the unreasonable risk of injury to health for CTC resulting from acute and chronic inhalation exposures in an occupational setting (Ref. 15). If ambient exposures are kept at or below the 8-hour TWA ECEL of 0.03 ppm, a potentially exposed person will be protected against the effects described in this unit, including cancer, chronic non-cancer effects, and effects resulting from acute inhalation exposures (Ref. 15). In addition to the ECEL memo, to respond to public comments, EPA also explained that the ECEL is protective of short-term acute inhalation exposures (Refs. 11 and 15). EPA is finalizing requirements that each owner or operator ensure that the airborne concentration of CTC does not exceed the ECEL for all potentially exposed persons within 1,005 days after the date of publication of the final rule (*i.e.*, no later than September 20, 2027) for Federal agencies and Federal contractors acting for or on behalf of the Federal government, 630 days after the date of publication of the final rule in the **Federal Register** (*i.e.*, no later than September 9, 2026) for non-Federal owners and operators, or beginning four months after introduction of CTC into the workplace if CTC use commences at least 540 days after the date of publication (*i.e.*, the use commences on or after June 11, 2026).

EPA is finalizing an ECEL action level at 0.02 ppm as an 8-hour TWA for CTC. Below the ECEL action level, certain compliance activities, such as periodic monitoring, would be required less frequently, as described further in this unit. In this way, EPA's WCPP for CTC is consistent with the familiar framework that is in place in OSHA standards for regulating toxic and hazardous substances under 29 CFR 1910 Subpart Z that establish an action level, although the values differ due to differing statutory authority. As explained by OSHA, the action level provides employers and employees with greater assurance that their employees will not be exposed to concentrations above the PELs (Ref. 42).

In summary, EPA is finalizing as proposed with slight modification that owners or operators must ensure the airborne concentration of CTC within the personal breathing zone of potentially exposed persons remains at or below 0.03 ppm as an 8-hour TWA ECEL, with an action level finalized as 0.02 ppm as an 8-hour TWA. For purposes of this rulemaking, the personal breathing zone is consistent with how OSHA defines it as a hemispheric area forward of the shoulders within a six-to-nine-inch radius of a worker's nose and mouth and requires that exposure monitoring air samples be collected from within this space (Ref. 43). EPA is finalizing the ECEL for most occupational conditions of use to ensure that no person is exposed to inhalation of CTC in excess of these concentrations resulting from those conditions of use. EPA recognizes that the regulated community has the ability to detect the values for the ECEL because of viable detection limits and analytical methods of CTC for monitoring devices that are available in commerce, currently in use, which are as low as 4 micrograms per sample (Refs. 15, 44). For the purposes of this TSCA section 6(a) rulemaking, EPA will consider the use of methods for exposure monitoring (*i.e.*, NIOSH Method 1003) that produce results that are accurate, to a confidence level of 95 percent and within 25 percent (plus or minus) of airborne concentrations of CTC above 0.03 ppm ECEL, to be in compliance with this rule. EPA recognizes that current analytical methods may not measure CTC to below the action level of 0.02 ppm, particularly for short-term tasks; therefore, owners and operators will be required to monitor more frequently, as described further in this unit, until monitoring methods that measure to or below the action level become available.

b. Monitoring Requirements

i. Exposure Sampling

Initial monitoring for CTC is critical for establishing a baseline of exposure for potentially exposed persons; similarly, periodic exposure monitoring assures continued compliance over time so that potentially exposed persons are not exposed to levels that would result in an unreasonable risk of injury to health. Exposure monitoring could be suspended if certain conditions described in Unit IV. are met. Also, in some cases, a change in workplace conditions with the potential to impact exposure levels would warrant additional monitoring, which is also described.

EPA is finalizing with modifications from proposal its requirement that owners or operators determine each potentially exposed person's exposure by taking a personal breathing zone air sample of each potentially exposed person's exposure or by taking personal breathing zone air samples that are representative of each potentially exposed person with a similar exposure profile to chemical substance or mixture based on substantial similarity of tasks performed, the manner in which the tasks are performed, and the materials and processes with which they work (hereinafter identified as an "exposure group"). Personal breathing zone air samples are representative of the 8-hour TWA of all potentially exposed persons in an exposure group if the samples are of the full shift-exposure of at least one person who represents the highest potential CTC exposures in that exposure group. In addition, the initial monitoring will be required when and where the operating conditions are best representative of each potentially exposed person's full-shift exposures. Personal breathing zone air samples taken during one work shift may be used to represent potentially exposed person exposures on other work shifts where the owner or operator can document that the tasks performed and conditions in the workplace are similar across shifts. Additionally, air sampling is required to measure ambient concentrations for CTC without taking respiratory protections into account as sampling is being performed. For purposes of exposure monitoring requirements, owners and operators are only required to monitor potentially exposed persons that are expected to be present in the workplace.

EPA is also finalizing requirements that the owner or operator ensure that their exposure monitoring methods are accurate to a confidence level of 95% and are within (plus or minus) 25% of

airborne concentrations of CTC above the 8-hour TWA ECEL. To ensure compliance for monitoring activities, EPA is finalizing recordkeeping requirements and will require that owners or operators document their choice of monitoring method outlined in this unit. As described in Unit III.C.1., EPA is finalizing the requirement that owners or operators meet certain documentation requirements for each monitoring event of CTC, including compliance with GLP Standards in accordance with 40 CFR part 792 or use of a laboratory accredited by the AIHA (*e.g.*, AIHA LAP, LLC Policy Module 2A/B/E of Revision 17.3), or other analogous industry-recognized program. Additionally, as described in Unit III.C.1., EPA is finalizing the requirement that owners or operators must re-monitor within 15 working days after receipt of any exposure monitoring when results indicate non-detect, unless an Environmental Professional as defined at 40 CFR 312.10 or a Certified Industrial Hygienist reviews the monitoring results and determines re-monitoring is not necessary.

EPA is also finalizing the requirement that each owner or operator maintain exposure monitoring records that include the following information for each monitoring event:

- Dates, duration, and results of each sample taken.
- The quantity, location(s) and manner of use of CTC at the time of each monitoring event.
- All measurements that may be necessary to determine the conditions (*e.g.*, work site temperatures, humidity, ventilation rates, monitoring equipment type and calibration dates) that may affect the monitoring results.
- Name, workplace address, work shift, job classification, work area, and type of respiratory protection (if any) of each monitored person.
- Identification of all potentially exposed persons that a monitored person is intended to represent if using a representative sample.
- Use of appropriate sampling and analytical methods.
- Compliance with GLP Standards in accordance with 40 CFR part 792 or use of a laboratory accredited by AIHA (*e.g.*, AIHA LAP, LLC Policy Module 2A/B/E of Revision 17.3), or another analogous industry-recognized program.
- Information regarding air monitoring equipment, including: type, maintenance, calibrations, performance tests, limits of detection, and any malfunctions.
- Notification of exposure monitoring results to each person whose exposures

are monitored or who is part of a monitored exposure group.

ii. Initial Exposure Monitoring

Under the final regulation, each non-Federal owner or operator of a facility that is engaged in one or more of the conditions of use listed in Unit IV.B.1. will be required to perform initial exposure monitoring within 540 days after publication of the final rule in the **Federal Register** (*i.e.*, no later than June 11, 2026) or within 30 days of introduction of CTC into the workplace, whichever is later, to determine the extent of exposure of potentially exposed persons to CTC. As discussed in Unit III.B., EPA is providing additional time for Federal agencies and Federal contractors acting for or on behalf of the Federal government to comply with the provisions of the WCPP, so they will be required to conduct initial monitoring within 915 days after publication (*i.e.*, no later than June 21, 2027). Initial monitoring will notify owners and operators of the magnitude of possible exposures to potentially exposed persons with respect to their work conditions and environments. Based on the magnitude of possible exposures in the initial exposure monitoring, the owner or operator may need to increase or decrease the frequency of future periodic monitoring or adopt new exposure controls (such as engineering controls, administrative controls, and/or a respiratory protection program), as indicated in table 1. In addition, the initial monitoring will be required when and where the operating conditions are best representative of each potentially exposed person's work-shift exposures. If the owner or operator chooses to use a sample that is representative of potentially exposed persons' full shift exposures (rather than monitor every individual), such sampling should be representative (*i.e.*, taken from the breathing zone of potentially exposed persons and reflect duration-appropriate exposure) of the most highly exposed persons in the workplace. Additionally, EPA expects that owners and operators will conduct initial exposure monitoring representative of all tasks that a potentially exposed person will be expected to do. EPA understands that certain tasks may occur less frequently or may reflect accidental exposure (for example, due to malfunction).

EPA also recognizes that some entities may already have objective exposure monitoring data. If the owner or operator has monitoring data conducted within five years prior to 60 days following publication of the final rule in the **Federal Register** and the monitoring

satisfies all other requirements in Unit IV., including the requirement that the data represents the highest CTC exposures likely to occur under reasonably foreseeable conditions of use, the owner or operator may rely on such earlier monitoring results for the initial baseline monitoring sample. Prior monitoring data cannot be used where there has been a change in work conditions or practices that is expected to result in new or additional exposures.

As described in more detail later in Unit IV., the owner or operator must conduct periodic monitoring at least once every five years since its last monitoring. This periodic monitoring must be representative of all the potentially exposed persons in the workplace and the tasks that they are expected to do.

iii. Periodic Exposure Monitoring

EPA is finalizing the following periodic monitoring for owners or operators. These finalized requirements are also outlined in Table 1.

- If samples taken during the initial exposure monitoring reveal a concentration below the ECEL action level (<0.02 ppm 8-hour TWA), the owner or operator must repeat the periodic exposure monitoring at least once every five years.

- If the most recent exposure monitoring indicates that airborne exposure is above the ECEL (>0.03 ppm 8-hour TWA), the owner or operator must repeat the periodic exposure monitoring within three months of the most recent exposure monitoring.

- If the most recent exposure monitoring indicates that airborne exposure is at or above the ECEL action level (≥ 0.02 ppm 8-hour TWA) but at or below the ECEL (≤ 0.03 ppm 8-hour TWA), the owner or operator must repeat the periodic exposure monitoring within six months of the most recent exposure monitoring.

- If the most recent (non-initial) exposure monitoring indicates that airborne exposure is below the ECEL action level, the owners or operators

must repeat such monitoring within six months of the most recent monitoring until two consecutive monitoring measurements, taken at least seven days apart, are below the ECEL action level (<0.02 ppm 8-hour TWA), at which time the owner or operator must repeat the periodic exposure monitoring at least once every five years.

- In instances where an owner or operator does not manufacture, process, use, or dispose of CTC for a condition of use for which the WCPP is required over the entirety of time since the last required periodic monitoring event, EPA is requiring that the owner or operator would be permitted to forgo the next periodic monitoring event. However, documentation of cessation of use of CTC would be required and periodic monitoring would be required to resume when the owner or operator restart any of the conditions of use listed in Unit IV.B.1.

TABLE 1—PERIODIC MONITORING REQUIREMENTS

Air concentration condition	Periodic monitoring requirement
If initial exposure monitoring is below the ECEL action level (<0.02 ppm 8-hour TWA).	Periodic exposure monitoring is required at least once every five years.
If the most recent exposure monitoring indicates that airborne exposure is above the ECEL (>0.03 ppm 8-hour TWA).	Periodic exposure monitoring is required within three months of the most recent exposure monitoring.
If the most recent exposure monitoring indicates that airborne exposure is at or above the ECEL action level but at or below the ECEL (≥ 0.02 ppm 8-hour TWA, ≤ 0.03 ppm 8-hour TWA).	Periodic exposure monitoring is required within six months of the most recent exposure monitoring.
If the two most recent (non-initial) exposure monitoring measurements, taken at least seven days apart within a 6-month period, indicate exposure is below the ECEL action level (<0.02 ppm 8-hour TWA).	Periodic exposure monitoring is required within five years of the most recent exposure monitoring.
If the owner or operator engages in a condition of use for which WCPP ECEL would be required but does not manufacture, process, use, or dispose of CTC in that condition of use over the entirety of time since the last required monitoring event.	The owner or operator may forgo the next periodic monitoring event. However, documentation of cessation of use of CTC is required and periodic monitoring would be required when the owner or operator resumes the condition of use.

Note: Additional scenarios in which monitoring may be required are discussed in Unit IV.B.3.b.iv.

iv. Additional Exposure Monitoring

EPA is finalizing that each owner or operator conduct additional exposure monitoring within a reasonable timeframe after there has been a change in the production, process, control equipment, personnel or work practices may reasonably be expected to result in new or additional exposures at or above the ECEL, or when the owner or operator has any reason to believe that new or additional exposures at or above the ECEL action level have occurred, for example if an owner or operator receives information from potentially exposed person(s) suggesting that such new or additional exposures may have occurred. In the event of start-up or shutdown, or ruptures, malfunctions or other breakdowns or unexpected releases that may lead to exposure to

potentially exposed persons, EPA is finalizing that each owner or operator must conduct exposure monitoring of potentially exposed persons (using personal breathing zone sampling) within a reasonable timeframe after the conclusion of the start-up or shutdown and/or the cleanup, repair or remedial action of the malfunction or other breakdown or unexpected release. EPA is also requiring that the owner or operator document that additional monitoring was completed within a reasonable timeframe. At this time, EPA is not finalizing a specific compliance timeframe for completion of additional monitoring when there has been a change in the production, process, control equipment, personnel or work practices, or in the event of start-up or shutdown, or ruptures, malfunctions or

other breakdowns or unexpected releases that may lead to exposure to potentially exposed persons; however, other TSCA section 6(a) rules are finalizing a compliance timeframe of 30 days for additional monitoring in these cases, and such timeframe would be an indication of what EPA considers likely to be reasonable in most cases when these changes are made at facilities that use CTC or in the event of these potential releases of CTC. An additional exposure monitoring event may result in an increased frequency of periodic monitoring. For example, if the initial monitoring results from a workplace are above the ECEL action level, but below the ECEL, periodic monitoring is required every six months. If additional monitoring is performed because increased exposures are suspected, and

the results are above the ECEL, subsequent periodic monitoring would have to be performed every three months. The required additional exposure monitoring should not delay implementation of any necessary cleanup or other remedial action to reduce the exposures to persons in the workplace.

c. Regulated Area

EPA is finalizing its requirement that the owner or operator demarcate any area where airborne concentrations of CTC exceed, or are reasonably expected to exceed the ECEL. To provide more clarity regarding how regulated areas must be demarcated, EPA has incorporated the language analogous to OSHA's regulated area requirements under the standards for toxic and hazardous substances (29 CFR part 1910, subpart Z) into this final rule. Owners and operators must demarcate regulated areas from the rest of the workplace in any manner that adequately establishes and alerts potentially exposed persons to the boundaries of the area and minimizes the number of authorized persons exposed to CTC within the regulated area. This can be accomplished using administrative controls (e.g., highly visible signifiers) in multiple languages as appropriate (e.g., when potentially exposed persons who primarily speak a language other than English are present, owners and operators should post additional highly visible signifiers in the language of the largest group of workers who cannot readily comprehend or read English), placed in conspicuous areas. The owner or operator is required to restrict access to the regulated area from any potentially exposed person that lacks proper training or is otherwise unauthorized to enter.

d. Notification of Monitoring Results

EPA is finalizing the requirement that the owner or operator must, within 15 working days after the receipt of the results of any exposure monitoring, notify each potentially exposed person whose exposure is represented by that monitoring and their designated representatives in writing, either individually to each potentially exposed person or by posting the information in an appropriate and accessible location, such as public spaces or common areas, for potentially exposed persons outside of the regulated area. The notice would be required to identify the exposure monitoring results, the ECEL and ECEL action level and what they mean in plain language, statement of whether the monitored airborne concentration of

CTC exceeds the ECEL and ECEL action level, and any corresponding respiratory protection required. If the ECEL is exceeded, the notice must also include a description of the actions taken by the owner or operator to reduce inhalation exposures to or below the ECEL. The notice must also include the quantity, location, manner of CTC use, and identified releases of CTC that could result in exposure to CTC at the time of monitoring. The notice must be posted in multiple languages if necessary (e.g., notice must be in a language that the potentially exposed person understands, including a non-English language version representing the language of the largest group of workers who cannot readily comprehend or read English).

4. Direct Dermal Contact Control (DDCC) Requirements

To reduce exposures in the workplace and address the unreasonable risk of injury to health resulting from dermal exposures to CTC identified under the occupational conditions of use in the TSCA 2020 Risk Evaluation for CTC, EPA is finalizing DDCC requirements for all of the conditions of use identified in Unit IV.B.1. EPA is finalizing its requirements that owners or operators must separate, distance, physically remove, or isolate all person(s) from direct handling of CTC or from skin contact with surfaces that may be contaminated with CTC (i.e., equipment or materials on which CTC may be present) under routine conditions in the workplace (hereafter referred to as direct dermal contact) within 180 days after the date of publication of the final rule in the **Federal Register** (i.e., June 16, 2025) for non-Federal owners or operators, or within 1,005 days after the date of publication of the final rule in the **Federal Register** (i.e., September 20, 2027) for Federal agencies and Federal contractors acting for or on behalf of the Federal government. The 2020 Risk Evaluation for Carbon Tetrachloride identified that unreasonable risk to workers is also driven by the dermal exposure, specifically from direct skin contact with CTC; risk exceeding the benchmark was identified even when considering use of chemically resistant gloves in most commercial and industrial conditions of use. EPA has determined that preventing direct dermal contact will eliminate the unreasonable risk of injury to health resulting from dermal exposures for certain occupational conditions of use of CTC. See the proposed rule for EPA's description of how the requirements related to DDCC would address the unreasonable risk resulting from dermal exposures and the rationale for this

regulatory approach in Units III.B.4. and V.A. of the proposed rule. and V.A. of the proposed rule.

5. Exposure Control Plan

EPA is finalizing its requirement that entities implementing the WCPP adopt feasible exposure controls, including one or a combination of elimination, substitution, engineering controls, and administrative controls, prior to requiring the use of PPE (i.e., respirators or gloves) as a means of controlling exposures below EPA's ECEL and/or prevent directing dermal contact with CTC for all potentially exposed persons, in accordance with the hierarchy of controls (Ref. 6). If an owner or operator chooses to replace CTC with a substitute, EPA recommends careful review of the available hazard and exposure information on the potential substitutes to avoid a substitute chemical that might later be found to present an unreasonable risk of injury to health or the environment under its conditions of use or be subject to regulation (sometimes referred to as a "regrettable substitution"). EPA expects that, for conditions of use for which EPA is finalizing a WCPP, compliance at most workplaces would be part of an established industrial hygiene program that aligns with the hierarchy of controls.

Examples of engineering controls that may prevent or reduce the potential for direct dermal contact include automation, physical barriers between contaminated and clean work areas, enclosed transfer liquid lines (with purging mechanisms in place (e.g., nitrogen, aqueous) for operations such as product changes or cleaning), and design of tools (e.g., a closed-loop container system providing contact-free connection for unloading fresh and collecting spent solvents, pneumatic tools, tongs, funnels, glove bags, etc.). Examples of administrative controls that may prevent or reduce the potential for direct dermal contact include adjusting work practices (i.e., implementing policies and procedures) such as providing safe working distances from areas where direct handling of CTC may occur.

EPA is finalizing the requirement that regulated entities use the hierarchy of controls, instituting one or a combination of controls to the extent feasible, and supplement such protections using PPE, where necessary, including respirators for potentially exposed persons at risk of inhalation exposure above the ECEL and dermal PPE for persons potentially exposed through direct dermal contact to CTC. If efforts of elimination, substitution,

engineering controls, and administrative controls are not sufficient to reduce exposures to or below the ECEL or prevent direct dermal contact for all potentially exposed persons in the workplace, EPA requires that the owner or operator use feasible controls to reduce CTC concentrations in the workplace to the lowest levels achievable and supplement these controls with respiratory protection and dermal PPE as needed to achieve the ECEL or prevent direct dermal contact. In such cases, EPA requires that the owner or operator provide potentially exposed persons reasonably likely to be exposed to CTC by inhalation to concentrations above the ECEL with respirators affording sufficient protection against inhalation risk and appropriate training on the proper use of such respirators, to ensure that their exposures do not exceed the ECEL as described in Unit IV. EPA also requires that the owner or operator provides potentially exposed persons reasonably likely to be exposed to CTC by direct dermal contact with dermal protection affording sufficient protection against dermal risk and appropriate training on the proper use of dermal protection, as described in this unit. As part of the training requirement, the owner or operator is required to provide information and comprehensive training in an understandable manner (*i.e.*, plain language), considering factors such as the skills required to perform the work activity and the existing skill level of the staff performing the work, and in multiple languages as appropriate (*e.g.*, based on languages spoken by potentially exposed persons) to potentially exposed persons. This training must be provided prior to or at the time of initial assignment to a job involving potential exposure to CTC. Furthermore, EPA also requires that the owner or operator document their efforts in using elimination, substitution, engineering controls, and administrative controls to reduce exposure to or below the ECEL in an exposure control plan.

The Agency understands that certain engineering controls can reduce exposures to people inside the workplace but may lead to increased ventilation of CTC outside of the workplace. Increasing CTC releases to the ambient air could lead to increasing risks to people in fenceline communities of adverse health effects from exposures to CTC in ambient air. Therefore, as proposed, and considering the effects of CTC on health and the magnitude of the exposure of human beings, as required by TSCA section

6(c)(2)(A)(i), EPA is prohibiting increased releases of CTC to outdoor air associated with the implementation of the WCPP/ECEL. This requirement is intended to avoid unintended increases in exposures to people from CTC emissions to ambient air. Owners and operators are required to attest in their WCPP/ECEL exposure control plan that engineering controls selected do not increase emissions of CTC to ambient air outside of the workplace and document in their exposure control plan whether additional equipment was installed to capture emissions of CTC to ambient air. Owners and operators may institute air emissions monitoring or modeling to assist with meeting this requirement.

EPA is finalizing its requirement that the owner or operator include and document in the exposure control plan or through any existing documentation of the facility's safety and health program developed as part of meeting OSHA requirements or other safety and health standards, the following:

- Identification in the exposure control plan of available exposure controls that were considered and rationale for using or not using available exposure controls in the following sequence (*i.e.*, elimination and substitution, then engineering controls and administrative controls) to reduce exposures in the workplace to either at or below the ECEL or to the lowest level achievable and to prevent or reduce direct dermal contact with CTC in the workplace;
 - For each exposure control considered, exposure controls selected based on feasibility, effectiveness, and other relevant considerations;
 - A description of actions the owner or operator must take to implement exposure controls selected, including proper installation, regular inspections, maintenance, training, or other steps taken;
 - A description of regulated areas, how they are demarcated, and persons authorized to enter the regulated areas;
 - Attestation that exposure controls selected do not increase emissions of CTC to ambient air outside of the workplace and whether additional equipment was installed to capture or otherwise prevent increased emissions of CTC to ambient air;
 - A description of activities conducted by the owner or operator to review and update the exposure control plan to ensure effectiveness of the exposure controls, identify any necessary updates to the exposure controls, and confirm that all persons are properly implementing the exposure controls; and

- An explanation of the procedures for responding to any change that may reasonably be expected to introduce additional sources of exposure to CTC, or otherwise result in increased exposure to CTC, including procedures for implementing corrective actions to mitigate exposure to CTC.

Under this final rule, owners or operators are prohibited from using rotating work schedules to comply with the ECEL 8-hour TWA, in alignment with certain elements of existing OSHA's standards for toxic substances under 29 CFR part 1910, subpart Z. Owners or operators must maintain the effectiveness of any engineering and administrative controls instituted as part of the exposure control plan. They must also review and update the exposure control plan as necessary, but at least every five years, to reflect any significant changes in the status of the owner or operator's approach to compliance with the exposure control requirements. EPA intends that the exposure control plan identify the *available* exposure controls and, for the exposure controls not selected, document the efforts identifying why these are not feasible, not effective, or otherwise not implemented. For entities for which significant amounts of time are needed to verify suitability of alternatives or procure funds or authorization for additional engineering controls, for example, EPA expects that as those controls become available the exposure control plan would be updated accordingly. EPA requires that the exposure control plan be revisited under certain conditions (and at least every five years) and encourages updates as more sophisticated controls are available.

This final rule requires owners or operators to make the exposure control plan and associated records, including ECEL exposure monitoring records, ECEL compliance records, DDCC compliance records, and workplace participation records, available to potentially exposed persons and their designated representatives. Owners or operators must notify potentially exposed persons and their designated representatives of the availability of the exposure control plan and associated records within 30 days of the date that the exposure control plan is completed and at least annually thereafter. The notice of the availability of the plan and associated records must be provided in plain language writing to each potentially exposed person in a language that the person understands or posted in an appropriate and accessible location outside the regulated area with an English-language version and a non-

English version representing the language of the largest group of workers who do not read English. This final rule also requires the owner or operator to provide the exposure control plan and associated records at a reasonable time, place, and manner to a potentially exposed person or their designated representative upon request. As explained in Unit III.C.2., if the owner or operator is unable to provide the specified records within 15 days, the owner or operator must inform the potentially exposed person or designated representative requesting the record within 15 days that reason for the delay and the earliest date when the record will be made available.

6. Personal Protective Equipment (PPE)

Where elimination, substitution, engineering controls, and administrative controls are not feasible to reduce the air concentration to or below the ECEL and/or prevent direct dermal contact with CTC for all potentially exposed persons, EPA is finalizing as proposed with slight modifications to improve clarity or for greater consistency with OSHA's regulations to require owners and operators to provide PPE, including respiratory protection and dermal protection selected in accordance with the guidelines described in this unit, and to implement a PPE program. This unit includes a description of the PPE program, including required PPE as it relates to respiratory protection, required PPE as it relates to dermal protection, and other requirements such as additional training for respirators and recordkeeping to support implementation of a PPE program.

a. Respiratory Protection

Where elimination, substitution, engineering, and administrative controls are not feasible or sufficiently protective to reduce the air concentration to or below the ECEL, or if inhalation exposure above the ECEL is still reasonably likely, EPA is finalizing, with slight modification from the proposal, minimum respiratory PPE requirements based on an owner or operator's most recent measured air concentration for one or more potentially exposed persons and the level of PPE needed to reduce exposure to or below the ECEL. In those circumstances, EPA is finalizing the requirements for a respiratory protection PPE program with worksite-specific procedures and elements for required respirator use. Owners or operators must develop and administer a written respiratory protection program in accordance with OSHA's respiratory protection standard under 29 CFR

1910.134(c)(1), (c)(3), and (c)(4). EPA is finalizing requirements that owners and operators provide training to all persons required to use respiratory protection consistent with 29 CFR 1910.134(k) prior to or at the time of initial assignment to a job involving potential exposure to CTC. Owners and operators must retrain all persons required to use PPE at least annually, or whenever the owner or operator has reason to believe that a previously trained person does not have the required understanding and skill to properly use PPE, or when changes in the workplace or in PPE to be used render the previous training obsolete.

EPA is finalizing requirements that each owner or operator supply a respirator, selected in accordance with requirements described in this unit, to each person who enters a regulated area within 1,005 days after the date of publication of the final rule in the **Federal Register** (*i.e.*, no later than September 20, 2027) for Federal agencies and Federal contractors acting for or on behalf of the Federal government, 630 days after the date of publication of the final rule in the **Federal Register** (*i.e.*, no later than September 9, 2026) for non-Federal owners and operators, or within three months after the receipt of any exposure monitoring that indicates exposures exceeding the ECEL, and thereafter must ensure that all persons within the regulated area are using the provided respirators whenever CTC exposures exceed or can reasonably be expected to exceed the ECEL.

EPA is also finalizing requirements that owners or operators who are required to administer a respiratory protection PPE program must supply a respirator based on a medical evaluation consistent with the requirements of 29 CFR 1910.134(e). If a potentially exposed person cannot use a negative-pressure respirator, then the owner or operator must provide that person with an alternative respirator. The alternative respirator must have less breathing resistance than the negative-pressure respirator and provide equivalent or greater protection. If the person is unable to use an alternative respirator, then the person must not be permitted to enter the regulated area. Additionally, EPA is requiring owners and operators to select respiratory protection that properly fits each affected person and communicate respirator selections to each affected person in accordance with the requirements of 29 CFR 1910.134(f). Consistent with requirements of 29 CFR 1910.134(g) through (j), EPA is requiring owners and operators to provide, ensure use of, and maintain (in a sanitary,

reliable, and undamaged condition) respiratory protection that is of safe design and construction. EPA is also requiring owners and operators to provide training to all persons required to use respiratory protection consistent with the requirements of 29 CFR 1910.134(k).

EPA is finalizing the requirements to establish minimum respiratory protection requirements, such that any respirator affording a higher degree of protection than the following requirements may be used. In instances where respiratory protection is appropriate, NIOSH Approved® equipment must be used. NIOSH Approved is a certification mark of the U.S. Department of Health and Human Services (HHS) registered in the United States and several international jurisdictions. EPA is finalizing the following requirements for respiratory protection, based on the most recent exposure monitoring concentration results measured as an 8-hour TWA that exceed the ECEL (0.03 ppm):

- If the measured exposure concentration is at or below 0.03 ppm: no respiratory protection is required.
- If the measured exposure concentration is above 0.03 ppm and less than or equal to 0.3 ppm (10 times ECEL): Any NIOSH Approved air-purifying half mask respirator equipped with organic vapor cartridges or canisters; or any NIOSH Approved Supplied-Air Respirator (SAR) or Airline Respirator operated in demand mode equipped with a half mask; or any NIOSH Approved Self-Contained Breathing Apparatus (SCBA) in a demand mode equipped with a half mask [APF 10].
- If the measured exposure concentration is above 0.3 ppm and less than or equal to 0.75 ppm (25 times ECEL): Any NIOSH Approved Powered Air-Purifying Respirator (PAPR) equipped with a loose-fitting facepiece or hood/helmet equipped with organic vapor cartridges or canisters; or any NIOSH Approved SAR or Airline Respirator in a continuous-flow mode equipped with a loose-fitting facepiece or helmet/hood [APF 25].
- If the measured exposure concentration is above 0.75 ppm and less than or equal to 1.5 ppm (50 times ECEL): Any NIOSH Approved air-purifying full facepiece respirator equipped with organic vapor cartridges or canisters; any NIOSH Approved PAPR with a half mask equipped with organic vapor cartridges or canisters; any NIOSH Approved SAR or Airline Respirator in a continuous flow mode equipped with a half mask; any NIOSH Approved SAR or Airline Respirator

operated in a pressure-demand or other positive-pressure mode with a half mask; or any NIOSH Approved SCBA in demand-mode equipped with a full facepiece or helmet/hood [APF 50].

- If the measured exposure concentration is above 1.5 ppm and less than or equal to 30 ppm (1,000 times ECEL): Any NIOSH Approved PAPR equipped with a full facepiece equipped with organic vapor cartridges or canisters; any NIOSH Approved SAR or Airline Respirator in a continuous-flow mode equipped with full facepiece; any NIOSH Approved SAR or Airline Respirator in pressure-demand or other positive-pressure mode equipped with a full facepiece and an auxiliary self-contained air supply; or any NIOSH Approved SAR or Airline Respirator in a continuous-flow mode equipped with a helmet or hood and has been tested to demonstrate performance at a level of a protection of APF 1,000 or greater. [APF 1,000].

- If the measured exposure concentration is greater than 30 ppm (1,000+ times ECEL): Any NIOSH Approved SCBA equipped with a full facepiece, hood, or helmet and operated in a pressure demand or other positive pressure mode [APF 10,000].

- If the exposure concentration is unknown: Any NIOSH Approved combination supplied air respirator equipped with a full facepiece and operated in pressure demand or other positive pressure mode with an auxiliary self-contained air supply; or any NIOSH Approved SCBA operated in pressure demand or other positive pressure mode and equipped with a full facepiece or hood/helmet [APF 1000+].

Additionally, EPA is finalizing requirements that owners or operators select and provide respirators in accordance with the requirements of 29 CFR 1910.134(d)(1)(iv) and with consideration of workplace and user factors that affect respirator performance and reliability.

EPA is requiring that the owner or operator must ensure that all filters, cartridges, and canisters used in the workplace are labeled and color coded per NIOSH requirements and that the label is not removed and remains legible. Consistent with 29 CFR 1910.134(d)(3)(iii), EPA is requiring either the use of NIOSH Approved respirators with an end-of-life service indicator for the contaminant, in this case CTC, or implementation of a change schedule for canisters and cartridges that ensures that they are changed before the end of their service life. EPA is also requiring owners and operators to ensure that respirators are

used in compliance with the terms of the respirator's NIOSH approval.

EPA is finalizing requirements that owners and operators must conduct regular evaluations of the workplace, including consultations with potentially exposed persons using respiratory protection, consistent with the requirements of 29 CFR 1910.134(l), to ensure that the provisions of the written respiratory protection program described in this unit are being effectively implemented.

EPA is finalizing the requirement that owners and operators document respiratory protection used and PPE program implementation. EPA is finalizing requirements that owners and operators document in the exposure control plan or other documentation of the facility's safety and health program information relevant to the respiratory program, including records on the name, workplace address, work shift, job classification, work area, and type of respirator worn (if any) by each potentially exposed person, maintenance, fit-testing, and training as described in this unit.

b. Dermal Protection

As described in this unit EPA is finalizing requirements that each owner or operator supply dermal PPE that separates and provides a barrier to prevent direct dermal contact with CTC, selected in accordance with requirements described in this unit, to each person who is reasonably likely to be dermally exposed in the work area through direct dermal contact within 1,005 days after the date of publication of the final rule in the **Federal Register** (*i.e.*, no later than September 20, 2027) for Federal agencies and Federal contractors acting for or on behalf of the Federal government, or 180 days after the date of publication of the final rule in the **Federal Register** (*i.e.*, no later than June 16, 2025) for non-Federal owners and operators. Where elimination, substitution, engineering controls, and administrative controls are not feasible or sufficient to fully prevent direct dermal contact with CTC, EPA is finalizing requirements that appropriate dermal PPE be provided by owners and operators to, and be worn by, persons potentially exposed to direct dermal contact with CTC. EPA is requiring owners and operators to provide dermal PPE that is of safe design and construction for the work to be performed. EPA is also requiring owners and operators ensure each potentially exposed person who is required to wear PPE to use and maintain PPE in a sanitary, reliable, and undamaged condition. Additionally, EPA is

requiring owners and operators to select and provide PPE that properly fits each potentially exposed person who is required to use PPE and communicate PPE selections to each affected person.

In choosing appropriate dermal PPE, EPA is requiring owners and operators to select gloves, clothing, and protective gear (which covers any exposed dermal area of arms, legs, torso, and face) based on specifications from the manufacturer or supplier or individually prepared third party testing that demonstrate an impervious barrier to CTC during expected durations of use and normal conditions of exposure within the workplace, accounting for potential chemical permeation or breakthrough times. EPA is also requiring that owners and operators demonstrate that the selected PPE will be impervious for the expected duration and conditions of exposure, such as using the format specified in ASTM F1194–99(2010) “Standard Guide for Documenting the Results of Chemical Permeation Testing of Materials Used in Protective Clothing Materials,” reporting cumulative permeation rate as a function of time, or equivalent manufacturer- or supplier-provided testing. In alignment with the OSHA Hand Protection PPE Standard (29 CFR 1910.138), EPA is requiring owners and operators to select dermal PPE based on an evaluation of the performance characteristics of the PPE relative to the task(s) to be performed, conditions present, and the duration of use. EPA is also requiring owners and operators to consider likely combinations of chemical substances to which the clothing may be exposed in the work area when selecting the appropriate PPE such that the PPE will prevent direct dermal contact to CTC.

For example, owners and operators can select gloves that have been tested in accordance with the American Society for Testing and Materials (ASTM) F739 “Standard Test Method for Permeation of Liquids and Gases through Protective Clothing Materials under Conditions of Continuous Contact.” EPA is finalizing that PPE be provided for use for a time period only to the extent and no longer than the time period for which testing has demonstrated that the PPE will be impervious during expected durations of use and conditions of exposure. EPA is finalizing requirements that owners and operators also consider other factors when selecting appropriate PPE, including effectiveness of glove type when preventing exposures from CTC alone and in likely combination with other chemical substances used in the work area or when used with glove liners, permeation, degree of dexterity

required to perform task, and temperature, as identified in the Hand Protection section of OSHA's Personal Protective Equipment Guidance (Ref. 45).

EPA is finalizing that owners and operators establish, either through manufacturer or supplier-provided documentation or individually prepared third party testing that the selected PPE will be impervious for the expected duration and conditions of exposure, such as using the format specified in ASTM F1194–99(2010) "Standard Guide for Documenting the Results of Chemical Permeation Testing of Materials Used in Protective Clothing Materials," reporting cumulative permeation rate as a function of time, or equivalent manufacturer- or supplier-provided testing. EPA is also requiring owners and operators to consider likely combinations of chemical substances to which the clothing may be exposed in the work area when selecting the appropriate PPE such that the PPE will prevent direct dermal contact to CTC. Degradation may also be appropriate to consider in the context of combination chemical exposures, as some glove types and materials may demonstrate efficient permeation barrier results but may not be fully resistant to degradation from the chemical exposure. Degradation can be evaluated using standard test methods such as select test methods within ASTM Method D 471 Standard Test Method for Rubber Property—Effect of Liquids (e.g., ASTM D412 Standard Test Methods for Vulcanized Rubber and Thermoplastic Elastomers-Tension). EPA is finalizing requirements that PPE must be immediately provided and replaced if any person is dermally exposed to CTC longer than the breakthrough time period for which testing has demonstrated that the PPE will be impermeable or if there is a chemical permeation or breakage of the PPE.

Additionally, EPA is finalizing requirements that owners and operators subject to this rule comply with provisions of 29 CFR 1910.133(b) for requirements on selection and use of eye and face protection.

Additionally, as part of the PPE program, EPA is also finalizing that owners and operators must comply with OSHA's general PPE training requirements at 29 CFR 1910.132(f) for application of a PPE training program, including providing training on proper use of dermal PPE (e.g., when and where PPE is necessary, proper application, wear, and removal of PPE, maintenance, useful life and disposal of PPE). EPA is finalizing that owners and operators provide PPE training to all

persons required to use dermal PPE prior to or at the time of initial assignment to a job involving potential exposure to CTC. Owners and operators have to re-train each affected person at least once annually or whenever the owner or operator has reason to believe that a previously trained person does not have the required understanding and skill to properly use PPE, or when changes in the workplace or in the PPE to be used render the previous training obsolete.

EPA is also finalizing requirements that owners and operators retain records of dermal PPE used and program implementation. EPA is requiring that owners and operators document in the exposure control plan or other documentation of the facility's safety and health program, information relevant to any dermal PPE program, as applicable, including:

- The name, workplace address, work shift, job classification, and work area of each person reasonably likely to directly handle CTC or handle equipment or materials on which CTC may present and the type of PPE selected to be worn by each of these persons;
- The basis for specific PPE selection (e.g., demonstration based on permeation testing or manufacturer specifications that each item of PPE selected provides an impervious barrier to prevent exposure during expected duration and conditions of exposure, including the likely combinations of chemical substances to which the PPE may be exposed in the work area);
- Appropriately sized PPE and training on proper application, wear, and removal of PPE, and proper care/disposal of PPE;
- Occurrence and duration of any direct dermal contact with CTC that occurs during any activity or malfunction at the workplace that causes direct dermal exposures to occur and/or glove breakthrough, and corrective actions to be taken during and immediately following that activity or malfunction to prevent direct dermal contact to CTC; and
- Training described in this unit.

7. Additional Finalized Requirements

a. Workplace Information and Training

EPA is also finalizing its requirements to implement a training program in alignment with the OSHA Hazard Communication Standard (29 CFR 1910.1200) and the OSHA General Industry Standard for Methylene Chloride (29 CFR 1910.1052). To ensure that potentially exposed persons in the workplace are informed of the hazards associated with CTC exposure, EPA is

finalizing as proposed with slight modification to require that owners or operators of workplaces subject to the WCPP institute a training and information program for potentially exposed persons and assure their participation in the training and information program within 1,005 days after the date of publication of the final rule in the **Federal Register** (i.e., no later than September 20, 2027) for Federal agencies and Federal contractors acting for or on behalf of the Federal government, or 630 days after the date of publication of the final rule in the **Federal Register** (i.e., no later than September 9, 2026) for non-Federal owners and operators. For purposes of workplace information and training, owners and operators are only required to train potentially exposed persons that are expected to be present in the workplace or to directly handle CTC or handle equipment or materials on which CTC may present.

As part of the training and information program, the owner or operator is required to provide information and comprehensive training in an understandable manner (i.e., plain language) and in multiple languages as appropriate (e.g., based on languages spoken by potentially exposed persons) to potentially exposed persons prior to or at the time of initial assignment to a job involving potential exposure to CTC. Owners and operators are required to provide information and training, as referenced in the OSHA Hazard Communication Standard, to all potentially exposed persons that includes:

- The requirements of the CTC WCPP and how to access or obtain a copy of the requirements of the WCPP, including but not limited to the exposure control plan, monitoring requirements, and PPE program;
- The quantity, location, manner of use, release, and storage of CTC and the specific operations in the workplace that could result in CTC exposure, particularly noting where each regulated area is located;
- Principles of safe use and handling of CTC in the workplace, including specific measures the owner or operator has implemented to reduce inhalation exposure at or below the ECEL or prevent dermal contact with CTC, such as work practices and PPE used;
- The methods and observations that may be used to detect the presence or release of CTC in the workplace (such as monitoring conducted by the owner or operator, continuous monitoring devices, visual appearance or odor of CTC when being released, etc.); and

- The acute and chronic health hazards of CTC as detailed on relevant Safety Data Sheets (SDSs).

In addition to providing training at the time of initial assignment to a job involving potential exposure to CTC, owners and operators subject to the CTC WCPP are required to re-train each potentially exposed person as necessary, but at a minimum annually, to ensure they understand the principles of safe use and handling of CTC in the workplace. The owner or operator would consider factors such as the skills required to perform the work activity and the existing skill level of the staff performing the work. EPA is finalizing its requirements that owners and update the training as necessary whenever there are changes in the workplace, such as new tasks or modifications of tasks, in particular, whenever there are changes in the workplace that increase exposure to CTC or where potentially exposed persons' exposure to CTC can reasonably be expected to exceed the action level or increase the potential for direct dermal contact with CTC. To support compliance, EPA is finalizing that each owner or operator of a workplace subject to the WCPP would be required to provide to the EPA, upon request, all available materials related to workplace information and training.

b. Workplace Participation

EPA encourages owners and operators to consult with potentially exposed persons and their designated representative on the development and implementation of exposure control plans and PPE/respirator programs. EPA is finalizing a requirement that owners and operators provide potentially exposed persons and their designated representatives regular access to the exposure control plans, exposure monitoring records, and PPE program implementation records. To ensure compliance with workplace participation, EPA is finalizing a requirement that the owner or operator document the notice to and ability of any potentially exposed person that may reasonably be affected by CTC exposure to readily access the exposure control plans, facility exposure monitoring records, PPE program implementation records, or any other information relevant to CTC exposure in the workplace.

c. Recordkeeping

For owners and operators to demonstrate compliance with the WCPP provisions, EPA is requiring that owners and operators retain compliance records for five years (although this requirement does not supplant any longer

recordkeeping retention time periods such as those required under 29 CFR 1910.1020, or other applicable regulations). EPA is requiring the owner or operator to retain records of:

- Exposure control plan;
 - PPE program implementation and documentation, including as necessary, respiratory protection and dermal protection used and related PPE training; and
 - Information and training provided to each person prior to or at the time of initial assignment and any retraining.
- In addition, EPA is finalizing requirements that owners and operators subject to the WCPP ECEL requirements maintain records to include:
- Regulated areas and authorized personnel;
 - The exposure monitoring records;
 - Notification of exposure monitoring results; and
 - To the extent that the owner or operator relies on prior exposure monitoring data, records that demonstrates that it meets all of the requirements of this section.

The owners and operators, upon request by EPA, are required to make all records that are maintained as described in Unit IV. available to EPA for examination and copying in accordance with EPA requirements. EPA emphasizes that all records required to be maintained can be kept in the most administratively convenient form; electronic record form or paper form.

8. Compliance Timeframes

EPA is finalizing the requirement that owners or operators of workplaces subject to the WCPP implement the DDCC requirements as outlined in this unit within 1,005 days after December 18, 2024 for Federal agencies or Federal contractors acting for or on behalf of the Federal government, 180 days after December 18, 2024 for non-Federal owners and operators, or within 30 days of introduction of CTC into the workplace, whichever is later. With regard to the compliance timeframe for the WCPP provisions related to the ECEL, EPA is not finalizing the timeframes proposed. Rather, as discussed in Unit III.B., based on consideration of public comments and reasonably available information, EPA is finalizing longer timeframes for compliance with provisions related to the ECEL for non-Federal owners or operators, and is providing Federal agencies and Federal contractors acting for or on behalf of the Federal government additional time to comply with each of the provisions of the WCPP. Specifically, EPA is finalizing its requirement that non-Federal owners

and operators perform initial exposure monitoring according to the process outlined in this unit within 540 days after date of publication of the final rule in the **Federal Register** (*i.e.*, no later than June 11, 2026) or within 30 days of introduction of CTC into the workplace, whichever is later. Federal agencies and Federal contractors acting for or on behalf of the Federal government must conduct initial exposure monitoring within 915 days after the date of publication (*i.e.*, no later than June 21, 2027), or within 30 days of introduction of CTC into the workplace, whichever is later. EPA is also finalizing its requirement that each non-Federal owner or operator ensure that exposure to CTC does not exceed the ECEL as an 8-hour TWA for all potentially exposed persons within 630 days after the date of publication of the final rule in the **Federal Register** (*i.e.*, no later than September 9, 2026), while Federal agencies and Federal contractors acting for or on behalf of the Federal government must comply with the ECEL within 1,005 days after the date of publication (*i.e.*, no later than September 20, 2027). If applicable, each owner or operator must provide respiratory protection sufficient to reduce inhalation exposures to below the ECEL to all potentially exposed persons in the regulated area within three months after receipt of the results of any exposure monitoring that indicates an exceedance of the ECEL. For non-Federal owners or operators, this will be within 630 days after the date of publication of the final rule in the **Federal Register** (*i.e.*, no later than September 9, 2026). For Federal agencies and Federal contractors acting for or on behalf of the Federal government, this will be within 1,005 days after the date of publication of the final rule in the **Federal Register** (*i.e.*, no later than September 20, 2027). EPA is also finalizing the requirement that owners and operators demarcate a regulated area within three months after receipt of any exposure monitoring that indicates exposures exceeding the ECEL. Owners and operators shall proceed accordingly to implement an exposure control plan, including institution of feasible exposure controls other than PPE, within 1,080 days after date of publication of the final rule in the **Federal Register** (*i.e.*, no later than December 3, 2027).

C. Prescriptive Controls Required for Laboratory Use

In contrast to the non-prescriptive requirements of the WCPP, including the DDCC, where regulated entities would have the ability to select controls

in accordance with the hierarchy of controls to comply with the parameters outlined in Unit IV.B., EPA has found it appropriate in certain circumstances to require specific prescriptive controls for certain occupational conditions of use. In general, EPA is finalizing prescriptive controls, for the industrial and commercial use of CTC as a laboratory chemical, as described in Unit III.A.2. This unit provides a description of the industrial and commercial use of CTC as a laboratory chemical subject to specific prescriptive controls, the specific prescriptive control requirements, and the compliance timeframe for the requirements.

1. Applicability

The industrial and commercial use of CTC as a laboratory chemical refers to the industrial or commercial use of CTC, often in small quantities, in a laboratory process or in specialized laboratory equipment for instrument calibration/maintenance, chemical analysis, chemical synthesis, extracting and purifying other chemicals, dissolving other substances, executing research, development, test and evaluation methods, and similar activities, such as use as a solvent, reagent, analytical standard, or other experimental use.

After the risk evaluation was published, DoD did further analysis and provided additional information clarifying their current use of CTC as a laboratory chemical and risk management measures implemented. DoD provided information on their use of CTC as a laboratory chemical in chemical weapons destruction, indicating that CTC is used in small amounts in a confined, laboratory-like setting with advanced engineering controls. There is no waste CTC generated during this process.

EPA recognizes that potentially exposed persons in a laboratory setting may include students, researchers, visiting scholars, or others whose job classifications may vary, such as depending on the academic period in university laboratories. The requirements described in this unit apply to all potentially exposed persons in all laboratory settings, including academic and research laboratories, regardless of job classification.

2. Workplace Requirements

To address the unreasonable risk of injury to health resulting from dermal exposures to CTC identified for the industrial and commercial use as a laboratory chemical, including DoD's use of CTC as a laboratory chemical in chemical weapons destruction, EPA is

requiring dermal PPE, including impermeable gloves and protective clothing, in combination with comprehensive training for tasks particularly related to the use of CTC in a laboratory setting as specified in this unit for each potentially exposed person with direct dermal contact to CTC in the work area through direct handling of the substance or from contact with surfaces that may be contaminated with CTC. For dermal PPE, EPA is requiring that each owner or operator comply with the requirements outlined in Units IV.B.6.b. for selection of dermal PPE and training for all potentially exposed persons. EPA's description for how the requirements for the industrial and commercial use as a laboratory chemical address the unreasonable risk resulting from dermal exposures under the conditions of use and the rationale for this regulatory approach is outlined in Unit V. of the proposed rule (88 FR 49205, July 28, 2023) (FRL-8206-01-OCSP).

In addition, EPA is requiring the use of laboratory ventilation devices, such as fume hoods, glove boxes, air handling units, exhaust fans, biological safety devices, airflow controls, and other local exhaust devices, in workplace laboratory settings for the industrial and commercial use of CTC as a laboratory chemical, except for DoD's use of CTC as a laboratory chemical in chemical weapons destruction, to codify existing good laboratory practices. EPA is requiring each owner or operator of a workplace laboratory setting, except for DoD's use of CTC as a laboratory chemical in chemical weapons destruction, to ensure laboratory ventilation devices are in use and functioning properly to minimize exposures to persons in the area where CTC is used as a laboratory chemical. EPA suggests owners or operators refer to OSHA's 29 CFR 1910.1450, Appendix A, for National Research Council recommendations concerning laboratory chemical hood ventilation system characteristics and practices and to ANSI's and ASSP's Z9.5-2022 for recommendations on additional laboratory ventilation controls to minimize exposures to potentially exposed persons in the work area.

EPA understands that DoD uses CTC in small amounts in a confined, laboratory-like setting with advanced engineering controls (Ref. 46). Therefore, for DoD's industrial and commercial use of CTC as a laboratory chemical in chemical weapons destruction, EPA is requiring advanced engineering controls that essentially codify existing practices at DoD facilities. EPA is not requiring a WCPP,

specifically with monitoring requirements, for DoD's industrial and commercial use of CTC as a laboratory chemical in chemical weapons destruction.

3. Recordkeeping

To support and demonstrate compliance, EPA is requiring that each owner or operator of a laboratory workplace subject to the requirements of this unit retain compliance records for five years. In alignment with 29 CFR 1910.1450(e)(3)(ii) and (iii) and 29 CFR 1910.132(d)(2), EPA is requiring that owners and operators must retain records of:

- Dermal protection used by each potentially exposed person and PPE program implementation as outlined in this unit;
- Criteria that the owner or operator will use to determine and implement control measures to reduce potentially exposed persons' exposure to CTC including laboratory ventilation devices as outlined in this unit;
- Implementation of properly functioning laboratory ventilation devices using manufacturer's instructions for installation, use, and maintenance of the systems, including inspections, tests, development of maintenance procedures, the establishment of criteria for acceptable test results, and documentation of test and inspection results, except for DoD's use of CTC as a laboratory chemical in chemical weapons destruction; and
- For DoD's industrial and commercial use of CTC as a laboratory chemical in chemical weapons destruction, implementation of advanced engineering controls that are in use and functioning properly and specific measures taken to ensure proper and adequate performance. Owners or operators must maintain records for five years. EPA expects owners or operators ensure that records reflect actions taken within the last five years to comply with the requirements of this unit.

4. Compliance Timeframes

With regards to the compliance timeframe, EPA is requiring that each owner or operator of a workplace engaged in the industrial and commercial use of CTC as a laboratory chemical ensure laboratory ventilation devices are in use and functioning properly and that dermal PPE is provided to all potentially exposed persons with direct dermal contact with CTC within 180 days after publication of the final rule.

Similarly, EPA is requiring that DoD facilities engaged in the industrial and

commercial use of CTC as a laboratory chemical in chemical weapons destruction ensure that advanced engineering controls are in use and functioning properly and dermal PPE is provided to all potentially exposed persons with direct dermal contact with CTC within 365 days after publication of the final rule.

EPA understands that certain departments and agencies of the Federal government, as well as Federal contractors acting for or on behalf of the Federal government, need additional time to comply with these timeframes. For example, ensuring compliance with the prescriptive controls could be challenging due to changing contracting, procurement decisions and other processes in Federal facilities. Similarly, EPA is requiring for that agencies of the Federal government and their contractors, when acting for or on behalf of the Federal government, that are engaged in the industrial and commercial use of CTC as a laboratory chemical ensure laboratory ventilation devices are in use and functioning properly, and that dermal PPE and training on proper use of PPE is provided to all potentially exposed persons with direct dermal contact with CTC within 365 days after publication of the final rule.

D. Prohibition of Manufacture, Processing, Distribution, and Use of CTC

1. Applicability

EPA is finalizing the prohibitions for most of the conditions of use for which prohibition was proposed. Prohibitions will address the contribution to the unreasonable risk determined to be presented by CTC in the 2020 Risk Evaluation for Carbon Tetrachloride and 2022 Revised Unreasonable Risk Determination for Carbon Tetrachloride from industrial and commercial uses of CTC, and reasonably available information indicates that industry has already transitioned away from CTC and found technically and economically feasible alternatives to CTC for these uses. Unit V. of the proposed rule and the Response to Comments document present further discussion of EPA's rationale for why these conditions of use are being prohibited (88 FR 49205) (FRL-8206-01-OCSP). EPA's *description* of the uses proposed to be prohibited for which the Agency is finalizing a WCPP (processing: incorporation into formulation, mixtures, or reaction products in vinyl chloride manufacturing and the industrial and commercial use as an industrial processing aid in the

manufacture of vinyl chloride) are in Units III.A.1. and IV.B.1. The rule prohibits manufacture, processing, distribution in commerce, and use of CTC for the following industrial and commercial uses of CTC: industrial and commercial use as a processing aid in the manufacture of petrochemical-derived products except in the manufacture of vinyl chloride (for which EPA is finalizing a WCPP); industrial and commercial use in the manufacture of other basic chemicals (including chlorinated compounds used in solvents, adhesives, asphalt, and paints and coatings), except for use in the elimination of nitrogen trichloride in the production of chlorine and caustic soda and the recovery of chlorine in tail gas from the production of chlorine (for which EPA is finalizing a WCPP); industrial and commercial use in metal recovery; industrial and commercial use as an additive; and industrial and commercial use in specialty uses by the U.S. Department of Defense. EPA is also finalizing the explicit prohibition for processing: incorporation into formulation, mixture or reaction products in petrochemical-derived manufacturing except in the manufacture of vinyl chloride (the upstream processing condition of use for the industrial and commercial use of CTC as a processing aid in the manufacture of petrochemicals-derived products except in the manufacture of vinyl chloride). This unit provides a description of the uses subject to the prohibitions to assist with compliance.

a. Processing: Incorporation Into Formulation, Mixture or Reaction Products in Petrochemical-Derived Manufacturing Except in the Manufacture of Vinyl Chloride

Incorporation into formulation, mixture, or reaction products refers to the process of mixing or blending several raw materials to obtain a single product or preparation or formulation. CTC has historically been incorporated into formulation or mixtures to manufacture hydrochloric acid (HCl), vinyl chloride, ethylene dichloride (EDC), chloroform, hafnium tetrachloride, thiophosgene, and methylene chloride. CTC may be incorporated into various products and formulations at varying concentrations for further distribution. For example, CTC may be unloaded from transport containers either directly into mixing equipment or into an intermediate storage vessel either manually or through automation via a pumping system. Mixing of components can occur in either a batch or continuous system. The mixture that contains CTC

may be used as a reactant to manufacture a chlorinated compound that is subsequently formulated into a product or a processing aid used to aid in the manufacture of petrochemicals-derived products. For the purposes of this rulemaking, EPA is specifically prohibiting the incorporation into formulation, mixture or reaction products in petrochemical-derived manufacturing except in the manufacture of vinyl chloride. Incorporation into formulation, mixture or reaction products in agricultural products manufacturing, vinyl chloride manufacturing, the elimination of nitrogen trichloride in the production of chlorine and caustic soda, and the recovery of chlorine in tail gas from the production of chlorine is being regulated under the WCPP, as described in Unit IV.B.

b. Industrial and Commercial Use

i. Industrial and Commercial Use as an Industrial Processing aid in the Manufacture of Petrochemicals-Derived Products Except in the Manufacture of Vinyl Chloride.

A processing aid is a "chemical that is added to a reaction mixture to aid in the manufacture or synthesis of another chemical substance but is not intended to remain in or become part of the product or product mixture." Additionally, processing agents are intended to improve the processing characteristics or the operation of process equipment, but not intended to affect the function of a substance or article created. CTC has traditionally been used as a processing aid/agent to aid in the manufacture of petrochemical-derived products (Ref. 1). The condition of use includes the use of CTC that has historically been used as a processing agent in the manufacture of chlorosulphonated polyolefin; styrene butadiene rubber; endosulfan (insecticide); 1-1 Bis (4-chlorophenyl) 2,2,2-trichloroethanol (dicofol insecticide); and tralomethrin (insecticide). For the purposes of this rulemaking, EPA is specifically prohibiting the industrial and commercial use of CTC as an industrial processing aid in the manufacture of petrochemicals-derived products, except in the manufacture of vinyl chloride. The industrial and commercial use as an industrial processing aid in the manufacture of agricultural products and vinyl chloride is being regulated under the WCPP, as described in Unit IV.B.

ii. Industrial and Commercial Use in the Manufacture of Other Basic Chemicals (Including Manufacturing of Chlorinated Compounds Used in Solvents, Adhesives, Asphalt, and Paints and Coatings), Except for Use in the Elimination of Nitrogen Trichloride in the Production of Chlorine and Caustic Soda and the Recovery of Chlorine in Tail Gas From the Production of Chlorine

CTC has historically been used as a processing aid/agent in basic organic and inorganic chemical manufacturing. CTC could be used as a processing agent in the manufacturing of chlorinated compounds that are subsequently used in the formulation of solvents, adhesives, asphalt, and paints and coatings; in the manufacturing of chlorinated paraffins (*e.g.*, plasticizer in rubber, paints, adhesives, sealants, plastics), and chlorinated rubber (*e.g.*, additive in paints, adhesives); and in the manufacturing of inorganic chlorinated compounds, such as in the production of chlorine and caustic soda and the recovery of chlorine in tail gas from the production of chlorine. For the purposes of this rulemaking, EPA is specifically prohibiting the industrial and commercial use in the manufacture of other basic chemicals (including manufacturing of chlorinated compounds used in solvents, adhesives, asphalt, and paints and coatings), except for use in the elimination of nitrogen trichloride in the production of chlorine and caustic soda and the recovery of chlorine in tail gas from the production of chlorine. The industrial and commercial use in the elimination of nitrogen trichloride in the production of chlorine and caustic soda and the recovery of chlorine in tail gas from the production of chlorine is being regulated under the WCPP, as described in Unit IV.B.

iii. Industrial and Commercial Use in Metal Recovery

CTC has historically been used as a processing aid or agent to aid in metal recovery.

iv. Industrial and Commercial Use as an Additive

Additives are chemicals combined with a chemical product to enhance the properties of the product. Additives typically stay mixed within the finished product and remain unreacted. The risk evaluation examined the use of CTC as an additive for the manufacture of petrochemical-derived products and agricultural products. CTC has historically been used as an additive in

fuel and in plastic components used in the automotive industry.

v. Industrial and Commercial Use in Specialty Uses by the U.S. Department of Defense (DoD)

During the risk evaluation, DoD provided monitoring data for CTC uses in various processes that include worker activities such as cleaning and sampling residual metal and ash; destruction of munitions and storage of resulting liquid waste; and sampling of energetics with solvent. The unreasonable risk determination for CTC further determined that this condition of use contributed to the unreasonable risk. The Agency understands that DoD has successfully phased out the use of CTC for this condition of use.

As discussed in Unit II.C.4., the prohibitions do not apply to any substance that is excluded from the definition of “chemical substance” under TSCA section 3(2)(B)(ii) through (vi).

2. Compliance Timeframes

EPA is finalizing that the prohibitions apply as of 180 days after the date of publication of the final rule for the manufacturing, processing, distribution in commerce, and use of CTC for the following: incorporation of CTC into formulation, mixture or reaction products in petrochemical-derived manufacturing except in the manufacture of vinyl chloride; the industrial and commercial use of CTC as a processing aid in the manufacture of petrochemical-derived products except in the manufacture of vinyl chloride; the industrial and commercial use of CTC in the manufacture of other basic chemicals (including chlorinated compounds used in solvents, adhesives, asphalt, and paints and coatings), except for use in the elimination of nitrogen trichloride in the production of chlorine and caustic soda and the recovery of chlorine in tail gas from the production of chlorine; the industrial and commercial use of CTC in metal recovery; and the industrial and commercial use of CTC as an additive.

EPA is also finalizing the prohibitions for the manufacturing, processing, distribution in commerce, and use of CTC for the industrial and commercial use in specialty uses by the DoD to apply as of 365 days after the date of publication of the final rule.

E. Other Requirements

1. Recordkeeping

For conditions of use that are not otherwise prohibited under this final rule, EPA is finalizing the requirement

that manufacturers, processors, distributors, and commercial users maintain ordinary business records, such as invoices and bills-of-lading, that demonstrate compliance with the prohibitions, restrictions, and other provisions of this final regulation; and to maintain such records for a period of 5 years from the date the record is generated. This requirement begins on February 18, 2025. For enforcement purposes, EPA will have access to such businesses records plus additional records required under 40 CFR 751.713. Recordkeeping requirements would ensure that owners or operators can demonstrate compliance with the regulations if necessary.

2. Downstream Notification

For conditions of use that are not otherwise prohibited under this final regulation, EPA is finalizing requirements that manufacturers (including importers), processors, and distributors of CTC provide downstream notification of the prohibitions through the SDSs by adding to sections 1(c) and 15 of the SDS the following language:

After June 16, 2025, this chemical substance (as defined in TSCA section 3(2)) may not be distributed in commerce or processed in greater than trace quantities for the following purposes: Incorporation into formulation, mixture or reaction products in petrochemical-derived manufacturing except in the manufacture of vinyl chloride; Industrial and commercial use as an industrial processing aid in the manufacture of petrochemicals-derived products except in the manufacture of vinyl chloride; Industrial and commercial use in the manufacture of other basic chemicals (including manufacturing of chlorinated compounds used in solvents, adhesives, asphalt, and paints and coatings), except for use in the elimination of nitrogen trichloride in the production of chlorine and caustic soda and the recovery of chlorine in tail gas from the production of chlorine; Industrial and commercial use in metal recovery; Industrial and commercial use as an additive; and beginning December 18, 2025, industrial and commercial specialty uses by the U.S. Department of Defense.

To provide adequate time to update the SDS and ensure that all products in the supply chain include the revised SDS, EPA’s final rule requires manufacturers to revise their SDS within two months of rule publication and processors and distributors to revise their SDS within six months of rule publication. EPA did not receive public comments asserting that these compliance dates for updating the SDS were impracticable, and is therefore finalizing the compliance dates as proposed. The intention of downstream notification is to spread awareness throughout the supply chain of the

restrictions on CTC under TSCA and to provide information to commercial end-users about prohibited uses of CTC.

V. TSCA Section 6(c)(2) Considerations

A. Health Effects of Carbon Tetrachloride and the Magnitude of Human Exposure to Carbon Tetrachloride

EPA's analysis of the health effects of CTC and the magnitude of human exposure to CTC are in the 2020 Risk Evaluation for CTC and the 2022 Revised Unreasonable Risk Determination for CTC (Refs. 1, 3). A summary is presented here.

The 2020 Risk Evaluation for CTC identified potential health effects of CTC including carcinogenicity, liver toxicity, neurotoxicity, kidney toxicity, reproductive and developmental toxicity, irritation and sensitization, and genetic toxicity. Acute inhalation exposures to CTC at relatively high concentrations induce immediate and temporary depression of the central nervous-system, with effects consisting of escape-impairing symptoms such as dizziness. For chronic non-cancer inhalation exposure scenarios to CTC, liver toxicity is identified as the most sensitive adverse effect contributing to the unreasonable risk of CTC exposure due to fatty changes to the liver indicative of cellular damage. Under EPA's Guidelines for Carcinogen Risk Assessment (Ref. 47), CTC is classified as "Likely to be Carcinogenic in Humans." CTC has been shown to cause pheochromocytomas (tumors of the adrenal glands) in male and female mice by oral and inhalation exposures, and a strong association between neuroblastoma and CTC in a single well-conducted epidemiological study in the same organ raises concern for potential carcinogenic effects in human. In addition, a general correlation has been observed in animal studies with CTC between hepatocellular cytotoxicity and regenerative hyperplasia and the induction of liver tumors (Ref. 1).

Populations exposed to CTC include workers ages 17 and older of either gender, including pregnant women and individuals who do not use CTC but may be indirectly exposed due to their proximity to the user who is directly handling CTC (occupational non-users, or ONUs). EPA estimates that, annually, there are approximately between 852 and 9,554 workers and between 500 and 4,144 ONUs at between 30 and 71 facilities either manufacturing, processing, or using CTC for industrial and commercial conditions of use (Ref. 5).

In addition to these estimates of numbers of workers and occupational non-users directly exposed to CTC, EPA recognizes there is exposure to the general population from air and water pathways for CTC (fenceline communities are a subset of the general population who may be living in proximity to a facility where CTC is being used in an occupational setting). EPA separately conducted a screening approach to assess whether there may be potential risks to the general population from these exposure pathways. This analysis is summarized in the proposed rule, which includes information on the SACC peer review. This unit addresses those areas where some risk was indicated at the fenceline, and the conditions of use will be continuing under this final rule.

EPA's methodological approach to assessing potential exposures to fenceline communities of chemicals undergoing risk evaluation under TSCA section 6 was presented to the SACC peer review panel in March 2022, and EPA is including SACC recommendations, as appropriate, in assessing general population exposures in upcoming risk evaluations.

EPA's fenceline analysis for the water pathway for CTC, based on methods presented to the SACC, did not find risks from drinking water, incidental oral ingestion of ambient water, or incidental dermal exposure of surface water (Ref. 48).

Standard cancer benchmarks used by EPA and other regulatory agencies are an increased cancer risk above benchmarks ranging from 1 in 1,000,000 to 1 in 10,000 (*i.e.*, 1×10^{-6} to 1×10^{-4}). For example, when setting standards under section 112(f)(2) of the CAA, EPA uses a two-step process, with "an analytical first step to determine an 'acceptable risk' that considers all health information, including risk estimation uncertainty, and includes a presumptive limit on maximum individual risk (MIR) of approximately 1-in-10 thousand" (Ref. 49, referencing the interpretation set forth in the 1989 final National Emission Standards for Benzene rule (54 FR 38044 Sept. 14, 1989)). In the screening level fenceline analysis for the ambient air pathway for CTC, EPA calculated its risk estimates to certain populations within the general population living or working near particular facilities and compared those risk estimates to a 1 in 1,000,000 (*i.e.*, 1×10^{-6}) benchmark value for cancer risk. There are still uncertainties where the calculated risk exceeds this cancer risk benchmark value. The benchmark values are not a bright line, and the Agency considers a number of factors

when determining unreasonable risk, such as the endpoint under consideration, the reversibility of effect, and exposure-related considerations (*e.g.*, duration, magnitude, aggregate or cumulative impacts, or frequency of exposure, or size of population exposed, including PESS).

The screening level fenceline analysis for CTC calculated risk estimates to select populations within the general population living or working near particular facilities exceeding the 1×10^{-6} benchmark value (Ref. 50). However, EPA has not determined based on this screening level analysis whether these risks to the general population contribute to the unreasonable risk presented by CTC. After considering the results, limitations, and uncertainties of the screening-level analysis, EPA determined as a matter of policy that reopening the TSCA section 6(b) risk evaluation for CTC for further evaluation of risk to the general population, and consequently delaying the promulgation of this TSCA section 6(a) rule, was not warranted. The Agency believes it is important to expeditiously promulgate this final rule to protect the public from the unreasonable risk determined in accordance with TSCA section 6(b)(4)(A), which was driven by occupational exposures.

The ambient air analysis for the multi-year fenceline analysis identified 19 facilities (in addition to 6 facilities solely manufacturing CTC as a byproduct, which were excluded because, as described earlier, the 2020 Risk Evaluation for Carbon Tetrachloride did not include the manufacture of CTC as a byproduct as a condition of use) with risk estimates above one in a million, with one facility with risk estimates above one in ten thousand, at 100 meters representing five conditions of use. Under the final regulatory action described in Unit IV., all of the ongoing conditions of use with an indication of potential risk to fenceline communities (with the exception of manufacture of CTC as a byproduct) would be required to establish a WCPP. Furthermore, EPA is prohibiting increased emissions associated with WCPP requirements, and in the WCPP exposure control plan facilities need to evaluate controls to determine how to reduce releases and exposures to potentially exposed persons in the workplace and attest that engineering controls selected do not increase emissions of CTC to ambient air outside of the workplace and whether additional equipment was installed to capture emissions of CTC to

ambient air. EPA anticipates that this analysis would help facilities to determine the most effective ways to reduce releases, including possible engineering controls or elimination/substitution of CTC, and therefore may also reduce the overall risk to fence-line communities.

EPA recognizes, as was described in the 2020 Risk Evaluation for Carbon Tetrachloride, that CTC is highly persistent in the atmosphere with an estimated tropospheric half-life exceeding 330 years. Thus, CTC has notable global background concentrations due to its long half-life, despite having limited air releases in the US, as noted in both the EPA's Air Toxic Screening Assessment modeling technical support document and in a recent EPA publication comparing the national air toxics modeling to regional monitoring data (Refs. 51, 52). The risk estimates from the fence-line analysis do not account for the background concentrations from historical emissions, which are persistent in the atmosphere.

In the instances where manufacturing, processing, or use of CTC may increase, EPA expects that potential additional exposure from emissions to ambient air to be limited as a result of the prohibition on the increased ventilation of CTC to ambient air and existing National Emission Standards for Hazardous Air Pollutants (NESHAPs) that cover CTC for these conditions of use under the CAA. Applicable NESHAPs include: 40 CFR part 63, subparts F, G, H, and I, Organic HAP from the Synthetic Organic Chemical Manufacturing Industry and Other Processes Subject to the Negotiated Regulation for Equipment Leaks.

The CAA establishes a two-phase process for the EPA's development, review, and potential revision of NESHAP that impose emission standards and work practice requirements on subject categories of sources of hazardous air pollutants. First, the EPA sets technology-based or performance-based standards reflecting the maximum achievable control technology (MACT) for major sources (CAA section 112(d)(2) and (3)) and generally available control technology (GACT) for area or non-major sources (CAA section 112(d)(5)). In the second phase, eight years after adoption of the first phase standards, the EPA performs a residual risk review of major source MACT standards to ensure that they provide an ample margin of safety to protect public health (CAA section 112(f)(2)), and a technology review of all NESHAP to account for developments in practices, processes and control

technologies (CAA section 112(d)(6)). The CAA only requires the EPA to conduct the residual risk review one time for each MACT standard, although the EPA has discretion to conduct additional risk reviews where warranted. The technology review, instead, is a recurring duty, and the EPA must perform it no less often than every eight years.

B. Environmental Effects of Carbon Tetrachloride and the Magnitude of Environmental Exposure to Carbon Tetrachloride

EPA's analysis of the environmental effects of CTC and the magnitude of exposure of the environment to CTC are in the 2020 Risk Evaluation for Carbon Tetrachloride (Ref. 1). The unreasonable risk determination for CTC is based solely on risks to human health; based on the TSCA 2020 Risk Evaluation for Carbon Tetrachloride, EPA determined that exposures to the environment did not drive the unreasonable risk. A summary is presented here in Unit V.

Exposures to terrestrial organisms from the suspended soils and biosolids pathway was qualitatively evaluated. Due to its physical-chemical properties, EPA expects that CTC does not bioaccumulate in fish or sediments; and CTC could be mobile in soil and migrate to water or volatilize to air (Ref. 1).

EPA concluded in the 2020 Risk Evaluation for Carbon Tetrachloride that CTC poses a hazard to environmental aquatic receptors. Amphibians were the most sensitive taxa for acute and chronic exposures. Acute exposures of CTC to fish, freshwater aquatic invertebrates, and sediment invertebrates resulted in hazard values as low as 10.4 mg/L, 11.1 mg/L, and 2 mg/L, respectively. For chronic exposures, CTC has a hazard value for amphibians of 0.03 mg/L based on teratogenesis and lethality in frog embryos and larvae. Furthermore, chronic exposures of CTC to fish, freshwater aquatic invertebrates, and sediment invertebrates resulted in hazard values as low as 1.97 mg/L, 1.1 mg/L, and 0.2 mg/L, respectively. In algal studies, CTC has hazard values ranging from 0.07 to 23.59 mg/L (Ref. 1).

In addition to the environmental effects assessed in the 2020 Risk Evaluation for Carbon Tetrachloride, EPA recognizes that CTC is an ozone-depleting substance with a 100-year GWP of 1730 (energy the emissions of one ton of gas will absorb over 100 years, relative to the emissions of one ton of carbon dioxide (CO₂)) (Ref. 53). As a result of its ozone-depleting effects, the Montreal Protocol and Title VI of the CAA led to a phase-out of CTC

production in the United States for most non-feedstock domestic uses. EPA did not evaluate the effect of CTC or this rule on ozone depletion. In addition, while the Agency understands that the use of CTC is expected to increase to produce low GWP HFOs, replacing many of the higher GWP HFCs, there is uncertainty in the change in volume of CTC that will be manufactured and used to produce HFOs. In the final rule, EPA is requiring owners/operators to ensure that any engineering controls instituted under the WCPP do not increase emissions of CTC to ambient air. EPA expects that potential additional exposure from emissions to ambient air would be limited as a result of the existing NESHAPs that cover CTC. However, EPA did not evaluate whether a possible increase of CTC emissions with a GWP of 1730 would offset emissions of the HFCs replaced by the lower GWP HFOs manufactured with CTC, or the overall global warming impact of CTC use.

C. Benefits of Carbon Tetrachloride for Various Uses

As described in the proposed rule, CTC is primarily used as a feedstock in the production of HCFCs, HFCs, and HFOs. Other conditions of use include regulated use as a processing agent in the manufacture of petrochemicals-derived and agricultural products and other chlorinated compounds such as chlorinated paraffins, chlorinated rubber and others that may be used downstream in the formulation of solvents for adhesives, asphalt, paints and coatings. Requirements under the Montreal Protocol and Title VI of the CAA led to a phaseout of CTC production in the United States for most non-feedstock domestic uses in 1996 and the CPSC banned the use of CTC in household products (excluding unavoidable residues not exceeding 10 ppm atmospheric concentration) in 1970.

CTC is a major feedstock for generation of lower-GWP alternative fluorocarbon products in the United States (Ref. 54). EPA anticipates that many entities currently using HFCs with higher global warming potential will transition to alternatives with lower global warming potential as requirements under the AIM Act begin to apply. The manufacturing of CTC is predicted to increase as a result of the transition from HFCs to lower-GWP HFOs that use CTC as a feedstock, such as HFO-1234yf used in motor vehicle AC and HFO-1234ze used in some types of aerosols and foam-blowing agents.

D. Reasonably Ascertainable Economic Consequences of the Final Rule

1. Likely Effect of the Rule on the National Economy, Small Business, Technological Innovation, the Environment, and Public Health

With respect to the anticipated effects of this rule on the national economy, the economic impact of a regulation on the national economy generally only becomes measurable if the economic impact of the regulation reaches 0.25 percent to 0.5 percent of Gross Domestic Product (GDP) (Ref. 55). Given the current GDP of \$23.17 trillion, this is equivalent to a cost of \$58 billion to \$116 billion which is considerably higher than the estimated cost of this rule. EPA considered the number of businesses, facilities, and workers that would be affected and the costs and benefits to those businesses and workers and society at large and did not find that there would be a measurable effect on the national economy. In addition, EPA considered the employment impacts of this final rule. For businesses subject to the WCCP, including the ECEL and DDCC requirements, and prescriptive workplace control requirements, EPA estimates the marginal cost of labor will increase. This may lead to small negative employment effects. Costs of prohibition in the final rule are not quantified, since EPA expects the prohibited uses are not ongoing. However, there may be employment effects proportionate to the extent to which CTC is still being used in the prohibited conditions of use.

EPA has determined that the rule will not have a significant impact on a substantial number of small entities. EPA estimates that the rule would affect at least seven small entities, and that the cost would only exceed 1 percent of annual revenues for two of these small entities. EPA expects that the final rule will not hinder technological innovation. Innovative applications of CTC in recent years have occurred in the production of HFOs. The regulatory options with requirements for certain conditions of use, including processing as a reactant in the production of refrigerants (such as HFOs), are not expected to inhibit innovation since they permit the continued use of CTC with appropriate controls. With respect to those conditions of use where prohibition is the requirement in the final action, EPA did not find evidence of ongoing use of CTC and thus there are no expected effects on innovation.

The effects of this rule on public health are estimated to be positive, due to the avoided incidence of adverse health effects attributable to CTC

exposure, including adrenal and liver cancer.

2. Costs and Benefits of the Regulatory Action and of the 1 or More Primary Alternative Regulatory Actions Considered by the Administrator

The costs and benefits that can be monetized for this rule are described at length in the Economic Analysis (Ref. 5). The total cost of the final rule is \$19.7 million dollars annualized over 20 years at a 3% discount rate and \$19 million dollars at a 7% discount rate. EPA's Economic Analysis for the rule quantified the benefits from avoided cases of adrenal and liver cancers. Cancer benefits are calculated based on inhalation exposure estimates from the Final Risk Evaluation. The estimated monetized benefit of the final rule ranges from approximately \$0.13 to \$0.14 million per year annualized over 20 years at a 3% discount rate and from \$0.06 to \$0.07 million per year at a 7% discount rate.

There are also unquantified benefits due to other avoided significant adverse health effects associated with CTC exposure, including liver, reproductive, renal, developmental, and CNS toxicity end points. EPA believes that the balance of costs and benefits of this final rule cannot be fairly described without considering the additional, non-monetized benefits of mitigating the non-cancer adverse effects. The non-cancer adverse effects from CTC exposure can significantly impact an individual's quality of life. The incremental improvements in health outcomes achieved by given reductions in exposure cannot currently be quantified for non-cancer health effects associated with CTC exposure, and therefore cannot be converted into monetized benefits. The qualitative discussion throughout this rulemaking and in the Economic Analysis highlights the importance of these non-cancer effects, which are not able to be monetized in the way that EPA is able to for cancer. These effects include not only cost of illness but also personal costs such as emotional and mental stress that are hard to measure appropriately. Considering only monetized benefits significantly underestimates the impacts of CTC adverse outcomes and underestimates the benefits of this final rule.

Net benefits were calculated by subtracting the costs from the quantified benefits. The net benefit of the final rule action is –\$19.6 million dollars annualized over 20 years at a 3% discount rate and –\$18.9 million dollars at a 7% discount rate.

Industry would bear monitoring, PPE, and notification and recordkeeping burdens and costs associated with the ECEL. While companies may comply with the rule using engineering controls, when estimating costs and benefits the Economic Analysis assumes firms will provide PPE to employees when monitoring thresholds are exceeded. EPA estimated monitoring results based on a log normal distribution estimated from the median and 95th percentile 8-hour time-weighted average exposure outcomes presented in the 2020 Risk Evaluation for Carbon Tetrachloride. PPE, recordkeeping, and monitoring costs after initial monitoring vary by industry and by projected initial monitoring result. Industry is expected to incur planning, recordkeeping and PPE costs associated with DDCC requirements. Industry would incur costs associated with developing an exposure control plan, performing inspections, documenting efforts to reduce exposure and occurrences of exposure, respiratory protection and dermal PPE, and training on the use of respiratory protection and dermal PPE.

EPA also considered the estimated costs of alternative regulatory actions to regulated entities. Estimated costs for regulatory alternatives can be found in the Economic Analysis for this final rule (Ref. 5).

A sensitivity analysis was conducted based on the low estimates of the number of affected entities in the 2020 Risk Evaluation for Carbon Tetrachloride. Based on these estimates, the total cost of the final rule is \$2.1 million dollars annualized over 20 years at both a 3 and 7% discount rate. The total benefit of the final rule is estimated to range from \$0.016 million dollars to \$0.018 million dollars annualized over 20 years at a 3% period discount rate, and ranges from \$0.008 million dollars to \$0.009 million dollars annualized over 20 years at a 7 percent discount rate. The net benefit of the rule under this sensitivity analysis is –\$2.1 million dollars annualized over 20 years at a 3% discount rate and a 7% discount rate. At a 2% discount rate, the cost of the rule assuming the low number of affected entities is \$2.1 million, the benefit is \$0.02 million, and the net benefit is –\$2.1 million.

3. Cost Effectiveness of the Regulatory Action and of 1 or More Primary Alternative Regulatory Actions Considered by the Administrator

For the COUs that EPA determined drive the unreasonable risk of injury to health from CTC, both the final rule and the primary alternative action, which is analyzed in the Economic Analysis,

reduce unreasonable risk to the extent necessary such that unreasonable risk is no longer presented. In achieving this result, however, the estimated costs of the final rule and the primary alternative regulatory action differ as described in Units I.E. and V.D.2. The costs of achieving the desired outcome via the final rule or the primary alternative regulatory action can be compared to evaluate cost-effectiveness. The measure of cost-effectiveness considered is the annualized cost of each regulatory option per microrisk reduction in cancer cases estimated to occur as a result of each regulatory option, where a microrisk refers to a one in one million reduction in the risk of a cancer case. The cost-effectiveness of the final rule ranges from \$681 to \$1,000 dollars per microrisk reduction at a 3% discount rate, and from \$656 to \$963 dollars per microrisk reduction at a 7% discount rate. The cost-effectiveness of the primary alternative regulatory action ranges from \$611 to \$897 dollars per microrisk reduction at a 3% discount rate, and from \$778 to \$1,142 dollars at a 7% discount rate.

The primary difference between the final and primary alternative option is that the alternative requires prescriptive controls for conditions of use which fall under the WCPP in the final rule. For two such conditions of use (Processing by incorporation into formulation, mixture, or reaction products in agricultural products manufacturing, vinyl chloride manufacturing, and other basic organic and inorganic chemical manufacturing; and Industrial and commercial use as a processing aid in the manufacture of agricultural products and vinyl chloride), the Economic Analysis analyzed a primary alternative action of prohibition for the vinyl chloride sub-uses only. In the proposed rule, EPA proposed prohibition for these sub-uses of vinyl chloride that at the time EPA did not have reasonably available information to indicate the uses were ongoing but later received public comments from one entity indicating that the incorporation of CTC into formulation, mixtures, or reaction products in vinyl chloride manufacturing and the industrial and commercial use of CTC as an industrial processing aid in the manufacture of vinyl chloride were ongoing. While the final rule requires a WCPP for these sub-uses, the primary alternative analyzes the costs and benefits of prohibiting these sub-uses of vinyl chloride.

Since the regulated universe in both the final and primary alternative regulatory actions is identical, the cost-effectiveness of the regulatory actions varies based on the differences in the

requirements of each action. Section 3.9 of the Economic Analysis provides a summary of the unquantified costs and uncertainties in the cost estimates that may impact the respective cost-effectiveness of the final rule and the primary alternative regulatory action considered.

VI. TSCA Section 9 Analysis and Section 26 Considerations

A. TSCA Section 9(a) Analysis

TSCA section 9(a) provides that, if the Administrator determines, in the Administrator's discretion, that an unreasonable risk may be prevented or reduced to a sufficient extent by an action taken under a Federal law not administered by EPA, the Administrator must submit a report to the agency administering that other law that describes the risk and the activities that present such risk. TSCA section 9(a) describes additional procedures and requirements to be followed by EPA and the other Federal agency following submission of any such report. As discussed in this unit, the Administrator does not determine that unreasonable risk from CTC under the conditions of use may be prevented or reduced to a sufficient extent by an action taken under a Federal law not administered by EPA. EPA's TSCA section 9(a) analysis is presented in Unit VII.A. of the proposed rule (88 FR 49215, July 28, 2023) (FRL-8206-01-OCSPP), and responses to comments about that analysis can be found in the Response Agree. Comments, Section 10.1 (Ref. 11).

TSCA section 9(d) instructs the Administrator to consult and coordinate TSCA activities with other Federal agencies for the purpose of achieving the maximum enforcement of TSCA while imposing the least burden of duplicative requirements. For this rulemaking, EPA has coordinated with appropriate Federal executive departments and agencies, including OSHA, to, among other things, identify their respective authorities, jurisdictions, and existing laws with regard to risk evaluation and risk management of CTC.

As discussed in more detail in the proposed rule, OSHA requires that employers provide safe and healthful working conditions by setting and enforcing standards and by providing training, outreach, education, and assistance. OSHA, in 1971, established a PEL for CTC of 10 ppm of air as an 8-hour TWA with an acceptable ceiling concentration of 25 ppm and an acceptable maximum peak above the acceptable ceiling concentration for an

eight-hour shift of 200 ppm, maximum duration of 5 minutes in any 4 hours. However, the exposure limits established by OSHA are higher than the exposure limit that EPA determined would be sufficient to address the unreasonable risk identified under TSCA from occupational inhalation exposures associated with certain conditions of use. Gaps exist between OSHA's authority to set workplace standards under the OSH Act and EPA's obligations under TSCA section 6 to eliminate unreasonable risk presented by chemical substances under the conditions of use, as further discussed in Units II.C. and VII.A. of the proposed rule.

EPA concludes that TSCA is the only regulatory authority able to prevent or reduce unreasonable risk of CTC to a sufficient extent across the range of conditions of use, exposures, and populations of concern. An action under TSCA is able to address occupational unreasonable risk and would reach entities that are not subject to OSHA. Moreover, the timeframe and any exposure reduction as a result of updating OSHA regulations for CTC cannot be estimated, while TSCA imposes a much more accelerated two-year statutory timeframe for proposing and finalizing requirements to address unreasonable risk. Finally, as discussed in greater detail in the proposed rule, the 2016 amendments to TSCA altered both the manner of identifying unreasonable risk and EPA's authority to address unreasonable risk, such that risk management is increasingly distinct from provisions of the OSH Act (88 FR 49180) (FRL-8206-01-OCSPP). For these reasons, in the Administrator's discretion, the Administrator has analyzed this issue and does not determine that unreasonable risk presented by CTC may be prevented or reduced to a sufficient extent by an action taken under a Federal law not administered by EPA.

B. TSCA Section 9(b) Analysis

If EPA determines that actions under other Federal laws administered in whole or in part by EPA could eliminate or sufficiently reduce a risk to health or the environment, TSCA section 9(b) instructs EPA to use these other authorities to protect against that risk "unless the Administrator determines, in the Administrator's discretion, that it is in the public interest to protect against such risk" under TSCA. In making such a public interest finding, TSCA section 9(b)(2) states: "the Administrator shall consider, based on information reasonably available to the Administrator, all relevant aspects of

the risk . . . and a comparison of the estimated costs and efficiencies of the action to be taken under this title and an action to be taken under such other law to protect against such risk.”

Although several EPA statutes have been used to limit CTC exposure (Ref. 10), regulations under those EPA statutes largely regulate releases to the environment, rather than the occupational exposures. While these limits on releases to the environment may be protective in the context of their respective statutory authorities, regulation under TSCA is also appropriate for occupational exposures and in some cases can provide upstream protections that would prevent the need for release restrictions required by other EPA statutes (e.g., Resource Conservation and Recovery Act (RCRA), CAA, CWA). Updating regulations under other EPA statutes would not be sufficient to address the unreasonable risk of injury to the health of workers and occupational non-users who are exposed to CTC under its conditions of use. EPA’s TSCA section 9(b) analysis is presented in the proposed rule (88 FR 49216) (FRL–8206–01–OCSPP), and responses to comments on that analysis can be found in the Response to Comments, section 10.2 (Ref. 11).

For these reasons, the Administrator does not determine that unreasonable risk from CTC under its conditions of use, as evaluated in the 2020 Risk Evaluation for Carbon Tetrachloride (Ref. 1), could be eliminated or reduced to a sufficient extent by actions taken under other Federal laws administered in whole or in part by EPA.

C. TSCA Section 14 Requirements

EPA is also providing notice to manufacturers, processors, and other interested parties about potential impacts to CBI. Under TSCA sections 14(a) and 14(b)(4), if EPA promulgates a rule pursuant to TSCA section 6(a) that establishes a ban or phase-out of a chemical substance, the protection from disclosure of any CBI regarding that chemical substance and submitted pursuant to TSCA will be “presumed to no longer apply,” subject to the limitations identified in TSCA section 14(b)(4)(B)(i) through (iii). Pursuant to TSCA section 14(b)(4)(B)(iii), the presumption against protection from disclosure will apply only to information about the specific conditions of use that this rule prohibits. Manufacturers or processors seeking to protect such information may submit a request for nondisclosure as provided by TSCA sections 14(b)(4)(C) and 14(g)(1)(E). Any request for nondisclosure must be submitted within

30 days after receipt of notice from EPA under TSCA section 14(g)(2)(A) stating EPA will not protect the information from disclosure. EPA anticipates providing such notice via the Central Data Exchange (CDX).

D. TSCA Section 26 Considerations

As explained in the 2023 proposed rule (88 FR 49216, July 29, 2023) (FRL–8206–01–OCSPP), EPA fulfilled TSCA section 26(h) by using scientific information, technical procedures, measures, methods, protocols, methodologies, and models consistent with the best available science. Comments received on the proposed rule about whether EPA adequately assessed reasonably available information under TSCA section 26 on the risk evaluation, and responses to those comments, can be found in Section 10.4 of the Response to Comments document (Ref. 11).

VIII. Statutory and Executive Order Reviews

Additional information about these statutes and Executive Orders can be found at <https://www.epa.gov/laws-regulations/laws-and-executive-orders>.

A. Executive Order 12866: Regulatory Planning and Review and Executive Order 14094: Modernizing Regulatory Review

This action is a “significant regulatory action” as defined in Executive Order 12866 (58 FR 51735, October 4, 1993), as amended by Executive Order 14094 (88 FR 21879, April 11, 2023). Accordingly, EPA submitted this action to the Office of Management and Budget (OMB) for Executive Order 12866

review. Documentation of any changes made in response to the Executive Order 12866 review is available in the docket. EPA prepared an analysis of the potential costs and benefits associated with this action. This analysis, *Economic Analysis of the Regulation of Carbon Tetrachloride Under TSCA Section 6(a)* (Ref. 5), is available in the docket and summarized in Units I.E. and V.D.

B. Paperwork Reduction Act (PRA)

The information collection activities in this final rule have been submitted to OMB for approval under the PRA, 44 U.S.C. 3501 *et seq.* The Information Collection Request (ICR) document that EPA prepared has been assigned EPA ICR No. 2744.02 and OMB Control No. 2070-0228 (Ref. 56). You can find a copy of the ICR in the docket for this rule, and it is briefly summarized here. The information collection requirements are not enforceable until OMB approves them. There are two primary provisions of the final rule that may increase burden under the PRA. The first is downstream notification, which would be carried out by updates to the relevant SDS and which will be required for manufacturers, processors, and distributors in commerce of CTC, who will provide notice to companies downstream upon shipment of CTC about the prohibitions. The information submitted to downstream companies through the SDS will provide knowledge and awareness of the restrictions to these companies.

The second primary provision of the final rule that may increase burden under the PRA is WCPP-related information generation, recordkeeping, and notification requirements (including development of exposure control plans; exposure level monitoring and related recordkeeping; development of documentation for a PPE program and related recordkeeping; development of documentation for a respiratory protection program and related recordkeeping; development and notification to potentially exposed persons (employees and others in the workplace) about how they can access the exposure control plans, exposure monitoring records, PPE program implementation documentation, and respirator program documentation; ordinary business records, such as invoices and bills-of-lading related to the continued distribution of CTC in commerce, as well as records documenting compliance with the proposed workplace chemical protection program requirements and proposed restrictions on the laboratory use of CTC.

Respondents/affected entities:

Persons that manufacture, process, use, distribute in commerce or dispose of carbon tetrachloride (see Unit I.A.).

Respondent's obligation to respond:

Mandatory under TSCA section 6(a) and 40 CFR part 751.

Estimated number of respondents: 72.

Frequency of response: On occasion.

Total estimated burden: 86,186 hours per year. Burden is defined at 5 CFR 1320.3(b).

Total estimated cost: \$14,800,653 per year, including \$9,360,626 in annualized capital or operation and maintenance costs.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. The OMB control number for the EPA's regulations in 40 CFR are listed in 40 CFR part 9. When OMB approves this ICR, the Agency will announce that approval in the **Federal Register** and publish a technical amendment to 40 CFR part 9 to display the OMB control number for the approved information collection activities contained in this final rule.

C. Regulatory Flexibility Act (RFA)

I certify that this action will not have a significant economic impact on a substantial number of small entities under the RFA, 5 U.S.C. 601 *et seq.* The small entities subject to the requirements of this action are small businesses that manufacture/import, process, or distribute the chemicals subject to this final rule. The Agency identified seven small firms in the small entity analysis that are potentially subject to the rule. The names and NAICS codes of these entities can be found in Section 6.2.2 of the Economic Analysis (Ref. 5). It is estimated that five of the seven small companies would incur a rule cost-to-company revenue impact ratio of less than one percent, and two companies would experience an impact of between one and three percent. The companies estimated to experience a greater than one percent rule cost-to-revenue impact would potentially be subject to the rule under the Disposal and the Manufacturing conditions of use, both of which would require a WCPP under the final rule. To avoid understating impacts to small entities, EPA used the highest per-facility cost presented in the EA (\$615,457). Per-facility costs were estimated by dividing the total costs by the number of affected facilities for each use. Details of this analysis are in the Economic Analysis (Ref. 5), which is in the docket for this action. Based on the low number of affected small entities

and the low impact, EPA does not expect this action to have a significant impact on a substantial number of small entities.

D. Unfunded Mandates Reform Act (UMRA)

This action does not contain an unfunded mandate of \$100 million (in 1995 dollars and adjusted annually for inflation) or more as described in UMRA, 2 U.S.C. 1531–1538, and does not significantly or uniquely affect small governments. The action will affect entities that use CTC. It is not expected to affect State, local or Tribal governments because the use of CTC by government entities is minimal. The costs involved in this action are estimated not to exceed \$183 million in 2023\$ (\$100 million in 1995\$ adjusted for inflation using the GDP implicit price deflator) or more in any one year. The total quantified annualized social cost of the final rule is \$19,736,400 (at 3% discount rate) and \$18,995,752 (at 7% discount rate).

E. Executive Order 13132: Federalism

EPA has concluded that this action has federalism implications, as specified in Executive Order 13132 (64 FR 43255, August 10, 1999), because regulation under TSCA section 6(a) may preempt State law. EPA provides the following preliminary federalism summary impact statement. The Agency consulted with State and local officials early in the process of developing the proposed action to permit them to have meaningful and timely input into its development. This included a consultation meeting on December 17, 2020. EPA invited the following national organizations representing State and local elected officials to this meeting: National Governors Association; National Conference of State Legislatures, Council of State Governments, National League of Cities, U.S. Conference of Mayors, National Association of Counties, International City/County Management Association, National Association of Towns and Townships, County Executives of America, and Environmental Council of States. A summary of the meeting with these organizations, including the views that they expressed, is available in the docket (Ref. 16). EPA provided an opportunity for these organizations to provide follow-up comments in writing but did not receive any such comments.

F. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

This action does not have Tribal implications as specified in Executive

Order 13175 (65 FR 67249, November 9, 2000) because it will not have substantial direct effects on Tribal governments, on the relationship between the Federal Government and the Indian Tribes, or on the distribution of power and responsibilities between the Federal Government and Indian Tribes. CTC is not manufactured, processed, or distributed in commerce by Tribes, and therefore, this rulemaking would not impose substantial direct compliance costs on Tribal governments. Thus, Executive Order 13175 does not apply to this action.

Notwithstanding the lack of Tribal implications as specified by Executive Order 13175, EPA consulted with Tribal officials during the development of this action, consistent with the EPA Policy on Consultation and Coordination with Indian Tribes, which EPA applies more broadly than Executive Order 13175.

The Agency held a Tribal consultation from December 7, 2020, through March 12, 2021, with meetings held on January 6 and 12, 2021. Tribal officials were given the opportunity to meaningfully interact with EPA concerning the current status of risk management. During the consultation, EPA discussed risk management under TSCA section 6(a), findings from the 2020 Risk Evaluation for Carbon Tetrachloride, types of information to inform risk management, principles for transparency during risk management, and types of information EPA sought from Tribes (Ref. 17). EPA briefed Tribal officials on the Agency's risk management considerations and Tribal officials raised no related issues or concerns to EPA during or in follow-up to those meetings (Ref. 17). EPA received no written comments as part of this consultation.

G. Executive Order 13045: Protection of Children From Environmental Health Risks and Safety Risks

Executive Order 13045 (62 FR 19885, April 23, 1997) directs Federal agencies to include an evaluation of the health and safety effects of the planned regulation on children in Federal health and safety standards and explain why the regulation is preferable to potentially effective and reasonably feasible alternatives. This action is not subject to Executive Order 13045 (62 FR 19885, April 23, 1997) because it is not a significant regulatory action under section 3(f)(1) of Executive Order 12866, and because EPA does not believe that the environmental health or safety risks addressed by this action will have a disproportionate risk to children as reflected by the conclusions of the CTC

risk evaluation. This action's health and risk assessments and impacts on both children and adults from occupational use from inhalation and dermal exposures are described in Units II.C.3, V.A., and the 2020 Risk Evaluation for Carbon Tetrachloride (Ref. 1). While the Agency found risks to children and adults from occupational use, the Agency determined that risks to children were not disproportionate. EPA's *Policy on Children's Health* applies to this action. Information on how the Policy was applied and on the action's health and risk assessments are contained in Unit II.D.2.c., and the 2020 Risk Evaluation for CTC and the Economic Analysis for this final rule (Refs. 1, 5).

H. Executive Order 13211: Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution or Use

This action is not a "significant energy action" as defined in Executive Order 13211 (66 FR 28355, May 22, 2001) because it is not likely to have a significant adverse effect on the supply, distribution or use of energy and has not been designated by the Administrator of the Office of Information and Regulatory Affairs as a significant energy action.

I. National Technology Transfer and Advancement Act (NTTAA)

Pursuant to the NTTAA section 12(d), 15 U.S.C. 272, the Agency has determined that this rulemaking involves environmental monitoring or measurement, specifically for occupational inhalation exposures to CTC. Consistent with the Agency's Performance Based Measurement System (PBMS), EPA will not require the use of specific, prescribed analytic methods. Rather, the Agency will allow the use of any method that meets the prescribed performance criteria. The PBMS approach is intended to be more flexible and cost-effective for the regulated community; it is also intended to encourage innovation in analytical technology and improved data quality. EPA is not precluding the use of any method, whether it constitutes a voluntary consensus standard or not, as long as it meets the performance criteria specified.

For this rulemaking, the key consideration for the PBMS approach is the ability to accurately detect and measure airborne concentrations of CTC at the ECEL and the ECEL action level. Some examples of methods which meet the criteria are included in the appendix of the ECEL memo (Ref. 15). EPA recognizes that there may be voluntary

consensus standards that meet the proposed criteria (Ref. 57).

J. Executive Orders 12898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations and 14096: Revitalizing Our Nation's Commitment to Environmental Justice for All

EPA believes that the human health or environmental conditions that exist prior to this action result in or have the potential to result in disproportionate and adverse human health or environmental effects on communities with environmental justice concerns in accordance with Executive Orders 12898 (59 FR 7629, February 16, 1994) and 14096 (88 FR 25251, April 26, 2023). As described more fully in the Economic Analysis for this rulemaking (Ref. 5), EPA analyzed the baseline conditions facing communities near CTC and HFO manufacturing facilities as well as those of workers in the same industry and county as CTC facilities and HFO manufacturing facilities. The analysis of local demographics found that, across the entire population within 1- and 3-miles of CTC facilities, there are higher percentages of people who identify as Black and living below the poverty line and a similar percentage of people who identify as Hispanic compared to the national averages. CTC facilities are concentrated in Texas and Louisiana, especially near Houston and Baton Rouge. As summarized in Unit V.A., the screening level fenceline analysis for CTC calculated risk estimates to select populations within the general population living or working near particular facilities exceeding the 1×10^{-6} benchmark value (Ref. 49). In cases where communities with environmental justice concerns are also fenceline communities, EPA expects that the finalized prohibition of increased emissions associated with WCPP requirements would prevent an increase in health and environmental impacts due to this rule.

The worker analysis was performed at the county and industry level. In eight of the 12 counties with CTC facilities that reported Basic Chemical Manufacturing, workers who identify as Black were over-represented compared to their percentage of the national demographics for that industry; at the national level, 11% of workers in the Basic Chemical Manufacturing industry identify as Black. In addition, there were eight counties with CTC facilities that reported Waste Treatment and Disposal; workers in that industry in those counties were more likely to earn less than the national average for that industry across several demographic

groups, as outlined in the Economic Analysis.

EPA believes that it is not practicable to assess whether this action is likely to result in disproportionate and adverse effects on communities with environmental justice concerns. EPA was unable to quantify the distributional effects of the regulatory action under consideration and compare them to baseline conditions for several reasons. Limitations include a lack of data regarding exposure reductions that will occur as a result of the rule and on the sociodemographic characteristics of workers in CTC facilities. Another key limitation that prevents evaluation of the distributional effects of the rule is a lack of knowledge of the actions regulated entities will take in response to the rule.

EPA additionally identified and addressed environmental justice concerns by conducting outreach to advocates of communities that might be subject to disproportionate exposure to CTC. On February 2 and 18, 2021, EPA held public meetings as part of this consultation. These meetings were held pursuant to and in compliance with Executive Order 12898 and Executive Order 14008, entitled “Tackling the Climate Crisis at Home and Abroad” (86 FR 7619, February 1, 2021). EPA received one written comment following these public meetings, in addition to oral comments provided during the meetings (Ref. 18). Commenters supported strong regulation of CTC to protect lower-income communities and workers. In addition, commenters recommended EPA conduct analysis of additional exposure pathways, including air and water.

The information supporting this Executive Order review is contained in Units I.E., II.D., V.D., VI.A. and in the Economic Analysis (Ref. 5). EPA’s presentations and fact sheets for the environmental justice consultations related to this rulemaking, are available at <https://www.epa.gov/assessing-and-managing-chemicals-under-tsca/materials-june-and-july-2021-environmental-justice>. These materials and a summary of the consultation are also available in the public docket for this rulemaking.

K. Congressional Review Act (CRA)

This action is subject to the CRA, 5 U.S.C. 801 *et seq.*, and the EPA will submit a rule report to each House of the Congress and to the Comptroller General of the United States. This action is not a “major rule” as defined by 5 U.S.C. 804(2).

List of Subjects in 40 CFR Part 751

Environmental protection, Chemicals, Export notification, Hazardous substances, Import certification, Reporting and recordkeeping.

Michael S. Regan,
Administrator.

Therefore, for the reasons stated in the preamble, 40 CFR chapter I is amended to read as follows:

PART 751—REGULATION OF CERTAIN CHEMICAL SUBSTANCES AND MIXTURES UNDER SECTION 6 OF THE TOXIC SUBSTANCES CONTROL ACT

■ 1. The authority citation for part 751 continues to read as follows:

Authority: 15 U.S.C. 2605, 15 U.S.C. 2625(l)(4).

■ 2. Add subpart H to read as follows:

Subpart H—Carbon Tetrachloride

Sec.

751.701 General.

751.703 Definitions.

751.705 Prohibition of Certain Industrial and Commercial Uses and Manufacturing, Processing, and Distribution in Commerce of Carbon Tetrachloride for those Uses.

751.707 Workplace Chemical Protection Program (WCPP).

751.709 Workplace Restrictions for the Industrial and Commercial Use as a Laboratory Chemical, Including the Use of Carbon Tetrachloride as a Laboratory Chemical by the U.S. Department of Defense.

751.711 Downstream Notification.

751.713 Recordkeeping Requirements.

§ 751.701 General.

(a) *Applicability.* This subpart sets certain restrictions on the manufacture (including import), processing, distribution in commerce, use, or disposal of carbon tetrachloride (CASRN 56–23–5) to prevent unreasonable risk of injury to health in accordance with TSCA section 6(a).

(b) *Trace quantities exclusion.* Unless otherwise specified in this subpart, the prohibitions and restrictions of this subpart do not apply to carbon tetrachloride that is solely present unintentionally in trace quantities with another chemical substance or mixture.

(c) *Owner and operator requirements.* Any requirement for an owner or operator, or an owner and operator, is a requirement for any individual that is either an owner or an operator.

§ 751.703 Definitions.

The definitions in subpart A of this part apply to this Subpart unless otherwise specified in this section. In

addition, the following definitions apply:

ECEL has the same meaning as in § 751.5 and for CTC, is an airborne concentration of carbon tetrachloride of 0.03 parts per million (ppm) calculated as an eight (8)-hour time-weighted average (TWA).

ECEL action level means a concentration of airborne carbon tetrachloride of 0.02 parts per million (ppm) calculated as an eight (8)-hour time-weighted average (TWA).

§ 751.705 Prohibition of Certain Industrial and Commercial Uses and Manufacturing, Processing, and Distribution in Commerce of Carbon Tetrachloride for Those Uses.

(a) Prohibitions. (1) After June 16, 2025, all persons are prohibited from manufacturing, processing, distributing in commerce (including making available) and using carbon tetrachloride for the following conditions of use:

(i) Processing condition of use: Incorporation into formulation, mixture or reaction products in petrochemical-derived manufacturing except in the manufacture of vinyl chloride.

(ii) Industrial and commercial conditions of use:

(A) Industrial and commercial use as an industrial processing aid in the manufacture of petrochemicals-derived products except in the manufacture of vinyl chloride.

(B) Industrial and commercial use in the manufacture of other basic chemicals (including manufacturing of chlorinated compounds used in solvents, adhesives, asphalt, and paints and coatings), except for use in the elimination of nitrogen trichloride in the production of chlorine and caustic soda and the recovery of chlorine in tail gas from the production of chlorine.

(C) Industrial and commercial use in metal recovery.

(D) Industrial and commercial use as an additive.

(2) After December 18, 2025, all persons are prohibited from manufacturing, processing, distributing in commerce (including making available) and using carbon tetrachloride for industrial and commercial specialty uses by the U.S. Department of Defense except as provided in § 751.709.

(b) [Reserved].

§ 751.707 Workplace Chemical Protection Program (WCPP).

(a) *Applicability.* The provisions of this section apply to the following conditions of use of carbon tetrachloride, including manufacturing and processing for export, except to the

extent the conditions of use are prohibited by § 751.705:

(1) Domestic manufacture, except where carbon tetrachloride is manufactured solely as a byproduct.

(2) Import.

(3) Processing as a reactant in the production of hydrochlorofluorocarbons, hydrofluorocarbons, hydrofluoroolefins and perchloroethylene.

(4) Processing: Incorporation into formulation, mixture, or reaction products for agricultural products manufacturing, vinyl chloride manufacturing, and other basic organic and inorganic chemical manufacturing.

(5) Processing: Repackaging for use as a laboratory chemical.

(6) Processing: Recycling.

(7) Industrial and commercial use as an industrial processing aid in the manufacture of agricultural products and vinyl chloride.

(8) Industrial and commercial use in the elimination of nitrogen trichloride in the production of chlorine and caustic soda and the recovery of chlorine in tail gas from the production of chlorine.

(9) Disposal.

(b) *Existing chemical exposure limit (ECEL)*—(1) *Eight-hour time-weighted average (TWA) ECEL*. Beginning September 20, 2027 for Federal agencies or Federal contractors acting for or on behalf of the Federal government, or by September 9, 2026 for non-Federal owners and operators, or beginning four months after introduction of carbon tetrachloride into the workplace if carbon tetrachloride commences after June 11, 2026, the owner or operator

must ensure that no person is exposed to an airborne concentration of carbon tetrachloride in excess of the ECEL, consistent with the requirements of paragraph (d)(1)(i) of this section and, if necessary, paragraph (f) of this section.

(2) *Exposure monitoring*—(i) *General*. (A) Owners or operators must determine each potentially exposed person's exposure, without regard to respiratory protection, by either:

(1) Taking a personal breathing zone air sample of each potentially exposed person's exposure; or

(2) Taking personal breathing zone air samples that are representative of the 8-hour TWA of each exposure group.

(B) Personal breathing zone air samples are representative of the 8-hour TWA of all potentially exposed persons in an exposure group if the samples are of at least one person's full-shift exposure who represents the highest potential carbon tetrachloride exposures in that exposure group. Personal breathing zone air samples taken during one work shift may be used to represent potentially exposed person exposures on other work shifts where the owner or operator can document that the tasks performed and conditions in the workplace are similar across shifts.

(C) Exposure samples must be analyzed using an appropriate analytical method by a laboratory that complies with the Good Laboratory Practice Standards in 40 CFR part 792 or a laboratory accredited by the American Industrial Hygiene Association (AIHA) or another industry-recognized program.

(D) Owners or operators must ensure that methods used to perform exposure

monitoring produce results that are accurate, to a confidence level of 95 percent, to within plus or minus 25 percent for airborne concentrations of carbon tetrachloride.

(E) Owners and operators must re-monitor within 15 working days after receipt of any exposure monitoring when results indicate non-detect, unless an Environmental Professional as defined at 40 CFR 312.10 or a Certified Industrial Hygienist reviews the exposure monitoring results and determines re-monitoring is not necessary.

(ii) *Initial monitoring*. By June 21, 2027 for Federal agencies and Federal contractors acting for or on behalf of the Federal government, or by June 11, 2026 for non-Federal owners and operators, or within 30 days of introduction of carbon tetrachloride into the workplace, whichever is later, each owner or operator covered by this section must perform initial monitoring of potentially exposed persons. Where the owner or operator has monitoring results from monitoring conducted within five years prior to February 18, 2025 and the monitoring satisfies all other requirements of this section, the owner or operator may rely on such earlier monitoring results to satisfy the requirements of this paragraph (b)(2)(ii).

(iii) *Periodic monitoring*. The owner or operator must establish an exposure monitoring program for periodic monitoring of exposure to carbon tetrachloride in accordance with Table 1.

TABLE 1 TO § 751.707(b)(3)(iii)—PERIODIC MONITORING REQUIREMENTS

Air concentration condition	Periodic exposure monitoring requirement
If all initial exposure monitoring is below the ECEL action level (<0.02 ppm 8-hour TWA).	Periodic exposure monitoring is required at least once every five years.
If the most recent exposure monitoring indicates that airborne exposure is above the ECEL (> 0.03 ppm 8-hour TWA).	Periodic exposure monitoring is required within three months of the most recent exposure monitoring.
If the most recent exposure monitoring indicates that airborne exposure is at or above the ECEL action level but at or below the ECEL (≥0.02 ppm 8-hour TWA, ≤0.03 ppm 8-hour TWA).	Periodic exposure monitoring is required within six months of the most recent exposure monitoring.
If the two most recent (non-initial) exposure monitoring measurements, taken at least seven days apart within a 6-month period, indicate exposure is below the ECEL action level (<0.02 ppm 8-hour TWA).	Periodic exposure monitoring is required within five years of the most recent exposure monitoring.
If the owner or operator engages in a condition of use for which WCPP ECEL would be required but does not manufacture, process, use, or dispose of carbon tetrachloride in that condition of use over the entirety of time since the last required monitoring event.	The owner or operator may forgo the next periodic exposure monitoring event. However, documentation of cessation of use of carbon tetrachloride is required; and periodic monitoring would be required when the owner or operator resumes the condition of use.

(iv) *Additional exposure monitoring*. (A) The owner or operator must conduct additional exposure monitoring within a reasonable timeframe whenever there has been a change in the production, process, control equipment, personnel or work practices that may reasonably be expected to result in new or additional exposures above the ECEL or when the owner or operator has any reason to believe that new or additional

exposures above the ECEL action level have occurred.

(B) Whenever start-ups or shutdowns, or ruptures, malfunctions or other breakdowns or unexpected releases occur that may lead to exposure to

potentially exposed persons, the owner or operator must conduct the additional exposure monitoring within a reasonable timeframe after the conclusion of the start-up or shutdown and/or the cleanup, repair or remedial action of the malfunction or other breakdown or unexpected release. Prior monitoring data cannot be used to meet this requirement.

(v) *Observation of monitoring.* (A) Owners and operators must provide potentially exposed persons or their designated representatives an opportunity to observe any monitoring of occupational exposure to CTC that is conducted under this section and designed to characterize their exposure.

(B) When monitoring observation requires entry into a regulated area, the owner or operator must provide the observers with the required PPE.

(C) Only persons who are authorized to have access to facilities classified in the interest of national security must be permitted to observe exposure monitoring conducted in such facilities.

(vi) *Notification of monitoring results.* (A) The owner or operator must inform each person whose exposures are monitored or who is part of a monitored exposure group and their designated representatives of any monitoring results within 15 working days of receipt of those monitoring results.

(B) This notification must include the following:

- (1) Exposure monitoring results;
- (2) Identification and explanation of the ECEL and ECEL action level;
- (3) Statement of whether the monitored airborne concentration of carbon tetrachloride exceeds the ECEL action level or ECEL;
- (4) If the ECEL is exceeded, descriptions of any exposure controls implemented by the owner or operator to reduce exposures to or below the ECEL, as required by paragraph (d)(1) of this section;
- (5) Explanation of any required respiratory protection provided in accordance with paragraphs (b)(3)(iv), (d)(1)(i), and (f) of this section;
- (6) Quantity of carbon tetrachloride in use at the time of monitoring;
- (7) Location of carbon tetrachloride use at the time of monitoring;
- (8) Manner of carbon tetrachloride use at the time of monitoring; and
- (9) Identified releases of carbon tetrachloride;

(C) Notice must be written in plain language and either provided to each potentially exposed person and their designated representatives individually in a language that the person understands, or posted in an appropriate and accessible location

outside the regulated area with an English-language version and a non-English language version representing the language of the largest group of workers who do not read English.

(3) *Regulated areas*—(i) *Establishment.* By September 20, 2027 for Federal agencies and Federal contractors acting for or on behalf of the Federal government, or by September 9, 2026 for non-Federal owners and operators, or within three months after receipt of any exposure monitoring that indicates exposures exceeding the ECEL, the owner or operator must establish and maintain a regulated area wherever airborne concentrations of carbon tetrachloride exceeds or can reasonably be expected to exceed the ECEL.

(ii) *Access.* The owner or operator must limit access to regulated areas to authorized persons.

(iii) *Demarcation.* The owner or operator must demarcate regulated areas from the rest of the workplace in a manner that adequately establishes and alerts persons to the boundaries of the area and minimizes the number of authorized persons exposed to carbon tetrachloride within the regulated area.

(iv) *Provisions of respirators.* (A) The owner or operator must ensure that each person who enters a regulated area is supplied with a respirator selected in accordance with paragraph (f) of this section and must ensure that all persons within the regulated area are using the provided respirators whenever carbon tetrachloride exposures may exceed the ECEL.

(B) An owner or operator who has implemented all feasible controls as required in paragraph (d)(1)(i) of this section, and who has established a regulated area as required by paragraph (b)(3)(i) of this section where carbon tetrachloride exposure can be reliably predicted to exceed the ECEL only on certain days (for example, because of work or process schedule) must have persons use respirators in that regulated area on those days.

(v) *Prohibited activities.* (A) The owner or operator must ensure that, within a regulated area, persons do not engage in non-work activities which may increase CTC exposure.

(B) The owner or operator must ensure that while persons are wearing respirators in the regulated area, they do not engage in activities which interfere with respirator performance.

(c) *Direct dermal contact controls (DDCC).* Beginning September 20, 2027 for Federal agencies or Federal contractors acting for or on behalf of the Federal government, or by June 16, 2025 for non-Federal owners and operators,

or within 30 days of introduction of carbon tetrachloride into the workplace, whichever is later, owners or operators must ensure that all persons are separated, distanced, physically removed, or isolated to prevent direct dermal contact with carbon tetrachloride or from contact with equipment or materials on which carbon tetrachloride may exist consistent with the requirements of paragraph (d)(1)(ii) of this section and, if necessary, paragraph (f) of this section.

(d) *Exposure control procedures and plan*—(1) *Methods of compliance*—(i) *ECEL.* (A) By December 3, 2027, the owner or operator must institute one or a combination of elimination, substitution, engineering controls, or administrative controls to reduce exposure to or below the ECEL except to the extent that the owner or operator can demonstrate that such controls are not feasible, in accordance with the hierarchy of controls.

(B) If the feasible controls required under paragraph (d)(1)(i)(A) of this section that can be instituted do not reduce exposures for potentially exposed persons to or below the ECEL, then the owner or operator must use such controls to reduce exposure to the lowest levels achievable by these controls and must supplement those controls with the use of respiratory protection that complies with the requirements of paragraph (f) of this section.

(C) Where an owner or operator cannot demonstrate exposure to carbon tetrachloride has been reduced to or below the ECEL through the use of controls required under paragraphs (d)(1)(i)(A) and (B) of this section, and has not demonstrated that it has appropriately supplemented with respiratory protection that complies with the requirements of paragraph (f) of this section, this will constitute a failure to comply with the ECEL.

(D) The owner or operator must ensure that any engineering controls instituted under paragraph (d)(1)(i)(A) of this section do not increase emissions of carbon tetrachloride to ambient air outside the workplace.

(ii) *Direct dermal contact controls (DDCC).* (A) The owner or operator must institute one or a combination of elimination, substitution, engineering controls, or administrative controls to prevent all persons from direct dermal contact with carbon tetrachloride except to the extent that the owner or operator can demonstrate that such controls are not feasible.

(B) If the feasible controls required under paragraph (d)(1)(ii)(A) of this section that can be instituted do not

prevent direct dermal contact with carbon tetrachloride, then the owner or operator must use such controls to reduce direct dermal contact to the extent achievable by these controls and must supplement those controls by the use of dermal protection that complies with the requirements of paragraph (f) of this section.

(C) Where an owner or operator cannot demonstrate that direct dermal contact to carbon tetrachloride is prevented through the use of controls required under paragraphs (d)(1)(ii)(A) and (B) of this section, and has not demonstrated that it has appropriately supplemented with dermal protection that complies with the requirements of paragraph (f) of this section, this will constitute a failure to comply with the DDCC requirements.

(2) *Exposure control plan.* By December 3, 2027, each owner and operator must establish and implement an exposure control plan.

(i) *Exposure control plan contents.* The exposure control plan must include documentation of the following:

(A) Identification of exposure controls that were considered, including those that were used or not used to meet the requirements of paragraphs (d)(1)(i)(A) and (d)(1)(ii)(A) of this section, in the following sequence: elimination, substitution, engineering controls and administrative controls;

(B) For each exposure control considered, a rationale for why the exposure control was selected or not selected based on feasibility, effectiveness, and other relevant considerations;

(C) A description of actions the owner or operator must take to implement exposure controls selected, including proper installation, regular inspections, maintenance, training or other actions;

(D) A description of regulated areas, how they are demarcated, and persons authorized to enter the regulated areas;

(E) Attestation that exposure controls selected do not increase emissions of carbon tetrachloride to ambient air outside of the workplace and whether additional equipment was installed to capture or otherwise prevent increased emissions of carbon tetrachloride to ambient air;

(F) Description of activities conducted by the owner or operator to review and update the exposure control plan to ensure effectiveness of the exposure controls, identify any necessary updates to the exposure controls, and confirm that all persons are properly implementing the exposure controls;

(G) An explanation of the procedures for responding to any change that may reasonably be expected to introduce

additional sources of exposure to carbon tetrachloride, or otherwise result in increased exposure to carbon tetrachloride, including procedures for implementing corrective actions to mitigate exposure to carbon tetrachloride.

(ii) *Exposure control plan requirements.* (A) The owner or operator must not implement a schedule of personnel rotation as a means of compliance with the ECEL.

(B) The owner or operator must maintain the effectiveness of any controls instituted under this paragraph (d).

(C) The exposure control plan must be reviewed and updated as necessary, but at least every five years, to reflect any significant changes in the status of the owner or operator's approach to compliance with paragraphs (b) through (d) of this section.

(iii) *Availability of exposure control plan.* (A) Owners or operators must make the exposure control plan and associated records, including ECEL exposure monitoring records, ECEL compliance records, DDCC compliance records, and workplace participation records described in § 751.713(b), available to potentially exposed persons and their designated representatives.

(B) Owners or operators must notify potentially exposed persons and their designated representatives of the availability of the exposure control plan and associated records within 30 days of the date that the exposure control plan is completed and at least annually thereafter.

(C) Notice of the availability of the exposure control plan and associated records must be provided in plain language writing to each potentially exposed person in a language that the person understands or posted in an appropriate and accessible location outside the regulated area with an English-language version and a non-English language version representing the language of the largest group of workers who do not read English.

(D) Upon request by the potentially exposed person or their designated representative(s), the owner or operator must provide the specified records at a reasonable time, place, and manner. If the owner or operator is unable to provide the requested records within 15 days, the owner or operator must, within those 15 days, inform the potentially exposed person or designated representative(s) requesting the record(s) of the reason for the delay and the earliest date when the record will be made available.

(e) *Workplace information and training.* (1) By September 20, 2027 for

Federal agencies and Federal contractors acting for or on behalf of the Federal government, or by September 9, 2026 for non-Federal owners and operators, the owner or operator must institute a training program and ensure that persons potentially exposed to carbon tetrachloride participate in the program according to the requirements of this paragraph (e).

(2) The owner or operator must ensure that each potentially exposed person is trained prior to or at the time of a potential exposure to carbon tetrachloride.

(3) The owner or operator must ensure that information and training is presented in a manner that is understandable to each person required to be trained and in multiple languages as appropriate, such as, based on languages spoken by potentially exposed persons in the workplace.

(4) The following information and training must be provided to all persons potentially exposed to carbon tetrachloride:

(i) The requirements of this section, as well as how to access or obtain a copy of these requirements in the workplace;

(ii) The quantity, location, manner of use, release, and storage of carbon tetrachloride and the specific operations in the workplace that could result in exposure to carbon tetrachloride, particularly noting where each regulated area is located;

(iii) Methods and observations that may be used to detect the presence or release of carbon tetrachloride in the workplace (such as monitoring conducted by the owner or operator, continuous monitoring devices, visual appearance or odor of carbon tetrachloride when being released);

(iv) The acute and chronic health hazards of carbon tetrachloride as detailed on relevant Safety Data Sheets; and

(v) The principles of safe use and handling of carbon tetrachloride and measures potentially exposed persons can take to protect themselves from carbon tetrachloride, including specific procedures the owner or operator has implemented to protect potentially exposed persons from exposure to carbon tetrachloride, such as appropriate work practices, emergency procedures, and personal protective equipment to be used.

(5) The owner or operator must re-train each potentially exposed person as necessary, but at minimum annually, to ensure that each such person maintains the requisite understanding of the principles of safe use and handling of carbon tetrachloride in the workplace.

(6) Whenever there are workplace changes, such as modifications of tasks or procedures or the institution of new tasks or procedures, that increase exposure, and where such exposure exceeds or can reasonably be expected to exceed the ECEL action level or increase potential for direct dermal contact with carbon tetrachloride, the owner or operator must update the training as necessary to ensure that each potentially exposed person is re-trained.

(f) *Personal protective equipment (PPE).* (1) *General.* The provisions of this paragraph (f) apply to any owner or operator that is required to provide respiratory protection pursuant to paragraphs (b)(3)(iv) or (d)(1)(i)(B) of this section or dermal protection pursuant to paragraphs (c) or (d)(1)(ii)(B) of this section or § 751.709(b)(3) or (4).

(2) *Respiratory protection.* (i) By September 20, 2027 for Federal agencies and Federal contractors acting for or on behalf of the Federal government, or by September 9, 2026 for non-Federal owners and operators, or within three months after receipt of any exposure monitoring that indicates exposures exceeding the ECEL, if an owner or operator is required to provide respiratory protection pursuant to paragraph (f)(1) of this section, the owner or operator must ensure that each potentially exposed person is provided with a respirator according to the requirements of this section.

(ii) For purposes of this paragraph (f)(2), cross-referenced provisions in 29 CFR 1910.134 applying to an “employee” apply equally to potentially exposed persons and cross-referenced provisions applying to an “employer” also apply equally to owners or operators. Other terms in cross-referenced provisions in 29 CFR 1910.134 that are defined in 29 CFR 1910.134(b) have the meaning assigned to them in that paragraph.

(iii) By September 20, 2027 for Federal agencies and Federal contractors acting for or on behalf of the Federal government, or by September 9, 2026 for non-Federal owners and operators, or within three months after receipt of any exposure monitoring that indicates exposures exceeding the ECEL, if an owner or operator is required to provide respiratory protection pursuant to (f)(1) of this section, the owner or operator must develop and administer a written respiratory protection program consistent with the requirements of 29 CFR 1910.134(c)(1), (c)(3) and (c)(4).

(iv) Owners and operators must select respiratory protection required by paragraph (f)(2)(i) of this section based

on a medical evaluation consistent with the requirements of 29 CFR 1910.134(e). If a potentially exposed person cannot use a negative-pressure respirator that would otherwise be required by paragraph (f)(1) of this section, then the owner or operator must provide that person with an alternative respirator. The alternative respirator must have less breathing resistance than the negative-pressure respirator and provide equivalent or greater protection. If the person is unable to use an alternative respirator, then the person must not be permitted to enter the regulated area.

(v) Owners and operators must select respiratory protection that properly fits each affected person and communicate respirator selections to each affected person consistent with the requirements of 29 CFR 1910.134(f).

(vi) Owners and operators must provide, ensure use of, and maintain (in a sanitary, reliable, and undamaged condition) respiratory protection that is of safe design and construction for the applicable condition of use consistent with the requirements of 29 CFR 1910.134(g) through (j).

(vii) Prior to or at the time of initial assignment to a job involving potential exposure to carbon tetrachloride, owners and operators must provide training to all persons required to use respiratory protection consistent with 29 CFR 1910.134(k).

(viii) Owners and operators must retrain all persons required to use PPE at least annually, or whenever the owner or operator has reason to believe that a previously trained person does not have the required understanding and skill to properly use PPE, or when changes in the workplace or in PPE to be used render the previous training obsolete.

(ix) Owners or operators must select and provide to persons appropriate respirators as indicated by the most recent monitoring results as follows:

(A) If the measured exposure concentration is at or below the 0.03 ppm: no respiratory protection is required.

(B) If the measured exposure concentration is above 0.03 ppm and less than or equal to 0.3 ppm (10 times ECEL): Any National Institute for Occupational Safety and Health (NIOSH)-Approved air-purifying half mask respirator equipped with organic vapor cartridges or canisters; or any NIOSH Approved Supplied-Air Respirator (SAR) or Airline Respirator operated in demand mode equipped with a half mask; or any NIOSH Approved Self-Contained Breathing Apparatus (SCBA) in demand mode equipped with a half mask [APF 10].

(C) If the measured exposure concentration is above 0.3 ppm and less than or equal to 0.75 ppm (25 times ECEL): Any NIOSH Approved Powered Air-Purifying Respirator (PAPR) equipped with a loose-fitting facepiece or hood/helmet equipped with organic vapor cartridges or canisters; any NIOSH Approved continuous flow supplied air respirator equipped with a loose-fitting facepiece; or any NIOSH Approved Supplied-Air Respirator (SAR) or Airline Respirator in a continuous-flow mode equipped with a loose-fitting facepiece or helmet/hood [APF 25].

(D) If the measured exposure concentration is above 0.75 ppm and less than or equal to 1.5 ppm (50 times ECEL): Any NIOSH Approved air-purifying full facepiece respirator equipped with organic vapor cartridges or canisters; any NIOSH Approved PAPR with a half mask equipped with organic vapor cartridges or canisters; any NIOSH Approved SAR or Airline Respirator in a continuous flow mode equipped with a half mask; any NIOSH Approved SAR or Airline Respirator operated in a pressure-demand or other positive-pressure mode with a half mask; or any NIOSH Approved SCBA in demand-mode equipped with a full facepiece or helmet/hood [APF 50].

(E) If the measured exposure concentration is above 1.5 ppm and less than or equal to 30 ppm (1,000 times ECEL): Any NIOSH Approved PAPR equipped with a full facepiece equipped with organic vapor cartridges or canisters; any NIOSH Approved SAR or Airline Respirator in a continuous-flow mode equipped with full facepiece; any NIOSH Approved SAR or Airline Respirator in pressure-demand or other positive-pressure mode equipped with a full facepiece and an auxiliary self-contained air supply; or any NIOSH Approved SAR or Airline Respirator in a continuous-flow mode equipped with a helmet or hood and that has been tested to demonstrated performance at a level of a protection of APF 1,000 or greater [APF 1000].

(F) If the measured exposure concentration is greater than 30 ppm (1,000 times ECEL): Any NIOSH Approved SCBA in a pressure-demand or other positive-pressure mode equipped with a full facepiece helmet/hood [APF 10,000].

(G) If the exposure concentration is unknown: Any NIOSH Approved combination supplied air respirator equipped with a full facepiece and operated in pressure demand or other positive pressure mode with an auxiliary self-contained air supply; or any NIOSH Approved SCBA operated in

pressure demand or other positive pressure mode and equipped with a full facepiece or helmet/hood [APF 1000+].

(x) Owners and operators must select and provide respirators as required in paragraph (f)(2) of this section consistent with the requirements of 29 CFR 1910.134(d)(1)(iv), and with consideration of workplace and user factors that affect respirator performance and reliability.

(xi) Owners and operators who select air-purifying respirators must either:

(A) Select respirators that have an end-of-service-life indicator (ESLI) that is NIOSH Approved® for carbon tetrachloride; or

(B) Implement a change schedule for canisters and cartridges based on objective information or data that ensures that canisters and cartridges are changed before the end of their service life. The written respiratory protection program required by paragraph (f)(2)(iii) of this section must include a description of the information and data relied upon, the basis for reliance on the information and data, and the basis for the canister and cartridge change schedule.

(xii) Owners and operators must ensure that respirators are used in compliance with the terms of the respirator's NIOSH certification.

(xiii) Owners and operators must conduct regular evaluations of the workplace, including consultations with potentially exposed persons using respiratory protection, consistent with the requirements of 29 CFR 1910.134(l), to ensure that the provisions of the written respiratory protection program required under paragraph (f)(2)(iii) of this section are being effectively implemented.

(xiv) The respiratory protection requirements in this paragraph (f)(2) represent the minimum respiratory protection requirements, such that any respirator affording a higher degree of protection than the required respirator may be used.

(3) *Dermal protection.* (i) Beginning September 20, 2027 for Federal agencies and Federal contractors acting for or on behalf of the Federal government, or by June 16, 2025 for non-Federal owners and operators, if an owner or operator is required to provide dermal protection pursuant to paragraph (f)(1), the owner or operator must ensure that each potentially exposed person is provided with dermal PPE according to the requirements of this section.

(ii) Owners or operators must supply and require the donning of dermal PPE that separates and provides a barrier to prevent direct dermal contact with carbon tetrachloride in the specific work

area where it is selected for use, selected in accordance with this paragraph and provided in accordance with 29 CFR 1910.132(h), to each person who is reasonably likely to be dermally exposed in the work area through direct dermal contact with carbon tetrachloride. For the purposes of this subsection, provisions in 29 CFR 1910.132(h) applying to an "employee" also apply equally to potentially exposed persons, and provisions applying to an "employer" also apply equally to owners or operators.

(iii) Owners or operators must select and provide dermal PPE in accordance with 29 CFR 1910.133(b) and additionally as specified in this paragraph (f)(3) to each person who is reasonably likely to be dermally exposed in the work area through direct dermal contact with carbon tetrachloride. For the purposes of this paragraph (f)(3)(iii), provisions in 29 CFR 1910.133(b) applying to an "employer" also apply equally to owners or operators.

(iv) Owners or operators must select and provide to persons appropriate dermal PPE based on an evaluation of the performance characteristics of the PPE relative to the task(s) to be performed, conditions present, and the duration of use. Replacement PPE must be provided immediately if any person is dermally exposed to CTC longer than the breakthrough time period for which testing has demonstrated that the PPE will be impermeable or if there is a chemical permeation or breakage of the PPE. Dermal PPE must include, but is not limited to, the following items:

(A) Impervious gloves selected based on specifications from the manufacturer or supplier or by individually prepared third-party testing.

(B) Impervious clothing covering the exposed areas of the body (e.g., long pants, long sleeved shirt).

(v) Owners or operators must demonstrate that each item of gloves and other clothing selected provides an impervious barrier to prevent direct dermal contact with carbon tetrachloride during normal and expected duration and conditions of exposure within the work area by evaluating the specifications from the manufacturer or supplier or individually prepared third-party testing of the dermal PPE, or of the material used in construction of the dermal PPE, to establish that the dermal PPE will be impervious to carbon tetrachloride alone and in likely combination with other chemical substances in the work area.

(vi) Dermal PPE that is of safe design and construction for the work to be

performed must be provided, used, and maintained in a sanitary, reliable, and undamaged condition. Owners and operators must select PPE that properly fits each affected person and communicate PPE selections to each affected person.

(vii) Owners or operators must provide training in accordance with 29 CFR 1910.132(f) to all persons required to use dermal protection prior to or at the time of initial assignment to a job involving exposure to carbon tetrachloride. For the purposes of this paragraph (f)(3)(vii), provisions in 29 CFR 1910.132(f) applying to an "employee" also apply equally to potentially exposed persons, and provisions applying to an "employer" also apply equally to owners or operators.

(viii) Owners and operators must retrain each person required to use dermal protection at least annually or whenever the owner or operator has reason to believe that a previously trained person does not have the required understanding and skill to properly use dermal protection, or when changes in the workplace or in dermal protection to be used render the previous training obsolete.

§ 751.709 Workplace Restrictions for the Industrial and Commercial Use as a Laboratory Chemical, Including the Use of Carbon Tetrachloride as a Laboratory Chemical by the U.S. Department of Defense.

(a) *Applicability.* The provisions of this section apply to the industrial and commercial use of carbon tetrachloride as a laboratory chemical, including the U.S. Department of Defense's industrial and commercial use of carbon tetrachloride as a laboratory chemical in chemical weapons destruction.

(b) *Laboratory chemical requirements.*

(1) After December 18, 2025 for Federal agencies and Federal contractors acting for or on behalf of the Federal government, or after June 16, 2025 for non-Federal owners and operators, owners or operators must ensure laboratory ventilation devices such as fume hoods or glove boxes are in use and functioning properly and that specific measures are taken to ensure proper and adequate performance of such equipment to minimize exposures to potentially exposed persons in the area when carbon tetrachloride is used as a laboratory chemical, except for the U.S. Department of Defense's use of carbon tetrachloride as a laboratory chemical in chemical weapons destruction.

(2) After December 18, 2025, the U.S. Department of Defense must ensure that

advanced engineering controls are in use and functioning properly and that specific measures are taken to ensure proper and adequate performance of such equipment to minimize exposures to potentially exposed persons in the area during the industrial/commercial use of carbon tetrachloride as a laboratory chemical in chemical weapons destruction.

(3) After December 18, 2025 for Federal agencies and Federal contractors acting for or on behalf of the Federal government, or after June 16, 2025 for non-Federal owners and operators, owners or operators must ensure that all persons reasonably likely to be exposed from direct dermal contact to carbon tetrachloride when carbon tetrachloride is used as a laboratory chemical, except for the U.S. Department of Defense's industrial and commercial use of carbon tetrachloride as a laboratory chemical in chemical weapons destruction, are provided with dermal PPE and training on proper use of PPE in a manner consistent with § 751.707(f)(3).

(4) After December 18, 2025, U.S. Department of Defense must ensure that all persons reasonably likely to be exposed from direct dermal contact to carbon tetrachloride through the industrial and commercial use of carbon tetrachloride as a laboratory chemical in chemical weapons destruction are provided with dermal PPE and training on proper use of PPE in a manner consistent with § 751.707(f)(3), except that the date listed in paragraph (f)(3)(i) does not apply.

§ 751.711 Downstream Notification.

(a) Beginning on February 18, 2025, each person who manufactures (including imports) carbon tetrachloride for any use must, prior to or concurrent with the shipment, notify companies to whom carbon tetrachloride is shipped, in writing, of the restrictions described in this Subpart in accordance with paragraph (c) of this section.

(b) Beginning on June 16, 2025, each person who processes or distributes in commerce carbon tetrachloride for any use must, prior to or concurrent with the shipment, notify companies to whom carbon tetrachloride is shipped, in writing, of the restrictions described in this Subpart in accordance with paragraph (c) of this section.

(c) The notification required under paragraphs (a) and (b) of this section must occur by inserting the following text in Sections 1(c) and 15 of the Safety Data Sheet (SDS) provided with the carbon tetrachloride:

After June 16, 2025, this chemical substance (as defined in TSCA section 3(2))

may not be distributed in commerce or processed in greater than trace quantities for the following purposes: Incorporation into formulation, mixture or reaction products in petrochemical-derived manufacturing except in the manufacture of vinyl chloride; Industrial and commercial use as an industrial processing aid in the manufacture of petrochemicals-derived products except in the manufacture of vinyl chloride; Industrial and commercial use in the manufacture of other basic chemicals (including manufacturing of chlorinated compounds used in solvents, adhesives, asphalt, and paints and coatings), except for use in the elimination of nitrogen trichloride in the production of chlorine and caustic soda and the recovery of chlorine in tail gas from the production of chlorine; Industrial and commercial use in metal recovery; Industrial and commercial use as an additive; and beginning December 18, 2025, industrial and commercial specialty uses by the U.S. Department of Defense.

§ 751.713 Recordkeeping Requirements.

(a) *General records.* After February 18, 2025, all persons who manufacture (including import), process, distribute in commerce, or engage in industrial or commercial use of carbon tetrachloride must maintain ordinary business records, such as downstream notifications, invoices and bills-of-lading related to compliance with the prohibitions, restrictions, and other provisions of this subpart.

(b) *Workplace Chemical Protection Program compliance.*—(1) *ECEL exposure monitoring.* For each monitoring event, owners or operators subject to the ECEL described in § 751.707(b) must document and retain records of the following:

(i) Dates, duration, and results of each sample taken;

(ii) The quantity, location(s) and manner of use of carbon tetrachloride in use at the time of each monitoring event;

(iii) All measurements that may be necessary to determine the conditions that may affect the monitoring results;

(iv) Name, workplace address, work shift, job classification, work area, and type of respiratory protection (if any) by each monitored person;

(v) Identification of all potentially exposed persons that a monitored person is intended to represent if using a representative sample, consistent with § 751.707(b)(2)(i)(A) and (B);

(vi) Sampling and analytical methods used as described in § 751.707(b)(2)(i)(D);

(vii) Compliance with the Good Laboratory Practice Standards in 40 CFR part 792, or use of laboratory accredited by the AIHA or another industry-recognized program, as required by § 751.707(b)(2)(i)(C); and

(viii) Information regarding air monitoring equipment, including: type, maintenance, calibrations, performance tests, limits of detection, and any malfunctions;

(ix) Re-monitoring determinations conducted by an Environmental Professional as defined at 40 CFR 312.10 or a Certified Industrial Hygienist, if results indicated non-detect; and

(x) Notification of exposure monitoring results in accordance with § 751.707(b)(2)(v).

(2) *ECEL compliance.* Owners or operators subject to the ECEL described in § 751.707(b) must retain records of:

(i) Exposure control plan as described in § 751.707(d)(2);

(ii) Implementation of the exposure control plan as described in § 751.707(d)(2), including:

(A) Any regular inspections, evaluations, and updating of the exposure controls to maintain effectiveness;

(B) Confirmation that all persons are implementing the exposure controls; and

(C) Each occurrence and duration of any start-up, shutdown, ruptures, or malfunction of the facility that causes an exceedance of the ECEL, any subsequent corrective actions taken by the owner or operator during the start-up, shutdown, ruptures, or malfunctions to mitigate exposures to CTC, and documentation indicating that additional monitoring was completed within a reasonable timeframe.

(iii) Respiratory protection used by each potentially exposed person and PPE program implementation as described in § 751.707(f)(2) including:

(A) The name, workplace address, work shift, job classification, work area of each potentially exposed person, and the type of respiratory protection provided to each potentially exposed person;

(B) The basis for the specific respiratory protection selection in accordance with § 751.707(f)(2); and

(C) Fit testing and training in accordance with § 751.707(f)(2).

(iv) Information and training as required in § 751.707(e).

(3) *DDCC compliance.* Owners or operators subject to DDCC requirements described in § 751.707(c) must retain records of:

(i) Exposure control plan as described in § 751.707(d)(2);

(ii) Dermal protection used by each potentially exposed person and PPE program implementation as described in § 751.707(f)(3), including:

(A) The name, workplace address, work shift, job classification, and work area of each person reasonably likely to

directly handle carbon tetrachloride or handle equipment or materials on which carbon tetrachloride may be present and the type of PPE selected to be worn by each of these persons;

(B) The basis for specific PPE selection (*e.g.*, demonstration based on permeation testing or manufacturer specifications that each item of PPE selected provides an impervious barrier to prevent exposure during expected duration and conditions of exposure, including the likely combinations of chemical substances to which the PPE may be exposed in the work area);

(C) Appropriately sized PPE and training on proper application, wear, and removal of PPE, and proper care/disposal of PPE;

(D) Occurrence and duration of any direct dermal contact with carbon tetrachloride that occurs during any activity or malfunction at the workplace that causes direct dermal exposures to occur and/or glove breakthrough, and corrective actions to be taken during and immediately following that activity or malfunction to prevent direct dermal contact to carbon tetrachloride; and

(E) Training in accordance with § 751.707(f)(3).

(iii) Information and training provided as required in § 751.707(e).

(4) *Workplace participation.* Owners or operators must document the notice to and ability of any potentially exposed person that may reasonably be affected by carbon tetrachloride inhalation exposure or direct dermal contact and their designated representatives to readily access the exposure control plans, facility exposure monitoring records, PPE program implementation records, or any other information relevant to carbon tetrachloride exposure in the workplace.

(c) *Workplace requirements for laboratory use compliance.* Owners and operators subject to the laboratory chemical requirements described in § 751.709 must retain records of:

(1) Dermal protection used by each potentially exposed person and PPE program implementation, as described in § 751.713(b)(3)(ii); and

(2) Documentation identifying criteria that the owner or operator will use to determine and implement control measures to reduce potentially exposed persons' exposure to carbon tetrachloride including laboratory ventilation devices;

(3) Documentation identifying: implementation of a properly functioning laboratory ventilation devices using manufacturer's instructions for installation, use, and maintenance of the devices including inspections, tests, development of maintenance procedures, the establishment of criteria for acceptable test results, and documentation of test and inspection results, except for the U.S. Department of Defense's use of carbon tetrachloride as a laboratory chemical in chemical weapons destruction; and

(4) For the U.S. Department of Defense's use of carbon tetrachloride as a laboratory chemical in chemical weapons destruction, documentation identifying implementation of advanced engineering controls that are in use and functioning properly and specific measures taken to ensure proper and adequate performance.

(d) *Retention.* Owners or operators must retain the records required under this section for a period of five years from the date that such records were generated.

Part IX

Environmental Protection Agency

40 CFR Part 751

Perchloroethylene (PCE); Regulation Under the Toxic Substances Control Act (TSCA); Final Rule

ENVIRONMENTAL PROTECTION AGENCY**40 CFR Part 751**

[EPA-HQ-OPPT-2020-0720; FRL-8329-01-OCSPP]

RIN 2070-AK84

Perchloroethylene (PCE); Regulation Under the Toxic Substances Control Act (TSCA)**AGENCY:** Environmental Protection Agency (EPA).**ACTION:** Final rule.

SUMMARY: The Environmental Protection Agency (EPA or Agency) is finalizing a rule to address the unreasonable risk of injury to health presented by perchloroethylene (PCE) under its conditions of use. TSCA requires that EPA address by rule any unreasonable risk of injury to health or the environment identified in a TSCA risk evaluation and apply requirements to the extent necessary so that the chemical no longer presents unreasonable risk. EPA's final rule will, among other things, prevent serious illness associated with uncontrolled exposures to the chemical by preventing consumer access to the chemical, restricting the industrial and commercial use of the chemical while also allowing for a reasonable transition period where the industrial and commercial use of the chemical is being prohibited, providing a time-limited exemption for a critical or essential use of PCE for which no technically and economically feasible safer alternative is available, and protecting workers from the unreasonable risk of PCE while on the job.

DATES: This final rule is effective on January 17, 2025.

ADDRESSES: The docket for this action, identified by docket identification (ID) number EPA-HQ-OPPT-2020-0720, is available online at <https://www.regulations.gov>. Additional information about dockets generally, along with instructions for visiting the docket in-person, is available at <https://www.epa.gov/dockets>.

SUPPLEMENTARY INFORMATION:**I. Executive Summary***A. Does this action apply to me?***1. General Applicability**

You may be affected by this rule if you manufacture, process, distribute in commerce, use, or dispose of PCE or products containing PCE. TSCA section 3(9) defines the term "manufacture" to mean "to import into the customs territory of the United States (as defined in general note 2 of the Harmonized Tariff Schedule of the United States), produce, or manufacture." Therefore, unless expressly stated otherwise, importers of PCE are subject to provisions regulating manufacture of PCE. The following list of North American Industrial Classification System (NAICS) codes is not intended to be exhaustive, but rather provides a guide to help readers determine whether this document might apply to them. Potentially affected entities include:

- Crude Petroleum Extraction (NAICS code 211120).
- Support Activities for Oil and Gas Operations (NAICS code 213112).
- Nonwoven Fabric Mills (NAICS code 313230).
- Wood Window and Door Manufacturing (NAICS code 321911).
- Paper Bag and Coated and Treated Paper Manufacturing (NAICS code 322220).
- Commercial Screen Printing (NAICS code 323113).
- Petroleum Refineries (NAICS code 324110).
- Petroleum Lubricating Oil and Grease Manufacturing (NAICS code 324191).
- Petrochemical Manufacturing (NAICS code 325110).
- Industrial Gas Manufacturing (NAICS code 325120).
- Other Basic Inorganic Chemical Manufacturing (NAICS code 325180).
- All Other Basic Organic Chemical Manufacturing (NAICS code 325199).
- Plastics Material and Resin Manufacturing (NAICS code 325211).
- Synthetic Rubber Manufacturing (NAICS code 325212).
- Paint and Coating Manufacturing (NAICS code 325510).
- Adhesive Manufacturing (NAICS code 325520).
- Soap and Other Detergent Manufacturing (NAICS code 325611).
- Polish and Other Sanitation Good Manufacturing (NAICS code 325612).

- All Other Miscellaneous Chemical Product and Preparation Manufacturing (NAICS code 325998).
- Unlaminated Plastics Film and Sheet (except Packaging) Manufacturing (NAICS code 326113).
- All Other Plastics Product Manufacturing (NAICS code 326199).
- Rubber and Plastics Hoses and Belting Manufacturing (NAICS code 326220).
- Rubber Product Manufacturing for Mechanical Use (NAICS code 326291).
- All Other Rubber Product Manufacturing (NAICS code 326299).
- Pottery, Ceramics, and Plumbing Fixture Manufacturing (NAICS code 327110).
- Glass Container Manufacturing (NAICS code 327213).
- Cement Manufacturing (NAICS code 327310).
- Secondary Smelting, Refining, and Alloying of Nonferrous Metal (except Copper and Aluminum) (NAICS code 331492).
- Metal Crown, Closure, and Other Metal Stamping (except Automotive) (NAICS code 332119).
- Metal Kitchen Cookware, Utensil, Cutlery, and Flatware (except Precious) Manufacturing (NAICS code 332215).
- Saw Blade and Handtool Manufacturing (NAICS code 332216).
- Other Fabricated Wire Product Manufacturing (NAICS code 332618).
- Metal Heat Treating (NAICS code 332811).
- Metal Coating, Engraving (except Jewelry and Silverware), and Allied Services to Manufacturers (NAICS code 332812).
- Electroplating, Plating, Polishing, Anodizing, and Coloring (NAICS code 332813).
- Industrial Valve Manufacturing (NAICS code 332911).
- Fluid Power Valve and Hose Fitting Manufacturing (NAICS code 332912).
- Plumbing Fixture Fitting and Trim Manufacturing (NAICS code 332913).
- Other Metal Valve and Pipe Fitting Manufacturing (NAICS code 332919).
- Ball and Roller Bearing Manufacturing (NAICS code 332991).
- Small Arms Ammunition Manufacturing (NAICS code 332992).
- Ammunition (except Small Arms) Manufacturing (NAICS code 332993).
- Small Arms, Ordnance, and Ordnance Accessories Manufacturing (NAICS code 332994).
- Fabricated Pipe and Pipe Fitting Manufacturing (NAICS code 332996).
- All Other Miscellaneous Fabricated Metal Product Manufacturing (NAICS code 332999).
- Other Industrial Machinery Manufacturing (NAICS code 333249).

- Air-Conditioning and Warm Air Heating Equipment and Commercial and Industrial Refrigeration Equipment Manufacturing (NAICS code 333415).
- Machine Tool Manufacturing (NAICS code 333517).
- Measuring, Dispensing, and Other Pumping Equipment Manufacturing (NAICS code 333914).
- Welding and Soldering Equipment Manufacturing (NAICS code 333992).
- Packaging Machinery Manufacturing (NAICS code 333993).
- Industrial Process Furnace and Oven Manufacturing (NAICS code 333994).
- Fluid Power Cylinder and Actuator Manufacturing (NAICS code 333995).
- Fluid Power Pump and Motor Manufacturing (NAICS code 333996).
- All Other Miscellaneous General Purpose Machinery Manufacturing (NAICS code 333999).
- Instruments and Related Products Manufacturing for Measuring, Displaying, and Controlling Industrial Process Variables (NAICS code 334513).
- Analytical Laboratory Instrument Manufacturing (NAICS code 334516).
- Motor Vehicle Body Manufacturing (NAICS code 336211).
- Travel Trailer and Camper Manufacturing (NAICS code 336214).
- Other Motor Vehicle Parts Manufacturing (NAICS code 336390).
- Aircraft Manufacturing (NAICS code 336411).
- Aircraft Engine and Engine Parts Manufacturing (NAICS code 336412).
- Other Aircraft Parts and Auxiliary Equipment Manufacturing (NAICS code 336413).
- Guided Missile and Space Vehicle Manufacturing (NAICS code 336414).
- Guided Missile and Space Vehicle Propulsion Unit and Propulsion Unit Parts Manufacturing (NAICS code 336415).
- Other Guided Missile and Space Vehicle Parts and Auxiliary Equipment Manufacturing (NAICS code 336419).
- Ship Building and Repairing (NAICS code 336611).
- Surgical and Medical Instrument Manufacturing (NAICS code 339112).
- Jewelry and Silverware Manufacturing (NAICS code 339910).
- Sporting and Athletic Goods Manufacturing (NAICS code 339920).
- Doll, Toy, and Game Manufacturing (NAICS code 339930).
- Office Supplies (except Paper) Manufacturing (NAICS code 339940).
- Gasket, Packing, and Sealing Device Manufacturing (NAICS code 339991).
- Musical Instrument Manufacturing (NAICS code 339992).
- Fastener, Button, Needle, and Pin Manufacturing (NAICS code 339993).
- Broom, Brush, and Mop Manufacturing (NAICS code 339994).
- Burial Casket Manufacturing (NAICS code 339995).
- All Other Miscellaneous Manufacturing (NAICS code 339999).
- Motor Vehicle Supplies and New Parts Merchant Wholesalers (NAICS code 423120).
- Home Furnishing Merchant Wholesalers (NAICS code 423220).
- Industrial Supplies Merchant Wholesalers (NAICS code 423840).
- Service Establishment Equipment and Supplies Merchant Wholesalers (NAICS code 423850).
- Other Miscellaneous Durable Goods Merchant Wholesalers (NAICS code 423990).
- Grain and Field Bean Merchant Wholesalers (NAICS code 424510).
- Other Chemical and Allied Products Merchant Wholesalers (NAICS code 424690).
- Petroleum Bulk Stations and Terminals (NAICS code 424710).
- Petroleum and Petroleum Products Merchant Wholesalers (except Bulk Stations and Terminals) (NAICS code 424720).
- New Car Dealers (NAICS code 441110).
- Used Car Dealers (NAICS code 441120).
- Other Gasoline Stations (NAICS code 447190).
- Sporting Goods Stores (NAICS code 451110).
- All Other Miscellaneous Store Retailers (except Tobacco Stores) (NAICS code 453998).
- Scheduled Passenger Air Transportation (NAICS code 481111).
- Scheduled Freight Air Transportation (NAICS code 481112).
- Pipeline Transportation of Natural Gas (NAICS code 486210).
- Teleproduction and Other Postproduction Services (NAICS code 512191).
- Other Motion Picture and Video Industries (NAICS code 512199).
- Miscellaneous Intermediation (NAICS code 523910).
- Other Financial Vehicles (NAICS code 525990).
- Lessors of Other Real Estate Property (NAICS code 531190).
- Offices of Real Estate Agents and Brokers (NAICS code 531210).
- Testing Laboratories (NAICS code 541380).
- Research and Development in the Physical, Engineering, and Life Sciences (except Nanotechnology and Biotechnology) (NAICS code 541715).
- Marketing Research and Public Opinion Polling (NAICS code 541910).
- All Other Professional, Scientific, and Technical Services (NAICS code 541990).
- Offices of Other Holding Companies (NAICS code 551112).
- Hazardous Waste Treatment and Disposal (NAICS code 562211).
- Solid Waste Landfill (NAICS code 562212).
- Solid Waste Combustors and Incinerators (NAICS code 562213).
- Other Nonhazardous Waste Treatment and Disposal (NAICS code 562219).
- Remediation Services (NAICS code 562910).
- Materials Recovery Facilities (NAICS code 562920).
- All Other Miscellaneous Waste Management Services (NAICS code 562998).
- General Automotive Repair (NAICS code 811111).
- Automotive Exhaust System Repair (NAICS code 811112).
- Automotive Transmission Repair (NAICS code 811113).
- Other Automotive Mechanical and Electrical Repair and Maintenance (NAICS code 811118).
- Automotive Body, Paint, and Interior Repair and Maintenance (NAICS code 811121).
- Automotive Glass Replacement Shops (NAICS code 811122).
- Automotive Oil Change and Lubrication Shops (NAICS code 811191).
- All Other Automotive Repair and Maintenance (NAICS code 811198).
- Consumer Electronics Repair and Maintenance (NAICS code 811211).
- Computer and Office Machine Repair and Maintenance (NAICS code 811212).
- Communication Equipment Repair and Maintenance (NAICS code 811213).
- Other Electronic and Precision Equipment Repair and Maintenance (NAICS code 811219).
- Commercial and Industrial Machinery and Equipment (except Automotive and Electronic) Repair and Maintenance (NAICS code 811310).
- Home and Garden Equipment Repair and Maintenance (NAICS code 811411).
- Other Personal and Household Goods Repair and Maintenance (NAICS code 811490).
- Drycleaning and Laundry Services (except Coin-Operated) (NAICS code 812320).
- Industrial Launderers (NAICS code 812332).

2. Applicability to Importers and Exporters.

This action may also affect certain entities subject to import certification and export notification requirements under TSCA (<https://www.epa.gov/tsc-import-export-requirements>). Persons who import any chemical substance in bulk form, as part of a mixture, or as part of an article (if required by rule) are subject to TSCA section 13 (15 U.S.C. 2612) import certification requirements and the corresponding regulations at 19 CFR 12.118 through 12.127 (see also 19 CFR 127.28(i)). Those persons must certify that the shipment of the chemical substance complies with all applicable rules and orders under TSCA (see 19 CFR 12.121). The EPA policy in support of import certification appears at 40 CFR part 707, subpart B.

In addition, any persons who export or intend to export a chemical substance that is the subject of this final rule are subject to the export notification provisions of TSCA section 12(b) (15 U.S.C. 2611(b)), and must comply with the export notification requirements in 40 CFR part 707, subpart D. Any person who exports or intends to export PCE must comply with the export notification requirements in 40 CFR part 707, subpart D.

B. What is the Agency's authority for taking this action?

Under TSCA section 6(a) (15 U.S.C. 2605(a)), if the Agency determines through a TSCA section 6(b) risk evaluation that a chemical substance presents an unreasonable risk of injury to health or the environment, EPA must by rule apply one or more requirements listed in TSCA section 6(a) to the extent necessary so that the chemical substance or mixture no longer presents such risk.

C. What action is the Agency taking?

Pursuant to TSCA section 6(b), EPA determined that PCE presents an unreasonable risk of injury to health, without consideration of costs or other nonrisk factors, including an unreasonable risk to potentially exposed or susceptible subpopulations (PESS) identified as relevant to the 2020 Risk Evaluation for PCE by EPA, under the conditions of use (Refs. 1 and 2). A description of the conditions of use that contribute to EPA's determination that PCE presents an unreasonable risk is in Unit III.B.1. of the 2023 PCE proposed rule, with a summary in Unit II.C.4. of this final rule. Accordingly, to address the unreasonable risk, EPA is finalizing a rule under TSCA section 6(a) to:

(i) Prohibit most industrial and commercial uses and the manufacture

(including import), processing, and distribution in commerce of PCE for those uses, outlined in Unit IV.D.1.;

(ii) Prohibit the manufacture (including import), processing, and distribution in commerce of PCE for all consumer use, outlined in Unit IV.D.2.;

(iii) Prohibit the manufacture (including import), processing, distribution in commerce, and commercial use of PCE in dry cleaning and spot cleaning through a 10-year phaseout, outlined in Unit IV.D.3.;

(iv) Require a Workplace Chemical Protection Program (WCPP), including an inhalation exposure concentration limit, direct dermal contact controls, and related workplace exposure controls, for many occupational conditions of use of PCE not prohibited, outlined in Unit IV.B.;

(v) Require prescriptive workplace controls for use of PCE in laboratories and energized electrical cleaners, outlined in Unit IV.C.;

(vi) Establish recordkeeping and downstream notification requirements, outlined in Unit IV.E.;

(vii) Provide a 10-year time limited exemption under TSCA section 6(g) for certain emergency uses of PCE in furtherance of National Aeronautics and Space Administration's (NASA) mission, for specific conditions of use which are critical or essential and for which no technically and economically feasible safer alternative is available, outlined in Unit IV.F.; and

(viii) Identify a regulatory threshold for products containing PCE for the prohibitions and restrictions on PCE, as outlined in Unit IV.A.

EPA notes that all TSCA conditions of use of PCE are subject to this final rule. "Conditions of use" is defined in TSCA section 3(4) to mean the circumstances, as determined by EPA, under which a chemical substance is intended, known, or reasonably foreseen to be manufactured, processed, distributed in commerce, used, or disposed of.

In addition, EPA is amending the general provision of 40 CFR part 751, subpart A, to define "Designated representative," "Direct dermal contact," "ECEL," and "Exposure group" so that these definitions may be commonly applied to this and other rules under TSCA section 6 that would be codified under 40 CFR part 751.

D. Why is the Agency taking this action?

Under TSCA section 6(a), "[i]f the Administrator determines in accordance with subsection (b)(4)(A) that the manufacture, processing, distribution in commerce, use or disposal of a chemical substance or mixture, or that any combination of such activities, presents

an unreasonable risk of injury to health or the environment, the Administrator shall by rule . . . apply one or more of the [section 6(a)] requirements to such substance or mixture to the extent necessary so that the chemical substance or mixture no longer presents such risk." PCE was the subject of a risk evaluation under TSCA section 6(b)(4)(A) that was issued in December 2020 (2020 Risk Evaluation for PCE) (Ref. 1). In addition, EPA issued a revised unreasonable risk determination in December 2022 (Ref. 2), determining that PCE, as a whole chemical substance, presents an unreasonable risk of injury to health under the conditions of use. On June 16, 2023, EPA issued a proposed rule (88 FR 39652) (FRL-8329-02-OCSP) under TSCA section 6(a) to regulate PCE, so that it no longer presents unreasonable risk (hereinafter "2023 PCE proposed rule"). The Agency received public comment on the proposal. With this action, EPA is finalizing with modifications the 2023 PCE proposed rule as described in this final rule. The conditions of use that contribute to the unreasonable risk from PCE are described in Unit III.B.1. of the 2023 PCE proposed rule.

PCE's hazards are well established. EPA's 2020 Risk Evaluation for PCE considered the hazards associated with exposure to PCE and determined that PCE presents an unreasonable risk of injury to health due to the significant adverse health effects associated with exposure to PCE. While some of the risks of adverse effects from PCE exposure are associated with acute single exposures, other risks are associated with long-term repeated exposures. The most sensitive health effect driving the unreasonable risk of PCE and selected as the basis for this rule is neurotoxicity from chronic exposure. It was selected based on the best available science and weight of scientific evidence and in consideration of the severity of the hazards, magnitude of exposure, population exposed, and uncertainties in the December 2020 Risk Evaluation for PCE and December 2022 revised risk determination for PCE. For PCE, impaired visual and cognitive function and diminished color discrimination following chronic exposures represent the most sensitive endpoint indicating neurotoxicity, based on epidemiological data reported in two studies that identified lowest observed adverse effect levels for color confusion and impaired pattern recognition and reaction time in pattern memory. Other significant adverse outcomes include kidney and liver effects, immune system toxicity,

reproductive toxicity, developmental toxicity, and cancer. For this action, EPA has determined that protecting against the most sensitive endpoint would also address the risk for other acute, chronic non-cancer, and cancer endpoints. This final rule will eliminate the unreasonable risk to human health from the TSCA conditions of use of PCE, as identified in the 2020 Risk Evaluation for PCE and the revised unreasonable risk determination for PCE in December 2022.

Although EPA is prohibiting many conditions of use of the chemical where it cannot be used without continuing to present unreasonable risk as described in Unit IV., EPA is not finalizing a complete ban on PCE. The Agency has considered the benefits of PCE for various uses as required under TSCA section 6(c)(2)(A) and (B) and recognizes that continued use of PCE for some TSCA conditions of use may provide benefits that complement the Agency's efforts to address climate-damaging hydrofluorocarbons (HFCs) under the American Innovation and Manufacturing Act of 2020 (AIM Act) (42 U.S.C. 7675), supporting human health and environmental protection under these programs, and that for these uses, strict workplace controls to address the unreasonable risk can be implemented. Therefore, this final rule allows PCE's continued use in tandem with strict workplace controls for the generation of HFC-125 and HFC-134a, two of the regulated substances that are subject to a 15-year phasedown under the AIM Act. HFCs-134a and -125 can be mixed with other substances to make lower global warming potential blends that are likely to be used to facilitate the transition away from HFC blends with higher global warming potentials in certain applications.

Additionally, the Agency recognizes that some conditions of use may be important for national security applications or for other critical needs. For example, PCE is a critical diluent (to modify the consistency or other properties in a formulation) for maskant applied to military and commercial aircraft skin panels that prevents chemical milling or industrial etching of certain areas. It is also used in petrochemical manufacturing as a processing aid in catalyst regeneration for reformate and isomerate (these are gasoline blending stocks) that make up an estimated 45% of the United States gasoline pool. Therefore, this final rule allows certain continued uses of PCE provided that sufficient worker protections are in place to address the unreasonable risk for certain occupational conditions of use. For the

conditions of use for which EPA is finalizing workplace controls under a WCPP, EPA expects that many workplaces already have stringent controls in place that reduce exposures to PCE; for some workplaces, EPA understands that these existing controls may already reduce exposures enough to meet the inhalation exposure concentration limit (called the existing chemical exposure limit (ECEL)) in this rulemaking or to prevent direct dermal contact with PCE. For many of the conditions of use for which EPA is finalizing workplace controls under a WCPP, data to support the industry's position that certain uses could meet the exposure limit and ancillary requirements of an effective WCPP in addressing unreasonable risk were submitted during the risk evaluation, the Small Business Advocacy Review (SBAR) Panel process, the comment period following publication of the 2023 PCE proposed rule, or stakeholder outreach, and are available in the corresponding public dockets (Docket ID Nos. EPA-HQ-OPPT-2020-0720; EPA-HQ-OPPT-2019-0502; EPA-HQ-OPPT-2016-0732).

Accordingly, EPA is finalizing workplace controls to address the unreasonable risk and allow continued manufacture (including import), processing for conditions of use that are not prohibited, repackaging, recycling, and disposal of PCE as well as continued use of PCE for processing as a reactant/intermediate, certain uses in vapor degreasing and cold cleaning, use as a maskant for chemical milling, use in adhesives and sealants, use as a processing aid, use as energized electrical cleaner, and use as a laboratory chemical, which comprise more than an estimated 80% of the current production volume of PCE. EPA is finalizing a prohibition or phaseout for most conditions of use of PCE, including use in dry cleaning and spot cleaning, general aerosol degreasing, paints and coatings, aerosol lubricants, and wipe cleaning, comprising less than an estimated 20% of the current production volume of PCE. Of the conditions of use that are not prohibited, EPA generally expects the production volume for those conditions of use to decline over time. For example, EPA expects the industrial and commercial use of PCE as a reactant in the generation of HFC-134a and HFC-125 to decline over time, in light of the AIM Act requirements to phase down production and consumption of listed HFCs by 85% over the next 15 years. The rationale for the final regulatory action, including the TSCA section 6

requirements considered in developing the regulatory action, is described in Units II.D. and III.

E. What are the estimated incremental impacts of this action?

EPA has prepared an Economic Analysis of the potential incremental impacts associated with this rulemaking that can be found in the rulemaking docket (Ref. 3). As described in more detail in the Economic Analysis (Ref. 3) and in Units V.D. and VIII.C., EPA was unable to quantify all incremental costs of this final rule. The quantifiable cost of the final rule is estimated to be \$43.43 million annualized over 20 years at a 2% discount rate. These costs take compliance with implementation of a WCPP into consideration, which would include meeting an ECEL of 0.14 ppm (0.98 mg/m³) for inhalation exposures as an 8-hour time-weighted average (TWA), dermal controls to prevent direct dermal contact, applicable personal protective equipment (PPE) requirements, and reformulation costs of numerous products.

The Economic Analysis notes various unquantified costs and uncertainty in the cost estimates (Sec. 7.14). The condition of use with the most expensive and uncertain compliance costs is the commercial use of PCE in energized electrical cleaning, which EPA estimates would result in about \$20 million out of \$43 million of estimated compliance costs. These estimates are based on assumptions regarding how much PCE is used for energized electrical cleaning and the types of locations of that use. Almost all of these compliance cost estimates are from respirator requirements for the use of PCE in energized electrical cleaning in confined spaces, which would require expensive respirators. Because there is no consensus industry estimate for what fraction of PCE use in energized electrical cleaning is in confined spaces, as described in Unit III.A.2.e., EPA estimated 5% of energized electrical cleaning use of PCE was in confined spaces.

In addition, EPA estimates that 6,000 dry cleaners still use PCE, a majority of which are small businesses. Overall, EPA expects few closures because EPA estimates that only about 60 PCE machines are expected to be in use at the end of the phaseout period given the age of the machines and the declining trend of use; this is detailed in section 7.7 of the Economic Analysis. Table 7-11 in that section details the age of the PCE dry cleaning machines in New York State, for which EPA has data. EPA believes that the data are generalizable to other states; industry has informed

the Agency that very few PCE machines have been purchased in recent years. See sections 7.7 and 11 of the Economic Analysis for additional detail on EPA's analysis, including uncertainties associated with estimating the economic impact.

In alignment with the goals of President Biden's Cancer Moonshot, the rule will protect people from cancer and other adverse health effects of PCE by prohibiting most uses of PCE while ensuring essential uses can safely continue (Ref. 4). The actions in this final rule are expected to achieve health benefits for the American public, some of which can be monetized and others that, while tangible and significant, cannot be monetized. The monetized benefits of this rule are approximately \$32.6 million to \$84.6 million annualized over 20 years at a 2% discount rate. The monetized benefits include potential reductions in risk of liver, kidney, brain, and testicular cancer. Non-monetized benefits include risk reduction of neurotoxicity, kidney toxicity, liver effects, immune/hematological effects, reproductive effects, and developmental effects (Ref. 3). Neurotoxic effects associated with PCE exposure in human studies include visual deficits, impaired cognition, and neurodevelopmental outcomes from prenatal and early childhood exposure to PCE such as increased affinity of engaging in drug, alcohol, and tobacco use as a teen or adult (Ref. 1). Reductions in PCE exposure therefore may also be associated with additional important, but currently unmonetized, benefits.

Additionally, the Agency expects that the dry cleaning phaseout will decrease significant adverse health risks for affected populations that may own, operate, or work at dry cleaning facilities, as well as children of workers present at dry cleaners. As described in more detail in the Economic Analysis, the Agency analyzed the demographic characteristics of several populations that would be impacted by this rulemaking, including for dry cleaning (Ref. 3). For the public's understanding, this document notes that based on reasonably available information, a significant number of members of minority populations may own or work at dry cleaning facilities.

II. Background

A. Overview of Perchloroethylene (PCE)

As described in more detail in the 2023 PCE proposed rule, PCE is a neurotoxicant and considered "likely to be carcinogenic in humans". This final rule applies to PCE (CASRN 127-18-4)

and is specifically intended to address the unreasonable risk of injury to health EPA has identified in the 2020 Risk Evaluation for PCE and the 2022 revised unreasonable risk determination, as described in Unit II.C. PCE is a colorless volatile liquid with a mildly sweet odor that is produced in and imported into the United States. PCE is manufactured, processed, distributed, used, and disposed of as part of many industrial, commercial, and consumer conditions of use.

As outlined in Unit II.C.4., PCE is used for the production of fluorinated compounds, as a solvent for dry cleaning and vapor degreasing; in catalyst regeneration in petrochemical manufacturing; and in a variety of commercial and consumer applications such as adhesives, paints and coatings, aerosol degreasers, brake cleaners, aerosol lubricants, sealants, stone polish, stainless steel polish and wipe cleaners. According to data submitted for the EPA's 2016 Chemical Data Reporting rule (CDR), the total aggregate annual production volume of PCE in the United States decreased from 388 million pounds to around 324 million pounds between 2012 and 2015 (Ref. 5). The total aggregate annual production volume ranged from 250 to 500 million pounds between 2016 and 2019 according to CDR (Ref. 6).

B. Regulatory Actions Pertaining to PCE

Because of its adverse health effects, PCE is subject to numerous Federal laws and regulations in the United States and is also subject to regulation by some States and other countries. A summary of EPA regulations pertaining to PCE, as well as other Federal, State, and international regulations, is in the docket (Refs. 1, 7).

As described in more detail in Unit II.C. of 2023 PCE proposed rule, and the Response to Public Comments document (Ref. 8), EPA considered the adequacy of the current occupational safety and health standards from the Occupational Safety and Health Administration (OSHA) (29 CFR part 1910) for protection of workers. EPA notes that the standards for chemical hazards that OSHA promulgates under the Occupational Safety and Health (OSH) Act share a broadly similar purpose with the worker protection-related regulations that EPA promulgates under TSCA section 6(a). The control measures OSHA and EPA require to satisfy the objectives of their respective statutes may also, in many circumstances, overlap or coincide. However, there are important differences between EPA's and OSHA's regulatory approaches and jurisdiction,

and EPA considers these differences when deciding whether and how to account for OSHA requirements when evaluating and addressing potential unreasonable risk to workers so that compliance requirements are clearly explained to the regulated community. TSCA risk evaluations are subject to statutory science standards, an explicit requirement to consider risks to potentially exposed or susceptible subpopulations, and a prohibition on considering costs and other non-risk factors when determining whether a chemical presents an unreasonable risk that warrants regulatory actions—all requirements that do not apply to development of OSHA regulations. As such, EPA may find unreasonable risk for purposes of TSCA notwithstanding OSHA requirements. In addition, health standards issued under section 6(b)(5) of the OSH Act must reduce significant risk only to the extent that it is technologically and economically feasible. OSHA's legal requirement to demonstrate that its section 6(b)(5) standards are technologically and economically feasible at the time they are promulgated often precludes OSHA from imposing exposure control requirements sufficient to ensure that the chemical substance no longer presents a significant risk to workers. While it is possible in some cases that the OSHA standards for some chemicals reviewed under TSCA will eliminate unreasonable risk, based on EPA's experience thus far in conducting occupational risk assessments under TSCA, EPA believes that OSHA chemical standards would in general be unlikely to address unreasonable risk to workers within the meaning of TSCA, since TSCA section 6(b) unreasonable risk determinations may account for unreasonable risk to more sensitive endpoints and working populations than OSHA's risk evaluations typically contemplate and EPA is obligated to apply TSCA section 6(a) risk management requirements to the extent necessary so that the unreasonable risk is no longer presented. Because the requirements and application of TSCA and OSHA regulatory analyses differ, it is necessary for EPA to conduct risk evaluations and, where it finds unreasonable risk to workers, develop risk management requirements for chemical substances that OSHA also regulates, and it is expected that EPA's findings and requirements may sometimes diverge from OSHA's. Additional considerations of OSHA standards in the revised unreasonable risk determination are discussed further in the 2022 Revised Unreasonable Risk

Determination for PCE, published in the **Federal Register** of December 14, 2022 (87 FR 76481 (FRL–9942–02–OCSPP)).

EPA intends for this regulation to be as consistent as possible with OSHA regulations for toxic and hazardous substances, with additional requirements as necessary to address the unreasonable risk identified under TSCA. Consistent with TSCA section 9(d), EPA consults and coordinates TSCA activities with OSHA and other relevant Federal agencies for the purpose of achieving the maximum enforcement of TSCA while imposing the least burdens of duplicative requirements.

C. Summary of EPA's Risk Evaluation Activities on PCE

EPA published the scope of the PCE risk evaluation in July 2017 (82 FR 31592 (FRL–9963–57)), and, after receiving public comments, published the problem formulation on June 11, 2018 (83 FR 26998 (FRL–9978–40)). In May 2020, EPA published a draft risk evaluation (85 FR 26464, May 4, 2020 (FRL–10008–63)), and, after public comment and peer review by the Science Advisory Committee on Chemicals (SACC), EPA issued the 2020 Risk Evaluation for PCE in December 2020 in accordance with TSCA section 6(b) (85 FR 82474, December 18, 2020 (FRL–10017–44)). EPA subsequently issued a draft revised TSCA unreasonable risk determination for PCE (87 FR 39085, June 30, 2022 (FRL–9942–01–OCSPP)), and after public notice and receipt of comments, published a Revised Risk Determination for PCE in December 2022 (87 FR 76481, December 14, 2022 (FRL–9942–01–OCSPP)). The 2020 Risk Evaluation for PCE and supplemental materials are in Docket ID No. EPA–HQ–OPPT–2019–0502, and the December 2022 revised unreasonable risk determination and additional materials supporting the risk evaluation process in Docket ID No. EPA–HQ–OPPT–2016–0732.

1. 2020 Risk Evaluation

In the 2020 Risk Evaluation for PCE, EPA evaluated risks associated with 61 conditions of use within the following categories: manufacture (including import), processing, distribution in commerce, industrial and commercial use, consumer use, and disposal (Ref. 1). Descriptions of these conditions of use are in Unit III.B.1. of the 2023 PCE proposed rule. The 2020 Risk Evaluation for PCE identified significant adverse health effects associated with short- and long-term exposure to PCE. A further discussion of the hazards of PCE

is in Unit III.B.2. of the 2023 PCE proposed rule.

2. 2022 Revised Unreasonable Risk Determination

As described in more detail in the 2023 PCE proposed rule, EPA revised the original unreasonable risk determination based on the 2020 Risk Evaluation for PCE and issued a final revised unreasonable risk determination in December 2022 (Ref. 2). EPA revised the risk determination for the 2020 Risk Evaluation for PCE pursuant to TSCA section 6(b) and consistent with Executive Order 13990 (titled “Protecting Public Health and the Environment and Restoring Science to Tackle the Climate Crisis”) and other Administration priorities (Refs. 9, 10, and 11). The revisions consisted of making the risk determination based on the whole-chemical substance instead of making the risk determination for each individual condition of use, which resulted in the revised risk determination superseding the prior “no unreasonable risk” determinations for specific conditions of use (Ref. 2), the withdrawal of the associated TSCA section 6(i)(1) “no unreasonable risk” order, and clarification that the risk determination does not reflect an assumption that all workers are always provided and appropriately wear PPE (Ref. 2).

EPA determined that PCE presents an unreasonable risk of injury to health, and EPA did not identify risks of injury to the environment that contribute to the unreasonable risk determination for PCE. The PCE conditions of use that contribute to EPA's determination that the chemical substance poses unreasonable risk to health are listed in the unreasonable risk determination (Ref. 2) and also in Unit III.B.1. of the 2023 PCE proposed rule, with descriptions to aid chemical manufacturers, processors, and users in determining how their particular use or activity would be addressed under the final regulatory action.

3. Description of Unreasonable Risk

EPA has determined that PCE presents an unreasonable risk of injury to health under the conditions of use, based on acute and chronic non-cancer risks and chronic cancer risks. As described in more detail in the 2023 PCE proposed rule and as described in the TSCA section 6(b) 2020 Risk Evaluation for PCE, EPA identified non-cancer effects from both acute and chronic inhalation and dermal exposures to PCE, and cancer from chronic inhalation and dermal exposures to PCE (Ref. 1). EPA

identified neurotoxicity as the most robust and sensitive endpoint for non-cancer adverse effects from acute inhalation and dermal exposures and as the most robust and sensitive endpoint for non-cancer adverse effects from chronic inhalation and dermal exposures for all conditions of use (Ref. 1). Other adverse effects associated with exposure to PCE include kidney and liver effects, immune system toxicity, and developmental toxicity. By targeting the sensitive chronic neurotoxicity effects endpoint for risk management, EPA's final rule will also prevent the unreasonable risks from acute, chronic non-cancer and cancer endpoints associated with inhalation and dermal exposure to PCE.

EPA considered potentially exposed or susceptible subpopulations identified as relevant to the risk evaluation by the Agency, which are included in the quantitative and qualitative analyses described in the 2020 Risk Evaluation for PCE (Ref. 1) and were considered in the determination of unreasonable risk for PCE.

4. Conditions of Use Subject to This Regulatory Action

As noted in Unit I.C. “conditions of use” is defined in TSCA section 3(4). Condition of use descriptions for PCE are provided in Unit III.B.1. of the 2023 PCE proposed rule and were obtained from EPA sources such as CDR codes, the 2020 Risk Evaluation for PCE and related documents, as well as the Organisation for Economic Co-operation and Development (OECD) harmonized use codes, and stakeholder engagements. EPA received public comments requesting minor clarifications of the descriptions for some industrial and commercial uses, and EPA has clarified those descriptions in Unit IV. A description of the minor changes can be found in the response to comments document and in Unit III.D. (Ref. 8). To assist with the implementation and compliance with the final rule, in Unit IV., EPA has provided a description of the conditions of use subject to the WCPP and to prescriptive controls.

As in the 2023 PCE proposed rule, for the purposes of this final rule, “occupational conditions of use” refers to the TSCA conditions of use described in Units III.B.1.a., b., c., and e. of the 2023 PCE proposed rule. Although EPA identified both industrial and commercial uses in the 2020 Risk Evaluation for PCE (Ref. 1) for purposes of distinguishing scenarios, the Agency clarified then and clarifies now that EPA interprets the authority Congress gave to the Agency to “regulat[e] any

manner or method of commercial use” under TSCA section 6(a)(5) to reach both industrial and commercial uses. Additionally, as described in the 2023 PCE proposed rule, in the 2020 Risk Evaluation for PCE (Ref. 1), EPA identified and assessed all known, intended, and reasonably foreseen industrial, commercial, and consumer uses of PCE. EPA determined that all industrial, commercial, and consumer uses of PCE evaluated in the 2020 Risk Evaluation for PCE contribute to the unreasonable risk of injury to health. As such, for purposes of this risk management rule, “consumer use” refers to all known, intended, or reasonably foreseen PCE consumer uses. Likewise, for the purpose of this risk management rule, “industrial and commercial use” refers to all known, intended, or reasonably foreseen PCE industrial and commercial uses.

EPA further notes that this rule does not apply to any substance excluded from the definition of “chemical substance” under TSCA section 3(2)(B)(ii) through (vi). Those exclusions include, but are not limited to, any pesticide (as defined by the Federal Insecticide, Fungicide, and Rodenticide Act) when manufactured, processed, or distributed in commerce for use as a pesticide; and any food, food additive, drug, cosmetic, or device, as defined in section 201 of the Federal Food, Drug, and Cosmetic Act, when manufactured, processed, or distributed in commerce for use as a food, food additive, drug, cosmetic or device.

D. EPA’s Proposed Rule Under TSCA Section 6(a) for PCE

1. Description of TSCA Section 6(a) Requirements

Under TSCA section 6(a), if the Administrator determines through a TSCA section 6(b) risk evaluation that a chemical substance presents an unreasonable risk of injury to health or the environment, without consideration of costs or other non-risk factors, including an unreasonable risk to a potentially exposed or susceptible subpopulation identified as relevant to the Agency’s risk evaluation, under the conditions of use, EPA must by rule apply one or more of the section 6(a) requirements to the extent necessary so that the chemical substance no longer presents such risk.

The TSCA section 6(a) requirements can include one or more of the following actions alone in or combination:

- Prohibit or otherwise restrict the manufacturing (including import), processing, or distribution in commerce

of the substance or mixture, or limit the amount of such substance or mixture which may be manufactured, processed, or distributed in commerce (section 6(a)(1)).

- Prohibit or otherwise restrict the manufacturing, processing, or distribution in commerce of the substance or mixture for a particular use or above a specific concentration for a particular use (section 6(a)(2)).

- Limit the amount of the substance or mixture which may be manufactured, processed, or distributed in commerce for a particular use or above a specific concentration for a particular use specified (section 6(a)(2)).

- Require clear and adequate minimum warning and instructions with respect to the substance or mixture’s use, distribution in commerce, or disposal, or any combination of those activities, to be marked on or accompanying the substance or mixture (section 6(a)(3)).

- Require manufacturers and processors of the substance or mixture to make and retain certain records or conduct certain monitoring or testing (section 6(a)(4)).

- Prohibit or otherwise regulate any manner or method of commercial use of the substance or mixture (section 6(a)(5)).

- Prohibit or otherwise regulate any manner or method of disposal of the substance or mixture, or any article containing such substance or mixture, by its manufacturer or processor or by any person who uses or disposes of it for commercial purposes (section 6(a)(6)).

- Direct manufacturers or processors of the substance or mixture to give notice of the unreasonable risk determination to distributors, certain other persons, and the public, and to replace or repurchase the substance or mixture (section 6(a)(7)).

In the 2023 PCE proposed rule under TSCA section 6(a), EPA analyzed how the TSCA section 6(a) requirements could be applied to address the unreasonable risk from PCE so that it no longer presents such risk. Unit II.D.1. of this final rule summarizes the TSCA section 6 considerations for issuing regulations under TSCA section 6(a). Unit V. of the 2023 PCE proposed rule outlines how EPA applied these considerations specifically to managing the unreasonable risk from PCE.

As required, EPA developed a proposed regulatory action and alternative regulatory actions, which are described in Units IV.A. and IV.B., respectively, of the 2023 PCE proposed rule. To identify and select a regulatory action, EPA considered the two routes

of exposure driving the unreasonable risk, inhalation and dermal, and the exposed populations. For occupational conditions of use, EPA considered how it could directly regulate manufacturing (including import), processing, distribution in commerce, industrial and commercial use, or disposal to address the unreasonable risk. EPA also considered how it could exercise its authority under TSCA to regulate the manufacturing (including import), processing, and/or distribution in commerce of PCE at different levels in the supply chain to eliminate exposures or restrict the availability of PCE and PCE-containing products for consumer use in order to address the unreasonable risk.

As required by TSCA section 6(c)(2), EPA considered several factors, in addition to the identified unreasonable risk, when selecting among possible TSCA section 6(a) regulatory requirements for the 2023 PCE proposed rule. EPA’s considerations regarding TSCA section 6(c)(2)(A) for PCE are discussed in full in Unit VI. of the 2023 PCE proposed rule, including the statement of effects with respect to these considerations. After review of public comments received, EPA has revised its statement of effects considerations in Unit V. of this final rule.

Additionally, as described in more detail in the 2023 PCE proposed rule, EPA considered the availability of alternatives when finalizing a prohibition or a substantial restriction (TSCA section 6(c)(2)(C)) (Ref. 12), and in setting final compliance dates in accordance with the requirements in TSCA section 6(d)(1).

To the extent information was reasonably available, EPA considered pollution prevention strategies and the hierarchy of controls adopted by OSHA and the National Institute for Occupational Safety and Health (NIOSH) when developing its 2023 PCE proposed rule, with the goal of identifying risk management control methods that would be permanent, feasible, and effective. EPA also considered how to address the unreasonable risk while providing flexibility to the regulated community where appropriate and took into account the information presented in the 2020 Risk Evaluation for PCE (Ref. 1), input from stakeholders, insight received during consultations, and anticipated compliance strategies from regulated entities.

Taken together, these considerations led EPA to the proposed regulatory action and alternative actions described in Unit II.D.3. Additional details related to how the requirements described in

this Unit II.D.1. were incorporated into development of the 2023 PCE proposed rule and alternative actions are in Unit V. of the 2023 PCE proposed rule.

2. Consultations and Other Engagement

a. Consultations

EPA conducted consultations and outreach as part of the development of the 2023 PCE proposed rule. The Agency held a federalism consultation from July 22, 2021, to October 22, 2021, as part of the rulemaking process and pursuant to Executive Order 13132 (Ref. 13).

EPA also consulted with Tribal officials during the development of the 2023 PCE proposed rule (Ref. 14). The Agency held a Tribal consultation from May 17, 2021, to August 20, 2021, with meetings on June 15 and July 8, 2021 (Ref. 14). EPA received no written comments as part of this consultation.

EPA's Environmental Justice (EJ) consultation occurred from June 3, 2021, to August 20, 2021. On June 16, 2021, and July 6, 2021, EPA held public meetings as part of this consultation. These meetings were held pursuant to Executive Orders 12898 and 14008. EPA received five written comments following the EJ meetings, in addition to oral comments provided during the consultation (Refs. 15, 16, 17, 18, 19). The 2023 PCE proposed rule presents a brief summary of the comments in Unit III.A.1. of the 2023 PCE proposed rule.

As required by section 609(b) of the Regulatory Flexibility Act (RFA), EPA convened a Small Business Advocacy Review (SBAR) Panel to obtain advice and recommendations from small entity representatives (SERs) that potentially would be subject to the rule's requirements. EPA met with SERs before and during Panel proceedings, on September 26, 2022, and November 10, 2022. Panel recommendations were addressed in Unit X.C. of the 2023 PCE proposed rule and in the Initial Regulatory Flexibility Analysis (IRFA) (Ref. 20); the Panel report is in the docket (Ref. 21). EPA has also prepared a Final Regulatory Flexibility Analysis (FRFA) (Ref. 22).

The Agency presents more information regarding the consultations in Units X.C., X.E., X.F., and X.J. of the 2023 PCE proposed rule.

b. Other Stakeholder Consultations

For development of the 2023 PCE proposed rule, in addition to the formal consultations described in Unit X. of the 2023 PCE proposed rule, EPA held a webinar on January 14, 2021, providing an overview of the TSCA risk management process and the risk

evaluation findings for PCE (Ref. 23). EPA also presented on the TSCA risk management process and the findings in the 2020 Risk Evaluation for PCE (Ref. 24) at a Small Business Administration (SBA) Office of Advocacy Environmental Roundtable on January 15, 2021. Attendees of these meetings were given an opportunity to voice their concerns regarding the risk evaluation and risk management.

Furthermore, during development of the 2023 PCE proposed rule, EPA engaged in discussions with representatives from different industries, non-governmental organizations, organized labor, technical experts, and users of PCE. A list of external meetings held during the development of the 2023 PCE proposed rule is available in the docket (Ref. 25); meeting materials and summaries are also available in the docket. A summary of the topics discussed during these meetings is in Unit III.A.2. of the 2023 PCE proposed rule.

c. Children's Environmental Health

The Agency's 2021 Policy on Children's Health (Ref. 26) requires EPA to protect children from environmental exposures by consistently and explicitly considering early life exposures (from conception, infancy, early childhood and through adolescence until 21 years of age) and lifelong health in all human health decisions through identifying and integrating children's health data and information when conducting risk assessments. TSCA section 6(b)(4)(A) also requires EPA to conduct risk evaluations "to determine whether a chemical substance presents an unreasonable risk of injury to health or the environment . . . including an unreasonable risk to a potentially exposed or susceptible subpopulation identified as relevant to the risk evaluation by the Administrator, under the conditions of use." In addition, TSCA section 6(a) requires EPA to apply one or more risk management requirements under TSCA section 6(a) so that PCE no longer presents an unreasonable risk (which includes unreasonable risk to any relevant potentially exposed or susceptible subpopulations). Information on how the 2021 Policy was applied and on the health and risk assessments supporting this action is available under Units II.C., II.D., and V.A., as well as in Unit III.A.3. of the 2023 PCE proposed rule, the 2020 Risk Evaluation for PCE (Ref. 1), and the Economic Analysis (Ref. 3).

3. Proposed Regulatory Action

EPA's 2023 PCE proposed rule under TSCA section 6(a) to address the

unreasonable risk presented by PCE under its conditions of use included the following:

- Prohibition of most industrial and commercial uses and the manufacture (including import), processing, and distribution in commerce, of PCE for those uses;
- Prohibition of the manufacture (including import), processing, and distribution in commerce of PCE for all consumer use;
- Prohibition of the manufacture (including import), processing, distribution in commerce, and commercial use of PCE in dry cleaning and spot cleaning through a 10-year phaseout;
- Requirements for strict workplace controls, including a PCE WCPP, which would include requirements to meet an inhalation exposure concentration limit and prevent direct dermal contact with PCE, for the 16 occupational conditions of use not prohibited;
- Requirements for prescriptive workplace controls for laboratory use;
- Establishments of recordkeeping and downstream notification requirements; and
- A 10-year time-limited exemption under TSCA section 6(g) for certain emergency uses of PCE in furtherance of NASA's mission, for specific conditions of use which are critical or essential and for which no technically and economically feasible safer alternative is available.

EPA notes that all TSCA conditions of use of PCE were subject to the 2023 PCE proposed rule and are subject to this final rule.

The 2023 PCE proposed rule included proposed timeframes for implementation. The prohibitions EPA proposed for most conditions of use would take effect in phases, beginning at the top of the supply chain, and coming into full effect after 24 months, as described in Units IV.A.1.a. and IV.A.1.b. of the 2023 PCE proposed rule. The phaseout period for dry cleaning that EPA proposed would take full effect after 10 years, as described in Unit IV.A.1.c. of the 2023 PCE proposed rule. Likewise, for the WCPP, EPA proposed timeframes for phases of compliance, beginning with monitoring at six months and full implementation after 12 months, as described in Unit IV.A.2. of the 2023 PCE proposed rule. EPA also proposed a compliance timeframe of 12 months for prescriptive controls for laboratory use.

Under TSCA section 6(c)(2)(A)(iv)(II) through (III), EPA is mandated to consider one or more alternative regulatory actions. These were included in the 2023 PCE proposed rule in Unit

IV.B. Similar to the proposed regulatory action, both the primary and second alternative regulatory actions combined prohibitions, requirements for a WCPP, and prescriptive controls to address the unreasonable risk from PCE under its conditions of use.

The primary alternative regulatory action combined prohibitions, a WCPP, and prescriptive controls to address the unreasonable risk from PCE driven by its conditions of use. At the time of publication of the 2023 PCE proposed rule, uncertainties regarding the feasibility of implementing workplace safety control measures in open systems or when worker activities require manual application or removal of PCE or PCE-containing products, availability of alternatives, or whether the use is ongoing or phased out for most of these conditions of use led EPA to propose prohibition. At the time of proposal, EPA did not have reasonably available information to confidently conclude that these conditions of use could meet requirements of a WCPP. The alternative regulatory action also considered and included WCPP for laboratory use to seek input on requiring the non-prescriptive WCPP instead of the prescriptive workplace controls included in the proposed regulatory action. The primary alternative regulatory action also considered prescriptive workplace controls where existing engineering controls, administrative controls, and PPE may already address the unreasonable risk for some conditions of use that would be subject to a WCPP under the proposed regulatory action. Additionally, the primary alternative regulatory action included requirements for a concentration limit for PCE in industrial and commercial use in solvent-based adhesives and sealants.

The primary alternative regulatory action also included longer timeframes for prohibitions and implementation of WCPP and prescriptive controls. Those timeframes were described in Unit IV.B. of the 2023 PCE proposed rule.

The second alternative regulatory action combined prohibitions, requirements for a WCPP, prescriptive controls, and two time-limited exemptions to address the unreasonable risk from PCE driven by its conditions of use. This second alternative regulatory action included prohibitions on some conditions of use that would have requirements for a WCPP under the proposed regulatory action.

The second alternative regulatory action also included shorter compliance timeframes for prohibition and a WCPP. Additionally, this second alternative regulatory action did not include

staggered prohibition compliance dates for manufacturers, processors, and distributors. The secondary alternative regulatory action compliance timeframes are described in Unit IV.B. of the 2023 PCE proposed rule.

For a comprehensive overview of the alternative regulatory actions, refer to Unit IV.B. of the 2023 PCE proposed rule, with the rationale for the alternative regulatory actions provided in Unit V.A.2. of the 2023 PCE proposed rule.

4. Public Comments Received

EPA requested comment on all aspects of the 2023 PCE proposed rule, and during the public comment period, EPA held a webinar on July 19, 2023, providing an overview of the 2023 PCE proposed rule and TSCA section 6; during the webinar, members of the public had the opportunity to share their perspectives (Ref. 27). The comment period closed on August 15, 2023. EPA received 749 public comments, with a majority received from individuals participating in mass mailer campaigns organized by non-governmental organizations. The public comments also include approximately 89 unique comments from industry stakeholders, trade associations, environmental groups, unions, academic institutions, a State government agency, a Federal Government agency, and members of the regulated community. A summary of the comments as well as EPA's responses is in the docket for this rulemaking (Ref. 8). Additionally, Unit III. contains summaries of public comments that informed EPA's regulatory approach in this final rule.

After the close of the public comment period for the 2023 PCE proposed rule, EPA held meetings with stakeholders to receive clarifying information on their comments, including affected industry and interested groups, related to the use of PCE. Topics of these meetings included exposure controls, process descriptions, monitoring data, and specific conditions of use. EPA received data as part of and following these stakeholder meetings and has made the information available to the public in the rulemaking docket (Docket ID No. EPA-HQ-OPPT-2020-0720) (Ref. 28).

After review of the public comments received on the 2023 PCE proposed rule, EPA revised certain preliminary considerations that impacted which conditions of use were proposed by EPA to be prohibited or that could continue under the WCPP or prescriptive controls (Ref. 8). Similarly, based on public comments received, EPA modified for this final rule several proposed

compliance timeframes, with details in Unit III.

III. Changes From the Proposed Rule Based on Public Comment

Unit III. summarizes the main changes from the 2023 PCE proposed rule to this final rule, based on the consideration of the public comments.

A. Changes to the Risk Management Approach for Certain Conditions of Use

As described in Units III.A.1. and 2., when compared to the 2023 PCE proposed rule, EPA's final rule prohibits two additional conditions of use (Unit III.A.1.), allows three additional conditions of use under the WCPP (Units III.A.2.a. through c.), broadens the types of prescriptive controls required for one condition of use (Unit III.A.2.d.), and allows one additional condition of use to continue under specific prescriptive controls or the WCPP (Unit III.A.2.e.).

The rationale for these changes is described in this unit. EPA emphasizes that implementation of the WCPP or prescriptive controls can fully address the unreasonable risk from PCE for the conditions of use allowed to continue, and that these changes do not significantly impact the production volume of PCE expected to remain in commerce when compared to the proposed regulatory action. Taken together, the conditions of use described in Unit III.A.1. and 2. account for less than an estimated 5% of the total production volume of PCE.

1. Additional Conditions of Use Subject to Prohibition: Industrial and Commercial Uses of PCE as a Solvent for In-Line Vapor Degreasing

EPA is finalizing a prohibition for the industrial and commercial use of PCE as a solvent for in-line conveyORIZED vapor degreasing and for in-line web cleaner vapor degreasing, which were considered for prohibition in the second alternative regulatory action of the 2023 PCE proposed rule. As described in section 6 of the Economic Analysis for the 2023 PCE proposed rule (Ref. 29), EPA estimated that approximately two conveyORIZED vapor degreasers and no web vapor degreasers use PCE. One public commenter, a critical cleaning consultant, stated they no longer encounter in-line conveyORIZED or in-line web vapor degreasers using PCE (Ref. 30). Additionally, commenters identified alternative types of degreaser technologies, such as open-top batch vapor degreasers, closed-loop batch vapor degreasers, and airless batch vapor degreasers, that clean effectively and for which monitoring data and

detailed process descriptions of PCE activities for these types of degreasers confirm that compliance with an ECEL of 0.14 ppm as an 8-hr TWA is possible (Refs. 30, 31). As described in Unit V.A.1. of the 2023 PCE proposed rule, prohibition is the preferred risk management option for occupational conditions of use where reasonably available information suggest minimal ongoing use or when feasible safer alternatives are reasonably available. Based on information provided by commenters and other information reasonably available to the Agency indicating that the use of PCE in in-line conveyORIZED and in-line web vapor degreasing is no longer ongoing, and availability of technologically feasible alternative vapor degreasing technology, EPA has determined that the unreasonable risk from PCE when used in both types of in-line vapor degreasers is best addressed with a prohibition.

2. Additional Conditions of Use Subject to Restrictions: WCPP and Prescriptive Controls

a. Processing PCE Into Formulation, Mixture, or Reaction Product in Other Chemical Products and Preparations

EPA is finalizing a WCPP for processing PCE into formulation, mixture, or reaction product in other chemical products and preparations, as included in the primary alternative regulatory action of EPA's proposal (88 FR 39652, June 16, 2023)(FRL-8329-02-OCSP). While EPA proposed to prohibit processing PCE into formulation, mixture or reaction product in other chemical products and preparations, this was because EPA proposed to prohibit the downstream industrial, commercial, and consumer uses associated with other chemical products and preparations. EPA included this condition of use under the WCPP in the primary alternative regulatory action.

EPA received several comments regarding processing PCE into formulation, mixture, or reaction product. One commenter stated that there appeared to be a disconnect between the proposed prohibitions on processing PCE versus prohibitions on distribution and/or use of PCE and requested that EPA clarify the prohibitions throughout all steps in the supply chain for each particular condition of use (Ref. 32). For example, the commenter stated that EPA proposed that PCE may be processed into a formulation, mixture, or reaction product in paint and coating mixtures but also proposed to prohibit the manufacturing, processing, distribution

in commerce, and use of PCE in solvent-based paints and coatings. The commenter also stated that EPA proposed that PCE could be used for industrial and commercial use in maskants for chemical milling but did not explicitly permit the manufacturing or processing of PCE for use in maskants. Another commenter expressed opposition to EPA's proposed prohibition on processing of PCE for other chemical products and preparations, and stated that the proposed prohibition appeared to be based on an overly broad assumption that exposures to PCE in this condition of use correspond to aerosol packing (Ref. 33).

In Unit III.B.1.b.iv. of the 2023 PCE proposed rule, EPA described how the condition of use of processing PCE into formulation, mixture, or reaction products in paint and coating products refers to when PCE is added to a paint or coating product for further distribution, including when PCE is incorporated into coating products such as maskant (88 FR 39652, June 16, 2023)(FRL-8329-02-OCSP). However, to avoid confusion regarding which processing into formulation, mixture, or reaction product condition of use of PCE is associated with each downstream industrial and commercial condition of use of PCE, and, in particular, confusion regarding which products may fall under the category of "other chemical products and preparations," EPA is finalizing WCPP for all PCE processing into formulation, mixture, or reaction products, including in other chemical products and preparations, to make clear that all processing of PCE into formulation, mixture, or reaction product conditions of use, including in cleaning and degreasing products, in adhesive and sealant products, and in paint and coating products that are not prohibited by virtue of the downstream use being prohibited, are subject to the WCPP. As in the 2023 PCE proposed rule, all manufacturing, processing, and distribution in commerce of PCE for any downstream industrial, commercial, or consumer condition of use that is prohibited under the final rule would also be prohibited. In response to a comment requesting clarity regarding prohibitions throughout all steps of the value chain for each condition of use, EPA clarifies that the final rule includes prohibitions (staggered by lifecycle stage) for the manufacture, processing, distribution in commerce, and for all consumer, industrial and commercial use of PCE and PCE-containing products, except for those industrial and commercial uses which will continue

under the WCPP or prescriptive controls, or are otherwise not prohibited. Therefore, in this final rule, WCPP applies to processing PCE for uses that are not prohibited.

b. Industrial and Commercial Use of PCE as a Processing Aid

EPA is finalizing a WCPP for industrial and commercial use of PCE as a processing aid in pesticide, fertilizer, and other agricultural manufacturing, as included in the primary alternative regulatory action of the 2023 PCE proposal rule. While EPA proposed to prohibit the industrial and commercial use of PCE as a processing aid in pesticide, fertilizer, and other agricultural manufacturing, this was due to insufficient information at the time of proposal to determine that compliance with the WCPP would be possible. For example, at the time of proposal, EPA was not aware of any monitoring data or detailed description of PCE activities for this use to confirm that compliance with an ECEL of 0.14 ppm as an 8-hr TWA would be possible. EPA requested comment on the ability of facilities in this sector to successfully implement the WCPP for this particular use because of the industrial nature of the use.

EPA received a few comments regarding the industrial and commercial use as a processing aid in pesticide, fertilizer, and other agricultural manufacturing. Two commenters disagreed with EPA's proposal to prohibit PCE use as a processing aid in the manufacture of agricultural chemicals and stated that it is unclear what information EPA relied on to conclude that this use could not meet the WCPP requirements (Refs. 33, 34). One commenter stated that this use of PCE is critical to the manufacture of certain agricultural products and described how they limit PCE exposure and manage production risks through strong product stewardship and industrial hygiene practices. Following a meeting to receive clarifying information on their comment, one commenter submitted information on worker activities and safety measures in place that provide worker protection for this use (Ref. 35). As described in the submitted information, activities associated with potential exposure to PCE include transfer, sample, and maintenance, where control measures such as purging lines/vessels prior to opening, closed sampling box, and PPE reduce exposures. Based on the information received, EPA believes such control measures that indicate the ability to comply with the WCPP requirements may be implementable for all those using PCE as a processing aid

in pesticide, fertilizer, and other agricultural chemical manufacturing.

Additionally, information submitted to EPA indicates that PCE may be used as a processing aid in industrial sectors other than petrochemical manufacturing and pesticide, fertilizer, and other agricultural chemical manufacturing (Refs. 33, 36). The 2020 Risk Evaluation assessed occupational exposures for “processing aids, specific to petroleum production—catalyst regeneration in petrochemical manufacturing” and “processing aids, not otherwise listed—pesticide, fertilizer and other agricultural chemical manufacturing” under the industrial processing aid Occupational Exposure Scenario (Ref. 1). While other specific processing aid uses of PCE were not identified in the 2020 Risk Evaluation, EPA expects the exposure assessment, including the worker activities, to be consistent across all processing aid type uses. For example, as assessed in the risk evaluation, worker activities that may result in exposure for use as a processing aid include unloading PCE into process equipment and maintenance. Similar to control measures that reduce the potential for exposure and indicate the ability to comply with the WCPP for use as a processing aid in the pesticide, fertilizer, and other agricultural chemical manufacturing sector, EPA has determined that control measures such as use occurring in a highly specialized closed system with minimal exposure to PCE during infrequent worker activity limit the potential for exposure and indicate the ability to comply with the WCPP for use as a processing aid in other industrial sectors. Therefore, EPA believes the WCPP requirements are practicable and implementable for all processing aid uses which occur at sophisticated industrial sites. EPA’s determination is based on reasonably available information included in submissions to EPA related to process descriptions, worker activities, and exposure mitigation practices for use of PCE as an industrial processing aid in sectors other than petrochemical manufacturing and pesticide, fertilizer, and agricultural chemical manufacturing (Refs. 1, 36).

The information submitted to EPA as part of the comment period regarding the industrial and commercial use of PCE as a processing aid in sectors other than petrochemical manufacturing (including industrial and commercial use as a processing aid in pesticide, fertilizer and agricultural chemical manufacturing) and supported by subsequent discussions, demonstrated the users’ ability to comply with the

WCPP. For this reason, EPA has determined that the unreasonable risk from PCE when used as a processing aid, even in sectors other than petrochemical manufacturing and pesticide, fertilizer, and agricultural chemical manufacturing, could be addressed with a WCPP. Therefore, in this final rule, EPA is finalizing a WCPP for all industrial and commercial use of PCE as a processing aid in sectors other than petrochemical manufacturing and a WCPP for industrial and commercial use of PCE as a processing aid in catalyst regeneration in petrochemical manufacturing.

c. Industrial and Commercial Use of PCE as Solvent for Cold Cleaning of Tanker Vessels

EPA is finalizing a WCPP for industrial and commercial use of PCE as solvent for cold cleaning of tanker vessels, which is a sub-use of the industrial and commercial use of PCE as solvent for cold cleaning, which EPA proposed to prohibit in the proposal (88 FR 39652, June 16, 2023) (FRL–8329–02–OCSPP). While EPA proposed to prohibit industrial and commercial use of PCE as solvent for cold cleaning, this was due to insufficient information at the time of proposal to determine that compliance with the WCPP would be possible and EPA believed alternatives were reasonably available. EPA requested comment on whether to consider a regulatory alternative that would subject more conditions of use of PCE to a WCPP, instead of a prohibition, than those contemplated in the primary alternative regulatory action. EPA also requested monitoring data and detailed descriptions of PCE-involving activities for these conditions of use to determine whether these additional conditions of use could comply with the WCPP such that risks are no longer unreasonable.

EPA received one comment regarding the industrial and commercial use of PCE in cold cleaning of tanker vessels. The commenter requested that EPA not prohibit this use because entities utilize PCE and other solvents, such as methylene chloride, ortho-dichlorobenzene, monochlorobenzene, and toluene, to clean tanks safely and effectively, when water and detergents are not compatible with the cargo material (Ref. 37). The commenter suggested that EPA establish the WCPP to maintain this use. Following a September 26, 2023, meeting with an industry user to receive clarifying information on their comment, the commenter submitted information on worker activities and safety measures in place that provide worker protection for this use (Ref. 38). As described in the

submitted information, tank cleaning with a solvent is typically infrequent (about every two years) and worker exposure occurs during sampling and connecting or disconnecting of hoses to or from the ship manifold or waste truck, activities during which control measures are in place. Based on the information submitted regarding this condition of use, and supported by subsequent discussions, EPA believes such controls and safety measures may be implementable industry wide.

EPA received two comments regarding industrial and commercial use of PCE in cold cleaning generally. One commenter stated that the empirical and modeled exposure data for cold cleaning in the risk evaluation are very similar to that for degreasing, but EPA proposed to allow continued use of PCE under the WCPP in vapor degreasing and not cold cleaning (Ref. 33). Another commenter associated with the aerospace and defense sector urged EPA to permit ongoing use under the WCPP for PCE as a cold, immersion cleaner (Ref. 32). However, for all cold cleaning other than cold cleaning of tanker vessels, EPA does not have any reasonably available information, including monitoring or detailed process description, that supports the ability to comply with a WCPP such that the risks are no longer unreasonable. EPA does not have any reasonably available information that indicates the exposure frequency, worker activities, and safety measures associated with cold cleaning of tanker vessels, as described by the commenter, are applicable to other cold cleaning operations, which may vary in equipment design or worker activities (Ref. 37, 38).

The information submitted to EPA during the comment period regarding the industrial and commercial use of PCE as a solvent for cold cleaning of tanker vessels, supported by subsequent discussions, demonstrated the users’ ability to comply with the WCPP. For this reason, EPA has determined that the unreasonable risk from PCE when used in cold cleaning of tanker vessels could be addressed with a WCPP. EPA is finalizing a prohibition for all other cold cleaning applications of PCE.

d. Industrial and Commercial Use of PCE as a Laboratory Chemical

In general, EPA is finalizing the prescriptive control requirements for the industrial and commercial use of PCE as a laboratory chemical as proposed, with some modifications, based on consideration of public comments. As described in the 2023 PCE proposed rule, to address the unreasonable risk of injury to health resulting from dermal

exposures to PCE for the industrial and commercial use as a laboratory chemical, EPA proposed to require dermal PPE in combination with comprehensive training for tasks related to the use of PCE in a laboratory setting for each potentially exposed person in direct dermal contact with PCE. EPA also proposed to require the use of fume hoods to codify the assumption of existing good laboratory practices that EPA relied upon as a key basis for its evaluation of risk from this condition of use (Ref. 1). EPA requested comment relative to the ability of owners and operators to implement laboratory chemical fume hood and dermal PPE-related requirements within 12 months of publication of the final rule. Under the primary alternative regulatory action, EPA included the WCPP for laboratory use of PCE and solicited comment on non-prescriptive requirements to meet an ECEL and Direct Dermal Contact Control (DDCC) as compared to the prescriptive workplace controls of using a fume hood and dermal PPE.

EPA received several comments regarding the industrial and commercial use of PCE as a laboratory chemical. Several commenters stated that the proposed regulation would result in confusion and duplication with the OSHA standard for occupational exposure to hazardous chemicals in laboratories under 29 CFR 1910.1450 that is already in effect (Refs. 39, 40, 41). The commenters urged EPA to more closely align its requirements for laboratory use of PCE with OSHA's laboratory standard to reduce the compliance burden. Some commenters expressed support for the use of fume hoods and other engineering controls over the WCPP and suggested that EPA include flexibility for engineering controls beyond a fume hood for consistency with the OSHA laboratory standard (Refs. 40, 42). The commenters stated that while fume hoods are considered best practice and are commonly used to reduce exposure in laboratories, some experiment designs utilizing PCE may not be able to be accommodated within a fume hood. Commenters described other alternative controls that can be designed and implemented to reduce exposure, such as glove boxes, exhausted enclosures, air-free solvent purification systems, and fume extractors. One commenter described other laboratory standards, including the American National Standards Institute (ANSI)/American Society of Safety Professionals (ASSP) Z9.5 Laboratory Ventilation standard and the ANSI/American Society of

Heating, Refrigerating and Air-Conditioning Engineers (ASHRAE) 62.1 Ventilation and Acceptable Indoor Air Quality standard, that laboratories adhere to in addition to OSHA's laboratory standard that they state meet or exceed the worker protections under EPA's proposed WCPP and prescriptive controls (Refs. 41, 43, 44).

Based on information provided by commenters related to exposure mitigation controls to comply with the OSHA laboratory standard and best management practices available to laboratories, EPA has determined that requiring laboratory ventilation devices such as fume hoods or glove boxes would better align with the OSHA laboratory standard and existing good laboratory practices. As described in Unit V.A.1. of the 2023 PCE proposed rule, EPA proposed to require fume hoods in laboratory settings to codify assumptions made in the 2020 Risk Evaluation for PCE, where EPA's risk estimates and determination that inhalation exposures from the industrial and commercial use of PCE as a laboratory chemical did not contribute to the unreasonable risk were predicated on its findings that expected safety practices of using PCE in small amounts under a fume hood reduce the potential for inhalation exposures. For the industrial and commercial use of PCE as a laboratory chemical, EPA concurs with the commenters that indicated EPA's requirements should align more closely with the OSHA laboratory standard wherever possible to prevent confusion. The requirement in this final rule that laboratory ventilation devices, such as fume hoods or glove boxes, are in use and functioning properly and that specific measures are taken to ensure proper and adequate performance of such equipment to minimize exposures to persons in the area when PCE is used in a laboratory setting aligns with existing requirements from 29 CFR 1910.1450(e)(3)(iii).

As detailed in Unit IV.C. of this final rule, EPA is finalizing as proposed the requirements for dermal PPE in combination with comprehensive training for tasks related to the use of PCE in a laboratory setting. EPA believes these requirements align with OSHA's laboratory standard and OSHA's General Requirements for Personal Protective Equipment at 29 CFR 1910.132 to the extent possible while still addressing the unreasonable risk of injury to health resulting from dermal exposures to PCE identified for the industrial and commercial use as a laboratory chemical.

e. Industrial and Commercial Use of PCE as Energized Electrical Cleaner

EPA is finalizing requirements to comply with *either* specific prescriptive controls *or* the WCPP for the industrial and commercial use of PCE as energized electrical cleaner, which is a sub-use of the industrial and commercial use of PCE as solvent for aerosol spray degreaser/cleaner, as described in Unit III.B.1.c.vi. of the 2023 PCE proposed rule. In the proposal, EPA proposed to prohibit the industrial and commercial use of PCE as solvent for aerosol spray degreaser/cleaner because the Agency was not able to identify reasonably available information such as monitoring data or detailed activity descriptions to indicate with certainty that relevant regulated entities could mitigate the identified unreasonable risk through a WCPP. EPA considered requiring a WCPP for this condition of use under the primary alternative regulatory action because of uncertainties regarding the availability of alternatives for all aerosol spray degreasing/cleaning applications, including for energized electrical cleaning. EPA requested comment on the ways PCE may be used, including the likelihood of successful compliance with the WCPP for this condition of use. EPA also requested comment on prescribing specific engineering or administrative controls that would reduce inhalation and dermal exposures enough to address the unreasonable risk across all workplaces engaged in a condition of use. Additionally, EPA requested comment on whether to include a self-certification requirement for purchasing PCE or PCE-containing products.

EPA received several comments expressing concern over the proposed prohibition on energized electrical cleaning (Refs. 45, 46, 33, 47, 48, 49). Several commenters stated that safer alternatives are not available because alternative products not containing PCE likely present a flammability safety issue (Refs. 45, 48, 47, 50). A commenter also stated that some cleaning in the electrical utility industry is conducted underground in confined spaces where respiratory protection is used and a non-flammable product, such as those containing PCE, is needed to control a potential fire hazard (Ref. 45). In addition to describing the need for PCE in energized electrical cleaning, commenters described the work practices and context that support the potential for exposure reduction to PCE through workplace controls, rather than prohibition. As an example, one commenter described work practices

and controls for energized electrical cleaning, stating that facilities that require cleaning of energized equipment rely on skilled technicians or other professional users who typically have education and training that may include two years at lineman school, time as an apprentice, licensing or certifications, and continuing education (Ref. 45).

Additionally, the commenter stated that OSHA General Industry and Construction standards include requirements specific to electrical work under 29 CFR part 1926, subparts E, K, and V. Commenters also described State-level regulations that exclude energized electrical cleaners from prohibitions on the manufacture and sale of PCE-containing general purpose degreasing products, electrical cleaners, and electronic cleaners (Refs. 45, 49). Another commenter stated that EPA should not prohibit energized electrical cleaning because petroleum refineries safely use energized electrical cleaners on a regular basis (Ref. 48).

While many commenters advocated for continued use of PCE for this condition of use, they differed in whether the WCPP or other workplace controls would be most suitable. Some commenters stated that the WCPP would be impractical for energized electrical cleaning because trained technicians often travel to different facilities to conduct work, including facilities that may not otherwise use PCE, and suggested that instead of a WCPP, a training and certification program would be sufficient to address the unreasonable risk (Refs. 45). Other commenters suggested PCE use for cleaning of energized electrical equipment should be exempt from the rule under a TSCA section 6(g) exemption (Refs. 45, 46, 33, 47).

Based on the information submitted to EPA as part of the comment period regarding this condition of use, supported by subsequent discussions, and in consideration of existing best practices and regulations for work in electrical spaces as well as the lack of reasonably available technically and economically feasible alternatives to PCE that also do not present a potential flammability concern for energized electrical cleaning, EPA has determined that the unreasonable risk from PCE when used as energized electrical cleaner could be addressed with a combination of labeling, self-certification, and either the WCPP or specific prescriptive controls, including dermal PPE and respiratory protection. EPA notes the importance of existing OSHA regulations designed to protect workers exposed to dangers such as electric shock, electrocution, fires, and

explosions. Specifically, in addition to the requirements for electrical work under OSHA General Industry and Construction standards at 29 CFR part 1926, subparts E, K, and V that one commenter mentioned in their public comment, OSHA regulates electrical work under Occupational Safety and Health standards at 29 CFR part 1910. For example, OSHA requires safety-related work practices on electrical equipment under the Electrical Standard at 29 CFR part 1910, subpart S (29 CFR 1910.301 to 1910.399), which was significantly updated in 2007. OSHA also sets forth requirements for the operation and maintenance of electrical power generation, control, transformation, transmission, and distribution lines and equipment under the Electric Power Generation, Transmission, and Distribution Standard at 29 CFR part 1910, subpart R (29 CFR 1910.269), last amended in 2015. Additionally, OSHA regulates electrical protective equipment under the Electrical Protective Equipment Standard at 29 CFR part 1910, subpart I (29 CFR 1910.137), which was significantly updated in 2014. Other standards and best practices apply to electrical safety in the workplace, for example the National Fire Protection Association 70E Standard for Electrical Safety in the Workplace (Ref. 51).

Under the Electrical Standard at 29 CFR 1910.333 and the Electric Power Generation, Transmission, and Distribution Standard at 29 CFR 1910.269, OSHA requires employers to establish minimum approach distances from exposed energized parts, depending on the voltage, that persons must maintain unless they are a qualified employee that meets certain requirements under 29 CFR 1910.269(l)(3)(iii)(A) through (C) or 29 CFR 1910.333(c)(3)(ii)(A) through (C). In instances where persons need to clean or degrease energized equipment in an area that is not considered a confined space, as defined in 29 CFR 1910.146(b), or an enclosed space (such as a manhole or vault) as described in 29 CFR 1910.269(e), for example housekeeping overhead lines, but are not permitted to approach or take conductive objects closer to the exposed energized part than the employer's established minimum approach distance, persons may be able to use tools, such as a hotstick with an aerosol spray can holder adapter or other live-line tools to clean the energized equipment (Ref. 52). In such instances where persons are maintaining the established minimum approach distance while conducting energized electrical cleaning in an area

that is not confined or enclosed, EPA believes the potential for inhalation exposures is minimal.

As noted earlier, EPA has determined that the unreasonable risk from PCE when used as energized electrical cleaner could be addressed with a combination of labeling, self-certification, and either (i) specific prescriptive controls, including dermal PPE and respiratory protection, or (ii) the WCPP. EPA's finalized requirements for industrial and commercial use of PCE as energized electrical cleaner are described in Unit IV.C.2. Other industrial and commercial use as a solvent for aerosol spray degreasers/cleaners is prohibited in the final rule, consistent with the proposal for that condition of use. EPA's workplace requirements to address the unreasonable risk for PCE as an energized electrical cleaner are consistent to the extent possible with existing regulations and best practices for work in electrical spaces such as OSHA's Electrical Standard at 29 CFR part 1910, subpart S and the Electric Power Generation, Transmission, and Distribution Standard at 29 CFR part 1910, subpart R.

In this final rule, EPA is also adding a definition of "energized electrical cleaner" to 40 CFR 751.603, consistent with the definition promulgated in States such as California (*Title 17, California Code of Regulations, Article 2, section 94508*), New York (*6 CRR-NY III A 235*), Maine (*06 ME Code Rules § 096-152*), Rhode Island (*250-RICR-120-05-31*), Connecticut (*section 22a-174-40*), Delaware (*7 Del. Admin. Code § 1141-1.0*), Washington, DC (*20 DCMR, Chapter 7, section 718*), Maryland (*COMAR 26.11.32*), New Jersey (*New Jersey Administrative Code 5:23-6.1*), Indiana (*Standards for Consumer and Commercial Products (CCP)—VOC Rule 326 IAC 8-15*), Illinois (*Administrative Cod Title 35, § 223.265*), and Massachusetts (*310 CMR 7.25*).

B. Changes to Timeframes

1. Changes to the WCPP Timeframe

For the conditions of use for which EPA proposed the WCPP, EPA proposed several compliance timeframes, including the following requirements:

- Initial exposure monitoring must be conducted within six months of publication of the final rule or within 30 days of introduction of PCE into the workplace if PCE use commences at least six months after the date of publication;
- Each owner or operator ensure that exposure to PCE does not exceed the ECEL as an 8-hour TWA for all

potentially exposed persons within nine months of publication of the final rule; and

- Owners and operators implement an exposure control plan within 12 months of publication of the final rule.

In the primary alternative regulatory action described in the 2023 PCE proposed rule, EPA described slightly longer timeframes that included the following:

- Initial exposure monitoring be conducted within 12 months of publication of the final rule;
- Each owner or operator ensures that the exposure to PCE does not exceed the ECEL as an 8-hour TWA for all potentially exposed persons within 15 months of publication of the final rule; and

- Owners and operators implement an exposure control plan within 18 months of publication of the final rule.

EPA requested comment regarding the ability of owners or operators to comply with the various provisions of the WCPP, including initial exposure monitoring, within the compliance timelines included in the proposal, and anticipated timelines for any procedural adjustments needed to comply with the establishment of a respiratory protection program and development of an exposure control plan. EPA further requested comment on any advantages or drawbacks associated with the longer timeframes outlined in the primary alternative regulatory action, and noted that the Agency may finalize significantly shorter or longer compliance timeframes based on consideration of public comments. EPA also requested comment regarding issues around the viability of current analytical methods and detection limits for occupational PCE sampling and/or monitoring methods.

Public comments highlighted challenges with the proposed timeframes and suggested longer timeframes for initial exposure monitoring. For example, some commenters stated that the proposed 6-month timeframe within which to conduct initial exposure monitoring may not be possible because PCE use may be infrequent and occur only periodically or annually, such as in maintenance exercises or in batch manufacturing operations (Refs. 53, 54, 32). One commenter expressed concern that requirements to comply with a new exposure limit would stress industrial hygiene consultants and laboratories that analyze the samples, and urged EPA to ensure that there would be adequate time for consultant firms and laboratories to establish sufficient capacity (Ref. 55). Some commenters

described how entities need more time than what was proposed to assess exposures to various products and processes and noted that the complexity of the WCPP provisions would require taking multiple measurements for the presence of PCE in various operations across multiple facilities, which will be challenging to layer on top of the employer's OSHA compliance practices (Refs. 32, 47, 54). Other commenters stated the proposed 6-month timeframe for initial monitoring would be untenable and suggested that the deadline be extended to 12 months (Refs. 31, 33, 56, 49). Two commenters reasoned that at least 12 months would be necessary to revalidate methods and determine whether revision to corporate exposure assessment strategy would be necessary to address the new ECEL (Refs. 33, 49). Commenters stated that a corporate exposure assessment strategy or similar mechanism would necessitate the procurement of professional services, adding logistical demand for these specialized services. The commenters also noted that monitoring at the proposed ECEL and action level would likely require laboratory analysis (rather than direct measurement) that will delay the availability of results and make meeting a 6-month timeframe challenging.

In consideration of public comments and the challenges of initiating the WCPP, even for facilities with industrial hygiene programs in place, and the difference in the occupational exposure limits between the OSHA permissible exposure limit (PEL) and the EPA ECEL and the challenges associated with monitoring to new, lower EPA exposure thresholds that may spur an increase in the need for monitoring or other exposure control assessment infrastructure, EPA has determined that a longer compliance deadline of 360 days, as provided in the primary alternative regulatory action described in the proposal, is as soon as practicable to conduct initial monitoring for PCE, which likely would require regulated entities to contract new services or realign current industrial hygiene professionals towards WCPP compliance. Adopting this timeframe from the primary alternative approach (providing 360 days for initial monitoring) is intended to: (1) prevent professional safety service sectors from being overwhelmed by new EPA requirements; (2) provide time to procure the necessary services while ensuring the preservation of safety quality, standards, and practices; and (3) provide sufficient time for a comprehensive exposure evaluation,

increasing the likelihood of successful implementation of the WCPP. Following initial monitoring, EPA is finalizing the requirement that each owner or operator supply a respirator to each person who enters a regulated area within three months after the receipt of any exposure monitoring that indicates exposures exceeding the ECEL. Therefore, the requirements for each owner or operator to ensure that exposures to PCE do not exceed the ECEL as an 8-hour TWA for all potentially exposed persons, including by providing respiratory protection, take effect 450 days after publication of the final rule. Given the full WCPP requirements (including the exposure control plan) are required after owners or operators are required to ensure that no person is exposed to an airborne concentration that exceeds the TWA ECEL, EPA acknowledges that compliance with the ECEL may include temporary PPE use (e.g., respiratory protection) until comprehensive engineering and administrative controls are fully implemented. As described in the 2023 PCE proposed rule, EPA believes that three months after receipt of exposure monitoring results is as soon as practicable, while also providing a reasonable transition period for entities to evaluate exposure monitoring results, acquire the correct respiratory protection, and establish the PPE program, including training, fit-testing, and medical evaluation. Additionally, for clarity in regulatory requirements and reduced burden in implementation, EPA is finalizing a compliance date for preventing direct dermal contact, including by use of dermal PPE, that is 450 days after publication of the final rule, so that this compliance timeframe is consistent with timeframe to ensure inhalation exposures do not exceed the ECEL. EPA believes that 450 days is as soon as practicable and provides a reasonable transition period for regulated entities to evaluate potential for direct dermal contact with PCE, establish a PPE program, acquire the appropriate dermal PPE, and conduct the required training.

EPA also received public comment regarding the compliance timeframe for full implementation of the WCPP, including detailing the evaluation steps that would be required to assess a facility and develop, document, and implement an exposure control plan. To allow time for orderly transitions and training to comply with an ECEL (0.14 ppm (8-hr TWA)) that is significantly lower than the OSHA PEL of 100 ppm (8-hr TWA) and the American Conference of Governmental Industrial Hygienists (ACGIH) threshold limit

value (TLV) of 25 ppm (8-hr TWA) for PCE, some commenters suggested that EPA adopt a graduated implementation approach for ECEL implementation by first requiring entities that already meet the OSHA PEL to comply with the ACGIH TLV within two years from the effective date of the final rule and then permitting those facilities meeting the ACGIH standard two years to transition to the ECEL (Refs. 57, 54). Two commenters expressed concern that the proposed timeframes would be insufficient for owners or operators to document their efforts to implement the hierarchy of controls as required under the WCPP, and recommended that the time required to develop the exposure control plan be extended to two years from completion of initial monitoring, for a total of 24 to 36 months from the effective date of the final rule, to provide adequate time for entities to evaluate and implement appropriate compliance approaches that are the least burdensome and most effective for workers (Refs. 49, 33).

Based on comments, outreach, reasonably available information, existing OSHA standards, and industry best practices, EPA maintains that the majority of the exposure reduction and worker safety infrastructure needed for compliance is currently in place, but recognizes the fundamental challenge of building a new exposure control strategy around the new, lower EPA exposure limit. Additionally, based on consideration of public comment and given that OSHA has not promulgated a detailed standard specific to PCE, EPA has determined that a longer compliance timeframe of 900 days for development and implementation of an exposure control plan is as soon as practicable to ensure that the regulated community has adequate time to evaluate monitoring data, assess and develop an exposure strategy, procure appropriate control technology and PPE, and implement the required chemical safety program for PCE.

Therefore, EPA is finalizing the compliance timeframes for the WCPP provisions as follows: (1) The requirements for each owner or operator to conduct initial baseline monitoring must be met within 360 days of the publication date for this final rule or within 30 days of introduction of PCE into the workplace, whichever is later; (2) The requirements for each owner or operator to ensure that exposure to PCE does not exceed the ECEL as an 8-hour TWA for all potentially exposed persons, including by providing respiratory protection to all potentially exposed persons in the regulated area must be met within 450 days of the

publication date for this final rule or within three months after receipt of the results of any exposure monitoring that indicates an exceedance of the ECEL; (3) The requirements that each owner or operator ensure all persons are separated, distanced, physically removed, or isolated from direct dermal contact with PCE, including by providing dermal PPE, must be met within 450 days of the publication date of this final rule; and (4) The requirements for development and implementation of an exposure control plan must be met within 900 days of the publication date of this final rule. EPA is also finalizing as proposed, with a slight modification, the requirement that owners and operators institute a training and information program for potentially exposed persons and assure their participation in the training and information program, and that this requirement be met within 450 days of the publication date of this final rule (see Unit IV.B.7.a.).

However, EPA understands that certain departments and agencies of the Federal government, as well as Federal contractors acting for or on behalf of the Federal government, need additional time to comply with these timeframes. For example, complying with these timeframes could impact the ability of the Department of Defense to continue to engage in vapor degreasing. While, for example, 29 CFR part 1960 sets forth procedures and guidelines for ensuring that Federal workers are protected in comparable ways to their non-Federal counterparts, EPA believes that compliance with this final rule will require increased and different preparations on the part of Federal agencies. For example, Federal agencies must follow procurement requirements which will likely result in increased compliance timelines. In addition, these requirements will require support in the Federal budget, which, for some agencies, is a multi-year process. Therefore, EPA is providing additional time for agencies of the Federal government and their contractors, when acting for or on behalf of the Federal government, to comply with the WCPP, including 915 days for initial monitoring, 1,005 days to ensure that no person is exposed to an airborne concentration of PCE that exceeds the ECEL, and 1,095 days to implement an exposure control plan.

2. Changes to Prohibition Timeframes

For most occupational conditions of use that EPA proposed to prohibit, EPA proposed that prohibitions would become effective in a staggered schedule for each stage of the supply chain and

would come into effect after the publication of this final rule: In 12 months for manufacturers, 15 months for processors, 18 months for distributors to retailers, 21 months for all other distributors (including retailers), and 24 months for industrial and commercial users. For consumer uses, EPA proposed that the prohibitions of manufacturing, processing, and distribution in commerce of PCE for consumer use would take effect after the publication of this final rule: In 12 months for manufacturers, 15 months for processors, 18 months for distributing to retailers, and 21 months for all other distributors and retailers. EPA's primary alternative regulatory action, discussed in the 2023 PCE proposed rule, included slightly longer timeframes, which begin after the publication of this final rule: In 18 months for manufacturers, 21 months for processors, 24 months for distributing to retailers, 27 months for all other distributors (including retailers), and 30 months for industrial and commercial uses. EPA requested comment regarding the proposed and alternative compliance dates for prohibitions and whether additional time is needed.

Several commenters raised concerns about the timeframe for complying with prohibitions from the proposed regulatory action, stating that EPA should consider longer timeframes for prohibition to avoid disruptions to the supply chain for continuing uses, help minimize disposal of products left on retail shelves, and provide sufficient time to identify, research, test, qualify, and implement cost-effective alternative substances or processes (Refs. 32, 50, 33). One commenter expressed concern that the proposed compliance timeframes would cause certain products containing PCE to leave the market, potentially cutting off PCE supply for continuing critical uses and creating a risk of obsolescence for essential equipment that is reliant on PCE.

Some commenters expressed that there may be circumstances in which a chemical alternative is not an exact, drop-in replacement for certain conditions of use, or in which new, additional, or modifications to existing engineering equipment could be necessary (Refs. 33, 50, 45). These commenters further expressed concerns regarding coordination with suppliers or customers across the supply chain (including with certifying entities in circumstances where a formulation change may require recertifying a product to meet performance standards, for example) that may require a

transitioning process. Due to these and other concerns, some commenters supported longer timeframes for prohibition than what was proposed, which would provide additional time that commenters described as necessary for seeking alternatives, successfully implementing their use, and mitigating supply chain impacts (Refs. 33, 50, 45). One commenter stated that the proposed 24-month prohibition is significantly shorter than for other EPA programs, such as EPA's National Emission Standards for Hazardous Air Pollutants (NESHAP) which typically provide 36 months for compliance, and suggested that EPA extend the deadlines to 12 months for manufacturing, 21 months for processing, 24 months for distribution to retailers, and 30 months for retail distribution (Ref. 50). Other commenters recommended that EPA double the proposed prohibition timeframes for manufacturers and processors, suggested longer timeframes, and suggested that EPA extend the sell-through period of products already in commerce by six months (Refs. 45, 46, 33).

After reviewing all of the comments, in this final rule EPA is modifying the proposed prohibition compliance timeframes for most uses to lengthen them to the prohibition compliance timeframes included in the primary alternative regulatory action, which will allow for successful implementation of the prohibitions in a manner that is as soon as practicable while providing for a reasonable transition period. This extension will also provide additional time for regulated entities to consult with their upstream suppliers and downstream customers and to make necessary adjustments, thereby mitigating immediate concerns for operational continuity for conditions of use identified in Units IV.B. and C. The timeframes for prohibition EPA is finalizing are described in detail in Unit IV.D.

EPA is finalizing as proposed the prohibition on the manufacturing, processing, distribution in commerce, and industrial and commercial use of PCE for dry cleaning and spot cleaning through a 10-year phaseout, as outlined in Unit IV.D.3.

C. Changes to WCPP Requirements

1. Exposure Monitoring Requirements

As part of the WCPP, EPA proposed to require owners or operators to meet certain documentation requirements for each monitoring event of PCE, including compliance with the Good Laboratory Practice (GLP) Standards in accordance with 40 CFR part 792.

Numerous commenters expressed concern regarding the requirement that the WCPP include compliance with the GLP Standards at 40 CFR part 792 (Refs. 46, 54, 53, 56, 48, 55, 49). Commenters stated that it is atypical, for industrial hygiene purposes, to use this standard for air sampling of PCE (Refs. 33, 55, 49). According to the commenters, it is common practice within the industrial hygiene community to have analyses performed by American Industrial Hygiene Association (AIHA) accredited laboratories (Ref. 49). Some commenters recommended that provisions of monitoring results and recordkeeping in the final rule be allowed from any accredited laboratory, without regard to a specific type, or allowing any number of approved monitoring methods, especially AIHA accredited laboratories (Refs. 56, 46). Commenters also suggested applying the policy described in typical TSCA section 5(e) orders that establish a New Chemical Exposure Limit under the TSCA New Chemicals Program, which state that compliance with TSCA GLP Standards is not required where exposure monitoring samples are analyzed by a laboratory accredited by either: (A) the AIHA Industrial Hygiene Laboratory Accreditation Program; or (B) another comparable program approved in advance in writing by EPA (Refs. 33, 55, 49). Another commenter reasoned the GLP Standards were not intended for air monitoring in a workplace when compliance with such standards would mean that real-time assessments could not be made, as air samples would need to be processed and analyzed in a laboratory (Ref. 53).

EPA agrees with the commenter that the WCPP is incompletely served by solely relying on the GLP Standard initially put forth in the 2023 PCE proposed rule. Given the concern from commenters regarding potential increases in demand for professional safety services and sampling laboratories having a negative impact due to anticipated industry strain and sampling limitations (Refs. 33, 55, 49), EPA has broadened the scope of laboratory accreditation accordingly. EPA has considered this laboratory capacity issue, in addition to other revisions for finalization in this rule, so that the additional infrastructure is in place for the regulated community to successfully implement the WCPP. For the final rule, EPA is requiring that exposure samples be analyzed using an appropriate analytical method, and related records retained, by a laboratory that complies with the GLP Standards in 40 CFR part 792 or that otherwise

maintains a relevant third-party laboratory accreditation (e.g., under the AIHA Laboratory Accreditation Programs, LLC Policy Module 2A/B/E of Revision 17.3), or other analogous industry-recognized programs.

Another commenter stated that EPA's proposal did not make clear that "personal breathing zone" air samples to monitor exposures are to be taken without regard to respirator use. The commenter noted that OSHA requires exposure monitoring to be conducted without regard to respirator use (citing as an example OSHA's definition of "employee exposure" at 29 CFR 1910.1052(b)) and asserted that this important element of OSHA's monitoring program was omitted from EPA's proposal (Ref. 58). EPA agrees with the commenter that exposure monitoring should be conducted without regard to respiratory protection to inform engineering control options and respiratory protection considerations. Therefore, EPA is finalizing this rule to explicitly state that air sampling is required to measure ambient concentrations for PCE without taking respiratory protections into account when being performed. This will ensure the highest degree of protection to potentially exposed persons by logging accurate ambient air concentrations of PCE, thus empowering owners or operators to appropriately consider the hierarchy of controls.

As part of the WCPP, EPA also proposed to establish an ECEL action level of 0.07 ppm as an 8-hour TWA for PCE. As described in Unit IV.A.2.b. of the 2023 PCE proposed rule, air concentrations at or above the action level would trigger more frequent periodic monitoring of exposures to PCE, consistent with the action level approach utilized by OSHA in the implementation of OSHA standards, although the values differ due to differing statutory authorities. EPA proposed an action level that would be half the 8-hour ECEL, which is in alignment with the precedented approach established under most OSHA standards. EPA solicited comment regarding an ECEL action level that is half the ECEL and any associated provisions related to the ECEL action level when the ECEL is significantly lower than the OSHA PEL. EPA also requested comment on viability of current analytical methods and detection limits for PCE sampling.

EPA received several comments regarding an action level that is half the ECEL and the viability of detecting to the action level with existing analytical methods. One commenter supported the establishment of an action level that is

one-half the ECEL as this stratified approach will impose appropriate controls based on the particulars of each workplace (Ref. 58). Other commenters expressed concern regarding the proposed ECEL action level, stating that the action level should not be included in the regulation because of challenges to reliably measure to the proposed value and suggesting EPA consider best practice for industrial hygiene exposure assessment published by the AIHA (Refs. 33, 57). Commenters warned that implementing a monitoring methodology for the proposed ECEL would not be seamless because existing monitoring methods are not adequate. As an example, commenters stated that the NIOSH 1003 method, as currently validated, will not achieve the limit of detection required for evaluating to the proposed ECEL or action limit (Refs. 33, 49). Commenters stated that passive sampling methods cannot measure to below the ECEL, and thus entities would need to rely on active sampling with a pump with samples sent out to laboratories for analysis (Refs. 45, 47). Another commenter asserts that the proposed ECEL action level of 0.07 ppm is not detectable and stated that the best way to ensure reliable and comparable results is to use a digital measuring device, which can currently detect concentrations up to 10 ppm and are in development to detect concentrations as low as 0.1 ppm, which is the lowest on the global market (Ref. 59). Additionally, other commenters stated that NIOSH recommends a detection limit of 10% of the occupational exposure limit (Refs. 33, 49, 60).

EPA acknowledges the challenges of occupational personal breathing zone monitoring to levels consistent with the ECEL action level and ECEL. As noted earlier, EPA intends for the WCPP to align with, to the extent possible, certain elements of the existing OSHA standards for regulating toxic and hazardous substances under 29 CFR part 1910, subpart Z and is therefore finalizing an action level different from the proposed 0.07 ppm ECEL action level to support a trigger for more frequent periodic monitoring. In consideration of public comment, reasonably available information, and outreach, EPA has determined that revising the ECEL action level to 0.10 ppm as an 8-hr TWA for PCE is appropriate given the limits of detection and limits of quantification for existing monitoring methods. EPA notes that while real-time monitoring with a digital measuring device is not required for rule compliance, EPA understands the practical benefits of real-time

occupational exposure monitoring. EPA also notes that the reliable limits of quantification for available analytical methods (*e.g.*, NIOSH 1003 and OSHA 5000) are below the ECEL action level of 0.10 ppm.

Additionally, as part of the WCPP, EPA proposed to require owners and operators to re-monitor within 15 working days after receipt of any exposure monitoring if results indicated non-detect or air monitoring equipment malfunction, unless an Environmental Professional as defined at 40 CFR 312.10 or a Certified Industrial Hygienist reviews the monitoring results and determines re-monitoring is not necessary. EPA received several comments disagreeing with the proposed requirement to review non-detect air monitoring samples. The commenters stated that the requirement is inconsistent with OSHA rules, is an unnecessary step that adds no value to reduce risk to workers, and could be costly, especially for smaller companies (Refs. 56, 32, 57, 33, 47, 48, 49). One commenter suggested that EPA incorporate a six-sample rolling average, as the statistical evaluation would incorporate ongoing validation of exposure levels for a particular task and thus remove any need for resampling based on a non-detect result.

EPA disagrees with commenters that expressed the opinion that re-evaluating a non-detect result adds no value and is inappropriate. While in some cases a non-detect result may accurately indicate that the chemical is not present and that air concentrations are below the ECEL action level, in other cases it may not necessarily imply negligible occupational exposure to the chemical. For example, interference from another chemical during sampling may result in an incorrect result of non-detect. This interference may not be recognized at the time of sampling or analysis. Owners and/or operators also may not be using sampling techniques or analytical procedures that are effective or appropriate for the particular chemical of interest. In each of these cases, non-detect results, along with supporting documentation about the sampling and analytical methods used to get those results, is a meaningful part of the potentially exposed person's exposure record required under the WCPP. The WCPP in the 2023 PCE proposed rule and in this final rule does not require re-monitoring in all cases. Re-monitoring may be necessary based on a professional evaluation by an Environmental Professional as defined at 40 CFR 312.10 or a Certified Industrial Hygienist. This flexibility allows owners or operators options in

terms of revisiting occupational sampling in the event of a non-detect result, or evaluation by a qualified professional.

From an owner/operator's perspective, a non-detect sampling result when effective sampling and analysis procedures are used is valuable in that it suggests effective implementation of exposure controls. Potentially exposed persons may also use these records in discussions with owner/operators, in collective bargaining situations, or in compliance assistance inquiries to EPA or other federal agencies. Exposure monitoring results may also improve overall workplace health and reducing owner/operator liability in the effective detection, treatment, and prevention of occupational disease or illness. All of the above scenarios are valuable for owner/operators, potentially exposed persons, and for effective mitigation of occupational exposures. In consideration of these factors, EPA has removed the air monitoring equipment malfunction from the monitoring activities that do not require resampling based on professional evaluation by an Environmental Professional or Certified Industrial Hygienist. While professional discretion may be warranted in determining whether re-monitoring is needed following results that indicate non-detect, EPA has determined this is not appropriate in the event of air monitoring equipment malfunction. This is due to the importance of air monitoring in ensuring that the requirements of the WCPP are met, and the importance of the WCPP in reducing risks from exposures to PCE in the workplace. Monitoring results from malfunctioning air monitoring equipment are not valid monitoring and therefore not sufficient to meet the monitoring requirements under the WCPP.

Additionally, while statistical methods may be useful in establishing and analyzing an occupational monitoring program, EPA is not persuaded by information commenters presented in support of relying on a six-sample rolling average of exposure measurements in place of the proposed requirement to evaluate re-monitoring. See section 5.5.3 of the Response to Comments document for a more detailed response (Ref. 8). EPA may consider developing additional guidance regarding occupational monitoring in the future. Therefore, after consideration of public comment, EPA is finalizing the requirement to re-monitor within 15 working days after receipt of any exposure monitoring if results indicated non-detect, unless an

Environmental Professional as defined at 40 CFR 312.10 or a Certified Industrial Hygienist reviews the monitoring results and determines re-monitoring is not necessary. However, EPA agrees with comments that raised concern that the 2023 PCE proposed rule lacked clarity on what would suffice for justification that re-monitoring is not necessary, and has therefore updated the recordkeeping requirements associated with the WCPP exposures records required under 40 CFR 751.615(b)(1) to require documentation of the determination by the Environmental Professional as defined at 40 CFR 312.10 or a Certified Industrial Hygienist to be maintained as a record. Occupational monitoring (and associated recordkeeping) is an area that EPA may develop guidance as part of final rule implementation efforts.

In the 2023 PCE proposed rule, EPA proposed to require under the WCPP that each owner or operator conduct additional exposure monitoring whenever a change in the production, process, control equipment, personnel, or work practices may reasonably be expected to result in new or additional exposures at or above the ECEL action level, or when the owner or operator has any reason to believe that new or additional exposures at or above the ECEL action level occurred. In the event of start-ups, shutdowns, spills, leaks, ruptures or other breakdowns that may lead to employee exposure, EPA proposed to require that each owner or operator conduct additional initial exposure monitoring to potentially exposed persons (using personal breathing zone sampling) after the cleanup of the spill or repair of the leak, rupture or other breakdown. EPA is finalizing the requirement to conduct this additional exposure monitoring, with a compliance timeframe requiring that this monitoring be conducted within 30 days after the relevant change or conclusion of the event and/or cleanup (see Unit IV.B.3.b.iii.), which is a clarification of the proposal, in which a timeframe was not specified.

As part of the WCPP exposure monitoring, EPA proposed to require owners or operators to determine each potentially exposed person's exposure by either taking a personal breathing zone air sample of each potentially exposed person's exposure or by taking personal breathing zone air samples that are representative of each potentially exposed person's exposure group, which EPA proposed to mean a group consisting of every person performing the same or substantially similar operations in each work shift, in each job classification, in each work area

where exposure to chemical substances or mixtures is reasonably likely to occur. EPA received a comment that suggested EPA revise the proposed definition of "exposure group" to more closely align with the similar exposure group approach used by industrial hygienists to refer to a group of workers who have common risks and similar exposure profiles (Ref. 56). EPA agrees that the definition of "exposure group" should align with standard practice for occupational safety and industrial hygiene and is therefore finalizing the definition of "exposure group" in 40 CFR 751.5 to mean a group of potentially exposed persons with a similar exposure profile to a chemical substance or mixture based on the substantial similarity of tasks performed, the manner in which the tasks are performed, and the materials and processes with which they work.

2. Designated Representative and Workplace Participation

As part of the WCPP in Unit IV.A.2.e.iii. of the 2023 PCE proposed rule, EPA proposed to require that owners or operators (*i.e.*, any person who owns, leases, operates, controls, or supervises a workplace covered by the rule) provide potentially exposed persons or their designated representatives regular access to the exposure control plans, exposure monitoring records, and PPE program implementation and documentation. Additionally, EPA proposed to require that owners or operators document the notice to and ability of any potentially exposed person that may reasonably be affected by PCE inhalation or dermal exposure to readily access the exposure controls plans, facility exposure monitoring records, PPE program implementation, or any other information relevant to PCE inhalation exposure in the workplace. EPA also requested comment on how owners and operators could engage with potentially exposed persons on the development and implementation of an exposure control plan and PPE program. Additional details of EPA's worker participation proposal can be found in Unit IV.A.2.e. of the 2023 PCE proposed rule.

EPA received public comment on the role of designated representatives in the WCPP. One commenter, a group of labor unions, urged EPA to incorporate requirements similar to OSHA's access standard at 29 CFR 1910.1020 (titled, "Access to employee exposure and medical records") in EPA's proposed requirements at 40 CFR 751.613 to ensure that exposure information is promptly and fully shared with both

potentially exposed persons and their designated representatives (Ref. 58). The commenter pointed out that while the preamble to the 2023 PCE proposed rule stated that EPA was proposing to provide designated representatives regular access to specified information, the proposed regulatory text at 40 CFR 751.613(b)(4) did not do so. The commenter also suggested that EPA include a requirement that employers provide employees or their designated representatives an opportunity to observe monitoring events. The commenter observed that workers and their designated representatives have a critical role to play in ensuring effective control of toxic substances and further noted that, often, unions are the organizations with expertise in understanding occupational exposure information. The commenter also urged EPA to require that owners and operators consult with workers and their designated representatives in developing and implementing their plans.

Following review of the comments received, EPA recognizes the importance of having the ability for potentially exposed persons and their designated representative(s), such as labor union representatives, to observe exposure monitoring and have prompt access to exposure records. EPA additionally recognizes that, in some instances, individual workers may be hesitant to ask owners or operators for information relating to their chemical exposure or may be less familiar with discipline-specific industrial hygiene practices. EPA determined that it is appropriate in this final rule to revise to some extent the requirements regarding designated representatives included in the proposal, consistent with existing OSHA precedent in certain 29 CFR part 1910, subpart Z regulations, to allow designated representatives the ability to observe occupational exposure monitoring and have access to exposure monitoring records. In EPA's final rule, the WCPP includes a requirement that owners and operators provide potentially exposed persons or their designated representatives an opportunity to observe any exposure monitoring that is designed to characterize their exposures and is conducted under the WCPP. With respect to facilities classified in the interest of national security, only persons authorized to have access to such facilities will be allowed to observe exposure monitoring.

EPA is also finalizing a requirement that designated representatives have access to relevant exposure records, similar to provisions in certain OSHA

regulations under 29 CFR part 1910, subpart Z, such as 29 CFR 1910.1200 and 29 CFR 1910.1020. EPA is requiring owners and operators to notify potentially exposed persons and their designated representatives of the availability of the exposure control plan and associated records of exposure monitoring and PPE program implementation within 30 days of the date that the exposure control plan is completed and at least annually thereafter. EPA is also requiring, consistent with the proposed requirement for notification of exposure monitoring results, that the notice of the availability of the exposure control plan and associated records be provided in plain language writing to each potentially exposed person in a language that the person understands or posted in an appropriate and accessible location outside the regulated area with an English-language version and a non-English language version representing the language of the largest group of workers who do not read English. While EPA encourages owners or operators to consult with persons that have potential for exposure and their designated representatives on the development and implementation of the exposure control plan, EPA has determined that it is not necessary to include this as a requirement in the final rule because OSHA does not typically require consultations with designated representatives. However, EPA believes that the notification of the exposure control plan and associated records may help facilitate participation from potentially exposed persons and their designated representatives in the implementation and further development of that plan.

In this final rule, EPA is defining “designated representative” in 40 CFR 751.5 to mean any individual or organization to whom a potentially exposed person gives explicit, written authorization to exercise a right of access. A recognized or certified collective bargaining agent must be treated automatically as a designated representative without regard to written authorization. Additionally, with respect to federal employees, EPA, like OSHA at 29 CFR 1960.2(e), will interpret these designated representative requirements consistent with the Federal Service Labor Management Relations Statute (5 U.S.C. 71), or collective bargaining or other labor-management arrangements that cover the affected employees.

Should a request be initiated for such records by the potentially exposed person or their designated representative(s), the owner or operator

will be required to provide the specified records at a reasonable time, place, and manner, analogous to provisions outlined in OSHA’s 29 CFR 1910.1020(e)(1)(i). If the owner or operator is unable to provide the requested records within 15 working days, the owner or operator must, within those 15 working days, inform the potentially exposed person or designated representative(s) requesting the record of the reason for the delay and the earliest date when the record can be made available. Additionally, in the event that a designated representative is observing exposure monitoring, the owner or operator must ensure that designated representatives are provided with PPE appropriate for the observation of monitoring. Finally, this rule requires owners or operators to provide notice to potentially exposed persons and their designated representatives of exposure monitoring results and of the availability of the exposure control plan and associated records. For purposes of this requirement, the owner or operator is only required to provide notice to those designated representatives that the owner or operator is aware of, such as representatives designated in writing or a recognized collective bargaining agent for the owner or operator’s own employees.

3. Other Changes to the WCPP

As part of the WCPP in the 2023 PCE proposed rule, EPA proposed various requirements for owners or operators to provide PPE, including respiratory protection and dermal protection, to potentially exposed persons and to establish a PPE program. For greater clarity in this final rule, EPA has revised the PPE requirements with respect to the cross-references to the relevant OSHA regulations. While the language appears different than the requirements included in the 2023 PCE proposed rule, it remains EPA’s intention that owners and operators implement PPE programs that are consistent with OSHA requirements. The PPE requirements as part of the WCPP in this final rule are described in Unit IV.B.6.

D. Other Changes

EPA is slightly modifying the provisions related to the de minimis regulatory threshold in the 2023 PCE proposed rule, where EPA proposed that products containing PCE at concentrations less than 0.1% by weight are not subject to the prohibitions. EPA requested comment on the de minimis concentration limit of PCE in products or formulations and received numerous comments in support of the inclusion of

a de minimis regulatory threshold (Refs. 48, 32, 46, 33, 61, 56, 47, 55, 62, 53, 54, 31, 63). One commenter urged EPA to make clear that the proposed de minimis exemption applies to all the provisions in the 2023 PCE proposed rule, and not just the prohibitions (Ref. 54). Some commenters expressed opposition to the de minimis level identified because they state EPA has not shown that a de minimis concentration is protective of workers (Refs. 64, 65, 66). EPA’s approach for a de minimis concentration of 0.1% for PCE is consistent with OSHA’s Hazard Communication Standard, as urged by several commenters who asserted that consistency with the existing hazard communication framework is important to avoid companies being out of compliance with EPA’s regulations without their knowledge, or having to engage in impractical and burdensome changes to hazard communication programs that are not necessary to protect against unreasonable risk (Ref. 33, 47, 48, 55). OSHA recently reaffirmed its approach of 0.1% threshold for carcinogens with its 2024 modification of its Hazard Communication Standard (89 FR 44144, May 20, 2024). The OSHA Hazard Communication standard, at 29 CFR 1910.1200, which requires employers to communicate to employees and downstream employers about the hazards of chemicals employees are exposed to, including through safety data sheets, defines “health hazard” as “a chemical which is classified as posing one of the following hazardous effects: acute toxicity (any route of exposure); skin corrosion or irritation; serious eye damage or eye irritation; respiratory or skin sensitization; germ cell mutagenicity; carcinogenicity; reproductive toxicity; specific target organ toxicity (single or repeated exposure); or aspiration hazard” (29 CFR 1910.1200(c)). The criteria for determining whether a chemical is classified as a health hazard are detailed in Appendix A to 29 CFR 1910.1200—Health Hazard Criteria. Section A.6.3.1 of Appendix A of 29 CFR 1910.1200 indicates that a substance is considered a health hazard if it includes greater than 0.1% of a substance that, like PCE, is classified as a carcinogen. OSHA’s Hazard Communication Standard is intended to be consistent with the United Nations Globally Harmonized System of Classification and Labelling of Chemicals (29 CFR 1910.1200(a)(1); 89 FR 44144, May 20, 2024). Other EPA programs, such as the Toxics Release Inventory (TRI) program, have adopted a de minimis threshold of 0.1% for

chemicals which are defined as carcinogens or as a potential carcinogen under the National Toxicology Program, International Agency for Research on Cancer, or OSHA, with limited exceptions not relevant to PCE (see 40 CFR 372.38(a)).

In consideration of public comment and the implementability of the PCE rule, as well as the analysis described in Unit V.A. of the 2023 PCE proposed rule, EPA is finalizing as proposed a de minimis threshold of 0.1%, which EPA is referring to in this final rule as a regulatory threshold, so that products containing PCE at concentrations less than 0.1% by weight are not subject to the prohibitions of this final rule, and is also adding clarification that products below the regulatory threshold are not subject to other restrictions of this final rule. While EPA conducted analysis regarding residual amounts of PCE in products (described in Unit V.A.1. of the 2023 PCE proposed rule), which confirmed that the use of the 0.1% value for carcinogens was an appropriate cut off, consistent with the OSHA's Hazard Communication Standard. EPA generally expects to align with the OSHA's Hazard Communication Standard approach regarding threshold amounts of chemicals going forward, with some exceptions as warranted by chemical-specific considerations (Ref. 67). EPA is confident that adopting a regulatory threshold of 0.1% for chemicals which are defined as carcinogens or as a potential carcinogen will increase regulatory certainty and enhance compliance. The manufacturing (including import), processing, and distribution in commerce of products that contain PCE at concentrations equal to or above the regulatory threshold of 0.1% are still subject to the prohibitions and restrictions of this final rule, regardless of the concentration of PCE in the end product.

As an additional change, EPA has revised its proposed description of industrial and commercial use of PCE as a laboratory chemical to provide additional clarity as suggested by a commenter (Ref. 62). The revised description for industrial and commercial use as a laboratory chemical appears in Unit IV.C.1. Similarly, for greater clarity and in response to comment that suggested EPA include terminology for "airless degreasers" in the final rule, EPA has revised its proposed description of industrial and commercial use as solvent for closed-loop batch vapor degreasing by clarifying that this use includes use of airless degreasers (Ref. 30). EPA has also revised the proposed description for

industrial and commercial use of PCE in maskant for chemical milling to provide additional clarity as recommended by a commenter (Ref. 31). Additionally, in response to a comment that EPA should ensure that uses of PCE required for environmental, health, and safety permit compliance, such as performance testing requirements in the NESHAP for hazardous waste combustors (HWCs) (40 CFR part 63, subpart EEE), are permitted to continue and are not inadvertently prohibited, EPA has revised its proposed description of disposal (Ref. 55). For purposes of this final rule, disposal includes the use of PCE to comply with requirements for HWC facilities under the Clean Air Act (CAA) and the Resource Conservation and Recovery Act (RCRA) (40 CFR parts 260 and 270), including use of PCE as a representative principal organic hazardous constituent (POHC) in destruction and removal efficiency (DRE) tests required under 40 CFR 63.1216–63.1221 and for chlorine feedrate operating conditions during comprehensive and confirmatory performance tests required under 40 CFR 63.1207(g)(1) and 40 CFR 63.1207(g)(2). The revised descriptions for industrial and commercial use as solvent for batch vapor degreasing, industrial and commercial use in maskant for chemical milling, and for disposal appear in Unit IV.B.1.

Additionally, in this final rule, EPA is not finalizing as proposed to amend the general provision of 40 CFR part 751, subpart A, to define "authorized person," "owner or operator," "potentially exposed person," "regulated area," and "retailer," because those definitions are finalized in the TSCA section 6 final rule for methylene chloride (89 FR 39254, May 8, 2024) (FRL–8155–01–OCSP) so that these definitions may be commonly applied to this and other rules under TSCA section 6 that would be codified under 40 CFR part 751. In response to one commenter that suggested EPA describe "distribution in commerce" in the preamble, EPA is finalizing the definition for "distribute in commerce" in § 751.603 so that it has the same meaning as in section 3 of the Act, except that the term does not include retailers for purposes of §§ 751.613 and 751.615 (Ref. 33).

IV. Provisions of the Final Rule

EPA intends that each provision of this rulemaking be severable. In the event of litigation staying, remanding, or invalidating EPA's risk management approach for one or more conditions of use in this rule, EPA intends to preserve the risk management approaches in the

rule for all other conditions of use to the fullest extent possible. The Agency evaluated the risk management options in TSCA section 6(a)(1) through (7) for each condition of use and generally EPA's regulation of one condition of use to address its contribution to the unreasonable risk from PCE functions independently from EPA's regulation of other conditions of use, which may have different characteristics leading to EPA's risk management decisions. Further, the Agency crafted this rule so that different risk management approaches are reflected in different provisions or elements of the rule that are capable of operating independently. Accordingly, the Agency has organized the rule so that if any provision or element of this rule is determined by judicial review or operation of law to be invalid, that partial invalidation will not render the remainder of this rule invalid.

There are many permutations of this. For example, as discussed in Unit IV.D., this final rule prohibits the industrial and commercial use of PCE in dry cleaning and spot cleaning, and also the industrial and commercial use of PCE in general aerosol degreasing/cleaning products that contain PCE (although a subset of this use is permitted to continue under specific prescriptive controls or the WCPP as described in Unit III.A.3.b.). For use of PCE in general aerosol degreasing/cleaning products as well as dry cleaning, EPA's risk management approach is prohibition. To the extent that a court were to find that EPA lacked substantial evidence to support its prohibition of general aerosol degreasing/cleaning or otherwise found legal issues with EPA's approach to that condition of use, it would have no bearing on other similarly situated conditions of use such as dry cleaning unless the specific issue also applies to the particular facts associated with dry cleaning. This is reflected in the structure of the rule, which describes these specific prohibitions separately by compliance date.

As another example, for industrial and commercial use of PCE as a processing aid in catalyst regeneration in petrochemical manufacturing and industrial and commercial use of PCE in automotive care products (e.g., engine degreaser and brake cleaner), EPA took different risk management approaches—application of the WCPP for the industrial and commercial use of PCE as a processing aid in catalyst regeneration in petrochemical manufacturing and prohibition for industrial and commercial use in automotive care products. To the extent that a court were to find a legal issue with EPA's

approach to the WCPP, impacting industrial and commercial use as a processing aid in catalyst regeneration in petrochemical manufacturing, it would have no bearing on EPA's decision to prohibit the industrial and commercial use in automotive care products, and vice versa. This is reflected in the structure of the rule, which organizes the prohibitions and the WCPP into different sections of the regulation.

EPA also intends all TSCA section 6(a) risk management elements in this rule to be severable from each regulatory exclusion from those requirements, including each TSCA section 6(g) exemption. EPA has the authority to promulgate TSCA section 6(g) exemptions "as part of a rule promulgated under [TSCA section 6(a)]." However, EPA's risk management decisions under TSCA sections 6(a) and 6(c) are independent from EPA's consideration of whether it is appropriate, based on the factors in TSCA section 6(g), to exempt specific conditions of use from the requirements of the TSCA section 6(a) risk management elements in the rule. In other words, EPA first decides whether and how to regulate each condition of use, per TSCA sections 6(a) through (c), and only then determines whether an exemption under TSCA section 6(g) is appropriate. Accordingly, the underlying TSCA section 6(a) risk management elements would not be impacted if a TSCA section 6(g) exemption is determined by judicial review or operation of law to be invalid. Rather, the exempted condition of use would become subject to the underlying TSCA section 6(a) risk management element(s). Similarly, to the extent a court were to find a legal issue with the regulatory threshold established in the rule, the underlying risk management requirements would not be impacted. Rather, the excluded products would become subject to the underlying TSCA section 6(a) risk management requirements applicable to the condition of use. EPA further notes that the specific examples of severability described in this Unit are not intended to be exhaustive, but rather illustrative of a wide variety of scenarios that reflect EPA's overarching intent that each provision of this rulemaking be severable.

To that end, EPA acknowledges that after the issuance of this rule, Federal agencies, their contractors, and other related entities may become aware of important information which indicates a particular use, that would otherwise be prohibited, could meet the criteria of section 6(g) or the requirements of a

WCPP. EPA also notes that there are multiple avenues to ask EPA to revisit issues in this TSCA section 6(a) rulemaking, both before and after the mandatory compliance dates are set consistent with TSCA section 6(d). EPA has the authority under TSCA section 6(g) to consider whether a time limited exemption is appropriate and consistent with TSCA section 6(g)(1), could expeditiously promulgate such exemptions independently from this rulemaking, including consideration of emergency or interim rulemaking. EPA has initiated a notice of proposed rulemaking for public comment on this topic, included in the Spring 2024 Regulatory Agenda (RIN 2070-AL17). Additionally, any person could petition EPA to request that EPA issue or amend a rule under TSCA section 6.

A. Applicability

This final rule sets prohibitions and restrictions on the manufacture (including import), processing, distribution in commerce, commercial use, and disposal of PCE to prevent unreasonable risk of injury to health in accordance with TSCA section 6(a), 15 U.S.C. 2605(a).

Additionally, pursuant to TSCA section 12(a)(2), this rule applies to PCE even if being manufactured, processed, or distributed in commerce solely for export from the United States because EPA has determined that PCE presents an unreasonable risk to health within the United States. Several commenters expressed concern that an unclear statement in the 2023 PCE proposed rule preamble, and a proposed regulatory requirement for downstream notification of permissible purposes for distribution in commerce, appeared to indicate that manufacture, processing, and distribution for export would be prohibited under the 2023 PCE proposed rule if the intended use in the destination country is prohibited in the United States, even if it is permissible under other risk mitigation rules in the destination country (Refs. 47, 33, 55, 49, 68). This was not EPA's intent. Because distribution in commerce did not contribute to EPA's unreasonable risk determination for PCE, and because this final rule permits manufacturing and processing, including recycling, for various uses to continue under the WCPP, EPA intends this final rule to permit manufacturing and processing in compliance with the WCPP for export, as well as distribution in commerce for export, without regard for the intended use in the destination country. EPA has clarified the regulatory text accordingly.

As discussed in Unit III.D., EPA is finalizing a regulatory threshold of 0.1%

to account for impurities and the unintended presence of PCE (in the 2023 proposed rule, this was referred to as a de minimis threshold). In other words, the provisions of this rulemaking only apply when PCE is present in a formulation at 0.1% or greater. Additionally, the provisions of this final rule only apply to chemical substances as defined under TSCA section 3. Notably, TSCA section 3(2) excludes from the definition of chemical substance "any food, food additive, drug, cosmetic, or device (as such terms are defined in Section 201 of the Federal Food, Drug, and Cosmetic Act [21 U.S.C. 321]) when manufactured, processed, or distributed in commerce for use as a food, food additive, drug, cosmetic, or device" and "any pesticide (as defined in the Federal Insecticide, Fungicide, and Rodenticide Act [7 U.S.C. 136 *et seq.*]) when manufactured, processed, or distributed in commerce for use as a pesticide." Additional details regarding TSCA statutory authorities can be found in section 2 of the response to comments document (Ref. 8).

EPA uses the term "potentially exposed person" in Unit IV. and in the regulatory text to include workers, occupational non-users, employees, independent contractors, employers, and all other persons in the work area where PCE is present and who may be exposed to PCE under the conditions of use for which a WCPP or specific prescriptive controls would apply. (EPA notes that this definition is intended to apply to occupational workspaces as part of implementation of the WCPP and other restrictions, and recognizes that other individuals or communities may be exposed to PCE as consumers, members of fence-line communities, or members of the general population.) For certain conditions of use, EPA requires a comprehensive WCPP or specific prescriptive controls to address the unreasonable risk from PCE to workers directly handling the chemical or in the area where the chemical is being used. Similarly, the 2020 Risk Evaluation for PCE (Ref. 1) did not distinguish between employers, contractors, or other legal entities or businesses that manufacture, process, distribute in commerce, use, or dispose of PCE. For this reason, EPA uses the term "owner or operator" to describe the entity responsible for implementing the WCPP or specified prescriptive controls in any workplace where an applicable condition of use is identified in Unit IV. and subject to the WCPP or prescriptive controls is occurring. The term includes any person who owns, leases, operates, controls, or supervises such a workplace. While

owners or operators remain responsible for ensuring compliance with the WCPP or prescriptive controls requirements in the workplace, they may contract with others to provide training or implement a respiratory protection program, for example. EPA is also clarifying its intent that for the provisions in this rule, any requirement for an owner or operator, or an owner and operator, is a requirement for any individual that is either an owner or an operator.

EPA emphasizes that this approach is essential for addressing the unreasonable risk presented by PCE, including to individuals who may not be covered by OSHA requirements, such as volunteers, self-employed persons, and state and local government workers who are not covered by a state plan. EPA uses the term “owner or operator” in TSCA programs because the term is used in other EPA programs to describe persons with responsibilities for implementing statutory and regulatory requirements at particular locations. See, for example, CAA section 113, 42 U.S.C. 7412, which defines “owner or operator” as a person who owns, leases, operates, controls, or supervises a stationary source. There is a similar definition in section 306 of the Clean Water Act (CWA), 33 U.S.C. 1316. EPA understands that the use of this term may result in multiple persons’ bearing responsibility for complying with provisions of this final rule, including the WCPP. However, this is also the case for workplaces regulated by OSHA, including those regulated under OSHA’s general industry standards at 29 CFR part 1910. OSHA’s 1999 Multi-Employer Citation Policy explains which employers should be cited for a hazard that violates an OSHA standard (Ref. 69). The OSHA Policy describes four different roles that employers may fill at a workplace and describes who should be cited for a violation based on factors such as whether the employer created the hazard, had the ability to prevent or correct the hazard, and knew or should have known about the hazard. More than one employer may be cited for the same hazard. This final rule will have similar results, in that more than one owner or operator may be responsible for compliance.

The OSHA multi-employer citation policy is an example of a guidance governing situations where more than one regulated entity is present. EPA has received several requests for clarification of the applicability of the term “owner or operator” to sites where more than one entity owns, leases, or controls a workplace where a PCE condition of use is ongoing and where implementation of the WCPP or

prescriptive controls is required. EPA understands that there are a wide variety of situations where these questions could arise, and plans to issue guidance consistent with TSCA authorities that explains how EPA will approach the issue of responsibility for implementation of, and compliance with, the WCPP requirements in practice.

B. Workplace Chemical Protection Program (WCPP)

1. Applicability

EPA is finalizing the WCPP for most of the conditions of use for which it was proposed, as well as for additional conditions of use for which prohibition was proposed. EPA has removed from the WCPP two conditions of use proposed to be included, as described in Unit III.A.1. EPA’s descriptions of changes from the 2023 PCE proposed rule are in Unit III. and EPA’s rationale for why the WCPP addresses the unreasonable risk for certain conditions of use is in Unit V. of the 2023 PCE proposed rule. EPA is additionally requiring that uses receiving an exemption under TSCA section 6(g), as outlined in Unit IV.F., comply with the WCPP to the extent feasible.

EPA is finalizing the WCPP for the following conditions of use where manufacture and processing are not otherwise prohibited: domestic manufacturing; import; processing as a reactant/intermediate; processing into formulation, mixture, or reaction product; processing by repackaging; recycling; industrial and commercial use as solvent for open-top batch vapor degreasing; industrial and commercial use as solvent for closed-loop batch vapor degreasing; industrial and commercial use in maskant for chemical milling; industrial and commercial use in solvent-based adhesives and sealants; industrial and commercial use as a processing aid in catalyst regeneration in petrochemical manufacturing; industrial and commercial use as a processing aid in sectors other than petrochemical manufacturing; industrial and commercial use for cold cleaning of tanker vessels; and disposal. This Unit provides a description of the uses subject to the WCPP to assist with compliance.

a. Manufacturing (Includes Import)

i. Domestic Manufacture

This condition of use refers to the making or producing of a chemical substance within the United States (including manufacturing for export), or the extraction of a component chemical substance from a previously existing

chemical substance or a complex combination of substances. For purposes of this rule, this description does not apply to PCE production as a byproduct, including during the manufacture of 1,2-dichloroethane, which EPA intends to consider in the risk evaluation for 1,2-dichloroethane (Ref. 70).

ii. Import

This condition of use refers to the act of causing a chemical substance or mixture to arrive within the customs territory of the United States.

b. Processing

i. Processing as a Reactant/Intermediate

This condition of use refers to processing PCE in chemical reactions for the manufacturing of another chemical substance or product. Through processing as a reactant or intermediate, PCE serves as a feedstock in the production of another chemical product via a chemical reaction in which PCE is completely consumed. For example, PCE is processed as a reactant in the production of HFCs, hydrochlorofluorocarbons, and chlorofluorocarbons. This condition of use includes reuse of PCE, including PCE originally generated as a byproduct or residual PCE, as a reactant.

ii. Processing Into Formulation, Mixture, or Reaction Product

This condition of use refers to when PCE is added or incorporated into a product (or product mixture) prior to further distribution of the product, including in cleaning and degreasing products, adhesive and sealant products, paint and coating products, and other chemical products and preparations.

iii. Processing by Repackaging

This condition of use refers to the preparation of PCE for distribution in commerce in a different form, state, or quantity. This includes transferring the chemical from a bulk container into smaller containers.

iv. Recycling

This condition of use refers to the process of treating generated waste streams (*i.e.*, which would otherwise be disposed of as waste) that are collected, either onsite or transported to a third-party site, for commercial purpose. Waste solvents can be restored to a condition that permits reuse via solvent reclamation/recycling. The recovery process may involve an initial vapor recovery or mechanical separation step followed by distillation, purification, and final packaging.

c. Industrial and Commercial Uses

i. Industrial and Commercial Use as Solvent for Open-Top Batch Vapor Degreasing

This condition of use refers to the industrial and commercial use of PCE as a solvent for cleaning and degreasing through the process of heating PCE to its volatilization point and using its vapors to remove dirt, oils, greases, and other surface contaminants from metal and other parts using batch open-top vapor degreaser systems.

ii. Industrial and Commercial Use as Solvent for Closed-Loop Batch Vapor Degreasing

This condition of use refers to the industrial and commercial use of PCE as a solvent for cleaning and degreasing through the process of heating PCE to its volatilization point and using its vapors to remove dirt, oils, greases, and other surface contaminants from metal and other parts using batch closed-loop or airless vapor degreasing systems.

iii. Industrial and Commercial Use in Maskant for Chemical Milling

This condition of use refers to the industrial and commercial use of PCE as a solvent in maskants or elastomer-based coatings that are used to protect a substrate during exposure to a chemical process, such as chemical milling, plating, and anodizing. This condition of use includes use of peelable maskant to act as temporary protection during transportation.

iv. Industrial and Commercial Use in Solvent-Based Adhesives and Sealants

This condition of use refers to the industrial and commercial use of PCE as a solvent in adhesive and sealant products to promote bonding between other substances, promote adhesion of surfaces, or prevent seepage of moisture or air.

v. Industrial and Commercial Use as a Processing Aid in Catalyst Regeneration in Petrochemical Manufacturing

This condition of use refers to the industrial and commercial use of PCE to improve processing characteristics or the operation of process equipment during the production of oil, gas, and other similar products. For example, PCE is used in both reforming and isomerization processes at refineries. In the reforming process, PCE is added directly to a regenerator in a Continuous Catalytic Regeneration reforming unit, and in the isomerization process, PCE is added to the hydrocarbon feed. In both processes, PCE provides chlorine ions to

regenerate the catalysts and is consumed in the process.

vi. Industrial and Commercial Use as a Processing Aid in Sectors Other Than Petrochemical Manufacturing

This condition of use refers to the industrial and commercial use of PCE outside of petrochemical manufacturing to improve the processing characteristics or the operation of process equipment or to alter or buffer the pH of the substance or mixture, when added to a process or to a substance or mixture to be processed. For example, PCE is used in pesticide, fertilizer and other agricultural manufacturing during the production of non-pesticidal products used to increase the productivity and quality of plant, animal, and forestry crops produced on a commercial scale. Processing aids are not intended to remain in or become part of the product or product mixture or affect the function of a substance or article created.

vii. Industrial and Commercial Use as Solvent for Cold Cleaning of Tanker Vessels

This condition of use refers to the industrial and commercial use of PCE as a non-boiling solvent in cold cleaning to remove dirt, oils, greases, and other surface contaminants from tanker vessels.

d. Disposal

This condition of use refers to the process of disposing waste streams of PCE that are collected either onsite or and transported to a third-party site for treatment or their final disposition, such as waste incineration or landfilling. This condition of use includes the use of PCE to comply with requirements for HWC facilities under the CAA (40 CFR part 63, subpart EEE) and RCRA (40 CFR parts 260 and 270), including as a representative POHC in DRE tests required under 40 CFR 63.1216–63.1221 and for chlorine feedrate operating conditions during comprehensive and confirmatory performance tests required under 40 CFR 63.1207(g)(1) and 40 CFR 63.1207(g)(2).

2. Overview

The WCPP for PCE encompasses an inhalation exposure limit and action level, DDCC, and the associated implementation requirements described in this unit to ensure that the chemical substance no longer presents unreasonable risk. Under a WCPP, owners or operators have some flexibility, within the parameters outlined in this unit, regarding how they prevent exceedances of the

identified EPA exposure limit thresholds or prevent direct dermal contact. In the case of PCE, meeting the EPA exposure limit threshold and implementing the DDCC requirements for certain occupational conditions of use would address the unreasonable risk to potentially exposed persons from inhalation and dermal exposure.

EPA is finalizing the WCPP requirements to start to take effect by December 15, 2025 for non-Federal owners or operators, or by June 21, 2027 for Federal agencies and Federal contractors acting for or on behalf of the Federal government, or within 30 days of introduction of PCE into the workplace, whichever is later, at which point entities would be required to complete initial monitoring (as described in Unit IV.B.3.b.). Additionally, EPA requires that each owner or operator ensure that no person is exposed to an airborne concentration of PCE that exceeds the ECEL as an 8-hour TWA, including by providing respirators to potentially exposed persons in the regulated area, no later than March 13, 2026 for non-Federal owners or operators, or no later than September 20, 2027 for Federal agencies and Federal contractors acting for or on behalf of the Federal government, or beginning four months after introduction of PCE into the workplace, whichever is later. EPA also requires each owner or operator to ensure all persons are separated, distanced, physically removed, or isolated from direct dermal contact with PCE, including by providing dermal PPE, by March 13, 2026 for non-Federal owners or operators, or no later than September 20, 2027 for Federal agencies and Federal contractors acting for or on behalf of the Federal government. EPA also requires implementation of any needed exposure controls based on initial monitoring and development of an exposure control plan, which requires consideration and documented application of the hierarchy of controls, no later than June 7, 2027 for non-Federal owners or operators, or December 20, 2027 for Federal agencies and Federal contractors acting for or on behalf of the Federal government (as described in Unit IV.B.5).

EPA's implementation of the requirement to meet an ECEL as part of a WCPP aligns with, to the extent possible, certain elements of the existing OSHA standards for regulating toxic and hazardous substances under 29 CFR part 1910, subpart Z. However, EPA is finalizing as proposed a new, lower occupational exposure limit, derived from the TSCA 2020 Risk Evaluation for PCE (Refs. 1, 71). For PCE, this final rule

will eliminate the unreasonable risk from PCE contributed to by the conditions of use subject to the WCPP, enable continued industry use where appropriate, and provide the familiarity of a pre-existing framework for the regulated community.

EPA's requirements include specific exposure limits and ancillary requirements necessary for successful implementation of an ECEL as part of a WCPP. Taken together, these WCPP requirements apply to the extent necessary so that the unreasonable risk from PCE under the conditions of use listed earlier in this Unit would no longer be presented.

Unit IV. includes a summary of the WCPP, including a description of the finalized exposure limits including an ECEL and ECEL action level; implementation requirements including monitoring requirements; a description of potential exposure controls in accordance with the hierarchy of controls, including engineering controls, administrative controls, and PPE as it relates to respirator selection; and additional finalized requirements for recordkeeping and workplace participation. Additionally, Unit IV. describes DDCC requirements for PCE, including potential exposure controls, which consider the hierarchy of controls; PPE as it relates to dermal protection; and additional requirements finalized for recordkeeping. Unit IV. also describes compliance timeframes revised from the 2023 PCE proposed rule, changes by EPA to certain provisions of the WCPP based on public comments, and addition of new provisions in the WCPP based on public comments used to inform this final rule.

3. Existing Chemical Exposure Limit (ECEL)

To reduce exposures in the workplace and address the unreasonable risk of injury to health resulting from inhalation exposures to PCE identified under the occupational conditions of use in the TSCA 2020 Risk Evaluation for PCE, EPA is requiring an ECEL and ancillary requirements for all of the conditions of use identified in Unit IV.B.1. except recycling and disposal. As described in Unit V.A.1.b. of the 2023 PCE proposed rule, for recycling and disposal, EPA did not identify human health risk from inhalation exposure as contributing to the unreasonable risk of PCE and is therefore not requiring an ECEL and related implementation measures identified in Unit IV. for recycling and disposal activities.

a. ECEL and ECEL Action Level (AL)

EPA is finalizing as proposed an ECEL under TSCA section 6(a) of 0.14 ppm (0.98 mg/m³) as an 8-hour TWA based on the chronic non-cancer human equivalent concentration for neurotoxicity. EPA has determined that ensuring exposures remain at or below the 8-hour TWA ECEL of 0.14 ppm will eliminate the unreasonable risk of injury to health resulting from acute and chronic inhalation exposures for certain occupational conditions of use of PCE (Ref. 71). If ambient exposures are kept at or below the 8-hour TWA ECEL of 0.14 ppm, a potentially exposed person will be protected against the effects described in Unit IV., including effects resulting from acute exposure, chronic non-cancer effects, and cancer. EPA is finalizing requirements that each owner or operator ensure that exposure to PCE does not exceed the ECEL as an 8-hour TWA for all potentially exposed persons within 450 days after publication of the final rule or beginning four months after introduction of PCE into the workplace, whichever is later.

EPA is finalizing an ECEL action level at 0.10 ppm as an 8-hour TWA, which is a modification from the ECEL action level EPA proposed, as described in Unit III.C.1. Below the ECEL action level, certain compliance activities, such as periodic monitoring, would be required less frequently, as described further in this Unit. In this way, EPA's WCPP for PCE is consistent with the familiar framework that is in place in OSHA standards for regulating toxic and hazardous substances under 29 CFR part 1910, subpart Z that establish an action level, although the values differ due to differing statutory authority. As explained by OSHA, the action level provides employers and employees with greater assurance that their employees will not be exposed to concentrations above the PELs (Ref. 72).

In summary, EPA is finalizing with slight modification that owners or operators must ensure the airborne concentration of PCE within the personal breathing zone of potentially exposed persons remains at or below 0.14 ppm as an 8-hour TWA ECEL, with an action level finalized as 0.10 ppm as an 8-hour TWA. For purposes of this rulemaking, the personal breathing zone is consistent with how OSHA defines it as a hemispheric area forward of the shoulders within a six-to-nine-inch radius of a worker's nose and mouth and requires that exposure monitoring air samples be collected from within this space (Ref. 73). EPA is finalizing the ECEL for certain occupational conditions of use to ensure that no

person is exposed to inhalation of PCE in excess of these concentrations resulting from those conditions of use. For the identified conditions of use for which the concentration thresholds are being finalized, EPA recognizes that the regulated community has the ability to detect the values for the ECEL and ECEL action level because of viable detection limits and analytical methods of PCE for monitoring devices that are available in commerce, currently in use, and approved by EPA, NIOSH, and OSHA, which can range from ≤0.5 parts per billion (ppb) to 9 ppm (Ref. 71). Based on the ECEL and ECEL action level established in this final rule, EPA confirmed there are adequate sampling methods available for personal breathing zone monitoring for PCE based on consultation with NIOSH and OSHA (Refs. 74, 75). While sampling methods may have some limitations, EPA notes that new and alternative methods may be developed as long as they are consistent with the performance criteria in the final PCE rule (accurate to a confidence level of 95% and are within (plus or minus) 25% of airborne concentrations of PCE above the 8-hour TWA ECEL). Multiple existing methods are available. OSHA, NIOSH, and EPA have available sampling methods (both active and passive) with sufficient limits of quantification to support WCPP implementation.

b. Monitoring Requirements

i. Exposure Sampling

Initial monitoring for PCE is critical for establishing a baseline of exposure for potentially exposed persons; similarly, periodic exposure monitoring assures continued compliance over time so that potentially exposed persons are not exposed to levels that would result in an unreasonable risk of injury to health. Exposure monitoring could be suspended if certain conditions described in Unit IV. are met. Also, in some cases, a change in workplace conditions with the potential to impact exposure levels would warrant additional monitoring, which is also described.

EPA is finalizing with modifications from proposal its requirement that owners or operators determine each potentially exposed person's exposure by either taking a personal breathing zone air sample of each potentially exposed person's exposure or by taking personal breathing zone air samples that are representative of each potentially exposed person with a similar exposure profile to a chemical substance or mixture based on the substantial

similarity of tasks performed, the manner in which the tasks are performed, and the materials and processes with which they work (hereinafter identified as an "exposure group"). Personal breathing zone air samples are representative of the 8-hour TWA of all potentially exposed persons in an exposure group if the samples are of the full shift-exposure of at least one person who represents the highest potential PCE exposures in that exposure group. In addition, the initial monitoring will be required when and where the operating conditions are best representative of each potentially exposed person's work-shift exposures. Personal breathing zone air samples taken during one work shift may be used to represent potentially exposed person exposures on other work shifts where the owner or operator can document that the tasks performed and conditions in the workplace are similar across shifts. Additionally, air sampling is required to measure ambient concentrations for PCE without taking respiratory protections into account as sampling is being performed. For purposes of exposure monitoring requirements, owners and operators are only required to monitor potentially exposed persons that are expected to be present in the workplace.

EPA is also finalizing requirements that the owner or operator ensure that their exposure monitoring methods are accurate to a confidence level of 95% and are within (plus or minus) 25% of airborne concentrations of PCE above the 8-hour TWA ECEL. To ensure compliance for monitoring activities, EPA is finalizing recordkeeping requirements and will require that owners or operators document their choice of monitoring method outlined in this Unit. As described in Unit III.C.1., EPA is finalizing the requirement that owners or operators meet certain documentation requirements for each monitoring event of PCE, including compliance with GLP Standards in accordance with 40 CFR part 792 or use of a laboratory accredited by the AIHA (e.g., AIHA LAP, LLC Policy Module 2A/B/E of Revision 17.3), or other analogous industry-recognized program. Additionally, as described in Unit III.C.1., EPA is finalizing the requirement that owners or operators must re-monitor within 15 working days after receipt of any exposure monitoring when results indicate non-detect, unless an Environmental Professional as defined at 40 CFR 312.10 or a Certified Industrial Hygienist reviews the

monitoring results and determines re-monitoring is not necessary.

EPA is also finalizing the requirement that each owner or operator maintain exposure monitoring records that include the following information for each monitoring event:

- Dates, duration, and results of each sample taken.
- The quantity, location(s) and manner of PCE use at the time of each monitoring event.
- All measurements that may be necessary to determine the conditions (e.g., work site temperatures, humidity, ventilation rates, monitoring equipment type and calibration dates) that may affect the monitoring results.
- Name, workplace address, work shift, job classification, work area, and type of respiratory protection (if any) of each monitored person.
- Identification of all potentially exposed persons that a monitored person is intended to represent if using a representative sample.
- Use of appropriate sampling and analytical methods.
- Compliance with GLP Standards in accordance with 40 CFR part 792 or use of a laboratory accredited by AIHA (e.g., AIHA LAP, LLC Policy Module 2A/B/E of Revision 17.3), or another analogous industry-recognized program.
- Information regarding air monitoring equipment, including: Type, maintenance, calibrations, performance tests, limits of detection, and any malfunctions.
- Notification of exposure monitoring results to each person whose exposures are monitored or who is part of a monitored exposure group.

ii. Initial Exposure Monitoring

Under the final regulation, each non-Federal owner or operator of a facility that is engaged in one or more of the conditions of use listed in Unit IV.B.1., except recycling and disposal, will be required to perform initial exposure monitoring within 360 days of the publication of this final rule or within 30 days of introduction of PCE into the workplace, whichever is later, to determine the extent of exposure of potentially exposed persons to PCE. As discussed in Unit III.B.1., EPA is providing additional time for Federal agencies and Federal contractors acting for or on behalf of the Federal government to comply with the provisions of the WCPP, so they will be required to conduct initial monitoring within 915 days after publication. Initial monitoring will notify owners and operators of the magnitude of possible exposures to potentially exposed persons with respect to their work

conditions and environments. Based on the magnitude of possible exposures in the initial exposure monitoring, the owner or operator may need to increase or decrease the frequency of future periodic monitoring or adopt new exposure controls (such as engineering controls, administrative controls, and/or a respiratory protection program). In addition, the initial monitoring will be required when and where the operating conditions are best representative of each potentially exposed person's work-shift exposures. If the owner or operator chooses to use a sample that is representative of potentially exposed persons' full shift exposures (rather than monitor every individual), such sampling should be representative (*i.e.*, taken from the breathing zone of potentially exposed persons and reflect duration appropriate exposure) of the most highly exposed persons in the workplace. Additionally, EPA expects that owners and operators will conduct initial exposure monitoring representative of all tasks that a potentially exposed person will be expected to do. EPA understands that certain tasks may occur less frequently or may reflect accidental exposure (for example, due to malfunction).

EPA also recognizes that some entities may already have objective exposure monitoring data. If the owner or operator has monitoring data conducted within five years prior to 60 days following publication of the final rule in the **Federal Register** and the monitoring satisfies all other requirements in Unit IV., including the requirement that the data represents the highest PCE exposures likely to occur under reasonably foreseeable conditions of use the owner or operator may rely on such earlier monitoring results for the initial baseline monitoring sample. Prior monitoring data cannot be used where there has been a change in work conditions or practices that is expected to result in new or additional exposures.

As described in more detail later in Unit IV., the owner or operator must conduct periodic monitoring at least once every five years since its last monitoring. This periodic monitoring must be representative of all the potentially exposed persons in the workplace and the tasks that they are expected to do.

iii. Periodic Exposure Monitoring

EPA is finalizing as proposed the following periodic monitoring for owners or operators. These finalized requirements are also outlined in table 1.

- If samples taken during the initial exposure monitoring reveal a

concentration below the ECEL action level (<0.10 ppm 8-hour TWA), the owner or operator must repeat the periodic exposure monitoring at least once every five years.

- If the most recent exposure monitoring indicates that airborne exposure is above the ECEL (>0.14 ppm 8-hour TWA), the owner or operator must repeat the periodic exposure monitoring within three months of the most recent exposure monitoring.
- If the most recent exposure monitoring indicates that airborne exposure is at or above the ECEL action level (≥ 0.10 ppm 8-hour TWA) but at or below the ECEL (≤ 0.14 ppm 8-hour

TWA), the owner or operator must repeat the periodic exposure monitoring within six months of the most recent exposure monitoring.

- If the most recent (non-initial) exposure monitoring indicates that airborne exposure is below the ECEL action level, the owners or operators must repeat such monitoring within six months of the most recent monitoring until two consecutive monitoring measurements, taken at least seven days apart, are below the ECEL action level (<0.10 ppm 8-hour TWA), at which time the owner or operator must repeat the periodic exposure monitoring at least once every five years.

- In instances where an owner or operator does not manufacture, process, use, or dispose of PCE for a condition of use for which the WCPP is required over the entirety of time since the last required periodic monitoring event, EPA is requiring that the owner or operator would be permitted to forgo the next periodic monitoring event. However, documentation of cessation of use of PCE would be required and periodic monitoring would be required to resume when the owner or operator restart any of the conditions of use listed in Unit IV.B.1., except recycling and disposal.

TABLE 1—PERIODIC MONITORING REQUIREMENTS

Air concentration condition	Periodic monitoring requirement
If initial exposure monitoring is below the ECEL action level (<0.10 ppm 8-hour TWA).	Periodic exposure monitoring is required at least once every five years.
If the most recent exposure monitoring indicates that airborne exposure is above the ECEL (>0.14 ppm 8-hour TWA).	Periodic exposure monitoring is required within three months of the most recent exposure monitoring.
If the most recent exposure monitoring indicates that airborne exposure is at or above the ECEL action level but at or below the ECEL (≥ 0.10 ppm 8-hour TWA, ≤ 0.14 ppm 8-hour TWA).	Periodic exposure monitoring is required within six months of the most recent exposure monitoring.
If the two most recent (non-initial) exposure monitoring measurements, taken at least seven days apart within a 6-month period, indicate exposure is below the ECEL action level (<0.10 ppm 8-hour TWA).	Periodic exposure monitoring is required within five years of the most recent exposure monitoring.
If the owner or operator engages in a condition of use for which WCPP ECEL is required but does not manufacture, process, use, or dispose of PCE in that condition of use over the entirety of time since the last required monitoring event.	The owner or operator may forgo the next periodic monitoring event. However, documentation of cessation of use of PCE is required and periodic monitoring is required when the owner or operator resumes the condition of use.

Table Note: Additional scenarios in which monitoring may be required are discussed in Unit IV.B.3.b.iv.

iv. Additional Exposure Monitoring

EPA is finalizing that each owner or operator conduct additional exposure monitoring within 30 days after there has been a change in the production, process, control equipment, personnel or work practices that may reasonably be expected to result in new or additional exposures at or above the ECEL action level, or when the owner or operator has any reason to believe that new or additional exposures at or above the ECEL action level have occurred, for example if an owner or operator receives information from potentially exposed person(s) suggesting that such new or additional exposures may have occurred. In the event of start-up or shutdown, or spills, leaks, ruptures, or other breakdowns or unexpected releases that may lead to exposure to potentially exposed persons, EPA is finalizing that each owner or operator must conduct exposure monitoring of potentially exposed persons (using personal breathing zone sampling) within 30 days after the conclusion of the start-up or shutdown and/or the cleanup of the spill or repair of the leak, rupture, or other breakdown. An additional exposure monitoring event

may result in an increased frequency of periodic monitoring. For example, if the initial monitoring results from a workplace are above the ECEL action level, but below the ECEL, periodic monitoring is required every six months. If additional monitoring is performed because increased exposures are suspected, and the results are above the ECEL, subsequent periodic monitoring would have to be performed every three months. The required additional exposure monitoring should not delay implementation of any necessary cleanup or other remedial action to reduce the exposures to persons in the workplace.

c. Regulated Area

EPA is finalizing its requirement that the owner or operator demarcate any area where airborne concentrations of PCE exceed, or are reasonably expected to exceed, the ECEL. To provide more clarity regarding how regulated areas must be demarcated, EPA has incorporated the language analogous to OSHA's regulated area requirements under the standards for toxic and hazardous substances (29 CFR part 1910, subpart Z) into this final rule.

Owners and operators must demarcate regulated areas from the rest of the workplace in any manner that adequately establishes and alerts potentially exposed persons to the boundaries of the area and minimizes the number of authorized persons exposed to PCE within the regulated area. This can be accomplished using administrative controls (e.g., highly visible signifiers) in multiple languages as appropriate (e.g., whenever potentially exposed persons who are primarily Spanish-speaking are likely to be present, owners and operators should post additional highly visible signifiers in Spanish), placed in conspicuous areas. The owner or operator is required to restrict access to the regulated area from any potentially exposed person that lacks proper training or is otherwise unauthorized to enter.

d. Notification of Monitoring Results

EPA is finalizing the requirement that the owner or operator must, within 15 working days after receipt of the results of any exposure monitoring, notify each potentially exposed person whose exposure is represented by that monitoring and their designated

representatives in writing, either individually to each potentially exposed person or by posting the information in an appropriate and accessible location, such as public spaces or common areas, for potentially exposed persons outside of the regulated area. The notice would be required to identify the exposure monitoring results, the ECEL and ECEL action level and what they mean in plain language, statement of whether the monitored airborne concentration of PCE exceeds the ECEL and the ECEL action level, and any corresponding respiratory protection required. If the ECEL is exceeded, the notice must also include a description of the actions taken by the owner or operator to reduce inhalation exposures to or below the ECEL. The notice must also include the quantity, location, manner of PCE use, and identified releases of PCE that could result in exposure to PCE at the time of monitoring. The notice must be posted in multiple languages if necessary (*e.g.*, notice must be in a language that the potentially exposed person understands, including a non-English language version representing the language of the largest group of workers who cannot readily comprehend or read English).

4. Direct Dermal Contact Control (DDCC)

To reduce exposures in the workplace and address the unreasonable risk of injury to health resulting from dermal exposures to PCE identified under the occupational conditions of use in the TSCA 2020 Risk Evaluation for PCE, EPA is finalizing largely as proposed, with modification to the compliance timeframe as described in Unit III.B., the DDCC requirements for all of the conditions of use identified in Unit IV.B.1. EPA is finalizing requirements that owners or operators must separate, distance, physically remove, or isolate all person(s) from direct handling of PCE or from skin contact with surfaces that may be contaminated with PCE (*i.e.*, equipment or materials on which PCE may be present) under routine conditions in the workplace (hereafter referred to as direct dermal contact) within 450 days after publication of the final rule. For purposes of this rulemaking, direct dermal contact with PCE does not include vapor exposures through the skin, although EPA recommends and encourages owners and operators to implement control measures to prevent or reduce dermal exposures to airborne PCE vapors. The 2020 Risk Evaluation for PCE identified that unreasonable risk to workers is also driven by the dermal exposure, specifically from direct skin contact with PCE; risk exceeding the benchmark

was identified even when considering use of chemically resistant gloves in most commercial and industrial conditions of use. EPA has determined that preventing direct dermal contact will eliminate the unreasonable risk of injury to health resulting from dermal exposures for certain occupational conditions of use of PCE. See EPA's description for how the requirements related to DDCC would address the unreasonable risk resulting from dermal exposures and the rationale for this regulatory approach in Units III.B.3. and V.A. of the 2023 PCE proposed rule.

5. Exposure Control Plan

EPA is finalizing its requirement that owners or operators implementing the WCPP use feasible exposure controls, including one or a combination of elimination, substitution, engineering controls, and administrative controls, prior to requiring the use of PPE (*i.e.*, respirators or gloves) as a means of controlling exposures below EPA's ECEL and/or prevent direct dermal contact with PCE for all potentially exposed persons, in accordance with the hierarchy of controls (Ref. 76). If an owner or operator chooses to replace PCE with a substitute, EPA recommends careful review of the available hazard and exposure information on the potential substitutes to avoid a substitute chemical that might later be found to present an unreasonable risk of injury to health or the environment or be subject to regulation (sometimes referred to as a "regrettable substitution"). EPA expects that, for conditions of use for which EPA is finalizing a WCPP, compliance at most workplaces would be part of an established industrial hygiene program that aligns with the hierarchy of controls.

Examples of engineering controls that may prevent or reduce the potential for direct dermal contact include automation, physical barriers between contaminated and clean work areas, enclosed transfer liquid lines (with purging mechanisms in place (*e.g.*, nitrogen, aqueous) for operations such as product changes or cleaning), and design of tools (*e.g.*, a closed-loop container system providing contact-free connection for unloading fresh and collecting spent solvents, pneumatic tools, tongs, funnels, glove bags, *etc.*). Examples of administrative controls that may prevent or reduce the potential for direct dermal contact include adjusting work practices (*i.e.*, implementing policies and procedures) such as providing safe working distances from areas where direct handling of PCE may occur.

EPA is finalizing the requirement that regulated entities use the hierarchy of controls, instituting one or a combination of controls to the extent feasible, and supplement such protections using PPE, where necessary, including respirators for potentially exposed persons at risk of inhalation exposure above the ECEL and dermal PPE for persons potentially exposed through direct dermal contact to PCE. If efforts of elimination, substitution, engineering controls, and administrative controls are not sufficient to reduce exposures to or below the ECEL or prevent direct dermal contact for all potentially exposed persons in the workplace, EPA requires that the owner or operator use feasible controls to reduce PCE concentrations in the workplace to the lowest levels achievable and supplement these controls with respiratory protection and dermal PPE as needed to achieve the ECEL or prevent direct dermal contact. In such cases, EPA requires that the owner or operator provide potentially exposed persons reasonably likely to be exposed to PCE by inhalation to concentrations above the ECEL with respirators affording sufficient protection against inhalation risk and appropriate training on the proper use of such respirators, to ensure that their exposures do not exceed the ECEL as described in Unit IV. EPA also requires that the owner or operator provides potentially exposed persons reasonably likely to be exposed to PCE by direct dermal contact with dermal protection affording sufficient protection against dermal risk and appropriate training on the proper use of dermal protection, as described in Unit IV. As part of the training requirement, the owner or operator is required to provide information and comprehensive training in an understandable manner (*i.e.*, plain language), considering factors such as the skills required to perform the work activity and the existing skill level of the staff performing the work, and in multiple languages as appropriate (*e.g.*, based on languages spoken by potentially exposed persons) to potentially exposed persons. This training must be provided prior to or at the time of initial assignment to a job involving potential exposure to PCE. Furthermore, EPA also requires that the owner or operator document their efforts in using elimination, substitution, engineering controls, and administrative controls to reduce exposure to or below the ECEL in an exposure control plan.

EPA is finalizing its requirement that the owner or operator include and

document in the exposure control plan or through any existing documentation of the facility's safety and health program developed as part of meeting OSHA requirements or other safety and health standards, the following:

- Identification in the exposure control plan of available exposure controls that were considered and rationale for using or not using available exposure controls in the following sequence (*i.e.*, elimination and substitution, then engineering controls and administrative controls) to reduce exposures in the workplace to either at or below the ECEL or to the lowest level achievable and to prevent or reduce direct dermal contact with PCE in the workplace;
- For each exposure control considered, exposure controls selected based on feasibility, effectiveness, and other relevant considerations;
- A description of actions the owner or operator must take to implement exposure controls selected, including proper installation, regular inspections, maintenance, training, or other steps taken;
- A description of regulated areas, how they are demarcated, and persons authorized to enter the regulated areas;
- A description of activities conducted by the owner or operator to review and update the exposure control plan to ensure effectiveness of the exposure controls, identify any necessary updates to the exposure controls, and confirm that all persons are properly implementing the exposure controls; and
- An explanation of the procedures for responding to any change that may reasonably be expected to introduce additional sources of exposure to PCE, or otherwise result in increased exposure to PCE, including procedures for implementing corrective actions to mitigate exposure to PCE.

Under this final rule, owners or operators are prohibited from using rotating work schedules to comply with the ECEL 8-hour TWA, in alignment with certain elements of existing OSHA's standards for toxic and hazardous substances under 29 CFR part 1910, subpart Z. Owners or operators must maintain the effectiveness of any engineering controls and administrative controls instituted as part of the exposure control plan. They must also review and update the exposure control plan as necessary, but at least every five years, to reflect any significant changes in the status of the owner or operator's approach to compliance with the exposure control requirements. EPA intends that the exposure control plan identify the available exposure controls

and, for the exposure controls not selected, document the efforts identifying why these are not feasible, not effective, or otherwise not implemented. For entities for which significant amounts of time are needed to verify suitability of alternatives or procure funds or authorization for additional engineering controls, for example, EPA expects that as those controls become available the exposure control plan would be updated accordingly. EPA requires that the exposure control plan be revisited under certain conditions (and at least every five years) and encourages updates as more sophisticated controls are available.

This final rule requires owners or operators to make the exposure control plan and associated records, including ECEL exposure monitoring records, ECEL compliance records, DDCC compliance records, and workplace participation records, available to potentially exposed persons and their designated representatives. Owners or operators must notify potentially exposed persons and their designated representatives of the availability of the exposure control plan and associated records within 30 days of the date that the exposure control plan is completed and at least annually thereafter. The notice of the availability of the plan and associated records must be provided in plain language writing to each potentially exposed person in a language that the person understands or posted in an appropriate and accessible location outside the regulated area with an English-language version and a non-English version representing the language of the largest group of workers who do not read English. This final rule also requires the owner or operator to provide the exposure control plan and associated records at a reasonable time, place, and manner to a potentially exposed person or their designated representative upon request. As explained in Unit III.C.2., if the owner or operator is unable to provide the specified records within 15 working days, the owner or operator must inform the potentially exposed person or designated representative requesting the record within 15 working days that reason for the delay and the earliest date when the record can be made available.

6. Personal Protective Equipment (PPE)

Where elimination, substitution, engineering controls, and administrative controls are not feasible to reduce the air concentration to or below the ECEL and/or prevent direct dermal contact with PCE for all potentially exposed persons, EPA is finalizing as proposed

with slight modifications to improve clarity or for greater consistency with OSHA's regulations to require owners and operators to provide PPE, including respiratory protection and dermal protection selected in accordance with the guidelines described in this unit, and to implement a PPE program. Unit IV. includes a description of the PPE Program, including required PPE as it relates to respiratory protection, required PPE as it relates to dermal protection, and other requirements such as additional training for respirators and recordkeeping to support implementation of a PPE program.

a. Respiratory Protection

Where elimination, substitution, engineering, and administrative controls are not feasible or sufficiently protective to reduce the air concentration to or below the ECEL, or if inhalation exposure above the ECEL is still reasonably likely, EPA is finalizing, with slight modification from the proposal, minimum respiratory PPE requirements based on an owner or operator's most recent measured air concentration for one or more potentially exposed persons and the level of PPE needed to reduce exposure to or below the ECEL. In those circumstances, EPA is finalizing requirements for a respiratory protection PPE program with worksite-specific procedures and elements for required respirator use. Owners or operators must develop and administer a written respiratory protection program in accordance with OSHA's Respiratory Protection Standard under 29 CFR 1910.134(c)(1), (c)(3), and (c)(4). EPA is finalizing requirements that owners and operators provide training to all persons required to use respiratory protection consistent with 29 CFR 1910.134(k) prior to or at the time of initial assignment to a job involving potential exposure to PCE. Owners and operators must retrain all persons required to use PPE at least annually, or whenever the owner or operator has reason to believe that a previously trained person does not have the required understanding and skill to properly use PPE, or when changes in the workplace or in PPE to be used render the previous training obsolete.

EPA is finalizing requirements that each owner or operator supply a respirator, selected in accordance with requirements described in Unit IV., to each person who enters a regulated area within 450 days after publication of the final rule, or within three months after the receipt of any exposure monitoring that indicates exposures exceeding the ECEL, and thereafter must ensure that

all persons within the regulated area are using the provided respirators whenever PCE exposures exceed or can reasonably be expected to exceed the ECEL.

EPA is also finalizing requirements that owners or operators who are required to administer a respiratory protection PPE program must supply a respirator selected based on a medical evaluation consistent with the requirements of 29 CFR 1910.134(e). If a potentially exposed person cannot use a negative-pressure respirator, then the owner or operator must provide that person with an alternative respirator. The alternative respirator must have less breathing resistance than the negative-pressure respirator and provide equivalent or greater protection. If the person is unable to use an alternative respirator, then the person must not be permitted to enter the regulated area. Additionally, EPA is requiring owners and operators to select respiratory protection that properly fits each affected person and communicate respirator selections to each affected person in accordance with the requirements of 29 CFR 1910.134(f). Consistent with requirements of 29 CFR 1910.134(g) through (j), EPA is requiring owners and operators to provide, ensure use of, and maintain (in a sanitary, reliable, and undamaged condition), respiratory protection that is of safe design and construction. EPA is also requiring owners and operators to provide training to all persons required to use respiratory protection consistent with the requirements of 29 CFR 1910.134(k).

EPA is finalizing the requirements to establish minimum respiratory protection requirements, such that any respirator affording a higher degree of protection than the following requirements may be used. EPA is finalizing the following requirements for respiratory protection, based on the most recent exposure monitoring concentrations results measured as an 8-hour TWA that exceed the ECEL (0.14 ppm):

- If the measured exposure concentration is at or below 0.14 ppm: no respiratory protection is required.
- If the measured exposure concentration is above 0.14 ppm and less than or equal to 1.4 ppm (10 times ECEL): Any NIOSH Approved® air-purifying half mask respirator equipped with organic vapor cartridges or canisters; or any NIOSH Approved® Supplied-Air Respirator (SAR) or Airline Respirator operated in demand mode equipped with a half mask; or any NIOSH Approved® Self-Contained Breathing Apparatus (SCBA) in a demand mode equipped with a half

mask [Assigned Protection Factor (APF) 10].

- If the measured exposure concentration is above 1.4 ppm and less than or equal to 3.5 ppm (25 times ECEL): Any NIOSH Approved® Powered Air-Purifying Respirator (PAPR) equipped with a loose-fitting facepiece or hood/helmet equipped with organic vapor cartridges or canisters; or any NIOSH Approved® SAR or Airline Respirator in a continuous-flow mode equipped with a loose-fitting facepiece or helmet/hood [APF 25].

- If the measured exposure concentration is above 3.5 ppm and less than or equal to 7.0 ppm (50 times ECEL): Any NIOSH Approved® air-purifying full facepiece respirator equipped with organic vapor cartridges or canisters; any NIOSH Approved® PAPR with a half mask equipped with organic vapor cartridges or canisters; any NIOSH Approved® SAR or Airline Respirator in a continuous flow mode equipped with a half mask; any NIOSH Approved® SAR or Airline Respirator operated in a pressure-demand or other positive-pressure mode with a half mask; or any NIOSH Approved® SCBA in demand-mode equipped with a full facepiece or helmet/hood [APF 50].

- If the measured exposure concentration is above 7.0 ppm and less than or equal to 140 ppm (1,000 times ECEL): Any NIOSH Approved® PAPR equipped with a full facepiece equipped with organic vapor cartridges or canisters; any NIOSH Approved® SAR or Airline Respirator in a continuous-flow mode equipped with full facepiece; any NIOSH Approved® SAR or Airline Respirator in pressure-demand or other positive-pressure mode equipped with a full facepiece and an auxiliary self-contained air supply; or any NIOSH Approved® SAR or Airline Respirator in a continuous-flow mode equipped with a helmet/hood and has been tested to demonstrate performance at a level of a protection of APF 1,000 or greater. [APF 1,000].

- If the measured exposure concentration is greater than 140 ppm (1,000+ times ECEL): Any SCBA in a pressure-demand or other positive-pressure mode equipped with a full facepiece or helmet/hood [APF 10,000].

- If the exposure concentration is unknown: Any NIOSH Approved® combination supplied air respirator equipped with a full facepiece and operated in pressure demand or other positive pressure mode with an auxiliary self-contained air supply; or any NIOSH Approved® SCBA operated in pressure demand or other positive pressure mode and equipped with a full facepiece or helmet/hood [APF 1000+].

Additionally, EPA is finalizing requirements that owners or operators select and provide respirators in accordance with the requirements of 29 CFR 1910.134(d)(1)(iv) and with consideration of workplace and user factors that affect respirator performance and reliability.

EPA is requiring that the owner or operator must ensure that all filters, cartridges, and canisters used in the workplace are labeled and color coded with the NIOSH approval label and that the label is not removed and remains legible. Consistent with 29 CFR 1910.134(d)(3)(iii), EPA is requiring either the use of respirators with an end-of-life service indicator certified by NIOSH for the contaminant, in this case PCE, or implementation of a change schedule for canisters and cartridges that ensures that they are changed before the end of their service life. EPA is also requiring owners and operators to ensure that respirators are used in compliance with the terms of the respirator's NIOSH certification.

EPA is finalizing requirements that owners and operators must conduct regular evaluations of the workplace, including consultations with potentially exposed persons using respiratory protection, consistent with the requirements of 29 CFR 1910.134(l), to ensure that the provisions of the written respiratory protection program described in this Unit are being effectively implemented.

EPA is finalizing the requirement that owners and operators document respiratory protection used and PPE program implementation. EPA is finalizing requirements that owners and operators document in the exposure control plan or other documentation of the facility's safety and health program information relevant to the respiratory program, including records on the name, workplace address, work shift, job classification, work area, and type of respirator worn (if any) by each potentially exposed person, maintenance, fit-testing, and training as described in this unit.

b. Dermal Protection

As described in Unit III.B.1., EPA is finalizing requirements that each owner or operator supply dermal PPE that separates and provides a barrier to prevent direct dermal contact with PCE, selected in accordance with requirements described in this Unit, to each person who is reasonably likely to be dermally exposed in the work area through direct dermal contact, to be effective within 450 days of the publication of this final rule. Where elimination, substitution, engineering

controls, and administrative controls are not feasible or sufficient to fully prevent direct dermal contact with PCE, EPA is finalizing requirements that appropriate dermal PPE be provided by owners and operators to, and be worn by, persons potentially exposed to direct dermal contact with PCE. EPA is requiring owners and operators to provide dermal PPE that is of safe design and construction for the work to be performed. EPA is also requiring owners and operators ensure each potentially exposed person who is required to wear PPE to use and maintain PPE in a sanitary, reliable, and undamaged condition. Additionally, EPA is requiring owners and operators to select and provide PPE that properly fits each potentially exposed person who is required to use PPE and communicate PPE selections to each affected person.

In choosing appropriate dermal PPE, EPA is requiring owners and operators to select gloves, clothing, and protective gear (which covers any exposed dermal area of arms, legs, torso, and face) based on specifications from the manufacturer or supplier or individually prepared third party testing that demonstrate an impervious barrier to PCE during expected durations of use and normal conditions of exposure within the workplace, accounting for potential chemical permeation or breakthrough times. EPA is also requiring that owners and operators demonstrate that the selected PPE will be impervious for the expected duration and conditions of exposure, such as using the format specified in ASTM F1194–99 (2010) “Standard Guide for Documenting the Results of Chemical Permeation Testing of Materials Used in Protective Clothing Materials,” reporting cumulative permeation rate as a function of time, or equivalent manufacturer- or supplier-provided testing. In alignment with the OSHA Hand Protection PPE Standard (29 CFR 1910.138), EPA is requiring owners and operators to select dermal PPE based on an evaluation of the performance characteristics of the PPE relative to the task(s) to be performed, conditions present, and the duration of use. EPA is also requiring owners and operators to consider likely combinations of chemical substances to which the clothing may be exposed in the work area when selecting the appropriate PPE such that the PPE will prevent direct dermal contact to PCE. Further information related to choosing appropriate PPE can be found in the summary of suitable gloves for PCE memo (Ref. 67).

For example, owners and operators can select gloves that have been tested in accordance with the American

Society for Testing and Materials (ASTM) F739 “Standard Test Method for Permeation of Liquids and Gases through Protective Clothing Materials under Conditions of Continuous Contact.” EPA is finalizing as proposed that PPE be provided for use for a time period only to the extent and no longer than the time period for which testing has demonstrated that the PPE will be impervious during expected durations of use and conditions of exposure. EPA is finalizing requirements that owners and operators also consider other factors when selecting appropriate PPE, including effectiveness of glove type when preventing exposures from PCE alone and in likely combination with other chemical substances used in the work area or when used with glove liners, permeation, degree of dexterity required to perform task, and temperature, as identified in the Hand Protection section of OSHA’s Personal Protective Equipment Guidance (Ref. 77). EPA is also finalizing requirements that replacement PPE must be provided immediately if any person is dermally exposed to PCE longer than the breakthrough time period for which testing has demonstrated that the PPE will be impermeable or if there is a chemical permeation or breakage of the PPE.

Additionally, EPA is finalizing as proposed requirements that owners and operators subject to this rule comply with provisions of 29 CFR 1910.133(b) for requirements on selection and use of eye and face protection.

Additionally, as part of the PPE program, EPA is also finalizing as proposed that owners and operators must comply with OSHA’s general PPE training requirements at 29 CFR 1910.132(f) for application of a PPE training program, including providing training on proper use of dermal PPE (e.g., when and where PPE is necessary, proper application, wear, and removal of PPE, maintenance, useful life, and disposal of PPE). EPA is finalizing that owners and operators provide PPE training to all persons required to use dermal PPE prior to or at the time of initial assignment to a job involving potential exposure to PCE. Owners and operators have to re-train each affected person at least once annually or whenever the owner or operator has reason to believe that a previously trained person does not have the required understanding and skill to properly use PPE, or when changes in the workplace or in the PPE to be used render the previous training obsolete.

EPA is also finalizing as proposed requirements that owners and operators retain records of dermal PPE used and

program implementation. EPA is requiring that owners and operators document in the exposure control plan or other documentation of the facility’s safety and health program, information relevant to any dermal PPE program, as applicable, including:

- The name, workplace address, work shift, job classification, and work area of each person reasonably likely to directly handle PCE or handle equipment or materials on which PCE may be present and the type of PPE selected to be worn by each of these persons;
- The basis for specific PPE selection (e.g., demonstration based on permeation testing or manufacturer specifications that each item of PPE selected provides an impervious barrier to prevent exposure during expected duration and conditions of exposure, including the likely combinations of chemical substances to which the PPE may be exposed in the work area);
- Appropriately sized PPE and training on proper application, wear, and removal of PPE, and proper care/disposal of PPE;
- Occurrence and duration of any direct dermal contact with PCE that occurs during any activity or malfunction at the workplace that causes direct dermal exposures to occur and/or glove breakthrough, and corrective actions to be taken during and immediately following that activity or malfunction to prevent direct dermal contact to PCE; and
- Training described in this unit.

7. Additional Finalized Requirements

a. Workplace Information and Training

EPA is also finalizing its requirements to implement a training program in alignment with the OSHA Hazard Communication Standard (29 CFR 1910.1200) and the OSHA General Industry Standard for Methylene Chloride (29 CFR 1910.1052). To ensure that potentially exposed persons in the workplace are informed of the hazards associated with PCE exposure, EPA is finalizing as proposed with slight modification to require that owners or operators of workplaces subject to the WCPP institute a training and information program for potentially exposed persons and assure their participation in the training and information program within 450 days after publication of the final rule. For purposes of workplace information and training, owners and operators are only required to train potentially exposed persons that are expected to be present in the workplace or to directly handle PCE or handle equipment or materials on which PCE may be present.

As part of the training and information program, the owner or operator is required to provide information and comprehensive training in an understandable manner (*i.e.*, plain language) and in multiple languages as appropriate (*e.g.*, based on languages spoken by potentially exposed persons) to potentially exposed persons prior to or at the time of initial assignment to a job involving potential exposure to PCE. Owners and operators are required to provide information and training, as referenced in the OSHA Hazard Communication Standard, to all potentially exposed persons that includes:

- The requirements of the PCE WCPP and how to access or obtain a copy of the requirements of the WCPP, including but not limited to the exposure control plan, monitoring requirements, and PPE program;
- The quantity, location, manner of use, release, and storage of PCE and the specific operations in the workplace that could result in PCE exposure, particularly noting where each regulated area is located;
- Principles of safe use and handling of PCE in the workplace, including specific measures the owner or operator has implemented to reduce inhalation exposure at or below the ECEL or prevent dermal contact with PCE, such as work practices and PPE used;
- The methods and observations that may be used to detect the presence or release of PCE in the workplace (such as monitoring conducted by the owner or operator, continuous monitoring devices, visual appearance, or odor of PCE when being released, *etc.*); and
- The acute and chronic health hazards of PCE as detailed on relevant Safety Data Sheets (SDSs).

In addition to providing training at the time of initial assignment to a job involving potential exposure to PCE, owners and operators subject to the PCE WCPP are required to re-train each potentially exposed person annually to ensure they understand the principles of safe use and handling of PCE in the workplace. EPA is finalizing its requirements that owners update the training as necessary whenever there are changes in the workplace, such as new tasks or modifications of tasks, in particular, whenever there are changes in the workplace that increase exposure to PCE or where potentially exposed persons' exposure to PCE can reasonably be expected to exceed the action level or increase the potential for direct dermal contact with PCE. To support compliance, EPA is finalizing as proposed that each owner or operator of a workplace subject to the WCPP would

be required to provide to the EPA, upon request, all available materials related to workplace information and training.

b. Workplace Participation

EPA encourages owners and operators to consult with potentially exposed persons and their designated representatives on the development and implementation of exposure control plans and PPE/respirator programs. EPA is finalizing the requirement that owners and operators provide potentially exposed persons and their designated representatives regular access to the exposure control plans, exposure monitoring records, and PPE program implementation. To ensure compliance with workplace participation, EPA is finalizing its requirement that the owner or operator document the notice to and ability of any potentially exposed person that may reasonably be affected by PCE exposure to readily access the exposure control plans, facility exposure monitoring records, PPE program implementation, or any other information relevant to PCE exposure in the workplace.

c. Recordkeeping

For owners and operators to demonstrate compliance with the WCPP provisions, EPA is requiring that owners and operators must retain compliance records for five years (although this requirement does not supplant any longer recordkeeping retention time periods such as those required under 29 CFR 1910. 1020 or other applicable regulations). EPA is requiring the owner or operator to retain records of:

- Exposure control plan;
 - PPE program implementation and documentation, including as necessary, respiratory protection and dermal protection used and related PPE training; and
 - Information and training provided to each person prior to or at the time of initial assignment and any retraining.
- In addition, EPA is finalizing as proposed requirements that owners and operators subject to the WCPP ECEL requirements maintain records to include:

- Regulated areas and authorized personnel;
- The exposure monitoring records;
- Notification of exposure monitoring results; and
- To the extent that the owner or operator relies on prior exposure monitoring data, records that demonstrates that it meets all of the requirements of this section.

The owners and operators, upon request by EPA, are required to make all records that are maintained as described

in Unit IV. available to EPA for examination and copying in accordance with EPA requirements. EPA emphasizes that all records required to be maintained can be kept in the most administratively convenient form such as electronic record form or paper form.

8. Compliance Timeframes

With regard to the compliance timeframe for those occupational conditions of use which are subject to the WCPP, EPA is not finalizing the timeframes proposed. Rather, as discussed in Unit III.B.1, based on consideration of public comments and reasonably available information, EPA is finalizing longer timeframes for non-Federal owners or operators, and is providing Federal agencies and Federal contractors acting for or on behalf of the Federal government additional time to comply with each of the provisions of the WCPP. Specifically, EPA is finalizing its requirement that non-Federal owners and operators perform initial exposure monitoring according to the process outlined in Unit IV. within 360 days after publication of the final rule in the **Federal Register**, or within 30 days of introduction of PCE into the workplace, whichever is later. Federal agencies and Federal contractors acting for or on behalf of the Federal government must conduct initial exposure monitoring within 915 days after the date of publication, or within 30 days of introduction of PCE into the workplace, whichever is later. EPA is also finalizing its requirement that each non-Federal owner or operator ensure that exposure to PCE does not exceed the ECEL as an 8-hour TWA for all potentially exposed persons within 450 days after publication of the final rule, while Federal agencies and Federal contractors acting for or on behalf of the Federal government must comply with the ECEL within 1005 days after the date of publication. If applicable, each owner or operator must provide respiratory protection sufficient to reduce inhalation exposures to below the ECEL to all potentially exposed persons in the regulated area within three months after receipt of the results of any exposure monitoring that indicates an exceedance of the ECEL. For non-Federal owners or operators, this will be within 450 days after publication of the final rule in the **Federal Register**. For Federal agencies and Federal contractors acting for or on behalf of the Federal government, this will be within 1005 after the date publication. EPA is also finalizing the requirement that owners and operators demarcate a regulated area within three months after receipt of any exposure

monitoring that indicates exposures exceeding the ECEL. Additionally, EPA is finalizing requirements that each non-Federal owner or operator ensure all persons are separated, distanced, physically removed, or isolated from direct dermal contact with PCE, including by providing dermal PPE within 450 days after publication of the final rule, while Federal agencies and Federal contractors acting for or on behalf of the Federal government must comply with dermal controls no later than 1005 days after publication of the final rule. Non-Federal owners or operators shall proceed accordingly to implement an exposure control plan, including institution of feasible exposure controls other than PPE, within 900 days of the publication of this final rule, while Federal agencies and Federal contractors acting for or on behalf of the Federal government must implement an exposure control plan within 1095 days after the date of publication.

C. Prescriptive Controls

In contrast to the non-prescriptive requirements of the WCPP, including DDCC, where regulated entities would have flexibility to select controls in accordance with the hierarchy of controls to comply with the parameters outlined in Unit IV.B., EPA has found it appropriate in certain circumstances to require specific prescriptive controls for certain occupational conditions of use. In general, EPA is finalizing the prescriptive controls as proposed, with some modifications, for the industrial and commercial use of PCE as a laboratory chemical, as described in Unit III.A.2.d. Additionally, EPA is finalizing prescriptive controls for the industrial and commercial use in energized electrical cleaning. The rationale for these changes from the 2023 PCE proposed rule, after consideration of public comments, is in Unit III.A.2.e. This unit provides a description of the conditions of use subject to specific prescriptive controls, the specific prescriptive control requirements, and the compliance timeframes for the requirements.

1. Workplace Requirements for Laboratory Use

a. Applicability

The industrial and commercial use of PCE as a laboratory chemical refers to the industrial or commercial use of PCE, often in small quantities, in a laboratory process or in specialized laboratory equipment for instrument calibration/maintenance, chemical analysis, chemical synthesis, extracting and

purifying other chemicals, dissolving other substances, executing research, development, test and evaluation methods, and similar activities, such as use as a solvent, reagent, analytical standard, or other experimental use.

EPA recognizes that potentially exposed persons in a laboratory setting may include students, researchers, visiting scholars, or others whose job classifications may vary, such as depending on the academic period in university laboratories. The requirements described in Unit IV. apply to all potentially exposed persons in all laboratory settings, including academic and research laboratories, regardless of job classification.

b. Workplace Requirements

To address the unreasonable risk of injury to health resulting from dermal exposures to PCE identified for the industrial and commercial use as a laboratory chemical, EPA is requiring dermal PPE, including impermeable gloves and protective clothing, in combination with comprehensive training for tasks particularly related to the use of PCE in a laboratory setting as specified in this unit for each potentially exposed person with direct dermal contact to PCE in the work area through direct handling of the substance or from contact with surfaces that may be contaminated with PCE. For dermal PPE, EPA is requiring that each owner or operator comply with the requirements outlined in Units IV.B.6.b. for selection of dermal PPE and training for all potentially exposed persons. EPA's description for how the requirements for the industrial and commercial use as a laboratory chemical address the unreasonable risk resulting from dermal exposures under the conditions of use and the rationale for this regulatory approach is outlined in Unit V. of the 2023 PCE proposed rule.

In addition, EPA is requiring the use of laboratory ventilation devices, such as fume hoods, glove boxes, air handling units, exhaust fans, biological safety devices, airflow controls, and other local exhaust devices, in workplace laboratory settings for the industrial and commercial use of PCE as a laboratory chemical, to codify existing good laboratory practices. EPA is requiring each owner or operator of a workplace laboratory setting, to ensure laboratory ventilation devices are in use and functioning properly to minimize exposures to persons in the area where PCE is used as a laboratory chemical. EPA suggests owners or operators refer to OSHA's 29 CFR 1910.1450, Appendix A, for National Research Council recommendations concerning laboratory

chemical hood ventilation system characteristics and practices and to ANSI's and ASSP's Z9.5–2022 for recommendations on additional laboratory ventilation controls to minimize exposures to potentially exposed persons in the work area.

c. Recordkeeping

To support and demonstrate compliance, EPA is requiring that each owner or operator of a laboratory workplace subject to the requirements of this unit retain compliance records for five years. In alignment with 29 CFR 1910.1450(e)(3)(ii) and (iii) and 29 CFR 1910.132(d)(2), EPA is requiring that owners and operators must retain records of:

- Dermal protection used by each potentially exposed person and PPE program implementation as outlined in this unit;
- Criteria that the owner or operator will use to determine and implement control measures to reduce potentially exposed persons' exposure to PCE including laboratory ventilation devices as outlined in this unit; and
- Implementation of properly functioning laboratory ventilation devices using manufacturer's instructions for installation, use, and maintenance of the systems, including inspections, tests, development of maintenance procedures, the establishment of criteria for acceptable test results, and documentation of test and inspection results.

Every five years, the owner or operator must re-assess and update these records.

d. Compliance Timeframes

With regards to the compliance timeframe, EPA is requiring that each owner or operator of a workplace engaged in the industrial and commercial of PCE as a laboratory chemical ensure laboratory ventilation devices are in use and functioning properly and that dermal PPE is provided to all potentially exposed persons with direct dermal contact with PCE within 360 days after publication of the final rule.

2. Workplace Requirements for Energized Electrical Cleaner

To address the unreasonable risk of injury to health resulting from inhalation and dermal exposures to PCE identified for the industrial and commercial use as an energized electrical cleaner, which is a sub-use of the industrial and commercial use as an aerosol spray degreaser/cleaner, and in consideration of the lack of reasonably available technically and economically

feasible alternatives to PCE for energized electrical cleaning, EPA is requiring (i) specific prescriptive controls outlined in this Unit, including dermal PPE and respiratory protection, or (ii) implementation of the WCPP outlined in Unit IV.B. EPA is also requiring labels and self-certification. As described in Unit III.A.2.e., EPA's workplace requirements to address the unreasonable risk for industrial and commercial use as an energized electrical cleaner are consistent to the extent possible with existing regulations and best practices for work in electrical spaces. EPA acknowledges the existing OSHA requirements for electrical protective equipment under 29 CFR 1910.137 and does not believe the requirements in this rule interfere with a potentially exposed person's ability to safely use electrical protective equipment, such as rubber insulating gloves and rubber insulating sleeves, as required under OSHA.

a. Applicability

The industrial and commercial use of PCE as an energized electrical cleaner refers to the use of PCE in a product that meets both of the following criteria: (1) the product is labeled to clean and/or degrease electrical equipment, where cleaning and/or degreasing is accomplished when electrical current exists, or when there is a residual electrical potential from a component, such as a capacitor; and; (2) the product label clearly displays the statements: "Energized Equipment use only. Not to be used for motorized vehicle maintenance, or their parts."

b. Workplace Requirements for Energized Electrical Cleaner

EPA is requiring that owners or operators must either implement (i) specific prescriptive controls that provide dermal PPE and respiratory protection, or (ii) implement the WCPP for industrial and commercial use as energized electrical cleaner. Owners and operators must maintain a statement regarding whether the business is complying with the specified prescriptive controls or with the WCPP.

i. Prescriptive Controls

A. Dermal protection. To address the unreasonable risk of injury to health resulting from dermal exposures to PCE identified for the industrial and commercial use as an energized electrical cleaner, EPA is requiring dermal PPE, including impermeable gloves and protective clothing, in combination with comprehensive training for each potentially exposed person with direct dermal contact to

PCE in the work area through direct handling of the substance or from contact with surfaces that may be contaminated with PCE. For dermal PPE, EPA is requiring that each owner or operator comply with the requirements outlined in Unit IV.B.6.b. for selection of dermal PPE and training for all potentially exposed persons.

B. Respiratory protection. Based on the 2020 Risk Evaluation for PCE, EPA determined that the use of respirators with an APF of 50 could control PCE air concentrations to levels that address the unreasonable risk from inhalation exposure based on high-end exposures for the industrial and commercial use in aerosol spray degreaser/cleaner. Therefore, EPA is requiring use of specific respiratory protection, in combination with comprehensive training, for use of an energized electrical cleaner containing PCE in confined spaces, as defined in 29 CFR 1910.146(b), or in an enclosed space (such as a manhole or vault), as described in 29 CFR 1910.269(c). Specifically, EPA is requiring owners or operators to provide to potentially exposed persons, and potentially exposed persons to use, the following: any NIOSH Approved® air-purifying full facepiece respirator equipped with organic vapor cartridges or canisters; any NIOSH Approved® Powered Air-Purifying Respirator (PAPR) with a half mask equipped with organic vapor cartridges or canisters; any NIOSH Approved® Supplied-Air Respirator (SAR) or Airline Respirator in a continuous flow mode equipped with a half mask; any NIOSH Approved® Supplied-Air Respirator (SAR) or Airline Respirator operated in a pressure-demand or other positive-pressure mode with a half mask; or any NIOSH Approved® SCBA in demand-mode equipped with a full facepiece or helmet/hood [APF 50]; or any respirator affording a higher degree of protection. In providing the specified respirators and training to potentially exposed persons, EPA is requiring owners or operators to administer a PPE program with procedures and elements for required respirator use as outlined in Unit IV.B.6.a. for proper respirator use, maintenance, fit-testing, medical evaluation, and training. EPA is requiring that the owner or operator must ensure that all filters, cartridges, and canisters used in the workplace are labeled and color coded with the NIOSH approval label and that the label is not removed and remains legible.

For energized electrical cleaning in spaces that are not enclosed or confined, EPA is requiring use of respiratory protection described in Unit IV. if the

potentially exposed person is permitted to approach exposed energized parts closer than the employer's established minimum approach distance by meeting the requirements of 29 CFR 1910.269(l)(3)(iii)(A) through (C) or 29 CFR 1910.333(c)(3)(ii)(A) through (C), or if there is no established minimum approach distance.

ii. WCPP

EPA understands that there may be instances where a performance-based standard is more appropriate to address the unreasonable risk for the industrial and commercial use of PCE as an energized electrical cleaner, instead of the specific prescriptive dermal and respiratory protection requirements described in Unit IV.C.2.b.i. For example, the WCPP may be preferred by owners or operators that regularly use PCE to clean energized electrical equipment onsite at their facility or by owners or operators that are implementing the WCPP at their facility for another condition of use of PCE. In these instances, EPA is requiring owners or operators to comply with the WCPP requirements, including the ECEL, direct dermal contact controls, and ancillary provisions, outlined in Unit IV.B. Owners and operators who choose to follow the WCPP as an alternative to the specific prescriptive controls must also document and maintain a statement that they are electing to comply with the WCPP.

c. Labeling Requirements for Energized Electrical Cleaner

To prevent the use of an energized electrical cleaner containing PCE for unintended applications, such as automotive maintenance or electrical cleaner, EPA is requiring that all manufacturers (including importers), processors, and distributors in commerce of energized electrical cleaner containing PCE provide a label securely attached to each product. Label information is required to be clearly displayed in an easily readable font size, and containing the following text: "This product contains perchloroethylene (PCE) (CASRN 127-18-4), a chemical determined by the Environmental Protection Agency to present unreasonable risk of injury to health under the Toxic Substances Control Act (TSCA), based on neurotoxicity and other adverse health effects. The use of PCE is restricted under 40 CFR part 751, subpart G. This product is for Energized Equipment use only. Not to be used for motorized vehicle maintenance, or their parts."

d. Self-Certification for Energized Electrical Cleaner

To ensure safe and appropriate use of PCE as an energized electric cleaner and to prevent use of an energized electrical cleaner containing PCE for unintended applications, EPA is requiring a point-of-sale self-certification requirement in order to purchase and subsequently use PCE as an energized electrical cleaner. Under this self-certification requirement, EPA is requiring owners or operators, or persons specifically authorized by the owner or operator to purchase energized electrical cleaner, to submit a self-certification to the distributor each time energized electrical cleaner containing PCE is purchased. The self-certification consists of a statement indicating the owner or operator is implementing the prescriptive controls described in Unit IV. or the WCPP described in Unit IV.B. at their business. The self-certification must be signed and presented by a person authorized to do so by the owner or operator of the business entity. EPA is requiring that copies of the self-certification be maintained as records by both the owner or operator and the distributor where PCE was purchased.

Owners or operators who wish to continue or begin purchasing energized electrical cleaners containing PCE must self-certify that the business is implementing and complying with all aspects of the workplace controls (specified respiratory and dermal PPE or the WCPP) described in Unit IV., with the self-certification statement set forth in 40 CFR 751.611(d)(1). This self-certification statement includes, among other information, that the business entity has complied with the rule's requirements and understands the significant penalties for noncompliance with these requirements.

The self-certification statement must be signed and dated by the owner or operator, including a name, title, email address, and phone number for the owner or operator who is self-certifying. The self-certification statement must also list the name and address of the business entity that is being certified and indicate if this is the business entity's first purchase of energized electrical cleaner containing PCE, after publication of the final rule. The self-certification statement would be valid for one year, unless the business entity has changed processes or there is an indication that exposures to PCE have changed.

To ensure distributors are only selling PCE to owners or operators, or to persons specifically authorized by the owner or operator to purchase energized

electrical cleaners, of business entities able to implement and comply with the workplace requirements for energized electrical cleaner, EPA is requiring owners or operators who self-certify to provide a copy of the business entity's current self-certification statement to the distributor from whom energized electrical cleaner containing PCE is being purchased, for every purchase of PCE. EPA is also requiring the distributors to collect, maintain, and retain a copy of the self-certification statement. EPA is also requiring distributors to keep records, such as invoices, that indicate the name of the purchaser and business entity, date of sale, and quantity of PCE purchased. Distributors of PCE as an energized electrical cleaner may only distribute to those companies that provide the correct self-certification statement for purchasing. EPA realizes that some companies may not engage in or use energized electrical cleaners containing PCE at the time this rule is finalized. Owners or operators that may wish to purchase energized electrical cleaners containing PCE after the publication of the final rule are required to submit the self-certification statement to the distributor from whom PCE was initially purchased in order to purchase PCE, certifying that the business for which PCE is being purchased will implement and comply with the workplace requirements for industrial and commercial use as an energized electrical cleaner. EPA is also requiring that sellers and distributors review the self-certification statement to ensure it is appropriately completed to include the business entity's information, as outlined in Unit IV. Distributors of PCE for use in energized electrical cleaners must have a complete and valid self-certification statement in accordance with this section for each sale of PCE for such use. EPA is requiring that the distributors and owners or operators maintain and retain the self-certification statement and related invoices in the most administratively convenient form (electronic or paper) and retain the statement and supporting documentation for five years.

e. Recordkeeping

To support and demonstrate compliance, EPA is requiring that each owner or operator subject to the requirements of this Unit retain compliance records for five years. EPA is requiring that owners and operators must retain records of:

- The self-certification statement and related invoices, including: (A) the written statement required in Unit IV.C.2.d.; (B) printed name and

signature, job classification, email address, and phone number of the owner or operator who is self-certifying; (C) date of self-certification; and (D) name and address of business entity; and

- Statement regarding whether the owner or operator is complying with the prescriptive dermal and respiratory protection requirements or with the WCPP.

Additionally, for owners or operators that elect to comply with the prescriptive dermal and respiratory protection requirements outlined in Unit IV.C.2.b.i., EPA is requiring that owners and operators must retain records of:

- Dermal protection used by each potentially exposed person and program implementation;
- Respiratory protection used by each potentially exposed person and program implementation;

For owners or operators that elect to comply with the WCPP instead of the prescriptive dermal and respiratory protection outlined in Unit IV.C.2.b.i., owners and operators must retain the records described in Unit IV.B.7.c.

EPA is also requiring sellers and distributors of energized electrical cleaner containing PCE to retain the following:

- Invoices that include: (A) name of purchaser; (B) date of sale; and (C) quantity of PCE or PCE containing products sold; and
- Self-certification statement for each purchase of PCE; and
- Copies of the labels required in Unit IV.C.2.c.

f. Compliance Timeframes

With regards to the compliance timeframe, EPA is requiring that each owner or operator of a business entity engaged in the industrial and commercial use of PCE as an energized electrical cleaner either: (1) Implement the specific prescriptive controls of dermal and respiratory protection for energized electrical cleaner described in this unit within 450 days of the publication of this final rule or (2) implement the WCPP in accordance with the compliance timeframes described in Unit IV.B.8., which includes requiring owners and operators to establish initial monitoring within 360 days of the publication of this final rule and providing PPE within 450 days of the publication of this final rule. Additionally, EPA is requiring that the labeling requirement take effect 450 days after publication of this final rule for manufacturers (including importers), processors, and distributors of energized electrical cleaner containing PCE. EPA

is also requiring the self-certification requirements take effect 450 days after publication of this final rule for owners or operators and distributors.

D. Prohibition of Manufacture, Processing, Distribution, and Use of PCE

1. Prohibition of Certain Industrial and Commercial Uses and Manufacturing, Processing, and Distribution in Commerce of PCE for Those Uses

In general, EPA is finalizing the prohibitions as proposed, with some modifications, including for compliance timeframes to provide for reasonable transitions, based on consideration of the public comments. The rule prohibits the manufacture, processing, distribution in commerce, and use of PCE for all industrial and commercial use, except for those industrial and commercial uses which would continue under the WCPP (as identified in Unit IV.A.2.), laboratory use (as identified in Unit IV.A.3.) and use as an energized electrical cleaner (as identified in Unit IV.A.3). Based on comments, EPA is finalizing timeframes longer than proposed for prohibitions of manufacture, processing, distribution, and most industrial and commercial use of PCE broadly. The rationale for these changes from the 2023 PCE proposed rule is in Unit III.B.2. EPA is also finalizing as proposed the phaseout timeframes for the industrial and commercial use of PCE in dry cleaning and related spot cleaning as described in Unit IV.D.3.

As discussed in Unit II.C.4., the prohibitions do not apply to any substance that is excluded from the definition of “chemical substance” under TSCA section 3(2)(B)(ii) through (vi) (Ref. 8).

The final regulation will impose prohibitions in a staggered timeframe, beginning at the top of the supply chain, as proposed. As discussed in Unit III.B.2., in response to comments received, EPA is finalizing timeframes for prohibitions according to the following staggered timeframe:

- Within 540 days of publication of this final rule for prohibitions on manufacturers;
- Within 630 days of publication of this final rule for prohibitions on processors;
- Within 720 days of publication of this final rule for prohibitions on distributing to retailers;
- Within 810 days of publication of this final rule for prohibitions on all other distributors (including retailers); and
- Within 900 days of publication of this final rule for prohibitions on industrial and commercial users.

Additionally, EPA had proposed a WCPP for the industrial and commercial use of PCE for in-line conveyORIZED and web vapor degreasing. After receiving public comments that clarified that these uses are no longer ongoing, EPA is finalizing the prohibition of these uses.

2. Prohibition of Manufacturing, Processing and Distribution in Commerce of PCE for Consumer Use

The final rule prohibits the manufacture, processing, and distribution in commerce of PCE and PCE-containing products for all consumer use. As discussed in the 2023 PCE proposed rule and in this final rule, “consumer use” refers to all known, intended, or reasonably foreseen PCE consumer uses.

EPA is also finalizing the proposed prohibitions on distributing in commerce to retailers, and on retailers from distributing in commerce, PCE and all PCE-containing products for any use (with the exception of dry cleaning, which is subject to a separate phaseout described in Unit IV.D.3), in order to prevent products intended for industrial and commercial use under the WCPP or prescriptive controls from being purchased by consumers. The prohibitions described in this unit will take effect in the following timeframes:

- Within 540 days of publication of this final rule for prohibitions on manufacturers;
- Within 630 days of publication of this final rule for prohibitions on processors, within 720 days of publication of this final rule for prohibitions on distributing to retailers; and
- Within 810 days of publication of this final rule for prohibitions on all other distributors (including retailers).

A retailer is any person or business entity that distributes or makes available products to consumers, including through e-commerce internet sales or distribution. If a person or business entity distributes or makes available any product to at least one consumer, then it is considered a retailer (40 CFR 751.5). For a distributor not to be considered a retailer, the distributor must distribute or make available products solely to commercial or industrial end-users or businesses. Prohibiting manufacturers (including importers), processors, and distributors from distributing PCE, or any products containing PCE, to retailers prevents retailers from making these products available to consumers, which helps address that part of the unreasonable risk from PCE contributed by consumer use.

3. Prohibition and Phaseout of PCE in Dry Cleaning

EPA is finalizing as proposed the prohibition on the manufacturing, processing, distribution of commerce, and industrial and commercial use of PCE for dry cleaning and spot cleaning, including in 3rd generation (dry-to-dry machines with refrigerated condenser) and 4th/5th generation (dry-to-dry machines with refrigerated condenser and carbon adsorber process controls) machines. A prohibition on the manufacturing, processing, distribution in commerce, and industrial and commercial use of PCE in dry cleaning and spot cleaning addresses the unreasonable risk for the following conditions of use as described in Unit III.B.1 of the 2023 PCE proposed rule:

- *Industrial and commercial use in dry cleaning and spot cleaning post-2006 dry cleaning.* This condition of use refers to industrial and commercial use of PCE in products for spot cleaning and as a solvent in degreasing and cleaning applications to remove dirt, grease, stains, spots, and foreign matter from garments at dry cleaning facilities that use PCE dry cleaning machines after the promulgation of the 2006 PCE NESHAP for Dry Cleaning Facilities (40 CFR part 63, subpart M). This includes dry cleaning facilities using third generation (dry-to-dry, non-vented machines with refrigerated condensers), fourth generation (dry-to-dry, non-vented machines with both refrigerated condensers and carbon adsorbers as secondary vapor controls), or fifth generation (dry-to-dry, non-vented machines with secondary vapor controls, a monitor inside the machine drum, and an interlocking system to ensure the concentration is below approximately 300 ppm before the loading door can be opened) PCE dry cleaning machines.

- *Industrial and commercial use in dry cleaning and spot cleaning 4th/5th generation only dry cleaning.* This condition of use refers to industrial and commercial use of PCE in products for spot cleaning and as a solvent in degreasing and cleaning applications to remove dirt, grease, stains, spots, and foreign matter from garments at dry cleaning facilities that use fourth generation or fifth generation PCE machines. In addition to use as a solvent in dry cleaning equipment, PCE is found in products to spot clean garments to remove stains or spots before and after dry cleaning treatment.

- *Consumer use in dry cleaning solvent (i.e., exposure to clothing or articles recently dry cleaned with PCE).* This condition of use refers to consumer

exposure to PCE used to remove dirt, grease, stains, spots, and foreign matter from garments via dry cleaning, in particular the transportation, storage, and wear of articles that were dry cleaned with PCE. For example, garments that are dry cleaned at facilities that use PCE as a dry cleaning solvent have residual concentrations of PCE remaining in the article after a dry cleaning event.

EPA is finalizing a phaseout period following the publication of the final rule. The phaseout starts with a prohibition on the industrial or commercial use of PCE in any dry cleaning machine acquired 180 days or later after publication of the final rule, followed by a prohibition on the industrial or commercial use of PCE in 3rd generation machines 3 years after publication of the final rule. Full implementation of the phaseout will be achieved with a prohibition on the industrial or commercial use of PCE in all dry cleaning and spot cleaning, including in 4th and 5th generation machines, 10 years after publication of the final rule and a prohibition on the manufacturing, processing, and distribution in commerce of PCE for use in dry cleaning solvent 10 years after publication of the final rule. EPA understands that the use of PCE in dry cleaning is currently declining and that very few PCE machines are being produced or sold in the United States market (Ref. 21). As described more fully in the Economic Analysis (Ref. 3), EPA assumes dry cleaning machines are retired 15 to 25 years after the manufactured date. A 3-year phaseout of the use of PCE in 3rd generation dry cleaning machines takes into consideration the age of existing 3rd generation dry cleaning machines as well as public comments submitted on the proposed amendments to the PCE Dry Cleaning NESHAP (December 27, 2021, 86 FR 73207) recommending a 3- to 5-year compliance timeframe at minimum to account for supply issues related to those machines. A 10-year phaseout of the use of PCE in dry cleaning and spot cleaning takes into account that, while the average projected useful lifespan of dry cleaning machines is 15 to 25 years, the purchase of new PCE dry cleaning machines has been in decline. EPA believes that the 180-day and 3-year compliance dates for the start of the phaseout, and the 10-year compliance date for full implementation of the phaseout, are consistent with requirements in TSCA section 6(d)(1)(C) and (D), respectively, to specify mandatory compliance dates for the start of phaseout requirements

that are as soon as practicable but not later than five years after the date of promulgation of the rule, and to specify mandatory compliance dates for full implementation of phaseout requirements that are as soon as practicable. EPA also believes that these compliance dates provide for a reasonable transition period, consistent with TSCA section 6(d)(1)(E).

E. Other Requirements

1. Recordkeeping

For conditions of use that are not otherwise prohibited under this final rule, EPA is finalizing as proposed the requirement that manufacturers, processors, distributors, and commercial users maintain ordinary business records, such as invoices and bills-of-lading, that demonstrate compliance with the prohibitions, restrictions, and other provisions of this proposed regulation; and to maintain such records for a period of 5 years from the date the record is generated. This requirement begins 60 days following publication of the final rule in the **Federal Register**. For enforcement purposes, EPA will have access to such businesses records plus additional records required under 40 CFR 751.615. Recordkeeping requirements would ensure that owners or operators can demonstrate compliance with the regulations if necessary.

2. Downstream Notification

For conditions of use that are not otherwise prohibited or are subject to delayed prohibition compliance timeframes under this final regulation, EPA is finalizing as proposed, with slight modification, the requirements that manufacturers (including importers), processors, and distributors, excluding retailers, of PCE and PCE-containing products provide downstream notification of the prohibitions through the SDSs by adding to sections 1(c) and 15 of the SDS the language set forth in 40 CFR 751.613(c). This notification spreads awareness throughout the supply chain that PCE and PCE-containing products can only be distributed in commerce or processed with a concentration of PCE equal to or greater than 0.1% by weight for uses that are not prohibited and for dry cleaning until the prohibition dates come into effect.

To provide adequate time to update the SDS and ensure that all products in the supply chain include the revised SDS, EPA's final rule requires manufacturers to revise their SDS within two months of rule publication and processors and distributors to revise

their SDS within six months of rule publication. EPA did not receive public comments asserting that these compliance dates for updating the SDS were impracticable, and is therefore finalizing the compliance dates as proposed. The intention of downstream notification is to spread awareness throughout the supply chain of the restrictions on PCE under TSCA and to provide information to commercial end-users about allowable uses of PCE.

F. TSCA Section 6(g) Exemptions

EPA is finalizing with minor clarifications the proposed 10-year exemption for emergency use of PCE in furtherance of NASA's mission for the following specific conditions of use: Industrial and commercial use as solvent for cold cleaning; and Industrial and commercial use in wipe cleaning. The exemption includes conditions, pursuant to TSCA section 6(g)(4), including required notification and controls for exposure, to the extent feasible. Specifically, this regulation requires the following: (1) NASA and its contractors must provide notice to the EPA Assistant Administrators of both the Office of Enforcement and Compliance Assurance and the Office of Chemical Safety and Pollution Prevention of each instance of emergency use within 15 days; and (2) NASA and its contractors must comply with the WCPP described in Unit IV.B to the extent feasible. The notification must include a description of the specific use of PCE in the context of one of the conditions of use for which this exemption is being finalized, an explanation of why the use described qualifies as an emergency, and an explanation with regard to the lack of availability of technically and economically feasible safer alternatives. EPA notes that in the event that sensitive information clearly marked as such relating to national security or critical infrastructure is submitted to EPA at any point during the TSCA section 6 process, the Agency will protect such information in accordance with applicable authorities.

EPA expects NASA and its contractors have the ability to implement a WCPP as described in Unit IV.B. for the identified uses in the context of an emergency, to some extent even if not to the full extent of WCPP implementation. Therefore, NASA must comply with the WCPP to the extent technically feasible in light of the particular emergency. NASA and its contractors would still be subject to the general recordkeeping requirements discussed in Unit IV.E.1.

V. TSCA Section 6(c)(2) Considerations**A. Health Effects of PCE and the Magnitude of Human Exposure to PCE**

EPA's analysis of the health effects of PCE and the magnitude of human exposure to PCE are in the 2020 Risk Evaluation for PCE and the 2022 revised unreasonable risk determination for PCE (Refs. 1, 2). A summary is presented in Unit V.

The 2020 Risk Evaluation for PCE identified potential health effects of PCE including non-cancer adverse health effects such as neurotoxicity and central nervous system effects, kidney and liver effects, immune system toxicity, reproductive toxicity, and developmental toxicity and cancer hazards from carcinogenicity as well as genotoxicity.

Among the non-cancer adverse health effects, EPA identified visual deficits indicative of neurotoxicity as a primary effect of PCE in humans following acute and chronic inhalation and dermal exposures. Identified symptoms of neurotoxicity include color confusion, changes in visual contrast detection, and alteration of visual-spatial function. Impaired visual and cognitive function and diminished color discrimination are the most sensitive adverse effects driving the unreasonable risk of PCE exposure. Prenatal and early childhood exposure to PCE has also been linked to statistically significant increased risk of engaging in risky behaviors. Additionally, the 2020 Risk Evaluation for PCE identified that PCE exposure is associated with several types of cancer, including liver tumors, brain gliomas, kidney cancer, and testicular cancer. By the criteria presented in EPA's Guidelines for Carcinogen Risk Assessment (Ref. 78), PCE is characterized as "likely to be carcinogenic to humans by all routes of exposure" based on conclusive evidence in mice and rats and suggestive evidence in humans.

Other adverse health effects identified in the 2020 Risk Evaluation for PCE identified include central nervous system depression, kidney nephrotoxicity and proximal tubule nuclear enlargement, liver necrosis and extreme dilation of blood or lymph vessels, reduced sperm quality, reduced red blood cells and hemoglobin, increased immune cells, decreased fetal/placental weight, developmental neurotoxicity, and skeletal effects from chronic exposures (Ref. 1).

Regarding the magnitude of human exposure, one factor EPA considers for the conditions of use that drive unreasonable risk is the size of the exposed population which, for PCE,

EPA estimates is 259,609 workers and 31,449 occupational non-users (ONUs) (Ref. 3). The number of consumers that use the approximately 115 types of products containing PCE each year is unknown. See section 6.1.9 of the Economic Analysis and section 8.4.1 of the response to comment document for additional detail, including a description of changes made from the 2023 PCE proposed rule to EPA's estimates in response to public comment (Refs. 3, 8).

For the conditions of use that drive the unreasonable risk for PCE, PESS include workers, ONUs, consumer users, and bystanders to consumers using products containing PCE. Children of workers present at dry cleaners are also a PESS group exposed to PCE during industrial and commercial use of PCE in dry cleaning and spot cleaning.

In addition to these estimates of numbers of workers, occupational non-users, consumers, and bystanders to consumer use directly exposed to PCE, EPA recognizes there is exposure to the general population from air and water pathways for PCE. (While bystanders are individuals in proximity to a consumer use of PCE, fenceline communities are a subset of the general population who may be living in proximity to a facility where PCE is being used in an occupational setting). EPA separately conducted a screening approach to assess whether there may be potential risks to the general population from these exposure pathways. This analysis is summarized in full in the 2023 PCE proposed rule, which includes information on the SACC peer review. This unit addresses those areas where some risk was indicated at the fenceline, and the condition of use will be continuing under the rule.

EPA's analysis methodology was presented to the SACC peer review panel in March 2022, and EPA is including SACC recommendations, as appropriate, in assessing general population exposures in upcoming risk evaluations. EPA's fenceline analysis for the water pathway for PCE, based on methods presented to the SACC, did not find risks from drinking water, incidental oral ingestion of surface water, or incidental dermal exposure to surface water (Ref. 79). EPA therefore does not intend to revisit or conduct an analysis of the water pathway for PCE as part of a supplemental risk evaluation.

EPA's analysis for the air pathway for PCE using methodology presented to SACC and the multi-year analysis conducted in response indicated potential exposure and associated risks

to select populations within the general population at particular facilities (Ref. 80). As described in Unit VI.A. of the 2023 PCE proposed rule, EPA's fenceline analysis for the air pathway for PCE indicates that EPA is not able to conclude that there are no potential risks to fenceline communities. Additionally, based on the fenceline analysis for the ambient air pathway for PCE, including the strengths, limitations, and uncertainties associated with the information used to inform the analysis, EPA is unable to determine with this screening analysis whether those risks drive the unreasonable risk of injury to health presented by PCE. Although EPA did not make a determination of unreasonable risk based on the fenceline screening analysis, this final regulatory action is expected to reduce the risks identified in the screening approach. Additionally, while the fenceline screening analysis identified facilities with some indication of releases and potential exposures with associated increased cancer risk that exceeds the 1×10^{-6} benchmark, the analysis did not identify any facilities exceeding the 1×10^{-4} benchmark; the highest risk estimate identified is in the 1×10^{-5} range (Ref. 80). Standard cancer benchmarks used by EPA and other regulatory agencies are an increased cancer risk above benchmarks ranging from 1 in 1,000,000 to 1 in 10,000 (*i.e.*, 1×10^{-6} to 1×10^{-4}). For example, when setting standards under CAA section 112(f)(2), EPA uses a two-step process, with "an analytical first step to determine an 'acceptable risk' that considers all health information, including risk estimation uncertainty, and includes a presumptive limit on maximum individual risk (MIR) of approximately 1-in-10 thousand" (Ref. 81, referencing the interpretation set forth in the 1989 final National Emission Standards for Benzene rule (54 FR 38044 Sept. 14, 1989)).

EPA believes that the prohibitions being finalized for manufacturing (including importing), processing, and distribution in commerce for all consumer use and most commercial use would reduce exposures to the general population, including fenceline communities. Of the 29 facilities which indicated potential exposure and associated increased cancer risk to fenceline communities, under the final regulation, 20 may be associated with conditions of use that EPA is not prohibiting, and thus exposures at the fenceline at the remaining 9 facilities would be addressed.

Under the final rule, only 16 conditions of use will continue (see

Units IV.B. and IV.C. for a summary). For many of these conditions of use, EPA expects use and associated production volume of PCE to decline over time. For example, the manufacturing and processing; incorporation into a formulation, mixture, or reaction product conditions of use can reasonably be expected to decline. While EPA is permitting the continued manufacturing and processing of PCE subject to the WCPP, the downstream distribution and use of formulations, mixtures, or reaction products for most conditions of use would be prohibited. Exceptions include the distribution and use of products for conditions of use that EPA is not prohibiting in this final regulation, including certain degreasing applications (e.g., vapor degreasing, cold cleaning, and energized electrical cleaning), chemical milling, adhesives and sealants, processing aid, and laboratory use. Additionally, EPA expects the processing of PCE as a reactant in the generation of HFC-134a and HFC-125 to decline over time, in light of the AIM Act requirements to phase down production and consumption of listed HFCs by 85% over the next 15 years. HFC-125 and HFC-134a are two of the regulated substances that are subject to the AIM Act phasedown.

For the conditions of use that are not prohibited, this final rule requires exposure controls via implementation of a WCPP or prescriptive controls as described in Units IV.B. and IV.C. While it is possible that efforts to reduce exposures in the workplace to levels below the ECEL could lead to adoption of engineering controls that ventilate more PCE outside, EPA predicts that this potential exposure would be limited as a result of the existing NESHAP that cover PCE for these conditions of use under the CAA. Applicable NESHAPs include: 40 CFR part 63, subpart F, Synthetic Organic Chemical Manufacturing Industry; 40 CFR part 63, subpart DD, Off-Site Waste and Recovery Operations; 40 CFR part 63, subpart VVV, Publicly Owned Treatment Works; 40 CFR part 63, subpart VVVVVV, Chemical Manufacturing Area Sources; 40 CFR part 63, subpart GG, Aerospace Manufacturing and Rework Facilities; 40 CFR part 63, subpart T, Halogenated Solvent Cleaning, and any exceedances would be an enforcement issue. The CAA establishes a two-phase process for the EPA's development, review, and potential revision of NESHAP that impose emission standards and work practice requirements on subject

categories of sources of hazardous air pollutants. First, the EPA sets technology-based or performance-based standards reflecting the maximum achievable control technology (MACT) for major sources (CAA section 112(d)(2)-(3)) and generally available control technology (GACT) for area or non-major sources (CAA section 112(d)(5)). In the second phase, eight years after adoption of the first phase standards, the EPA performs a residual risk review of major source MACT standards to ensure that they provide an ample margin of safety to protect public health (CAA section 112(f)(2)), and a technology review of all NESHAP to account for developments in practices, processes and control technologies (CAA section 112(d)(6)). The CAA only requires the EPA to conduct the residual risk review one time for each MACT standard, although the EPA has discretion to conduct additional risk reviews where warranted. The technology review, instead, is a recurring duty, and the EPA must perform it no less often than every eight years.

Thus, the prohibitions and restrictions on PCE in this final rule, combined with the expected decline in production volume for PCE and the CAA requirements described above, are expected to sufficiently address the emissions of PCE, and thus the resulting risks identified in the screening analysis to any general population or fence-line communities close to facilities engaging in PCE use. EPA therefore does not intend to revisit or conduct an analysis of the air pathway for PCE as part of a supplemental risk evaluation.

B. Environmental Effects of PCE and the Magnitude of Environmental Exposure to PCE

EPA's analysis of the environmental effects of PCE and the magnitude of exposure of the environment to PCE are in the 2020 Risk Evaluation for PCE and the 2022 revised unreasonable risk determination for PCE (Refs. 1, 2). The unreasonable risk determination for PCE is based solely on risks to human health; based on the TSCA 2020 Risk Evaluation for PCE, EPA determined that exposures to the environment did not drive the unreasonable risk. A summary is presented in Unit V.

The manufacturing, processing, use, and disposal of PCE can result in releases to the environment, including aquatic releases of PCE from facilities that manufacture, use, or process PCE. Fate, exposure, and environmental hazard were evaluated in the 2020 Risk Evaluation for PCE in order to characterize environmental risk of PCE.

PCE has low bioaccumulation potential and moderate potential to accumulate in wastewater biosolids, soil, or sediment. Releases of PCE to the environment are likely to volatilize to the atmosphere, where it will slowly photooxidize. It may migrate to groundwater, where it will slowly hydrolyze. Additionally, the bioconcentration potential of PCE is low.

Potential effects of PCE exposure described in the literature for aquatic life include mortality, developmental deformities, immobilization, reproductive effects, growth effects, and biomass effects. EPA concluded that PCE poses a hazard to environmental aquatic organisms, including aquatic invertebrates, fish, amphibians, and aquatic plants (algae). For acute exposures, PCE is a hazard to aquatic invertebrates based on immobilization, to fish based on immobilization of midge larvae at 7.0 mg/L, to fish based on mortality of rainbow trout as the most sensitive species with acute toxicity values as low as 4.8 mg/L, and amphibians based on developmental effects to the wood frog as the most sensitive species with acute toxicity values as low as 7.8 mg/L. For chronic exposures, PCE is a hazard to aquatic invertebrates, with a toxicity value of 0.5 mg/L; and a chronic toxicity value of 0.84 mg/L for fish. PCE is also a hazard for green algae with a toxicity value of 3.6 mg/L. EPA incorporated modeled exposure data from the Exposure and Fate Assessment Screening Tool (Ref. 82), as well as monitored data from the Water Quality Portal (Ref. 83), to characterize the exposure of PCE to aquatic species.

In the 2020 Risk Evaluation for PCE, the indicators evaluated for risk of injury to the environment include immobilization from acute exposure, growth effects from chronic exposure, and mortality to algae (Ref. 1). Based on the 2020 Risk Evaluation for PCE, EPA did not identify risk of injury to the environment that drive the unreasonable risk determination for PCE.

C. Benefits of PCE for Various Uses

As described in the 2023 PCE proposed rule, PCE is a solvent used in a variety of industrial, commercial, and consumer use applications, including as a feedstock in the production of fluorinated compounds, cleaning and degreasing, adhesives and sealants, paints and coatings, lubricants and greases, processing aid, and other uses. The physical and chemical properties of PCE, such as non-flammability, high volatility, low global warming potential, low vapor pressure, high chloride

density, high boiling point, and high solvency of oils, waxes, and greases, as well as relatively low cost, make it a popular and effective solvent for many applications (Refs. 1, 84).

D. Reasonably Ascertainable Economic Consequences of the Final Rule

1. Likely Effect of the Rule on the National Economy, Small Business, Technological Innovation, the Environment, and Public Health

The reasonably ascertainable economic consequences of this final rule include several components, all of which are described in the Economic Analysis (Ref. 3). With respect to the anticipated effects of this final rule on the national economy, EPA considered the number of businesses and workers that would be affected and the costs and benefits to those businesses and workers and did not find that there would be an impact on the national economy (Ref. 3). The economic impact of a regulation on the national economy becomes measurable only if the economic impact of the regulation reaches 0.25% to 0.5% of Gross Domestic Product (GDP). Given the current GDP, this is equivalent to a cost of \$40 billion to \$80 billion. Therefore, because EPA has estimated that the monetized cost of the final rule would be \$43.4 million annualized over 20 years at a 2% discount rate, EPA has concluded that this rule is highly unlikely to have any measurable effect on the national economy (Ref. 3). In addition, EPA considered the employment impacts of this final rule, and found that the direction of change in employment is uncertain, but EPA expects the short-term and longer-term employment effects to be small.

There are an estimated 154,683 small entities affected by the final rule with a per firm and total estimated cost impact of \$177 and \$27.4 million, respectively. Of the small businesses potentially impacted by this final rule, almost 100% (154,671 out of 154,683) are expected to have impacts of less than 1% to their firm revenues, 8 (0.00005%) are expected to have impacts between 1 and 3% to their firm revenues, and 5 (0.00003%) are expected to have impacts greater than 3% to their firm revenues. Most of these small entities (94%) are users of PCE in aerosol degreasing with an estimated 119,523 small entities using PCE in energized electrical cleaning and an estimated 26,050 small entities using PCE in other aerosol spray cleaning/degreasing uses like brake cleaning.

EPA estimates that there are 6,000 firms currently using PCE dry cleaning machines but estimates that only 62

would still be using PCE for dry cleaning by the end of the proposed 10-year phaseout. As described further in the Economic Analysis, EPA maintains that almost no new PCE machines have been brought into service in recent years and therefore most existing dry cleaning machines using PCE are old and will no longer be in service by the phaseout date.

In addition to dry cleaners, other users of PCE (such as in vapor degreasing and use as maskant in chemical milling) could be strongly impacted because they may have no economical alternative to the use of PCE.

With respect to this rule's effect on technological innovation, EPA expects this rule to spur more innovation than it will hinder. A prohibition or significant restriction on the manufacture, processing, and distribution in commerce of PCE for uses covered in this final rule may increase demand for safer chemical substitutes. This rule is not likely to have significant effects on the environment because PCE does not present an unreasonable risk to the environment, though this rule does present the potential for small reductions in air emissions and soil contamination associated with improper disposal of products containing PCE. The effects of this rule on public health are estimated to be positive, due to the reduced risk of cancer and other non-cancer endpoints from exposure to PCE.

2. Costs and Benefits of the Regulatory Action and of the One or More Primary Alternative Regulatory Actions Considered by the Administrator

The costs and benefits that can be monetized for this rule are described at length in the Economic Analysis (Ref. 3). The monetized costs for this final rule are estimated to be \$43.4 million annualized over 20 years at a 2% discount rate. The monetized benefits are estimated to be \$32.6 to \$84.6 million annualized over 20 years at a 2% discount rate.

EPA considered the estimated costs to regulated entities as well as the cost to administer and enforce an alternative regulatory action. The alternative regulatory action is described in detail in Unit IV.B of the 2023 PCE proposed rule. The estimated annualized cost of the alternative regulatory action is \$62.1 million at a 2% discount rate over 20 years (Ref. 3). The monetized benefits of the alternative action are estimated to be \$32.5 to \$84.4 million annualized over 20 years at a 2% discount rate (Ref. 3).

This final rule is expected to achieve health benefits for the American public,

some of which can be monetized and others that, while tangible and significant, cannot be monetized. EPA believes that the balance of costs and benefits of this proposal cannot be fairly described without considering the additional, non-monetized benefits of mitigating the non-cancer adverse effects. These effects may include neurotoxicity, kidney toxicity, liver toxicity, immunological and hematological effects, reproductive effects, and developmental effects. The multitude of adverse effects from PCE exposure can profoundly impact an individual's quality of life, as discussed in Units II.A. (overview), III.B.2. (description of the unreasonable risk), V.A. (discussion of the health effects), and the 2020 Risk Evaluation for PCE. Chronic adverse effects of PCE exposure include both cancer and the non-cancer effects listed previously. Acute effects of PCE exposure could be experienced for a shorter portion of life but are nevertheless significant in nature. The incremental improvements in health outcomes achieved by given reductions in exposure cannot be quantified for non-cancer health effects associated with PCE exposure, and therefore cannot be converted into monetized benefits. The qualitative discussion throughout this rulemaking and in the Economic Analysis highlights the importance of these non-cancer effects. These effects include willingness-to-pay to avoid illness, which includes cost of illness and other personal costs such as pain and suffering. Considering only monetized benefits underestimates the impacts of PCE adverse outcomes and therefore underestimates the benefits of this 2023 PCE proposed rule.

3. Cost Effectiveness of the Regulatory Action and of One or More Primary Alternative Regulatory Actions Considered by the Administrator

Cost effectiveness is a method of comparing certain actions in terms of the expense per item of interest or goal. A goal of this regulatory action is to prevent unreasonable risk resulting from exposure to PCE. The regulatory action would cost \$3.1 million per potential prevented cancer case while the primary alternative regulatory action would cost \$4.4 million (using the 2% discount rate) (Ref. 3).

VI. TSCA Section 9 Analysis and Section 14 and 26 Considerations

A. TSCA Section 9(a) Analysis

TSCA section 9(a) provides that, if the Administrator determines, in the Administrator's discretion, that an unreasonable risk may be prevented or

reduced to a sufficient extent by an action taken under a Federal law not administered by EPA, the Administrator must submit a report to the agency administering that other law that describes the risk and the activities that present such risk. TSCA section 9(a) describes additional procedures and requirements to be followed by EPA and the other Federal agency after submission of the report. As discussed in Unit VI., the Administrator does not determine that unreasonable risk from PCE under the conditions of use may be prevented or reduced to a sufficient extent by an action taken under a Federal law not administered by EPA. EPA's section 9(a) analysis can be found in full in Unit VII.A. of the 2023 PCE proposed rule, and responses to comments on that 9(a) analysis can be found in the Response to Comments, section 9.1 (Ref. 8).

TSCA section 9(d) instructs the Administrator to consult and coordinate TSCA activities with other Federal agencies for the purpose of achieving the maximum enforcement of TSCA while imposing the least burden of duplicative requirements. For this rulemaking, EPA has coordinated with appropriate Federal executive departments and agencies including but not limited to OSHA and the Consumer Product Safety Commission (CPSC), to, among other things, identify their respective authorities, jurisdictions, and existing laws with regard to risk evaluation and risk management of PCE.

As discussed in more detail in the 2023 PCE proposed rule, OSHA requires that employers provide safe and healthful working conditions by setting and enforcing standards and by providing training, outreach, education, and assistance. OSHA, in 1971, established a PEL for PCE of 100 ppm of air as an 8-hour TWA with an acceptable ceiling concentration of 200 ppm and an acceptable maximum peak above the acceptable ceiling concentration for an eight-hour shift of 300 ppm, maximum duration of 5 minutes in any 3 hours. However, the exposure limits established by OSHA are higher than the exposure limit that EPA determined would be sufficient to address the unreasonable risk identified under TSCA from occupational inhalation exposures associated with certain conditions of use. Gaps exist between OSHA's authority to set workplace standards under the OSH Act and EPA's obligations under TSCA section 6 to eliminate unreasonable risk presented by chemical substances under the conditions of use. The U.S. CPSC, under authority provided to it by Congress in the Consumer Product

Safety Act (CPSA), protects the public from unreasonable risk of injury or death associated with consumer products. Under the CPSA, CPSC has the authority to regulate PCE in consumer products, but not in other sectors such as automobiles, some industrial and commercial products, or aircraft for example.

EPA therefore concludes that TSCA is the only regulatory authority able to prevent or reduce unreasonable risk of PCE to a sufficient extent across the range of conditions of use, exposures, and populations of concern. An action under TSCA is also able to address occupational unreasonable risk and would reach entities that are not subject to OSHA. Moreover, the timeframe and any exposure reduction as a result of updating OSHA or CPSC regulations for PCE cannot be estimated, while TSCA imposes a much more accelerated two-year statutory timeframe for proposing and finalizing requirements to address unreasonable risk. Regulating PCE's unreasonable risk utilizing TSCA authority will also avoid the situation where a patchwork of regulations amongst several Agencies using multiple laws and differing legal standards would occur and is therefore a more efficient and effective means of addressing the unreasonable risk of PCE. Finally, as discussed in greater detail in the 2023 PCE proposed rule, the 2016 amendments to TSCA altered both the manner of identifying unreasonable risk and EPA's authority to address unreasonable risk, such that risk management is increasingly distinct from provisions of the CPSA, Federal Hazardous Substances Act (FHSA), or OSH Act (88 FR 39652) (FRL-8329-01-OCSP). For these reasons, in the Administrator's discretion, the Administrator has analyzed this issue and does not determine that unreasonable risk from PCE may be prevented or reduced to a sufficient extent by an action taken under a Federal law not administered by EPA.

B. TSCA Section 9(b) Analysis

If EPA determines that actions under other Federal laws administered in whole or in part by EPA could eliminate or sufficiently reduce a risk to health or the environment, TSCA section 9(b) instructs EPA to use these other authorities to protect against that risk "unless the Administrator determines, in the Administrator's discretion, that it is in the public interest to protect against such risk" under TSCA. In making such a public interest finding, TSCA section 9(b)(2) states: "the Administrator shall consider, based on information reasonably available to the

Administrator, all relevant aspects of the risk . . . and a comparison of the estimated costs and efficiencies of the action to be taken under this title and an action to be taken under such other law to protect against such risk."

Although several EPA statutes have been used to limit PCE exposure (Refs. 3, 5), regulations under those EPA statutes largely regulate releases to the environment, rather than occupational or consumer exposures. While these limits on releases to the environment are protective in the context of their respective statutory authorities, regulation under TSCA is also appropriate for occupational and consumer exposures and in some cases can provide upstream protections that would prevent the need for release restrictions required by other EPA statutes (e.g., RCRA, CAA, CWA). Updating regulations under other EPA statutes would not be sufficient to address the unreasonable risk of injury to the health of workers, occupational non-users, consumers, and bystanders who are exposed to PCE under its conditions of use. EPA's section 9(b) analysis can be found in full in Unit VII.B. of the 2023 PCE proposed rule, and responses to comments on that 9(b) analysis can be found in the Response to Comments, section 9.2 (Ref. 8).

For these reasons, the Administrator does not determine that unreasonable risk from PCE under its conditions of use, as evaluated in the 2020 Risk Evaluation for PCE (Ref. 1), could be eliminated or reduced to a sufficient extent by actions taken under other Federal laws administered in whole or in part by EPA.

C. TSCA Section 14 Requirements

EPA is also providing notice to manufacturers, processors, and other interested parties about potential impacts to CBI. Under TSCA sections 14(a) and 14(b)(4), if EPA promulgates a rule pursuant to TSCA section 6(a) that establishes a ban or phase-out of a chemical substance, the protection from disclosure of any CBI regarding that chemical substance and submitted pursuant to TSCA will be "presumed to no longer apply," subject to the limitations identified in TSCA section 14(b)(4)(B)(i) through (iii). Pursuant to TSCA section 14(b)(4)(B)(iii), the presumption against protection from disclosure will apply only to information about the specific conditions of use that this rule prohibits or phases out. Per TSCA section 14(b)(4)(B)(i), the presumption against protection will not apply to information about certain emergency uses that this rule exempts from a ban or phase-out

pursuant to TSCA section 6(g). Manufacturers or processors seeking to protect such information may submit a request for nondisclosure as provided by TSCA sections 14(b)(4)(C) and 14(g)(1)(E). Any request for nondisclosure must be submitted within 30 days after receipt of notice from EPA under TSCA section 14(g)(2)(A) stating EPA will not protect the information from disclosure. EPA anticipates providing such notice via the Central Data Exchange (CDX).

D. TSCA Section 26 Considerations

As explained in the 2023 PCE proposed rule, EPA fulfilled TSCA section 26(h) by using scientific information, technical procedures, measures, methods, protocols, methodologies, and models consistent with the best available science. Comments received on the 2023 PCE proposed rule about whether EPA adequately assessed reasonably available information under TSCA section 26 on the risk evaluation, and responses to those comments, can be found in Section 9.3 of the Response to Comments document (Ref. 8).

VIII. Statutory and Executive Order Reviews

Additional information about these statutes and Executive orders can be found at <https://www.epa.gov/laws-regulations/laws-and-executive-orders>.

A. Executive Order 12866: Regulatory Planning and Review and Executive Order 14094: Modernizing Regulatory Review

This action is a “significant regulatory action” as defined under section 3(f)(1) of Executive Order 12866 (58 FR 51735, October 4, 1993), as amended by Executive Order 14094 (88 FR 21879, April 11, 2023). Accordingly, EPA submitted this action to the Office of Management and Budget (OMB) for Executive Order 12866 review. Documentation of any changes made in response to Executive Order 12866 review is available in the docket. EPA prepared an analysis of the potential costs and benefits associated with this action. This analysis (Ref. 3) is available in the docket and summarized in Unit I.E.

B. Paperwork Reduction Act (PRA)

The information collection activities in this rule will be submitted to OMB for approval under the PRA, 44 U.S.C. 3501 *et seq.* The Information Collection Request (ICR) document that EPA prepared has been assigned EPA ICR No. 2740.02, and OMB Control No. 2070-0233 (Ref. 85).) The ICR is available in the docket and is briefly summarized here. The information collection requirements are not enforceable until OMB approves them.

There are four primary provisions of the final rule that may increase burden under the PRA. The first is downstream notification, which would be carried out

by updates to the relevant SDS and which will be required for manufacturers, processors, and distributors in commerce of PCE, who will provide notice to companies downstream upon shipment of PCE about the prohibitions. The information submitted to downstream companies through the SDS will provide knowledge and awareness of the restrictions to these companies. The second primary provision of the rule that may increase burden under the PRA is WCPP-related information generation, recordkeeping, and notification requirements (including development of exposure control plans; exposure level monitoring and related recordkeeping; development of documentation for a PPE program and related recordkeeping; development of documentation for a respiratory protection program and related recordkeeping; development and notification to potentially exposed persons (employees and others in the workplace) about how they can access the exposure control plans, exposure monitoring records, PPE program implementation documentation, and respirator program documentation; and development of documentation demonstrating eligibility for an exemption from the proposed prohibitions, and related recordkeeping). The third primary provision of the rule that is expected to increase burden under the PRA is information generation related to workplace requirements for laboratory use-related information and generation, (including development of documentation for a PPE program, related recordkeeping, and development of documentation demonstrating implementation of a properly functioning ventilated laboratory safety device). The fourth primary provision of the rule that is expected to increase burden under the PRA is information generation related to energized electrical cleaning, including self-certification, recordkeeping, and notification requirements (including development and documentation of those requirements under the specific prescriptive controls or WCPP and related recordkeeping; development of documentation of a self-certification statement and related recordkeeping; notification of self-certification; and labeling).

Respondents/affected entities:

Persons that manufacture, process, use, distribute in commerce, or dispose of PCE or products containing PCE. See also Unit I.A.

Respondent's obligation to respond: Mandatory (TSCA section 6(a) and 40 CFR part 751).

Estimated number of respondents: 157,760.

Frequency of response: On occasion.
Total estimated burden: 432,203 hours (per year). Burden is defined at 5 CFR 1320.3(b).

Total estimated cost: \$34,515,086 (per year), includes \$2,922,680 annualized capital or operation and maintenance costs.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. The OMB control numbers for the EPA's regulations in 40 CFR are listed in 40 CFR part 9. When OMB approves this ICR, the Agency will announce that approval in the **Federal Register** and publish a technical amendment to 40 CFR part 9 to display the OMB control number for the approved information collection activities contained in this final rule.

C. Regulatory Flexibility Act (RFA)

Pursuant to section 603 and 609(b) of the RFA, 5 U.S.C. 601 *et seq.*, EPA prepared an IRFA for the 2023 PCE proposed rule and convened a SBAR Panel to obtain advice and recommendations from SER that potentially would be subject to the rule's requirements. Summaries of the IRFA and Panel recommendations are presented in the 2023 PCE proposed rule (88 FR 39652, June 16, 2023) (FRL-8329-02-OCSP).

As required by section 604 of the RFA, EPA prepared a FRFA for this action (Ref. 22). The FRFA addresses issues raised by public comments on the IRFA for the 2023 PCE proposed rule. The complete FRFA is available for review in the docket and is summarized here.

1. Statement of Need and Rule Objectives

Under section of TSCA 6(a) (15 U.S.C. 2605(a)), if EPA determines after a TSCA section 6(b) risk evaluation that a chemical substance presents an unreasonable risk of injury to health or the environment, without consideration of costs or other non-risk factors, including an unreasonable risk to a potentially exposed or susceptible subpopulation identified as relevant to the risk evaluation, under the conditions of use, EPA must by rule apply one or more requirements listed in TSCA section 6(a) to the extent necessary so that the chemical substance or mixture no longer presents such risk. PCE was the subject of a risk evaluation under TSCA section 6(b)(4)(A) that was issued in December 2020. In addition, in December 2022,

EPA issued a revised unreasonable risk determination that PCE as a whole chemical substance presents an unreasonable risk of injury to health under the conditions of use. As a result, EPA is taking action to the extent necessary so that PCE no longer presents such risk.

EPA developed this final rule after considering EPA's unreasonable risk determination for PCE, information provided in public comments on the 2023 PCE proposed rule, findings from and comments on the SBAR panel, other required consultations, and additional public outreach. For more information on the 2023 PCE proposed rule, SBAR panel, and outreach efforts for this action, see the docket for this rulemaking (EPA-HQ-OPPT-2020-0720).

To address the identified unreasonable risk, this rule (1) prohibits most industrial and commercial uses and the manufacture (including import), processing and distribution in commerce, of PCE for those uses; (2) prohibits the manufacture (including import), processing, and distribution in commerce of PCE for all consumer use; (3) prohibits the manufacture (including import), processing, distribution in commerce, and use of PCE in dry cleaning and related spot cleaning through a 10-year phaseout; (4) requires a WCPP, including an inhalation exposure concentration limit, direct dermal contact controls, and related workplace exposure controls for many occupational conditions of use of PCE not prohibited; (5) require prescriptive workplace controls for laboratory use and energized electrical cleaner; (6) establish recordkeeping and downstream notification requirements; (7) provides certain time-limited exemptions from requirements for uses of PCE which are critical that have no technically feasible, safer alternative available; and (8) identifies a regulatory threshold for products containing PCE for the prohibitions and restrictions on PCE.

2. Significant Issues Raised by the Public Comments in Response to the IRFA and EPA Response

A summary of significant issues raised by comments about the IRFA (Ref. 20) and EPA's response is in the Response to Comments document (Ref. 8) in section 11.3.

3. SBA Office of Advocacy Comments and EPA Response

SBA Office of Advocacy provided comments on the 2023 PCE proposed rule (EPA-HQ-OPPT-2020-0720). A summary of these comments and EPA's

response is in the Response to Comments document (Ref. 8) in sections 5.1.3, 5.3.2, 5.3.3, 5.8.2, 7.1, and 8.4.3.

4. Estimate of the Number of Small Entities to Which the Final Rule Applies

The final rule potentially affects small manufacturers (including importers), processors, distributors, retailers, users of PCE or of products containing PCE, and entities engaging in disposal. EPA estimates that the rule would affect approximately 157,760 firms using PCE, of which 154,683 small entities (based on SBA definitions in March 2023) have estimated impacts. EPA estimates that most small entities that use PCE use it in aerosol spray degreasing and cleaning; 119,523 in energized electrical cleaning and 26,050 in other aerosol spray cleaning/degreasing (include brake cleaners). An estimated 5,949 of these entities are commercial users of PCE in dry cleaning applications. Users of products containing PCE, including adhesives and sealants, liquid cleaners/degreasers, mold cleaners, and other products also account for some of the affected small entities. EPA also estimates that 69 small entities use PCE in chemical milling, 87 use PCE in recycling and disposal, and 25 incorporate PCE into other formulations, mixtures, and reaction products. For a full description of the estimated number of small entities affected by this rule, see the FRFA (Ref. 22).

5. Projected Reporting, Recordkeeping and Other Compliance Requirements of the Final Rule

a. Compliance Requirements

EPA is prohibiting most conditions of use of PCE. As described in the final rule, EPA is prohibiting all manufacturing (including import), processing, and distribution in commerce of PCE for consumer use. After the publication of the final rule, prohibitions on manufacturing, processing, and distribution in commerce of PCE for consumer use will occur in 540 days for manufacturers, 630 days for processors, 720 days for distributing to retailers, and 810 days for all other distributors and retailers.

EPA is also prohibiting most industrial and commercial uses and the manufacture (including import), processing and distribution in commerce of PCE for those uses. The prohibitions for these commercial uses will become effective following prohibitions relevant to these uses in stages of the supply chain before the industrial and commercial use (e.g., manufacturing and processing). The restrictions follow a staggered schedule

for each stage of the supply chain. After the publication of the final rule, prohibitions come into effect in 540 days for manufacturers, 630 days for processors, 720 days for distributing to retailers, 810 days for all other distributors and retailers, and 900 days for industrial and commercial use.

EPA is finalizing a prohibition compliance date for commercial use of PCE in any dry cleaning machine acquired 180 days or later after the publication of this final rule, followed by a prohibition on the use of PCE in 3rd generation machines 3 years after the publication of this final rule. Full implementation of the phaseout will be achieved with a prohibition on the use of PCE in all dry cleaning and spot cleaning, including in 4th and 5th generation machines, 10 years after the publication of this final rule and a prohibition on the manufacturing, processing, and distribution in commerce of PCE for use in dry cleaning solvent 10 years after the publication of this final rule.

For most other conditions of use that contribute to the unreasonable risk from PCE, EPA is finalizing a WCPP to address the unreasonable risk as outlined in Unit IV.B. The WCPP includes a combination of requirements to address unreasonable risk driven by inhalation and dermal exposures in the workplace. The PCE WCPP encompasses restrictions on certain occupational conditions of use and includes provisions for an ECEL, DDCC, and ancillary requirements to support implementation of these restrictions. Due to the low exposure level and stringent requirements in the WCPP that is necessary to address the unreasonable risk from PCE, EPA identified certain conditions of use where the Agency expects a WCPP can be successfully implemented.

As described in Unit IV.B., the WCPP is non-prescriptive, in the sense that regulated entities are not required to use specific controls prescribed by EPA to achieve the exposure concentration limit. Rather, it is a performance-based exposure limit that enables owners or operators to determine how to most effectively meet the exposure limit based on conditions at their workplace.

Exposures remaining at or below the ECEL would address any unreasonable risk of injury to health driven by inhalation exposures for occupational conditions of use. EPA's requirements include the specific exposure limits that are required to meet the TSCA section 6(a) standard to apply one or more requirements to the substance so that it no longer presents unreasonable risk, and also include ancillary requirements

necessary for the ECEL's successful implementation as part of a WCPP.

EPA is also finalizing a requirement for specific prescriptive controls for the industrial and commercial use of PCE in laboratory chemicals and specific prescriptive controls for energized electrical cleaner as outlined in Unit IV.C. For laboratory use, EPA is requiring dermal PPE in combination with comprehensive training for tasks particularly related to the use of PCE in a laboratory setting for each potentially exposed person to direct dermal contact with PCE. Additionally, EPA is requiring the use of laboratory ventilation devices in workplaces engaged in the laboratory chemical condition of use. To support and demonstrate compliance, EPA is finalizing that each owner or operator of a laboratory workplace subject to the workplace controls for laboratory use requirements retain compliance records for five years. For energized electrical cleaner, EPA is requiring labeling, self-certification, and either the WCPP or prescriptive controls that include respiratory and dermal PPE in combination with comprehensive training for tasks.

EPA is not requiring reporting requirements beyond downstream notification or labeling (third-party notifications). Regarding recordkeeping requirements, three primary provisions of the final rule relate to recordkeeping. The first is recordkeeping of general records: all persons who manufacture, process, distribute in commerce, or engage in industrial or commercial use of PCE or PCE-containing products must maintain ordinary business records, such as invoices and bills-of-lading related to compliance with the prohibitions, restrictions, and other provisions of the regulation. The second is recordkeeping related to WCPP compliance: under the final rule, facilities complying with the rule through the WCPP are required to develop and maintain records associated with ECEL exposure monitoring (including measurements, compliance with GLP Standards or use of a laboratory accredited by the AIHA or another industry-recognized program and information regarding monitoring equipment); ECEL compliance (including the exposure control plan, PPE program implementation, and workplace information and training); DDCC compliance (including the exposure control plan, PPE program implementation, basis for specific PPE selection, occurrence and duration of direct dermal contact with PCE, and workplace information and training); and workplace participation. The third

is recordkeeping for business entities complying with the prescriptive controls for laboratory use or for energized electrical cleaning. To support and demonstrate compliance, EPA is finalizing that each owner or operator of a workplace subject to the WCPP or specific prescriptive controls retain compliance records for five years.

b. Classes of Small Entities Subject to the Compliance Requirements

The small entities that would be potentially directly regulated by this rulemaking are small entities that manufacture (including import), process, distribute in commerce, use, or dispose of PCE, including retailers of PCE for end-consumer uses.

c. Professional Skills Needed To Comply

Entities subject to this rule that manufacture (including import), process, or distribute PCE in commerce for consumer use would be required to cease such activity. The entity would be required to modify their SDS to inform their customers of the prohibition on manufacture, processing, and distribution of PCE for consumer use. They would also be required to maintain ordinary business records, such as invoices and bills-of-lading, that demonstrate compliance with the prohibitions, restrictions, and other provisions of this final rule. None of these activities require any special skills.

Entities that use PCE in any industrial and commercial capacity that is prohibited would be required to cease that activity. Restriction or prohibition of these uses will likely require the implementation of an alternative chemical or the cessation of use of PCE in a process or equipment that may require persons with specialized skills, such as engineers or other technical experts. Instead of developing an alternative method themselves, commercial users of PCE may choose to contract with another entity to do so.

Entities that are permitted to continue to manufacture, process, distribute, use (with the exception for use as a laboratory chemical or use in energized electrical cleaning), or dispose of PCE are required to implement a WCPP and would have to meet the provisions of the program for continued use of PCE. Entities that would be permitted to continue use of PCE as a laboratory chemical or in energized electrical cleaning are required to implement prescriptive workplace controls for those uses and would have to meet the provisions of the workplace restrictions for continued use of PCE. Adaption to

a WCPP or prescriptive workplace controls may require persons with specialized skills such as an engineer, chemist, health and safety professional, or laboratory technicians to process monitoring samples. Instead of implementing the WCPP or workplace controls themselves, entities that use PCE may choose to contract with another entity to do so. Records would have to be maintained for compliance with a WCPP or workplace controls, as applicable. While this recording activity itself may not require a special skill, the information to be measured and recorded may require persons with specialized skills such as an industrial hygienist or laboratory technician. Additionally, potentially exposed persons reasonably likely to be exposed to PCE by inhalation to concentrations above the ECEL are required to be trained for the proper use of respirators. Potentially exposed persons reasonably likely to have direct dermal contact to PCE are required to be trained for proper use of dermal protection. While this does not necessarily entail a specialized skill, it does require specialized training for those handling PCE within regulated areas and includes activity-specific training for proper PPE use.

6. Steps Taken To Minimize Economic Impact to Small Entities

a. Small Business Advocacy Review Panel

As required by section 609(b) of the RFA, as amended by the Small Business Regulatory Enforcement Fairness Act (SBREFA), EPA conducted outreach to small entities and convened a SBAR Panel on October 27, 2022, to obtain advice and recommendations of representatives of the small entities that potentially would be subject to the rule's requirements. The Panel solicited input on all aspects of these proposed regulations. Ten potentially impacted small entities served as small-entity representatives (SERs) to the Panel, representing a broad range of small entities from diverse geographic locations. The Panel Report was signed on February 1, 2023.

Consistent with the RFA/SBREFA requirements, the Panel evaluated the assembled materials and small-entity comments on issues related to elements of the regulatory flexibility analysis. It is important to note that the Panel's findings and discussion were based on the information available at the time the final report was prepared. For the full list of Panel recommendations, see section 7.A. of the FRFA (Ref. 22).

EPA detailed the SBAR Panel's request for comment on these specific

topics in the IRFA and 2023 PCE proposed rule and solicited comment from the public. During the comment period, the public provided comment on some of these areas. Those comments and others received on the 2023 PCE proposed rule and EPA's responses are in the Response to Comments document in the docket (Ref. 8).

b. Alternatives Considered

To identify the regulatory approach that would address the unreasonable risk from PCE, EPA analyzed alternative regulatory approaches to identify which would be feasible, reduce burden to small businesses, and achieve the objective of the statute (*i.e.*, applying one or more requirements list in TSCA section 6(a) to the extent necessary so that the chemical substance or mixture no longer presents an unreasonable risk). As described in more detail in Unit V. of the 2023 PCE proposed rule, and Unit II.D. of the final rule, EPA considered several factors, in addition to identified unreasonable risk, when selecting among possible TSCA section 6(a) requirements. To the extent practicable, EPA factored into its decisions: the effects of PCE on health and the environment, the magnitude of exposure to PCE of human beings and the environment, the benefits of PCE for various uses, and the reasonably ascertainable economic consequences of the rule. As part of this analysis, EPA considered a wide variety of control measures to address the unreasonable risk from PCE such as weight fractions, prescriptive controls, and a certification and limited access program. EPA's consideration of these alternative control measures is described in detail in the IRFA for the 2023 PCE proposed rule, and throughout Unit V.A. of the 2023 PCE proposed rule.

Based on consideration of public comments received on the 2023 PCE proposed rule, EPA has made some changes from the 2023 PCE proposed rule to the final rule. These changes include the finalization of additional conditions of use under the WCPP or prescriptive controls rather than prohibition, prohibition of additional conditions of use rather than the WCPP, and changes to compliance timeframes for prohibition and the WCPP. Additional changes to the rule based on consideration of public comments are detailed Unit III. of the final rule and include modifications to provisions of the WCPP. For additional information and rationale towards alternative actions, see Unit III.D. of this final rule and section 7.B. of the FRFA (Ref. 22).

In addition, EPA is preparing a Small Entity Compliance Guide to help small

entities comply with this rule. EPA expects that this guide will be made available on the EPA website prior to the effective date of this final rule.

D. Unfunded Mandates Reform Act (UMRA)

This action does not contain an unfunded mandate of \$100 million (adjusted annually for inflation) or more (in 1995 dollars) as described in UMRA, 2 U.S.C. 1531–1538, and does not significantly or uniquely affect small governments. The action will affect entities that use PCE. It is not expected to affect state, local, or Tribal governments because the use of PCE by government entities is minimal. The costs involved in this action are estimated not to exceed \$183 million in 2023\$ (\$100 million in 1995\$ adjusted for inflation using the GDP implicit price deflator) or more in any one year.

E. Executive Order 13132: Federalism

EPA has concluded that this action has federalism implications, as specified in Executive Order 13132 (64 FR 43255, August 10, 1999), because regulations under TSCA section 6(a) may preempt State law. EPA provides the following federalism summary impact statement. The Agency consulted with State and local officials early in the process of developing the proposed action to permit them to have meaningful and timely input into its development. This included background presentation on September 9, 2020, and a consultation meeting on July 22, 2021. EPA invited the following national organizations representing State and local elected officials to these meetings: American Water Works Association, Association of Clean Water Administrators, Association of Metropolitan Water Agencies, Association of State Drinking Water Administrators, Environmental Council of the States, National Association of Counties, National Conference of State Legislatures, National Governors Association, National League of Cities, National Water Resources Association, and United States Conference of Mayors. A summary of the meeting with these organizations, including the views that they expressed, is available in the docket (Ref. 13). EPA provided an opportunity for these organizations to provide follow-up comments in writing but did not receive any such comments.

F. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

This action does not have Tribal implications as specified in Executive Order 13175 (65 FR 67249, November 9,

2000) because it will not have substantial direct effects on Tribal governments, on the relationship between the Federal Government and the Indian Tribes, or on the distribution of power and responsibilities between the Federal Government and Indian Tribes. PCE is not manufactured, processed, or distributed in commerce by Tribes, and therefore, this rulemaking would not impose substantial direct compliance costs on Tribal governments.

Notwithstanding the lack of Tribal implications as specified by Executive Order 13175, EPA consulted with Tribal officials during the development of this action, consistent with the EPA Policy on Consultation and Coordination with Indian Tribes, which EPA applies more broadly than Executive Order 13175.

The Agency held a Tribal consultation from May 17, 2021, to August 20, 2021, with meetings on June 15, 2021, and July 8, 2021. Tribal officials were given the opportunity to meaningfully interact with EPA concerning the current status of risk management. During the consultation, EPA discussed risk management under TSCA section 6(a), findings from the 2020 Risk Evaluation for PCE, types of information to inform risk management, principles for transparency during risk management, and types of information EPA sought from Tribes (Ref. 14). EPA briefed Tribal officials on the Agency's risk management considerations and Tribal officials raised no related issues or concerns to EPA during or in follow-up to those meetings (Ref. 14). EPA received no written comments as part of this consultation.

G. Executive Order 13045: Protection of Children From Environmental Health Risks and Safety Risks

Executive Order 13045 (62 FR 19885, April 23, 1997) directs federal agencies to include an evaluation of the health and safety effects of the planned regulation on children in federal health and safety standards and explain why the regulation is preferable to potentially effective and reasonably feasible alternatives. This action is not subject to Executive Order 13045 (62 FR 19885, April 23, 1997) because EPA does not believe the environmental health or safety risks addressed by this action present a disproportionate risk to children as reflected by the conclusions of the PCE risk evaluation. EPA did not find that the adverse health impacts for children and for men and women of reproductive age was disproportionate in comparison to other populations. EPA's Policy on Children's Health applies to this action. Information on

how the Policy was applied and on the action's health and risk assessments are contained in Units III.A.3. and B.2., VI.A. and B., and the 2020 Risk Evaluation for PCE (Ref. 1) and the Economic Analysis for the 2023 PCE proposed rule (Ref. 3).

H. Executive Order 13211: Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution or Use

This action is not a "significant energy action" under Executive Order 13211 (66 FR 28355, May 22, 2001) because it is not likely to have a significant adverse effect on the supply, distribution or use of energy and has not been designated by the Administrator of the Office of Information and Regulatory Affairs as a significant energy action.

I. National Technology Transfer and Advancement Act (NTTAA)

Pursuant to the NTTAA section 12(d), 15 U.S.C. 272., the Agency has determined that this rulemaking involves environmental monitoring or measurement, specifically for occupational inhalation exposures to PCE. Consistent with the Agency's Performance Based Measurement System (PBMS), EPA will not require the use of specific, prescribed analytic methods. Rather, the Agency plans to allow the use of any method that meets the prescribed performance criteria. The PBMS approach is intended to be more flexible and cost-effective for the regulated community; it is also intended to encourage innovation in analytical technology and improved data quality. EPA is not precluding the use of any method, whether it constitutes a voluntary consensus standard or not, as long as it meets the performance criteria specified.

For this rulemaking, the key consideration for the PBMS approach is the ability to accurately detect and measure airborne concentrations of PCE at the ECEL and the ECEL action level. Some examples of methods which meet the criteria are included in appendix B of the ECEL memo (Ref. 71). EPA recognizes that there may be voluntary consensus standards that meet the criteria (Ref. 86).

J. Executive Orders 12898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations and 14096: Revitalizing Our Nation's Commitment to Environmental Justice for All

EPA believes that the human health or environmental conditions that exist prior to this action result in or have the potential to result in disproportionate

and adverse human health or environmental effects on communities with environmental justice concerns in accordance with Executive Order 12898 (59 FR 7629, February 16, 1994) and Executive Order 14096 (88 FR 25251, April 26, 2023). As described more fully in the Economic Analysis for this rulemaking (Ref. 3), EPA conducted an analysis to characterize the baseline conditions faced by communities and workers affected by the regulation to identify the potential for disproportionate impacts on communities with environmental justice concerns using information about the facilities, workforce, and communities potentially affected by the regulatory options under current conditions, before the regulation would go into effect. The analysis drew on publicly available data provided by EPA, U.S. Census Bureau, and Centers for Disease Control and Prevention, including data from TRI, EPA Enforcement and Compliance History Online, National Air Toxics Assessment, the American Community Survey, and the Behavioral Risk Factor Surveillance System. The baseline characterization suggests that workers in affected industries and regions, as well as residents of nearby communities, are more likely to be people of color than the general population in affected States, although this varied by use assessed. Additionally, based on reasonably available information, the Agency understands that most dry cleaning workers are members of minority populations.

EPA believes that this action is likely to reduce existing disproportionate and adverse effect on communities with environmental justice concerns. This regulatory action would apply requirements to the extent necessary so that PCE no longer presents an unreasonable risk, EPA is not able to quantify the distribution of the change in risk across affected populations due to data limitations that prevented EPA from conducting a more comprehensive analysis of such a change.

EPA additionally identified and addressed environmental justice concerns by conducting outreach to communities with environmental justice concerns. For example, on June 16 and July 6, 2021, EPA held public meetings as part of this consultation (Ref. 87). These meetings were held pursuant to and in compliance with Executive Order 12898 and Executive Order 14008, Tackling the Climate Crisis at Home and Abroad (86 FR 7619, February 1, 2021). EPA received five written comments following the EJ meetings, in addition to oral comments provided during the consultations. In general, commenters

supported strong outreach to affected communities, encouraged EPA to follow the hierarchy of controls, favored prohibitions, and noted the uncertainty, and in some cases inadequacy, of PPE. Commenters also urged the EPA to extend the rulemaking into ongoing releases from hazardous waste and disposal sites, in particular vapor intrusion of PCE from contaminated groundwater, soil, and indoor air. Additionally, commenters expressed concern that the adverse health impacts of PCE dry cleaning fall disproportionately to owners and employees of minority owned small businesses, noted the viability of professional wet cleaning as an alternative to PCE dry cleaning, and urged EPA to consider economic impacts and a financial program to offset transition costs to local communities.

The information supporting the review under Executive Order 12898 and Executive Order 14096 is contained in Units I.E., II.D., III.A.1., VI.A., and in the Economic Analysis (Ref. 3). EPA's presentations, a summary of EPA's presentation and public comments made, and fact sheets for the EJ consultations related to this rulemaking are available at <https://www.epa.gov/assessing-and-managing-chemicals-under-tsc/materials-june-and-july-2021-environmental-justice>. These materials and a summary of the consultation are also available in the public docket for this rulemaking.

K. Congressional Review Act (CRA)

This action is subject to the CRA, 5 U.S.C. 801 *et seq.*, and EPA will submit a rule report to each House of the Congress and to the Comptroller General of the United States. This action is not a "major rule" as defined by 5 U.S.C. 804(2).

List of Subjects in 40 CFR Part 751

Environmental protection, Chemicals, Export notification, Hazardous substances, Import certification, Reporting and recordkeeping.

Michael S. Regan,
Administrator.

Therefore, for the reasons stated in the preamble, EPA amends 40 CFR part 751 as follows:

PART 751—REGULATION OF CERTAIN CHEMICAL SUBSTANCES AND MIXTURES UNDER SECTION 6 OF THE TOXIC SUBSTANCES CONTROL ACT

■ 1. The authority citation for part 751 continues to read as follows:

Authority: 15 U.S.C. 2605, 15 U.S.C. 2625(l)(4).

■ 2. Amend § 751.5 by adding in alphabetical order definitions for "Designated representative," "Direct dermal contact," "ECEL," and "Exposure group" to read as follows:

§ 751.5 Definitions.

* * * * *

Designated representative means any individual or organization to whom a potentially exposed person gives written authorization to exercise a right of access. A recognized or certified collective bargaining agent must be treated automatically as a designated representative without regard to written authorization.

Direct dermal contact means direct handling of a chemical substance or mixture or skin contact with surfaces that may be contaminated with a chemical substance or mixture.

ECEL is an Existing Chemical Exposure Limit, and means an airborne concentration calculated as an eight (8)-hour time-weighted average (TWA).

* * * * *

Exposure group means a group of potentially exposed persons with a similar exposure profile to a chemical substance or mixture based on the substantial similarity of tasks performed, the manner in which the tasks are performed, and the materials and processes with which they work.

* * * * *

■ 3. Amend part 751 by adding Subpart G to read as follows:

Subpart G—Perchloroethylene (PCE)

Sec.

751.601 General.

751.603 Definitions.

751.605 Prohibitions of manufacturing, processing, distribution in commerce, and use.

751.607 Workplace Chemical Protection Program (WCPP).

751.609 Workplace requirements for laboratory use.

751.611 Workplace requirements for energized electrical cleaner.

751.613 Downstream notification.

751.615 Recordkeeping requirements.

751.617 Exemptions.

§ 751.601 General.

(a) *Applicability.* This Subpart establishes prohibitions and restrictions on the manufacture (including import), processing, distribution in commerce, use, and disposal of perchloroethylene (CASRN 127–18–4) (PCE), also known as tetrachloroethylene, to prevent unreasonable risk of injury to health in accordance with TSCA section 6(a).

(b) *Regulatory threshold.* Unless otherwise specified in this Subpart, the

prohibitions and restrictions of this Subpart do not apply to products containing PCE at thresholds less than 0.1 percent by weight.

(c) *Owner and operator requirements.* Any requirement for an owner or operator, or an owner and operator, is a requirement for any individual that is either an owner or an operator.

§ 751.603 Definitions.

The definitions in Subpart A of part 751 apply to this Subpart unless otherwise specified in this section. In addition, the following definitions apply to this Subpart:

3rd generation machine means a dry-to-dry machine with a refrigerated condenser, as those terms are defined in 40 CFR part 63, subpart M.

4th or 5th generation machine means a dry-to-dry machine with a carbon adsorber and refrigerated condenser, as those terms are defined in 40 CFR part 63, subpart M.

Distribute in commerce has the same meaning as in section 3 of the Act, except that the term does not include retailers for purposes of §§ 751.613 and 751.615.

ECEL has the same meaning as in § 751.5 and, for PCE, is an airborne concentration of PCE of 0.14 part per million (ppm).

ECEL action level means a concentration of airborne PCE of 0.10 part per million (ppm) calculated as an eight (8)-hour time-weighted average (TWA).

Energized electrical cleaner means a product that meets both of the following criteria: (1) the product is labeled to clean and/or degrease electrical equipment, where cleaning and/or degreasing is accomplished when electrical current exists, or when there is a residual electrical potential from a component, such as a capacitor; and (2) the product label clearly displays the statements: "Energized Equipment use only. Not to be used for motorized vehicle maintenance, or their parts."

§ 751.605 Prohibitions of manufacturing, processing, distribution in commerce, and use.

(a) *Applicability.* (1) The provisions of this section apply as indicated in paragraph (b) of this section to all manufacturing (including import), processing, and distribution in commerce of PCE for consumer use.

(2) The provisions of this section apply as indicated in paragraph (b) of this section to:

(i) All manufacturing (including import), processing, and distribution in commerce of PCE for industrial and commercial use, other than for the

industrial and commercial uses addressed under §§ 751.607(a), 751.609(a), and 751.611(a), or covered by paragraph (a)(3) of this section; and

(ii) All industrial and commercial use of PCE, other than the industrial and commercial uses addressed under §§ 751.607(a), 751.609(a), and 751.611(a), or covered by paragraph (a)(3) of this section.

(3) The provisions of this section apply as indicated in paragraph (b) of this section to all manufacturing (including import), processing, distribution in commerce, and industrial and commercial use of PCE in dry cleaning and related spot cleaning, including:

(i) Industrial and commercial use in dry cleaning and related spot cleaning in 3rd generation machines; and

(ii) Industrial and commercial use in dry cleaning and related spot cleaning in 4th and 5th generation machines.

(4) This section does not apply to the distribution in commerce or use of clothing and articles that have been commercially dry cleaned with PCE.

(5) This section does not apply to manufacturing, processing, or distribution in commerce of PCE solely for export that meets the conditions described in TSCA section 12(a)(1)(A) and (B).

(b) *Prohibitions.* (1) After June 11, 2026, all persons are prohibited from manufacturing (including importing) PCE for the uses listed in paragraphs (a)(1) and (a)(2)(ii) of this section.

(2) After September 9, 2026, all persons are prohibited from processing PCE, including any PCE-containing products, for the uses listed in paragraphs (a)(1) and (a)(2)(ii) of this section.

(3) After December 8, 2026, all persons are prohibited from distributing in commerce (including making available) PCE, including any PCE-containing products, to retailers for any use other than commercial dry cleaning.

(4) After March 8, 2027, all retailers are prohibited from distributing in commerce (including making available) PCE, including any PCE-containing products.

(5) After March 8, 2027, all persons are prohibited from distributing in commerce (including making available) PCE, including any PCE-containing products, for the uses described in paragraphs (a)(1) and (a)(2)(ii) of this section.

(6) After June 7, 2027, all persons are prohibited from industrial or commercial use of PCE, including any PCE-containing products, for the uses listed in paragraph (a)(2)(ii) of this section.

(7) All persons are prohibited from industrial or commercial use of PCE in dry cleaning machines acquired after June 16, 2025.

(8) After December 20, 2027, all persons are prohibited from industrial or commercial use of PCE for the use listed in paragraph (a)(3)(i) of this section.

(9) After December 19, 2034, all persons are prohibited from the manufacturing (including importing), processing, distribution in commerce, or industrial or commercial use of PCE for dry cleaning and spot cleaning, including for the use listed in paragraph (a)(3)(ii) of this section.

(10) After December 19, 2034, all persons are prohibited from manufacturing (including import), processing, distribution in commerce, or use of PCE, including any PCE containing products, for industrial or commercial use in an emergency by the National Aeronautics and Space Administration or its contractors as described in § 751.117(b).

§ 751.607 Workplace Chemical Protection Program (WCPP).

(a) *Applicability.* The provisions of this section apply to the following conditions of use of PCE, including manufacturing and processing for export, unless otherwise indicated in this section, except to the extent the conditions of use are prohibited by § 751.605:

(1) Manufacturing (domestic manufacture);

(2) Manufacturing (import);

(3) Processing as a reactant/intermediate;

(4) Processing into formulation, mixture or reaction product;

(5) Repackaging;

(6) Industrial and commercial use as solvent for open-top batch vapor degreasing;

(7) Industrial and commercial use as solvent for closed-loop batch vapor degreasing

(8) Industrial and commercial use in maskant for chemical milling;

(9) Industrial and commercial use in solvent-based adhesives and sealants;

(10) Industrial and commercial use as a processing aid in catalyst regeneration in petrochemical manufacturing;

(11) Industrial and commercial use as a processing aid in sectors other than petrochemical manufacturing;

(12) Industrial and commercial use for cold cleaning of tanker vessels;

(13) Recycling; and

(14) Disposal.

(b) *Existing chemical exposure limit (ECEL).*—(1) *Applicability.* The provisions of this paragraph (b) apply to

any workplace engaged in a condition of use that is listed in paragraph (a)(1) through (12) of this section and not prohibited by § 751.605.

(2) *Eight-hour time-weighted average (TWA) ECEL.* Beginning September 20, 2027 for Federal agencies and Federal contractors acting for or on behalf of the Federal government, March 13, 2026 for non-Federal owners and operators, or beginning four months after introduction of PCE into the workplace if PCE use commences after December 15, 2025, the owner or operator must ensure that no person is exposed to an airborne concentration of PCE in excess of the ECEL, consistent with the requirements of paragraph (d)(1)(i) of this section and, if necessary, paragraph (f) of this section.

(3) *Exposure monitoring*—(i) *General.*

(A) Owners or operators must determine each potentially exposed person's exposure, without regard to respiratory protection, by either:

(1) Taking a personal breathing zone air sample of each potentially exposed person's exposure; or

(2) Taking personal breathing zone air samples that are representative of the 8-hour TWA of each exposure group.

(B) Personal breathing zone air samples are representative of the 8-hour TWA of all potentially exposed persons in an exposure group if the samples are of at least one person's full-shift exposure who represents the highest potential PCE exposures in that exposure group. Personal breathing zone air samples taken during one work shift may be used to represent potentially exposed person exposures on other work shifts where the owner or operator can document that the tasks performed and conditions in the workplace are similar across shifts.

(C) Exposure samples must be analyzed using an appropriate analytical method by a laboratory that complies with the Good Laboratory Practice (GLP) Standards in 40 CFR part 792 or a laboratory accredited by the American Industrial Hygiene Association (AIHA) or another industry-recognized program.

(D) Owners or operators must ensure that methods used to perform exposure monitoring produce results that are accurate, to a confidence level of 95 percent, to within plus or minus 25 percent for airborne concentrations of PCE.

(E) Owners and operators must re-monitor within 15 working days after receipt of any exposure monitoring when results indicate non-detect, unless an Environmental Professional as defined at 40 CFR 312.10 or a Certified Industrial Hygienist reviews the

monitoring results and determines re-monitoring is not necessary.

(ii) *Initial monitoring.* By June 21, 2027 for Federal agencies and Federal contractors acting for or on behalf of the Federal government, by December 15, 2025 for non-Federal owners and operators, or within 30 days of introduction of PCE into the workplace,

whichever is later, each owner or operator covered by this section must perform initial monitoring of potentially exposed persons. Where the owner or operator has monitoring results from monitoring conducted within five years prior to February 18, 2025 and the monitoring satisfies all other requirements of this section, the owner

or operator may rely on such earlier monitoring results to satisfy the requirements of this paragraph.

(iii) *Periodic monitoring.* The owner or operator must establish an exposure monitoring program for periodic monitoring of exposure to PCE in accordance with table 1.

TABLE 1 TO § 751.607(b)(3)(iii)—PERIODIC MONITORING REQUIREMENTS

Air concentration condition	Periodic monitoring requirement
If initial exposure monitoring is below ECEL action level (<0.10 ppm 8-hour TWA).	Periodic exposure monitoring is required at least once every five years.
If the most recent exposure monitoring indicates that airborne exposure is above the ECEL (>0.14 ppm 8-hour TWA).	Periodic exposure monitoring is required within three months of the most recent exposure monitoring.
If the most recent exposure monitoring indicates that airborne exposure is at or above the ECEL action level but at or below the ECEL (≥0.10 ppm 8-hour TWA, ≤0.14 ppm 8-hour TWA).	Periodic exposure monitoring is required within six months of the most recent exposure monitoring.
If the two most recent (non-initial) exposure monitoring measurements, taken at least seven days apart within a 6 month period, indicate exposure is below the ECEL action level (<0.10 ppm 8-hour TWA).	Periodic exposure monitoring is required within five years of the most recent exposure monitoring.
If the owner or operator engages in a condition of use for which WCPP ECEL is required but does not manufacture, process, use, or dispose of PCE in that condition of use over the entirety of time since the last required monitoring event.	The owner or operator may forgo the next periodic monitoring event. However, documentation of cessation of use of PCE is required; and periodic monitoring is required when the owner or operator resumes the condition of use.

(iv) *Additional monitoring.* (A) The owner or operator must conduct the exposure monitoring required by paragraph (b)(3)(ii) of this section within 30 days after there has been a change in the production, process, control equipment, personnel or work practices that may reasonably be expected to result in new or additional exposures above the ECEL action level or when the owner or operator has any reason to believe that new or additional exposures above the ECEL action level have occurred. Prior monitoring data cannot be used to meet this requirement.

(B) Whenever start-ups or shutdowns, or spills, leaks, ruptures or other breakdowns or unexpected releases occur that may lead to exposure to potentially exposed persons, the owner or operator must conduct the exposure monitoring required by paragraph (b)(3)(ii) of this section within 30 days after the conclusion of the start-up or shutdown and/or the cleanup of the spill or repair of the leak, rupture or other breakdown. Prior monitoring data cannot be used to meet this requirement.

(v) *Observation of monitoring.* (A) Owners and operators must provide potentially exposed persons or their designated representatives an opportunity to observe any monitoring of occupational exposure to PCE that is conducted under this section and designed to characterize their exposure.

(B) When monitoring observation requires entry into a regulated area, the

owner or operator must provide the observers with the required PPE.

(C) Only persons who are authorized to have access to facilities classified in the interest of national security must be permitted to observe exposure monitoring conducted in such facilities.

(vi) *Notification of monitoring results.* (A) The owner or operator must inform each person whose exposures are monitored or who is part of a monitored exposure group and their designated representatives of any monitoring results within 15 working days of receipt of those monitoring results.

(B) This notification must include the following:

(1) Exposure monitoring results;
(2) Identification and explanation of the ECEL and ECEL action level;
(3) Statement of whether the monitored airborne concentration of PCE exceeds the ECEL action level or ECEL;

(4) If the ECEL is exceeded, descriptions of any exposure controls implemented by the owner or operator to reduce exposures to or below the ECEL, as required by paragraph (d)(1) of this section;

(5) Explanation of any respiratory protection provided in accordance with paragraphs (b)(4)(iv), (d)(1)(i), and (f) of this section;

(6) Quantity of PCE in use at the time of monitoring;

(7) Location of PCE use at the time of monitoring;

(8) Manner of PCE use at the time of monitoring; and

(9) Identified releases of PCE.

(C) Notice must be written in plain language and either provided to each potentially exposed person and their designated representatives individually in a language that the person understands, or posted in an appropriate and accessible location outside the regulated area with an English-language version and a non-English language version representing the language of the largest group of workers who do not read English.

(4) *Regulated areas*—(i) *Establishment.* By September 20, 2027 for Federal agencies and Federal contractors acting for or on behalf of the Federal government and by March 13, 2026 for non-Federal owners and operators, or within three months after receipt of any exposure monitoring that indicates exposures exceeding the ECEL, the owner or operator must establish and maintain a regulated area wherever airborne concentrations of PCE exceed or can reasonably be expected to exceed, the ECEL.

(ii) *Access.* The owner or operator must limit access to regulated areas to authorized persons.

(iii) *Demarcation.* The owner or operator must demarcate regulated areas from the rest of the workplace in a manner that adequately establishes and alerts persons to the boundaries of the area and minimizes the number of authorized persons exposed to PCE within the regulated area.

(iv) *Provisions of respirators.* (A) The owner or operator must ensure that each

person who enters a regulated area is supplied with a respirator selected in accordance with paragraph (f) of this section and must ensure that all persons within the regulated area are using the provided respirators whenever PCE exposures may exceed the ECEL.

(B) An owner or operator who has implemented all feasible controls as required in paragraph (d)(1)(i) of this section, and who has established a regulated area as required by paragraph (b)(4)(i) of this section where PCE exposure can be reliably predicted to exceed the ECEL only on certain days (for example, because of work or process schedule) must have persons use respirators in that regulated area on those days.

(v) *Prohibited activities.* (A) The owner or operator must ensure that, within a regulated area, persons do not engage in non-work activities which may increase PCE exposure.

(B) The owner or operator must ensure that while persons are wearing respirators in the regulated area, they do not engage in activities which interfere with respirator performance.

(c) *DDCC.* Beginning September 20, 2027 for Federal agencies and Federal contractors acting for or on behalf of the Federal government and beginning March 13, 2026 for non-Federal owners and operators, owners or operators must ensure that all persons are separated, distanced, physically removed, or isolated from direct dermal contact with PCE consistent with the requirements of paragraph (d)(1)(ii) of this section and, if necessary, paragraph (f) of this section.

(d) *Exposure control procedures and plan—(1) Methods of compliance—(i) ECEL.* (A) By December 20, 2027 for Federal agencies and Federal contractors acting for or on behalf of the Federal government, or by June 7, 2027 for non-Federal owners and operators, the owner or operator must institute one or a combination of elimination, substitution, engineering controls, or administrative controls to reduce exposure to or below the ECEL except to the extent that the owner or operator can demonstrate that such controls are not feasible, in accordance with the hierarchy of controls.

(B) If the feasible controls required under paragraph (d)(1)(i)(A) of this section that can be instituted do not reduce exposures for potentially exposed persons to or below the ECEL, then the owner or operator must use such controls to reduce exposure to the lowest levels achievable by these controls and must supplement those controls with the use of respiratory protection that complies with the

requirements of paragraph (f) of this section.

(C) Where an owner or operator cannot demonstrate exposure to PCE has been reduced to or below the ECEL through the use of controls required under paragraphs (d)(1)(i)(A) and (B) of this section, and has not demonstrated that it has appropriately supplemented with respiratory protection that complies with the requirements of paragraph (f) of this section, this will constitute a failure to comply with the ECEL.

(ii) *DDCC requirements.* (A) By December 20, 2027 for Federal agencies and Federal contractors acting for or on behalf of the Federal government, or by June 7, 2027 for non-Federal owners and operators, the owner or operator must institute one or a combination of elimination, substitution, engineering controls, or administrative controls to prevent all persons from direct dermal contact with PCE except to the extent that the owner or operator can demonstrate that such controls are not feasible.

(B) If the feasible controls required under paragraph (d)(1)(ii)(A) of this section that can be instituted do not prevent direct dermal contact, then the owner or operator must use such controls to reduce direct dermal contact to the extent achievable by these controls and must supplement those controls with the use of dermal protection that complies with the requirements of paragraph (f) of this section.

(C) Where an owner or operator cannot demonstrate direct dermal contact to PCE is prevented through the use of controls required under paragraphs (d)(1)(ii)(A) and (B) of this section, and has not demonstrated that it has appropriately supplemented with dermal protection that complies with the requirements of paragraph (f) of this section, this will constitute a failure to comply with the direct dermal contact control requirements.

(2) *Exposure control plan.* By December 20, 2027 for Federal agencies and Federal contractors acting for or on behalf of the Federal government, or by June 7, 2027 for non-Federal owners and operators, each owner and operator must establish and implement an exposure control plan.

(i) *Exposure control plan contents.* The exposure control plan must include documentation of the following:

(A) Identification of exposure controls that were considered, including those that were used or not used to meet the requirements of paragraphs (d)(1)(i)(A) and (d)(1)(ii)(A) of this section, in the following sequence: elimination,

substitution, engineering controls and administrative controls;

(B) For each exposure control considered, a rationale for why the exposure control was selected or not selected based on feasibility, effectiveness, and other relevant considerations;

(C) A description of actions the owner or operator must take to implement exposure controls selected, including proper installation, regular inspections, maintenance, training or other actions;

(D) A description of regulated areas, how they are demarcated, and persons authorized to enter the regulated areas;

(E) Description of activities conducted by the owner or operator to review and update the exposure control plan to ensure effectiveness of the exposure controls, identify any necessary updates to the exposure controls, and confirm that all persons are properly implementing the exposure controls; and

(F) An explanation of the procedures for responding to any change that may reasonably be expected to introduce additional sources of exposure to PCE, or otherwise result in increased exposure to PCE, including procedures for implementing corrective actions to mitigate exposure to PCE.

(ii) *Exposure control plan requirements.* (A) The owner or operator must not implement a schedule of personnel rotation as a means of compliance with the ECEL.

(B) The owner or operator must maintain the effectiveness of any controls instituted under this paragraph (d).

(C) The exposure control plan must be reviewed and updated as necessary, but at least every 5 years, to reflect any significant changes in the status of the owner or operator's approach to compliance with paragraphs (b) through (d) of this section.

(iii) *Availability of exposure control plan.* (A) Owners or operators must make the exposure control plan and associated records, including ECEL exposure monitoring records, ECEL compliance records, DDCC compliance records, and workplace participation records described in § 751.615(b), available to potentially exposed persons and their designated representatives.

(B) Owners or operators must notify potentially exposed persons and their designated representatives of the availability of the exposure control plan and associated records within 30 days of the date that the exposure control plan is completed and at least annually thereafter.

(C) Notice of the availability of the exposure control plan and associated

records must be provided in plain language writing to each potentially exposed person in a language that the person understands or posted in an appropriate and accessible location outside the regulated area with an English-language version and a non-English language version representing the language of the largest group of workers who do not read English.

(D) Upon request by the potentially exposed person or their designated representative(s), the owner or operator must provide the specified records at a reasonable time, place, and manner. If the owner or operator is unable to provide the requested records within 15 working days, the owner or operator must, within those 15 working days, inform the potentially exposed person or designated representative(s) requesting the record(s) of the reason for the delay and the earliest date when the record will be made available.

(e) *Workplace information and training.* (1) By March 13, 2026, the owner or operator must institute a training program and ensure that persons potentially exposed to PCE participate in the program according to the requirements of this paragraph (e).

(2) The owner or operator must ensure that each potentially exposed person is trained prior to or at the time of a potential exposure to PCE.

(3) The owner or operator must ensure that information and training is presented in a manner that is understandable to each person required to be trained.

(4) The following information and training must be provided to all persons potentially exposed to PCE:

(i) The requirements of this section, as well as how to access or obtain a copy of these requirements in the workplace;

(ii) The quantity, location, manner of use, release, and storage of PCE and the specific operations in the workplace that could result in exposure to PCE, particularly noting where each regulated area is located;

(iii) Methods and observations that may be used to detect the presence or release of PCE in the workplace (such as monitoring conducted by the owner or operator, continuous monitoring devices, visual appearance or odor of PCE when being released);

(iv) The acute and chronic health hazards of PCE as detailed on relevant Safety Data Sheets; and

(v) The principles of safe use and handling of PCE and measures potentially exposed persons can take to protect themselves from PCE, including specific procedures the owner or operator has implemented to protect potentially exposed persons from

exposure to PCE, such as appropriate work practices, emergency procedures, and personal protective equipment to be used.

(5) The owner or operator must retrain each potentially exposed person annually to ensure that each such person maintains the requisite understanding of the principles of safe use and handling of PCE in the workplace.

(6) Whenever there are workplace changes, such as modifications of tasks or procedures or the institution of new tasks or procedures, that increase exposure, and where such exposure exceeds or can reasonably be expected to exceed the ECEL action level or increase potential for direct dermal contact, the owner or operator must update the training and ensure that each potentially exposed person is re-trained.

(f) *Personal protective equipment (PPE)*—(1) *Protection.* The provisions of paragraph (f) apply to any owner or operator that is required to provide respiratory protection pursuant to paragraphs (b)(4)(iv) or (d)(1)(i)(B) of this section or § 751.611(b), or dermal protection pursuant to paragraphs (c) or (d)(1)(ii)(B) of this section, § 751.609(b)(2), or § 751.611(b).

(2) *Respiratory protection.* (i) By September 20, 2027 for Federal agencies and Federal contractors acting for or on behalf of the Federal government, by March 13, 2026 for non-Federal owners and operators, or within three months after receipt of any exposure monitoring that indicates exposures exceeding the ECEL, if an owner or operator is required to provide respiratory protection pursuant to paragraph (f)(1) of this section, the owner or operator must ensure that each potentially exposed person is provided with a respirator according to the requirements of this section.

(ii) For purposes of this paragraph (f)(2), cross-referenced provisions in 29 CFR 1910.134 applying to an “employee” apply equally to potentially exposed persons and cross-referenced provisions applying to an “employer” also apply equally to owners or operators. Other terms in cross-referenced provisions in 29 CFR 1910.134 that are defined in 29 CFR 1910.134(b) have the meaning assigned to them in that paragraph.

(iii) By September 20, 2027 for Federal agencies and Federal contractors acting for or on behalf of the Federal government, or by March 13, 2026 for non-Federal owners and operators, or within three months after receipt of any exposure monitoring that indicates exposures exceeding the ECEL, if an owner or operator is

required to provide respiratory protection pursuant to paragraph (f)(1) of this section, the owner or operator must develop and administer a written respiratory protection program consistent with the requirements of 29 CFR 1910.134(c)(1), (c)(3) and (c)(4).

(iv) Owners and operators must select respiratory protection required by paragraph (f)(2)(i) of this section based on a medical evaluation consistent with the requirements of 29 CFR 1910.134(e). If a potentially exposed person cannot use a negative-pressure respirator that would otherwise be required by paragraph (f)(1) of this section, then the owner or operator must provide that person with an alternative respirator. The alternative respirator must have less breathing resistance than the negative-pressure respirator and provide equivalent or greater protection. If the person is unable to use an alternative respirator, then the person must not be permitted to enter the regulated area.

(v) Owners and operators must select respiratory protection that properly fits each affected person and communicate respirator selections to each affected person consistent with the requirements of 29 CFR 1910.134(f), 1910.134 App. A.

(vi) Owners and operators must provide, ensure use of, and maintain (in a sanitary, reliable, and undamaged condition) respiratory protection that is of safe design and construction for the applicable condition of use consistent with the requirements of 29 CFR 1910.134(g) through (j), 1910.134 App. B–1 to B–2.

(vii) Prior to or at the time of initial assignment to a job involving potential exposure to PCE, owners and operators must provide training to all persons required to use respiratory protection consistent with 29 CFR 1910.134(k), 1910.134 App. D.

(viii) Owners and operators must retrain all persons required to use PPE at least annually, or whenever the owner or operator has reason to believe that a previously trained person does not have the required understanding and skill to properly use PPE, or when changes in the workplace or in PPE to be used render the previous training obsolete.

(ix) Owners or operators must select and provide to persons appropriate respirators as indicated by the most recent monitoring results as follows:

(A) If the measured exposure concentration is at or below 0.14 ppm: no respiratory protection is required.

(B) If the measured exposure concentration is above 0.14 ppm and less than or equal to 1.4 ppm (10 times ECEL): Any National Institute for Occupational Safety and Health

(NIOSH) Approved® air-purifying half mask respirator equipped with organic vapor cartridges or canisters; or any NIOSH Approved® Supplied-Air Respirator (SAR) or Airline Respirator operated in demand mode equipped with a half mask; or any NIOSH Approved® Self-Contained Breathing Apparatus (SCBA) in a demand mode equipped with a half mask [APF 10].

(C) If the measured exposure concentration is above 1.4 ppm and less than or equal to 3.5 ppm (25 times ECEL): Any NIOSH Approved® Powered Air-Purifying Respirator (PAPR) equipped with a loose-fitting facepiece or hood/helmet equipped with organic vapor cartridges or canisters; or any NIOSH Approved® SAR or Airline Respirator in a continuous-flow mode equipped with a loose-fitting facepiece or helmet/hood [APF 25].

(D) If the measured exposure concentration is above 3.5 ppm and less than or equal to 7.0 ppm (50 times ECEL): Any NIOSH Approved® air-purifying full facepiece respirator equipped with organic vapor cartridges or canisters; any NIOSH Approved® PAPR with a half mask equipped with organic vapor cartridges or canisters; any NIOSH Approved® SAR or Airline Respirator in a continuous flow mode equipped with a half mask; any NIOSH Approved® SAR or Airline Respirator operated in a pressure-demand or other positive-pressure mode with a half mask; or any NIOSH Approved® SCBA in demand-mode equipped with a full facepiece or helmet/hood [APF 50].

(E) If the measured exposure concentration is above 7.0 ppm and less than or equal to 140 ppm (1,000 times ECEL): Any NIOSH Approved® PAPR equipped with a full facepiece equipped with organic vapor cartridges or canisters; any NIOSH Approved® SAR or Airline Respirator in a continuous-flow mode equipped with full facepiece; any NIOSH Approved® SAR or Airline Respirator in pressure-demand or other positive-pressure mode equipped with a full facepiece and an auxiliary self-contained air supply; or any NIOSH Approved® SAR or Airline Respirator in a continuous-flow mode equipped with a helmet or hood and that has been tested to demonstrated performance at a level of a protection of APF 1,000 or greater [APF 1000].

(F) If the measured exposure concentration is greater than 140 ppm (1,000+ times ECEL): Any NIOSH Approved® Self-Contained Breathing Apparatus (SCBA) in a pressure-demand or other positive-pressure mode equipped with a full facepiece or helmet/hood [APF 10,000].

(G) If the exposure concentration is unknown: Any NIOSH Approved® combination supplied air respirator equipped with a full facepiece and operated in pressure demand or other positive pressure mode with an auxiliary self-contained air supply; or any NIOSH Approved® SCBA operated in pressure demand or other positive pressure mode and equipped with a full facepiece or hood/helmet [APF 1000+].

(x) Owners and operators must select and provide respirators as required in paragraph (f)(2) of this section consistent with the requirements of 29 CFR 1910.134(d)(1)(iv), and with consideration of workplace and user factors that affect respirator performance and reliability.

(xi) Owners and operators who select air-purifying respirators must either:

(A) Select respirators that have an end-of-service-life indicator (ESLI) that is NIOSH Approved® for PCE; or

(B) Implement a change schedule for canisters and cartridges based on objective information or data that ensures that canisters and cartridges are changed before the end of their service life. The written respiratory protection program required by paragraph (f)(2)(iii) of this section must include a description of the information and data relied upon, the basis for reliance on the information and data, and the basis for the canister and cartridge change schedule.

(xii) Owners and operators must ensure that respirators are used in compliance with the terms of the respirator's NIOSH certification.

(xiii) Owners and operators must conduct regular evaluations of the workplace, including consultations with potentially exposed persons using respiratory protection, consistent with the requirements of 29 CFR 1910.134(l), to ensure that the provisions of the written respiratory protection program required under paragraph (f)(2)(iii) of this section are being effectively implemented.

(xiv) The respiratory protection requirements in this paragraph (f)(2) represent the minimum respiratory protection requirements, such that any respirator affording a higher degree of protection than the required respirator may be used.

(3) *Dermal protection.* (i) By September 20, 2027 for Federal agencies and Federal contractors acting for or on behalf of the Federal government, or by March 13, 2026 for non-Federal owners and operators, if an owner or operator is required to provide dermal protection pursuant to paragraph (f)(1) of this section, the owner or operators must ensure that each potentially exposed

person is provided with dermal PPE according to the requirements of this section.

(ii) Owners or operators must supply and require the donning of dermal PPE that separates and provides a barrier to prevent direct dermal contact with PCE in the specific work area where it is selected for use, selected in accordance with this paragraph (f)(3) and provided in accordance with 29 CFR 1910.132(h), to each person who is reasonably likely to be dermally exposed in the work area through direct dermal contact with PCE. For the purposes of this paragraph (f)(3)(ii), provisions in 29 CFR 1910.132(h) applying to an "employee" also apply equally to potentially exposed persons, and provisions applying to an "employer" also apply equally to owners or operators.

(iii) Owners or operators must select and provide dermal PPE in accordance with 29 CFR 1910.133(b) and additionally as specified in this paragraph (f)(3) to each person who is reasonably likely to be dermally exposed in the work area through direct dermal contact with PCE. For the purposes of this paragraph (f)(3)(iii), provisions in 29 CFR 1910.133(b) applying to an "employer" also apply equally to owners or operators.

(iv) Owners or operators must select and provide to persons appropriate dermal PPE based on an evaluation of the performance characteristics of the PPE relative to the task(s) to be performed, conditions present, and the duration of use. Replacement PPE must be provided immediately if any person is dermally exposed to PCE longer than the breakthrough time period for which testing has demonstrated that the PPE will be impermeable or if there is a chemical permeation or breakage of the PPE. Dermal PPE must include, but is not limited to, the following items:

(A) Impervious gloves selected based on specifications from the manufacturer or supplier or by individually prepared third-party testing.

(B) Impervious clothing covering the exposed areas of the body (e.g., long pants, long sleeved shirt).

(v) Owners or operators must demonstrate that each item of gloves and other clothing selected provides an impervious barrier to prevent direct dermal contact with PCE during normal and expected duration and conditions of exposure within the work area by evaluating the specifications from the manufacturer or supplier or individually prepared third-party testing of the dermal PPE or of the material used in construction of the dermal PPE, to establish that the dermal PPE will be impervious to PCE alone

and in likely combination with other chemical substances in the work area.

(vi) Dermal PPE that is of safe design and construction for the work to be performed must be provided, used, and maintained in a sanitary, reliable, and undamaged condition. Owners and operators must select PPE that properly fits each affected person and communicate PPE selections to each affected person.

(vii) Owners or operators must provide training in accordance with 29 CFR 1910.132(f) to all persons required to use dermal protection prior to or at the time of initial assignment to a job involving exposure to PCE. For the purposes of this paragraph (f)(3)(vii), provisions in 29 CFR 1910.132(f) applying to an “employee” also apply equally to potentially exposed persons, and provisions applying to an “employer” also apply equally to owners or operators.

(viii) Owners and operators must retrain each person required to use dermal protection at least annually or whenever the owner or operator has reason to believe that a previously trained person does not have the required understanding and skill to properly use dermal protection, or when changes in the workplace or in dermal protection to be used render the previous training obsolete.

§ 751.609 Workplace requirements for laboratory use

(a) *Applicability.* The provisions of this section apply to the industrial and commercial use of PCE as a laboratory chemical.

(b) *Laboratory use requirements.* (1) After December 15, 2025, owners or operators must ensure laboratory ventilation devices such as fume hoods or glove boxes are in use and functioning properly and that specific measures are taken to ensure proper and adequate performance of such equipment to minimize exposures to potentially exposed persons in the area when PCE is used in a laboratory setting.

(2) After December 15, 2025, owners or operators must ensure that all persons reasonably likely to be exposed from direct dermal contact to PCE in a laboratory setting are provided with dermal personal protective equipment and training on proper use of PPE in a manner consistent with § 751.607(f)(3), except that the date listed in paragraph (f)(3)(i) does not apply.

§ 751.611 Workplace requirements for energized electrical cleaner.

(a) *Applicability.* The provisions of this section apply as indicated in

paragraphs (b) through (d) of this section to:

(1) All manufacturing (including importing), processing, and distribution in commerce of PCE for industrial and commercial use as energized electrical cleaner, and

(2) Industrial and commercial use of PCE as energized electrical cleaner.

(b) *Energized electrical cleaner requirements.* The provisions of this paragraph (b) apply to any workplace engaged in the condition of use listed in paragraph (a)(2).

(1) *PPE.* (i) The provisions of this paragraph (b)(1) apply after March 13, 2026.

(ii) Owners or operators must ensure that all potentially exposed persons using PCE, including any PCE containing products, are provided with dermal PPE and training on proper use of PPE in accordance with § 751.607(f)(3).

(iii) If any of the criteria in paragraphs (b)(1)(iii)(A) or (B) are met, then owners or operators must ensure that all persons using PCE, including any PCE containing products, are provided with respiratory PPE and training on proper use of PPE in accordance with § 751.607(f)(2), except that instead of selecting appropriate respirators based on monitoring results pursuant to paragraph (f)(2)(ix), owners or operators must select from and provide the following types of respirators: any NIOSH Approved® air-purifying full facepiece respirator equipped with organic vapor cartridges or canisters; any NIOSH Approved® PAPR with a half mask equipped with organic vapor cartridges or canisters; any NIOSH Approved® SAR or Airline Respirator in a continuous flow mode equipped with a half mask; any NIOSH Approved® SAR or Airline Respirator operated in a pressure-demand or other positive-pressure mode with a half mask; any NIOSH Approved® SCBA in demand-mode equipped with a full facepiece or helmet/hood [APF 50]; or any respirator affording a higher degree of protection.

(A) The potentially exposed person is in a confined space, as defined in 29 CFR 1910.146(b), or in an enclosed space, as described in 29 CFR 1910.269(e); or

(B) The potentially exposed person approaches the exposed energized equipment closer than the employer's established minimum approach distance required under 29 CFR 1910.269(l)(3) or when there is no established minimum approach distance.

(2) *Alternative to PPE requirements.*

(i) As an alternative to the requirements in paragraph (b)(1) of this section, the

owner or operator may choose to follow the WCPP provisions in § 751.607.

(ii) Owners or operators who choose to follow the WCPP as an alternative to the requirements in paragraph (b)(1) of this section must:

(A) Document and maintain a statement that they are electing to comply with the WCPP.

(B) Comply with the WCPP provisions in § 751.607 and document compliance in accordance with § 751.615(b).

(c) *Label.* After March 13, 2026, all manufacturers (including importers), processors and distributors in commerce of PCE or PCE-containing products for industrial and commercial use as energized electrical cleaner must provide a label securely attached to each product. Label information must be prominently displayed and in an easily readable font size, with the sentences:

“This product contains perchloroethylene (PCE) (CASRN 127–18–4), a chemical determined by the Environmental Protection Agency to present unreasonable risk of injury to health under the Toxic Substances Control Act (TSCA), based on neurotoxicity and other adverse health effects. The use of PCE is restricted under 40 CFR part 751, subpart G. This product is for Energized Equipment use only. Not to be used for motorized vehicle maintenance, or their parts.”

(d) *Self-certification.* After March 13, 2026, the owner or operator of the business entity purchasing and using PCE, including any PCE containing products, for the industrial and commercial use as energized electrical cleaner must self-certify that use is in compliance with requirements of paragraph (b) of this section with the following written statement.

(1) The self-certification must include the following written statement:

I certify each of the following statements under penalty of law. This document was prepared under my direction and supervision. This energized electrical cleaner will be used for energized equipment use only. This business entity has implemented and complies with the EPA requirements for the use of energized electrical cleaner that contains perchloroethylene under 40 CFR 751.611 and only trained and qualified persons will handle the energized electrical cleaner. Based on my inquiry of the person or persons who manages this business entity and/or those persons directly responsible for implementing the EPA requirements for energized electrical cleaner that contains perchloroethylene, and to the best of my knowledge and belief, this business entity is in compliance with the EPA requirements for energized electrical cleaner. I am aware that there are significant penalties, including the possibility of civil penalties for failing to comply with these requirements and criminal fines and imprisonment, for knowingly

failing to comply with these requirements. I understand that this certification shall serve as a certification that this business entity will properly implement and comply with the EPA requirements for energized electrical cleaner consistent with the applicable regulatory timelines.

(2) The self-certification must also include the following:

(i) Printed name and signature, job classification, title, email address, and phone number of the owner or operator who is self-certifying.

(ii) Date of self-certification.

(iii) Name and address of the business entity.

(iv) Indication of whether this is the business entity's first purchase of PCE, including PCE containing products, after publication of the final rule.

(3) Owners or operators or persons specifically authorized by the owner or operator to purchase energized electrical cleaner must provide a copy of the self-certification statement for each business entity to the distributor from whom PCE, including PCE containing products, is being purchased, for every purchase.

(4) Distributors of PCE, including PCE containing products, must review the self-certification statement to ensure it is appropriately completed to include the owner or operator's and the business entity's information required by this section.

(5) Distributors of PCE, including PCE containing products, must have a complete and valid self-certification statement in accordance with this section for each sale of PCE, including PCE containing products, for use in energized electrical cleaning.

§ 751.613 Downstream notification.

(a) Beginning on February 18, 2025, each person who manufactures (including imports) PCE for any use must, prior to or concurrent with the shipment, notify companies to whom PCE is shipped, in writing, of the restrictions described in this Subpart in accordance with paragraph (c) of this section.

(b) Beginning on June 16, 2025, each person who processes or distributes in commerce PCE or any PCE-containing products for any use must, prior to or concurrent with the shipment, notify companies to whom PCE is shipped, in writing, of the restrictions described in this Subpart in accordance with paragraph (c) of this section.

(c) The notification required under paragraphs (a) and (b) of this section must occur by inserting the following text in Section 1(c) and 15 of the Safety Data Sheet (SDS) provided with the PCE or with any PCE-containing product:

After December 8, 2026 this chemical substance (as defined in TSCA section 3(2))/product cannot be distributed in commerce to retailers for any use. After March 8, 2027, this chemical substance (as defined in TSCA section 3(2))/product is and can only be distributed in commerce or processed with a concentration of PCE equal to or greater than 0.1% by weight for the following purposes: (1) Processing as a reactant/intermediate; (2) Processing into formulation, mixture or reaction product; (3) Processing by repackaging; (4) Recycling; (5) Industrial and commercial use as solvent in open-top batch vapor degreasing; (6) Industrial and commercial use as solvent in closed-loop batch vapor degreasing; (7) Industrial and commercial use in maskant for chemical milling; (8) Industrial and commercial use as a processing aid in catalyst regeneration in petrochemical manufacturing; (9) Industrial and commercial use as a processing aid in sectors other than petrochemical manufacturing; (10) Industrial and commercial use as solvent for cold cleaning of tanker vessels; (11) Industrial and commercial use as energized electrical cleaner; (12) Industrial and commercial use in laboratory chemicals; (13) Industrial and commercial use in solvent-based adhesives and sealants; (14) Industrial and commercial use in dry cleaning in 3rd generation machines until December 20, 2027; (15) Industrial and commercial use in all dry cleaning and related spot cleaning until December 19, 2034; (16) Export; and (17) Disposal.

§ 751.615 Recordkeeping requirements.

(a) *General records.* After February 18, 2025, all persons who manufacture (including import), process, distribute in commerce, or engage in industrial or commercial use of PCE or PCE-containing products must maintain ordinary business records, such as downstream notifications, invoices and bills-of-lading related to compliance with the prohibitions, restrictions, and other provisions of this subpart G.

(b) *WCPP compliance—(1) ECEL exposure monitoring.* For each monitoring event, owners or operators subject to the ECEL described in § 751.607(b) must document and retain records of the following:

(i) Dates, duration, and results of each sample taken;

(ii) The quantity, location(s) and manner of PCE use at the time of each monitoring event;

(iii) All measurements that may be necessary to determine the conditions that may affect the monitoring results;

(iv) Name, workplace address, work shift, job classification, work area, and type of respiratory protection (if any) by each monitored person;

(v) Identification of all potentially exposed persons that a monitored person is intended to represent if using a representative sample, consistent with § 751.607(b)(3)(i)(A) and (B);

(vi) Sampling and analytical methods used as described in

§ 751.607(b)(3)(i)(D);

(vii) Compliance with the GLP Standards in 40 CFR part 792, or use of a laboratory accredited by the AIHA or another industry-recognized program, as required by § 751.607(b)(3)(i)(C); and

(viii) Information regarding air monitoring equipment, including: Type, maintenance, calibrations, performance tests, limits of detection, and any malfunctions;

(ix) Re-monitoring determinations conducted by an Environmental Professional as defined at 40 CFR 312.10 or a Certified Industrial Hygienist, if results indicated non-detect; and

(x) Notification of exposure monitoring results in accordance with § 751.607(b)(3)(v).

(2) *ECEL compliance.* Owners or operators subject to the ECEL described in § 751.607(b) must retain records of:

(i) Exposure control plan as described in § 751.607(d)(2);

(ii) Implementation of the exposure control plan as described in § 751.607(d)(2), including:

(A) Any regular inspections, evaluations, and updating of the exposure controls to maintain effectiveness;

(B) Confirmation that all persons are implementing the exposure controls; and

(C) Each occurrence and duration of any start-up, shutdown, or malfunction of the facility that causes an exceedance of the ECEL and any subsequent corrective actions taken by the owner or operator during the start-up, shutdown, or malfunctions to mitigate exposures to PCE.

(iii) Respiratory protection used by each potentially exposed person and PPE program implementation as described in § 751.607(f)(2) including:

(A) The name, workplace address, work shift, job classification, work area of each potentially exposed person, and the type of respiratory protection provided to each potentially exposed person;

(B) The basis for the specific respiratory protection selection in accordance with § 751.607(f)(2); and

(C) Fit testing and training in accordance with § 751.607(f)(2).

(iv) Information and training provided as required in § 751.607(e).

(3) *DDCC compliance.* Owners or operators subject to DDCC requirements described in § 751.607(c) must retain records of:

(i) Exposure control plan as described in § 751.607(d)(2);

(ii) Dermal protection used by each potentially exposed person and PPE

program implementation as described in § 751.607(f)(3), including:

(A) The name, workplace address, work shift, job classification, and work area of each person reasonably likely to directly handle PCE or handle equipment or materials on which PCE may be present and the type of PPE selected to be worn by each of these persons;

(B) The basis for specific PPE selection (e.g., demonstration based on permeation testing or manufacturer specifications that each item of PPE selected provides an impervious barrier to prevent exposure during expected duration and conditions of exposure, including the likely combinations of chemical substances to which the PPE may be exposed in the work area);

(C) Appropriately sized PPE and training on proper application, wear, and removal of PPE, and proper care/disposal of PPE;

(D) Occurrence and duration of any direct dermal contact with PCE that occurs during any activity or malfunction at the workplace that causes direct dermal exposures to occur and/or glove breakthrough, and corrective actions to be taken during and immediately following that activity or malfunction to prevent direct dermal contact to PCE; and

(E) Training in accordance with § 751.607(f)(3).

(iii) Information and training provided as required in § 751.607(e).

(4) *Workplace participation.* Owners or operators must document the notice to and ability of any potentially exposed person that may reasonably be affected by PCE inhalation exposure or direct dermal contact and their designated representatives to readily access the exposure control plans, facility exposure monitoring records, PPE program implementation records, or any other information relevant to PCE exposure in the workplace.

(c) *Workplace requirements for laboratory use compliance.* Owners and operators subject to the laboratory chemical requirements described in § 751.609 must retain records of:

(1) Dermal protection used by each potentially exposed person and PPE program implementation, as described in § 751.615(b)(3)(ii);

(2) Documentation identifying: Criteria that the owner or operator will use to determine and implement control measures to reduce potentially exposed persons' exposure to PCE including laboratory ventilation devices;

(3) Documentation identifying: Implementation of properly functioning laboratory ventilation devices using manufacturer's instructions for

installation, use, and maintenance of the devices including inspections, tests, development of maintenance procedures, the establishment of criteria for acceptable test results, and documentation of test and inspection results; and

(d) *Workplace requirements for energized electrical cleaner.* (1) Owners and operators subject to the energized electrical cleaner requirements described in § 751.611 must retain records of:

(i) Statement regarding whether the owner or operator is complying with the prescriptive PPE requirements described in § 751.611(b)(1) or with the WCPP described in § 751.611(b)(2).

(ii) Dermal and respiratory protection used by each potentially exposed person and program implementation as described in § 751.611(b)(1) or WCPP records described in § 751.615(b).

(iii) Labels used as described in § 751.611(c).

(iv) Self-certification statements provided as described in § 751.611(d)(1)–(3).

(2) Distributors of PCE, including PCE containing products, for use in energized electrical cleaning must retain sale records, including:

(i) Name of purchaser;

(ii) Date of sale;

(iii) Quantity of PCE or PCE containing products sold;

(iv) Self-certification statement for each purchase of PCE; and

(v) Copies of labels required in § 751.611(c).

(e) *Records related to exemptions.* To maintain eligibility for an exemption described in § 751.617, the records maintained by the owners or operators must demonstrate compliance with the specific conditions of the exemption.

(f) *Retention.* Owners or operators must retain the records required under this section for a period of 5 years from the date that such records were generated.

§ 751.617 Exemptions.

(a) *General applicability.* (1) Time-limited exemptions described in this section are established in accordance with 15 U.S.C. 2605(g)(1).

(2) To be eligible for the exemptions established in this section, regulated parties must comply with all conditions promulgated in this section for such exemptions in accordance with 15 U.S.C. 2605(g)(4).

(b) *Time-limited exemption for emergency use by the National Aeronautics and Space Administration.* Under 15 U.S.C. 2605(g)(1)(A), use of PCE or PCE containing products for the conditions of use identified in

paragraph (b)(1) of this section in an emergency by the National Aeronautics and Space Administration (NASA) and its contractors operating within the scope of their contracted work is exempt from the requirements of § 751.605 until December 19, 2034.

(1) *Applicability.* This exemption shall apply to the following specific conditions of use:

(i) Industrial and commercial use as solvent for cold cleaning; and

(ii) Industrial and commercial use in wipe cleaning.

(2) *Emergency use.* (i) An emergency is a serious and sudden situation requiring immediate action, within 15 days or less, necessary to protect:

(A) Safety of NASA's or their

contractors' personnel;

(B) NASA's missions;

(C) Human health, safety, or property, including that of adjacent communities; or

(D) The environment.

(ii) Each emergency is a separate situation; if use of PCE exceeds 15 days, then justification must be documented.

(3) *Eligibility.* To be eligible for the exemption, NASA and its contractors must:

(i) Select PCE because there are no technically and economically feasible safer alternatives available during the emergency.

(ii) Perform the emergency use of PCE at locations controlled by NASA or its contractors.

(iii) Comply with the following conditions:

(A) Within 15 working days of the emergency use by NASA or its contractors, NASA and its contractors must provide notice to the EPA Assistant Administrators of both the Office of Enforcement and Compliance Assurance and the Office of Chemical Safety and Pollution Prevention that includes the following:

(1) Identification of the conditions of use detailed in paragraph (b)(1) of this section that the emergency use fell under;

(2) An explanation for why the emergency use met the definition of emergency in paragraph (b)(2)(i) of this section; and

(3) An explanation of why PCE was selected, including why there were no technically and economically feasible safer alternatives available in the particular emergency.

(iv) The owner or operator must comply with and document such compliance efforts under the WCPP provisions in § 751.607, to the extent technically feasible in light of the particular emergency.

(v) The owner or operator of the location where the use takes place must

comply with the recordkeeping requirements in § 751.615.

ELECTRONIC RESEARCH

World Wide Web

Full text of the daily Federal Register, CFR and other publications is located at: www.govinfo.gov.

Federal Register information and research tools, including Public Inspection List and electronic text are located at: www.federalregister.gov.

E-mail

FEDREGTOC (Daily Federal Register Table of Contents Electronic Mailing List) is an open e-mail service that provides subscribers with a digital form of the Federal Register Table of Contents. The digital form of the Federal Register Table of Contents includes HTML and PDF links to the full text of each document.

To join or leave, go to <https://public.govdelivery.com/accounts/USGPOOFR/subscriber/new>, enter your email address, then follow the instructions to join, leave, or manage your subscription.

PENS (Public Law Electronic Notification Service) is an e-mail service that notifies subscribers of recently enacted laws.

To subscribe, go to <http://listserv.gsa.gov/archives/publaws-l.html> and select *Join or leave the list (or change settings)*; then follow the instructions.

FEDREGTOC and **PENS** are mailing lists only. We cannot respond to specific inquiries.

LIST OF PUBLIC LAWS

This is a continuing list of public bills from the current session of Congress which have become Federal laws. This list is also available online at <https://www.archives.gov/federal-register/laws/current.html>.

The text of laws is not published in the **Federal**

Register but may be ordered in “slip law” (individual pamphlet) form from the Superintendent of Documents, U.S. Government Publishing Office, Washington, DC 20402 (phone, 202–512–1808). The text is available at <https://www.govinfo.gov/app/collection/plaw>. Some laws may not yet be available.

S. 3960/P.L. 118–151

To amend title 35, United States Code, to provide a

good faith exception to the imposition of fines for false assertions and certifications, and for other purposes. (Dec. 17, 2024; 138 Stat. 1685)
Last List December 16, 2024

Public Laws Electronic Notification Service (PENS)

PENS is a free email notification service of newly

enacted public laws. To subscribe, go to https://portalguard.gsa.gov/__layouts/pg/register.aspx.

Note: This service is strictly for email notification of new laws. The text of laws is not available through this service. **PENS** cannot respond to specific inquiries sent to this address.
