

FEDERAL REGISTER

Vol. 89

Wednesday,

No. 243

December 18, 2024

Pages 102673–103616

OFFICE OF THE FEDERAL REGISTER

The **FEDERAL REGISTER** (ISSN 0097-6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Publishing Office, is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The **FEDERAL REGISTER** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see www.federalregister.gov.

The seal of the National Archives and Records Administration authenticates the **Federal Register** as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge at www.govinfo.gov, a service of the U.S. Government Publishing Office.

The online edition of the **Federal Register** is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6:00 a.m. each day the **Federal Register** is published and includes both text and graphics from Volume 1, 1 (March 14, 1936) forward. For more information, contact the GPO Customer Contact Center, U.S. Government Publishing Office. Phone 202-512-1800 or 866-512-1800 (toll free). E-mail, gpocusthelp.com.

The annual subscription price for the **Federal Register** paper edition is \$860 plus postage, or \$929, for a combined **Federal Register**, **Federal Register** Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the **Federal Register** Index and LSA is \$330, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily **Federal Register**, including postage, is based on the number of pages: \$11 for an issue containing less than 200 pages; \$22 for an issue containing 200 to 400 pages; and \$33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for \$3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: U.S. Government Publishing Office—New Orders, P.O. Box 979050, St. Louis, MO 63197-9000; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, see bookstore.gpo.gov.

There are no restrictions on the republication of material appearing in the **Federal Register**.

How To Cite This Publication: Use the volume number and the page number. Example: 89 FR 12345.

Postmaster: Send address changes to the Superintendent of Documents, Federal Register, U.S. Government Publishing Office, Washington, DC 20402, along with the entire mailing label from the last issue received.

Title 3—

Proclamation 10872 of December 13, 2024

The President

Bill of Rights Day, 2024

By the President of the United States of America

A Proclamation

America is the only country in the world founded on an idea: that we are all created equal and deserve to be treated equally throughout our lives. Two hundred and thirty-three years ago today, that idea was at the heart of our Nation's Bill of Rights, launching the greatest self-government experiment in the history of the world and endowing all of us with fundamental rights and liberties. Today, we recommit to safeguarding those first 10 freedoms guaranteed by the Bill of Rights and all the progress we have made to protect Americans since.

The freedoms guaranteed to us in the Bill of Rights help define the soul of our Nation. The first 10 Amendments to the United States Constitution include the freedoms of religion, speech, press, assembly, and privacy, which form our Nation's north star. And the 17 additional Amendments that came later helped our Nation realize its promise of liberty and justice for all—from abolishing our Nation's original sin of slavery to giving women the right to vote.

But freedom is never guaranteed—every generation has had to defend and fight for it. In recent years, long-established civil rights principles and protections have been undermined and challenged. The Supreme Court gutted the Voting Rights Act in 2013, opening the floodgates to a new wave of restrictive voting laws that States across the country have passed. Anti-LGBTQI+ rights bills have emboldened discrimination against Americans for who they are and whom they love. And in 2022, the Court overruled *Roe v. Wade* and took away the constitutional right to choose, which had been the law of the land for nearly 50 years.

As President, I made it my mission to protect our democracy and the freedoms it guarantees. When the Supreme Court overturned *Roe v. Wade*, I took executive action to protect women's access to reproductive health care. To protect the will of the people, right to vote, and have that vote counted—which is the threshold of democracy and liberty—I signed the Electoral Count Reform Act to ensure the peaceful transfer of power. And to protect the civil rights and liberties of LGBTQI+ Americans, I signed the landmark Respect for Marriage Act, upholding the rights of same-sex and interracial couples. But there is still more to do to ensure that our Nation respects the civil rights and liberties of all Americans. I continue to call on the Congress to restore the protections of *Roe v. Wade* in Federal law and pass the Freedom to Vote Act and the John Lewis Voting Rights Advancement Act.

On Bill of Rights Day, we recommit to protecting and expanding Americans' civil rights and liberties. We must continue fighting for progress and following our Nation's north star, securing dignity and respect for all Americans. And we must continue to strengthen the guardrails of our democracy, ensuring that our Nation and all the freedoms it guarantees will be enjoyed for generations to come. I know we can do it—because together, nothing is beyond our capacity.

NOW, THEREFORE, I, JOSEPH R. BIDEN JR., President of the United States of America, by virtue of the authority vested in me by the Constitution

and the laws of the United States, do hereby proclaim December 15, 2024, as Bill of Rights Day. I call upon the people of the United States to observe this day with appropriate ceremonies and activities.

IN WITNESS WHEREOF, I have hereunto set my hand this thirteenth day of December, in the year of our Lord two thousand twenty-four, and of the Independence of the United States of America the two hundred and forty-ninth.

A handwritten signature in black ink, appearing to read "Joe Biden", is written over a horizontal line.

Rules and Regulations

Federal Register

Vol. 89, No. 243

Wednesday, December 18, 2024

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.

The Code of Federal Regulations is sold by the Superintendent of Documents.

OFFICE OF PERSONNEL MANAGEMENT

5 CFR Parts 302 and 731

RIN 3206–AO17

Suitability and Fitness

AGENCY: Office of Personnel Management.

ACTION: Final rule.

SUMMARY: The Office of Personnel Management (OPM) is issuing a final rule revising regulations governing the Federal Government personnel vetting investigative and adjudicative processes for determining suitability and fitness. This final rule establishes requirements and standards for agencies to properly vet individuals to assess risk to the integrity and efficiency of the service. The regulations establish the requirements for when investigations must be conducted for appointments to the civil service, to work as a contractor employee, or to work in a Department of Defense Non appropriated Fund position. This final rule establishes the requirement for enrolling these populations, including low, moderate, and high risk, into continuous vetting. Furthermore, this rule provides adjudicative criteria for assessing suitability and fitness for much of the civil service. Nothing in this rule shall be read in derogation of any individual's rights under Title VII of the U.S. Code.

DATES: Effective January 17, 2025.

FOR FURTHER INFORMATION CONTACT: Christine Bilunka at (202) 599–0090 or by email at SuitEA@opm.gov.

SUPPLEMENTARY INFORMATION:

Background

Under 5 U.S.C. 3301 and 7301, Congress authorizes the President to prescribe regulations to govern the admission into the civil service in the executive branch. The regulations must “best promote the efficiency” of the executive branch civil service,

“ascertain the fitness of applicants with respect to character, and prescribe rules for the conduct of executive branch employees. In addition to the President's authority to prescribe standards for suitability and fitness for civil service appointments based on character and conduct, 5 U.S.C. 3301 recognizes the President's authority to prescribe qualification standards based on applicants' education and experience and to assess their relative knowledge, skill, and ability.

OPM, as delegated by the President, has the authority to prescribe qualification standards and to conduct examinations of applicants' qualifications. OPM also has the authority to prescribe suitability standards and to conduct investigations of suitability for appointment and continuing employment. (See 5 U.S.C. 1104(a)(1).) Amendments to the Civil Service Rules made by Executive Order (E.O.) 13764 of January 17, 2017, *Amending the Civil Service Rules, Executive Order 13488, and Executive Order 13467 to Modernize the Executive Branch-Wide Governance Structure and Processes for Security Clearances, Suitability and Fitness for Employment, and Credentialing and Related Matters*, directed OPM to establish minimum standards of fitness based on character and conduct for appointment to positions in the excepted service of the executive branch. (82 FR 8115.) E.O. 13764 required the OPM Director to establish mutually consistent standards and procedures to determine the reliability, trustworthiness, and good character and conduct of those working for the Government in the executive branch regardless of appointment type. Additionally, E.O. 13764 expanded OPM's responsibilities by making OPM responsible for establishing investigative standards, risk designation procedures, and reciprocity rules for positions in the excepted service beyond those that could be noncompetitively converted to the competitive service.

As amended by E.O. 13764, E.O. 13488 of January 16, 2009, *Granting Reciprocity on Excepted Service and Federal Contractor Employee Fitness and Reinvestigating Individuals in Positions of Public Trust*, establishes that contractor employee fitness or nonappropriated fund employee fitness is subject to the same position

designation requirements and investigative standards, policies, and procedures as fitness determinations for civil service employees as prescribed by OPM under the Civil Service Rules. (74 FR 41111.) As amended by E.O. 13764, E.O. 13467 of June 30, 2008, *Reforming Processes Related to Suitability for Government Employment, Fitness for Contractor Employees, and Eligibility for Classified National Security Information*, establishes a requirement for continuous vetting for persons who perform, or who seek to perform, work for the executive branch in competitive service, excepted service, career Senior Executive Service, contractor employee, and nonappropriated fund positions that are included in covered positions as defined in the E.O. 73 FR 38103. Furthermore, E.O. 13467 (section 2.1(c)), as amended by E.O. 13764, requires that, to the extent practicable, the investigative and adjudicative standards for fitness be consistent with the suitability standards.

In May 2018, the OPM Director and the Director of National Intelligence, in their respective roles as Suitability and Credentialing Executive Agent and Security Executive Agent, launched an effort consistent with this direction, “Trusted Workforce 2.0” (see <https://www.performance.gov/trusted-workforce/>), to transform workforce vetting by employing a modernized and more efficient process for ensuring that only trusted individuals enter and remain in the Federal workforce. Key goals of the initiative are to capitalize on information technology capabilities that allow for the integration of automation and take advantage of a wider spectrum of data, reduce time-intensive manual processing, and promote greater mobility of the workforce by providing vetting processes that enable each individual's vetting status to be continuously up to date. This final rule helps advance the goals of the Trusted Workforce 2.0 initiative.

Explanation of OPM's Final Rule

Aligned Criteria

OPM is issuing revised suitability criteria at 5 CFR 731.202. The basis for the specific revisions to several of the existing suitability factors is explained in the section discussing § 731.202. Additionally, OPM is revising § 731.202 so that these criteria will be used for making both suitability and fitness

determinations except as otherwise noted in the regulation. Establishing the criteria as the minimum standards of fitness for much of the excepted service is done per the amended Civil Service Rule II (5 CFR 2.1(a)(iii) and (iv), making OPM responsible for setting standards of suitability for most Federal appointments and for setting minimum standards of fitness for positions in the excepted service, with certain exceptions.) Additionally, the aligned factors are consistent with E.O. 13467, as amended by E.O. 13764, which requires standards for suitability for appointment in the competitive service and standards for fitness for appointment in the excepted service be aligned “to the extent possible.” OPM is also revising 5 CFR 731.104 to specify the circumstances under which either a suitability or fitness determination is required. These changes are described in detail in the sections discussing §§ 731.104 and 731.202.

Aligned Position Designation Requirements, Investigative Standards, and Reciprocity

This final rule also implements several changes to improve consistency in the vetting process and to enhance mobility of the civil service, contractor employee, and nonappropriated fund workforces. Specifically, the rule aligns the requirements for position designation, investigations, and reciprocal acceptance of investigations and suitability or fitness determinations amongst these populations. Agencies will use the same system for designating position risk (*i.e.*, low, moderate, and high) for civil service, contractor employee and nonappropriated fund positions to determine the commensurate level of background investigation. Background investigations conducted for these positions will be done using the same investigative standards, which prescribe the investigative checks to be conducted at low, moderate, and high tiers that correlate to position risk. Finally, agencies will apply the same rules for determining whether reciprocal acceptance of prior background investigations and suitability or fitness determinations are required, promoting efficient transfer of trust determinations.

Civil Service Rule V (5 CFR 5.2(a)), as amended by E.O. 13764, section 1, establishes that, for positions in the excepted service for which the OPM Director has standard-setting responsibility under 5 CFR part 2, the Director may require agencies to designate positions based on risk in accordance with OPM guidance to determine the appropriate level of

investigation, and may prescribe investigative standards, policies, and procedures, and reciprocity standards for investigations and adjudications of suitability and fitness, except to the extent statute vests authority to apply additional fitness standards in an agency. Civil Service Rule VI (5 CFR 6.3(b)), as amended by E.O. 13764, section 1, likewise provides that appointments and position changes in the excepted service are “subject to the suitability and fitness requirements of the applicable Civil Service Rules and Regulations” as prescribed by the Director.

Policies and procedures for suitability and fitness are required to be “aligned using consistent standards to the extent possible” and to “provide for reciprocal recognition.” (E.O. 13467, as amended, section 1.1.) Further, agencies are required to accept background investigations and adjudications conducted by other agencies except when an agency determines the prior investigation or adjudication does not meet its standards. (E.O. 13467, as amended, section 2.2.) The Director of OPM, as the Suitability and Credentialing Executive Agent, is responsible for establishing these requirements through regulations, guidance, and standards. (E.O. 13467, as amended, section 2.5.)

E.O. 13488, as amended by E.O. 13764, establishes that the same position designation requirements and investigative standards, policies, and procedures used for fitness determinations for civil service employees apply to contractor employee fitness and nonappropriated fund employee fitness. (E.O. 13488, as amended, section 3(b).) Likewise, section 3(c) of E.O. 13488, as amended, provides that fitness determinations for contractor employees and nonappropriated fund employees and their underlying investigations are subject to the same reciprocity requirements as those prescribed by OPM under the Civil Service Rules for employment in the civil service. Therefore, contractor employees, except those for which OPM is statutorily precluded from prescribing standards, and nonappropriated fund populations are subject to the same position designation, investigative, and reciprocity requirements as positions in the competitive service, the excepted service (including positions where the incumbent can noncompetitively convert to the competitive service), and for career appointments to the Senior Executive Service.

The position designation, reciprocity, and investigation requirements for

contractor employees that OPM is codifying in part 731 are not new. Since 2009, E.O. 13488 has covered contractor employee fitness, giving agency heads discretion on fitness criteria, but requiring them to take into account OPM guidance when determining if the criteria was equivalent for the purpose of making a reciprocally acceptable determination. Per E.O. 13488, reciprocity for fitness and suitability determinations applied to contractor employees, and agencies have been required to report the nature and results of background investigations and fitness determinations to the government-wide investigations and adjudications index (Central Verification System or successor). Likewise, the requirement that contractor employees be subject to the same investigative requirements as apply to Federal employees has been in place since 2012. In a December 6, 2012, memorandum issued by the Security, Suitability, and Credentialing Performance Accountability Council (PAC) titled *Assignment of Functions Relating to Coverage of Contractor Employee Fitness in the Federal Investigative Standards*, the PAC determined, after consulting with the Department of Defense and other affected agencies, that contractor employees should be subject to the same Federal Investigative Standards as apply to Federal employees. Consistent with E.O. 13467, which authorized the PAC to assign functions related to matters such as alignment and improvement of investigations and contractor employee fitness, the PAC via this memorandum assigned the Director of OPM the function of prescribing investigative standards for “contractor employee fitness,” which at that time was defined in section 1.3(f) of E.O. 13467 as “fitness based on character and conduct for work for or on behalf of the Government as a contractor employee.”

The Federal Investigative Standards, which were issued by the Executive Agents in December 2012, applied “to all individuals working for or on behalf of the executive branch and individuals with access to federally controlled facilities and information systems.” The Standards were established for investigations to determine eligibility for logical and physical access, suitability for Government employment, eligibility for access to classified information, eligibility to hold a sensitive position, and fitness to perform work for or on behalf of the Government as a contractor employee.

This rule does not specifically address investigative requirements for eligibility for access to classified information or for employment in sensitive (national

security) positions. Those matters are addressed in 5 CFR part 1400 and in issuances by the Director of National Intelligence acting as the Security Executive Agent under E.O. 13467. However, this rule continues the existing requirement (5 CFR 731.106(a) and (c)(2)) that a position must be designated based both on its public trust risk and its national security sensitivity so that the appropriate level of investigation is conducted to address both suitability and national security concerns. Complementary language appears in 5 CFR 1400.201.

Continuous Vetting Requirements

Continuous vetting refers to the process of “reviewing the background of a covered individual at any time to determine whether that individual continues to meet applicable requirements.” (E.O. 13467, as amended, section 1.3.) In the context of suitability and fitness for employment, continuous vetting is used to determine if an individual remains suitable or fit for a position over time. A covered individual is, with limited exceptions, “a person who performs, or who seeks to perform, work for or on behalf of the executive branch (e.g., Federal employee, military member, or contractor), or otherwise interacts with the executive branch such that the individual must undergo vetting.” (Id.) In accordance with section 2.1 of E.O. 13467, as amended, all covered individuals are to be subject to continuous vetting under standards to be established by the Security Executive Agent or the Suitability and Credentialing Executive Agent exercising its Suitability Executive Agent functions, as applicable. Further, the Director of OPM as the Suitability Executive Agent is responsible for prescribing applicable investigative standards, policies, and procedures. With this final rule, any individual occupying a position that is subject to investigation, as described in revised § 731.104(a), including both public trust positions and low risk positions, is subject to continuous vetting. The nature and specificity of continuous vetting checks will be further defined in supplemental issuances, and requirements will account for position risk and sensitivity designations.

Elimination of Fixed, Five-Year Periodic Reinvestigation Requirement for Public-Trust Positions

With this final rule and OPM’s implementation of the continuous vetting requirement set forth in E.O. 13467, as amended, section 2.1, OPM has eliminated the fixed, five-year

periodic reinvestigation requirement for public trust positions.

Digest of Public Comments

In response to the proposed rule (88 FR 6192, January 31, 2023), OPM received 3,587 comments via the eRulemaking portal, one comment via email, and one comment by phone. All comments were received during the 60-day comment period. Comments received were from individuals, organizations, a labor union, and a Federal agency. Approximately 3,500 identical form comments were submitted by about 3,400 commenters.

In general, the comments ranged from categorical rejection of the proposed regulations to strong support. OPM carefully considered comments and arguments made in support of and in opposition to the proposed amendments. The comments are summarized and discussed in the subsequent sections. Comments are organized by general comments followed by comments specific to each section. A discussion of the suggested revisions that were considered and either adopted, adopted in part, or declined, and the rationale therefore is included. Comments beyond the scope of the proposed changes or which were vague or incomplete are not addressed.

General Comments

Some commenters offered support for the regulatory changes, believing that the changes to the regulation would serve to improve the Government’s ability to assess the integrity and efficiency of the service and streamline the process, while others suggested that the current process is sufficient and that changes are unnecessary.

Several commenters took issue with the relevant terminology, suggesting that the terms “character,” “suitability and fitness,” and “conduct necessary” are vague and could allow for discrimination, including against individuals who do not have the same educational or cultural background as other job applicants. Others commented more generally that the rule would allow for discrimination without regard to an individual’s qualifications, asserting that hiring managers could determine the level of character required and reject candidates based on their own ideology. Other commenters called the rule unconstitutional and illegal, suggesting it may allow for discrimination based upon political beliefs or protected speech.

In response to these comments, OPM agrees that this final rule advances important goals to strengthen and streamline personnel vetting. This rule

implements vetting reform requirements and initiatives that span three Administrations and were first initiated in 2017 and distilled into the transformational Trusted Workforce 2.0 framework beginning in 2018 with a focus on revamping the fundamental approach and supporting policy framework, overhauling business processes, and modernizing the information technology architecture. Effective Government operations require that the Government’s workforce be trusted to deliver on mission, provide excellent service, and demonstrate effective stewardship of taxpayer funds. Establishing and maintaining trust is a core goal of the Federal personnel vetting program. Further, as addressed in the previous sections (Background and Explanation of OPM’s Final Rule), the rule implements requirements established by the President via Executive orders. Therefore, the scope of the regulations with respect to the populations covered, including the excepted service, adheres to the direction of the Executive orders. As such, OPM will not make any revisions to the rule regarding the scope.

OPM disagrees with comments suggesting the language in the regulation may allow for discrimination. The terms called out by the commenters are well-established and their application to personnel vetting is not changing through this rule. As outlined in the regulation and elaborated upon in a body of guidance, such as the Suitability Processing Handbook, the Trusted Workforce 2.0 policy, and the Investigative Standards, OPM and agencies must base suitability determinations on the presence or absence of one or more of the specific factors in 5 CFR 731.202(b) while considering the additional considerations in § 731.202(c) to the extent they are deemed pertinent. OPM also disagrees that agencies, when acting in accordance with the rule, are at liberty to determine the level of character that applicants must possess arbitrarily, nor do the requirements allow for suitability or fitness decisions that are based upon the decision-maker’s personal ideology.

With respect to the concerns raised that some of the proposed changes are vague and may be illegal or unconstitutional, OPM disagrees that the proposed changes are illegal and unconstitutional. OPM acknowledges the concerns regarding clarity and is not moving forward with some of the proposed changes. This is discussed in subsequent sections.

Part 302—Employment in the Excepted Service

The final rule adds as an authority E.O. 13764, which amended the Civil Service Rules to extend authority by the OPM Director to establish the minimum standards of fitness for the excepted service, and amends the existing authority citations to comply with 1 CFR part 21, subpart B. This final rule adds § 302.108 to refer readers to part 731 for requirements on fitness determinations for excepted positions. Additionally, the section establishes that an agency must record its reason(s) for making fitness determinations under part 731 and must furnish a copy of those reasons to an applicant upon their request. Section 302.203 is revised to direct readers to part 731 for the minimum standards and criteria for determining fitness for employment based on character and conduct, allowing agencies to prescribe additional factors to protect the integrity and promote the efficiency of the service when job-related and consistent with business necessity.

One commenter wrote that the disqualifying factors in the existing part 302, which the commenter opines address an applicant's ability to effectively work for the Government, their ability to faithfully service the Federal Government, and other possible statutory concerns, are far different from the new factors OPM proposed in part 731. According to the commenter, the new factors in part 731 consider behavior that is entirely unrelated to the applicant's proven history with the law and the Federal Government and the applicant's capacity to perform the job.

OPM agrees that the disqualifying factors in part 302, although similar, were not entirely consistent with those in § 731.202. OPM disagrees with the commenter's notion that the intent of the disqualifying factors was far different than consideration of behavior as specified in part 731. As was explained in the notice of proposed rulemaking, the inconsistency is, in part, a basis for making the change in this rulemaking, as the President has called for an executive branch-wide vetting enterprise to use, to the greatest extent practicable, aligned and consistent vetting policies, procedures, and standards for determining suitability or fitness for Government employment. (See E.O. 13467, as amended.) Specifically, the President directed that the investigative and adjudicative standards for fitness must, to the extent practicable, be consistent with the standards for suitability. (E.O. 13467, sec. 2.1(c).) Therefore, OPM is

necessarily changing the way in which fitness is determined by aligning the factors and additional considerations used for fitness determinations with those used for suitability. OPM agrees that the President intended for the OPM Director to establish the minimum standards of fitness based upon character or conduct (see E.O. 13764, sec. 1(a)(iii), revising 5 CFR 2.1(a)(vi).); however, OPM disagrees with the suggestion that the fitness factors as aligned with the suitability factors evaluate fitness based on something other than an assessment of an individual's character or conduct. Each of the factors is designed to allow agencies to consider different aspects of an individual's past conduct, as identified during the vetting process, and how that conduct illustrates the individual's character. See discussion of § 731.202 for more information about the factors.

This same commenter suggested that permitting agencies to prescribe additional fitness factors is an extreme change that grants agencies near limitless power. The commenter suggested that this delegation to agencies is inconsistent with the direction of E.O. 13764 to promote consistency between agencies. The commenter suggested the terms "job-related" and "business necessity" must be defined very clearly, agencies must be required to publicly post and explain potential factors, and OPM must oversee and assess these factors.

OPM agrees that E.O. 13764 seeks to promote consistency between agencies. By aligning the minimum fitness factors with the suitability standards, application of reciprocity between agencies based on fitness determination should increase. Under the existing regulations, an agency has latitude for establishing reasons to deem an applicant unfit for an excepted service appointment. OPM regulations have provided a list of potential disqualifying reasons (which are referenced by the commenter) but have not required the use of any particular factors. This final rule, in establishing a specific list of factors that can be supplemented by an agency in making a fitness determination, is not a vast expansion of authority for agencies. Commenter's suggestion to the contrary is simply incorrect.

Nonetheless, the President amended the Civil Service Rules to make OPM responsible for the *minimum* standards of fitness based on character and conduct, and thus allowed agencies to supplement the fitness standards, where appropriate. (See E.O. 13764, amending 5 CFR 2.1(a)(i) and (ii) to state that OPM

is responsible for "Standards of suitability" for the competitive service but is responsible for "Minimum standards of fitness" for the excepted service.) The President also made clear that each agency is authorized to "determine[] that a particular background investigation or adjudication does not sufficiently address the standards used by *that agency* in determining the fitness" of its excepted service employees. (E.O. 13467, sec. 2.2, as amended (emphasis added).) Accordingly, OPM is not responsible for, nor is it required to approve or oversee, the establishment of additional fitness factors used by an agency in determining fitness for its excepted service positions.¹ OPM agrees, however, that additional fitness factors should be made known to applicants when such factors are used in making an unfavorable fitness determination, and therefore has included a requirement in § 302.108(b) for agencies to make additional factors a matter of record and furnish them to an applicant, upon request, in such circumstances.

OPM is not accepting the request to define what *job-related and consistent with business necessity* means because we do not agree it is needed in this context. This terminology is not unique to personnel vetting and is generally understood as the standard that agencies must meet to justify unique hiring requirements. These concepts appear in civil service hiring policy at least as early as the Uniform Guidelines on Employee Selection Procedures (1978), which the Civil Service Commission, the Equal Employment Opportunity Commission, the U.S. Department of Justice, and the U.S. Department of Labor helped develop. (See sec. 60–3, Uniform Guidelines on Employee Selection Procedure (1978); 43 FR 38295 (Aug. 25, 1978).) OPM and agencies are well-versed in applying these concepts. (See, e.g., OPM's Delegated Examining

¹ See E.O. 13764, sec. 3(q), adding a new section 2.2 "Reciprocity" to E.O. 13467. The provision cited by the commenter ("Any additional requirements approved by the appropriate Executive Agent shall be limited to those that are necessary to address significant needs unique to the agency involved, to protect national security, or to satisfy a requirement imposed by law.") does not indicate that agency *fitness* factors are subject to this Executive Agent oversight. The preceding sentence states: "Except as *described above* and except to the extent authority to apply additional requirements is vested by statute in an agency, an agency may not establish additional . . . requirements . . . without the approval of the [appropriate Executive Agent]." This sentence applies to the suitability factors but does not apply to the fitness factors, which were "*described above*." Accordingly, the "additional requirements approved by the appropriate Executive Agent" refers only to suitability factors.

Operations Handbook, available at https://www.opm.gov/policy-data-oversight/hiring-information/competitive-hiring/deo_handbook.pdf.) Agencies also apply these concepts in administering Section 501 of the Rehabilitation Act of 1973, as amended (29 U.S.C. 791), which prohibits selection criteria and standards that tend to screen out people with disabilities unless the procedures have been determined through a job analysis to be job-related and consistent with business necessity.

Part 731—Suitability and Fitness

This final rule revises the authorities by adding E.O. 13764, Civil Service Rule 6, and Presidential Memorandum—Enhancing Safeguards to Prevent the Undue Denial of Federal Employment Opportunities to the Unemployed and Those Facing Financial Difficulties Through no Fault of Their Own, January 31, 2014. This rule also revises the formatting of existing authorities to comply with 1 CFR part 21, subpart B.

Section 731.101 Purpose

This section describes the purposes for this regulation, which are to establish investigation, continuous vetting, and reciprocity requirements; suitability requirements and the minimum standards of fitness; and the procedures for taking suitability actions. This section also provides definitions necessary for administration. Notably, OPM is adopting its proposed definition for the term “employment subject to investigation,” which is used throughout the revisions to part 731. This term captures the range of individuals subject to investigation by virtue of their appointment to the competitive service or career Senior Executive Service, an appointment to the excepted service, employment as a contractor employee, or employment as a nonappropriated fund employee.

OPM received no comments on this section; however, OPM is making several changes in the final rule to improve clarity and readability. For example, OPM has made minor wording changes to the definition of excepted service (e.g., moving the clause “of the executive branch” to follow the word “position,” which is the noun that the clause modifies). OPM is also revising the definition of suitability action, which referenced the list of actions in § 731.203. OPM has moved that list into the definition. Conversely, the definition of a suitability action included regulatory information of relevance in Subpart B and included information that was redundant with § 731.203(a); therefore, OPM has deleted

the redundant information from the definition and moved the remaining language to § 731.203(b). OPM is adopting minor clarifying edits to the proposed definitions of appointee, contractor employee, and employee.

OPM also is correcting a numbering error from the proposed rule. Proposed paragraph (b)(4) is not part of the “purpose” sentence in paragraph (b) and is renumbered as paragraph (c). Proposed paragraph (c) is codified at paragraph (d) in this final rule.

Section 731.102 Implementation

This section addresses the requirement to use investigations conducted under part 731 only in accordance with the Privacy Act and section 1.1(e) of E.O. 13467, as amended, and it establishes that OPM may issue requirements for implementing the rule. OPM received no comments on this section and is adopting the language as proposed.

Section 731.103 Delegation to Agencies for Competitive Service Positions

This section describes the limited delegation and related requirements that OPM makes to agency heads for adjudicating the suitability of applicants or appointees for competitive service and career Senior Executive Service positions (as defined in § 731.101) within the agency.

A commenter suggested OPM revise the rule to allow an agency head with delegated suitability authority to redelegate or convey outside of their agency the authority for making suitability adjudicative determinations for positions within their agency. OPM is not accepting this change. For the reasons described in the following paragraphs, OPM delegates limited authority for adjudicating suitability to agency heads. Agency heads may redelegate the function within their own agency, and agency records must show any redelegation.

Congress and the President have assigned to OPM the responsibility for adjudicating the suitability of certain individuals applying to or holding positions in the competitive service. (See 5 CFR parts 2 and 5; see generally 5 U.S.C. 3301 and 7301 and the Civil Service Rules established in E.O. 10577, as amended by E.O.s 12107 and 13764.) Congress has authorized the OPM Director to delegate any function vested in or delegated to the Director to heads of executive branch agencies and other agencies employing persons in the competitive service. (5 U.S.C. 1104(a)(2).) When OPM delegates functions, it must establish standards

that apply to OPM as well as to any agency under delegated authority, and OPM must oversee the performance of those delegated functions. And, when an agency does not wish to perform the function(s) delegated, the head of the agency may ask OPM to assist in performing the function on a reimbursable basis. (See 5 U.S.C. 1104(b)(4).) Additionally, section 2.5(b)(v) of E.O. 13467, as amended, requires the OPM Director, as the Suitability Executive Agent, to review agency suitability and fitness vetting programs on a continuous basis to determine whether they are meeting the executive order’s requirements.

Suitability determinations are case-by-case decisions based upon the nature of the conduct, as applicable, and the functions and responsibilities of the position. In making the delegation for suitability adjudications to agency heads, OPM recognized the important role an agency plays in comparing the nature of the position against the issues in an individual’s background. The agency, armed with the understanding of the job duties and agency mission, is best positioned to determine when conduct warrants a finding of unsuitability and, in that instance, determine the best course of action—whether it be taking suitability action in accordance with the agency’s delegated authority or looking to another authority more appropriate or applicable to the situation.

OPM retained the authority to adjudicate suitability in cases where the nature of the conduct causes the individual to be unsuitable for any position. Through suitability reviews, agency officials may identify cases that warrant referral to OPM for suitability review and action and can make those referrals as is required by the regulation. OPM proposed to retain authority to adjudicate suitability where there was evidence of conduct that fell within several proposed, new suitability factors. As addressed further in the pertinent section of this final rule, OPM is not proceeding with the four distinct factors that would have comprised § 731.202(b)(7) through (10) and is instead retaining the current factor at § 731.202(b)(7). Accordingly, OPM is modifying its proposed language at § 731.103(f) to specify that OPM has sole jurisdiction to adjudicate cases involving evidence of conduct that falls within § 731.202(b)(7).

Section 731.104 Investigation and Reciprocity Requirements

This section establishes investigation requirements and reciprocity requirements for investigations and for

suitability and fitness determinations. As an initial matter, a Federal agency recommended reorganizing the paragraphs in § 731.104(b) for clarity. OPM agrees and has made the following adjustments from the notice of proposed rulemaking:

- Section 731.104(b)(1) is now § 731.104(b).
- Section 731.104(b)(2) is now § 731.104(c).
- Section 731.104(b)(2)(i) is now § 731.104(c)(1).
- Section 731.104(b)(2)(ii) is now § 731.104(c)(2).
- Section 731.104(b)(2)(ii)(C) is now § 731.104(d).

In addition, OPM has edited the proposed regulatory language to improve clarity and readability. For example, OPM modified paragraphs (a)(1) and (2) from the proposal to use more consistent terminology throughout the section. Specifically, paragraphs (c)(1) and (2) (as renumbered) referred to a prior investigation being reciprocally accepted. In contrast, paragraphs (a)(1) and (2) discussed the concept of reciprocal acceptance of a prior investigation but did not use that phrasing. In rephrasing paragraphs (a)(1) and (2) to use more consistent language, OPM has also restated the requirement in terms of providing direction to the employing agency. OPM also revised paragraph (c)(2)(ii) (as renumbered) to make clear that the additional factors are permitted, but not required, by § 731.202(b). Finally, OPM revised paragraph (d) (as renumbered) to remove an inadvertent reference to reinvestigation. (See prior discussion in the Elimination of Fixed, Five-Year Periodic Reinvestigation Requirement for Public-Trust Positions section.)

Section 731.104 explains the requirements for employment subject to investigation (see § 731.101 discussion of definitions) and reciprocity requirements for populations covered. OPM's proposed revisions, which are adopted in this final rule, extend these requirements to include the "excepted service," "contractor employees," and "nonappropriated fund employees" in addition to appointments in the competitive service, appointments to the excepted service that can noncompetitively convert to the competitive service, and career appointments to the career Senior Executive Service. In general, these types of employment are subject to background investigations for suitability or fitness. However, as described in the new § 731.104(a)(3), certain short-term positions are not subject to background investigations for suitability and fitness

but checks to ensure suitability or fitness are still required.

Per revised 5 CFR 731.104(c), suitability determinations must be made for all appointments in the competitive service, excepted service when the position can noncompetitively convert to the competitive service, or career Senior Executive Service; and fitness determinations must be made for all appointments to excepted service positions, except under specified circumstances. Under § 731.104(c)(2), however, an agency is generally required to reciprocally accept a prior favorable determination, except under certain circumstances. The conditions under which an agency is not required to reciprocally accept a prior favorable suitability or fitness determination are addressed in the new § 731.104(c)(2)(i) and (ii). Additionally, OPM clarifies that agencies may reciprocally accept a prior *investigation* that is at or above the appropriate tier but for which a new suitability or fitness determination is needed. Prior to this change, the regulation could be misread to require a new investigation in this scenario.

The following are examples where an agency will reciprocally accept an existing background investigation while making a new suitability or fitness determination.

Example 1: An individual is employed with Agency A in a position that required a Tier 5 level background investigation. Agency A reported a favorable national security determination for the Tier 5 investigation and did not report a suitability determination. The individual is transferring to a position with Agency B which also requires a Tier 5 level background investigation. The new position is in the competitive service, so the agency is also required to make a suitability determination. Because there is no record of a favorable suitability or fitness determination, Agency B will request a copy of the existing Tier 5 background investigation and will review it to make a suitability determination.

Example 2: An individual works for Agency A as a Program Analyst. The individual had a Tier 4 level background investigation for which Agency A made a favorable suitability determination. The individual has now been given a conditional offer for employment with Agency B in a Fiduciary Service Representative position. Agency B sees that the individual has a Tier 4 level background investigation, which is sufficient for the new position. Agency B also sees that Agency A made a favorable suitability determination; however, the background

investigation record in the government-wide repository reflects the individual had financial issues. Given the financial duties of the new position, Agency B determines that a core duty determination² is warranted. Agency B must reciprocally accept the existing Tier 4 background investigation but will request a copy of it for review to determine whether the individual is suitable for the position with their agency.

With respect to break-in-service requirements, OPM is removing the 24-month break-in-service provision that applied to reciprocity (see current §§ 731.104(a)(5) and 731.202(d)). This requirement is replaced with a new process, established in the Federal Personnel Vetting Investigative Standards issued by the Suitability, Credentialing, and Security Executive Agents, which expands this window of time up to sixty months using a tiered, risk-based approach of graduated levels of investigation. Upon reentry, individuals will be enrolled into continuous vetting consistent with new requirements in § 731.106(d).

Finally, OPM updates requirements for "seasonal" positions to require a background investigation as addressed in § 731.106(c)(1). Seasonal employees, in accordance with 5 CFR 340.401(a), are permanent employees who are placed in a nonduty/nonpay status and recalled to duty in accordance with preestablished conditions of employment. Because of the permanent characteristics of the positions, they implicate different risks than temporary appointments.

An individual commented on the option for agencies to make a core duty determination, rather than reciprocally accept a prior favorable suitability or equivalent fitness determination. The commenter believes this option will require agencies to review the prior investigative record each time an individual changes positions and suggested instead that OPM consider stipulating a time period after which agencies would no longer need to consider the impact of past conduct, as indicated in a prior investigation, against the core duties of the new position. OPM does not agree with the commenter's interpretation. Agencies are not required to make a core duty determination each time an individual changes positions. Core duty

² An agency must consider the nature of the position in evaluating suitability or fitness if pertinent to a specific case. 5 CFR 731.202(c). This assessment, which considers the core duties of the position and the relevance of information discovered during an investigation, is called a "core duty determination."

determinations are only required when there is information in the individual's investigative record as reflected in the government-wide repository that shows the individual has engaged in conduct that may be incompatible with the core duties of the position to which the person is applying or transferring into. That prior conduct may make that person unsuitable or unfit for the new position, though they were suitable or fit for the current position. It would be inconsistent with the manner in which suitability should be assessed if OPM were to establish deadlines after which an agency may not consider how conduct may impact suitability or fitness for a new position. Take for example an individual moving into a law enforcement position where conduct of a criminal nature, even if dated, may be incompatible. While OPM is not making a change as a result of this comment, we acknowledge that enhancements to information technology systems allowing agencies more clarity regarding the nature of conduct contained within the investigation record would streamline and reduce processing times for agencies. Additionally, future system enhancements could avoid the need for agencies to request copies of prior files as is often required currently to make a new determination.

A labor union expressed support for the change to remove the 24-month break in service provision citing that investigations can be onerous and time-consuming for employees. The organization agreed that the change is a reasonable step towards minimizing that burden.

A Federal agency recommended that, as written, the proposed regulatory text requiring agencies to enroll individuals into continuous vetting when reentering service may not align with implementation guidance. Implementation guidance has not yet been made available for the full scope of this rule. OPM is revising the regulatory text in § 731.104(a)(2) for clarity by adding that agencies must request such checks as may be specified in implementing guidance and must enroll individuals re-entering service after a break in service into continuous vetting, consistent with the requirements in § 731.106(d). Additionally, OPM will continue to issue updated implementation guidance as continuous vetting is expanded to more populations.

Section 731.105 Authority To Take Suitability Actions in Cases Involving the Competitive Service or Career Senior Executive Service

This section specifies OPM and agency authorities with respect to taking suitability actions. Changes from the current rule are for clarity and to address the additional circumstances under which OPM retains jurisdiction when the nature of the conduct would make an individual unsuitable to hold any covered position.

One commenter believed that, because the language in § 731.105(a)(1) was new (clarifying that suitability actions can be taken if an application is withdrawn, if an offer of employment is withdrawn, and if an appointed individual separates from employment), the authority to take suitability actions in these instances is also new. It is not. The authority to take suitability actions in these circumstances exists currently and updates to the regulation simply provide clarity and greater transparency on the situations when suitability actions can be taken. In regulatory changes made in 2008 (*see* 73 FR 20149), OPM revised the definition of "applicant" from "[a] person being considered for employment" to "a person who is being considered or has been considered for employment." In a notice explaining the regulatory changes, OPM stated "[s]uitability actions may be warranted for individuals who are not currently, but were previously, under consideration. For instance, if an individual provided fraudulent information in an attempt to obtain a Federal job, he or she might no longer be actively under consideration because the qualification requirements were not met. In such a case, it is in the best interests of the Government to refer the case to OPM for suitability adjudication." (*See* Federal Investigations Notice No. 09–06, available at <https://www.dcsa.mil/Portals/128/Documents/pv/GovHRSec/FINs/FY09/fin-09-06.pdf>.) The commenter also suggested that, by resigning from a position, the individual should be protected from a suitability action. However, if an individual who is undergoing a suitability review and whose suitability is in question has the job application or offer withdrawn or resigns or is terminated for reasons other than suitability, this will not prevent an agency or OPM from taking a suitability action, including the potential to impose a debarment so that the individual cannot serve in a position for a period of time. Imposing a debarment through the suitability action process not only stops an individual

from holding a covered position, it also offers a period of time for the individual to potentially rehabilitate from the concerning conduct that caused them to be deemed unsuitable, raising the possibility that they could be found suitable for a future position after the period of debarment has concluded. To improve clarity, OPM is adopting revised text at § 731.105(a)(1) to reflect the intent of the rule, which is to allow OPM or an agency to continue with an action that is in process. Specifically, we are revising "take" in the proposed rule to "complete" in this final rule.

At § 731.105(d), in addition to OPM having jurisdiction over material intentional falsification, OPM has added that only OPM is able to take a suitability action under part 731 against an *employee* in the competitive service or career Senior Executive Service based on the criteria of § 731.202(b)(3), (7), or (8). As addressed further in the pertinent section of this final rule, OPM is not proceeding with the four distinct factors that would have comprised § 731.202(b)(7), (8), (9), or (10) and is instead retaining the current factors at § 731.202(b)(7) and (8). An individual commented that the proposed change to also retain jurisdiction over the (previously proposed) four distinct additional factors is unjustified as it seems to exist for the exclusive purpose of targeting ideological enemies. The commenter's concerns with the factors are moot now that OPM has decided not to proceed with those factors; but, with respect to the commenter's objection to OPM retaining suitability jurisdiction, OPM does not agree with the commenter's contention. OPM is assigned the authority to adjudicate suitability on behalf of the executive branch. Where OPM has determined that individual agencies are better positioned to make the suitability determination, OPM has delegated the responsibility to the respective agency head. However, where there is evidence of conduct that would make an individual unsuitable for any covered position, OPM retains jurisdiction as only OPM can impose a government-wide debarment.

Section 731.106 Designation of Public Trust Positions and Investigative Requirements

This section addresses requirements for agencies to designate position risk and sensitivity. OPM is adding a reference to 5 CFR part 1400, which is the complementary regulation, issued jointly by OPM and the Office of the Director of National Intelligence (ODNI), addressing position sensitivity designations. Additionally, OPM

clarifies the timing of initiating background investigations, which should occur prior to appointment. This is consistent with OPM's prior guidance for issuing personal identity verification credentials and with what is required for positions with a sensitivity designation, as specified in 5 CFR part 1400.

OPM is also moving the requirements regarding the timing of criminal and credit history collection from § 731.103 to this section by including the language that was published in the final rule to implement the Fair Chance to Compete for Jobs Act of 2019 (*see* 88 FR 60317). Finally, this section adds the requirement for continuous vetting for the low risk population and replaces periodic reinvestigations for the public trust population.

One commenter recommended that OPM should enhance training on position designation and provide additional guidance to agencies. The comment is outside the scope of the rule changes, but OPM will take the commenter's suggestion under consideration.

OPM received comments in support of and in opposition to continuous vetting. A labor union, in support of the change, acknowledged the importance of ensuring that the integrity and efficiency of the civil service is upheld but expressed concern with the current reinvestigation process, which they described as unnecessarily rigid and burdensome for employees.

The same labor union and another commenter urged OPM to consider the burden on employees, while two commenters opined that the nature and periodicity of the continuous vetting checks needs to be specified. One commenter expressed concern that the investigative service provider could determine the scope of the checks, causing the checks to be too intrusive. OPM acknowledges that, even with the shift to continuous vetting, individuals will be required to provide self-reported information and may be subject to interviews or inquiries as a result of information revealed via checks. OPM recognizes that the Privacy Act of 1974 requires collecting information, to the greatest extent practicable, from the individual and, accordingly, that there is a need to provide the individual with an opportunity to address issues an agency may determine to be adjudicatively relevant. OPM also agrees that the process should be designed in a way such that individuals undergoing vetting are not required to provide information or respond to requests unnecessarily. These individuals deserve transparency into the vetting

process in a way that will not jeopardize the nation's security. OPM and ODNI, in their respective roles as the Suitability and Security Executive Agents, establish the continuous vetting checks that are required, considering the positions' risk and sensitivity levels. The requirements specify the types of checks conducted along with the periodicity. Heads of agencies must follow policies and issuances by the Executive Agents, including investigative standards (*see* E.O. 13467, sec. 2.7, as amended) and all Federal personnel vetting conducted by the executive branch must comply with the standards established by the Executive Agents. Therefore, the mechanisms will be better understood and widely followed, resulting in consistent and standardized checks across the covered populations.

One commenter opined that, if periodic reinvestigations are replaced by continuous vetting, the initial check should only go back one year, while two commenters opined that individuals in positions designated as low risk should not be subject to continuous vetting or personnel vetting standards because they do not require security clearances, making it unfair for them to fall under the same scrutiny. Various commenters also expressed concern that the requirement is contrary to the Administration's position on second chance hiring, will result in less talent competing for Government positions, could cause difficulty keeping jobs, and is too invasive. An organization objected to the reduction in suitability and fitness review from an objective, five-year reassessment to a continuous review process on the basis that the current rule already permits this and that doing away with the five-year requirement could weaken agency security.

OPM agrees that the current rule permits checks for the public trust population at a higher periodicity if they take place at least once every five years but otherwise disagrees with these points. The requirement that individuals working for or on behalf of the Government be subject to some level of vetting dates back several decades. More recently, since 2008, under the Final Credentialing Standards for Issuing Personal Identity Verification Cards under Homeland Security Presidential Directive 12, a Tier 1 or equivalent investigation has been required to be granted a personal identity verification (PIV) credential. Investigative source and coverage requirements for full background investigations are established commensurate with the position risk and sensitivity designations and the

same will be true with continuous vetting requirements. The President, by Executive order, established the requirement for continuous vetting for covered individuals, and therefore, OPM is implementing that requirement via this rule. OPM has revised the regulatory text to state that checks must be conducted at regular intervals based on the type of check and with consideration of position risk and sensitivity. These provisions were in the proposed regulatory text but are reorganized to clarify the agency requirements. Similarly, OPM has made minor changes to the examples of public trust positions in the regulatory text to improve readability.

Another commenter raised questions about the authorities that agencies may consider when actionable information is returned as the result of continuous vetting checks. As has been the case with periodic reinvestigations, agencies will consider the substantive standards in § 731.202 when evaluating the results. A person's employment status, however, will determine the applicable agency authority and procedures to be followed in any action taken based upon the results. In many instances, based upon the time on the job and/or the conduct occurring post appointment, a suitability action under part 731 will not be applicable. Nonetheless, conduct that surfaces could be the basis for an adverse action under 5 CFR part 752. Whether to propose or take an adverse action based on results from continuous vetting checks is a matter within the discretion of the employing agency. How the results of continuous vetting may be addressed when a favorable determination cannot be made is not different from how agencies currently manage the results of periodic reinvestigations.

A commenter expressed concern with the language in the revised § 731.106(d)(1) specifying that individuals may only be subject to continuous vetting if they have signed an authorization for release of information permitting a disclosure for continuous vetting purposes. The commenter is concerned the continuous vetting requirement addressed in part 731 might be confused with other processes also referred to as continuous vetting where a release is not required. They asked that OPM replace the word "individual" to state more clearly to whom the continuous vetting requirements apply. Section 731.106(d)(1) addresses the continuous vetting requirements as being applicable to individuals occupying positions of *employment subject to investigation* and, under § 731.101, "employment

subject to investigation” generally includes an appointment to the competitive service or career Senior Executive Service, an appointment to the excepted service, employment as a contractor employee, or employment as a non-appropriated fund employee. Read as a whole, paragraph (d)(1) identifies the population to which continuous vetting and the corresponding requirements apply. In addition, the regulatory text explicitly states that continuous vetting may be conducted only after an individual has signed an authorization for release of information. Therefore, OPM is not making a change in response to this comment.

OPM is making a clarifying edit to § 731.106(g) with respect to the timing of credit history inquiries, consistent with OPM’s guidance since December 1, 2016 (81 FR 86555). For competitive service and career Senior Executive Service positions, agencies may not make specific inquiries concerning an applicant’s credit background unless the hiring agency has made a conditional offer of employment to the applicant or has been granted an exception by OPM. (See 5 CFR 330.1300.) The requirement with respect to timing of collection of credit history does not apply to other positions, though agencies may determine it to be a best practice.

Section 731.201 Standard

Section 731.201 has long provided the standard for protecting the integrity and promoting the efficiency of the service. This final rule extends the standard to fitness determinations.

OPM received comments from two individuals. One interpreted the change making the standard applicable to fitness determinations as suggesting that agencies may use part 752 procedures to take a removal action. The intent of the section, however, is to establish that, like suitability, fitness determinations must be based on the degree of impact an individual’s character or conduct may have on the integrity and efficiency of the service. As we explained in the response to comments regarding § 731.106 and also addressed in the regulation at § 731.105(e), an agency has discretion to take adverse actions against individuals under authorities other than part 731, as appropriate and applicable. For populations subject to assessment of fitness, rather than suitability, OPM does not establish in part 731 procedures by which the agency may take an action based upon an unfavorable fitness determination.

The other commenter suggested the standard is subject to interpretation by hiring officials and could lead to

prohibited personnel practices, discrimination, civil rights violations, and potential legal action. The commenter asked OPM to develop a specific definition for suitability and fitness that applies to all agencies. OPM agrees that one suitability and fitness standard that applies to all agencies, to the extent feasible, is desirable. To that end, the standard that a suitability action “will protect the integrity or promote the efficiency of the service” has been in place since 2000 when it was last updated to add the phrase “protect the integrity . . . of the service.” In addition to considering the risk to an agency’s accomplishment of its duties or responsibilities, or potential interference or prevention of effective service in the position, an important facet of the standard for suitability is the integrity of the merit system and fair and open competitions for positions. The standard, now applicable to fitness determinations, is consistent with the suitability standards to the extent practicable in accordance with E.O. 13467, as amended.

Section 731.202 Criteria for Making Suitability and Fitness Determinations

This section establishes the suitability and fitness factors and additional considerations that collectively, and in consideration of the standard set forth in § 731.201, are used by agencies to determine if an individual is suitable or fit.

OPM received comments on this section from one Federal agency, five organizations, one labor union, and numerous individuals. Comments were in support of and in opposition to the proposed changes. Some comments were general to the section while others related to specific factors. The general comments are summarized first. Comments on specific factors are discussed next.

One individual opposed the application of the minimum standards of fitness to contractor employees. The individual stated that, because contractors are owners, members, or non-federal employees conducting their personal matters inside private businesses, the invasion of privacy and other rights is especially damaging and an overreach in comparison to the factors that had existed in part 302. OPM disagrees but offers a clarification. First, Government contractors are not “conducting their personal matters inside private businesses.” The very reason that a contractor employee needs to be vetted is because they are working for or on behalf of the Federal Government. Second, the President directed that contractor employee

fitness be subject to the same vetting requirements (e.g., position designation requirements; investigative standards, policies, and procedures; reciprocity) as civil service employees as prescribed by OPM. (See E.O. 13488, as amended.) Further, OPM notes that this is not a new requirement—contractors have been covered by E.O. 13488 since it was issued in 2009. Under this Executive Order, agency heads were required to take OPM guidance into account when considering if adjudicative criteria were equivalent for the purposes of making a reciprocally acceptable determination. Contractor employees have also been subject to the same investigative requirements as Federal employees since 2012. This was the result of a decision by Security, Suitability, and Credentialing Performance Accountability Council, as authorized by E.O. 13467. Finally, OPM notes that the additional authority given to OPM by the President to establish the minimum standards of fitness relates to the excepted service. (See E.O. 13764, sec. 2(c), amending E.O. 13488, sec. 3(a).) As has been the case since 2009, agency heads retain the discretion to establish adjudicative criteria for determining fitness to perform work as a contractor employee but with due regard to the regulations and guidance prescribed by OPM for the civil service and directives of the Office of Management and Budget.

A commenter suggested adding a factor covering emotional, mental, and personality disorders. They suggested that an individual’s mental health may have the propensity to affect their conduct and should be a factor for suitability or fitness as is done with national security determinations. Further, they pointed to medical qualification assessments that may be available to agencies for civil service positions, but not for contractors, as a basis for adding mental health concerns as a factor in the fitness determination process. OPM disagrees. Suitability and fitness determinations are decisions on whether an individual’s past conduct and actions may introduce risk to an agency’s mission or are contrary to the integrity required of individuals working for or on behalf of the Government. Additionally, the medical qualification determination process is addressed in 5 CFR part 339 and, therefore, is outside the scope of this rulemaking.

Multiple individuals asked OPM to reconsider changes to the factors, stating they are inappropriate, vague, overly broad and open to personal interpretation which could lead to bias or discrimination. Several of these

commenters suggested the proposed changes are illegal and would violate constitutional rights. A few commenters suggested that individuals should be hired based upon their qualifications without consideration of the types of conduct which the criteria address. OPM generally disagrees that any of the proposed factors give OPM or agencies the ability or authority to consider information in a way that is unconstitutional; however, OPM is not moving forward with some of the proposed changes. These changes are discussed as part of the discussion of each factor in the following sections. Further, OPM agrees that the process for assessing qualifications of applicants is essential, though separate from the process of vetting individuals, such as for suitability or fitness. In 5 U.S.C. chapter 73, Congress authorizes the President to prescribe regulations for the conduct of employees in the executive branch and, in chapter 33, authorizes the President to prescribe regulations for admission into the civil service that will best promote the efficiency of the service and to ascertain the fitness of applicants for employment sought. As such, via the Civil Service Rules, the President has made OPM responsible for establishing qualification standards and, separately, standards of suitability and fitness.

Evaluating whether an individual is suitable or fit to work for the Federal Government (either directly or indirectly as a contractor employee) often occurs after a background investigation. Portions of that investigation are conducted by gathering information directly from the individual via personnel vetting forms and, in some cases, personal interviews. Additional information is gathered from other sources.

Once the background investigation is complete, an adjudicator evaluates the information obtained against the factors. Only conduct falling within a factor may be the basis for finding one unsuitable or unfit. The adjudicator, through application of pertinent additional consideration, will determine whether the individual's character or conduct may have an adverse impact on the integrity or efficiency of the service.

Factor 4—Dishonest Conduct

OPM proposed to split the existing factor regarding “criminal and dishonest conduct” into two separate factors to make it clear that dishonest conduct need not be criminal to be relevant to a determination of suitability or fitness. OPM is adopting “dishonest conduct” as Factor 4.

A Federal agency noted that financial concerns can be easily overlooked under the criteria for “dishonest conduct.” That Federal agency acknowledged that financial irresponsibility may be a suitability issue falling under the dishonest conduct factor but suggested adding a factor specifically to address intentional disregard for debt in finances. The agency expressed the view that adding a factor would provide better clarity as the agency recognized that, to be a basis for unsuitability, an agency must establish financial irresponsibility demonstrated by evidence of the individual deliberately accumulating debt of a significant nature and/or intentionally disregarding those debts. OPM agrees that an important aspect of establishing financial irresponsibility as a suitability or fitness concern is the requirement to have evidence of the dishonest actions by the individuals. However, OPM believes that the current factor of “dishonest conduct” sufficiently captures this intentional disregard. Therefore, the suggestion to add another factor, or to elaborate on the existing, is not adopted.

Factor 5—Excessive Alcohol Use, Without Evidence of Rehabilitation, of a Nature and Duration That Suggests the Applicant or Appointee Would Be Prevented From Performing the Duties of the Position in Question, or Would Constitute a Direct Threat to the Property or Safety of the Applicant, Appointee, or Others

OPM proposed to change “alcohol abuse” to “excessive alcohol use” to capture the intent that the relevance to suitability and fitness is the need to account for an individual's problematic misuse of alcohol over a period of time. As OPM described in the proposed rule, excessive alcohol use may suggest that the individual would be prevented from performing the duties of the position or would constitute a direct threat to the property or safety of themselves or others as a result. OPM also proposed to remove the requirement that rehabilitation be “substantial” to align the suitability and fitness factors.

A labor union agreed with the change to this factor as being more representative of the concern of accounting for an individual's problematic misuse of alcohol, over time. The labor union also agreed with not requiring evidence that rehabilitation be substantial. An individual, who also expressed support for the change, asked OPM to provide additional guidance or examples for identifying and distinguishing conduct that may fall within this factor as well

as what constitutes rehabilitation. The individual also asked that OPM emphasize the importance of following other laws which offer protections from discrimination based upon past alcohol use, such as the Americans with Disabilities Act.

OPM agrees and will continue to provide guidance on this factor via supplemental issuances to agencies. Though outside the scope of this rulemaking, OPM also agrees that agency personnel involved in the hiring process must be familiar with and abide by laws and requirements meant to protect the rights of job applicants.

Factor 6—Illegal Use of Narcotics, Drugs, or Other Controlled Substances, Without Evidence of Rehabilitation

OPM proposed to remove the requirement for evidence of “substantial” rehabilitation to provide consistency between Factors 5 and 6. A labor union and the individual commenting on Factor 5 in support of the change also commented on Factor 6. The labor union commended the changes to strike the requirement for evidence of rehabilitation to be substantial while the individual expressed support but asked OPM to provide additional guidance.

Another individual suggested striking Factor 6, amend it to not apply to marijuana, or modify Factor 5 to focus on excess use of marijuana because of shifts in state laws regarding marijuana usage. OPM is not adopting this change. Factor 6 may be used by agencies to assess an individual's illegal use of several substances, not only marijuana. Also, despite changes to state laws, marijuana continues to be classified as a controlled substance under the Controlled Substances Act (21 U.S.C. 802(16)). But as is the case with any of the suitability factors, agencies and OPM must apply additional considerations, as pertinent, to assess the potential for the individual, based upon their conduct, to negatively impact the integrity and efficiency of the service. Marijuana use, alone, is not a basis for automatically finding one unsuitable or unfit. Instead, the agency or OPM must demonstrate how, considering the nature of the position, the past usage will have negative impact. This is the case with any illegal use of drugs. Recognizing that past marijuana usage may factor into the suitability determination of job applicants who are well qualified, OPM has issued guidance³ for agencies on

³ Available at <https://www.chcoc.gov/content/assessing-suitabilityfitness-applicants-or-appointees-basis-marijuana-use-maintaining-drug>.

how marijuana use may or may not adversely affect the integrity and efficiency of the service, thereby impacting an individual's suitability or fitness for a position. Adjudicators will consider the person holistically, evaluating any impact to the integrity and efficiency of the service on a case-by-case basis.

Comments Applicable to Proposed Factors 7, 8, 9, and 10

OPM proposed to replace the existing Factor 7 with four distinct factors. Most of the comments received regarding OPM's proposed changes to the suitability factors were on these proposed changes. Some commenters, including multiple organizations, expressed general opposition to the changes, asking OPM to leave the existing Factor 7 unchanged, while others expressed specific concerns. Several commenters suggested that, without a stricter delineation of allowable or disqualifying conduct, the factors may be misused and could lead to findings of unsuitability for actions such as membership in organizations or movements that peacefully seek changes to our Nation's current laws and policies. The commenters offered other examples of conduct that they posited could lead to findings of unsuitability under the revised factors such as protesting at school board meetings or counseling a pregnant woman on her options. Finally, the commenters suggested the rule does not include any prohibition about applying the factors in a way that circumscribes an individual's personal liberties and recommended that OPM include an assertion that the factors address conduct not protected by the First Amendment. OPM does not agree with the commenters' assessment of how the factors could be applied or with the examples offered. As OPM explained in the proposed rule, the four new factors were intended to address conduct that has a clear nexus to the integrity and efficiency of the civil service, that poses significant insider threat risks to Federal agencies and the public and also is not protected by the First Amendment. (88 FR 6192, 6199.) OPM acknowledges the commenters' concerns regarding clarity. OPM is not proceeding with the four distinct factors that would have comprised § 731.202(b)(7), (8), (9), or (10) and is instead retaining at § 731.202(b)(7) the current factor, Knowing and willful engagement in acts or activities designed to overthrow the U.S. Government by force.

Proposed Factor 7—Knowing Engagement in an Act or Activity With the Purpose of Overthrowing Federal, State, Local, or Tribal Government

OPM is not moving forward with its proposed changes to Factor 7 and is retaining the existing provision at 5 CFR 731.202(b)(7). Two individuals and two organizations supported this factor as was proposed, but not Factors 8, 9, and 10 as were proposed. A Federal agency asked OPM to strike "knowing" to avoid agencies having to establish evidence of the individual's thoughts and intentions and eliminate the risk of not being able to establish conduct if the individual claims to have not acted knowingly. OPM acknowledges that direct evidence of knowledge may not be readily available thus requiring circumstantial evidence. But requiring evidence that the individual participated in an act or activity with the purpose of overthrowing the Government knowingly is critical if the conduct is to be considered as a basis for finding an individual unsuitable or unfit. Requiring this element to establish the Factor helps demonstrate that the individual understood that the conduct was wrongful and better avoids scenarios where an individual is found unsuitable or unfit solely because they were in the wrong place at the wrong time or were misled about the purpose or intent of an event.

Two organizations and an individual questioned the removal of the words "by force" from § 731.202(b)(7) and recommended re-inserting it for clarity. As discussed, OPM is not moving forward with its proposed changes and will retain the existing factor.

Proposed Factor (8)—An Act of Force, Violence, Intimidation, or Coercion With the Purpose of Denying Another Individual the Free Exercise of Rights Under the U.S. Constitution or any State Constitution

A Federal agency suggested revising the factor to include attempted acts, and two individuals requested that the factor be removed because it could be used to discriminate against people who hold different views than those in government. Another commenter, who suggested the existing provision at 5 CFR 731.202(b)(7) was sufficient, suggested the language in this factor is unclear, overreaches OPM's authority, and could infringe on individuals' rights. The commenter suggested that, with this factor, OPM or an agency could find someone unsuitable due to "praying outside of an abortion clinic or marching in a Black Lives Matter protest

march." An organization suggested the factor parrots the "Klan Act" which would already be covered by the criminal conduct factor.

OPM disagrees that the factor, as was proposed, could be used by an agency to find someone unsuitable for activity protected by the First Amendment. OPM agrees that conduct covered by the proposed factor includes conduct covered by another factor as applicable to the circumstances, such as criminal conduct (*see* 5 CFR 731.202(b)(2)). Therefore, OPM is not implementing this proposed factor in this final rule.

Proposed Factor (9)—Attempting To Indoctrinate Another or To Incite Another to Action in Furtherance of an Illegal Act

One individual requested that OPM remove this proposed factor because of its potential breadth—positing it could result in finding an individual unsuitable who sought to teach or influence another person in any context whatsoever. The individual commented that the language is vague and indoctrination must be defined. The commenter also suggested that this factor may be used to find unsuitable anyone who has ever attempted to persuade another person to lobby legislators to change laws and asked if even home schooling or holding political rights training sessions would be considered indoctrination. Two organizations commented that the factor is ambiguous with one asking if it makes it permissible for an agency to ask about all attempts to indoctrinate which could include serving as a youth group leader or posting about the pandemic on social media and another questioning whether indoctrination, a prolonged process, could lead to conduct in furtherance of an illegal act. OPM does not agree that the language is vague nor that "indoctrinate" needs further definition. Indoctrinate when used as a verb is generally understood to mean teaching another the ideas, opinions, or beliefs of a particular group. Under this factor, the attempt to indoctrinate or incite another must be done in furtherance of an illegal act. It is this latter point regarding illegality that sufficiently narrows the factor to answer commenters' various questions and hypotheticals and would be the relevant inquiry to be addressed in determining an individual's suitability or fitness. As discussed, however, OPM is not implementing this proposed factor in this final rule.

Proposed Factor (10)—Active Membership or Leadership in a Group With Knowledge of its Unlawful Aim, or Participation in Such a Group With Specific Intent To Further Its Unlawful Aim

A Federal agency suggested removing the element that the individual have knowledge of a group's unlawful aim. Three individuals suggested that "unlawful aim" will be difficult to prove and therefore, difficult to enforce. Two organizations suggested that the wording of the factor make it open to interpretation.

Similar to OPM's response relating to suggestions about Factor 7, this element helps demonstrate that the individual understood that the aim was wrongful and should be included to better avoid scenarios where being misled about a group's aim causes an individual to be found unsuitable or unfit.

Further, suitability and fitness determinations are based upon evidence of an individual's character or conduct and when that evidence supports a conclusion that the character or conduct will have an adverse impact on the integrity and efficiency of the service, OPM or the agency must not make a favorable suitability or fitness determination. The point of this factor was not to target individuals for holding views that may be in conflict with those of officials making adjudicative decisions or to find individuals unsuitable or unfit because of affiliations they may have with groups of others who share their opinions, for example. As specified in the text of the proposed factor, the factor required an unlawful aim or participation specifically for the purpose of furthering the unlawful aim. It is the knowing affiliation or intent to further illegal activities that raise the potential suitability or fitness concern. OPM agrees, though, that the nature of character or conduct that this tailored factor addresses, could be better addressed under another factor as applicable to the circumstances, such as criminal conduct (*see* 5 CFR 731.202(b)(2)). Therefore, OPM is not implementing this proposed factor in this final rule.

Factor (12)—Violent Conduct

OPM also proposed to add a factor for violent behavior to account for behavior that does not squarely fall under another factor, such as violent behavior that occurs outside of the workplace and may not be considered criminal or dishonest in nature. For the purposes of this regulation, the term "violent" means using or involving physical force

intended to hurt, damage, or kill someone or something. (88 FR 6192, 6200.)

For example, in certain jurisdictions, protection orders may be filed against individuals for sexual or physical violence regardless of whether the violent conduct constitutes a criminal act under the law of the relevant jurisdiction. The process for securing the protection order may be a civil matter. The addition of this factor gives agencies and OPM a way to consider, in such a scenario, if the individual's conduct is a basis for finding the individual to be unsuitable or unfit.

One individual expressed support for the factor but asked that the scope be limited to avoid application against, for example, those who participate in competitive boxing or recreational hunting as those activities could arguably fit with the definition of violent conduct, because they involve physical force intended to hurt, damage, or kill someone or something. Two commenters opposed to this factor expressed the same concern that the factor was vague and potentially covered those who use deadly force in self-defense, such as abused spouses or law enforcement officers. OPM appreciates these comments as another opportunity to elaborate on how suitability or fitness determinations are made.

When evaluating information to consider if it may warrant an assessment for suitability or fitness, OPM or the agency must first consider whether the information falls within one of the factors. If so, OPM or the agency will consider the impact on the integrity and efficiency of the service through application of the additional considerations. For example, while the act of hunting wild game could technically fall within the definition of conduct that is "violent" as it involves physical force intended to kill something, lawful hunting would not have an adverse impact on the integrity and the efficiency of the service. First, an individual would not be required to report legal hunting activities during the course of a background investigation. If it were reported, such as by a co-worker, it is unlikely to be identified as a potential issue in the background investigation. Even in the unlikely event an adjudicator were to make the initial consideration that legal hunting could cause the individual to be unsuitable or unfit, the subsequent process of relating the conduct to the factor, assessing the applicable additional considerations under 5 CFR 731.202(c) (such as the nature and seriousness of the conduct and the circumstances surrounding the

conduct), and ultimately assessing whether the conduct negatively impacts the integrity and efficiency of the service would yield a favorable determination. In sum, when evaluating the nature of the conduct or the circumstances surrounding it, OPM or the agency would conclude that it is not adjudicatively relevant.

As another example, while deadly force in self-defense could be considered violent conduct, in the scenarios offered by the commenter, the surrounding circumstances would also be considered under § 731.202(c)(3) to determine if the conduct was mitigated, thus not leading to a finding of unsuitability.

As discussed previously, OPM is retaining the existing Factor 7 without change. OPM is also retaining the existing Factor 8 without change. (Although OPM had proposed to renumber the factors, OPM did not propose any substantive changes to the existing Factor 8.) Accordingly, OPM is adopting this proposed Factor 12 as new Factor 9 at § 731.202(b)(9).

Section 731.203 Suitability Actions by OPM and Other Agencies for the Competitive Service or Career Senior Executive Service

OPM proposed to revise § 731.203 to limit the applicability of suitability actions to only individuals in the competitive service, in the excepted service that can noncompetitively convert to the competitive service, or the career Senior Executive Service. The change was necessary due to the implementation of the minimum standards of fitness for the excepted service.

OPM did not receive any comments on this section. OPM is adopting its proposed changes with several modifications as discussed in more detail in the section regarding § 731.101. Specifically, OPM has moved the list of actions from the proposed § 731.203 into the definition of a suitability action in § 731.101. OPM also moved the limitation that a suitability action may be taken only by OPM or an agency with delegated authority under the procedures in subparts C and D of the part from the proposed definition of a suitability action to § 731.203.

Section 731.204 Debarment by OPM in Cases Involving the Competitive Service and Career Senior Executive Service

This section explains OPM's ability to impose debarment, including concurrent periods of debarment, when new conduct arises while an individual is under debarment. OPM also proposed to revise the text to explain that this

provision is limited to individuals in or seeking appointment to the competitive service or the career Senior Executive Service.

OPM received no comments on this section and sees no reason to amend the proposal. OPM is adopting its proposed changes.

Section 731.205 Debarment by Agencies in Cases Involving the Competitive Service and Career Senior Executive Service

OPM proposed to revise the text to explain that this provision is limited to individuals in or seeking appointment to the competitive service or the career Senior Executive Service.

OPM received no comments on this section and sees no reason to amend the proposal. OPM is adopting its proposed changes.

Section 731.206 Reporting Requirements for Investigations and Suitability and Fitness Determinations

This section specifies reporting requirements for agencies into the government-wide central repository. OPM proposed to revise this section to include references to continuous vetting.

OPM received no comments on this section and sees no reason to amend the proposal. OPM is adopting its proposed changes.

Sections 731.302 and 731.402 Notice of Proposed Action

Sections 731.302 and 731.402 govern the issuance of a notice of proposed action in a suitability action by OPM or an agency, respectively. OPM proposed to amend these sections to also permit delivery of correspondence by secure email.

OPM received no comments on these sections and sees no reason to amend the proposal. OPM is adopting its proposed changes.

Subpart Headings

OPM proposed to revise the headings of several subparts of part 731 to indicate that those provisions only apply to individuals in or applying to the competitive service, the excepted service that may noncompetitively convert to the competitive service, or career Senior Executive Service. OPM received no comments on those amendments, sees no reason to amend the proposal, and is adopting its proposed changes.

Subpart F—Savings Provision

OPM proposed to eliminate this subpart as obsolete. OPM received no comments on this subpart, sees no

reason to amend the proposal, and is removing the subpart in this final rule.

Expected Impact of This Final Rule

1. Statement of Need

OPM is issuing this final rule to establish standards and processes by which OPM and agencies efficiently and appropriately vet individuals to assess risk to the integrity and efficiency of the service. It implements several changes required by E.O. 13764. First, per the change to the Civil Service Rules expanding OPM's responsibilities for fitness, it sets the minimum standards of fitness for the excepted service. This change results in the same adjudicative factors and additional considerations being applicable across much of the civil service. Consistent with amendments to E.O.s 13467 and 13488, the changes also align position designation requirements, investigative standards, and reciprocity rules between the civil service, contractor employees, and nonappropriated funds workforces. Now, agencies will use the same system for designating position risk and sensitivity, background investigations will be conducted using the same standards, and the same rules for determining whether reciprocal acceptance of prior background investigations and suitability or fitness determinations will be applied across the workforce.

As required by E.O. 13467, as amended, the rule also implements continuous vetting for the low risk and public trust populations.

2. Regulatory Alternatives

OPM must comply with Executive order directions, as previously described, to establish minimum standards of fitness based on character and conduct for appointment to positions in the excepted service of the executive branch that are, to the extent practicable, consistent with the standards for suitability. OPM is likewise responsible for establishing in its regulations that excepted service employee, nonappropriated fund Department of Defense (DoD) employee, and contractor employee fitness is subject to enterprise position designation requirements, investigative standards, and reciprocity requirements. Similarly, continuous vetting for all populations subject to personnel vetting has been directed by Executive order to sustain an enhanced risk-management approach.

In implementing this requirement, OPM considered the cost to agencies of establishing policies and procedures to conform to OPM's regulation. There will

be costs associated with implementing aspects of the policies required by the E.O.s; however, there are also efficiencies resulting from policy implementation. The expected impact of aligned investigative and adjudicative standards is the increased application of reciprocity, which eliminates the need for a new investigation or new adjudication. Similarly, individuals enrolled in continuous vetting will not require periodic reinvestigations, nor will they require a repeat of initial vetting, as they have to date, when moving from one position level to a higher level or when returning to a vetted position after a break in service.

Still, agencies with a greater proportion of individuals in low risk positions will incur costs as a result of the requirement for continuous vetting of this population when periodic reinvestigations were not previously required. As noted in the section 4. of this preamble, these costs may be offset by cost savings realized as agencies implement continuous vetting across all populations, particularly for agencies with large populations of individuals in high risk positions. However, not all agencies will realize cost savings. While there is no alternative to the policy requirement, agencies may realize some cost avoidance in the near term through phased implementation of continuous vetting for low risk populations. As such, implementation of the required continuous vetting checks for enrolled individuals is eased through a phased introduction of the required checks over time.

OPM considered not only the cost to agencies but the burden of preparing for enrollment of the low risk and public trust populations into continuous vetting. Recognizing that agencies must validate the need of their current workforce to be enrolled into continuous vetting in accordance with this new requirement, a process that could be time intensive in particular for the low risk population not previously subject to a reinvestigation requirement, we established a phased approach. Beginning with the public trust population, agencies, working with their investigative service providers, will gradually enroll their workforces into the new continuous vetting service. This iterative approach avoids agency vetting professionals from being faced with enrolling their covered workforce all at the same time and adjudicating any resulting hits from continuous vetting checks. This enables agencies to adopt the necessary policy and procedural infrastructure needed to execute requirements.

3. Impact

The rule promotes a more trusted workforce to serve the American public through an enhanced risk management approach for personnel vetting, one which advances the mobility of the workforce to support agency mission needs. Establishing a continuous vetting approach for all populations subject to personnel vetting provides a framework for modernized investigative and adjudicative processes that leverage available, appropriate technology to replace costly and time-consuming labor-intensive processes that have burdened efforts by agencies to acquire top talent in a timely manner. Further, the new model assists agencies in managing and reducing risk by providing more timely information than was possible under the prior investigative model.

OPM is implementing these requirements in the least burdensome way possible while still effectuating what the President set forth in Executive orders. Individuals subject to continuous vetting are those populations already subject to Federal personnel vetting investigative standards, including contractor employees with long term access to Federal facilities and information systems. Even prior to recent Executive orders and policy requirements requiring personnel vetting investigations and determinations on contractors, the Federal Acquisition Regulation (FAR) Council published a final rule in November 2006, amending the FAR to require contracting officers to incorporate the requirement for contractors to comply with agency verification procedures—implementing HSPD–12, Office of Management and Budget (OMB) guidance M–05–24, and Federal Information Processing Standards Publication (FIPS PUB) number 201 when applicable to be performed under the contract. Aside from the new requirement for individuals in low risk positions to be continuously vetted, agencies and contractor employees requiring long term access to Federal facilities and information systems to support agencies should already be familiar with personnel vetting requirements.

This final rule provides greater consistency in vetting processes and, where possible, saves costs by reducing redundancy and duplication and modernizes processes for collecting information. By establishing minimum standards of fitness for the excepted service that align with OPM's suitability standards, there is a greater likelihood that individuals will be assessed using

consistent standards, thus providing a stronger basis for application of reciprocity when moving between positions. The impact to agencies' personnel vetting programs is reduced when they can reciprocally apply prior determinations rather than making new determinations or requesting new investigations.

OPM anticipates this final rule will reduce the burden on agencies as they transition from a full reinvestigation of every public trust employee every five years to reinvestigation only as needed and to continuous vetting that relies extensively on automated sources. Although agencies will also need to enroll their low risk population, which is not currently subject to reinvestigation requirements, into continuous vetting, the cost impacts may be offset by savings associated with the move from periodic reinvestigations to continuous vetting for their sensitive and non-sensitive public trust populations. Enrollment of the non-sensitive public trust population will occur throughout fiscal year 2025. Enrollment of the low risk population is projected to begin in fiscal year 2027. Through a phased process, agencies are initiating their populations into continuous vetting and, eventually, individuals will be enrolled into continuous vetting at the onset of their initial background investigations. Further, since each individual's investigation will always be up to date through the continuous vetting approach, agencies will no longer need to await results of a new background investigation. Instead, agencies will be able to onboard individuals more quickly into new positions, while only having to request investigation necessary to cover any investigative gaps that may be due to breaks in service or changes in position risk and/or sensitivity.

One organization suggested OPM provide data demonstrating the number of Federal civil service employees who were delayed in transferring to another agency and the processing burden to agencies as a result. An individual suggested that more research into the benefit of the scope and frequency of vetting could be beneficial, especially in the case of suitability or fitness vetting, which the commenter opines is less studied and scrutinized than that of security vetting. The individual offered that there is little objective research to support that this degree of vetting is effective and that there is little discussion of the goals and objectives of conducting vetting to this extent. As is outlined at the onset of this rule, OPM is required by Executive order to

establish continuous vetting requirements for the non-sensitive public trust and low risk populations to standardize investigative activities across the civil service, contractor employee, and DoD nonappropriated funds populations. OPM is not adopting substantial changes to the applicability of reciprocity requirements that have been in place since 2009. Further, by way of this rule, OPM is not increasing the scope of vetting requirements, though the periodicity of post-appointment checks are changing for the non-sensitive public trust population. The Federal Personnel Vetting Core Doctrine,⁴ which defines the personnel vetting mission, its guiding principles, key supporting processes, and policy priorities, provides more explanation in support of the new approaches.

4. Costs

An organization asked for a cost-benefit analysis of the change from periodic reinvestigations to continuous vetting. The organization recognized that the current regulation already authorizes a continuous reassessment so long as it occurs at least every five years. The organization suggested reassessments that decrease in periodicity may result in a cost savings but could weaken agency security. The commenter did not express questions or concerns with the cost analysis that was included in the notice of proposed rulemaking published in January 2023 or with the explanation of anticipated benefits with the changes. Therefore, OPM adopts the economic assessment provided in the proposed rule with only two sets of changes. First, OPM updated pricing of products by the Defense Counterintelligence and Security Agency (DCSA), which was an estimate at the time the proposed rule was issued. Second, OPM also updated the cost analysis to use the 2024 pay rates.

This rule will affect the operations of most Federal agencies in the executive branch—ranging from cabinet-level departments to small independent agencies. To comply with the regulatory changes, affected agencies will need to review the rule and update their policies and procedures. For this cost analysis, the assumed average salary rate of Federal employees performing this work will be the rate in 2024 for GS–14, step 5, from the Washington, DC, locality pay table (\$157,982 annual locality rate and \$75.70 hourly locality rate). We assume that the total dollar

⁴ 86 FR 2705 (January 13, 2021), available at <https://www.federalregister.gov/documents/2021/01/13/2021-00547/federal-personnel-vetting-core-doctrine>.

value of labor, which includes wages, benefits, and overhead, is equal to 200 percent of the wage rate, resulting in an assumed labor cost of \$151.40 per hour. We estimate that, in the first year following publication of the final rule, the effort to update policies and procedures will require an average of 250 hours of work by employees with an average hourly cost of \$151.40. This effort would result in estimated costs in the first year of implementation of about \$37,850 per agency, and about \$3,028,000 in total government-wide. In subsequent years, the costs of regulatory compliance associated with this rule will be folded into agencies' routine costs.

The ongoing administrative costs to agencies for continuous vetting enrollment of existing and new individuals working for or on behalf of the Government will vary depending on the makeup of each agency's populations with regard to their affected Federal and contract positions and the risk levels of those positions. As noted, agencies' populations of individuals subject to continuous vetting are those already subject to Federal personnel vetting investigative standards as described previously, including contractor employees with long term access to Federal facilities and information systems. The extent to which such individuals have previously been subject to periodic reinvestigation requirements depended on the nature of their access or duties. Those in national security sensitive positions have long been subject to periodic reinvestigation requirements and more recently to continuous vetting requirements. Those in non-sensitive public trust positions have been subject to periodic reinvestigations for suitability, as described previously. Each agency is responsible for assessing the risk level at the low, moderate, or high level for each position within their agency. Each agency is therefore best positioned to know the number of employees in positions at each level and the number of individuals associated with the personnel vetting requirements at each respective investigative tier. Each agency will have different numbers of positions at each risk level and the proportion of low, moderate, and high risk positions will vary. Consequently, the cost of continuous vetting for the low risk and public trust population will vary amongst the Federal agencies.⁵

⁵ Federal agencies are responsible for appropriate vetting of their personnel according to standards set by the Security and Suitability & Credentialing Executive Agents and pay for background investigations and continuous vetting checks on

To assist Federal agencies in budget development, DCSA released in August 2024 its 2025 and 2026 products and services billing rates⁶ including pricing for the initial continuous vetting capability for non-sensitive public trust positions. For fiscal year 2025, agencies can expect to pay a \$3.25 monthly subscription fee for active enrollees in non-sensitive, public trust continuous vetting. By comparison, DCSA's price for a standard service, non-sensitive, high risk public trust reinvestigation (Tier 4) in fiscal year (FY) 2025 is \$2,505, which equates to \$41.75 monthly over five years. Agencies utilizing continuous vetting in FY 2025 for their non-sensitive, high risk, public trust populations would avoid \$2,310 in personnel vetting costs over five years for each such position. The difference between reinvestigation costs and initial continuous vetting checks for nonsensitive moderate risk positions is not as significant; still, agencies would avoid \$180 in personnel vetting costs over five years for such positions given the FY 2025 cost of \$375 for each non-sensitive moderate risk public trust reinvestigation. While DCSA's pricing for FY 2025 and 2026 does not establish the cost of the continuous vetting product for the low risk population, it will not be more than \$39–\$40.20 per year which are the FY 2025 and FY 2026 costs for the continuous vetting products for the non-sensitive, public trust populations.⁷ Future costs for continuous vetting for the low risk population are not expected to rise to the cost of checks for the national security population, since checks on the low risk population will be much less extensive than those on the national security population.

An additional factor that agencies need to consider when assessing budget impacts of continuous vetting is the cost avoidance realized by the move from periodic reinvestigations to continuous vetting of their sensitive populations. To illustrate how the impacts to agency budgets will vary, the following examples are provided for a department that is comprised mainly of non-sensitive positions, the Department of Veterans Affairs (VA), and a department that is comprised mainly of sensitive positions, DoD. The VA has vastly more

contractor personnel as well as Federal appointees and employees.

⁶ Available at https://www.dcsa.mil/Portals/128/Documents/about/err/FIN_24-01_FY25_and_FY26_Billing-Rates.pdf.

⁷ DCSA has established the FY 2025 cost for the interim continuous vetting product for the non-sensitive public trust population at \$39 per year versus the full Trusted Workforce 2.0 product which is priced at \$90.

non-sensitive positions (approximately 513,400) than sensitive positions (approximately 9,000). The VA's positions are largely non-sensitive, low risk, with approximately 455,000 Federal and contractor personnel in low risk positions; 41,200 in non-sensitive, moderate risk, public trust positions; and 17,200 in non-sensitive, high risk, public trust positions. Under the current requirement to request a reinvestigation for public trust positions every five years and considering FY 2025 DCSA pricing, the VA should anticipate paying \$58,536,000 for non-sensitive, public trust reinvestigations over five years. With continuous vetting, the annual cost of enrolling the public trust population for fiscal year 2025 is \$2,277,600, or \$11,338,000 over five years, equating to \$47,198,000 in cost avoidance for the non-sensitive, moderate and high risk positions over the five-year cycle. For continuous vetting of the low risk population, at a cost of \$39 per low risk position per year, VA would expect to pay DCSA \$17,745,000 annually or \$88,725,000 over five years. For any sensitive positions the VA has, they may also recognize the cost savings between the periodic reinvestigation products and continuous vetting product for sensitive positions. The cost implications for enrollment of VA's 9,000 sensitive positions into continuous vetting could range from an additional cost of \$810,000 over five years to cost avoidance of \$29,286,000 depending on the proportion of noncritical sensitive positions (Tier 3) and critical sensitive/special sensitive positions (Tier 5). Thus, the total cost of the shift to continuous vetting for all of VA's populations subject to this requirement, using VA's anticipated payments to DCSA for these services, will depend on the makeup of VA's population. Compare this to DoD, which has a much higher sensitive population than non-sensitive with approximately 3.5 million individuals in sensitive positions and approximately 283,000 in non-sensitive positions. With approximately 3,000 non-sensitive, moderate risk positions and 560 non-sensitive, high risk positions, the DoD could plan to spend \$3,465,440 on periodic reinvestigations over five years for their non-sensitive public trust positions whereas continuous vetting would result in a total cost of \$1,602,000 and therefore result in \$1,863,440 in cost avoidance over that same period. The cost of enrolling DoD's 280,000 federal and contractor low risk positions at \$39 per year subject to the requirement would equate to an annual

cost of \$11,037,000 or \$55,185,000 over five years; however, this cost would be offset not only by the cost avoidance of \$1,863,440 for the non-sensitive, public trust population but also by the cost savings associated with the shift to continuous vetting from periodic reinvestigations for the sensitive population. Given that the DoD has approximately 3.5 million individuals in national security positions undergoing continuous vetting in lieu of periodic reinvestigations, the expected cost savings would be expected to offset the cost for enrollment of their low risk populations into continuous vetting.

5. Benefits

The standardization in vetting resulting from the changes in this rule will increase efficiency across the executive branch while allowing for faster identification of issues that may adversely affect trust determinations of individuals. Mobility of individuals is enhanced by reciprocal acceptance of investigations and adjudications thus allowing individuals to move more quickly between and within Federal agencies and Government contractors. Additionally, the revised rule enables a more efficient re-entry to Federal service.

With respect to continuous vetting, agencies may recognize a cost savings by using continuous vetting rather than the traditional reinvestigation product that is currently required for public trust positions at a minimum five-year periodicity, and the extent of the cost savings will vary depending on the proportion of their populations with regard to risk and sensitivity levels. Additionally, cost savings may be realized since continuous vetting provides that the vetting of enrolled individuals will always be up to date. This will result in further cost avoidance whenever an individual requires an upgrade of their vetting level or when an individual returns to a vetted position after a break in service. Agencies will be able to onboard individuals more quickly into new positions while requesting only the investigative elements necessary to cover any investigative gaps that may be due to changes in position risk and/or sensitivity. This cost avoidance will be borne out as agencies begin to implement the new Trusted Workforce 2.0 policies that leverage continuous vetting for risk management. On balance, while we anticipate there may be additional costs to agencies with much greater proportions of low risk positions than non-sensitive, public trust or national security positions, we do not believe that this rule will

substantially increase the ongoing costs to most agencies, and the benefits outweigh the costs in providing agencies greater opportunities for timely talent acquisition and reduced risk to people, property, information systems, and mission through timely delivery of relevant information.

Severability

If any of the provisions of this final rule is held to be invalid or unenforceable by its terms, or as applied to any person or circumstance, it shall be severable from its respective section(s) and shall not affect the remainder thereof or the application of the provision to other persons not similarly situated or to other dissimilar circumstances, unless such holding is that the provision is invalid and unenforceable in all circumstances, in which event the provision shall be severable from the remainder of this part and shall not affect the remainder thereof. This final rule revises vetting requirements by broadening their applicability, establishing continuous vetting, and standardizing the way in which suitability and fitness determinations are made. As discussed elsewhere in this rule, there are various authorities for these provisions. The provisions of this final rule apply to different populations such as the competitive service, the excepted service, and contractor employees. Should provisions related to one of these populations be held to be invalid we believe that most of the provisions should be severable and would not be impacted. Similarly, many of the operational requirements have no bearing on other provisions and are severable. For example, a holding that a suitability or fitness factor is invalid should not impact other provisions related to how these decisions are made. In enforcing the provisions of this rule, OPM will comply with all applicable legal requirements.

Regulatory Review

OPM has examined the impact of this rule as required by Executive Orders 12866, 13563, and 14094, which direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). A regulatory impact analysis must be prepared for major rules with effects of \$200 million or more in any one year. This rulemaking does not reach that threshold but has otherwise been designated as a

“significant regulatory action” under section 3(f) of Executive Order 12866, as amended by Executive Order 14094.

Regulatory Flexibility Act

The Acting Director of the OPM certifies that this rule will not have a significant economic impact on a substantial number of small entities.

Federalism

This regulation will not have substantial direct effects on the States, on the relationship between the Federal Government and the States, or on distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order 13132, it is determined that this rule does not have sufficient federalism implications to warrant preparation of a Federalism Assessment.

Civil Justice Reform

This regulation meets the applicable standard set forth in Executive Order 12988.

Unfunded Mandates Reform Act of 1995

Section 202 of the Unfunded Mandates Reform Act of 1995 (UMRA) requires that agencies assess anticipated costs and benefits before issuing any rule that would impose spending costs on State, local, or tribal governments in the aggregate, or on the private sector, in any 1 year of \$100 million in 1995 dollars, updated annually for inflation. That threshold is currently approximately \$183 million. This regulation will not result in the expenditure by State, local, or tribal governments, in the aggregate, or by the private sector, in excess of the threshold. Thus, no written assessment of unfunded mandates is required.

Congressional Review Act

The Office of Information and Regulatory Affairs in the Office of Management and Budget has determined that this rule does not satisfy the criteria listed in 5 U.S.C. 804(2).

Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3521)

Notwithstanding any other provision of law, no person is required to respond to, nor shall any person be subject to a penalty for failure to comply with a collection of information subject to the requirements of the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*) (PRA), unless that collection of information displays a currently valid OMB Control Number.

Depending on the population, currently suitability and vetting information is collected through the following OMB Control Numbers.

- 3206–0261 (Standard Form 85, Questionnaire for Non-Sensitive Positions)
- 3206–0258 (Standard Form 85P, Questionnaire for Public Trust Positions and SF 85P–S, (Supplemental Questionnaire for Selected Positions))
- 3206–0005 (SF 86, Questionnaire for National Security Positions)

Additional information regarding these collections of information—including all current supporting materials—can be found at <https://www.reginfo.gov/public/do/PRAMain> by using the search function to enter either the title of the collection or the OMB Control Number. Data gathered through the information collection falls under the systems of record notice Personnel Vetting Records System, DUSDI 02–DOD (83 FR 52420).

In a parallel effort to this rule, and as part of its work with the PAC, OPM proposed a new information collection and renewal cycle, Personnel Vetting Questionnaire (PVQ), to streamline the existing information collections commensurate with on-going efforts to improve personnel vetting processes and the experience of individuals undergoing personnel vetting. OMB approved the PVQ information collection under control number 3206–0279 on November 15, 2023. See https://www.reginfo.gov/public/do/PRAViewICR?ref_nbr=202302-3206-005. Once the new collection is implemented, OPM plans to discontinue the current information collections.

Some individuals or populations may be required to complete an updated questionnaire in order for continuous vetting to be conducted. In the notice of proposed rulemaking published in January 2023, OPM sought public comment on the cost and burden implications for this potential new population. However, no comments were received other than what has been addressed elsewhere within this rule.

List of Subjects in 5 CFR Parts 302 and 731

Administrative practices and procedure, Authority delegations (Government agencies), Government contracts, Government employees, Investigations.

Office of Personnel Management.

Kayyonne Marston,

Federal Register Liaison.

Accordingly, for the reasons stated in the preamble, OPM amends 5 CFR parts 302 and 731 as follows:

PART 302—EMPLOYMENT IN THE EXCEPTED SERVICE

- 1. The authority citation for part 302 is revised to read as follows:

Authority: 5 U.S.C. 1302, 3301, 3302, 3317, 3318, 3319, 3320, 8151. E.O. 10577, 19 FR 7521, 3 CFR 1954–1958 Comp., p. 218. Sec. 302.105 also issued under 5 U.S.C. 1104; sec. 3(5), Pub. L. 95–454, 92 Stat. 1111. Sec. 302.501 also issued under 5 U.S.C. ch. 77. Sec. 302.107 also issued under 5 U.S.C. 9201–9206; sec. 1122(b)(1), Pub. L. 116–92, 133 Stat. 1607. Secs. 302.108 and 302.203 also issued under E.O. 13764, 82 FR 8115, 3 CFR, 2017 Comp., p. 243.

- 2. Amend § 302.107 by revising the section heading to read as follows:

§ 302.107 Suitability and fitness inquiries regarding criminal history.

- 3. Add § 302.108 to subpart A to read as follows:

§ 302.108 Determinations of fitness for employment in an Excepted Service position.

(a) An agency must make fitness determinations for excepted service positions in accordance with the applicable requirements of part 731 of this chapter.

(b) An agency must record its reasons for making fitness determinations under part 731 of this chapter and must furnish a copy of those reasons to an applicant upon their request.

- 4. Revise § 302.203 to read as follows:

§ 302.203 Standard and criteria for determining fitness for employment in an Excepted Service position.

(a) The minimum standard and criteria for determining fitness for employment based on character and conduct are prescribed in part 731, subpart B, of this chapter.

(b) Agencies may prescribe additional factors to protect the integrity and promote the efficiency of the service when job-related and consistent with business necessity.

PART 731—SUITABILITY AND FITNESS

- 5. The authority citation for part 731 is revised to read as follows:

Authority: 5 U.S.C. 1302, 3301, 7301, E.O. 10577, 19 FR 7521, 3 CFR, 1954–1958 Comp., p. 218, as amended. E.O. 13467, 73 FR 38103, 3 CFR, 2009 Comp., p. 198, as amended. E.O. 13488, 74 FR 4111, 3 CFR, 2010 Comp., p.

189, as amended. E.O. 13764, 82 FR 8115, 3 CFR, 2017 Comp. p. 243. Presidential Memorandum of January 31, 2014, 3 CFR, 2014 Comp., p. 340. 5 CFR parts 1, 2, 5, and 6.

- 6. Revise the heading for part 731 to read as set forth above.

- 7. Revise subpart A to read as follows:

Subpart A—Scope

Sec.

731.101 Purpose.

731.102 Implementation.

731.103 Delegation to agencies for the competitive service and career Senior Executive Service.

731.104 Investigation and reciprocity requirements.

731.105 Authority to take suitability actions in cases involving the competitive service and career Senior Executive Service.

731.106 Designation of public trust positions and investigative requirements.

§ 731.101 Purpose.

(a) The following definitions apply for the purposes of this part:

Applicant means an individual who is being considered or has been considered for employment in the competitive service or career Senior Executive Service.

Appointee means an individual who has entered on duty and is in the first year of employment in a competitive service or career Senior Executive Service position when it is employment subject to investigation. When the individual is serving a probationary or trial period, the individual's status as an appointee will extend through the end of the initial probationary/trial period, if longer than one year.

Competitive service or career Senior Executive Service, for the purposes of this part, refers to a position in the competitive service, a position in the excepted service where the incumbent can be noncompetitively converted to the competitive service, and a career appointment to a position in the Senior Executive Service.

Contractor employee means an individual who performs work for or on behalf of any agency under a contract and who, to perform the work specified under the contract, will require access to space, information, information technology systems, staff, or other assets of the Federal Government, and who could, by the nature of their access or duties, adversely affect the integrity or efficiency of the Government. Such contracts include but are not limited to: personal service contracts; contracts between any non-Federal entity and any agency; and subcontracts between any non-Federal entity and another non-Federal entity to perform work related

to the primary contract with the agency. The term contractor employee includes employees of a grantee of any agency or any other category of person who performs work for or on behalf of an agency but does not include a Federal employee.

Core duty means a continuing responsibility that is of particular importance to the relevant covered position or the achievement of an agency's mission.

Days means calendar days unless otherwise noted in this part.

Employee means an individual who has completed the first year of an appointment in the competitive service or career Senior Executive Service when it is employment subject to investigation and is no longer serving the initial probation or trial period, if applicable. In the case of an appointee whose initial probation or trial period is for more than one year, the individual will be considered an employee at the completion of the initial probation or trial period.

Employment subject to investigation, except as described elsewhere in this part, includes an appointment to the competitive service or career Senior Executive Service, an appointment to the excepted service, employment as a contractor employee, or employment as a nonappropriated fund employee.

Excepted service means any position of the executive branch either excepted from the competitive service or which is not in the Senior Executive Service.

(1) For the purposes of this part, excepted service does not include:

(i) Any position in an element of the intelligence community as defined in the National Security Act of 1947, as amended, to the extent that the individual is not otherwise subject to OPM appointing authorities;

(ii) Any position where OPM is statutorily precluded from prescribing such standards; and

(iii) Any position when filled by political appointment.

(2) Senior Executive Service noncareer, limited term, and limited emergency appointments are not subject to suitability actions under this part.

(3) Excepted service does not mean any position excepted from the competitive service of the executive branch that could be noncompetitively converted to the competitive service.

Fitness is the level of character or conduct determined necessary for an individual to perform work for a Federal agency as an employee in the excepted service, as a contractor employee, or as a nonappropriated fund employee.

Fitness determination means a decision by an agency that an individual

has or does not have the required level of character and conduct necessary to perform work for a Federal agency as an excepted service employee. These determinations are based on whether an individual's character or conduct may have an adverse impact on the integrity or efficiency of the service.

Material means, in reference to a statement, one that affects, or has a natural tendency to affect, or is capable of influencing, an official decision even if OPM or an agency does not rely upon it.

Nonappropriated fund employee means an employee paid from nonappropriated funds of an instrumentality of the United States under the jurisdiction of the Armed Forces conducted for the comfort, pleasure, contentment, and mental and physical improvement of personnel of the Armed Forces as described in 5 U.S.C. 2105.

Political appointment means an appointment by Presidential nomination for confirmation by the Senate, an appointment by the President without Senate confirmation (except those appointed under 5 CFR 213.3102(c)); an appointment to a position compensated under the Executive Schedule (5 U.S.C. 5312 through 5316); an appointment of a White House Fellow to be assigned as an assistant to a top-level Federal officer (5 CFR 213.3102(z)); a Schedule C appointment (5 CFR 213.3301 and 213.3302); a noncareer, limited term, or limited emergency Senior Executive Service appointment (5 CFR part 317, subpart F); an appointee to serve in a political capacity under agency-specific authority; and a provisional political appointment.

Suitability action means one or more of the following outcomes:

(1) Cancellation of eligibility;

(2) Removal;

(3) Cancellation of reinstatement eligibility; and

(4) Debarment.

Suitability determination means a decision by OPM or an agency with delegated authority that an individual is suitable or is not suitable for employment in the competitive service or career Senior Executive Service in the Federal Government or a specific Federal agency. A suitability determination is based on whether an individual's character or conduct may have an adverse impact on the integrity or efficiency of the service.

(b) The purpose of this part is as follows:

(1) To establish investigation, continuous vetting, and reciprocity requirements for an appointment to a position in the competitive service and

excepted service and for career appointment in the Senior Executive Service. Contractor employee fitness and nonappropriated fund employee fitness, as addressed in sections 3(b) and 3(c) of Executive Order 13488, are also subject to the position designation requirements, investigative standards, and reciprocity-requirements in this part.

(2) To establish the criteria for making determinations of suitability for the competitive service or career Senior Executive Service and to establish a minimum standard of fitness for the excepted service.

(3) To establish the procedures for taking suitability actions in the case of the competitive service or career Senior Executive Service.

(c) An Agency shall exercise due regard to this part and supplemental guidance if determining fitness for employment as a contractor employee or as a nonappropriated fund employee.

(d) Any determination made and action taken under this part are distinct from: an objection to an eligible or pass over of a preference eligible; OPM's or an agency's decision on a request, made under 5 U.S.C. 3318 and 5 CFR 332.406; and any determination of eligibility for access to classified information or for assignment to, or retention in, sensitive national security positions made under E.O. 12968, E.O. 10865, or E.O. 13467, as amended, or similar authorities.

§ 731.102 Implementation.

(a) An investigation conducted under this part may not be used for any other purpose except as provided in a Privacy Act system of records notice published by the agency conducting the investigation and section 1.1(e) of Executive Order 13467, as amended.

(b) OPM may set forth any policy, procedure, criteria, standard, quality control procedure, and supplementary guidance to implement this part in an OPM or joint Executive Agent issuance.

§ 731.103 Delegation to agencies for the competitive service and career Senior Executive Service.

(a) Subject to the limitations and requirements of paragraphs (b), (d), and (f) of this section, OPM delegates to the head of an agency authority for making a suitability determination and taking a suitability action (including limited, agency-specific debarments under § 731.205) in a case involving an *applicant* or *appointee*.

(b) When an agency, acting under delegated authority from OPM, determines that a government-wide debarment by OPM under § 731.204(a) may be an appropriate action, it must

refer the case to OPM for debarment consideration. An agency must make a referral prior to any proposed suitability action, but only after sufficient resolution of the suitability issue(s) to determine if a Government-wide debarment appears warranted.

(c) An agency exercising authority under this part by delegation from OPM must adhere to OPM requirements as stated in this part and issuances described in § 731.102(b). An Agency must also implement policies and maintain records demonstrating that they employ reasonable methods to ensure adherence to these issuances.

(d) OPM reserves the right to undertake a determination of suitability based upon evidence of falsification or fraud relating to an examination or appointment at any point when information giving rise to such a charge is discovered. OPM must be informed in all cases where there is evidence of material, intentional false statements, or deception or fraud, in examination or appointment, and OPM will take a suitability action where warranted.

(e) OPM may revoke an agency's delegation to make suitability determinations and take suitability actions under this part if an agency fails to conform to this part or OPM issuances as described in § 731.102(b).

(f) OPM retains sole jurisdiction to make a final suitability determination and take an action under this part in any case where there is evidence that there has been a material, intentional false statement, or deception or fraud, in examination or appointment. OPM also retains sole jurisdiction to make a final suitability determination and take an action under this part in any case when there is evidence that there has been knowing and willful engagement in acts or activities designed to overthrow the U.S. Government by force. An Agency must refer these cases to OPM for suitability determinations and suitability actions under this authority. Although no prior approval is needed, notification to OPM is required if the agency wants to take, or has taken, action under its own authority (such as 5 CFR part 315, 359, or 752) in cases involving conduct fitting within any of these factors. In addition, paragraph (a) of this section notwithstanding, OPM may, in its discretion, exercise its jurisdiction under this part in any case it deems necessary regardless of whether the agency may adjudicate under another authority.

§ 731.104 Investigation and reciprocity requirements.

(a) To establish an individual's suitability or fitness, employment

subject to investigation (see definitions § 731.101(a)) requires the individual to undergo investigation by an agency with authority to conduct investigations except as described in paragraphs (a)(1) through (3) of this section.

(1) An agency must reciprocally accept a prior background investigation in the event of promotion, demotion, reassignment, or transfer from employment subject to investigation to other employment subject to investigation without a break in service, unless the new employment is at a higher risk level.

(2) An agency must reciprocally accept a prior background investigation when the person entering employment subject to investigation has undergone a background investigation that is at or above the level required for the position as determined by position designation and has a qualifying break in service specified in supplemental guidance, unless the agency obtains new information in connection with the person's employment that calls into question the person's suitability or fitness under § 731.202. Agencies must request such checks as may be specified in implementing guidance and must enroll individuals re-entering service after a break in service into continuous vetting, consistent with the requirements in § 731.106(d).

(3) Positions that are intermittent, per diem, or temporary in nature, not to exceed an aggregate of 180 days per year in either a single continuous appointment or series of appointments, do not require a background investigation for suitability or fitness. The employing agency, however, must conduct such checks as it deems appropriate to ensure the suitability or fitness of the person. The employing agency must conduct such vetting as required under OPM issuances.

(b) An individual does not have to serve a new probationary or trial period in the Civil Service merely because the individual's employment is subject to investigation under this section. An individual's probationary or trial period in the Civil Service is not extended because the individual's employment is subject to investigation under this section.

(c) A suitability determination must be made for each appointment in the competitive service or career Senior Executive Service and a fitness determination must be made for each appointment in the excepted service, except as described in paragraph (c)(2) of this section.

(1) In the case of a prior investigation that is reciprocally accepted, if the record in the Central Verification

System or its successor system does not reflect a prior favorable suitability or fitness determination, the agency must review the prior investigation for the purpose of making a suitability or fitness determination.

(2) In the case of a prior investigation that is reciprocally accepted, if the prior investigation was favorably adjudicated for suitability or fitness, the agency must accept the prior determination except that the agency must make a new determination where:

(i) The investigative record on file for the individual shows conduct that is incompatible with the core duties of the relevant covered position; or

(ii) The agency has prescribed additional factors as permitted under § 731.202(b) that were not addressed in the prior favorable adjudication, in which case the agency must conduct an adjudication using only those additional factors.

(d) Continuous vetting requirements under § 731.106 are not affected by this section.

§ 731.105 Authority to take suitability actions in cases involving the competitive service or career Senior Executive Service.

(a) OPM or an agency acting under delegated authority may take a suitability action in connection with any application for, or appointment to, the competitive service or career Senior Executive Service.

(1) OPM's or an agency's authority to complete a suitability action continues when an application is withdrawn, when an offer of employment is withdrawn, or when an individual appointed separates from employment.

(2) OPM's or an agency's authority to take a suitability action includes the case of an application for or appointment to the competitive service or career Senior Executive Service from another type of position when a prior investigation is being reciprocally accepted as described in § 731.104(a).

(b) OPM may take a suitability action under this part against an *applicant* or *appointee* based on the criteria in § 731.202.

(c) Except as limited by § 731.103(b), (d), and (f), an agency, exercising delegated authority, may take a suitability action under this part against an *applicant* or *appointee* based on the criteria of § 731.202.

(d) Only OPM may take a suitability action under this part against an *employee* in the competitive service or career Senior Executive Service based on the criteria of § 731.202(b)(3), (7), or (8).

(e) An agency may not take a suitability action against an *employee* in

the competitive service or career Senior Executive Service. Nothing in this part precludes an agency from taking an adverse action against an employee under the procedures and standards of 5 CFR part 752 or terminating a probationary employee under the procedures of 5 CFR part 315 or 359 or under agency specific authorities. An agency must notify OPM to the extent required in § 731.103(d) and (f) if it wants to take, or has taken, action under these authorities. OPM retains the right to take a suitability action even in those cases where the agency makes an adjudicative determination under another authority.

§ 731.106 Designation of public trust positions and investigative requirements.

(a) *Risk designation.* For every position in the competitive service; in the excepted service; to be filled with a career appointment in the Senior Executive Service; or in which the occupant performs a service as a contractor employee or as a nonappropriated fund employee, an agency head must designate the position at high, moderate, or low risk level (in accordance with the risk designation system issued jointly by the Executive Agents; see § 731.102(b)), as determined by the position's potential for adverse impact to the efficiency or integrity of the service.

(b) *Public trust position.* A position at the high or moderate risk level is designated as a "public trust" position. Such positions may involve policy making, major program responsibility, public safety and health, law enforcement duties, fiduciary responsibilities, or other duties demanding a significant degree of public trust such as positions involving access to or control of financial records or with significant risk for causing damage or realizing personal gain.

(c) *Investigative requirements.* (1) An individual entering employment subject to investigation under this part must undergo a background investigation as described in § 731.104. OPM establishes minimum investigative requirements correlating to the risk level. An investigation should be initiated before the individual is appointed or otherwise becomes employed by or on behalf of the agency; however, where an agency does not timely initiate the investigation, it must do so as soon as possible, even if the appointment has already occurred.

(2) Any position subject to risk designation under this section must also receive a sensitivity designation of Special-Sensitive, Critical-Sensitive, Noncritical-Sensitive, or Non-sensitive,

as appropriate. This designation is complementary to the risk designation and may have an effect on the position's investigative requirement. Part 1400 of this title details the various sensitivity levels and investigative requirements for positions designated as sensitive. Procedures for determining investigative requirements for a position based upon risk and sensitivity will be published in issuances, as described in § 731.102(b) and 5 CFR part 1400.

(3) If a suitability or fitness issue develops prior to the required investigation, OPM or the agency may request investigation from an authorized investigative service provider sufficient to resolve the issue and support an unfavorable suitability or fitness determination. However, inquiries into criminal or credit history cannot occur until a conditional offer has been made, as specified in § 731.106(g). If warranted for positions in the competitive service or career Senior Executive Service, an agency may also take suitability action, in accordance with the authorities described in this part. If the individual is then appointed or otherwise becomes employed by or on behalf of the agency, the minimum level of investigation must be conducted as required by paragraph (c)(1) of this section.

(d) *Continuous vetting requirements.* (1) Individuals occupying positions of employment subject to investigation are also subject to continuous vetting through periodic checks of their background at any time in accordance with standards issued by OPM. Checks must be conducted at regular intervals, based on the type of check and with consideration of position risk and sensitivity. The nature of a continuous vetting check, and any additional requirements and parameters, are specified in supplemental issuances as described in § 731.102(b). An individual may be subjected to continuous vetting only if they have signed an authorization for release of information permitting a disclosure for continuous vetting purposes. Continuous vetting for an individual in a public trust position satisfies the requirement for a periodic reinvestigation of an individual in a public trust position as directed in E.O. 13488, as amended. An agency must ensure that each continuous vetting check is conducted and a determination made regarding continued employment.

(2) An individual in a sensitive position who is continually vetted to standards established by the Security Executive Agent for satisfying periodic reinvestigation and/or continuous vetting requirements meets the continuous vetting requirements for a public trust position.

(3) An agency must notify each employee covered by this section of the continuous vetting requirements under this paragraph (d).

(e) *Risk level changes.* If an individual in employment subject to investigation experiences a change to a higher position risk level due to promotion, demotion, reassignment, or transfer, or the risk level of the individual's position is changed to a higher level, the individual may remain in or encumber the position. Any upgrade in the investigation required for the new risk level should be initiated within 14 days after the promotion, demotion, reassignment, transfer or new designation of risk level is final or as otherwise required by 5 CFR part 1400.

(f) *Completed investigations.* An investigation or continuous vetting check under paragraphs (c) through (e) of this section supports a determination by the employing agency of whether the findings of the investigation would justify an action under this part or under another applicable authority, such as 5 CFR part 315, 359, or 752. Section 731.103 addresses whether an agency may take an action under this part, and whether the matter must be referred to OPM for debarment consideration.

(g) *Criminal or credit history inquiries.* A hiring agency may not make specific inquiries concerning an applicant's criminal background in oral or written form (including through the OF-306 or other forms used to conduct vetting for Federal employment, USAJOBS, or any other electronic means) unless the hiring agency has made a conditional offer of employment to the applicant. For criminal inquiries prior to a conditional offer, this prohibition does not apply to applicants for positions excepted under 5 CFR 920.201(b). For competitive service or career Senior Executive Service, a hiring agency may not make specific inquiries concerning an applicant's credit background in oral or written form (including through the OF-306 or other forms used to conduct vetting for Federal employment, USAJOBS, or any other electronic means) unless the hiring agency has made a conditional offer of employment to the applicant. Agencies may request an exception to the provision for making credit inquiries in advance of a conditional offer in accordance with the provisions in 5 CFR part 330, subpart M. Agencies may make an inquiry into an applicant's Selective Service registration, military service, citizenship status, where applicable, or previous work history, prior to making a conditional offer of employment to an applicant.

(h) *Recordkeeping and use of information.* When an agency makes a suitability or fitness determination based on an investigation, the agency must:

(1) Ensure that any record used in making the determination is accurate, relevant, timely, and complete to the extent reasonably necessary to ensure fairness to the individual in any determination;

(2) Ensure that all applicable administrative procedural requirements provided by law, including the regulations in this part and issuances as described in § 731.102(b) have been observed;

(3) Consider all available information in reaching its final decision on a suitability or fitness determination or suitability action, except information furnished by a non-corroborated confidential source, which may be used only for limited purposes, such as information used to develop a lead or in interrogatories to a subject, if the identity of the source is not compromised in any way; and

(4) Keep any record of the agency determination or action as required by issuances as described in § 731.102(b).

■ 8. Revise subpart B to read as follows:

Subpart B—Determinations of Suitability or Fitness; Suitability Actions in Cases Involving the Competitive Service or Career Senior Executive Service

Sec.

731.201 Standard.

731.202 Criteria for making suitability and fitness determinations.

731.203 Suitability actions by OPM and other agencies for the competitive service or career Senior Executive Service.

731.204 Debarment by OPM in cases involving the competitive service or career Senior Executive Service.

731.205 Debarment by agencies in cases involving the competitive service or career Senior Executive Service.

731.206 Reporting requirements for investigations and suitability and fitness determinations.

§ 731.201 Standard.

The standard for a suitability and fitness determination and for a suitability action defined in § 731.203 is that the action will protect the integrity or promote the efficiency of the service.

§ 731.202 Criteria for making suitability and fitness determinations.

(a) *General.* OPM, or an agency to which OPM has delegated suitability authority, must base its suitability determination on the presence or absence of one or more of the specific

factors in paragraph (b) of this section. An agency is responsible for making a fitness determination for an excepted service position covered by this part but must apply the specific factors in paragraph (b) as the minimum standards for making the determination. When applying these criteria, an agency must also apply guidance in supplemental issuances, as described in § 731.102(b). If using these factors to also make a Personal Identity Verification (PIV) Credential determination as outlined in OPM issuances regarding PIV credentialing eligibility, an agency must also ensure they have verified the individual's identity.

(b) *Specific factors.* Only OPM may take a suitability action considering the factors in paragraph (b)(3) or (7) of this section. Agencies may use the factor in paragraph (b)(8) of this section in applicant and appointee suitability cases but not employee cases; however, OPM may use this factor in employee cases. When making a suitability determination, OPM or an agency will consider only the following factors to determine if one is suitable. When making fitness determinations, an agency must consider these factors as a minimum standard, but it may prescribe additional factors to protect the integrity and promote the efficiency of the service, when job-related and consistent with business necessity.

(1) Misconduct or negligence in employment;

(2) Criminal conduct;

(3) Material, intentional false statement, or deception or fraud, in examination or appointment;

(4) Dishonest conduct;

(5) Excessive alcohol use, without evidence of rehabilitation, of a nature and duration that suggests the applicant or appointee would be prevented from performing the duties of the position in question, or would constitute a direct threat to the property or safety of the applicant, appointee, or others;

(6) Illegal use of narcotics, drugs, or other controlled substances, without evidence of rehabilitation;

(7) Knowing and willful engagement in acts or activities designed to overthrow the U.S. Government by force;

(8) Any statutory or regulatory bar that prevents the lawful employment of the individual in the position in question; and

(9) Violent conduct.

(c) *Additional considerations.* OPM and an agency must consider any of the following additional considerations to the extent OPM or the relevant agency, in its sole discretion, deems any of them pertinent to the individual case:

(1) The nature of the position for which the individual is applying or in which the individual is employed;

(2) The nature and seriousness of the conduct;

(3) The circumstances surrounding the conduct;

(4) The recency of the conduct;

(5) The age of the individual involved at the time of the conduct;

(6) Contributing societal conditions; and

(7) The absence or presence of rehabilitation or efforts toward rehabilitation.

§ 731.203 Suitability actions by OPM and other agencies for the competitive service or career Senior Executive Service.

(a) This section pertains only to the competitive service or career Senior Executive Service as defined in § 731.101.

(b) A suitability action may be taken only by OPM or an agency with delegated authority under the procedures in subparts C and D of this part.

(c) A non-selection, or cancellation of eligibility for the competitive service based on an objection to an eligible or pass over of a preference eligible under 5 CFR 332.406, is *not* a suitability action even if it is based on reasons set forth in § 731.202.

(d) A suitability action may be taken against an applicant or an appointee to the competitive service or career Senior Executive Service when OPM or an agency exercising delegated authority under this part finds that the applicant or appointee is unsuitable for the reasons cited in § 731.202, subject to the agency limitations of § 731.103(b), (d), and (f).

(e) OPM may require that an employee in the competitive service or career Senior Executive Service be removed on the basis of one or more of the following:

(1) A material, intentional false statement, deception, or fraud in examination or appointment;

(2) Knowing and willful engagement in acts or activities designed to overthrow the U.S. Government by illegal or unconstitutional means; and/or

(3) Statutory or regulatory bar that prevents the individual's lawful employment.

(f) OPM may cancel any reinstatement eligibility obtained as a result of a material, intentional false statement, deception, or fraud in examination or appointment.

(g) An action to remove an appointee or employee *for suitability reasons* under this part is not an action under 5

CFR part 315, 359, or 752. Where conduct covered by this part may also form the basis for an action under 5 CFR part 315, 359, or 752, an agency may take the action under 5 CFR part 315, 359, or 752, as appropriate, instead of under this part. An agency must notify OPM to the extent required in § 731.103(f) if it wants to take, or has taken, action under these authorities. OPM reserves the right to also take an action under this part.

(h) An agency does not need approval from OPM before taking an unfavorable suitability action. However, it is required to report to the Central Verification System or its successor, each unfavorable suitability action taken under this part within 30 days after it takes the action. Also, each suitability determination based on an investigation must be reported to the Central Verification System or its successor as soon as possible and in no event later than 90 days after receipt of the final report of investigation.

§ 731.204 Debarment by OPM in cases involving the competitive service and career Senior Executive Service.

(a) When OPM finds an individual unsuitable for any reason listed in § 731.202, OPM, in its discretion, may, for a period of not more than 3 calendar years from the date of the unfavorable suitability determination, deny that individual examination for, and appointment to, the competitive service and career appointment in the Senior Executive Service.

(b) OPM may impose an additional period of debarment following the expiration of a period of OPM or agency debarment or when new conduct arises while under debarment, but only after the individual again becomes an applicant, appointee, or employee subject to OPM's suitability jurisdiction, and the individual's suitability is determined in accordance with the procedures of this part. An additional debarment period may be based in whole or in part on the same conduct on which the previous suitability action was based, when warranted, or new conduct.

(c) OPM, in its sole discretion, determines the duration of any period of debarment imposed under this section.

§ 731.205 Debarment by agencies in cases involving the competitive service and career Senior Executive Service.

(a) Subject to the provisions of § 731.103, when an agency finds an applicant or appointee unsuitable based upon reasons listed in § 731.202, the agency may, for a period of not more than 3 years from the date of the

unfavorable suitability determination, deny that individual examination for, and appointment to, either all, or specific competitive service positions and career appointment to all, or specific Senior Executive Service positions within that agency.

(b) The agency may impose an additional period of debarment following the expiration of a period of OPM or agency debarment, but only after the individual again becomes an applicant or appointee subject to the agency's suitability jurisdiction, and his or her suitability is determined in accordance with the procedures of this part. An additional debarment period may be based in whole or in part on the same conduct on which the previous suitability action was based, when warranted, or new conduct.

(c) The agency, in its sole discretion, determines the duration of any period of debarment imposed under this section.

(d) The agency is responsible for enforcing the period of debarment and taking appropriate action if an individual applies for a position at that agency during the debarment period or is examined for or appointed to a position at that agency during the debarment period. This responsibility does not limit OPM's authority to exercise jurisdiction itself and take any action OPM deems appropriate.

§ 731.206 Reporting requirements for investigations and suitability and fitness determinations.

An agency must report to the Central Verification System or its successor the level or nature, result, and completion date of each background investigation, reinvestigation, or enrollment in Continuous Vetting; each agency decision based on such investigation, reinvestigation, or Continuous Vetting; and any personnel action taken based on such investigation or reinvestigation, as required in supplemental guidance.

■ 9. Revise the heading of subpart C to read as follows:

Subpart C—OPM Suitability Action Procedures for the Competitive Service or Senior Executive Service

■ 10. Amend § 731.302 by revising paragraph (c) to read as follows:

§ 731.302 Notice of proposed action.

* * * * *

(c) OPM will serve the notice of proposed action upon the respondent by mail, secure email, or hand delivery no less than 30 days prior to the effective date of the proposed action to the

respondent's last known residence or duty station.

* * * * *

■ 11. Revise the heading of subpart D to read as follows:

Subpart D—Agency Suitability Action Procedures for the Competitive Service or Career Senior Executive Service

■ 12. Amend § 731.402 by revising paragraph (c) to read as follows:

§ 731.402 Notice of proposed action.

* * * * *

(c) The agency must serve the notice of proposed action upon the respondent by mail, secure email, or hand delivery no less than 30 days prior to the effective date of the proposed action to the respondent's last known residence or duty station.

* * * * *

■ 13. Revise the heading of subpart E to read as follows:

Subpart E—Appeal to the Merit Systems Protection Board of Suitability actions in cases involving the Competitive Service or Career Senior Executive Service

Subpart F—[Removed]

■ 14. Remove subpart F, consisting of § 731.601.

BILLING CODE 6325–66–P

OFFICE OF PERSONNEL MANAGEMENT

5 CFR Part 950

Combined Federal Campaign: Authorization of Short-Term Regulatory Variation

AGENCY: Office of Personnel Management.

ACTION: Notification.

SUMMARY: The Office of Personnel Management (OPM) is providing notice that the Acting Director is authorizing a variation from the regulatory public accountability standards to relieve practical difficulties and unnecessary hardships in complying with the strict letter of the regulation. The Acting Director has found that such a variation is within the spirit of the regulations and will ensure the achievement of campaign objectives. Specifically, for an 18-month period, OPM is modifying certain revenue thresholds for the various public accountability standards

for charities participating in the Combined Federal Campaign (CFC).

DATES: The authorization of short-term regulatory variation standards are effective on December 18, 2024.

FOR FURTHER INFORMATION CONTACT:

Keith Willingham, Director, Office of the CFC, keith.willingham@opm.gov, 202-606-2564.

SUPPLEMENTARY INFORMATION: The CFC is the world's largest and most successful annual workplace charity campaign, with 35 CFC campaign zones throughout the country and overseas and raising millions of dollars each year. Pledges made by Federal civilian, retiree, postal, and military donors during the campaign season support non-profit organizations that meet CFC regulations and provide health and human welfare benefits throughout the world.

To provide public accountability, OPM generally requires participating charities to undergo a third-party audit of their finances. In a 1995 rulemaking, OPM exempted local charities from the audit requirement if they had annual revenue of less than \$100,000. In 2014, OPM eliminated the distinction between "local" and "national" charities and expanded the exemption to all charities with revenue of less than \$100,000. *See* 5 CFR 950.203(a)(2)(i). In that rulemaking, OPM also added a second tier, allowing charities with revenue of \$100,000 to under \$250,000 to participate without an audit but with a review by an independent certified public accountant instead. *See* 5 CFR 950.203(a)(2)(ii).

Participation by charities in the CFC dropped precipitously over the last decade, however. Charities have explained that the audit requirement serves as a barrier to participation. Revenue reported by charities has increased, and more than 75 percent of charities now exceed the current audit threshold of \$250,000 in reported revenue. At the same time, costs of audits have risen dramatically and now often exceed the value of donations collected through the CFC. Audit services can now range from \$15,000–\$30,000. Accordingly, a charity cannot justify the expense of the audit, which yield a net loss to the charity.

The mission of the CFC is to promote and support philanthropy through a program that is employee-focused, cost-efficient, and effective in providing all Federal employees the opportunity to donate. The CFC provides employees with an easy way to contribute to their charities of choice; so, when employees no longer find their favorite charity on the CFC list, they may not give as much

or as often. Therefore, to attract more donors to the CFC and to retain and attract a more diverse group of charities, OPM is adjusting the audit requirements in an 18-month pilot program.

OPM's CFC regulations authorize the Director of OPM to "waive any of these [public accountability] standards and certifications upon a showing of extenuating circumstances." 5 CFR 950.203(e). In addition, the Director may "exercise general supervision over all operations of the CFC and take all necessary steps to ensure the achievement of campaign objectives." 5 CFR 950.102(c). Recognizing that the financial thresholds have not been adjusted in over ten years (and that the \$100,000 threshold is almost 20 years old), OPM finds that immediate steps are warranted to facilitate participation by charities in the CFC.

Based on the feedback OPM has received from charities, the Acting Director has found that the current financial thresholds present extenuating circumstances that impair the achievement of campaign objectives as the thresholds have not been adjusted for inflation in over 10 years. Furthermore, the thresholds are inconsistent with the standards applied by other areas of the government. For example, the Office of Management and Budget currently requires audits for organizations that expend \$750,000 or more in Federal funds. *See* 2 CFR part 200, subpart F. Similarly, many similar state programs have raised their audit thresholds to \$1,000,000. Because the existing regulatory thresholds are having a negative impact on the effectiveness of the CFC and revised thresholds would provide some necessary financial relief, the Acting Director finds that a limited waiver is appropriate. Specifically, waiving the audit requirement for charities with annual revenue of \$1 million or less, and waiving the requirement for an independent review of financial statements for charities with annual revenue above \$1 million but that receive less than \$750,000 in CFC pledges will help address the extenuating circumstances of the increased revenues received by charities combined with the increased costs of financial auditing and review services without commensurate inflationary adjustments to the regulatory thresholds.

Accordingly, OPM provides notice that, for the 18-month period after December 18, 2024, OPM will waive the regulatory thresholds for audits and/or reviews of financial statements for organizations with annual reported revenue of \$1,000,000 or less on its IRS

Form 990 or pro forma IRS Form 990 and will waive the regulatory thresholds for audits of financial statements for organizations with annual reported revenue above \$1,000,000 and with less than \$750,000 coming from CFC. Details are available at <https://cfccharities.opm.gov/app/#!/home>.

All other organizations (e.g., an organization with annual reported revenue above \$1,000,000 and with \$750,000 or more coming from CFC) continue to be required to undergo an annual financial statement audit for CFC purposes. The organization must account for its funds based on generally accepted accounting principles. A copy of the audited financial statements and auditors report must be included with the application. *See* 5 CFR 950.203(a)(2)).

Next Steps

OPM plans to update its regulations governing the CFC (RIN 3206-AO66). OPM will assess the effectiveness of this waiver in terms of encouraging charity participation in CFC and whether there is a resultant increase in employee participation. OPM will also assess the extent to which these pilot programs affect the number of charities participating in CFC and which charities meet these proposed thresholds. OPM charity application reviewers at the local national, and international levels will study the audits and financial reviews submitted with applications to ensure that these thresholds are providing appropriate levels of accountability.

Office of Personnel Management.

Kayyonne Marston,

Federal Register Liaison.

BILLING CODE 6325-58-P

SMALL BUSINESS ADMINISTRATION

13 CFR Part 120

RIN 3245-AI21

ALP Express Pilot to Permanent Status

AGENCY: U.S. Small Business Administration.

ACTION: Final rule.

SUMMARY: The U.S. Small Business Administration ("SBA" or Agency) is making permanent the increased delegated authorities made available under the ALP Express Pilot for Certified Development Companies ("CDCs") approved for the Accredited Lenders Program ("ALP"). These increased delegated authorities for 504

loans of \$500,000 or less (“ALP Express authority”) were authorized under the Economic Aid to Hard-hit Small Businesses, Nonprofits, and Venues Act (Economic Aid Act or EAA). When these EAA-increased delegated authorities expired on September 30, 2023, SBA implemented the ALP Express Pilot (Pilot) in October 2023 to allow SBA to further evaluate the improved customer service levels for SBA Borrowers and the use of these increased delegated authorities by ALP CDCs. The ALP Express Pilot is scheduled to expire on September 30, 2025. Due to the success of the Pilot, SBA is revising regulations and proceeding to make the Pilot permanent after receiving supportive public comments and no objections to SBA’s October 24, 2024, notice of proposed rulemaking. SBA notified Congress of the intent to convert the Pilot to become a permanent part of the 504 Loan Program in September 2024.

DATES: This rule is effective as of January 17, 2025.

FOR FURTHER INFORMATION CONTACT: Gregorius Suryadi, Office of Financial Assistance, U.S. Small Business Administration at (202) 205-6806 or gregorius.suryadi@sba.gov. The phone number above may also be reached by individuals who are deaf or hard of hearing, or who have speech disabilities, through the Federal Communications Commission’s TTY-Based Telecommunications Relay Service teletype service at 711.

SUPPLEMENTARY INFORMATION:

I. Background Information

The 504 Loan Program is an SBA financing program authorized under title V of the Small Business Investment Act of 1958, as amended, 15 U.S.C. 695 *et seq.* (“Small Business Investment Act”). Under the 504 Loan Program, loans are made to small business applicants by Certified Development Companies (“CDCs”), which are certified and regulated by SBA to promote economic development within their community.

There are three types of CDCs that participate in the 504 Loan Program. This document relates to the temporary increased delegated authorities that were granted, in accordance with section 328(b) of the Economic Aid Act (“EAA”), to CDCs that are approved by SBA to participate in the Accredited Lenders Program (hereafter “ALP CDCs”), which is authorized under section 507(a) of the Small Business Investment Act. Under section 507(c) of the Small Business Investment Act, SBA is authorized to develop an expedited

procedure for processing a loan application or servicing action submitted by ALP CDCs. [15 U.S.C. 697d.]

Prior to the Economic Aid Act, ALP CDCs were required to obtain SBA’s approval on both the loan’s eligibility and creditworthiness determinations. In addition, ALP CDCs only had delegated authority to make certain “No Adverse Change” certifications prior to loan closing without SBA’s review and approval and were only authorized to close 504 loans under the expedited loan closing procedures applicable to a Priority CDC. Further, ALP CDCs were required to obtain SBA’s approval for most servicing actions. Section 328(b) of the EAA temporarily provided ALP CDCs increased delegated authority to “approve, authorize, close and service covered loans,” for loans of not more than \$500,000 and that are not made to a borrower in an industry with a high rate of default as defined by SBA. SBA implemented these increased delegated authorities with the publication of an interim final rule on June 27, 2022. (87 FR 37979). Pursuant to the EAA, these delegated authorities were to expire on September 30, 2023.

In order to evaluate the use of these increased delegated authorities by ALP CDCs and to identify opportunities for further modification, SBA developed the ALP Express Pilot program to provide these increased delegated authorities through September 30, 2025, to ALP CDCs (hereafter referred to as “ALP Express Pilot Loans”). The ALP Express Pilot’s delegated authorities in effect represented a continuation of the ALP Express authority provided by the Economic Aid Act. (88 FR 69529 (October 6, 2023)). Pursuant to its authority set forth in section 507(c) of the Small Business Investment Act (15 U.S.C. 697d(c)), which authorizes SBA to develop expedited procedures for processing a loan application or servicing action submitted by ALP CDCs, SBA published a notice of proposed rulemaking on October 24, 2024 (89 FR 84831), proposing to make permanent the increased delegated authorities available under the ALP Express Pilot. With this document SBA also requested public comment to help the Agency identify which parts of the pilot have been successful and which may need further modification.

II. Summary of Comments Received

On November 25, 2024, the notice of proposed rulemaking comment period ended. SBA received 11 comments to the notice of proposed rulemaking of which one was beyond the scope of the NPRM. Of the 10 unique comments

received, 2 were from national trade associations, 7 were from Certified Development Companies, and one was from an individual. The one comment that was beyond the scope of the notice of proposed rulemaking was from an individual. Public comments received to further expand the pilot authorities will be addressed in the Section-by-Section Analysis. Of the 10 comments received, 9 supported the changes as set forth in the notice of proposed rulemaking. One comment supported the changes and requested additional modification, and the comment from the individual was nonresponsive as it did not comment on the proposed rule but instead suggested revisions to the ALP Express Guide. SBA did not receive any comments opposing the changes. In addition to comments on these regulations there were also comments requesting that SBA implement policies and procedures on electronic signatures, electronic closings, and digital debentures to improve efficiencies across the 504 loan program for both ALP and non-ALP CDCs.

III. Section-by-Section Analysis

A. CDC’s Authorities. Under the ALP Express Pilot, SBA delegated to ALP CDCs the authority to make the final decision with respect to the applicant’s creditworthiness on ALP Express Pilot Loans. SBA continued to be responsible for reviewing each 504 loan to ensure that it meets all loan program requirements for program eligibility, and its risk management enhancement within E-Tran provided a tool to assist with fraud detection and prevention. SBA proposed to make these increased authorities permanent for loans that meet ALP Express eligibility criteria. SBA is not making additional changes to current ALP Express underwriting, servicing or closing authorities beyond those established by the ALP Express Pilot Program. In its public comments the National Association of Development Companies (NADCO), a national trade association, stated that additional delegated authorities cannot be implemented because SBA lacks this authority under the Accredited Lenders Program. Based on the excellent performance of this cohort of the 504 loans portfolio, there has been low risk to the national 504 portfolio due to the implementation of the ALP Express Pilot. SBA expects ALP CDCs to continue to use this delegated authority as prudent lenders and will monitor the national portfolio of ALP Express loans. Of all ALP Express loans approved since inception of the Pilot and through June 30, 2024, none were in default or in liquidation. SBA will monitor the risk of

this cohort on a continuous basis going forward.

SBA also delegated to ALP CDCs the authority to approve certain servicing actions after closing on ALP Express Pilot Loans (though ALP CDCs were still required to notify the appropriate SBA servicing center of their approval of any servicing action on ALP Express Pilot Loans). In addition, SBA delegated to ALP CDCs the responsibility to undertake all actions necessary to close the ALP Express Pilot Loan and Debenture in accordance with the expedited loan closing procedures applicable to a Priority CDC and with 13 CFR 120.960. SBA is making these increased authorities permanent for loans that meet ALP Express eligibility criteria (hereafter referred to as “ALP Express Loans”). CDCs would use these delegated authorities to approve certain servicing actions after closing. SBA has not found any issues or concerns with the ALP Express loan cohort that would prompt SBA to reconsider making permanent these increased delegated authorities. SBA will continuously monitor the risk of this cohort due to these permanent servicing and closing delegations going forward.

In their own discretion, ALP CDCs may decide not to exercise their increased delegated authority with respect to an ALP Express Loan and may instead submit the loan to SBA under nondelegated procedures. ALP CDCs may not use their ALP Express authority to service a loan that was approved under non-delegated authority that could have been made as an ALP Express Loan. In addition, Premier Certified Lender Program (PCLP) CDCs may decide to process an ALP Express Loan under their status as an ALP CDC instead of as a PCLP CDC, thereby not requiring the CDC to comply with Loan Loss Reserve Fund requirements for that loan. A PCLP CDC that decides to process a loan as an ALP Express Loan however may only use ALP Express authorities, not PCLP authority, for that loan.

In making, closing, servicing, or liquidating an ALP Express Loan, CDCs are required to follow all Loan Program Requirements. This includes the loan closing and disbursement procedures in SOP 50 10 7.1 and any updates to the servicing and liquidation requirements in 13 CFR 120.535, 120.536, 120.540, 120.842 and 120.960, as well as SOP 50 55. SBA is not further expanding any of these responsibilities in making permanent the increased authorities available to ALP CDCs under the ALP Express delegations of authority.

SBA received public comments recommending a further expansion of

ALP Express delegated authorities. The commenters recommended that SBA: (1) Allow full delegated processing, approval, and authorization of ALP Express Loans; (2) Allow ALP CDCs to prepare, finalize, and execute the Loan Terms and Conditions; (3) Allow ALP CDCs to process and approve all loan modifications between loan approval and loan closing and enter changes directly in the Capital Access Financial System (CAFS); (4) Implement a loan scoring model for use by ALP CDCs in approving ALP Express Loans. SBA is not including these recommendations because SBA lacks this authority under the Accredited Lenders Program.

For further guidance on ALP Express authority, please review the ALP Express Pilot Program Guide. This guide will apply to the increased delegated authorities made permanent under this final rule and will be updated as needed.

Finally, in response to public comments, SBA is revising its regulations under 13 CFR 120.953 related to certain responsibilities of Trustee appointed by SBA to facilitate 504 Debenture sales and the related definition of “Debenture” in 13 CFR 120.802. Pursuant to 13 CFR 120.953(c), SBA must appoint a Trustee to maintain physical possession of 504 Debentures for SBA and the Certificate holders. In practice, this requirement limits CDCs, and indirectly SBA borrowers, to executing only physical paper Debentures and prohibits the adoption of electronic Debentures and all their corresponding advantages and efficiencies. SBA is revising the definition of “Debenture” in 13 CFR 120.802 to allow for either paper or electronic Debentures. A revision to the requirements set forth in 13 CFR 120.953(c) will clarify that the SBA shall use a trustee to hold in trust paper Debentures. The consequence of adopting electronic Debentures will be a streamlined loan closing process and modernized documentation retention procedures for these documents, thereby lowering costs for CDCs and SBA borrowers.

B. Application and Reporting Requirements. CDCs are required to comply with the reporting requirements in 13 CFR 120.830, using the application forms for current 504 loan processing, and are required to execute an SBA Terms and Conditions document for each 504 loan, including ALP Express Pilot loans, as set forth in SOP 50 10. ALP CDCs use SBA Form 1244 to document its ALP Express authority when submitting an application for an ALP Express Pilot loan. In doing so, SBA tracks whether

the ALP CDC was using its ALP Express increased delegated authority for the loan. In making the increased authorities available to ALP CDCs under the ALP Express Pilot Program permanent, SBA is not changing ALP CDC reporting requirements and related responsibilities. No further changes to Form 1244 are needed.

C. Lender Oversight. ALP CDC oversight procedures shall continue to follow the requirements set forth in 13 CFR part 120, subpart I, SOP 50 53 (Lender Supervision and Enforcement) and SOP 51 00 (On-Site Lender Reviews and Examinations). The SOPs can be found on the SBA website. ALP CDCs will be monitored both for performance and other risk characteristics. The ALP CDC must comply with the requirement that it only make ALP Express Loans in an amount of \$500,000 or less, along with all other loan program requirements. ALP CDCs also will be subject to 13 CFR 120.1400 through 120.1600 and the provisions of SOP 50 53 concerning supervision and enforcement. SBA is not changing these responsibilities in making permanent the increased authorities available to ALP CDCs.

Compliance With Executive Orders 12866, 12988, 13175, 13132, 13563, and 14094, the Congressional Review Act, Paperwork Reduction Act, and Regulatory Flexibility Act Executive Orders 12866, 13563, and 14094

Executive Order 12866, “Regulatory Planning and Review,” directs agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Executive Order 13563, “Improving Regulation and Regulatory Review,” emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. Executive Order 14094, “Modernizing Regulatory Review,” amends section 3(f) of Executive Order 12866 and supplements and reaffirms the principles, structures and definitions governing contemporary regulatory review established in Executive Order 12866 and Executive Order 13563. The OMB Office of Information and Regulatory Affairs has determined that this rulemaking is not a significant regulatory action. SBA has drafted a cost-benefit analysis for the public’s information in the next section.

A. Cost-Benefit Analysis

Is there a need for the regulatory action?

Access to capital is one of the primary challenges for small businesses to start, grow, and sustain their businesses. The SBA 504 loan program serves an important role in business lending for small businesses that do not have credit available elsewhere from conventional sources on reasonable terms. The Agency believes that a streamlined process for small dollar loans particularly for loans of \$500,000 or less will facilitate increased participation by small business owners, especially those in underrepresented communities. SBA observed that upon implementing the increased delegated authorities required by the EAA, SBA was able to reduce the processing and approval time of loan applications of \$500,000 or less for small businesses that needed immediate financial assistance.

The ALP Express Pilot increased delegated authorities have proven that ALP CDCs are able to process, approve, and service ALP Express loans within the guidelines issued by the SBA. Due to the success of the Pilot, SBA is now making these delegations permanent. Accordingly, the permanent program change will reduce regulatory burdens, reduce the number of hours spent processing an application to deliver a loan for both SBA and CDCs and increase access to capital for small businesses.

With respect to adopting electronic 504 Debentures, SBA believes this change will streamline the loan closing process and lower costs for CDCs and SBA borrowers.

B. Benefits and Costs of the Rulemaking

What are the potential benefits and costs of this regulatory action?

SBA anticipates that making permanent the ALP Express Pilot Loan authority and providing ALP CDCs with greater authority to approve and service loans will reduce processing time and therefore benefit small businesses, their employees, and the communities they serve.

Indeed, SBA observed that the processing and approval time for ALP Express Pilot loans averaged 2.3 business days whereas the processing time for regular 504 loans using non-delegated authority averaged 5 days. Therefore, small businesses will have access to capital to start, grow, and sustain their businesses in a shorter timeframe. SBA does not anticipate additional costs or impacts on the subsidy once these increased delegated authorities are made permanent.

Finally, adoption of electronic Debentures will expedite the loan closing process and lower documentation storage and transmission costs.

C. What alternatives have been considered?

SBA could allow the ALP Express Pilot to expire and resume the level of ALP authorities that were in place prior to the implementation of the Economic Aid Act. Due to the efficiency gains under the ALP Express pilot, SBA considered it more prudent to retain these increased delegated authorities to reduce regulatory burdens for ALP CDCs and to responsibly streamline the processing, approval and closings of 504 loan application under \$500,000 without substantially increasing the risk of waste, fraud, or abuse of the programs, or threatening the integrity of the business loan programs or the waste of taxpayer dollars.

SBA reviewed public comments and received recommendations for alternatives that cannot be implemented because SBA does not have this authority under the Accredited Lenders Program. These include: (1) Allowing full delegated processing, approval, and authorization of ALP Express Loans; (2) Allowing ALP CDCs to prepare, finalize, and execute the Loan Terms and Conditions; (3) Allowing ALP CDCs to process and approve all loan modifications between loan approval and loan closing and enter changes directly in the CAFS; (4) Implementing a loan scoring model for use by ALP CDCs in approving ALP Express Loans.

Finally, as an alternative to the changes being contemplated to § 120.953, SBA could maintain its current physical Debenture regime where physical paper is shipped and stored. Due to the efficiency gains afforded by electronic Debentures, SBA considered it more prudent to transition to the use of electronic Debentures.

Executive Order 12988

This action meets applicable standards set forth in sections 3(a) and 3(b)(2) of Executive Order 12988, *Civil Justice Reform*, to minimize litigation, eliminate ambiguity, and reduce burden. The action would not have preemptive effect or retroactive effect.

Executive Order 13175

This final rule will not have Tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it would not have a substantial direct effect on one or more Indian tribes, on the relationship between the

Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

Executive Order 13132

This final rule will not have federalism implications as defined in Executive Order 13132, *Federalism*. It would not have substantial direct effects on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government, as specified in the Executive order. As such it does not warrant the preparation of a Federalism Assessment.

Paperwork Reduction Act

This final rule does not impose additional reporting or recordkeeping requirements under the Paperwork Reduction Act, 44 U.S.C. chapter 35. In order to implement the Economic Aid Act, SBA determined that it was necessary to temporarily modify SBA Form 1244, which was approved on November 22, 2022, under OMB Control Number 3245-0071, *Application for Section 504 Loans*, to conform the application with the revised requirements for ALP Express Loan authority. The changes did not add any new burdens for the respondents. SBA made the following technical corrections and clarifying changes to SBA Form 1244 which became effective October 1, 2024: (1) revised question number 4 on page 2 to include the updated language as a result of the Criminal Justice Reviews for the SBA Business Loan Programs, Disaster Loan Programs, and Surety Bond Guaranty Program (89 FR 34094); (2) added a paragraph on page 4 authorizing the SBA to release information regarding existing SBA loan to Lender/CDC; (3) revised the instructions on page 5 (*Purpose of the Form*) to clarify that CDCs with ALP Express Loan authority must use the form; (4) added a new ALP Express checkbox to page 8 in the *Submission Method* field; (5) added an additional row to the project table on page 9 for Other Secured Debt to be Refinanced; and (6) updated the instructions on pages 11 and 12 (*Required Exhibits*) to identify which exhibits must be completed and uploaded in SBA's E-Tran system for ALP Express Loans and which exhibits non-ASM CDCs must complete and upload into E-Tran. No additional modifications to SBA Form 1244 were necessary for the ALP Express Pilot, and no additional modifications to SBA Form 1244 will be necessary for purposes of making the ALP Express

increased authorities permanent through this rulemaking.

Regulatory Flexibility Act

The Regulatory Flexibility Act (“RFA”), 5 U.S.C. 601, *et seq.*, requires administrative agencies to consider the effect of their actions on small businesses, small organizations, and small governmental jurisdictions. Pursuant to the RFA, when an agency issues a proposed rulemaking, it must prepare and make available for public comment an initial regulatory flexibility analysis to address the impact of the rule on small entities. SBA published a notice of proposed rulemaking on October 24, 2024, with comments due on or before November 25, 2024, and received 10 supportive comments and no opposing comment. Section 605 of the RFA allows an agency to certify a rule, in lieu of preparing an analysis, if the rulemaking is not expected to have a significant economic impact on a substantial number of small entities. The rulemaking will have a positive impact and will be beneficial for all ALP CDCs. By making permanent the temporary increased delegated authorities available under the ALP Express Pilot program this rulemaking will improve the approval time of 504 loan applications for loans in an amount of \$500,000 or less.

Between FY 2022 (June 27, 2022) and FY 2025 (October 31, 2024) SBA approved 4,971 non-ALP Express loans of \$500,000 or less, for a total dollar amount of \$1,511,075,000. In the same period SBA approved 2,364 ALP Express and ALP Express Pilot loans for a total dollar amount of \$1,283,386,000. The total number of approved 504 loans of \$500,000 or less over this period was 7,335 loans, in the amount of \$2,794,461,000. Based on the total 504 loans of \$500,000 or less approved since ALP Express implementation, ALP CDCs have demonstrated success in processing and servicing loans using their increased ALP Express delegated authority. In addition, since ALP Express implementation, there have been no instances of ALP Express loans in default or in liquidation.

SBA estimates the burden for completing SBA Form 1244, “Application For Section 504 Loans”, including time for reviewing instructions, gathering data and documentation needed, and completing and reviewing the form, is 2.5 hours. SBA will not need to change SBA Form 1244 as a result of this rulemaking. SBA anticipates the final rule will increase the number of CDCs making loans of \$500,000 or less and increase the number of approved 504 program loans

as a whole. The ALP Express Pilot added no additional cost burdens to SBA, CDCs, or small business borrowers and there were minimal changes to SBA forms. SBA used existing staff to implement the Pilot. No further changes to SBA forms or staffing levels are anticipated to make permanent the ALP Express increased delegated authorities. Finally, the ALP Express Pilot cohort of loans had no defaults and no liquidations. SBA will continue to monitor the risk of this cohort to SBA’s 504 portfolio going forward.

With respect to the electronic Debenture change, SBA currently must appoint a Trustee to maintain physical possession of 504 Debentures for SBA and the Certificate holders. In practice, this requirement limits CDCs, and indirectly SBA borrowers, to executing only physical paper Debentures and prohibits the adoption of electronic Debentures and all their corresponding advantages and efficiencies. A revision to the requirements set forth in 13 CFR 120.953(c) will authorize SBA to maintain possession of electronic (or digital) versions of 504 Debentures, thereby streamlining the loan closing process and lowering costs for CDCs and SBA borrowers.

Based on the foregoing, the Administrator of the SBA hereby certifies that this rulemaking will not have a significant economic impact on a substantial number of small businesses. The SBA invited comments from the public on the certification for the proposed rule. SBA did not receive any objections to its certification.

Congressional Review Act

This rule has been determined not to meet the criteria set forth in 5 U.S.C. 804(2). SBA will submit the rule to Congress and the Government Accountability Office consistent with the Congressional Review Act’s requirements.

List of Subjects in 13 CFR Part 120

Administrative practice and procedure, Banks, Banking, Business and industry, Child support, Community development, Confidential business information, Credit, Disaster assistance, Employee benefit plans, Energy conservation, Environmental protection, Equal employment opportunity, Exports, Flood insurance, Flood plains, Foreign trade, Fraud, Individuals with disabilities, Lead poisoning, Loan programs—business, Loan programs—energy, Loan programs—veterans, Reporting and recordkeeping requirements, Small businesses, Solar energy, Trusts and trustees, Veterans.

Accordingly, for the reasons stated in the preamble, SBA amends 13 CFR part 120 as follows:

PART 120—BUSINESS LOANS

■ 1. The authority citation for part 120 continues to read as follows:

Authority: 15 U.S.C. 634(b)(6), (b)(7), (b)(14), (h), and note, 636(a), (h) and (m), 650, 687(f), 696(3) and (7), and 697(a) and (e); sec. 521, Pub. L. 114–113, 129 Stat. 2242; sec. 328(a), Pub. L. 116–260, 134 Stat. 1182.

■ 2. Amend § 120.802 by revising the definition of *Debenture* to read as follows:

§ 120.802 Definitions.

* * * * *

Debenture is an obligation issued by a CDC and guaranteed 100 percent by SBA, the proceeds of which are used to fund a 504 loan. SBA, in its discretion, may authorize either paper or electronic Debentures.

* * * * *

■ 3. Amend § 120.842 by revising paragraph (a) and removing paragraph (d) to read as follows:

§ 120.842 ALP Express Loans.

(a) *Definition.* For the purposes of this section, an ALP Express Loan means a 504 loan in an amount that is not more than \$500,000 and which is underwritten, approved, closed and serviced using the authorities set forth in this section.

* * * * *

■ 4. Amend § 120.953 by revising paragraph (c) to read as follows:

§ 120.953 Trustee.

* * * * *

(c) Hold in trust paper Debentures composing a Debenture Pool for the benefit of SBA and the Certificate holders;

* * * * *

Isabella Casillas Guzman,
Administrator.

BILLING CODE 8026–09–P

DEPARTMENT OF COMMERCE

Office of the Secretary

15 CFR Part 3

[Docket No. 241210–0320]

RIN 0605–AA64

Implementation of HAVANA Act of 2021

AGENCY: Department of Commerce.

ACTION: Final rule.

SUMMARY: This rule implements the HAVANA Act of 2021 (the Act) for the Department of Commerce (Department). The Act provides the authority for the Secretary of Commerce and other agency heads to provide payments to certain individuals who have incurred qualifying injuries to the brain. The rule covers current and former Department employees and dependents of current or former employees.

DATES: This final rule is effective December 18, 2024.

ADDRESSES: Public comments and materials associated with this final rule are available through the Federal eRulemaking Portal at <http://www.Regulations.gov>, Docket No. DOC–2023–0001.

FOR FURTHER INFORMATION CONTACT: Charles Cutshall, Chief Privacy Officer, at 202–482–5735 or ccutshall@doc.gov.

SUPPLEMENTARY INFORMATION:**Background**

This rule implements the Helping American Victims Affected by Neurological Attacks (HAVANA) Act of 2021, Public Law 117–46, codified in 22 U.S.C. 2680b(i), which (among other things) required Department heads to prescribe regulations implementing the HAVANA Act for covered individuals. The Department published an interim final rule (IFR) on April 19, 2023 (88 FR 24110), which laid out the process for HAVANA Act claimants to submit claims for payment for a qualifying injury to the brain suffered by current and former employees of the Department, and dependents of current or former employees. Under the IFR, the criteria for a qualifying injury to the brain are based on current medical practices related to brain injuries. Further, the injury must have occurred in connection with certain hostile acts or other incidents designated by the Secretary of State or the Secretary of Commerce. Further background is contained in the preamble to the IFR. The IFR provided for 30 days of public comment, and the Department provides responses to those comments below.

Responses to Comments

The Department received a total of eight public comment submissions in response to the IFR. Many comments provided input on multiple subjects. The Department received identical comment submissions from four commentors. All comments are addressed below.

Several commentors focused on the Department's definition of “qualifying

injury to the brain.” First, numerous commentors urged the Department to adopt a broad definition of a “qualifying injury to the brain.” Under the IFR, individuals may be eligible for a HAVANA Act payment if they meet one of three criteria under the definition of “qualifying injury to the brain”: (1) An acute injury to the brain such as, but not limited to, a concussion, penetrating injury, or as the consequence of an event that leads to permanent alterations in brain function as demonstrated by confirming correlative findings on imaging studies (to include computed tomography scan (CT), or magnetic resonance imaging scan (MRI)), or electroencephalogram (EEG); or (2) A medical diagnosis of a traumatic brain injury (TBI) that required active medical treatment for 12 months or more; or (3) acute onset of new persistent, disabling neurologic symptoms as demonstrated by confirming correlative findings on imaging studies (to include CT or MRI), or EEG, or physical exam, or other appropriate testing, and that required active medical treatment for 12 months or more.

The Department believes that this definition is broad and flexible enough to cover a wide range of brain injuries. The Department also notes that this definition is consistent with regulations issued by the State Department (Jan. 25, 2023, at 88 FR 4722). Therefore, this final rule does not change the IFR definition of “qualifying injury to the brain.”

Multiple comments requested that the Department remove the requirement that an individual receive 12 months of active medical treatment before they are eligible for a HAVANA Act payment. Of the three criteria for a qualifying brain injury, as set forth above, only (2) and (3) require 12 months of treatment. Under (1), 12 months of treatment is not required if an individual demonstrates permanent alterations in brain function with confirming correlative findings on imaging studies. The Department believes that the requirement for 12 months of treatment, which is consistent with State Department regulations (Jan. 25, 2023, at 88 FR 4722), demonstrates that an individual suffers from a chronic condition even if that individual does not demonstrate a permanent condition. Further, even if a covered individual has not yet received 12-months or more of treatment as outlined in (2) or (3), the covered individual may nevertheless qualify at a later time if treatment lasts for twelve months or more.

A number of comments asked that the Department establish an eligibility

threshold for benefits that does not rest in whole or in part on the contemporaneous diagnosis of a brain injury. Instead, the commentors urged the Department to allow claimants to establish eligibility based on the presence of one or more of the symptoms that have come to be associated with Anomalous Head Injuries. The Department does not believe that it is appropriate to grant claims without appropriate medical documentation of a qualifying injury to the brain. The Department also notes that the standard that it uses to determine payment eligibility is consistent with the standard used by the Department of State.

One comment asked that the Department recognize a “qualifying brain injury” even when an individual is receiving ongoing treatment; or the treatment was “split up” or the individual was diagnosed years later. Nothing in the IFR prevents the payment of compensation under such circumstances, provided that the definition of a “qualifying brain injury” is otherwise met.

One comment focused on the date of the injury, expressing a belief that the Department should compensate individuals who suffered qualifying injuries prior to January 1, 2016. The Department is unable to accept this suggestion. The HAVANA Act specifies that payments are for injuries occurring on or after January 1, 2016. The Department does not have the authority to provide payments for injuries occurring prior to that date without an amendment to the HAVANA Act or additional legislative action.

In addition to the comments discussed above concerning the Department's definition of a “qualifying brain injury,” multiple comments urged that the final rule incorporate some mechanism to facilitate changes to the Department's framework for determining eligibility for payment based on science or diagnostic breakthroughs. The Department declines to incorporate such a mechanism into this final rule but may conduct rulemaking in the future in accordance with existing laws and regulations, should circumstances so dictate.

One comment urged the Department to provide reasons for a denial of requests for benefits to a claimant and develop a meaningful appeals process that employees can use in the event of a denial of benefits. Under the IFR, the Department already provides claimants who have been denied a payment with the reason for the denial. Additionally, the Department believes that its current appeals process, which provides for

higher-level review of any denial, offers adequate and meaningful review of denials.

One comment, seeking to ensure greater transparency about the Department's decision-making process, raised concerns with the use of non-public information maintained by the State Department in the Department's consultation process with the State Department. Consultation with the State Department may assist the Department in determining, in part, a claimant's eligibility for benefits under the HAVANA Act. In particular, because a qualifying injury to the brain must have occurred in connection with war, insurgency, hostile act, terrorist activity, or other incidents designated by the Secretary of State or the Secretary of Commerce, consultation with the State Department may assist in determining whether an injury is connected to an incident designated by the Secretary of State. However, the State Department, not the Department of Commerce, determines whether such information is administratively controlled or made publicly available.

Regulatory Analysis

Administrative Procedure Act

Because this rule is a matter relating to agency management or personnel or to public property, loans, grants, benefits, or contracts, it is exempt from the requirements of 5 U.S.C. 553. *See* 5 U.S.C. 553(a)(2). Furthermore, because this final rule does not change the regulatory provisions previously implemented by the IFR, a delay in effective date is unnecessary and therefore the Department finds good cause for this rule to take effect immediately. Furthermore, because this final rule does not change the regulatory provisions previously implemented by the IFR, a delay in effective date is unnecessary and therefore the Department finds good cause for this rule to take effect immediately. *See* 5 U.S.C. 553 (d)(3).

Regulatory Flexibility Act

The Chief Counsel for Regulations for the Department certified that this rulemaking does not have a significant impact on a substantial number of small entities. This rule applies only to certain individuals who are current and former Department employees and family members who are eligible for payments as a result of certain injuries. The rule provides for payments to certain individuals and is not expected to impact any small entities. As a result, a regulatory flexibility analysis is not required under the Regulatory

Flexibility Act (5 U.S.C. 601, *et seq.*), and none has been prepared.

Executive Order 12866 and Executive Order 13563

This rule has been determined to be a significant regulatory action under Executive Order 12866, as amended by Executive Order 14094.

The Department has reviewed the rule to ensure its consistency with the regulatory philosophy and principles set forth in Executive Order 12866 and finds that the benefits of the rule (in providing mechanisms for individuals to obtain compensation for certain injuries) outweigh any costs to the public. The Department has also considered this rulemaking in light of Executive Order 13563 and affirms that this proposed regulation is consistent with the guidance therein.

Paperwork Reduction Act

In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. 3501, *et seq.*) (PRA), the information collection associated with this final rule was approved by the Office of Management and Budget (OMB) under OMB Control Number 0690-0037. Notwithstanding any other provision of the law, no person is required to respond to, nor shall any person be subject to a penalty for failure to comply with, a collection of information subject to the requirements of the PRA, unless that collection of information displays a currently valid OMB Control Number.

Accordingly, the Department of Commerce adopts the interim rule published April 19, 2023, at 88 FR 24110, as final without change.

Dated: December 13, 2024.

Jeremy Pelter,

Deputy Assistant Secretary for Administration, performing the non-exclusive functions and duties of the Chief Financial Officer and Assistant Secretary of Commerce for Administration, U.S. Department of Commerce.

BILLING CODE 3510-17-P

DEPARTMENT OF COMMERCE

15 CFR Part 29

[Docket No. 241211-0323]

RIN 0605-AA57

Promoting the Rule of Law Through Improved Agency Guidance Documents Rescission

AGENCY: Department of Commerce.

ACTION: Final rule.

SUMMARY: This final rule rescinds the Department's regulations on guidance document procedures in accordance with a 2021 Executive order to revoke previous Executive orders concerning Federal regulation.

DATES: This final rule is effective December 18, 2024.

FOR FURTHER INFORMATION CONTACT:

Xenia Kler, Office of the Assistant General Counsel for Legislation and Regulation, 202-482-5354, or via email xkler1@doc.gov.

SUPPLEMENTARY INFORMATION:

Background

Executive Order 13891, "Promoting the Rule of Law Through Improved Agency Guidance Documents," sought to ensure that when Federal agencies issue guidance documents, the agencies: do not treat those guidance documents alone as imposing binding obligations both in law and in practice, except as incorporated into a contract; take public input into account in formulating significant guidance documents; and make guidance documents readily available to the public. (84 FR 55235, Oct. 15, 2019). On September 28, 2020, the Department issued an interim final rule, "Promoting the Rule of Law Through Improved Agency Guidance Documents" to implement E.O. 13891. (85 FR 60694). The interim final rule established 15 CFR part 29 for guidance document procedures, procedures for withdrawal or modification requests from the public, and procedures for significant guidance documents.

On January 20, 2021, President Biden issued E.O. 13992, "Revocation of Certain Executive Orders Concerning Federal Regulation," revoking a number of Executive orders including E.O. 13891. (86 FR 7049, Jan. 25, 2021). E.O. 13992 directs agencies "to rescind any orders, rules, regulations, guidelines, or policies, or portions thereof, implementing or enforcing the revoked Executive orders."

After review and consideration, the Department concluded that its rule on guidance documents deprives the Department of necessary flexibility in determining when and how best to issue guidance based on particular facts and circumstances consistent with the policy directive in E.O. 13992. Therefore, the Department is issuing this final rule to rescind its regulations at 15 CFR part 29. The Department will continue to pursue ways to make its guidance documents more accessible to the public. Additionally, in accordance with M-09-13, "Guidance for Regulatory Review," the Office of Management and Budget will continue

to review the Department's actions and documents subject to the Office of Information and Regulatory Affairs review under E.O. 12866. These reviews include policy and guidance documents that OMB determines are significant.

Classification

This final rule is a rule of agency organization, procedure, or practice, codifying in the CFR the Department's existing procedures. Therefore, pursuant to 5 U.S.C. 553(b)(3)(A), notice and public comment are not required. Because a notice and public comment are not required for this rule by 5 U.S.C. 553, or by any other law, the analytical requirements of the Regulatory Flexibility Act, 5 U.S.C. 601, *et seq.*, are not applicable. Accordingly, no regulatory flexibility analysis is required and none has been prepared.

This rule has been determined to be not significant for purposes of Executive Order 12866.

This rule does not have any collection of information requirements under the Paperwork Reduction Act.

List of Subjects in 15 CFR Part 29

Administrative practice and procedure, Guidance documents.

PART 29—[REMOVED AND RESERVED]

■ For the reasons stated in the preamble and under the authority of 15 U.S.C. 1512, the Department of Commerce amends subtitle A in title 15 of the Code of Federal Regulations by removing and reserving part 29.

Dated: December 12, 2024.

Nell Abernathy,

Director, Office of Policy and Strategic Planning, U.S. Department of Commerce.

BILLING CODE P

SOCIAL SECURITY ADMINISTRATION

20 CFR Part 402

[Docket No. SSA–2021–0049]

RIN 0960–AI07

Availability of Information and Records to the Public

AGENCY: Social Security Administration.

ACTION: Final rule.

SUMMARY: The Social Security Administration (SSA) is finalizing revisions to our Freedom of Information Act (FOIA) regulations to conform with the requirements of the FOIA Improvement Act of 2016. The FOIA

Improvement Act of 2016 requires Federal agencies to issue regulations on procedures for disclosure of records consistent with the amendments to the FOIA by such Act. We are also finalizing the reorganization of our FOIA regulation to make our FOIA procedures easier for the public to understand and use.

DATES: This rule is effective January 17, 2025.

FOR FURTHER INFORMATION CONTACT: Sarah Reagan, Office of Privacy and Disclosure, Social Security Administration, WHR G401, 6401 Security Boulevard, Baltimore, MD 21235, (410) 966–5855.

For information on eligibility or filing for benefits, call our national toll-free number, 1–800–772–1213, or TTY 1–800–325–0778, or visit our internet site, Social Security Online, at <https://www.ssa.gov>.

SUPPLEMENTARY INFORMATION:

I. Background

The FOIA is a Federal statute that allows the public to request records from the Federal government. The FOIA provides that any person has a right, enforceable in court, to obtain access to federal agency records subject to the FOIA, except to the extent that any portions of such records are protected from public disclosure by one of nine exemptions. Under the FOIA, agencies must make records specified in 5 U.S.C. 552(a)(2) (e.g., instructional manuals issued to our employees, general statements of policy, other materials used in processing claims, etc.) available for public inspection in an electronic format. The FOIA also statutorily requires Federal agencies to annually report on numerous and various metrics to the Department of Justice (DOJ).

Since the time the SSA became an agency independent of the Department of Health and Human Services, Congress enacted two significant laws. These laws, the Openness Promotes Effectiveness in our National Government Act of 2007 (OPEN Government Act of 2007)¹ and the FOIA Improvement Act of 2016,² guide how agencies implement the requirements of the FOIA. We are finalizing our proposed updates and revisions to our regulation at 20 CFR part 402 to conform with these laws, as well as the FOIA Improvement Act of 2016's requirement to issue regulations on

procedures for disclosure of records in accordance with its amendments.

On June 6, 2023, we published a notice of proposed rulemaking (NPRM) to update, reorganize, and clarify our FOIA processes for the public.³ In the NPRM, we proposed comprehensive revisions to the entirety of 20 CFR part 402. This reorganization starts with our FOIA policies and procedures for processing FOIA requests and concludes with information on records available for public inspection. Our revisions, finalized here with some modifications from the NPRM, streamline our FOIA regulations at part 402 by creating new sections, consolidating sections based on content, and revising section headings to more clearly capture the information contained therein. We also proposed updates to reflect office name changes, as well as general text changes consistent with the plain language initiative.⁴

Our proposed revisions to our FOIA regulation at 20 CFR part 402, which we are finalizing with minor revisions, are supported by the requirements of the OPEN Government Act of 2007 and the FOIA Improvement Act of 2016.

These changes also correlate with the guidelines on the FOIA that Attorney General Merrick Garland issued within his March 2022 *Memorandum for Heads of Executive Departments and Agencies*. As summarized by DOJ's Office of Information Policy, Attorney General Garland's memorandum "direct[s] the heads of all executive branch departments and agencies to apply a presumption of openness in administering the FOIA and make clear that the Justice Department will not defend nondisclosure decisions that fail to do so." Attorney General Garland stated that proactive disclosures are "fundamental to the faithful application of FOIA," and advised agencies of the need "to remove barriers to access and to help requesters understand the FOIA process and the nature and scope of the records the agency maintains."

In the NPRM, and in this final rule, we explained and justified the rulemaking on the requirements of the

³ 88 FR 36980.

⁴ The Plain Writing Act of 2010 requires Federal agencies to use clear communication that the public can understand and use. Federal agencies are required to follow plain language principles; <https://centerforplainlanguage.org/learning-training/five-steps-plain-language/>. In fiscal year 2021, the Center for Plain Language graded Federal agencies' Coronavirus Update pages and main FOIA web pages. SSA received an overall grade of B+ and received positive reviews on our FOIA main web page.

¹ Public Law 110–175; <https://www.congress.gov/bills/110/congress/senate-bill/2488/text>.

² Public Law 114–185; <https://www.congress.gov/bills/114/congress/senate-bill/337/text>.

OPEN Government Act of 2007⁵ and the FOIA Improvement Act of 2016.⁶

The changes we are finalizing in this final rule to conform with the requirements of the OPEN Government Act of 2007 are as follows:

- Within revised § 402.60, we are updating and clarifying the following business practices: our acknowledgement of FOIA requests, when a request is considered perfected, our multi-tracking procedures, unusual circumstances, and tolling of the 20 business day statutory time period;
- Within revised §§ 402.70 through 402.80, we are clarifying our rules concerning fees;
- Within revised §§ 402.05 and 402.100, we are introducing and providing information on the services of the FOIA Public Liaison and the Office of Government Information Services (OGIS); and
- Within revised § 402.10, we are defining “representative of the news media,” amending the definition of “record,” and defining new terms (such as the FOIA Public Liaison, OGIS, and Chief FOIA Officer).

The changes we are finalizing in this final rule to conform with the requirements of the FOIA Improvement Act of 2016 are as follows:

- Within revised §§ 402.15(a) and 402.60(k), we are adding the foreseeable harm standard;
- Within revised § 402.105, we are updating the appeal timeframe to 90 days (from 30 days);
- Within revised §§ 402.05 and 402.100, discussed earlier, we are addressing the FOIA Public Liaison and OGIS;
- Within revised §§ 402.70 through 402.80, we are clarifying our fee charging rules, including when unusual circumstances apply;
- Within revised § 402.135(a), we are revising the deliberative process privilege to provide that this privilege cannot be applied to records that are 25 years or older at the time of the FOIA request; and,
- Within revised § 402.155(a), we are addressing our public posting of records requested three or more times.

Changes We Made From the NPRM to the Final Rule

- In § 402.10, we clarified the definition of “commercial interest” in response to public comment.
- In § 402.10, we added the definition of “commercial use” to differentiate “Commercial interest” from “commercial use.” “Commercial use” is

terminology used in our fee waiver provisions and is not intended to impact the “commercial use” FOIA fee category.

- In § 402.10, we clarified the definition of “educational institution.” While we did not receive public comment on this definition, the language we added aligns with DOJ FOIA guidance and case law. The added language specifies that we may seek verification from the requester that the request is in furtherance of scholarly research.

- In § 402.10, we clarified the definition of “fee category.” While we did not receive public comment on this definition, we removed “noncommercial” so the language now states: “The categories are: commercial use requests; scientific or educational institutions and news media requests; and all other requests.” “Commercial use” is its own fee category; therefore, the term “noncommercial” is redundant.

- In § 402.10, we changed the term “reading room” to “FOIA library” to align with DOJ FOIA guidance. We also added the following sentence to further explain what may be maintained in a FOIA library: “Posted records may include those provided under agency discretion and not required pursuant to FOIA.” We changed the term “reading room” to “FOIA library” throughout the regulation.

- In § 402.10, we modified the definition of “representative of the news media.” While we did not receive public comment on this definition, we removed the phrase “based on the requester’s intended use of the requested records” to align with the FOIA statute.

- In § 402.10, we clarified the definition of “Trade secrets and commercial or financial information.” While we did not receive public comment on this definition, we adjusted the terminology of the definition to make it easier to understand. The term now reads: “Trade secrets and confidential commercial or financial information.”

- In § 402.20(b), we changed the language from stating the agency “will handle” your request under the Privacy Act to the agency “may handle” your request under the Privacy Act. This change clarifies that not all individuals requesting their own records that are maintained in a system of records, or parents or legal guardians authorized to act under § 401.75 of this chapter who are seeking the records about a minor or individual who has been declared incompetent, would be entitled to access records under the Privacy Act.

For instance, SSA maintains systems of records that are exempt from access under § 401.85 and third-party information within a subject’s systems of records may not be accessible under the Privacy Act. Further, requesters must verify their identity to make a Privacy Act request. In cases where a requester who filed a FOIA would not be entitled to records under the Privacy Act, we will handle their request under FOIA. We further clarified that “Privacy Act requests are also processed under the FOIA, when appropriate, to give you the benefit of both statutes. You must verify your identity in accordance with our regulations.” Given our central processing of FOIA, it is not feasible for Privacy Act initial denials to be processed under FOIA prior to denial of administrative appeal because OPD, the sole decisionmaker under FOIA, does not process initial denials but does process administrative appeal denials.

- In § 402.25, we modified the language to align more with the FOIA statute by changing “member of the public” to “person.”

- In § 402.30(a)(4), we consolidated two separate sentences into one for clarity and readability. The sentence now reads: “The request must clearly state and reasonably describe what SSA records are being requested in sufficient detail to enable OPD to locate them with a reasonable amount of effort.” We also changed the word “should” to “may” in the following sentence to clarify that providing the information specified therein is not a requirement: “If the request is for electronic communications, such as email records, the request may identify the names, position titles, or other identifying information about the agency employees involved, as well as the applicable timeframe.”

- In § 402.35, we added the National FOIA Portal as an additional resource through which requesters can submit FOIA requests to SSA, and we removed the agency’s fax number. This section, however, continues to provide requesters codified directions to our website at <https://www.ssa.gov/foia> for additional contact information, as well as an email address for inquiries and a physical mailing address.

- In § 402.45, we changed the name of the section heading and revised the content to more clearly describe how we handle certain requests. The “Requests not processed under the FOIA” is now *Requests handled outside of the FOIA process*. We added a clarifying sentence, “When records (a) through (d) below are requested from OPD, OPD will respond to the requester and provide information for requesting the records sought,” to

⁵ 88 FR at 36981.

⁶ 88 FR at 36982.

articulate how we respond outside of the FOIA process.

- In § 402.55, we edited the language to further clarify how we handle consultations and referrals, *e.g.*, we added language to explain referrals of requests in whole or in part. Our practices as described in this section align with DOJ's FOIA guidance and how other agencies similarly handle consults and referrals. While we did not receive public comment on this section, we clarified the language in § 402.55(a) to state that “[w]hen reviewing records located by SSA in response to a request, SSA will determine whether another agency of the Federal Government is better able to determine whether the record is exempt from disclosure under the FOIA.” We further clarify that we may refer records, in whole or in part to an outside agency. Within modified § 402.55(a)(1), finalized in this rule, we now state: “We will notify the requester in writing when we opt to refer records in whole or in part to another agency for direct response from that agency, including the name(s) or the agency(s) to which the record was referred and that agency’s FOIA contact information, unless notification would cause harm to an interest protected under the FOIA. In such instances, in order to avoid harm to an interest protected by an applicable exemption, we coordinate to seek the view of the originating agency.”

- We moved § 402.55(b) *Referral of requester to another agency*, to § 402.60(k) and edited the language to more clearly describe SSA’s actions. The sub-heading now reads: *Directing a requester to another agency*. This subsection describes our practices that are not technically referrals as defined in the FOIA statute. This move provides more clarity on our FOIA process.

- In § 402.60(a)(1), we revised the first sentence concerning our acknowledgement of FOIA requests for consistency with the FOIA statute. The language now reads: “If we receive a FOIA request that will take longer than 10 working days to process, we will provide an acknowledgment.”

- In § 402.60(b) and elsewhere throughout the regulation, we changed the term “business days” to “working days” for consistency with the FOIA statute.

- In § 402.60, we reorganized *Expedited processing* within 402.60(c) *Multi-tracking procedures*. Section 402.60(c), clarifies that there are three multi-track types: “FOIA requests are categorized simple, complex, or expedited. Unless granted expedited processing, we process FOIA requests in each track according to a first-in, first-out basis.” We further clarify in

§ 402.60(c)(2) how long it takes the agency to process requests placed in the complex multi-track: “We will place into a complex processing queue any request that cannot be completed within 20 working days due to the complex nature of the request, including consultation with components that may maintain records subject to the request.”

- In § 402.60(d), we clarify that “[w]hen unusual circumstances exist, we will process the request under the complex track.” We received a public comment concerning SSA’s “unusual circumstances” practice. As explained within the “Comments and Responses” portion of this final rule, we modified our final regulation to reflect that “unusual circumstances” exist “[w]hen unusual circumstances exist, we will process the request under the complex track.” This change is a clarifying statement but not a change in practice. We currently use multi-tracks under § 402.140(c) and similarly define longer tracks to include situations where there is a need to consult with other SSA offices and the FOIA defines unusual circumstances under 5 U.S.C. 552(a)(6)(B)(iii) to exist when there is a need to search for and collect the requested records from offices separate from the office processing the FOIA request. Thus, the change to § 402.60(d) is merely a clarifying statement of how our tracks align with the unusual circumstance requirements in FOIA.

- In § 402.60(d)(2), we added language about our “unusual circumstances” notification for consistency with the FOIA statute. We added the following sentence: “We will notify the requester of the date by which we estimate completing the request.”

- In § 402.60(f), we clarified our fees by adding “duplication” among the items subject to a fee. The language now reads: “FOIA requesters are issued a fee notice that informs them of the estimated search, review, and duplication time associated with processing their FOIA request.”

- In § 402.60(g)(2), we clarified language regarding our administrative closing of requests. The language now reads: “The processing time will resume upon our receipt of the requester’s response. There may be instances when we require multiple clarifications on a FOIA request. After the first request for clarification, any additional clarifications are performed without tolling the clock. If we do not receive a response to our clarification attempts within 30 calendar days from the date of our first contact to the requester, we will close the FOIA request.”

- In 402.60(i), we renamed the title of the subsection to reflect the content

more clearly. The subsection’s title changed from “Unproductive searches” to *No records determinations*.

- In § 402.60(j), we removed the word “only” from the first sentence, so it now reads as follows: “We will furnish copies of records in whole or in-part, unless we reasonably foresee that disclosure would harm an interest protected by a FOIA exemption or if disclosure is prohibited by law.”

- In § 402.65, we modified (a), (a)(2), and (b). Under § 402.65(a), we removed the phrase “such as” before we list the criteria for expedited processing. For § 402.65(a)(2), for clarity and plain language usage, we changed the language from “the request is from the media, or other” to “the requester is.” In response to public comment, we also removed the word “immediate” in describing the urgency to inform the public necessary for expedited processing. Under § 402.65(b), we added language to clarify and more closely align with the FOIA statute⁷ to reflect the requester’s requirements when submitting a request for expedited processing. Our regulation now clearly states what information the requester must provide when submitting a request for expedited processing, *i.e.*, “A requester who seeks expedited processing must submit a statement, certified to be true and correct, explaining in detail the basis for making the request for expedited processing. We will notify the requester within 10 calendar days of receipt of the request for expedited processing of our decision to grant or deny expedited processing.” We added one more sentence, clarifying our processing of requests for expedited processing: “Requests granted expedited processing will be given priority and processed as soon as practicable.”

- In § 402.85, in response to public comment, we modified the language by further clarifying the public interest criteria and what a requester should provide when submitting a request for a fee waiver citing public interest. We expand on this change within the “Comments and Responses” portion of this final rule.

- In § 402.90(c)(3), to align more with the electronic age and requesters’ use of credit card payment forms, we added language clarifying that we will dispose of payment information or return it. For example, if a requester faxed us their credit card payment information and the credit card payment information is no longer needed, rather than returning the completed credit card payment form via postal mail, we may dispose of the payment information.

⁷ 5 U.S.C. 552(a)(6)(E)(vi).

• In § 402.105(a)(2) and (a)(3), we added language further clarifying the timeframe to submit an appeal and what information a requester should provide when submitting an appeal. While we did not receive public comment on this section, we added the phrase “or in the case of electronic submissions, transmitted” and the word “calendar” to § 402.105(a)(2), so it now reads: “Be received, or in the case of electronic submissions, transmitted within 90 calendar days from the date of the determination the requester is appealing.” Under § 402.105(a)(3), we expand on what the appeal should include by adding two more sentences, so it now reads: “Explain what the requester is appealing and include additional information to support the appeal. The appeal should clearly identify the agency determination that is being appealed and the assigned request’s tracking number. To facilitate handling when submitted via mail or fax, the requester should mark the appeal letter, or subject line of the electronic transmission, ‘Freedom of Information Act Appeal.’”

• In § 402.105(b), we revised the first sentence concerning our

acknowledgement of FOIA appeals for consistency with the FOIA statute. The language now reads: “If we receive an appeal that will take longer than 10 working days to process, we will provide an acknowledgment.”

• In § 402.105(c)(2), we clarify how long it takes the agency to process appeals placed in the complex multi-track: “Appeals of complex requests cannot be completed within 20 working days.”

• In § 402.115 through § 402.145, we revised some of the introductions within the FOIA Exemptions to account that there may be considerations beyond the Exemption itself.

• In § 402.130, we clarified Exemption 4 regarding the Submitter’s Notice to make clear how we may handle transmission of submitter notices in cases involving many submitters. We also clarified some of the language to make it consistent throughout the regulation.

• In § 402.135, Exemption 5, we added “may” to the following sentence to clarify that these records are examples: “Such internal government communications may include an agency’s communications with an outside consultant or other outside

person, with a court, or with Congress, when those communications are for a purpose similar to the purpose of privileged intra-agency communications.”

• In § 402.145(e), we modified the language to mirror the FOIA statute concerning Exemption 7(E).

• In § 402.155, we added the phrase, “SSA’s public” in front of “Hearings, Appeals, and Litigation Law Manual.” We received public comment regarding the agency’s proactive disclosures; therefore, our addition of the phrase “SSA’s public” clarifies that the agency posts a public version of the Hearings, Appeals, and Litigation Law Manual.

• In § 402.160(a), we added “(a)(5) By posting in the FOIA Library,” to the list of places where the agency publishes records.

To visualize our reorganization of part 402, we provided a table that identifies the old (existing) regulatory sections, the sections to which the content moved, and the names of the new sections, which we are also including for ease-of-use and transparency in this final rule.⁸

Section-by-Section Changes

20 CFR PART 402 REORGANIZATION OF SECTIONS

Reorganization of 20 CFR part 402

Existing section	Existing → New	New section
402.5. Scope and purpose	402.5 → 402.05	402.05. Scope and purpose of this part.
402.10. Policy	402.10 → 402.15	402.10. Definitions.
402.15. Relationship between the FOIA and the Privacy Act of 1974.	402.15 → 402.20	402.15. SSA’s FOIA policy.
402.20. Requests not handled under the FOIA	402.20 → 402.45	402.20. Relationship between the FOIA and the Privacy Act of 1974.
402.25. Referral of requests outside of SSA	402.25 → 402.55	402.25. Who can file a FOIA request?
402.30. Definitions	402.30 → 402.10	402.30. Requirements of a FOIA request.
402.35. Publication	402.35 → 402.160	402.35. Where to submit a FOIA request.
402.40. Publications for sale	402.40 → 402.165	402.40. Requests for deceased individual’s records.
402.45. Availability of records	402.45(a) → 402.05	402.45. Requests handled outside of the FOIA process.
402.50. Availability of administrative staff manuals	402.50 removed	402.50. FOIA Officer’s authority.
402.55. Materials available at district offices and branch offices.	402.55 → 402.155	402.55. Referrals and consultations.
402.60. Materials in field offices of the Office of Hearings and Appeals.	402.60 → 402.155	402.60. How does SSA process FOIA requests?
402.65. Health care information	402.65 removed	402.65. Expedited processing.
402.70. Reasons for withholding some records	402.70 → 402.95(b)	402.70. Fees associated with processing FOIA requests.
402.75. Exemption one for withholding records: National defense and foreign policy.	402.75 → 402.115	402.75. FOIA fee schedule.
402.80. Exemption two for withholding records: Internal personnel rules and practices.	402.80 → 402.120	402.80. Charging under section 1106(c) of the Social Security Act.
402.85. Exemption three for withholding records: Records exempted by other statutes.	402.85 → 402.125	402.85. Waiver of fees in the public interest.
402.90. Exemption four for withholding records: Trade secrets and confidential commercial or financial information.	402.90 → 402.130	402.90. Notification of fees and prepayment requirements.
402.95. Exemption five for withholding records: Internal memoranda.	402.95 → 402.135	402.95. Release of records.

20 CFR PART 402 REORGANIZATION OF SECTIONS—Continued

Reorganization of 20 CFR part 402		
Existing section	Existing → New	New section
402.100. Exemption six: Clearly unwarranted invasion of personal privacy.	402.100 → 402.140	402.100. FOIA Public Liaison and the Office of Government Information Services.
402.105. Exemption seven for withholding records: Law enforcement.	402.105 → 402.145	402.105. Appeals of the FOIA Officer's determination.
402.110. Exemption eight and nine for withholding records: Records on financial institutions; records on wells.	402.110 → 402.150	402.110. U.S. District Court action.
402.115. Reserved	Reserved → New section 402.115.	402.115. The FOIA Exemption 1: National defense and foreign policy.
402.120. Reserved	Reserved → New section 402.120.	402.120. The FOIA Exemption 2: Internal personnel rules and policies.
402.125. Who may release a record	402.125 → 402.50	402.125. The FOIA Exemption 3: Records exempted under other statutes.
402.130. How to request a record	402.130 → 402.35	402.130. The FOIA Exemption 4: Trade secrets and confidential commercial or financial information.
402.135. Where to send a request	402.130 → 402.30 and 402.35	402.135. The FOIA Exemption 5: Internal documents.
402.140. How a request for a record is processed	402.140(a)–(c) → 402.60	402.140. The FOIA Exemption 6: Clearly unwarranted invasion of personal privacy.
402.145. Responding to your request	402.140(d) → 402.65	402.145. The FOIA Exemption 7: Law enforcement.
402.150. Release of records	402.145(d) → 402.15(a)(2)	
	402.145(a)–(c) → 402.60	
	402.150 → 402.95	402.150. The FOIA Exemptions 8 and 9: Records on financial institutions; records on wells.
402.155. Fees to be charged—categories of requests	402.155 → 402.70–402.75	402.155. Records available for public inspection.
402.160. Fees to be charged—general provisions	402.160 → 402.70–402.75	402.160. Where records are published.
402.165. Fee schedule	402.165 → 402.75	402.165. Publications for sale through the Government Publishing Office.
402.170. Fees for providing records and related services for program purposes pursuant to section 1106 of the Social Security Act.	402.170 → 402.80	Transferred as Shown, and Unused in Revised part 402.
402.175. Fees for providing information and related services for non-program purposes.	402.170(b) → 402.85(d)	
402.180. Procedure on assessing and collecting fees for providing records.	402.175 → 402.80	Transferred as Shown, and Unused in Revised part 402.
402.185. Waiver or reduction of fees in the public interest.	402.180 → 402.90	Transferred as Shown, and Unused in Revised part 402.
402.190. Officials who may deny a request for records under FOIA.	402.185 → 402.85	Transferred as Shown, and Unused in Revised part 402.
402.195. How a request is denied	402.190 → 402.50	Transferred as Shown, and Unused in Revised part 402.
402.200. How to appeal a decision denying all or part of a request.	402.195 → 402.60	Transferred as Shown, and Unused in Revised part 402.
402.205. U.S. District Court Action	402.200 → 402.105	Transferred as Shown, and Unused in Revised part 402.
	402.205 → 402.110	

Comments Summary

We received five public comments on our NPRM from June 6 through August 7, 2023. All the comments are available for public viewing at <https://www.regulations.gov/document/SSA-2021-0049-0001>. These comments were from:

- Two individuals; and
- Three advocacy groups, Public Citizen, Community Legal Services of Philadelphia, and Justice in Aging.

We carefully considered the public comments we received. Comments from individuals and advocacy provided a mix of support for the revisions and reorganization as well as recommended revisions.

We received some comments that were outside the scope of this rulemaking because they did not relate

to our proposals. Even though outside the scope, we address some of these other comments where they related to the FOIA more generally because a response might help the public understand our program better.

The next section summarizes and responds to the public comments.

Comments and Responses

Comment: Two commenters requested that we ensure the application of the fee waiver provision is consistent with the FOIA statute within the introductory language of 20 CFR 402.85. The commenters urged us to ensure that our application of the new fee waiver regulation is “more consistent with the FOIA statute.” The commenters explained that we deny fee waiver requests made in the public interest.

Response: We understand the commenters' concern; however, we consistently follow the statutory and our regulatory requirements to disclose records at no fee or a reduced fee. Because SSA charges fees when the request is not directly related to the administration of the Social Security Act based on our authority in section 1106(c) of the Social Security Act, which applies notwithstanding the FOIA provisions in 5 U.S.C. 552 and 552a, the FOIA statutory fee provisions would not apply.⁹ When a public interest fee waiver is sought, we will approve waiver when the criteria in our regulation at 20 CFR 402.85 (formerly 20 CFR 402.185) have been met; this aspect of our fee charging and waiver procedures has not changed in this final

⁹ See 42 U.S.C. 1306(c).

rule from our current regulations. In seeking waiver requests, the requester should explain with reasonable specificity why their request meets the “public interest” criteria for a fee waiver under 20 CFR 402.85. Our regulation at § 402.85, explains the factors we consider when determining whether a request meets the “public interest” criteria necessary to reduce or waive the fee. The modifications we made to this section of our final regulation further clarify what a requester should provide when submitting a request for a fee waiver citing public interest. Under § 402.85(b)(1), we added the phrase “in writing” to the following sentence: “A requester must make the request for a fee waiver or reduction in writing at the same time they make their request for records.” In describing the public interest criteria under § 402.85(b)(2), we modified § 402.85(b)(2)(iii) and added § 402.85(b)(2)(iv). Within § 402.85(b)(2)(iii), we added the phrase “of those operations or activities” so the sentence now reads: “Whether the contribution to public understanding of those operations or activities would be significant.” Newly added § 402.85(b)(2)(iv) further clarifies that specificity is necessary when requesting a fee waiver in the public interest, *i.e.*: the requester “must be reasonably specific in your waiver request as to the specific Government operation or activity and provide direct, clear (not remote or attenuated) connections to the meaningful information you seek. Generalized interest in government programs is not reasonably specific to grant waiver.”

Comment: Several commenters requested that we change our proposed definition of “commercial interest” in 20 CFR 402.10. They asserted that our proposed definition of “commercial interest” suggests that interests related to non-profit corporations, such as the work performed by claimant advocacy entities, are commercial. These commenters suggested that our proposed definition does not accurately reflect the standard for a finding of a noncommercial use in the FOIA statute.

Response: We disagree that our proposed definition, finalized here, is inconsistent with the FOIA statute. Similar to our response regarding “public interest” above, commercial interests could be present regardless of the identity of the requester (individual, non-profit corporation, for-profit corporation). In response to the comment, we revised the definition of “commercial interest” to clarify that the interests could exist regardless of the requester’s identity. We also added the

definition of “commercial use” to address the FOIA fee category.

Comment: Several commenters agreed with our proposed revisions to 20 CFR 402.155 to provide responsive FOIA records in electronic format, particularly those documents related to statements of policy and interpretation, consistent with 5 U.S.C. 552(a)(2)(B). The commenters further advocated that our Program Operations Manual System (POMS) be proactively disclosed in its entirety and indexed, as well as all Emergency Messages (EM) and Administrative Messages (AM).

Response: POMS and EMs are not categorically subject to the proactive disclosure requirements of the FOIA. Nonetheless, in the interest of transparency, SSA now publishes indexes of POMS and EM titles, which are updated quarterly, on our public-facing website.¹⁰ SSA has a longstanding practice of making agency non-sensitive POMS and EMs public, even when the policies are not subject to the FOIA’s proactive disclosure requirements. Our current policy publication process directs authoring components to flag sensitive POMS and EMs that should be proactively disclosed under FOIA.¹¹ Any such flagged policies then undergo a FOIA review and are published with appropriate redactions if they contain non-exempt content.

AMs, which are informational or staff reminders and do not contain new instructions or policy, are also not categorically subject to proactive disclosure requirements. Our regulations and policy publication practices reflect these distinctions.

Comment: Commenters requested that when requesting electronic communications, they do not need to provide identifying information about the agency employees involved and that a request can be reasonably described even if it seeks a large number of documents. They requested that we revise the scope of proposed § 402.30, which described the requirements of a FOIA request, without necessarily providing detailed information regarding the individual(s) from whom the records are sought.

Response: SSA processes the FOIA centrally within the Office of Privacy and Disclosure (OPD); therefore, we need the requester to clearly state and reasonably describe what SSA records are being requested so that we can

properly determine the scope of the FOIA request. When seeking emailed communications, we understand that requesters may not know the name of specific employees whose records they want to be searched; therefore, we do not require such information. As stated in our proposed regulation, “When known, requests should identify the records sought by providing the name/ title of the record, applicable date range, subject matter, offices or employees involved, and record type. If the request is for electronic communications, such as email records, the request may identify the names, position titles, or other identifying information about the agency employees involved, as well as the applicable timeframe.”¹² While we are clarifying the above examples are not required, technology limitations may prevent the agency from conducting searches without this information. Absent sufficient details, the agency may be unable to search for or locate the records sought.

Comment: One commenter requested that we modify the final rule to specify that the agency will respond to initial requests within 20 working days, unless we provide written notice to the requester “setting forth the unusual circumstances for [an] extension and the date on which a determination is expected to be dispatched,” as articulated in the FOIA statute at 5 U.S.C. 552(a)(6)(B)(i). The commenter acknowledged, however, that the agency may extend its response time beyond 20 business days only if it provides written notice to the requester. Further, the commenter stated that the proposed rule, in contrast, makes no mention of notifying the requester if the agency is going to take more than 20 working days to respond to an appeal.

Response: SSA processes the FOIA centrally within the Office of Privacy and Disclosure (OPD) and we frequently search, collect, and consult with components outside of OPD to process complex requests and appeals. We place requests and appeals in the complex multitask type because they will generally take more than 20 working days to process due to the complex nature of the request, including consultation with components that may maintain records subject to the request. We modified our final regulation to reflect that “[w]hen unusual circumstances exist, we will process the request under the complex track.” This change is merely a clarifying statement of how our complex multi-track aligns with the unusual circumstances requirements in FOIA. “Unusual

¹⁰ See link at, <https://secure.ssa.gov/apps10/reference.nsf/instructiontypecode!openview&restricttocategory=INSTTTLES>.

¹¹ See instructions at, <https://secure.ssa.gov/apps10/reference.nsf/links/12202023010304PM>.

¹² 20 CFR 402.30(a)(4).

circumstances” exist when requests or appeals require OPD to: search for and collect records from SSA components or field locations that are separate from OPD; search for, collect, and review a voluminous number of records that are part of a single request; or consult with two or more SSA components or another agency having substantial interest in the request before releasing the records. We acknowledge the FOIA’s requirements at 5 U.S.C. 552(a)(6)(B) to provide notice to the requester when unusual circumstances exist. Within the agency’s acknowledgement letters and emails, we advise requesters that requests and appeals placed in a complex processing track meet unusual circumstances.

Comment: One commenter requested that we modify the final rule by deleting language in proposed *tolling* § 402.60(h)(2) stating that the agency reserves the right to administratively close a request within 10 business days if we do not receive a response to our request for clarification from the FOIA requester.

Response: The agency makes every reasonable effort to secure clarification from requesters before we administratively close a request. We contact requesters via email, phone, and or postal mail in our attempt to gain the clarification necessary to process FOIA requests. To avoid confusion, we clarified the language in § 402.60(g)(2) by removing the 10-business day language. The language now reads: “The processing time will resume upon our receipt of the requester’s response. There may be instances when we require multiple clarifications on a FOIA request. After the first request for clarification, any additional clarifications are performed without tolling the clock. If we do not receive a response to our clarification attempts within 30 calendar days from the date of our first contact to the requester, we will close the FOIA request.” Our authority, finalized in § 402.60(g)(2) is an administrative discretion that we will use in instances where a FOIA requester never responds to our requests for clarification. If our only course of communication with a requester is postal mail, we understand that delays may occur, and are mindful to allow additional time to accommodate postal mail delivery. We cannot process requests that are not reasonably described; therefore, when a requester does not respond to any correspondence wherein we request clarification, or should the correspondence be returned as undeliverable, we reserve the right to administratively close the FOIA request.

Comment: One commenter requested that we modify the proposed rule in § 402.65(a) to remove the word “immediate” in describing the urgency to inform the public necessary for expedited processing. The commenter stated that our proposed language closely aligns with the statutory language in 5 U.S.C. 552(a)(6)(E)(v)(II) of the FOIA statute, but the word “immediate” before “urgency” is not in the statute.

Response: We agreed with the commenters’ suggestion and adopted this change in order to more closely align with the statute.

Regulatory Procedures

Executive Order (E.O.) 12866, as Supplemented by E.O. 13563

We consulted with the Office of Management and Budget (OMB) and they determined that this rule does not meet the criteria for a significant regulatory action under E.O. 12866, as supplemented by E.O. 13563. Therefore, OMB did not formally review it.

Anticipated Costs to Our Program

The Office of the Chief Actuary estimates that there are no direct effects on scheduled Old-Age, Survivors, and Disability Insurance benefit payments and Federal Supplemental Security Income payments.

Anticipated Administrative Benefits to the Social Security Administration

The Office of Budget, Finance, and Management estimates an administrative effect of less than 15 work years and \$2 million annually.

Anticipated Qualitative Benefits

We anticipate qualitative benefits from the revisions to the FOIA regulation from streamlined and clarified FOIA policies and procedures. We expect the clarified regulations will benefit both SSA and the public because the administration of the FOIA for SSA and our public customers would be better organized and easier to follow. The purpose of the FOIA is to provide the public with access to government records, and administrative transparency is paramount to a successful FOIA program. Since the FOIA is processed centrally at SSA, our regulation must be easy for agency employees to understand so components outside of OPD understand the importance of the FOIA and their roles in the agency’s administration of the FOIA. When our policies are clear for agency employees, we are able to process FOIA requests in a more efficient manner, which benefits both the agency and the public.

Our revised regulation at part 402 provides information in a cascading fashion that is easier to follow than our existing regulation, and accurately reflects amendments implemented by the FOIA Improvement Act of 2016. Our revisions account for the roles of the FOIA Public Liaison and OGIS, which is useful for correct points of contact internally and for the public, increasing efficiency and lowering confusion. The revisions also update inaccurate information, such as the timeframe for the public to appeal adverse decisions, which presently state 30 days, but is 90 days under the FOIA Improvement Act of 2016.

The FOIA is designed to build trust between the public and Federal agencies. SSA’s revised regulation at 20 CFR part 402 strengthens this trust with transparency by explaining in plain language how SSA processes FOIA requests and appeals, and further describes our proactive posting of agency records. Clear communication with the public is paramount to our administration of the FOIA. Updating and revising our FOIA regulation serves to enhance our communication with the public, making it easier for the public to know how to submit FOIA requests and where to review proactively posted records.

E.O. 13132 (Federalism)

We analyzed this final rule in accordance with the principles and criteria established by E.O. 13132 and determined that the rule will not have sufficient federalism implications to warrant the preparation of a federalism assessment. We also determined that this rule will not preempt any State law or State regulation or affect the States’ abilities to discharge traditional State governmental functions.

Regulatory Flexibility Act

We certify that this rule will not have a significant economic impact on a substantial number of small entities because they affect individuals only. Therefore, a regulatory flexibility analysis is not required under the Regulatory Flexibility Act, as amended.

Paperwork Reduction Act

While this final rule mentions the public reporting requirements for the public to submit FOIA requests to the agency, we already obtained OMB approval for these public reporting requirements under the current OMB approved information collections for 0960–0566 (SSA 3288) and 0960–0665 (SSA–711 and Online FOIA Request). As we already cover these requirements under OMB-approved information

collections, and these revised rules merely move those requirements to new CFR citations but do not change them, these revised rules will not require Office of Management and Budget approval under the Paperwork Reduction Act. Rather, upon publication of the final rule, we will submit Change Requests to update the CFR citations for OMB No. 0960–0566 and 0960–0665.

List of Subjects in 20 CFR Part 402

Administrative practice and procedure, Freedom of information.

The Acting Commissioner of Social Security, Carolyn W. Colvin, having reviewed and approved this document, is delegating the authority to electronically sign this document to Erik Hansen, a Federal Register Liaison for the Social Security Administration, for purposes of publication in the **Federal Register**.

Erik Hansen,

Associate Commissioner, for Legislative Development and Operations, Social Security Administration.

■ For the reasons set forth in the preamble, the Social Security Administration revises 20 CFR part 402 to read as follows:

PART 402—AVAILABILITY OF INFORMATION AND RECORDS TO THE PUBLIC

Sec.

- 402.05 Scope and purpose of this part.
- 402.10 Definitions.
- 402.15 SSA's FOIA policy.
- 402.20 Relationship between the FOIA and the Privacy Act of 1974.
- 402.25 Who can file a FOIA request?
- 402.30 Requirements of a FOIA request.
- 402.35 Where to submit a FOIA request.
- 402.40 Requests for deceased individual's records.
- 402.45 Requests handled outside of the FOIA process.
- 402.50 FOIA Officer's authority.
- 402.55 Referrals and consultations.
- 402.60 How does SSA process FOIA requests?
- 402.65 Expedited processing.
- 402.70 Fees associated with processing FOIA requests.
- 402.75 FOIA fee schedule.
- 402.80 Charging under section 1106(c) of the Social Security Act.
- 402.85 Waiver of fees in the public interest.
- 402.90 Notification of fees and prepayment requirements.
- 402.95 Release of records.
- 402.100 FOIA Public Liaison and the Office of Government Information Services.
- 402.105 Appeals of the FOIA Officer's determination.
- 402.110 U.S. District Court action.
- 402.115 The FOIA Exemption 1: National defense and foreign policy.
- 402.120 The FOIA Exemption 2: Internal personnel rules and practices.

- 402.125 The FOIA Exemption 3: Records exempted by other statutes.
- 402.130 The FOIA Exemption 4: Trade secrets and confidential commercial or financial information.
- 402.135 The FOIA Exemption 5: Internal documents.
- 402.140 The FOIA Exemption 6: Clearly unwarranted invasion of personal privacy.
- 402.145 The FOIA Exemption 7: Law enforcement.
- 402.150 The FOIA Exemptions 8 and 9: Records on financial institutions; records on wells.
- 402.155 Records available for public inspection.
- 402.160 Where records are published.
- 402.165 Publications for sale through the Government Publishing Office.

Authority: 42 U.S.C. 405, 902(a)(5), and 1306; 5 U.S.C. 552 and 552a; 18 U.S.C. 1905; 26 U.S.C. 6103; 31 U.S.C. 9701; E.O. 12600, 52 FR 23781, 3 CFR, 1987 Comp., p. 235.

§ 402.05 Scope and purpose of this part.

(a) The purpose of this part is to describe the Social Security Administration's (SSA) policies and procedures for implementing the requirements of the Freedom of Information Act (FOIA) 5 U.S.C. 552. The FOIA mandates disclosure to the public of Federal agency records unless specific exemptions apply. The FOIA also requires an agency to proactively disclose records and make certain records available for public inspection.

(b) The rules in this part describe how SSA makes records available to the public, including:

- (1) What constitutes a proper request for records;
- (2) How to make a FOIA request;
- (3) Who has the authority to release and withhold records;
- (4) What fees may be charged to process a request for records;
- (5) The timing of determinations regarding release;
- (6) The exemptions that permit the withholding of records;
- (7) Requesters' right to seek assistance from the FOIA Public Liaison;
- (8) Requesters' right to appeal the agency's FOIA determination;
- (9) Requesters' right to seek assistance from the Office of Government Information Services and then go to court if they still disagree with our release determination; and
- (10) The records available for public inspection.

(c) The rules in this part do not revoke, modify, or supersede SSA's regulations relating to disclosure of information in part 401 or 403 of this chapter.

§ 402.10 Definitions.

As used in this part:

Agency means the Social Security Administration (SSA). Agency may also refer to any executive department, military department, government corporation, government-controlled corporation, or other establishment in the executive branch of the Federal Government, or any independent regulatory agency. A private organization is not an agency even if it is performing work under contract with the Government or is receiving Federal financial assistance.

Chief FOIA Officer means a senior official of SSA who has an agency-wide responsibility for ensuring efficient and appropriate compliance with the FOIA, monitoring implementation of the FOIA throughout the agency, and making recommendations to the head of the agency to improve the agency's implementation of the FOIA. The Commissioner of SSA designated the General Counsel as the Chief FOIA Officer for SSA. The Chief FOIA Officer or the Chief FOIA Officer's designee is authorized to make final decisions in response to appeals of the FOIA Officer's determinations.

Commercial interest includes interests relating to business, trade, and profit. These interests could be present regardless of the identity of the requester (e.g., individual, non-profit corporation, for-profit corporation). The interest of a representative of the news media in using the information for news dissemination purposes will not be considered a commercial interest.

Commercial use request is a request that asks for information for a use or a purpose that furthers a commercial, trade, or profit interest, which can include furthering those interests through litigation. An agency's decision to place a requester in the commercial use category will be made on a case-by-case basis based on the requester's intended use of the information. Agencies will notify requesters of their placement in this category.

Component means each separate office, division, commission, service, center, or administration within SSA that may maintain agency records subject to a request under the FOIA.

Duplication means the process of reproducing a copy of a record, or of the information contained in it, to the extent necessary to respond to a request. Copies include paper, electronic records, audiovisual materials, and other formats of agency records.

Educational institution is any school that operates a program of scholarly research. A requester in this fee category must show that the request is made in connection with their role at the educational institution. To qualify for

this category, a requester must show that the FOIA request is authorized by, and is made under the auspices of or in connection with the requester's role at a qualifying institution and that the records are sought to further a scholarly research goal of the institution, and not for a commercial use or purpose, or for individual use or benefit. SSA may seek verification from the requester that the request is in furtherance of scholarly research and will advise requesters of their placement in this category.

Exemption means one of the nine exemptions to the mandatory disclosure of records permitted under section 552(b) of the FOIA.

Expedited processing means the process set forth in the FOIA that allows requesters to request faster processing of their FOIA request, if they meet specific criteria noted in § 402.65.

Fee category means one of the three categories established by the FOIA to determine whether a requester will be charged fees under FOIA for search, review, and duplication. The categories are: commercial use requests; scientific or educational institutions and news media requests; and all other requests.

Fee waiver means the waiver or reduction of fees if a requester is able to demonstrate the requirements set forth in § 402.85.

FOIA Library means an electronic location(s) that SSA uses to post records that are made available to the public without a specific request. SSA makes FOIA library records electronically available to the public through our website, www.ssa.gov, including at www.ssa.gov/foia. Posted records may include those provided under agency discretion and not required pursuant to FOIA.

FOIA Officer means an SSA official whom the Commissioner of Social Security delegated the authority to release or withhold records; to assess, waive, or reduce fees in response to FOIA requests; and to make all other determinations regarding the processing of a FOIA request. In this capacity, the FOIA Officer is authorized to request and receive responsive records that may be maintained by other agency components. Except for records subject to proactive disclosure pursuant to subsection (a)(2) of the FOIA, only the FOIA Officer has the authority to release or withhold records or to waive fees in response to a FOIA request.

FOIA Public Liaison means an agency official who reports to the agency Chief FOIA Officer and serves as a supervisory official to whom a requester can raise concerns about the service the requester received concerning the processing of the FOIA request. This

individual is responsible for increasing transparency in the agency's FOIA business process, helping requesters understand the status of requests, and assisting in the resolution of disputes. The FOIA Public Liaison may be contacted via email to FOIA.Public.Liaison@ssa.gov.

FOIA request means a written request that meets the criteria in § 402.30.

Freedom of Information Act or FOIA means the law codified at 5 U.S.C. 552 that provides the public with the right to request agency records from the Federal executive branch agencies.

Non-commercial scientific institution means an institution that does not further the commercial, trade, or profit interests of any person or entity and is operated for the purpose of conducting scientific research whose results are not intended to promote any particular product or industry.

Numident refers to the "Numerical Identification System," the SSA system that contains information available on an Application for a Social Security Card (Form SS-5). The Numident record contains the name of the applicant, place of birth, and other information.

OGC means the Office of the General Counsel.

Online FOIA portal means the electronic application that SSA uses to process FOIA requests. The public may also submit requests directly to SSA via the online FOIA portal.

OPD means the Office of Privacy and Disclosure.

Other requester means any individual or organization whose FOIA request does not qualify as a commercial-use request, representative of the news media request (including a request made by a freelance journalist), or an educational or non-commercial scientific institution request.

Production means the process of preparing the records for duplication, including the time spent in preparing the records for duplication (*i.e.*, materials used, records/database retrieval, employee and contractor time, as well as systems processing time).

Record(s) means any information maintained by an agency, regardless of format, that is made or received in connection with official agency business that is under the agency's control at the time of the FOIA request. Record(s) includes any information maintained for an agency by a third party.

(1) Record(s) does not include personal records of an employee, or other information in formally organized and officially designated SSA libraries and FOIA library, where such materials are available under the rules of the particular library.

(2) Record(s) includes information maintained by the State Disability Determination Services related to performing the disability determination function and medical source information pertaining to consultative examinations performed for the Social Security program when obtained by, created on behalf of, or otherwise, in the control of SSA.

Redact means delete or mark over.

Representative of the news media means any person or entity that gathers information of potential interest to a segment of the public, uses its editorial skills to turn raw materials into a distinct work, and distributes that work to an audience. The term "news" means information that is about current events or that would be of current interest to the public. Examples of news media entities include television or radio stations that broadcast news to the public at large and publishers of periodicals, including print and online publications that disseminate news and make their products available through a variety of means to the general public. We do not consider FOIA requests for records that support the news-dissemination function of the requester to be a commercial use. We consider "freelance" journalists who demonstrate a solid basis for expecting publication through a news media entity as working for that entity. A publishing contract provides the clearest evidence that a journalist expects publication; however, we also consider a requester's past publication record. We decide whether to grant a requester media status on a case-by-case basis.

Request means asking for records, whether or not the requester refers specifically to the FOIA. Requests from Federal agencies, subpoenas, and court orders for documents are not included within this definition.

Review, unless otherwise specifically defined in this part, means examining records responsive to a request to determine whether any portions are exempt from disclosure. Review time includes processing a record for disclosure (*i.e.*, doing all that is necessary to prepare the record for disclosure), including redacting the record and marking the appropriate FOIA exemptions. It does not include the process of resolving general legal or policy issues regarding exemptions.

Search means the process of identifying, locating, and retrieving records responsive to a request, whether in hard copy or in electronic form or format, or by manual or automated/electronic means.

Special services means performing additional services outside of that

required under the FOIA to respond to a request. Examples include using an overnight mail service to send the agency's response to a FOIA request.

SS-5 means an Application for a Social Security Card. It is used to request an original, different, or replacement Social Security Card.

SSA means the Social Security Administration.

Submitter means any person or entity that provides trade secrets or commercial or financial information to the agency, and includes individuals, corporations, other organizational entities, and state and foreign governments.

Tolling means temporarily stopping the running of a time limit. We may toll a FOIA request to seek clarification from the requester or to address fee issues, as further described in § 402.60(h).

Trade secrets and confidential commercial or financial information means trade secrets and confidential commercial or financial information that is obtained by the agency from a submitter, such that it may be protected from disclosure under Exemption 4 of the FOIA, 5 U.S.C. 552(b)(4).

§ 402.15 SSA's FOIA policy.

(a) *Presumption of openness.* SSA will withhold information only if we reasonably foresee that disclosure would harm an interest protected by a FOIA exemption or if disclosure is prohibited by law.

(b) *Authority to release and withhold records.* As described in § 402.50, the agency's FOIA Officer, or the FOIA Officer's designee, has the authority to:

(1) Release or withhold records in response to initial requests;

(2) Grant or deny expedited processing; and

(3) Reduce or waive fees.

(c) *Records publicly available.* We make available for public inspection in an electronic format records that are final and have been requested and released three or more times and other specified records described in § 402.155. We do not make available for public inspection records that are not static, such as the Open Access Death Master File.

(d) *Required record production.* The FOIA does not require an agency to give opinions, conduct research, answer questions, or create records.

§ 402.20 Relationship between the FOIA and the Privacy Act of 1974.

(a) *Coverage.* The FOIA and the rules in this part apply to all SSA records. The Privacy Act, 5 U.S.C. 552a, applies to records that are about individuals, but only if the records are in a system of records.

(b) *Requesting your own records.* If you have filed a FOIA request and are an individual requesting your own records that are maintained in a system of records, or if you are a parent or legal guardian authorized to act under § 401.75 of this chapter who is seeking the records about a minor or individual who has been declared incompetent, your request may be handled under the Privacy Act. See § 401.40 of this chapter. If we handle your request under the Privacy Act, we will provide you with written notification with further processing instructions. Privacy Act requests are also processed under the FOIA, when appropriate, to give you the benefit of both statutes. You must verify your identity in accordance with our regulations. See § 401.45 of this chapter.

§ 402.25 Who can file a FOIA request?

Any person may submit a FOIA request to SSA. Under the FOIA, "any person" includes requests from individuals, corporations, State and local agencies, as well as foreign entities. Requests from Federal agencies and Federal or State courts are not covered by the FOIA.

§ 402.30 Requirements of a FOIA request.

(a) To be considered a FOIA request under this part, the following must occur:

(1) The request must be written (either by hand or electronically);

(2) The request must be submitted in accordance with § 402.35;

(3) The requester must provide the following required contact information: Requester's name, U.S. or foreign postal address, description of records sought, and fee willing to pay. While not required, we encourage requesters to provide us with their email address and phone number; and

(4) The request must clearly state and reasonably describe what SSA records are being requested in sufficient detail to enable OPD to locate them with a reasonable amount of effort. Broad, sweeping requests and vague requests are not reasonably described. When known, requests should identify the records sought by providing the name/title of the record, applicable date range, subject matter, offices or employees involved, and record type. If the request is for electronic communications, such as email records, the request may identify the names, position titles, or other identifying information about the agency employees involved, as well as the applicable timeframe. Absent sufficient details, the agency may be unable to search for or locate the records sought. The greater the date range, the

longer it may take to process the request and the greater amount of fees that may be charged.

(b) Requests that do not meet the required criteria in paragraph (a) of this section are not considered proper FOIA requests.

§ 402.35 Where to submit a FOIA request.

(a) *Submission of requests.* Except as specified in paragraph (b) of this section, requesters must submit FOIA requests in writing to OPD through the following options:

(1) *Online FOIA portal:* Link available from the agency's www.ssa.gov/foia website or the National FOIA Portal at www.FOIA.gov.

(2) *Email:* FOIA.Public.Liaison@ssa.gov.

(3) *Mail:* SSA Office of Privacy and Disclosure, ATTN: Freedom of Information Officer, 6401 Security Boulevard, Baltimore, MD 21235.

(b) *Requests for copies of Deceased Individual's Application for a Social Security Card (SS-5) or Numident record.* Requesters may use the Form SSA-711, *Request for a Deceased Individual's Social Security Record*, to request a copy of a deceased individual's original SS-5 or Numident record. When the Form SSA-711 is used, it may be submitted to the office listed on the form or as directed in paragraph (a) of this section.

§ 402.40 Requests for deceased individual's records.

(a) The agency will disclose the records concerning a deceased individual when we have acceptable proof of death unless Federal law or regulations prohibits the disclosure.

(b) Proof of death includes:

(1) A copy of a public record of death of the number holder;

(2) A statement of death by the funeral home director;

(3) A statement of death by the attending physician or the superintendent, physician, or intern of the institution where the person died;

(4) A copy of the coroner's report of death or the verdict of the coroner's jury;

(5) An obituary that we determine has sufficient identifying information; or

(6) Other certified record of death that we determine within our discretion is acceptable.

(c) If upon review of the provided proof of death, we cannot determine that the individual is deceased or we have questions about the authenticity of the proof, then the proof is not acceptable. When we do not have acceptable proof of death, we will treat the request in accordance with

§ 402.20(b), requests for information about a living person.

§ 402.45 Requests handled outside of the FOIA process.

When records outlined in paragraphs (a) through (d) of this section are requested from OPD, OPD will respond to the requester and provide information for requesting the records sought:

(a) To the extent a request asks for records that are currently publicly available, either from SSA or from another part of the Federal Government. See § 402.155.

(b) If the records sought are distributed by SSA as part of its regular program activity, for example, public information leaflets distributed by SSA. See §§ 402.155 through 402.165.

(c) If the records sought are earnings records covered by § 422.125 of this chapter.

(d) If a request does not meet the requirements of a FOIA request as defined in § 402.30. We will send written correspondence to the requester:

(1) Providing instructions for how to submit a proper FOIA request; or

(2) Asking for additional information to make the request a proper FOIA request.

§ 402.50 FOIA Officer's authority.

(a) *Release determination.* Only the Deputy Executive Director for OPD or their designee is authorized to make determinations about:

(1) Release or withholding of records;
(2) Expedited processing;
(3) Charging or waiver of fees; and
(4) Other matters relating to processing a request for records under this part.

(b) *Determination provided in writing.* The FOIA Officer's determination is provided in writing to the requester via emailed communication or, in the absence of the requester's email address, via U.S. postal mail. If the requester disagrees with the FOIA Officer's determination in response to items identified in paragraph (a) of this section, the requester may appeal the determination to the Executive Director for OPD, as described in § 402.105.

§ 402.55 Referrals and consultations.

(a) *Consultation and referral.* When reviewing records located by SSA in response to a request, SSA will determine whether another agency of the Federal Government is better able to determine whether the record is exempt from disclosure under the FOIA. As to any such record, SSA will proceed in one of the following ways:

(1) *Referral of FOIA records in whole or in part to an outside agency.* We will

notify the requester in writing when we opt to refer records in whole or in part to another agency for direct response from that agency, including the name(s) or the agency(s) to which the record was referred and that agency's FOIA contact information, unless notification would cause harm to an interest protected under the FOIA. In such instances, in order to avoid harm to an interest protected by an applicable exemption, we coordinate to seek the view of the originating agency.

(2) *Agency consultation.* If a request is for records that were created by, or provided to us by, another agency that is not subject to the FOIA, we may consult with that agency, as described in paragraph (b) of this section.

(b) *Consultation with another agency or entity.* If a request is for records that originated with SSA but contain information of interest to another agency or entity, we may consult with the other agency or entity prior to issuing our release determination to the requester.

§ 402.60 How does SSA process FOIA requests?

(a) *Acknowledgement.* (1) If we receive a FOIA request that will take longer than 10 working days to process, we will provide an acknowledgment. The acknowledgement email or letter restates the FOIA request and provides the requester with the request's tracking number.

(2) If we require clarification to process the FOIA request, we will contact the requester either via email, U.S. postal mail, or phone call. We attempt to contact requesters twice. If we do not receive a response to our clarification attempts within 30 calendar days from the date of our first contact to the requester, we will close the FOIA request due to insufficient information.

(b) *Perfected requests.* FOIA requests are considered "perfected," i.e., the 20-working day statutory time begins, when the request meets the requirements of the proper FOIA request listed in § 402.30. There may be times that we require more information from the requester after perfecting a request. The 20-working day period may be extended in unusual circumstances by written notice to the requester. See paragraph (d) of this section.

(c) *Multi-tracking procedures.* FOIA requests are categorized simple, complex, or expedited. Unless granted expedited processing, we process FOIA requests in each track according to a first-in, first-out basis.

(1) *Simple.* For most non-expedited requests, we make a determination

about release of the record(s) requested within 20-working days.

(2) *Complex.* We will place into a complex processing queue any request that cannot be completed within 20-working days due to the complex nature of the request, including consultation with components that may maintain records subject to the request. We make good faith efforts to notify requesters in writing if it is necessary for us to take additional time to process a request and of the requester's right to seek dispute resolution services with the Office of Government Information Services. See § 402.100.

(3) *Expedited processing.* Unless granted expedited processing, we process FOIA requests according to a first-in, first-out basis. See § 402.65 for information on expedited processing.

(d) *Unusual circumstances.* (1) Unusual circumstances exist when there is a need to:

(i) Search for and collect records from SSA components or field locations that are separate from OPD;

(ii) Search for, collect, and review a voluminous number of records that are part of a single request; or

(iii) Consult with two or more SSA components or another agency having substantial interest in the request before releasing the records.

(2) Within the unusual circumstances letter to the requester, we will provide an estimated date that we will contact the requester with the applicable fee notice and/or further correspondence. We will notify the requester of the date by which we estimate completing the request. We will also advise the requester that they may modify or narrow the scope of their request.

(3) When unusual circumstances exist, we will process the request under the complex track.

(e) *Aggregating requests.* We may aggregate requests in cases where it reasonably appears that multiple requests, submitted either by a requester or by a group of requesters acting in concert, constitute a single request, involving clearly related matters, which would otherwise involve unusual circumstances. In the event requests are aggregated, they will be treated as one request for estimating response time and calculating fees.

(f) *Fee notice.* FOIA requesters are issued a fee notice that informs them of the estimated search, review, and duplication time associated with processing their FOIA request. For more information on fees, see §§ 402.70 through 402.80.

(g) *Tolling.* (1) We may stop or toll the 20 working days in two circumstances:

(i) We may stop the clock once if we require additional information regarding the specifics of the request; and

(ii) We may stop the clock as many times as needed regarding fee assessments.

(2) The processing time will resume upon our receipt of the requester's response. There may be instances when we require multiple clarifications on a FOIA request. After the first request for clarification, any additional clarifications are performed without tolling the clock. If we do not receive a response to our clarification attempts within 30 calendar days from the date of our first contact to the requester, we will close the FOIA request.

(h) *Retrieving records.* We are required to furnish copies of records only when they are in our possession or we can retrieve them from storage. We will make reasonable efforts to search for records except when such efforts would significantly interfere with the operation of our automated information system(s). The Federal Government follows National Archives and Records Administration rules on record retention. Records are retained or destroyed under the guidelines of the Federal Records Act.

(i) *No records determinations.* We will search for records to satisfy a request using methods that can be reasonably expected to produce the requested records. Nevertheless, we may not be able to always find the records requested using the information provided by the requester, or they may not exist. If we advise that we have been unable to find the records despite a diligent search, the requester may appeal the no records determination to the Executive Director for OPD, as described in § 402.105.

(j) *Furnishing records.* We will furnish copies of records in whole or in-part, unless we reasonably foresee that disclosure would harm an interest protected by a FOIA exemption or if disclosure is prohibited by law. When information within a responsive record(s) is exempt from disclosure, the information is redacted and the applicable FOIA exemption(s) are noted within the redacted cell. We will make reasonable efforts to provide the records in the form or format requested if the record is readily reproducible in that form or format. We may provide individual records as we process them on a rolling basis, or we may release all responsive records once the request is completed. See § 402.95 for more information on SSA's release of records.

(k) *Directing a requester to another agency.* If a request is for records that are not SSA records for purposes of the

FOIA, and we believe the records may be maintained by another agency, we may advise the requester to submit their request to that other agency. In such cases, we will provide the requester with the other agency's name in our response letter. Our recommendation that the requester submit their request to the other agency is not a guarantee the other agency will have or disclose the records requested.

(l) *Burdensome requests.* The FOIA requires an agency to provide the record in any form or format requested by the person if the record is readily reproducible by the agency in that form or format. We will not search or produce records in response to a FOIA request that we determine would be unduly burdensome to process. FOIA requests are determined to be unreasonably burdensome when processing the FOIA request would significantly interfere with the ongoing operation of the agency's programs.

§ 402.65 Expedited processing.

(a) Expedited processing must be requested at the same time as the FOIA request. We provide expedited processing when the requester can demonstrate a "compelling need" for the requested information:

(1) When there is an imminent threat to the life or safety of a person;

(2) When the requester is primarily engaged in disseminating information, and shows an urgency to inform the public about actual or alleged government activities; or

(3) When the requester can show, in detail and to our satisfaction, that a prompt response is needed because the requester may be denied a legal right, benefit, or remedy without the requested information, and that it cannot be obtained elsewhere in a reasonable amount of time.

(b) A requester who seeks expedited processing must submit a statement, certified to be true and correct, explaining in detail the basis for making the request for expedited processing. We will notify the requester within 10 calendar days of receipt of the request for expedited processing of our decision to grant or deny expedited processing. Only the FOIA Officer may make the decision to grant or deny expedited processing. Requests granted expedited processing will be given priority and processed as soon as practicable. Requests that do not meet the "compelling need" criteria, will be processed normally. If we do not grant the request for expedited processing, the requester may appeal the denial to the Executive Director for OPD. In the appeal letter, the requester should

explain why they believe their request demonstrates a "compelling need," such as describing how the request meets the criteria in paragraphs (a)(1) through (3) of this section. The process described in § 402.105 will also apply to these appeals.

§ 402.70 Fees associated with processing FOIA requests.

(a) *Charging authorities*—(1) *Section 1106(c).* Section 1106(c) of the Social Security Act (42 U.S.C. 1306(c)) allows the agency to charge for FOIA requests that are not directly related to SSA's administration of the Social Security Act. See § 402.80 for information on the agency's authorization under section 1106(c) to charge requesters. Requesters may request a fee waiver, as described in § 402.85.

(2) *FOIA fee categories.* The FOIA establishes three fee categories of requesters, *i.e.*, commercial use, non-commercial scientific or educational institutions and representatives of the news media; and other requesters. The category of the requester determines the fees that may be charged; see § 402.75 for the FOIA fee schedule. Requesters may request a fee waiver, as described in § 402.85.

(b) *Hourly rate when charging under section 1106(c) and the FOIA fee categories.* (1) When we search for and review records, we charge an hourly rate, based in 15-minute increments, depending on the grade(s) of the employee(s) and/or contractors performing the search and review. The hourly rate is the same when charging under the FOIA fee provisions or section 1106(c) of the Social Security Act. SSA uses the current General Schedule (GS) salary table for the locality pay area of Washington-Baltimore-Arlington, DC-MD-VA-WV-PA. We use the following criteria to compute our hourly rates for search or review:

(i) When performed by employees at grade GS-1 through GS-8, SSA will charge an hourly rate based on the salary of a GS-5, step 7, employee;

(ii) When performed by a GS-9 through GS-14, SSA will charge an hourly rate based on the salary of a GS-12, step 4, employee; and

(iii) When performed by a GS-15 or above, SSA will charge an hourly rate based on the salary of a GS-15, step 7, employee.

(2) When work is performed by a contractor, we will charge an hourly rate based on the GS equivalent of the contractor's hourly pay rate. We compute the hourly rate by taking the current hourly rate for the specified grade and adding 16 percent of that rate

to cover benefits and rounding to the nearest whole dollar. These rates are adjusted as Federal salaries change. Federal salary rates are available from the Office of Personnel Management. When a search and review involves employees at more than one of these GS levels, we will charge the rate appropriate for each. We may charge a fee for search time even if we are unable to locate any responsive records or the records are exempt from disclosure.

§ 402.75 FOIA fee schedule.

(a) *Fee schedule category.* Requesters whom SSA charges under the FOIA fee schedule are subject to the following fees dependent upon their fee category:

(1) *Commercial.* Commercial use requesters are charged for search, review, and duplication.

(2) *Non-commercial educational or scientific institutions and representative of the news media.* Requesters that fit this category are charged for the duplication of documents. We will not charge requesters the copying costs for the first 100 pages of duplication.

(3) *Other.* If the FOIA request does not fall within a category described in paragraph (a)(1) or (2) of this section, we will charge for search and duplication; however, we will not charge for the first two hours of search time or for the duplication costs of the first 100 pages.

(b) *Certification.* If a requester asks for certification of the record(s) responsive to their FOIA request and OPD agrees to provide it, we will notify the requester of the appropriate certification fee via written correspondence.

(c) *Record(s) production and duplication—(1) Electronic records.* We will charge the actual costs for producing and duplicating the record and the time spent by the employees or contractors in production, duplication, or otherwise processing the FOIA request, at the rates given in § 402.70(c).

(2) *Photocopying standard size pages.* For noncommercial requesters, we will charge \$0.10 per page after the first 100 pages, which are free. The FOIA Officer may charge lower fees for particular documents where:

(i) The document has already been printed in large numbers;

(ii) The program office determines that using existing stock to answer this request, and any other anticipated FOIA requests, will not interfere with program requirements; and

(iii) The FOIA Officer determines that the lower fee is adequate to recover the prorated share of the original printing costs.

(3) *Photocopying odd-size documents.* For photocopying documents, such as punch cards or blueprints, or

duplicating other records, such as tapes, we will charge the actual costs of operating the machine, plus the actual cost of the materials used, plus charges for the time spent by the operator, at the rates given in § 402.70(c).

(d) *Cost of service less than cost of issuing a bill.* We will not charge a fee when the cost of the service is less than the cost of sending the requester a bill. However, where an individual, organization, or governmental unit makes multiple separate requests, we will total the costs incurred and bill the requester for the services rendered.

(e) *Fee waiver.* We may waive or reduce the fee if we find that waiver is in the public interest. See § 402.85 for fee waiver information.

§ 402.80 Charging under section 1106(c) of the Social Security Act.

Section 1106(c) of the Social Security Act permits the agency to charge the full cost to process requests for information for purposes not directly related to the administration of program(s) under the Social Security Act. This may be done notwithstanding the fee provisions in FOIA, the Privacy Act, or any other provision of law. In responding to FOIA requests for non-program purposes, we will charge the full cost (both direct and indirect costs) of our services, regardless of the requester's fee categorization, unless the cost of the service is less than the cost of issuing a bill as stated in paragraph (b) of this section.

(a) *Full costs.* The agency may charge full costs for processing records or information requests, including but not limited to:

(1) *Search.* We may charge for search time even if we are unable to locate any responsive records or the records are exempt from disclosure. We will notify the requester in writing if the records estimated as responsive are determined unreasonably burdensome for the agency to process and/or the search would cause significant interference with the operation of SSA's automated information systems.

(2) *Review.* Review includes the reviews performed at any level (staff through executive), including but not limited to review by multiple people and offices.

(3) *Production and duplication of record(s).* We may charge the full cost of the systems' processing (e.g., computer search time, computer processing database retrieval), materials used to produce and duplicate the requested record(s), and time spent by agency employee(s) and/or contractor(s) in production, duplication, or otherwise processing the FOIA request.

(4) *Certification.* We will charge the full costs for certification.

(5) *Employee's time.* The full cost of an employee's time includes fringe benefits and overhead costs, such as rent and utilities.

(6) *Forwarding/delivering materials.* If special arrangements for forwarding material are requested, we will charge the requester the full cost of this service (e.g., if express mail or a commercial delivery service is requested). If no special forwarding arrangements are requested, we will charge the requester the full cost of the service, including the U.S. Postal Service cost.

(7) *Performing other special services.* If we agree to provide any special services requested, we will charge the full cost of the time of the employee(s) or contractor(s) who perform the service, plus the full cost of any systems processing time and materials that the employee or contractor uses.

(b) *Cost of service less than cost of issuing a bill.* We will not charge a fee when the cost of the service is less than the cost of sending the requester a bill. However, where an individual, organization, or governmental unit makes multiple separate requests, we will total the costs incurred and bill the requester for the services rendered.

(c) *Standard administrative fees for non-program information.* The information in this part does not revoke, modify, or supersede the schedule of standard administrative fees the agency charges for specified non-program information requests.

(d) *Non-program purpose.* Non-program purposes constitute any purpose that is not program related.

(1) We consider a request to be program related if:

(i) The information must be disclosed under the Social Security Act (Act); or

(ii) The information will be used for a purpose which is directly related to the administration of a program under the Act for which SSA has responsibility. In deciding whether this paragraph (d)(1)(ii) applies, the major criteria SSA considers is whether the information is:

(A) Needed to pursue a benefit under a program that SSA administers under the Act.

(B) Needed solely to verify the accuracy of information obtained in connection with a program that SSA administers under the Act.

(C) Needed in connection with an activity under SSA's purview which is authorized under the Act.

(D) Needed by an employer to carry out taxpaying responsibilities under the Federal Insurance Contributions Act or section 218 of the Act.

(2) We will consider each request on a case-by-case basis when the criteria in this paragraph (d) are not met but the requester claims a request is for a program-related purpose for another reason. We will not conclude a request is program-related solely because the records sought are about programs administered by SSA or are claimed to be of public interest.

(e) *Disagreement with program or non-program determination.* Only the FOIA Officer has the authority to make the program/non-program decision. If a requester disagrees with the FOIA Officer's non-program determination, they may appeal the decision to the Executive Director for OPD. In the appeal letter, the requester should explain why they believe the request meets the requirements in paragraph (c) of this section. The process described in § 402.105 will also apply to these appeals.

§ 402.85 Waiver of fees in the public interest.

A requester may request waiver or reduction of fees, whether charged under § 402.75 or § 402.80, if the release of the requested records is in the public interest. We will waive or reduce the fees we would otherwise charge if disclosure of the requested information:

- (a) Is in the public interest because it is likely to contribute significantly to public understanding of the operations or activities of the government; and
- (b) Is not primarily in the commercial interest of the requester.

(1) *Procedure for requesting a waiver or reduction.* A requester must make the request for a fee waiver or reduction in writing at the same time they make their request for records. The requester should explain with reasonable specificity why they believe a waiver or reduction is proper under the analysis in paragraphs (b)(2) and (3) of this section. Only the FOIA Officer may make the decision whether to waive, or reduce, the fees. If we do not completely grant the request for a waiver or reduction, the requester may appeal the denial to the Executive Director for OPD. In the appeal letter, the requester should explain why they believe the request meets the requirements in paragraphs (b)(2) and (3) of this section. The process prescribed in § 402.105 will also apply to these appeals.

(2) *Public interest.* We consider the factors below when analyzing whether disclosure is in the public interest:

- (i) How the records pertain to the Federal Government's operations or activities;
- (ii) Whether disclosure would reveal any meaningful information about

Government operations or activities not already known to the public; and

(iii) Whether the contribution to public understanding of those operations or activities would be significant.

(iv) Regarding the above criteria, you must be reasonably specific in your waiver request as to the specific Government operation or activity and provide direct, clear (not remote or attenuated) connections to the meaningful information you seek. Generalized interest in government programs is not reasonably specific to grant waiver.

(3) *Not primarily in requester's commercial interest.* If the disclosure is determined to be in the public interest as described in paragraph (b)(2) of this section, we will then determine whether it also furthers the requester's commercial interest and, if so, whether this effect outweighs the advancement of that public interest. We consider the following factors when analyzing whether disclosure is not primarily in the requester's commercial interest:

(i) Would the disclosure further a commercial interest of the requester, or of someone on whose behalf the requester is acting?

(ii) If disclosure would further a commercial interest of the requester, would that effect outweigh the advancement of the public interest defined in paragraph (b)(2) of this section? Which effect is primary?

(4) *Burden on SSA to produce the record(s).* If the disclosure meets the requirements in paragraphs (b)(2) and (3) of this section, we reserve the right to charge a fee if special services are needed to provide the records.

(5) *Deciding between waiver and reduction.* If the disclosure meets the requirements in paragraphs (b)(2) and (3) of this section, we will normally waive fees. However, in some cases we may decide only to reduce the fees. For example, we may do this when disclosure of some but not all of the requested records meet the fee waiver criteria.

§ 402.90 Notification of fees and prepayment requirements.

Requesters must agree to pay the fee, whether charged under § 402.75 or § 402.80, before we will begin the search for record(s).

(a) *Cost estimate.* OPD will issue a fee notice to the requester for the processing of their request for records that includes an estimated fee based on the time we estimate it will take to process the record(s) requested. We issue fee notices via email or, when the requester does

not provide an email address, via U.S. postal mail.

(b) *Advanced payment information required.* The requester must agree to pay the estimated fee provided within the fee notice and provide the agency with payment information within 30 calendar days from the date of our fee notice. Payment information is required before OPD will begin the search for the requested record(s). Unless otherwise specified in the schedule of standard administrative fees the agency charges for specified non-program information requests, OPD will process payment when the request is closed, *i.e.*, when the FOIA Officer issues a decision on records release. If the payment information provided by the requester expires during the course of OPD's processing of the FOIA request, the requester must provide updated payment information. If updated payment information is not provided within 30 calendar days of our written request for the payment information, we reserve the right to administratively close the request.

(c) *Changes in estimated fee.* (1) If the time spent to search for records is more or less than the time estimated in the fee notice, OPD will issue the requester a revised fee notice after the responsive component(s) performs the records search and retrieval.

(2) If the record(s) provided to OPD for review are more or less than those from which OPD estimated search and review time, OPD will issue the requester a revised fee notice after the responsive component(s) perform the records search and retrieval.

(3) OPD will either dispose of the payment information or return the payment information to the requester when OPD issues the revised fee notice.

(4) The requester must agree to pay the revised fee before we will continue processing the request. If the requester disagrees with the revised fee, the requester may appeal to the Executive Director for OPD. Appeals will be processed as described in § 402.105.

(d) *Prompt payment.* We will administratively close the FOIA request if we do not receive a response or appeal within 30 calendar days from the date of the fee notice. "Response" includes:

(1) Requesting to narrow the scope of the request; or

(2) Providing payment in response to the fee notice. Appeals will be processed as described in § 402.105.

(e) *Methods of payment.* We accept payment by check or money order made payable to the Social Security Administration (SSA), as well as by

credit card (MasterCard, Visa, Discover, American Express, or Diner's Club).

§ 402.95 Release of records.

(a) *Records previously released.* If we have released a record, or a part of a record, to others in the past, we will ordinarily release it to the requester, as well. However, we will not release it to a requester if a statute forbids this disclosure; an exemption applies that was not previously applicable; or if the previous release was unauthorized.

(b) *Withholding records.* Section 552(b) of the FOIA explains the nine exemptions under which we may withhold records requested under the FOIA. Within §§ 402.115 through 402.150, we describe the FOIA exemptions and explain how we apply them to disclosure determinations. In some cases, more than one exemption may apply to the same document. Section 552(b) of the FOIA, while providing nine exemptions from mandatory disclosure, does not itself provide any assurance of confidentiality by the agency.

(c) *FOIA library.* If the record(s) requested are already publicly available, either in our electronic FOIA library or elsewhere online, such as at www.ssa.gov, we will direct the requester to the publicly available record(s).

(d) *Poor copy.* If we cannot make a legible copy of a record to be released, we do not attempt to reconstruct it. Instead, we furnish the best copy possible and note its poor quality in our reply.

§ 402.100 FOIA Public Liaison and the Office of Government Information Services.

We notify requesters of their right to seek dispute resolution from the FOIA Public Liaison or the Office of Government Information Services (OGIS) within our fee notices, responses to determinations identified in § 402.50(a), and responses to appeals.

(a) *FOIA Public Liaison.* If requesters have questions about the response to their request or wish to seek dispute resolutions services within SSA, the requester may contact the FOIA Public Liaison via email to FOIA.Public.Liaison@ssa.gov.

(b) *OGIS.* OGIS is an entity outside of SSA that offers mediation services to resolve disputes between FOIA requesters and Federal agencies as a non-exclusive alternative to litigation. OGIS' contact information will be provided in any decision letter issued by the FOIA Officer and Executive Director for OPD.

§ 402.105 Appeals of the FOIA Officer's determination.

(a) *Appeal requirements.* If a requester disagrees with the FOIA Officer's determination in response to items specified in § 402.50(a), the requester may appeal the decision. The appeal must meet the following requirements:

(1) Be submitted in writing via the avenues identified in § 402.35(a);

(2) Be received, or in the case of electronic submissions, transmitted within 90 calendar days from the date of the determination the requester is appealing; and

(3) Explain what the requester is appealing and include additional information to support the appeal. The appeal should clearly identify the agency determination that is being appealed and the assigned request's tracking number. To facilitate handling when submitted via mail or fax, the requester should mark the appeal letter, or subject line of the electronic transmission, "Freedom of Information Act Appeal."

(b) *Acknowledgement.* If we receive an appeal that will take longer than 10 working days to process, we will provide an acknowledgment. The acknowledgement is provided via email or, when the requester does not provide an email address, via U.S. postal mail. The acknowledgement email or letter restates the FOIA appeal and provides the requester with the appeal's tracking number.

(c) *Processing timeframe.* FOIA appeals are categorized as either simple or complex, based on the designation of the initial request.

(1) *Simple.* Generally, we make a determination about release of the requested record(s) within 20-working days.

(2) *Complex.* Appeals of complex requests cannot be completed within 20-working days. During OPD's processing of the appeal, OPD will need to consult with appropriate SSA component(s), including legal counsel; therefore, we generally require more than 20-working days to issue a final decision on the appeal.

(d) *Final decision.* The Chief FOIA Officer delegated to the Executive Director for OPD the authority to make decisions on appeals of the FOIA Officer's determinations.

(1) The final decision is provided in writing to the requester via email or, in the absence of the requester's email address, via U.S. postal mail.

(2) The final decision letter will explain the basis of the decision (for example, the reasons why an exemption applies).

(e) *Disagreement with final decision.* If a requester disagrees with the final decision issued by the Executive Director for OPD, they may seek assistance from OGIS, as described in § 402.100. Requesters may also ask a U.S. District Court to review our final decision. See 5 U.S.C. 552(a)(4)(B).

§ 402.110 U.S. District Court action.

If the Executive Director for OPD or the Executive Director for OPD's designee, upon review, affirms the denial of the FOIA Officer's determination of items specified in § 402.50(a), requesters may ask a U.S. District Court to review that denial. See 5 U.S.C. 552(a)(4)(B).

§ 402.115 The FOIA Exemption 1: National defense and foreign policy.

Exemption 1 protects from disclosure information specifically authorized under criteria established by an Executive order to be kept secret in the interest of national defense or foreign policy and are in fact properly classified pursuant to such Executive order.

§ 402.120 The FOIA Exemption 2: Internal personnel rules and practices.

Exemption 2 authorizes our agency to withhold records that are related solely to the internal personnel rules and practices of an agency. For example, we may withhold personnel rules and practices dealing with employee relations or human resources.

§ 402.125 The FOIA Exemption 3: Records exempted by other statutes.

(a) *Required record release.* Exemption 3 authorizes our agency to withhold records if another statute specifically allows or requires us to withhold them. We may use another statute to justify withholding only if it prohibits disclosure or if it sets forth criteria to guide our decision on releasing or identifies particular types of material to be withheld.

(b) *Examples.* (1) We often use this exemption to withhold information regarding a worker's earnings which is tax return information under section 6103 of the Internal Revenue Code.

(2) We also use this exemption to withhold death information about decedents:

(i) When the date of death is within three calendar years from the current date, the requested information about the decedent is protected under section 203 of the Bipartisan Budget Act of 2013 (Pub. L. 113–67).

(ii) When the agency's source of death is the state, the requested information is protected under section 205(r) of the Social Security Act.

§ 402.130 The FOIA Exemption 4: Trade secrets and confidential commercial or financial information.

Submitters may designate information as trade secrets and confidential commercial or financial information at the time of submission or within a reasonable time thereafter. Submitters must use good faith efforts to designate, by appropriate markings, any portion of its submission that it considers to be protected from disclosure under the FOIA exemptions. These designations expire ten years after the due date of the submission unless the submitter requests a longer designation period.

(a) *Steps of submitters notice*—(1) *The submitter's notice.* When trade secrets or confidential commercial or financial information is requested under the FOIA, SSA will provide written submitter's notice if we have a reason to believe that information in the records could reasonably be disclosed under the FOIA. The submitter's notice will describe and include a copy of the trade secret or commercial or financial information requested or portions of records containing the information. In cases involving many submitters, SSA may post or publish a submitter's notice in a place or manner reasonably likely to inform the submitters of the proposed disclosure instead of sending individual notifications. The submitter's notice requirements of this section do not apply if:

(i) SSA determines the information is fully exempt under the FOIA, and therefore will not be disclosed;

(ii) The information has been previously published or made generally available; or

(iii) Disclosure of the information is required by statute other than the FOIA.

(2) *Submitter's opportunity to object to disclosure.* (i) Unless SSA grants an extension, the submitter must respond to the notice within five working days of SSA issuing the submitter's notice or the information may be released in accordance with these regulations and the FOIA. A submitter who fails to respond within five working days will be considered to have no objection to the disclosure of the information. SSA is not required to consider any information received after the date of any disclosure decision. Any information provided by a submitter under this subpart may itself be subject to disclosure under the FOIA.

(ii) If a submitter objects to disclosure, the submitter should provide SSA with a detailed written statement that specifies all grounds for withholding the particular information under any exemption of the FOIA. In order to rely on Exemption 4 as basis for non-

disclosure, the submitter must explain why the information constitutes a trade secret or commercial or financial information that is confidential.

(iii) SSA will consider a submitter's timely made objections and specific grounds for nondisclosure in deciding whether to disclose the requested information.

(3) *Notice of intent to disclose.* Whenever SSA decides to disclose information over the objection of a submitter, SSA provides the following to the submitter:

(i) A Release Over Objection letter explaining the reasons why each of the submitter's disclosure objections did not meet the requirements for withholding under the FOIA.

(ii) A copy of the information as SSA intends to release it.

(iii) A statement of our intent to disclose the information five working days from the date on the Release Over Objection letter unless the submitter files an action in a U.S. District Court to prevent the release.

(b) *Notice of FOIA lawsuit.* When a submitter's notice is issued for a request that is the subject of a lawsuit, SSA notifies the submitter of the lawsuit within the notice.

(c) *Requester notification.* To the extent SSA expects substantial delays in the processing of FOIA requests due to the agency's communications with the submitter, we will notify the requester in writing via email, or when the requester's email is not provided, via U.S. postal mail.

§ 402.135 The FOIA Exemption 5: Internal documents.

This exemption covers inter-agency or intra-agency government documents that fall within an evidentiary privilege recognized in civil discovery. Such internal government communications may include an agency's communications with an outside consultant or other outside person, with a court, or with Congress, when those communications are for a purpose similar to the purpose of privileged intra-agency communications. Some of the most-commonly applicable privileges are described in the following paragraphs:

(a) *Deliberative process privilege.* This privilege protects the decision-making processes of government agencies. Information is protected under this privilege if it is predecisional and deliberative. The purpose of the privilege is to prevent injury to the quality of the agency decision-making process by encouraging open and frank internal discussions, by avoiding premature disclosure of decisions not

yet adopted, and by avoiding the public confusion that might result from disclosing reasons that were not in fact the ultimate grounds for an agency's decision. Purely factual material in a deliberative document is within this privilege only if it is inextricably intertwined with the deliberative portions so that it cannot reasonably be segregated, if it would reveal the nature of the deliberative portions, or if its disclosure would in some other way make possible an intrusion into the decision-making process. We will release purely factual material in a deliberative document unless that material is otherwise exempt. The privilege continues to protect predecisional documents even after a decision is made; however, we will release predecisional deliberative communications that were created 25 years or more before the date on which the records are requested.

(b) *Attorney work product privilege.* This privilege protects records prepared by or for an attorney in anticipation of or for litigation. It includes documents prepared for purposes of administrative and court proceedings. This privilege extends to information directly prepared by an attorney, as well as materials prepared by non-attorneys working for an attorney.

(c) *Attorney-client communication privilege.* This privilege protects confidential communications between an attorney and the attorney's client where legal advice is sought or provided.

§ 402.140 The FOIA Exemption 6: Clearly unwarranted invasion of personal privacy.

We may withhold records about individuals if disclosure would constitute a clearly unwarranted invasion of their personal privacy.

(a) *Balancing test.* When we decide whether to release records that contain personal or private information about someone else, we weigh the foreseeable harm of invading a person's privacy against the public interest in disclosure. When we determine whether disclosure would be in the public interest, we will consider whether disclosure of the requested information would shed light on how a Government agency performs its statutory duties.

(b) *Agency employees.* To protect the safety of agency employees, we will not disclose information when the information sought is contact information and/or duty stations of one or more Federal employees if the disclosure would place employee(s) at risk of injury or other harm.

(c) *Examples.* We generally withhold the personally identifiable information

of individuals if we do not have the consent (consistent with § 401.100 of this chapter) of the number holder, including but not limited to the number holder's home address, age, Social Security number, claims file, and other personal information. If the information requested concerns agency employees, we will determine disclosure on a case-by-case basis. For example, our redaction of management officials' information may be treated differently depending on how the balancing test applies in a given circumstance.

§ 402.145 The FOIA Exemption 7: Law enforcement.

Exemption 7 authorizes our agency to withhold certain records that the government has compiled for law enforcement purposes. The records may apply to actual or potential violations of either criminal or civil laws or regulations. We can withhold these records only to the extent that releasing them would cause harm in at least one of the following situations:

(a) *Enforcement proceedings.* Pursuant to the FOIA Exemption 7(A) (5 U.S.C. 552(b)(7)(a)), we may withhold information whose release could reasonably be expected to interfere with prospective or ongoing law enforcement proceedings. Investigations of fraud and mismanagement, employee misconduct, and civil rights violations may fall into this category. In certain cases—such as when a fraud investigation is likely—we may refuse to confirm or deny the existence of records that relate to the violations in order not to disclose that an investigation is in progress, or may be conducted.

(b) *Fair trial or impartial adjudication.* Under the FOIA Exemption 7(B) (5 U.S.C. 552(b)(7)(b)), we may withhold records whose release would deprive a person of a fair trial or an impartial adjudication because of prejudicial publicity.

(c) *Personal privacy.* Under the FOIA Exemption 7(C) (5 U.S.C. 552(b)(7)(c)), we may withhold the personally identifiable information of individuals when the disclosure could reasonably be expected to constitute an unwarranted invasion of personal privacy. When a name surfaces in an investigation, that person is likely to be vulnerable to innuendo, rumor, harassment, and retaliation.

(d) *Confidential sources and information.* Pursuant to the FOIA Exemption 7(D) (5 U.S.C. 552(b)(7)(d)), we may withhold the identity of confidential sources, as well as the records obtained from the confidential sources in criminal investigations or by an agency conducting a lawful national

security investigation. A confidential source may be an individual; a State, local, or foreign government agency; or any private organization. The exemption applies whether the source provides information under an express promise of confidentiality or under circumstances from which such an assurance could be reasonably inferred; however, inferred confidentiality is determined in a case-by-case analysis. Also protected from mandatory disclosure is any information which, if disclosed, could reasonably be expected to jeopardize the system of confidentiality that assures a flow of information from sources to investigatory agencies.

(e) *Techniques and procedures.* Under the FOIA Exemption 7(E) (5 U.S.C. 552(b)(7)(e)), we may withhold records that would disclose techniques and procedures for law enforcement investigations or prosecutions, or would disclose guidelines for law enforcement investigations or prosecutions if such disclosure could reasonably be expected to risk circumvention of the law. In some cases, it is not possible to describe even in general terms those techniques without disclosing the very material to be withheld.

(f) *Life and physical safety.* Under the FOIA Exemption 7(F) (5 U.S.C. 552(b)(7)(f)), we may withhold records whose disclosure could reasonably be expected to endanger the life or physical safety of any individual. This protection extends to threats and harassment, as well as to physical violence.

§ 402.150 The FOIA Exemptions 8 and 9: Records on financial institutions; records on wells.

Exemption 8 permits us to withhold records about regulation or supervision of financial institutions. Exemption 9 permits the withholding of geological and geophysical information and data, including maps, concerning wells.

§ 402.155 Records available for public inspection.

(a) Under the FOIA, SSA is required to make available for public inspection in an electronic format:

- (1) Final opinions made in the adjudication of cases;
- (2) An agency's statements and interpretations of policy that have been adopted but are not published in the **Federal Register**;
- (3) Administrative staff manuals and instructions that affect the public; and
- (4) Copies of records, regardless of form or format, that an agency determines will likely become the subject of subsequent requests, as well as records that have been requested and

released three or more times, unless said materials are published and copies are offered to sale.

(b) SSA will not use or cite instructional manuals issued to our employees, general statements of policy, and other materials which are used in processing claims as a precedent for an action against a person unless we have indexed the record and published it or made it available, or unless the person has timely notice of the record.

(c) Records that SSA makes available for public inspection in an electronic format may be accessed through www.ssa.gov free of charge. Such records include:

- (1) Compilation of Social Security Laws and Regulations;
- (2) SSA regulations under the retirement, survivors, disability, and supplemental security income programs, *i.e.*, 20 CFR parts 401, 402, 404, 416, and 422;
- (3) Social Security Handbook;
- (4) Social Security Rulings and Acquiescence Rulings;
- (5) SSA's Public Programs Operations Manual System;
- (6) SSA's Organizational Structure;
- (7) State and Local Coverage Handbook for State Social Security Administrators; and
- (8) SSA's Public Hearings, Appeals, and Litigation Law Manual.

§ 402.160 Where records are published.

(a) *Methods of publication.* Materials we are required to publish pursuant to the provisions of 5 U.S.C. 552(a)(1) and (a)(2), we publish in one of the following ways:

(1) By publication in the **Federal Register** of Social Security Administration regulations, and by their subsequent inclusion in the Code of Federal Regulations;

(2) By publication in the **Federal Register** of appropriate general notices;

(3) By other forms of publication, when incorporated by reference in the Code of Federal Regulations with the approval of the Director of the Federal Register;

(4) By publication in the "Social Security Rulings" of indexes of precedential social security orders and opinions issued in the adjudication of claims, statements of policy and interpretations that have been adopted but have not been published in the **Federal Register**; and

(5) By posting in the FOIA library.

(b) *Publication of rulings.* Although not required pursuant to 5 U.S.C. 552(a)(1) and (a)(2), we publish the following rulings in the **Federal Register** and by other forms of publication:

(1) We publish Social Security Rulings in the **Federal Register** under the authority of the Commissioner of Social Security. They are binding on all components of SSA. These rulings represent precedent final opinions and orders and statements of policy and interpretations that we have adopted.

(2) We publish Social Security Acquiescence Rulings in the **Federal Register** under the authority of the Commissioner of Social Security. They are binding on all components of SSA, except with respect to claims subject to the relitigation procedures established in 20 CFR 404.985(c) and 416.1485(c). For a description of Social Security Acquiescence Rulings, see 20 CFR 404.985(b) and 416.1485(b).

§ 402.165 Publications for sale through the Government Publishing Office.

The public may purchase publications containing information pertaining to the program, organization, functions, and procedures of SSA from the electronic U.S. Government Bookstore maintained by the Government Publishing Office. The publications for sale include but are not limited to:

- (a) Title 20, parts 400 through 499, of the Code of Federal Regulations;
- (b) **Federal Register** issues; and
- (c) Compilation of the Social Security Laws.

BILLING CODE 4191–02–P

DEPARTMENT OF THE TREASURY

Internal Revenue Service

26 CFR Part 1

[TD 10019]

RIN 1545–BR31

Definition of the Term “Coverage Month” for Computing the Premium Tax Credit

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Final regulations.

SUMMARY: This document contains final regulations that amend the definition of “coverage month” and amend certain other rules in existing income tax regulations regarding the computation of an individual taxpayer’s premium tax credit. The coverage month amendment generally provides that, in computing a premium tax credit, a month may be a coverage month for an individual if the amount of the premium paid, including by advance payments of the premium tax credit, for the month for the

individual’s coverage is sufficient to avoid termination of the individual’s coverage for that month. The final regulations also amend the existing regulations relating to the amount of enrollment premiums used in computing the taxpayer’s monthly premium tax credit if a portion of the monthly enrollment premium for a coverage month is unpaid. Finally, the final regulations clarify when an individual is considered to be not eligible for coverage under a State’s Basic Health Program. The final regulations affect taxpayers who enroll themselves, or enroll a family member, in individual health insurance coverage through a Health Insurance Exchange and may be allowed a premium tax credit for the coverage.

DATES:

Effective date: These final regulations are effective on December 18, 2024.

Applicability date: These final regulations apply to taxable years beginning on or after January 1, 2025.

FOR FURTHER INFORMATION CONTACT:

Clara Raymond at (202) 317–4718 (not a toll-free number).

SUPPLEMENTARY INFORMATION:

Authority

This document contains amendments to the Income Tax Regulations (26 CFR part 1) under section 36B of the Internal Revenue Code (Code).¹ Section 36B(h) provides an express delegation of authority for the Secretary of the Treasury or her delegate (Secretary) to prescribe such regulations as may be necessary to carry out section 36B, including regulations that provide for the coordination of the premium tax credit (PTC) allowed under 36B with the program for advance payments of the PTC (APTC) under section 1412 of the Affordable Care Act.² The final regulations are also issued under the express delegation of authority under section 7805(a), which authorizes the Secretary to “prescribe all needful rules and regulations for the enforcement of [the Code], including all rules and regulations as may be necessary by reason of any alteration of law in relation to internal revenue.”

¹ Unless otherwise indicated, references to “section” or “§” are to sections of the Code or the Treasury regulations issued thereunder.

² The Affordable Care Act (or ACA) refers to the Patient Protection and Affordable Care Act (Pub. L. 111–148, enacted on March 23, 2010), as amended by the Health Care and Education Reconciliation Act of 2010 (Pub. L. 111–152, enacted on March 30, 2010).

Background

I. Section 36B Rules Relating to Coverage Months and Monthly PTC Amount

Section 36B provides a PTC for applicable taxpayers who meet certain eligibility requirements, including that a member of the taxpayer’s family enrolls in a qualified health plan (QHP) through a Health Insurance Exchange (Exchange) for one or more “coverage months.”

Section 1.36B–3(c)(1) provides that a month is a coverage month for an individual if (i) as of the first day of the month, the individual is enrolled in a QHP through an Exchange; (ii) the taxpayer pays the taxpayer’s share of the premium for the individual’s coverage under the plan for the month by the unextended due date for filing the taxpayer’s income tax return for that taxable year, or the full premium for the month is paid by APTC; and (iii) the individual is not eligible for the full calendar month for minimum essential coverage (within the meaning of § 1.36B–2(c)) other than coverage described in section 5000A(f)(1)(C) of the Code (relating to coverage in the individual market).

Section 1.36B–3(d)(1) provides that the PTC (also called the premium assistance amount) for a coverage month is the lesser of (i) the premiums for the month, reduced by any amounts that were refunded, for one or more QHPs in which a taxpayer or a member of the taxpayer’s family enrolls (enrollment premiums); or (ii) the excess of the adjusted monthly premium for the applicable benchmark plan over $\frac{1}{12}$ of the product of a taxpayer’s household income and the applicable percentage for the taxable year. The term “family” is defined in § 1.36B–1(d), and the applicable percentage is defined in § 1.36B–3(g).

Section 1.36B–2(c)(2)(i) provides that, for purposes of determining whether a given month is a coverage month for an individual, an individual generally is considered eligible for government-sponsored minimum essential coverage if the individual meets the criteria for coverage under a government-sponsored program described in section 5000A(f)(1)(A) as of the first day of the first full month the individual may receive benefits under the program.

Section 1.36B–2(c)(2)(v) provides that an individual is treated as not eligible for Medicaid, CHIP, or a similar program for a period of coverage under a QHP if, when the individual enrolls in the QHP, an Exchange determines or considers (within the meaning of 45 CFR 155.302(b)) the individual to be not eligible for Medicaid or CHIP.

Section 36B(f)(3) and § 1.36B–5 require Exchanges to report to QHP enrollees and the IRS certain information, including monthly enrollment premiums, needed to compute the PTC allowed for the enrollee. This information is reported to enrollees on IRS Form 1095–A, *Health Insurance Marketplace Statement*. The Centers for Medicare & Medicaid Services (CMS), part of the Department of Health and Human Services (HHS), is responsible for the Form 1095–A reporting for Exchanges that use the Federal eligibility and enrollment platform (Federally-facilitated Exchanges, or FFEs, and State-based Exchanges on the Federal platform, or SBE–FPs). State Exchanges with their own platforms (State Exchanges) are responsible for the Form 1095–A reporting for individuals who enroll in a QHP through their State Exchange.

II. HHS Rules Relating to Coverage When Premiums Are Unpaid

HHS regulations at 45 CFR 156.270(d) implement section 1412(c)(2)(B)(iv)(II) of the Affordable Care Act to require issuers of QHPs to allow a “grace period” for enrollees for whom the APTC is paid but who fail to timely pay their share of the premium for the coverage. In general, a QHP issuer must provide a grace period of 3 consecutive months for such an enrollee before the issuer may terminate the enrollee’s coverage. During the first month of the grace period, the QHP issuer must pay all appropriate claims for services rendered, and, during the second and third months of the grace period, the QHP issuer may pend claims.

HHS regulations at 45 CFR 155.400(g) allow issuers to implement a premium payment threshold policy under which issuers can consider enrollees to have paid all amounts due if the enrollees pay an amount sufficient to maintain a percentage of total premium paid out of the total premium owed equal to or greater than a level prescribed by the issuer, provided that the level and the policy are applied in a uniform manner to all enrollees. If an enrollee satisfies these conditions, the issuer may provide coverage even though the full enrollment premium is not paid.

In certain States, issuers also may provide coverage without payment of the full enrollment premium if a State department of insurance prohibits an issuer from terminating QHP coverage during a declared emergency.

III. Proposed Regulations

On September 17, 2024, the Department of the Treasury (Treasury Department) and the IRS published a

notice of proposed rulemaking (REG–116787–23) in the **Federal Register** (89 FR 75984) under section 36B (proposed regulations). The proposed regulations would have changed the definition of “coverage month” in § 1.36B–3(c)(1) for some scenarios for which the full premium for the month is unpaid by the unextended due date of the taxpayer’s return for the year of coverage, provided the amount of the premium paid for the month, including by APTC, is sufficient to avoid termination of the individual’s coverage for that month. The proposed regulations would have provided that a month for which the enrollment premium is not fully paid may be a coverage month in the following scenarios: (i) the first month of a grace period described in 45 CFR 156.270(d); (ii) a month for which a premium payment threshold under 45 CFR 155.400(g) has been met and for which month the issuer of the individual’s qualified health plan provides coverage; and (iii) a month for which a State department of insurance has, during a declared emergency, issued an order prohibiting the issuer of the individual’s qualified health plan from terminating the individual’s coverage for the month irrespective of whether the full premium for the month is paid.

The proposed amendment to the definition of “coverage month” would have required a conforming change to the calculation of the monthly PTC amount under § 1.36B–3(d)(1)(i) so that the premium for a month to be considered in determining the monthly PTC for an individual’s coverage would be reduced by any portion of the premium that is unpaid as of the unextended due date for filing the taxpayer’s income tax return for the taxable year that includes the month.

Finally, the proposed regulations would have clarified § 1.36B–2(c)(2)(v) to provide that an individual is treated as not eligible for Medicaid, CHIP, or a similar program such as a State’s Basic Health Program (BHP), for a period of coverage under a QHP if, when the individual enrolls in the QHP, an Exchange conducts an eligibility determination or, if applicable, eligibility assessment (within the meaning of 45 CFR 155.302(b)) for Medicaid, CHIP, or a similar program and determines or assesses the individual to be not eligible for coverage under the program.

The Treasury Department and the IRS received nine public comments in response to the notice of proposed rulemaking. Copies of the comments are available for public inspection at <https://www.regulations.gov> or upon request. A public hearing on the

proposed regulations was scheduled for December 13, 2024. There were no requests to speak at the scheduled public hearing. Consequently, the public hearing was cancelled. After considering all the comments received, the Treasury Department and the IRS adopt the proposed regulations without modifications.

Summary of Comments and Explanation of Revisions

I. Overview

All nine public comments on the proposed regulations were in support of the rules in the proposed regulations. One commenter requested that the final regulations include detailed requirements, expectations, and examples relating to reporting by Exchanges of enrollment premiums and second lowest cost silver plan (SLCSP) premiums on Form 1095–A for a month for which a taxpayer’s share of the enrollment premium is not paid in full (non-payment month) that may be a coverage month. Another commenter requested that all non-payment months for which coverage is provided be considered coverage months. Finally, several commenters requested flexibility for Exchanges to comply with the new coverage month rule. The comments are addressed in more detail in Parts II through IV of this Summary of Comments and Explanation of Revisions.

II. Additional Guidance for Reporting on Form 1095–A

As discussed in Part I of the Background section of this preamble, section 36B(f)(3) and § 1.36B–5 require Exchanges to report to QHP enrollees and the IRS certain information needed to compute the PTC allowed for the enrollee. This information is reported to enrollees on IRS Form 1095–A. The enrollee’s monthly enrollment premiums are reported in column A of Part III of Form 1095–A and the enrollee’s monthly second lowest cost silver plan (SLCSP) premiums are reported in column B of the form.

The current instructions for Form 1095–A require Exchanges to report \$0 in column A of Form 1095–A as the enrollment premium for a non-payment month. The instructions also require Exchanges to report \$0 for a non-payment month in column B of Form 1095–A as the amount of the taxpayer’s SLCSP premium for the month. Reporting \$0 as the monthly amount in either column A or column B signals to the taxpayer and the IRS that this is not a coverage month and, thus, no PTC is allowed for the month.

One commenter requested that the final regulations include detailed requirements, expectations, and examples relating to how Exchanges should report enrollment premiums and SLSP premiums on Form 1095-A for non-payment months that may be coverage months. The commenter asked that the examples demonstrate how Exchanges should report multiple grace periods in a calendar year, mid-month changes, and partial payments.

The commenter's request for detailed guidance on how Exchanges should report amounts on Form 1095-A is best addressed in the Instructions for Form 1095-A, rather than in regulatory text. The IRS intends to revise the 2025 Instructions for Form 1095-A to reflect the coverage month changes in these final regulations. Specifically, the revised instructions will require Exchanges to report in column A of Part III of Form 1095-A the full enrollment premium for any month that is a coverage month if such month is (i) the first month of a grace period described in 45 CFR 156.270(d) for the plan enrollees; (ii) a month for which a premium payment threshold under 45 CFR 155.400(g) has been met and for which month the issuer of the individual's qualified health plan provides coverage; or (iii) a month for which a State department of insurance has, during a declared emergency, issued an order prohibiting the issuer of the individual's qualified health plan from terminating the individual's coverage for the month (the three scenarios described in § 1.36B-3(c)(4)). The instructions will continue to provide that Exchanges must report \$0 in column A for any other months for which the full enrollment premium for the month is not paid, and that the amount reported in column A should be reduced by any enrollment premium refunds or credits.

Similarly, the instructions for column B of Part III of Form 1095-A will be amended to provide that Exchanges should not report \$0 as the SLSP premium for any months for which the full enrollment premium is not paid, if the month is a coverage month under one of the three scenarios described in § 1.36B-3(c)(4). Instead, Exchanges should report the SLSP premium that would apply if the enrollment premium had been paid in full.

With regard to the commenter's request for examples demonstrating how to report amounts on Form 1095-A under the final regulations, the Treasury Department and the IRS understand that State Exchanges may need additional guidance as they proceed with implementation of these final

regulations. The Treasury Department and the IRS welcome additional input and will continue to work with State Exchanges to ensure that the Instructions for Form 1095-A adequately address how Exchanges should report non-payment months as coverage months under one of the three scenarios described in § 1.36B-3(c)(4).

III. Additional Scenarios for Which Non-Payment Months May Be Coverage Months

The proposed regulations included a request for comments on whether the final regulations should include scenarios in addition to those provided in the proposed regulations regarding non-payment months that may be coverage months. One commenter suggested that the final regulations should permit all non-payment months to be coverage months as long as the amount of the premium paid for the month, including by APTC, is sufficient to avoid termination of the individual's coverage for that month.

In drafting the proposed regulations, the Treasury Department and the IRS considered but rejected a rule that would allow all non-payment months to be coverage months if the amount of the premium paid for the month, including by APTC, is sufficient to avoid termination of the individual's coverage for the month. As stated in the preamble to the proposed regulations, a main reason for amending the coverage month definition is to promote reporting consistency among Exchanges regarding the reporting of enrollment premiums for non-payment months. The Treasury Department and the IRS worked closely with HHS staff to identify the three scenarios described in § 1.36B-3(c)(4) as scenarios for which there is inconsistent reporting among Exchanges. In addition, the Treasury Department and the IRS have determined that an open-ended rule that could be interpreted differently by different Exchanges, based on their particular State law or practices, would not achieve more consistent reporting among Exchanges. Exchanges, as well as taxpayers and the IRS, need clarity on the definition of a coverage month, and that definition needs to apply uniformly to all taxpayers under the Federal tax law. Consequently, the Treasury Department and the IRS do not adopt this comment, and the change to the coverage month rule in the final regulations applies only for the three scenarios described in § 1.36B-3(c)(4).

IV. Applicability Date of Final Regulations

The proposed regulations provided that the changes under §§ 1.36B-2 and

1.36B-3 were proposed to apply for taxable years beginning on or after the first date of the calendar year that begins after the date these regulations are published as final regulations in the **Federal Register**. Several commenters noted that State Exchanges will need to make extensive changes to their platform architecture to report for non-payment months that are coverage months under one of the three scenarios described in § 1.36B-3(c)(4) and, thus, requested that the final regulations provide adequate time for states to make the necessary changes to ensure accurate reporting. One commenter stated that a 9-12-month period is generally needed to implement IT changes. Another commenter requested that the final rule include detailed scenarios addressing the applicability date. One commenter supported the proposed applicability date of the next calendar year following the date of publication.

Consistent with the proposed applicability date, the rules in these final regulations apply to taxable years beginning on or after January 1, 2025. Thus, a taxpayer may be allowed a PTC for 2025 for a non-payment month that is a coverage month as described in these final regulations. However, the Treasury Department and the IRS understand that Exchanges need time to implement their reporting for the coverage month rule in the final regulations, and some Forms 1095-A filed by State Exchanges for the 2025 coverage year may not reflect that non-payment months described in § 1.36B-3(c)(4) are coverage months for which a PTC is allowed. Exchanges should do the best they can to timely implement the coverage month rule in these final regulations. Exchanges are reminded that, because section 36B(f)(3) imposes the requirement on Exchanges to report QHP enrollment information to the IRS and to Enrollees on Form 1095-A, Form 1095-A is not an information return within the meaning of section 6721, and there is no penalty imposed on an Exchange for filing a Form 1095-A that does not include all of the information required to be shown on the return or that includes incorrect information. The Treasury Department and the IRS will continue to consult with State Exchanges to assist with their implementation of the coverage month rule under these final regulations.

Finally, the proposed regulations included various applicability dates to incorporate existing applicability dates for prior amendments to the regulations under section 36B, but all of the amendments under §§ 1.36B-2 and 1.36B-3 in the proposed regulations

were proposed to apply on the same date. Those amendments to proposed §§ 1.36B–2 and 1.36B–3, as finalized in these regulations, all apply to taxable years beginning on or after January 1, 2025. Thus, the Treasury Department and the IRS do not believe detailed scenarios are needed to address the final regulation's applicability date as requested by one of the commenters.

V. Conforming Change to the PTC Calculation and Clarification of Eligibility

As noted in Part III of the Background section of this preamble, the proposed regulations addressed two items in addition to the change to the coverage month definition. First, the proposed regulations included a proposed change that would have conformed the calculation of the monthly PTC amount under § 1.36B–3(d)(1)(i) with the proposed rule allowing certain non-payment months to be coverage months. Under the proposed rule, taxpayers would have reduced the amount of the enrollment premiums used to compute their monthly PTC by any portion of the premium that is unpaid as of the unextended due date of the taxpayer's income tax return for the taxable year that includes the month. Second, the proposed regulations would have clarified § 1.36B–2(c)(2)(v) to provide that an individual is treated as not eligible for Medicaid, CHIP, or a similar program such as a State BHP, for a period of coverage under a QHP if, when the individual enrolls in the QHP, an Exchange conducts an eligibility determination or, if applicable, eligibility assessment (within the meaning of 45 CFR 155.302(b)) for Medicaid, CHIP, or a similar program and determines or assesses the individual to be not eligible for coverage under the program. Because no negative comments or suggested changes were received with respect to these two items, this Treasury decision adopts these amendments without change.

VI. Severability

If any provision in this rulemaking is held to be invalid or unenforceable facially, or as applied to any person or circumstance, it shall be severable from the remainder of this rulemaking, and shall not affect the remainder thereof, or the application of the provision to other persons not similarly situated or to other dissimilar circumstances.

Special Analyses

I. Regulatory Planning and Review

Pursuant to the Memorandum of Agreement, Review of Treasury

Regulations under Executive Order 12866 (June 9, 2023), tax regulatory actions issued by the IRS are not subject to the requirements of section 6 of Executive Order 12866, as amended. Therefore, a regulatory impact assessment is not required.

II. Paperwork Reduction Act

These final regulations do not impose any additional information collection requirements in the form of reporting, recordkeeping requirements, or third-party disclosure statements. Taxpayers who claim PTC on their income tax returns are required to file Form 8962, *Premium Tax Credit (PTC)*, which is the sole collection of information requirement imposed on individuals by section 36B and the regulations under section 36B. The rules in these final regulations will require the IRS to revise the instructions for Form 8962. For purposes of the Paperwork Reduction Act of 1995 (44 U.S.C. 3507(c)), the reporting burden associated with the collection of information for Form 8962 will be reflected in the PRA submission associated with income tax returns under the OMB control number 1545–0074. To the extent there is a change in burden because of these final regulations, the change in burden will be reflected in the updated burden estimates for Form 8962.

In addition, Exchanges are required to report to QHP enrollees on Form 1095–A certain information the enrollees need to compute the PTC allowed for the enrollee and to reconcile the PTC with any APTC paid for their coverage. Exchanges must also report this information to the IRS. The rules in these final regulations will require the IRS to revise the instructions for recipients of Form 1095–A and the instructions for Exchanges completing Form 1095–A. For purposes of the Paperwork Reduction Act of 1995 (44 U.S.C. 3507(c)), the reporting burden associated with the collection of information for Form 1095–A will be reflected in the PRA submission associated with Form 1095–A under the OMB control number 1545–2232. To the extent there is a change in burden because of these final regulations, the change in burden will be reflected in the updated burden estimates for Form 1095–A.

III. Regulatory Flexibility Act

The Treasury Department and the IRS hereby certify that these final regulations will not have a significant economic impact on a substantial number of small entities pursuant to the Regulatory Flexibility Act (5 U.S.C. chapter 6). This certification is based on

the fact that the majority of the effect of the final regulations falls on individual taxpayers, and entities will experience only small changes.

Pursuant to section 7805(f), the notice of proposed rulemaking preceding these regulations was submitted to the Chief Counsel for the Office of Advocacy of the Small Business Administration for comment on their impact on small business, and no comments were received.

IV. Unfunded Mandates Reform Act

Section 202 of the Unfunded Mandates Reform Act of 1995 requires that agencies assess anticipated costs and benefits and take certain other actions before issuing a final rule that includes any Federal mandate that may result in expenditures in any one year by a State, local, or Tribal government, in the aggregate, or by the private sector, of \$100 million (updated annually for inflation). This final rule does not include any Federal mandate that may result in expenditures by State, local, or Tribal governments, or by the private sector in excess of that threshold.

V. Executive Order 13132: Federalism

E.O. 13132 (Federalism) prohibits an agency from publishing any rule that has federalism implications if the rule either imposes substantial, direct compliance costs on State and local governments, and is not required by statute, or preempts State law, unless the agency meets the consultation and funding requirements of section 6 of the E.O. This rule does not have federalism implications and does not impose substantial direct compliance costs on State and local governments or preempt State law within the meaning of the E.O.

VI. Congressional Review Act

Pursuant to the Congressional Review Act (5 U.S.C. 801 *et seq.*), the Office of Information and Regulatory Affairs designated this rule as not a major rule, as defined by 5 U.S.C. 804(2).

Statement of Availability of IRS Documents

Guidance cited in this preamble is published in the Internal Revenue Bulletin and is available from the Superintendent of Documents, U.S. Government Publishing Office, Washington, DC 20402, or by visiting the IRS website at <https://www.irs.gov>.

Drafting Information

The principal author of these final regulations is Clara L. Raymond of the Office of Associate Chief Counsel (Income Tax and Accounting). However, other personnel from the Treasury

Department and the IRS participated in the development of the regulations.

List of Subjects in 26 CFR Part 1

Income taxes, Reporting and recordkeeping requirements.

Adoption of Amendments to the Regulations

Accordingly, the Treasury Department and the IRS amend 26 CFR part 1 as follows:

PART 1—INCOME TAXES

■ **Paragraph 1.** The authority citation for part 1 is amended by:

- 1. Removing the entry for § 1.36B–0;
- 2. Adding entries in numerical order for §§ 1.36B–1 through 1.36B–3;
- 3. Revising the entries for §§ 1.36B–4 and 1.36B–5; and
- 4. Adding an entry in numerical order for § 1.36B–6.

The additions and revisions read as follows:

Authority: 26 U.S.C. 7805 * * *

* * * * *

Section 1.36B–1 also issued under 26 U.S.C. 36B(h).

Section 1.36B–2 also issued under 26 U.S.C. 36B(h).

Section 1.36B–3 also issued under 26 U.S.C. 36B(h).

Section 1.36B–4 also issued under 26 U.S.C. 36B(h).

Section 1.36B–5 also issued under 26 U.S.C. 36B(h).

Section 1.36B–6 also issued under 26 U.S.C. 36B(h).

* * * * *

■ **Par. 2.** Section 1.36B–0 is amended by:

- 1. Redesignating the entries for § 1.36B–3(c)(4) and § 1.36B–3(c)(5) as the entries for § 1.36B–3(c)(5) and § 1.36B–3(c)(6), respectively; and
- 2. Adding a new entry for § 1.36B–3(c)(4).

The addition reads as follows:

§ 1.36B–0 Table of contents.

* * * * *

§ 1.36B–3 *Computing the premium assistance credit amount.*

* * * * *

(c) * * *

(4) Scenarios for payments sufficient to avoid coverage termination.

* * * * *

■ **Par. 3.** Section 1.36B–2 is amended by:

- 1. Revising the first sentence in paragraph (c)(2)(v);
- 2. Revising paragraph (e)(1); and
- 3. Adding paragraph (e)(6).

The revisions and addition read as follows:

§ 1.36B–2 Eligibility for premium tax credit.

(c) * * *

(2) * * *

(v) * * * An individual is treated as not eligible for Medicaid, CHIP, or a similar program such as a Basic Health Program, for a period of coverage under a qualified health plan if, when the individual enrolls in the qualified health plan, an Exchange conducts an eligibility determination or, if applicable, eligibility assessment (within the meaning of 45 CFR 155.302(b)) for Medicaid, CHIP, or a similar program and determines or assesses the individual to be not eligible for coverage under the program. * * *

* * * * *

(e) * * *

(1) Except as provided in paragraphs (e)(2) through (6) of this section, this section applies to taxable years ending after December 31, 2013.

* * * * *

(6) The first sentence of paragraph (c)(2)(v) of this section applies to taxable years beginning on or after January 1, 2025. The first sentence of paragraph (c)(2)(v) of this section, as contained in 26 CFR part 1 edition revised as of April 1, 2024, applies to taxable years ending after December 31, 2013, and beginning before January 1, 2025.

■ **Par. 4.** Section 1.36B–3 is amended by:

- 1. Revising paragraph (c)(1)(ii);
- 2. Redesignating paragraphs (c)(4) and (5) as paragraphs (c)(5) and (6), respectively;
- 3. Adding new paragraph (c)(4); and
- 4. Revising paragraphs (d)(1)(i) and (n).

The revisions and addition read as follows:

§ 1.36B–3 Computing the premium assistance credit amount.

* * * * *

(c) * * *

(1) * * *

(ii) The taxpayer pays the taxpayer's share of the premium for the individual's coverage under the plan for the month by the unextended due date for filing the taxpayer's income tax return for that taxable year, the full premium for the month is paid by advance credit payments, or the amount of the premium paid (including by advance credit payments) for the month is sufficient to avoid termination of the individual's coverage for that month under one of the scenarios described in paragraph (c)(4) of this section; and

(4) *Scenarios for payments sufficient to avoid coverage termination.* The

scenarios under which the amount of the premium paid (including by advance credit payments) for the month is sufficient to avoid termination of an individual's coverage for that month under paragraph (c)(1)(ii) of this section are the following:

(i) The first month of a grace period described in 45 CFR 156.270(d) for the individual.

(ii) A month for which a premium payment threshold under 45 CFR 155.400(g) has been met and for which month the issuer of the individual's qualified health plan provides coverage.

(iii) A month for which a State department of insurance has, during a declared emergency, issued an order prohibiting the issuer of the individual's qualified health plan from terminating the individual's coverage for the month irrespective of whether the full premium for the month is paid.

* * * * *

(d) * * *

(1) * * *

(i) The enrollment premiums, which are the premiums for the month for one or more qualified health plans in which a taxpayer or a member of the taxpayer's family enrolls, reduced by any amounts—

(A) Refunded in the same taxable year as the premium liability is incurred; or

(B) Unpaid as of the unextended due date for filing the taxpayer's income tax return for the taxable year that includes the month; or

* * * * *

(n) *Applicability dates.* (1) Except as provided in paragraphs (n)(2) through (4) of this section, this section applies to taxable years ending after December 31, 2013.

(2) Paragraphs (d)(1)(i) and (2) of this section apply to taxable years beginning after December 31, 2016. Paragraph (f) of this section applies to taxable years beginning after December 31, 2018. Paragraphs (d)(1) and (2) of § 1.36B–3, as contained in 26 CFR part 1 edition revised as of April 1, 2016, apply to taxable years ending after December 31, 2013, and beginning before January 1, 2017. Paragraph (f) of § 1.36B–3, as contained in 26 CFR part 1 edition revised as of April 1, 2016, applies to taxable years ending after December 31, 2013, and beginning before January 1, 2019.

(3) Paragraphs (c)(4) through (6) of this section apply to taxable years beginning on or after January 1, 2025. Paragraph (c)(4) of this section, as contained in 26 CFR part 1 edition revised as of April 1, 2024, applies to taxable years beginning after December

31, 2016, and beginning before January 1, 2025. Paragraph (c)(5) of this section, as contained in 26 CFR part 1 edition revised as of April 1, 2024, applies to taxable years ending after December 31, 2013, and beginning before January 1, 2025.

(4) Paragraph (d)(1)(i) of this section applies to taxable years beginning on or after January 1, 2025. Paragraph (d)(1)(i) of § 1.36B–3, as contained in 26 CFR part 1 edition revised as of April 1, 2016, applies to taxable years ending after December 31, 2013, and beginning before January 1, 2017. Paragraph (d)(1)(i) of § 1.36B–3, as contained in 26 CFR part 1 edition revised as of April 1, 2022, applies to taxable years beginning after December 31, 2016, and beginning before January 1, 2023. Paragraph (d)(1)(i) of § 1.36B–3, as contained in 26 CFR part 1 edition revised as of April 1, 2024, applies to taxable years beginning after December 31, 2022, and beginning before January 1, 2025.

Douglas W. O'Donnell,
Deputy Commissioner.

Approved: December 5, 2024.

Aviva R. Aron-Dine,
Deputy Assistant Secretary of the Treasury
(Tax Policy).

BILLING CODE 4830–01–P

DEPARTMENT OF THE TREASURY

Alcohol and Tobacco Tax and Trade Bureau

27 CFR Part 5

[Docket No. TTB–2022–0007; T.D. TTB–199;
Re: Notice No. 213]

RIN 1513–AC88

Addition of American Single Malt Whisky to the Standards of Identity for Distilled Spirits

AGENCY: Alcohol and Tobacco Tax and Trade Bureau, Treasury.

ACTION: Final rule; Treasury decision.

SUMMARY: This final rule amends the Alcohol and Tobacco Tax and Trade Bureau (TTB) regulations that set forth the standards of identity for distilled spirits to include “American single malt whisky” as a type of whisky that is produced in the United States and meets certain criteria. TTB proposed the new standard of identity in response to petitions and comments submitted by several distillers and the American Single Malt Whisky Commission. TTB is finalizing the amendments to the regulations to establish the standard of

identity with some changes to reflect comments received.

DATES: This final rule is effective January 19, 2025.

FOR FURTHER INFORMATION CONTACT: Selina M. Ferguson, Regulations and Rulings Division, Alcohol and Tobacco Tax and Trade Bureau, 1310 G Street NW, Box 12, Washington, DC 20005; telephone 202–453–1039.

SUPPLEMENTARY INFORMATION:

Background

TTB Authority

The Alcohol and Tobacco Tax and Trade Bureau (TTB) administers regulations regarding the labeling of distilled spirits, which include those setting forth “standards of identity.” The authority to establish these standards is based on section 105(e) of the Federal Alcohol Administration Act (FAA Act),¹ codified in the United States Code at 27 U.S.C. 205(e). That section authorizes the Secretary of the Treasury (the Secretary) to prescribe regulations relating to the “packaging, marking, branding, and labeling” of alcohol beverage containers “as will prohibit deception of the consumer with respect to such products” and “as will provide consumers with adequate information as to the identity and quality of the products.” Section 105(e) of the FAA Act also generally requires bottlers and importers of alcohol beverages to obtain approval of the product labels through certificates of label approval (COLAs) prior to bottling or importing alcohol beverages for sale in interstate commerce.

TTB administers these FAA Act provisions pursuant to section 1111(d) of the Homeland Security Act of 2002, as codified at 6 U.S.C. 531(d). In addition, the Secretary has delegated certain administrative and enforcement authorities to TTB through Treasury Department Order 120–01.

Part 5 of title 27 of the Code of Federal Regulations (27 CFR part 5) sets forth the regulations implementing those provisions of section 105(e) of the FAA Act as they pertain to distilled spirits.

Classes and Types of Spirits

The TTB regulations establish standards of identity for distilled spirits products and categorize these products according to various classes and types. See 27 CFR part 5, subpart I. As used in 27 CFR 5.141(a), the term “class”

refers to a general category of spirits. Subpart I sets forth the various classes of distilled spirits and their characteristics. Examples of classes of distilled spirits include “whisky,” “rum,” “gin,” and “brandy.” As used in § 5.141(a), the term “type” refers to a subcategory within a class of spirits. These types generally have additional or more specific characteristics than the class. For example, “Cognac” is a type within the class of brandy, specifically grape brandy distilled exclusively in the Cognac region of France and meeting the laws and regulations of the French government for designation as Cognac. See 27 CFR 5.145(c)(2).

The TTB labeling regulations at 27 CFR 5.63(a)(2) require that the class and type of distilled spirits appear on the product’s label. These regulations provide that the class and type must be stated in conformity with 27 CFR part 5, subpart I, of the TTB regulations.

Current Standards of Identity, Classification of Malt Whisky, and Treatment of Products Labeled as “American Single Malt Whisky”

Current TTB regulations at 27 CFR 5.143(a) set forth the standard of identity for the class whisky. In § 5.143, paragraphs (c)(2) through (18) categorize the specific types of whisky, such as “Bourbon whisky” and “malt whisky.” The current regulations provide standards for identifying whisky as “malt whisky,” at paragraph (c)(2), and “whisky distilled from malt mash,” at paragraph (c)(7), but do not further specify standards for “single malt whisky.” Malt whisky is described as whisky produced at not more than 160° proof from a fermented mash of not less than 51 percent malted barley and stored at not more than 125° proof in charred new oak barrels. Such whisky stored in charred new oak barrels for a period of 2 years or more may optionally be further designated as “straight” malt whisky. See 27 CFR 5.143(c)(5). A “whisky distilled from malt mash” is whisky produced in the United States at not more than 160° proof from a fermented mash of not less than 51 percent malted barley and stored in used oak barrels.

With respect to geographical designators such as “American,” § 5.154(a)(3) provides that geographical names that are not names for distinctive types of distilled spirits, and that have not become generic, may not be used unless the product is produced in the particular place or region indicated in the name. Accordingly, a product currently designated as “American whisky” must be produced in the United States. Additionally, §§ 5.143(b)

¹ Aug. 29, 1935, ch. 814, title I, sec. 101 *et seq.*, formerly sec. 1 *et seq.*, 49 Stat. 977; renumbered title I, sec. 101 *et seq.*, and amended Public Law 100–690, title VIII, Nov. 18, 1988, 102 Stat. 4517.

and 5.154(b)(1) provide that a product designated as “malt whisky” or “American malt whisky” must be produced in the United States.

Products may currently bear the designation “American Single Malt Whisky,” and TTB has approved COLAs with that term, without any additional parameters other than those described above.

American Single Malt Whisky Petitions and Related Comments

In October 2017, TTB received three petitions with similar content from XO Alambic, Remy Cointreau, and Westland Distillery. Each of these petitioners noted that they were filing their petition on behalf of, or with, the American Single Malt Whiskey Commission (ASMWC), an association of at least seventy-five producers of whisky in the United States. In their petitions, the distillers requested the establishment of a standard of identity to define the “American single malt whisky” category for producers and consumers alike. They noted that the American whisky category has been growing over the past decade and continues to expand, and that recognition of American single malt whisky is at an all-time high, with U.S. distillers winning international competitions with products in these categories. They stated that establishment of a standard of identity would benefit consumers, as it would provide a definition for the product, establish trust in the category, clarify label declarations, and equip consumers with the necessary information to make informed decisions so they can have confidence in the products they are choosing to buy in a similar way that Scotch whisky standards provide such information to American consumers. They also believe establishment of a standard of identity would strengthen the U.S. economy by increasing tax revenue related to the sale of American single malt whiskey, and by creating jobs related to producing, distributing, and selling such a product and the ingredients used in this product.

In their petitions, the distillers requested the establishment of a standard of identity for American single malt whisky, defined as a type of whisky that is mashed, matured, and distilled at a single United States distillery, distilled to a proof not exceeding 160° proof from a fermented mash of 100 percent malted barley, stored in oak containers not exceeding a capacity of 700 liters, and bottled at not less than 80° proof.

In 2018, TTB published in the **Federal Register** a notice of proposed

rulemaking (Notice No. 176, 83 FR 60562) proposing to amend its regulations governing the labeling and advertising of wine, distilled spirits, and malt beverages. Although TTB did not include a proposal for an American single malt whisky standard of identity in Notice No. 176, TTB received over 200 comments in support of such a standard. One of these comments was from the ASMWC, who proposed a slightly different standard of identity from the one submitted in the three 2017 petitions. ASMWC’s comment to Notice No. 176 proposed that American single malt whisky should be distilled, mashed, and matured in the United States, but only distillation should be required to take place at a single United States distillery. All other aspects of the standard remained the same as those previously proposed in the petitions from XO Alambic, Remy Cointreau, and Westland Distillery. ASMWC’s comment stated that this standard of identity was supported by more than 130 producers of single malt whisky. In this document, this ASMWC proposal is referred to as the “2018 ASMWC petition.”

Notice of Proposed Rulemaking

On July 29, 2022, TTB published in the **Federal Register** Notice No. 213 (87 FR 45727), “Proposed Addition of American Single Malt Whisky to the Standards of Identity for Distilled Spirits,” which provided notice and the opportunity to comment on the proposed addition of a standard of identity for American single malt whisky to the TTB regulations. Notice No. 213 generally incorporated the standard of identity proposed in the petitions submitted to TTB and comments received on Notice No. 176. Specifically, TTB proposed to define American single malt whisky as a type of whisky that is mashed, distilled, and aged in the United States; is distilled entirely at one U.S. distillery; is distilled to a proof of 160° or less; is distilled from a fermented mash of 100 percent malted barley; is stored in oak barrels (used, uncharred new, or charred new) not exceeding 700 liters; and is bottled at not less than 80° proof.

Comments Received

The comment period for Notice No. 213 closed on September 27, 2022. TTB received 158 comments in response to Notice No. 213. Commenters included 16 U.S. and foreign trade associations, 44 industry members and related companies, and 98 individual members of the public (many of these individuals are part of the distilled spirits industry but submitted their comments only

under their own name). Of the comments received, 73 were submitted separately to TTB but had identical or nearly identical content and are labeled as mass comments as posted on the rulemaking docket. These mass comments stated support for the creation of a standard of identity for American single malt whisky in line with the ASMWC petition.

The vast majority of the comments received supported establishing a standard of identity for American single malt whisky. In addition to the mass comments, 41 commenters expressed support for establishing the standard of identity as proposed in the NPRM, while twenty-five commenters supported establishing a standard of identity for American single malt whisky but with modifications to the proposed criteria. Three commenters did not support establishing a standard of identity. Those in support stated that establishing a standard of identity for American single malt whisky is beneficial for producers and consumers. Specifically, commenters stated that it will increase opportunities for American producers, allow for more innovation in this product category, and create trust in this category for consumers. Those opposed to establishing the proposed standard of identity for American single malt whisky generally did so in response to the proposed criteria and stated that the definition was too narrow, should allow grains other than barley, or that the definition was not restrictive enough. These comments are addressed in the discussion for each criterion below.

Discussion of Comments

Below, TTB summarizes and responds to the comments received relating to the proposed criteria for American single malt whisky. TTB notes that many commenters compared the criteria for American single malt whisky to other whiskies frequently described as “single malt,” such as Scotch whisky or Irish whisky. While recognizing the well-established reputation of such whiskies, TTB is also taking into consideration how best to reflect input from commenters that identified processes unique to the U.S. industry. In certain instances, TTB finds reason not to merely adopt the criteria applied elsewhere, but to recognize practices that may vary from those criteria, particularly where adhering to longstanding U.S. practices that would have shaped U.S. consumer expectations in identifying a U.S. product.

Mashed, Distilled, and Aged in the United States, and Distilled Entirely at One U.S. Distillery

The proposed standard set forth in Notice No. 213 included a criterion that the whisky must be mashed (which would include fermentation of the mash), distilled, and aged in the United States, and it must be distilled entirely at one U.S. distillery. No commenters opposed requiring mashing, distillation, and aging to occur in the United States. Commenters also broadly supported further requiring distillation to occur at a single United States distillery but differed as to whether mashing and (to a lesser extent) aging should also be required to occur at a single distillery. While the 2017 petitions for the American single malt whisky standard would have required mashing, distilling, and aging to take place at a single U.S. distillery, the standard proposed in Notice No. 213 reflected the later 2018 ASMWC petition in allowing mashing and aging to take place at U.S. facilities other than the place of distillation.

Distillation

All commenters discussing the requirement that distillation occur at a single U.S. distillery supported such a requirement. In its comment supporting the proposed criterion, the ASMWC stated that the term “single” in “single malt whisky” has been understood globally for generations to mean that the whisky was distilled at a single distillery. Two associated online whisky enthusiast communities that submitted a joint comment—the Whiskey Lodge and Reddit community “/r/AmericanSMW” (Whiskey Lodge)—stated that the requirement to distill at a single distillery was “[g]reat” and the “[b]are minimum for ‘single malt.’” The American Craft Spirits Association (ACSA) explained, “[o]ther than the distillation taking place at a single distillery, the rest of the production process should take place in the United States for the whiskey to be called American Single Malt Whiskey.” Similarly, the Distilled Spirits Counsel of the United States (DISCUS), the Kentucky Distillers Association, the Irish Whisky Association, the Japan Spirits and Liqueurs Makers Association, the National Association of Beverage Importers (NABI), the Scotch Whisky Association, SpiritsEUROPE, Sazerac, and Grand Teton Distillery all expressed support for requiring distillation in a single U.S. distillery.

Mashing and Fermentation

Thirteen commenters also supported a standard more restrictive than the one proposed in Notice No. 213, requiring that mashing and fermentation in addition to distillation take place at a single distillery. These commenters included Sazerac, the Kentucky Distillers’ Association, DISCUS, the Scotch Whisky Association, the Irish Whisky Association, SpiritsEUROPE, the Japan Spirits & Liqueurs Makers Association, and NABI. The Irish Whisky Association and Scotch Whisky Association stated that not requiring mashing, fermentation, and distillation to take place at the same distillery would be inconsistent with international practice and would undermine and devalue the “single malt whisky” category. DISCUS contended that requiring the mashing to take place at the same facility as the distillation would align with consumer understanding and place American single malt whisky on equal footing as other products in the global market, while allowing mashing to occur elsewhere would lose the connection between the use of the term “single malt” and its place of production. NABI added that without a requirement for mashing and distillation to occur at a single facility, “a significant link is lost in the connection of the single malt whiskies representing the single efforts and quality controls of the same distillery.”

Some commenters expressed that malting and fermentation should not be required to occur at the same single distillery required for distillation. Copperworks Distilling Co. and the ASMWC noted that many American whisky producers purchase their mash from domestic breweries, and allowing American single malt whisky to be produced with mash made at domestic facilities other than the distillery producing the final product recognizes this practice. The ASMWC noted that, while United Kingdom regulations require mashing and fermentation to happen at the same facility, no such requirement applies in European Union regulations nor in regulations of many other single malt whisky producing regions.

Aging

Only a small number of commenters directly discussed location requirements for aging. Those that did (ACSA, NABI, Sazerac, and others) generally supported requiring aging to occur in the United States, but no commenter specifically expressed the view that it should also be required to take place at a single U.S.

distillery. One individual commenter suggested requiring disclosure on the label if the whisky is distilled at one distillery but aged or bottled at a different distillery.

Definition of Distillery

The American Distilled Spirits Alliance (ADSA) requested that TTB clarify the definition of “distillery” in the context of distillation occurring at “one U.S. distillery,” suggesting two possible approaches. First, ADSA suggested the term could apply to the “DSP” which TTB understands to mean the distilled spirits plant under the IRC and TTB regulations, reflected in the permit under those provisions. ADSA stated that an alternative option may be to follow the criteria for use of the term “bottled-in-bond,” which are set forth at 27 CFR 5.88 and require that a distilled spirit labeled as “bottled-in-bond” comply with certain standards, including that the spirits are distilled by the same distiller and, relevant here, at the same distillery.

TTB Response

TTB agrees with the consensus view of the commenters that the standard of identity should require that American Single Malt Whisky be mashed, fermented, distilled, and aged in the United States and that distillation take place at a single U.S. distillery. However, TTB is not incorporating the additional restrictions requiring mashing and fermentation to occur at a single distillery. TTB notes that these additional restrictions were requested by some commenters and opposed by others, and that such restrictions were not proposed in the 2018 ASMWC petition or in Notice No. 213.

As noted in the comments, TTB understands that it is common for U.S. distillers to partner with breweries to produce their mash and believes that the criterion should take into account and reflect the processes that have evolved in the American context as they reflect the expectations of American consumers and businesses for such domestic products. Moreover, this practice allows for innovation in this category by continuing partnerships with breweries. TTB believes this decision will not devalue the single malt whisky category more broadly, as some commenters suggest, because it is reasonable to expect that consumers will continue to have different expectations for products labeled as “American single malt whisky” compared with products labeled as single malt whisky from different countries with different standards.

Regarding the concept of a single distillery or references to the “same distillery,” TTB is amending the regulatory text to clarify that this term will be administered similarly to the “same distillery” requirement for the bottled-in-bond designation at 27 CFR 5.88(a)(2), which generally means the area identified as the location of the bonded area on a distilled spirits plant’s TTB permit or registration.

TTB is not incorporating the requirement suggested by one commenter that the label disclose where aging and bottling occur if different than the distillery where distillation occurred. As noted above, no commenters expressed a view that the American single malt whisky standard of identity should require aging or bottling to take place at the same distillery as distillation. Accordingly, TTB does not believe the fact that aging or bottling occurs at a different distillery is sufficiently critical to the consumer to require that it be disclosed on the label. TTB notes that the information may be provided voluntarily.

Distilled to a Proof of 160° or Less

In Notice No. 210, the proposal included a criterion that, to meet the standard of identity for American single malt whisky, the alcohol content of the liquor must not exceed 160° proof during distillation consistent with petitions TTB had received. It is also consistent with the current standards for many whisky type standards, including “malt whisky” and “whisky distilled from malt mash.”

Five commenters opposed a maximum 160° distilling proof, including Loon Liquors LLC, Brother Justus Whisky Co., and Little Round Still. Loon Liquors LLC stated that consumer expectations have been shaped by single malt whiskies distilled in Scotland and elsewhere, which allow distillation at less than 190° proof, and limiting distillation proof to 160° could confuse consumers. Further, the commenter states that distilling at high proof (between 160° and 190° proof) provides for precision in creating their signature flavor profiles, and limiting proof to no higher than 160° proof prevents American distillers from innovating and competing with distilleries in other countries that do not have such a limitation. Brother Justus Whisky Co. similarly pointed out that other international single malt whisky standards allow distillation at up to 190° proof and stated that a lower limit would stifle innovation and market access by smaller producers. Little Round Still stated that American single malt whisky should have the same

distillation proof limit as single malt whiskies elsewhere, that is, less than 190° proof.

However, the majority of commenters specifically discussing this criterion supported it. For example, the ASMWC supports a distillation proof not exceeding 160° proof, stating that this is an important provision designed to ensure the flavor and character of the grain remains after distillation. The ASMWC points out that, while the Scotch whisky regulations for single malt allow for distillation of up to 190° proof, they also require the use of pot stills, which according to ASMWC, are intended to ensure that more grain flavor is retained in the final distillate. ASMWC asserts that the same result is achieved by providing a lower maximum distillation strength of up to 160° proof. The Scotch Whisky Association similarly expressed support for the 160° proof distillation limit for American single malt whisky, stating it is consistent with single malt whiskies produced elsewhere. Other commenters, such as the Whiskey Lodge expressed support for a distillation proof not exceeding 160° noting that the limit was in line with other American whiskies.

TTB Response

With this final rule, TTB is incorporating a distillation proof of 160° or less for American single malt whisky, consistent with the proposal.

As the Whiskey Lodge suggested above, the proposed criterion is consistent with the current standard for “malt whisky” under TTB regulations, as well as most other types of whisky. As with other criteria, one goal in setting forth a standard of identity for American single malt whisky is to recognize the importance of existing standards for single malt whiskies internationally while also reflecting unique aspects distinctive to American production. Except for light whisky and certain blended whiskies, all subcategories (*i.e.*, types) of domestically-produced whisky recognized in the standards of identity have a maximum distillation proof of 160°. See 27 CFR 5.143(c). As noted by some commenters, this maximum has deep historical roots. President Taft, in a presidential memorandum, noted the distinction between whisky made from distilling a product at a proof of from 140° to 160° [proof] known as ‘high wines,’” and that made from what was then referred to as “neutral spirits” distilled at a proof “varying from 160° to 188°.”² This delineation was carried

² William Howard Taft, Decision on the Meaning of the Term “Whisky” Under the Pure Food Act and

forward following the repeal of prohibition into some of the earliest standards of identity for whisky published by TTB’s predecessor agency, the Federal Alcohol Control Administration, which differentiated between “neutral whisky . . . distilled at more than 160° proof and less than 190° proof” and “straight whisky . . . distilled at not exceeding 160° proof.”³ This distinction has persisted in regulations issued under the FAA Act since then. See 27 CFR 5.21(b) (1938 ed.). Maintaining this standard for American single malt whisky therefore reflects the American style of production that consumers and businesses have operated under since before prohibition.

Additionally, international standards allowing for certain single malt whiskies to be distilled up to 190° proof exist within the context of other standards. The ASMWC points out in its comment that, while for example Scotch whisky standards allow for distillation up to 190° proof, those standards also require the use of pot stills. TTB also notes the ASMWC’s assertion that the 160° distillation proof maximum accomplishes the same goal as the Scotch whisky pot still requirement in retaining the grain flavor in the distillate, which may be significant to consumers.

Distilled From a Fermented Mash of 100 Percent Malted Barley

In Notice No. 213, the proposal included a criterion that, to meet the standard of identity for American single malt whisky, the product must be produced from a fermented mash of only malted barley.

A majority of the commenters specifically addressing this issue expressed support for this criterion. The ASMWC (which the mass comments generally support) stated that the industry and consumers understand that “malt” specified on its own refers to malted barley exclusively, and that this meaning is consistent with longstanding TTB regulations. The Scotch Whisky Association noted “[t]he use of malted barley only in ‘Single Malt Whisky’ is tightly bound up in its reputation as a whisky category globally.” Canyon Diablo Distillery explained, “using less than 100% malted barley and mixing in

the Proper Regulations for Branding Various Kinds of Whisky Under the Internal Revenue Act, (1909) (published online by Gerhard Peters and John T. Woolley, The American Presidency Project <https://www.presidency.ucsb.edu/node/367051>).

³ United States, Federal Alcohol Control Administration, *Regulations relating to false advertising and misbranding of distilled spirits*, United States Govt. Printing Office (1935).

addition[al] different grains changes the character of the whisky and should change its identity,” and the American Distilled Spirits Alliance added, “[f]or [American single malt whisky] to maintain the characteristics consumers expect with the term “single malt,” it must be made from 100% malted barley.”

However, not all commenters agreed with the criterion as proposed and suggested different alternatives. Some commenters expressed that the term “malt” should not be limited to malted barley, but instead reflect a broader view of the term since other grains, such as rye and wheat, can also be malted. For example, Chattanooga Whiskey suggested that only 51 percent malted barley be required in order to reflect a broader understanding of the term malt and allow for innovation explaining that, “nearly every grain can now be malted, in our modern era . . . [m]any [mistakenly] believe that malt is always barley, and that barley is the only grain that contains the requisite enzymes.” Similarly, Bainbridge Organic Distillers stated that this aspect of the definition limited single malt whisky to the concept as it is understood within the United Kingdom, and that prohibiting American distillers from using the term “single malt” when distilling other malted grains would limit innovation.

Other commenters suggested adopting additional standards of identity that would specify the different grains. Canyon Diablo noted on this point that, “[w]hile other grains can be malted and used they should have a different standard of identity and classification and be labeled as such.” Similarly, the ADSA commented that, “While some distillers will argue for the use of alternative grains as innovative or uniquely American, the use of a commonly accepted term—single malt—in naming of the product category requires preserving the base characteristics, which the consumer has already come to expect.” “Single malt” they explained is “an indicator of 100% malted barley” and “an example of such a characteristic, because it forms the base flavor profile for the product.” They concluded that, “[s]ome commenters may propose for the allowance of using rye or wheat, and that’s fine if they are also asking for the creation of an additional category. . . .” Sazerac suggested that allowances for the use of other grains could be incorporated into the terms of the proposed standard for American Single Malt Whisky, providing the example of “a single malt rye made with 100 percent rye.”

TTB Response

TTB agrees with the commenters that state that the term “malt” on its own refers to malted barley exclusively. This meaning is well established and reflects current regulations at 27 CFR 5.143(c)(2) providing that “malt whisky” refers to whisky made from at least 51 percent “malted barley,” while whiskies made with 51 percent of other malted grains must name the grain. Changing this approach would require a more significant change beyond the scope of this rulemaking. Moreover, TTB agrees with the ADSA and other similar comments that allowing the use of other grains in addition to barley in “American single malt whisky” may cause consumer confusion.

Although some commenters suggested that including other types of grain would foster innovation, TTB notes that whisky producers would still be able to innovate with other grains as long as the final product is appropriately labeled. For example, rye malt whisky (with a fermented mash of not less than 51 percent malted rye grain) would be allowed, provided it met the other relevant requirements.

TTB would consider any future petitions from interested parties for the creation of additional standards of identity for other products made primarily or entirely from other malted grains, but TTB is not finalizing any such standards in the context of this rulemaking without an opportunity for public notice and comment to better understand consumer expectations and industry practices surrounding such products.

Stored in Oak Barrels Not Exceeding a Capacity of 700 Liters

The proposed standard set forth in Notice No. 213 included a criterion that American single malt whisky be stored in oak barrels no larger than 700 liters during aging. Twenty commenters specifically expressed support for the 700-liter limit. In explaining their support for this criterion, commenters such as the Scotch Whisky Association, ASMWC, and an individual commenter indicated that it is necessary for the appropriate level of interaction between the whisky and wood of the barrel, and that the limitation would ensure larger barrels that would dilute the effect of the wood contact are not used.

Nine commenters did not support the 700-liter size limit, including Sazerac, the Kentucky Distillers Association, and several individual commenters. Commenters generally highlighted that this limit is not in place for other types of whisky. One commenter, Brandy

Library Lounge, LLC, also stated any limit would be more appropriately expressed in gallons for an American product. Also, one commenter stated a more restrictive limit might be needed but did not specify such a limit. Sazerac suggested a 60-gallon limit instead of a 700-liter limit, stating that a 53-gallon barrel is the industry standard. Two other commenters, an individual commenter and Canyon Diablo Distillery, generally opposed barrels size limitations but similarly suggested that, if such a limitation is imposed, a size closer to the industry standard 53-gallon barrel would be more appropriate.

TTB Response

In this final rule, TTB is finalizing the proposed 700-liter size limit on barrels used for storage of American single malt whisky during aging. TTB is persuaded by the significant majority of commenters in favor of this criterion, in particular by those who raised the point that establishing a barrel size maximum would indicate characteristics related to interaction between the product and the wood in connection with any statements regarding aging. At the same time, TTB acknowledges the concerns raised by certain commenters about establishing a standard not required for or perhaps followed in the production of other whisky types. By establishing a 700-liter size limit, TTB believes consumers will have greater certainty of the degree to which the age of the product represents interaction with the barrel, but producers will still have flexibility to use most barrels typically used for the production of American whiskies. TTB is not finalizing a more restrictive standard, such as the 60-gallon limit suggested by one commenter, because TTB believes it would prevent the use of some barrels commonly used in American whisky production.

In response to commenters who asked for the criterion to be expressed in gallons instead of liters, TTB will consider issuing public guidance clarifying the gallon equivalent to the 700-liter maximum included in the final rule.

The Use of Used, Uncharred New, or Charred New Oak Barrels

The proposed standard set forth in Notice No. 213 included a criterion that allows producers to use oak barrels that are used, uncharred new, or charred new for the storage of American single malt whisky during aging. Twenty-two commenters specifically stated support for allowing the use of used, uncharred new, or charred new oak barrels. These commenters stated that this would allow for creativity, innovation, and

variety in the finished products. Commenters also stated that allowing used barrels would help address a potential low supply of new oak barrels.

One commenter, Canyon Diablo Distillery, expressed the view that the use of non-American wood barrels or used barrels that contained non-American whisky would result in a non-American product. Two commenters suggested allowing storage in non-oak wood casks. Additionally, one commenter opposed the use of used barrels, suggesting that American single malt whisky should be stored only in new oak barrels to be consistent with the definition of malt whisky.

TTB Response

TTB is incorporating this criterion as proposed and will allow American single malt whisky to be stored for aging in oak barrels that are used, uncharred new, or charred new.

Currently, TTB regulations state that one criterion of all whisky is storage in oak barrels. This criterion is already widely accepted in the industry. Allowing storage in barrels made from wood other than oak would be a significant departure from all other types of whisky and could lead to consumer confusion about the characteristics of American single malt whisky. Additionally, finalizing a type standard that contradicts the class standard would have a broader impact than the proposal TTB initially notified. As such, the finalized standard of identity allows for storage only in oak barrels.

While some commenters opposed allowing used oak barrels for storage, TTB believes that allowing American single malt whisky to be stored in used oak barrels recognizes the realities of American whisky-making. As cited by commenters who supported this criterion as proposed, allowing used barrels will help alleviate the possible shortage of oak barrels and is consistent with single malt whiskies produced elsewhere. Moreover, different whisky types permit the use of different types of oak barrels, for example, light whisky and corn whisky can be aged in used or uncharred new oak barrels (27 CFR 5.143(c)(3) and (5)), while bourbon can only be aged in charred new oak barrels (27 CFR 5.143(c)(2)). Allowing multiple barrel types is consistent with those standards.

Finally, TTB believes that storage in a barrel that is not made of American wood, or that previously contained non-American whisky, does not make whisky produced in the United States “non-American.” Since mashing, distilling, and aging all occur in the

United States, the product is an American product regardless of the source of the wood for the barrel.

Bottled at Not Less Than 80° Proof

The proposed standard set forth in Notice No. 213 included a criterion requiring American single malt whisky to be bottled with an alcohol by volume content of not less than 40 percent (or 80° proof). TTB did not specifically include this criterion as part of the proposed American single malt whisky standard of identity in § 5.143(c)(15), as it flows directly from the general definition of the class “whisky” under current regulations. TTB received six comments supporting this criterion and is merely noting for clarity that American single malt whisky must be bottled at not less than 80° proof, consistent with the class requirements.

Use of Geographical Designations Other Than American

The proposal set forth in Notice No. 213 is unique among American whiskies in that the geographical designation “American” is expressly included in the type designation. This is different, for example, from the type designation “bourbon whisky” that must be made in the United States, but does not include the “American” reference in the type designation. The petition that provided the basis for Notice No. 213, and consequently the proposal in that notice, did not set forth a standard of identity for “single malt whisky” but rather a standard for a specific product to be identified as “American single malt whisky.” As a result, commenters requested clarification of the rules for including State and other geographic designations for such a standard.

The ADSA asked that TTB clarify whether the regulations for American single malt whisky would “preclude the usage of the name of the specific U.S. State or U.S. City of production in lieu of ‘American,’” further proposing that “[s]o long as the product being made complies with the Class and Type for [American single malt whisky] it should be allowed to use a furthering descriptor.” ADSA provides the example of an industry member making a product in Montana that would comply with the American single malt whisky standard of identity, and asserts that they should be allowed to either include Montana as a geographic descriptor or to replace the word “American” with “Montana” and use the term “Montana single malt whisky” because the “clear implication” is that the product is not only an American single malt whisky but one from Montana. ADSA further states that at no

time should such a product be allowed to be labeled with the State or similar descriptor without the term

“American,” if it does not meet the American single malt whisky criteria.

Whiskey Lodge similarly suggested that if a State or any designation more specific than “American” appeared in the designation, TTB allow the term “American” to not appear, for example, “Texas single malt [w]hiskey” and “Rocky Mountain single malt whiskey.” Relatedly, an individual commenter suggested that TTB also add American single malt whisky standards of identity for particular regions within the United States noting, “A malt whiskey from the Pacific Northwest is very different from a whiskey made in the southern states and very different from a whiskey made in the Midwest.”

TTB Response

The standard of identity TTB proposed in Notice No. 213 generally incorporated the proposal it had received from ASMWC, and TTB stated in that notice that, as proposed, the amendment to the regulations would affect any COLA that uses the term “American single malt whisky” as a designation, as products with those labels would be required to meet any new standard of identity. The proposal did not contemplate applying the standards more broadly to products labeled as “single malt whisky” with other place names. Additionally, the ASMWC stated in its comment that it was not aware of more than a handful of whiskies bottled, labeled, and sold as “American single malt whisky” that would not meet the requirements for the proposed American single malt whisky standard of identity, and so conveyed its understanding that the proposal was limited in scope to such products. Applying the criteria of the standard of identity beyond use of the term “American single malt whisky” would significantly expand the scope of what was originally proposed, potentially affecting labels for any malt whisky domestically produced and currently labeled with “single malt whisky,” not just those labeled using the term “American single malt whisky.” TTB would not be able to finalize such an expanded application without considering the effect on all stakeholders and providing additional notice and opportunity to comment. As a result, TTB is finalizing the standard of identity with the scope that was proposed, and only labels bearing the term “American single malt whisky” would be held to the criteria for that standard. Products produced in the United States that do not bear the full

term would not be required to meet the criteria for use of the term “American single malt whisky.” TTB would consider proposing such a broader scope should it receive a petition to do so.

Comments on TTB’s Request for Information

In addition to the above criteria for American single malt whisky, TTB posed eight questions in Notice No. 213 that relate to the addition of American single malt whisky as a type of whisky and its implementation. The comment summary above includes responses to comments regarding two of the eight questions, related to size restrictions for barrels used to store American single malt whisky and the use of used and new oak barrels in the production of American single malt whisky. Below is a summary of the comments and TTB’s responses on the remaining six questions.

Use of Coloring, Flavoring or Blending Materials

TTB solicited feedback on whether to allow the use of coloring, flavoring, or blending materials in the production of American single malt whisky. The majority of commenters opposed their use, and thirty-eight commenters noted that doing so could be misleading for consumers. Many commenters were concerned that the use of additives would undermine this category of spirits, which is currently considered prestigious.

However, while many commenters expressed a general opposition to the use of coloring, flavoring, or blending materials in American single malt whisky, several of those in opposition made an exception for the use of caramel color. For example, DISCUS generally opposed allowing coloring, flavoring, or blending materials but expressed openness to the use of caramel color if disclosed on the label. Similarly, the ASMWC suggested prohibiting all coloring, flavoring, or blending materials but recognized that the addition of caramel color is “customarily employed” in the production of American single malt whisky and other single malt whiskies. The Irish Whisky Association and Scotch Whisky Association both expressed support for the addition of caramel coloring, consistent with the respective standards of their country’s single malt whiskies.

Overall, 18 commenters supported some allowance for coloring materials, with the majority of those supporting only the use of caramel coloring. In general, commenters who supported the

use of coloring materials also stated that there should be a requirement to disclose the use of coloring materials on the label. Additionally, two commenters stated they may possibly support coloring, flavoring, or blending materials if they were more clearly defined. No commenters specifically supported allowing the use of flavoring materials in American single malt whisky.

TTB Response

In response to comments received, TTB is finalizing a standard of identity for American single malt whisky that allows the use of caramel coloring, provided that the use of such coloring material is disclosed on the label. Allowing caramel coloring aligns American single malt whisky with many other types of whisky, including other single malt whiskies produced internationally. Prohibiting all other coloring, flavoring, and blending materials would narrow the allowed additives as supported by commenters. While TTB’s current regulations at 27 CFR 5.72(c) generally do not require a statement of any type when caramel coloring is used in the types of whiskies that allow such coloring material (if used at not more than 2.5 percent by volume of the finished product), TTB agrees with commenters that any added caramel coloring should be disclosed on the label of American single malt whisky to ensure transparency regarding the product’s readily-observable characteristics.

Use of the Designation “Straight”

Notice No. 213 included a question on whether to allow the designation “straight” to be used with American single malt whisky. Under current regulations, the “straight” designation generally refers to an aging requirement of at least two years, which is the period of time the whisky has been stored in an oak barrel of the type otherwise required for the underlying standard of identity. For example, “bourbon whisky” may only be stored in charred new oak barrels, and “straight bourbon whisky” must be stored in a charred new oak barrel for a minimum of two years.⁴ See 27 CFR 5.143(c)(2) and (5).

Ten commenters were in support of allowing the designation “straight” to be used with American single malt whisky, including ACSA, ADSA, Whiskey Lodge, and several individual

commenters and distilleries. These commenters were in general agreement that the term “straight” should be allowed as long as the whisky has been aged for at least two years.

Eight commenters opposed the use of the designation “straight” with American single malt whisky, including the National Association of Beverage Importers, Scotch Whisky Association, Irish Whisky Association, spiritsEUROPE, and several individual commenters and distilleries. These commenters indicated that the term “straight” would cause confusion in the global marketplace because the term is unique to American whisky. In general, these commenters suggested a minimum age requirement or including the product’s age on the label instead of using the term “straight.” One commenter, New Riff Distilling LLC, stated the term “straight” should only be allowed to indicate the use of new charred oak barrels.

TTB Response

TTB will allow the use of the designation “straight” with American single malt whisky as long as the two-year aging requirement is met. Allowing for this designation would be consistent with other product designations for whisky under TTB’s regulations, where the “straight” whisky must be stored for two years in the type of barrel associated with the underlying type of whisky. In other words, for American single malt whisky to be designated as “straight American single malt whisky,” the whisky must be stored for a minimum of two years in used, uncharred new, or charred new oak barrels. While commenters in opposition to the use of the term “straight” suggested that the term is not well-understood in the global market because it is only used on American whiskies, TTB agrees with an individual commenter in support who suggests that “straight” is a term that is unique to American whiskies, so it is therefore appropriate for use with American single malt whisky as an additional distinguishing factor.

TTB is incorporating a new paragraph (c)(16) in table 1 of 27 CFR 5.143 to account for “straight American single malt whisky” as described above. TTB is not incorporating any other minimum age requirement(s) in the American single malt whisky standard of identity. Commenters, including NABI, the Scotch Whisky Association, Sazerac, Japan Spirits and Liqueurs Makers Associations, spiritsEUROPE, the Irish Whisky Association, NIST on behalf of the UK, and the Kentucky Distillers’ Association, suggested that American

⁴ Similarly, “corn whisky” bearing an age statement must have been stored in used or uncharred new oak barrels, and “straight corn whisky” must have been stored in used or uncharred new oak barrels for a minimum of two years. See 27 CFR 5.143(c)(3) and (6).

single malt whisky should have a minimum age requirement ranging from two to four years. However, TTB believes this would unduly hinder innovation and notes that no other types within the class “whisky” have a minimum age requirement (other than the age requirement associated with the “straight” designator). Further, because TTB’s regulations generally require that whiskies aged less than four years bear an age statement (see 27 CFR 5.74(b)), TTB believes there is sufficient transparency within the class regarding age.

“Blended” American Single Malt Whisky

TTB requested and received input on whether to allow for mixtures of American single malt whisky to be labeled as “blended American single malt whisky,” similar to how TTB regulations allow for blended Scotch whisky and blended Canadian whisky to be labeled, respectively, “blended Scotch whisky” and “blended Canadian whisky.” Eight commenters support the use of the term “blended American single malt whisky.” These commenters, which include individuals and distilleries, noted that producers and consumers desire products composed of whisky from more than one distillery.

Thirteen commenters oppose use of the term “blended American single malt whisky”, asserting use of the term “blended” may cause consumer confusion because the term “blended” is typically not associated with the term “single.” These commenters included ACSA, DISCUS, Kentucky Distillers Association, Scotch Whisky Association, Irish Whisky Association, spiritsEUROPE, Japan Spirits and Liqueurs Makers Association, and individual commenters and distilleries. Some commenters (for example, ACSA, DISCUS) suggested modifying the name of this product category to replace the term “single” with “blended,” such as “American Blended Malt Whisky.”

TTB Response

TTB’s finalized regulations for the American single malt whisky standard of identity do not allow blends of whiskies from multiple distilleries that would otherwise meet the American single malt whisky criteria to be labeled “blended American single malt whisky.” TTB agrees with the commenters in opposition that blending whiskies from multiple distilleries is fundamentally contradictory to the meaning of “single” in the American single malt whisky standard of identity, even if the “blended” modifier is included. As such, producers blending

whiskies from different distilleries may not classify them as American single malt whisky. With respect to commenters’ suggestion to modify the name of the standard of identity to “American Blended Malt Whisky” for blends, TTB notes that a blend of whiskies produced in the United States and meeting the current standard of identity for “malt whisky” could already be labeled “American Blended Malt Whisky.”

Impact on Trademark Owners and Producers of Malt Whisky

In Notice No. 213, TTB sought comments on the impact that adding a standard of identity for American single malt whisky may have on owners of U.S. trademarks and current producers of malt whisky. In general, commenters who support establishing this standard of identity stated that the definition of American single malt whisky in the standard of identity would be beneficial to producers and trademark owners, as it would lend credibility to their operations, bring potential for increased recognition globally, and foster innovation. They assert that it would help ensure a level playing field for producers of American single malt whisky and maintain the premium reputation of the category. Additionally, the ASMWC stated they are not aware of more than a handful of whiskies bottled, labeled, and sold as “American single malt whisky” that would not meet the requirements for the proposed American single malt whisky standard of identity.

One commenter suggested that current producers who may face an economic hardship due to the new standard of identity should be able to continue to use their current products or processes. Another commenter asserted that its labels and trademarks would be negatively impacted by the rulemaking unless the standard of identity is modified to allow distillation at up to 190° proof. The commenter further stated that, along with adversely impacting their business, requiring American single malt whisky distillers to limit their distillation proof to 160° or less would inhibit market access and create a competitive disadvantage for American single malt whisky distillers vis-à-vis those producing outside of the United States, would be anti-competitive, and would exclude innovative whiskies.

TTB Response

As illustrated above, most commenters emphasized how establishing a standard of identity for American single malt whisky would

benefit U.S. producers. However, as also noted above, one commenter specifically stated that they, and the industry, would be negatively affected by the proposed standard of identity. Given that the current standard for production proof of malt whisky is consistent with the production proof of the standard of identity proposed for American single malt whisky, TTB is not aware of any widespread expectation in the industry that products meeting only the class standard of identity “whisky,” along with the other proposed criteria, would or should qualify for an American single malt whisky standard of identity. As discussed in the explanation of the maximum distillation proof criterion, the standards of identity for malt whisky and most other American whisky types within the general class (all except for light whisky and certain blended whiskies) allow distillation only up to a maximum of 160° proof.

In the event that there are current producers with approved labels that designate a product as “American single malt whisky,” producers may continue to use those labels but only on products that comply with the new requirements of TTB’s regulations in 27 CFR part 5, subject to the transition period discussed below in this document. Producers of products that do not comply with the new standard of identity could continue to produce such products but would need to obtain approval of new labels indicating the applicable class and/or type.

Use-Up of Previously Approved Labels

Commenters also provided feedback on whether, after establishment of the “American single malt whisky” standard of identity, TTB should allow producers to use up previously approved labels that do not comply with this standard, and for how long TTB should allow the use of these previously-approved labels before such labels would be revoked by operation of regulation. Commenters provided a wide range of answers, stating that after the establishment of the American single malt whisky standard of identity, producers should be afforded anywhere from 60 days to 20 years to use up previously approved labels that do not comply with this standard. One commenter recommended that TTB allow producers to revise their current label instead of requiring the application for a new one. Additionally, another commenter implied that if obtaining a new label would pose an economic hardship, that TTB allow the continued use of already approved

labels on products not meeting the criteria.

TTB Response

TTB is providing a five-year transition period, as discussed below in this document. This amount of time should allow any affected industry members to make label changes in conjunction with any routine label updates or change their processes to ensure their product conforms to the new standard of identity described in this rule.

Competition in the Alcohol Beverage Market

Finally, commenters provided feedback on how the addition of a standard of identity for American single malt whisky would affect competition in the alcohol beverage market (see “Effect on Currently-Approved Labels”). Commenters generally provided feedback that the addition of this standard of identity would increase the competitiveness of American distillers and level the playing field among producers of American single malt whisky. As noted above, one commenter asserted that a standard that requires a distillation proof of 160° is anti-competitive.

TTB Response

TTB notes positively the feedback from commenters that the addition of this standard of identity would increase the competitiveness of American distillers and level the playing field among producers of American single malt whisky. TTB addresses these comments as well as the comment on the maximum distillation proof of 160° further below in the sections “Effect on Currently-Approved Labels” and “Impact on Trademark Owners and Producers of Malt Whisky.”

TTB Determination

After careful consideration of the petitions received in response to this issue in Notice No. 176 and the comments received in response to Notice No. 213, TTB is finalizing a standard of identity for “American single malt whisky,” with two changes from the standard proposed in Notice No. 213. As originally proposed, TTB is defining American single malt whisky as a type of whisky that is mashed, distilled, and aged in the United States; is distilled entirely at one U.S. distillery; is distilled to a proof of 160 or less; is distilled from a fermented mash of 100 percent malted barley; is stored in oak barrels (used, uncharred new, or charred new) with a maximum capacity of 700 liters; and is bottled at not less than 80° proof.

In the first change from the proposal in Notice No. 213, TTB is providing for the use of the designation “straight” with American single malt whisky that is aged for two years. The second change allows for the use of caramel coloring as long as it is disclosed on the label.

This new standard of identity will be added to 27 CFR 5.143. TTB is also revising certain other sections in part 5 to include cross references to American single malt whisky.

Effect on Currently-Approved Labels

TTB will allow a five-year transition period, as this amount of time should allow any affected industry members to make label changes in conjunction with any routine label updates, to use up existing labels, or to change their processes to ensure their product conforms to the new standard of identity. A label with the designation “American single malt whisky” may be used for whisky that does not meet the new standard of identity if it is bottled within five years from the effective date of this final rule, provided that such label was approved before the effective date of this final rule and the whisky conforms to the standards set forth in 27 CFR 5.143 in effect prior to this final rule. All products bottled after this five-year transition period bearing an “American single malt whisky” designation must meet the standards for such designation. TTB may act to revoke COLAs covering non-compliant products and/or take other enforcement action against bottlers using such COLAs.

Regulatory Analysis and Notices

Regulatory Flexibility Act

Pursuant to the requirements of the Regulatory Flexibility Act (5 U.S.C. chapter 6), TTB certifies that this final rule will not have a significant economic impact on a substantial number of small entities. The final rule amends the standards of identity for whisky in TTB’s regulations at 27 CFR 5.143(c) and makes conforming edits in other sections of part 5. It does not impose or otherwise cause any new reporting, recordkeeping, or other administrative requirements. TTB does not believe this rulemaking will affect a significant number of existing labels for distilled spirits products but is providing a five-year transition period to mitigate the effects on any affected industry member. (TTB specifically solicited comments on potential impacts on current producers and received only one comment from a producer indicating that their label(s) would be

affected by the proposed regulations.) Therefore, no regulatory flexibility analysis is required.

Paperwork Reduction Act

The collection of information in this rule has been previously approved by the Office of Management and Budget (OMB) under the title “Labeling and Advertising Requirements Under the Federal Alcohol Administration Act,” and assigned control number 1513–0087. This regulation would not result in a substantive or material change in the previously approved collection action, since the nature of the mandatory information that must appear on labels affixed to the container remains unchanged. An agency may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a valid control number.

Executive Order 12866

This final rule is not a significant regulatory action as defined in Executive Order 12866, as amended. Therefore, a regulatory assessment is not required.

List of Subjects in 27 CFR Part 5

Advertising, Alcohol and alcoholic beverages, Consumer protection, Labeling, Liquors, Packaging and containers, and Reporting and recordkeeping requirements.

Amendments to the Regulations

For the reasons discussed in the preamble, TTB amends 27 CFR part 5 as follows:

PART 5—LABELING AND ADVERTISING OF DISTILLED SPIRITS

- 1. The authority citation for part 5 continues to read as follows:

Authority: 26 U.S.C. 5301, 7805, 27 U.S.C. 205 and 207.

Subpart A—General Provisions

- 2. Amend § 5.1 by revising the term “Age” to read as follows:

§ 5.1 Definitions.

* * * * *

Age. The length of time during which, after distillation and before bottling, the distilled spirits have been stored in oak barrels. “Age” for bourbon whisky, rye whisky, wheat whisky, malt whisky, or rye malt whisky, and straight whiskies other than straight corn whisky and straight American single malt whisky, means the period the whisky has been stored in charred new oak barrels.

* * * * *

Subpart E—Mandatory Label Information

■ 3. Amend § 5.66 by revising paragraphs (f)(1) introductory text and (f)(1)(i) to read as follows:

§ 5.66 Name and address for domestically bottled distilled spirits that were wholly made in the United States.

* * * * *

(f) * * *

(1) The State of distillation, which is the State in which original distillation takes place, must appear on the label of any type of whisky defined in § 5.143(c)(2) through (7), (15), and (16), which is distilled in the United States. The State of distillation may appear on any label and must be shown in at least one of the following ways:

(i) By including a “distilled by” (or “distilled and bottled by” or any other phrase including the word “distilled”) statement as part of the mandatory name and address statement, followed by a single location;

* * * * *

■ 4. Amend § 5.72 by adding a sentence at the end of paragraph (c) to read as follows:

§ 5.72 Coloring materials.

* * * * *

(c) * * * Provided, if any amount of caramel color is used in American single malt whisky, or in straight American single malt whisky, a statement specifying the use of caramel color must appear on the label.

* * * * *

■ 5. Amend § 5.74 by revising paragraphs (a)(1) and (b)(4) to read as follows:

§ 5.74 Statements of age, storage, and percentage.

(a) * * *

(1) As defined in § 5.1, age is the length of time during which, after distillation and before bottling, the distilled spirits have been stored in oak barrels. For bourbon whisky, rye whisky, wheat whisky, malt whisky, or rye malt whisky, and straight whiskies other than straight corn whisky and straight American single malt whisky, aging must occur in charred new oak barrels.

* * * * *

(b) * * *

(4) In the case of whisky made in the United States and stored in reused oak barrels, other than corn whisky, light whisky, American single malt whisky, and straight American single malt whisky, in lieu of the words “___ years old” specified in paragraphs (b)(1) and (2) of this section, the period of storage in the reused oak barrels must appear on the label as follows: “stored ___ years in reused cooperage.”

* * * * *

Subpart I—Standards of Identity for Distilled Spirits

■ 6. Amend § 5.143 by:

■ a. Redesignating paragraphs (c)(16) through (18) in table 2 as paragraphs (c)(17) through (19);

■ b. Adding paragraphs (c)(15) and (16) to table 1; and

■ c. Adding paragraph (d).

The additions read as follows:

§ 5.143 Whisky.

* * * * *

(c) * * *

TABLE 1 TO PARAGRAPH (c)—TYPES OF WHISKY AND PRODUCTION, STORAGE, AND PROCESSING STANDARDS

Type	Source	Distillation proof	Storage	Neutral spirits permitted	Allowable coloring, flavoring, blending materials permitted
* * * * *	* * * * *	* * * * *	* * * * *	* * * * *	* * * * *
(15) American single malt whisky.	Fermented mash of 100 percent malted barley, produced in the United States.	160 or less, distilled at the same distillery in the United States.	Used, charred new, or uncharred new oak barrels; 700-liter maximum capacity; stored only in the United States.	No	No, except for caramel coloring and only if disclosed on the label.
(16) Straight American single malt whisky.	Fermented mash of 100 percent malted barley, produced in the United States.	160 or less, distilled at the same distillery in the United States.	Used, charred new, or uncharred new oak barrels for a minimum of 2 years; 700-liter maximum capacity; stored only in the United States.	No	No, except for caramel coloring and only if disclosed on the label.

* * * * *

(d) *Transition period.* A label with the designation “American single malt whisky” or “straight American single malt whisky” may be used on distilled spirits bottled before January 19, 2030, if the distilled spirits conform to the applicable standards set forth in this part in effect prior to January 19, 2025.

Signed: December 12, 2024.

Mary G. Ryan,
Administrator.

Approved: December 12, 2024.

Aviva R. Aron-Dine,
Deputy Assistant Secretary for Tax Policy.

BILLING CODE 4810–31–P

DEPARTMENT OF THE TREASURY**Bureau of the Fiscal Service****31 CFR Part 323**

[FISCAL–2023–0002]

RIN 1530–AA28

Disclosure of Records

AGENCY: Bureau of the Fiscal Service, Department of the Treasury.

ACTION: Final rule.

SUMMARY: The Bureau of the Fiscal Service (Fiscal Service) within the

Department of the Treasury (Treasury) is issuing regulations to implement statutory requirements under the SECURE 2.0 Act of 2022 that require Treasury to provide certain U.S. savings bond information to States. A State receiving the information with respect to an applicable savings bond may use the information to locate the owner of the bond pursuant to Treasury's regulations and the State's own standards and requirements under abandoned property rules and regulations of the State. Under the SECURE 2.0 Act of 2022, Treasury is required to issue regulations or guidance to protect the privacy of savings bond owners, prevent fraud, and ensure that information disclosed to a State is used solely to locate savings bond owners.

DATES: This rule is effective December 18, 2024.

FOR FURTHER INFORMATION CONTACT:

Marcia Goodnight, Retail Securities Services, at RetailSecurityServicesComments@fiscal.treasury.gov; or Lela Anderson, Attorney-Advisor, at 304-480-8692.

SUPPLEMENTARY INFORMATION:

I. Background

The U.S. Department of the Treasury has issued savings bonds since 1935 on the credit of the United States to raise funds for Federal programs and operations. Article 8, Section 8, Clause 2 of the Constitution authorizes the Federal Government to "borrow money on the credit of the United States." Under this grant of power, "Congress authorized the Secretary of the Treasury, with the approval of the President, to issue savings bonds in such form and under such conditions as he may from time to time prescribe." *Free v. Bland*, 369 U.S. 663, 667 (1962) (citing the predecessor to 31 U.S.C. 3105). Congress provided that the proceeds of savings bonds may be used by the Federal Government for any expenditures authorized by law. *See* 31 U.S.C. 3105(a).

Congress expressly authorized the Secretary of the Treasury to establish the terms and conditions that govern the savings bond program. 31 U.S.C. 3105(c). Treasury's implementing regulations set forth "a contract between the United States and savings bond purchasers," giving "purchasers confidence that the United States will honor its debts when a purchaser surrenders a savings bond for payment" and protecting "the public fisc by ensuring that Treasury does not face multiple claims for payment on a single savings bond." 80 FR 80258 (Dec. 24,

2015). In general, savings bonds are not transferrable and are payable only to the registered owner, except as described in Treasury regulations detailing when payment will be made to a person or entity that is not the registered owner. *See* 31 CFR 315.15, 353.15, and 360.15.

To redeem a paper savings bond, the registered owner or a successor specified in the regulations must surrender the physical bond. *See* 31 CFR 353.35. Although there are exceptions to this surrender requirement, the exceptions are "carefully drawn to protect the owner's rights and to protect Treasury against competing claims." 80 FR 80258. For example, if a claimant cannot surrender the bond, the claimant must provide satisfactory evidence of the loss, theft, or destruction of the bond, or a satisfactory explanation of the mutilation or defacement, as well as sufficient information to identify the bond by serial number. *See, e.g.,* 31 CFR parts 315 and 353, subpart F. Pursuant to express statutory authority, Treasury regulations allow owners to keep their bonds indefinitely and to surrender them for payment at any time after the bonds mature. *See* 31 U.S.C. 3105(b) and 31 CFR parts 315 and 353, subpart H.

Litigation Over State Escheat Claims

Many State escheat laws allow States to take custody of unclaimed or abandoned property. Treasury discussed the effect of escheat on the rights of savings bond owners in a 1952 bulletin to the Federal Reserve Banks addressing a State claim to the custody of four savings bonds in the State's possession, which had belonged to a ward of the State who died without heirs. In this context, where the State had possession of the bonds it sought to redeem, Treasury stated that it will not recognize a State claim to the custody of savings bonds, but will recognize an escheat judgment that confers title on a State because "in escheat the state is 'the ultimate heir.'" 80 FR 80258 (quoting Public Debt Bulletin No. 111, Subject: State Statutes Concerning Abandoned Property (Feb. 27, 1952) at 3). It was unnecessary for the 1952 bulletin to provide further detail about State escheat claims because in that case the State did not claim title over the bonds. *Id.*

Treasury addressed a new, broader custody escheat claim in 2004 and 2006, when several States attempted to claim the proceeds of all matured, unredeemed bonds registered to residents in their State. Unlike the claim addressed by the 1952 bulletin, these States did not possess the bonds they

sought to redeem, which presumably were still held by their owners. Treasury informed the States that they "must possess the bonds they seek to redeem." 80 FR 20259 & n.3 (citing 2004 and 2006 letters to various States). In the ensuing litigation, the U.S. Court of Appeals for the Third Circuit concluded that the State unclaimed property statutes conflicted with Federal law. *See New Jersey v. U.S. Dep't of the Treasury*, 684 F.3d 382, 407-09 (3d Cir. 2012), *cert. denied*, 569 U.S. 1004 (2013). The States' "efforts to impose the status of 'abandoned' or 'unclaimed' on the Federal Government's obligations" could not be reconciled with the fact that the bond proceeds are not 'abandoned' or 'unclaimed' under Federal law because the owners of the bonds may redeem them at any time after they mature." *Id.* at 409.

Subsequent litigation was prompted by certain States enacting title escheat laws specifically for savings bonds that the States deemed to be "unclaimed" or "abandoned." In 2000 and 2015, respectively, Kansas and Arkansas enacted statutes providing that a U.S. savings bond is presumed to be abandoned if it has not been redeemed by a certain time and further providing that such bonds escheat to the State a certain time after the bonds are presumed abandoned. *See* 80 FR 80259. Pursuant to those laws, Kansas and Arkansas initiated escheat proceedings to claim title to bonds in their possession, as well as to a broad class of bonds the States did not possess. With respect to the bonds not in their possession, Kansas and Arkansas published statements in local newspapers of their intention to claim title to bonds of a particular description. Although bond owners were not parties to the escheat proceeding, and may never have learned that the State was attempting to claim title over their bonds, they were obligated to respond to the escheat proceeding in order to protect their ownership of the bonds. *Id.* After obtaining *ex parte* escheat judgments, Kansas and Arkansas sought to redeem the savings bonds not in their possession. Treasury denied those requests.

The U.S. Court of Appeals for the Federal Circuit upheld Treasury's decision for two independent reasons. First, the Court of Appeals held that "federal law preempts the States' escheat laws." *LaTurner v. United States*, 933 F.3d 1354, 1357 (Fed. Cir. 2019), *cert. denied*, 141 S. Ct. 239 (2020). The court explained that, whereas "Treasury regulations impose no time limit on the redemption of savings bonds," the State laws provide

that, “if bond holders do not redeem their bonds promptly enough (as decided by the States), they lose ownership and the bonds will transfer to the state.” *Id.* at 1361. The court determined that, because “federal law takes precedence,” *id.* (quoting *Murphy v. National Collegiate Athletic Ass’n*, 584 U.S. 453, 477 (2018)), “the bonds belong to the original bond owners, not the States, and thus the States cannot redeem the bonds,” *id.* at 1357.

Second, the Court of Appeals held that, “even if the States owned the bonds, they could not obtain any greater rights than the original bond owners,” and Treasury’s regulations make clear that “a bond owner must provide the serial number to redeem” the specific bonds at issue. *LaTurner*, 933 F.3d at 1357. The court observed that “the States do not have the physical bonds or the bond serial numbers.” *Id.* The court therefore determined that, “even if the bonds here are considered lost,” *id.* at 1364, “Treasury properly denied [the States’] request for redemption,” *id.* at 1357. The court also concluded that the States could not “circumvent the [regulatory] requirement” to “provide the serial number” of the bonds by asking “the government to disclose the bond serial numbers as a matter of discovery.” *Id.* at 1366. The Court of Appeals denied the States’ petitions for rehearing *en banc*, and the Supreme Court denied the States’ petitions for writs of certiorari. *LaTurner v. United States*, 141 S. Ct. 239 (2020); *Lea v. United States*, 141 S. Ct. 240 (2020).

While that litigation was ongoing, Treasury amended its regulations in 2015 through notice-and-comment rulemaking to clarify that it “will not recognize an escheat judgment that purports to vest a State with title to a bond that the State does not possess.” 31 CFR 315.88(a); *see also* 31 CFR 315.20(b) (“Escheat proceedings will not be recognized under this subpart.”), 80 FR 80264–65. In a separate suit filed in Federal district court, Kansas and four other States challenged the amended regulations as an allegedly unjustified departure from Treasury’s past practice. The district court rejected that challenge, concluding that the regulations clarified rather than changed Treasury’s practice. *See Estes v. U.S. Dep’t of the Treasury*, 219 F. Supp. 3d 17, 22 (D.D.C. 2016). The States appealed but voluntarily dismissed the appeal. *See Order, LaTurner v. U.S. Dep’t of the Treasury*, No. 17–5015 (D.C. Cir. Nov. 21, 2017).

Thus, under 31 U.S.C. 3105 and Treasury’s implementing regulations, U.S. savings bond owners are entitled to redeem their bonds at any time after

maturity without penalty; the United States honors those debts in perpetuity. *See* 31 CFR 353.35. State laws that treat matured but not yet redeemed U.S. savings bonds that are not in a State’s possession as “abandoned” property subject to escheatment undermine the rights of registered owners or their heirs to redeem matured bonds whenever they choose through the simple act of turning in the physical bonds to a designated payor such as a local bank. Treasury’s existing regulations preempt any State law that deems U.S. savings bonds “abandoned” because they are not yet redeemed or otherwise interferes with the Federal-law rights of the registered owners or their heirs to redeem them.

SECURE 2.0 Act of 2022

Against that backdrop, Congress considered legislation to amend 31 U.S.C. 3105. As discussed further below, Congress declined to enact a 2021 legislative proposal that would have allowed States to escheat matured, unredeemed savings bonds that are not in their possession. Instead, Congress enacted the SECURE 2.0 Act of 2022¹ (Secure 2.0 Act), which was signed into law on December 29, 2022.

The Secure 2.0 Act added subsection (f) to 31 U.S.C. 3105, requiring Treasury to share certain U.S. savings bond information with States for the purpose of locating savings bond owners. Under new subsection (f), Treasury “shall provide each State, in digital or other electronic form, with information describing any applicable savings bond which has an applicable address that is within such State, including (i) the name and applicable address of the registered owner; and (ii) the name and applicable address of any registered co-owner or beneficiary.”² “Applicable address” is defined as the registered address for the registered owner (or co-owner or beneficiary) of the savings bond or the last-known address for the registered owner (or co-owner or beneficiary) available to the Secretary.³ “Applicable savings bond” is defined as a savings bond (1) which is more than three years past its final maturity date, (2) is in paper form, or is in paperless or electronic form and there is no designated bank account or routing information or the designated bank account or routing information is incorrect; and (3) has not been redeemed.⁴

¹ Public Law 117–328 (Dec. 29, 2022), Division T; 31 U.S.C. 3105(f).

² 31 U.S.C. 3105(f)(1)(A).

³ 31 U.S.C. 3105(f)(1)(C).

⁴ 31 U.S.C. 3105(f)(6).

The new subsection (f) expressly limits the purpose for which a State may use the information shared by Treasury to locating the registered savings bond owner. The statute provides: “Any State that receives information described in paragraph (1)(A) with respect to an applicable savings bond may use such information to locate the owner of such bond pursuant to the same standards and requirements as are applicable under” State abandoned property rules and any regulations or guidance promulgated by Treasury pursuant to the Secure 2.0 Act. 31 U.S.C. 3105(f)(4). The Secure 2.0 Act does not override the Treasury regulations described above, which do not allow States to escheat savings bonds that are not in their possession.

The Secure 2.0 Act directs Treasury to prescribe regulations or guidance as may be necessary to carry out the purposes of subsection (f), including rules to protect the privacy of the owners of applicable savings bonds, prevent fraud, and ensure that any information provided to a State is used solely for the purposes of the new subsection (f).⁵ Under the Secure 2.0 Act, regulations or guidance issued by Treasury must not have the effect of prohibiting, restricting, or otherwise preventing a State from obtaining the information described above, except as deemed necessary to protect privacy or prevent fraud or misuse of savings bond information.⁶

II. Public Comments and Fiscal Service’s Responses

On October 31, 2023, Fiscal Service published a notice of proposed rulemaking (NPRM) to carry out the purposes of the Secure 2.0 Act.⁷ Fiscal Service received 14 substantive comment letters in response to the NPRM. Twelve comments were from State treasurers’ offices or their legal representatives, one was a joint comment from the National Association of Unclaimed Property Administrators (NAUPA) and the National Association of State Treasurers (NAST), and one comment was from a private individual. The comments largely fell into four general categories: (1) the restriction on using shared information about savings bonds to escheat those bonds, (2) the lack of Congressional appropriations for States to use in attempting to locate savings bond owners, (3) the lack of a claims servicing role for the States after locating savings bond owners, and (4) the prohibition on publicly releasing

⁵ 31 U.S.C. 3105(f)(2)(A).

⁶ 31 U.S.C. 3105(f)(2)(B).

⁷ 88 FR 74386.

savings bond information without the express consent of Treasury. There were also comments on certain other topics, which we also address below.

Restriction on Using Shared Information to Escheat Bonds

Eight commenters objected to the proposed regulation's restriction on using the information shared by Treasury under the Secure 2.0 Act to escheat the applicable savings bonds. According to those commenters, escheat would be more efficient and cost effective to unite the bond owners with their property than the process outlined in the proposed regulation. One commenter also asserted that (1) the regulations exceed Treasury's statutory authority by prohibiting escheat, (2) denying escheatment to the States is arbitrary and capricious, and (3) prohibiting escheatment using information obtained under the Secure 2.0 Act is a departure from Treasury's existing possession escheat policy.

These objections disregard the express limitations that the Secure 2.0 Act imposes on a State's use of the information shared pursuant to the Secure 2.0 Act. As described above, the Secure 2.0 Act only authorizes a State to use the shared information for the purpose of locating the bond owners. Under the Secure 2.0 Act, "any State that receives information [from Treasury] with respect to an applicable savings bond may use such information to locate the owner of such bond."⁸ The statute also requires Treasury to prescribe regulations or guidance as may be necessary to "ensure that any information provided to a State under [new subsection (f)] shall be used solely to carry out the purposes of" that subsection.⁹ By restricting the use of information provided to a State under these regulations, Treasury is implementing the statute in accordance with its express terms.

Further, the Secure 2.0 Act does not override existing Treasury regulations that prohibit a State from escheating a bond that the State does not have in its possession. Under regulations that predate the Secure 2.0 Act, a matured U.S. savings bond does not expire and may be redeemed by the registered owner (or heir) at any time. As the Federal Circuit explained in *LaTurner*, those Federal regulations preempt inconsistent State law.

To the extent that commenters suggest that the Secure 2.0 Act was intended to override the *LaTurner* decision and Treasury's regulations by allowing

States to escheat matured, unredeemed savings bonds that are not in their possession, Treasury disagrees. In 2021, proposed legislation that would have had that effect was introduced in Congress but never passed.¹⁰ The 2021 proposed legislation's language specifically would have allowed not only for the transfer of applicable savings bond information to the States but would have allowed the States to obtain title to the applicable savings bond through a valid judgment of escheatment. The 2021 proposed legislation stated that "[n]otwithstanding any other Federal law, the ownership of an applicable savings bond may be transferred pursuant to a valid judgment of escheatment vesting a State with title to the bond," and that "[n]othing in this section, or in any regulation promulgated by the Secretary to implement this section, may be construed to preempt State law providing for, or governing the escheatment of, applicable savings bonds."¹¹ The 2021 proposed legislation further stated that "[t]he Secretary may not prescribe any regulation which prevents or prohibits a State from obtaining title to an applicable savings bond or redeeming such bond" under the act.¹² However, the 2021 proposed legislation failed to move past the House Ways and Means Committee and the Senate Finance Committee. Instead, when a version of the proposed legislation reemerged in 2022 as part of the Secure 2.0 Act, the title-escheat language had been removed along with the language prohibiting Treasury from promulgating regulations that would preempt State law on escheatment.

Because U.S. savings bonds do not expire and Treasury has imposed no time limit for savings bond owners to redeem them, savings bond information shared with States under the Secure 2.0 Act does not pertain to savings bonds that are abandoned or lost, but simply unredeemed. The restriction in this final rule on using information shared under the Secure 2.0 Act to escheat savings bonds serves to protect the bond owner's rights and to prevent future double payments from Treasury when the rightful owner presents the savings bond for redemption. As Treasury has previously explained, "[t]he potential for competing claims exposes Treasury to the risk of double-payment and costly litigation, as well as threatens the vested

rights of bond owners." 80 FR 80259. Under State escheatment laws, a State could attempt to claim savings bonds that are still in the possession of registered owners, who can submit them for payment at any time. A State could also attempt to claim bonds that are in the possession of another State, where both States have a claim to title under their own State laws. Allowing States to escheat unredeemed savings bonds that are not in the States' possession would be contrary to existing Treasury regulations, as well as the agreement made between Treasury and a bond owner when the bond is purchased.

In providing that States may use the information shared by Treasury to "locate the owner" of savings bonds pursuant to the States' abandoned property rules and Treasury regulations and guidance, the Secure 2.0 Act leaves in place the balance Treasury has struck to protect bond owners' rights and the public fisc. As discussed above, the Secure 2.0 Act did not override the *LaTurner* decision or override existing Treasury regulations by allowing States to escheat matured, unredeemed savings bonds that are not in their possession.

Although several commenters expressed a concern that the proposed regulation could interfere with States' ability to redeem bonds that are in their possession, the Secure 2.0 Act and this final rule address only bonds that are not in a State's physical possession. Where a State has the physical bond, the State has the serial number and other information needed to ask Treasury—under existing regulations unchanged here—to redeem that bond. For similar reasons, prohibiting title escheat using information obtained under the Secure 2.0 Act is not a departure from Treasury's possession escheat policy, which has long recognized that States may be able to redeem bonds that are in their physical possession under circumstances that provide evidence that the bonds were, in fact, abandoned property.¹³ Under existing Treasury regulations, States may request payment on an escheat judgment purporting to vest a State with title to a matured savings bond in the State's possession.¹⁴ Those existing regulations are not affected by this final rule. This final rule continues to support Treasury's policy requiring States to be in possession of any savings bond they are purporting to escheat. States may still pursue title escheat for savings bonds in their possession, as they would be using the information found on the savings bond itself to complete the escheatment

⁸ 31 U.S.C. 3105(f)(4).

⁹ 31 U.S.C. 3105(f)(2)(A).

process, rather than using any information provided to them by Treasury under the Secure 2.0 Act.

Lack of Congressional Appropriations To Support States' Locator Services

Some commenters expressed concern about the lack of Federal funding available to assist the States in locating savings bond owners. For example, one commenter suggested that a lack of funds will “hinder the resources States have available to provide enhanced outreach efforts beyond currently established efforts.” Another noted that “certain challenges are created for participating States by not actually receiving the funds that are associated with the bond records,” leaving the States to bear the financial burden of locator services.

However, the Secure 2.0 Act does not grant funding to assist the States in providing optional locator services. The Secure 2.0 Act only directs Treasury to make applicable savings bond information available to the States for the purpose of locating the owner or owner's representatives. In prior litigation and in their comments on the NPRM, multiple States have claimed that they “have both the dedicated resources and the solemn responsibility to locate the missing property owners and reunite them with their property,” *Arkansas Brief* at 6–7, *LaTurner v. United States*, 933 F.3d 1354 (Fed. Cir. 2019) (No. 18–1509), ECF No. 37, and have proclaimed that their ultimate goal is to “help the original owners learn of, and be paid on, th[eir] bonds,” *Kansas Brief* at 14, *LaTurner v. United States*, 933 F.3d 1354 (Fed. Cir. 2019) (No. 18–1509), ECF No. 36. States are free to use their resources for such efforts, but nothing in the Secure 2.0 Act requires the States to undertake these administrative efforts to locate bond owners if a State chooses not to do so.

Lack of a Claims-Servicing Role

A number of commenters expressed a concern regarding the lack of a “claims servicing” role for States in the proposed regulations. These comments appear to propose that States—not Treasury—should accept State-specific property claim forms and require that savings bond owners redeem their bonds through the State's unclaimed property procedures rather than Treasury's savings bond redemption procedures. Commenters raised concerns about the efficiency and effectiveness of the overall Secure 2.0 Act framework, stating that a streamlined process to locate and pay bond owners is essential. These commenters indicated that Treasury

should rely upon the States' experience in reuniting their respective citizens with unclaimed funds, rather than asking States to refer savings bond owners to Treasury for redemption. Another commenter noted that a State's role in the program is unclear if the States do not provide the proceeds of the savings bonds to their owners.

However, the Secure 2.0 Act does not contemplate overriding the longstanding Federal regulations, procedures, and agreements under which individuals redeem their U.S. savings bonds for payment by the Federal Government. Under existing Treasury regulations, there is a well-established framework for savings bond owners to redeem their bonds.¹⁵ Any savings bond owner may redeem a savings bond directly from Fiscal Service, whether they have physical possession of the bond or need to declare the bond lost, stolen, or destroyed. Fiscal Service also has dedicated customer service staff trained to process complex redemption requests, which may include decedents' estates, trusts, and attorneys-in-fact. All necessary forms for redemption are available to the public through the *TreasuryDirect.gov* website.

Additionally, any bond owner who has physical possession of a Series EE or Series I savings bond, which is in a single owner, co-ownership, or beneficiary ownership registration, is permitted to redeem the savings bond at any financial institution designated by Treasury as a paying agent. These two methods of redemption, through Fiscal Service and through designated paying agents, promote efficient, consistent, and reliable pathways to redemption for savings bond owners. Under this final rule, Treasury will continue to process redemptions through established methods.

Restriction on Public Release of Savings Bond Information

Twelve commenters expressed concern over the NPRM's proposed restriction of a State's public release of the applicable savings bond information without Treasury's express consent. Commenters stated that this restriction would place an increased administrative burden on State agencies by preventing them from using their current reunification methods to reunite bond owners with their bonds. The Secure 2.0 Act requires Treasury to issue regulations or guidance as may be necessary to “protect the privacy of the owners of applicable savings bonds” and to “prevent fraud.”¹⁶ In order to

balance the competing interests, rather than adopting a blanket prohibition on public release of relevant information, the NPRM and the final rules permit the public release of information by States if they first obtain Treasury's consent. In determining whether to grant such consent, Treasury will consider the risks to savings bond owners' privacy and the risk of fraud. In recent years, as printing technologies have advanced, it has become easier for criminals to create fraudulent paper savings bonds using publicly available information. Since 2021, there have been over \$40 million in redemptions of counterfeit savings bonds. Fiscal Service has responded by taking certain steps that have reduced the opportunities for fraud. By reducing publicly available information and taking other precautionary steps, Treasury has significantly reduced the number of counterfeit savings bonds presented for redemption. Based on its experience addressing fraud, Fiscal Service believes that making records of matured, unredeemed savings bonds available to the public creates substantial risks of fraud.

A few commenters stated that they believe that some savings bond information is already publicly available; however, savings bond records are not currently available to the public. Moreover, savings bond information is subject to the Privacy Act of 1974, which generally prohibits the release of such information to the public. Fiscal Service further protects this information in its Privacy Act regulations,¹⁷ as well its Privacy Act System of Records Notice Treasury/Fiscal Service .014—United States Securities and Access.¹⁸ Consistent with Treasury's obligation to protect savings bond owners' personal information, the Treasury Hunt website restricts the disclosure of savings bond information and only suggests that a requestor contact Fiscal Service to inquire further about their Treasury securities; it does not provide any specific information regarding any securities that may be held. Only after Fiscal Service verifies the requestor's identity will it release any information to the owner as permitted under the law and its regulations.

Miscellaneous Comments

Treasury received comments regarding what information will be made available to the States under the final rule. One commenter requested

¹⁷ 31 CFR 323.2.

¹⁸ 85 FR 11776, (Feb. 27, 2020). Fiscal Service intends to modify this System of Records Notice to assist in implementing the Secure 2.0 Act.

¹⁵ 31 CFR 353.39, 31 CFR 360.39.

¹⁶ 31 U.S.C. 3105(f)(2).

additional information on whether Social Security numbers, savings bond denominations, and serial numbers will be released to the States. Another commenter suggested that the release of savings bond serial numbers is mandatory under the Secure 2.0 Act.

Under the Secure 2.0 Act, Treasury is required to provide each State, in digital or other electronic form, with information describing the name and applicable address of a registered owner, co-owner, or beneficiary of an applicable savings bond with an applicable address within that State.¹⁹ Accordingly, Treasury will release the name and applicable address of such registered owners, co-owners, and beneficiaries to the States, pursuant to the statute.

The final rule does not include provisions for releasing Social Security numbers, saving bond denominations, or bond serial numbers. Based on Treasury's experience, the serial number and Social Security number are the two items of information most likely to facilitate fraud. Further, the Secure 2.0 Act provides that the information Treasury shares "may include the serial number of any applicable savings bond," not that serial numbers must be shared.²⁰ In addition, in Treasury's long experience administering the savings bond program, bond denominations have marginal or no utility in locating bond owners. Denominations and bond serial numbers are important in the redemption of a savings bond, but do not offer Treasury or a participating State information regarding the location or identity of the savings bond owner.

One commenter submitted questions regarding the contracting and enforcement of information sharing with the States. At this time, Fiscal Service is working to develop a technical solution for sharing the mandated information with the States. Any mandatory security requirements for accessing the information will be included in the information-sharing contracts with the States. Fiscal Service intends to work closely with the States to ensure compliance with our security requirements, monitoring the use of the information in accordance with the information-sharing contract.

III. Summary of Final Rule Amendments

Overview

Fiscal Service is adding these Secure 2.0 Act regulations to 31 CFR part 323, which includes regulations adopted

under the Freedom of Information Act (FOIA) regarding the disclosure of records.²¹ Fiscal Service is maintaining the current FOIA regulations found in part 323 by moving the existing provisions in §§ 323.1 through 323.5 into a new subpart A. A new subpart B contains the regulations to implement the Secure 2.0 Act requirements to provide information and records containing applicable savings bond information to States. Subpart B includes definitions necessary to implement the regulations, requirements for a State to receive applicable savings bond information, conditions regarding the use of the information, and liability terms. Separating the regulations implementing the two different statutory authorities, FOIA and the Secure 2.0 Act, by subpart is intended to assist the public in identifying the two separate authorities under which an individual or a State may request information.

Treasury believes the new disclosure of applicable savings bond information requirements is closely associated with the purpose of FOIA and its existing disclosure regulations. While the Secure 2.0 Act only allows for disclosure of certain information to States, rather than to the public at large, a savings bond owner could look to a single regulation, part 323, to determine the various ways in which their savings bond information could be disclosed.

Subpart A, § 323.1

As noted above, subpart A as amended contains regulations that implement FOIA for Fiscal Service, previously found at part 323. Accordingly, the final rule makes a technical modification to the first sentence of § 323.1 to identify "this subpart" rather than "this part."

Subpart B

Following are summaries of the provisions in the new subpart B, all of which are being added in this final rule.

Purpose of the Regulations, § 323.10

This section briefly describes the purpose of the new regulatory provisions, namely to implement the Secure 2.0 Act.

Rules Governing Sharing of Applicable Savings Bond Information With States, § 323.11

Section 323.11 includes the definitions and terms necessary to provide States the information required by the Secure 2.0 Act. In addition, the

amendments add new provisions to help protect the privacy of the owners of applicable savings bonds, prevent fraud, and ensure that shared information is used only for permissible purposes under the Secure 2.0 Act.

Definitions, § 323.11(a)

The Secure 2.0 Act requires Treasury to provide, in digital or other electronic form, each State with information describing any "applicable savings bond" that has an "applicable address" within such State. The statute requires this information to include the name and applicable address for each registered owner, co-owner, or beneficiary. "Applicable address" is defined in the statute as the registered address for the registered owner, co-owner, or beneficiary of the savings bond or the last-known address for the foregoing if it is available to Treasury.²² The final rule defines "last-known address" to mean an address available to Fiscal Service after a reasonable search of its records.

While the level of effort dedicated to the search could be expressed in various degrees, a "reasonable" search balances the goals of efficiency and effectiveness. An exhaustive search, for example, would be unduly costly and burdensome on Fiscal Service, given the breadth of our systems of records, and unlikely to significantly change the results of the search. "Record" is broadly defined to include any data or documentation containing or composed of information describing relevant applicable savings bonds, including the applicable addresses of the owners. This definition allows Fiscal Service to protect savings bond owners from unauthorized disclosure of their information, as any information received from Treasury will remain a record subsequent to disclosure.

The term "State" is also broadly defined in the final rule to mean U.S. territories, possessions, and the District of Columbia, as well as the 50 States. This definition is consistent with available registered addresses over the lifetime of the savings bond program.

Requests for Records

Section 323.11(b) provides that each State may request applicable savings bond records from Fiscal Service. Upon request, the State must enter into an information-sharing agreement with Fiscal Service to receive the requested records. Fiscal Service expects that this agreement will require a State to make representations regarding protecting the savings bond records from unauthorized

¹⁹ 31 U.S.C. 3105(f)(1)(A).

²⁰ See 31 U.S.C. 3105(f)(1)(B).

²¹ 31 CFR part 323.

²² 31 U.S.C. 3105(f)(1)(C).

disclosure, including security requirements for receiving and storing the records. These security requirements are appropriate to minimize the risk of fraud or misuse or misappropriation of information.

Use of Records

Section 323.11(c) specifies how the records or information contained therein may be used by States, in compliance with the Secure 2.0 Act. As stated at 31 U.S.C. 3105(f), Treasury's regulations are required to ensure that applicable savings bond information provided to a State will be used solely to carry out the purpose of locating the owner of the savings bond.²³ In accordance with this statutory requirement, the regulation provides that the applicable savings bond information cannot be used to escheat savings bond ownership to a State. The purpose of the Secure 2.0 Act is for Treasury to provide information regarding applicable savings bonds to States to assist in locating the owner of the bonds. The Secure 2.0 Act does not allow States to use the provided records and information to escheat the bonds, which would conflict with the rights of savings bond owners to redeem matured savings bonds whenever they choose.

Under the regulation, in order to protect the savings bond owner's privacy, any applicable savings bond information provided to States cannot be released to the public or any third party without Treasury's express written approval. This requirement is also expected to be incorporated into the information-sharing agreement described above. The requirement to obtain such approval from Treasury is also intended to ensure that the release of savings bond records or the information therein does not subject Fiscal Service customers to fraud risk. In recent years, Fiscal Service has taken steps that have reduced the opportunities for fraud, and making records of matured, unredeemed savings bonds available to the public would create an unacceptable risk of fraud. Fiscal Service will continue to monitor savings bond fraud and consider implementing further risk-mitigation strategies, which may eventually allow for certain savings bond records to be distributed publicly.

Liability

Under § 323.11(d), Treasury will not be responsible for any loss, liability, cost, or expense that results from a State's receipt, use, or distribution of records regarding applicable savings

bonds or any information contained therein. Any misuse of savings bond records or information provided to a State under the regulations could result in fraudulent activity, breach of privacy for a savings bond owner, and financial loss for bond owners. Under the regulations, a State that receives information under the regulations bears the responsibility for, and indemnifies Treasury against, any loss or other costs associated with the State's receipt, use, distribution of, or failure to adequately protect, any records or information.

Severability, § 323.12

This provision clarifies Treasury's intent with respect to the severability of provisions of this rule. In the event any section, subsection, clause, paragraph, or phrase of this subpart is deemed invalid or unconstitutional by a court of competent jurisdiction, all remaining provisions shall continue in effect.

IV. Procedural Requirements

A. Executive Order 12866

This rule is not a significant regulatory action as defined in E.O. 12866, dated September 30, 1993, as amended, and is not a major rule under 5 U.S.C. 804.

B. Administrative Procedure Act (APA)

Because this rule relates to United States securities, which are contracts between Treasury and the owner of the security, this rule falls within the contract exception to the APA, 5 U.S.C. 553(a)(2). Treasury voluntarily sought public comment to assist the agency in assessing the impact of the rule.

C. Regulatory Flexibility Act

This rule relates to matters of public contract and procedures for United States securities. Since a notice of proposed rulemaking is not required, the provisions of the Regulatory Flexibility Act, 5 U.S.C. 601 *et seq.*, do not apply. In any event, Treasury certifies that this rule, which implements the Secure 2.0 Act's requirements that Treasury provide certain U.S. savings bond information to States, will not have a significant economic impact on a substantial number of small entities.²⁴

D. Paperwork Reduction Act

The provisions of the Paperwork Reduction Act, 44 U.S.C. 3501 *et seq.*, and its implementing regulations, 5 CFR part 1320, do not apply to this rule because there are no new or revised recordkeeping or reporting requirements.

List of Subjects in 31 CFR Part 323

Archives and records, Freedom of information, Privacy, Savings bonds.

Accordingly, for the reasons set forth in the preamble, Treasury amends 31 CFR part 323, as follows:

PART 323—DISCLOSURE OF RECORDS

- 1. The authority citation for part 323 continues to read as follows:

Authority: 80 Stat. 379; sec. 3, 60 Stat. 238, as amended; 5 U.S.C. 301, 552.

- 2. Add subpart A to read as follows:

Subpart A—Freedom of Information Act

§§ 323.1 through 323.5 [Designated as Subpart A]

- 3. Designate §§ 323.1 through 323.5 as subpart A.
- 4. Revise the first sentence of § 323.1 to read as follows:

§ 323.1 Purpose of regulations.

The regulations of this subpart are issued to implement 5 U.S.C. 552(a)–(2) and (3). * * *

- 5. Add subpart B to read as follows:

Subpart B—SECURE 2.0 Act of 2022

Sec.

323.10 Purpose of this subpart.

323.11 Rules governing sharing of applicable savings bond information with States.

323.12 Severability.

Authority: 31 U.S.C. 3105(f).

Subpart B—SECURE 2.0 Act of 2022

§ 323.10 Purpose of this subpart.

The regulations of this subpart are issued to implement section 122 of the SECURE 2.0 Act of 2022, 31 U.S.C. 3105(f). The requirements of 31 U.S.C. 3105(f) are additionally met through the publication of a new Routine Use in the applicable Fiscal Service System of Record Notice.

§ 323.11 Rules governing sharing of applicable savings bond information with States.

(a) *Definitions.* For purposes of this section:

Applicable address has the meaning set forth in 31 U.S.C. 3105(f)(1)(C).

Applicable savings bond has the meaning set forth in 31 U.S.C. 3105(f)(6).

Last known address means the full street address, if available, found after a reasonable search of Fiscal Service records.

Name means the full registered name of the owner, co-owner, or beneficiary of

²³ 31 U.S.C. 3105(f)(2).

²⁴ 5 U.S.C. 605(b).

an applicable savings bond, as it appears on the savings bond inscription.

Record means data or documentation, whether in paper, digital, or other electronic form, containing or composed of information describing any applicable savings bond which has an applicable address within a State, including the name and registered address or last known address of the registered owner, co-owner, or beneficiary, as further defined in 31 U.S.C. 3105(f)(1).

Registered address means the address included in the savings bond inscription.

State means the fifty States, the District of Columbia, American Samoa, the Federated States of Micronesia, Guam, the United States Virgin Islands, the Marshall Islands, the Commonwealth of the Northern Mariana Islands, Palau, and the Commonwealth of Puerto Rico.

(b) **Requests for records.** Records will be made available to States in compliance with 31 U.S.C. 3105(f) and this subpart, upon request by a State to Fiscal Service. Prior to receiving access to records, each State, through an authorized State representative, must enter into an information-sharing agreement with Fiscal Service using a form that will be provided by Fiscal Service. Such agreements may contain, among other things, requirements that Treasury deems necessary or appropriate to ensure the security of the information.

(c) **Use of records.** Any records or any information made available to a State under this subpart:

(1) Must be used only for the purpose of locating the owner of an applicable savings bond;

(2) Must not be used to escheat savings bond ownership to a State; and

(3) Must not be released by a State to the public or any third party, unless explicitly approved in writing, in advance, by Treasury.

(d) **Liability.** Treasury is not liable for any loss, liability, cost, or expense that may result from a State's receipt, use, or distribution of records or any information contained therein. A State receiving records under this subpart shall indemnify Treasury for any loss, liability, cost, or expense associated with the State's receipt, use, or distribution of, or failure to adequately protect, records or any information contained therein.

§ 323.12 Severability.

The provisions of this subpart are severable, and if any section, subsection, clause, paragraph, or phrase of this subpart shall be adjudged to be invalid or unconstitutional by any court

of competent jurisdiction, the judgment shall not affect, impair, or invalidate the remainder of this subpart, but shall be confined in its operation to the section, subsection, clause, paragraph, or phrase directly involved in the controversy in which such judgment shall have been rendered, and the remainder of this subpart shall continue to be in force and effect.

By the Department of the Treasury.

David Lebryk,

Fiscal Assistant Secretary.

BILLING CODE P

DEPARTMENT OF THE TREASURY

Office of Foreign Assets Control

31 CFR Part 587

Publication of Russian Harmful Foreign Activities Sanctions Regulations Web General Licenses 53A, 55C, 113, and 114

AGENCY: Office of Foreign Assets Control, Treasury.

ACTION: Publication of web general licenses.

SUMMARY: The Department of the Treasury's Office of Foreign Assets Control (OFAC) is publishing four general licenses (GLs) issued pursuant to the Russian Harmful Foreign Activities Sanctions Regulations: GLs 53A, 55C, 113, and 114, each of which was previously made available on OFAC's website.

DATES: GLs 53A, 55C, 113, and 114 were issued on November 21, 2024. See **SUPPLEMENTARY INFORMATION** for additional relevant dates.

FOR FURTHER INFORMATION CONTACT:

OFAC: Assistant Director for Licensing, 202–622–2480; Assistant Director for Regulatory Affairs, 202–622–4855; or Assistant Director for Compliance, 202–622–2490 or <https://ofac.treasury.gov/contact-ofac>.

SUPPLEMENTARY INFORMATION:

Electronic Availability

This document and additional information concerning OFAC are available on OFAC's website: <https://ofac.treasury.gov/>.

Background

On November 21, 2024, OFAC issued GLs 53A, 55C, 113, and 114 to authorize certain transactions otherwise prohibited by the Russian Harmful Foreign Activities Sanctions Regulations, 31 CFR part 587. Each GL was made available on OFAC's website

(<https://ofac.treasury.gov>) when it was issued. GL 53A replaced and superseded GL 53. GL 55C replaced and superseded GL 55B. GL 55C has an expiration date of June 28, 2025; GLs 113 and 114 each have an expiration date of December 20, 2024. The text of these GL is provided below.

OFFICE OF FOREIGN ASSETS CONTROL

Russian Harmful Foreign Activities Sanctions Regulations 31 CFR Part 587

GENERAL LICENSE NO. 53A

Authorizing Transactions for Diplomatic Missions of the Russian Federation Involving Gazprombank Joint Stock Company or Prohibited by Directive 4 Under Executive Order 14024

(a) Except as provided in paragraph (c) of this general license, U.S. persons are authorized to engage in all transactions ordinarily incident and necessary to the official business of diplomatic or consular missions of the Government of the Russian Federation (“Russian missions”) that are prohibited by Executive Order (E.O.) 14024 and involve Gazprombank Joint Stock Company (Gazprombank), or any entity in which Gazprombank owns, directly or indirectly, a 50 percent or greater interest, or are prohibited by Directive 4 under E.O. 14024, *Prohibitions Related to Transactions Involving the Central Bank of the Russian Federation, the National Wealth Fund of the Russian Federation, and the Ministry of Finance of the Russian Federation*.

(b) Except as provided in paragraph (c) of this general license, U.S. persons are authorized to engage in all transactions ordinarily incident and necessary to the compensation of employees of Russian missions, including payment of salaries and reimbursement of expenses, that are prohibited by E.O. 14024 and involve Gazprombank, or any entity in which Gazprombank owns, directly or indirectly, a 50 percent or greater interest, or are prohibited by Directive 4 under E.O. 14024.

(c) This general license does not authorize:

(1) Any transactions prohibited by Directive 2 under E.O. 14024, *Prohibitions Related to Correspondent or Payable-Through Accounts and Processing of Transactions Involving Certain Foreign Financial Institutions*;

(2) Any debit to an account on the books of a U.S. financial institution of the Central Bank of the Russian Federation, the National Wealth Fund of the Russian Federation, or the Ministry of Finance of the Russian Federation; or

(3) Any transactions otherwise prohibited by the Russian Harmful Foreign Activities Sanctions Regulations, 31 CFR part 587 (RuHSR), including transactions involving any person blocked pursuant to the RuHSR, other than blocked persons described in paragraph (a) of this general license, unless separately authorized.

(c) Effective November 21, 2024, General License No. 53, dated November 10, 2022, is replaced and superseded in its entirety by this General License No. 53A.

Lisa M. Palluconi,
Acting Director, Office of Foreign Assets Control

Dated: November 21, 2024

OFFICE OF FOREIGN ASSETS CONTROL

Russian Harmful Foreign Activities Sanctions Regulations 31 CFR Part 587 GENERAL LICENSE NO. 55C

Authorizing Certain Services Related to Sakhalin-2

(a) Except as provided in paragraph (c) of this general license, all transactions prohibited by the determination of November 21, 2022 made pursuant to section 1(a)(ii) of Executive Order (E.O.) 14071 (“Prohibitions on Certain Services as They Relate to the Maritime Transport of Crude Oil of Russian Federation Origin”) related to the maritime transport of crude oil originating from the Sakhalin-2 project (“Sakhalin-2 byproduct”) are authorized through 12:01 a.m. eastern daylight time, June 28, 2025, provided that the Sakhalin-2 byproduct is solely for importation into Japan.

(b) Except as provided in paragraph (c) of this general license, all transactions prohibited by E.O. 14024 involving Gazprombank Joint Stock Company (Gazprombank) or any entity in which Gazprombank owns, directly or indirectly, a 50 percent or greater interest, that are related to the Sakhalin-2 project, including such transactions involving Sakhalin Energy LLC, are authorized through 12:01 a.m. eastern daylight time, June 28, 2025.

(c) This general license does not authorize:

(1) Any transactions prohibited by Directive 2 under E.O. 14024, *Prohibitions Related to Correspondent or Payable-Through Accounts and Processing of Transactions Involving Certain Foreign Financial Institutions*;

(2) Any transactions prohibited by Directive 4 under E.O. 14024, *Prohibitions Related to Transactions Involving the Central Bank of the*

Russian Federation, the National Wealth Fund of the Russian Federation, and the Ministry of Finance of the Russian Federation; or

(3) Any transactions otherwise prohibited by the Russian Harmful Foreign Activities Sanctions Regulations, 31 CFR part 587 (RuHSR), including transactions involving any person blocked pursuant to the RuHSR, other than the blocked persons described in paragraph (b), unless separately authorized.

(d) Effective November 21, 2024, General License No. 55B, dated June 26, 2024, is replaced and superseded in its entirety by this General License No. 55C.

OFFICE OF FOREIGN ASSETS CONTROL

Russian Harmful Foreign Activities Sanctions Regulations 31 CFR Part 587

GENERAL LICENSE NO. 114

Authorizing Certain Transactions Related to Debt or Equity of, or Derivative Contracts Involving, Certain Entities Blocked on November 21, 2024

(a) Except as provided in paragraphs (d) and (e) of this general license, all transactions prohibited by Executive Order (E.O.) 14024 that are ordinarily incident and necessary to the divestment or transfer, of debt or equity issued or guaranteed by the following blocked entities (“Covered Debt or Equity”) to a non-U.S. person are authorized through 12:01 a.m. eastern standard time, December 20, 2024:

(1) Gazprombank Joint Stock Company;

(2) Interstate Bank; or

(3) Any entity in which one or more of the above persons own, directly or indirectly, individually or in the aggregate, a 50 percent or greater interest.

(b) Except as provided in paragraph (e) of this general license, all transactions prohibited by E.O. 14024 that are ordinarily incident and necessary to facilitating, clearing, and settling trades of Covered Debt or Equity that were placed prior to 4:00 p.m. eastern standard time, November 21,

2024 are authorized through 12:01 a.m. eastern standard time, December 20, 2024.

(c) Except as provided in paragraph (e) of this general license, all transactions prohibited by E.O. 14024 that are ordinarily incident and necessary to the wind down of derivative contracts entered into prior to 4:00 p.m. eastern standard time, November 21, 2024 that (i) include a blocked person described in paragraph (a) of this general license as a counterparty or (ii) are linked to Covered Debt or Equity are authorized through 12:01 a.m. eastern standard time, December 20, 2024, provided that any payments to a blocked person are made into a blocked account in accordance with the Russian Harmful Foreign Activities Sanctions Regulations, 31 CFR part 587 (RuHSR).

(d) Paragraph (a) of this general license does not authorize:

(1) U.S. persons to sell, or to facilitate the sale of, Covered Debt or Equity to, directly or indirectly, any person whose property and interests in property are blocked; or

(2) U.S. persons to purchase or invest in, or to facilitate the purchase of or investment in, directly or indirectly, Covered Debt or Equity, other than purchases of or investments in Covered Debt or Equity ordinarily incident and necessary to the divestment or transfer of Covered Debt or Equity as described in paragraph (a) of this general license.

(e) This general license does not authorize:

(1) Any transactions prohibited by Directive 2 under E.O. 14024, *Prohibitions Related to Correspondent or Payable-Through Accounts and Processing of Transactions Involving Certain Foreign Financial Institutions*;

(2) Any transactions prohibited by Directive 4 under E.O. 14024, *Prohibitions Related to Transactions Involving the Central Bank of the Russian Federation, the National Wealth Fund of the Russian Federation, and the Ministry of Finance of the Russian Federation*; or

(3) Any transactions otherwise prohibited by the RuHSR, including transactions involving any person blocked pursuant to the RuHSR other than the blocked persons described in paragraph (a) of this general license, unless separately authorized.

BILLING CODE 4810–AL–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA–R09–OAR–2024–0005; FRL–11919–02–R9]

Partial Approval and Disapproval of Air Quality Implementation Plans; Arizona; Regional Haze State Implementation Plan for the Second Implementation Period and Prong 4 (Visibility) for the 2015 Ozone and 2012 Particulate Matter Standards

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: The Environmental Protection Agency (EPA) is partially approving and partially disapproving the regional haze state implementation plan (SIP) revision submitted by Arizona on August 15, 2022 (“2022 Arizona Regional Haze Plan”), under the Clean Air Act (CAA) and the EPA’s Regional Haze Rule (RHR) for the program’s second implementation period. Arizona’s SIP submission was developed to address the requirement that states must periodically revise their long-term strategies for making reasonable progress towards the national goal of preventing any future, and remedying any existing, anthropogenic impairment of visibility, including regional haze, in mandatory Class I Federal areas. The SIP submission also addresses other applicable requirements for the second implementation period of the regional haze program. Within this action, the EPA is also disapproving the visibility transport prong of Arizona’s infrastructure SIP submittals for the 2012 annual fine particulate matter (PM_{2.5}) and 2015 ozone National Ambient Air Quality Standards (NAAQS). The EPA is taking this action pursuant to CAA sections 110 and 169A.

DATES: This rule is effective on January 17, 2025.

ADDRESSES: The EPA has established a docket for this action under Docket ID No. EPA–R09–OAR–2024–0005. All documents in the docket are listed on the <https://www.regulations.gov> website. Although listed in the index, some information is not publicly

available, e.g., Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the internet and will be publicly available only in hard copy form. Publicly available docket materials are available through <https://www.regulations.gov>, or please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section for additional availability information. If you need assistance in a language other than English or if you are a person with a disability who needs a reasonable accommodation at no cost to you, please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section.

FOR FURTHER INFORMATION CONTACT: Michael Dorantes, Geographic Strategies & Modeling Section (AIR-2-2), Planning & Analysis Branch, Air and Radiation Division, EPA Region IX, 75 Hawthorne Street, San Francisco, CA 94105; phone: (415) 972-3934; email: dorantes.michael@epa.gov.

SUPPLEMENTARY INFORMATION: Throughout this document, “we,” “us” and “our” refer to the EPA.

- IV. Statutory and Executive Order Reviews

I. Background

A. Regional Haze Plan for the Second Implementation Period

On August 15, 2022,¹ the Arizona Department of Environmental Quality (ADEQ) submitted the 2022 Arizona Regional Haze Plan. ADEQ supplemented its SIP revision on

August 25, 2023, with nonpoint source rules (“2023 Arizona Regional Haze Rules Supplement”).² ADEQ made these SIP submissions to address requirements of the CAA’s regional haze program pursuant to CAA sections 169A and 169B and 40 CFR 51.308.

On May 31, 2024, the EPA published a notice of proposed rulemaking proposing partial approval and partial disapproval of the 2022 Arizona Regional Haze Plan SIP submission as partially satisfying the regional haze requirements for the second implementation period contained in the CAA and 40 CFR 51.308.³ We did not propose to act on the 2023 Arizona Regional Haze Rules Supplement.

The EPA is now approving the elements of the 2022 Arizona Regional Haze Plan related to requirements contained in 40 CFR 51.308(f)(1), (f)(4)–(6), and (g)(1)–(5). The EPA is disapproving the elements of the 2022 Arizona Regional Haze Plan related to requirements contained in 40 CFR 51.308(f)(2), (f)(3), and (i)(2)–(4). Our proposed action and our responses to comments in section II of this document contain more information on the basis for this rulemaking and on our evaluation of the submittal.

B. Prong 4 (Visibility) of the 2012 PM_{2.5} NAAQS and 2015 Ozone NAAQS Infrastructure SIPs

Arizona submitted its infrastructure SIP submission for the 2012 PM_{2.5} NAAQS on December 11, 2015 (“2015 PM_{2.5} I-SIP submittal”).⁴ Arizona also submitted its infrastructure SIP submission for the 2015 ozone NAAQS on September 24, 2018 (“2018 Ozone I-SIP submittal”).⁵

Our May 31, 2024 proposed rulemaking action proposed to disapprove the prong 4 portions of Arizona’s 2018 Ozone I-SIP submittal and 2015 PM_{2.5} I-SIP submittal. The EPA is now disapproving the Prong 4 elements of Arizona’s 2018 Ozone I-SIP submittal and 2015 PM_{2.5} I-SIP submittal. Our proposed action contains more information on the basis for this

rulemaking and on our evaluation of the submittals.

II. Public Comments and EPA Responses

The EPA’s May 31, 2024 proposed rulemaking action provided a 30-day public comment period that would have ended on July 1, 2024. We received four comments requesting an extension of the comment period. On June 26, 2024,⁶ the EPA extended the comment period for the proposed rulemaking action by 14 days in response to requests from commenters. This action extended the close of the comment period to July 15, 2024.

The EPA received an additional ten unique comments, including one anonymous comment,⁷ two comments from private individuals,⁸ and comment letters from Tri-State Generation and Transmission Association, Inc. (“Tri-State”),⁹ ADEQ,¹⁰ the Arizona Chamber of Commerce and Industry and the Arizona Manufacturers Council (“the Chamber and AMC”),¹¹ Tucson Electric Power (TEP),¹² the Salt River Agricultural Improvement and Power District (SRP),¹³ 12 community organizations (“Community Sign-on Letter”),¹⁴ and Earthjustice on behalf of the National Parks Conservation Association, Sierra Club, and the Coalition to Protect America’s National Parks (“NPCA et al.”).¹⁵ The anonymous comment and the comments from the private individuals were unrelated to our proposed rulemaking. These three comments do not require a response. We respond to the issues raised in the seven remaining comment

letters received on our proposed rulemaking in this action.

A. Comment Letter From Tri-State

Sections I (“Introduction”), II (“Background Information on Tri-State”), and III (“Tri-State Supports the Provisions of the Arizona Department of Environmental Quality’s State Implementation Plan Submittal for which EPA has Proposed Approval”) of Tri-State’s comment letter either provide background information or are supportive of the EPA’s proposal and therefore do not require a response in our final action. We respond to sections IV (“The Partial Disapproval is Overly Vague and Should Be Reproposed with a Fulsome and Specific Explanation of What EPA Finds Inconsistent with the Clean Air Act and the Implementing Regulations”), V (“Additional Emission Reductions Are Inappropriate for Springerville Unit 3”), and VI (“EPA’s Reliance on the July 8, 2021, Clarifications Memorandum Is Inappropriate Because It Was Issued Only Days Prior to the Regional Haze State Implementation Plans Being Due”) of Tri-State’s comment letter below.

Comment A.1. Tri-State comments that the proposed rule, specifically the partial disapproval, is overly vague and does not lend itself to the general public being able to adequately understand what the EPA finds objectionable regarding the SIP submission. Tri-State asserts that the EPA made broad statements about divergences from the Control Cost Manual and inadequacies in four-factor analyses and that “it [is] impossible to understand with certainty the sources to which these overly broad statements apply.” The commenter also notes that the proposed rulemaking action only gives limited examples of what the EPA is referring to and asserts that the EPA needs to clearly provide where it has issues with the SIP revision as it was submitted not just examples of what it is concerned about. Specifically, Tri-State states that the proposed rulemaking action makes general comments about ADEQ conducting analyses for well-controlled sources to further reduce emissions but makes no reference to which sources that the EPA finds to be lacking in this area. Tri-State also comments that the vagueness of the proposal is not consistent with the cooperative nature of the CAA in the EPA working with states.

Response A.1. We do not agree that the proposal was overly vague or that the basis for our proposed partial disapproval was unclear. The proposal provided a detailed summary of the 2022 Arizona Regional Haze Plan and the EPA’s evaluation of the Plan with

regard to each of the applicable requirements of the CAA and the RHR. With respect to the EPA’s partial disapproval specifically, the proposal laid out multiple reasons for the EPA’s determination that the long-term strategy did not fully meet the requirements of 40 CFR 51.308(f)(2), related to source selection, four-factor analyses (specifically, controlled emissions rates and deviations from the Control Cost Manual), and control determinations (specifically, the application of cost thresholds, the use of visibility as a factor to avoid controls, and the mass-based emissions caps at Springerville Generating Station (SGS)).¹⁶ In each instance, we provided at least one example of a unit to which this reason applied.¹⁷ We also explained why the disapproval of the long-term strategy also necessitated disapproval of the RPG and FLM consultation elements.¹⁸

We disagree with the commenter’s suggestion that it was necessary for the EPA to specify the extent to which each of the flaws identified by the EPA applied to each unit considered by ADEQ. The EPA’s role in reviewing SIPs is to determine whether they meet all of the applicable CAA requirements.¹⁹ In evaluating whether a SIP revision (or a portion thereof) meets all of the applicable requirements, the EPA is not required to separately evaluate and discuss each of the thousands of pieces of information, analyses and determinations comprising the SIP submission. Rather, the EPA may focus on those specific elements of the SIP revision that form the basis for our determination that certain applicable requirements are met and certain applicable requirements are not met. Therefore, in this instance, it was reasonable for the EPA to summarize our evaluation and cite to examples of where the State’s documentation, analyses, and determinations did not meet CAA requirements, rather than separately evaluating and discussing every such instance throughout the SIP revision.

For example, regarding source selection, our proposal stated that:

ADEQ did not provide an adequate justification for screening out certain sources and units from conducting a four-factor

analysis on the basis that they are ‘effectively controlled’ as part of its source selection process. Specifically, in some cases, ADEQ did not identify the controls for each pollutant at each unit or process, the associated limits, or where the controls/limits currently exist in the Arizona SIP. In other cases, ADEQ listed the controls, but did not clearly explain why it is reasonable to assume, without conducting a four-factor analysis, that no additional controls would be reasonable.

We then provided examples of specific sources to which these concerns applied. In addition, table 3 of the proposal listed all of the units that ADEQ screened out as “effectively controlled” and includes the entirety of ADEQ’s rationale for each unit.²⁰ This table clearly shows that for many of the units, ADEQ did not list controls for one or more of the three relevant pollutants (NO_x, SO₂, and PM). Moreover, even for those units where ADEQ did list this information, it did not explain why it is reasonable to assume, without conducting a four-factor analysis, that no additional controls would be reasonable. Furthermore, our proposed rulemaking action clearly stated that ADEQ did not adequately explain whether *any* of the existing controls for facilities evaluated within the SIP submittal were necessary for reasonable progress and therefore a part of the state’s long-term strategy. Therefore, it was not necessary to specifically identify each source that was deficient in this respect because the deficiency applied to every source determined to be effectively controlled.

Finally, regarding the cooperative nature of the CAA, we note that the EPA worked extensively with ADEQ during SIP development. EPA and ADEQ staff met on a monthly basis beginning in 2019 and continuing through 2021 to discuss the development of the Plan. The EPA also provided informal written feedback on various elements of the Plan between 2019 and 2022. In these communications, the EPA identified many of the flaws that are the basis for the partial disapproval, so ADEQ was aware of the EPA’s concerns prior to the EPA’s proposal.

In conclusion, based on the findings discussed in our proposal and elsewhere in this document, we find that the long-term strategy in the 2022 Arizona Regional Haze Plan does not meet the requirements of 51.308(f)(2) and we are disapproving the Plan with respect to this requirement. Therefore, pursuant to CAA section 110(c), the EPA will be required to develop a new

¹⁶ 89 FR 47398, 47428–47432.

¹⁷ Id.

¹⁸ Id. at 47432–47433 and 47435–47436.

¹⁹ See CAA section 110(k)(3) (“the Administrator shall approve [a SIP] submittal as a whole if it meets all of the applicable requirements of [the CAA]. If a portion of the plan revision meets all the applicable requirements of [the CAA], the Administrator may approve the plan revision in part and disapprove the plan revision in part”).

²⁰ Consistent with their labeling in the Plan, Appendix C.1, Table 147, these rationales appear under the heading of “Comments.”

long-term strategy as part of a FIP, unless the EPA approves a subsequent SIP submission that fully meets these requirements. That long-term strategy would necessarily include updated source selection, four factor analyses, and control determinations that address the deficiencies we identified in the Plan. We are available to work with ADEQ following this final action to develop a SIP revision, including these elements.

Comment A.2. Tri-State asserted that additional emissions reductions are “inappropriate” for Springerville Generating Station (SGS) Unit 3. Tri-State made a few arguments in support of this contention.

First, Tri-State noted that ADEQ evaluated the currently installed NO_x emissions controls against technically feasible emissions controls and concluded that the current NO_x emissions controls constitutes best available control technology (BACT) for coal-fired electric generating units (EGUs). For SO₂, Tri-State indicated that ADEQ’s analysis for SGS Unit 3 clearly demonstrates that Unit 3’s emissions ranged from 0.069 to 0.090 lb/MMBtu on an annual basis and has continuously complied with the Mercury and Air Toxics Standard (MATS) SO₂ emissions standard of 0.20 lb/MMBtu, and therefore does not warrant further emissions controls. Tri-State also noted language in the EPA’s “Guidance on Regional Haze State Implementation Plans for the Second Implementation Period” (“2019 Guidance”)²¹ that describes scenarios in which the EPA believes it may be reasonable for a state not to select a particular source for further analysis for EGUs that have add-on flue gas desulfurization (FGD) and that meets the applicable alternative SO₂ emissions limit of the MATS rule for power plants.

Second, Tri-State noted the visibility improvement at the Mount Baldy Wilderness Area in the first planning period, and that Arizona will have four additional 10-year planning periods to achieve the 1.3 deciview improvement needed to achieve natural conditions.

Finally, Tri-State stated that its intent is to retire SGS Unit 3 by September 15, 2031, and requested that the EPA include in the final rule a provision to allow sources to work with their state regulatory agencies to adopt an

enforceable commitment to retire a unit, such as through a permit condition, to allow the source to forego any further emissions control or reduction requirements if a unit is retiring within ten years of the Regional Haze SIP approval.

Response A.2. We partially agree with this comment. First, with respect to NO_x emissions at SGS Unit 3, ADEQ noted in the Plan “[t]he current controls ([low-NO_x burners (LNB), overfire air (OFA) with selective catalytic reduction (SCR)] represent the most effective NO_x control technologies for coal fired EGUs and are estimated to achieve 85–95% removal efficiency.”²² We agree that the existing LNB, OFA and SCR constitute effective controls for NO_x at SGS Unit 3. As described in our proposal and in response B.1 of this document, existing effective controls are generally necessary to make reasonable progress and must be included in the SIP, unless the state provides a weight-of-evidence demonstration to justify that the existing effective controls are not necessary to make reasonable progress. Because the Arizona SIP does not include a NO_x emissions limit corresponding to these controls for SGS Unit 3, the State should have provided such demonstration. Specifically, the State should have considered whether SGS Unit 3 is subject to an enforceable NO_x emissions limit that ensures its NO_x emissions rate will not increase. Without proper justification that emissions of visibility impairing pollutants will not increase, it is unclear how reasonable progress is being made within the State’s long-term strategy for the second planning period.²³

Similarly, with respect to SO₂ emissions at SGS Unit 3, we agree that, as described in the 2019 Guidance, an add-on FGD meeting the applicable alternative SO₂ emissions standard under MATS may constitute an effective control for SO₂. However, as noted in the previous paragraph, existing effective controls are generally necessary to make reasonable progress and must be included in the SIP, unless the state provides a weight-of-evidence demonstration to justify that the existing effective controls are not necessary to make reasonable progress. Because the Arizona SIP does not include a SO₂ emissions limit corresponding to the existing SO₂ controls at SGS Unit 3, the State should have provided such a demonstration, including consideration

of whether SGS Unit 3 is subject to an enforceable SO₂ emissions limit that ensures its SO₂ emissions rate will not increase.

Second, regarding the Mount Baldy Wilderness Area, although we commend the efforts in Arizona that contributed to the noted visibility improvement at the Mount Baldy Wilderness Area in the first planning period, previous and ongoing measures are not automatically sufficient to ensure ongoing reasonable progress. The regional haze requirements of CAA sections 169A and 169B and 40 CFR 51.308 need to be satisfied.²⁴ In particular, the increment of progress that is “reasonable progress” for a given implementation period is determined through the four statutory factors.²⁵ While progress made in the first implementation period, ongoing emissions trends, and anticipated changes in emissions may inform a state’s regional haze planning process, these circumstances alone do not satisfy a state’s obligation to determine and include in its SIP the measures that are necessary to make reasonable progress in the second planning period. We also note that, while Mount Baldy is the closest Class I area to SGS and therefore has the highest Q/d (emissions in tons per year divided by distance to an affected Class I area in kilometers) value (339) with respect to SGS,²⁶ this does not mean that Mount Baldy is the only Class I area affected by emissions from SGS. ADEQ did not specifically identify all the Class I areas that may be affected by emissions from each of the sources it evaluated. Nonetheless, given that SGS had a 2018 Q of 17,044 tons per year (tpy)²⁷ and is located within 300 km of 15 different Class I areas,²⁸ it is likely to contribute to visibility impairment at a number of Class I areas.

Finally, with respect to Tri-State’s request regarding enforceable shutdowns, we note that the EPA’s role in acting on SIP submittals is to evaluate whether they meet applicable CAA

²⁴ See 64 FR 35714 (July 1, 1999), 35721–35722 for additional explanation as to the EPA’s determination that emissions from *all States* reasonably contribute to visibility impairment and thus are subject to the regional haze regulations. Additionally, in the 2017 RHR, the EPA “reiterat[ed] that the CAA requires States to consider the four statutory factors . . . in each implementation period to determine the rate of progress towards natural visibility conditions that is reasonable for each Class I area.” 82 FR 3078 (January 10, 2017), 3080.

²⁵ 40 CFR 51.308(f)(2)(i).

²⁶ Plan Appendix C, p. 21, Table 1. Q is calculated as the total 2018 annual facility-wide NO_x, SO₂, and PM₁₀ emissions in tpy, excluding processes determined by ADEQ to be effectively controlled.

²³ See CAA 169A(a)(1) “Congress hereby declares as a national goal *the prevention of any future, and the remedying of any existing, impairment of visibility in [Class I areas.]*” (emphasis added).

requirement, not to establish new requirements. Tri-State may choose to work with ADEQ to establish enforceable shutdowns as part of a subsequent SIP revision. However, we note that even if there were an enforceable shutdown in 2031, this would not automatically preclude the unit from consideration under a four-factor analysis.²⁹

Comment A.3. Tri-State comments that it was unreasonable for the EPA to use the July 8, 2021 “Clarifications Regarding Regional Haze State Implementation Plans for the Second Implementation Period” (“2021 Clarifications Memo”) as a basis for disapproval of the 2022 Arizona Regional Haze Plan. Tri-State indicated that although ADEQ submitted its plan over a year late on August 22, 2022, ADEQ was over three years into the process of developing the plan, working with the Western Regional Air Partnership, the EPA, other states, Federal Land Managers (FLMs) and members of the public, was nearly complete and ready to go through the Arizona rulemaking process when the EPA published the 2021 Clarifications Memo. Tri-State also noted that the rulemaking process can take over a year due to various tasks required.

Response A.3. The EPA disagrees that it used the 2021 Clarifications Memo as a basis for disapproving portions of the 2022 Arizona Regional Haze Plan. Contrary to the commenter’s suggestion, the EPA’s guidance, including the 2021 Clarifications Memo, is not the basis for our disapproval. Rather, the partial disapproval is based on the Plan’s failure to satisfy the requirements of the relevant portions of the RHR and CAA sections 169A and 169B. We did cite the guidance documents because these documents provide helpful context explaining the EPA’s interpretations of the applicable statutory and regulatory requirements against which we are required to evaluate SIP submittals. Commenters are free to disagree and raise concerns with those interpretations as part of the notice and comment process on individual SIP actions. However, in this instance, the commenter does not appear to object to any of the interpretations in the 2021 Clarifications Memo, only to the fact that they were provided shortly before the due date for the plans.

With regard to timing, we note that the 2021 Clarifications Memo was developed in response to issues that

EPA regions and other stakeholders had raised regarding draft regional haze SIP revisions that were already under development by states.³⁰ The 2021 Clarifications Memo therefore necessarily came during the SIP development process and, in comparison to the SIP-specific feedback previously provided by the EPA prior to its issuance, was intended to “offer feedback more broadly to help support SIP development, submittal, review, and action for the second planning period.”³¹ With regard to Arizona’s Plan specifically, throughout the EPA’s collaboration with ADEQ during early engagement, EPA staff advised ADEQ of many of the interpretations that would be expressed in the 2021 Clarifications Memo. Therefore, we do not agree that it was improper for the EPA to cite to the 2021 Clarifications Memo as further explanation for why portions of the 2022 Arizona Regional Haze Plan did not comply with the applicable statutory and regulatory requirements.

B. Comment Letter From ADEQ

Sections I (“Background”) and XI (“Conclusion”) of ADEQ’s comment letter are informational and therefore do not require a response. We respond to sections II–X of ADEQ’s comment letter below.

Comment B.1. ADEQ asserts that the EPA’s changing guidance increased the burden of ADEQ’s planning efforts by introducing uncertainty and rework. ADEQ noted delays between final publication of the 2017 RHR and the 2019 Guidance, as well as later changes to the EPA’s interpretation of the RHR that came close to the plan submittal deadline, including the 2021 Clarifications Memo. ADEQ asserts that the state did not have the resources to undertake the evaluation of existing control measures, as noted in the 2021 Clarifications Memo, a process that ADEQ states was unreasonably broad-reaching and duplicative.

Response B.1. We disagree with ADEQ’s assertions about the EPA’s additional guidance increasing the burden of ADEQ’s planning efforts by introducing uncertainty and rework. First and foremost, as stated previously and throughout this notice, the EPA did not rely on guidance as the basis for its partial disapprovals. Rather, the 2019 Guidance and the 2021 Clarifications Memo merely provide additional context to the EPA’s interpretations of the statutory and regulatory requirements. Both the 2019 Guidance and the 2021 Clarifications Memo were

drafted to be used as tools by States in the development of their second planning period regional haze plans. However, neither of these documents were necessary for States to develop and submit their SIP revisions.

Regarding the contents of the guidance, we do not agree that the EPA significantly changed its interpretations in either the 2019 Guidance or the 2021 Clarifications Memo. The commenter has not provided any examples of interpretations that it believes were changed under the 2019 Guidance and provided only a single example from the 2021 Clarifications Memo, relating to the section entitled, “Determining When Existing Measures are Necessary for Reasonable Progress.” We do not agree that interpretations set forth in this section of the 2021 Clarifications Memo represented a significant change in interpretation. Rather, they were intended to clarify the following statement in the 2019 Guidance:

If a state determines that an in-place emission control at a source is a measure that is necessary to make reasonable progress and there is not already an enforceable emission limit corresponding to that control in the SIP, the state is required to adopt emission limits based on those controls as part of its long-term strategy in the SIP via the regional haze second planning period plan submission.³²

Many states and other stakeholders raised questions about this statement. In response, as part of the 2021 Clarifications Memo, the EPA laid out in further detail our interpretation of the CAA and RHR regarding how to make such a determination.

We also disagree, on multiple grounds, with the commenter’s assertion that the “EPA’s revised guidance requires an unreasonably broad-reaching review of all existing control measures that are not separately included in the regional haze plan to evaluate whether those same measures should be duplicated in the regional plan to support reasonable visibility progress.”

First, the 2021 Clarifications Memo did not establish any new requirements. On the contrary, it clearly states that “[t]his memorandum does not change or substitute for provisions or requirements of the CAA or RHR, nor does it create any new requirements. Rather, this memorandum clarifies and provides further information on the existing statutory and regulatory requirements.”³³ One of the key requirements of the CAA and RHR is that all measures that are necessary to make reasonable progress must be

²⁹ See 2019 Guidance, pp. 20–21 (“It may be more challenging for a state to reasonably use a shorter remaining useful life as the basis for not selecting sources the further away the enforceable shutdown date gets from 2028”).

³⁰ 2021 Clarifications Memo, p. 1.

³¹ *Id.*

³² 2019 Guidance, p. 423.

³³ 2021 Clarifications Memo, p. 2.

included the SIP.³⁴ However, neither the CAA, the RHR, or the 2019 Guidance explain how to determine whether an existing measure that results from a four-factor analysis (or is used as the basis to avoid such an analysis) is necessary to make reasonable progress. Based on questions received on this subject during SIP development, it was clear that further guidance on this question would be helpful. Accordingly, the EPA provided this guidance in the 2021 Clarifications Memo.³⁵

Regarding “existing measures,” the Memo explains:

When the outcome of a four-factor analysis is that no new measures are reasonable for a source, the source’s existing measures are generally needed to prevent future visibility impairment (*i.e.*, to prevent future emission increases) and thus necessary to make reasonable progress. Measures that are necessary to make reasonable progress must be included in the SIP.

However, there may be circumstances in which a source’s existing measures are not necessary to make reasonable progress. Specifically, if a state can demonstrate that a source will continue to implement its existing measures and will not increase its emission rate, it may not be necessary to require those measures under the regional haze program in order to prevent future emission increases.

Similarly, with regard to existing “effective controls” used to screen out sources from a four-factor analysis:

A decision to forgo a full four-factor analysis based on a source’s existing effective controls is equivalent to a determination that no new measures are necessary to make reasonable progress. In this scenario, existing effective controls are, therefore, generally necessary to make reasonable progress and thus must be adopted into the regulatory portion of the SIP. However, the state may provide a weight-of-evidence demonstration as described in Section 4.1 to justify that the existing effective control is not necessary for reasonable progress.

Thus, the 2021 Clarifications Memo clarifies that, under the CAA and the RHR, there is a general presumption that existing measures resulting from a four-factor analysis (or relied upon to avoid such an analysis) are necessary to prevent future visibility impairment and therefore necessary to make reasonable progress. Accordingly, states have the option to submit all such measures into the SIP (to the extent they are not already approved into the SIP) without further evaluation of whether the measures are necessary to make reasonable progress. Alternatively, states may choose to provide a weight-of-evidence demonstration that such

measures are not necessary to make reasonable progress. Importantly, however, such a demonstration is needed only where an enforceable emissions limitation corresponding to an existing measure has not already been approved into the SIP and is not being submitted for SIP approval as part of the regional haze plan. Therefore, we do not agree that a review of “all existing control measures that are not separately included in the regional haze plan” is required.

Third, to the extent that a state chooses to undertake such a demonstration that existing measures are not necessary to make reasonable progress, we do not agree that it would be duplicative. On the contrary, because such a demonstration is necessary only for measures for which emissions limitations are not submitted into the SIP, the state and the EPA need to evaluate relevant evidence concerning whether the source will continue to implement its existing measures and maintain its emissions rate in the absence of SIP-approved requirements to do so, to ensure that visibility impairment does not increase.

In sum, we disagree with ADEQ’s characterization of the contents of the 2021 Clarifications Memo and its role in our partial approval and partial disapproval of the Plan.

Comment B.2. ADEQ comments that the EPA should not issue binding decisions based on guidance alone where the bases for disapproval are not in the rule or statute. ADEQ cites to statements in the 2019 Guidance and 2021 Clarifications Memo regarding screening out of effectively controlled sources and determinations of whether existing controls are necessary to make reasonable progress, as the examples of guidance. Specifically, ADEQ asserts that “[i]t was unreasonable for the EPA’s clarification memo to issue these additional specific barriers to a determination that existing measures were effective at a given source late in the development of second round regional haze plans through guidance, and without additional notice and comment.”

Response B.2. We disagree that we issued our proposed decision based on guidance. Rather, the proposal action clearly indicates that the partial disapproval was based on failing to satisfy the requirements of the relevant portions of the RHR and CAA sections 169A and 169B, with citations to our guidance as further explanation. See Response A.3 for more explanation.

We also note that ADEQ’s comment appears to conflate two separate questions: first, whether its justification

for screening out a unit based on existing effective emissions controls was sufficient, and second, whether such existing effective control measures are necessary to make reasonable progress. In our proposal, we discussed each of these issues as two separate grounds for our proposed partial disapproval with respect to 40 CFR 51.308(f)(2).³⁶ While both questions apply to sources that are screened out from a four-factor analysis based on existing effective controls, they are distinct. The first issue is further addressed in Response B.3 of this document, while the second is addressed in Response B.1. Therefore, we do not agree that the 2021 Clarifications Memo created any additional barriers to a determination that existing measures were effective at a given source.

Comment B.3. ADEQ disagreed with the EPA’s proposed determination that Arizona failed to provide adequate justification for deferring certain emissions units from consideration. ADEQ indicated that the state has the flexibility to reasonably select a set of sources for an analysis of control measures, and that it did not exclude entire facilities from consideration or exempt sources that had previously adopted BART or reasonable progress controls, but rather excluded just the emissions processes or units that recently installed highly effective controls from the calculation of the Q/d value for that facility. ADEQ also provided additional information regarding effective controls in Attachment A of its letter.

Response B.3. We agree that states have flexibility to reasonably select a set of sources for analysis of controls measures. However, as described in our proposal, we find that ADEQ’s approach to screening out units from conducting a four-factor analysis on the basis that they are “effectively controlled” was not adequately documented.³⁷ Specifically, in some cases, ADEQ did not identify the controls for each pollutant at each unit or process, the associated limits, or where the controls and/or limits currently exist in the Arizona SIP. In other cases, ADEQ listed the controls, but did not clearly explain why it is

³⁶ See 89 FR 47398, 47428 (“ADEQ did not provide an adequate justification for screening out certain sources and units from conducting a four-factor analysis on the basis that they are “effectively controlled” as part of its source selection process”) and 47431 (“ADEQ has not addressed whether any of the existing measures relied upon in its four-factor analyses or its ‘effective controls’ determinations are necessary to make reasonable progress and thus should be a part of the State’s long-term strategy for the second planning period.”).

³⁷ 89 FR 47398, 47428.

³⁵ 2021 Clarifications Memo, pp. 8–9.

reasonable to assume, without conducting a four-factor analysis, that no additional controls would be reasonable.³⁸ Accordingly, ADEQ should have identified where the existing limits are found in the SIP or FIP and clearly explained why no additional controls would likely be reasonable under a four-factor reasonable progress analysis for the second planning period. Without this analysis and explanation, it is not clear what is a part of Arizona's long-term strategy for the second planning period.

As noted in its comment, ADEQ conducted its effective controls screening on a unit-specific basis. However, it did not do so on a pollutant-specific basis. Rather, ADEQ screened out entire units from further evaluation for NO_x, SO₂, or PM₁₀ if the units met ADEQ's screening criteria for any one of these pollutants. We find that this approach was unreasonable because it resulted in the screening out of entire units without consideration of whether the unit had effective controls for all three of the pollutants covered in ADEQ's long-term strategy. For example, ADEQ screened out AEPCO Apache Unit 3 and TEP Irvington Generating Station (IGS) Unit 4 from any further analysis because these units were converted from coal to natural gas under better-than-BART alternatives during the first planning period.³⁹ The EPA acknowledges that fuel combustion units that are required to combust pipeline-quality natural gas are generally considered to be effectively controlled for SO₂ and PM.⁴⁰ However, they are not necessarily effectively controlled for NO_x, based on burning natural gas alone. Therefore, we find that ADEQ has not provided adequate justification for screening these units out from an analysis of NO_x controls.

Additionally, we appreciate the documentation in Attachment A that ADEQ provided in its attachment letter. However, this information would need to be part of a SIP revision subject to review by the public and FLMs in order for the EPA to consider it as part of the long-term strategy. If ADEQ develops a new SIP revision intended to remedy the deficiencies discussed in our proposed and final actions on the Plan,

it may be appropriate to include this information in that SIP revision.

Comment B.4. ADEQ asserts that, despite indicating that flawed emissions rates were used for some of ADEQ's analyses, the proposed action identified one example of differing achievable emissions rates for selective catalytic reduction (SCR) and selective non-catalytic reduction (SNCR) controls for SGS Units 1 and 2's four factor analyses. In this example, ADEQ used 0.060 lb/MMBtu and 0.15 lb/MMBtu as reasonable estimates of the achievable rates at TEP SGS Units 1 and 2 for SCR and SNCR, respectively.

For SCR, ADEQ additionally states the study that the EPA cited for its justification that SCR has been demonstrated to achieve 0.05 lb/MMBtu (or up to 90 percent reduction) was published in 2005 and found that the 20 SCR systems examined in 2003 achieved NO_x emissions rates between 0.04 and 0.07 lb/MMBtu.⁴¹ In addition, ADEQ noted that EPA found 0.065 lb/MMBtu as a "reasonable estimate of average SCR performance" in its 2016 Regional Haze FIP action for the Salt River Project Coronado Generating Station Unit 1.

For SNCR, ADEQ additionally states that the EPA did not provide a technical citation for disagreeing with ADEQ's use of 0.15 lb/MMBtu for SNCR. ADEQ noted that the proposed rule indicated that ADEQ did not demonstrate why source specific conditions would cause SNCR on these units to achieve as little as a 15 percent reduction. ADEQ noted that Srivastava et al. found that while smaller boilers (e.g., 76–78 MW units) were able to achieve greater than 60 percent NO_x reductions, larger boilers (e.g., 500 MW units) "may be capable of achieving reductions of only ~30%." ADEQ indicates that SGS Units 1 and 2 units have nameplate ratings of 425 MW and would be expected to achieve less reductions than smaller units. ADEQ also points to the inlet concentration as another consideration for achievable emissions rates with post combustion emissions control. Citing Srivastava et al., ADEQ notes that the study found that "in the absence of reliable SCR inlet NO_x data, the SCR efficiencies are estimated using an inlet NO_x level of 0.5 lb/10⁶ Btu." However, in the case of SGS Units 1 and 2, the NO_x concentration in the exhaust from these

units is less than 100 parts per million by volume (ppmv) with an assumed rate of 0.174 lb/MMBtu and 0.178 lb/MMBtu being used in ADEQ's four factor analysis cost calculations for Unit 1 and Unit 2, respectively. Given the already low NO_x inlet concentration, an achievable emissions rate of 0.15 lb/MMBtu was determined to be reasonable. ADEQ further noted that additional information related to achievable emissions rates for SNCR for SGS Unit 1 and Unit 2 can be found in Appendix K, Section II(J), Comment 10 of the 2022 Arizona Regional Haze Plan.

Response B.4. We acknowledge that we only highlighted a single example of flawed emissions rates in our proposal—for NO_x at SGS Units 1 and 2. However, as explained in response A.1, in evaluating whether a SIP revision (or a portion thereof) meets each of these CAA requirements, the EPA is not required to separately evaluate and discuss each of the thousands of pieces of information, analyses and determinations comprising the SIP submission. Rather, the EPA may focus on those specific elements of the SIP revision that form the basis for our determination that certain applicable requirements are met and certain applicable requirements are not met. In this instance, we focused on these units because they are expected to have the highest NO_x emissions of any units in the State (2,099 and 2,283 tpy respectively) by 2028, so it is important to carefully examine whether additional NO_x reductions from these units are necessary to make reasonable progress. Given this context, and for the reasons outlined below, we do not agree with ADEQ that it has adequately documented the emissions rates assumed in this analysis, which are a critical component of a four-factor analysis.

The emissions rate achievable by a unit equipped with SCR is determined by several parameters and technological limitations. There are periods of operation in which the SCR is not able to operate, particularly during periods of startup and shutdown.⁴² The SCR emissions rate (lb/MMBtu) achievable by a particular unit represents the combination of two primary elements: (1) the controlled NO_x emissions rate during periods of normal unit operation when the SCR is able to operate, and (2) the uncontrolled NO_x emissions rate

³⁸ See 40 CFR 51.308(f)(2)(i) ("... The State must include in its implementation plan a description of the criteria is used to determine which sources or groups of sources it evaluated and how the four factors were taken into consideration in selecting the measures for inclusion in its long-term strategy"). See also 2021 Clarifications Memo, p. 5; 2019 Guidance, p. 23.

Available at: <https://doi.org/10.1080/10473289.2005.10464736>.

⁴² Control Cost Manual, Section 4, Chapter 2 Selective Catalytic Reduction (June 2019), section, 2.2.1 Reduction Chemistry, Reagents, and Catalyst, available at https://www.epa.gov/sites/default/files/2017-12/documents/scrcostmanualchapter7thedition_2016revisions2017.pdf.

during periods of startup and shutdown when the SCR system cannot operate, and result in unit emissions higher than the SCR controlled emissions rate that increase the unit's overall emissions rate.

With regard to the first element, the 2005 study is not the sole basis for our finding that an overall emissions rate of 0.050 lb/MMBtu is achievable with SCR on an annual average basis. There are multiple instances of coal-fired units installing SCR on a retrofit basis and achieving 0.050 lb/MMBtu in practice on an annual average basis.⁴³ These units are typically able to achieve this overall level of control by being able to operate at NO_x annual emissions rates at or below 0.050 lb/MMBtu based upon periods of normal operation. Even several of the units identified by ADEQ operating in the annual average emissions rate range of 0.055 to 0.065 lb/MMBtu are still achieving emissions rates of 0.050 lb/MMBtu and lower based upon periods of normal operation.⁴⁴ We consider this information sufficient to establish that an 0.050 lb/MMBtu emissions rate warrants consideration as technically feasible for coal fired units generally during periods of normal operation, absent source specific factors affecting feasibility. We are not aware of assertions by either ADEQ or TEP that the Springerville units specifically cannot achieve 0.050 lb/MMBtu when operating with SCR during periods of normal operation.⁴⁵ Therefore, we find that ADEQ should have considered a controlled NO_x emissions rate of 0.050 lb/MMBtu for SGS Units 1 and 2 when operating with SCR during periods of normal operation.

The majority of analysis performed by ADEQ is relevant to the second element and is intended to support a position that, when the annual emissions rate achievable during normal operations is combined with emissions from the number of startup/shutdown cycles exhibited by SGS Units 1 and 2, an annual average emissions rate of 0.06 lb/MMBtu is what is reasonably achievable for these units. We consider it appropriate to account for the effect of

startup/shutdown emissions on the emissions rate achievable by the unit, but disagree that the analysis provided by ADEQ supports an annual average emissions rate of 0.060 lb/MMBtu. TEP's four factor analysis and ADEQ's SIP submittal did not include startup/shutdown history to support the assertion that Springerville has more startup/shutdown events than comparable tangentially-fired coal fired boilers. A review of Clean Air Markets Program Data (CAMPD) emissions and operating data over a 2021–2023 timeframe indicate that SGS Units 1 and 2 each experienced approximately 9 to 14 startup events per year. While we acknowledge that some portion of SGS baseline emissions consist of startup/shutdown emissions that cannot be controlled by an SCR system, the substantial majority of baseline emissions are attributable to emissions during normal operation. We estimate that approximately 97–98% of baseline emissions are attributable to normal operations that could be controlled by SCR.⁴⁶ Given that the majority of unit emissions can be controlled by SCR to 0.050 lb/MMBtu or lower and that the remaining 2–3 percent of operations are characterized by low inlet SCR emissions rates, we do not consider the historical startup/shutdown operating profile to support deviating to an 0.06 lb/MMBtu emissions rate on an annual average basis.

ADEQ cites a limit of 0.065 lb/MMBtu established for SRP Coronado Unit 1 in a 2016 Regional Haze FIP action as support for the use of an annual average emissions rate of 0.060 lb/MMBtu. We wish to clarify that the 0.065 lb/MMBtu value was not the annual average emissions rate used in cost calculations, but was the emissions limit established on a rolling 30-boiler operating day (BOD) average, for Coronado Unit 1. We relied upon an 0.050 lb/MMBtu annual average emissions rate in developing cost calculations for SCR,⁴⁷ which is

⁴⁶ See Docket Item F–17 [SGS CAMPD 2021–23.xlsx]. To illustrate SCR control potential during periods of normal operation, this spreadsheet is based on the key assumption that emissions from any day a unit did not operate a full 24 hours would be attributable to startup/shutdown periods. An hourly analysis would provide a more refined and precise assessment, though we consider this assumption to overestimate the emissions attributable to startup/shutdown by including all emissions from partial operating days towards startup/shutdown.

⁴⁷ See Docket Item EPA–R09–OAR–2012–0021–0204 for cost calculation details. More information related to establishing a 30 BOD limit relative to an annual emissions rate can be found in our March 31, 2015 (80 FR 17010) proposed reconsideration, including Docket Items EPA–R09–OAR–2015–0165–0029 through –0033 for further details. We note that SRP identified an SCR design target

consistent with our action here. In establishing a rolling 30–BOD limit for Coronado Unit 1 in that action, we acknowledged that upward revisions to the SCR design rate achievable on an annual average basis would be appropriate in order to accommodate the effect that multiple startup/shutdown events would have to overall unit emissions rates on an averaging period that could be as short as 30 days. Based upon startup/shutdown frequency and projected controlled emissions rate information provided by SRP, we finalized 0.065 lb/MMBtu as an appropriate emissions limit and reasonable estimate of SCR performance over a short-term period.⁴⁸ Given that the 0.065 lb/MMBtu limit reference here corresponds to a different, shorter averaging period, and was itself based on an 0.05 lb/MMBtu annual average emissions rate, we do not consider it supportive of an 0.060 lb/MMBtu annual average emissions rate.

For SNCR, we appreciate the additional analysis provided in the comment and citation to Appendix K summarizing ADEQ's responses to public comments. We acknowledge that low inlet NO_x concentrations are a general consideration in evaluating NO_x controls that can negatively impact control efficiencies and achievable controlled emissions rates. Therefore, in order to further evaluate whether a rate lower than 0.15 lb/MMBtu may be achievable with SNCR at SGS Units 1 and 2 on an annual basis, we examined CAMPD emissions data over a 2019–2023 time period for SNCR-equipped units comparable to SGS Units 1 and 2, specifically filtering for tangentially-fired coal units operating with SNCR on a retrofit basis.⁴⁹ We identified four currently operating SNCR-equipped units achieving NO_x emissions rates below 0.15 lb/MMBtu, ranging between 0.10 to 0.12 lb/MMBtu.⁵⁰ These values represent the highest performing SNCR-equipped units, with the next best performing units operating at emissions rates of 0.15 lb/MMBtu and higher. At least one of the four units we identified has the capability to use natural gas,

during periods of normal operation as low as 0.03 lb/MMBtu for Coronado Unit 1, though we acknowledge there are source specific differences with the SGS units.

⁴⁸ It is unclear to what extent a comparable 30–BOD limit may be appropriate for the SGS units, but we note that the SGS units appear to have historically had at least as many startup/shutdown events as Coronado Unit 1.

⁴⁹ See Docket Item F–21, “SNCR Tangential Coal Units.xlsx.”

⁵⁰ See Docket Item F–21. These units include Boswell Energy Center (MN) Unit 4, Will County (IL) Unit 4, and Jeffrey Energy Center (KS) Units 2 and 3.

⁴³ See Docket Item F–16 “SCR Tangentially fired Coal.xlsx.”

⁴⁴ Id.

⁴⁵ TEP has indicated that vendors have been unwilling to provide manufacturer guarantees of 0.050 lb/MMBtu over the lifetime of the SCR system. Because manufacturer guarantees include contractual and financial considerations beyond technical performance of the SCR system, we do not consider an inability to secure a manufacturer guarantee to constitute a determination that an emission rate of 0.050 lb/MMBtu is not technically feasible, particularly with regard to periods of normal operation.

which could have the effect of lowering emissions rates relative to units that do not have this capability, such as SGS Units 1 and 2.⁵¹ Based on the three remaining units, each unit had relatively low pre-SNCR emissions rates that are comparable to SGS Unit 1 and 2, and each unit is able to achieve SNCR emissions rates below 0.15 lb/MMBtu and control efficiencies better than 15 percent. Neither ADEQ or TEP has provided documentation to support a claim that SGS Units 1 and 2 specifically cannot achieve an annual emissions rate lower than 0.15 lb/MMBtu with SNCR. Therefore, we find that ADEQ should have considered a NO_x emissions rate of lower than 0.15 lb/MMBtu for SNCR at SGS Units 1 and 2.

We also note that this was one of multiple flaws that formed the basis of our determination that the State's long-term strategy did not satisfy the requirements of 40 CFR 51.308(f)(2), including reasons related to source selection and control determinations, as detailed in our proposal and elsewhere in this document. Therefore, even assuming that a control efficiency of 15 percent for SNCR at SGS Units 1 and 2 was reasonable, it would not have changed our determination that the 2022 Arizona Regional Haze Plan did not satisfy the requirements of 40 CFR 51.308(f)(2).

Comment B.5. ADEQ disagrees with the EPA's determination that Arizona deviated from the Control Cost Manual without documentation as part of its four factor analyses with regards to remaining useful life calculations for the El Paso Natural Gas (EPNG) Williams facility and the use of source specific interest rates without providing adequate documentation in the control measure analyses for the EPNG Williams and Willcox facilities.

ADEQ indicates that the EPA Control Cost Manual Section 4, Chapter 2, states that “. . . a representative value of the equipment life for SCR at power plants can be considered as 30 years . . . [f]or other sources, the equipment life can be between 20 and 30 years.” ADEQ noted that while it erroneously omitted this citation from the EPNG Williams Turbine analysis, the Control Cost Manual citation and justification for use of 25 years is the midpoint between the 20–30 year range for non-EGU SCR systems and was included in the EPNG Willcox SCR analysis for Turbines 1 and

2.⁵² ADEQ also noted that it received cost calculation spreadsheets utilizing a 25-year useful life for SCR for the EPNG Williams Turbine 1 from the US Forest Service.⁵³

ADEQ also explains that in its analysis of remaining useful life for compressor engines at the EPNG Williams facility, ADEQ documented the assumptions and basis for using 20 years to amortize NO_x controls in Appendix C, Section C3.7.6.5, which includes citations to the Control Cost Manual and the EPA's 2016 technical support document for the Cross State Air Pollution Rule for the 2008 Ozone NAAQS.

Response B.5. We appreciate the clarification regarding ADEQ's reasoning for use of a 25-year remaining useful life for the EPNG Williams turbines and 20 years for the EPNG Williams engines. While there are instances of combustion turbines with operating lifetimes beyond 25 years (with or without retrofit controls), we acknowledge that EPA guidance such as the Control Cost Manual has not recommended a value beyond the 20–30 year range. ADEQ's use of a 25-year useful life represents the midpoint of Control Cost Manual recommendations, and therefore we agree that it is consistent with the Control Cost Manual. However, we note that the lack of documentation of remaining useful life for the units at Williams Compressor Station was one of the many flaws that we identified in the state's long-term strategy including reasons related to source selection and control determinations, as detailed in our proposal and elsewhere in this document. Therefore, this clarification does not change our determination that the 2022 Arizona Regional Haze Plan did not satisfy the requirements of 40 CFR 51.308(f)(2).

Comment B.6. ADEQ disagrees with the EPA's determination that ADEQ did not reasonably weigh the statutory factors in reaching its control determinations with regards to application of cost thresholds. ADEQ disagrees that Arizona's consideration of incremental cost effectiveness in its four factor analyses were done in an unreasonable manner. ADEQ cites to its explanation that the incremental cost of requiring low-emission combustion 2 (LEC 2) as opposed to Air-Fuel ratio adjustments is \$5,034/ton, which ADEQ considered reasonable, and therefore ADEQ found that LEC 2 is a more

appropriate control for Williams Reciprocating Engine 1 (RECIP–1).⁵⁴

ADEQ also asserts that it also analyzed other determinations from the regional haze first implementation period besides the incremental cost effectiveness value for the Nelson Lime Plant action, and ADEQ provides this information in Table 1 of its comment letter.

Response B.6. We appreciate ADEQ's explanation about LEC 2 on RECIP–1, but we note that ADEQ also rejected LEC 3 on Williams RECIP–1, on the grounds that the incremental costs of these controls, relative to less stringent controls, were excessive. In addition, ADEQ did not provide or consider incremental cost effectiveness values for the same controls for the other units at the same source (RECIP–2 or RECIP–5). Although states may choose to consider incremental costs in a reasonable manner,⁵⁵ we find it was unreasonable for ADEQ to do so only for specific units and controls, rather than in a consistent manner across all units and controls. Such inconsistent treatment of sources without explanation is the “the hallmark of arbitrary action.”⁵⁶

We also appreciate the addition of Table 1 identifying other first implementation period incremental cost effectiveness decisions. However, this information was not included in the Plan and therefore not subject to review by the public or FLMs. Accordingly, it cannot be relied upon to meet the requirement of 40 CFR 51.308(f)(2)(iii) for States to document the technical basis for their long-term strategy. Moreover, even if the information had been included in the Plan, it would not have justified ADEQ's inconsistent consideration of incremental cost effectiveness, for the reasons described in our proposal and the preceding paragraph.

Comment B.7. ADEQ states that, contrary to the EPA's contention, ADEQ did not rely upon visibility benefits for its control determinations, but rather visibility impacts were reported for some sources to give reference to the reader as to the relative impact of these sources or controls on visibility. ADEQ also asserts that nothing in the CAA, RHR, or 2019 Guidance prevents the department from considering visibility benefits as part of its analysis and stated that “the ADEQ's labeling of the visibility benefits associated with specific control scenarios as ‘small’

⁵¹ Based on reported natural gas fuel usage, the Boswell Energy Center appears to use natural gas primarily as a startup fuel, but does periodically use quantities of natural gas that suggest co-firing with coal for electricity generation purposes.

⁵⁶ *Nat'l Parks Conservation Ass'n v. EPA*, 788 F.3d 1134, 1145 (9th Cir. 2015).

comports with similar language used by the EPA in their regional haze actions.”⁵⁷

Response B.7. We agree with ADEQ that in its Response to Comments, ADEQ stated that “[v]isibility impacts were reported for some sources to give reference to the reader as to the relative impact of these sources or controls considered on visibility. However, this information was not considered in the Department’s emissions control measure determinations.”⁵⁸ However, this assertion is contradicted by the language of some of the control determinations in the Plan. For example, in the NO_x four-factor analysis for SGS, ADEQ stated that:

*ADEQ does find visibility impacts a useful consideration given the goal of the regional haze program is to improve visibility in Class I areas. As such, ADEQ reports modeled visibility impacts in this documentation. The small modeled visibility benefits associated with the modeled hypothetical NO_x emission reduction supports the determination that no additional NO_x controls are necessary to make reasonable progress towards natural visibility at Class I areas during this implementation period.*⁵⁹

Similar language appears following the SO₂ four factor analysis for SGS⁶⁰ and in the summary of ADEQ’s NO_x reasonable progress determination for IGS Unit 3.⁶¹ This language indicates that ADEQ did consider visibility for these units, and specifically, that it weighed the “small modeled benefits” of controls in determining that no additional NO_x controls were warranted at SGS Units 1 and 2 and IGS Unit 3, and no more stringent SO₂ controls were warranted at SGS Units 1 and 2.

While states have the option to consider visibility benefits, along with the four statutory factors, in making control determinations, if they choose to do so, they must do so “in a reasonable way that does not undermine or nullify the role of the four statutory factors in determining what controls are necessary to make reasonable progress.”⁶² In this

case, we find it was not reasonable for ADEQ to consider visibility benefits only for specific sources and without any explanation of what would constitute a significant visibility benefit.

In the action cited by ADEQ where the EPA considered “relatively small visibility benefits,”⁶³ we were comparing the relatively small benefits of a control at one source to the relatively larger visibility benefits expected to result from controls at other sources.⁶⁴ In contrast, in the 2022 Arizona Regional Haze Plan, ADEQ did not find any visibility benefits at any source to be anything other than small. Thus, as explained in our proposal regarding SGS Units 1 and 2, “[i]n the absence of any opportunities for larger emissions reductions and corresponding visibility benefits, we find that ADEQ’s reliance on ‘small’ visibility benefits as an additional justification for not adopting more stringent controls at these units is not persuasive.”⁶⁵

Finally, we note that, even assuming that ADEQ did not consider visibility benefits as part of its control determinations for SGS Units 1 and 2, we would still conclude that the determinations were flawed for other reasons. In particular, for NO_x, ADEQ did not adequately justify the control efficiency used for SCR and SNCR, as discussed in the proposal and response B.4.⁶⁶ For SO₂, ADEQ unreasonably rejected wet FGD on the basis of incremental cost, and set mass-based caps that will not ensure implementation of the emissions reduction measures that are necessary to make reasonable progress at these units, as discussed in the proposal and response B.8. Furthermore, the lack of clarity in the Plan regarding whether or not ADEQ considered visibility benefits in making its control determinations for SGS Units 3 and 4 and IGS Unit 3, indicates a lack of reasoned decision making that also supports our disapproval of the Plan’s long-term strategy.

Comment B.8. ADEQ disagrees with the EPA’s determination that ADEQ did not reasonably weigh the statutory factors in reaching its control determinations with regards to three issues noted in the proposed rule concerning the mass-based emissions caps at SGS and IGS.

First, ADEQ asserts that the EPA’s rationale is arbitrary and capricious in

regard to the rejection of wet FGD for SGS Units 1 and 2. ADEQ states that the use of emissions limits in lieu of codifying specific control technologies is a flexibility that the EPA itself used in its reasonable progress determination for Phoenix Cement Clarkdale (PCC).⁶⁷ ADEQ asserts that the EPA established an emissions limit for PCC that did not require the installation of a particular control technology but rather compliance through other means of meeting the limit.

Second, regarding the EPA’s contention that spray dry absorber (SDA) upgrades may still be cost effective after the establishment of the mass-based emissions caps, ADEQ comments that this manner of analysis is not contemplated in the four-factor analysis as outlined in the RHR or the 2019 Guidance. ADEQ asserts that the EPA has never applied this standard whereby after the establishment of an emissions limit based on the reductions achievable from a considered control technology that a State must revisit and update the baseline emissions of its four-factor analysis to reflect the new emissions limit. ADEQ claims that for its analysis of SGS, ADEQ did not select a control scenario in its four-factor analysis that included the imposition of both emissions limits and the installation of SDA upgrades, and therefore, the EPA should not substitute its judgment for ADEQ’s selection of SDA upgrades as the evaluated control measure for SGS Units 1 and 2 or reject ADEQ’s determination based on an arbitrary and circular four factor analysis standard.

Third, ADEQ further disagrees with the EPA’s assertion that the mass-based emissions caps at SGS and IGS would not meaningfully constrain the emissions from one unit during periods when the other unit is not operating and argues that the rationale is arbitrary and capricious. ADEQ notes that the EPA referenced TEP’s 2023 Integrated Resources Plan (IRP) and highlighted TEP’s plans to retire SGS Unit 1 in 2027, but states that as the operating scenarios outlined in the IRP are not federally enforceable conditions, ADEQ has no basis for the consideration of these future scenarios as part of its control measure analysis and the establishment of the mass-based emissions limits. ADEQ states that the EPA should not rely upon unenforceable and hypothetical operating scenarios to reject ADEQ’s reasonable progress determinations.

Lastly, ADEQ disagrees with the EPA’s rationale that IGS Unit 3’s mass-

⁵⁷ Citing *e.g.*, “relatively small visibility benefits” in 79 FR 52419, 52439 (September 3, 2014).

⁶⁷ 79 FR 52420, 52460.

based emissions limits are not yet enforceable and therefore are not an appropriate basis for modifying the baseline control scenario for a four-factor analysis. ADEQ cites that for the EPA's BART determination for Arizona Public Service (APS) Cholla generating station, the EPA accepted a source specific permit revision for APS Cholla Unit 2 that included a trigger that was conditional on the EPA's approval of the SIP revision that altered the remaining useful life of the unit in ADEQ's four factor analysis.⁶⁸ Therefore, ADEQ concludes that the EPA should approve ADEQ's reasonable progress determination for IGS Unit 3.

Response B.8. We disagree with ADEQ's comments arguing that the EPA's justification for disapproving the reasonable progress determinations for SGS and IGS as it relates to the mass-based emissions caps at SGS and IGS was improper.

First, we wish to clarify that we do not object to the use of numeric emissions limitations as a means to implement control determinations. Indeed, CAA section 169A(b)(2) specifically requires the long-term strategy to include "enforceable emissions limitations, compliance schedules, and other measures that are necessary to make reasonable progress." As explained in our proposal:

The amount of progress that is "reasonable progress" is based on applying the four statutory factors in CAA section 169A(g)(1) in an evaluation of potential control options for sources of visibility impairing pollutants, which is referred to as a "four-factor" analysis. The outcome of that analysis is the emissions reduction measures that a particular source or group of sources needs to implement to make reasonable progress towards the national visibility goal. . . . Such measures must be represented by "enforceable emissions limitations, compliance schedules, and other measures" (i.e., any additional compliance tools) in a state's long-term strategy in its SIP.⁶⁹

We find that the mass-based emissions caps set for SGS do not represent the emissions reduction measures that were the outcome of the state's four-factor analysis for the reasons described in our proposal⁷⁰ and herein. Therefore, these caps do not meet the requirements of 169A(b)(2) and (g)(1), or the corresponding provisions of the RHR.

Regarding PCC, we agree that in the EPA's reasonable progress determination for PCC in the first implementation period, the EPA established a mass-based emissions

limitation for NO_x. However, the circumstances between PCC and SGS Units 1 and 2 differ in important ways. The limit for PCC was set pursuant to 40 CFR 51.308(d)(3), which required the long-term strategy for the first implementation period to "include enforceable emissions limitations, compliance schedules, and other measures *as necessary to achieve the reasonable progress goals* established by States having mandatory Class I Federal areas."⁷¹ In this instance, the Class I areas primarily affected by emissions from PCC were in Arizona,⁷² and the emissions reductions from PCC were reflected in the applicable RPGs for these areas by scaling of visibility extinction components in proportion to changes in total annual emissions.⁷³ Under these circumstances, an annual mass-based emissions limit corresponding to the level of annual emissions reductions assumed in the RPG calculations was sufficient to meet the applicable requirement for an emissions limit "as necessary to achieve" the relevant RPGs.

In contrast, for the second planning period, the EPA clarified in 40 CFR 51.308(f)(2) that "the long-term strategy must include the enforceable emissions limitations, compliance schedules, and other measures that are necessary to make reasonable progress, as determined pursuant to (f)(2)(i) through (iv)." 40 CFR 51.308(f)(i) in turn requires the state to "evaluate and determine the emission reduction measures that are necessary to make reasonable progress by considering" the four statutory factors. Thus, the revised rule clarifies that the long-term strategy must include emissions limitations, compliance schedules, and other measures representing the emissions reduction measures that the state determined to be necessary to make reasonable progress, considering the four statutory factors.

The EPA provided recommendations on the appropriate form of such emissions limitations and other measures in the 2019 Guidance and the Clarifications Memo. Specifically, the 2019 Guidance recommends the use of throughput-based limits, rather than mass-based limits (i.e., "caps") for emissions limitations to implement measures necessary for reasonable progress in most instances.⁷⁴ The Guidance notes that mass-based limits

are allowed under the RHR, but explains that, "[i]f the state has determined, independent of the forecasted operating level, that operation of the emission control equipment . . . is necessary to make reasonable progress, a mass-based emission limit may not be appropriate."⁷⁵ The Clarifications Memo also reaffirms that "whether for new or existing measures . . . an emission limit . . . should be in the form of the emission rate achieved when implementing those measures (e.g., pounds per million British thermal units or lbs/MMBtu, pounds per hour or lbs/hr, or pounds per ton or lbs/ton of produced material)."⁷⁶

With regard to SGS 1 and 2, ADEQ concluded, based on a four-factor analysis that, "it is reasonable to require TEP to upgrade the current SDA systems"⁷⁷ and did not indicate that this determination was conditioned on a particular level of operation. Therefore, ADEQ should have set limits in the form of the emissions rates achieved when implementing SDA upgrades, e.g., lb/MMBtu limits, or should have provided a rationale for why the mass-based limits, which could be met without any control upgrades, nonetheless represent SDA upgrades.

We also note that the mass-based limit at PCC was for a single unit, meaning that it necessarily constrained the emissions from that unit on an annual basis. In contrast, the mass-based limit at SGS Units 1 and 2 were set across two units. Accordingly, if one unit ceases to operate, the limits would not meaningfully constrain emissions from the other unit. In addition, ADEQ rejected more stringent controls at SGS Units 1 and 2 based on its "determination that another viable reasonable control exists to reduce SO₂ emissions from Units 1 & 2 (upgraded SDA)." In contrast, the EPA did not reject any more stringent controls for PCC based on incremental cost effectiveness. Furthermore, the cap at PCC was intended, in part, to address concerns raised during consultation with the facility's owner, the Salt River Pima Maricopa Indian Community (SRPMIC).⁷⁸ No similar considerations exist with respect to SGS Units 1 and 2. Therefore, we find that the circumstances concerning the PCC

⁷⁵ Id. pp. 44–45.

⁷⁰ 89 FR 47398, 47430.

mass-based cap are distinguishable from those concerning SGS Units 1 and 2.

Second, regarding our finding that SDA upgrades would be cost effective after the establishment of the mass-based emissions caps, we disagree that we substituted our judgment for ADEQ's by arbitrarily rejecting ADEQ's determination based on a circular four-factor analysis standard. Contrary to ADEQ's suggestion, we did not state that ADEQ was required to revisit and update the baseline emissions of its four-factor analysis to reflect the new emissions limitation. However, we note that ADEQ did use this approach for IGS Unit 3 and determined that with the emissions reductions associated with the new Unit 3 emissions caps, no additional controls are necessary to make reasonable progress. ADEQ did not provide any rationale for why it used this approach for IGS Unit 3, but not for SGS Units 1 and 2.

Furthermore, the fact that the SDA upgrades would still be cost effective following implementation of the mass-based caps at SGS Units 1 and 2 is relevant to whether the use of caps (in lieu of throughput-based limits) is reasonable and appropriate in this particular case. The fact that throughput-based (*e.g.*, lb/MMBtu) limits equivalent to SDA would still be cost-effective following implementation of the caps (*i.e.*, if TEP complies with the caps by lowering its operating level) indicates that throughput limits based on the emissions rates achievable with SDA upgrades may be necessary to make reasonable progress, regardless of the future operating level. As previously noted, the 2019 Guidance explains that, under such circumstances, mass-based caps are generally not appropriate. Therefore, we believe this consideration is relevant to the evaluation of whether mass-based caps were reasonable and consistent with the requirements of the RHR in this case.

Third, we agree with ADEQ's statement that the operating scenarios outlined in the IRP are not federally enforceable conditions. However, ADEQ's statement in its comment letter that it has "no basis for the consideration of these future scenarios as part of its control measure analysis and the establishment of the mass-based emission limits" is inconsistent with its stated rationale in the Plan for establishing caps instead of mass-based limits. Specifically, ADEQ stated that:

As discussed in TEP's 2020 IRP, Units 1 will transition to seasonal operation in 2023 and Unit 2 in 2024. TEP is planning to retire Unit 1 in 2027 and Unit 2 in 2032. TEP will be very likely to manage its operating level strategically instead of completing the

upgrades to the SDA systems for meeting the RP requirements. Therefore, ADEQ determines that a mass-based emission limit is reasonable.⁷⁹

In other words, ADEQ elected to establish caps *specifically because* it anticipated that TEP could comply with these caps by reducing its operating level consistent with its then-current IRP. Therefore, we do not agree that it was inappropriate for the EPA to consider information contained in TEP's most recent (2023) IRP in evaluating whether the mass-based caps were reasonable and consistent with the RHR.

Lastly, we agree that for APS Cholla Unit 2, the EPA accepted a source-specific permit revision that included a trigger that was conditional on the EPA's approval of the SIP revision that altered the remaining useful life of the unit in ADEQ's four factor analysis. However, the APS Cholla scenario was distinguishable because, as explained in the proposed rule,⁸⁰ the SIP revision for APS Cholla replaced the FIP that was applicable to these units.⁸¹ Therefore, it would not have been reasonable to subject them to two inconsistent requirements, one State and one Federal, under the RHR at the same time. Thus, under these circumstances it was appropriate for ADEQ to make the effectiveness of the permit conditions contingent on EPA SIP approval. In the current case, there is no existing FIP in place applicable to IGS Unit 3, so no similar rationale exists for making the cap contingent upon approval by the EPA.

Comment B.9. ADEQ asserts that the EPA should approve ADEQ's reasonable progress goal (RPG) for the Sycamore Canyon Wilderness Area. The state indicates that it provided the required "robust demonstration" by including a detailed analysis of visibility data at the Sycamore site to demonstrate that its slower rate of progress results from significant increases in light extinction from coarse mass.

Response B.9. As ADEQ notes in its comment, its analysis regarding Sycamore Canyon focused on the substantial increase in coarse mass and soil impairment at the Sycamore Canyon site. However, as explained in our proposal, the rule requires a state with a Class I area whose RPG is above the glidepath to demonstrate, based on the source selection and four factor analyses required under 40 CFR 51.308(f)(2)(i), that there are no additional emissions reduction

measures for sources that may reasonably be anticipated to contribute to visibility impairment in the Class I area that would be reasonable to include in the long-term strategy.⁸² Although ADEQ provided a detailed analysis of monitoring data concerning Sycamore Canyon, it did not provide "a robust demonstration, including documenting the criteria used to determine which sources or groups or sources were evaluated and how the four factors required by paragraph (f)(2)(i) were taken into consideration in selecting the measures for inclusion in its long-term strategy."⁸³ Instead, it relied solely on monitoring data and the source selection and four-factor analyses contained elsewhere in the Plan.⁸⁴ For the reasons described in our proposal and elsewhere in this document, we find that these analyses were inadequate to meet the requirements of 40 CFR 51.308(f)(2). Therefore, the Plan also did not meet the requirements of 40 CFR 51.308(f)(3)(ii)(A) with respect to Sycamore Canyon.

Comment B.10. ADEQ indicates that the State intends to coordinate with EPNG to provide supporting documentation for the interest rate. ADEQ indicates that it intends to provide the interest rate documentation as confidential business information (CBI) to the EPA for review prior to publication of the final rule and requests that the EPA approve the cost calculation for EPNG Willcox and Williams based on the site-specific interest rate and supporting documentation.

Response B.10. Although ADEQ referenced the existence of documentation and the possibility of sharing it with the EPA in its response to comments in the Plan,⁸⁵ no supporting documentation for the interest rate was submitted as part of the Plan or prior to the close the public comment period on the EPA's proposed partial approval and partial disapproval. Therefore, the EPA is unable consider the interest rate information as part of this action.

Additionally, we note that the lack of documentation of EPNG's firm-specific interest rate was one of several flaws that we identified in the state's long-term strategy. Therefore, even if the appropriate documentation had been submitted and within the proper time frame, that alone would not have changed our determination that the

⁸⁵ 2022 Arizona Regional Haze Plan, Appendix K.

⁷⁹ 2022 Arizona Regional Haze Plan, Appendix C, p. 236.

⁸⁰ 89 FR 47398, 47407, Table 1.

⁸¹ 77 FR 72511 (December 5, 2012).

2022 Arizona Regional Haze Plan did not satisfy the long-term strategy requirements of 40 CFR 51.308(f)(2).

Comment B.11. ADEQ voiced procedural concerns with the lack of specificity in the EPA's proposed disapproval of the 2022 Arizona Regional Haze Plan. ADEQ cites CAA 307(d)(3) as requiring a detailed notice of rulemaking and cites *Small Ref. Lead Phase-Down Task Force v. EPA*, 705 F.2d 506, 518–19 (D.C. Cir. 1983), for the proposition that the notice provided in the proposal may be too general to be adequate and that “[a]gency notice must describe the range of alternatives being considered with reasonable specificity.” The commenter asserts that the EPA's proposed rule does not provide “detailed notice” of certain specific issues that form the basis for disapproval of entire sections of the 2022 Arizona Regional Haze Plan, denying ADEQ the opportunity to specifically address those bases for disapproval during the comment period.

Response B.11. We disagree that the EPA's proposal provided inadequate notice. The EPA's action on the 2022 Arizona Regional Haze Plan is not subject to the requirements of CAA section 307(d). Those requirements apply only to specific enumerated types of actions under the CAA and to “such other actions as the Administrator may determine.”⁸⁶ Actions on SIPs are not one of the enumerated actions, and the Administrator had not determined that this action is subject to 307(d) pursuant to Section 307(d)(1)(V). Therefore, this action is subject to the procedural requirements of the Administrative Procedure Act (APA).

Accordingly, pursuant to 5 U.S.C. 553(b)(2) and (3), the EPA's notice of proposed rulemaking regarding the Plan was required to include “reference to the legal authority under which the rule is proposed” and “either the terms or substance of the proposed rule or a description of the subjects and issues involved.” The proposal clearly met these requirements, as it stated the applicable legal authorities and provided the EPA's review of the Plan in relation to those requirements. The comment provides no basis to conclude that the proposal failed to meet these requirements. Indeed, the opinion cited by the commenter contrasts these more general APA requirements to the more exacting requirements of CAA section 307(d) concerning the contents of proposed rulemaking.⁸⁷ While we agree with the commenter that “[a]gency

notice must describe the range of alternatives being considered with reasonable specificity,”⁸⁸ we find that our proposal met this requirement, as it plainly stated that the EPA was considering partially approving and partially disapproving the 2022 Arizona Regional Haze Plan and detailed the reason for this proposed action. Please also see Responses A.1.

Comment B.12. ADEQ acknowledges that further FLM consultation is required for a plan revision that will correct the deficiencies identified in the proposed rulemaking action, but contends that the inclusion of the nonpoint source selection analysis and selected controls for nonpoint sources in the FLM review draft of the plan provided FLMs adequate notice and review of Arizona's nonpoint source rules that were codified after plan submission and submitted in the 2023 Arizona Regional Haze Rules Supplement.⁸⁹

Response B.12. The EPA disagrees with ADEQ's contention that it provided the FLMs with adequate notice and review of Arizona's nonpoint source rules. The information about FLM consultation regarding the rules specifically is not detailed in either the 2023 Arizona Regional Haze Rules Supplement, or the 2022 Arizona Regional Haze Plan. The 2023 Arizona Regional Haze Rules Supplement indicated that further information on how this SIP revision complied with 40 CFR 51.308(i) requirements for federal land manager consultation is section 2.4 of the 2022 Arizona Regional Haze Plan.⁹⁰ However, section 2.4 of the plan only describes the FLM review of the 2022 Arizona Regional Haze Plan, and does not specify if ADEQ provided a draft of the three nonpoint source rules to the FLMs for review. The rules were not included in the 2022 Arizona Regional Haze Plan. Should Arizona choose to submit a SIP revision, clarification of the FLM review process of the nonpoint source rules that are listed in Table 1–1 of the 2023 Arizona Regional Haze Rules Supplement would be helpful for EPA review.

C. Comment Letter From the Chamber and AMC

Parts I (“The Chamber and AMC are supportive of the goals of the Regional Haze Rule”) and III (“Conclusion”) of the Chamber and AMC's comment letter are informational and therefore do not

require a response. We respond to part II, sections A–E of the Chamber and AMC's comment letter below.

Comment C.1. The Chamber and AMC note that the EPA's delayed action and partial disapproval of Arizona's Regional Haze Plan is an example of erosion of cooperative federalism. The commenter contends that the timeline of events leading up to the EPA's partial disapproval of Arizona's Regional Haze Plan is problematic and that the EPA seems to routinely miss statutory deadlines, only to get sued by third-party entities for failure to act, resulting in agreements to deadline extensions that delay action for years. In the meantime, the resources and analysis invested by states depreciate in value, often requiring states to reinvest in efforts to update an analysis with new information. The commenter also asserted that “[r]egularly, an even worse scenario plays out in which EPA denies a SIP because the information submitted in good faith by a state has since become dated and stale.”

Response C.1. We do not agree that either the timing or substance of the EPA's partial disapproval of Arizona's Regional Haze Plan is an example of the erosion of cooperative federalism. We acknowledge that the EPA did not act on the 2022 Arizona Regional Haze Plan within the statutory deadline under CAA section 110(k)(3), and that we were subsequently sued for failing to meet that deadline. This resulted in a court-ordered deadline for the EPA to take action on the Plan by March 30, 2025.⁹¹ However, we do not agree that this resulted in a “deadline extension” of any sort, or an erosion of cooperative federalism. On the contrary, in issuing a partial approval and partial disapproval of the Plan, the EPA is fulfilling our statutorily-mandated role to review SIPs for compliance with the requirements of the CAA and the RHR, as further described in Response D.3.

We also disagree with the suggestion that the EPA is disapproving the 2022 Arizona Regional Haze Plan, partially or entirely because information became “dated or stale.” The comment did not provide examples of information becoming dated, resulting in disapproval; thus, we cannot comment on any specific concerns the commenter has with the information within the 2022 Arizona Regional Haze Plan.

Further, as explained in Responses A.1 EPA staff also discussed with ADEQ many of the concerns that became bases for our disapproval during the SIP development process.

⁸⁶ CAA Section 307(d)(1).

⁸⁷ *Small Ref. Lead Phase-Down Task Force v. EPA*, 705 F.2d 506, 518–19 (D.C. Cir. 1983).

Comment C.2. The Chamber and AMC state that guidance should not be cited as grounds to disapprove the 2022 Arizona Regional Haze Plan. The commenter asserts that guidance should be viewed only as a reference and not a legal requirement to be used to approve or disapprove a state's plan. The Chamber and AMC also claim that the EPA published final guidance for Regional Haze Plans three weeks before the plans were due, making compliance with the guidance practically impossible before the deadline. The commenter concludes that relying on the guidance to partially disapprove the Plan was therefore arbitrary and capricious, and the EPA should withdraw all of the proposed disapprovals based upon the 2021 Clarifications Memo.

Response C.2. The EPA disagrees that it relied on guidance, including the 2021 Clarifications Memo, as the basis for our partial disapproval. See responses A.5, B.1, and B.2.

Comment C.3. The Chamber and AMC assert that Arizona's source selection methodology was reasonable and that the EPA should give deference to the State on this matter. The commenter indicates that sources that applied controls in the first round of Regional Haze had recently made significant investments in the design, engineering, procurement, construction and operation of those air pollution control devices. They note that forcing facilities to consider improvement or replacement of these air pollution control devices long before they have depreciated is an unnecessary economic burden for the source and the State. The Chamber and AMC note that ADEQ chose not to force additional analysis from these sources and reasonably relied upon reductions from other emissions sources for visibility improvement, a method that resulted in all but one of Arizona's Class I areas either meeting or exceeding the uniform rate of progress (URP) toward natural conditions.

Response C.3. We disagree that it was reasonable for Arizona to screen out sources solely because they applied controls during the first planning period, for the reasons described in section IV.E.2.a. of our proposal and in response B.3 of this document.

We also disagree that our disapproval will automatically force sources to consider improving or replacing any recently installed air pollution devices. Rather, ADEQ has the option to provide additional documentation and justification for its effective control determinations in a responsive SIP revision. We anticipate that for many

units that recently installed controls, ADEQ will be able to provide an adequate demonstration of effective controls on a unit-specific and pollutant-specific basis, if it chooses to do so, which would preclude the need for a four-factor analysis for those units and pollutants. Any affected units and pollutants for which ADEQ is unable to make such demonstration would be subject to the four-factor analysis requirement as required by 40 CFR 51.308(f)(2).

Finally, we note that all states are subject to the requirements at 40 CFR 51.308(f)(2) and (3) regardless of whether the 2028 RPGs for Class I Areas they affect are above or below URP.

Comment C.4. The Chamber and AMC assert that the EPA should give deference to Arizona's deviation from the EPA Control Cost Manual in developing cost estimates. The commenter notes that the Cost Control Manual is not accurate for all sources and cites examples such as variable interest and emissions rates. They conclude that the use of different interest rates and different control efficiencies for different projects should be viewed as reasonable.

Response C.4. We do not agree that we should have deferred to Arizona's deviation from the EPA Control Cost Manual in the absence of adequate justification. As discussed in Response D.3, Congress charged the EPA with independently evaluating and reviewing SIP submissions for compliance with the applicable requirements under the CAA. 40 CFR 51.308(f)(2)(iii) requires states to "document the technical basis, including modeling, monitoring, cost, engineering, and emissions information, on which the State is relying to determine the emission reduction measures that are necessary to make reasonable progress in each mandatory Class I Federal area it affects." The technical documentation must include the modeling, monitoring, cost, engineering, and emissions information on which the state relied to determine the measures necessary to make reasonable progress. For the reasons noted in section IV.E.2.b.ii ("Deviations from Cost Control Manual") of our proposed rule, we found that Arizona failed to adequately document the technical basis that it relied upon to determine emissions reduction measures, as required by 40 CFR 51.308(f)(2)(iii). Specifically, as explained in our proposal, it is important to use consistent methods in order to allow for reasoned comparisons between different sources within a state,

and cost analyses in other states.⁹² Therefore, while our regulations allow for flexibility among various methodologies, where a state deviates from these methods, it should explain how its alternative approach is reasonable, appropriate, and consistent with the regulations and the statutory requirement to make reasonable progress towards the national goal. Arizona did not do so. We therefore disagree that the EPA should give deference to Arizona's approach in the Plan.

Comment C.5. The Chamber and AMC indicate that Arizona's plan should be viewed in the context that it results in all but one monitor having an RPG that provides for a greater rate of visibility improvement than the adjusted URP. The commenter asserts that Arizona has created a plan that meets or exceeds the URP at all monitors except for Sycamore Canyon, which was moved to an intersection of two dirt roads in 2014. The commenter concludes that the fact that visibility at Arizona's Class I areas is improving at a pace to reach natural conditions prior to the RHR goal of 2064 is important context in evaluating the source selection methodology and other decisions made by Arizona.

Response C.5. We do not agree with the commenter's characterization of the role of the URP. As explained in our proposal:

The URP is a planning metric used to gauge the amount of progress made thus far and the amount left before reaching natural visibility conditions. However, the URP is not based on consideration of the four statutory factors and therefore cannot answer the question of whether the amount of progress being made in any particular implementation period is "reasonable progress."⁹³

Moreover, being on or below the URP does not exempt a state from any of the requirements of the CAA or the Regional Haze Rule.⁹⁴

It should also be noted that the URP represents the amount of visibility improvement that would need to be achieved during each implementation period to achieve natural visibility conditions by the end of 2064. However, the 2064 date is used solely to calculate the URP as a tracking metric. The CAA and RHR do not contain any end dates for the regional haze program and do not have a "goal" or requirement to achieve natural conditions by 2064 specifically.

Please also see Response B.9 for more information on the robust

demonstration required for Sycamore Canyon under 40 CFR 51.308(f)(3)(ii), which is missing from Arizona's submission.

D. Comment Letter From TEP

The "Background" section of TEP's comment letter is informational and therefore does not require a response. We respond to the "Comments of Proposed Disapproval" section of TEP's comment letter below.

Comment D.1. TEP claims that ADEQ's source selection methodology was reasonable and the EPA should approve the determination. First, TEP cites to the 2019 Guidance and 2021 Clarifications Memo as providing states discretion for source selection and notes that ADEQ applied a Q/d screening threshold of 10 for each process at a source. TEP further describes ADEQ's screening out processes where the facility recently adopted "effective controls," which the Agency defined as controls installed to meet the requirements of the PSD program (BACT), the first regional haze planning period (BART), or other NAAQS requirements. Second, TEP further suggests that the EPA is proposing to approve "many aspects of ADEQ's source selection process," including ADEQ's choice of screening threshold and focus on NO_x, SO₂, and PM₁₀ in evaluating visibility impacts, but simultaneously proposing to find that the State did not adequately justify its determination of effective emissions reduction measures.

Response D.1. First, we disagree with the commenter that ADEQ applied a Q/d screening threshold of 10 for each process at a source. As noted in the 2022 Arizona Regional Haze Plan, the Q value was calculated from *facility-wide* PM₁₀, NO_x, and SO₂ annual emissions, not process-specific emissions.⁹⁵

Second, we clarify that the EPA did not propose to approve "many aspects of ADEQ's source selection process." We found that ADEQ reasonably and adequately explained and documented many aspects of its source selection process, such as its focus on sulfate, nitrate, and coarse mass and its use of a Q/d value of 10 for point sources. However, we are not separately approving or disapproving specific elements of ADEQ's long-term strategy, including any elements of the source-selection process. Rather, we are disapproving the long-term strategy as a whole under 40 CFR 51.308(f)(2), for the reasons described in our proposal and in this document.

Comment D.2. TEP asserts that ADEQ reasonably evaluated existing controls at IGS Unit 4 and SGS Units 3 and 4.

First, the commenter states that ADEQ did not determine that sources were effectively controlled based on BART controls alone, but also evaluated additional emissions reduction measures at several units that were controlled during the first regional haze planning period, citing Table 8–2 in the 2022 Arizona Regional Haze Plan. For IGS Unit 4 specifically, the commenter states that ADEQ evaluated existing emissions reduction measures at IGS Unit 4 from a source-specific perspective, and determined that further analysis would be futile. TEP cites to statements regarding post-combustion controls in the 2019 Guidance and states that, in a recent FIP action for Arizona, the EPA determined that eliminating coal combustion at Unit 4 would control emissions beyond the best available NO_x and SO₂ controls.⁹⁶ TEP concludes that these emissions reduction measures remain the best available controls at this unit in the second planning period. TEP further notes that ADEQ's determination that IGS Unit 4 is well-controlled is also consistent with recent decreasing emissions trends across BART-eligible EGUs, including IGS Unit 4, and between 2014 and 2019. TEP points to the recent proposed rule for Georgia's Regional Haze SIP,⁹⁷ and comments that the EPA cited to similar visibility-impairing emissions trends as support for Georgia's source-selection methodology. Citing to the 2021 Clarifications Memo,⁹⁸ TEP also indicates that ADEQ was not required to consider emissions trends and that the State has discretion to emphasize other considerations, such as the EPA's prior FIP evaluation.

Second, TEP states that the EPA's proposed disapproval fails to engage with ADEQ's analysis for SGS Unit 3 and 4. TEP notes that ADEQ considered potential additional control measures that could be used to achieve emissions reductions at SGS Units 3 and 4 based on an initial control analysis submitted by TEP.⁹⁹ In this analysis, TEP provided

information on technically feasible control measures, as well as the actual and projected emissions rates at each unit.

Response D.2. We disagree that ADEQ's evaluations regarding effective controls at IGS Unit 4 and SGS Units 3 and 4 were reasonable and justified. Contrary to TEP's claim, ADEQ did not evaluate additional emissions reduction measures at several units that were controlled during the first regional haze planning period. Table 8–2 cited by TEP to support its claim that ADEQ evaluated additional emissions reduction measures at units that were controlled during the first regional haze planning period only depicts annual, source-level total emissions of NO_x, SO₂ and PM₁₀ and does not include any information regarding unit-specific or pollutant specific emissions rates or controls. The commenter also provides no citation for its assertion that ADEQ evaluated existing emissions reduction measures at IGS Unit 4 from a source-specific perspective. Therefore, based on the contents of the 2022 Arizona Regional Haze Plan, it was reasonable for the EPA to determine that ADEQ did not evaluate additional emissions reduction measures at units that were controlled during the first regional haze planning period.

Similarly, the commenter's citation to the discussion of post-combustion controls in the 2019 Guidance is misleading because no such controls were installed at IGS Unit 4. Rather, the unit was converted from coal to gas as part of a "better-than-BART" determination pursuant to 40 CFR 51.308(e)(2).¹⁰⁰ Therefore, the actual relevant effective controls discussion in the 2019 Guidance is the discussion of fuel combustion units that are required to burn pipeline quality natural gas. Such units are generally considered to be effectively controlled for SO₂ and PM.¹⁰¹ However, they are not necessarily effectively controlled for NO_x. Therefore, we disagree with the commenter that, given TEP's recent conversion of IGS Unit 4 from coal to natural gas, ADEQ's conclusion that further analysis was not required was reasonable. As stated in the proposed rule,¹⁰² ADEQ should have explained why it is reasonable to assume, without conducting a four-factor analysis, that no additional NO_x controls would be reasonable.¹⁰³

⁹⁸ Specifically, TEP quotes page 3 of the 2021 Clarifications Memo ("[t]he [Regional Haze Rule] does not explicitly list factors that states must or may not consider when selecting sources for analysis,") and cites page 5 of the 2021 Clarifications Memo as supporting its assertion that "EPA has recommended that states consider projected and actual emissions in evaluating existing emission reduction measures."

⁹⁹ TEP, Identification and Evaluation of Emission Control Measures for Units 3 and 4 at the Springerville Generating Station for Purposes of the Regional Haze Second Planning Period Under 40

⁹⁵ 2022 Arizona Regional Haze Plan, Appendix C2.2, p. 26.

The commenter's discussion of emissions trends is also misleading on several grounds. First, the commenter mischaracterizes the EPA's review of Georgia's regional haze source selection methodology. In the section of the Georgia proposal cited by TEP, the EPA considered trends in total measured visibility impairment at three Class I areas affected by Georgia's sources as supporting the reasonableness of the state's overall source selection methodology.¹⁰⁴ The EPA did not, however, consider trends in emissions from specific sources and did not indicate that such trends would be relevant either to the reasonableness of a state's overall source selection methodology or especially to the question of a whether a particular source may be screened out on the grounds that it is "effectively controlled." Furthermore, the trends cited by the commenter were for multiple BART-eligible EGUs, not just IGS. Therefore, we do not agree that decreasing SO₂ and NO_x emissions at BART-eligible EGUs in Arizona between 2014 and 2019 are relevant to whether IGS Unit 4 is effectively controlled.

Second, the commenter mischaracterizes the contents of the 2021 Clarifications Memo as it relates to how to determine whether a source is effectively controlled. The first section cited by the commenter, regarding "Factors to Consider for Source Selection"¹⁰⁵ relates to a State's overall source selection methodology, which is generally considered to be the first step of determining what measures are necessary for reasonable progress.¹⁰⁶ Whether and how to screen out particular sources on the grounds that they are effectively controlled is a subsequent step. As previously noted, we found that many aspects of ADEQ's source selection process were reasonable and adequately explained and documented,¹⁰⁷ consistent with the statement in the Clarifications Memo that, "whatever choices states make should be reasonably explained and produce a reasonable outcome."¹⁰⁸

description of the criteria is used to determine which sources or groups of sources it evaluated and how the four factors were taken into consideration in selecting the measures for inclusion in its long-term strategy." See also 2021 Clarifications Memo, p. 5; 2019 Guidance, p. 23.

¹⁰⁴ 89 FR 47481, 47497–47498.

¹⁰⁵ 2021 Clarifications Memo, p. 3.

¹⁰⁶ Id. ("Source selection is a critical step in states' analytical processes. All subsequent determinations of what constitutes reasonable progress flow from states' initial decisions regarding the universe of pollutants and sources they will consider for the second planning period.")

¹⁰⁷ 89 FR 47428.

¹⁰⁸ 2021 Clarifications Memo, p. 3.

However, once the sources were initially selected for evaluation of additional control measures, we found that ADEQ did not provide an adequate justification for subsequently screening out certain sources and units from ultimately conducting a four-factor analysis on the basis that they are effectively controlled.

The second section of the 2021 Clarifications Memo mischaracterized by the commenter, "Sources that are Not Selected Based on Existing Effective Controls," does address the screening out of particular sources on the grounds that they are effectively controlled. In particular, this section recommends that, "States should *first* assess whether the source in question already operates an 'effective control' as described in the August 2019 Guidance. They should *further* consider information *specific to the source*, including recent actual and projected emission rates, to determine if the source could reasonably attain a lower rate."¹⁰⁹ For the reasons detailed in our proposal and elsewhere in this document, we find that ADEQ did not reasonably explain and support its determination at the first step that IGS Unit 4 already operates effective controls, particularly for NO_x. Moreover, even if IGS Unit 4 does have effective controls, ADEQ should have considered recent actual and projected emissions rates *for this particular* unit, not for all BART-eligible units as a group, in order to determine whether these controls are necessary to make reasonable progress.

Finally, we disagree that our proposed disapproval fails to engage with ADEQ's analysis for SGS Unit 3 and 4. Contrary to the commenter's suggestion, ADEQ did not screen out SGS Units 3 and 4 at the source selection stage,¹¹⁰ but instead conducted four-factor analyses for these units.¹¹¹ We summarized these analyses on pages 47422–47423 of our proposal. We did not note any particular flaws in these analyses or the resulting determinations that no additional controls were necessary to make reasonable progress in our proposal. However, we found that ADEQ had not addressed whether any of the *existing* measures relied upon in these four-factor analyses were necessary to make reasonable progress and thus should be a part of the State's long-term strategy for the second planning period.¹¹² We also noted that, as part of its analysis of whether these existing measures are

¹⁰⁹ Id., p. 5 (emphasis added).

¹¹⁰ 2022 Arizona Regional Haze Plan, Appendix C, Exhibit CI.

¹¹¹ Id., Chapter C3.13.

¹¹² 89 FR 47431.

necessary to make reasonable progress, the State should have considered whether the relevant sources are subject to enforceable emissions limits that ensure their emissions rates will not increase. Without this information, it is not clear what measures are in the State's long-term strategy for the second planning period and how controls on these units result in each of the affected Class I areas making reasonable progress towards the national goal.

Comment D.3. TEP asserts that ADEQ reasonably evaluated additional control measures using a four-factor analysis for SGS Units 1 and 2. Citing *Oklahoma v. EPA*, 723 F.3d 1201, 1209 (10th Cir. 2013), the commenter asserts that while the statute identifies the factors that must be considered, Congress left to states the determination as to how these factors should be weighed.

Response D.3. While we agree that states have significant discretion in how they consider and apply the four statutory factors as part of a Regional Haze SIP, they do not have unlimited discretion. On the contrary, the EPA has a crucial role in reviewing such SIP submissions for compliance with the requirements of the CAA and the RHR. Pursuant to CAA section 110, states must submit SIP revisions to the EPA for review and the EPA must evaluate whether each SIP submission meets all of the applicable requirements of the Act.¹¹³ The EPA must disapprove any SIP revision that "would interfere with any applicable requirement" of the Act.¹¹⁴ CAA section 110(a)(2)(J) specifically requires that SIPs "meet the applicable requirements" of Part C of Title I of the CAA including the requirements for visibility protection set forth in sections 169A and 169B.¹¹⁵ Pursuant to section 169A(b), the EPA is required to promulgate visibility protection regulations that apply to "each applicable implementation plan" (i.e., each SIP or FIP)¹¹⁶ for each State containing one or more Class I areas and each State "emissions from which may reasonably be anticipated to cause or contribute to any impairment of

¹¹³ CAA section 110(a)(1), (k)(3), 42 U.S.C. 7410(a)(1) and (k)(3).

¹¹⁴ CAA section 110(l), 42 U.S.C. 7410(l).

¹¹⁵ CAA sections 110(a)(2)(J), 169A and 169B 42 U.S.C. 7410(a)(2)(J), 7491 and 7492.

¹¹⁶ Under the CAA, "applicable implementation plan" is defined as "the portion (or portions) of the implementation plan, or most recent revision thereof, which has been approved under [CAA section 110], or promulgated under [CAA section 110](c) . . . and which implements the relevant requirements of [the CAA]." CAA section 302(q), 42 U.S.C. 7602(q). In other words, an "applicable implementation plan" is an EPA-approved SIP or Tribal Implementation Plan, or an EPA-promulgated FIP.

visibility in any [Class I area].” The CAA specifies that these regulations (including the RHR) must require each such SIP or FIP to “contain such emission limits, schedules of compliance and other measures as may be necessary to make reasonable progress toward meeting the national goal.”¹¹⁷ Thus, the statute provides the EPA a key oversight role in reviewing SIPs, including regional haze SIPs, and the “EPA has substantive authority to assure that a state’s proposals comply with the Act, not simply the ministerial authority to assure that the state has made some determination.”¹¹⁸

Nothing in the *Oklahoma* case cited by the commenter undermines this authority. On the contrary, the *Oklahoma* court upheld the EPA’s disapproval of BART determinations that were part of a regional haze SIP, noting BART “does not differ from other parts of the CAA—states have the ability to create SIPs, but they are subject to EPA review.”¹¹⁹ Likewise, all regional haze SIPs are subject to EPA review, as described in the preceding paragraph.

In our action on the Plan, we are exercising our substantive authority to review the state’s submittal for compliance with the applicable requirements of the CAA and RHR. Based on our review of the Plan, we find, among other things, that ADEQ had not reasonably evaluated and weighed the four statutory factors for SGS Units 1 and 2 for the reasons noted in section IV.E.2 of our proposal and responses B.4., B.6, B.7 and B.8 of this document.

Comment D.4. TEP states that ADEQ’s choice of cost-effectiveness threshold was reasonable, and that the EPA’s proposed rule did not afford appropriate deference to ADEQ’s assessment of reasonable cost-effectiveness values. TEP also cites a previous EPA action stating that “Congress did not provide any direction as to how states should consider ‘the costs of compliance’ when determining reasonable progress.”¹²⁰ TEP also provides the following reasons for why it believes ADEQ’s choice of cost-effectiveness threshold was reasonable.

First, TEP states that ADEQ selected a threshold based on the State’s evaluation of the highest cost controls during the first planning period. TEP notes that this threshold is nearly \$1,000/ton higher than the 98th

percentile value for EGU boilers during the first planning period and \$1,500/ton higher than costs rejected by Georgia in evaluating additional emissions reduction measures in its SIP submission.¹²¹

Second, TEP claims that ADEQ’s bright-line approach to analyzing available controls above its cost-effectiveness threshold was also reasonable. TEP disagrees with the EPA’s concern about the average cost of installing SNCR at SGS Unit 2 being \$269/ton above ADEQ’s \$6,500/ton threshold.¹²² TEP states that the 2019 Guidance emphasized that the RHR does not prevent states from implementing “bright line” cost-effectiveness thresholds when considering additional control measures, consistent with the Ninth Circuit’s decision in *NPCA v. EPA*.¹²³ TEP asserts that this threshold sets an amount above which a state would reject control options as too expensive, and that for controls falling below this threshold, it is reasonable for ADEQ to evaluate additional factors, such as incremental costs, visibility impacts, and the other statutory factors, in determining whether these controls are necessary for reasonable progress.

Response D.4. As TEP describes, the EPA noted in prior rulemakings that “Congress did not provide any direction as to how states should consider ‘the costs of compliance’ when determining reasonable progress.” However, consistent with our prescribed statutory role, as described in Response D.3, the EPA is required to evaluate whether each State exercised its flexibility and conducted the required analyses in a reasonable way and in accordance with the applicable requirements. As described throughout our proposal and this final action, we determined that Arizona did not do so.

For example, contrary to TEP’s claim, the EPA did not find that ADEQ’s average cost-effectiveness thresholds of \$6,500/ton for point sources and \$5,000/ton for nonpoint sources were unreasonable. Rather, as explained in our proposal, we found that the State inconsistently and unreasonably applied these cost thresholds to the control determinations.¹²⁴

In particular, we found that ADEQ incorrectly characterized its average cost effectiveness threshold for points sources as a bright-line threshold,¹²⁵

given that ADEQ, in fact, rejected controls that were below this threshold. In these instances, ADEQ relied on incremental cost effectiveness as a basis to find the cost of control excessive, but, again, did not do so consistently, as described in Response B.6 of this document. Thus, ADEQ did not consistently apply either its chosen average cost effectiveness threshold or any defined incremental cost effectiveness threshold as a basis to choose whether to adopt or reject control measures, nor did it explain its reasoning for these inconsistencies. The EPA finds this to be unreasonable. Based on this and other flaws in the long-term strategy described in the proposal and elsewhere in this document, we find that the long-term strategy in the Plan did not meet the requirements of 40 CFR 51.308(f)(2).

We also note that, while our proposed rule recommended that ADEQ revisit control determinations with controls that were slightly above the cost thresholds, given the flaws in the cost-effectiveness analyses, we did not indicate that, in the absence of such flaws, use of a bright line threshold would have been improper, as long it was appropriately justified and consistently applied. Finally, we note that the fact that other states have applied lower or similar thresholds does not automatically make Arizona’s threshold reasonable.

Comment D.5. TEP states that ADEQ’s evaluation of control costs is conservative and results in projected costs that are lower than what TEP would incur. TEP asserts that ADEQ selected baseline assumptions consistent with the EPA’s Control Cost Manual. In particular, TEP indicates that ADEQ calculated control costs using an assumed interest rate of 4.75 percent and a maximum equipment life of 30 years, but that these assumptions resulted in unrealistically low control cost estimates. TEP noted that the EPA previously used 20-year equipment life and 7 percent interest rate for both NO_x and SO₂ candidate emissions reduction measures for IGS as part of a previous regional haze FIP,¹²⁶ and that these assumed values of 7 percent and 20 years better reflect actual control costs.

TEP also asserted that ADEQ is not required to treat the guidance provided by the Control Cost Manual as dispositive, and, citing *Wyoming v. EPA*, 78 F.4th 1171, 1180 (10th Cir. 2023), TEP asserted that the EPA cannot treat nonbinding guidelines as mandatory in evaluating a SIP submission.⁸⁸

¹²⁶ 79 FR 9318.

Response D.5 We do not agree that ADEQ's evaluation of costs was conservative and results in projected costs that are lower than what TEP would incur. Regarding the EPA's previous analyses for IGS, first, we note that the EPA has revised several chapters of the Control Cost Manual, since the 2014 regional haze FIP cited by TEP in the comment letter. In particular, the chapter concerning SCR was updated in 2019.¹²⁷ As part of that update, the remaining useful life for SCR was revised from 20 years to 30 years.¹²⁸ Consistent with this change, ADEQ used a remaining useful life of 30 years for SCR, but used 20 years for SNCR.¹²⁹

Second, as explained in the Control Cost Manual,¹³⁰ interest rates change with time due to changes in prices over time for all relevant goods and services such as capital equipment, engineering services, other materials and reagents used in the construction and operation of control equipment. In the absence of source-specific information, ADEQ relied on a 4.75 percent interest rate developed by analyzing and averaging historical bank prime rate data. ADEQ looked at 3-year average bank prime rates for the periods of 2017–2019 (4.83 percent) and April 2018–March 2020 (4.78 percent). These dates were chosen as they were the most recent data at the time of the analysis.¹³¹ In contrast, ADEQ also explained in its SIP submittal that the 7 percent interest rate from the first planning period FIP cited by TEP was the 3-year average bank prime rate during 2005–2007.¹³² Therefore, the 7 percent rate used by the EPA in our previous FIP was not appropriate for the cost analysis for the

Plan, which was developed in 2020–2022.

Finally, we disagree with the commenter's suggestion that we treated the Control Cost Manual, or any other guidance, as binding. As discussed in Responses A.3 and C.4, the EPA's citations to guidance documents were intended to provide further context on what is generally considered to be a reasonable approach to fulfill the statutory and regulatory requirements. We acknowledge that the suggestions in those guidance documents are not binding, but are generally assumed to be reasonable. States can deviate from the suggestions within EPA guidance documents. However, they must do so in a reasonable way, accompanied by sufficient justification. The Plan did not do so for the reasons described in our proposal and elsewhere in this document.

Comment D.6. TEP asserts that ADEQ's analysis of SCR and SNCR reasonably approximated emissions limits achievable at SGS Units 1 and 2. TEP explains that the emissions rate used in the analysis was unit-specific, and that ADEQ considered baseline NO_x emissions, inlet concentrations, and the frequency of startup/shutdown cycles at SGS Units 1 and 2. TEP reiterates that ADEQ explained that a higher number of startup/shutdown cycles results in higher average NO_x emissions rates with SCR, and that SGS Units 1 and 2 experience a higher frequency of startup/shutdown cycles than average EGUs.

TEP further disagrees that SGS Units 1 and 2 are able to achieve an emissions rate of 0.05 lb/MMBtu. TEP notes that ADEQ further explained in its response to public comments that it was inappropriate to use an annual emissions limit of 0.05 lb/MMBtu because the CAMPD database only contains three comparable units, out of fifty-eight units, which are operating below this emissions limit in 2019–2021. The CAMPD database shows that approximately 20% of the units achieved emissions below 0.06 lb/MMBtu in 2019–2021, which ADEQ believed was a reasonable estimate of the rate achievable with SCR for SGS Units 1 and 2. TEP also notes that based on their extensive industry experience, vendors will not guarantee a rate of 0.05 lb/MMBtu due to concerns about degradation over time.

TEP also states that even if ADEQ adopted the EPA's preferred emissions rate of 0.05 lb/MMBtu, ADEQ's analysis of control measures for SGS Units 1 and 2 would remain substantially the same. Table 3 of TEP's comment letter provides the updated cost-effectiveness

value using a 0.05 lb/MMBtu rate for SGS Units 1 and 2, assuming a 4.75 percent interest rate and a remaining useful life of 30 years.

Response D.6. We do not agree that ADEQ's analysis of SCR and SNCR reasonably approximated emissions limits achievable at SGS Units 1 and 2. Our proposed rule acknowledged the startup/shutdown considerations noted by ADEQ.¹³³ However, the proposed rule also explains that ADEQ has not demonstrated why these startup/shutdown considerations would be significant enough at SGS Units 1 and 2 on an annual average basis, which is the averaging period used to calculate ton/year emissions reductions for cost effectiveness calculations, to preclude them from achieving this emissions reduction level with SCR. As discussed in more detail in Response B.4, we would consider it appropriate for an emissions limitation established on a shorter averaging period to have a higher value to account for startup/shutdown emissions, which have a greater effect on overall unit emissions rates over shorter averaging periods.

We also disagree with TEP that ADEQ's review of emissions rates for other tangentially fired coal units in CAMPD should be determinative of the SCR emissions rate achievable for the SGS units. We do not necessarily consider the inventory of unit emissions data in CAMPD to be representative of what is achievable with SCR technology because units whose emissions are included in CAMPD have been required to install SCR as a result of a variety of regulatory programs. Not all of these programs may have fully considered technological factors in establishing emissions requirements or allowable emissions limits, which would have the effect of elevating reported emissions rates. For example, several units in the eastern U.S. have installed SCR but have not been required to operate in a manner that fully accounts for periods of startup operations,¹³⁴ while other units may only operate their SCR systems seasonally.¹³⁵ Other SCR systems may have been required by a Consent Decree, which involves a

¹³³ 89 FR 47398, 47428.

¹³⁴ 87 FR 31798 (May 25, 2022) and Docket Item EPA–R03–OAR–2022–0347–0059 for further details.

¹³⁵ Docket Items EPA–HQ–OAR–2021–0668–0115 and EPA–HQ–OAR–2021–0668–0096 examine ozone season data from several mid-atlantic states and identifies best performing months for several units. An examination of operating data on a monthly or daily basis over the course of a calendar year indicates that several units, such as Pleasants Power Station 1 and 2 (WV), Conemaugh 2 (PA), and DB Wilson W1 (KY) operate at much lower NO_x emission rates during ozone season months.

¹³² Id.

negotiated settlement in which allowable emissions limits may be established as part of injunctive relief, and may not necessarily be representative of SCR technical capabilities. Therefore, we find that ADEQ's analysis of other tangentially fired coal units in CAMPD is not determinative of the SCR emissions rate achievable for the SGS units.

Finally, though we appreciate the summary provided in Table 3 of the comment letter, the analysis is new information not included in the Plan. This information would need to be part of a SIP revision subject to review by the public and FLMs in order for the EPA to consider it as part of the long-term strategy.

Comment D.7. TEP asserts that ADEQ reasonably determined that SO₂ emissions limits were an appropriate and equivalent control measure compared to SDA upgrades. TEP notes that while the EPA suggests that TEP should also be required to install the SDA upgrades in addition to the mass-based limits, the EPA does not explain why SDA upgrades would achieve emissions reductions beyond the mass-based limits adopted by TEP, which are equivalent to SDA upgrades.

Further, TEP states that the selection of emissions limits is consistent with the CAA and is entitled to deference. First, TEP reasons that the CAA does not require the installation of specific control technologies, and that the EPA has recognized in the 2019 Guidance that mass-based limits may be a reasonable alternative to specific control technologies, particularly where fixed capital costs are high, so long as such limits do not enable a source to cease operating an existing control technology. Second, TEP asserts that the emissions limits are equally or more protective than control technologies because the total SO₂ emitted cannot exceed the caps, and whether one or both units is operating is irrelevant, and because it provides the flexibility for greater total emissions reductions to occur, should TEP ultimately retire SGS Unit 1 in 2027. The commenter specifies that if TEP elects to achieve compliance with the proposed caps by shutting down Unit 1, it is projected to reduce SO₂ emissions by 2,982 tpy and achieve significant reductions in NO_x and PM emissions, whereas the installation of SDA upgrades at both units is projected to reduce SO₂ emissions by 2,122 tpy. Third, TEP asserts that the emissions limits are consistent with EPA precedent. TEP listed previous examples of EPA-approved mass-based emissions limits, such as the Hawaii Regional Haze FIP for three Hawaiian

Electric facilities¹³⁶ and the Regional Haze FIP for PCC.¹³⁷

Response D.7. We disagree with TEP's assertions that the selection of mass-based SO₂ emissions limits for SGS Units 1 and 2 was reasonable for the reasons described in Section IV.E.2.c.iii of our proposal,¹³⁸ and Response B.8 of this document.

We also disagree with TEP's assertion that the EPA did not explain why SDA upgrades would achieve emissions reductions beyond the mass-based limits adopted by ADEQ. As stated in the proposed rule,¹³⁹ because the limits are set across two units and the ton per day (tpd) limit is based on a 30-calendar-day average (rather than a 30-day-boiler-operating day average),¹⁴⁰ they would not meaningfully constrain the emissions from one unit during periods when the other unit is not operating. In particular, the annual SO₂ cap of 3,739 tpy is significantly higher than ADEQ's projected 2028 SO₂ emissions for either Unit 1 or Unit 2 (2,869 and 2,982 tpy, respectively)¹⁴¹ and nearly double each unit's recent emissions (1,980 and 1,988 tpy respectively on average 2021–2023).¹⁴² Accordingly, if TEP shuts down SGS Unit 1 by 2028, as it has stated it intends to do,¹⁴³ Unit 2 would be able to emit 3,739 tpy SO₂ in 2028, nearly double what it emitted on average in 2021–2023 and significantly *more* than the 2,982 tpy it is projected to emit in the absence of a cap and closure of Unit 1. In contrast, a lb/MMBtu limit representing SDA upgrades on each unit would ensure emissions from Unit 2 would be reduced by approximately 1/3 from recent emissions levels (*i.e.*, a reduction of roughly 663 tpy) even if Unit 1 ceases operation. Therefore, under the scenario projected by TEP to occur in 2028 (*i.e.*, closure of SGS Unit 1), implementation of SDA upgrades at Unit 2 would achieve significant emissions reductions beyond the mass-based limits adopted by ADEQ.

¹³⁶ 77 FR 61478 (October 9, 2012).

¹³⁷ 79 FR 52420.

¹³⁸ 89 FR 47398, 47430–47431.

¹³⁹ *Id.*

¹⁴⁰ A limit based on boiler operating days would effectively exclude days with zero emissions from the calculation of the 30-day average whereas a limit based on calendar days does not.

¹⁴¹ Plan, appendix C, p. 213, Table 83.

¹⁴² Emissions information can be publicly accessed through the EPA Clean Air Markets Program data, available at <https://campd.epa.gov/>.

¹⁴³ As part of its preferred alternative in its 2023 Integrated Resources Plan, p. 56, TEP states that “Initially, the units will alternate idling between spring and fall (both seasons include the adjacent winter months). TEP plans to transition Unit 1 to summer-only operations prior to full retirement at the end of 2027.”

We also note that, if SGS Unit 1 does not close and both units continue operation at roughly the same level as 2021–2023, a lb/MMBtu limit representing SDA upgrades on each unit would ensure emissions from both Unit 1 and Unit 2 would be reduced by approximately 1/3 (*i.e.*, a reduction of roughly 1,323 tpy based on 2021–2023 emissions), whereas ADEQ's annual cap of 3,739 tpy would only ensure reductions of 229 tpy (*i.e.*, compared to total 2021–2023 annual average emissions of 3,968). Therefore, we expect that lb/MMBtu limits representing SDA upgrades on each unit would achieve significantly greater emissions reductions than the two-unit mass-based limits adopted by ADEQ.

For similar reasons, we also do not agree with TEP's statements that “the proposed form of the limit is potentially more environmentally protective than the installation of controls because it provides the flexibility for greater total emission reductions to occur, should TEP ultimately retire SGS Unit 1 in 2027” and that “[r]equiring the use of air pollution control technology at each unit individually would foreclose a *more* environmentally beneficial compliance option.” Specifically, TEP incorrectly cites Table 83 as supporting its assertion that if it “elects to achieve compliance with the proposed caps by shutting down Unit 1, it is projected to reduce SO₂ emissions by 2,982 tpy and also to achieve significant reductions in NO_x and PM emissions.” This mischaracterizes the content of Table 83, which reflects ADEQ's *baseline* projection of emissions at the TEP units, based on emissions and throughput data for 2016, 2018 and 2019.¹⁴⁴ These values were the starting point for ADEQ's four-factor analysis and do not represent the projected emissions of these units following implementation of the emissions caps and/or the closure of Unit 1. No such projection is included in the Plan. However, as noted in the preceding paragraph, if TEP shuts down SGS Unit 1 by 2028, as it has stated it intends to do, Unit 2 could emit as much as 3,739 tpy SO₂ in 2028, nearly double what it emitted on average in 2021–2023 and significantly more than the 2,982 tpy it is projected to emit in the absence of a cap and closure of Unit 1.

Third, in response to TEP's claim about EPA precedent, both FIP actions cited by TEP apply to first planning period requirements and thus preceded the 2017 revisions to the RHR, which added 40 CFR 51.308(f). Please see Response B.8 for more information

¹⁴⁴ Plan, Appendix C, pp. 212.

about PCC. The other precedent cited by ADEQ, a cap on the Hawaiian Electric sources, was not based solely on a determination that a particular control measure was necessary to make reasonable progress under the four statutory factors. Rather, the cap was intended primarily to ensure that no degradation in visibility conditions would occur at the affected Class I area during the first or subsequent planning periods, as required under the RHR.¹⁴⁵ This was based on circumstances that were specific to Hawaii in the first planning period, namely, that no photochemical modeling had been performed for Hawaii's Class I areas and the EPA set the RPGs for these areas based on island-specific emissions inventories.¹⁴⁶ None of these circumstances apply to Arizona generally, or to SGS Units 1 and 2 specifically, in the second regional haze planning period and thus are inappropriate to rely upon.

Comment D.8. TEP comments that ADEQ reasonably rejected additional control measures based on the four factors. For remaining useful life specifically, TEP indicates that a 20-year remaining useful life is more appropriate for SGS Units 1 and 2 because the shutdowns are publicly documented in the 2023 IRP. TEP cites the 2021 Clarifications Memo as stating, "reasonable bases for projecting that future emissions will be significantly different than past emissions are enforceable requirements and energy efficiency, renewable energy, or other similar programs, where there is a documented commitment to participate and a verifiable basis for quantifying changes in future emissions."¹⁴⁷ TEP noted that consistent with this guidance, TEP's planned retirement of these units significantly shortens the remaining useful life of any controls and projected emissions reductions, and a 20-year remaining useful life is a reasonable, conservative basis to analyze cost-effectiveness of additional controls.

Response D.8. We disagree that 20 years is a reasonable remaining useful life for SGS Units 1 and 2. The portion of the 2021 Clarifications Memo cited by TEP concerns setting emissions limits for control measures found necessary to make reasonable progress, not remaining useful life. Therefore, this

citation does not support TEP's assertion. Additionally, the 2019 Guidance and Clarifications Memo clearly indicate that, under the RHR, where a shutdown date is used to shorten a source's remaining useful life as part of a reasonable progress determination, an enforceable requirement to shutdown must be included in the SIP and/or be federally enforceable.¹⁴⁸ The potential shutdowns of SGS Units 1 and 2 are not federally enforceable. Therefore, they cannot be relied upon to shorten the remaining useful life of these units. In the absence of an enforceable requirement for SGS Units 1 and 2 to retire, we do not agree that a 20-year remaining useful life is reasonable.

Comment D.9. TEP comments that ADEQ reasonably rejected additional control measures in part by considering incremental costs. TEP noted that ADEQ determined incremental costs for additional controls would range from \$9,400–13,500/ton, and that even the low end of this range exceeded similar incremental costs that the EPA determined to be excessive for sources in Arizona as part of the 2014 BART FIP.¹⁴⁹

TEP further states that ADEQ reasonably considered incremental cost-effectiveness where the cost impacts were not clear due to uncertainty in the remaining useful life of the additional controls. Citing *American Corn Growers Association vs. EPA*, TEP states that it is reasonable for a state to consider incremental visibility improvements and other incremental metrics to inform its assessment of whether a particular control is "too costly . . . for a particular source."¹⁵⁰ TEP notes that such an assessment does not give "controlling weight" to the cost factor, but rather considers whether, on balance, it would be unreasonable to require installation of a control, consistent with the language of CAA section 169A.

Lastly, TEP asserts that ADEQ reasonably compared the costs of and emissions reductions achievable with wet FGD and circulating dry scrubbers (CDS) to the costs of and emissions reductions achievable with SDA upgrades, even where such upgrades were not required to be installed. The commenter argues that ADEQ reasonably used SDA upgrades as a proxy for its mass-based emissions

limits, since these limits were developed based on equivalence with SDA upgrades and the EPA's approach for Hawaiian Electric.

Response D.9. We disagree that ADEQ's use of incremental cost effectiveness was reasonable for the reasons explained in Section IV.E.2.C.IX of our proposal¹⁵¹ and Response B.6 of this document. We also note that, while the commenter refers to "similar incremental costs that the EPA determined to be excessive for sources in Arizona as part of the 2014 BART FIP," the accompanying citation refers to only a single source, *i.e.*, Nelson Lime Kiln, which is the same source cited by ADEQ in the Plan.

We also find that the commenter's citation to *American Corn Growers* is inapposite. That decision concerned the EPA's interpretation of the BART provisions of the CAA and turned on the fact that the CAA includes the "the degree in improvement in visibility that would be expected at each Class I area as a result of imposing BART" as one of five factors to be considered in BART determinations.¹⁵² In contrast, the Act does not mandate visibility improvement as one of the four factors to be considered in determining reasonable progress.¹⁵³ As discussed in Response B.7, ADEQ indicated in its Response to Comments that it did not consider this factor in its determinations.¹⁵⁴ Furthermore, even if ADEQ did consider visibility improvement in making control determinations for SO₂ at SGS Units 1 and 2,¹⁵⁵ it is evident that ADEQ did not consider *incremental* visibility improvement associated with Wet FGD compared to SDA upgrades. Rather, ADEQ considered only "a hypothetical SO₂ emission reduction of 3,236 tpy, which is approximately equivalent to 0.08 lb/MMBtu for SGS Units 1 and 2."¹⁵⁶ This level of reductions does not correspond either to SDA upgrades or wet FGD, so ADEQ could not possibly have considered the incremental visibility benefit between the levels of control. Accordingly, *American Corn Growers* has no bearing on our assessment of whether ADEQ's approach to its four factor analyses and

determinations for SGS Units 1 and 2 were reasonable.

In addition, we also disagree that there is uncertainty in the remaining useful life of SGS Units 1 and 2, because the potential shutdowns at these units are not federally enforceable. See Response D.8.

Finally, we disagree that ADEQ reasonably used SDA upgrades as a proxy for its mass-based emissions limits. See Responses B.8 and D.7.

Comment D.10. TEP states that the EPA incorrectly implies that ADEQ based its control determinations on visibility benefits, when ADEQ stated otherwise in its SIP submission.¹⁵⁷

Second, TEP notes that any consideration of visibility would be consistent with recent EPA actions on regional haze and the text of the statute. Citing the EPA's recent proposed action on the Georgia Regional Haze SIP, TEP states that the EPA emphasized incremental visibility improvements and that "Georgia is also not contributing to visibility impairment at any Class I areas above the URP."¹⁵⁸ TEP claims that because Arizona has similarly de minimis contributions to visibility impairment at Class I areas,¹⁵⁹ the EPA cannot apply inconsistent criteria to its review of SIP submissions by different states. Finally, citing *Loper Bright Enterprises v. Raimondo*, 144 S. Ct. 2244, 2263 (2024), TEP argues that "EPA's suggestion that visibility should play little-to-no role in a state's assessment of reasonable progress is unreasonable and counter to the text of the statute."

Response D.10. Regarding whether ADEQ considered visibility benefits, in its control determinations, please see Response B.7.

We disagree that the EPA is applying inconsistent criteria to review of SIP submissions by different states. As explained in Response D.2, in the section of the Georgia action cited by the commenter, the EPA considered overall trends in visibility impairment in evaluating the reasonableness of Georgia's source selection methodology. This is entirely different from weighing the potential visibility benefits of specific controls at specific units, which is what the commenter appears to be advocating for. Additionally, the quoted section of the Georgia proposal simply states as a fact that Georgia is not contributing to visibility impairment at any Class I areas above the URP. That

information is not used and should not be used as a "safe harbor" argument to exclude contributing sources from a four-factor analysis and potentially including cost-effective controls in the long-term strategy.

Moreover, we do not agree that Arizona has de minimis contributions to visibility impairment at Class I areas. In support of this assertion, TEP cites Table 21 on page 47432 of the proposal. This table shows Baseline Conditions, Adjusted URP and 2028 RPGs at Arizona's Class I areas. However, the table provides no indication of which sources contribute to visibility impairment at these Class I areas, or whether these sources are located in Arizona or elsewhere. This table also does not address any Class I areas outside of Arizona. Furthermore, there is no other information in the Plan that suggests that emissions from Arizona have de minimis contributions to visibility impairment at all potentially affected Class I areas. Therefore, we do not agree that the EPA is applying inconsistent criteria to review of SIP submissions by different states.

Finally, we disagree that we suggested that "visibility should play little-to-no role in a state's assessment of reasonable progress." Rather, we stated that "[w]hether a particular visibility impact is meaningful should be assessed in context and cannot be used to undermine the four statutory factors that are to be analyzed in order to determine what measures are necessary for reasonable progress."¹⁶⁰ Applying these considerations to ADEQ's discussion of visibility benefits at SGS Units 1 and 2, we found that "[i]n the absence of any opportunities for larger emissions reductions and corresponding visibility benefits, we find that ADEQ's reliance on 'small' visibility benefits as an additional justification for not adopting more stringent controls at these units is not persuasive."¹⁶¹ Therefore, we do not agree with the commenter's characterization of our proposal.

Comment D.11. TEP asserts that ADEQ appropriately incorporated "on-the-way" measures in assessing baseline conditions at IGS Unit 3. TEP cites the 2021 Clarifications Memo and states that the EPA has explicitly recognized "on-the-way" measures that "have not yet been implemented and the associated emissions reductions have not yet occurred as of the SIP submission date," and that the EPA indicated that these measures may impact a state's choice of baseline for a

four-factor analysis at a particular source ("reasonable bases for projecting that future emissions will be significantly different than past emissions are enforceable requirements and energy efficiency, renewable energy, or other similar programs, where there is a documented commitment to participate and a verifiable basis for quantifying changes in future emissions").¹⁶² TEP claims that the operational conditions at IGS Unit 3 have been incorporated in an enforceable permit, and will become effective upon approval of Arizona's SIP submission. TEP also claims that it has a documented commitment to complying with these limits by requesting these permit limits.

Response D.11. TEP mischaracterizes the contents of the 2021 Clarifications Memo. The first section of the memo cited by the commenter, entitled "On-the-Way" Measures and Shutdowns, states that "on-the-way measures . . . are necessary to make reasonable progress and must be included in a SIP."¹⁶³ In this case, because the IGS Unit 3 limits have not taken effect under State law, their inclusion as part of the SIP revision is not meaningful, and they are not an appropriate basis for modifying the baseline control scenario for a four-factor analysis.

The second portion of the 2021 Clarifications Memo cited by TEP concerns setting emissions limits for control measures that have been found necessary to make reasonable progress. It is not relevant to the question of the extent to which existing measures may be considered as part of the baseline for a control analysis. Regarding this latter question, the 2019 Guidance states that:

Enforceable requirements are one reasonable basis for projecting a change in operating parameters and thus emissions; energy efficiency, renewable energy, or other such programs where there is a documented commitment to participate and a verifiable basis for quantifying any change in future emissions due to operational changes may be another. A state considering using assumptions about future operating parameters that are significantly different than historical operating parameters should consult with its EPA Regional office.¹⁶⁴

Again, the emissions limits at IGS Unit 3 are not enforceable by the State or the EPA unless and until the resulting reasonable progress determination is approved into the SIP. Moreover, the permit conditions that would implement the caps were adopted specifically to meet regional

¹⁵⁷ 2022 Arizona Regional Haze Plan, Appendix K at 9 (explaining that visibility information "was not considered in the Department's emission control measure determination").

¹⁶⁴ 2019 Guidance p. 29 (emphases added).

haze requirements and were not part of “energy efficiency, renewable energy, or other such programs.”¹⁶⁵ Therefore, we find that they are not a reasonable basis for projecting a change in operating parameters.

Comment D.12. TEP asserts that ADEQ reasonably evaluated additional control measures using a four-factor analysis for IGS Unit 3 based on excessive costs. TEP explains that each of the NO_x controls available for IGS Unit 3 exceed Arizona’s cost threshold of \$6,500/ton, and ADEQ therefore determined that no additional controls were reasonable for the second planning period. TEP also noted that while the average cost of installing combustion control retrofits at IGS Unit 3 was only \$230/ton above ADEQ’s \$6,500/ton threshold, the RHR does not prevent states from implementing “bright line” cost-effectiveness thresholds when considering additional control measures.

Response D.12. We partly agree with this comment. We agree that the NO_x controls analyzed for IGS Unit 3 exceed the cost threshold of \$6,500, when the emissions limits in the permit (which are not yet in effect) are considered as part of the baseline control scenario. However, as described in section IV.E.2.c.iii of our proposal, and Response D.11, we do not agree that these limits are an appropriate basis for modifying the baseline control scenario for a four-factor analysis. We also agree the RHR does not prevent states from implementing “bright line” cost-effectiveness thresholds, but we find that ADEQ did not do so in a reasonable or consistent manner in the Plan, as discussed in Response D.4.

E. Comment Letter From SRP

Sections I (“Introduction”), II (“Background”), III (“SRP Facilities Subject to the Proposed Rule”) and IV (“EPA Has Appropriately Proposed Approval of Several Aspects of Arizona’s Regional Haze SIP”) of SRP’s comment letter either provide background information or are supportive and therefore do not require a response. We respond to sections V–XI of SRP’s comment letter below.

Comment E.1. SRP comments that the proposed rule is vague and deprives the public of an adequate opportunity for comment. Citing *American Iron & Steel*

Institute v. EPA, SRP notes that the EPA is obligated to provide the public with information sufficient to facilitate public comment on the proposal, and that it is not clear which grounds for the proposed partial disapproval of the SIP submission apply to which sources. SRP provides a few examples of allegedly vague language in the proposed rule, for example, noting “some” of Arizona’s four-factor analyses were affected in a few instances. SRP asserts that because it is not clear which aspects of the EPA’s analysis apply to which facilities, the public cannot reasonably evaluate the grounds for the proposed disapproval actions, and therefore the EPA needs to issue a new proposed rule that provides additional necessary detail in support of the proposed actions.

Response E.1. We disagree with this comment. In *American Iron & Steel Institute*,¹⁶⁶ the court denied, in part, review of an EPA interim final rule due to a lack of proper notice. However, as described in Response A.1, we do not agree that the proposed rule deprives the public of an adequate opportunity for comment.

We also note that, in acting on the 2022 Arizona Regional Haze Plan, the EPA is not issuing new requirements applicable to any emissions sources. Rather, this final partial disapproval establishes a two-year deadline for the EPA to promulgate a FIP to address the relevant requirements under CAA section 110(c), unless the EPA approves a subsequent SIP submission that meets these requirements. Accordingly, Arizona can develop and submit a SIP revision addressing the disapproved elements of the Plan. Both the state’s adoption of that SIP revision and the EPA’s subsequent action on that SIP revision would be subject to public notice and comment requirements.¹⁶⁷ Similarly, if the EPA does not fully approve a SIP submission addressing the disapproved elements of the Plan, any FIP promulgated by the EPA would be subject to public notice and comment. Accordingly, there will be ample additional opportunities for the public, including potentially regulated entities, to engage in the rulemaking process before any additional requirements take effect.

Comment E.2. SRP asserts that the EPA should approve Arizona’s determination that Coronado Generating Station and SGS Unit 4 are effectively controlled because they are consistent with the law and EPA guidance. SRP

states that the 2019 Guidance indicates that sources that have recently installed effective controls are the prime example of sources that do not require evaluation during the current planning period. Specifically, SRP notes that the 2019 Guidance states that BART-eligible units that installed and began operating controls to meet BART emissions limits for the first implementation period, including sources that installed controls to comply with a better-than-BART alternative, may be considered to be effectively controlled.

For Coronado, SRP states that the source is subject to a better-than-BART alternative that the EPA approved in October 2017, and that there have been no intervening changes in technology since that time. SRP states that Coronado will also install new controls (SCR) to comply with the BART alternative by January 2026.¹⁶⁸ SRP noted that the first planning period regional haze SIP submission for Coronado also includes two additional requirements for SO₂: an SO₂ emissions limit of 0.060 lb/MMBtu, calculated on a 30-boiler-operating-day rolling average and an annual plant-wide SO₂ emissions cap of 1,970 tons per year.

SRP further asserts that SGS Unit 4 is similarly well-controlled. ADEQ determined that Unit 4’s existing controls of combustion controls (LNB+OFA) and SCR is the most effective control technology available for NO_x for coal fired EGUs, and thus, no further analysis for other control technologies was needed. For SO₂, Unit 4 is equipped with SDA systems subject to the MATS rule and has been achieving an SO₂ emissions rate over the most recent five years ranging from 0.076 to 0.10 lb/MMBtu on an annual basis. For PM, Unit 4 is equipped with a baghouse, which ADEQ found to have the highest PM control efficiency of any PM control considered for Unit 4.

Response E.2. Regarding Coronado Generating Station, we agree that the source was subject to a better-than-BART alternative. However, we note that the commenter mischaracterizes the contents of the 2019 Guidance regarding effective control determinations for BART-eligible sources. The relevant portion of the Guidance includes as an example of potentially effective controls, “BART-eligible units that *installed and began operating controls to meet BART emission limits* for the first implementation period, *on a*

¹⁶⁵ See, e.g., 2022 Arizona Regional Haze Plan, Appendix C, p. 197 (describing TEP’s submittal of permit application for NO_x caps in response to ADEQ’s initial regional haze control determination); Appendix G, p. 58 (“The purpose of the proposed SIP and significant permit revision is to support ADEQ’s forthcoming periodic comprehensive regional haze SIP submittal to EPA.”).

¹⁶⁶ See 568 F.2d 284 (3d Cir.1977), cert. denied, 435 U.S. 914, 98 S.Ct. 1467, 55 L.Ed.2d 505 (1978).

¹⁶⁷ See CAA section 110(l), 40 CFR 40 CFR 51.102, and 5 U.S.C. 553.

¹⁶⁸ SRP cited in the comment letter, but we note that the correct citation is 82 FR 46903 (October 10, 2017).

*pollutant-specific basis.*¹⁶⁹ The Guidance further explains that:

Although the Regional Haze Rule anticipates the re-assessment of BART-eligible sources under the reasonable progress Rule provisions, if a source installed and is currently operating controls to meet BART emission limits, it may be unlikely that there will be further available reasonable controls for such sources. *However, states may not categorically exclude all BART-eligible sources, or all sources that installed BART controls, as candidates for selection for analysis of control measures.*

The associated footnote clarifies that this consideration is not applicable to BART-subject units for which the BART requirement was met in whole or in part by emissions reductions at other units as part of a better-than-BART alternative or trading program.¹⁷⁰

As discussed in our proposal and Response B.3 of this document, ADEQ excluded all units that installed BART (or better-than-BART) controls between 2014 and 2028 for *any* pollutant. We therefore disagree that Arizona followed the 2019 Guidance in evaluating effective controls because it categorically excluded all such units without considering whether the unit in question installed effective controls for NO_x, SO₂ and PM₁₀, or whether the BART requirement was met in part by reductions at other units as part of a better-than-BART alternative.

Regarding SGS Unit 4, see Response D.2.

Comment E.3. SRP states that the EPA's assumed emissions rate for SCR controls of 0.05 lb/MMBtu is not feasible at coal-fired EGUs. SRP asserts that the EPA cannot assume all coal-fired units are capable of the same efficiencies following pollution control installation or that these controls incur the same costs for each unit nationwide, irrespective of the local conditions and operations impacting individual units. SRP further notes that the EPA's conclusion that all SCR retrofitted units can uniformly meet a NO_x emissions limit of 0.05 lb/MMBtu without proper evaluation and consideration of individual units is arbitrary and capricious and may unlawfully impose limits on EGUs that are unachievable. SRP further points out that the cited Srivastava et al. study notes units that achieved NO_x emissions rates between 0.04 and 0.07 lb/10⁶ Btu, and that this range illustrates the variability associated with SCR-controlled coal-fired unit NO_x emissions rates and the

importance of considering unit-specific factors when identifying a controlled emissions rate.

Citing Appendix K of the Plan, SRP further asserts that ADEQ specifically addressed unit-specific considerations when setting the SGS Unit 1 and 2 NO_x emissions rates by reviewing CAMPD data. By assuming an SCR controlled NO_x emissions rate of 0.06 lb/MMBtu, ADEQ is assuming that SGS Units 1 and 2 will achieve a controlled emissions rate within the top 21 percent of tangentially-fired EGUs. SRP indicates that without acknowledging ADEQ's evaluation, the EPA states that ADEQ did not provide adequate justification and unreasonably assumes an emissions rate within the top 5 percent of SCR controlled tangentially-fired EGUs is appropriate for the SGS Unit 1 and 2. SRP concludes that while the state made reasonable conclusions as to the emissions rates achievable by SCR at specific facilities, the EPA has not.

Response E.3. We disagree that the EPA has assumed that all coal-fired units are capable of the same efficiencies following pollution control installation or that these controls incur the same costs for each unit. As described in Responses B.4 and D.6, we have considered unit-specific factors in evaluating the emissions rates achievable with SCR at SGS Units 1 and 2, and we are not aware of any assertions that SGS specifically cannot achieve 0.050 lb/MMBtu when operating with SCR during periods of normal operation. Therefore, we find that ADEQ should have considered a controlled NO_x emissions rate of 0.050 lb/MMBtu for SGS Units 1 and 2 when operating with SCR during periods of normal operation. As further explained in Response B.4, this does not mean that 0.050 lb/MMBtu would be an appropriate 30–BOD limit for these units, but rather that it should be considered as annual emissions rate for purposes of the control cost analysis.

Comment E.4. SRP comments that it is not necessary to include control requirements for Coronado Generating Station in Arizona's Regional Haze SIP. SRP states that under CAA section 169A, a state (or the EPA) may only require a long-term strategy to include those control measures that are found to be necessary to make reasonable progress through the evaluation of the four statutory reasonable progress factors. SRP claims that the EPA's position that in the absence of a four-factor analysis supporting new controls, existing controls should generally be deemed necessary to make reasonable progress and be included in the regional haze SIP is not a valid reading of the

CAA's visibility provisions. Further, SRP claims that the CAA framework ties reasonable progress controls to the four-factor analysis, and does not leave room for the EPA's presumption that existing controls must be included in a SIP even whenever a four-factor analysis failed to identify new controls that should be implemented. Such existing controls may only be deemed necessary components of a regional haze SIP if a four-factor analysis independently identifies such controls as necessary for reasonable progress.

SRP further cites both the 2021 Clarifications Memo ("There may be other cases where, after having conducted robust source selection and rigorous analysis of the four factors, states have not identified any new measures that are reasonable to require for a source. In such cases, states will have to address whether the source's existing measures are necessary to make reasonable progress") and 2019 Guidance: ("[i]f a state determines that an in-place emission control at a source is a measure that is necessary to make reasonable progress and there is not already an enforceable emission limit corresponding to that control in the SIP, the state is required to adopt emission limits based on those controls as part of its long-term strategy in the SIP via the regional haze second planning period plan submission"). SRP claims that the EPA therefore acknowledged that there should be no presumption that existing measures are needed for reasonable progress.

Lastly, SRP states that Coronado Generating Station is already subject to a source-specific SIP revision that was designed to implement the better-than-BART alternative during the first planning period of the regional haze program. SRP asserts that because these requirements are already binding and enforceable, there is no need for any additional action to address Coronado.

Response E.4. First, we disagree that existing controls being necessary for reasonable progress does not have a basis in the statute for two reasons. First, under CAA 169A(a)(1), the national visibility goal is generally separated into two parts: (1) the prevention of any future, and (2) the remedying of any existing anthropogenic visibility impairment. As noted in the proposed rule,¹⁷¹ and in response B.1, continued implementation of the source's existing measures is generally necessary to prevent future emissions increases and thus necessary

¹⁶⁹ See 2019 Guidance, p. 25 (emphasis added).

¹⁷⁰ *Id.*, n. 54.

¹⁷¹ 89 FR 47398, 47404.

to make reasonable progress towards the national goal.

Second, control measures used to fulfill a CAA requirement must be in the SIP.¹⁷² In this instance, in order to make reasonable progress toward the national goal, the CAA requires every regional haze SIP to contain “such emission limits, schedules of compliance, and other measures as may be necessary for reasonable progress.”¹⁷³ The CAA also requires each regional haze SIP submission to include a long-term strategy “for making reasonable progress toward meeting the national goal.”¹⁷⁴ Finally, reasonable progress is defined in the CAA as a consideration of the four factors outlined in CAA 169A(g)(1). If the State opts to avoid conducting the required consideration of the four statutory factors on a source or group of sources based solely on the source’s existing measures, then, in order to fulfill its long-term strategy requirements, those existing measures must also be in the SIP, or else the state must demonstrate that the existing measures are not necessary to make reasonable progress. This ensures that this source’s contribution to visibility impairment will not increase, and also ensures that all measures being relied upon to fulfill the regional haze requirements are in the SIP. Therefore, if Arizona is relying on existing measures to avoid the statutorily required four factor analysis, then those existing measures must be in the SIP and thus a part of its long-term strategy for the second planning period, unless the State demonstrates that they are not necessary to make reasonable progress.

Additionally, we disagree that the EPA’s guidance documents acknowledged that there should be no presumption that existing measures are needed for reasonable progress. The 2021 Clarifications Memo is clear that, under the CAA and the RHR, “when the outcome of a four-factor analysis is that no new measures are reasonable for a source, the source’s *existing measures are generally needed to prevent future visibility impairment (i.e., to prevent future emission increases) and thus necessary to make reasonable progress.*”¹⁷⁵ ADEQ did not provide this analysis of whether existing measures are necessary to make reasonable progress.

Finally, while we agree that Coronado Generating Station is already subject to

a source-specific SIP that was designed to implement a better-than-BART alternative for the first implementation period, we do not agree that this automatically means, without further justification, that there is no need for any additional action to Coronado in the second implementation period for the reasons described in E.2.

Comment E.5. SRP asserts that the EPA should approve Arizona’s control determinations and four-factor analyses with respect to cost-effectiveness thresholds, incremental costs, compliance with the Control Cost Manual, and consideration of visibility.

First, regarding cost-effectiveness thresholds, SRP indicates that Arizona’s cost-effectiveness threshold of \$6,500/ton is reasonable and should be approved, along with the control determinations the state made in reliance on that threshold. SRP noted other examples of cost-effectiveness thresholds in other states (Georgia and Arkansas) that are lower than the values Arizona adopted. SRP also cites the EPA’s recent proposal for Missouri that cites a \$6,060 to \$7,600/ton threshold from the Central Regional Air Planning Association and Texas BART FIP threshold range of \$5,300/ton to \$6,500/ton that is consistent with the \$6,500/ton threshold adopted by Arizona. Therefore, SRP concludes that ADEQ’s threshold is reasonable and represents a conservatively high threshold from a historical perspective.

Second, regarding incremental costs, SRP asserts that the EPA provided no rationale for finding ADEQ’s approach unreasonable, and that it was appropriate to only consider incremental costs if a simple dollar-per-ton analysis suggests a control might be cost-effective in the absence of more nuanced information. SRP notes that suggesting that states cannot reasonably take incremental costs into account to reject control requirements far exceeds the EPA’s statutory authority, citing the court decision in *American Corn Growers Association vs. EPA* as stating that “[t]he Haze Rule calls for states to play the lead role in designing and implementing regional haze program to clear the air in national parks and wilderness areas.” SRP further states that the EPA states that Arizona considered only a single BART determination in finding that incremental costs of \$9,400–13,500/ton were excessive, but this value is in line with past EPA actions finding incremental costs excessive.¹⁷⁶

Third, regarding compliance with the Control Cost Manual, SRP states that the EPA did not provide enough information for the public to tell what it considers to be the full range of the deviations from the Cost Control Manual, except for some of the State’s remaining useful life values. SRP asserts that the EPA’s rules specifically allow for deviations from the Manual’s methodology and sample calculations and values whenever site-specific information is more accurate.

Lastly, regarding consideration of visibility, SRP asserts that the EPA appears to place inappropriate limits on Arizona’s consideration of visibility impacts as part of its assessment of reasonable progress, and that the State took visibility into account as additional confirmation that controls were not reasonable. SRP also states that the EPA has provided no context or analysis for stating that visibility impacts must be assessed in context to determine if they are truly meaningful and justify expensive control requirements. SRP points out that Table 10–5 of the 2022 Arizona Regional Haze Plan shows that natural visibility is projected to occur at all statewide sites between 2028 and 2056, well ahead 2064 natural conditions. SRP concludes that Arizona appropriately determined that controls were not reasonable for SGS when visibility is rapidly improving, costs are over or very near a reasonable cost threshold, and where visibility improvements from potential controls would be relatively small.

Response E.5. The EPA disagrees with this comment for a number of reasons. First, with respect to cost-effectiveness thresholds, the EPA clarifies that we are not disapproving Arizona’s average cost-effectiveness threshold specifically, but rather, finds that the State inconsistently applied the threshold and did not adequately justify how this approach resulted in a reasonable set of control measures in the long-term strategy for the second planning period. We also note that the fact that other states have applied lower or similar thresholds does not automatically make Arizona’s threshold reasonable. For further explanation on this point, see Response D.4.

Second, with respect to incremental costs, contrary to the commenter’s assertion, our proposed rule did not suggest that Arizona cannot consider incremental costs. However, we reiterate that, if a state chooses to consider incremental costs, it must do so in a reasonable and consistent manner and

¹⁷² See *Committee for a Better Arvin v. EPA*, 786 F.3d 1169, 1175–77 (9th Cir. 2015).

¹⁷³ CAA 169A(b)(2).

¹⁷⁴ CAA 169A(b)(2)(B).

¹⁷⁵ 2021 Clarifications Memo, pp. 8–9 (emphasis added).

¹⁷⁶ See, e.g., 79 FR 9318, 9342 (rejecting controls based on incremental costs of \$8,803 and \$8,576/ton); 76 FR 80754, 80756 (December 27, 2011)

(rejecting controls based on incremental costs of \$5,367/ton).

that Arizona did not do so in the Plan. See Responses B.6, B.8, and D.9.

Third, with respect to compliance with the Control Cost Manual, we note that, in addition to discussing remaining useful life values, we cited an example of where the State used an interest rate that was above the then-current prime rate without adequate documentation.¹⁷⁷ While we agree with the commenter that States can deviate from the Cost Control Manual's methodology and sample calculations and values whenever site-specific information is more accurate, ADEQ did not provide such relevant site-specific documentation. In situations where an enforceable shutdown date does not exist, the remaining useful life of a control under consideration should be the full period of the useful life of that control as recommended by the EPA's Control Cost Manual.¹⁷⁸ See Responses A.1 and C.4.

With respect to consideration of visibility, we disagree that the EPA has provided no context or analysis for stating that visibility impacts must be assessed in context. On the contrary, in our proposed notice, we explained why the evaluation and control of smaller and better-controlled sources in Arizona may be necessary to achieve the national goal.¹⁷⁹ However, we also noted that SGS specifically is by far the largest emissions source analyzed by ADEQ in the 2022 Arizona Regional Haze Plan and ADEQ found that Units 3 and 4, as well as Units 1 and 2 for PM₁₀, were effectively controlled, leaving only NO_x and SO₂ at Units 1 and 2 as providing an opportunity for further control at this source.¹⁸⁰ In addition, we cited to portions of the 2019 Guidance and Clarifications Memo that provide additional recommendations to states that visibility improvements could reasonably be considered in conjunction with a four-factor analysis. To the extent that the commenter is arguing that the EPA should have provided our own analysis of visibility impacts, we disagree. The EPA's role in reviewing SIP submittals is to assess their compliance with applicable requirements, not to address those requirements ourselves, as we would be obligated to do in a FIP.

Regarding Table 10–5, we note that this table is based on Arizona's RPGs, and that contrary to SRP's suggestion, ADEQ did not cite or discuss this table or otherwise reference its RPGs in making its control determinations. Furthermore, as explained in our proposal “[b]ecause RPGs are the modeled result of the measures in states’ long-term strategies (as well as other measures required under the CAA), they cannot be determined before states have conducted their four-factor analyses and determined the control measures that are necessary to make reasonable progress.”¹⁸¹ Accordingly, we do not agree that Arizona did or should have considered the information in Table 10–5 in making its control determinations. We also note that the commenter mischaracterizes the contents of this table, insofar as the “projected date of natural visibility for SYCA” is 2089, which is well after 2064. See also response C.5.

In sum, we disagree that Arizona appropriately determined that controls were not reasonable for SGS for the reasons described in this response, elsewhere in this document and in our proposal.

Comment E.6. SRP claims that the EPA improperly asserts that Arizona's SIP must require installation of specific control technologies, specifically with regards to SDA upgrades at SGS Units 1 and 2. SRP states that the regional haze program has not been used to impose requirements to install and operate specific technologies, and that some states have made use of emissions caps rather than emissions rates and other creative tools to address regional haze requirements, including Coronado Generating Station during the first planning period.

Response E.6. We agree with the commenter that ADEQ was not obligated to require installation of a particular control. However, the State is obligated to set emissions limitations or establish other measures corresponding to the controls that it determined to be necessary to make reasonable progress.¹⁸² See also Response B.8 where we note issues with ADEQ's

provided rationale in justifying the mass-based emissions caps at SGS and IGS. Finally, we note that the example of Coronado Generating Station was under the better-than-BART provisions of 40 CFR 51.308(e)(2), rather than the provisions of 40 CFR 51.308(f), which govern regional haze plans for the second implementation period.

Comment E.7. SRP comments that the EPA's disapproval of 40 CFR 51.308(f)(3)(ii) for the Sycamore Canyon monitor fails to acknowledge or address critical monitoring deficiencies. SRP noted that ADEQ's determination that monitor irregularities should preclude the site from 40 CFR 51.308(f)(3)(ii)(A) requirements, and that the EPA cannot ignore the issues. SRP states that ADEQ has shown that the site would have experienced drastic visibility improvements if not for the impact of PM, and that the increases of coarse mass and soil that occurred after the monitor was relocated in 2015 shows that the increasing trends of dust at the monitor originate from local sources. SRP further notes that the current monitor location is not within the Class I area, so it is unreasonable to assume the local dust impacts experienced at the monitor result in visibility degradation within the Class I area. SRP asserts that the EPA's current disapproval deprives the public of an adequate opportunity to comment as the EPA fails to discuss the monitoring irregularities at the monitor. SRP claims that the EPA's disapproval of 40 CFR 51.308(f)(3)(ii) is arbitrary and capricious because the action ignores the facts presented by ADEQ, ADEQ's recommendation that the SYCA monitor should not be used for long-term progress analysis, and instead relies on questionable monitoring data without any discussion of its merits.

Response E.7. Please see Response B.9.

Further, we do not agree that we ignored ADEQ's monitoring analysis. On the contrary, we specifically acknowledged this analysis in our proposal.¹⁸³ However, we found this analysis was insufficient to meet the requirements of 40 CFR 51.308(f)(3)(ii)(A), given the flaws in ADEQ's long-term strategy.

We also disagree with the commenter's assertion that ADEQ determined that monitor irregularities should preclude the site from 40 CFR 51.308(f)(3)(ii)(A) requirements. Rather, ADEQ asserted that the Plan complied

¹⁸¹ Id. at 47405.

¹⁸² CAA 169A(b)(2) (“... each applicable implementation plan for a State . . . which may reasonably be anticipated to cause or contribute to any impairment of visibility . . . [must] contain such emissions limits, schedules of compliance and other measures as may be necessary to make reasonable progress[.]”); 40 CFR 51.308(f)(2) (“Each State must submit a long-term strategy that addresses regional haze visibility impairment . . . the long-term strategy must include the enforceable emissions limitations . . . that are necessary to make reasonable progress.”); see also 2021 Clarifications Memo, pp. 8–9.

¹⁷⁷ 89 FR 47398, 47429.

¹⁷⁸ 2019 Guidance, pp. 33–34. See also 40 CFR 51.308(f)(2)(iii) (“The State must document the technical basis, including modeling, monitoring, cost, engineering, and emissions information, on which the State is relying to determine the emission reduction measures that are necessary to make reasonable progress in each mandatory Class I Federal area it affects”).

¹⁷⁹ 89 FR 47398, 47430.

¹⁸⁰ Id.

¹⁸³ See 89 FR 47398, 47433 (“ADEQ provided a discussion in its submission that explains how the monitor was relocated in 2015 and experienced increases in soil and coarse mass extinction.”)

with these requirements.¹⁸⁴ We do not agree with this assertion for the reasons stated in our proposal and Response B.9 of this document. ADEQ also noted that it will continue to monitor and investigate the source of coarse mass impacts at the monitor site during subsequent progress reports and periodic comprehensive Regional Haze SIP revisions.¹⁸⁵ We will work with ADEQ and other stakeholders on the consideration of this issue in the development of future SIP revisions.

F. Community Sign-On Letter

The Community Sign-On Letter is supportive with three suggestions for improvement. The supportive portions of the letter do not require a response.

Comment F.1. The commenter requests that the EPA confirm the polluting facilities that ADEQ improperly excluded from analysis in the state's plan.

Response F.1. Please see Response A.1, which describes the EPA's approach to reviewing the Plan generally and source selection specifically.

Comment F.2. The commenter requests that the EPA confirm the specific errors in each of the selected source's review of pollution controls.

Response F.2. We have explained the bases for our partial disapproval with respect to 40 CFR 51.308(f)(2) in our proposal and elsewhere in this document. Therefore, the EPA's disapproval of 51.308(f)(2) is justified.

Comment F.3. The commenter requests that the EPA consider the equity and environmental justice impacts of the state's plan and maximize the environmental justice co-benefits of haze pollution reduction opportunities.

Response F.3. The regional haze statutory provisions do not explicitly address considerations of environmental justice, and neither do the regulatory requirements of the second planning period in 40 CFR 51.308(f), (g), and (i). As explained in "EPA Legal Tools to Advance Environmental Justice,"¹⁸⁶ the CAA provides states with the discretion to consider environmental justice in developing rules and measures related to regional haze. While a State may consider environmental justice under

the reasonable progress factors, neither the statute nor the RHR requires states to conduct an environmental justice analysis for the EPA to approve a SIP submission. Furthermore, the CAA and applicable implementing regulations neither prohibit nor require such an evaluation of environmental justice with regard to a regional haze SIP submission. The EPA is not identifying environmental justice as a basis for its decision to partially approve and partially disapprove Arizona's SIP revision.

G. Comment Letter From NPCA et al.

Sections I ("Background") and II ("EPA's Proposed Rule Correctly Disapproves ADEQ's Approach To Source Selection, Four-Factor Analyses, Control Determinations, and Reasonable Progress Goals") of the NPCA et al.'s comment letter either provide background information or are supportive and therefore do not require a response. We respond to sections III–VI of the NPCA et al.'s comment letter below.

Comment G.1. NPCA et al. request the EPA to be more specific about the point sources of concern. First, the commenter states that in the final rule, the EPA should list the sources that ADEQ improperly screened out and failed to conduct a four-factor reasonable progress analysis for, namely Apache Unit 3, Cholla Units 1, 3–4, Coronado, ASARCO Hayden Smelter, Lhoist-Nelson Lime Plant, Apache Nitrogen, Freeport-McMoRan Miami Smelter.

Second, the commenter states that the EPA should list each point source for which the EPA is disapproving ADEQ's control determinations, namely SGS Units 1 and 2 NO_x and SO₂ analyses, SGS 3 and 4 SO₂ analyses, IGS 3 and 4 NO_x analyses, Williams Compressor Station NO_x analysis, Wilcox Compressor Station NO_x analysis, Drake Cement Plant NO_x and SO₂ analyses, and Phoenix Cement-Clarkdale Plant, NO_x and PM₁₀ analyses.

Response G.1. See Response A.1. The EPA is disapproving long-term strategy as a whole. Any subsequent SIP revision developed by the State, or FIP developed by EPA, will need to establish a long-term strategy in accordance with the regulatory requirements. 40 CFR 51.308(f)(2).

Comment G.2. NPCA et al. comment that the EPA must consider the equity and environmental justice impacts of its action on Arizona's Regional Haze SIP. The commenter indicates that the EPA guidance documents direct states to consider the broader environmental implications of their regional haze plans, by requiring an analysis of the

"non-air quality environmental impacts of compliance," including environmental justice, and that meaningful outreach and engagement to environmental justice communities is crucial. NPCA et al. request ADEQ and the EPA to conduct meaningful outreach, substantively incorporate equity and environmental justice into the SIP revision and the supporting technical documents, such as preparing maps that detail the location of environmental justice communities in Arizona and the location of nearby visibility-impairing sources. The commenters specify that a number of visibility-impairing sources in Arizona are located near vulnerable communities, yet ADEQ did not conduct a four-factor analysis for many of these sources.

Response G.2. See Response F.3. NPCA et al. provided additional demographic information for communities near several sources in Arizona. Without agreeing with the particular relevance or accuracy of this information, the EPA acknowledges the demographic information provided as part of the comment. As discussed in our proposal and in this document, the EPA has evaluated Arizona's SIP submission against the statutory and regulatory regional haze requirements and determined that it has not satisfied certain minimum requirements.

Comment G.3. NPCA et al. note that the EPA must disapprove ADEQ's adjustments to the URP glidepath for each Class I area. The commenter asserts that the EPA can only approve these URP glidepath adjustments if it determines ADEQ used "scientifically valid data and methods" per 40 CFR 51.308(f)(1)(vi)(B), and they request the EPA to disapprove ADEQ's URP glidepath adjustments for two reasons.

First, NPCA et al. state that the EPA incorrectly suggests that ADEQ's adjustments were de minimis and had no effect on whether the RPGs for each Class I area are above or below the URP glidepath. However, ADEQ's decision to adjust the default URP glidepaths significantly affected whether the RPG for several Class I areas are above or below the glidepath, such as Chiricahua Wilderness, Saguaro National Park, and Superstition Wilderness.

Second, NPCA et al. state that the EPA's determination that ADEQ's glidepath adjustments used scientifically valid data and methods is unsound given that the EPA previously expressed concerns with these data and methods. The commenter further states that the EPA highlighted substantial problems in its 2019 Modeling

¹⁸⁴ Plan p. 106 ("In accordance with 40 CFR 51.308(f)(3)(ii)(A), Arizona has provided robust documentation in support of the state's source selection criteria and reasonable progress determinations for selecting measures for inclusion in its long-term strategy.")

¹⁸⁶ See EPA Legal Tools to Advance Environmental Justice, May 2022, available at www.epa.gov/system/files/documents/2022-05/EJ%20Legal%20Tools%20May%202022%20FINAL.pdf at 35–36.

Technical Support Document (TSD)¹⁸⁷ with available data and methods for adjusting Class I glidepaths based on both international and prescribed wildland fire emissions, including international emissions data from just a single year,¹⁸⁸ and uncertainty in many of the calculations and modeling and ambient data.¹⁸⁹

Response G.3. As noted in our proposal and in our response to Comment C.5, being on or below the URP does not relieve a state from considering the four statutory factors to determine what level of control is needed to achieve reasonable progress.¹⁹⁰ The URP is used in later steps of the reasonable progress analysis for informational purposes and to provide a non-enforceable benchmark against which to assess a Class I area's rate of visibility improvement. Achieving the URP does not mean that a Class I area is making "reasonable progress" and does not relieve a state from using the four statutory factors to determine what level of control is needed to achieve such progress.¹⁹¹

We also find that the specific points raised by NPCA are overstated, and we therefore disagree that we should disapprove ADEQ's glidepath adjustments. First, the EPA's proposal stated, "[t]he *choice of adjustment option* made no difference in whether the RPG for each area was above or below its URP glidepath,"¹⁹² not that an adjustment, in general, made no difference. That is, the glidepath adjustment results were nearly the same between the option that adjusted for international anthropogenic impacts alone, and the option that adjusted for international impacts together with wildland prescribed fire impacts. The commenter is correct that for several Class I areas, the adjustment itself does make a difference in the assessment of whether projected visibility impacts are above or below the glidepath. Our assessment of the URP and RPGs took that into account, as noted in our proposal.¹⁹³ If the adjustment were

rejected altogether, that would strengthen the case for the need for the State to make a "robust demonstration" that there are no reasonable additional emissions reduction measures, although in this case that need is already established because Sycamore Canyon Wilderness impacts are above its glidepath with or without adjustment.¹⁹⁴

Second, the EPA disagrees that the glidepath adjustments were not based on scientifically valid data and methods. The 2019 Modeling TSD acknowledges various limitations and uncertainties in various model inputs and calculation approaches, which is always the case in modeling. That acknowledgement was not intended as an assertion by the EPA that its own data and methods were scientifically invalid. Similarly, it was not intended that a glidepath adjustment made using the same or similar methods would not be based on scientifically valid data and methods. Rather, the data and methods used were the best available to the EPA at the time of the modeling in that TSD, and presented as a reasonable and valid approach for glidepath adjustment that states could consider in developing their SIPs, without precluding the use of better data and methods that a state might develop. The EPA's specific statement about "uncertainty in many of the calculations and modeling and ambient data" was in the context of alternative approaches to adjusting the glidepath, for which the 2019 Modeling TSD provided five,¹⁹⁵ including the default. Those approaches differed in whether international impacts and prescribed fire should be combined with the baseline model run on an absolute or relative basis (*i.e.*, simply added in or applied as a percent difference), and whether natural conditions should be estimated from monitored data or from modeling. There is not one clearly best approach that would be most appropriate for all Class I areas in the country, but the EPA chose one as the default and provided a range of adjustment results. For Arizona Class I areas, the glidepath adjustment in the default approach was nearly the same as the maximum among the approaches examined, except for the Grand Canyon and Sycamore Canyon Wilderness, where it gave closer to the minimum adjustment among the approaches considered.¹⁹⁶ As noted in the EPA's proposal, the WRAP results used by ADEQ were fairly close to default

approach values estimated by the EPA and were determined to be based on scientifically valid data and methods.¹⁹⁷ The EPA does not find any reason, and the commenters do not provide any additional reasons to determine otherwise.

Comment G.4. NPCA et al. indicate that the EPA must disapprove additional aspects of ADEQ's source selection process, noting that ADEQ's Q/d threshold of 10 is arbitrarily high, ADEQ should not have eliminated the totality of "effectively-controlled" process emissions from its Q/d analysis, and ADEQ's "de minimis point source process determination" is arbitrary and capricious.

Response G.4. As explained in our proposal and the 2021 Clarifications Memo, the RHR does not require states to consider controls for all sources, all source categories, or any or all sources in a particular source category.¹⁹⁸ Rather, the states have discretion to choose any source selection methodology or threshold that is reasonable, but the choices they make must be explained and should be designed to result in a set of sources which capture a meaningful portion of the state's total contribution to visibility impairment. To this end, 40 CFR 51.308(f)(2)(i) requires that a state's SIP submission must include "a description of the criteria it used to determine which sources or groups of sources it evaluated." The technical basis for source selection, which may include methods for quantifying potential visibility impacts such as emissions divided by distance metrics, trajectory analyses, residence time analyses, and/or photochemical modeling, must also be appropriately documented, as required by 40 CFR 51.308(f)(2)(iii).

Overall, in this particular instance, the EPA finds that that many aspects of ADEQ's source selection process, such as its focus on sulfate, nitrate, and coarse mass and its use of a Q/d value of 10 for point sources, were reasonable and adequately explained and documented. However, we also find that ADEQ did not provide an adequate justification for screening out certain sources and units from conducting a four-factor analysis on the basis that they are "effectively controlled" as part of its source selection process.¹⁹⁹ As the

¹⁸⁷ Memorandum from Richard A. Wayland, Director, Air Quality Assessment Division, EPA, to Regional Air Division Directors, Subject: "Availability of Modeling Data and Associated Technical Support Document for the EPA's Updated 2028 Visibility Air Quality Modeling," September 19, 2019, available at <https://www.epa.gov/visibility/technical-support-document-epas-updated-2028-regional-haze-modeling>.

¹⁹⁷ 89 FR 47398, 47411.

¹⁹⁸ 89 FR 47398, 47403; 2021 Clarifications Memo, Sections 2 and 2.1.

¹⁹⁹ See 40 CFR 51.308(f)(2)(i) (" . . . The State must include in its implementation plan a description of the criteria is used to determine which sources or groups of sources it evaluated and how the four factors were taken into consideration

EPA has previously stated, “[s]ource selection is a critical step in states’ analytical processes. All subsequent determinations of what constitutes reasonable progress flow from states’ initial decisions regarding the universe of pollutants and sources they will consider for the second planning period.”²⁰⁰ Therefore, Arizona’s source selection methodology, including unjustified effectively controlled determinations, supports the EPA’s determination that Arizona’s long-term strategy did not include all measures necessary to make reasonable progress. Therefore, EPA’s disapproval of 40 CFR 51.308(f)(2), as a whole, is reasonable.

Comment G.5. NPCA et al. state that ADEQ’s average cost-effectiveness threshold is too low, and requests the EPA to further clarify that ADEQ’s \$6,500 per ton cost threshold is too low and unreasonably excludes cost-effective control measures.

Response G.5. While the EPA is not disapproving ADEQ’s cost threshold, we nonetheless find that the State did not apply this threshold in a consistent and reasonable manner, as described in our proposal²⁰¹ and Response D.4 of this document.

Comment G.6. NPCA et al. comment that the EPA must promptly issue a Regional Haze FIP for Arizona. The commenter recommends that to provide sufficient time for sources to implement control measures before the second implementation period ends in 2028, the EPA should issue a proposed FIP in 2024 and finalize the FIP by the end of 2025.

Response G.6. Disapproving a SIP submission establishes a two-year deadline for the EPA to promulgate a FIP to address the relevant requirements under CAA section 110(c), unless the EPA approves a subsequent SIP submission that meets these requirements. The EPA is not proposing a FIP for the disapproved requirements of the 2022 Arizona Regional Haze Plan at this time.

III. Final Action

Under CAA section 110(k)(3), and based on the evaluation and rationale presented in the proposed rule and this final rule, the EPA is partially approving and partially disapproving the 2022 Arizona Regional Haze Plan. Specifically, the EPA is approving the elements of the 2022 Arizona Regional Haze Plan related to requirements contained in 40 CFR 51.308(f)(1), (f)(4)–

(6), and (g)(1)–(5). The EPA is disapproving the elements of the 2022 Arizona Regional Haze Plan related to requirements contained in 40 CFR 51.308(f)(2), (f)(3), and (i)(2)–(4). Further, the EPA is disapproving the interstate transport requirements of CAA section 110(a)(2)(D)(i)(II) prong 4 (visibility) for the 2018 Ozone I–SIP submittal and 2015 PM_{2.5} I–SIP submittal.

Under section 179(a) of the CAA, final disapproval of a submittal that addresses a requirement of part D, title I of the CAA or is required in response to a finding of substantial inadequacy as described in CAA section 110(k)(5) starts a sanctions clock. Arizona’s 2022 Regional Haze Plan, 2018 Ozone I–SIP submittal, and 2015 PM_{2.5} I–SIP submittal were not submitted to meet any of these requirements. Therefore, the disapprovals noted in section III.B will not trigger any offset or highway sanctions clocks. Disapproving a SIP submission also establishes a two-year deadline for the EPA to promulgate a FIP to address the relevant requirements under CAA section 110(c), unless the EPA approves a subsequent SIP submission that meets these requirements. We anticipate that any SIP or FIP that remedies the disapprovals with respect to Regional Haze requirements, would also, in conjunction with the existing Arizona Regional Haze FIP, remedy the disapproval for the interstate transport visibility requirement of CAA section 110(a)(2)(D)(i)(II) for the 2018 Ozone I–SIP submittal and 2015 PM_{2.5} I–SIP submittal.

IV. Statutory and Executive Order Reviews

Under the CAA, the Administrator is required to approve a SIP submission that complies with the provisions of the Act and applicable federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, the EPA’s role is to review state choices, and approve those choices if they meet the minimum criteria of the Act. Accordingly, this final action partially approves and partially disapproves state law as meeting federal requirements and does not impose additional requirements beyond those imposed by state law.

Additional information about these statutes and Executive orders can be found at <https://www.epa.gov/laws-regulations/laws-and-executive-orders>.

A. Executive Order 12866: Regulatory Planning and Review and Executive Order 13563: Improving Regulation and Regulatory Review

This action is not a significant regulatory action and was therefore not submitted to the Office of Management and Budget (OMB) for review.

B. Paperwork Reduction Act (PRA)

This action does not impose an information collection burden under the PRA because this action does not impose additional requirements beyond those imposed by state law.

C. Regulatory Flexibility Act (RFA)

I certify that this action will not have a significant economic impact on a substantial number of small entities under the RFA. This action will not impose any requirements on small entities beyond those imposed by state law.

D. Unfunded Mandates Reform Act (UMRA)

This action does not contain any unfunded mandate as described in UMRA, 2 U.S.C. 1531–1538, and does not significantly or uniquely affect small governments. This action does not impose additional requirements beyond those imposed by state law. Accordingly, no additional costs to State, local, or Tribal governments, or to the private sector, will result from this action.

E. Executive Order 13132: Federalism

This action does not have federalism implications. It will not have substantial direct effects on the states, on the relationship between the national government and the states, or on the distribution of power and responsibilities among the various levels of government.

F. Executive Order 13175: Coordination With Indian Tribal Governments

This action does not have Tribal implications, as specified in Executive Order 13175, because the SIP is not approved to apply on any Indian reservation land or in any other area where the EPA or an Indian Tribe has demonstrated that a Tribe has jurisdiction, and will not impose substantial direct costs on Tribal governments or preempt Tribal law. Thus, Executive Order 13175 does not apply to this action.

G. Executive Order 13045: Protection of Children From Environmental Health Risks and Safety Risks

The EPA interprets Executive Order 13045 as applying only to those

in selecting the measures for inclusion in its long-term strategy”).

²⁰⁰ 2021 Clarifications Memo, p. 3.

²⁰¹ 89 FR 47398, 47429.

regulatory actions that concern environmental health or safety risks that the EPA has reason to believe may disproportionately affect children, per the definition of “covered regulatory action” in section 2–202 of the Executive Order. Therefore, this action is not subject to Executive Order 13045 because it merely partially approves and partially disapproves state law as meeting federal requirements. Furthermore, the EPA’s Policy on Children’s Health does not apply to this action.

H. Executive Order 13211: Actions That Significantly Affect Energy Supply, Distribution, or Use

This action is not subject to Executive Order 13211, because it is not a significant regulatory action under Executive Order 12866.

I. National Technology Transfer and Advancement Act (NTTAA)

Section 12(d) of the NTTAA directs the EPA to use voluntary consensus standards in its regulatory activities unless to do so would be inconsistent with applicable law or otherwise impractical. The EPA believes that this action is not subject to the requirements of section 12(d) of the NTTAA because application of those requirements would be inconsistent with the CAA.

J. Executive Order 12898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations

Executive Order 12898 (Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations, 59 FR 7629, Feb. 16, 1994) directs Federal agencies to identify and address “disproportionately high and adverse human health or environmental effects” of their actions on communities with environmental justice (EJ) concerns to

the greatest extent practicable and permitted by law. Executive Order 14096 (Revitalizing Our Nation’s Commitment to Environmental Justice for All, 88 FR 25251, April 26, 2023) builds on and supplements E.O. 12898 and defines EJ as, among other things, “the just treatment and meaningful involvement of all people, regardless of income, race, color, national origin, or Tribal affiliation, or disability in agency decision-making and other Federal activities that affect human health and the environment.”

The State did not evaluate EJ considerations as part of its SIP submittal; the CAA and applicable implementing regulations neither prohibit nor require such an evaluation. EPA did not perform an EJ analysis and did not consider EJ in this action. Due to the nature of the action being taken here, this action is expected to have a neutral to positive impact on the air quality of the affected area. Consideration of EJ is not required as part of this action, and there is no information in the record inconsistent with the stated goal of E.O. 12898/14096 of achieving EJ for communities with EJ concerns.

K. Congressional Review Act (CRA)

This action is subject to the CRA, and the EPA will submit a rule report to each House of the Congress and to the Comptroller General of the United States. This action is not a “major rule” as defined by 5 U.S.C. 804(2).

L. Petitions for Judicial Review

Under section 307(b)(1) of the CAA, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by February 18, 2025. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this rule for the purposes of judicial review nor does it

extend the time within which a petition for judicial review may be filed, and shall not postpone the effectiveness of such rule or action. This action may not be challenged later in proceedings to enforce its requirements (see section 307(b)(2)).

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Incorporation by reference, Intergovernmental relations, Nitrogen oxides, Ozone, Particulate matter, Reporting and recordkeeping requirements, Sulfur Oxides, Volatile organic compounds.

Dated: December 10, 2024.

Martha Guzman Aceves,
Regional Administrator, Region IX.

For the reasons stated in the preamble, the EPA amends chapter I, title 40 of the Code of Federal Regulations as follows:

PART 52—APPROVAL AND PROMULGATION OF IMPLEMENTATION PLANS

■ 1. The authority citation for part 52 continues to read as follows:

Authority: 42 U.S.C. 7401 *et seq.*

Subpart D—Arizona

■ 2. In § 52.120(e), amend Table 1 by adding an entry for “State Implementation Plan Revision: Regional Haze Program (2018–2028)” before the entry for “Arizona State Implementation Plan Revision under Clean Air Act Section 110(a)(1) and (2); Implementation of the 2008 Lead National Ambient Air Quality Standards, excluding the appendices.”

The addition reads as follows:

§ 52.120 Identification of plan.

* * * * *
(e) * * *

TABLE 1—EPA-APPROVED NON-REGULATORY AND QUASI-REGULATORY MEASURES
[Excluding certain resolutions and statutes, which are listed in tables 2 and 3, respectively] ¹

■ 3. Section 52.145 is amended by adding paragraph (o) to read as follows:	ACTION: Final rule.			number: (202) 564–4016; e-mail address: lloyd.tyler@epa.gov .
§ 52.145 Visibility protection.	SUMMARY: The Environmental Protection Agency (EPA or the Agency) is amending the new chemicals procedural regulations under the Toxic Substances Control Act (TSCA). These amendments align the regulatory text with the amendments to TSCA's new chemicals review provisions contained in the Frank R. Lautenberg Chemical Safety for the 21st Century Act, enacted on June 22, 2016, will improve the efficiency of EPA's review processes, and update the regulations based on existing policies and experience implementing the New Chemicals Program. This final rule includes amendments that will increase the quality of information initially submitted in new chemicals notices and improve the Agency's processes for timely, effective completion of individual risk assessments and the new chemicals review process overall. EPA is also finalizing several amendments to the regulations for low volume exemptions (LVEs) and low release and exposure exemptions (LoREXs), which will require EPA approval of an exemption notice prior to commencement of manufacture, make per- and polyfluoroalkyl substances (PFAS) categorically ineligible for these exemptions, and provide that certain persistent, bioaccumulative, toxic (PBT) chemical substances are ineligible for these exemptions.			<i>For general information contact:</i> The TSCA-Hotline, ABVI-Goodwill, 422 South Clinton Ave., Rochester, NY 14620; telephone number: (202) 554–1404; e-mail address: TSCA-Hotline@epa.gov .
(o) <i>Disapproval.</i> On August 15, 2022, the Arizona Department of Environmental Quality submitted the “State Implementation Plan Revision: Regional Haze Program (2018–2028).”				SUPPLEMENTARY INFORMATION:
(1) The following portions of the “State Implementation Plan Revision: Regional Haze Program (2018–2028)” are disapproved because they do not meet the applicable requirements of Clean Air Act sections 169A and 169B and the Regional Haze Rule in 40 CFR 51.301 through 51.308.				I. Executive Summary
(i) Chapters 2, 6.1, 6.2, 6.3, 7, 8, 9, and 10;				<i>A. Does this action apply to me?</i>
(ii) Appendices B, C, D, E, F, G, H, I, J, and L.				You may be potentially affected by this action if you intend to manufacture a new chemical substance, or manufacture or process a chemical substance for a significant new use. The following list of North American Industrial Classification System (NAICS) codes is not intended to be exhaustive, but rather provides a guide to help readers determine whether this document applies to them. Potentially affected entities may include:
■ 4. Section 52.147 is amended by adding paragraph (f) to read as follows:	DATES: This final rule is effective January 17, 2025.			• Chemical Manufacturers (NAICS code 325). • Petroleum and Coal Products (NAICS code 324). • Merchant Wholesalers, Nondurable Goods (NAICS code 424).
§ 52.147 Interstate transport.	ADDRESSES: The docket for this action, identified by docket identification (ID) number EPA–HQ–OPPT–2022–0902, is available online at https://www.regulations.gov . Additional instructions for visiting the docket, along with more information about dockets generally, is available at https://www.epa.gov/dockets .			This list details the types of entities that EPA is aware could potentially be regulated by this action. Other types of entities not listed could also be regulated. To determine whether your entity is regulated by this action, you should carefully examine the applicability criteria found in 40 CFR 720.22, 721.5, 723.50, and 725.1. If you have questions regarding the applicability of this action, please consult the technical person listed under FOR FURTHER INFORMATION CONTACT .
(f) <i>Disapproval.</i> The SIPs submitted on December 11, 2015 and September 24, 2018 do not meet the requirements of Clean Air Act section 110(a)(2)(D)(i)(II) (interfere with measures in any other state to protect visibility, only) for the 2012 PM _{2.5} NAAQS and the 2015 ozone NAAQS, respectively.				<i>B. What is the Agency's authority for taking this action?</i>
[FR Doc. 2024–29508 Filed 12–17–24; 8:45 am]				EPA is promulgating this rule pursuant to its authority in TSCA section 5 (15 U.S.C. 2604). Section 5(a)(1) of the Toxic Substances Control Act (TSCA), 15 U.S.C. 2604(a)(1), as amended by the Frank R. Lautenberg Chemical Safety for the 21st Century Act of 2016 (Pub. L. 114–182) (herein referred to as the “2016 Lautenberg
BILLING CODE 6560–50–P				
ENVIRONMENTAL PROTECTION AGENCY				
40 CFR Parts 68, 372, 703, 720, 721, 723, 725, and 761				
[EPA–HQ–OPPT–2022–0902; FRL–7906–02–OCSPP]				
RIN 2070–AK65				
Updates to New Chemicals Regulations Under the Toxic Substances Control Act (TSCA)				
AGENCY: Environmental Protection Agency (EPA).				

Amendments”), provides that no person, as defined at 40 CFR 720.3, may manufacture (which includes import under TSCA) a new chemical substance or manufacture or process a chemical substance for a use which EPA has determined is a significant new use, unless at least 90 days prior to such manufacture or processing that person submits a notice to EPA containing the information required by TSCA section 5(d). EPA must conduct a review of the notice, make one of five possible determinations pertaining to the likelihood of unreasonable risk of injury to health or the environment, and take any actions required as a result of that determination, all within the applicable review period. The submitted notice must include the information described in TSCA section 5(d)(1): insofar as known to the submitter or reasonably ascertainable, information described in certain provisions of TSCA section 8(a)(2) (e.g., chemical identity, use, and exposure information); in the form and manner prescribed by EPA, information in the possession or control of the submitter related to the health or environmental effects of the chemical substance; and a description of any other information concerning the environmental and health effects of the chemical substance, insofar as known to the submitter or reasonably ascertainable.

C. What action is the Agency taking?

EPA is promulgating amendments to the procedural regulations at 40 CFR parts 720, 721, and 725 to align with the requirements in TSCA section 5, as amended by the 2016 Lautenberg Amendments, and to make additional updates. EPA is amending the regulations to specify that EPA must make a determination on each Pre-Manufacture Notice (PMN), Significant New Use Notice (SNUN), and Microbial Commercial Activity Notice (MCAN) received before the submitter may commence manufacturing or processing of the chemical substance that is the subject of the notice, and to list the five possible determinations and the actions required in association with those determinations. In addition, EPA is finalizing amendments that will clarify the level of detail expected for the information that a submitter is required to include in a PMN, SNUN, or exemption notice in order for the notice to be considered complete. EPA is also finalizing amendments to the procedures for reviewing PMNs and SNUNs; specifically, procedures for addressing PMNs and SNUNs that have errors or are incomplete or that are amended during the applicable review

period. Additionally, EPA is finalizing several amendments to the regulations at 40 CFR 723.50 for LVEs and LoREXs. These amendments would require EPA approval of an exemption notice before the submitter may commence manufacture, allow EPA to inform an LVE or LoREX holder when the chemical substance that is the subject of the exemption becomes subject to a significant new use rule (SNUR) under TSCA and the chemical identity is confidential, make PFAS categorically ineligible for these exemptions, and make certain PBTs ineligible for these exemptions. Finally, EPA is amending the regulations pertaining to suspensions for all TSCA section 5 notices to allow submitters to request suspensions for up to 30 days via oral or e-mail request. This final rule takes into consideration comments received on the proposed rule (88 FR 34100, May 26, 2023 (FRL-7906-01-OCSP)). Details on the final rule requirements, including modifications from the proposal, are explained in Unit III.

D. Why is the Agency taking this action?

Under amended TSCA, EPA must review all notices submitted under TSCA section 5(a)(1) and make a determination pertaining to the risks of new chemical substances or significant new uses of chemical substances described in such notices before they can proceed to the marketplace. Before the 2016 Lautenberg Amendments, TSCA allowed the PMN or SNUN submitter to commence manufacturing or processing upon expiration of the review period unless EPA made an affirmative finding of unreasonable risk. Under amended TSCA, EPA must review all notices submitted under TSCA section 5(a)(1) and make a determination pertaining to the risks of every new chemical substance or significant new use of a chemical substance described in such notices before they can proceed to the marketplace. To reflect and better meet these requirements, EPA is amending the procedural regulations codified at 40 CFR parts 720, 721, and 725 and making additional updates based on existing policies or lessons learned from administering the New Chemicals Program since TSCA was amended in 2016.

EPA is also finalizing amendments that will clarify the information that is required to be included in PMNs, SNUNs, and exemption notices to reduce the need to redo all or part of the risk assessment (“rework”) due to late submissions of information. This action is expected to reduce rework of risk assessments by minimizing requests

from submitters to amend their PMNs, SNUNs, or exemption notices with additional information after the review period has commenced. The Agency is also finalizing amendments to make clear the procedures that will be employed if submitters amend their PMNs or SNUNs during the applicable review period.

EPA is amending the regulations for LVEs and LoREXs so that submitters may not commence manufacture until EPA has issued a decision for the exemption notice, to better ensure that manufacture under LVEs and LoREXs will not present an unreasonable risk. Additionally, EPA is promulgating amendments that allow the Agency to notify submitters if a chemical substance for which they hold an LVE or LoREX is or becomes subject to a proposed or final SNUR and the chemical identity is confidential, so that chemical manufacturers are made aware that they may be subject to additional TSCA requirements. EPA is also finalizing amendments to make PFAS categorically ineligible for an LVE or LoREX, which would ensure that all new PFAS are reviewed through the full PMN process. In addition, EPA is making certain PBTs ineligible for these exemptions, to better manage risks associated with PBT chemical substances that have anticipated environmental releases and potentially unreasonable exposures to humans or environmental organisms.

Lastly, EPA is promulgating amendments that will allow informal (oral or e-mail) requests for review period suspensions of up to 30 days to reduce the number of repeated requests for 15-day suspensions, because EPA believes that e-mail may be more expedient than oral communication for many submitters.

E. What are the estimated incremental impacts of this action?

EPA has evaluated the costs and benefits of this rulemaking and provided an Economic Analysis (EA) of the potential impacts associated with this rule, titled “Economic Analysis for the Final Rule: Updates to New Chemicals Regulations under the Toxic Substances Control Act” (Ref. 1), which is available in the docket and briefly summarized here. The benefits of the rule include increased efficiency in both the submission and review processes for notices submitted through the PMN form. The changes under this rule would clarify the information requirements on the PMN form in the Agency’s Central Data Exchange (CDX) to make more transparent the level of detail that EPA needs in order to make

a reasoned evaluation. As submitters provide more complete information in their initial submissions, the changes under this rule are expected to reduce the frequency with which PMNs, SNUNs, and exemption notices are amended with additional information and the amount of rework of risk assessments that the Agency conducts following such amendments.

In addition, the more detailed and comprehensive 90-day review afforded to PMNs allows EPA to make a more informed hazard determination for PFAS, leading to improvement in the expected outcome of these decisions. More informed decision making about a PFAS's potential risks is likely to result in a reduction in the cost of risk-based decision making about the PFAS, and an improvement in the expected outcome of the decisions.

As a result of the changes presented in this rule, the total annual burden to industry is expected to decrease by approximately 4,528 hours, while total annual costs to industry submitters are expected to have a net increase of approximately \$203,150. The Agency is expected to experience an annual cost savings of approximately \$1,117,132.

II. Background

A. What did EPA propose?

On May 26, 2023 (88 FR 34100; FRL-7906-01-OCSPP), EPA proposed amendments intended to align the regulatory text with the amendments to TSCA's new chemicals review provisions contained in the 2016 Lautenberg Amendments, to improve the efficiency of EPA's review processes, and update the regulations based on existing policies and experience implementing the New Chemicals Program. Additionally, the proposal included amendments that would reduce the need to redo all or part of a risk assessment by improving information initially submitted in new chemicals notices, which should also help reduce the length of time that new chemicals notices are under review. EPA also proposed several amendments to the regulations for LVEs and LoREXs, which included requiring EPA approval of an exemption notice prior to commencement of manufacture, making PFAS categorically ineligible for these exemptions, and providing that certain PBT chemical substances would be made ineligible for these exemptions, consistent with EPA's 1999 PBT policy. Lastly, the proposal included amendments related to the suspension of the review period.

B. How did the 2016 Lautenberg Amendments change TSCA section 5?

As enacted in 1976, TSCA provided EPA with authority to require reporting, recordkeeping, and testing, and to issue restrictions relating to chemical substances and/or mixtures. TSCA section 5(a)(1) required that a person submit to EPA a notice at least 90 days before commencing manufacture of a new chemical substance or manufacture or processing of a chemical substance for a use which EPA determined to be a significant new use. Under the 1976 law, EPA was not obligated to make a determination or finding regarding unreasonable risk for each notice submitted under TSCA section 5(a)(1). EPA's obligations with respect to making determinations on notices submitted under TSCA section 5(a)(1) fundamentally changed with the passage of the 2016 Lautenberg Amendments. The 2016 Lautenberg Amendments added a new paragraph to TSCA at section 5(a)(3) titled "Review and Determination," under which EPA must review and make one of five determinations pertaining to the likelihood of risk on all notices received under TSCA section 5(a)(1), which include PMNs, SNUNs and MCANs, within the applicable review period. EPA's obligation to take action after making a determination on a notice submitted under TSCA section 5(a)(1) also changed with the passage of the 2016 Lautenberg Amendments.

The 2016 Lautenberg Amendments require EPA to review each notice submitted under TSCA section 5(a)(1), make a determination on that notice, and take the action required in association with that determination within the applicable review period. Under TSCA section 5(i)(3), the "applicable review period" means 90 days from the date EPA receives a notice under TSCA section 5(a)(1), or up to 180 days from that date if EPA extends the applicable review period according to the provisions in TSCA section 5(c). The 2016 Lautenberg Amendments also added a new paragraph at TSCA section 5(a)(4) explaining that a failure by EPA to render a determination within the applicable review period would not relieve EPA of any requirement to make such determination, but would, with certain exceptions, result in a fee refund to the notice submitter.

TSCA section 5(h) was not significantly amended by the 2016 Lautenberg Amendments. TSCA section 5(h) provides EPA the authority to exempt a person from certain TSCA section 5 requirements under certain situations. EPA developed the current

LVE and LoREX regulations in 1995 pursuant to TSCA section 5(h)(4) (60 FR 16336, March 29, 1995). See Unit II. of the May 26, 2023, proposed rule (88 FR 34100) for further discussion of the 2016 Lautenberg Amendments.

C. How are the new chemicals regulations structured?

EPA's regulations related to TSCA section 5 are codified in Title 40, Chapter I, Subchapter R of the Code of Federal Regulations (CFR). They include:

- Regulations pertaining to PMNs, which are codified at 40 CFR part 720;
- Regulations pertaining to SNUNs, which are codified at 40 CFR part 721;
- Regulations pertaining to certain exemptions, which are codified at 40 CFR part 723; and
- Regulations pertaining to MCANs and microorganism-related exemptions, which are codified at 40 CFR part 725.

The information requirements codified for PMNs in 40 CFR 720.45 generally also apply to SNUNs under 40 CFR part 721 (see 40 CFR 721.1(c) and 721.25(a), which cross-reference 40 CFR part 720) and to LVEs and LoREXs submitted under 40 CFR 723.50 (see 40 CFR 723.50(e)(2), which cross-references 40 CFR 720.45). As a result, the amendments to the requirements in 40 CFR 720.45 apply to PMNs and also to SNUNs, LVEs, and LoREXs. The review procedures for PMNs codified in 40 CFR part 720 generally also apply to SNUNs under 40 CFR part 721 (see 40 CFR 721.25(c)) but not to exemptions under 40 CFR part 723, so the amendments to the part 720 review procedures promulgated by this action apply to PMNs and SNUNs but not to such exemptions. Neither the information requirements nor the review procedures in 40 CFR part 720 apply to MCANs or microorganism-related exemptions under 40 CFR part 725, so EPA is also finalizing certain amendments to the MCAN and microorganism-related exemption regulations at 40 CFR part 725.

D. Did EPA receive public comments on the proposed rule?

EPA received 51 public comments on the proposed rule. Commenters included potentially affected businesses, trade associations, environmental and public health advocacy groups, unions, and other Federal agencies. In this preamble, EPA has responded to many of the significant comments on the proposed rule; however, the more comprehensive version of EPA's response to comments for this rulemaking can be found in the Response to Comments document (Ref.

2). The Response to Comments document summarizes all the comments relevant to the proposal and EPA's response to those comments. In the Response to Comments document, EPA also discusses any changes to and clarifications from the proposed rule made in this final rule.

III. Overview of the Final Rule

This final rule is based on the May 26, 2023, proposed rule (88 FR 34100) and in consideration of the public comments received on the proposed rule.

A. Amendments To Conform Regulations to 2016 Lautenberg Amendments

EPA is amending the PMN procedural regulations at 40 CFR part 720 to align them with the notice review and determination requirements in TSCA section 5, as amended by the 2016 Lautenberg Amendments. These procedural regulations also generally apply to SNUNs under 40 CFR part 721 (see 40 CFR 721.1(c) and 721.25(c)). EPA is also promulgating similar changes to the MCAN procedural regulations at 40 CFR part 725 to align them with the same notice review and determination requirements added by the 2016 Lautenberg Amendments. EPA has been implementing the amended statutory requirements but, prior to this rulemaking, had not yet codified these updates into the new chemicals procedural regulations. The amendments specify that EPA must make a determination on each PMN, SNUN, and MCAN received before the submitter may commence manufacturing (which includes importing) or processing and lists the five possible determinations and the actions required in association with those determinations. EPA is also adding definitions for new terms and to update existing terminology introduced by the 2016 Lautenberg Amendments.

1. Commencement of Manufacture or Processing

As proposed, EPA is finalizing amendments at 40 CFR 720.75(d) by removing outdated language allowing the submitter to commence manufacture of a chemical substance when the review period expires and adding new language specifying that EPA must issue a determination and take any required action on each PMN before manufacture may commence. EPA is also finalizing an amendment to 40 CFR 721.25(d) to state that any person submitting a SNUN shall not manufacture or process a chemical substance for a significant new use until EPA has issued a determination with respect to the

significant new use and taken the actions required in association with that determination. Likewise, EPA is finalizing an amendment at 40 CFR 725.170(b) and (c) by removing similar outdated language allowing the submitter to commence manufacture of a new microorganism or manufacture or processing of a microorganism for a significant new use when the review period expires and adding new language specifying that EPA must issue a determination and take any required action on each MCAN before manufacture or processing may commence.

Some comments on the proposal challenged the EPA's description of how the New Chemicals Program operated prior to the passage of the 2016 Lautenberg Amendments and suggested that the 2016 Lautenberg Amendments had only minor impacts on the Program. EPA disagrees with these comments, as prior to the 2016 Lautenberg Amendments, EPA was not required to conduct a review of and issue a determination for every notice. Following the 2016 Lautenberg Amendments, EPA must review all notices submitted under TSCA section 5(a)(1) and make a determination pertaining to the risks of a new chemical or significant new use of an existing chemical before it is allowed into the marketplace. For a detailed response to these and other comments, please see the Response to Comments document (Ref. 2).

2. Required Determinations and Associated Actions

As proposed, EPA is finalizing amendments at 40 CFR 720.75(d) and 725.170 by listing the five possible determinations that EPA must make for each PMN, SNUN, or MCAN it receives. EPA is also finalizing amendments to 40 CFR 720.75(d) and 725.170(b) to describe the actions that EPA must take in association with its determination for a PMN, SNUN, or MCAN. EPA is codifying those actions, which EPA has been implementing, as applicable, for every PMN, SNUN, and MCAN since the 2016 Lautenberg Amendments, to be clear about EPA's review process to the public.

After EPA issues an order under TSCA section 5(e) or (f) and the applicable review period concludes, the submitter may submit studies, tests, reports, or other additional information. If EPA concludes from an assessment of the additional information that one or more of the prohibitions or limitations contained in the order are no longer necessary to protect against an unreasonable risk of injury to health or

the environment, EPA may modify or revoke the prohibitions or limitations of the order. If EPA determines that none of the order terms are warranted after assessment of the additional information, EPA may revoke all the requirements of the order.

Several comments on the proposed rule asserted that EPA not only has the authority to revoke or lessen restrictions in an order after it has been issued, but also can and must strengthen protections in an order based on new information received on a chemical substance that demonstrates the order is insufficient to protect against unreasonable risk. The commenters further urged EPA to clarify that an order may be modified based on new information obtained from any source, not solely the submitter. EPA agrees with these commenters and a detailed response is available in the Response to Comments document (Ref. 2). Upon consideration of these comments, EPA is modifying the proposed amendments at 40 CFR 720.75(d)(3) and 725.170(b)(3) to clarify that new information may be received from any source, and to add that where such information demonstrates that the prohibitions or limitations of the order are not sufficient to protect against an unreasonable risk of injury to health or the environment, EPA may modify the order or take other action, as appropriate, to the extent necessary to protect against such risk.

3. Other Updates

As proposed, EPA is finalizing amendments to the regulation that will replace the undefined terms "notice period," "notification period," "statutory review period," and "notice review period" with the term "applicable review period" throughout 40 CFR part 720 to conform to the new terminology in TSCA section 5 added by the 2016 Lautenberg Amendments. EPA is also finalizing an amendment to add, as proposed, a definition for "applicable review period" to 40 CFR 720.3, which EPA would define as the period starting on the date EPA receives a complete notice under section 5(a)(1) of the Act and ending 90 days after that date or on such date as is provided for in sections 5(b)(1) or 5(c) of the Act. In response to the proposed amendment adding a definition for "applicable review period," commenters expressed difficulty in determining what EPA considers to be a complete notice and requested that the Agency clearly define what constitutes a notice that is "complete." EPA considers a complete notice to be a notice that meets all the procedural requirements indicated in 720.65(c)(1) (e.g. a notice that includes

a company signature, is submitted via CDX, includes a second copy of the submission with all confidential information deleted, includes the payment identity number, etc.) and includes all required information that is known to or reasonably ascertainable by the submitter, as described in 720.45 and 720.50. A submission that fails to meet the statutory information requirements is incomplete, and EPA is justified in refusing to review the notice until the information is received. In the Response to Comments document (Ref. 2), EPA discusses in more detail the longstanding definition of “known to or reasonably ascertainable by” and its application in specific contexts.

After considering the comments, EPA is finalizing an amendment to add a definition for “potentially exposed or susceptible subpopulation” (PESS) to 40 CFR 720.3. For this rule, EPA is defining “potentially exposed or susceptible subpopulation” as proposed and using the same definition that was proposed and finalized as part of the rulemaking entitled “Procedures for Chemical Risk Evaluation under the Toxic Substances Control Act (TSCA)” (89 FR 37028, May 3, 2024 (FRL-8529-02-OCSPP)).

As a primary matter, the inclusion of “overburdened communities” in the list of example subpopulations in this definition is not itself a determination. Rather, it is an example of a subpopulation that EPA may identify as a PESS in future risk assessments, and it is reflective of the reality that, in addition to groups like children and pregnant women, there are communities of people that may experience disproportionate environmental risks from chemicals due to greater exposure or susceptibility to environmental and health harms.

EPA proposed to add a regulatory definition of PESS that includes the term “overburdened communities” in the list of example subpopulations. This term, which is an addition to the examples provided in the statutory definition of PESS at TSCA section 3(12), reflects the Agency’s understanding and acknowledgment that a chemical substance may disproportionately expose and/or may disproportionately impact communities already experiencing disproportionate and adverse human health or environmental burdens. Such disproportionality can be as a result of greater exposure or vulnerability to environmental hazards, lack of opportunity for public participation, or other factors. Increased exposure or vulnerability may be attributable to an accumulation of negative or lack of positive environmental, health,

economic, or social conditions within these populations or places. The term describes situations where multiple factors, including both environmental and socio-economic stressors, may act cumulatively to impact health and the environment and contribute to persistent environmental health disparities. These situations may apply to communities with environmental justice concerns.

While some commenters on the proposed rule objected to the inclusion of “overburdened communities,” EPA believes that it is appropriate to include “overburdened communities” as an example subpopulation in the definition of PESS. Congress’ inclusion of “such as” in the statutory definition provides EPA with clear discretion to go beyond the statute’s list of examples. EPA further disagrees that this addition is substantively changing the criteria for identification of PESS (i.e., greater exposure or susceptibility and greater risk than general population).

EPA does not believe it is necessary to define “overburdened communities” as part of this rule. In the same way that EPA considers whether children or workers or the elderly are a PESS in the context of a specific risk assessment, EPA will look to whether “overburdened communities” may become subject to exposure or could be more susceptible than the general population. EPA does not intend for this term to be confined to a location or geographic proximity but would use reasonably available information for each new chemical substance or significant new use to determine the inclusion of specific communities. Those who could potentially experience “greater exposure” could include individuals or communities that would experience higher levels of exposure to a chemical substance due to geography (e.g., fenceline communities in close proximity to facilities that could emit air pollutants or living near potential effluent releases to water), unique exposure pathways that differ from those of the general population (e.g., Tribal communities where reliance on subsistence fishing may result in increased exposure via ingestion), and/or aggregate exposure via multiple conditions of use (e.g., a worker potentially exposed to the chemical substance who also lives in close proximity to the facility that may also release the chemical substance through air emissions).

In making these additions to 40 CFR 720.3, EPA is also revising the overall format used to list the definitions in 40 CFR 720.3, by removing the designations for each definition and

adopting the alphabetical listing approach consistent with the recommendation of the Office of the Federal Register (OFR). See page 2–27 of the OFR’s Document Drafting Handbook, August 2018 Edition (Revision 2.1, dated October 2023), <https://www.archives.gov/federal-register/write/ddh/>. Specifically, EPA is using the revise and republish instructions in the regulatory text of this final rule to reflect the addition of the two definitions and the adoption of the recommended undesignated alphabetical listing format for this definition section. This change also requires corresponding technical corrections to the citation in several other regulations. The existing definitions and these other regulations are otherwise unchanged. Conforming edits to remove the designations for the definitions in 40 CFR 720.3 are being made to 40 CFR 68.115, 372.38, 703.3, and 761.3.

EPA is also promulgating an update to 40 CFR 720.70(b) by revising paragraph (b)(3). Some commenters opposed EPA’s proposal to remove the regulatory-only requirement in 40 CFR 720.70(b)(3) to publish a list of test data submitted in accordance with 40 CFR 720.50(a) in the TSCA section 5(d)(2) notice of receipt. EPA disagrees with these comments. As EPA explained in the preamble to the proposed rule (88 FR 34100, May 26, 2023), the Agency believes that its objective of providing such information to the public is now better achieved through ChemView than through publication in the **Federal Register**. Through ChemView, the Agency currently makes the section 5 notice, including test data submitted with it, publicly available generally within 5 business days of receipt, subject to confidentiality protections. EPA is finalizing the change to 720.70(b)(3) as proposed. For additional response to the comments received on the amendments to 40 CFR 720.70(b)(3), see the Response to Comments document (Ref. 2).

B. Amendments Related to Notice Information Requirements

EPA is promulgating amendments to the notice information requirements at 40 CFR 720.45, as well as corresponding changes to the PMN form in CDX, to clarify the level of detail expected for information that must be submitted to EPA in PMN, SNUN, and certain exemption notices. EPA is finalizing these amendments largely as proposed, with most changes representing minor clarifications to the proposed regulatory text in response to the comments.

1. Background

A notice submitted under TSCA section 5(a)(1) must include the information described in TSCA section 5(d)(1): (1) insofar as known to the submitter or reasonably ascertainable, information described in certain provisions of TSCA section 8(a)(2); (2) in the form and manner prescribed by EPA, information in the possession or control of the submitter related to the health or environmental effects of any manufacture, processing, distribution in commerce, use, or disposal of the chemical substance or any article containing such substance; and (3) a description of any other information concerning the environmental and health effects of the chemical substance, insofar as known to the submitter or reasonably ascertainable. EPA has promulgated regulations detailing these information requirements in 40 CFR 720.45 and 720.50.

EPA has developed an application form in CDX to collect such information from submitters. The user guide for CDX is listed in the references section of this final rule and can be found in the docket (Ref. 3). This form is prescribed by EPA for submission of PMNs, SNUNs, LVEs, LoREXs, and test marketing exemption (TME) applications. In this preamble, EPA refers to the form as the “PMN form” for simplicity, but the changes outlined in this section would impact the other types of notices that use the same form (*i.e.*, PMNs, SNUNs, LVEs, LoREXs, and TMEs).

EPA has observed that most section 5 notices do not contain all required information at the level of detail that EPA needs to perform refined risk assessments. As described in the preamble of the proposed rule, these deficiencies frequently result in EPA using conservative assumptions in its risk assessments due to lack of available data, which can create delays in the timeline for case completion, particularly when submitters provide information to EPA late in a case’s review in response to risk estimates stemming from the lack of available data. In recent years, EPA has issued guidance documents (Ref. 3 and 4), established pre-screen processes for incoming cases, and conducted outreach efforts (Ref. 5) to make clearer to submitters the level of detail necessary for timely review of their chemicals, as well as to minimize the need for costly rework of case assessment materials. EPA believes that amending the notice information requirements at 40 CFR 720.45 to specify the level of detail needed, as well as building that

additional detail into the CDX user interface, will help submitters provide more detailed section 5 notices and help to minimize the need for EPA to use default values and conservative assumptions in its risk assessments due to the lack of available data. Therefore, EPA is finalizing the amendments to the notice information requirements at 40 CFR 720.45 as well as the corresponding changes to the PMN form in CDX largely as described in the proposed rule.

2. Changes to 40 CFR 720.45, 40 CFR 720.50, and the PMN Form

EPA is amending 40 CFR 720.45 and the PMN form in CDX to clarify the information requirements for a notice. Specifically, EPA is adding details to certain information requirements already contained in 40 CFR 720.45. EPA is also adding additional reporting fields to the PMN form to reflect these details. In this action, EPA is adding these details as separate, unique information requirements in 40 CFR 720.45 and making corresponding changes to the PMN form to clarify the level of detail needed for EPA’s review of section 5 notices and to ensure that the fields in the PMN form are consistent with the regulations. In some cases, information requested in the PMN form is not clearly required in the 720.45 regulations, so EPA is adding those details to 40 CFR 720.45 to ensure that the regulations and PMN form are as consistent as possible. Although EPA is finalizing these amendments largely as they were described in the proposed rule, changes, mostly to improve clarity, have been made to some amendments in response to comments received by EPA. In response to comments, EPA is also finalizing additional amendments to the regulations at 720.45 and 720.50, as well as to the PMN form in CDX, that further add clarity and better align the PMN form with the regulations. See Ref. 6, which includes tables that detail the changes that are being made to 40 CFR 720.45, 720.50, and the CDX interface per this final rule. Additionally, EPA has amended 40 CFR 723.50(e) to update a cross-reference to 40 CFR 720.45 based on the amendments made in this rule.

Consistent with TSCA section 5(d)(1), for all information requirements under 40 CFR 720.45, submitters are only required to provide information to the extent that it is known to or reasonably ascertainable by the submitter, as defined at 40 CFR 720.3. Under the amendments to 40 CFR 720.45, a submitter is required to include in the PMN form the detailed information finalized in this action, along with all other information already required, to

the extent the information is known to or reasonably ascertainable by the submitter. This is an important point because a submitter may not know or be able to reasonably ascertain certain details about the chemical substance that is the subject of the notice, such as details about manufacturing, processing, or use sites not controlled by the submitter. In those situations, EPA will make conservative assumptions and use default values for any information that is not known to or reasonably ascertainable by the submitter and therefore not provided in the PMN form.

Based on a public comment, EPA is adding language to 720.50(c) to clarify that submitters can submit additional information not otherwise required by 720.50(a)–(b) to facilitate EPA’s review of the notice.

a. Physical and Chemical Properties and Environmental Fate Characteristics

The first set of detailed information requirements that EPA is adding to 40 CFR 720.45 concerns the physical and chemical properties and environmental fate characteristics of the chemical substance (see Table 1 in Ref. 6). Currently, if submitters have physical-chemical or environmental fate test data, they must provide the test data or a standard literature citation in accordance with 720.50(a)(2)–(3). EPA collects physical and chemical properties test data required by 40 CFR 720.50, “Submission of test data and other data concerning the health and environmental effects of a substance,” in two ways. First, the CDX user interface prompts the submitter to attach relevant documents, such as test data, to the PMN form using an attachment function. Second, the PMN form includes a CDX user interface screen with form fields for physical and chemical properties available for completion via a pick list. Data provided in the PMN form via CDX may be pulled from the test data provided by submitters per 720.50(a)(2)–(3), or the data can be submitted as standalone information for which submitters do not have underlying test data. EPA believes that the information requirements in 40 CFR 720.45 should reflect the PMN form fields. EPA is therefore adding relevant physical and chemical properties information requirements in a new provision at 40 CFR 720.45(j)(1) that are already specified within the PMN form. Submitters must submit physical-chemical and environmental fate information in the corresponding PMN form fields in accordance with new paragraph 720.45(j), which is added as described in the proposed rule.

EPA is also adding several information requirements to 40 CFR 720.45(j)(1) that are not already specified within the PMN form for physical and chemical properties. Specifically, EPA is requiring that data on surface tension and ultraviolet-visible (UV-VIS) absorption, as well as any particle size distribution analysis, be submitted as part of the PMN form, to the extent it is known to or reasonably ascertainable by the submitter. One commenter requested that EPA clarify the language outlined in the proposed rule for the particle size distribution analysis data requirement to make it clear that it includes both the analysis method as well as any data used to develop the particle size distribution value, a suggestion that EPA is incorporating in this final rule. Two commenters requested that EPA include several amendments to the nanomaterial morphology requirements outlined in the proposed rule, recommendations that EPA considers to be overly prescriptive and as such is declining to finalize. Additionally, after considering these comments, EPA anticipates that the proposed requirements at 40 CFR 720.45(j)(1) for information on aspect ratio, thickness, and number of layers or walls for nanomaterials are likely to be applicable only to a narrow subset of nanomaterials. Because this information would not be relevant to most nanomaterials, EPA will not include the proposed nanomaterial data requirements in the final regulations. For all other amendments to 40 CFR 720.45(j), as was proposed in the May 2023 proposed rule, EPA will also add fields for attaching associated data on the physical and chemical properties screen of the PMN form.

As proposed, EPA is also adding information requirements for the environmental fate characteristics of the chemical substance (see Table 1 in Ref. 6) to 40 CFR 720.45(j)(2). Environmental fate characteristics test data are already required by 40 CFR 720.50; however, this provision does not describe in detail what these relevant characteristics include. In addition, this information is already collected by EPA as attachments to the PMN form; however, fields for environmental fate characteristics are not yet included on the CDX user interface screen pick list. EPA is thus adding the relevant environmental fate characteristics to the information requirements at 40 CFR 720.45(j)(2) and form fields to the PMN form by expanding the pick list.

b. Categories of Use

The next set of changes that EPA is finalizing at 40 CFR 720.45 relates to the categories of use of the chemical substance (see Table 2 in Ref. 6). The requirements being finalized include detailed information on commercial and consumer uses, which already have form fields in the PMN form in CDX. Although the regulations at 40 CFR 720.45(f) previously required a description of intended categories of use by function and application, the estimated percent of production volume devoted to each category of use, and the percent of the new substance in the formulation for each commercial or consumer use, certain details on commercial and consumer uses were not specified. The added information requirements include the types of products or articles that would incorporate the new chemical substance (*e.g.*, household cleaners, plastic articles), how and where a product or article incorporating the new chemical substance would be used (*e.g.*, spray applied indoors, brushed on outdoor surfaces), consumption rates and frequency and duration of use for products or articles containing the new chemical substance, and information related to the use of products or articles containing the new chemical substance by potentially exposed or susceptible subpopulations. Additionally, EPA is finalizing at 40 CFR 720.45(f) a requirement to designate applicable consumer and commercial product categories using Organization for Economic Co-operation and Development (OECD)-based functional use codes, which would create consistency with TSCA section 8(a) Chemical Data Reporting (CDR) requirements in 40 CFR part 711. EPA is finalizing corresponding changes to the PMN form fields in CDX for this data element. EPA is also finalizing amendments to 40 CFR 721.25 to ensure that submitters of SNUNs include in their notice both a description of the intended categories of use, as required by 40 CFR 720.45(f)(1), and of all known categories of use, to the extent known to or reasonably ascertainable by the submitter. Such categories of use may include uses that are ongoing and not subject to a significant new use rule (SNUR). Such information is valuable for EPA in determining necessary regulatory action should potential risks be identified during review of a SNUN. In the final rule, this provision appears in a new paragraph (e) of 40 CFR 721.25 rather than as an addition to paragraph (c), and the text was rephrased slightly for clarification. One commenter

requested that EPA include a provision at 40 CFR 720.45(f) that would require submitters with chemicals having more than 10 intended uses to designate codes only for the 10 uses that represent the largest proportion of the anticipated production volume of the chemical, a suggestion that EPA is finalizing. EPA, however, will still require submitters to identify in the free form text field of the PMN form all intended or known uses of the chemical substance.

c. Details Concerning Manufacture, Processing, and Use

The third set of information requirements that EPA is finalizing at 40 CFR 720.45 is information related to where and how the chemical substance will be manufactured, processed, or used. These requirements apply to sites controlled by submitters as well as sites controlled by others, and although the information requirements that EPA is finalizing are similar for both, different types of activities often occur at submitter-controlled sites versus those at sites controlled by others (*e.g.*, manufacturing versus processing). Moreover, activities at sites controlled by others are typically not as well characterized by submitters compared to descriptions of the submitters' own activities, since in many cases the identity and number of sites controlled by others is unknown to and not reasonably ascertainable by the submitters when a notice is submitted. As such, some slight differences exist in the requirements EPA is finalizing for information related to sites controlled by submitters versus sites controlled by others. See Ref. 6 for more details.

Both for sites controlled by submitters and for sites controlled by others, EPA is adding information requirements for site addresses (see Table 3 and Table 5 in Ref. 6). For submitter-controlled sites, EPA is also adding requirements for a description of whether a particular chemical substance is manufactured or processed via batch or continuous production, as well as the amount of the chemical substance manufactured or processed in each batch and/or timeframe (see Tables 3, 4, and 5 in Ref. 6). These information requirements already have a corresponding form field in the PMN form in CDX because they are each covered by the existing information requirements in 40 CFR 720.45(g)(1) and (2) and (h) for a process description of operations at such sites. Since these information requirements were not specified in the regulations, EPA is finalizing them at 40 CFR 720.45(g)(1) and (2) for sites controlled by the submitter and 40 CFR

720.45(h)(1) and (2) for sites not controlled by the submitter.

EPA is also adding requirements for detailed information about the process diagram or description for each site controlled by the submitter (see Table 4 in Ref. 6) and for each site not controlled by the submitter (see Table 5 in Ref. 6). These data elements were previously required but not expressly included in the list of required data elements in 40 CFR 720.45. They include descriptions of the identity, approximate weight per batch or per day for continuous production, and entry point of all starting materials and feedstocks; the identity, approximate weight per batch or per day for continuous production, and entry point of all products, recycle streams, and wastes, including frequency of any equipment cleaning; the type of containers used for interim storage and transport of the chemical substance; and identification, by number, of any points of release. EPA is finalizing requirements for this information at 40 CFR 720.45(g)(2) and (h)(2) and in new fields in the PMN form to clarify the level of detail needed and to ensure that the regulations and PMN form are consistent.

One commenter noted that an existing data requirement related to manufacturing, processing, use, and disposal of chemical substances subject to section 5 notification is ambiguous in its scope. 40 CFR 720.45(d) requires submitters to describe any byproducts resulting from the manufacture, processing, use, and disposal of a chemical substance, and the commenter requested that EPA clarify whether its definition of byproduct includes “degradation products”. In the Response to Comments document (Ref. 2), EPA notes that byproducts are distinct from degradants and that information on degradants is required under the information requirements outlined in 720.45(j)(2).

d. Worker Exposure

EPA is also finalizing requirements for details about the possible worker exposures at each site controlled by the submitter (see Table 6 in Ref. 6), and at each site not controlled by the submitter (see Table 7 in Ref. 6). These requirements include types of potential worker exposure (e.g., dermal, inhalation), descriptions of any protective equipment and engineering controls in place, the moisture content of the chemical substance (if a solid), and the percentage of the chemical substance in the formulation at the time of exposure. In addition, for sites controlled by others, these requirements

also include worker activities and descriptions of the physical form of the chemical substance (consistent with information requirements for sites controlled by the submitter). Although these details are already covered by the existing information requirements in 40 CFR 720.45(g)(3) and (h) regarding worker exposure information, and some already have a corresponding form field in the PMN form in CDX, EPA is finalizing them as separate, unique information requirements at 40 CFR 720.45(g)(3) and (h)(3) and in new fields in the PMN form to clarify the level of detail needed and to ensure that the regulations and PMN form are consistent. One commenter requested that EPA revise the proposed text at 40 CFR 720.45(g)(3) and (h)(3) to clarify that the worker exposure information required in 40 CFR 720.45(g)(3)(ii)-(viii) and (h)(3)(ii)-(viii) pertains to each worker activity occurring during the manufacturing, processing, and use of the chemical substance, as identified pursuant to 720.45(g)(3)(i) and 720.45(h)(3)(i). EPA has incorporated this suggestion in the final rule because it provides additional clarity to submitters.

Several commenters made requests related to worker exposure that, if accepted by EPA, would affect the structure of and level of detail contained in the PMN form in CDX. For example, one commenter requested that EPA allow submitters to assign a “Letter of Activity” (a field in CDX to link specific worker activities to operations described in the corresponding manufacturing diagram) to activities at submitter-controlled sites; the option to assign a Letter of Activity already exists for activities at sites controlled by others. Another commenter requested that EPA include in the PMN form dropdown options for “Worker Activity” and “Worker Category” for sites controlled by others—dropdown options that currently exist for submitter-controlled sites in the PMN form. EPA is finalizing all of the aforementioned suggestions by making corresponding changes to the CDX interface. EPA, however, also received several additional suggestions related to worker exposures that EPA is choosing not to adopt. More information on the comments received relating to worker exposure and EPA’s responses can be found in the Response to Comments document (Ref. 2).

Additionally, EPA is finalizing proposed amendments to 40 CFR 720.45(g)(3) and (h)(3) to ensure that submitters include worker exposure information from exempt manufacture or related use of the chemical substance under 40 CFR 720.30 (e.g., manufacture

of the chemical substance under the byproduct or impurity exemptions) at each site where the chemical substance will be manufactured, processed, or used, if known or reasonably ascertainable. However, to avoid any confusion occasioned by the abbreviated, non-exhaustive list of exemption examples that appeared in a parenthetical in the proposed regulatory text, the final rule does not include the proposed parenthetical and streamlines the text by simply cross-referencing 40 CFR 720.30.

e. Environmental Releases

EPA is finalizing information requirements concerning the potential environmental releases at each site controlled by the submitter (see Table 8 in Ref. 6) and at each site not controlled by the submitter (see Table 9 in Ref. 6). EPA is requiring descriptions of the type of release (e.g., transport, interim storage, disposal, equipment cleaning), as well as the amount of the chemical substance released directly to the environment or into a control technology. EPA is finalizing an amendment to require a description of the amount of the chemical substance released to the environment after use of a control technology. EPA is also requiring for equipment cleaning releases a description of the frequency of equipment cleaning and what is used to clean equipment. EPA is also requiring for transport and storage releases a description of how the chemical substance or the product containing the chemical substance is transported from the site and stored, as well as information about the containers used. For releases into air, EPA is requiring Clean Air Act operating permit numbers and a description of any Leak Detection and Repair program the site has implemented; one commenter requested that EPA amend the language for this data element to require a description of the type of control technology used to treat stack air releases, which EPA is finalizing. For releases into water, EPA is requiring National Pollutant Discharge Elimination System (NPDES) permit numbers and information on the waterbodies and other destinations into which the release occurs; one commenter requested that EPA also require a description of any outfall numbers associated with the known points of release associated with the NPDES permit number(s), a suggestion that EPA is finalizing. For releases into wastewater treatment plants, EPA is requiring information on the publicly owned treatment works (POTW) into which the release occurs. For the

requirement concerning information on POTW, one commenter requested that EPA amend this data requirement to also specifically request information concerning privately owned treatment works to which releases might occur, the type of wastewater technology employed at any treatment facilities, and the known or estimated treatment efficiency at these facilities—all of which are suggestions that EPA is finalizing. In addition, for sites controlled by others, these requirements also include a description of the media of release consistent with the requirement for sites controlled by the submitter.

Although each of these detailed data elements are already covered by the existing information requirements in 40 CFR 720.45(g)(4) and (h) regarding environmental releases, and some already have a corresponding form field in the PMN form in CDX, EPA is finalizing them as separate, unique information requirements at 40 CFR 720.45(g)(4) and (h)(4) and in new fields in the PMN form to clarify the level of detail needed and to ensure that the regulations and PMN form are consistent.

EPA is finalizing amendments to 40 CFR 720.45(g) and (h) to make their formatting and the information required in both consistent. EPA recognizes that a submitter may not possess such information about sites not controlled by the submitter. As mentioned elsewhere in this preamble and in the Response to Comments document (Ref. 2), submitters are only required to supply information that is known to or reasonably ascertainable by them, as defined at 40 CFR 720.3.

Additionally, EPA is finalizing amendments to 40 CFR 720.45(g)(4) and 720.45(h)(4) to ensure that submitters include environmental release information from exempt manufacture or related use of the chemical substances under 40 CFR 720.30 (*e.g.*, manufacture of the chemical substance under the byproduct or impurity exemptions) at each site where the chemical substance will be manufactured, processed, or used, if known or reasonably ascertainable. However, to avoid any confusion occasioned by the abbreviated, non-exhaustive list of exemption examples that appeared in a parenthetical in the proposed regulatory text, the final rule does not include the proposed parenthetical and streamlines the text by simply cross-referencing 40 CFR 720.30.

f. Pollution Prevention Information

Lastly, EPA is adding optional pollution prevention information at 40 CFR 720.45(k) as proposed. The PMN form in CDX currently includes an optional text field and attachment function for submitters who wish to provide pollution prevention information about the chemical substance, such as information about using alternative fuel sources, reducing the use of water and chemical inputs, modifying a production process to produce less waste, implementing water and energy conservation practices, or substituting for riskier existing products.

3. Other Modifications to the PMN Form in CDX

In addition to the amendments intended to clarify the information requirements for a notice and the corresponding changes to the PMN form in CDX outlined in Unit III.B.1. and 2., EPA is also adding statements with accompanying check boxes to certain screens of the PMN form (such as when transitioning between the various worksheets completed by the submitter) that indicate that information fields can only be left blank if such information is not known to or reasonably ascertainable by the submitter. Additionally, a statement would warn the submitter of the potential consequences of leaving the field blank and later amending the field. If a field is left blank, EPA generally follows the scientifically informed approach to make conservative assumptions and use appropriate default values when assessing risk, which could result in more stringent risk management requirements than might be directed if data were provided showing such assumptions or default values were not necessary to use. If a field that has been left blank is later amended during the review process, EPA may declare the original submission incomplete (see Unit III.C.3. for a more detailed discussion on notice amendments indicating that the original submission was incomplete). Several commenters expressed concerns about the potential burden posed by the inclusion of these check boxes in the CDX workflow, concerns with which EPA disagrees. While the inclusion of check boxes might require submitters to spend slightly more time preparing the PMN form for their section 5 notices, EPA believes that the improved quality of submissions resulting from this, and the other changes being finalized to the CDX environment, will save submitters, as well as EPA, more time, and

resources in the long run. This check box approach does not have a corresponding regulatory change, as it is consistent with the existing requirements to provide all information that is known to or reasonably ascertainable by the submitter and EPA's longstanding practice to use conservative assumptions and default values in the absence of information. The ICR document accompanying this final rule describes the potential modifications to each screen of the PMN form (Ref. 7).

Some commenters made requests related to the CDX enhancements outlined in the proposed rule that EPA is addressing in this final rule. First, two commenters requested that EPA include in the enhancements to the CDX interface an option for submitters to, if data are not provided for a particular data element, explain why this information is not known or reasonably ascertainable, a suggestion that EPA will incorporate. Another commenter requested that EPA allow submitters to access a "beta version" of the enhanced CDX environment before rolling out the changes to the broader CDX environment. EPA will make efforts to do so and plans to share more information with stakeholders via outreach once this final rule is published. The CDX enhancements described in this rulemaking will not be finalized upon publication or effective date of the final rule. The enhancements will take time to develop, and EPA will make the updated CDX interface reflecting these changes publicly available as soon as resources allow. However, submitters are currently able to include all information for the newly specified data elements described in this preamble and the amended regulatory text as generic attachments in the current CDX workflow. EPA will share additional guidance and conduct outreach with stakeholders prior to the rollout of the changes to CDX and will work to extend flexibility to submitters in the event that issues arise related to discrepancies between the regulations and the PMN form before the CDX enhancements can be implemented.

C. Amendments Related To Pre-Screen, Incomplete Submissions, Correcting Errors, and New Information

EPA is finalizing amendments to the regulations regarding how EPA acknowledges the receipt of a notice to account for EPA's pre-screen process and to clarify the start of the applicable review period, particularly when a notice contains errors or is incomplete. EPA is also finalizing amendments to align the process for correcting errors in

the notice with the existing process for incomplete submissions. EPA is further clarifying that an initial notice submission may later be deemed incomplete if the submitter submits additional information at any time during the review period that was known to or reasonably ascertainable by the submitter at the time of initial notice submission. Finally, EPA is promulgating amendments that clarify that new information about a chemical substance under EPA review must be submitted electronically via CDX and that certain notification to EPA of new information may be made by e-mail.

1. Pre-Screening Procedures

EPA is finalizing amendments to 40 CFR 720.65(a) to codify the pre-screen process that EPA conducts prior to moving forward to the risk assessment process. The new language would clarify, for purposes of transparency, EPA's current pre-screen practice as described in Unit III.C.1 of the proposed rule preamble. EPA is also finalizing an amendment to 40 CFR 720.70 to clarify that a notice of receipt will be published in the **Federal Register** after EPA receives a complete notice, rather than merely receiving the notice, to accommodate the pre-screening procedures. Additionally, based on public comments, EPA is amending 40 CFR 723.50(e)(3) to add a description of current pre-screen procedures and update/clarify the process for completing an incomplete LVE or LoREX notice, which will better align with similar changes made to 40 CFR 720.65 and with existing electronic submission requirements.

One comment on the proposal asserted that EPA should include in section 5 prescreen a review of all CBI claims for consistency with sections 14(b) and (c) of TSCA and treat any submission that includes a CBI claim that appears to be inconsistent with the requirements of these sections as "erroneous or incomplete." EPA disagrees with these comments as assuring that every CBI claim is consistent with section 14(b) and (c) of TSCA would require a substantive review of each claim, which is well beyond the CBI review requirements described in TSCA section 14(g). For a more detailed response regarding CBI review during pre-screen, please see the Response to Comments document (Ref. 2).

2. Correcting Errors in Notices

As proposed, EPA is finalizing amendments at 40 CFR 720.65(a) and (b) to state that if EPA receives a notice with errors and EPA requests (as part of

the pre-screen process or, at latest, within 30 days of receipt of the notice) that the submitter remedy such errors, the applicable review period will not begin until EPA receives a corrected notice. This will align the process for correcting errors with the current process in 40 CFR 720.65 for correcting an incomplete notice.

3. Notice Amendments Indicating Original Notice was Incomplete

EPA is finalizing amendments at 40 CFR 720.65(c)(2) and to 40 CFR 720.65(c)(5)(iii) (moved to 720.65(d)(5)(iii)), to clearly communicate and clarify that EPA may deem an original notice incomplete, and restart the review period at Day 1, if a submitter provides required information during the applicable review period without demonstrating that it was not known to or reasonably ascertainable by the submitter at the time of the initial notice submission. Additionally, EPA is updating the reference to 40 CFR 720.80(b)(2) at 40 CFR 720.65(c)(vii) to instead point to 40 CFR 703.5(c) because the 2023 CBI rule (88 FR 37155, June 7, 2023) moved the language that was previously at 720.80(b)(2) to a new section at 40 CFR 703.5.

As stated in the proposal for this rule (88 FR 34100, May 26, 2023), EPA is changing the longstanding practice of accepting amendments that contain required information that was known or reasonably ascertainable at the time of the original submission and then accepting a request to suspend the review period under 40 CFR 720.75(b).

As explained in Unit II.B., the 2016 Lautenberg Amendments impose additional obligations on EPA. EPA believes that exercising its discretionary authority under the existing regulations to declare an original submission incomplete and restart the applicable review period upon submission of the complete notice (e.g., when an amendment is submitted that makes a notice complete) is appropriate in order for EPA to efficiently meet current statutory requirements. Several comments on the proposed rule objected to these amendments, stating that submitters often are prompted to generate new or additional information during the review period to rebut unforeseen or conservative assumptions made by EPA. To address this comment and assist with efficient review, EPA is also amending the notice information requirements at 40 CFR 720.45 to specify the level of detail needed to perform refined risk assessments, as well as building that additional detail into the CDX user interface, which is detailed in Unit III.B of both the

proposed rule (88 FR 34100, May 26, 2023) and this final rule. By specifying more detailed information requirements in 40 CFR 720.45 and data fields in the CDX user interface, EPA should receive more complete submissions upfront and help to minimize the need for EPA to use default values and conservative assumptions in its risk assessment due to a lack of available data. The Agency, however, reiterates that the submitter is required to provide all required information that is known or reasonably ascertainable at the time of the initial submission and not in reaction to risk assessment findings. Submitters must provide all information required by 40 CFR 720.45 and 720.50 upfront to satisfy the requirement of submitting a complete notice.

In response to the proposal, EPA received a comment asking that the Agency provide submitters with an opportunity to explain why information submitted as part of an amendment should not result in restarting the applicable review period. Under the amendment to 40 CFR 720.65(c)(2) being finalized in this action, the submitter of additional or revised information during the review period must demonstrate to EPA's satisfaction that the information was not known to or reasonably ascertainable by the submitter at the time of the original submission to preclude an EPA determination that the original notice was incomplete. Amendments to a notice that will not be considered as amendments indicating that the original notice was incomplete are: (1) Amendments based on new data (as described at 40 CFR 720.40(f) and 720.50(a)(4)); (2) Administrative, non-substantive amendments (e.g., submitter contact information); and (3) Amendments made at the request of EPA. EPA, however, will take case-by-case facts into consideration when determining whether a late submission of information indicates that a notice was incomplete when originally submitted. If a submitter disagrees with EPA's determination that the original notice submission was incomplete, the submitter may object according to the existing procedures at 40 CFR 720.65(c)(4) and (5), as amended in this final rule, which updates and moves these provisions to 40 CFR 720.65(d)(4) and (5).

As explained in the proposed rule, a notice submitted under TSCA section 5(a)(1) is statutorily required to include the information described in TSCA section 5(d)(1) insofar as it is known to the submitter or reasonably ascertainable. In response to various procedural amendments proposed in

this rulemaking, EPA received comments asking the Agency to further define “known to or reasonably ascertainable by” beyond the current definition at 40 CFR 720.3. While EPA understands and recognizes the desire to have a more explicitly defined list of criteria or more detailed definition of “known to or reasonably ascertainable by,” EPA believes that it is not possible to define “known to or reasonably ascertainable by” more explicitly—as was stated in the 1983 final rule entitled “Premanufacture Notification; Premanufacture Notice Requirements and Review Procedures” (Ref. 8) and restated in the May 2023 proposed rule (88 FR 34100). EPA has not, in this rulemaking, proposed or finalized any amendment to or undertaken any substantive reconsideration, reexamination, or reinterpretation of the existing definition at 40 CFR 720.3. That said, to assist submitters, EPA has provided additional discussion and examples as to what is meant by “known to or reasonably ascertainable by” in the Response to Comments document (Ref. 2).

4. Notifying EPA of the Receipt of New Information on a Chemical Substance Under Review

EPA is finalizing amendments to 40 CFR 720.40(f), 40 CFR 720.50(a)(4)(ii), and 40 CFR 723.50(i) to clarify that new information about a chemical substance under EPA review must be submitted electronically via CDX, consistent with the general electronic submission requirements in 40 CFR 720.40(a). In addition, when submitters receive new information within five days of the end of the review period, EPA is amending the regulations to allow submitters to notify EPA by e-mail of the receipt of new information. Although the regulatory text in 40 CFR 720.40(f) and 40 CFR 723.50(i) are similar, the regulatory text provided along with the proposed rule erroneously showed only the proposed changes to 40 CFR 720.40(f) and did not show proposed changes to 40 CFR 723.50(i). This was an oversight and the regulatory text accompanying this final rule consistently amends both 40 CFR 720.40(f) and 40 CFR 723.50(i).

D. Amendments to Low Volume Exemptions and Low Release and Exposure Exemptions

EPA is promulgating several amendments to the current LVE and LoREX regulations. Specifically, EPA is finalizing amendments so that: (1) submitters may not commence manufacture until EPA has approved the LVE or LoREX notice; (2) EPA may

proactively inform LVE and LoREX holders if the chemical substance that is the subject of the LVE or LoREX becomes subject to a SNUR and the chemical identity is CBI, or if it is listed on the confidential portion of the TSCA Inventory; (3) PFAS are categorically ineligible for these exemptions; and (4) certain PBT chemical substances are ineligible for these exemptions.

LVE and LoREX regulations are promulgated under the statutory authority of TSCA section 5(h)(4), 15 U.S.C. 2604(h)(4), which provides that EPA may, upon application and by rule, exempt the manufacturer of any new chemical substance from all or part of the requirements of TSCA section 5 if EPA determines that the manufacture, processing, distribution in commerce, use, or disposal of such chemical substance, or that any combination of such activities, “will not present an unreasonable risk of injury to health or the environment, including an unreasonable risk to a potentially exposed or susceptible subpopulation identified by [EPA] under the conditions of use.”

1. Amendments to Expiration of LVE and LoREX Review Period

EPA is finalizing, as proposed, amendments to the LVE and LoREX regulations at 40 CFR 723.50(g) to require a notification of approval of an LVE or LoREX from EPA prior to commencement of manufacture of the chemical substance under the exemption. Prior to the promulgation of this amendment, 40 CFR 723.50(g)(2) provided that the submitter may begin manufacture of a chemical substance under an LVE or LoREX upon expiration of the 30-day review period if EPA had taken no action. As described in Unit III.A., EPA is also amending the regulations that allow submitters to begin manufacture or processing of chemical substances for which a PMN, MCAN, or SNUN was submitted upon expiration of the review period, so that those regulations would require a determination from EPA prior to commencement of manufacture or processing of such substances. As discussed in Unit III.A., these changes to 40 CFR 720.75, 721.25(d), and 725.170 are being made to conform those regulations to the 2016 Lautenberg Amendments. EPA is finalizing similar amendments to the LVE and LoREX regulations at 40 CFR 723.50 to align with the amendments to the PMN, SNUN, and MCAN regulations and with the statutory framework and to better ensure that chemical substances manufactured under LVEs and LoREXs will not present an unreasonable risk.

2. Notification of LVE and LoREX Holders if the Chemical Substance is Subject to a SNUR or Listed on the Confidential Portion of the TSCA Inventory

EPA is finalizing amendments to 40 CFR 723.50 to allow EPA to inform an LVE or LoREX holder whenever the chemical substance that is the subject of that LVE or LoREX becomes subject to a proposed or final SNUR that describes the chemical substance by a generic chemical name due to a confidentiality claim for its specific chemical identity. This amendment would, as a courtesy, help inform LVE and LoREX holders of regulatory requirements that they may have otherwise been unable to determine on their own without submitting an inquiry to EPA (also known as a *bona fide* notice) pursuant to 40 CFR 721.11. In the proposed rule (88 FR 34100, May 26, 2023), EPA stated that the Agency did not intend to proactively inform current LVE and LoREX holders about SNURs that predate this rule and that EPA would only start the practice of notifying LVE and LoREX holders subject to this amendment after the date of the final rule. However, upon consideration of public comments in support of notifying current exemption holders of preexisting SNURs, EPA intends, subject to availability of resources, to notify current LVE and LoREX holders about preexisting SNURs that describe the chemical substance by a generic chemical name. Given current resource constraints, however, EPA is unable to provide a timeline for when it will begin and complete this notification effort. A lack of receipt of this courtesy notice that a chemical substance is subject to a SNUR does not excuse chemical manufactures and processors from complying with any existing regulations. LVE and LoREX holders who wish to determine whether their chemical substance is subject to a SNUR may always submit an inquiry to EPA (also known as a *bona fide* notice) pursuant to 40 CFR 721.11.

In response to public comments, in addition to notifying LVE and LoREX holders when they are subject to a SNUR, EPA also intends, subject to availability of resources, to begin notifying LVE or LoREX submitters if a substance is added to the confidential portion of the TSCA Inventory as a result of filings by a different submitter that claimed the specific chemical identity of the substance as confidential. As of February 7, 2024, more than 460 LVEs and LoREXs that were granted by EPA pertain to chemical substances that are now listed on the TSCA Inventory.

Once on the Inventory, a chemical substance may be subject to additional requirements under TSCA. Of the more than 390 chemical substances covered by these LVE and LoREX, approximately 125 are on the confidential portion of the TSCA Inventory. Without notice by EPA or by submitting a *bona fide* notice, a submitter is unlikely to know their substance is listed on the confidential portion of the Inventory, unless they also submitted the PMN and subsequent Notice of Commencement that led to the Inventory listing of the substance. While EPA intends to begin providing notice to exemption holders whose chemical substance now appears on the confidential portion of the TSCA Inventory, EPA does not intend to provide notice to those who hold granted LVEs or LoREXs pertaining to chemical substances whose specific chemical identities are added to the public portion of the TSCA Inventory due to the additional resources this would require and to the fact this information is publicly available.

In response to public comment, EPA affirms that once a chemical substance is added to the Inventory, an LVE or LoREX (or any other exemption from PMN requirements) is no longer necessary to manufacture the chemical substance and thus any approved LVE or LoREX is no longer binding on the manufacturer. The premanufacture notice requirements of TSCA section 5(a)(1), the relevant statutory exemption authority at TSCA section 5(h)(4), and the LVE/LoREX regulations at 40 CFR 723.50 all apply to manufacturers of new chemical substances, yet a chemical substance is no longer a “new chemical substance” as defined in TSCA section 3(11) once it is added to the Inventory. While EPA intends to begin providing notice to LVE and LoREX submitters once their substance is listed on the confidential portion of the Inventory, EPA does not intend to formally revoke these exemptions under the process described in 40 CFR 723.50(h)(2), as that process pertains to new chemical substances for which manufacture is not otherwise permitted in the absence of a PMN or applicable exemption.

The amendments to the regulations at 40 CFR 723.50 establish that a granted LVE or LoREX notice demonstrates a *bona fide* intent to manufacture the substance, such that a disclosure to an LVE or LoREX holder that the substance is the subject of a proposed or final rule under Part 721 or similarly that the substance is on the confidential portion of the TSCA Inventory will not be considered public disclosure of confidential business information under

section 14 of the Act. EPA is not amending the procedures in 40 CFR 723.50(l) for asserting and protecting confidential business information.

3. Making PFAS Categorically Ineligible for LVEs and LoREXs

EPA is finalizing amendments to limit the scope of the LVE and LoREX exemptions that were first promulgated in accordance with TSCA 5(h)(4) in 1985 and 1995 respectively (50 FR 16477 (April 26, 1985) and 60 FR 16346 (March 29, 1995)). TSCA 5(h)(4) allows, but does not require, the Administrator to exempt the manufacturer of any new chemical substance from all or part of the requirements of TSCA section 5 in certain circumstances. The statute does not specify any circumstances under which the Administrator would be required to provide an exemption and EPA’s action here is consistent with its authority under 5(h)(4) to create and/or define the scope of exemptions. These amendments make PFAS categorically ineligible for LVEs and LoREXs going forward, using a structural definition of PFAS for purposes of the LVE and LoREX regulations. Upon the effective date of this rule, any LVE or LoREX notice for a PFAS that is submitted to the Agency will be denied upon receipt without substantive review. This includes any chemical substance where any of the reasonably anticipated metabolites, environmental transformation products, byproducts, or reasonably anticipated impurities are a PFAS. Persons who wish to manufacture a PFAS not on the TSCA Inventory will be required to submit a PMN at least 90 days prior to commencing manufacture for a non-exempt commercial purpose. The definition for PFAS that EPA is finalizing is aligned with the recently finalized TSCA section 8(a)(7) rule (88 FR 70516, October 11, 2023) and the Inactive PFAS SNUR (89 FR 1822, January 11, 2024). Although PFAS would no longer be eligible for LVE or LoREX, there may be case-specific circumstances where a use of a new PFAS or a new use of an existing PFAS may be needed by a federal agency to meet its mission or is required in order to meet another critical need. EPA will work with other federal agencies to expedite review of such cases. Furthermore, EPA recognizes the critical role that many new chemicals play, including some PFAS, in the manufacture of semiconductors. The new chemicals program now prioritizes notices for chemicals used in sectors supported by the Creating Helpful Incentives to Produce Semiconductors (CHIPS) and Science Act and the

Inflation Reduction Act’s (IRA) climate goals. Since beginning the process of prioritizing CHIPS and Science Act and IRA related chemicals, EPA now reviews these new chemicals in a third of the time compared to other sectors. The Agency believes these key sectors are important to growing new jobs as part of the Biden-Harris Administration’s domestic manufacturing initiatives. For some new chemicals needed by the semiconductor sector, such as photo-acid generators, EPA’s multi-year collaborative effort with the sector has resulted in a regulatory pathway for dozens of these chemicals, and recent submittals have had review timeframes of under 90 days.

As noted in the proposed rule, EPA’s New Chemicals Program began implementing a new policy for reviewing and managing LVE notices for PFAS in April 2021. In an April 27, 2021, press release announcing the new PFAS LVE policy (Ref. 9), the Agency stated that “[g]iven the complexity of PFAS chemistry, potential health effects, and their longevity and persistence in the environment, an LVE notice for a PFAS is unlikely to be eligible for this kind of exemption under the regulations.” Since 2021, EPA has reviewed 8 LVE notices for PFAS, which were each reviewed on a case-by-case basis. Each of the 8 PFAS were determined to be ineligible for an LVE due to the risks identified and/or an inability to complete the review in 30 days as a result of the complexities of the review or uncertainties in the assessment. EPA has never received or approved any PFAS LoREX notices.

Each of the 8 PFAS that were the subject of LVE notices reviewed since 2021, or the reasonably anticipated metabolites and environmental transformation products of those PFAS, was determined to be a PBT chemical substance. In 5 of the 8 cases, however, the PBT designation included noted uncertainties for each of the substances reviewed. If EPA is unable to score a characteristic (e.g., B “unknown” for bioaccumulation), the characteristic is still considered to be potentially a 2 or higher for the purposes of identifying potential PBTs (Ref. 10). In many cases, additional uncertainties were identified for the potential routes of exposure, which included exposures to workers, the general population, a potentially exposed or susceptible subpopulation (e.g., consumers, infants), or the environment. PFAS present a challenge for EPA to evaluate because there is often insufficient information to quantify the risk they may pose and consequently make effective decisions

about how to regulate them (Ref. 11). As currently described in the regulations, EPA may determine that a new chemical substance is ineligible for an LVE or LoREX if there are issues concerning toxicity or exposure that require further review which cannot be accomplished within the 30-day review period. EPA notes that the shortened 30-day review period for LVEs and LoREX is one of the major benefits of these exemptions as it allows companies to introduce new chemical substances more quickly into commerce. The 30-day review period provides a screen for EPA to identify any new chemical substances with issues that require more detailed and comprehensive review and analysis, such as that available in a full PMN review. See 60 FR 16336. Given the shortened 30-day review of an LVE along with the inability to require testing or impose additional restrictions under a section 5(e) or 5(f) order, EPA was unable to address those uncertainties which would be necessary to conclude that the substance would not present an unreasonable risk. Since all of the 8 PFAS that were the subject of LVE notices were deemed ineligible for the exemption, the submitters were required to submit a PMN if they wanted to move forward with the manufacture of the new chemical substances.

For the purpose of making PFAS ineligible for LVEs and LoREXs, EPA is defining "PFAS" using a structural definition. In this rule, EPA defines PFAS to mean a chemical substance that contains at least one of these three structures:

(1) R-(CF₂)_n-CF(R')R'', where both the CF₂ and CF moieties are saturated carbons;

(2) R-CF₂OCF₂-R', where R and R' can either be F, O, or saturated carbons; or

(3) CF₃C(CF₃)R'R'', where R' and R'' can either be F or saturated carbons.

Manufacturers of substances that do not meet this structural definition and of substances where any of the reasonably anticipated metabolites, environmental transformation products, byproducts, or reasonably anticipated impurities do not meet this structural definition remain eligible to submit an LVE or LoREX notice.

In opposition to these amendments, EPA received comments asserting that because PFAS are a broad category of chemicals, any proposed regulatory action on PFAS should not group PFAS into a single category. Comments also asserted that there was no scientific basis or risk-based evidence for making PFAS ineligible for LVEs and LoREXs. EPA agrees with the comments that PFAS are a broad category of chemical

substances with common toxicological properties, exposures, or uses, and notes that the assessment and management of these substances for regulatory purposes should generally be done on a case-by-case basis or as groups of substances with common toxicological properties, exposures, or uses. Furthermore, EPA believes that any assessment of PFAS should be done in line with the scientific standards, weight of scientific evidence, and consideration of any reasonably available information as outlined in section 26 of TSCA. The amendment to make PFAS ineligible for LVEs and LoREXs, however, is not based on an assessment of all PFAS or any PFAS and does not impose risk management restrictions on any PFAS substance. The decision to make PFAS ineligible for LVEs and LoREXs is not a determination of risk for all or any PFAS. While the current state of science and EPA's understanding of PFAS has motivated the decision to make all PFAS ineligible for LVEs and LoREXs, these amendments are not based on EPA findings that particular PFAS chemicals, or all chemicals qualifying as PFAS under this rule, may present unreasonable risks of injury to human health or the environment under the conditions of use due to levels of hazards and exposures identified and evaluated by EPA. Rather, due to the scientific complexities or uncertainties associated with assessing PFAS and the lack of data on most PFAS with regards to toxicity and exposure to human health and the environment, EPA expects in most cases to be unable to determine pursuant to TSCA section 5(h)(4) that a PFAS "will not present an unreasonable risk" under the conditions of use within the 30-day review period provided for LVE and LoREX notices. This action is a procedural action based on EPA's experience administering TSCA and reviewing LVEs for PFAS.

Additionally, making PFAS ineligible for the LVE and LoREX exemptions may in fact reduce burden in many instances by avoiding the submission and review of LVEs that are ultimately denied and required to be resubmitted and reviewed anew through the PMN review process. Furthermore, the New Chemicals Program developed the PFAS Framework to help ensure that the Program effectively and efficiently reviews and makes appropriate decisions on new PFAS or significant new uses of existing PFAS reviewed through PMNs and SNUNs. The PFAS Framework will guide EPA's review of PFAS under TSCA section 5, ensuring consistency and efficiency in its review of incoming submissions while

advancing the Agency's goals to ensure protection of public health and the environment. Please see the Response to Comments document that accompanies this rule for a more detailed discussion of and response to the comments received on the amendments to make PFAS categorically ineligible for LVEs and LoREXs (Ref. 2).

The definition for PFAS promulgated at 40 CFR 723.50 does not include substances that only have a single fluorinated carbon or unsaturated fluorinated moieties (e.g., fluorinated aromatic rings and olefins), which are more susceptible to chemical transformation than their saturated counterparts, and therefore less likely to persist in the environment. These potentially degradable substances, if submitted to EPA in a LVE or LoREX notice, would still be evaluated by EPA and a decision made to either deny or grant the exemption.

The three-part structural definition for PFAS includes fluoropolymers. Fluoropolymers are made using fluorinated monomers, and often fluorinated processing aides, which contributes to the release of PFAS. In addition, the disposal of fluoropolymers may also result in PFAS releases. EPA has been concerned about potential risks of fluoropolymers for more than a decade. On January 27, 2010 (75 FR 4295, 1/27/2010), EPA amended the 'polymer exemption rule,' to exclude from eligibility polymers containing as an integral part of their composition, except as impurities, certain perfluoroalkyl moieties consisting of a CF₃- or longer chain length. EPA issued this amendment because, based on information at the time, EPA could no longer conclude that these polymers will not present an unreasonable risk to human health or the environment under the terms of the polymer exemption rule, which is the determination necessary to support an exemption under section 5(h)(4) of TSCA. While some comments stated that fluoropolymers are safe, there remains debate on the toxicity of fluoropolymers especially when considering their entire life cycle (Ref. 12). EPA's decision to include fluoropolymers as part of the amendment to make PFAS ineligible for LVEs and LoREXs, however, was not based on hazard, exposure, or risk. Fluoropolymers are no less complicated to review than nonpolymeric PFAS, and the Agency expects it would need the longer 90-day review for a PMN.

At the time of finalizing this rulemaking, EPA is not revoking previously granted LVEs for PFAS. EPA, however, may take future action on a case-by-case basis to revoke previously

granted LVEs for PFAS, which would be done in accordance with the existing regulations at 40 CFR 723.50(h)(2). EPA believes that the revocation of any existing LVE should be done on a case-by-case basis. While there are well identified hazards for many PFAS and PFAS studies have repeatedly found harm to human health, EPA has not determined that PFAS as an entire category of chemical substances do not meet the “will not present unreasonable risk of injury to health or the environment” standard of TSCA section 5(h)(4). As noted previously, EPA’s decision to make future PFAS ineligible for LVEs is not based on hazard or risk but is instead based on EPA’s experience administering TSCA and reviewing LVEs for PFAS (please see the Response to Comments document for a more detailed discussion (Ref. 2)).

As EPA continues to consider previously granted PFAS LVEs, EPA will take into consideration the concerns raised about the potential impacts to domestic semiconductor and electric vehicle industry, national defense, or other critical applications. The Biden-Harris Administration is committed to restoring U.S. leadership in semiconductor and electric vehicle manufacturing, supporting good-paying jobs across those supply chains, and advancing U.S. economic and national security. EPA’s Framework for Addressing New PFAS and New Uses of PFAS (PFAS Framework) (Ref. 10) outlines EPA’s planned approach when reviewing new PFAS and new uses of existing PFAS. The application of the PFAS Framework will help ensure that new PFAS won’t harm human health and the environment and allows that certain PFAS be used when exposures and releases can be mitigated, which is critical for important sectors like semiconductors. Under the framework, EPA expects that some PBT PFAS will not result in worker, general population or consumer exposure and are not expected to result in releases to the environment, such as when PFAS are used in a closed system with occupational protections as is generally the practice in the manufacture of some semiconductors and other electronic components. Additionally, EPA continues to work cooperatively with companies who wish to voluntarily withdraw previously granted LVEs for PFAS. As of April 1, 2024, 56 LVEs have been withdrawn through EPA’s PFAS Low Volume Exemption Stewardship Program.

4. Codifying EPA’s Policy Concerning PBT Chemicals and LVEs and LoREXs

EPA is finalizing amendments to 40 CFR 723.50(d) that would codify EPA’s long-standing practice that, whenever EPA identifies a chemical substance under LVE or LoREX review (or any reasonably anticipated metabolites, environmental transformation products, or byproducts of the substance, or any reasonably anticipated impurities in the substance) as PBT with anticipated environmental releases and potentially unreasonable exposures to humans or environmental organisms, that substance would be ineligible for the LVE or LoREX. As noted in Unit III.D.3., the LVE and LoREX exemptions were first promulgated in accordance with TSCA section 5(h)(4) in 1985 and 1995 respectively (50 FR 16477, April 26, 1985 (FRL–2742–1) and 60 FR 16346, March 29, 1995 (FRL–4923–1)). TSCA section 5(h)(4) allows, but does not require, the Administrator to exempt the manufacturer of any new chemical substance from all or part of the requirements of TSCA section 5 in certain circumstances. The statute does not specify any circumstances under which the Administrator would be required to provide an exemption and EPA’s action here is consistent with both its long-standing practice and with its authority under TSCA section 5(h)(4) to create and/or define the scope of exemptions.

On November 4, 1999, EPA issued its policy statement identifying a category for PBT new chemical substances (Ref. 13). The 1999 policy statement formally acknowledged PBT chemical substances as a category based on shared characteristics to facilitate premanufacture assessment and regulation. In response to the proposed amendment to the LVE and LoREX regulations, EPA received comment asserting that the Agency cannot categorically make all PBT chemicals ineligible for LVEs and LoREXs. EPA did not propose to categorically make all PBT chemicals ineligible for LVEs and LoREXs and is not doing so in this final rule. Rather, EPA proposed and is finalizing amendments to 40 CFR 723.50(d) to codify that whenever EPA identifies a chemical substance under LVE or LoREX review (or any reasonably anticipated metabolites, environmental transformation products, or byproducts of the substance, or any reasonably anticipated impurities in the substance) as PBT with anticipated environmental releases and potentially unreasonable exposures to humans or environmental organisms, that substance would be ineligible for the

LVE or LoREX. In order to effectuate these amendments for individual exemption notices, EPA would first need to review the exemption notice to determine if the substance is a PBT and then review the environmental releases and exposures to humans or environmental organisms to determine if releases and exposures are expected. Only after EPA has reviewed the hazards and exposures, will EPA make a decision to either grant or deny an LVE or LoREX for a PBT chemical substance.

Based on EPA’s experience administering LVEs and LoREXs, EPA expects that most exemptions for PBT chemical substances will not be granted. However, EPA agrees that there are instances where PBT chemical substances can be managed under an exemption. EPA may receive an exemption notice for a PBT chemical substance that will not result in worker, general population, or consumer exposure and that is not expected to result in releases to the environment, such as chemical substances used in a closed system to make semiconductors or other electronic components. In such a negligible exposure and environmental release scenario where worker exposure is fully mitigated and general population exposures are not expected, if EPA has sufficient information on the substance and the conditions of use to ensure that such PBT chemical substances can be disposed of properly and no consumer exposure is expected, EPA generally expects to grant the exemption.

EPA is defining “PBT chemical substance” for purposes of 40 CFR 723.50 as “a chemical substance possessing characteristics of persistence (P) in the environment, accumulation in biological organisms (bioaccumulation (B)), and toxicity (T) resulting in potential risks to humans and ecosystems. For more information on EPA’s Policy on new chemical substances that are PBT, see EPA’s 1999 policy statement (64 FR 60194; November 4, 1999).”

E. Amendments Related to Suspensions of the Review Period

As proposed, EPA is finalizing amendments to 40 CFR 720.75(b)(2) to allow PMN, SNUN, LVE, and LoREX submitters to request a suspension of the notice review period for up to 30 days orally or in writing, including by e-mail, without the need for a formal, written request submitted to EPA via CDX using e-PMN software. EPA is similarly finalizing amendments to 40 CFR 725.54(c) to permit MCAN submitters to request suspensions for up

to 30 days orally or in writing, including by e-mail, without the need for a formal, written request submitted to EPA via CDX using e-PMN software. Some comments to the proposal took issue with increasing the number of suspension days made through oral or e-mail communication from 15 to 30 days. These comments suggested such an amendment would result in less frequent communication from EPA regarding the status of a new chemical review. EPA disagrees with these comments, as the amendments would allow the submitter to request *up to* a 30-day suspension through oral or e-mail communication; however, submitters will still be allowed to suspend the review period for a shorter amount of time if preferred. For a more detailed response to the comments regarding the amendments relating to suspensions of the review period, please see the Response to Comments document (Ref. 2).

F. Severability

As explained in this preamble, EPA is finalizing several different types of amendments in this rule, including amendments related to: commencement of manufacture or processing; required determinations and associated actions; terminology and definitions; notice information requirements; pre-screening procedures; correcting errors in notices; incomplete notices; notification of the receipt of new information; expiration of the LVE and LoREX review period; notification of LVE and LoREX holders regarding certain other actions involving their chemical substance; PFAS ineligibility for LVE and LoREX exemptions; certain PBT ineligibility for LVE and LoREX exemptions; and suspensions of the review period. Each type of amendment functions independently, serves a discrete purpose, and is intended to be severable from the other amendments. In the event of litigation staying, remanding, or invalidating a portion of EPA's amendments in this rule, EPA intends to preserve all other amendments in this rule to the fullest extent possible. For example, the amendment to the LVE and LoREX regulations making PFAS ineligible for such exemptions functions independently from the amendment to those regulations making certain PBTs ineligible for the exemptions, such that if either ineligibility provision were stayed or invalidated, it would have no effect on the other, and EPA intends that the other would remain effective. Similarly, any stay or invalidation of the amendment making PFAS ineligible for the LVE and LoREX exemptions would have no effect on amendments related to

incomplete notices, and vice versa. These specific examples are not intended to be exhaustive, but rather illustrative of scenarios that reflect EPA's overarching intent that each type of amendment be severable.

Furthermore, within the broader category of amendments to notice information requirements, the rule includes a number of discrete amendments pertaining to different types of information. Each of these specific amendments to notice information requirements functions independently and is intended to be severable from the others. As an example, if amended information requirements regarding the categories of use of the chemical substance were to be stayed or invalidated, it would have no effect on amended information requirements regarding worker exposure, and vice versa.

The limited circumstance in which severability is not intended is where a single type of amendment involved changes to multiple paragraphs or sections of the regulations. For example, in cases where EPA is finalizing the same or similar amendment in multiple parts of the CFR for conformity (e.g., where an amendment to part 721, 723, or 725 is intended merely to conform to the same or similar amendment in part 720), severability is not intended between those provisions. In addition, where the amendment making PFAS ineligible for LVE and LoREX exemptions to be invalidated, the related amendment defining PFAS for purposes of that ineligibility provision would no longer be necessary or helpful. However, EPA does intend severability in the inverse scenario: if the definition of PFAS were stayed or invalidated, EPA intends severability of all other amendments, including the amendment making PFAS ineligible for LVEs and LoREX.

V. Statutory and Executive Order Reviews

Additional information about these statutes and Executive Orders can be found at <https://www.epa.gov/laws-regulations/laws-and-executive-orders>.

A. Executive Orders 12866: Regulatory Planning and Review and 14094: Modernizing Regulatory Review

This action is a "significant regulatory action" as defined in Executive Order

12866, as amended by Executive Order 14094 (88 FR 21879, April 11, 2023). Accordingly, EPA submitted this action to the Office of Management and Budget (OMB) for Executive Order 12866 review. Documentation of any changes made in response to the Executive Order 12866 review is available in the docket. The EPA prepared an economic analysis of the potential impacts associated with this action. This analysis, “Economic Analysis for the Final Rule: Updates to New Chemicals Regulations under the Toxic Substances Control Act” (Ref. 1), is also available in the docket.

B. Paperwork Reduction Act (PRA)

The information collection activities in this rule have been submitted to OMB for review and approval under the PRA (44 U.S.C. 3501 *et seq.*). The Information Collection Request (ICR) document that EPA prepared has been assigned EPA ICR No. 1188.15 (Ref. 7). This ICR represents a revision to the currently approved ICR that covers the information collection activities contained in the existing regulations. The Economic Analysis covers the incremental changes from this action. You can find copies of the Economic Analysis and ICR in the docket, and the ICR is briefly summarized here.

Respondents/affected entities: Certain chemical manufacturers (including importers) and processors (see Unit I.A.).

Respondent's obligation to respond: Mandatory under TSCA section 5.

Estimated number of respondents: 560.

Frequency of response: On occasion.

Total estimated incremental burden: Estimates show that this rule will decrease existing approved ICR burden by 4,528 hours per year. Burden is defined at 5 CFR 1320.3(b).

Total estimated incremental cost: Estimates show that this rule will increase existing approved ICR costs by \$203,150 per year. This includes \$0 annualized capital or operation and maintenance costs.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. The OMB control numbers for EPA's regulations in title 40 of the CFR are listed in 40 CFR part 9. When OMB approves this ICR, the Agency will announce that approval in the **Federal Register** and publish a technical amendment to 40 CFR part 9 to display the OMB control number for the approved information collection activities contained in this final rule.

EPA did not receive any comments on the ICR revision that was posted with

the proposed rule. EPA prepared a Response to Comments document (Ref. 2) that summarizes all the comments relevant to the proposal, including comments affecting the Agency's burden estimates related to the rule.

C. Regulatory Flexibility Act (RFA)

I certify that this action will not have a significant economic impact on a substantial number of small entities under the RFA, 5 U.S.C. 601 *et seq.* The Agency's basis is briefly summarized here and is detailed in the Economic Analysis (Ref. 1).

The majority of firms that submit a TSCA section 5 notice will realize either no change or a decrease in costs associated with form submission. However, EPA expects that firms that submit LVE notices for PFAS will incur an estimated cost of approximately \$61,049 per notice due to the greater burden and non-labor costs associated with submitting a PMN form. EPA estimates that 98 percent of small firms (184 firms) will have cost impacts of less than 1 percent of revenues, less than 1 percent (1 firm) will have cost impacts between 1 and 3 percent of revenues, and 1 percent (2 firms) will have cost impacts greater than 3 percent of revenues.

D. Unfunded Mandates Reform Act (UMRA)

This action does not contain an unfunded mandate of \$100 million (adjusted annually for inflation) or more as described in UMRA, 2 U.S.C. 1531–1538, and does not significantly or uniquely affect small governments. EPA has concluded that this action imposes no enforceable duty on any state, local or Tribal governments because, based on EPA's experience with reviewing TSCA section 5 actions, state, local and Tribal governments have not been impacted and EPA does not have any reasons to believe that any state, local, or Tribal government would engage in the activities such that they would be impacted by this rulemaking.

In addition, given that the estimated incremental cost on the private sector is expected to be less than \$50,000 (Ref. 1), EPA has concluded that this rulemaking is not expected to result in expenditures by the private sector of \$183 million or more in any one year (\$100 million in 1995\$ adjusted for inflation using the CDP implicit price deflator).

E. Executive Order 13132: Federalism

This action does not have federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999), because it will not have substantial direct effects on the states,

on the relationship between the national government and the states, or on the distribution of power and responsibilities among the various levels of government.

F. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

This action does not have Tribal implications as specified in Executive Order 13175 (65 FR 67249, November 9, 2000), because it will not have substantial direct effects on Tribal governments, on the relationship between the Federal Government and the Indian tribes, or on the distribution of power and responsibilities between the Federal government and Indian tribes.

G. Executive Order 13045: Protection of Children From Environmental Health Risks and Safety Risks

EPA interprets Executive Order 13045 (62 FR 19885, April 23, 1997) as applying only to those regulatory actions that concern environmental health or safety risks that the EPA has reason to believe may disproportionately affect children, per the definition of “covered regulatory action” in section 2–201 of the Executive Order. Therefore, this action is not subject to Executive Order 13045 because it does not concern an environmental health risk or safety risk. Since this action does not concern human health risks, EPA's Policy on Children's Health also does not apply. This procedural rule would align the implementing regulations codified at 40 CFR parts 720, 721, and 725 with amended TSCA and make additional updates based on existing policies or lessons learned from administering the New Chemicals Program since TSCA was amended in 2016.

Although this procedural rule itself would not directly affect the level of protection provided to human health or the environment, EPA expects that the rule would improve the Agency's consideration of risks to children—in furtherance of EPA's Policy on Children's Health—and other PESS. In turn, EPA anticipates that the amendments would help better inform the Agency's determinations for each new chemical substance or significant new use for which it received a notice under TSCA section 5(a)(1), pertaining to the likelihood of unreasonable risk to human health or the environment under known, intended or reasonably foreseen conditions of use. EPA uses an integrated approach that draws on knowledge and experience across disciplinary and organizational lines to

identify and evaluate concerns regarding health and environmental effects, and exposure and release.

H. Executive Order 13211: Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use

This action is not a “significant energy action” as defined in Executive Order 13211 (66 FR 28355, May 22, 2001), because it is not likely to have a significant adverse effect on the supply, distribution, or use of energy.

I. National Technology Transfer and Advancement Act (NTTAA)

This rulemaking does not involve technical standards under the NTTAA section 12(d), 15 U.S.C. 272.

J. Executive Order 12898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations and Executive Order 14096: Revitalizing Our Nation’s Commitment to Environmental Justice for All

EPA believes that this type of action does not concern human health or environmental conditions and therefore cannot be evaluated with respect to potentially disproportionate and adverse effects on communities with environmental justice concerns in accordance with Executive Orders 12898 (59 FR 7629, February 16, 1994) and 14096 (88 FR 25251, April 26, 2023). This action is procedural in nature. Therefore, EPA believes that it is not practicable to assess whether the human health or environmental conditions that exist prior to this action result in disproportionate and adverse effects on communities with environmental justice concerns. Although this action does not concern human health or environmental conditions, EPA identifies and addresses environmental justice concerns by finalizing, among other things, the regulatory definition of PESS to include overburdened communities, the Agency believes that this action would assist EPA and others in determining the potential exposures, hazards and risks to overburdened communities associated with the manufacture, processing, distribution in commerce, use, or disposal of the new chemical substances and significant new uses of chemical substances subject to this rulemaking. EPA anticipates that the inclusion of overburdened communities among the PESS considered in the Agency’s review of a TSCA section 5 submission would also enable the Agency, if necessary, to design appropriate future risk

management actions to address an unreasonable risk that the Agency may determine is presented by that chemical substance and to consider how such risk management actions would affect communities with environmental justice concerns.

K. Congressional Review Act (CRA)

This action is subject to the CRA, 5 U.S.C. 801 *et seq.*, and the EPA will submit a rule report to each House of the Congress and to the Comptroller General of the United States. This action is not a “major rule” as defined by 5 U.S.C. 804(2).

List of Subjects

40 CFR Part 68

Administrative practice and procedure, Air pollution control, Chemicals, Environmental protection, Hazardous substances.

40 CFR Part 372

Environmental protection, Reporting and recordkeeping requirements, Toxic substances.

40 CFR Part 703

Chemicals, Confidential business information, Environmental protection, Exports, Hazardous substances, Imports, Reporting and recordkeeping requirements.

40 CFR Parts 720, 721, 723, and 725

Environmental protection, Chemicals, Hazardous materials, Reporting and recordkeeping requirements.

Dated: December 3, 2024.

Michal Freedhoff,

Assistant Administrator, Office of Chemical Safety and Pollution Prevention.

Therefore, for the reasons set forth in the preamble, 40 CFR chapter I is amended as follows:

PART 68—CHEMICAL ACCIDENT PREVENTION PROVISIONS

- 1. The authority citation for part 68 continues to read as follows:

Authority: 42 U.S.C. 7412(r), 7601(a)(1), 7661–7661f.

§ 68.115 Threshold determination.

- 2. Amend § 68.115(b)(5) by revising the citation “§ 720.3(ee)” to read “§ 720.3.”

PART 372—TOXIC CHEMICAL RELEASE REPORTING: COMMUNITY RIGHT-TO-KNOW

- 3. The authority citation for part 372 continues to read as follows:

Authority: 42 U.S.C. 11023 and 11048.

§ 372.38 Exemptions.

- 4. Amend § 372.38(d) by revising the citation “§ 720.3(ee)” to read “§ 720.3.”

PART 703—CONFIDENTIALITY CLAIMS

- 5. The authority citation for part 703 continues to read as follows:

Authority: 15 U.S.C. 2613.

§ 703.3 Definitions.

- 6. Amend § 703.3 by:
 - a. Revising in the introductory text the citation “§ 720.3(ff)” to read “§ 720.3;”
 - b. Revising in the definition for “*Health and safety study*” the citation “§ 720.3(k)” to read “§ 720.3.”

PART 720—PREMANUFACTURE NOTIFICATION

- 7. The authority citation for part 720 continues to read as follows:

Authority: 15 U.S.C. 2604, 2607, and 2613.

§ 720.1 Scope.

- 8. Amend § 720.1 by removing the phrase “The rule” and adding in its place the phrase “This part” wherever it appears.
- 9. Revise and republish § 720.3 to read as follows:

§ 720.3 Definitions.

In addition to the definitions under section 3 of the Act, 15 U.S.C. 2602, the following definitions apply to this part.

Act means the Toxic Substances Control Act, 15 U.S.C. 2601 *et seq.*

Applicable review period means the period starting on the date EPA receives a complete notice under section 5(a)(1) of the Act and ending 90 days after that date or on such date as is provided for in sections 5(b)(1) or 5(c) of the Act.

Article means a manufactured item:

- (1) Which is formed to a specific shape or design during manufacture;
- (2) Which has end use function(s) dependent in whole or in part upon its shape or design during end use; and
- (3) Which has either no change of chemical composition during its end use or only those changes of composition which have no commercial purpose separate from that of the article and that may occur as described in § 720.30(h)(5), except that fluids and particles are not considered articles regardless of shape or design.

Byproduct means a chemical substance produced without a separate commercial intent during the manufacture, processing, use, or disposal of another chemical substance or mixture.

Byproduct material, source material, and special nuclear material have the

meanings contained in the Atomic Energy Act of 1954, 42 U.S.C. 2014 *et seq.* and the regulations issued under it.

Central Data Exchange or CDX means EPA's centralized electronic document receiving system, or its successors.

Chemical substance means any organic or inorganic substance of a particular molecular identity, including any combination of such substances occurring in whole or in part as a result of a chemical reaction or occurring in nature, and any chemical element or uncombined radical, except that "chemical substance" does not include:

- (1) Any mixture;
- (2) Any pesticide when manufactured, processed, or distributed in commerce for use as a pesticide;
- (3) Tobacco or any tobacco product;
- (4) Any source material, special nuclear material, or byproduct material;
- (5) Any pistol, firearm, revolver, shells, or cartridges; or
- (6) Any food, food additive, drug, cosmetic, or device, when manufactured, processed, or distributed in commerce for use as a food, food additive, drug, cosmetic, or device.

Commerce means trade, traffic, transportation, or other commerce:

- (1) Between a place in a State and any place outside of such State; or
- (2) Which affects trade, traffic, transportation, or commerce between a place in a State and any place outside of such State.

Cosmetic, device, drug, food, and food additive have the meanings contained in the Federal Food, Drug, and Cosmetic Act, 21 U.S.C. 321 *et seq.*, and the regulations issued under it. In addition, the term "food" includes poultry and poultry products, as defined in the Poultry Products Inspection Act, 21 U.S.C. 453 *et seq.*; meats and meat food products, as defined in the Federal Meat Inspection Act, 21 U.S.C. 60 *et seq.*; and eggs and egg products, as defined in the Egg Products Inspection Act, 21 U.S.C. 1033 *et seq.*

Customs territory of the United States means the 50 States, Puerto Rico, and the District of Columbia.

Director means the Director of the EPA Office of Pollution Prevention and Toxics (OPPT).

Distribute in commerce means to sell in commerce, to introduce or deliver for introduction into commerce, or to hold after introduction into commerce.

EPA means the U.S. Environmental Protection Agency.

e-PMN software means electronic-PMN software created by EPA for use in preparing and submitting Premanufacture Notices (PMNs) and other TSCA section 5 notices and support documents electronically to the Agency.

Health and safety study or study means any study of any effect of a chemical substance or mixture on health or the environment or on both, including underlying data and epidemiological studies, studies of occupational exposure to a chemical substance or mixture, toxicological, clinical, and ecological, or other studies of a chemical substance or mixture, and any test performed under the Act. Chemical identity is always part of a health and safety study.

(1) Not only is information which arises as a result of a formal, disciplined study included, but other information relating to the effects of a chemical substance or mixture on health or the environment is also included. Any data that bear on the effects of a chemical substance on health or the environment would be included.

(2) Examples include:

(i) Long- and short-term tests of mutagenicity, carcinogenicity, or teratogenicity; data on behavioral disorders; dermatotoxicity; pharmacological effects; mammalian absorption, distribution, metabolism, and excretion; cumulative, additive, and synergistic effects; acute, subchronic, and chronic effects; and structure/activity analyses.

(ii) Tests for ecological or other environmental effects on invertebrates, fish, or other animals, and plants, including acute toxicity tests, chronic toxicity tests, critical life stage tests, behavioral tests, algal growth tests, seed germination tests, plant growth or damage tests, microbial function tests, bioconcentration or bioaccumulation tests, and model ecosystem (microcosm) studies.

(iii) Assessments of human and environmental exposure, including workplace exposure, and impacts of a particular chemical substance or mixture on the environment, including surveys, tests, and studies of: Biological, photochemical, and chemical degradation; air, water, and soil transport; biomagnification and bioconcentration; and chemical and physical properties, *e.g.*, boiling point, vapor pressure, evaporation rates from soil and water, octanol/water partition coefficient, and water solubility.

(iv) Monitoring data, when they have been aggregated and analyzed to measure the exposure of humans or the environment to a chemical substance or mixture.

(v) Any assessments of risk to health and the environment resulting from the manufacture, processing, distribution in commerce, use, or disposal of the chemical substance.

Importer means any person who imports a chemical substance, including a chemical substance as part of a mixture or article, into the customs territory of the United States.

"Importer" includes the person primarily liable for the payment of any duties on the merchandise or an authorized agent acting on his or her behalf. The term also includes, as appropriate:

- (1) The consignee.
- (2) The importer of record.
- (3) The actual owner if an actual

owner's declaration and superseding bond has been filed in accordance with 19 CFR 141.20; or

(4) The transferee, if the right to draw merchandise in a bonded warehouse has been transferred in accordance with 19 CFR part 144, subpart C. (See "principal importer.")

Impurity means a chemical substance which is unintentionally present with another chemical substance.

Intermediate means any chemical substance that is consumed, in whole or in part, in chemical reactions used for the intentional manufacture of another chemical substance(s) or mixture(s), or that is intentionally present for the purpose of altering the rates of such chemical reactions.

Inventory means the list of chemical substances manufactured or processed in the United States that EPA compiled and keeps current under section 8(b) of the Act.

Known to or reasonably ascertainable by means all information in a person's possession or control, plus all information that a reasonable person similarly situated might be expected to possess, control, or know.

Manufacture means to produce or manufacture in the United States or import into the customs territory of the United States.

Manufacture for commercial purposes means:

(1) To manufacture with the purpose of obtaining an immediate or eventual commercial advantage for the manufacturer, and includes, among other things, "manufacture" of any amount of a chemical substance or mixture.

(2) The term also applies to substances that are produced coincidentally during the manufacture, processing, use, or disposal of another substance or mixture, including byproducts that are separated from that other substance or mixture and impurities that remain in that substance or mixture. Byproducts and impurities without separate commercial value are nonetheless produced for the purpose of obtaining a commercial advantage, since

they are part of the manufacture of a chemical substance for commercial purposes.

Manufacture solely for export means to manufacture for commercial purposes a chemical substance solely for export from the United States under the following restrictions on activities in the United States:

(1) Distribution in commerce is limited to purposes of export or processing solely for export as defined in § 721.3 of this chapter.

(2) The manufacturer and any person to whom the substance is distributed for purposes of export or processing solely for export (as defined in § 721.3 of this chapter), may not use the substance except in small quantities solely for research and development in accordance with § 720.36.

Manufacturer means a person who imports, produces, or manufactures a chemical substance. A person who extracts a component chemical substance from a previously existing chemical substance or a complex combination of substances is a manufacturer of that component chemical substance. A person who contracts with a manufacturer to manufacture or produce a chemical substance is also a manufacturer if:

(1) The manufacturer manufactures or produces the substance exclusively for that person; and

(2) That person specifies the identity of the substance and controls the total amount produced and the basic technology for the plant process.

Mixture means any combination of two or more chemical substances if the combination does not occur in nature and is not, in whole or in part, the result of a chemical reaction; except “mixture” does include:

(1) Any combination which occurs, in whole or in part, as a result of a chemical reaction if the combination could have been manufactured for commercial purposes without a chemical reaction at the time the chemical substances comprising the combination were combined, and if all of the chemical substances comprising the combination are not new chemical substances; and

(2) Hydrates of a chemical substance or hydrated ions formed by association of a chemical substance with water, so long as the nonhydrated form is itself not a new chemical substance.

New chemical substance means any chemical substance which is not included on the Inventory.

Nonisolated intermediate means any intermediate that is not intentionally removed from the equipment in which it is manufactured, including the

reaction vessel in which it is manufactured, equipment which is ancillary to the reaction vessel, and any equipment through which the chemical substance passes during a continuous flow process, but not including tanks or other vessels in which the substance is stored after its manufacture.

Person means any natural person, firm, company, corporation, joint-venture, partnership, sole proprietorship, association, or any other business entity, any State or political subdivision thereof, any municipality, any interstate body, and any department, agency or instrumentality of the Federal Government.

Pesticide has the meaning contained in the Federal Insecticide, Fungicide, and Rodenticide Act, 7 U.S.C. 136 *et seq.* and the regulations issued under it.

Possession or control means in possession or control of the submitter, or of any subsidiary, partnership in which the submitter is a general partner, parent company, or any company or partnership which the parent company owns or controls, if the subsidiary, parent company, or other company or partnership is associated with the submitter in the research, development, test marketing, or commercial marketing of the chemical substance in question. (A parent company owns or controls another company if the parent owns or controls 50 percent or more of the other company's voting stock. A parent company owns or controls any partnership in which it is a general partner). Information is included within this definition if it is:

(1) In files maintained by submitter's employees who are:

(i) Associated with research, development, test marketing, or commercial marketing of the chemical substance in question.

(ii) Reasonably likely to have such data.

(2) Maintained in the files of other agents of the submitter who are associated with research, development, test marketing, or commercial marketing of the chemical substance in question in the course of their employment as such agents.

Potentially exposed or susceptible subpopulation means a group of individuals within the general population identified by EPA who, due to either greater susceptibility or greater exposure, may be at greater risk than the general population of adverse health effects from exposure to a chemical substance or mixture, such as infants, children, pregnant women, workers, the elderly, or overburdened communities.

Principal importer means the first importer who, knowing that a new

chemical substance will be imported rather than manufactured domestically, specifies the identity of the chemical substance and the total amount to be imported. Only persons who are incorporated, licensed, or doing business in the United States may be principal importers.

Process means the preparation of a chemical substance or mixture, after its manufacture, for distribution in commerce:

(1) In the same form or physical state as, or in a different form or physical state from, that in which it was received by the person so preparing such substance or mixture, or

(2) As part of a mixture or article containing the chemical substance or mixture.

Processor means any person who processes a chemical substance or mixture.

Small quantities solely for research and development (or “small quantities solely for purposes of scientific experimentation or analysis or chemical research on, or analysis of, such substance or another substance, including such research or analysis for the development of a product”) means quantities of a chemical substance manufactured or processed or proposed to be manufactured or processed solely for research and development that are not greater than reasonably necessary for such purposes.

State means any State of the United States and the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, Guam, the Canal Zone, American Samoa, the Northern Mariana Islands, and any other territory or possession of the United States.

Support documents means material and information submitted to EPA in support of a TSCA section 5 notice, including but not limited to, correspondence, amendments (if notices for these amendments were submitted prior to January 19, 2016), and test data. The term “support documents” does not include orders under TSCA section 5(e) (either consent orders or orders imposed pursuant to TSCA section 5(e)(2)(B)).

Technically qualified individual means a person or persons:

(1) Who, because of education, training, or experience, or a combination of these factors, is capable of understanding the health and environmental risks associated with the chemical substance which is used under his or her supervision;

(2) Who is responsible for enforcing appropriate methods of conducting scientific experimentation, analysis, or chemical research to minimize such risks; and

(3) Who is responsible for the safety assessments and clearances related to the procurement, storage, use, and disposal of the chemical substance as may be appropriate or required within the scope of conducting a research and development activity.

Test data means data from a formal or informal test or experiment, including information concerning the objectives, experimental methods and materials, protocols, results, data analyses, recorded observations, monitoring data, measurements, and conclusions from a test or experiment.

Test marketing means the distribution in commerce of no more than a predetermined amount of a chemical substance, mixture, or article containing that chemical substance or mixture, by a manufacturer or processor, to no more than a defined number of potential customers to explore market capability in a competitive situation during a predetermined testing period prior to the broader distribution of that chemical substance, mixture, or article in commerce.

United States, when used in the geographic sense, means all of the States.

§ 720.30 [Amended]

■ 10. Amend § 720.30 by revising the citations “§ 720.3(e)” in paragraph (a) and “720.3(u)” in paragraph (b) to both read “§ 720.3.”

■ 11. Amend § 720.40 by revising paragraph (f) to read as follows:

§ 720.40 General.

* * * *

(f) *New information.* During the applicable review period, if the submitter possesses, controls, or knows of new information that materially adds to or changes the information included in the notice, the submitter must submit that information to EPA within ten days of receiving the new information, but no later than five days before the end of the applicable review period. The new information must be submitted electronically to EPA via CDX and must clearly identify the submitter and the notice to which the new information is related. If the new information becomes

available during the last five days of the applicable review period, the submitter must immediately inform its EPA contact for that notice by telephone or e-mail and submit the new information electronically to EPA via CDX.

* * * *

■ 12. Amend § 720.45 by:

■ a. Revising paragraphs (a)(4) and (5), and (f) through (h); and

■ b. Adding paragraphs (j) and (k).

The revisions and additions read as follows:

§ 720.45 Information that must be included in the notice form.

* * * *

(a) * * *

(4) If an importer submitting the notice cannot provide all the information specified in paragraphs (a)(1) and (2) of this section because it is claimed as confidential by the foreign supplier of the substance, the importer must have the foreign supplier follow the procedures in paragraph (a)(3) of this section and provide the correct chemical identity information specified in paragraphs (a)(1) and (2) of this section directly to EPA in a joint submission or as a letter of support to the notice, which clearly references the importer’s notice and PMN User Fee Identification Number. The applicable review period will commence upon receipt of both the notice and the complete, correct information, in accordance with § 720.65.

(5) If a manufacturer cannot provide all the information specified in paragraphs (a)(1) and (2) of this section because the new chemical substance is manufactured using a reactant having a specific chemical identity claimed as confidential by its supplier, the manufacturer must submit a notice directly to EPA containing all the information known by the manufacturer about the chemical identity of the reported substance and its proprietary reactant. In addition, the manufacturer must ensure that the supplier of the confidential reactant submit a letter of support directly to EPA providing the specific chemical identity of the confidential reactant, including the

CASRN, if available, and the appropriate PMN or exemption number, if applicable. The letter of support must reference the manufacturer’s name and PMN Fee Identification Number. The applicable review period will commence upon receipt of the notice, the letter of support, and the complete, correct information, in accordance with § 720.65.

* * * *

(f)(1) A description of the intended category or categories of consumer or commercial use by function and application, which includes a description of the following:

(i) The estimated percent of production volume devoted to each category of use.

(ii) The percent of the new chemical substance in the formulation for each commercial or consumer use.

(iii) The types of products or articles that would incorporate the new chemical substance (*e.g.*, household cleaners, plastic articles).

(iv) Information related to the use of products or articles containing the new chemical substance by potentially exposed or susceptible subpopulations.

(v) How and where a product or article containing the new chemical substance would be used (*e.g.*, spray applied indoors, brushed on outdoor surfaces).

(vi) Consumption rates and frequency and duration of use of products or articles containing the new chemical substance.

(2) Using the applicable codes listed in Table 1 to paragraph (f)(2), submitters must designate the consumer and commercial product category or categories that best describe the consumer and commercial products in which the new chemical substance is intended or known to be used. When more than 10 codes apply to the consumer or commercial products in which the new chemical substance is intended or known to be used, submitters should only designate the 10 product categories that represent the highest proportion of the anticipated production volume.

TABLE 1 TO PARAGRAPH (f)(2)—CODES FOR REPORTING CONSUMER AND COMMERCIAL PRODUCT CATEGORIES

Code	Category
Chemical Substances in Furnishing, Cleaning, Treatment Care Products	
CC101	Construction and building materials covering large surface areas including stone, plaster, cement, glass and ceramic articles; fabrics, textiles, and apparel.
CC102	Furniture & furnishings including plastic articles (soft); leather articles.
CC103	Furniture & furnishings including stone, plaster, cement, glass, and ceramic articles; metal articles; or rubber articles.
CC104	Leather conditioner.
CC105	Leather tanning, dye, finishing, impregnation, and care products.

TABLE 1 TO PARAGRAPH (f)(2)—CODES FOR REPORTING CONSUMER AND COMMERCIAL PRODUCT CATEGORIES—
Continued

Code	Category
CC106	Textile (fabric) dyes.
CC107	Textile finishing and impregnating/surface treatment products.
CC108	All-purpose foam spray cleaner.
CC109	All-purpose liquid cleaner/polish.
CC110	All-purpose liquid spray cleaner.
CC111	All-purpose waxes and polishes.
CC112	Appliance cleaners.
CC113	Drain and toilet cleaners (liquid).
CC114	Powder cleaners (floors).
CC115	Powder cleaners (porcelain).
CC116	Dishwashing detergent (liquid/gel).
CC117	Dishwashing detergent (unit dose/granule).
CC118	Dishwashing detergent liquid (hand-wash).
CC119	Dry cleaning and associated products.
CC120	Fabric enhancers.
CC121	Laundry detergent (unit-dose/granule).
CC122	Laundry detergent (liquid).
CC123	Stain removers.
CC124	Ion exchangers.
CC125	Liquid water treatment products.
CC126	Solid/Powder water treatment products.
CC127	Liquid body soap.
CC128	Liquid hand soap.
CC129	Solid bar soap.
CC130	Air fresheners for motor vehicles.
CC131	Continuous action air fresheners.
CC132	Instant action air fresheners.
CC133	Anti-static spray.
CC134	Apparel finishing, and impregnating/surface treatment products.
CC135	Insect repellent treatment.
CC136	Pre-market waxes, stains, and polishes applied to footwear.
CC137	Post-market waxes, and polishes applied to footwear (shoe polish).
CC138	Waterproofing and water-resistant sprays.
Chemical Substances in Construction, Paint, Electrical, and Metal Products	
CC201	Fillers and putties.
CC202	Hot-melt adhesives.
CC203	One-component caulks.
CC204	Solder.
CC205	Single-component glues and adhesives.
CC206	Two-component caulks.
CC207	Two-component glues and adhesives.
CC208	Adhesive/Caulk removers.
CC209	Aerosol spray paints.
CC210	Lacquers, stains, varnishes, and floor finishes.
CC211	Paint strippers/removers.
CC212	Powder coatings.
CC213	Radiation curable coatings.
CC214	Solvent-based paint.
CC215	Thinners.
CC216	Water-based paint.
CC217	Construction and building materials covering large surface areas, including wood articles.
CC218	Construction and building materials covering large surface areas, including paper articles; metal articles; stone, plaster, cement, glass, and ceramic articles.
CC219	Machinery, mechanical appliances, electrical/electronic articles.
CC220	Other machinery, mechanical appliances, electronic/electronic articles.
CC221	Construction and building materials covering large surface areas, including metal articles.
CC222	Electrical batteries and accumulators.
Chemical Substances in Packaging, Paper, Plastic, Toys, Hobby Products	
CC301	Packaging (excluding food packaging), including paper articles.
CC302	Other articles with routine direct contact during normal use, including paper articles.
CC303	Packaging (excluding food packaging), including rubber articles; plastic articles (hard); plastic articles (soft).
CC304	Other articles with routine direct contact during normal use including rubber articles; plastic articles (hard).
CC305	Toys intended for children's use (and child dedicated articles), including fabrics, textiles, and apparel; or plastic articles (hard).
CC306	Adhesives applied at elevated temperatures.
CC307	Cement/concrete.
CC308	Crafting glue.
CC309	Crafting paint (applied to body).

TABLE 1 TO PARAGRAPH (f)(2)—CODES FOR REPORTING CONSUMER AND COMMERCIAL PRODUCT CATEGORIES—Continued

Code	Category
CC310	Crafting paint (applied to craft).
CC311	Fixatives and finishing spray coatings.
CC312	Modelling clay.
CC313	Correction fluid/tape.
CC314	Inks in writing equipment (liquid).
CC315	Inks used for stamps.
CC316	Toner/Printer cartridge.
CC317	Liquid photographic processing solutions.
Chemical Substances in Automotive, Fuel, Agriculture, Outdoor Use Products	
CC401	Exterior car washes and soaps.
CC402	Exterior car waxes, polishes, and coatings.
CC403	Interior car care.
CC404	Touch up auto paint.
CC405	Degreasers.
CC406	Liquid lubricants and greases.
CC407	Paste lubricants and greases.
CC408	Spray lubricants and greases.
CC409	Anti-freeze liquids.
CC410	De-icing liquids.
CC411	De-icing solids.
CC412	Lock deicers/releasers.
CC413	Cooking and heating fuels.
CC414	Fuel additives.
CC415	Vehicular or appliance fuels.
CC416	Explosive materials.
CC417	Agricultural non-pesticidal products.
CC418	Lawn and garden care products.
Chemical Substances in Products not Described by Other Codes	
CC980	Other (specify).
CC990	Non-TSCA use.

(g) For sites controlled by the submitter:

(1) The identity and address of each site where the new chemical substance will be manufactured, processed, or used.

(2) A process description of each manufacture, processing, and use operation which includes a diagram of the major unit operations and chemical conversions; indication of whether batch or continuous manufacturing or processing occurs at the site, and the amount manufactured or processed per batch or per day if continuous and per year; the identity, approximate weight per batch or per day for continuous production, and entry point of all starting materials and feedstocks (including reactants, solvents, catalysts, etc.); the identity, approximate weight per batch or per day for continuous production, and entry point of all products, recycle streams, and wastes, including frequency of any equipment cleaning; the type of interim storage and transport containers used; and the points of release of the new chemical substance numbered. If the new chemical substance is released to two media at the same step in the process,

assign a second number for the second medium.

(3) Worker exposure information for each worker activity anticipated or known to occur during manufacture, processing, or use of the new chemical substance, including worker exposure information from exempt manufacture or related use of the new chemical substance under § 720.30. This information includes:

(i) A description of each worker activity.

(ii) Type of potential worker exposure (e.g., dermal, inhalation).

(iii) Protective equipment in place, if any, including a description of the kind of gloves, protective clothing, goggles, or respirator that limit worker exposure.

(iv) Engineering controls in place, if any.

(v) Physical form of the new chemical substance to which workers may be exposed and moisture content if physical form is solid.

(vi) The percent of new chemical substance in formulation at time of worker exposure.

(vii) The number of workers reasonably likely to be exposed.

(viii) The duration of activities.

(4) Information on known or anticipated release of the new chemical substance to the environment, including releases from the exempt manufacture or related use of the new chemical substance under § 720.30. This information includes the type of release (e.g., transport, interim storage, disposal, equipment cleaning), the quantity of the new chemical substance released directly to the environment, the quantity of the new chemical substance released into control technology, the quantity of the new chemical substance released to the environment after control technology, the media of release, the type of control technology used, and the following additional information based on the type of release:

(i) For equipment cleaning releases, frequency of equipment cleaning and what is used to clean the equipment.

(ii) For transport and storage releases, how the new chemical substance or product containing the new chemical substance is transported from the site and stored, whether dedicated containers are used, whether the cleaning and disposal of the containers is under the submitter's control, the container cleaning method, the

frequency of container cleaning, and the amount of release per container cleaning.

(iii) For releases into air, Clean Air Act operating permit numbers, a description of any Leak Detection and Repair program in accordance with 40 CFR parts 60, 61, 63, 65, 264 or 265 (related to the monitoring and management of fugitive releases) the site has implemented, and the type of air pollution control technologies used at the site to treat the stack releases that will contain the new chemical substance.

(iv) For releases into water, the National Pollutant Discharge Elimination System (NPDES) permit number(s), outfall numbers, the name(s) of the waterbody into which the release occurs, and other destination(s) into which the release occurs.

(v) For releases into wastewater treatment plants, the name(s) of the publicly owned treatment works (POTW) or privately owned treatment works into which the release occurs and the corresponding NPDES permit number(s), the type of wastewater treatment technology or technologies employed, and a description of the known or expected treatment efficiency.

(h) For sites not controlled by the submitter:

(1) The identity and address of each site where the new chemical substance will be manufactured, processed, or used.

(2) A description of each type of processing and use operation involving the new chemical substance, including identification of the estimated number of processing or use sites; a process description of each operation which includes a diagram of the major unit operations and chemical conversions; the identity, approximate weight per batch or per day for continuous production, and entry point of all starting materials and feedstocks (including reactants, solvents, catalysts, etc.); the identity, approximate weight per batch or per day for continuous production, and entry point of all products, recycle streams, and wastes, including frequency of any equipment cleaning; the type of interim storage and transport containers used; and the points of release of the new chemical substance numbered. If the new chemical substance is released to two media at the same step in the process, assign a second number for the second medium.

(3) Worker exposure information for each worker activity anticipated or known to occur during manufacture, processing, or use of the new chemical substance, including worker exposure

information from exempt manufacture or related use of the new chemical substance under § 720.30. This information includes:

(i) A description of each worker activity.

(ii) Type of potential worker exposure (e.g., dermal, inhalation).

(iii) Protective equipment in place, if any, including a description of the kind of gloves, protective clothing, goggles, or respirator that limit worker exposure, if any.

(iv) Engineering controls in place if any.

(v) Physical form of the new chemical substance to which workers may be exposed and moisture content if physical form is solid.

(vi) The percent of the new chemical substance in formulation at time of worker exposure.

(vii) The number of workers reasonably likely to be exposed.

(viii) The duration of activities.

(4) Information on known or anticipated release of the new chemical substance to the environment, including releases from the exempt manufacture or related use of the new chemical substance under § 720.30. This information includes the type of release (e.g., transport, interim storage, disposal, equipment cleaning), the quantity of the new chemical substance released directly to the environment, the quantity of the new chemical substance released into control technology, the quantity of the new chemical substance released to the environment after control technology, the media of release, the type of control technology used, and the following additional information based on the type of release:

(i) For equipment cleaning releases, frequency of equipment cleaning and what is used to clean the equipment.

(ii) For transport and storage releases, how the new chemical substance or product containing the new chemical substance will be transported from the site and stored, whether dedicated containers are used, whether the cleaning and disposal of the containers is under the submitter's control, the container cleaning method, the frequency of container cleaning, and the amount of release of the new chemical substance per container cleaning.

(iii) For releases into air, Clean Air Act operating permit numbers, a description of any Leak Detection and Repair program in accordance with 40 CFR parts 60, 61, 63, 65, 264 or 265 (related to the monitoring and management of fugitive releases) the site has implemented, and the type of air pollution control technologies used at the site to treat the stack releases that

will contain the new chemical substance.

(iv) For releases into water, the National Pollutant Discharge Elimination System (NPDES) permit number(s), outfall numbers, the name(s) of the waterbody into which the release occurs, and other destination(s) into which the release occurs.

(v) For releases into wastewater treatment plants, the name(s) of the publicly owned treatment works (POTW) or privately owned treatment works into which the release occurs and the corresponding NPDES permit number(s), the type of wastewater treatment technology or technologies employed, and a description of the known or expected treatment efficiency.

* * * * *

(j) The physical and chemical properties and environmental fate characteristics of the new chemical substance, which include the following:

(1) For physical and chemical properties, such information includes boiling point, sublimation, density/relative density, dissociation constant, explosibility, flammability, melting point, octanol/water partition coefficient, particle size distribution, particle size distribution analysis (i.e., analysis method and data used to develop the particle size distribution), the physical state of the neat substance, pH, solubility, vapor pressure, volatilization from water, volatilization from soil, spectra, UV-VIS absorption data, and surface tension.

(2) For environmental fate characteristics, such information includes hydrolysis, photolysis, aerobic and anaerobic biodegradation, atmospheric oxidation half-lives, Henry's law constant, adsorption/desorption coefficient, bioaccumulation or bioconcentration factor, Incineration Removal Efficiency (Destruction and Removal Efficiencies or DREs), and Sewage Treatment (WWTP) Removals.

(k) Information about pollution prevention efforts, such as using alternative fuel sources, reducing the use of water and chemical inputs, modifying a production process to produce less waste, or implementing water and energy conservation practices, or substituting for riskier existing products. Inclusion of this information is optional.

■ 13. Amend § 720.50 by revising paragraphs (a)(4)(ii) and adding paragraph (c) to read as follows:

§ 720.50 Submission of test data and other data concerning the health and environmental effects of a substance.

(a) * * *

(4) * * *

(ii) If a test or experiment is completed before the applicable review period ends, the person must submit the study, report, or test data electronically to EPA via CDX, as specified in paragraph (a)(3)(i) of this section, within ten days of receiving it, but no later than five days before the end of the review period. If the test or experiment is completed during the last five days of the review period, the submitter must inform its EPA contact for that notice by telephone or e-mail prior to the end of the review period and submit the study, report, or test data electronically to EPA via CDX.

* * * * *

(c) *Other information.* A person may submit other information, not otherwise required in this section, to facilitate EPA's review of the notice.

* * * * *

■ 14. Revise § 720.65 to read as follows:

§ 720.65 Acknowledgement of receipt of a notice; errors in the notice; incomplete submissions; and false and misleading statements.

(a) *Notification to the submitter.* (1) EPA will acknowledge receipt of each notice by sending a letter via CDX or U.S. mail to the submitter that identifies the premanufacture notice number assigned to the new chemical substance and date on which the applicable review period begins as described in paragraph (a)(2) of this section.

(2) Before EPA sends an acknowledgement of receipt of a notice pursuant to paragraph (a)(1) of this section, EPA will conduct a pre-screen of the notice, typically taking 2–3 days and according to the criteria under paragraphs (b)(1) and (c)(1) of this section.

(i) If EPA concludes that the notice contains errors warranting remedy or is incomplete, EPA will notify the submitter according to paragraph (d)(3) of this section. The applicable review period will not begin. Once the submitter corrects the errors or incomplete submission according to the requirements provided by EPA and re-submits the notice to EPA, EPA will follow the procedures of paragraph (a)(2) of this section.

(ii) If EPA does not identify errors or determine the notice to be incomplete during screening, EPA will notify the submitter according to paragraph (a)(1) of this section. The applicable review period will begin on the date EPA received the complete notice.

(b) *Errors in the notice.* (1) Within 30 days of receipt of the notice, EPA may request that the submitter remedy errors in the notice. The following are examples of such errors:

(i) Typographical errors that cause data to be misleading or answers to any questions to be unclear.

(ii) Contradictory information.

(iii) Ambiguous statements or information.

(2) The applicable review period does not begin for notices containing errors that EPA asks the submitter to remedy until corrections are made following the procedures of paragraph (d) of this section.

(c) *Incomplete submissions.* (1) A submission is not complete, and the applicable review period does not begin, if:

(i) The wrong person submits the notice form.

(ii) The submitter does not sign the notice form.

(iii) Some or all of the information in the notice or the attachments are not in English, except for published scientific literature.

(iv) The submitter does not submit the notice in the manner set forth in § 720.40(a)(2).

(v) The submitter does not provide information that is required by section 5(d)(1)(B) and (C) of the Act and § 720.50.

(vi) The submitter does not provide information required by § 720.45 or indicate that it is not known to or reasonably ascertainable by the submitter.

(vii) The submitter does not submit a second copy of the submission with all confidential information deleted for the public file, as required by § 703.5(c).

(viii) The submitter does not include any information required by section 5(b)(1) of the Act and pursuant to a rule promulgated under section 4 of the Act, as required by § 720.40(g).

(ix) The submitter does not submit data which the submitter believes show that the chemical substance will not present an unreasonable risk of injury to health or the environment, if EPA has listed the chemical substance under section 5(b)(4) of the Act, as required in § 720.40(h).

(x) The submitter does not include an identifying number and a payment identity number as required by § 700.45(e)(3).

(2) The submission may be declared incomplete if at any time during the applicable review period the submitter submits additional or revised information without demonstrating to EPA's satisfaction that the additional or revised information in the amended notice was not known to or reasonably ascertainable by the submitter at the time of initial notice submission (e.g., new information as described in § 720.40(f) or information from testing

in progress at the time of the original submission, as described in § 720.50(a)(4)), unless it relates to administrative or non-substantive amendments (e.g., changing the technical point of contact) or amendments made at the request of EPA.

(d) *Corrections to errors in the notice or incomplete submissions.* (1) If EPA receives an incomplete submission or seeks remedy of errors identified in a notice, EPA will notify the submitter within 30 days of receipt that the submission contains errors or is incomplete and that the applicable review period will not begin until EPA receives a correct and complete notice.

(2) If EPA obtains additional information during the applicable review period that indicates the original submission was incomplete, EPA may declare the submission incomplete within 30 days after EPA obtains the additional information and so notify the submitter.

(3) The notification that a submission contains errors or is incomplete under paragraph (d)(1) or (2) of this section will include:

(i) A statement of the basis of EPA's determination that the submission contains errors or is incomplete.

(ii) The requirements for correcting the errors or incomplete submission.

(iii) Information on procedures under paragraph (d)(4) of this section for filing objections to the determination or requesting modification of the requirements for completing the submission.

(4) Within ten days after receipt of notification by EPA that a submission contains errors or is incomplete, the submitter may file written objections requesting that EPA accept the submission as a complete notice or modify the requirements necessary to complete the submission.

(5) EPA will consider the objections filed by the submitter and determine:

(i) Whether the submission was complete or incomplete, or whether to modify the requirements for completing the submission. EPA will notify the submitter in writing of EPA's response within ten days of receiving the objections.

(ii) If EPA determines, in response to the objection, that the submission was complete, the applicable review period will be deemed suspended on the date EPA declared the notice incomplete and will resume on the date that the notice is declared complete. The submitter need not correct the notice as EPA originally requested. If EPA can complete its review within 90 days from the date of the original submission, EPA

may inform the submitter that the running of the review period will resume on the date EPA originally declared it incomplete.

(iii) If EPA modifies the requirements for completing the submission or affirms its original determination that the submission contains errors or is incomplete, or if no objections are filed, the applicable review period will begin (or if previously begun, will restart at Day 1) when EPA receives a complete notice.

(e) *Materially false or misleading statements.* If EPA discovers at any time that a person submitted materially false or misleading statements in the notice, EPA may find that the notice was incomplete from the date it was submitted and take any other appropriate action.

■ 15. Amend § 720.70 by revising paragraphs (a) and (b)(3) to read as follows:

§ 720.70 Notice in the Federal Register.

(a) *Filing notice of receipt.* In accordance with section 5(d)(2) of the Act, after EPA has received a complete notice, EPA will file a notice of receipt with the Office of the Federal Register including the information specified in paragraph (b) of this section.

(b) * * *

(3) For test data submitted in accordance with § 720.40(g), a summary of the data received will be published.

* * *

■ 16. Amend § 720.75 by:

- a. Revising the section heading;
- b. Removing the phrase “notice review period” and adding in its place the phrase “applicable review period,” wherever it appears; and
- c. Revising paragraphs (a), (b), (c)(4) introductory text, (c)(4)(iii), and (d).

The revisions read as follows:

§ 720.75 Applicable review period and determination.

(a) *Length of applicable review period.* The applicable review period specified in section 5(a) of the Act runs for 90 days from the date EPA receives a complete notice, or the date EPA determines the notice is complete under § 720.65(d), unless the Agency extends the applicable review period under section 5(c) of the Act and paragraph (c) of this section.

(b) *Suspension of the running of the applicable review period.* (1) A submitter may voluntarily suspend the running of the applicable review period if EPA agrees. If EPA does not agree, the review period will continue to run, and EPA will notify the submitter. A submitter may request a suspension at any time during the applicable review

period. The suspension must be for a specified period of time.

(2) *Requests for suspensions.* (i) A request for a suspension of 30 days or less may be made orally, including by telephone, or in writing, including by e-mail, to the submitter's EPA contact for that notice. Any request for a suspension exceeding 30 days must be submitted in the manner set forth in paragraph (b)(2)(ii) of this section. The running of the applicable review period will be suspended upon approval of the oral or written request by EPA.

(ii) Requests for suspensions exceeding 30 days must be submitted electronically to EPA via CDX using e-PMN software. Requests for suspensions of 30 days or less may also be submitted electronically to EPA via CDX using e-PMN software. See § 720.40(a)(2)(ii) for information on how to access the e-PMN software. The running of the applicable review period will be suspended upon approval of the request submitted electronically to EPA via CDX using e-PMN software by EPA.

(c) * * *

(4) The following are examples of situations in which EPA may find that good cause exists for extending the applicable review period:

* * *

(iii) EPA has received significant additional information during the applicable review period, which was not known to or reasonably ascertainable by the submitter at the time of initial notice submission.

(d) *Determinations.* (1) Within the applicable review period, EPA will make one of the following five determinations, as set forth in section 5(a)(3) of the Act:

(i) The chemical substance presents an unreasonable risk of injury to health or the environment, as set forth in section 5(a)(3)(A) of the Act.

(ii) Information available to EPA is insufficient to permit a reasoned evaluation of the health and the environmental effects of the relevant chemical substance, as set forth in section 5(a)(3)(B)(i) of the Act.

(iii) In the absence of sufficient information to permit EPA to make such an evaluation, the chemical substance may present an unreasonable risk of injury to health or the environment, as set forth in section 5(a)(3)(B)(ii)(I) of the Act.

(iv) The chemical substance is or will be produced in substantial quantities, and such substance either enters or may reasonably be anticipated to enter the environment in substantial quantities or there is or may be significant or substantial human exposure to the

substance, as set forth in section 5(a)(3)(B)(ii)(II) of the Act.

(v) The chemical substance is not likely to present an unreasonable risk of injury to health or the environment, as set forth in section 5(a)(3)(C) of the Act.

(2) EPA will take the following actions required in association with the determination:

(i) For determinations described in paragraph (d)(1)(i) of this section, EPA will issue the submitter an order to prohibit or limit the manufacture, processing, distribution in commerce, use, or disposal of the chemical substance, or any combination of such activities, to the extent necessary to protect against an unreasonable risk of injury to health or the environment, as set forth in section 5(f) of the Act, or will issue a proposed rule under section 6(a) of the Act, as set forth in section 5(f) of the Act.

(ii) For determinations described in paragraphs (d)(1)(ii), (iii), or (iv) of this section, EPA will issue the submitter an order to prohibit or limit the manufacture, processing, distribution in commerce, use, or disposal of the chemical substance, or any combination of such activities, to the extent necessary to protect against an unreasonable risk of injury to health or the environment, as set forth in section 5(e) of the Act. EPA may issue an order under section 5(e) of the Act that requires certain testing to be conducted and presented to EPA after the applicable review period has concluded.

(iii) For determinations described in paragraph (d)(1)(v) of this section, EPA will issue the submitter a document containing EPA's final determination and will submit for publication in the **Federal Register** a statement of the finding, as set forth in section 5(g) of the Act. Upon EPA's issuance of the determination document, the submitter may commence the manufacture of the chemical substance without waiting for the end of the applicable review period.

(3) EPA may modify or revoke the prohibitions and limitations in an order issued under paragraph (d)(2)(i) or (ii) of this section after the applicable review period has ended if EPA receives additional testing, studies, reports, or other information that EPA determines, upon review, demonstrate that such prohibitions or limitations are no longer necessary to protect against an unreasonable risk of injury to health or the environment. Where such information demonstrates that the prohibitions or limitations of the order are not sufficient to protect against an unreasonable risk of injury to health or the environment, EPA may modify the order or take other action, as

appropriate, to the extent necessary to protect against such risk.

(4) No person submitting a notice in response to the requirements of this part may manufacture a chemical substance subject to this part until EPA has issued a determination in accordance with paragraph (d)(1) of this section and taken the associated action required under paragraph (d)(2) of this section.

* * * * *

PART 721—SIGNIFICANT NEW USES OF CHEMICAL SUBSTANCES

■ 17. The authority citation for part 721 continues to read as follows:

Authority: 15 U.S.C. 2604, 2607, and 2625(c).

■ 18. Amend § 721.25 by:

- a. Revising paragraph (d); and
- b. Adding paragraph (e).

The revisions and additions read as follows:

§ 721.25 Notice requirements and procedures.

* * * * *

(d) Any person submitting a significant new use notice in response to the requirements of this part shall not manufacture or process a chemical substance identified in subpart E of this part for a significant new use until EPA has issued a determination with respect to the significant new use and taken the actions required in association with that determination in accordance with the procedures for new chemical substances at § 720.75(d) of this chapter.

(e) When submitting a significant new use notice, in addition to providing a description of the intended categories of consumer or commercial use by function and application as required by § 720.45(f)(1) of this chapter, the submitter must also provide, to the extent known to or reasonably ascertainable by the submitter, a description of known categories of consumer or commercial use by function and application.

■ 19. Amend §§ 721.10647(a)(1), 721.10844(a)(1), 721.10929(a)(1), 721.11149(a)(1), 721.11179(a)(1), 721.11361(a)(1)(iii), and 721.11712(a)(1) by revising the citation “720.3(c)” to read “720.3.”

■ 20. Amend § 721.11777(b) by revising the citations “720.3(w)” and “720.3(d)” to read “720.3.”

PART 723—PREMANUFACTURE NOTIFICATION EXEMPTIONS

■ 21. The authority citation for part 723 continues to read as follows:

Authority: 15 U.S.C. 2604.

■ 22. Amend § 723.50 by:

- a. Revising paragraphs (a)(1);
- b. Adding paragraphs (b)(11) and (12);
- c. Revising paragraphs (d);
- d. Adding paragraphs (e)(2)(xiv);
- e. Revising paragraphs (e)(3), (g), (h)(2)(v), and (i); and
- f. Adding paragraph and (p).

The revisions and additions read as follows:

§ 723.50 Chemical substances manufactured in quantities of 10,000 kilograms or less per year, and chemical substances with low environmental releases and human exposures.

(a) * * *

(1) This section grants an exemption from the premanufacture notice requirements of section 5(a)(1)(A)(i) of the Toxic Substances Control Act (15 U.S.C. 2604(a)(1)(A)) for the manufacture of:

* * * * *

(b) * * *

(11) *PFAS or per- and poly-fluoroalkyl substance* means a chemical substance that contains at least one of these three structures:

(i) R–(CF₂)–CF(R′)R″, where both the CF₂ and CF moieties are saturated carbons;

(ii) R–CF₂OCF₂–R′, where R and R′ can either be F, O, or saturated carbons; or

(iii) CF₃C(CF₃)R′R″, where R′ and R″ can either be F or saturated carbons.

(12) *PBT chemical substance* means a chemical substance possessing characteristics of persistence (P) in the environment, accumulation in biological organisms (bioaccumulation (B)), and toxicity (T) resulting in potential risks to humans and ecosystems. For more information on EPA’s Policy on new chemical substances that are PBTs, see EPA’s 1999 policy statement (64 FR 60194, November 4, 1999 (FRL–6097–7)).

* * * * *

(d) *Chemical substances that cannot be manufactured under this exemption.* A new chemical substance cannot be manufactured under this section, notwithstanding satisfaction of the criterion of paragraph (c)(1) or (2) of this section, if EPA determines, in accordance with paragraph (g) of this section, that the substance, any reasonably anticipated metabolites, environmental transformation products, or byproducts of the substance, or any reasonably anticipated impurities in the substance, under anticipated conditions of manufacture, processing, distribution in commerce, use, or disposal of the new chemical substance:

(1) May cause:

(i) Serious acute (lethal or sublethal) effects;

(ii) Serious chronic (including carcinogenic and teratogenic) effects; or

(ii) Significant environmental effects.

(2) Or is:

(i) A PFAS.

(ii) A PBT chemical substance with anticipated environmental releases and potentially unreasonable exposures to humans or environmental organisms.

* * * * *

(e) * * *

(2) * * *

(xiv) Physical and chemical properties and environmental fate characteristics (§ 720.45(j)).

(3) *Incomplete notices.* EPA will conduct a pre-screen of the notice, typically taking 2–3 days and according to the criteria under paragraph (e)(2) of this section. If EPA concludes that the notice is incomplete, EPA will notify the submitter and the review period will not begin. Once the submitter corrects the errors or incomplete submission according to the requirements provided by EPA and re-submits the notice to EPA, the review period will begin. If EPA does not identify errors or determine the notice to be incomplete during screening, the review period will begin on the date EPA received the complete notice.

* * * * *

(g) *Review period.* (1) EPA will review the notice submitted under paragraph (e) of this section to determine whether manufacture of the new chemical substance is eligible for the exemption. The review period will run for 30 days from the date EPA receives a complete notice. To provide additional time to address any unresolved issues concerning an exemption application, the exemption applicant may, at any time during the review period, request a suspension of the review period pursuant to the provisions of § 720.75(b) of this chapter.

(2) No person submitting a notice under paragraph (e) of this section may manufacture the new chemical substance until EPA notifies the submitter that the new chemical substance meets the terms of this section.

(h) * * *

(2) * * *

(v) If the Agency determines that manufacture of the new chemical substance does not meet the terms of this section and that the manufacturer did not act with due diligence and in good faith to meet the terms of this section, the manufacturer must cease any continuing manufacture, processing, distribution in commerce, and use of the new chemical substance within 7 days of the written notification

under paragraph (h)(2)(iii) of this section. The manufacturer may not resume manufacture, processing, distribution in commerce, and use of the new chemical substance until it submits a notice under section 5(a)(1) of the Act and part 720 of this chapter and EPA has made one of the five determinations as set forth in section 5(a)(3) of the Act and taken the action required in association with that determination.

* * * * *

(i) *Additional information.* If the manufacturer of a new chemical substance under the terms of this exemption obtains test data or other information indicating that the new chemical substance may not qualify under terms of this section, the manufacturer must submit these data or information to EPA within 15 working days of receipt of the information. If, during the notice review period specified in paragraph (g) of this section, the submitter obtains possession, control, or knowledge of new information that materially adds to, changes, or otherwise makes significantly more complete the information included in the notice, the submitter must submit that information to EPA within ten days of receiving the new information, but no later than five days before the end of the applicable review period. The new information must be submitted electronically to EPA via CDX and must clearly identify the submitter and the exemption notice to which the new information is related. If the new information becomes available during the last 5 days of the notice review period, the submitter must immediately inform its EPA contact for that notice by telephone or e-mail and submit the new information electronically to EPA via CDX.

* * * * *

(p) *Subject to a significant new use rule or listed on TSCA Inventory.* If a significant new use rule is proposed or finalized in part 721 of this chapter for a chemical substance described by a generic chemical name or if the specific chemical identity of a chemical substance is listed on the confidential portion of the TSCA Inventory, EPA may make reasonable efforts to notify any persons who may also manufacture the same chemical substance under the terms of this section. A disclosure to a person with an approved exemption under this section that the chemical substance is subject to a proposed or final rule in part 721 of this chapter or is listed on the confidential portion of the TSCA Inventory will not be considered public disclosure of confidential business information under

section 14 of the Act. The notification will inform manufacturers subject to the terms of this section that the chemical substance is subject to a proposed or final significant new use rule under section 5(a)(2) of the Act or is listed on the TSCA Inventory, and identify the proposed or final section in subpart E of part 721 of this chapter that pertains to the chemical substance or the generic name for that substance listed on the public portion of the TSCA Inventory, as applicable.

PART 725—REPORTING REQUIREMENTS AND REVIEW PROCESSES FOR MICROORGANISMS

■ 23. The authority citation for part 725 continues to read as follows:

Authority: 15 U.S.C. 2604, 2607, 2613, and 2625.

■ 24. Amend § 725.8(c)(1) by revising the citation “720.3(e)” to read “720.3.”

■ 25. Amend § 725.54 by revising paragraphs (b)(1), (c) and (d) to read as follows:

§ 725.54 Suspension of the review period.

* * * * *

(b)(1) *Request for suspension.* A request for suspension may only be submitted in a manner set forth in this paragraph. The request for suspension also may be made orally, including by telephone, or in writing, including by e-mail, to the submitter's EPA contact for that notice, subject to paragraph (c) of this section.

* * * * *

(c) An oral or written request for suspension may be granted by EPA for a maximum of 30 days only. Requests for longer suspension must only be submitted in the manner set forth in paragraph (b)(2) of this section.

(d) If the submitter has not made a previous oral or written request, the running of the applicable review period is suspended as of the date of receipt of the CDX submission by EPA.

■ 26. Amend § 725.60 by revising paragraph (a)(1) to read as follows:

§ 725.60 Withdrawal of submission by the submitter.

(a)(1) *Withdrawal of notice by the submitter.* A submitter may withdraw a notice during the applicable review period by submitting a statement of withdrawal in a manner set forth in this paragraph. The withdrawal is effective upon receipt of the CDX submission by EPA.

* * * * *

■ 27. Amend § 725.170 by:

- a. Revising paragraphs (a) and (b); and
- b. Removing paragraph (c).

The revisions read as follows.

§ 725.170 EPA review of the MCAN.

* * * * *

(a) *Length of the review period.* The MCAN review period specified in section 5(a) of the Act runs for 90 days from the date EPA receives a complete MCAN, or the date EPA determines the MCAN is complete under § 725.33, unless the Agency extends the period under section 5(c) of the Act and § 725.56.

(b) *Determinations.* (1) Within the applicable review period, EPA will make one of the following five determinations on the microorganism, as set forth in section 5(a)(3) of the Act:

(i) The microorganism presents an unreasonable risk of injury to health or the environment, as set forth in section 5(a)(3)(A) of the Act.

(ii) Information available to EPA is insufficient to permit a reasoned evaluation of the health and the environmental effects of the microorganism, as set forth in section 5(a)(3)(B)(i) of the Act.

(iii) In the absence of sufficient information to permit EPA to make such an evaluation, the microorganism may present an unreasonable risk of injury to health or the environment, as set forth in section 5(a)(3)(B)(ii)(I) of the Act.

(iv) The microorganism is or will be produced in substantial quantities, and such substance either enters or may reasonably be anticipated to enter the environment in substantial quantities or there is or may be significant or substantial human exposure to the substance, as set forth in section 5(a)(3)(B)(ii)(II) of the Act.

(v) The microorganism is not likely to present an unreasonable risk of injury to health or the environment, as set forth in section 5(a)(3)(C) of the Act.

(2) EPA will take the following actions required in association with the determination.

(i) For determinations described in paragraph (b)(1)(i) of this section, EPA will issue the submitter an order to prohibit or limit the manufacture, processing, distribution in commerce, use, or disposal of the microorganism, or any combination of such activities, to the extent necessary to protect against an unreasonable risk of injury to health or the environment, as set forth in section 5(f) of the Act, or will issue a proposed rule under section 6(a) of the Act, as set forth in section 5(f) of the Act.

(ii) For determinations described in paragraphs (b)(1)(ii), (iii), or (iv), EPA will issue the submitter an order to prohibit or limit the manufacture, processing, distribution in commerce,

use, or disposal of the microorganism, or any combination of such activities, to the extent necessary to protect against an unreasonable risk of injury to health or the environment, as set forth in section 5(e) of the Act. EPA may issue an order under section 5(e) of the Act that requires certain testing to be conducted and presented to EPA after the applicable review period has concluded.

(iii) Following determinations described in paragraph (b)(1)(v) of this section, EPA will issue the submitter a document containing EPA's final determination and will submit for publication in the *Federal Register* a statement of the finding, as set forth in section 5(g) of the Act. Upon EPA's issuance of the determination document, the submitter may commence the manufacture of the microorganism without waiting for the end of the applicable review period.

(3) EPA may modify or revoke the prohibitions and limitations in an order issued under paragraph (b)(2)(i) or (ii) of this section after the applicable review period has ended if EPA receives additional information, testing, studies, or reports that EPA determines, upon review, demonstrate that such prohibitions or limitations are no longer necessary to protect against an unreasonable risk of injury to health or the environment. Where such information demonstrates that the prohibitions or limitations of the order are not sufficient to protect against an unreasonable risk of injury to health or the environment, EPA may modify the order or take other action, as appropriate, to the extent necessary to protect against such risk.

(4) No person submitting an MCAN in response to the requirements of this subpart may manufacture a microorganism subject to this subpart until EPA has issued a determination in accordance with paragraph (b)(1) of this section and taken the associated action required under paragraph (b)(2) of this section.

* * * * *

PART 761—POLYCHLORINATED BIPHENYLS (PCBs) MANUFACTURING, PROCESSING, DISTRIBUTION IN COMMERCE, AND USE PROHIBITIONS

■ 28. The authority citation for part 761 continues to read as follows:

Authority: 15 U.S.C. 2605, 2607, 2611, 2614, and 2616.

■ 29. In § 761.3 amend the definition for "Importer" by removing the citation

"§ 720.3(l)" and adding in its place "§ 720.3."

* * * * *

[FR Doc. 2024–28870 Filed 12–17–24; 8:45 am]

BILLING CODE 6560–50–P

DEPARTMENT OF TRANSPORTATION

Office of the Secretary

49 CFR Part 37

[Docket No. DOT–OST–2024–0090]

RIN 2105–AF05

Transportation for Individuals With Disabilities; Adoption of Accessibility Standards for Pedestrian Facilities in the Public Right-of-Way

AGENCY: Office of the Secretary (OST), U.S. Department of Transportation (DOT or the Department).

ACTION: Final rule.

SUMMARY: The Department of Transportation (DOT or the Department) is amending its Americans with Disabilities Act regulations to adopt, without modification, the Architectural and Transportation Barriers Compliance Board's Accessibility Guidelines for Pedestrian Facilities in the Public Right-of-Way (PROWAG) as DOT's regulatory standards for new construction and alterations of transit stops in the public right-of-way.

DATES: This rule is effective January 17, 2025.

FOR FURTHER INFORMATION CONTACT: For general questions, Holly Ceasar-Fox, Office of the General Counsel, U.S. Department of Transportation, (202) 366–7420, holly.ceasarfox@dot.gov. For legal questions related to PROWAG, James T. Esselman, Office of Chief Counsel, Federal Highway Administration, (202) 366–6181, james.esselman@dot.gov. For legal questions related to transit, Diane Alexander, Office of Chief Counsel, Federal Transit Administration, (202) 366–3101, diane.alexander@dot.gov. For questions related to intercity or high-speed rail, Linda Martin, Federal Railroad Administration, Office of Chief Counsel, 202–689–9408, Linda.Martin@dot.gov.

Electronic Access and Filing: This document, the notice of proposed rulemaking (NPRM), all comments received, and all background material may be viewed online at www.regulations.gov using the docket number listed above. Electronic retrieval help and guidelines are available on the website. It is available 24 hours each day, 365 days each year. An electronic

copy of this document may also be downloaded from the Office of the Federal Register's website at www.federalregister.gov and the Government Publishing Office's website at www.GovInfo.gov.

SUPPLEMENTARY INFORMATION: The Americans with Disabilities Act (ADA) directs the Architectural and Transportation Barriers Compliance Board (U.S. Access Board, or the Board) to issue minimum guidelines for accessible design to guide the U.S. Department of Justice (DOJ) and the U.S. Department of Transportation (DOT) in the development of ADA accessibility standards. *See* 42 U.S.C. 12204(a). On August 8, 2023, the Board issued its final rule on Public Rights-of-Way Accessibility Guidelines (PROWAG). (88 FR 53604).

Title II of the ADA sets forth accessibility requirements applicable to public entities. Under Title II, Part B, DOT is authorized to implement the ADA relating to nondiscrimination in the provision of public transportation services. *See* 42 U.S.C. 12149(a). The ADA directs DOT to adopt standards for accessible public transportation facilities that are "consistent with" final minimum accessibility guidelines issued by the Board. *Id.* at section 12149(b). Similarly, Title III of the ADA directs DOT to adopt regulations implementing the transportation provisions of Title III, applicable to private entities that provide specified public transportation services and provides that any standards adopted under such regulations must be "consistent with" final minimum accessibility guidelines adopted by the Access Board. *Id.* at sections 12186(a), (c).

Under these authorities, DOT issued a notice of proposed rulemaking (NPRM) to adopt the PROWAG into DOT's ADA regulations on August 22, 2024 (89 FR 67922). The NPRM proposed to adopt the entirety of the PROWAG into DOT's ADA regulations but noted that DOT's independent regulatory authority under the ADA extends only to the accessibility of public transportation facilities. *See* 42 U.S.C. 12149(a), 12186(a), (c). As a result, the NPRM proposed that in adopting the PROWAG into DOT's ADA regulations, DOT will apply only those provisions applicable to new construction and alterations of transit stops in the public right-of-way. PROWAG R210 requires transit stops and transit shelters to comply with technical requirements set forth in PROWAG R309. Elements required to be accessible under PROWAG R309 include the boarding and alighting area

at a sidewalk or street-level transit stop or the boarding platform, pedestrian access routes (PARs) that connect altered boarding and alighting areas or altered boarding platforms with existing pedestrian circulation paths, and, if provided, transit shelters and PARs connecting transit shelters with boarding and alighting areas or boarding platforms. Other PROWAG provisions applicable to transit stops in the public right-of-way include: fare vending machines (R210); operable parts of other fixed elements (R210); detectable warnings for boarding platforms (R205.5) and sidewalk and street-level rail boarding and alighting areas (R205.6); pedestrian signs (R208); PARs between newly constructed transit stops and accessible elements, spaces, and pedestrian facilities required to be accessible (R203.2.1); alternate transit stops (R204.2); and benches (R209.6.1).

Because DOT's independent regulatory authority under the ADA extends only to the accessibility of public transportation facilities, DOT's authority does not extend to regulating the accessibility of other separate elements of the public right-of-way, such as on-street parking spaces, crosswalks, or sidewalks, with the exception of the elements mentioned above, as applied to transit stops. Such other elements in the public right-of-way fall under the jurisdiction of the Department of Justice under Title II, Part A, of the ADA.

In addition to seeking comments on DOT's proposal to adopt PROWAG into its ADA regulations, DOT also requested comments on specific issues. First, noting that DOT's ADA standards must be "consistent with" the Access Board's PROWAG, the Department asked whether its accessibility standards should differ from the Access Board's PROWAG by adopting modifications that provide greater accessibility than the PROWAG or that clarify application of certain PROWAG provisions. Specifically, DOT requested comments on whether it should add restrictions on certain transit stop designs that locate the transit boarding and alighting area so that it coincides with vehicular lanes, including bicycle facilities. The Department expressed concern that these types of transit stop designs may impede accessibility for individuals with disabilities.

The NPRM proposed, as well, to add definitions of "transit stop," "public right-of-way," and "alteration of a transit stop" to 49 CFR 37.3. The Department also proposed that a transit stop project located in the public right-of-way on which construction has begun, or for which all approvals for

final design have been received, before the effective date of the final rule, would not be required to comply with DOT's PROWAG standards, but would otherwise be required to be readily accessible to and usable by individuals with disabilities. The Department also proposed an effective date of the final rule of 30 days after publication of the final rule.

As discussed in further detail below, DOT is proceeding with adopting the PROWAG into DOT's ADA regulations at 49 CFR part 37, without modification, as standards applicable to transit stops in the public right-of-way. In order to avoid duplication, since the entire text of the PROWAG is available in materials published by the Access Board, the Department is adopting the PROWAG into § 37.9 of the Department's ADA regulations at 49 CFR part 37 by cross-reference to 36 CFR part 1190.

Comments to the NPRM

DOT published its NPRM proposing to adopt the PROWAG into DOT's ADA regulations at 49 CFR part 37 on August 22, 2024. The comment period ended on September 23, 2024.

DOT received 88 comments in response to the NPRM. Out of the 88 comments considered, 61 commenters expressed general support for the proposed rule, while 27 commenters did not provide a general opinion but rather focused their comments on specific issues. No commenters expressed general opposition to the proposed rule.

1. *Overlapping Boarding Areas With Vehicular Lanes*

Comments

The greatest number of comments on the NPRM concerned DOT's request for comments on whether DOT should consider adding restrictions on certain transit stop designs that locate the transit boarding and alighting area so that it coincides with vehicular lanes, including bicycle facilities. The PROWAG does not currently address such designs, and DOT expressed concern that co-location of the boarding area with a vehicular lane, including a bicycle lane, may put a transit user with disabilities at risk of being struck while waiting to board or while alighting from a transit vehicle. The Department sought comment on whether allowing boarding and alighting areas to overlap vehicular lanes presents accessibility concerns, and whether it should consider adding a provision to R309.1 when it adopts the PROWAG into its standards restricting such co-location. DOT also sought comment on whether there are solutions short of prohibiting co-location that

would address accessibility concerns, such as alternative designs that prevent vehicular passage when riders are boarding or alighting from a transit vehicle.

DOT received comments from forty-four entities opposed to adding restrictions on transit stop designs that provide for overlap between boarding and alighting areas and bicycle lanes. Those entities included ten State departments of transportation (State DOTs), fourteen local public entities, four public transit providers, three disability advocacy groups, eight transportation-related organizations, two consultant groups, and three individuals. Arguments against adding restrictions on these types of transit stop designs included the following: (1) several entities that have used such designs reported no or minor instances of conflicts between cyclists or micromobility users (e.g., scooters) and transit users; (2) even if such conflict does exist, numerous design guidelines have been developed that minimize the potential for conflicts between transit riders and vehicles while retaining the key design features of multimodal transit boarding and alighting areas; (3) such designs are an emerging area of practice that would benefit from increased coordination and research; (4) the addition of restrictions would impact the scope of currently active bike lane projects and create additional barriers to their completion; and (5) prohibition of co-location would add more complexity to future active transportation projects, especially in constrained environments, and negatively impact the ability of entities to meet environmental and Vision Zero goals. Commenters also expressed opposition to DOT taking any action in this area in the absence of proposing specific regulatory language.

More specifically, several entities, acknowledging the potential for transit user—vehicular conflicts where transit stop designs provide overlap between vehicle lanes and the boarding and alighting area, argued that restricting such designs would deprive entities of necessary flexibility to accommodate all users of limited right-of-way and pointed to existing design guidelines from around the country that they contend effectively mitigate conflict concerns. One transit agency commented that it undertook its own design process for transit stops that could safely accommodate pedestrians, transit users, and cyclists and that, working alongside accessibility advocates, transit experts, and active transportation advocates, arrived at a design that has been implemented in

thirty locations. The entity reported few incidents between cyclists, micromobility users, and transit riders at these locations.

One local public entity reported using an overlapping transit stop/bike lane design at over forty locations with no record of reported pedestrian-cyclist accidents at such locations. The entity noted that through monitoring and evaluation, as well as consultation with the local disability community, it has continued to refine shared stop designs to promote safe and predictable interactions between bicyclists and bus customers. Other entities commented that research should continue to better inform the conversation before any regulatory action might be taken. The three disability advocacy groups that opposed regulatory restrictions at this time encouraged DOT to monitor ongoing research.

DOT received comments from fifteen entities in favor of adding restrictions on the co-location of boarding and alighting areas with vehicular lanes. These entities include ten disability advocacy groups, one State DOT, three local public entities, and one public transit provider. These entities generally contended that designs that allow overlap of boarding areas with vehicular lanes (e.g., bike lanes) present significant accessibility and safety concerns for people with disabilities, including those who are blind or have low vision, warranting restrictions through this rulemaking.

One disability advocacy group shared the concerns that DOT had noted about co-located boarding and alighting areas and bicycle lanes and noted that there was at least one instance in their community of a cyclist colliding with and injuring a transit rider alighting from a bus. This commenter emphasized that shared transit stop areas are becoming increasingly dangerous as bike lanes are used more frequently by individuals using electric bikes, electric scooters, and motor scooters, which can travel at much greater speeds. Another disability advocacy group added that although many cyclists and micromobility users act responsibly at conflict points, the personal experiences of members is that many cyclists and micromobility users do not reliably yield to pedestrians or transit riders at shared transit stop locations. Another commenter noted that shared transit stop designs can cause confusion for individuals with vision disabilities and increase safety concerns which may encourage some individuals with disabilities to avoid certain transit stops or shift their mode of travel to curb-to-curb service.

Many of the same commenters who encouraged DOT to add regulatory restrictions on shared or overlapping transit stops also encouraged DOT to restrict or provide further guidance on “floating” transit stop islands, a design in which the transit stop is set away from the sidewalk with a bike lane channel in between the sidewalk and the transit stop island. Commenters noted that in addition to transit stops that overlap with vehicular lanes, transit stop islands also present challenges and safety concerns for individuals with disabilities, particularly those who are blind or have low vision, who must cross the bicycle lane to reach the transit stop. Commenters stated that individuals with vision disabilities struggle to detect approaching cyclists at such locations and lack customary physical cues signaling the presence of a bus stop.

DOT Response

DOT continues to have concerns, as expressed in the NPRM, about the accessibility of transit stop designs that locate the transit boarding and alighting area so that it coincides with vehicular lanes, including bicycle facilities. These concerns were echoed primarily by disability advocacy groups, but also by commenters that opposed DOT taking any regulatory action at this time. In fact, most commenters who opposed regulatory restrictions recognize the inherent conflict that exists by allowing vehicular lanes to overlap with boarding and alighting areas but argue that allowance of design flexibility, particularly in constrained right-of-way environments common predominantly to dense urban areas, is vital to allow safe accommodation of travelers as a whole. They note that there is little data showing that the use of overlapping transit stop designs has led to major conflicts between transit riders and cyclists or micromobility users and point to existing design guides that have been developed to minimize the potential for major conflicts at such locations.

Despite DOT’s ongoing concerns about transit stop designs that locate the transit boarding and alighting area so that it coincides with vehicular lanes, DOT will not add any regulatory restrictions on such designs at this time. DOT recognizes the relatively recent development of these types of designs and the ongoing research taking place to identify the impact of such designs on transportation in general, including efforts to develop safe multimodal networks, but also more specifically on individuals with disabilities. DOT is encouraged by the number of comments

that reflected public entities working with individuals with disabilities to address safety and accessibility concerns in the design of transit stops and encourages continued coordination among all transportation stakeholders on these issues.

DOT also recognizes the concerns expressed by many commenters about the accessibility and safety of floating transit stop islands, including comments that urged further research on the use of wayfinding aids, such as tactile warning surface indicators, tactile directional indicators, and tactile warning delineators. DOT declines to take any action in this final rule with respect to floating transit stop islands but encourages further research on the accessibility of such designs.

2. Definition of “Transit Stop”

Comments

DOT received seven comments regarding the proposed definition of transit stop. Three disability advocacy groups commented that DOT should remove the language in the definition limiting its application to stops used by transportation vehicles that operate on a fixed route or scheduled route. These groups argued that by focusing only on stops used by vehicles that operate on a fixed or scheduled route, the definition does not account for pick-up and drop-off locations used by demand responsive public transportation services. These commenters noted that many public transportation providers have begun and are likely to continue to deploy a wide range of demand-responsive transit models beyond paratransit service that should be addressed by DOT’s rule. Two transportation organizations commented that the definition of transit stop should expressly include the need for a pedestrian access route connecting to existing pedestrian circulation paths. One State DOT supported the proposed definition of transit stop, and one local public entity suggested that the definition of transit stop should include all elements required to be accessible at a transit stop.

DOT Response

As DOT explained in the NPRM, the ADA directs DOT to adopt standards for accessible public transportation facilities that are “consistent with” final minimum accessibility guidelines issued by the Board. *Id.* at section 12149(b). Similarly, Title III of the ADA directs DOT to adopt regulations implementing the transportation provisions of Title III, applicable to private entities that

provide specified public transportation services and provides that any standards adopted under such regulations must be “consistent with” final minimum accessibility guidelines adopted by the Access Board. *Id.* at sections 12186(a), (c).

Public transportation facilities subject to Title II of the ADA and DOT’s ADA regulations at 49 CFR part 37 are those facilities used in the provision of designated public transportation, which is defined in DOT’s ADA regulations as “transportation provided by a public entity (other than public school transportation) by bus, rail, or other conveyance (other than transportation by aircraft or intercity or commuter rail transportation) that provides the general public with general or special service, including charter service, on a regular and continuing basis.” 49 CFR 37.3. These facilities include bus and other transit stops in the public right-of-way operated by public transit agencies.

Public transportation facilities subject to Title III of the ADA and DOT’s ADA regulations at 49 CFR part 37 include those facilities located in the public right-of-way used in the provision of specified public transportation, which is defined in DOT’s ADA regulations as “transportation by bus, rail, or any other conveyance (other than aircraft) provided by a private entity to the general public, with general or special service (including charter service) on a regular and continuing basis.” 49 CFR 37.3.

DOT’s intent in the NPRM was to bridge the gap between the language used in its current regulations at 49 CFR part 37 regarding designated and specified public transportation and the language in the PROWAG, which does not refer to designated and specified public transportation but contains provisions specific to transit stops. To bridge this gap, DOT proposed adopting a definition of “transit stop” that mirrors the definition of transit stop in the PROWAG but also seeks to clarify that a transit stop is a transportation facility used in the provision of designated or specified public transportation.

The PROWAG defines “transit stop” as: “An area that is designated for passengers to board or alight from buses, rail cars, and other transportation vehicles that operate on a fixed route or scheduled route, including bus stops and boarding platforms. This definition does not include intercity rail except where a stop is located in the public right-of-way.” PROWAG R104. DOT proposed adding a sentence to the end of this definition as follows: “A facility used in the provision of designated or

specified public transportation in the public right-of-way is a transit stop.”

As noted above, three disability advocacy groups commented that DOT’s proposed definition of “transit stop,” by focusing only on stops used by transportation vehicles that operate on a fixed route or schedule route, does not address stops in the public right-of-way that may be used by providers of demand responsive designated or specified public transportation. In response, DOT notes that the definition of “transit stop” in the PROWAG is intended only to cover those stops used by public transportation vehicles that serve fixed or scheduled routes. The bus boarding and alighting area dimensions, boarding platform requirements, and other elements included at R309 of the PROWAG were all developed to address the accessibility of stops used by public transportation vehicles that serve fixed or scheduled routes. Those specific requirements are not intended to apply to other locations in the public right-of-way that may be used by demand responsive designated or specified public transportation vehicles.

The PROWAG, however, includes provisions for other pick-up and drop-off locations in the public right-of-way. The PROWAG defines a “passenger loading zone” as “[a]n area that is specifically designed or designated for loading and unloading passengers, but that does not primarily serve vehicles on a fixed or scheduled route.” By noting that a passenger loading zone does not primarily serve vehicles on a fixed or scheduled route, the PROWAG distinguishes a passenger loading zone from a transit stop. The PROWAG further provides that “permanently designated passenger loading zones” other than transit stops, must comply with accessibility requirements. PROWAG at R212. The Access Board described the application of section R212 in further detail in the preamble to its final PROWAG rule: “Often, permanent passenger loading zones in the public right-of-way are comprised of a sidewalk cut out so that vehicles can pull out of the traveled way to unload passengers. However, a permanently affixed sign designating a passenger loading zone is sufficient to bring the loading zone under coverage of this rule. Passenger loading zones that vary with the time of day or the occupancy of a particular retail space, such as valet stands that are provided only during certain hours, are not considered permanently designated and are therefore not subject to PROWAG.”

DOT acknowledges that demand responsive designated or specified public transportation vehicles may use

passenger loading zones in the public right-of-way, but such loading zones are not necessarily exclusively designed for use by such vehicles; rather, they may often be used by individual, private vehicles. In developing its NPRM to adopt PROWAG into its ADA regulations, DOT viewed the scope of “passenger loading zones” as falling under DOJ’s ADA jurisdiction over all other pedestrian facilities in the public right-of-way, and, thus, DOT did not propose covering such facilities under its ADA rule. While DOT declines to finalize standards at this time concerning coverage of passenger loading zones applicable to providers of designated or specified transportation, DOT recognizes that this is an area of overlapping jurisdiction with DOJ and may consider proposing standards in this area in a future rulemaking. Even in the absence of enforceable standards, the ADA requires new and altered facilities, including facilities used in the provision of public transportation, to be accessible to and usable by individuals with disabilities. *See* 42 U.S.C. 12146, 12147. DOT encourages entities to follow the PROWAG guidelines applicable to passenger loading zones.

In response to these comments, however, DOT also acknowledges that a portion of its proposed definition of “transit stop” should be removed. The sentence reading “[a] facility used in the provision of designated or specified public transportation in the public right-of-way is a transit stop” is overbroad and unnecessary. A transit stop is a facility used in the provision of designated or specified public transportation, but not all facilities used in the provision of designated or specified public transportation are transit stops. As discussed above, a passenger loading zone may be used in the provision of designated or specified public transportation. As a result, DOT will remove this sentence from its definition of “transit stop.”

Regarding other aspects of the proposed definition of transit stop, two transportation organizations commented that the definition of transit stop should expressly include the need for a pedestrian access route connecting to existing pedestrian circulation paths, and one local public entity suggested that the definition of transit stop should include all elements required to be accessible at a transit stop. Both of these concerns derive from DOT’s proposed definition of transit stop identifying some but not all elements of transit stops for which PROWAG accessibility requirements would apply under DOT’s final rule. As noted previously, the PROWAG defines “transit stop” as “[a]n

area that is designated for passengers to board or alight from buses, rail cars, and other transportation vehicles that operate on a fixed route or scheduled route, including bus stops and boarding platforms. This definition does not include intercity rail except where a stop is located in the public right-of-way." DOT proposed adopting a definition of "transit stop" into its regulations mirroring the PROWAG definition but adding that "[t]ransit stops include, if provided, transit shelters and pedestrian circulation connections between transit shelters and bus boarding and alighting areas or boarding platforms they serve." The local public entity commenter expressed that by adding a sentence that includes transit shelters and pedestrian circulation connections in the definition of transit stop but excludes other elements that must be accessible if provided at transit stops, such as fare vending machines and benches, may confuse the public. Similarly, the two transportation organizations that commented on this aspect of the definition of transit stop felt that the definition should make clear the need for a pedestrian access route connecting to existing pedestrian circulation paths.

Upon consideration of these comments, DOT has decided to remove the additional sentence about transit shelters and pedestrian circulation connections from the definition of "transit stop" in DOT's final rule. In this way, the definition of "transit stop" in DOT's final rule tracks more closely with the definition of "transit stop" in the PROWAG. Other elements required to be accessible if provided at a transit stop are set forth clearly in the PROWAG itself, which is adopted into DOT's regulation by reference. As set forth in the NPRM, elements required to be accessible at a transit stop in the public right-of-way under PROWAG R309 include the boarding and alighting area at a sidewalk or street-level transit stop or the boarding platform, pedestrian access routes (PARs) that connect altered boarding and alighting areas or altered boarding platforms with existing pedestrian circulation paths, and, if provided, transit shelters and PARs connecting transit shelters with boarding and alighting areas or boarding platforms. The PROWAG contains other provisions applicable to transit stops in the public right-of-way that would be subject to DOT enforcement under this rule: fare vending machines (R210); operable parts of other fixed elements (R210); detectable warnings for boarding platforms (R205.5) and sidewalk and street-level rail boarding and alighting

areas (R205.6); pedestrian signs (R208); PARs between newly constructed transit stops and accessible elements, spaces, and pedestrian facilities required to be accessible (R203.2.1); alternate transit stops (R204.2); and benches (R209.6.1).

3. Alteration of a Transit Stop

Comments

DOT proposed to adopt a definition of "alteration of a transit stop" providing: "*Alteration of a transit stop* means a change to or an addition of a transit stop in an existing, developed public right-of-way that affects or could affect pedestrian access, circulation, or usability." DOT received eight comments regarding the proposed definition. Four State DOTs and one local public entity commented that DOT should further clarify specific activities that would constitute an "alteration of a transit stop." One public transit provider commented that DOT should clarify that an "alteration of a transit stop" only includes activity that involves concrete work. One disability advocacy group commented that the definition of "alteration of a transit stop" should be consistent with the existing definition of "alteration" in DOT's regulations at 49 CFR part 37. And, last, one local public entity commented that the definition of "alteration of a transit stop" should be revised to read "alteration or addition of a transit stop" to ensure that practitioners understand that an addition of a transit stop to existing developed right-of-way is considered an alteration under PROWAG and not new construction.

More specifically, with respect to the types of activities that would be considered an alteration of a transit stop under the rule, one commenter asked whether resurfacing a road adjacent to a transit stop would be considered an alteration of the transit stop requiring the entire transit stop to be brought into compliance, to the maximum extent feasible, with PROWAG transit stop requirements. Similarly, another commenter asked if activities such as repairing a broken post, or fixing or replacing a sign, would trigger an obligation to bring the entire transit stop into compliance with PROWAG requirements. Commenters expressed concern that if small changes to individual elements at a transit stop triggered an obligation to ensure that the entire transit stop meets PROWAG standards, entities may choose to remove particular stops altogether rather than improve them.

DOT Response

DOT agrees with the commenters that the public needs clarification on what activities explicitly constitute an "alteration" under the proposed definition of "alteration of a transit stop" and the scope of improvements that would be required when a transit stop or part of a transit stop is altered. DOT specifically proposed a definition of "alteration of a transit stop" to distinguish alterations of such facilities from the definition of "alteration" in DOT's current ADA regulations at 49 CFR 37.3, which applies to alterations of facilities that are buildings or on sites. Thus, to the extent that one commenter suggested that the definition of "alteration of a transit stop" should be harmonized with the existing definition of "alteration," DOT declines to take that step because the definition of "alteration" that applies to buildings or sites contains language that is specific to those types of facilities. A separate definition of "alteration of a transit stop" is necessary.

DOT notes that the existing definition of "alteration" at 49 CFR 37.3 contains much more detail about the types of activities considered to be alterations of buildings or sites than DOT proposed for the definition of "alteration of a transit stop." Specifically, the existing definition of alteration is: "Alteration means a change to an existing facility, including, but not limited to, remodeling, renovation, rehabilitation, reconstruction, historic restoration, changes or rearrangement in structural parts or elements, and changes or rearrangement in the plan configuration of walls and full-height partitions. Normal maintenance, reroofing, painting or wallpapering, asbestos removal, or changes to mechanical or electrical systems are not alterations unless they affect the usability of the building or facility." This definition is a modification of the definition of "alteration" in the Access Board's 2004 ADA Accessibility Guidelines, which provided examples of the types of modifications to a facility that would constitute an alteration.

Similarly, DOT adopted its proposed definition of "alteration of a transit stop" from the PROWAG's definition of "alteration," which provides that an alteration or the term altered means: "A change to or an addition of a pedestrian facility in an existing, developed public right-of-way that affects or could affect pedestrian access, circulation, or usability." In adopting the PROWAG, the Access Board deliberately chose to omit detailed examples of the types of activities that would be considered

alterations, choosing instead to allow DOT and DOJ, the ADA enforcement agencies, to provide necessary clarification. See Accessibility Guidelines for Pedestrian Facilities in the Public Right-of-Way, 88 FR 53604, 53608 (Aug. 8, 2023). Because the term “alteration of a transit stop” narrows the scope of the types of activities that could be covered as compared with the general definition of “alteration” in the PROWAG, DOT believes it is appropriate to provide clarification of the scope of covered alterations and more detailed examples of “alteration of a transit stop” in the regulatory text as opposed to relying on the issuance of guidance statements at some future date, while not precluding the possibility of issuing further clarifying guidance.

Accordingly, DOT is adopting the following definition of “alteration of a transit stop” in this final rule: “*Alteration of a transit stop* means a change to or an addition of a transit stop, or a part thereof, in an existing, developed public right-of-way that affects or could affect pedestrian access, circulation, or usability. Alterations include, but are not limited to, the reconstruction of an existing transit stop, the addition of a new transit shelter, the addition of a new bench, fare vending machine, or transit sign that identifies a stop or route, reconfiguring the interface of a transit stop with the street or sidewalk network, such as adding floating bus stops, adding a prepared surface for boarding and alighting, and rearrangement of transit stop elements, such as benches or fare vending machines. Normal maintenance such as painting transit shelters, replacing damaged transit shelter windows or screens, repairing a fare vending machine, replacing damaged sign posts, repairing existing curb, or repairing damaged benches or trash cans, are not alterations unless they affect the usability of the transit stop. Permanent closure of a transit stop due to service changes is also not an alteration of a transit stop.”

It is not possible to provide examples of all potential modifications to a transit stop in the regulatory definition of “alteration of a transit stop,” but DOT believes that the examples provided in this final rule illustrate the way particular modifications should be addressed. In addition, in response to comments regarding whether an alteration of an element of a transit stop necessarily triggers the need to bring the entire transit stop into compliance with PROWAG standards at the same time, DOT is modifying the definition of “alteration to a transit stop” to mean “a

change to or an addition of a transit stop, or a part thereof” (emphasis added). In making this revision, DOT intends to focus compliance efforts in the first instance on the part of the transit stop that is being altered. This phrasing is consistent with language in the ADA statute, which provides that alterations to an existing facility, or part thereof, must be made in such a manner that to the maximum extent feasible, the altered portions of the facility are readily accessible to and usable by individuals with disabilities. 42 U.S.C. 12147(a). For example, should a public entity add a new bench at a transit stop, which is included as an example of an “alteration of a transit stop,” only those provisions of PROWAG applicable to benches added to an existing right-of-way would be required to be made accessible at the transit stop to the maximum extent feasible where existing physical constraints make compliance with applicable requirements technically infeasible. This would include the requirements for benches at transit stops set forth at R209.6.1 but would also include the provisions at R202.2 which require pedestrian access routes to connect altered pedestrian facilities to an existing pedestrian circulation path (a transitional segment may be used in the connection). Addition of a new bench at a bus stop would require the bench to be connected by a PAR to an existing pedestrian circulation path but would not trigger the requirement to bring the bus boarding and alighting area into compliance with PROWAG standards.

Similar approaches would be taken to other alterations of elements of a transit stop. If an entity adds a bus boarding and alighting area with a prepared surface to a bus stop that previously did not include a prepared surface (e.g., a stop identified only by a sign in the ground), the bus boarding and alighting area would be required to be made accessible to the maximum extent feasible where existing physical constraints make compliance with applicable requirements technically infeasible. The entity adding the new bus boarding and alighting area would be required to provide necessary PARs connecting the new bus boarding and alighting area to existing pedestrian circulation paths under PROWAG R309.1.3.2, which provides that “[i]n alterations, boarding and alighting areas and boarding platforms shall be connected to existing pedestrian circulation paths by pedestrian access routes complying with R302.”

4. Compliance Exception for Projects in Construction Phase or Through Final Design

Comments

DOT proposed to include an exception in the regulation that would exempt from compliance with the final rule those transit stop projects located in the public right-of-way on which construction has begun or for which all approvals for final design have been received before the effective date of the final rule. DOT received two comments from State DOTs and one comment from a local public entity that urged DOT to exempt from compliance with the final rule all transit projects in the planning stage at the time the final rule becomes effective. One of the State DOTs commented that projects in the planning and design stages, but which have not yet completed final design, may have already completed right-of-way acquisition or signed contracts with utility companies and that the requirement to comply with newly adopted standards could result in delays to such projects.

DOT Response

DOT disagrees with the commenters’ recommendation to exempt transit projects in the planning and design stages from compliance with the newly adopted PROWAG standards at the time of the effective date of the final rule. The exemption for projects on which construction has begun or for which final design has been completed before the effective date of the rule strikes an appropriate balance for entities affected by the rule by recognizing the investment of resources in projects that have advanced to final design or construction versus ensuring that the benefits of the newly adopted standards are realized for projects that remain only in the planning or design phase. DOT followed this same approach with respect to compliance with the revised ADA Accessibility Guidelines that DOT adopted in 2006. DOT will adopt the exemption as proposed in the NPRM. DOT notes, however, that projects for which all final design approvals have been received or for which construction has begun at the time of the effective date of the final rule still must ensure that the elements of the transit stop affected by the transit project (either new construction or alteration) are accessible to and usable by individuals with disabilities even if they are not required to comply with the specific standards adopted by DOT in this final rule. See, e.g., 42 U.S.C. 12147(a).

5. Effective Date

Comments

DOT proposed in the NPRM that its final rule adopting PROWAG into its ADA regulations at 49 CFR part 37 would become effective 30 days after issuance of the final rule. In support of this proposal, DOT noted the public and regulated entities have been aware of the proposed PROWAG's provisions related to transit stops since 2011, which are generally unchanged in the PROWAG, and that many entities have relied on the Department of Justice's similar 2010 ADA Standards and DOT's 2006 ADA Standards for boarding and alighting areas or boarding platforms as references for transit stops in the public right-of-way. As a result, DOT stated that it did not anticipate entities requiring additional time to become familiar with the Department's ADA public right-of-way standards before compliance is required for new construction and alterations.

DOT received twelve comments in favor of its proposed 30-day effective date. Five of those commenters favored the 30-day effective date outright, including one disability advocacy group, three local public entities, and one transportation organization. Seven other commenters endorsed the 30-day effective date provided that DOT did not adopt any modifications to the PROWAG, particularly with respect to placing restrictions on the use of transit stop designs that place the bus boarding and alighting area so that it overlaps with vehicular lanes, including bicycle lanes.

DOT received six comments opposed to the 30-day effective date. One State DOT proposed setting a 90-day effective date. One State DOT, one local public entity, one transportation organization, and one public transit provider proposed a 12-month effective date. Last, one State DOT expressed opposition to the 30-day effective date but did not propose an alternative. The commenters opposed to the 30-day effective date generally expressed that although the Access Board's PROWAG NPRM was issued in 2011 and similar standards for transit stops at sites under the ADA Accessibility Guidelines (ADAAG) have been in place since 1991, the length of time since the 2011 PROWAG NPRM to the present has created ambiguity over how entities should approach the accessibility of transit stops in the public right-of-way.

DOT Response

DOT disagrees with commenters who proposed a later effective date than the 30-day effective date in the proposed

rule. The Access Board issued its final PROWAG rule in August 2023, setting minimum guidelines for the accessibility of pedestrian facilities in the public right-of-way, including transit stops, and the ADA requires DOT to adopt standards for accessible public transportation facilities that are "consistent with" the Access Board's minimum guidelines. So, covered entities have been aware for more than a year that DOT's accessibility standards for transit stops would provide accessibility requirements no less than the guidelines in PROWAG. Moreover, as reflected in the Regulatory Impact Analysis accompanying this final rule, even in the absence of enforceable standards before issuance of this final rule, public entities have had a general obligation to ensure that their facilities are readily accessible to and usable by individuals with disabilities, and to otherwise not discriminate against individuals on the basis of disability. As such, covered entities have generally looked to the Department of Justice's 2010 ADA Standards,¹ the Federal Transit Administration's ADA Circular,² or other references for guidance on how to meet that general accessibility requirement. A review of these sources shows that they provide specifications substantially similar to the final PROWAG rule. In addition, guidance from some of the largest transit agencies indicated that these transit agencies either cite DOT's or DOJ's existing ADA standards applicable to facilities on sites (2004 ADAAG) with regard to accessibility of transit stops or otherwise refer to ADA accessibility requirements in their publications. For more information and analysis on the current state of industry practice, please see the Regulatory Impact Analysis, which is available in the docket for this rulemaking.

Entities have had sufficient time to anticipate the standards that DOT is adopting in the final rule. This is especially the case as DOT is not proposing any modifications to PROWAG in adopting PROWAG in this final rule. The majority of entities that commented on this issue support this approach, and the rule retains an exception from compliance with the PROWAG standards for those projects

¹ 2010 ADA Standards for Accessible Design, U.S. Department of Justice (2010), accessed July 14, 2022 from <https://www.ada.gov/regs2010/2010ADAStandards/2010ADAstandards.htm> (applicable primarily to facilities on sites).

² FTA Circular 4710.1—Americans With Disabilities Act Guidance, Federal Transit Administration (2015), accessed July 18, 2022 from https://www.transit.dot.gov/sites/fta.dot.gov/files/docs/Final_FTA_ADA_Circular_C_4710.1.pdf.

on which construction has begun, or all approvals for final design have been received before the effective date. DOT is adopting a 30-day effective date from the date of publication of this rule.

6. Other Comments

Comments

DOT received several comments requesting that DOT make revisions to various PROWAG provisions that are unrelated to the accessibility of transit stops in the public right-of-way. For instance, one individual and one consulting firm requested clarification about the change of grade requirements at PROWAG R304.5.2 for curb ramps and blended transitions at gutters or streets. Another individual commented on the pedestrian signal phase timing requirements at PROWAG R306.2. Two disability advocacy groups and one State DOT commented on PROWAG provisions related to roundabouts. These and other similar comments pertain to provisions of PROWAG that fall within DOJ's ADA jurisdiction and fall outside of DOT's limited ADA jurisdiction over facilities related to the delivery of designated or specified public transportation. These PROWAG provisions will become enforceable once they are adopted, with or without modifications, as mandatory standards under the ADA by DOJ.

Rulemaking Analyses and Notices

Executive Order 12866 (Regulatory Planning and Review), Executive Order 13563 (Improving Regulation and Regulatory Review), and DOT Regulatory Policies and Procedures

The Office of Management and Budget (OMB) has determined that this rulemaking is not a significant regulatory action within the meaning of E.O. 12866, as amended by E.O. 14094 ("Modernizing Regulatory Review"). The rule will not have an annual effect on the economy of \$200 million or more. The rule will not adversely affect in a material way the economy, any sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, territorial, or Tribal governments or communities. In addition, the changes will not interfere with any action taken or planned by another agency and would not materially alter the budgetary impact of any entitlements, grants, user fees, or loan programs.

DOT estimates that this rulemaking will have minimal implementation costs, due to the close alignment between the requirements of the rule and existing guidance and industry practices for transit stops in the public

right-of-way. This is presented in further detail in the accompanying Regulatory Impact Analysis (RIA) document.

The rule benefits pedestrians with disabilities by establishing a clear set of accessible design and construction standards for transit stops in the public right-of-way with which public entities would be required to comply. The rule will ensure a more uniformly accessible public transportation system, which facilitates independent living and economic self-sufficiency. Other pedestrians may experience ancillary benefits as well if facilities are easier to use. These benefits are unlikely to be quantified or monetized. The full RIA is available in the docket.

Regulatory Flexibility Act

In compliance with the Regulatory Flexibility Act (Pub. L. 96–354, 5 U.S.C. 601–612), DOT has reviewed the analysis conducted by the Access Board and published with the final rule (88 FR 53604, August 8, 2023), and evaluated the effects of this rule on small entities and has determined that it is not anticipated to have a significant economic impact on a substantial number of small entities. DOT estimates that this rulemaking will have minimal implementation costs, due to the close alignment between the requirements of the rule and existing guidance and industry practices for transit stops in the public right-of-way. In addition, many small governmental jurisdictions are located in rural areas and do not have transit facilities that will be impacted by this rulemaking. This is presented in further detail in the accompanying RIA document. Therefore, the Department certifies that the rule will not have a significant economic impact on a substantial number of small entities.

Unfunded Mandates Reform Act of 1995

The Unfunded Mandates Reform Act does not apply to proposed or final rules that enforce constitutional rights of individuals or enforce statutory rights that prohibit discrimination on the basis of race, color, sex, national origin, age, handicap, or disability. Since DOT's adoption of the 2023 Accessibility Guidelines for Pedestrian Facilities in the Public Right-of-Way Guidelines is done pursuant to the ADA, which prohibits discrimination on the basis of disability, an assessment of the rule's effect on State, local, and Tribal governments, and the private sector is not required.

Executive Order 13132 (Federalism Assessment)

DOT's rule will be applicable to public entities, including State and local governments, but any federalism implications are not significant. Public entities have been subject to the ADA since 1991, and the many public entities that receive Federal financial assistance have also been required to comply with the requirements of section 504 of the Rehabilitation Act of 1973. Both statutes have required accessibility of transit stops, even in the absence of enforceable standards. Many public entities, in fact, have independently applied the proposed 2011 PROWAG or similar transit stop provisions in DOT's 2006 ADA Standards or DOJ's 2010 ADA Standards. Thus, the adoption of PROWAG into DOT's ADA regulations, enforceable only with respect to transit stops, will not significantly alter existing practice. In addition, public entities previously had the opportunity to provide input and feedback during the development of the Access Board's PROWAG rule. As a result, DOT has determined that this rule will not have sufficient federalism implications to warrant the preparation of a federalism assessment. This final rule will not have a substantial effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among various levels of government.

Paperwork Reduction Act of 1995

Under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501, *et seq.*), Federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct, sponsor, or require through regulations. DOT has determined that this final rule does not contain collection of information requirements for the purposes of the PRA.

National Environmental Policy Act

The Department has analyzed the environmental impacts of this action pursuant to the National Environmental Policy Act of 1969 (NEPA) (42 U.S.C. 4321 *et seq.*) and has determined that it is categorically excluded pursuant to DOT Order 5610.1C, Procedures for Considering Environmental Impacts (44 FR 56420, Oct. 1, 1979). Categorical exclusions are actions identified in an agency's NEPA implementing procedures that do not normally have a significant impact on the environment and therefore do not require either an environmental assessment (EA) or

environmental impact statement (EIS). See 40 CFR 1501.4(a). Paragraph 4(c)(5) of DOT Order 5610.1C adopts by reference the categorical exclusions for all DOT Operating Administrations. This action is covered by the categorical exclusion listed in the Federal Transit Administration's implementing procedures, "[p]lanning and administrative activities that do not involve or lead directly to construction, such as: . . . promulgation of rules, regulations, directives . . ." 23 CFR 771.118(c)(4) and Federal Highway Administration's implementing procedures, "[p]romulgation of rules, regulations, and directives." 23 CFR 771.117(c)(20).

In analyzing the applicability of a categorical exclusion, the agency must also consider whether extraordinary circumstances are present that would warrant the preparation of an EA or EIS. 40 CFR 1501.4(b). This rulemaking concerns civil rights protection for individuals with disabilities. The Department does not anticipate any environmental impacts, and there are no extraordinary circumstances present in connection with this rulemaking.

Executive Order 13175 (Tribal Consultation)

DOT has analyzed this rule in accordance with the principles and criteria contained in E.O. 13175, "Consultation and Coordination with Indian Tribal Governments." The rule establishes a regulation on the accessibility of transit stops in the public right-of-way.

This measure applies to public entities, as defined under the ADA, which does not include Tribal governments or other Tribal entities, and it will not have substantial direct effects on one or more Indian Tribes, will not impose substantial direct compliance costs on Indian Tribal governments, and will not preempt Tribal laws. Accordingly, the funding and consultation requirements of E.O. 13175 do not apply and a Tribal summary impact statement is not required.

Executive Order 12898 (Environmental Justice)

E.O. 12898 requires that each Federal agency make achieving environmental justice part of its mission by identifying and addressing, as appropriate, disproportionately high and adverse human health or environmental effects of its programs, policies, and activities on minorities and low-income populations. DOT has determined that this rule does not raise any environmental justice issues.

Regulation Identifier Number

A RIN is assigned to each regulatory action listed in the Unified Agenda of Federal Regulations. The Regulatory Information Service Center publishes the Unified Agenda in April and October of each year. The RIN contained in the heading of this document can be used to cross reference this action with the Unified Agenda.

List of Subjects in 49 CFR Part 37

Civil Rights, Individuals with disabilities, Transportation.

Issued in Washington, DC, under authority delegated in 49 CFR 1.27(a).

Subash Iyer,

Acting General Counsel, U.S. Department of Transportation.

For the reasons set forth in the preamble, DOT amends 49 CFR part 37, as follows:

PART 37—TRANSPORTATION SERVICES FOR INDIVIDUALS WITH DISABILITIES (ADA)

■ 1. The authority citation for part 37 continues to read as follows:

Authority: 42 U.S.C. 12101–12213; 49 U.S.C. 322.

■ 2. Amend § 37.3 by adding, in alphabetical order, the definitions for “Alteration of a transit stop”, “Public right-of-way”, and “Transit stop” to read as follows:

§ 37.3 Definitions.

* * * * *

Alteration of a transit stop means a change to or an addition of a transit stop, or a part thereof, in an existing, developed public right-of-way that affects or could affect pedestrian access, circulation, or usability. Alterations include, but are not limited to, the reconstruction of an existing transit stop, the addition of a new transit shelter, the addition of a new bench, fare vending machine, or transit sign that identifies a stop or route, reconfiguring the interface of a transit stop with the street or sidewalk network such as adding floating bus stops, adding a prepared surface for boarding and alighting, and rearrangement of transit stop elements, such as benches or fare vending machines. Normal maintenance such as painting transit shelters, replacing damaged transit shelter windows or screens, repairing a fare vending machine, replacing damaged sign posts, repairing existing curb, or repairing damaged benches or trash cans, are not alterations unless they affect the usability of the transit stop. Permanent closure of a transit stop

due to service changes is also not an alteration of a transit stop.

* * * * *

Public right-of-way means public land acquired for or dedicated to transportation purposes, or other land where there is a legally established right for use by the public for transportation purposes.

* * * * *

Transit stop means an area that is designated for passengers to board or alight from buses, rail cars, and other transportation vehicles that operate on a fixed route or scheduled route, including bus stops and boarding platforms. This definition does not include intercity rail except where a stop is located in the public right-of-way.

* * * * *

■ 3. Revise § 37.9 to read as follows:

§ 37.9 Standards for accessible transportation facilities.

(a) *Transportation facilities other than transit stops in the public right-of-way.*

(1) For purposes of this part, a transportation facility shall be considered to be readily accessible to and usable by individuals with disabilities if it meets the requirements of this part and the requirements set forth in appendices B and D to 36 CFR part 1191, which apply to buildings and facilities covered by the Americans with Disabilities Act, as modified by appendix A to this part.

(2) Facility alterations begun before January 26, 1992, in a good faith effort to make a facility accessible to individuals with disabilities may be used to meet the key station requirements set forth in §§ 37.47 and 37.51, even if these alterations are not consistent with the requirements set forth in appendices B and D to 36 CFR part 1191 and appendix A to this part, if the modifications complied with the Uniform Federal Accessibility Standards (UFAS) or ANSI A117.1(1980) (American National Standards Specification for Making Buildings and Facilities Accessible to and Usable by the Physically Handicapped). This paragraph applies only to alterations of individual elements and spaces and only to the extent that provisions covering those elements or spaces are contained in UFAS or ANSI A117.1, as applicable.

(3)(i) New construction or alterations of buildings or facilities on which construction has begun, or all approvals for final design have been received, before November 29, 2006, are not required to be consistent with the requirements set forth in appendices B

and D to 36 CFR part 1191 and appendix A to this part, if the construction or alterations comply with the former appendix A to this part, as codified in the October 1, 2006, edition of the Code of Federal Regulations.

(ii) Existing buildings and facilities that are not altered after November 29, 2006, and which comply with the former appendix A to this part, are not required to be retrofitted to comply with the requirements set forth in appendices B and D to 36 CFR part 1191 and appendix A to this part.

(4)(i) For purposes of implementing the equivalent facilitation provision in ADA chapter 1, section 103, of appendix B to 36 CFR part 1191, the following parties may submit to the Administrator of the applicable operating administration a request for a determination of equivalent facilitation:

(A)(1) A public or private entity that provides transportation facilities subject to the provisions of subpart C of this part, or other appropriate party with the concurrence of the Administrator.

(2) With respect to airport facilities, an entity that is an airport operator subject to the requirements of part 27 of this title or regulations implementing the Americans with Disabilities Act, an air carrier subject to the requirements of 14 CFR part 382, or other appropriate party with the concurrence of the Administrator.

(B) The manufacturer of a product or accessibility feature to be used in a transportation facility or facilities.

(ii) The requesting party shall provide the following information with its request:

(A) Entity name, address, contact person and telephone;

(B) Specific provision(s) of appendices B and D to 36 CFR part 1191 or appendix A to this part concerning which the entity is seeking a determination of equivalent facilitation;

(C) [Reserved]

(D) Alternative method of compliance, with demonstration of how the alternative meets or exceeds the level of accessibility or usability provided in appendices B and D to 36 CFR part 1191 or appendix A to this part; and

(E) Documentation of the public participation used in developing an alternative method of compliance.

(iii) In the case of a request by a public entity that provides transportation facilities (including an airport operator), or a request by an air carrier with respect to airport facilities, the required public participation shall include the following:

(A) The entity shall contact individuals with disabilities and groups representing them in the community.

Consultation with these individuals and groups shall take place at all stages of the development of the request for equivalent facilitation. All documents and other information concerning the request shall be available, upon request, to Department of Transportation officials and members of the public.

(B) The entity shall make its proposed request available for public comment before the request is made final or transmitted to DOT. In making the request available for public review, the entity shall ensure that it is available, upon request, in accessible formats.

(C) The entity shall sponsor at least one public hearing on the request and shall provide adequate notice of the hearing, including advertisement in appropriate media, such as newspapers of general and special interest circulation and radio announcements.

(iv) In the case of a request by a manufacturer or a private entity other than an air carrier, the manufacturer or private entity shall consult, in person, in writing, or by other appropriate means, with representatives of national and local organizations representing people with those disabilities who would be affected by the request.

(v) A determination of compliance will be made by the Administrator of the concerned operating administration on a case-by-case basis, with the concurrence of the Assistant Secretary for Transportation Policy.

(vi)(A) Determinations of equivalent facilitation are made only with respect to transportation facilities, and pertain only to the specific situation concerning which the determination is made. Provided, however, that with respect to a product or accessibility feature that the Administrator determines can provide an equivalent facilitation in a class of situations, the Administrator may make an equivalent facilitation determination applying to that class of situations.

(B) Entities shall not cite these determinations as indicating that a product or method constitutes equivalent facilitation in situations, or classes of situations, other than those to which the determinations specifically pertain.

(C) Entities shall not claim that a determination of equivalent facilitation indicates approval or endorsement of any product or method by the Federal Government, the Department of Transportation, or any of its operating administrations.

(b) *Transportation facilities (transit stops) in the public right-of-way.* (1) Except as set forth in paragraph (b)(2) of

this section, if new construction or alterations of a transit stop located in the public right-of-way commence after January 17, 2025, the new construction or alterations of the transit stop shall comply with the requirements set forth in the appendix to 36 CFR part 1190, which apply to pedestrian facilities located in the public right-of-way covered by the Americans with Disabilities Act.

(2) New construction or alterations of transit stops located in the public right-of-way on which construction has begun, or all approvals for final design have been received, before January 17, 2025, are not required to be consistent with the requirements set forth in the appendix to 36 CFR part 1190, but are otherwise required to be readily accessible to and usable by individuals with disabilities.

(3)(i) For purposes of implementing the equivalent facilitation provision in chapter 1, section R102.1, of the appendix to 36 CFR part 1190, the following parties may submit to the Administrator of the applicable operating administration a request for a determination of equivalent facilitation:

(A) A public or private entity that provides transit stops in the public right-of-way subject to the provisions of subpart C of this part, or other appropriate party with the concurrence of the Administrator.

(B) The manufacturer of a product or accessibility feature to be used in a transit stop in the public right-of-way.

(ii) The requesting party shall provide the following information with its request:

(A) Entity name, address, contact person and telephone;

(B) Specific provision(s) of the appendix to 36 CFR part 1190 concerning which the entity is seeking a determination of equivalent facilitation;

(C) Alternative method of compliance, with demonstration of how the alternative meets or exceeds the level of accessibility or usability provided in the appendix to 36 CFR part 1190; and

(D) Documentation of the public participation used in developing an alternative method of compliance.

(iii) In the case of a request by a public entity that provides transit stops in the public right-of-way, the required public participation shall include the following:

(A) The entity shall contact individuals with disabilities and groups representing them in the community. Consultation with these individuals and groups shall take place at all stages of

the development of the request for equivalent facilitation. All documents and other information concerning the request shall be available, upon request, to Department of Transportation officials and members of the public.

(B) The entity shall make its proposed request available for public comment before the request is made final or transmitted to DOT. In making the request available for public review, the entity shall ensure that it is available, upon request, in accessible formats.

(C) The entity shall sponsor at least one public hearing on the request and shall provide adequate notice of the hearing, including advertisement in appropriate media, such as newspapers of general and special interest circulation and radio announcements.

(iv) In the case of a request by a manufacturer or a private entity, the manufacturer or private entity shall consult, in person, in writing, or by other appropriate means, with representatives of national and local organizations representing people with those disabilities who would be affected by the request.

(v) A determination of compliance will be made by the Administrator of the concerned operating administration on a case-by-case basis, with the concurrence of the Assistant Secretary for Transportation Policy.

(vi)(A) Determinations of equivalent facilitation are made only with respect to transit stops in the public right-of-way, and pertain only to the specific situation concerning which the determination is made. Provided, however, that with respect to a product or accessibility feature that the Administrator determines can provide an equivalent facilitation in a class of situations, the Administrator may make an equivalent facilitation determination applying to that class of situations.

(B) Entities shall not cite these determinations as indicating that a product or method constitutes equivalent facilitation in situations, or classes of situations, other than those to which the determinations specifically pertain.

(C) Entities shall not claim that a determination of equivalent facilitation indicates approval or endorsement of any product or method by the Federal Government, the Department of Transportation, or any of its operating administrations.

BILLING CODE 4910-9X-P

DEPARTMENT OF TRANSPORTATION

National Highway Traffic Safety
Administration

49 CFR Part 563

[Docket No. NHTSA–2024–0084]

RIN 2127–AM12

Event Data Recorders

AGENCY: National Highway Traffic Safety Administration (NHTSA), Department of Transportation (DOT).

ACTION: Final rule.

SUMMARY: This final rule amends regulations regarding event data recorders (EDRs) to extend the EDR recording period for timed data metrics from 5 seconds of pre-crash data at a frequency of 2 Hz to 20 seconds of pre-crash data at a frequency of 10 Hz. This final rule responds to the mandate of the Fixing America's Surface Transportation Act (FAST Act) to establish the appropriate recording period in NHTSA's EDR regulation.

DATES: *Effective Date:* This rule is effective January 17, 2025.

Compliance Dates: The compliance date is September 1, 2027. Vehicles produced by small-volume or limited-line manufacturers must comply with this final rule on or after September 1, 2029. Altered vehicles and vehicles manufactured in two or more stages must comply with this final rule if manufactured on or after September 1, 2030.

Petition for reconsideration: Petitions for reconsideration of this final rule must be received not later than February 3, 2025.

ADDRESSES: Petitions for reconsideration of this final rule must refer to the docket number set forth above (NHTSA–2024–0084) and be submitted to the Administrator, National Highway Traffic Safety Administration, 1200 New Jersey Avenue SE, Washington, DC 20590. Note that all petitions received will be posted without change to <https://www.regulations.gov>, including any personal information provided.

Confidential Business Information: If you wish to submit any information under a claim of confidentiality, you should submit your complete submission, including the information you claim to be confidential business information, to the Chief Counsel, NHTSA, at the address given under **FOR FURTHER INFORMATION CONTACT**. In addition, you should submit a copy, from which you have deleted the claimed confidential business information, to Docket Management at

the address given above. When you send a submission containing information claimed to be confidential business information, you should include a cover letter setting forth the information specified in our confidential business information regulation (49 CFR part 512). Please see further information in the Regulatory Notices and Analyses section of this preamble.

Privacy Act: The petition will be placed in the docket. Anyone is able to search the electronic form of all documents received into any of our dockets by the name of the individual submitting the comment (or signing the comment, if submitted on behalf of an association, business, labor union, etc.). You may review DOT's complete Privacy Act Statement in the **Federal Register** published on April 11, 2000 (65 FR 19477–78) or you may visit <https://www.transportation.gov/individuals/privacy/privacy-act-system-records-notice>.

Docket: For access to the docket to read background documents or comments received, go to www.regulations.gov, or the street address listed above. Follow the online instructions for accessing the dockets.

FOR FURTHER INFORMATION CONTACT:

For technical issues: Mr. Joshua McNeil, Office of Crashworthiness Standards, Telephone: (202) 366–1810, Facsimile: (202) 493–2739.

For legal issues: Ms. Natasha D. Reed, Office of the Chief Counsel, Telephone: (202) 366–2992, Facsimile: (202) 366–3820. The mailing address for these officials is: National Highway Traffic Safety Administration, 1200 New Jersey Avenue SE, Washington, DC 20590.

I. Executive Summary

NHTSA established 49 CFR part 563 (part 563) in 2006, setting forth requirements for data elements, data capture and format, data retrieval, and data crash survivability of EDRs.¹ Part 563 does not mandate EDRs on vehicles, but is instead an “if equipped” standard applying only to light vehicles required to have frontal air bags that a manufacturer chooses to voluntarily equip with EDRs.² Part 563 ensures all EDRs subject to the regulation capture the same core set of data elements in a crash, standardizes the parameters (format, duration, etc.) of captured data elements, and sets minimum requirements for data survivability.³ Part 563 further requires that manufacturers of vehicles with EDRs subject to part 563 make commercially available a tool for the purpose of downloading⁴ the data collected by the EDR.

This rulemaking amends current NHTSA regulations regarding EDRs under part 563 by extending the capture and recording period for timed data metrics from 5 seconds of pre-crash data at a sample rate of 2 Hz to 20 seconds of pre-crash data at a sample rate of 10 Hz (*i.e.*, an increase from 2 samples per second to 10 samples per second). The objective of this amendment is to capture and record the appropriate amount of data to provide sufficient vehicle-related data to assist investigations of the cause of motor vehicle crashes. This rulemaking is issued in response to a statutory mandate under section 24303 of the Fixing America's Surface Transportation Act (FAST Act), Pub. L. 119–14 (Dec. 4, 2015).

The increased sample rate required by this final rule will provide crash investigators a better understanding of the sequence of pre-crash actions, and

¹ 71 FR 50998 (Aug. 28, 2006).

² In 2012, NHTSA proposed to convert part 563's “if equipped” requirements for EDRs into a new Federal Motor Vehicle Safety Standard (FMVSS) mandating the installation of EDRs in most light vehicles. The NPRM did not propose making any changes to the current EDR regulation's performance requirements, including those for the required data elements (77 FR 74144 (Dec. 13, 2012)). In 2019, NHTSA withdrew that proposal due to the near universal installation of EDRs on light vehicles (84 FR 2804 (Feb. 8, 2019)).

³ Part 563 requires EDR data to survive the crash tests in FMVSS Nos. 208, “Occupant crash protection,” and 214, “Side impact protection.”

⁴ For the purposes herein, we are using the term “downloading” to refer to the process by which data are retrieved from an EDR. When downloading the data on an EDR, the original data set remains intact and unchanged in the memory banks of the EDR. NHTSA has also used the term “imaging” in other documents to refer to the same process. NHTSA uses imaging and downloading interchangeably.

the increased recording duration will provide more details on actions taken prior to crashes. Specifically, with the implementation of this final rule's increased recording duration, actions such as running a stop sign or red light could be captured in full and included in crash reconstruction when supplemented with roadway and traffic control information. The increased recorded duration could also help capture any corrective maneuvers taken by a vehicle prior to an initial road departure. The increased data recording frequency required by this final rule will help clarify the interpretation of recorded pre-crash information, including braking and steering actions taken by a vehicle. It will also help reduce potential uncertainty related to the relative timing of recorded data elements, and assist with the identification of potential pedal misapplication.

II. Background

A. Overview of the Event Data Recorder Technology and Regulatory History

Event data recorders are devices installed in a vehicle to capture and record technical information immediately before and during a crash on the status and operation of vehicle systems. An EDR reserves a random access memory (RAM) buffer the size of one EDR record to locally store data before the data are written to memory. The data are typically stored using Electrically Erasable Programmable Read-Only Memory (EEPROM) or data flash memory,⁵ both of which are types of non-volatile memory. The RAM buffer is typically embedded in the microprocessor, a component of the EDR that may require an upgrade if the processing capabilities are insufficient to meet the new EDR data capture requirements. During a crash, one or more capacitors are used as backup power (energy reserve) to power the EDR, as the main battery is assumed to be cut off. The capacitor(s) must have sufficient energy to power the entire transfer of data. These components are housed in packaging and manufacturer development and validation stages are aimed at ensuring the EDR functions as intended.

EDR event data are permanently recorded at the end of a specified event. In most cases, data are captured during events meeting a pre-determined threshold of severity or in events severe enough to cause air bag deployment.

This information can aid crash investigators in assessing the performance of specific safety equipment, including event air bag deployment strategies, air bag operation, and event severity. Captured information can also help NHTSA and others identify potential opportunities for safety improvements in current and future vehicles and implement more effective safety regulations. It may also help first responders assess the severity of a crash, estimate the probability of serious injury in vehicles equipped with Advanced Automatic Crash Notification (AACN) systems, and improve defect investigations and crash data collection quality.

NHTSA established 49 CFR part 563 (part 563) on August 28, 2006, setting forth requirements for the accuracy, collection, storage, survivability, and retrievability of data in vehicles equipped with EDRs.⁶ Tables I and II of part 563 detail the various data elements covered under the standard. Table I lists 15 data elements all EDRs subject to part 563 are required to record, along with the recording interval (duration) and sampling frequency. Table II lists data elements that EDRs subject to part 563 are not required to record, but that are subject to part 563 if they are recorded. Two data elements in Table II are listed as "if equipped," meaning if a vehicle has the specified equipment, the specified information must be recorded. Table II also provides the recording interval (duration) and sampling frequency for each listed data element. In addition, all data elements in Tables I and II must be reported according to the range, accuracy, and resolution in Table III of part 563. Relevant to this final rule, there are currently seven data elements in Table I and Table II that must be captured for a duration of 5 seconds prior to the crash (speed, engine throttle, service brake, engine RPM, ABS activity, stability control, and steering input). NHTSA established this 5-second duration after concluding this length would ensure the usefulness of the data in crash reconstruction while minimizing the risk of overtaxing an EDR's microprocessor during the data capture process, which could cause a malfunction resulting in data loss.⁷

Part 563 became fully effective on September 1, 2012. Since this time, the adoption of EDRs has been nearly universal, as NHTSA's internal analysis

estimates 99.5 percent of model year 2021 passenger cars and other vehicles with a gross vehicle weight rating (GVWR) of 3,855 kilograms (kg) (8,500 pounds) or less are equipped with part 563 compliant EDRs.⁸

B. The Fixing America's Surface Transportation Act

This rulemaking addresses a statutory mandate under section 24303 of the FAST Act, which requires NHTSA to "submit to Congress a report that contains the results of a study conducted by the Administrator to determine the amount of time event data recorders installed in passenger motor vehicles should capture and record for retrieval vehicle-related data in conjunction with an event in order to provide sufficient information to investigate the cause of motor vehicle crashes."⁹ The FAST Act further provides that, within two years of submitting this report to Congress, NHTSA "shall promulgate regulations to establish the appropriate period during which event data recorders installed in passenger motor vehicles may capture and record for retrieval vehicle-related data to the time necessary to provide accident investigators with vehicle-related information pertinent to crashes involving such motor vehicles."¹⁰ This final rule promulgates regulations to establish appropriate EDR data recording durations as mandated under the FAST Act.

III. Notice of Proposed Rulemaking

A. Developments Culminating in the NPRM

To meet the agency's initial obligation under section 24303 of the FAST Act, NHTSA contracted with researchers at Virginia Polytechnic Institute and State University (Virginia Tech) to conduct a study (the "EDR Duration Study") to determine the amount of time EDRs should capture and record information to provide sufficient vehicle-related data to support investigation of the cause of motor vehicle crashes. The study focused on three crash types that could potentially benefit from more than the currently required 5 seconds of pre-crash data: rear-end, intersection, and roadway departure crashes. These three crash modes were selected because they comprised approximately 70 percent of

⁶ 71 FR 50998 (Aug. 28, 2006).

⁷ NHTSA proposed a recording duration of 8 seconds in the NPRM for what became the 2006 final rule (69 FR 32942 (June 14, 2004)). However, NHTSA decided to reduce the duration in response to public comments (71 FR 50998, 51020 (Aug. 28, 2006)).

⁸ 87 FR 37289 (June 22, 2022). See *supra* note 2 and accompanying text. The 2012 NPRM estimated that about 92 percent of model year 2010 light vehicles had some EDR capability.

⁹ Pub. L. 114–94, 129 Stat. 1312, December 4, 2015.

¹⁰ *Id.*

⁵ Flash memory is an electronic computer memory storage medium that can be electrically erased and reprogrammed and can retain stored information even when power is removed.

all passenger vehicle crashes annually,¹¹ require relatively longer maneuvering times, and represent the most prevalent and relatively severe crashes based on fatalities.

The EDR Duration Study¹² took place in two phases. Phase I sought to estimate how frequently EDRs fail to record sufficient pre-crash data. Phase I did not analyze the amount of pre-crash data required to capture crash causation beyond the 5 seconds currently required under part 563. Analyzing cases in the National Automotive Sampling System-Crashworthiness Data System (NASS-CDS) database, Phase I determined part 563's current recording duration of 5 seconds failed to capture the initiation of all driver crash avoidance maneuvers for each of the three crash types studied. Evasive steering initiation represented

the largest percentage of avoidance maneuvers not captured by the 5 second recording duration in all three crash types.¹³ The study concluded the 5-second recording duration may be insufficient in many cases to determine the factors leading to a crash or to capture the pre-crash actions taken by a driver to avoid collision, potentially resulting in crash investigators having insufficient crash-related EDR information to determine crash causation.

Phase II of the EDR Duration Study sought to determine what recording duration would provide crash investigators with sufficient data to determine crash causation. The study analyzed data from naturalistic driving studies (NDS)¹⁴ to understand the complete duration (5 seconds or greater)

of driver pre-crash actions in the following three types of crashes: rear-end, intersection, and road departure. Phase II found that 20 seconds of pre-crash data would encompass the 90th percentile recording duration required for the three crash modes and crash avoidance maneuvers analyzed. This conclusion means that, based on the cumulative distributions for all three crash modes and crash avoidance maneuvers analyzed, 20 seconds of pre-crash data recording captures the driver pre-crash actions in 90 percent of the dataset.¹⁵ Table 1 summarizes the relevant Phase II findings. A more detailed summary of the EDR Duration Study can be found in the NPRM associated with this rulemaking.

TABLE 1—SUMMARY OF RECORDING DURATION NECESSARY TO CAPTURE PRE-CRASH ACTIONS FROM EDR DURATION STUDY

Driver pre-crash maneuver	Duration of pre-crash action (seconds)	
	50th percentile	90th percentile
Rear-End Crash:		
Time to Closest Approach	4.5	12.3
Intersection Crash:		
Approach + Traversal	12.6–15.1	¹⁶ 16.0–18.6
Road Departure Crash: *		
Drift out of lane to Recovery	3.2	6.0

* Lane excursion events were examined in the 100-car NDS.

On September 28, 2018, following completion of the EDR Duration Study, NHTSA submitted a Report to Congress summarizing the study results to the House Committee on Energy and Commerce and the Senate Committee on Commerce, Science, and Transportation, as required by section 24303 of the FAST Act.¹⁷

B. Summary of the NPRM

On June 22, 2022, pursuant to section 24303 of the FAST Act, NHTSA issued a notice of proposed rulemaking (NPRM) to amend part 563.¹⁸ The NPRM relied on the findings of the EDR Duration Study and information

gathered from NHTSA's defects investigation experience, which has demonstrated EDR data can be used to assist the agency in assessing whether a vehicle operated properly at the time of an event can help detect undesirable operations.¹⁹ Based on these findings and information, the NPRM proposed extending the recording interval and data sample rate of pre-crash data elements under part 563 from 5 seconds of pre-crash data at a frequency of 2 Hz to 20 seconds of pre-crash data at a frequency of 10 Hz (*i.e.*, an increase from 2 samples per second to 10 samples per second). The seven frequency-based pre-crash data elements

affected by the proposed amendments are:

- Three required data elements in Table I of part 563: "Speed, Vehicle Indicated," "Engine throttle, % full (or accelerator pedal, % full)," and "Service brake, on/off,"
- Four "if recorded" data elements in Table II of part 563: "Engine RPM," "ABS activity (engaged, non-engaged)," "Stability control (on, off, engaged)," and "Steering input."

In support of the proposal, the NPRM explained that the EDR Duration Study concluded extending part 563's recording duration from 5 to 20 seconds would help capture critical pre-crash

¹¹ Derived from the NHTSA report "Target Crash Population for Crash Avoidance Technologies in Passenger Vehicles," March 2019, DOT HS 812 653.

¹² Event Data Recorder Duration Study [Appendix to a Report to Congress. Report No. DOT HS 813 082B], 2022, <https://doi.org/10.21949/1530244>.

¹³ From Phase I, the EDR failed to record the initiation of steering in 80% of rear-end crashes, 64% of intersection crashes, and 88% of road departure crashes.

¹⁴ Phase II used data from two previously conducted naturalistic driving studies: a 2002 100-car study conducted by Virginia Tech, and the 2016 Second Strategic Highway Research Program (SHRP-2) NDS conducted by the Transportation Research Board of The National Academies.

¹⁵ This duration is influenced heavily by the inclusion of intersection crashes. Without the inclusion of intersection crashes, 12.3 seconds of data would encompass the 90th percentile recording duration for rear-end and road departure crashes.

¹⁶ The range of time shown for intersection crashes was derived from intersections with different numbers of lanes. The lower bound represents time for 2-lane intersections and the upper bound represents time for 7-lane intersections.

¹⁷ The 2018 report "Event Data Recorder Study" is available at <https://www.nhtsa.gov/reports-to-congress>. An appendix to the report to Congress was later published in March 2022 with more

details on the EDR Duration Study. See "Event Data Recorder Duration Study [Appendix to a Report to Congress. Report No. DOT HS 813 082B]," 2022, <https://doi.org/10.21949/1530244>.

¹⁸ 87 FR 37289 (June 22, 2022)

¹⁹ In 2010, NHTSA began to obtain data from Toyota EDRs as part of its inquiry into allegations of unintended acceleration, and as a follow-up to the recalls of some Toyota models for sticking and entrapped accelerator pedals. The Toyota unintended acceleration study (NHTSA Report No. NHTSA-NVS-2011-ETC, "Technical Assessment of Toyota electronic Throttle Control (ETC) Systems," January 2011) helped determine the root cause of each crash.

data. The NPRM also proposed increasing the EDR sampling frequency of pre-crash data from 2 Hz to 10 Hz,²⁰ explaining that an increased sampling rate, in addition to an increased pre-crash recording duration, is critical in determining crash causation. In support of the proposal, the NPRM explained that in some crash circumstances (*e.g.*, brake application and release or rapid reversals in steering input of less than 0.5 seconds), 2 Hz may be insufficient to identify crash causation factors, as it is possible for an EDR recording at 2 Hz to miss rapid vehicle control inputs. Thus, although more crash causation information would be captured with the proposed 20 second time duration, this data could be misinterpreted without a refinement and increase in the EDR sampling acquisition frequency.

The NPRM further explained an improved data sampling rate is needed because of how fast the sequence of events leading to crashes can happen and how fast the vehicle's systems need to activate in response to such events, such as crash avoidance technologies activation (*e.g.*, antilock braking system and electronic stability control). In support of increasing the EDR sampling frequency of pre-crash data from 2 Hz to 10 Hz, the NPRM noted the current sampling rate of 2 Hz is well below the timing necessary to understand the performance and effectiveness of such systems. Additionally, it explained the EDR output for the pre-crash data elements is not synchronized,²¹ even at the sampling rate of 2 Hz, which could result in uncertainty when comparing data at specific points in time with precision. Finally, the NPRM pointed out a greater sampling rate for the pre-crash data elements would reduce potential uncertainty related to the relative timing of data elements, specifically for correlating the driver's commands and the vehicle's performance.

In discussing the benefits of the proposal, the NPRM stated increasing the recording time for the pre-crash data would help ensure that data on the initiation of pre-crash actions and maneuvers is captured for most crashes. The NPRM further explained that increased data will enhance the usefulness of the recorded information and potentially lead to further improvements in the safety of current and future vehicles. The NPRM acknowledged the proposed changes could add additional costs, as increased EDR memory may be required in some cases. However, the agency explained it believed needed memory changes could be incorporated into the existing or planned memory design in vehicles, based on how slight any increased memory requirements needed to accommodate the added EDR data storage would be. The agency further explained its belief that in most cases the amount of additional memory necessary to comply with the proposed requirements would be less than the unused memory on a vehicle's airbag control module (ACM) chip. Finally, the agency stated it anticipated the proposal would require no additional processor speed or backup power needs, despite the proposed increases in recording duration and frequency.

The NPRM proposed an effective date of the first September 1 one year after the publication of the final rule. The agency explained that a one-year lead time was appropriate because increasing the required pre-crash data recording time should not require any additional hardware or substantial redesign of either the EDR or the vehicle and would likely require only minimal software changes.

NHTSA sought comments on several aspects of the NPRM, including:

1. The need and practicability of increasing the pre-crash recording duration.

2. The need and practicability of increasing the sampling rate.

3. Whether current EDRs will need to increase their memory capacity or change the memory implementation strategy (*i.e.*, short term memory buffer versus long-term storage) to meet the new requirements.

4. Whether the NPRM's cost estimates and assumptions are accurate, including comments on whether there are other costs (*e.g.*, redesign for a larger unit, additional capacity for Random-Access Memory (RAM), etc.), or other factors the agency needs to consider.

5. Any potential impact of the NPRM's proposal on the ACM processor and associated cost.

6. Comments on the proposed lead time.

7. Comments on the DOT's Office of the Secretary's Privacy Office (DOT Privacy Office) tentative determination that the proposed rulemaking does not create privacy risk, as no new or substantially changed technology would collect, maintain, or disseminate information in an identifiable form because of the proposed rule.

The agency received responses from a wide variety of stakeholders and interested persons in response to the NPRM's request for comments. These comments are available in the docket for the NPRM²² and are discussed in detail in the response to comments section below.

C. Requirements of the Final Rule

After careful consideration of comments received and the requirements of the FAST Act, NHTSA is promulgating this final rule to amend regulations regarding EDRs. Under this final rule, the recording duration and data sample rate of 7 data elements in Tables I and II under part 563 will increase to 20 seconds at 10 Hz from the previous requirements of 5 seconds at 2 Hz, as proposed by the NPRM and shown in Table 2.

TABLE 2—NEW EDR REQUIREMENTS UNDER FINAL RULE

Data element	Previous requirements		Requirements under final rule	
	Recording interval/time ¹ (relative to time zero) (sec)	Data sample rate (samples per second)	Recording interval/time (relative to time zero) (sec)	Data sample rate (samples per second)
Recording interval/time (relative to time zero)				
Speed, vehicle indicated	– 5.0 to 0	2	– 20.0 to 0	10

²⁰ Table I in part 563 currently requires an EDR to capture pre-crash data at a sample rate of 2 samples per second (Hz). The same sample rate applies to Table II elements of engine revolutions per minute (RPM), anti-lock braking system (ABS)

status, electronic stability control (ESC) status, and steering input.

²¹ While true time synchronization of data originating from the vehicle network may not be possible, the increased sample rate for pre-crash

data elements may reduce the potential uncertainty related to the relative timing of data elements, specifically for correlating the driver's commands and the vehicle's performance.

²² NHTSA–2022–0021.

TABLE 2—NEW EDR REQUIREMENTS UNDER FINAL RULE—Continued

Data element	Previous requirements		Requirements under final rule	
	Recording interval/time ¹ (relative to time zero) (sec)	Data sample rate (samples per second)	Recording interval/time (relative to time zero) (sec)	Data sample rate (samples per second)
Engine Throttle, % full (or accelerator pedal, % full)	– 5.0 to 0	2	– 20.0 to 0	10
Service brake, on/off	– 5.0 to 0	2	– 20.0 to 0	10
Data Elements Required for Vehicles Under Specified Minimum Conditions ² (Table II)				
Engine rpm	– 5.0 to 0	2	– 20.0 to 0	10
ABS activity (engaged, non-engaged)	– 5.0 to 0	2	– 20.0 to 0	10
Stability control (on, off, or engaged)	– 5.0 to 0	2	– 20.0 to 0	10
Steering input	– 5.0 to 0	2	– 20.0 to 0	10

¹ Pre-crash data and crash data are asynchronous. The sample time accuracy requirement for pre-crash time is – 0.1 to 1.0 sec (e.g., T = – 1 would need to occur between – 1.1 and 0 seconds.)

² If the data for these data elements is recorded in non-volatile memory for the purpose of subsequent downloading, they must meet the recording duration and frequency requirements in part 563.

The approach of this final rule is generally consistent with that of the NPRM. Minor non-substantive changes have been made to the final rule's regulatory text in the interest of simplification and organizational purposes, including by maintaining the current language of § 563.3. Additionally, based on comments received we have adjusted estimated costs and modified the lead time to provide manufacturers the time necessary to make any software, testing, and development changes required to ensure the EDR captures and records pre-crash data without affecting air bag deployment, while still fulfilling the agency's statutory mandate in a reasonable amount of time.

D. Lead Time

The NPRM sought to provide adequate lead time to manufacturers to allow them to incorporate necessary changes as part of their routine production cycles while also limiting the transition costs associated with the standardization of EDR data. To that end, the NPRM proposed an effective date of the first September 1 one year after the publication of the final rule. The NPRM estimated that 99.5 percent of model year 2021 passenger cars and other vehicles with a GVWR of 3,855 kg or less had part 563-compliant EDRs. As discussed in the cost section of the NPRM, the agency believed that increasing the required pre-crash data recording duration and data sample rate would not require additional hardware or substantial redesign of the EDR or vehicle and would likely require only minimal software changes and testing for validation.

Comments

NHTSA received several comments criticizing the agency's proposed one-year lead time, with commenters stating it did not consider the complexity of EDR implementation, along with the time needed for testing and validation to ensure the primary and secondary functionalities of the EDR. Commenters expressed that a lead time of one year could compromise safety and suggested alternative lead times ranging around 3 to 4 years. Several commenters also suggested a phase-in schedule extending out several years following publication of the final rule to allow manufacturers more time to significantly redesign the current software and hardware on their EDRs. The Motor & Equipment Manufacturers Association (MEMA) stated that software for a new vehicle is typically completed 18 months prior to the start of production, and that suppliers also require 18 months to deliver a validated update to manufacturers, along with an additional 18 months to test and certify the new system. Commenters also sought exemptions for vehicle platforms nearing the end of their lifecycle within 1–2 years of the Final Rule.

The Alliance for Automotive Innovation (Auto Innovators) expressed concern that the short lead time, additional memory requirements, and other system resources necessary to meet the proposed increase in pre-crash recording duration and frequency could result in some manufacturers being forced to deactivate the EDR function entirely, or to shift EDR resources by choosing not to record Table II or ADAS system status data elements.

Though supportive of the proposal, the Insurance Institute for Highway Safety and Highway Loss Data Institute

(IIHS–HLDI) commented that if manufacturers were not able to meet the new requirements given the one-year lead time, they may instead choose to disable EDR functionality. IIHS–HLDI indicated support of a longer lead time to avoid the loss of any EDR data before the new requirements can be met.

The National Transportation Safety Board (NTSB) indicated the proposed lead time was reasonable and that the proposed changes from 5 seconds of pre-crash data at 2 Hz to 20 seconds of pre-crash data at 10 Hz should be practical to implement.

Agency Response

NHTSA acknowledges comments from vehicle manufacturers and others stating that the NPRM's proposed lead time would not allow manufacturers to incorporate the proposed changes as part of their regular production cycle. NHTSA agrees with comments received stating that a longer lead time is needed to allow manufacturers the flexibility to better manage the implementation of the final rule and alleviate unnecessary redesign costs for EDRs. Following review of comments received and further analysis, this final rule doubles the proposed lead time to accommodate manufacturer concerns, while also fulfilling the agency's statutory mandate under the FAST Act in a reasonable amount of time. As a result, the revised requirements will be implemented beginning with vehicles manufactured on or after September 1, 2027. Limited line²³ and small-volume

²³ Limited line manufacturer means a manufacturer that sells three or fewer carlines, as that term is defined in 49 CFR 583.4, in the United States during a production year.

manufacturers²⁴ will only need to produce compliant EDRs on or after September 1, 2029. Manufacturers producing altered vehicles or vehicles in two or more stages will have one additional year, until September 1, 2030, for compliance.

Extending the lead time beyond 2 years is not necessary. NHTSA understands that some vehicle models already have sufficient hardware to meet the requirements of this final rule, with one manufacturer indicating that a majority of its vehicle models are already equipped with sufficient hardware. NHTSA acknowledges that those EDRs would still potentially require up to 2 years of software development and testing to ensure their quality meets this final rule's part 563 requirements and that air bag deployment, if the EDR function shares resources with the restraint systems, is not affected by the extended duration and sampling rate of the EDR pre-crash data. Based on NHTSA's internal analysis of EDR records in the Crash Investigation Sampling System (CISS), other manufacturers also have some EDR modules that could meet the requirements of this final rule without hardware changes.

The agency did consider a phase-in period in response to timing concerns raised by manufacturers, but ultimately did not find that compelling reasons were presented to justify a phase-in period. However, in acknowledgment that some EDRs will require changes to meet the requirements of this final rule, the agency is doubling the initially proposed lead time to provide manufacturers with sufficient time to make the minor modifications adopted in this final rule. In support of this decision, NHTSA is aware that manufacturers across the globe can meet much shorter EDR lead times in other markets, such as Europe and Japan. NHTSA is not aware of any peculiarities of the U.S. market that would necessitate lead times double, triple, or quadruple the lead times in other markets.

NHTSA also acknowledges the concern raised by some commenters that manufacturers may choose to deactivate EDRs because of their inability to meet the requirements within the proposed 1-year lead time. NHTSA does not share that concern, and in any event, this final rule's extended lead time, which provides

additional flexibility to manufacturers, should mitigate this concern. However, this final rule does not change the voluntary nature of part 563, and manufacturers remain free to decide if their vehicle will have EDR functionality based on their own considerations. Although the system that activates air bags in a vehicle may share resources with the EDR functionality, we emphasize that the performance of systems that deploy air bags (*e.g.*, supplemental restraint system) to mitigate injuries in a crash should not be negatively affected in order to develop an EDR that meets today's new requirements.

IV. Final Rule and Response to Comments

NHTSA received 21 comments on the proposed rule from a wide variety of commenters, including: advocacy groups, supplier and trade associations, vehicle manufacturers, manufacturer associations, insurance institutes, industry association consultants, engineer organizations, and members of the public.

The safety advocacy groups included the Advocates for Highway & Auto Safety (Advocates) and the Center for Auto Safety (CAS). The supplier and trade associations included Robert Bosch LLC and Bosch Automotive Service Solutions (Bosch) and MEMA. Manufacturers and manufacturer associations included Nissan Motor Co., LTD. (Nissan), Ford Motor Company (Ford), American Honda Motor Co. (Honda), General Motors Company (GM), and Auto Innovators. Insurance institutes and industry associations commenting on the NPRM included the National Association of Mutual Insurance Companies (NAMIC), State Farm Insurance Companies (State Farm), and joint comments from the Insurance Institute for Highway Safety (IIHS) and Highway Loss Data Institute (HLDI). The consultants and engineering organizations included the Event Data Recorder Committee of SAE International (SAE), the Collision Safety Institute (CSI), and QuantivRisk, Inc. NHTSA also received comment from the NTSB, and four comments from members of the public.

Overall, safety advocates (CAS and Advocates), insurance institutes and industry associations (NAMIC, IIHS–HLDI, and State Farm), NTSB, and three public commenters generally supported the proposed amendment. However, they recommended NHTSA consider expanding part 563 requirements through such additions as new data elements for emerging safety systems like advanced driver-assistance systems

(ADAS) and automated driving systems (ADS), increased vehicle weight limits applicable to all newly manufactured passenger vehicles, and a revised trigger threshold to include crashes involving vulnerable road users. These commenters also expressed support for the agency's work with international organizations to harmonize EDR requirements, including groups like the United Nations Economic Commission for Europe (UN ECE), the World Forum for Harmonization of Vehicle Regulations (WP.29), and EDR technical working groups (*e.g.*, SAE International).

Other commenters questioned and criticized some aspects of the NPRM, including the proposed lead time and estimated costs. Commenters in this group included vehicle manufacturers and manufacturer associations, industry suppliers and trade associations (including MEMA), industry experts and engineering organizations (SAE, CSI, and QRI), and one individual member of the public. Several commenters indicated the NPRM's proposed lead time was insufficient and suggested longer lead times.

The following sections address the key issues raised by commenters in response to the NPRM, including concerns related to the recording duration and frequency (or sample rate), the EDR duration study, EDR components, additional data elements, privacy, benefits, costs, and other expressed concerns.

A. Recording Duration and Sampling Rate

The agency sought comment on the NPRM's proposal to increase the EDR pre-crash recording duration and sample rates under part 563. Comments received expressed mixed views, with many comments critical of the proposal and expressing strong concerns with the EDR Duration study, suggesting that the NPRM's extended duration proposal should not have relied upon the study's findings.

General Comments

Several commenters did not support the NPRM's proposal to extend part 563's recording duration requirements, expressing skepticism that recording data beyond current part 563 requirements would improve crash causation investigations. SAE, referencing the agency's technical report on "Characteristics of Fatal Rollover Crashes,"²⁵ acknowledged that rollover

²⁴ Small-volume manufacturer as defined in 49 CFR 571.127, "Automatic emergency braking systems for light vehicles," is an original vehicle manufacturer that produces or assembles fewer than 5,000 vehicles annually for sale in the United States.

²⁵ DOT HS 809 438 (SAE stated the report concluded that EDR data are proven as a valuable
Continued

crashes generally require a longer amount of recorded data but stated they do not justify the added duration of pre-crash data. SAE explained that increasing recording duration will, in almost all cases, merely represent static operating conditions. Ford stated that additional studies on vehicles with active safety features and EDRs compliant with part 563 are necessary to more accurately determine any anticipated safety benefit of extending the pre-crash recording duration at a higher sampling rate.

GM, commenting that it already voluntarily added 3 seconds of pre-crash data to its latest Generation EDR, stated eight seconds of pre-crash data is more than sufficient to understand crash dynamics and vehicle performance based on its experience working with accident reconstructionists, police, and other authorities.

CSI stated there is no need to increase EDR recording duration, but suggested the sample rate could be phased in over a longer lead time to allow for other revisions to part 563. Bosch indicated the current data sample rate of 2 Hz may not capture all data when a multi-impact crash occurs but emphasized that an increased sample rate would require significant changes in EDR hardware and software. Bosch agreed that increased pre-crash data frequency could capture additional events, such as braking interventions, lane change maneuvers, and steering maneuvers.

Ford, seeking to clarify information cited by the agency in the proposal, also stated that although the EDR in the referenced 2007 Ford²⁶ was capable of recording more than 20 seconds of pre-crash data, it did not meet the crash test performance and survivability requirements of part 563. Ford explained that the pre-crash data in the 2007 Ford was stored in the Powertrain Control Module (PCM), which served as a diagnostics tool not equipped with a power energy reserve. Ford stated it later replaced the PCM recording capability with a part 563-compliant EDR that uses the Restraint Control Module (RCM) to record PCM data for 5 seconds prior to a crash event.

Several commenters supported some or all aspects of the proposal, stating it would provide more information for crash investigations and safety data. IIHS-HLDI stated it would provide

researchers with a greater understanding of the role different factors like vehicle, driver, and roadway/environment play leading up to a crash. NAMIC agreed more pre-crash data would help insurers, researchers, manufacturers, and regulators understand and determine crash causation, while also helping crash avoidance research. NAMIC also stated that the benefits of more pre-crash data on vehicle dynamics and system status, driver inputs, vehicle crash signatures, restraint usage/deployment status, and post-crash data, such as the activation of an automatic collision notification system, would provide greater safety value than any associated costs with increased memory capacity and potential EDR unit redesigns. State Farm supported the proposed duration and frequency changes to EDRs, and suggested vehicles should at minimum record all available information relevant to the crash.

Many commenters supported extending recorded categories rather than extending the duration and/or sampling rate of existing part 563 data retention requirements to improve crash analysis. The NTSB stated although the proposed rule addresses data elements currently in part 563, a complete understanding of crashes involving vehicles with ADAS would necessitate more pre-crash data than is currently required. CAS stated that even longer durations and higher sample frequencies could be beneficial for data not currently included in part 563, such as progressive sensor degradation, object event detection, response processing, and performance of sensor and data processing components.

EDR Duration Study

Many commenters criticized the NPRM's reliance on the EDR Duration Study's finding that 20 seconds of pre-crash data encompasses the 90th percentile recording duration necessary to capture the initiation of driver actions. SAE stated the study failed to demonstrate that the recommended 20-second recording duration would improve crash causation investigations. SAE further stated that the study focused on determining the duration necessary to assess driver behavior, rather than crash causation, and reiterated its previous comments critiquing the study.²⁷

Specifically, SAE stated the study should have assessed more than the

speed, braking, and steering actions of the vehicle, noting that engine throttle percentage, accelerator pedal percentage, engine RPM, cruise control status, anti-lock braking system (ABS) activity, lateral acceleration, and yaw rate are all useful data elements when studying the cause of a crash event. SAE also stated the vehicles in the study lacked modern safety features, such as pre-collision braking and electronic stability control, which could have prevented some of the accidents or provided intervention within the current recording duration of 5 seconds.

SAE asserted the study contained flawed assumptions about current automotive braking system architectures. SAE also stated there were two false assumptions concerning steering input. First, SAE explained the EDR Duration Study concluded that the availability of steering angle data, an optional data element, was very limited, thus reducing its significance in Phase I of the study. Second, SAE stated the study assigned steering angle data the same importance as the other data elements, and that the study's authors erroneously assumed a weighted distribution would compensate for the small number of cases with steering input. In response to this assumption, SAE stated actual field-related data from more recent part 563 compliant vehicles covering a wider range of manufacturers should have been used, and that the study's analysis should have been updated with current systems data. SAE also discussed the resolution of the steering input data, explaining that some pre-part 563 EDRs reported steering input data with a range of ± 16 degrees, meaning a steering maneuver beyond 16 degrees would need to be made to be detected and recorded in the EDR. SAE stated that depending on vehicle speed, a steering input of less than 16 degrees could have significance in relation to vehicle dynamics; however, if no such recorded input occurred, the study concluded the driver was not moving the steering wheel.

SAE also critiqued the study's lack of distinction between accelerator pedal position and engine throttle position, stating it purposely ignored EDR data recorded more than 5 seconds before a crash, and further stated that if all 8 seconds of pre-crash data, where available, were reviewed, the study could have confirmed whether the service brake was on at 5 seconds prior to a crash event. SAE explained this information could demonstrate whether pre-crash data beyond 5 seconds would change overall reconstruction results. Finally, in relation to the study's 1-Hz

source to determine vehicle speed, evasive maneuvers, and passenger status).

recording frequency in older vehicles, SAE and Auto Innovators stated brake pedal application can occur multiple times within one second, and state changes could be missed in the sample period. Several commenters expressed support for SAE's comments on the study.

Agency Response

This final rule adopts the NPRM's proposed part 563 EDR pre-crash data recording and frequency durations. This final rule's implementation will fulfill the FAST Act mandate and provide additional information on the status of vehicle systems and the actions taken prior to a crash.

General Comments

The agency acknowledges criticisms raised by several commenters, including suggestions that further studies are needed to determine the safety benefits of additional EDR pre-crash data. However, NHTSA is confident the EDR Duration Study provides a solid basis for this final rule's increase to 20 seconds of pre-crash data based on the study's findings on the amount of pre-crash actions missed in the 5 seconds prior to a recorded event by the EDR, particularly for in-road departure and intersection crashes. The EDR Duration Study found part-563's 5-second recording duration insufficient to record important information in a substantial percentage of crashes in which the EDR is triggered. This information, including the initiation of crash avoidance driving maneuvers, *e.g.*, pre-crash braking, would assist investigators with crash reconstruction. The study also found that 20 seconds of pre-crash data would encompass the 90th percentile recording duration required for the three crash modes and the crash avoidance maneuvers analyzed.

In support of the increased frequency requirement of this final rule, NHTSA understands some manufacturers already equip vehicles with EDRs that record data at 5 or 10 Hz, and in some cases multiple rates. NHTSA agrees with commenters who expressed support for the proposed increase by stating the increased frequency could capture events like braking interventions, lane change maneuvers, and steering maneuvers that may be missed at 2 Hz.

In response to Ford's comment regarding the 2007 Ford vehicle included in the EDR Technology Study²⁸ and referenced in the NPRM,

the agency is aware that the EDR in question was manufactured prior to the implementation of part 563. The agency did not reference it in the NPRM as a basis to state that all current EDRs are capable of recording 20 seconds of data. Instead, it serves as an example to show that manufacturers have already developed systems that record more than 5 seconds of pre-crash data. Finally, in response to comments encouraging the recording of additional data elements, this topic falls outside the scope of the NPRM and will not be addressed in this rulemaking. The agency may address the recording of additional data elements, including ADAS system status and performance parameters, in future rulemaking. Additional details on the estimated benefits of this final rule are discussed in section V.

EDR Duration Study

Many comments received criticized certain aspects of the EDR Duration Study and the NPRM's reliance on it in extending the recording duration of part 563. The agency does not find these arguments compelling. The study adequately met the FAST Act's mandate to conduct a study to determine the amount of time event data recorders installed in passenger motor vehicles should capture and record for retrieval vehicle-related data in conjunction with an event to provide sufficient information to investigate the cause of motor vehicle crashes.

Specifically, as required by the FAST Act, the study presented the durations necessary to provide sufficient information to investigate the cause of motor vehicle crashes. The agency does not agree with comments stating that the study incorrectly focused on driver actions rather than crash causation. The FAST Act required the agency to address data needed to assess crash causation. As such, vehicle dynamics were not the focus of the EDR Duration Study. Crash causation is crucial for effective crash investigation. Because many studies, some using police-accident reports²⁹ or EDR data, have shown that driver error is often the cause of crashes,³⁰ an understanding of pre-crash vehicle actions is critical to determining an appropriate recording duration. One study used the crashes in

the Naturalistic Driving Study (NDS) to determine that driver error contributed to 93% of observed crashes.³¹ In the EDR Duration Study, "behavior" is used synonymously with "action." Therefore, the study's objective in Phase II was to determine a recording duration that provides more certainty of capturing the complete duration of pre-crash actions.

In response to SAE's critique that speed, braking, and steering were studied exclusive to each other in Phase 1 of the EDR Duration Study and not with the rest of the EDR data, NHTSA acknowledges SAE's comment that crash reconstructionists analyze vehicle speed in conjunction with brake status. However, these two factors were not combined in Phase 1 because the study successfully addressed the research questions without studying whether enough brake pedal pressure was being applied to decelerate the vehicle. The study analyzed each pre-crash action individually because the study's objective focused on whether any braking input, steering input, or accelerator release occurred.

NHTSA also acknowledges SAE's statement that the study assumed the Service Brake On indicator signified driver intent to actively brake the vehicle, when it could instead be related to disengaging cruise control status or a slightly engaged brake pedal (*e.g.*, resting a foot on the pedal). In response to this comment, NHTSA states the EDR Duration Study solely focused on the pre-crash action itself, regardless of whether that action resulted in decreased vehicle speed. As such, any braking action can still be considered a valid pre-crash action of the driver.

In response to SAE's comment that weighted distributions were incorrectly used to compensate for the small number of cases with steering input in Phase I, NHTSA disagrees. Weighted distributions were used as the standard result format for all the data elements in the study, regardless of the sample size. Additionally, NASS-CDS data are designed for use in a weighted fashion because of its nationally representative structure.

In criticizing the study, SAE and Auto Innovators commented that the EDR Duration Study assumed that no recorded steering input meant the driver was not moving the steering wheel, but that pre-part 563 EDRs required a steering input change of more than 16 degrees to be captured by the EDR so active steering maneuvers in the dataset

²⁸ Gabler, H.C., Tsoi, A., Hinch, J., Ruth, R., Bowman, D., & Winterhalter, M. (2020, June). Light-vehicle event data recorder technologies (Report

may not have been captured. The EDR Duration Study could only use the EDR data available (which included pre-part 563 EDRs) to evaluate what pre-crash actions were captured. The study assumed that if a non-zero steering angle was recorded at -5 s, the initiation of a pre-crash steering maneuver was not captured. NHTSA does not believe that the current resolution for steering input (5 degrees) would change the results of Phase 1 of the EDR Duration Study since the authors defined the steering input time as the time between the event and the earliest non-zero steering angle recorded. NHTSA agrees that, based on vehicle speed, a change in steering input less than the 16-degree resolution could be significant.

In response to comments on the issue of whether the accelerator pedal position or engine throttle position was used to assess driver action, the EDR Duration Study used the accelerator pedal position to indicate a depressed pedal, as the objective of the study was driver action prior to crash. NHTSA acknowledges that accelerator pedal position and engine throttle position do not always correspond (especially given modern vehicles with drive-by-wire technology). The study used accelerator pedal position as it is related to the driver's input, whereas the engine throttle position can lag behind that input. NHTSA also acknowledges SAE's comment that the EDR Duration Study ignored data extending beyond 5 seconds. Specifically, where EDRs recorded 8 seconds of pre-crash data in the study, the results were truncated to 5 seconds to combine them with the remainder of the dataset that only had 5 seconds of pre-crash data to make the brake pedal, accelerator pedal, and steering input data consistent. Doing so is consistent with the 5 seconds of pre-crash data required by part 563 prior to this final rule. This was done in Phase 1, as this part of the study evaluated whether 5 seconds of data was sufficient for capturing the initiation of pre-crash maneuvers in rear-end, road departure and intersection crashes. The authors of the EDR Duration Study could not use EDR data to determine the duration beyond 5 seconds needed to capture crash causation, because most EDR data only records 5 seconds of pre-crash data per the minimum requirements in part 563. Therefore, as required by the FAST Act, to determine the amount of time event data recorders installed in passenger motor vehicles should capture and record for retrieval vehicle-related data in conjunction with an event to provide sufficient information

to investigate the cause of motor vehicle crashes, Phase 2 of the study used two naturalistic driving studies (NDS) (100-Car NDS and SHRP-2 NDS). These studies were used because they include more than 5 seconds of data prior to an event.³²

Further, although some commenters stated that older vehicles used in the study had EDR data recorded at a sample rate less than the part 563 requirements (2 Hz), the EDR Duration Study acknowledged the uncertainties of the sample rate (1 Hz vs. 2 Hz) of data numerous times throughout the report. The study's results were presented in terms of the observed EDR data, the "Lower Bound," and "Upper Bound," which assumed the actual pre-crash action for EDRs recording at 1 Hz was one time step earlier than the reported time (e.g., if an initial braking action occurred at -4 s the action was assumed to occur at -5 s). NHTSA believes that presenting the results in this corridor fashion was appropriate and provided a fair and transparent representation of the range of times the driver action may have occurred. In response to SAE and Auto Innovators' comments that a pre-crash braking action can occur multiple times within the time span of 1 second (1 Hz) or 0.5 seconds (2 Hz), NHTSA notes that this fact supports increasing the recording frequency of pre-crash data, as required by this final rule, so that multiple pre-crash actions are captured by the EDR.

NHTSA also acknowledges comments received stating that the vehicles used in the study lacked modern safety features that could have prevented some crashes and provided intervention within 5 seconds of the crash event. However, NHTSA observes the available EDR data used in the study did not generally include any details on active safety features, as part 563 does not require the capturing of those elements, which are at times voluntarily recorded by manufacturers. Therefore, any pre-crash data related to modern safety features could not be included as part of the research in Phase 1 of the study.

NHTSA does not know if active safety features will be universally adopted in future vehicles or recorded for the purposes of crash reconstruction. However, NHTSA points out that ABS and electronic stability control (ESC) were studied in Phase 2 of the EDR Duration Study, which used naturalistic driving data from newer vehicles. The ABS activation times in that data ranged from 2–9 seconds prior to the crash,

further demonstrating that a 5-second duration is not always sufficient to capture all the pre-crash actions of the vehicle. Finally, some comments criticizing the EDR Duration study addressed areas outside the scope of this rulemaking and the research questions and conclusions made by the study, such as how beneficial the additional data will be when used with vehicle dynamics for crash reconstruction and that pre-crash data would benefit more from additional data elements rather than extending the time capture pre-crash. As such, the agency is not addressing these comments in this final rule.

B. EDR Components

EDR Comments Overview

The agency sought comment on whether the NPRM's proposed changes would affect current EDRs, including in terms of creating any increased memory needs, processor speed burdens, or other issues not considered by the proposal. Many commenters, including OEMs, manufacturers' associations, industry suppliers, trade associations, industry experts, and engineer organizations generally agreed that while the proposed 20 seconds of pre-crash data could be recorded by EDRs, some EDRs may require significant hardware and software changes to meet these demands. Commenters stated the memory (RAM and read-only Memory (ROM)), energy reserve, and microprocessor (or microcontroller) of EDRs may all need to be upgraded or expanded. Bosch stated that some manufacturers may have EDRs capable of accommodating the new requirements using current hardware. Nissan suggested that some of its EDR modules could record for 20 seconds without requiring hardware changes, given enough time for testing and development.

Agency Response

Following careful consideration of comments received, this final rule is extending the EDR recording period for timed data metrics from 5 seconds of pre-crash data at a frequency of 2 Hz to 20 seconds of pre-crash data at a frequency of 10 Hz. NHTSA acknowledges some current EDRs may require significant hardware and software changes to meet this final rule's recording requirements. However, the changes made by this final rule are necessary to fulfill the Fast Act's requirement that the agency "shall promulgate regulations to establish the appropriate period during which event data recorders installed in passenger

³² The two NDS studies used in the EDR Duration study collected data in normal driving conditions over the course of millions of trips and miles.

motor vehicles may capture and record for retrieval vehicle-related data to the time necessary to provide accident investigators with vehicle-related information pertinent to crashes involving such motor vehicles.”³³

Based on the data submitted to NHTSA by vehicle manufacturers and EDR records available from CISS, many newer EDRs already have sufficient memory, processing performance, and reserve energy capacity to capture and record 20 seconds of pre-crash data at 10 Hz. If necessary, manufacturers could potentially reconfigure these EDRs by reallocating memory to meet the new recording requirements for pre-crash data in this final rule, as the reallocation of memory would not entail any additional energy or processor capability. NHTSA acknowledges the subject systems would still need to undergo development and testing to ensure they function as intended with no adverse effect on the activation of air bags in a crash event with air bag deployment.

The agency is aware that memory is not solely used to record EDR data, as it is shared by other functions of the ACM. However, many modern EDRs, particularly those updated to meet UN ECE Regulation No. 160,³⁴ likely already have sufficient capability to meet the pre-crash recording duration and sample rate requirements of this final rule without disrupting how EDR data are currently recorded. Based on the CISS EDR data available, NHTSA is aware of at least one manufacturer that has made such EDR upgrades to a large portion of its newer models, such that only software changes would be needed to comply with the final rule.³⁵ Further, EDRs that currently capture and record more than 1600 bytes of pre-crash data could allocate resources to, at minimum, record the three required Table I data elements for 20 seconds at 10 Hz.

Additional analysis on comments received and the agency’s response in the areas of EDR memory, data processing, energy reserve, design, and the development process is provided below.

Memory Comments

Many commenters indicated the current amount of non-volatile memory in EDRs may not be sufficient to record 20 seconds of pre-crash data captured at 10 Hz. The NPRM indicated an increase in pre-crash recording duration from 5 seconds to 20 seconds with an accompanying increase in recording frequency from 2 Hz to 10 Hz, would require 1.33 kilobytes (kB) of additional memory (a factor of 2.43 increase from the baseline) if all 7 pre-crash data elements were recorded. However, SAE stated some suppliers estimated the memory would increase by a factor of 8.5. SAE explained that adding more memory to meet the new data capture requirements would involve a complex process, as reallocating memory from other data elements would require an entire development process for each type of EDR.³⁶

GM stated that to meet the proposed requirements in the NPRM, the memory for its latest generation EDR would have to increase from approximately 720 bytes per recorded event to 8260 bytes, or an increase by a factor of approximately 11.5 based on 46 pre-crash data elements. GM explained this estimate must be multiplied by 3 to account for 3 separate EDR-recorded event buffers. GM further stated it is desirable to have a consistent sampling rate for all pre-crash data elements to reduce software complexity, and that it does not have a design in production that can simply incorporate the requirements in spare memory.

GM explained memory allocation is one of the first steps of new product development, used to determine the specifications for the microprocessor, memory storage size and type, energy reserve, and power supply, and that changes to the type of memory required would have a significant impact on the design specifications for EDRs. Honda, Nissan, and Ford also stated that meeting the requirements proposed in the NPRM would require additional non-volatile memory. CSI and MEMA stated memory estimates should consider that the ACM and any other system housing the EDR shares processor power and memory with the EDR, and that additional memory is rarely available in existing systems. QuantivRisk, Inc. and CSI also stated that adding memory would require additional development and testing costs.

³⁶ Manufacturers typically have more than one type of EDR installed across their vehicle models.

Agency Response

NHTSA acknowledges comments received from industry, OEMs, and trade associations suggesting that EDRs would require more memory than that estimated by the NPRM (for both data capture and recording) to meet the NPRM’s proposed requirements. Necessary memory upgrades could include both non-volatile memory for storing the recorded crash data, and volatile memory (or RAM) for data processing (read into and write over). Currently, part 563’s specified recording duration of 5 seconds at 2 samples per second generates a total of 11 samples for each pre-crash data element (2 samples per second $\times$ 5 seconds + 1 initial sample).

The EDR Technology Study, reporting on information provided by EDR subject experts from OEMs and ACM/EDR suppliers, found a typical recorded crash event requires approximately 929 bytes (77 bytes for pre-crash data elements) to record all of the Table I and Table II data elements for a single event.³⁷ Depending on the redundancy strategy for data quality control, a typical recorded EDR requires approximately 1.86 kB per event. To record data for 20 seconds at 10 Hz, 201 samples (10 $\times$ 20 + 1) would be captured, or an additional 190 samples per pre-crash data element over the previous requirements of 5 seconds at 2 Hz. In total, an additional 1,330 (190 $\times$ 7) data points must be captured, processed, and recorded per crash event if all 7 pre-crash data elements are recorded (Table II lists optional data elements if they are recorded by the EDR). An EDR is required to record these elements for up to two events in a multi-event crash.³⁸ To capture two events, the EDR would require an additional 2,660 bytes of memory for the additional data, as required by this final rule. Similarly, an equal amount of RAM would be needed for data processing.

Memory reallocation may be necessary for older generation EDRs to meet this final rule’s required Table I elements. Additionally, manufacturers with EDRs that voluntarily record data elements not listed in Tables I and II³⁹

³⁷ See Tables 20 and 21 in DOT HS 812 929. Table I data elements require 72 bytes and Table II data elements require 857 bytes.

³⁸ For EDR data capture, part 563 requires the memory for air bag deployment events to be locked to prevent any future overwriting of the data. For non-air bag deployment events, the EDR can capture and record the current data, up to two events.

³⁹ Comments received from GM and Honda support the contention that some EDRs are

³³ Public Law 114–94, 2015 HR 22, Public Law 114–94, December 4, 2015, 129 Stat 1312.

³⁴ UN ECE Regulation No. 160 requires all new types of M1 and N1 vehicles in Europe to have an EDR beginning July 6, 2022, and further requires all new vehicles to have an EDR beginning July 7, 2024. Table 1 in Annex 4 of UN R160 lists twenty-three mandatory pre-crash data elements to be captured by the EDR.

³⁵ For example, EDR records from vehicle 2 in CISS Case Number: 1–20–2022–129–03.

of part 563 may need to reallocate memory if memory allocation is nearing capacity or there is insufficient memory to meet the requirements of this final rule. However, NHTSA accepts this potential as Congress unambiguously signaled its desire for the agency to prioritize the time necessary to provide accident investigators vehicle-related information pertinent to crashes through the FAST Act statutory mandate. This final rule's additional lead time should considerably minimize any required memory reallocation. Further, any memory reallocation needed to meet the requirements of this final rule could potentially be carried out by only capturing those elements required by Table I, as only Table I elements must be recorded if an EDR is installed.

In relation to recording requirements, GM suggested that it is preferable to record all pre-crash data elements captured by its latest generation EDR, including those required by part 563 and those voluntarily captured, at the same sample rate to not increase software complexity. However, EDRs that record data elements at different recording intervals and data sample rates already exist (*e.g.*, some EDRs capture and record data at both 5 s/10 Hz and 5 s/2 Hz). Further, although manufacturers may choose to do so, NHTSA is not requiring manufacturers to record all pre-crash data at 20 seconds and 10 Hz; rather they must only apply that standard to those elements listed in Table I and, if recorded, Table II of part 563.

If an EDR does record numerous data elements not listed in part 563 at 20 seconds and 10 Hz, NHTSA agrees that the amount of extra memory needed to record that data could significantly increase. However, the recording of additional elements outside of Table I is not required by this final rule, and the minimum amount of extra memory needed to record the three pre-crash Table I elements is only approximately 570 bytes (1,040 bytes if considering two events). The estimate provided by the agency for the additional memory needed (2,660 bytes) is for all 7 mandatory and optional pre-crash data elements captured at 20 s and 10 Hz, and for the recording of multiple events. The decision to install additional memory necessary for data buffering and redundancy is a voluntary decision by a manufacturer and is not required by part 563. As discussed in the NPRM, many manufacturers already have EDRs with sufficient hardware capabilities to capture and record more pre-crash data,

or will have the time to develop such EDRs given this final rule's additional lead time allowing for EDR development and testing/validation. For example, vehicle models equipped with EDRs containing 32 kB of flash data storage (memory) or greater should already have sufficient capacity to capture the increased amount of pre-crash data required by this final rule.

For EDRs containing insufficient memory to record the data elements in Table I and II at this final rule's required recording interval/data sample rate, manufacturers may be able meet the new requirements through various means. For example, if EDR memory is currently used to record other data elements not required in part 563, OEMs could reallocate the available memory to record the mandatory data elements at 20 seconds and 10 Hz. If no excess memory is available because a portion of the memory is used for purposes outside of capturing and recording EDR data, modification should not be overly burdensome, as only 1.33 kB of additional memory is needed under this final rule to record the seven pre-crash data elements. Further, if an OEM solely recorded the data elements required by Table I, only approximately 0.57 kB of additional memory would be needed to meet the requirements of this final rule (an increase from 33 samples to 603 samples for Table I pre-crash data elements).

Where memory reallocation is not possible or preferred and additional memory is necessary, manufacturers could increase the memory capacity of the EEPROM, or embed higher capacity flash memory chips with similar costs, since flash memory typically costs less than EEPROM.⁴⁰ For example, information from manufacturers in the EDR Technology Study indicated a typical 2013 microprocessor used in vehicle applications had 32 kB or 64 kB of flash data as part of the ACM, and that most companies are replacing the older memory technology (EEPROM) with flash memory located on the microprocessor. As previously stated, EDRs containing 32 kB of flash data storage (memory) or greater should have sufficient capacity to capture the increased amount of pre-crash data required by this final rule.

⁴⁰ NHTSA understands that manufacturers have moved from EEPROM to flash memory located on the microprocessor for memory storage. The agency did not receive specific comments on how much flash memory EDRs are using to record pre-crash for 5 seconds or on the amount of memory that would be needed to capture the additional data, including additional memory for redundancy. Therefore, it is difficult to discuss examples of how the different components would need to be upgraded.

Finally, in response to comments expressing concern that the NPRM failed to capture all costs associated with any EDR memory increases needed to meet the requirements of this final rule, NHTSA acknowledges these concerns and, following careful consideration, has adjusted estimated costs accordingly in the Final Regulatory Evaluation (FRE) accompanying this final rule. Additional details on the updated cost estimates of this final rule are discussed in section V.

Data Processing

Comments

Several commenters expressed concern that the proposal would create increased data processing needs. SAE and Auto Innovators stated that, depending on current microprocessor capacity, the proposed data requirements would necessitate additional energy capacity, speed, and memory upgrades, which would also require a new microprocessor and circuit board. SAE and Auto Innovators indicated these modifications would require a complete redesign of the EDR from both a hardware and software perspective. GM stated none of its current EDR designs can support the 20 second requirement without changes to the microprocessor. Honda commented that the NPRM's proposed increases in recording duration and frequency will increase the amount of RAM in the microcontroller unit (MCU) required to record the data, necessitating a physically larger and higher performance MCU. Honda explained that the proposed changes would also require the MCU ROM and processor performance (*e.g.*, clock frequency) to increase.

Agency Response

NHTSA acknowledges the concerns raised by several commenters, including Honda, GM, SAE, and Auto Innovators, that the proposed requirements may necessitate microprocessors with higher clock speeds and an increased amount of ROM depending on the performance specifications of the current microprocessor used to capture and record EDR data. NHTSA also acknowledges comments stating that the NPRM's proposed increase in RAM would necessitate a physically larger and higher performance microprocessor. However, these changes may only be necessary in older generation EDRs or EDRs that are recording data at or near the memory capacity. Further, although some older generation EDRs may lack the performance specifications needed

recording data beyond the Table I and II part 563 elements.

to capture and record the increased duration and frequency of pre-crash data required by this final rule (including clock speed of the microprocessor, available ROM, RAM, and flash memory), many newer EDRs have the necessary MCU specifications to record for 20 seconds. NHTSA acknowledges these newer versions would require a period of software development to change how data are buffered, written to memory, and tested to validate the EDR and ensure that all systems interacting with the EDR perform as intended. However, these concerns should be alleviated through the additional lead time provided by this final rule, which should allow manufacturers to make any EDR design changes needed to meet the requirements of this final rule.

Energy Reserve and Design Concerns Comments

Several comments stated that the proposal would require increased energy reserve. Auto Innovators explained the EDR function is typically integrated into a vehicle's ACU or ACM and includes reserve energy to successfully deploy the restraint systems, facilitate high voltage shutoffs for electric vehicles, and record EDR data into non-volatile memory if vehicle power is lost early in the crash event. GM stated the increased write time duration would require more energy reserve, and that a microprocessor with a higher current draw could affect the energy reserve. For many existing units to meet the new requirements, Auto Innovators stated that the amount of additional, voluntary data elements recorded by the EDR would need to be reduced, or that the air bag control/EDR module would require redesign to accommodate the additional reserve power capacity. Both Auto Innovators and SAE stated that many current EDRs record more than the minimum part 563 requirements, and that these additional data elements would also have to be recorded for 20 seconds.

Several commenters stated the proposed changes would require larger and, in some cases, multiple capacitors to meet the extended pre-crash recording period, as the EDR module operates under its own power supply during a crash. Commenters indicated larger capacitors pose engineering challenges in terms of lifespan, durability, and ability to charge during normal operation. Auto Innovators stated the additional energy capacity required to meet the new requirements would considerably increase the footprint of the ACU/EDR, and that

enough physical space may not exist in optimum locations for current vehicles (selected for crash sensing and durability) to accommodate increases in ACU/EDR size. Commenters explained needed changes to the size of the module could require redesign and affect placement in the vehicle, increasing design complexity and increasing costs for both consumers and manufacturers.

Agency Response

The ACU requires reserve energy (provided by capacitors) in the event of a loss of battery power in the vehicle. This reserve energy exists for the EDR to capture and record data, while also ensuring the vehicle's air bags can properly deploy. NHTSA acknowledges several comments received from industry stating that meeting the proposed EDR requirements may necessitate capacitors with increased capacitance, which may in turn require overall hardware changes and potential design changes to the EDR. However, none of the comments received stated that additional power was necessary across all EDR modules, instead only suggesting that more power may be required.

Based on comments received, NHTSA understands that some manufacturers equip EDRs that voluntarily record pre-crash data elements not listed as part of the minimum requirements in part 563. Any data elements not listed in part 563 that a manufacturer may choose to capture are not required to be recorded for 20 seconds at 10 Hz. A large amount of voluntarily recorded pre-crash data all recorded at 20 seconds could increase the amount of reserve energy required to write to memory and provide backup power, which could necessitate redesign of the EDR packaging. However, as previously stated, NHTSA is only requiring EDRs to record the three pre-crash data elements in Table I and the four pre-crash data elements in Table II (if they are recorded by the EDR) for 20 seconds. Although manufacturers may prefer to record all data at the same duration and sample rate, there are examples of EDRs in CISS that record data at different durations and sample rates. Manufacturers are of course free to record voluntarily captured elements as they prefer.

Based on NHTSA's analysis, the costs of capacitors, especially in large quantities, is relatively low. For example, an EDR capacitor upgrade from 3.3 μF to 10.0 μF would cost approximately \$0.02 per unit, based on

market research.⁴¹ Further, EDRs with sufficient memory capacity to allow for some memory reallocation would not require an increase in reserve energy. The physical size of capacitors can vary according to many different constraints such as: manufacturer, dielectric type, target application, mounting style, capacitance, voltage rating. Based on NHTSA's research, there are 6.8 μF capacitors and a 10.0 μF capacitors with similar specifications beside capacitance that have the same physical dimensions in terms of diameter and surface mount area. Varying other parameters (e.g., voltage rating) only changes the physical dimensions of these capacitors by 1 mm or less. Ultimately, the manufacturer chooses where to place the EDR housing within its vehicles. NHTSA has included cost estimates that cover software development and design validation but does not believe such small hardware components will significantly affect the size of the physical casing that holds the electronic components of the EDR.

Therefore, this final rule adopts the NPRM's proposal to extend the EDR recording period for timed data metrics from 5 seconds of pre-crash data to 20 seconds of pre-crash data at a frequency of 10 Hz. Manufacturers should be able to meet these requirements given the lead time and relatively low cost of capacitors to implement any required upgrades.

Development and Validation Comments

SAE and Auto Innovators stated that in addition to costs incurred from the proposed EDR component upgrades, the proposal would also require associated development and integration costs, including validation and testing at component, sub-system, and vehicle levels. These commenters stated that costs and associated lead times are further amplified because the EDR application is most often coupled with a safety restraint management system requiring rigorous safety system validation and verification. Nissan, explaining it confirms the functionality of the EDR in coordination with other compliance crash tests completed in less than 20 seconds, commented that the proposal would require additional or new crash test procedures to retrieve data from a vehicle. SAE commented that capturing 20 seconds of data would require a crash test facility over 985 feet

⁴¹ Based on quotes from DigiKey, the average unit price for 3.3 μF capacitors is \$0.11 and the average unit price for 10.0 μF capacitors is \$0.13. Therefore, \$0.02 was used as the upgrade cost for reserve energy.

long, and that no such test facility currently exists. GM also expressed concerns in relation to vehicle level validation, asking if the proposal would require a crash of sufficient length to encompass the entire 20 seconds of pre-crash data. GM explained that such a requirement would impact vehicle barrier facilities and testing protocol, resulting in additional costs.

Agency Response

Several commenters expressed concerns that the proposed rule would incur new costs, including for a new crash test facility and additional or new crash test procedures to record and retrieve the appropriate amount of data. In response, the agency points out that vehicles do not have to operate at the speeds specified for crash testing under such scenarios as FMVSS No. 208 or FMVSS No. 214 to meet the new EDR recording requirements of this final rule. New or altered test procedures may be needed to validate the EDR, but manufacturers should not need new crash test facilities to meet the new data capture requirements. Manufacturers may instead use other means that do not require the vehicle to travel at crash test speeds (*i.e.*, 56 kph or 35 mph) for 20 seconds to capture pre-crash data as testing validation for this final rule's data capture requirements. For example, tests may be conducted by initially operating the vehicle at a minimum speed before acceleration or by idling the vehicle prior to accelerating to the speeds necessary for other crash tests. The availability of these alternative options and the extended lead time provided by this final rule will help mitigate any potential incurred costs.

C. Additional Data Elements

Comments

Many commenters stated that part 563 should include the recording of additional ADAS/ADS data elements to improve EDR data effectiveness. Commenters stated the incorporation of new crash avoidance, pre-crash, and post-crash data elements would provide a greater safety value to improve driver-assistive safety technologies compared with increased recording duration and frequency. Several commenters recommended that a standard format for capturing and reporting data related to advanced safety systems should be defined and included as part of the EDR requirements. Some commenters encouraged NHTSA to follow a similar path to the European Union's (EU) recent mandate requiring the equipping of new vehicles with EDRs that record ADAS elements. Bosch recommended

the use of other recorders to record information like driver and ADS state to determine the control of the vehicle before an event triggering EDR recording, such as the Data Storage System for Automated Driving (DSSAD) recommended by the UN ECE, or the SAE ADS data logger (SAE J3197).

Agency Response

While NHTSA agrees with commenters that additional data elements may be beneficial for collision reconstruction, this topic falls outside the scope of this rulemaking. The NPRM did not address the addition of any new data elements, and the rulemaking responds to the FAST Act's instruction to promulgate regulations establishing the appropriate amount of time that EDRs should capture and record data.

The agency may address the recording of additional data elements, including ADAS system status and performance parameters, in future rulemaking. Manufacturers may of course continue to include or add pre-crash data elements outside of those listed in part 563⁴² to EDRs but must also comply with this final rule. Manufacturers may also continue to log data from modern safety features in other vehicle systems.

D. Privacy Considerations

Comments

As explained in the NPRM, the DOT Privacy Office has determined that this rulemaking does not create privacy risk because no new or substantially changed technology will collect, maintain, or disseminate information in an identifiable form. NHTSA requested comment on this determination.

In response to this request, SAE stated that when part 563 was initially proposed it specified a recording duration of 8 seconds, which the agency reduced to 5 seconds to apply prudent judgment in balancing securing data with the privacy rights of an individual vehicle operator.⁴³ SAE cited the comment submitted by the Electronic Privacy Information Center (EPIC) in response to the initial proposal of establishing part 563, in which EPIC cited several Fair Information Practices (FIPs) limiting data collection based on purpose-specific principles and cautioned NHTSA against an

⁴² Examples of some pre-crash data elements not listed in part 563 but recorded by some 2021 EDR-equipped light vehicles include: adaptive cruise control status, AEB status, brake pedal position, cruise control status, drive mode, forward collision warning, ignition status, lane departure warning, road departure mitigation status, tire pressure status, traction control system status, and wheel speed.

⁴³ 71 FR 50998 (Aug. 28, 2006).

incremental expansion of EDR data records as mandated policy. SAE stated NHTSA should demonstrate a clear public benefit for the proposed increased data capture duration, contrasted with a balance of personal privacy. Auto Innovators stated that expanding the pre-crash recording time to 20 seconds will capture a significant amount of driver behavior, much of which will not have any significant impact on the determination of crash causation factors that cannot currently be obtained by other crash reconstruction methods.

Agency Response

The agency emphasizes that EDRs do not record personally identifiable data, and captured data are regularly overwritten, except for specified crash events meeting the trigger threshold to retain data. Increasing the pre-crash recording duration from 5 seconds to 20 seconds should not increase privacy concerns, as no new or substantially changed technology will collect, maintain, or disseminate information in an identifiable form. Further, the Driver Privacy Act of 2015, part of the FAST Act⁴⁴ and implemented after the establishment of part 563, states that the owner or lessee of a motor vehicle is the owner of the data collected by an EDR. Recorded EDR data may only be retrieved for the purpose of improving motor vehicle safety and vehicle safety research (provided the data are not personally identifiable), or through the vehicle owners' consent or a court or administrative order. These privacy protections should alleviate expressed privacy concerns while allowing the agency to fulfill the FAST Act's mandate to establish the appropriate recording period in NHTSA's EDR regulation.

E. International Harmonization

Comments

Several commenters expressed support for international harmonization of EDR functions. Specifically, SAE, Honda, Auto Innovators, MEMA, and Bosch stated they support a harmonized approach with UN ECE Regulation No. 160.⁴⁵ Commenters noted that UN Regulation No. 160–01, which went into effect in July 2024, has adopted additional data elements for modern safety technologies. SAE recommended maintaining a mandated EDR practice

⁴⁴ Public Law 114–94, § 24301–24302, 129 Stat. 1312, 1713–14 (2015).

⁴⁵ UNECE WP.29 has established the EDR/DSSAD Informal Working Group (IWG) to develop internationally harmonized performance specifications/regulations for EDR functions.

consistent with global EDR regulations to ease manufacturers' financial burden and avoid penalizing US vehicle buyers. In support of this approach, SAE discussed other global requirements, including those of Korea (KMOVSS 56–2), Japan (J–EDR 2015), China (GB 39732–2020), EU (2022/545 based on UN R160), and Russia (Fed article 26 162–03), which all require a minimum of 5 seconds of pre-crash data captured at 2 Hz. Honda stated it has developed its EDRs to accommodate not only part 563 requirements, but also the various EDR regulations for China and UN R160 (00 and 01 Series).

Agency Response

NHTSA acknowledges that some other international EDR regulations specify a 5 second pre-crash data recording duration at 2 Hz. However, the agency has decided to proceed with the extended EDR data recording and frequency requirements proposed in the NPRM based on the requirements of the FAST Act and the findings of the EDR Duration Study, which found that capturing data at an increased recording duration and sample rate will enhance certainty when interpreting pre-crash data, resulting in improved crash investigations. In response to comments encouraging international harmonization in such areas as additional data elements for modern safety technologies, this topic falls outside the scope of the NPRM and will not be addressed in this rulemaking. However, the agency may address such topics in future EDR rulemakings, following review of the results of ongoing international efforts related to EDRs.

F. Other Considerations

Comments

NHTSA received several other comments generally related to part 563. One individual supported an increased EDR duration but stated there is a need to update part 563's trigger threshold definition. This commenter stated that the current trigger threshold, which specifies an 8 km/h change in vehicle velocity within a 150 ms interval, may not capture non-air bag deployment events, such as collisions involving a vulnerable road user and a vehicle. IIHS–HLDI provided similar comments and suggested modifying part 563 to include automatic emergency braking (AEB) activation status as a trigger threshold, as many vehicles are equipped with AEB systems. The Institute also stated that adding data on vehicle-to-pedestrian collisions would improve roadway design and help refine

vehicle structures and crash avoidance systems to mitigate the severity of those collisions.

One individual commenter stated part 563 should apply to all newly manufactured vehicles, regardless of weight. The commenter explained that some newer electric vehicles may weigh more than the applicability requirement of an unloaded vehicle weight of 5,500 lb. and would therefore be exempt from complying with part 563.

Agency Response

Although multiple commenters encouraged additional amendments to part 563, these suggestions fall outside the scope of the proposed rulemaking and are thus not included in this final rule. However, NHTSA may consider additional amendments to part 563 as part of a future rulemaking.

V. Summary of Estimated Benefits and Costs

The requirements specified in this final rule affect vehicle manufacturers that produce light vehicles with a GVWR not greater than 3,855 kg (8,500 pounds) and voluntarily install EDRs in their vehicles. This rule also applies to final-stage manufacturers and alterers. Both the agency and the public have historically benefited from incorporating EDR information into crash and defects investigations, as the inclusion of EDR data leads to improved investigations and better understanding of injury causes and mechanisms.

The NPRM stated the proposed increased recording time for the pre-crash data would provide benefits by helping to ensure that data on the initiation of pre-crash actions and maneuvers are captured for most crashes. The agency explained this increased data would enhance the usefulness of the recorded information, potentially leading to further improvements in the safety of current and future vehicles. The agency also stated the proposed increase in data recording frequency would clarify the interpretation of recorded pre-crash information for crash investigators and researchers.

In relation to costs, the NPRM acknowledged that increasing the recording time of the pre-crash data could add additional costs for increased memory if an EDR had little or no excess memory in the module. In the NPRM, the agency stated it understood that about 99.5 percent of model year 2021 passenger cars and other vehicles with a GVWR of 3,855 kg or less are already equipped with part 563-compliant EDRs, that no additional hardware would be required by the

proposed amendment, and that compliance costs would be negligible. The agency sought comment on potential costs and benefits associated with the NPRM's proposals.

Comments

Most commenters stated the proposal to increase the amount of pre-crash data captured and recorded would result in significant costs, including because of the need to upgrade and validate EDRs in vehicles. Many OEMs stated that costs would hinder the implementation of the proposed final rule, with some citing concerns over whether a real-world safety gap exists to justify costs incurred. Commenters stated the proposed changes would increase memory requirements, resulting in an increased overall EDR price. Commenters also stated software and hardware changes would be needed to meet the 20-second pre-crash capture requirements, including, where necessary, increased capacitance to provide power to the EDR and to make necessary changes to the printed circuit board.

Specifically, SAE pointed to a study done by the Federal Motor Carrier Safety Administration (FMCSA) on heavy-duty and commercial data recorders, referenced in the NPRM, stating it raised questions concerning the applicability of the cost estimates for flash memory. SAE also listed the following component changes and costs that must be considered for multiple module designs: microprocessor upgrade, additional memory (both RAM and nonvolatile memory), energy reserve increase, PCB design changes, module housing changes, potential mounting changes in vehicle software and hardware engineering design and development cost, component validation cost, vehicle validation cost for new module designs, and vehicle level recertification.

GM expressed concerns over the burdens associated with increased EDR complexity and the inability of different regions to arrive at a more common technical solution, pointing to recently implemented worldwide EDR regulations that maintain the 5-second pre-crash recording interval and sample rates historically required by part 563. GM further stated the cost estimate in the NPRM is not negligible and does not fully encompass all the required changes proposed by the NPRM, which could include component validation, full vehicle validation, and vehicle recertification of the EDR and the Sensing and Diagnostic Module.

Auto Innovators submitted additional comments related to costs following the

closing of the NPRM comment period.⁴⁶ These comments stated that, based on member responses, the estimated average cost of development and testing to meet the proposed rule would be \$8.4 million dollars per manufacturer, with an average estimated cost increase of \$5.40 per vehicle to develop an EDR meeting the proposed rule. Given those estimates, Auto Innovators stated that, assuming an average annual light duty vehicle production of 16.4 million vehicles for 17 OEMs, the cost burden for the first year would be \$231.36 million. Auto Innovators explained this is the sum of each OEM's development/test costs and that, assuming the same annual production took place, the annual cost burden following the first year of implementation of the final rule would be \$88.56 million, based on the annual affected vehicle production times the incremental EDR module cost.

Commenters also stated manufacturers may require vehicle crash tests to ensure the data transferred from sensors in the vehicle to the EDR are not affected by hardware updates. Commenters stated costs to consumers and lead-time implications are especially important because of such issues as supply chain disruptions, microchip shortages, high inflation, and economic uncertainty. Auto Innovators also stated NHTSA should consider equity issues given the average new car price of vehicles.

In support of the proposal, NAMIC commented that the costs to increase the recording duration are warranted by the benefits of more and better pre-crash data, even if costs in addition to memory are required (*e.g.*, redesign for a larger unit, additional RAM, *etc.*). NAMIC stated the proposed changes provide greater safety value than any additional costs to the vehicle. CAS stated the price of flash memory used to estimate costs in the NPRM was overestimated and that OEMs may receive discounts for bulk memory purchases. CAS further stated the incremental cost associated with upgrading the memory would not prevent the expansion of EDR data storage.

Agency Response

The agency does not agree with comments expressing skepticism over the benefits of the NPRM's proposed increased recording duration and frequency requirements. This final rule's requirements will improve crash investigations and crash data collection quality, ultimately assisting the agency and others in identifying potential

opportunities for safety improvement in vehicles already on the road, improving future vehicle designs, and creating more effective safety regulations. The increased information captured by the requirements of this final rule will aid not only the agency, but also crash investigators, first responders, and others.

However, following review the agency does find certain comments received stating that the NPRM did not consider additional costs associated with the NPRM's proposal compelling. As such, NHTSA has revised the cost estimates originally provided in the NPRM to include two different EDR versions: those solely requiring software changes to meet the proposed rule and those requiring both hardware and software changes. The updated estimated benefits and costs associated with this final rule are detailed below.

A. Benefits

EDR data are invaluable for improving system performance. EDR data improve crash investigations and crash data collection quality, which assists safety researchers, vehicle manufacturers, and the agency to better understand vehicle crashes and help determine crash causation.⁴⁷ Similarly, vehicle manufacturers can use EDR data to improve vehicle designs and develop more effective vehicle safety countermeasures. For example, as mentioned in the NPRM, the Toyota unintended acceleration study⁴⁸ confirmed the significant value of EDR pre-crash data.⁴⁹ The agency successfully used this EDR data to assist in determining the root cause of the events and to support the safety recalls. Further, in 2016, the agency used EDR data to establish crash scenarios and vehicle dynamics when evaluating the efficacy of vehicle-to-vehicle (V2V) communication technologies in an NPRM for V2V.⁵⁰

⁴⁷ Even though crash investigators gather insightful information about the dynamics of crashes, some parameters cannot be determined or cannot be as accurately measured (such as the change in velocity) by traditional post-crash investigation procedures, such as visually examining and evaluating physical evidence, *e.g.*, the crash-involved vehicles and skid marks.

⁴⁸ NHTSA Report No. NHTSA-NVS-2011-ETC, "Technical Assessment of Toyota Electronic Throttle Control (ETC) Systems," February 2011.

⁴⁹ In March 2010 NHTSA began obtaining data from Toyota EDRs as part of its inquiry into allegations of unintended acceleration (UA), and as follow-up to the recalls of some Toyota models. The study analyzed cases in which the accelerator pedal became stuck or entrapped, seeking to determine the root cause of each crash.

⁵⁰ Preliminary Regulatory Impact Analysis, FMVSS No. 150, Vehicle-to-Vehicle Communication Technologies for Light Vehicles, December 2016, HS 812 359.

The requirements of this final rule will fulfill the outstanding need of adequate recording of pre-crash actions for investigation and reconstruction without overtasking the vehicle's power and memory needs for capturing EDR data. The amendments may also result in foundational upgrades to the hardware and software for a modernized EDR, which could in turn support the capture and recording of other data elements. This final rule's increased recording duration and refined resolution may also provide OEMs with more granular pre-crash information that manufacturers can use to evaluate and develop improvements for vehicle systems. NHTSA acknowledges that, similar to the establishment of part 563, it is difficult to estimate the exact portion of benefits creditable to an increased amount of EDR data after a standard is implemented or a safety countermeasure is developed. While stored data are valuable in terms of safety research and emergency response, it is not easy to quantify how they translate to the improvement of vehicle safety. However, increased recording duration and frequency will provide many overall benefits to the public, as described below.

Increased Recording Duration

Per the findings of the EDR Duration Study, the current part 563 EDR pre-crash recording duration of 5 seconds does not capture the initiation of pre-crash braking and steering maneuvers in a substantial percentage of cases. Based on the findings of the study a recording duration of 20 seconds is required to ensure that the initiation of pre-crash actions and maneuvers can be captured for most crashes. The three crash modes examined in the EDR Duration Study—rear-end, intersection, and roadway departure—comprised about 70 percent of all passenger vehicle crashes, annually.⁵¹ Separately, these crashes represent the most prevalent, relatively longer maneuvered times required, and relatively severe crashes (based on fatalities). Therefore, the newly required 20 second recording time is adequate to record the pre-crash actions for almost all crashes given the collective frequency of these three crash types and what they represent.

Increasing the recording duration of pre-crash data will help ensure that data on the initiation of crash avoidance driving maneuvers are captured for most crashes. This increased recording duration will enhance the usefulness of

⁵¹ Derived from the NHTSA report "Target Crash Population for Crash Avoidance Technologies in Passenger Vehicles," March 2019, DOT HS 812 653.

⁴⁶ NHTSA-2022-0021-0025.

the recorded information, potentially leading to further improvements in the safety of current and future vehicles. The study also found that a better understanding of pre-crash actions will assist in the evaluation of emerging crash avoidance systems (e.g., lane departure warning, lane keeping assist, forward collision avoidance, automatic emergency braking, and intersection safety assistance systems).

The 20 second extended recording duration will be particularly useful in intersection crashes, which have an approach stage as the vehicle comes to the intersection and a traversal stage in which the vehicle is exposed in the intersection. Based on the EDR Duration Study, the currently required 5-second recording duration captures less than 1 percent of the total intersection event time, which includes the approach and traversal stage. The study found that 15 seconds would capture 50 percent of the total intersection event time, and 20 seconds would capture 95 percent of the total intersection event time. With this final rule's increased recording duration, actions such as running a stop sign, rolling stops, or running a red light could be captured in full and included in the crash reconstruction when supplemented with roadway and traffic control information. In road departure crashes, longer durations could also capture any corrective maneuvers by the vehicle before the initial road departure.

Increased Recording Frequency

Currently most EDRs capture pre-crash data at a frequency of 2 Hz. However, based on EDR records in the NASS-CDS and CISS (Crash Investigation Sampling System) databases, some manufacturers already use models that voluntarily capture pre-crash data at 5 Hz or 10 Hz. Further, some vehicle manufacturers and suppliers have indicated their support for an increased frequency rate. When manufacturers and suppliers were asked about near-term plans for EDRs in the EDR Technology Study, some respondents expressed interest in adding, "higher sampling frequency and longer recording interval for pre-crash data, i.e., sampling interval better than $\frac{1}{10}$ of a second."⁵²

In support of the benefits of this final rule's amendments to part 563, an increase in data recording frequency will help clarify the interpretation of recorded pre-crash information. For example, rapid vehicle control inputs (e.g., brake application and release or

rapid reversals in steering input of less than 0.5 seconds) may not be logged by an EDR that records data at 2 Hz. Although 20 seconds of pre-crash data will capture more crash causation information, a refinement in acquisition frequency is also needed to assuage data misinterpretation concerns. An improved data sampling rate is also needed due to the nature of crashes, which can include a quick sequence of events prior to a crash that require a vehicle's crash avoidance technologies, such as Anti-lock Braking System and Electronic Stability Control, to activate quickly. To understand the performance and effectiveness of such systems, the sample rate of pre-crash data elements should be increased. In addition, as EDR output for pre-crash data elements is not synchronized,⁵³ including at the previously required sample rate of 2 Hz, uncertainty could exist when an investigator is attempting to compare data at specific points in time with precision. The higher sample rate required by this final rule will reduce this potential uncertainty in relation to the relative timing of recorded data elements, to better correlate a driver's commands and a vehicle's performance.

This final rule's increased sample rate will also benefit crash causation analysis and pre-crash behavior. For example, additional events like momentary highly dynamic steering inputs, ABS, or ESC activation that are not recorded at the 2-Hz sample rate could be captured at 10 Hz. For multi-impact crash events, a sample rate of 10 Hz will allow the EDR to better capture the actions that occur when a vehicle undergoes a series of events (e.g., lane departure resulting in striking an object followed by striking another object in immediate succession).

Further, an increase in recording frequency could help investigators better identify where vehicle dynamics prior to a crash event relate to pedal misapplication. Pedal misapplication crashes occur when a driver presses one pedal while intending to press another pedal. In an emergency braking situation, pedal misapplication would result in the driver pressing the accelerator pedal hard. Identifying and decreasing pedal misapplication events is important, as a recent study observed pedal misapplication rates involved a much higher percentage of events than

previously estimated.⁵⁴ While data points can be estimated to account for data gaps when recorded at 2 Hz, driver actions may not be captured by the EDR at the time they occur. This informational gap may result in underestimations of the accelerator application rate, resulting in a failure to identify pedal misapplication entirely, if, for example, the driver fully presses the accelerator pedal to 100 percent for a quarter of a second. An increased recording frequency of 10 Hz will help identify events involving pedal misapplication, potentially providing additional information on how to mitigate these events and improve vehicular safety.

Finally, in addition to the many benefits provided by this final rule's requirement to increase part 563's data recording frequency requirements to 10 Hz, manufacturers' voluntary integration of ADAS data elements recorded at a sample rate of 10 Hz could provide valuable insights on the performance of new technologies. For example, some vehicle manufacturers already voluntarily collect EDR data on the status and operation of ADAS technologies (e.g., activation of forward crash warning alerts, automatic emergency braking activations, and lane keeping assist technologies). In voluntarily collecting this information, manufacturers have generally adopted the sample rate used for pre-crash data elements voluntarily recorded by the EDR (2 Hz), but some current EDRs capture data at 10 Hz. Evidence has shown that an increased sample rate of 10 Hz will help provide the resolution needed to understand the real-world performance and effectiveness of these advanced crash avoidance systems and better estimate the actions of the vehicle prior to a crash, such as the traveling trajectory.⁵⁵ This information will in turn allow researchers to better determine the timing of the sequence of pre-crash actions.

B. Costs

The Preliminary Regulatory Evaluation (PRE) the NPRM relied on to estimate costs considered only vehicles equipped with EDRs containing sufficient memory, microprocessor specifications, and reserve energy to record 20 seconds of data at 10 Hz.

⁵⁴ Smith, C.P., Sherony, R., Gabler, H.C., and Riexinger, L.E., "Identifying Pedal Misapplication Behavior Using Event Data Recorders," SAE Int. J. Advances & Curr. Prac. in Mobility 5(1):206–216, 2023, doi:10.4271/2022-01-0817.

⁵⁵ Matsumura, H., and Itoh, T., "Study on Estimation of Traveling Trajectory Using the Recording Data in the Event Data Recorder," SAE Int. J. Adv. & Curr. Prac. in Mobility 5(2):580–594, 2023, <https://doi.org/10.4271/2022-01-0837>.

⁵² DOT HS 812 929, pg. 39. Five vehicle manufacturers and three suppliers were interviewed as part of the study.

⁵³ While true time synchronization of data originating from the vehicle network may not be possible, the increased sample rate for pre-crash data elements may reduce the potential uncertainty related to the relative timing of data elements, specifically for correlating the driver's commands and the vehicle's performance.

NHTSA acknowledges comments criticizing the NPRM's cost estimates for not adequately accounting for any changes needed to meet the proposed amendments.

For example, the NPRM estimated additional memory costs by multiplying the additional 1,330 bytes to record for 20 seconds at 10 Hz by the cost of flash memory (0.072 cents/megabyte) reported in the EDR Technology Study. This calculation resulted in a cost estimate of \$0.003 for additional memory per event. However, in response to comments received, the agency reviewed online estimates, which indicate that the unit cost for a 16 kB, 32 kB, and 64 kB EEPROM is \$0.41, \$0.46, and \$0.56, respectively.⁵⁶ This pricing results in an additional cost of \$0.15 to increase memory from 16 kB to 64 kB.⁵⁷ As such, this final rule is updating the estimated unit cost for memory upgrade (if all seven pre-crash data elements are recorded) to be \$0.13 per vehicle. The \$0.13 per vehicle includes \$0.06 per vehicle to upgrade the storage memory and \$0.07 per vehicle to upgrade the RAM, both based on two events being recorded.

Although the PRE still applies to EDRs with sufficient memory, microprocessor specifications, and reserve energy to meet this final rule's requirements, NHTSA acknowledges it did not comprehensively consider costs associated with older EDR technologies and the corresponding level of upgrades potentially required in vehicles equipped with them, including costs for redesign and validation. Per comments received, NHTSA understands not all vehicles are equipped with EDRs containing sufficient memory/processor capability/reserve energy to require only software changes.⁵⁸ Based on feedback from commenters and in acknowledgement of this issue, NHTSA has revisited the cost estimates presented in the NPRM to determine the costs associated with meeting the requirements of this final rule given the wide variety of EDRs currently available.

Unlike the PRE, this final rule includes estimated costs for EDRs currently compliant with part 563 that need upgrades to meet this final rule's new recording duration and frequency requirements. These updated cost estimates are presented via a "lower bound" and "upper bound" to capture the potential range for the total cost of the final rule. These bounds are in place to avoid speculating on how many vehicles and EDR platforms would only require software changes to meet the new data capture requirements versus those that would require hardware and software changes.

Description of Upper and Lower Bound Cost Estimates

The cost estimates presented in the Final Regulatory Evaluation (FRE) now represent a "lower bound" reflecting the incremental costs of "upgraded EDRs" that already have the capacity to comply with this final rule.⁵⁹ The "upper bound" represents all the potential components of an EDR that may require upgrades to transition from a "base EDR" to an "upgraded EDR" to meet the requirements of this final rule. For this category of EDRs, the estimated costs encompass more than the incremental costs required to meet this final rule. As EDRs currently vary in hardware capabilities, the actual cost of the final rule should fall somewhere between the lower bound and upper bound of the cost estimates laid out below.

Every part 563 pre-crash data element will require the capturing of an additional 190 data points to meet the 20 second recording duration and 10 Hz frequency requirement of this final rule. Specifically, for the 3 required data elements in Table I, the total number of additional data points is 570. For all 7 pre-crash data elements in Table I and II, the total number of additional data points is 1,330. The NPRM explained that manufacturers could accommodate this needed increase in memory by using the existing memory already available for capturing and recording EDR data (typically in the ACM). The NPRM estimated associated costs for these additional memory needs (1.33 kB for all 7 pre-crash elements) would be \$0.003 per vehicle based on a conservative estimate of \$0.002/kB. However, as previously acknowledged, these estimated costs did not account for EDRs requiring hardware upgrades

based on insufficient reserve energy or microprocessors.

While many newer generation EDRs record at rates between 5 Hz to 10 Hz, most EDRs still record 5 seconds of pre-crash data. Although the agency has a large pool of EDR data, ascertaining the exact hardware specifications among various EDRs for the purposes of this rulemaking is not practical, as EDR modules come with a variety of chip designs capable of accomplishing similar functionality with similar costs, and this information is proprietary. The varied and proprietary nature of EDR designs thus makes defining a representative "base EDR" challenging. Further, EDR designs vary not only by manufacturer, but also often by vehicle model, and EDR capabilities are not standardized. Indeed, they must only meet the minimum requirements in part 563. For example, some EDRs record more than 5 seconds of pre-crash data, some record more than two events, and some voluntarily record more optional data elements than those specified in Table I or Table II of part 563. Further, some EDRs record the required and optional pre-crash data at different sample rates.

Despite the lack of available data needed to perform a comprehensive assessment of EDR design specifications and corresponding functionalities, the agency used its best knowledge to adequately describe a representative base EDR representing the upper bound for the cost estimates based on the specifications in Table 3. We assumed that a base EDR does not have sufficient excess memory to record pre-crash data for 20 seconds at 10 Hz, requiring the microcontroller and reserve energy to be upgraded or increased to meet the requirements of this final rule. We also assumed that a base level EDR must be fully upgraded/modernized, meaning its associated costs are well in excess of the incremental costs associated with making an already updated EDR compliant with the final rule. This cost is more representative of a vehicle manufacturer updating its EDR capability with an eye towards recording additional data elements, such as data elements required by UN R160. If a manufacturer chooses to capture and record ADAS-related pre-crash data elements not listed in part 563, then hardware components may need to be upgraded well beyond what is required by this final rule. However, as mandated by the FAST Act, NHTSA is only changing the duration and sample rate of part 563 pre-crash data elements.

For the lower bound of cost estimates, we assumed a vehicle is already

⁵⁶ See <https://www.mouser.com/c/semiconductors/memory-ics/EEPROM> as of July 25, 2023.

⁵⁷ Note that RAM is generally more expensive than EEPROM, but NHTSA does not have a comparable price comparison because of a lack of data and online product information specifically for RAM designed for vehicle use. However, based on NHTSA's internal analysis, RAM is approximately 20.0 percent more expensive than EEPROM given the same memory capacity. As a result, updating RAM would cost \$0.07 (= 0.06 * 1.20).

⁵⁸ The cost of upgrading this class of EDRs now reflects the "upper bound" of the cost analysis provided below and represents the need to go from a "base EDR" to an "upgraded EDR."

⁵⁹ The agency recognizes that even with the approach taken in the PRE, manufacturers would still need to test and validate any redesigned EDR to ensure it would function as intended and not negatively affect the performance of the air bag systems in the vehicle.

equipped with an EDR capable of capturing pre-crash data for 20 seconds at 10 Hz, as well as additional unrequired data (*i.e.*, it has already been upgraded by the vehicle manufacturer from the base level previously discussed to the fully modernized level). In this scenario, the “upgraded EDR” would not require hardware changes but may

still require development time for software changes, testing, and validation. As a result, the estimated cost for this scenario would only include software redesign and EDR validation. An upgraded EDR representing the lower bound is described by the specifications in Table 3.

As shown in Table 3, the estimated cost to upgrade only the hardware of the base EDR to that of the upgraded EDR is \$1.33 per EDR. This cost estimate includes an increase in the non-volatile memory capacity, a higher-performance MCU, and more reserve energy to capture and record the data and backup power to the system.

TABLE 3—BASE EDR AND UPGRADED EDR HARDWARE SPECIFICATIONS USED FOR COST ESTIMATES

Component		Base EDR	Upgraded EDR
Non-Volatile Memory	EEPROM or Flash	16 kB	64 kB.
Microcontroller (32-bit)	ROM	512 kB	1 MB.
	Memory	48 kB	96 kB.
	RAM	48 kB	96 kB.
	Clock Frequency	80 MHz	120 MHz.
Reserve Energy	Capacitance	3.3 µF	10 µF.
Estimated costs to upgrade hardware for increased data capture (per unit)			
		\$1.33	\$0.00.

Following publication of the NPRM and review of comments received NHTSA carried out a Final Regulatory Evaluation (FRE), available under the same docket number as this final rule, to estimate the total unit cost per EDR. The total unit cost consists of the following components: (1) increased memory capacity, (2) microcontroller upgrades, (3) energy reserve upgrade, (4) EDR redesign and validation, (5) assembling related material and labor costs, and (6) data imaging tool upgrade. The aggregated unit cost is the additional cost for an EDR to comply with the final rule. Based on these findings, the agency now estimates that the cost to upgrade EDRs to meet the new requirements under this final rule would range between \$0.87 and \$2.20 per vehicle equipped with an EDR.⁶⁰

NHTSA estimates that this final rule will affect approximately 15.23 million light vehicles annually with a GVWR less than 8,501 lbs. This number is derived from Ward’s Automotive Yearbook 2022 and the agency’s NCAP data. Based on Ward’s data, from 2012 to 2021, the average annual sales of light vehicles with a GVWR less than 14,001 lbs was approximately 16.21 million. Due to the incompatible GVWR categorization in Ward’s data, NHTSA was not able to directly parse out the number of light vehicles, *i.e.*, GVWR less than 8,501 lbs, so NCAP data was used. NCAP data includes the precise GVWR and expected sales volume, but only for models of vehicles that manufacturers reported to the agency. In other words, NCAP might not be adequate for assessing the absolute annual vehicle sale volume since the

expected sold volume might not be the actual volume sold and the reported models might not be comprehensive. However, NCAP is a reasonable, available source to derive the relative proportion of vehicles by GVWR. Based on 2021 and 2022 NCAP, an average of 6 percent of reported light vehicles had a GVWR greater than 8,500 lbs. Multiplying the annual sales from Ward’s data by the percentage of affected vehicles results in 15.23 million (= 16.21 million * 0.94). Based on approximately 15.23 million affected vehicles sold annually, the total estimated annual costs range from \$13.26 million to \$33.52 million.⁶¹ The FRE’s estimated unit cost per EDR for each cost component, the total unit cost, and the total annual costs for the lower and upper bound estimates are shown in Table 4.

TABLE 4—COST ESTIMATES FOR INCREASED RECORDING DURATION OF EDR PRE-CRASH DATA

Cost To Modernize EDR From Indicated Baseline		
Cost components	Upgraded EDR (lower bound)	Base EDR (upper bound)
Memory Capacity Increase	\$0.00	\$0.13
EEPROM/Flash Increase	0.00	0.06
Buffer (Volatile Memory)	0.00	0.07
Microcontroller Upgrades	0.00	1.10
Energy Reserve Upgrade	0.00	0.02
EDR Redesign and Validation	0.87	0.87
Labor for Assembling	0.00	0.08
Data Imaging Tool Upgrade	0.00	0.00
Aggregated Unit Cost	0.87	2.20

⁶⁰ All costs are in 2022 values.

⁶¹ Costs for testing, evaluation, and other fixed costs are factored into the component unit costs by a 1.5 markup factor from its variable cost.

TABLE 4—COST ESTIMATES FOR INCREASED RECORDING DURATION OF EDR PRE-CRASH DATA—Continued

Cost To Modernize EDR From Indicated Baseline		
Cost components	Upgraded EDR (lower bound)	Base EDR (upper bound)
Total Number of Affected Vehicles	15,230,000	
Total Cost of the Rule (in Millions)	\$13.26	\$33.52

Given the lack of reliable available data discussed above, NHTSA has used the cost estimates provided by Auto Innovators in response to the NPRM to estimate the cost for redesign and validation in the FRE.⁶² Auto Innovators provided an estimated average development/testing cost of \$8.4 million per OEM, based on feedback from OEMs. This estimate would amount to a total of \$142.8 million collectively for the 17 OEMs that provided estimates to Auto Innovators and would only be considered part of the cost burden for the first year. Applying this cost to 16.4 million vehicles sold annually⁶³ over 10 years, the estimated cost per vehicle for this component is \$0.87. In the FRE for this final rule, the estimated \$0.87 for redesign and validation has been applied equally in both the lower bound and upper bound scenarios. Estimated costs for memory, microprocessors, and capacitors were derived from an online search, with sources presented in the FRE for this rulemaking. The components were filtered using the following specifications: automotive grade or use, reel package, and surface-mount. The sourced online sale unit prices were quoted for small quantities compared to the large quantities that OEMs may order for production. The unit prices were further discounted to 30 percent of the unit price.⁶⁴ The costs for wiring and assembly have been adjusted for inflation from the estimated assembly costs presented in the 2006 EDR final rule.

In acknowledgment of the updated estimated costs laid out in the FRE, NHTSA has added lead time to this final rule to allow OEMs additional time to comply with this final rule. This lead time should mitigate costs that may be

required for OEMs to meet this final rule. The added lead time will also allow for the phasing out of older EDR systems prior to the implementation of the 20 second and 10 Hz requirements. Phasing out these EDRs will help negate required upgrades and any costs associated with the necessary components and costs needed to develop and test the package.

VI. Rulemaking Analyses and Notices

Executive Orders 12866, 13563, and 14094, and DOT Regulatory Policies and Procedures

We have considered the potential impact of this rule under Executive Order 12866, Executive Order 13563, Executive Order 14094, and DOT Order 2100.6A. This final rule is nonsignificant under E.O. 12866 and E.O. 14094 and was not reviewed by the Office of Management and Budget. It is also not considered “of special note to the Department” under DOT Order 2100.6A, *Rulemaking and Guidance Procedures*.

As discussed in this final rule and the NPRM, the additional pre-crash data that would be collected by EDRs under this final rule would be valuable for the advancement of vehicle safety by enhancing and facilitating crash investigations, the evaluation of safety countermeasures, advanced restraint and safety countermeasure research and development, and certain safety defect investigations. Improvements in vehicle safety could occur indirectly from the collection of these data.

We estimate that approximately 99.5 percent of model year 2021 passenger cars and other vehicles with a GVWR of 3,855 kg or less are already equipped with part 563-compliant EDRs. As discussed in the section on the cost impacts of this final rule, the agency believes that a portion of currently equipped EDRs would not require additional hardware to meet the requirements of this final rule and that the compliance costs would be low for software testing and validation. Additionally, this final rule’s lead time should allow manufacturers to choose how best to equip compliant EDRs in applicable vehicles by the effective date

of this final rule, while also mitigating costs. Updated cost estimates have been provided for EDRs that would require hardware and software updates.

Regulatory Flexibility Act

The Regulatory Flexibility Act of 1980 (5 U.S.C. 601 *et seq.*) requires agencies to evaluate the potential effects of their proposed and final rules on small businesses, small organizations, and small Government jurisdictions. The Act requires agencies to prepare and make available an initial and final regulatory flexibility analysis (RFA) describing the impact of proposed and final rules on small entities. An RFA is not required if the head of the agency certifies that the proposed or final rule will not have a significant impact on a substantial number of small entities. I hereby certify that this rule would not have a significant economic impact on a substantial number of small entities. Additional details related to the basis of this finding can be found in the FRE for this rulemaking final rule.

The factual basis for the certification (5 U.S.C. 605(b)) is set forth below. Although the agency is not required to issue an initial regulatory flexibility analysis, this section discusses many of the issues that an initial regulatory flexibility analysis would address.

This final rule creates minor amendments to 49 CFR part 563, Event Data Recorders (EDRs), to extend the recording period for pre-crash elements in voluntarily installed EDRs from 5 seconds of pre-crash data at a sample rate of 2 Hz to 20 seconds of pre-crash data at a sample rate of 10 Hz. This final rule applies to vehicle manufacturers that produce light vehicles with a GVWR not greater than 3,855 kg (8,500 pounds) and voluntarily install EDRs in their vehicles. It also applies to final-stage manufacturers and alterers. We know of no Federal rules which duplicate, overlap, or conflict with the final rule.

The Small Business Administration’s size standard regulation at 13 CFR part 121, “Small business size regulations,” prescribes small business size standards by North American Industry Classification System (NAICS) codes.

⁶² NHTSA–2022–0021–0025.

⁶³ Annual production of vehicles typically fitted with part 563 compliant EDRs averaged between 2015–2019 (pre-COVID). See <https://www.epa.gov/automotive-trends/explore-automotive-trends-data#SummaryData>.

⁶⁴ Online quotes are for a sale quantity that is significantly less than the quantity that would be purchased by the manufacturers. To account for the efficiency of mass production and pricing power, NHTSA uniformly discounted these unit prices by 70 percent to represent the component price for manufacturers. This 70 percent discount may be conservative based on the agency’s knowledge.

NAICS code 336211, Motor Vehicle Body Manufacturing, prescribes a small business size standard of 1,000 or fewer employees. NAICS code 336390, Other Motor Vehicle Parts Manufacturing, prescribes a small business size standard of 1,000 or fewer employees. Most motor vehicle manufacturers would not qualify as a small business. There are a number of vehicle manufacturers that are small businesses.

This final rule will directly affect 20 single stage motor vehicle manufacturers.⁶⁵ None of these are qualified as a small business. However, NHTSA analyzed current small manufacturers, multistage manufacturers, and alterers that currently have part 563 compliant EDRs and found that 13 motor vehicle manufacturers affected by this rulemaking would qualify as small businesses. While these 13 motor vehicle manufacturers qualify as small businesses, none of them would be significantly affected by this rulemaking for several reasons. First, vehicles that contain EDRs are already required to comply with part 563. These small businesses generally adhere to original equipment manufacturers' instructions in manufacturing modified and altered vehicles. Based on our knowledge, original equipment manufacturers do not permit a final stage manufacturer or alterer to modify or alter sophisticated devices such as air bags or EDRs. Therefore, multistage manufacturers and alterers will be able to rely on the certification and information provided by the original equipment manufacturer for EDRs.

This rule may require hardware changes and will require adjusting the recording time and sampling rate for up to seven pre-crash data elements. As previously stated, the agency believes some current or planned systems can accommodate these changes. Additionally, NHTSA believes the market for the vehicle products of the 13 small vehicle manufacturers is highly inelastic, meaning that purchasers of their products are enticed by the desire to have a highly customized vehicle. Generally, under this circumstance, if any prices increase, the price of competitor's models will also need to be raised by a similar amount, since all light vehicles must comply with the standards. Therefore, any reasonable price increase will not have any effect on sales of these vehicles. NHTSA also

designed the final rule to provide two years of lead time before the implementation of this final rule. Limited line⁶⁶ and small-volume manufacturers⁶⁷ will only need to produce compliant EDRs on or after September 1, 2029. Manufacturers producing altered vehicles or vehicles in two or more stages will have one additional year, until September 1, 2030, for compliance. This additional time provides any affected entities flexibility and ample time to make the necessary assessments to acquire a basis for certifying their vehicles' compliance.

Executive Order 13132 (Federalism)

NHTSA has examined this rule pursuant to Executive Order 13132 (64 FR 43255, August 10, 1999) and concluded that no additional consultation with States, local governments, or their representatives is mandated beyond the rulemaking process. The agency has concluded that this rule will not have sufficient federalism implications to warrant consultation with State and local officials or the preparation of a federalism summary impact statement. The rule does not have "substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government."

NHTSA rules can preempt in two ways. First, the National Traffic and Motor Vehicle Safety Act contains an express preemption provision: When a motor vehicle safety standard is in effect under this chapter, a State or a political subdivision of a State may prescribe or continue in effect a standard applicable to the same aspect of performance of a motor vehicle or motor vehicle equipment only if the standard is identical to the standard prescribed under this chapter. 49 U.S.C. 30103(b)(1). It is this statutory command by Congress that preempts any non-identical State legislative and administrative law addressing the same aspect of performance. The express preemption provision described above is subject to a savings clause under which compliance with a motor vehicle safety standard prescribed under this chapter does not exempt a person from

liability at common law. 49 U.S.C. 30103(e). Pursuant to this provision, State common law tort causes of action against motor vehicle manufacturers that might otherwise be preempted by the express preemption provision are generally preserved.

NHTSA rules can also preempt State law if complying with the FMVSS would render the motor vehicle manufacturers liable under State tort law. Because most NHTSA standards established by an FMVSS are minimum standards, a State common law tort cause of action that seeks to impose a higher standard on motor vehicle manufacturers will generally not be preempted. If and when such a conflict does exist—for example, when the standard at issue is both a minimum and a maximum standard—the State common law tort cause of action is impliedly preempted. *See Geier v. American Honda Motor Co.*, 529 U.S. 861 (2000).

Pursuant to Executive Orders 13132 and 12988, NHTSA has considered whether this rule could or should preempt State common law causes of action. The agency's ability to announce its conclusion regarding the preemptive effect of one of its rules reduces the likelihood that preemption will be an issue in any subsequent tort litigation. To this end, the agency has examined the nature (*i.e.*, the language and structure of the regulatory text) and objectives of this rule and finds that this rule, like many NHTSA rules, would prescribe only a minimum safety standard. As such, NHTSA does not intend this rule to preempt state tort law that would effectively impose a higher standard on motor vehicle manufacturers. Establishment of a higher standard by means of State tort law will not conflict with the minimum standard adopted here. Without any conflict, there could not be any implied preemption of a State common law tort cause of action.

This final rule proposes technical amendments to an already existing regulation.⁶⁸ When 49 CFR part 563 was promulgated in 2006, NHTSA explained its view that any state laws or regulations that prohibit the types of EDRs addressed by part 563 would create a conflict and therefore be preempted. As a result, regarding this final rule, NHTSA does not believe there are current state laws or regulations for EDRs that conflict with part 563 or with the overall minor

⁶⁶ Limited line manufacturer means a manufacturer that sells three or fewer carlines, as that term is defined in 49 CFR 583.4, in the United States during a production year.

⁶⁷ Small-volume manufacturer as defined in § 571.127, "Automatic emergency braking systems for light vehicles," is an original vehicle manufacturer that produces or assembles fewer than 5,000 vehicles annually for sale in the United States.

⁶⁸ The 2006 final rule promulgating 49 CFR part 563 discussed preemption at length. *See* 71 FR 50907, 51029 (Aug. 28, 2006).

⁶⁵ BMW, Fiat/Chrysler (Ferrari and Maserati), Ford, Geely (Volvo), General Motors, Honda (Acura), Hyundai, Kia, Lotus, Mazda, Mercedes, Mitsubishi, Nissan (Infiniti), Porsche, Subaru, Suzuki, Tata (Jaguar and Land Rover), Tesla, Toyota (Lexus), and Volkswagen/Audi.

change to capture time proposed by this document.

Further, the amendments required by this final rule are directed by the FAST Act, which directs NHTSA to conduct a study to determine the amount of time EDRs should capture and record data to provide sufficient information for crash investigators, and conduct a rulemaking based on this study to establish the appropriate recording period in part 563. NHTSA conducted an EDR Duration Study and submitted a Report to Congress summarizing the results of this study in September 2018. This final rule fulfills the rulemaking mandated by the FAST Act. To the extent there are state laws with different capture times than that required by this final rule, Congress made the determination in the FAST Act that the capture time required by part 563 should be extended. NHTSA is issuing this final rule in accordance with that statutory mandate.

Executive Order 12988 (Civil Justice Reform)

When promulgating a regulation, Executive Order 12988 specifically requires that the agency must make every reasonable effort to ensure that the regulation, as appropriate: (1) Specifies in clear language the preemptive effect; (2) specifies in clear language the effect on existing Federal law or regulation, including all provisions repealed, circumscribed, displaced, impaired, or modified; (3) provides a clear legal standard for affected conduct rather than a general standard, while promoting simplification and burden reduction; (4) specifies in clear language the retroactive effect; (5) specifies whether administrative proceedings are to be required before parties may file suit in court; (6) explicitly or implicitly defines key terms; and (7) addresses other important issues affecting clarity and general draftsmanship of regulations.

Pursuant to this Order, NHTSA notes as follows. The preemptive effect of this rule is discussed above in connection with E.O. 13132. NHTSA notes further that there is no requirement that individuals submit a petition for reconsideration or pursue other administrative proceeding before they may file suit in court.

Congressional Review Act

The Congressional Review Act, 5 U.S.C. 801 et. seq., as added by the Small Business Regulatory Enforcement Fairness Act of 1996, generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of the

Congress and to the Comptroller General of the United States. NHTSA will submit a report containing this rule and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the **Federal Register**. This rule does not meet the criteria in 5 U.S.C. 804(2) to be considered a major rule. The rule will be effective sixty days after the date of publication in the **Federal Register**.

Executive Order 13609 (Promoting International Regulatory Cooperation)

Executive Order 13609, “Promoting International Regulatory Cooperation,” promotes international regulatory cooperation to meet shared challenges involving health, safety, labor, security, environmental, and other issues and to reduce, eliminate, or prevent unnecessary differences in regulatory requirements.

The agency is currently participating in the negotiation and development of technical standards for Event Data Recorders in the United Nations Economic Commission for Europe (UNECE) World Forum for Harmonization of Vehicle Regulations (WP.29). As a signatory member, NHTSA is obligated to initiate rulemaking to incorporate safety requirements and options specified in Global Technical Regulations (GTRs) if the U.S. votes in the affirmative to establish the GTR. No GTR for EDRs has been developed at this time. NHTSA has analyzed this rule under the policies and agency responsibilities of Executive Order 13609 and has determined this rulemaking would have no effect on international regulatory cooperation.

National Environmental Policy Act

NHTSA has analyzed this rule for the purposes of the National Environmental Policy Act. In accordance with 49 CFR 1.81, 42 U.S.C. 4336, and DOT NEPA Order 5610.1C, NHTSA has determined that this rule is categorically excluded pursuant to 23 CFR 771.118(c)(4) (planning and administrative activities, such as promulgation of rules, that do not involve or lead directly to construction). This rulemaking, which amends regulations regarding Event Data Records (EDRs) to extend the EDR recording period of timed data metrics from 5 seconds of pre-crash data at a frequency of 2Hz to 20 seconds of pre-crash data at a frequency of 10 Hz, is not anticipated to result in any environmental impacts, and there are no extraordinary circumstances present in connection with this rulemaking.

Paperwork Reduction Act

Under the Paperwork Reduction Act of 1995 (PRA), a person is not required to respond to a collection of information by a Federal agency unless the collection displays a valid Office of Management and Budget (OMB) control number. This final rule makes amendments that relate to an information collection that is subject to the PRA, but the amendments are not expected to increase the burden associated with the information collection. In compliance with the requirements of the PRA, NHTSA published a notice in the **Federal Register** on August 26, 2021 (86 FR 47719), seeking public comment and providing a 60-day comment period. NHTSA followed up with a second notice, published on March 17, 2022 (87 FR 15302), announcing that the agency was submitting the information collection request to OMB for approval. OMB approved the collection without change on September 29, 2022 (OMB Control No. 2127–0758).

National Technology Transfer and Advancement Act

Under the National Technology Transfer and Advancement Act of 1995 (NTTAA) (Pub. L. 104–113), “all Federal agencies and departments shall use technical standards that are developed or adopted by voluntary consensus standards bodies, using such technical standards as a means to carry out policy objectives or activities determined by the agencies and departments.” Voluntary consensus standards are technical standards (e.g., materials specifications, test methods, sampling procedures, and business practices) that are developed or adopted by voluntary consensus standards bodies, such as SAE International (SAE). The NTTAA directs us to provide Congress, through OMB, explanations when we decide not to use available and applicable voluntary consensus standards. The NTTAA requires agencies to use voluntary consensus standards in lieu of government-unique standards except where inconsistent with law or otherwise impractical.

There are several consensus standards related to EDRs, most notably those standards published by SAE (J1698—Event Data Recorder) and the Institute of Electrical and Electronics Engineers (IEEE) (Standard 1616, IEEE Standard for Motor Vehicle Event Data Recorder). NHTSA carefully considered the consensus standards applicable to EDR data elements in establishing part 563. Consensus standards for recording time/intervals, data sample rates, data

retrieval, data reliability, data range, accuracy and precision, and EDR crash survivability were evaluated by NHTSA and adopted when appropriate. The FAST Act directed NHTSA to conduct a study to determine the amount of time EDRs should capture and record pre-crash data to provide sufficient information for crash investigators, and to conduct a rulemaking based on this study to establish the appropriate recording period in NHTSA's EDR regulation. NHTSA conducted the EDR Duration Study and submitted a Report to Congress summarizing the results of this study in September 2018. This rulemaking exceeds the pre-crash data recording durations of the SAE and IEEE standards (*i.e.*, SAE and IEEE recommend recording 8 seconds of pre-crash data) based upon the new information obtained from the EDR Duration Study. The results of the study on EDR recording duration suggest that the recommended recording duration by these standards would not capture the initiation of crash avoidance maneuvers. NHTSA declines to adopt the voluntary consensus standards for the pre-crash recording because such a decision would be inconsistent with the best available information to the agency and conflict with the outcome of a study required by the FAST Act.

Unfunded Mandates Reform Act

Section 202 of the Unfunded Mandates Reform Act of 1995 (UMRA), Public Law 104–4, requires Federal agencies to prepare a written assessment of the costs, benefits, and other effects of proposed or final rules that include a Federal mandate likely to result in the expenditure by State, local, or tribal governments, in the aggregate, or by the private sector, of more than \$100 million annually (adjusted for inflation with base year of 1995). Adjusting this amount by the implicit gross domestic product price deflator for the year 2020 results in \$158 million (113.625/71.868 = 1.581). Before promulgating a rule for which a written statement is needed, section 205 of the UMRA generally requires the agency to identify and consider a reasonable number of regulatory alternatives and adopt the least costly, most cost-effective, or least burdensome alternative that achieves the objectives of the rule. The provisions of section 205 do not apply when they are inconsistent with applicable law. Moreover, section 205 allows the agency to adopt an alternative other than the least costly, most cost-effective, or least burdensome alternative if the agency publishes with the final rule an explanation of why that alternative was not adopted.

This final rule would not result in expenditures by State, local, or tribal governments, in the aggregate, or by the private sector in excess of \$158 million (in 2020 dollars) annually. As a result, the requirements of section 202 of the Act do not apply.

Executive Order 13045 (Protection of Children From Environmental Health and Safety Risks)

Executive Order 13045, “Protection of Children from Environmental Health and Safety Risks,” (62 FR 19885, April 23, 1997) applies to any proposed or final rule that: (1) is determined to be “economically significant,” as defined in E.O. 12866, and (2) concerns an environmental health or safety risk that NHTSA has reason to believe may have a disproportionate effect on children. If a rule meets both criteria, the agency must evaluate the environmental health or safety effects of the rule on children and explain why the rule is preferable to other potentially effective and reasonably feasible alternatives considered by the agency. This rulemaking is not subject to the Executive order because it is not economically significant as defined in E.O. 12866.

Executive Order 13211

Executive Order 13211 (66 FR 28355, May 18, 2001) applies to any rulemaking that: (1) is determined to be significant as defined under E.O. 12866, and is likely to have a significantly adverse effect on the supply of, distribution of, or use of energy; or (2) that is designated by the Administrator of the Office of Information and Regulatory Affairs as a significant energy action. This rulemaking is not subject to E.O. 13211.

Privacy

The E-Government Act of 2002, Public Law 107–347, sec. 208, 116 Stat. 2899, 2921 (Dec. 17, 2002), requires Federal agencies to conduct a Privacy Impact Assessment when they develop or procure new information technology involving the collection, maintenance, or dissemination of information in identifiable form or they make substantial changes to existing information technology that manages information in identifiable form. A PIA is an analysis of how information in identifiable form is collected, stored, protected, shared, and managed. The purpose of a PIA is to demonstrate that system owners and developers have incorporated privacy protections throughout the entire life cycle of a system.

The Agency submitted a Privacy Threshold Analysis analyzing this rulemaking to the DOT, Office of the Secretary's Privacy Office (DOT Privacy Office). The DOT Privacy Office has determined that this rulemaking does not create privacy risk because no new or substantially changed technology would collect, maintain, or disseminate information in an identifiable form because of this rule. NHTSA also notes that the Driver Privacy Act of 2015 assigns ownership of EDR data to the vehicle owner, provides limitations on data retrieval from EDR data, and generally prohibits access to EDR data with specific exceptions to this general rule.

Plain Language Requirement

E.O. 12866 requires each agency to write all rules in plain language. Application of the principles of plain language includes consideration of the following questions:

- Have we organized the material to suit the public's needs?
- Are the requirements in the rule clearly stated?
- Does the rule contain technical language or jargon that isn't clear?
- Would a different format (grouping and order of sections, use of headings, paragraphing) make the rule easier to understand?
- Would more (but shorter) sections be better?
- Could we improve clarity by adding tables, lists, or diagrams?
- What else could we do to make the rule easier to understand?

NHTSA has considered these questions and attempted to use plain language in promulgating this final rule. If readers have suggestions on how we can improve our use of plain language, please write us.

Regulation Identifier Number (RIN)

The Department of Transportation assigns a regulation identifier number (RIN) to each regulatory action listed in the Unified Agenda of Federal Regulations. The Regulatory Information Service Center publishes the Unified Agenda in April and October of each year. You may use the RIN contained in the heading at the beginning of this document to find this action in the Unified Agenda.

List of Subjects in 49 CFR Part 563

Motor vehicle safety, Motor vehicles, Reporting and record keeping requirements.

In consideration of the foregoing, NHTSA amends 49 CFR part 563 as follows:

PART 563—EVENT DATA RECORDERS

- 1. Revise the authority citation for part 563 to read as follows:

Authority: 49 U.S.C. 322, 30101, 30111, 30115, 30117, 30166, 30168; delegation of authority at 49 CFR 1.95.

- 2. Add definitions for “*Limited-line manufacturer*” and “*Small-volume manufacturer*” in alphabetical order to § 563.5(b) to read as follows:

§ 563.5 Definitions.

(b) * * * * *

Limited-line manufacturer means a manufacturer that sells three or fewer carlines, as that term is defined in 49 CFR 583.4, in the United States during a production year.

Small-volume manufacturer means an original vehicle manufacturer that produces or assembles fewer than 5,000

vehicles annually for sale in the United States.

* * * * *

- 3. Revise § 563.7 to read as follows:

§ 563.7 Data elements.

(a) *Data elements required for all vehicles.* Each vehicle equipped with an EDR must record all of the data elements listed in table I to § 563.7(a), during the interval/time and at the sample rate specified in that table.

TABLE I TO § 563.7(a)—DATA ELEMENTS REQUIRED FOR ALL VEHICLES EQUIPPED WITH AN EDR

Data element	Recording interval/time ¹ (relative to time zero)	Data sample rate (samples per second)
Delta-V, longitudinal	0 to 250 ms or 0 to End of Event Time plus 30 ms, whichever is shorter.	100
Maximum delta-V, longitudinal	0–300 ms or 0 to End of Event Time plus 30 ms, whichever is shorter.	N/A
Time, maximum delta-V	0–300 ms or 0 to End of Event Time plus 30 ms, whichever is shorter.	N/A
Speed, vehicle indicated	–20.0 to 0 sec ⁴	4 10
Engine throttle, % full (or accelerator pedal, % full)	–20.0 to 0 sec ⁴	4 10
Service brake, on/off	–20.0 to 0 sec ⁴	4 10
Ignition cycle, crash	–1.0 sec	N/A
Ignition cycle, download	At time of download ³	N/A
Safety belt status, driver	–1.0 sec	N/A
Frontal air bag warning lamp, on/off ²	–1.0 sec	N/A
Frontal air bag deployment, time to deploy, in the case of a single stage air bag, or time to first stage deployment, in the case of a multi-stage air bag, driver.	Event	N/A
Frontal air bag deployment, time to deploy, in the case of a single stage air bag, or time to first stage deployment, in the case of a multi-stage air bag, right front passenger.	Event	N/A
Multi-event, number of event	Event	N/A
Time from event 1 to 2	As needed	N/A
Complete file recorded (yes, no)	Following other data	N/A

¹ Pre-crash data and crash data are asynchronous. The sample time accuracy requirement for pre-crash time is –0.1 to 1.0 sec (e.g., T = –1 would need to occur between –1.1 and 0 seconds.)

² The frontal air bag warning lamp is the readiness indicator specified in S4.5.2 of FMVSS No. 208, and may also illuminate to indicate a malfunction in another part of the deployable restraint system.

³ The ignition cycle at the time of download is not required to be recorded at the time of the crash, but shall be reported during the download process.

⁴ For vehicles manufactured before September 1, 2027, the required recording interval is –5.0 to 0 sec relative to time zero and the required data sample rate is 2 samples per second. For vehicles manufactured before September 1, 2029 by small-volume manufacturers and limited-line manufacturers, the required recording interval is –5.0 to 0 sec relative to time zero and the required data sample rate is 2 samples per second. For vehicles manufactured before September 1, 2030 by manufacturers producing altered vehicles or vehicles in two or more stages, the required recording interval is –5.0 to 0 sec relative to time zero and the required data sample rate is 2 samples per second.

(b) *Data elements required for vehicles under specified conditions.* Each vehicle equipped with an EDR

must record each of the data elements listed in column 1 of table II to § 563.7(b) for which the vehicle meets

the condition specified in column 2 of that table, during the interval/time and at the sample rate specified in that table.

TABLE II TO § 563.7(b)—DATA ELEMENTS REQUIRED FOR VEHICLES UNDER SPECIFIED MINIMUM CONDITIONS

Data element name	Condition for requirement	Recording interval/time ¹ (relative to time zero)	Data sample rate (per second)
Lateral acceleration	If recorded ²	N/A	N/A
Longitudinal acceleration	If recorded	N/A	N/A
Normal acceleration	If recorded	N/A	N/A
Delta-V, lateral	If recorded	0–250 ms or 0 to End of Event Time plus 30 ms, whichever is shorter.	100

TABLE II TO § 563.7(b)—DATA ELEMENTS REQUIRED FOR VEHICLES UNDER SPECIFIED MINIMUM CONDITIONS—Continued

Data element name	Condition for requirement	Recording interval/time ¹ (relative to time zero)	Data sample rate (per second)
Maximum delta-V, lateral	If recorded	0–300 ms or 0 to End of Event Time plus 30 ms, whichever is shorter.	N/A
Time maximum delta-V, lateral	If recorded	0–300 ms or 0 to End of Event Time plus 30 ms, whichever is shorter.	N/A
Time for maximum delta-V, result- ant.	If recorded	0–300 ms or 0 to End of Event Time plus 30 ms, whichever is shorter.	N/A
Engine rpm	If recorded	–20.0 to 0 sec ⁵	⁵ 10
Vehicle roll angle	If recorded	–1.0 up to 5.0 sec ³	10
ABS activity (engaged, non-en- gaged).	If recorded	–20.0 to 0 sec ⁵	⁵ 10
Stability control (on, off, or en- gaged).	If recorded	–20.0 to 0 sec ⁵	⁵ 10
Steering input	If recorded	–20.0 to 0 sec ⁵	⁵ 10
Safety belt status, right front pas- senger (buckled, not buckled).	If recorded	–1.0 sec	N/A
Frontal air bag suppression switch status, right front passenger (on, off, or auto).	If recorded	–1.0 sec	N/A
Frontal air bag deployment, time to nth stage, driver ⁴ .	If equipped with a driver's frontal air bag with a multi-stage infla- tor.	Event	N/A
Frontal air bag deployment, time to nth stage, right front passenger ⁴ .	If equipped with a right front pas- senger's frontal air bag with a multi-stage inflator.	Event	N/A
Frontal air bag deployment, nth stage disposal, driver, Y/N (whether the nth stage deploy- ment was for occupant restraint or propellant disposal purposes).	If recorded	Event	N/A
Frontal air bag deployment, nth stage disposal, right front pas- senger, Y/N (whether the nth stage deployment was for occu- pant restraint or propellant dis- posal purposes).	If recorded	Event	N/A
Side air bag deployment, time to deploy, driver.	If recorded	Event	N/A
Side air bag deployment, time to deploy, right front passenger.	If recorded	Event	N/A
Side curtain/tube air bag deploy- ment, time to deploy, driver side.	If recorded	Event	N/A
Side curtain/tube air bag deploy- ment, time to deploy, right side.	If recorded	Event	N/A
Pretensioner deployment, time to fire, driver.	If recorded	Event	N/A
Pretensioner deployment, time to fire, right front passenger.	If recorded	Event	N/A
Seat track position switch, fore- most, status, driver.	If recorded	–1.0 sec	N/A
Seat track position switch, fore- most, status, right front pas- senger.	If recorded	–1.0 sec	N/A
Occupant size classification, driver	If recorded	–1.0 sec	N/A
Occupant size classification, right front passenger.	If recorded	–1.0 sec	N/A
Occupant position classification, driver.	If recorded	–1.0 sec	N/A
Occupant position classification, right front passenger.	If recorded	–1.0 sec	N/A

¹ Pre-crash data and crash data are asynchronous. The sample time accuracy requirement for pre-crash time is –0.1 to 1.0 sec (e.g., T = –1 would need to occur between –1.1 and 0 seconds.)

² “If recorded” means if the data is recorded in non-volatile memory for the purpose of subsequent downloading.

³ “Vehicle roll angle” may be recorded in any time duration; –1.0 sec to 5.0 sec is suggested.

⁴ List this element n – 1 times, once for each stage of a multi-stage air bag system.

⁵For vehicles manufactured before September 1, 2027, the required recording interval is –5.0 to 0 sec relative to time zero and the required data sample rate is 2 samples per second. For vehicles manufactured before September 1, 2029 by small-volume manufacturers and limited-line manufacturers, the required recording interval is –5.0 to 0 sec relative to time zero and the required data sample rate is 2 samples per second. For vehicles manufactured before September 1, 2030 by manufacturers producing altered vehicles or vehicles in two or more stages, the required recording interval is –5.0 to 0 sec relative to time zero and the required data sample rate is 2 samples per second.

Issued in Washington, DC, under authority delegated in 49 CFR 1.95 and 501.

Adam Raviv,
Chief Counsel.

[Final Rule, RIN 2127–AM12, 49 CFR part 563 Event Data Recorders]

50 CFR Part 648

[Docket No. 241212–0325]

RIN 0648–BN01

Fisheries of the Northeastern United States; Framework Adjustment 15 to the Monkfish Fishery Management Plan; Framework Adjustment 6 to the Spiny Dogfish Fishery Management Plan

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Final rule.

SUMMARY: NMFS is implementing regulations for Framework Adjustment 15 to the Monkfish Fishery Management Plan/Framework Adjustment 6 to the Spiny Dogfish Fishery Management Plan, which the New England and Mid-Atlantic Fishery Management Councils jointly recommended and NMFS approved. This action establishes area-based gear requirements for vessels fishing with gillnets in the monkfish fishery, starting on January 1, 2026, and for vessels fishing with gillnets in the spiny dogfish fishery starting on May 1, 2025. This action is necessary to minimize bycatch of Atlantic sturgeon in the monkfish and spiny dogfish fisheries to the extent practicable and fulfill requirements of the Biological Opinion on Ten Fishery Management Plans in the Greater Atlantic Region and the New England Fishery Management Council's Omnibus Habitat Amendment 2.

DATES: Effective May 1, 2025.

ADDRESSES: Copies of the Framework 15/Framework 6 document, including the Regulatory Flexibility Act Analysis and other supporting documents for the

measures, are available from Dr. Cate O'Keefe, Executive Director, New England Fishery Management Council, 50 Water Street, Mill 2, Newburyport, MA 01950 and Dr. Christopher M. Moore, Executive Director, Mid-Atlantic Fishery Management Council, 800 North State Street, Suite 201, Dover, DE 19901. The Framework 15/Framework 6 document is also accessible via the internet at: <https://www.nefmc.org/management-plans/monkfish> or <https://www.mafmc.org/dogfish>.

FOR FURTHER INFORMATION CONTACT:

Spencer Talmage, Fishery Policy Analyst, (978) 281–9232.

SUPPLEMENTARY INFORMATION:

Background

The New England Fishery Management Council (New England Council) and the Mid-Atlantic Fishery Management Council (Mid-Atlantic Council) (collectively, the Councils) jointly manage both the Monkfish and Spiny Dogfish Fishery Management Plans (FMP). The New England Council is the administrative lead for the Monkfish FMP, while the Mid-Atlantic Council is the lead for the Dogfish FMP.

NMFS issued a Biological Opinion on May 27, 2021, that considered the effects of the authorization of two interstate fishery management plans (ISFMP) and eight Federal FMPs, including the Monkfish and Spiny Dogfish FMPs, on Endangered Species Act (ESA)-listed species and designated critical habitat through a formal Section 7 consultation. The Biological Opinion determined that NMFS's authorization of the eight FMPs and two ISFMPs may adversely affect, but is not likely to jeopardize, Atlantic sturgeon. The Biological Opinion included an Incidental Take Statement and Reasonable and Prudent Measures (RPM) with accompanying Terms and Conditions to minimize the impacts of incidental take of Atlantic sturgeon. The RPMs required that NMFS convene a working group to review all of the available information on Atlantic sturgeon bycatch in the federally permitted large-mesh gillnet fisheries and, by May 27, 2022, develop an Action Plan to reduce Atlantic sturgeon bycatch in these fisheries by 2024.

NMFS initially issued the Action Plan on May 26, 2022, and revised it on September 26, 2022, to incorporate feedback from the Councils and public. The Councils subsequently developed

this joint framework action—Framework 15 to the Monkfish FMP and Framework 6 to the Dogfish FMP—to address the recommendations of the Action Plan and fulfill the requirements of the Biological Opinion.

Under the Magnuson-Stevens Fishery Conservation and Management Act, we approve, disapprove, or partially approve measures that the Councils propose, based on consistency with the Act and other applicable law. We review proposed regulations for consistency with the FMP, plan amendment, the Magnuson-Stevens Act and other applicable law, and publish the proposed regulations, solicit public comment, and promulgate the final regulations. We have approved all of the measures in this joint framework action recommended by the Councils, as described below. The measures implemented in this final rule:

- Require vessels fishing on a monkfish day-at-sea (DAS) within the New Jersey Atlantic Sturgeon Bycatch Reduction Area to use low-profile gillnet gear, beginning on January 1, 2026;
- Prohibit dogfish vessels fishing in the New Jersey Atlantic Sturgeon Bycatch Reduction Area from leaving gillnet gear in the water overnight during the months of May and November, effective May 1, 2025; and
- Prohibit dogfish vessels fishing in the Delaware and Maryland Atlantic Sturgeon Bycatch Reduction Area and Virginia Atlantic Sturgeon Bycatch Reduction Area from leaving gillnet gear in the water overnight from November through March, effective May 1, 2025.

Approved Measures

1. Low-Profile Gillnet Gear

The regulations implemented by this final rule require vessels fishing on a Monkfish DAS within the New Jersey Atlantic Sturgeon Bycatch Reduction Area that are using large mesh (*i.e.*, greater than or equal to 10 inches (25.4 centimeters (cm))) to use low-profile gillnet gear, beginning on January 1, 2026. Low-profile gillnet gear is defined in this final rule as having:

- Mesh size ranging from 12 to 13 inches (30.48 to 33.02 cm);
- Net height ranging from 6 to 8 meshes tall;
- Net length of 300 feet (91.44 meters (m));
- Tie-down length of less than or equal to 30 inches (76.2 cm);

- Tie-down spacing of 12 feet (3.66 m);
- Primary hanging ratio of 0.50;
- Twine size of 0.81 millimeters (mm); and
- Tie downs at every float to keep the float line down.

These characteristics are intended to reduce interaction with Atlantic sturgeon by reducing the likelihood that Atlantic sturgeon high in the water column will become entangled, by allowing smaller sturgeon to swim through the larger mesh, and by allowing the larger sturgeon to break the mesh.

The requirement to use low-profile gillnet gear within the New Jersey Atlantic Sturgeon Bycatch Reduction Area will begin on January 1, 2026, as recommended by the Councils, to allow for the twine size to be considered under Marine Mammal Protection Act (MMPA) provisions and to provide time for affected members of the fishing industry to transition to new gear. The definition of the low-profile gillnet gear requires a twine size of 0.81 mm; however, this conflicts with current Harbor Porpoise Take Reduction Plan (HPTRP) Regulations, which require that large-mesh gillnet gear in the waters off the New Jersey Management Area have a twine size at least 0.9 mm in diameter from January 1 through April 30, except during April 1 through April 20 (50 CFR 229.34(b)(1)(ii)). The Harbor Porpoise Take Reduction Team (HPTRT) was asked by the Councils to consider whether this requirement could be modified to reduce the twine size required in the HPTRP regulations. On June 28, 2024, the HPTRT received a presentation regarding the potential impact of 0.81 mm mesh on harbor porpoise; the analysis presented showed that allowing the 0.81-mm twine size would not be anticipated to cause a statistically significant change in harbor porpoise bycatch relative to current conditions. The HPTRT did not voice any concerns over the proposed change in gear configuration nor the analysis of possible effects.

The low-profile gillnet design is a new gear configuration for a large majority of the fleet. The transition to the new gear will require construction of new nets, which may take time on the part of gear manufacturers, who are limited in number. Thus, delaying this requirement until January 1, 2026, provides industry with the time necessary to acquire and familiarize itself with the new selective gear.

2. Overnight Soak Prohibitions

Within the New Jersey Atlantic Sturgeon Bycatch Reduction Area, this

action requires federally permitted spiny dogfish vessels fishing with roundfish gillnets (*i.e.*, not tie-down gillnets) with a mesh size of 5 to 10 inches (12.7 to 25.4 cm) to remove nets from the water by 8 p.m. Eastern Time (ET) each day until 5 a.m. ET the following day. This requirement will be in place from May 1 through May 31 and November 1 through November 30 of each year, beginning May 1, 2025. This seasonal requirement is based on observer data showing that, of sturgeon takes observed from 2017–2019 and 2021–2022, takes by dogfish vessels within the New Jersey Atlantic Sturgeon Bycatch Reduction Area during May and November accounted for a combined 23 percent of all observed takes by dogfish vessels during the time period.

In the Delaware and Maryland Sturgeon Bycatch Area and in the Virginia Atlantic Sturgeon Bycatch Reduction Area, this action requires federally permitted spiny dogfish vessels fishing with roundfish gillnets (*i.e.*, not tie-down gillnets) with a mesh size of 5.25 to 10 inches (13.34 to 25.4 cm) to remove nets from the water by 8 p.m. ET each day until 5 a.m. ET the following day. This requirement is in place from November 1 through March 31 each year, beginning May 1, 2025. This seasonal requirement is based on observer data showing that, of sturgeon takes observed from 2017–2019 and 2021–2022, takes by dogfish vessels within the Delaware and Maryland Bycatch Reduction Area and in the Virginia Sturgeon Bycatch Reduction Area from November through March accounted for 59 percent of all observed takes by dogfish vessel during the time period.

Implementing an overnight soak restriction for these vessels in the Atlantic Sturgeon Bycatch Reduction Areas during these seasons is expected to reduce the amount of Atlantic sturgeon bycatch, but the amount of that reduction is not certain. Within these areas, the overnight soak prohibitions effectively restrict the length of time gillnets could be soaked by dogfish vessels to a maximum of 15 hours. Bycatch mortality increases as soak time increases, and this restriction will cap soak time at levels where mortality is lower. As a result, the overnight soak prohibitions and the resulting reduction in overall soak time in the fishery are expected to greatly reduce the mortality of Atlantic sturgeon that are caught in nets within the Atlantic Sturgeon Bycatch Reduction Areas.

Comments and Responses

We received a total of 32 comments during the public comment period for the proposed rule. Of the 32 individual comments received, 17 were unique comments, and 15 were a form letter with identical, or close to identical, contents, but submitted by different individuals. Of the 32 individual comments received, 6 opposed the proposed measures, 1 fully supported the proposed measures, 1 supported the action but suggested improvements, and the remaining 25 suggested changes to the action, but did not clearly offer either support or opposition for the action.

Comments in Support

Comment 1: One member of the public generally supported the proposed measures, noting their agreement that Atlantic sturgeon bycatch should be limited. The commenter also provided feedback on the proposed rule. First, the commenter suggested that more information should be provided regarding the population levels for Atlantic sturgeon, monkfish, and spiny dogfish. The commenter also questioned why shortnose sturgeon was not included in this action. Finally, the commenter suggested additional modifications and requirements for large mesh gillnet gear that they suggested would reduce bycatch of Atlantic sturgeon. These were breakaway panels, net slack requirements, and depth restrictions.

Response: NMFS agrees that reduction in Atlantic sturgeon bycatch is important for marine conservation and stewardship. The Environmental Assessment (EA) for this action (see **ADDRESSES**) contains detailed information regarding target species (*e.g.*, monkfish and dogfish), Atlantic sturgeon, and other species affected and potentially affected by the action (including shortnose sturgeon). Regarding additional gear modifications suggested in the comment, the low-profile gillnet design was derived from completed scientific work specifically focusing on reducing Atlantic sturgeon bycatch in the gillnet fisheries. Additional research would need to be conducted to determine the impact of the modifications and requirements on sturgeon bycatch, other species, and directed fisheries prior to consideration under the Council process for implementation in the gillnet fisheries.

Comment 2: The Center for Biological Diversity commented that it supports efforts to reduce and eliminate bycatch of marine species, including Atlantic sturgeon. The Center for Biological

Diversity did not have specific comments regarding the measures being proposed, but stated that we should more explicitly consider the impacts of derelict fishing gear on the environment within the EA for this action and within other analyses conducted by the agency.

Response: We note the Center for Biological Diversity's support of the action to reduce bycatch of Atlantic sturgeon. NMFS does not expect the measures in this action to have a measurable impact on the incidence of derelict fishing gear either positively or negatively, though some reduction in derelict fishing gear may result if fishing effort is reduced. As such, we have determined that there is no need to update the EA for this action in response to this comment.

Comments in Opposition Comment 3: One member of the public opposed regulations for the fishing industry in general.

Response: While NMFS acknowledges the commenter's concern, regulations are the means by which measures contained in an FMP can be implemented and effectuated. Such regulations can be developed by the agency on its own, pursuant to the authority of MSA section 305(d), or, as here, through Council-recommended regulations pursuant to section 303(c). NMFS is required by section 304(b) of the MSA to evaluate proposed regulations pertaining to the fishing industry that are submitted by the Councils pursuant to section 303(c) that are deemed to be necessary and appropriate to implement an FMP. NMFS reviews such submitted regulations to determine whether they are consistent with the FMP, the MSA, and other applicable law. As stated in the Classifications section of this final rule, the NMFS Assistant Administrator determined that this final rule is consistent with the Monkfish and Spiny Dogfish FMPs, other provisions of the Magnuson-Stevens Act, and other applicable law. As such, NMFS is promulgating these regulations to implement Frameworks 15 and 6.

Comment 4: Two members of the public commented that no action (Alternative 1 in the EA) should be the preferred alternative and the action included in this rule (Alternative 5) should not be implemented. One of the commenters stated that the impacts of no action could be positive for Atlantic sturgeon compared to the other alternatives.

Response: NMFS disagrees that no action should be taken and that Alternative 5 is not supported by the impact analysis. Alternative 5 is expected to reduce Atlantic sturgeon

bycatch and mortality in the gillnet fishery compared to taking no action. The measures implemented in this action, Alternative 5, balance as much bycatch reduction for Atlantic sturgeon as possible with as minimal potential impacts on the monkfish and spiny dogfish fisheries as possible. Other alternatives that were not included in the proposed rule also would be expected to reduce Atlantic sturgeon bycatch. Alternatives 2 through 4 would reduce the bycatch of Atlantic sturgeon more than any other alternatives. However, they would also have more negative impacts on the monkfish and dogfish fisheries than other alternatives because they would prevent operation of the monkfish and spiny dogfish fisheries entirely during certain times of the year in the Atlantic Sturgeon Bycatch Reduction Areas. Alternative 5 allows for the continued operation of the monkfish and spiny dogfish fisheries within the Atlantic sturgeon bycatch reduction areas, thereby reducing bycatch and mortalities while also minimizing socioeconomic impacts on the monkfish and spiny dogfish fisheries.

Low-Profile Gillnet Requirement

Comment 5: One member of the public stated that the proposed regulations should not explicitly name the low-profile gillnet, arguing that giving the gear a specific name will result in confusion.

Response: NMFS disagrees that a specific name assigned to the gear type would result in confusion. There are already several examples of selective gear types defined in the regulations, including Rühle Trawl § 648.80(a)(9)(ii), Rope Separator Trawl § 648.84(e), and Large-Mesh Belly Panel Trawl § 648.84(f), and there is no evidence that significant confusion has resulted from that practice. Defining the low-profile gillnet gear allows for a clear definition of the gear configuration in the regulations and makes it easier to distinguish it from other gillnet gear. This also simplifies future modifications to the specific gear and its required configurations, should they become necessary.

Comment 6: Two members of the fishing industry, including one HPTRT member, commented about the potential interactions between, and possible inadvertent economic impacts of, the HPTRP regulations that would require a different minimum twine size than the low-profile gillnet gear minimum twine size. Regarding the HPTRP regulations, the commenters expressed concern that the 0.81-mm twine size was included in the definition for low profile gillnet gear

while HPTRP regulations are currently in place include a 0.9-mm minimum twine size. The commenters assert that if nothing is done to resolve the conflict in these sets of regulations, then an inadvertent fishery closure could occur, incurring negative economic impacts typically associated with fishery closure. The commenters recommended a delay to January 1, 2027, to resolve this issue.

Response: NMFS expects that the delay in effectiveness of the low-profile gillnet requirement to January 1, 2026, will provide sufficient time to resolve the concerns raised by this commenter, and disagrees that a delay to January 1, 2027, would be necessary at this time.

On June 28, 2024, the HPTRT met and received information regarding all of the characteristics of the low-profile gillnet, including the 0.81-mm twine size, and the potential impacts of said gear on take of harbor porpoise. The team did not voice any concerns over the proposed change in gear configuration or the analysis presented on possible effects. We expect to propose future alteration of the HPTRP regulations to accommodate the twine size included in the low-profile gillnet requirement in this action.

Further, the 0.81-mm twine size was derived from the scientific research used to inform the development of this action; the inclusion of 0.81-mm twine size in the low-profile gillnet design is essential to ensuring that the gear is most effective at reducing bycatch of Atlantic sturgeon. Removing the twine size specification from the gear definition would be expected to reduce the efficacy of these regulations in reducing Atlantic sturgeon bycatch, which is the primary goal of this action.

Other General Comments

Comment 7: One member of the public questioned whether an interaction with an Atlantic sturgeon that is released alive should qualify as a take, instead stating that a take should only be when an Atlantic sturgeon is killed and landed.

Response: NMFS disagrees with the assertion by this commenter that a take should only be when an Atlantic sturgeon is killed and landed. Atlantic sturgeon is protected under the ESA, and the ESA is explicit in its definition of take. The ESA defines "take" to mean "to harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in any such conduct." 16 U.S.C. 1532(19). Non-lethal, incidental interaction with Atlantic sturgeon caused by fisheries activity falls into the definition of take as defined under the ESA.

Comment 11: One member of the public commented that the action should consider the impact of offshore wind development on monkfish and dogfish.

Response: The EA for this action includes a summary of the expected impacts of offshore wind energy development on monkfish and dogfish that considered all stages of wind energy development, including initial site assessment, construction activities, and the completed wind fields. Each of these could potentially result in a variety of direct and indirect impacts on the affected species and their marine habitat. The analysis concludes that the impacts could range from no impact to moderate negative. However, the impact of offshore wind energy development on monkfish and dogfish do not change the need for this action to reduce bycatch of Atlantic sturgeon in the monkfish and dogfish gillnet fisheries. The analysis can be found in the Cumulative Effects Analysis (CEA), Section 6.7.2.2.1, of the EA supporting this action (see ADDRESSES).

Comment 12: One member of the public commented on offshore wind development in relation to the status of North Atlantic right whales.

Response: The relationship between offshore wind development and the status of North Atlantic right whales is outside the scope of this rulemaking.

Economic Impacts

We received several comments from the public regarding the potential economic impacts of this action on the monkfish and spiny dogfish fisheries. These comments often made overlapping or interrelated points. To reduce repetition and ensure ease of readability, these comments and responses have been summarized and addressed by issue, rather than by individual comment.

Comment 13: We received 17 comment letters, including those from the Sustainable Fisheries Association (SFA) and 14 members of the fishing industry who submitted comments mirroring the language used by the SFA, that urged a delayed effectiveness for the overnight soak prohibitions that were proposed. The most commonly requested date for a delayed effectiveness of this action was May 1, 2025, the start of fishing year 2025. Each comment cited economic concerns and costs relating to adjustments to fishing behavior, including changes to mesh sizes, which vessels would need to make in order to come into compliance with the overnight soak prohibition regulations. Commenters asserted that, should the overnight soak prohibition

go into effect before May 1, 2025, there would either not be enough time for vessel owners to comply with the regulations, or the cost of doing so would be prohibitively high in a short span of time. As a result, the commenters stated that they would likely not fish during the seasonal restriction if no delay was provided. Commenters noted that the dogfish fishery is dependent on a small number of processors and a relatively small market that could be negatively impacted by the overnight soak prohibition if implemented shortly after this rule publishes and before May 1, 2025. They expressed concern that doing so could result in the loss of markets and processors for the foreseeable future.

Response: NMFS finds that the request from the public to delay effectiveness of the overnight soak prohibitions is reasonable and justified, and that change is reflected in the May 1, 2025, effectiveness date of this final rule. In making this determination, NMFS considered the economic implications raised by members of the public in comparison to the potential impacts on Atlantic sturgeon that might occur as a result of the delay. NMFS agrees with the argument that a standard 30-day delayed effectiveness under the Administrative Procedure Act (APA) may not be sufficient time for industry to adjust to the regulations being put into place by this final action.

A delay in effectiveness to May 1, 2025, would only eliminate the seasonal overnight soak prohibition in the Delaware and Maryland Atlantic Sturgeon Bycatch Reduction Areas from a date 30 days after the publication of this final rule through March 31, 2025. Though the measures being approved in this final action do address Atlantic sturgeon bycatch in the monkfish and dogfish fisheries, the negative impacts to Atlantic sturgeon that might occur as a result of losing 3 to 4 months of the overnight soak prohibition are unlikely to be significant. These impacts do not justify implementation after only a 30-day delayed effectiveness given the weight of the economic concerns that have been raised by the public.

NMFS also notes that delayed effectiveness for gear related measures is not a novel concept; the low-profile gillnet gear requirement in the New Jersey Atlantic Sturgeon Bycatch Reduction Area approved in this very action is delayed until January 1, 2026. The rationale for that delay was also in part to provide time necessary for industry to adapt to the regulations being implemented. It would be inconsistent to accept that rationale

when implementing measures that affect one fishery, while rejecting it for measures implemented for another, closely related fishery.

Finally, the Atlantic States Marine Fisheries Commission is currently developing complementary action to address Atlantic sturgeon bycatch by state-only permitted vessels within the footprint of the Atlantic Sturgeon Bycatch Reduction Areas being put into place by this action. A delay in effectiveness to May 1, 2025, reduces or avoids the potential for mismatched implementation of these regulations and simplifies enforcement.

Comment 14: We received seven comments that requested that the overnight soak prohibition in the Delaware and Maryland Atlantic Sturgeon Bycatch Reduction Area and Virginia Atlantic Sturgeon Bycatch Reduction Area be effective for mesh sizes greater than 5.25 inches to 10 inches (13.34 to 25.4 cm), rather than for mesh sizes 5.25 inches to 10 inches (13.34 to 25.4 cm). The commenters want to be able to use 5.25-inch (13.34-cm) mesh and noted that there would be a high cost for vessels to switch gear to less than 5.25-inch (13.34-cm) gear so that they could continue to fish in the areas.

Response: NMFS is not changing the overnight soak prohibitions in the Delaware and Maryland Atlantic Sturgeon Bycatch Reduction Area and the Virginia Atlantic Sturgeon Bycatch Reduction Area in response to these comments. The Councils' process fully considered what range of mesh sizes the prohibitions would apply to during the development of this action, including at Advisory Panel, Joint Committee, and Council meetings. The Councils were deliberate in their selection of mesh sizes that would be subject to these regulations in order to most effectively address Atlantic sturgeon bycatch and mortality. These comments provided no information that would justify deviation from the range of mesh sizes recommended by the Councils. NMFS also notes that to address the economic impact of replacing gear, it is delaying the effective date of the measures until May 1, 2025. Vessel owners replace gillnets over time because of wear and tear or loss. The delay in effectiveness to May 1, 2025, allows vessel owners a longer time frame to voluntarily replace gillnets due to usual wear and tear with gear that uses smaller mesh, should they so choose, prior to the effective date of the overnight soak prohibition.

Comment 15: Four comments were received that generally stated that this action would result in the weakening or overall loss of the impacted fisheries

and associated businesses. Two commenters additionally noted that, under National Standard 7, the MSA requires “normal and prudent measures” do not impose a financial burden, and that the costs associated with needing to replace standard gillnet gear with low-profile gillnet gear would be significant.

Response: NMFS disagrees with the implication that this action is inconsistent with National Standard 7, which states that “Conservation and management measures shall, where practicable, minimize costs and avoid unnecessary duplication.” National Standard 7 guidelines also establish that the supporting analyses for FMPs should demonstrate that the benefits of fishery regulation are real and substantial relative to added costs, including costs to the industry for compliance. The EA includes an analysis of impacts to small entities for the purposes of the Regulatory Flexibility Act, which does expect some cost to industry as it complies with the regulations within this action.

As described in the EA (see **ADDRESSES**), the action in this rule strikes a balance between ESA requirements to reduce sturgeon bycatch and the economic impact on the monkfish and dogfish fisheries. Overnight soak prohibitions for the dogfish fishery and the requirement for the monkfish fishery to use low-profile gillnet gear in times and areas with high Atlantic sturgeon take were selected over more restrictive time and area closures that would have prevented all fishing by the monkfish and spiny dogfish fisheries in those places and times. These measures allow the fishery to continue to operate in a manner that reduces impacts to Atlantic sturgeon. Further, delays in the effective date of this action are designed to, as much as possible, mitigate costs incurred by the need to purchase new gear to comply with the new regulations.

The measures in this action represent the most flexible set of regulations under consideration while still fulfilling requirements to reduce Atlantic sturgeon bycatch. As such, this action is consistent with National Standard 7 of the MSA.

Changes From the Proposed Action

In this final rule, we have made a small number of changes to the proposed implementing regulations. These changes clarify the proposed regulatory text, but are not substantive in terms of modifying the proposed measures. After consulting with the Councils, in this final rule, we make the

following changes to the proposed implementing regulations:

- Revise the proposed text at § 648.14(s)(2)(iv) to replace the word “Violate” with “Fail to comply with.” This change makes the regulation consistent with other regulatory text in § 648.14.

- Revise the proposed text at § 648.91(d)(2)(i) to more clearly reference the regulations defining and implementing the Mid-Atlantic Exemption Area at 648.80(c)(5).

Classification

Pursuant to section 304(b)(3) of the Magnuson-Stevens Act, the NMFS Assistant Administrator has determined that this final rule is consistent with the Monkfish and Spiny Dogfish FMPs, other provisions of the Magnuson-Stevens Act, and other applicable law.

This final rule has been determined to be not significant for purposes of Executive Order 12866.

During development of this action, NMFS reached out to Tribal representatives from the coastal Tribes in the Greater Atlantic Region to seek whether they wanted to engage on this Framework. No response was received, and as such, NMFS has determined that this action would not have a substantial direct effect on one or more Indian Tribes, on the relationship between the Federal Government and Indian Tribes, or on the distribution of power and responsibilities between the Federal Government and Indian Tribes; therefore, consultation with Tribal officials under E.O. 13175 is not required, and the requirements of sections (5)(b) and (5)(c) of E.O. 13175 also do not apply. A Tribal summary impact statement under section (5)(b)(2)(B) and section (5)(c)(2)(B) of E.O. 13175 is not required and has not been prepared.

The Chief Counsel for Regulation of the Department of Commerce certified to the Chief Counsel for Advocacy of the Small Business Administration during the proposed rule stage that this action would not have a significant economic impact on a substantial number of small entities. The factual basis for the certification was published in the proposed rule and is not repeated here. Although we received comments on the economic impacts of the proposed action, these comments did not change the factual basis for this certification. Comments on the economic impacts, and responses to those comments, are included in the Comments and Responses section of this final rule. As a result, a regulatory flexibility analysis was not required and none was prepared.

List of Subjects in 50 CFR Part 648

Fisheries, Fishing.

Dated: December 12, 2024.

Samuel D. Rauch III,
Deputy Assistant Administrator for
Regulatory Programs, National Marine
Fisheries Service.

For the reasons set out in the preamble, NMFS amends 50 CFR part 648 as follows:

PART 648—FISHERIES OF THE NORTHEASTERN UNITED STATES

■ 1. The authority citation for part 648 continues to read as follows:

Authority: 16 U.S.C. 1801 *et seq.*

■ 2. Amend § 648.2, by adding in alphabetical order the definition for “low-profile gillnet gear” to read as follows:

§ 648.2 Definitions.

* * * * *

Low-profile gillnet gear means monkfish gillnets that are constructed with the following characteristics designed to reduce interaction with Atlantic sturgeon: 12 to 13 inch (30.48 to 33.02 cm) diamond mesh; Net height of 6 to 8 meshes; Net length of 300 feet (91.44 m); Tie-down length less than or equal to 30 inches (76.2 cm); Tie-down spacing of 12 feet (3.66 m); Primary hanging ratio of 0.50 (*i.e.*, the length of webbing is twice that of the length of line used); Twine size of 0.81 mm; and the net is tied at every float to keep the float line down.

* * * * *

■ 3. Amend § 648.14, by adding paragraphs (m)(3)(iii) and (s)(2)(iv) to read as follows:

§ 648.14 Prohibitions.

* * * * *

(m) * * *

(3) * * *

(iii) Fail to comply with the New Jersey Atlantic Sturgeon Bycatch Reduction Area requirements specified at § 648.91(d).

* * * * *

(s) * * *

(2) * * *

(iv) *Area requirements.* Fail to comply with the Atlantic Sturgeon Bycatch Reduction Areas requirements specified at § 648.234(a).

* * * * *

■ 4. Amend § 648.91, by adding paragraph (d) to read as follows:

§ 648.91 Monkfish regulated mesh areas and restrictions on gear and methods of fishing.

* * * * *

(d) *New Jersey Atlantic Sturgeon Bycatch Reduction Area*—(1) *Area Definition*: The New Jersey Dogfish and Monkfish Atlantic Sturgeon Bycatch Reduction Area is defined by straight lines connecting the following points in the order stated:

TABLE 1 TO PARAGRAPH (d)

Point	N lat.	W long.
NJ1	40°24'	73°54'
NJ2	40°9'	73°24'
NJ3	39°30'	73°51'
NJ4	39°48'	74°12'
NJ1	40°24'	73°54'

(2) *Restrictions in the New Jersey Atlantic Sturgeon Bycatch Reduction Area*. Effective year round beginning on January 1, 2026, vessels may not fish with gillnet gear under a Monkfish DAS within the New Jersey Atlantic Sturgeon Bycatch Reduction Area unless:

(i) A vessel is fishing on a monkfish-only DAS within the MA Exemption Area and in accordance with the requirements set forth at § 648.80(c)(5)(ii), with roundfish gillnets with a mesh size equal to or greater than 5 inches (12.7 cm) and less than 10 inches (25.4 cm).

(ii) A vessel is fishing with low profile gillnet gear, as defined in § 648.2.

■ 5. Add § 648.234 to read as follows:

§ 648.234 Gear restrictions.

(a) *New Jersey Atlantic Sturgeon Bycatch Reduction Area*—(1) *Area Definition*: The New Jersey Dogfish and Monkfish Atlantic Sturgeon Bycatch

Reduction Area is defined by straight lines connecting the following points in the order stated:

TABLE 1 TO PARAGRAPH (a)

Point	N lat.	W long.
NJ1	40°24'	73°54'
NJ2	40°9'	73°24'
NJ3	39°30'	73°51'
NJ4	39°48'	74°12'
NJ1	40°24'	73°54'

(2) From May 1 through May 31 and November 1 through November 30 of each year, vessels issued a Federal spiny dogfish permit must remove gillnet gear with a mesh size equal to or greater than 5 inches (12.7 cm) and less than 10 inches (25.4 cm) from within the New Jersey Atlantic Sturgeon Bycatch Reduction Area from 8 p.m. eastern time each day through 5 a.m. eastern time the following day.

(b) *Delaware and Maryland Atlantic Sturgeon Bycatch Reduction Area*—(1) *Area Definition*: The Delaware and Maryland Atlantic Sturgeon Bycatch Reduction Area is defined by straight lines connecting the following points in the order stated:

TABLE 2 TO PARAGRAPH (b)

Point	N lat.	W long.
DM1	38°27'	75°60'
DM2	38°21'	74°48'
DM3	37°30'	75°12'
DM4	37°48'	75°30'
DM1	38°27'	75°60'

(2) *Requirements*: From November 1 through March 31 of each year, vessels issued a Federal spiny dogfish permit must remove roundfish gillnets with a mesh size equal to or greater than 5.25 inches (13.3 cm) and less than 10 inches (25.4 cm) from the water within the Delaware and Maryland Atlantic Sturgeon Bycatch Reduction Area from 8 p.m. eastern time each day through 5 a.m. eastern time the following day.

(c) *Virginia Atlantic Sturgeon Bycatch Reduction Area*—(1) *Area Definition*: The Virginia Atlantic Sturgeon Bycatch Reduction Area is defined by straight lines connecting the following points in the order stated:

TABLE 3 TO PARAGRAPH (c)

Point	N lat.	W long.
37°18'	75°54'	
VA2	36°48'	75°36'
VA3	36°33'	75°51'
VA4	36°54'	76°6'
VA1	37°18'	75°54'

(2) *Requirements*: From November 1 through March 31 of each year, vessels issued a Federal spiny dogfish permit must remove roundfish gillnets with a mesh size equal to or greater than 5.25 inches (13.3 cm) and less than 10 inches (25.4 cm) from the water within the Virginia Atlantic Sturgeon Bycatch Reduction Area from 8 p.m. eastern time each day through 5 a.m. eastern time the following day.

[FR Doc. 2024–29861 Filed 12–17–24; 8:45 am]

BILLING CODE 3510–22–P

Proposed Rules

Federal Register
Vol. 89, No. 243
Wednesday, December 18, 2024

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

FEDERAL RETIREMENT THRIFT INVESTMENT BOARD

5 CFR Part 1605

Breakage on Late Contributions, Makeup Contributions, and Loan Payments

AGENCY: Federal Retirement Thrift Investment Board.
ACTION: Proposed rule.

SUMMARY: The Federal Retirement Thrift Investment Board (FRTIB) proposes to permit the TSP record keeper to calculate gains and losses on late contributions, makeup contributions, loan payments even when the total amount on a late payment record or total agency contributions on a current payment record is less than \$1.00.

DATES: Comments must be received on or before February 18, 2025.

ADDRESSES: You may submit comments using one of the following methods:
• Federal eRulemaking Portal: <https://www.regulations.gov>. Follow the instructions for submitting comments.

• Mail: Office of General Counsel, Attn: Dharmesh Vashee, Federal Retirement Thrift Investment Board, 77 K Street NE, Suite 1000, Washington, DC 20002.

Comments will be made available to the public online at <https://www.regulations.gov>. Do not include any personally identifiable or confidential information that you do not want publicly disclosed. Anonymous comments are acceptable.

FOR FURTHER INFORMATION CONTACT: For press inquiries: James Kaplan at (202) 864-7150. For information about how to comment on this proposed rule: Elizabeth Harris at (202) 913-5300.

SUPPLEMENTARY INFORMATION: The FRTIB administers the TSP, which was established by the Federal Employees' Retirement System Act of 1986 (FERSA), Public Law 99-335, 100 Stat. 514. The TSP is a tax-deferred retirement savings plan for Federal

civilian employees and members of the uniformed services. The TSP is similar to cash or deferred arrangements established for private-sector employees under section 401(k) of the Internal Revenue Code (26 U.S.C. 401(k)). The provisions of FERSA that govern the TSP are codified, as amended, largely at 5 U.S.C. 8351 and 8401-79.

Under 5 U.S.C. 8432, the Executive Director of the FRTIB is directed to prescribe regulations to establish an error correction procedure for lost earnings that result from employing agencies' errors.

Employing agencies submit agency matching contributions, deduct employee contributions from participants' basic pay, and deduct loan payments from participants' basic pay. Employing agencies also submit makeup contributions to the TSP.

Contribution and loan payment information is submitted by employing agencies to the TSP record keeper using a payment record. Occasionally, a payment record is not submitted timely or contains an error. As a result, the participant's funds are unavailable for investment by the TSP record keeper and do not experience gains realized or losses incurred that they would have otherwise. These missed gains or losses are referred to as breakage.

Currently, § 1605.2(a)(1) says that the TSP does not calculate breakage if the total amount on a late payment record or total agency contributions on a current payment record is less than \$1.00. We believe this rule exists due to technological and administrative limitations that no longer exist and is, therefore, obsolete. This proposed rule would permit the TSP record keeper to calculate breakage even when the total amount on a late payment record or total agency contributions on a current payment record is less than \$1.00.

Regulatory Flexibility Act

This proposed regulation will not have a significant economic impact on a substantial number of small entities. This regulation will affect Federal employees, members of the uniformed services who participate in the TSP, and beneficiary participants.

Paperwork Reduction Act

This proposed regulation does not require additional reporting under the criteria of the Paperwork Reduction Act.

Unfunded Mandates Reform Act of 1995

Pursuant to the Unfunded Mandates Reform Act of 1995, 2 U.S.C. 602, 632, 653, and 1501-1571, the effects of this regulation on State, local, and Tribal governments and the private sector have been assessed. This regulation will not compel the expenditure in any one year of \$100 million or more by State, local, and Tribal governments, in the aggregate, or by the private sector. Therefore, a statement under 2 U.S.C. 1532 is not required.

List of Subjects in 5 CFR Part 1605

Claims, Government employees, Pensions, Retirement.

Suzanne Tosini,
Acting Executive Director, Federal Retirement Thrift Investment Board.

For the reasons stated in the preamble, the FRTIB proposes to amend 5 CFR part 1605 as follows:

PART 1605—CORRECTION OF ADMINISTRATIVE ERRORS

■ 1. The authority citation for part 1605 continues to read as follows:

Authority: 5 U.S.C. 8351, 8432a, 8432d, 8474(b)(5) and (c)(1). Subpart B also issued under section 1043(b) of Public Law 104-106, 110 Stat. 186 and § 7202(m)(2) of Public Law 101-508, 104 Stat. 1388.

■ 2. Amend § 1605.2 by revising paragraph (a)(1) to read as follows:

§ 1605.2 Calculating, posting, and charging breakage on late contributions and loan payments.

* * * * *
(a) * * *

(1) The TSP record keeper will not calculate breakage if contributions or loan payments are posted within 30 days of the "as of" date; and

* * * * *

DEPARTMENT OF THE TREASURY**Internal Revenue Service****26 CFR Part 1****[REG–116017–24]****RIN 1545–BR36****Administrative Requirements for an Election To Exclude Applicable Unincorporated Organizations From the Application of Subchapter K; Correction****AGENCY:** Internal Revenue Service (IRS), Treasury.**ACTION:** Notice of proposed rulemaking and public hearing; correction.

SUMMARY: This document contains corrections to REG–116017–24, which was published in the **Federal Register** on Wednesday, November 20, 2024. REG–116017–24 contained proposed regulations that would provide certain administrative requirements for unincorporated organizations taking advantage of modifications to the rules governing elections to be excluded from the application of partnership tax rules.

DATES: Written or electronic comments are still being accepted and must be received by January 21, 2025. A public hearing on the proposed regulations has been scheduled for February 7, 2025, at 10 a.m. Eastern Standard Time (EST). Requests to speak and outlines of topics to be discussed at the public hearing must be received by January 21, 2025.

ADDRESSES: Commenters are strongly encouraged to submit public comments electronically via the Federal eRulemaking Portal at <https://www.regulations.gov> (indicate IRS and REG–116017–24) by following the online instructions for submitting comments. Requests for the public hearing must be submitted as prescribed in the “Comments and Public Hearing” section of the notice of proposed rulemaking published on November 20, 2024 (89 FR 91617). Once submitted to the Federal eRulemaking Portal, comments cannot be edited or withdrawn. The Department of the Treasury (Treasury Department) and the IRS will publish for public availability any comments submitted to the IRS’s public docket. Send paper submissions to: CC:PA:01:PR (REG–116017–24), Room 5203, Internal Revenue Service, P.O. Box 7604, Ben Franklin Station, Washington, DC 20044.

FOR FURTHER INFORMATION CONTACT: Concerning the proposed regulations, contact Cameron Williamson at (202) 317–6684; and concerning submissions of comments and/or the public hearing,

contact the Publications and Regulations Section at (202) 317–6901 (not toll-free numbers) or by email to publichearings@irs.gov (preferred).

SUPPLEMENTARY INFORMATION:**Background**

The notice of proposed rulemaking (REG–116017–24) that is the subject of this correction is under sections 761(a), 6031(a), 6417(d) and (h), and 7805(a) of the Internal Revenue Code.

Correction of Publication

Accordingly, FR Doc. 2024–26962 (REG–116017–24), appearing on page 91617 in the **Federal Register** on Wednesday, November 20, 2024, is corrected as follows:

1. On page 91619, in the third column, in the first full paragraph, in the seventh line down from the top of the paragraph, the language “modifications for” is removed.

Kalle L. Wardlow,

Federal Register Liaison, Publications & Regulations Section, Associate Chief Counsel, (Procedure and Administration).

[FR Doc. 2024–29653 Filed 12–17–24; 8:45 am]

BILLING CODE 4830–01–P

DEPARTMENT OF EDUCATION**34 CFR Chapter III****[Docket ID ED–2024–OSERS–0131]****Proposed Priority and Requirements—Innovative Rehabilitation Training Program**

AGENCY: Office of Special Education and Rehabilitative Services, Department of Education.

ACTION: Proposed priority and requirements.

SUMMARY: The Department of Education (Department) proposes a priority and requirements under the Innovative Rehabilitation Training program, Assistance Listing Number 84.263G. The Department may use the proposed priority and requirements for competitions in fiscal year (FY) 2025 and later years. We take this action to promote the development of innovative and improved methods of training on promising vocational rehabilitation (VR) counseling, engagement, and service delivery strategies and practices to State VR agency personnel or other public or non-profit rehabilitation professionals and paraprofessionals (including those enrolled in master’s or bachelor’s level rehabilitation programs) to provide quality VR and supported employment services that lead to quality employment

outcomes for individuals with disabilities.

DATES: We must receive your comments on or before January 17, 2025.

ADDRESSES: Comments must be submitted via the Federal eRulemaking Portal at www.regulations.gov. However, if you require an accommodation or cannot otherwise submit your comments via www.regulations.gov, please contact the program contact person listed under **FOR FURTHER INFORMATION CONTACT**. The Department will not accept comments submitted by fax or by email, or comments submitted after the comment period closes. To ensure the Department does not receive duplicate copies, please submit your comments only once. In addition, please include the Docket ID at the top of your comments.

Federal eRulemaking Portal: Go to www.regulations.gov to submit your comments electronically. Information on using Regulations.gov, including instructions for accessing agency documents, submitting comments, and viewing the docket, is available on the site under “FAQ.”

Note: The Department’s policy is generally to make comments received from members of the public available for public viewing in their entirety on the Federal eRulemaking Portal at www.regulations.gov. Therefore, commenters should be careful to include in their comments only information that they wish to make publicly available.

FOR FURTHER INFORMATION CONTACT: Felipe Lulli, U.S. Department of Education, 400 Maryland Avenue SW, Room 4A10, Washington, DC 20202. Telephone: (202) 987–0128. Email: 84.263G@ed.gov.

A brief summary of the proposed rule is available at www.regulations.gov/docket/ED-2024-OSERS-0131.

If you are deaf, hard of hearing, or have a speech disability and wish to access telecommunications relay services, please dial 7–1–1.

SUPPLEMENTARY INFORMATION:

Invitation to Comment: We invite you to submit comments regarding the proposed priority and requirements. To ensure that your comments have maximum effect in developing the final priority and requirements, we urge you to clearly identify the specific section of the proposed priority and requirements that each comment addresses.

We are particularly interested in comments about whether the proposed priority and requirements would be challenging for new applicants to meet and, if so, how the proposed priority

and requirements could be revised to address such potential challenges.

We invite you to assist us in complying with the specific requirements of Executive Orders 12866, 13563, and 14094 and their overall requirement of reducing regulatory burden that might result from this proposed priority and requirements. Please let us know of any further ways we could reduce potential costs or increase potential benefits while preserving the effective and efficient administration of the program.

During and after the comment period, you may inspect public comments about the proposed priority and requirements by accessing *Regulations.gov*. To inspect comments in person, please contact the person listed under **FOR FURTHER INFORMATION CONTACT**.

Assistance to Individuals with Disabilities in Reviewing the Rulemaking Record: On request we will provide an appropriate accommodation or auxiliary aid to an individual with a disability who needs assistance to review the comments or other documents in the public rulemaking record for this proposed priority and requirements. If you want to schedule an appointment for this type of accommodation or auxiliary aid, please contact the person listed under **FOR FURTHER INFORMATION CONTACT**.

Purpose of Program: The Innovative Rehabilitation Training program is designed to develop (a) new types of training programs for rehabilitation personnel and to demonstrate the effectiveness of these new types of training programs for rehabilitation personnel in providing rehabilitation services to individuals with disabilities; (b) new and improved methods of training rehabilitation personnel so that there may be a more effective delivery of rehabilitation services to individuals with disabilities by designated State rehabilitation agencies and designated State rehabilitation units or other public or non-profit rehabilitation service agencies or organizations; and (c) new innovative training programs for VR professionals and paraprofessionals to have a 21st-century understanding of the evolving labor force and the needs of individuals with disabilities so they can more effectively provide VR services to individuals with disabilities.

Program Authority: 29 U.S.C. 709(c) and 772.

Applicable Program Regulations: 34 CFR parts 385 and 387.

Proposed Priority

This document contains one proposed priority, Innovative Rehabilitation Training on Emerging VR Counseling,

Engagement, and Service Delivery Strategies Leading to Quality Employment in 21st Century Careers for Individuals With Disabilities, and six topic areas under the priority.

Background: The Rehabilitation Services Administration (RSA), Office of Special Education and Rehabilitative Services proposes this priority and these requirements, based on allowable activities under 34 CFR parts 385 and 387, to enable VR agency professionals to help more VR participants benefit from the training, education, and employment opportunities offered by the Workforce Innovation and Opportunity Act (WIOA).

The proposed priority would support the purposes of WIOA, including to “improve the quality and labor market relevance of workforce investment, education, and economic development efforts to provide America’s workers with the skills and credentials necessary to secure and advance in employment with family-sustaining wages and to provide America’s employers with the skilled workers the employers need to succeed in a global economy.” (WIOA sec. 2(3)). It is also consistent with RSA Technical Assistance Circulars 23–03 Maximizing Services and the Use of Funds to Support Quality Employment Outcomes for Individuals with Disabilities through the VR and Supported Employment Programs and 24–01 Promoting Meaningful and Sustained Engagement of Individuals with Disabilities in the VR Program; the RSA Commissioner’s Dear Colleague Letters DCL–24–02 on RSA priorities and DCL–25–01 on artificial intelligence; and priority 5(j) of the Secretary’s Supplemental priorities (Final Priority and Definitions, **Federal Register**, December 10, 2021), reflecting the Department’s commitment to effective VR services and use of funds, meaningful and sustained engagement with VR participants, collaboration with workforce development partners and community-based organizations including community rehabilitation programs (CRPs), advanced technology employment and training, and equity of access and opportunity for students with disabilities, disconnected youth and adults with disabilities. The proposed priority would promote quality employment for individuals with disabilities through innovative rehabilitation training to VR professionals on emerging VR counseling, engagement, and service delivery practices.

Applicants would be able to apply under one or more of the priority’s six topic areas: (1) VR Counselor Participant Engagement Practices, (2) Career

Assessment Addressing Emerging Career and Employment Trends, (3) Preparing VR Participants for High-Quality Employment in Science, Technology, Engineering, and Math (STEM) and Advanced Technology Careers, including Artificial Intelligence (AI), (4) Dual Customer Employer Engagement and Service Delivery Strategies, (5) Engagement and Service Delivery Strategies for Underserved Populations, and (6) Field Initiated.

Topic Area 1: VR Counselor Participant Engagement Practices

Participant engagement is described as “an active, multifaceted process that involves the empowerment of participants, participants’ exercise of self-determined informed choice, and their collaboration with employment specialists in the working alliance” (Johnson et al., 2009). Research and program data suggests that participant engagement contributes to successful VR services and outcomes, particularly by increasing participant retention in VR programs. Southwick and Schultz (2019) and Dutta et al. (2017) found that active engagement increases participants’ motivation, expectations, and confidence—characteristics essential for successful VR services and employment outcomes. State VR agencies are developing and implementing promising employee engagement strategies, including Motivational Interviewing and Rapid Engagement. Research suggests that Motivational Interviewing, for example, strengthens counselor-participant working relationships; improves understanding of participant circumstances, needs, and goals reflected in Individualized Plans for Employment (IPE); and encourages participants’ sustained engagement in the resulting VR services (Torres, Frain, Tansey, 2019).

Early and sustained engagement may mitigate participants from exiting the VR process before receiving services under an individualized plan for employment (IPE). Nationally, the VR participant attrition rate was 29 percent in Program Year (PY) 2023, with individual States’ attrition rates ranging between 14 percent and 60 percent during the same period.

Topic area 1 would strengthen counselors’ engagement with participants throughout the VR continuum—from referral and application to the provision of services under a signed IPE—leading to quality competitive integrated employment outcomes.

Topic Area 2: Career Assessment Addressing Emerging Career and Employment Trends

WIOA emphasizes the need to ensure that competitive integrated employment outcomes optimally reflect VR participants' individual strengths, abilities, capabilities, interests, and informed choice. To this end, topic area 2 of this proposed priority would increase the effectiveness of VR professionals' vocational evaluation and comprehensive assessment practices in identifying and supporting VR participants' optimal career and employment goals, postsecondary education and training pathways, comprehensive support needs including rehabilitation technology, and potential options such as business ownership, self-employment, and telework.

Topic Area 3: Preparing VR Participants for High-Quality Employment in (STEM) and Advanced Technology Careers, Including AI

STEM is a promising career field for individuals with disabilities. Across all workers, employment in STEM occupations grew by 10.5 percent between May 2009 and May 2015, compared to 5.2 percent growth in non-STEM occupations (Fayer et al., 2017). Currently, STEM occupations requiring postsecondary-level scientific or technical knowledge account for 6.6 percent of the workforce in 2023 (U.S. Bureau of Labor Statistics, 2024). More broadly, considering all educational attainment levels and pathways, the National Science Foundation estimates that workers in jobs requiring significant STEM-related knowledge account for 23 percent of the workforce (National Science Board, National Science Foundation, 2024). STEM fields are projected to grow by an additional 10.4 percent through 2033, nearly three times the rate of non-STEM jobs (with positions in computing, engineering, and advanced manufacturing leading the way) (U.S. Bureau of Labor Statistics, 2024). STEM jobs pay substantially more than non-STEM jobs, with median annual wages of \$95,420 for STEM occupations, compared to \$40,120 for non-STEM occupations (Krutch & Roderick, 2022).

VR agencies are working to prepare VR participants for the expanding career potential in emerging STEM-related fields, through pre-employment transition services and other initiatives. Of all VR participants who achieved competitive integrated employment after receiving VR services under an IPE during PYs 2017–2019, 20,420 (5.3 percent) were employed in STEM fields.

Of these participants, 8,348 (40.9 percent) were youth aged 14–24 (Chun et al., 2023). Examples of STEM-related pre-employment transition services, for example, have grown significantly since the passage of WIOA in 2014, as evidenced by the VR portions of the WIOA State Plans. Topic area 3 would support VR professionals' efforts to maximize opportunities for VR participants to explore, consider, and pursue careers in STEM and other advanced technologies, including AI.

Topic Area 4: Dual Customer Employer Engagement and Service Delivery Strategies

WIOA has fostered the growth of dual customer business engagement initiatives that create career exploration, training, and employment opportunities for VR participants while meeting employers' need for skilled workers. State VR agencies have adopted a variety of business engagement models including Progressive Employment, Rapid Engagement, Customized Employment, Customized Training, Individualized Placements and Supports as well as apprenticeships in partnership with businesses, State and local workforce development partners, and community-based organizations including CRPs. Topic area 4 would support such business engagement trends by improving the capacity of VR counselors and specialists to provide optimal dual customer services and training outlined in 34 CFR 361.32.

Topic Area 5: Engagement and Service Delivery Strategies for Underserved Populations

Publicly available, individual-level RSA-911 VR participant data indicate that disparities exist in VR eligibility determination, service provision, and employment outcomes for Black, American Indian/Alaska Native, and Hispanic individuals with disabilities, and other traditionally underserved or underrepresented populations (Shaewitz, D.M. & Yin, M., 2021). Innovative practices can also address challenges in accessing VR services and outcomes faced by youth in foster care; formerly incarcerated adults; veterans; residents of rural, remote, or impoverished communities; and individuals with intellectual, developmental, emotional, sensory, substance abuse, traumatic head injury-related disabilities, among others. Topic area 5 of this proposed priority would promote access to VR services, resources, and opportunities for these or other underserved or underrepresented groups. Applicants may identify an underserved or underrepresented group,

or combination of populations, and develop an innovative training program enabling VR professionals to address their challenges through research-based promising practices.

Topic Area 6: Field Initiated

Finally, to maximize the breadth and impact of this proposed priority, topic area 6 would offer applicants the flexibility to propose improved methods of training on promising VR counseling, engagement, and service delivery strategies and practices on topic areas that are either not specified in this priority or a combination of two or more topic areas described in this priority, consistent with the priority's purpose.

Applicants may draw from the activities and findings of RSA's WIOA-related discretionary grant investments, and other Federal, State, and non-government activities, to develop innovative training proposals under this priority. Beginning in 2015, RSA's VR Technical Assistance Centers on Workforce Innovation (WINTAC), Youth (Y-TAC), and Targeted Communities (VRTAC-TC) provided intensive, targeted, and universal technical assistance and training to State VR agencies in support of WIOA purposes and priorities, including youth transition, pre-employment transition services, employer engagement, apprenticeships, labor market analysis, credentialing, and measurable skill gains leading to quality competitive integrated employment outcomes. Other WIOA-relevant RSA investments during this period included the Career Pathways for Individuals with Disabilities demonstration project and the National Technical Assistance Center on Transition in partnership with the Department's Office of Special Education Programs. These initiatives involved evidence-based or emerging practices such as Index Plus, Community-Based Participatory Research, Motivational Interviewing, Trauma-Informed Care, Integrated Placement and Supports, and Integrated Resource Teams. State VR agencies engaged in these initiatives reported improvements in VR service delivery and outcomes. WINTAC, for example, helped the State VR agency of Alaska increase pre-employment transition services by 384 percent in three years. VRTAC-TC contributed to significant increases in VR applications, eligibility determinations, IPE development, service delivery, and competitive integrated employment outcomes for 21 priority underserved population groups from 24 socioeconomically challenged communities in 12 States, relative to the

same population groups elsewhere in their respective States.

RSA investments in support of WIOA continued with the Innovative Rehabilitation Training grants awarded in 2019 and 2020 as well as the VR Technical Assistance Center for Quality Employment and the VR Technical Assistance Center for Quality Management, awarded in 2020. RSA further invested in innovative approaches related to career advancement, transitioning from subminimum wage employment to competitive integrated employment, State and local partnerships to improve youth transition outcomes, and transformational approaches to create 21st Century workforce opportunities for adults and youth with disabilities, through Disability Innovation Fund awards in 2021, 2022, 2023, and 2024.

Currently, the Innovative Rehabilitation Training program (awarded in 2019 and 2020) is providing training to VR professionals and students on VR counseling, career assessment, forensic evaluation, pre-employment transition services, business engagement, business ownership, self-employment, and telecommuting, and specialized VR services for individuals with intellectual disabilities and autism spectrum disorders. The grants reflect a wide range of curricula (full academic courses, certificate program, standalone modules); products (research studies, published articles, videos); information delivery methods (online or on-site, synchronous or asynchronous, on-demand or scheduled); instructional technologies (including advanced technologies such as Virtual Reality simulations and role playing); and communities of practice (involving VR agency leadership, cross-disciplinary VR specialists, stakeholders, and partners). Grantees have established strong partnerships with State VR agencies, pertinent national associations, and IHEs to develop, evaluate, disseminate, and replicate the curricula and recruit training participants.

This proposed priority represents a natural progression from previous RSA investments and the existing Innovative Rehabilitation Training program. The priority would promote key elements from WIOA including dual customer business engagement services, with a focus on contemporary emerging, high-paying careers in STEM, green industries, critical infrastructure, and advanced technology fields, including AI.

Proposed Priority: Innovative Rehabilitation Training on Emerging VR

Counseling, Engagement, and Service Delivery Strategies Leading to Quality Employment in 21st Century Careers for Individuals With Disabilities. Projects that propose a new innovative rehabilitation training program for rehabilitation personnel on emerging VR counseling, engagement, and service delivery best practices or strategies in any of six topic areas that provides a 21st century understanding of the evolving labor force and the needs of individuals with disabilities, resulting in more effective delivery of rehabilitation services to individuals with disabilities. The six topic areas under this priority are:

(1) VR Counselor Participant Engagement Practices. Proposed projects under this topic area must focus on improving VR counselors' knowledge and skills to effectively engage with VR participants through the VR continuum from referral and application to the provision of VR services under a signed IPE, and through the achievement of an employment outcome. This may include, for example, VR counseling relationship-building skills training; early and ongoing engagement strategies, including pre-employment transition services; benefits counseling, financial planning, and VR participant self-advocacy skills training; and the development of internal and external partnerships with cross-disciplinary VR agency specialists, employers, workforce development partners, Client Assistance Programs, and community-based organizations, including CRPs and Centers for Independent Living (CILs).

(2) Career Assessment Addressing Emerging Career and Employment Trends. Proposed projects under this topic area must focus on identifying and supporting VR participants' informed choice and optimal career and employment goals, postsecondary education and training, credentialing and measurable skills attainment pathways, and comprehensive support needs including assistive technology, consistent with participants' unique strengths, abilities, capabilities, and interests. This may include, for example, providing vocational evaluation and comprehensive assessments; facilitating AI-enabled individual supports and accommodations, conducting local and national labor market analyses; tracking emerging 21st century career trends in STEM, advanced technologies, and green industries such as sustainable manufacturing and renewable energy; exploring work options such as business ownership, self-employment, and telework; and identifying the most

appropriate training and employment options including apprenticeships, customized employment, and career pathways.

(3) Preparing VR Participants for High-quality Employment in STEM and Advanced Technology Careers, including AI. Proposed projects under this topic area must focus on maximizing the number of VR participants provided the opportunity to explore, consider, and pursue high quality careers in STEM and advanced technology careers, including AI, and other emerging high-quality fields. This may include, for example, early and meaningful exposure to such careers through quality pre-employment transition services; peer mentorship by persons with disabilities in such careers; identification of VR participants whose unique strengths, abilities, interests, and informed choice align with such careers; and partnerships with State and local educational agencies, Institutions of Higher Education (IHE), career and technical education programs, disability organizations, CRPs, and others to provide the appropriate training, education, and support services.

(4) Dual Customer Employer Engagement and Service Delivery Strategies. Proposed projects under this topic area must focus on helping VR agency personnel to engage effectively with employers through the provision of the services and training outlined in 34 CFR 361.32, meeting employers' needs for skilled workers while creating quality employment and training opportunities for VR participants. This may include, for example, strategies for identifying promising dual customer employer engagement opportunities; providing training and technical assistance to employers regarding the employment of individuals with disabilities, including disability awareness, and the requirements of the Americans with Disabilities Act and other employment-related laws; supporting VR agency capacity-building to provide quality dual customer services and training to employers; conducting outreach to employers, community-based organizations, and business associations highlighting VR agency capabilities and documented successes; and delivering dual customer service and training through the coordinated efforts of cross-disciplinary VR personnel, employers, and workforce development system partners.

(5) Engagement and Service Delivery Strategies for Underserved Populations. Proposed projects under this topic area must focus on promoting access to VR services, resources, and opportunities

for current or prospective VR participants from the underserved population(s) selected by the applicant. This may include, for example, identifying the needs, challenges, opportunities, cultural sensitivities, or linguistic requirements of the selected population; establishing partnerships with local or national associations, community-based organizations including CRPs and CILs, and advocates representing the selected population; conducting outreach strategies to engage the selected populations throughout the VR process; and developing VR policies, procedures, practices, and VR service delivery approaches that address the populations' unique needs, challenges, cultural sensitivities, or linguistic requirements. Applicants must identify the selected underserved population(s), which may include disability category, race, ethnicity, socioeconomic status, or other factors.

(6) Field-Initiated. Proposed projects under this topic area must address an area not specified in this priority, consistent with the stated purpose of the priority, or a combination of two or more topic areas specified in this priority.

Note: The numbering of the topic areas does not reflect an established hierarchy or preference among the topic areas.

Types of Priorities:

When inviting applications for a competition using one or more priorities, we designate the type of each priority as absolute, competitive preference, or invitational through a notice in the **Federal Register**. The effect of each type of priority follows:

Absolute priority: Under an absolute priority, we consider only applications that meet the priority (34 CFR 75.105(c)(3)).

Competitive preference priority:

Under a competitive preference priority, we give competitive preference to an application by (1) awarding additional points, depending on the extent to which the application meets the priority (34 CFR 75.105(c)(2)(i)); or (2) selecting an application that meets the priority over an application of comparable merit that does not meet the priority (34 CFR 75.105(c)(2)(ii)).

Invitational priority: Under an invitational priority, we are particularly interested in applications that meet the priority. However, we do not give an application that meets the priority a preference over other applications (34 CFR 75.105(c)(1)).

Proposed Project Requirements

The Department proposes the following project requirements for

applicants under this priority. Based on ongoing administration of the current program, RSA expects that these requirements will promote innovation, continuous improvement, and enduring impacts on VR professionals and participants beyond the life of the grant. We may apply one or more of these requirements in any year in which this program is in effect.

Proposed Project Requirements:

(a) Establish the empirical basis of the proposed project objectives and activities. The applicant must identify the particular focus it intends to address within the selected topic area; the key knowledge and practice determinants of VR service effectiveness and employment outcome quality; and the empirical sources and rationale for the identified knowledge and practices, including available research, literature reviews, and relevant projects conducted by RSA or other Federal or non-government entities. Applicants responding to topic area 5, Underserved Populations, must also provide supporting data regarding their selected population group(s) and identified barriers to VR services and employment outcomes.

(b) Establish a process, including clear and actionable steps as well as specific timelines, to continue assessing innovative practices and training methods for possible incorporation, especially during the initial year of the grant, including stakeholder surveys to identify promising practices that the State VR agencies may already be implementing.

(c) Design an innovative, multifaceted VR counselor training plan to convey the identified knowledge and practices. The training plan must specify the intended participants; proposed curricula, activities, and products, including training modules, communities of practice, research studies, published articles, or videos; instructional and communication technologies, including AI-based methods and tools, if applicable; and knowledge translation methods adapted to diverse learning styles or ethnic and linguistic backgrounds. The training plan must address a broad range of VR professionals—decision-makers, counselors, cross-disciplinary specialists—and pertinent partners and stakeholders, as appropriate.

(d) Establish an advisory panel of one or more VR agencies and other pertinent stakeholders to help develop, implement, and evaluate the project. The applicant must describe the panel membership, structure, and responsibilities. Panel member responsibilities may include identifying

key knowledge requirements, best practices, and innovative approaches for the training curricula and methods; coordinating with other interested parties to disseminate curricula, recruit training participants, engaging additional VR agencies and stakeholders; and participating in the project's continuous feedback, evaluation, and improvement processes.

(e) Prioritize key stakeholder engagement, partnerships, and information-sharing in the innovative training activities, including with IHEs and relevant professional associations. The applicant must identify the stakeholders to be involved within each of the project's particular focus; the purpose and expected benefits of stakeholder involvement; anticipated communities of practices to facilitate stakeholder involvement; and the innovative or advanced convening or communication technologies to be used, as applicable.

(f) Establish continuous feedback, evaluation, and improvement processes, including action steps and clear timelines, to ensure that the training curricula and resources are responsive to the needs of the current and aspiring VR professionals and stakeholders; meet the project scope and objectives; and reflect evolving research, promising practices, and innovative training methods during the life of the grant.

(g) Disseminate, replicate, and sustain the innovative training curricula and resources. The applicant must post completed training curricula and related resources on National Clearinghouse of Rehabilitation Training Materials (NCRTM) and other appropriate venues on an ongoing basis; facilitate replication of training curricula by interested VR agencies, IHEs, or other interested parties; sustain and maintain the training curriculum beyond the life of the grant; and present innovative training curricula, resources, outcomes, and lessons learned in at least one national forum during the final year of the grant.

Final Priority and Requirements

We will announce the final priorities and requirements in a document in the **Federal Register**. We will determine the final priorities and requirements after considering public comments on the proposed priority and requirements and other information available to the Department. This document does not preclude us from proposing additional eligibility criteria, priorities, requirements, definitions, and selection criteria subject to meeting applicable rulemaking requirements.

Note: This document does *not* solicit applications. In any year in which we choose to use one or more of these proposed priorities and these requirements, we invite applications through a notice in the **Federal Register**.

Executive Orders 12866, 13563, and 14094

Regulatory Impact Analysis

Under Executive Order 12866, the Office of Management and Budget (OMB) determines whether this regulatory action is “significant” and, therefore, subject to the requirements of the Executive order and subject to review by OMB. Section 3(f) of Executive Order 12866, as amended by Executive Order 14094, defines a “significant regulatory action” as an action likely to result in a rule that may—

(1) Have an annual effect on the economy of \$200 million or more (adjusted every three years by the Administrator of Office of Information and Regulatory Affairs (OIRA) for changes in gross domestic product); or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, territorial, or Tribal governments or communities;

(2) Create a serious inconsistency or otherwise interfere with an action taken or planned by another agency;

(3) Materially alter the budgetary impacts of entitlement grants, user fees, or loan programs or the rights and obligations of recipients thereof; or

(4) Raise novel legal or policy issues for which centralized review would meaningfully further the President’s priorities, or the principles set forth in this Executive order, as specifically authorized in a timely manner by the Administrator of OIRA in each case.

This proposed regulatory action is not a significant regulatory action subject to review by OMB under section 3(f) of Executive Order 12866, as amended by Executive Order 14094.

We have also reviewed this proposed regulatory action under Executive Order 13563, which supplements and explicitly reaffirms the principles, structures, and definitions governing regulatory review established in Executive Order 12866, as amended by Executive Order 14094. To the extent permitted by law, Executive Order 13563 requires that an agency—

(1) Propose or adopt regulations only upon a reasoned determination that their benefits justify their costs (recognizing that some benefits and costs are difficult to quantify);

(2) Tailor its regulations to impose the least burden on society, consistent with obtaining regulatory objectives and taking into account—among other things and to the extent practicable—the costs of cumulative regulations;

(3) In choosing among alternative regulatory approaches, select those approaches that maximize net benefits (including potential economic, environmental, public health and safety, and other advantages; distributive impacts; and equity);

(4) To the extent feasible, specify performance objectives, rather than the behavior or manner of compliance a regulated entity must adopt; and

(5) Identify and assess available alternatives to direct regulation, including economic incentives—such as user fees or marketable permits—to encourage the desired behavior, or provide information that enables the public to make choices.

Executive Order 13563 also requires an agency “to use the best available techniques to quantify anticipated present and future benefits and costs as accurately as possible.” OIRA has emphasized that these techniques may include “identifying changing future compliance costs that might result from technological innovation or anticipated behavioral changes.”

We are issuing this proposed priority and these proposed requirements only on a reasoned determination that their benefits would justify their costs. In choosing among alternative regulatory approaches, we selected those approaches that would maximize net benefits. Based on the analysis that follows, the Department believes that this regulatory action is consistent with the principles in Executive Order 13563.

We also have determined that this regulatory action would not unduly interfere with State, local, and Tribal governments in the exercise of their governmental functions.

In accordance with these Executive Orders, the Department has assessed the potential costs and benefits, both quantitative and qualitative, of this regulatory action. The potential costs are those resulting from statutory requirements and those we have determined as necessary for administering the Department’s programs and activities.

Clarity of the Regulations

Executive Order 12866 and the Presidential memorandum “Plain Language in Government Writing” require each agency to write regulations that are easy to understand.

The Secretary invites comments on how to make this proposed priority and requirements easier to understand, including answers to questions such as the following:

- Are the requirements in the proposed priority and requirements clearly stated?

- Do the proposed priority and requirements contain technical terms or other wording that interferes with their clarity?

- Does the format of the proposed priority and requirements (grouping and order of sections, use of headings, paragraphing, etc.) aid or reduce their clarity?

- Would the proposed priority and requirements be easier to understand if we divided them into more (but shorter) sections?

- Could the description of the proposed priority and requirements in the **SUPPLEMENTARY INFORMATION** section of this preamble be more helpful in making the proposed priority and requirements easier to understand? If so, how?

- What else could we do to make the proposed priority and requirements easier to understand?

To send any comments about how the Department could make this proposed priority and requirements easier to understand, see the instructions in the **ADDRESSES** section.

Intergovernmental Review: This program is subject to Executive Order 12372 and the regulations in 34 CFR part 79. One of the objectives of the Executive order is to foster an intergovernmental partnership and a strengthened federalism. The Executive order relies on processes developed by State and local governments for coordination and review of proposed Federal financial assistance.

This document provides early notification of our specific plans and actions for this program.

Regulatory Flexibility Act

Certification: The Secretary certifies that this proposed priority and these proposed requirements would not have a significant economic impact on a substantial number of small entities. Participation in the Innovative Rehabilitation Training program is voluntary. In addition, the only eligible entities for this program are State agencies or their equivalents under State law, Public, Private and Nonprofit Entities, including Indian Tribes and Institutions of Higher Education, which do not meet the definition of a small entity. We expect that in determining whether to apply for Innovative Rehabilitation Training program funds, an eligible entity would evaluate the requirements of preparing an application and any associated costs and weigh them against the benefits likely to be achieved by receiving a program grant. An eligible entity probably would apply only if it determines that the likely benefits

exceed the costs of preparing an application.

We believe that the proposed priority and requirements would not impose any additional burden on a small entity applying for a grant than the entity would face in the absence of the proposed action. That is, the length of the applications those entities would submit in the absence of the proposed regulatory action and the time needed to prepare an application would likely be the same.

This proposed regulatory action would not have a significant economic impact on a small entity once it receives a grant because it would be able to meet the costs of compliance using the funds provided under this program. We invite comments from eligible small entities as to whether they believe this proposed regulatory action would have a significant economic impact on them and, if so, request evidence to support that belief.

Paperwork Reduction Act of 1995: The proposed priority and requirements contain information collection requirements that are approved by OMB under OMB control number 1894-0006.

Accessible Format: On request to the program contact person listed under **FOR FURTHER INFORMATION CONTACT**, individuals with disabilities can obtain this document in an accessible format. The Department will provide the requestor with an accessible format that may include Rich Text Format (RTF) or text format (txt), a thumb drive, an MP3 file, braille, large print, audiotope, or compact disc, or other accessible format.

Electronic Access to This Document: The official version of this document is the document published in the **Federal Register**. You may access the official edition of the **Federal Register** and the Code of Federal Regulations at www.govinfo.gov. At this site you can view this document, as well as all other documents of this Department published in the **Federal Register**, in text or Portable Document Format (PDF). To use PDF you must have Adobe Acrobat Reader, which is available free at the site. You may also access documents of the Department published in the **Federal Register** by using the article search feature at www.federalregister.gov. Specifically, through the advanced search feature at this site, you can limit your search to documents published by the Department.

Glenna Wright-Gallo,

Assistant Secretary for Special Education and Rehabilitative Services.

[FR Doc. 2024-29996 Filed 12-17-24; 8:45 am]

BILLING CODE 4000-01-P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 62

[EPA-R06-OAR-2024-0232; FRL-12425-01-R6]

Approval and Promulgation of State Air Quality Plans for Designated Facilities and Pollutants; Oklahoma; Control of Emissions From Existing Municipal Solid Waste Landfills

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: Pursuant to the Federal Clean Air Act (CAA or the Act), the Environmental Protection Agency (EPA) is proposing to approve the CAA section 111(d) State plan submitted by the State of Oklahoma for sources subject to the Municipal Solid Waste (MSW) Landfills Emission Guidelines (EG). The Oklahoma MSW landfills plan was submitted to fulfill the State's obligations under CAA section 111(d) to implement and enforce the requirements under the MSW Landfills EG. The EPA is proposing to approve the State plan and amend the agency regulations in accordance with the requirements of the CAA.

DATES: Written comments must be received on or before February 18, 2025.

ADDRESSES: Submit your comments, identified by Docket No. EPA-R06-OAR-2024-0232, at <https://www.regulations.gov> or via email to gesualdo.matthew@epa.gov. Follow the online instructions for submitting comments. Once submitted, comments cannot be edited or removed from *Regulations.gov*. The EPA may publish any comment received to its public docket. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. The EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.* on the web, cloud, or other file sharing system). For additional submission methods, please contact Matthew Gesualdo, (214) 665-6530, gesualdo.matthew@epa.gov. For the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit

<https://www.epa.gov/dockets/commenting-epa-dockets>.

Docket: The index to the docket for this action is available electronically at www.regulations.gov. While all documents in the docket are listed in the index, some information may not be publicly available due to docket file size restrictions or content (e.g., CBI).

FOR FURTHER INFORMATION CONTACT:

Matthew Gesualdo, EPA Region 6 Office, Air and Radiation Division—State Planning and Implementation Branch, (214) 665–6530, gesualdo.matthew@epa.gov. We encourage the public to submit comments via <https://www.regulations.gov>. Please call or email the contact listed above if you need alternative access to material indexed but not provided in the docket.

SUPPLEMENTARY INFORMATION:

Throughout this document wherever “we,” “us,” or “our” is used, we mean the EPA.

I. Background

Section 111 of the CAA, “Standards of Performance for New Stationary Sources,” directs the EPA to establish emission standards for stationary sources of air pollution that could potentially endanger public health or welfare. These standards are referred to as New Source Performance Standards (NSPS). Section 111(d) addresses the process by which the EPA and States regulate standards of performance for existing sources. When NSPS are promulgated for new sources, section 111(d) and EPA regulations require that the EPA publish an Emission Guideline (EG) to regulate the same pollutants from existing facilities. While NSPS are directly applicable to new sources, EG for existing sources (designated facilities) are intended for States to use to develop a State plan to submit to the EPA.

State plan submittal and revisions under CAA section 111(d) must be consistent with the applicable EG and the requirements of 40 CFR part 60, subpart B, and part 62, subpart A. The regulations at 40 CFR part 60, subpart B, contain general provisions applicable to the adoption and submittal of State plans under CAA section 111(d). Additionally, 40 CFR part 62, subpart A, provides the procedural framework by which the EPA will approve or disapprove such plans submitted by a state. Once approved by the EPA, the State plan becomes federally enforceable. If a State does not submit an approvable State plan to the EPA, the EPA is responsible for developing,

implementing, and enforcing a federal plan.

The MSW landfills NSPS for new landfills and EG for existing landfills were first promulgated by EPA on March 12, 1996, in 40 CFR part 60, subparts WWW and Cc, respectively (61 FR 9905). On August 29, 2016, the EPA finalized revisions to the MSW landfills NSPS and EG in 40 CFR part 60, subparts XXX and Cf, respectively (81 FR 59332; 81 FR 59313). The 2016 EG revision updates the control requirements and monitoring, reporting, and recordkeeping provisions for existing MSW landfill sources.

The current MSW landfills EG, found at 40 CFR part 60, subpart Cf, concerns the regulation of landfill gas and its components, including methane, from MSW landfills for which construction, reconstruction, or modification was commenced on or before July 17, 2014. The deadline to submit a State plan to the EPA was May 30, 2017. On May 21, 2021, EPA finalized the MSW landfills Federal plan in 40 CFR part 62, subpart OOO (86 FR 27756). The MSW landfills Federal plan at 40 CFR part 62, subpart OOO, applies to States that do not have an EPA-approved State plan. The MSW landfills Federal plan is currently in effect in Oklahoma.

In order to fulfill obligations under CAA section 111(d), the Oklahoma Department of Environmental Quality (ODEQ) submitted a revised State plan for the control of emissions from existing MSW landfills for the State of Oklahoma on April 30, 2024.¹ The Oklahoma MSW landfills plan implements and enforces the applicable provisions under the MSW landfills EG at 40 CFR part 60, subpart Cf, and additionally meets the relevant requirements of the CAA section 111(d) implementing regulations at 40 CFR part 60, subpart B. The Oklahoma submittal and the supplements are included in the public docket for this rulemaking (Docket No. EPA–R06–OAR–2024–0232).

II. Evaluation

The EPA has evaluated the Oklahoma MSW landfills plan to determine whether the plan meets applicable requirements from the MSW landfills EG at 40 CFR part 60, subpart Cf, and the CAA section 111(d) implementing regulations at 40 CFR part 60, subpart B. The EPA’s detailed rationale and discussion on the Oklahoma MSW landfills plan can be found in the EPA Technical Support Document (TSD),

¹ The Oklahoma plan submitted by ODEQ does cover sources located in Indian country with some exclusions.

located in the docket for this rulemaking.

The State plan submittal package includes all materials necessary to be deemed administratively and technically complete according to the criteria of 40 CFR part 60, subpart B. The State plan document (the “Oklahoma MSW Landfill State Plan”) includes all the necessary authority for the implementation and enforcement of the MSW landfill Emission Guidelines in the State. Specifically, the State appropriately incorporated all applicable EG requirements from 40 CFR part 60, subpart Cf, into the Oklahoma Administrative Code (OAC) 252:100–47, Control of Emissions from Existing Municipal Solid Waste Landfills. Both the adopted State plan document and the relevant OAC regulations, as well as all other relevant plan submittal materials may be found in the docket for this action. Necessary State legal and enforcement authorities required for plan approval are located elsewhere in Oklahoma’s statute, rules and regulations and have been reviewed and approved of by the EPA in the course of prior State implementation plan as well as section 111(d) and/or 129 State plan approvals. See 40 CFR part 52, subpart E, and 40 CFR part 62, subpart E.

The Oklahoma MSW landfills plan has been evaluated in detail in the TSD. Our evaluation demonstrates that the Oklahoma MSW landfills plan meets the requirements in 40 CFR part 60, subpart Cf and subpart B, and is consistent with the requirements for an approvable section 111(d) State plans for MSW landfills.

III. Impact on Areas of Indian Country

Following the U.S. Supreme Court decision in *McGirt v. Oklahoma*, 140 S. Ct. 2452 (2020), the Governor of the State of Oklahoma requested approval under Section 10211(a) of the Safe, Accountable, Flexible, Efficient Transportation Equity Act of 2005: A Legacy for Users, Public Law 109–59, 119 Stat. 1144, 1937 (August 10, 2005) (“SAFETEA”), to administer in certain areas of Indian country (as defined at 18 U.S.C. 1151) the State’s environmental regulatory programs that were previously approved by the EPA for areas outside of Indian country. The State’s request excluded certain areas of Indian country further described below. In addition, the State only sought approval to the extent that such approval is necessary for the State to administer a program in light of *Oklahoma Dept. of Environmental*

Quality v. EPA, 740 F.3d 185 (D.C. Cir. 2014).²

On October 1, 2020, the EPA approved Oklahoma's SAFETEA request to administer all the State's EPA-approved environmental regulatory programs, including the Oklahoma SIP, in the requested areas of Indian country. As requested by Oklahoma, the EPA's approval under SAFETEA does not include Indian country lands, including rights-of-way running through the same, that: (1) qualify as Indian allotments, the Indian titles to which have not been extinguished, under 18 U.S.C. 1151(c); (2) are held in trust by the United States on behalf of an individual Indian or Tribe; or (3) are owned in fee by a Tribe, if the Tribe (a) acquired that fee title to such land, or an area that included such land, in accordance with a treaty with the United States to which such Tribe was a party, and (b) never allotted the land to a member or citizen of the Tribe (collectively "excluded Indian country lands").³

The EPA's approval under SAFETEA expressly provided that to the extent EPA's prior approvals of Oklahoma's environmental programs excluded Indian country, any such exclusions are superseded for the geographic areas of Indian country covered by the EPA's approval of Oklahoma's SAFETEA request.⁴ The approval also provided

that future revisions or amendments to Oklahoma's approved environmental regulatory programs would extend to the covered areas of Indian country (without any further need for additional requests under SAFETEA).

As explained earlier in this action, the EPA is proposing to approve the Oklahoma CAA section 111(d) MSW landfill State plan that was submitted by the State of Oklahoma on April 30, 2024. More specifically, we are proposing to approve Oklahoma's MSW landfill plan addressing CAA section 111(d) requirements for MSW under the MSW landfill EG codified at 40 CFR part 60, subpart Cf. The Oklahoma MSW landfill plan applies statewide, but only affects specific types of facilities, as discussed earlier in this document. Consistent with the EPA's October 1, 2020, SAFETEA approval, if this approval is finalized as proposed, this Oklahoma MSW landfill plan will apply to all Indian country within Oklahoma, other than the excluded Indian country lands, as described earlier. EPA has identified multiple existing facilities located within currently recognized reservation areas and not on excluded Indian country lands. These facilities will be subject to the Oklahoma MSW landfill plan we are proposing to approve. Any newly constructed municipal solid waste landfill in these same areas would be subject to the MSW landfill NSPS, not the MSW landfill plan implementing the MSW landfill EG requirements.

IV. Proposed Action

The EPA is proposing to approve the Oklahoma MSW landfill plan submitted by ODEQ in accordance with the requirements of section 111(d) of the CAA and to amend 40 CFR part 62, subpart E, to codify EPA's approval. The EPA is proposing to find that the Oklahoma MSW landfill plan is at least as protective as the Federal requirements provided under the MSW landfills EG, codified at 40 CFR part 60, subpart Cf. Once approved by the EPA, the Oklahoma MSW landfills plan will become federally enforceable.

V. Environmental Justice Considerations

Information on Executive Order 12898 (Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations, 59 FR 7629, February 16, 1994), Executive Order 14094 (Revitalizing Our Nation's Commitment

to Environmental Justice for All, 88 FR 25251, April 26, 2023), and how EPA defines environmental justice can be found in the section titled "Statutory and Executive Order Reviews" in this proposed rule.⁵ EPA is providing additional analysis of environmental justice associated with this action. The results of this analysis are being provided for informational and transparency purposes, not as a basis of our proposed action.

EPA conducted screening analyses using EJSCREEN, an environmental justice mapping and screening tool that provides EPA with a nationally consistent dataset and approach for combining various environmental and demographic indicators.⁶ The EJSCREEN tool presents these indicators at a Census block group (CBG) level or a larger user-specified "buffer" area that covers multiple CBGs.⁷ An individual CBG is a cluster of contiguous blocks within the same census tract and generally contains between 600 and 3,000 people. EJSCREEN is not a tool for performing in-depth risk analysis, but is instead a screening tool that provides an initial representation of indicators related to environmental justice and is subject to uncertainty in some underlying data (e.g., some environmental indicators are based on monitoring data which are not uniformly available; others are based on self-reported data).⁸ To help mitigate this uncertainty, we have summarized EJSCREEN data within larger "buffer" areas covering multiple block groups and representing the average resident within the buffer areas surrounding the MSW landfills. We present EJSCREEN environmental indicators to help screen for locations where residents may experience a higher overall pollution burden than would be expected for a block group with the same total population. These indicators of overall pollution burden include estimates of ambient particulate matter (PM_{2.5}) and ozone concentration, a score for traffic proximity and volume, percentage of pre-1960 housing units (lead paint

² In *ODEQ v. EPA*, the D.C. Circuit held that under the CAA, a state has the authority to implement a SIP in non-reservation areas of Indian country in the state, where there has been no demonstration of Tribal jurisdiction. Under the D.C. Circuit's decision, the CAA does not provide authority to states to implement SIPs in Indian reservations. *ODEQ* did not, however, substantively address the separate authority in Indian country provided specifically to Oklahoma under SAFETEA. That separate authority was not invoked until the State submitted its request under SAFETEA, and was not approved until EPA's decision, described in this section, on October 1, 2020.

³ In accordance with Executive Order 13990, EPA is currently reviewing our October 1, 2020, SAFETEA approval. On December 22, 2021, EPA proposed to withdraw and reconsider the October 1, 2020, SAFETEA approval. See <https://www.epa.gov/ok/proposed-withdrawal-and-reconsideration-and-supporting-information>. EPA expects to have further discussions with Tribal governments and State of Oklahoma as part of this reconsideration. EPA also notes that the October 1, 2020, approval is the subject of a pending challenge in Federal court. *Pawnee Nation of Oklahoma v. Regan*, No. 20-9635 (10th Cir.). Pending completion of EPA's review, EPA is proceeding with this proposed action in accordance with the October 1, 2020, approval. EPA may make further changes to the approval of Oklahoma's plan to reflect the outcome of the proposed withdrawal and reconsideration of the October 1, 2020 SAFETEA approval. To the extent any change occurs in the scope of Oklahoma's CAA 111(d)/129 authority in Indian country before the finalization of this proposed rule, such a change may affect the scope of the EPA's final action on the proposed rule.

⁴ EPA's prior approvals relating to Oklahoma's CAA section 111(d)/129 plans did not apply in

areas of Indian country located in the state. See, e.g., 70 FR 57764 (October 4, 2005). Such prior expressed limitations are superseded by the EPA's approval of Oklahoma's SAFETEA request.

⁵ See <https://www.epa.gov/environmentaljustice/learn-about-environmental-justice>.

⁶ The EJSCREEN tool is available at <https://www.epa.gov/ejscreen>.

⁷ See <https://www.census.gov/programs-surveys/geography/about/glossary.html>.

⁸ In addition, EJSCREEN relies on the five-year block group estimates from the U.S. Census American Community Survey. The advantage of using five-year over single-year estimates is increased statistical reliability of the data (i.e., lower sampling error), particularly for small geographic areas and population groups. For more information, see https://www.census.gov/content/dam/Census/library/publications/2020/acs/acs_general_handbook_2020.pdf.

indicator), and scores for proximity to Superfund sites, risk management plan (RMP) sites, and hazardous waste facilities.⁹ EJSCREEN also provides information on demographic indicators, including percent low-income, communities of color, linguistic isolation, and less than high school

education. The EPA prepared EJSCREEN reports covering buffer areas of approximately 3-mile radii around the existing MSW landfills in Oklahoma. Table 1 presents a summary of results from the EPA's screening-level analysis for the areas surrounding each MSW landfill compared to the U.S. as

a whole, where the landfill was located in an area where one or more of the EJ indices were greater than the 80th percentiles (the full, detailed EJSCREEN reports are provided in the docket for this rulemaking).

TABLE 1—EJSCREEN ANALYSIS SUMMARY FOR EXISTING OKLAHOMA MSW LANDFILLS WITH EJ INDICES ABOVE 80%ILE

Variables	Values for buffer areas (radius) for each MSW landfill and the U.S. (percentile within U.S. where indicated)							
	Enid City Landfill (Garfield, 3 miles)	Great Plains (Pocasset) Landfill (Grady, 3 miles)	Ponca City Landfill (Kay, 3 miles)	Newcastle Landfill (McClain, 3 miles)	Muskogee Community Landfill (Muskogee, 3 miles)	Osage Landfill (Osage, 3 miles)	Quarry Landfill (Waste Management of OK) (Tulsa, 3 miles)	U.S.
<i>Pollution Burden Indicators</i>								
Particulate matter (PM _{2.5}), annual average	8.97 µg/m ³ (74th %ile)	9.01 µg/m ³ (75th %ile)	9.19 µg/m ³ (78th %ile)	9.81 µg/m ³ (86th %ile)	8.88 µg/m ³ (71st %ile)	8.69 µg/m ³ (66th %ile)	9.38 µg/m ³ (81st %ile)	8.45 µg/m ³ (—)
Ozone, summer seasonal average of daily 8-hour max	58.9 ppb (42nd %ile)	59.2 ppb (46th %ile)	57.2 ppb (33rd %ile)	60.8 ppb (52nd %ile)	53.7 ppb (15th %ile)	59.1 ppb (43rd %ile)	59.4 ppb (44th %ile)	61.8 ppb (—)
Traffic proximity (daily traffic count/distance to road)	180,000 (23rd %ile)	57,000 (13th %ile)	45,000 (11th %ile)	250,000 (28th %ile)	200,000 (24th %ile)	180,000 (24th %ile)	680,000 (46th %ile)	1,700,000 (—)
Lead paint (percentage pre-1960 housing)	0.52% (75th %ile)	0.14% (41st %ile)	0.43% (69th %ile)	0.045% (25th %ile)	0.30% (58th %ile)	0.66% (84th %ile)	0.074% (31st %ile)	0.30% (—)
Superfund proximity score*	0.00 (0%ile)	0.00 (0%ile)	0.00 (0%ile)	0.00 (0%ile)	0.099 (59th %ile)	0.99 (91st %ile)	0.00 (0%ile)	0.39 (—)
RMP proximity score *	1.20 (85th %ile)	0.22 (46th %ile)	1.30 (86th %ile)	0.28 (50th %ile)	0.16 (40th %ile)	0.95 (79th %ile)	1.60 (90th %ile)	0.57 (—)
Hazardous waste proximity score *	0.00 (0%ile)	0.13 (20th %ile)	0.36 (29th %ile)	0.27 (26th %ile)	0.15 (21st %ile)	1.00 (45th %ile)	4.60 (77th %ile)	3.5 (—)
<i>Demographic Indicators</i>								
People of color population	39% (57th %ile)	15% (29th %ile)	35% (53rd %ile)	23% (40th %ile)	53% (68th %ile)	30% (48th %ile)	24% (42nd %ile)	40% (—)
Low-income population	49% (80th %ile)	23% (43rd %ile)	47% (78th %ile)	20% (37th %ile)	55% (85th %ile)	46% (77th %ile)	32% (58th %ile)	30% (—)
Linguistically isolated population	2% (65th %ile)	1% (57th %ile)	1% (58th %ile)	0% (0%ile)	2% (64th %ile)	1% (58th %ile)	2% (62nd %ile)	5% (—)
Population with less than high school education	18% (79th %ile)	7% (48th %ile)	13% (69th %ile)	9% (55th %ile)	15% (72nd %ile)	11% (63rd %ile)	9% (53rd %ile)	11% (—)
Population under 5 years of age	7% (73rd %ile)	4% (38th %ile)	4% (46th %ile)	7% (69th %ile)	8% (75th %ile)	8% (78th %ile)	5% (50th %ile)	5% (—)
Population over 64 years of age	10% (25th %ile)	31% (89th %ile)	15% (46th %ile)	12% (32nd %ile)	17% (53rd %ile)	15% (45th %ile)	29% (86th %ile)	18% (—)

* The traffic proximity and volume indicator is a score calculated by daily traffic count divided by distance in meters to the road. The Superfund proximity, RMP proximity, and hazardous waste proximity indicators are all scores calculated by site or facility counts divided by distance in kilometers.

EPA proposes to approve Oklahoma's MSW Landfills Plan, received on April 30, 2024, in accordance with section 111(d) of the CAA. The Oklahoma MSW Landfills Plan incorporates Federal requirements for MSW landfills, as specified in the MSW landfills EG at 40 CFR part 60, subpart Cf, which are also implemented under the MSW Landfills Federal Plan at 40 CFR part 62, subpart

OOO. The MSW Landfills Federal Plan was implemented by EPA in Oklahoma as Oklahoma did not have an approved MSW landfills plan addressing applicable EG requirements. These EG requirements implemented under the MSW Landfills Federal Plan and now incorporated by Oklahoma in its MSW landfills plan is designed to result in significant emissions reductions for

MSW landfills, as described in the **Federal Registers** for the MSW landfill rules (80 FR 52100; 81 FR 59276). Landfill gas is a natural byproduct of the decomposition of organic material in landfills and is composed of roughly 50% methane, 50% carbon dioxide (CO₂), and less than 1% non-methane organic compounds (NMOC) by volume, which include volatile organic

⁹ For additional information on environmental indicators and proximity scores in EJSCREEN, see "EJSCREEN Environmental Justice Mapping and

Screening Tool: EJSCREEN Technical Documentation," Chapter 3 and Appendix C (September 2019) at https://www.epa.gov/sites/default/files/2021-04/documents/ejscreen_technical_document.pdf.

compounds (VOC) and various organic hazardous air pollutants (HAP).¹⁰ VOC emissions are precursors to both fine particulate matter (PM_{2.5}) and ozone formation; exposure to PM_{2.5} and ozone is associated with significant public health effects, including (1) cardiovascular morbidity such as heart attacks, (2) respiratory morbidity such as asthma attacks, acute bronchitis, (3) hospital admissions and emergency room visits, and (4) premature mortality.¹¹ Hazardous air pollutants may cause cancer or other serious health effects, such as reproductive effects or birth defects.¹² In addition, methane is a potent greenhouse gas with a global warming potential 28–36 times greater than CO₂. Therefore, we believe that these requirements for existing MSW landfills and resulting emissions reductions have climate benefits and have contributed to reduced environmental and health impacts on all populations impacted by emissions from these sources in Oklahoma, including communities with environmental justice concerns, and will continue to do so under Federal oversight. This proposed rule is not anticipated to have disproportionately high or adverse human health or environmental effects on communities with environmental justice concerns because it is not anticipated to result in or contribute to emissions increases in Oklahoma. If finalized as proposed, EPA's approval of the Oklahoma MSW Landfills Plan will make the Plan and the corresponding MSW landfills EG requirements incorporated into the Plan federally enforceable by EPA as of the effective date of the final rulemaking.

VI. Statutory and Executive Order Reviews

Under the CAA, the Administrator is required to approve a CAA section 111(d) submission that complies with the provisions of the Act and applicable Federal regulations. 42 U.S.C. 7411(d); 42 U.S.C. 7429; 40 CFR part 60, subparts B and Cf; and 40 CFR part 62, subpart A. Thus, in reviewing CAA section 111(d) State plan submissions, the EPA's role is to approve State plans that meet the criteria of the CAA and implementing regulations. Accordingly, this action merely proposes to approve State law as meeting Federal requirements and does not impose additional requirements beyond those

imposed by State law. For that reason, this action:

- Is not a “significant regulatory action” subject to review by the Office of Management and Budget under Executive Orders 12866 (58 FR 51735, October 4, 1993) and 13563 (76 FR 3821, January 21, 2011);
- Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
- Does not have federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- Is not an economically significant regulatory action based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);
- Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001);
- Is not subject to requirements of section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the CAA; and
- Does not provide the EPA with the discretionary authority to address, as appropriate, disproportionate human health or environmental effects, using practicable and legally permissible methods, under Executive Order 12898 (59 FR 7629, February 16, 1994).

This proposed approval of revisions to the Oklahoma 111(d) State plan in accordance with section 111(d) of the CAA as discussed more fully elsewhere in this document will apply, if finalized as proposed, to certain areas of Indian country as discussed in the preamble, and therefore has Tribal implications as specified in E.O. 13175 (65 FR 67249, November 9, 2000). However, this action will neither impose substantial direct compliance costs on federally recognized Tribal governments, nor preempt Tribal law. This action will not impose substantial direct compliance costs on federally recognized Tribal governments because no actions will be required of Tribal governments. This action will also not preempt Tribal law as no Oklahoma tribe implements a regulatory program under the CAA, and thus does not have applicable or related Tribal laws. Consistent with the EPA

Policy on Consultation and Coordination with Indian Tribes (May 4, 2011), the EPA has engaged with Tribal governments that may be affected by this action and provided information about this action.

Executive Order 12898 (Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations, 59 FR 7629, Feb. 16, 1994) directs Federal agencies to identify and address “disproportionately high and adverse human health or environmental effects” of their actions on communities with environmental justice (EJ) concerns to the greatest extent practicable and permitted by law. Executive Order 14096 (Revitalizing Our Nation's Commitment to Environmental Justice for All, 88 FR 25251, April 26, 2023) builds on and supplements E.O. 12898 and defines EJ as, among other things, “the just treatment and meaningful involvement of all people, regardless of income, race, color, national origin, or Tribal affiliation, or disability in agency decision-making and other Federal activities that affect human health and the environment.”

The air agency did not evaluate EJ considerations as part of its submittal; the CAA and applicable implementing regulations neither prohibit nor require such an evaluation. EPA performed an EJ analysis, as is described in the section titled, “Environmental Justice Considerations.” The analysis was done for the purpose of providing additional context and information about this rulemaking to the public, not as a basis of the action. Due to the nature of the action being taken here, this action is expected to have a neutral to positive impact on the air quality of the affected area. In addition, there is no information in the record upon which this decision is based inconsistent with the stated goal of E.O. 12898/14096 of achieving EJ for communities with EJ concerns.

ADMINISTRATIVE CONFERENCE OF THE UNITED STATES

Consultation with State, Local, and Tribal Governments in Regulatory Policymaking; Request for Comments; Public Listening Sessions

AGENCY: Administrative Conference of the United States (ACUS).

ACTION: Notice; request for comments; public listening sessions.

SUMMARY: The Office of the Chair of ACUS is requesting public input on Federal agency processes for consulting with State, local, and Tribal governments when agencies engage in regulatory policymaking. ACUS is accepting written comments and will hold two virtual public listening sessions. Responses to this request may inform an ongoing ACUS project, *Consultation with State, Local, and Tribal Governments in Regulatory Policymaking*, which, if warranted, may recommend best practices for agencies to use.

DATES: Written comments must be received no later than 10 a.m. (ET) January 17, 2025.

Two virtual public listening sessions will be held on Wednesday, January 8, 2025 (3 p.m.–5 p.m. ET), and Wednesday, January 15, 2025 (3 p.m.–5 p.m. ET).

ADDRESSES: You may submit written comments by email to info@acus.gov (with “Consultation with State, Local, and Tribal Governments in Regulatory Policymaking” in the subject line of the message), or by U.S. Mail addressed to Consultation with State, Local, and Tribal Governments in Regulatory Policymaking, Administrative Conference of the United States, Suite 706 South, 1120 20th Street NW, Washington, DC 20036. ACUS will ordinarily post comments on the project web page (<https://www.acus.gov/projects/consultation-state-local-and-tribal-governments-regulatory>).

policymaking) as they are received. Commenters should not include information, such as personal information or confidential business information, that they do not wish to appear on the ACUS website. For the full ACUS public comment policy, please visit <https://www.acus.gov/policy/public-comment-policy>.

In addition to receiving written comments, ACUS plans to hold two virtual public listening sessions, addressing the themes specified, on the following dates:

Listening Session 1—Wednesday, January 8, 2025 (3 p.m.–5 p.m. ET). This listening session will focus on issues pertaining to consultation with State and local governments.

Listening Session 2—Wednesday, January 15, 2025 (3 p.m.–5 p.m. ET). This listening session will focus on issues pertaining to consultation with tribal governments.

Registration is required for each virtual public listening session. To register, please send an email to info@acus.gov by January 2, 2025 (with “Consultation with State, Local, and Tribal Governments in Regulatory Policymaking” in the subject line of the message). In the email, please: (1) provide your name and organization, if any; (2) indicate which listening session(s) you would like to attend; and (3) indicate whether you would like to speak during the listening session(s). Online and dial-in information for the listening sessions will be shared with registered participants before each session.

FOR FURTHER INFORMATION CONTACT:

Becaja Caldwell, Attorney Advisor, Administrative Conference of the United States, 1120 20th Street NW, Suite 706 South, Washington, DC 20036; Telephone (202) 480–2080; email bcaldwell@acus.gov.

SUPPLEMENTARY INFORMATION: The Administrative Conference Act, 5 U.S.C. 591–596, established the Administrative Conference of the United States. The Conference studies the efficiency, adequacy, and fairness of the administrative procedures used by Federal agencies and makes recommendations to agencies, the President, Congress, and the Judicial Conference of the United States for procedural improvements (5 U.S.C. 594(1)). For further information about

the Conference and its activities, see www.acus.gov.

Consultation With State, Local, and Tribal Governments in Regulatory Policymaking

Consultation requirements represent an important way through which Congress and presidents have defined, structured, and institutionalized the Federal Government’s relationship with State and local governments and its unique nation-to-nation relationship with Tribal governments. The Unfunded Mandates Reform Act requires agencies to develop processes by which representatives of State, local, and tribal governments can “provide meaningful and timely input in the development of regulatory proposals containing significant Federal intergovernmental mandates.”¹ Executive Order (E.O.) 13132, *Federalism*, requires agencies to consult with State and local government officials when “formulating and implementing policies that have federalism implications.”² E.O. 13175, *Consultation and Coordination with Indian Tribal Governments*, similarly requires agencies to consult with Tribal government officials when “formulating and implementing policies with Tribal implications.”³

The President and Office of Management and Budget have periodically issued additional directives and guidance regarding consultation with State, local, and Tribal governments. Recent directives include President Biden’s Memorandum on Tribal Consultation and Strengthening Nation-to-Nation Relationships⁴ and Memorandum on Uniform Standards for Tribal Consultation.⁵

¹ 2 U.S.C. 1534(a).

² 64 FR 43255 (Aug. 4, 1999). “‘Policies that have federalism implications’ refers to regulations, legislative comments or proposed legislation, and other policy statements or actions that have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.” *Id.*

³ 65 FR 67249 (Nov. 9, 2000). “‘Policies that have tribal implications’ refers to regulations, legislative comments or proposed legislation, and other policy statements or actions that have substantial direct effects on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.” *Id.*

⁴ 86 FR 7491 (Jan. 29, 2021).

⁵ 87 FR 74479 (Nov. 30, 2022).

ACUS has also emphasized the importance of effective consultation with State, local, and Tribal officials, recommending, for example, that agencies adopt best practices for consulting with State and local governments in cases of potential preemption of State law;⁶ consider how State, local, and Tribal governments will be involved in the retrospective review of agency rules;⁷ and codify regulations describing how they obtain feedback from State, local, and Tribal governments.⁸

Agencies have adopted a variety of approaches to consulting with State, local, and Tribal governments, and there is still more that can be learned from a comprehensive study of agency consultation practices. To that end, ACUS is undertaking a project to examine when and how agencies consult with State, local, and Tribal officials on regulatory policymaking. Among other topics, the project will address agency policies and procedures for consulting with State, local, and Tribal governments; agencies' approaches to identifying and engaging with appropriate State, local, and Tribal officials; methods for utilizing feedback from State, local, and Tribal governments in agency decision making; and common issues and challenges that agencies face in developing and implementing accountable processes for consultation.

Specific Topics for Public Comment

ACUS welcomes views, information, and data on all aspects of strategies that agencies are using or might use to consult with State, local, and/or Tribal governments when they engage in regulatory policymaking. ACUS also seeks specific feedback on the following questions related to agencies' consultation efforts:

1. What has been your experience regarding consultations with a Federal agency engaging in regulatory policymaking? For example, if you are (or were) a State, local, or Tribal government official, was any portion of the process especially easy or particularly difficult? Do you have specific suggestions for increasing the effectiveness of consultations in regulatory policymaking?

2. If you have been involved in a consultation, how often are (or were) you contacted by Federal agencies to consult on a particular regulatory policy? How often do (or did) you contact Federal agencies to request a consultation on a given regulatory policy? What was your experience with requesting a consultation? What tasks do (or did) you undertake as part of the consultation effort? At what stage in the regulatory policymaking process were you consulted by a Federal agency? In your experience, was that consultation timed too early, appropriately, or too late?

3. If you have been involved in a consultation, how did you feel your feedback during the consultation process was used by Federal agencies? Were you satisfied with how your input was used? Why or why not? Do you recall whether the Federal agency explained to you how they incorporated your feedback into the regulatory policymaking process? Do you have specific suggestions for incorporating feedback into the regulatory policymaking process?

4. In your experience, are there certain types of information that may be useful to share during consultation but which you may not want to disclose, for example confidential or culturally sensitive information? If so, do you have any specific recommendations for how Federal Government agencies can best manage this information as it considers a regulatory policy that may have federalism or Tribal implications?

5. In your experience, how easy or difficult was it to locate the appropriate agency official with responsibility for State, local, or Tribal government matters when seeking to or engaging in consultation efforts? How, if at all, did this impact consultation efforts? Do you have any specific recommendations to facilitate communication among Federal, State, local, and Tribal government officials for consultations on regulatory policymaking?

6. If you are familiar with agency policies on State, local, or Tribal government consultation, what are your thoughts on such policies?

7. In your experience, what makes a consultation successful? What makes a consultation unsuccessful? Do you have any specific recommendations on reducing barriers to effective and meaningful consultation among and between Federal, State, local, and Tribal government officials?

8. In your opinion, what role can State, local, and government officials play to facilitate consultation, and how should Federal Government agencies encourage such actions, if at all?

Dated: December 12, 2024.

Shawne C. McGibbon,

General Counsel.

COMMISSION ON CIVIL RIGHTS

Notice of Public Meetings of the New Mexico Advisory Committee to the U.S. Commission on Civil Rights

AGENCY: U.S. Commission on Civil Rights.

ACTION: Announcement of virtual briefing.

SUMMARY: Notice is hereby given, pursuant to the provisions of the rules and regulations of the U.S. Commission on Civil Rights (Commission) and the Federal Advisory Committee Act that the New Mexico Advisory Committee (Committee) will hold a virtual briefing via *ZoomGov* on Wednesday, January 15, 2025, for the purpose of hearing testimony on civil rights implications of immigrant detention centers in the state.

DATES: The virtual briefing will take place on:

- PANEL II: Wednesday, January 15, 2025, from 1 p.m.–3 p.m. MT.

ADDRESSES: Zoom Webinar Link to Join: https://www.zoomgov.com/webinar/register/WN_om0T0CDWRNm1MKY6rV8doA.

FOR FURTHER INFORMATION CONTACT:

Brooke Peery, Designated Federal Officer (DFO), at bpeery@usccr.gov or (202) 701–1376.

SUPPLEMENTARY INFORMATION:

Committee meetings are available to the public through the registration link above. Any interested member of the public may listen to the meeting. An open comment period will be provided to allow members of the public to make a statement as time allows. Per the Federal Advisory Committee Act, public minutes of the meeting will include a list of persons who are present at the meeting. If joining via phone, callers can expect to incur regular charges for calls they initiate over wireless lines, according to their wireless plan. The Commission will not refund any incurred charges. Callers will incur no charge for calls they initiate over land-line connections to the toll-free telephone number. Closed captioning will be available for individuals who are deaf, hard of hearing, or who have certain cognitive or learning impairments. To request additional accommodation, please email Angelica Trevino, Support Specialist, at

DEPARTMENT OF COMMERCE

Census Bureau

Agency Information Collection Activities; Submission to the Office of Management and Budget (OMB) for Review and Approval; Comment Request; Business Trends and Outlook Survey (BTOS)

AGENCY: Census Bureau, Commerce.

ACTION: Notice of information collection, request for comment.

SUMMARY: The Department of Commerce, in accordance with the Paperwork Reduction Act (PRA) of 1995, invites the general public and other Federal agencies to comment on proposed, and continuing information collections, which helps us assess the impact of our information collection requirements and minimize the public's reporting burden. The purpose of this notice is to allow for 60 days of public comment on the proposed revisions to the BTOS prior to the submission of the

information collection request (ICR) to OMB for approval.

DATES: To ensure consideration, comments regarding this proposed information collection must be received on or before February 18, 2025.

ADDRESSES: Interested persons are invited to submit written comments by email to Thomas.J.Smith@census.gov. Please reference BTOS in the subject line of your comments. You may also submit comments, identified by Docket Number USCB-2024-0034, to the Federal e-Rulemaking Portal: <http://www.regulations.gov>. All comments received are part of the public record. No comments will be posted to <http://www.regulations.gov> for public viewing until after the comment period has closed. Comments will generally be posted without change. All Personally Identifiable Information (for example, name and address) voluntarily submitted by the commenter may be publicly accessible. Do not submit Confidential Business Information or otherwise sensitive or protected information. You may submit attachments to electronic comments in Microsoft Word, Excel, or Adobe PDF file formats.

FOR FURTHER INFORMATION CONTACT:

Requests for additional information or specific questions related to collection activities should be directed to Catherine Buffington, Chief, Economic Indicator Division, 301-763-1838, and catherine.d.buffington@census.gov.

SUPPLEMENTARY INFORMATION:

I. Abstract

The U.S. Census Bureau plans to request a 3-year extension with revisions from the Office of Management and Budget (OMB) for the Business Trends and Outlook Survey (BTOS). The BTOS has produced data products on a bi-weekly basis since October 2022. This continuous near real time data collection and publication provides a baseline of the U.S. economy and measures change as a result of current and future economic shocks.

BTOS uses ongoing data collection to produce high frequency, timely, and granular information about current economic conditions and trends. BTOS is the only biweekly business tendency survey produced by the federal statistical system, providing unique and detailed data during times of economic or other emergencies. The BTOS target population is all nonfarm employer businesses with receipts of \$1,000 or more in the United States, the District of Columbia, and Puerto Rico. The current sample consists of approximately 1.2 million businesses

divided into six panels. A new sample collection is conducted each year. Data collection occurs every two weeks, and businesses in each panel are asked to report once every 12 weeks for one year. Data are released every 2 weeks and are available by 2017 North American Industry Classification System (NAICS) sector, state, the 25 most populous Metropolitan Statistical Areas and employment size. Data are also available by subsector (3-digit NAICS) and sector by employment size.

Data from BTOS are currently used to provide timely data to understand the economic conditions being experienced by businesses; BTOS provides near real time data on key items such as revenue, paid employees, hours worked as well as inventories. BTOS also provides high level information on the changing share of businesses facing difficulties stemming from supply chain issues, interest rate changes, and/or weather-related events. Previously, there had been few data sources available to policymakers, media outlets, and academia that delivered near real time insights into economic trends and outlooks. BTOS data has consistently been used by the Small Business Administration to evaluate the impact of regulatory changes.

The BTOS collects the following high-level topics for the previous two weeks, and the items in bold have 6-month future projections:

- Overall performance
- Revenue
- Employment
- Hours worked
- Artificial Intelligence
- Operating status
- Inventories
- Delivery time
- Demand
- Output prices
- Input prices
- Interest Rates
- Loss—Weather Event

For the first year of BTOS, the content remained unchanged at 26 questions. For the second sample year, the BTOS moved to a set of core questions and supplemental content. Supplemental content is designed to provide urgently needed data on an emerging or current issue. For the first collection of supplemental content, the topic was on business use of artificial intelligence. Due to vast demand to continue this data series, the Census Bureau plans to request a revision to include the artificial intelligence supplement again for the fourth sample year of BTOS.

BTOS data is collected in near real time and disseminated as experimental products. BTOS data is experimental

with the goal of meeting Census Bureau quality standards for regularly occurring, non-experimental statistics.

II. Method of Collection

The first time each biweekly panel is in sample, businesses are contacted either by email or letter with an invitation to respond to the survey. For each biweekly survey panel, initial letters are sent on the Friday before the 2-week period while initial emails are sent on the first Monday of the 2-week period. Starting with the second time each biweekly panel is in sample, businesses are contacted only by email with an invitation to respond to the survey. Both letter and email invitations describe the purpose of the survey collection, include the link to the online reporting tool, and contain the access code.

III. Data

OMB Control Number: 0607–1022.
Form Number(s): None.

Type of Review: Regular submission, Request for a Revision of a Currently Approved Collection.

Affected Public: Business or other for-profit organizations.

Estimated Number of Respondents: 795,000 responses collected annually.

Estimated Time per Response: 10 minutes.

Estimated Total Annual Burden Hours: 132,500.

Estimated Total Annual Cost to Public: \$0 (This is not the cost of respondents' time, but the indirect costs respondents may incur for such things as purchases of specialized software or hardware needed to report, or expenditures for accounting or records maintenance services required specifically by the collection.)

Respondent's Obligation: Voluntary.

Legal Authority: Title 13 U.S.C., Sections 131 and 182.

IV. Request for Comments

We are soliciting public comments to permit the Department/Bureau to: (a) Evaluate whether the proposed information collection is necessary for the proper functions of the Department, including whether the information will have practical utility; (b) Evaluate the accuracy of our estimate of the time and cost burden for this proposed collection, including the validity of the methodology and assumptions used; (c) Evaluate ways to enhance the quality, utility, and clarity of the information to be collected; and (d) Minimize the reporting burden on those who are to respond, including the use of automated collection techniques or other forms of information technology.

Comments that you submit in response to this notice are a matter of public record. We will include, or summarize, each comment in our request to OMB to approve this ICR. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you may ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Sheleen Dumas,

Departmental PRA Clearance Officer, Office of the Under Secretary for Economic Affairs, Commerce Department.

[FR Doc. 2024–29834 Filed 12–17–24; 8:45 am]

BILLING CODE 3510–07–P

DEPARTMENT OF COMMERCE

Census Bureau

Agency Information Collection Activities; Submission to the Office of Management and Budget (OMB) for Review and Approval; Comment Request; 2025 National Household Food Acquisition and Purchase Survey (FoodAPS) Pilot Test

The Department of Commerce will submit the following information collection request to the Office of Management and Budget (OMB) for review and clearance in accordance with the Paperwork Reduction Act of 1995, on or after the date of publication of this notice. We invite the general public and other Federal agencies to comment on proposed, and continuing information collections, which helps us assess the impact of our information collection requirements and minimize the public's reporting burden. This notice allows for 30 days for public comments.

Agency: U.S. Census Bureau, Commerce.

Title: 2025 National Household Food Acquisition and Purchase Survey (FoodAPS) Pilot Test.

Form Number(s): None. All information will be collected electronically.

Type of Request: Regular submission.
Number of Respondents: 5,000.
Average Hours per Response: 49 minutes.

Burden Hours: 4,092.

Needs and Uses: The National Household Food Acquisition and Purchase Survey (FoodAPS) fills a

critical data gap and supports research that informs policymaking on key national priorities, including health and obesity, hunger, and nutrition assistance policy. The survey captures unique and comprehensive data about household food purchases and acquisitions, along with factors that influence household food choices.

The Census Bureau plans to request Office of Management and Budget (OMB) approval to conduct the 2025 FoodAPS Pilot Test is to examine and gain knowledge about all areas of the survey life cycle for this study, with the goal of fielding a full scale, nationally representative FoodAPS survey starting in CY2027. Additionally, the 2025 FoodAPS Pilot Test will test the feasibility of using model-based estimates to identify populations of interests. Previous iterations used a mailing-based screener. Another purpose is to determine whether administering the 2025 FoodAPS Pilot Test via self-response only can achieve the desired response rate. Previous versions of the FoodAPS used field representatives to solicit respondent participation and collect data.

The target populations for the 2025 FoodAPS Pilot Test are Supplemental Nutrition Assistance Program (SNAP) participants; Women, Infants, and Children (WIC) recipients; and low-income households. Respondent materials and survey instruments for the 2025 FoodAPS Pilot Test will be available in English and Spanish.

Affected Public: Individuals or households.

Frequency: This is a pilot survey in preparation for a full survey in CY2027.

Respondent's Obligation: Voluntary.

Legal Authority: The National Household Food Study is authorized under Title 7, Section 3171 and 2026 (a) (1) of the United States Code. The Census Bureau, conducting this study for the United States Department of Agriculture under 13 U.S.C. 8(b), is required by law to keep your information confidential and can use your responses for statistical purposes only (Title 13, U.S. Code, Section 9). Responding to the survey is voluntary. You may stop participating at any time, and there are no penalties for nonparticipation. Per the Federal Cybersecurity Enhancement Act of 2015, your data are protected from cybersecurity risks through screening of the systems that transmit your data. For more information on the Census Bureau's Data Protection and Privacy principles, please see our data protection website at <https://www.census.gov/privacy/>.

This information collection request may be viewed at www.reginfo.gov. Follow the instructions to view the Department of Commerce collections currently under review by OMB.

Written comments and recommendations for the proposed information collection should be submitted within 30 days of the publication of this notice on the following website www.reginfo.gov/public/do/PRAMain. Find this particular information collection by selecting “Currently under 30-day Review—Open for Public Comments” or by using the search function and entering either the title of the collection or the OMB Control Number 0607–0971.

Sheleen Dumas,

Departmental PRA Clearance Officer, Office of the Under Secretary for Economic Affairs, Commerce Department.

Foreign-Trade Zones Board

[B–6–2024]

Proposed Foreign-Trade Zone—Iberia Parish, Louisiana Under Alternative Site Framework; Invitation for Public Comment on Response to Preliminary Recommendation

Pursuant to Section 400.33(e)(2) of the Foreign-Trade Zones (FTZ) Board’s regulations (15 CFR part 400), the FTZ Board is inviting public comment on the response to the preliminary recommendation pertaining to the application of the Port of Iberia District to establish a foreign-trade zone in Iberia Parish, Louisiana, under the alternative site framework.

Public comment is invited through January 17, 2025. Rebuttal comments in response to material submitted during the foregoing period may be submitted through February 3, 2025. Submissions shall be addressed to the FTZ Board’s Executive Secretary and sent to: ftz@trade.gov.

A copy of the response will be available for public inspection in the “Online FTZ Information Section” section of the FTZ Board’s website,

which is accessible via www.trade.gov/ftz.

For further information, contact Camille Evans at Camille.Evans@trade.gov.

Dated: December 13, 2025.

BILLING CODE 3510–DS–P

DEPARTMENT OF COMMERCE

Foreign-Trade Zones Board

[S–218–2024]

Foreign-Trade Zone 240; Application for Subzone; Premium Guard, Inc.; Weirton, West Virginia

An application has been submitted to the Foreign-Trade Zones (FTZ) Board by the West Virginia Economic Development Authority, grantee of FTZ 240, requesting subzone status for the facility of Premium Guard, Inc., located in Weirton, West Virginia. The application was submitted pursuant to the provisions of the Foreign-Trade Zones Act, as amended (19 U.S.C. 81a–81u), and the regulations of the FTZ Board (15 CFR part 400). It was formally docketed on December 11, 2024.

The proposed subzone (28.6 acres) is located at 491 Park Drive, Weirton, West Virginia. No authorization for production activity has been requested at this time. The proposed subzone would be subject to the existing activation limit of FTZ 240.

In accordance with the FTZ Board’s regulations, Kolade Osho of the FTZ Staff is designated examiner to review the application and make recommendations to the Executive Secretary.

Public comment is invited from interested parties. Submissions shall be addressed to the FTZ Board’s Executive Secretary and sent to: ftz@trade.gov. The closing period for their receipt is January 27, 2025. Rebuttal comments in response to material submitted during the foregoing period may be submitted during the subsequent 15-day period to February 11, 2025.

A copy of the application will be available for public inspection in the

“Online FTZ Information Section” section of the FTZ Board’s website, which is accessible via www.trade.gov/ftz.

For further information, contact Kolade Osho at Kolade.Osho@trade.gov.

Dated: December 12, 2024.

Camille R. Evans,

Acting Executive Secretary.

BILLING CODE 3510–DS–P

DEPARTMENT OF COMMERCE

International Trade Administration

Initiation of Antidumping and Countervailing Duty Administrative Reviews

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The U.S. Department of Commerce (Commerce) has received requests to conduct administrative reviews of various antidumping duty (AD) and countervailing duty (CVD) orders with November anniversary dates. In accordance with Commerce’s regulations, we are initiating those administrative reviews.

DATES: Applicable December 18, 2024.

FOR FURTHER INFORMATION CONTACT:

Brenda E. Brown, AD/CVD Operations, Customs Liaison Unit, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230, telephone: (202) 482–4735.

SUPPLEMENTARY INFORMATION:

Background

Commerce has received timely requests, in accordance with 19 CFR 351.213(b), for administrative reviews of various AD and CVD orders with November anniversary dates.

All deadlines for the submission of various types of information, certifications, or comments or actions by Commerce discussed below refer to the number of calendar days from the applicable starting time.

Respondent Selection

In the event that Commerce limits the number of respondents for individual examination for administrative reviews initiated pursuant to requests made for the orders identified below, Commerce intends to select respondents based either on U.S. Customs and Border Protection (CBP) data for U.S. imports during the period of review (POR) or questionnaires in which we request the quantity and value (Q&V) of sales, shipments, or exports during the POR. Where Commerce selects respondents based on CBP data, we intend to place the CBP data on the record within five days of publication of the initiation notice. Where Commerce selects respondents based on Q&V data, Commerce intends to place the Q&V questionnaire on the record of the review within five days of publication of the initiation notice. In either case, we intend to make our decision regarding respondent selection within 35 days of publication of the initiation **Federal Register** notice. Comments regarding the CBP data (and/or Q&V data (where applicable)) and respondent selection should be submitted within seven days after the placement of the CBP data/submission of the Q&V data on the record of this review. Parties wishing to submit rebuttal comments should submit those comments within five days after the deadline for the initial comments.

In the event that Commerce decides it is necessary to limit individual examination of respondents and conduct respondent selection under section 777A(c)(2) of the Tariff Act of 1930, as amended (the Act), the following guidelines regarding collapsing of companies for purposes of respondent selection will apply. In general, Commerce has found that determinations concerning whether particular companies should be “collapsed” (e.g., treated as a single entity for purposes of calculating AD rates) require a substantial amount of detailed information and analysis, which often require follow-up questions and analysis. Accordingly, Commerce will not conduct collapsing analyses at the respondent selection phase of this review and will not collapse companies at the respondent selection phase unless there has been a determination to collapse certain companies in a previous segment of this AD proceeding (e.g., investigation, administrative review, new shipper review, or changed circumstances review). For any

company subject to this review, if Commerce determined, or continued to treat, that company as collapsed with others, Commerce will assume that such companies continue to operate in the same manner and will collapse them for respondent selection purposes. Otherwise, Commerce will not collapse companies for purposes of respondent selection.

Parties are requested to (a) identify which companies subject to review previously were collapsed, and (b) provide a citation to the proceeding in which they were collapsed. Further, if companies are requested to complete the Q&V Questionnaire for purposes of respondent selection, in general, each company must report volume and value data separately for itself. Parties should not include data for any other party, even if they believe they should be treated as a single entity with that other party. If a company was collapsed with another company or companies in the most recently completed segment of this proceeding where Commerce considered collapsing that entity, complete Q&V data for that collapsed entity must be submitted.

Notice of No Sales

With respect to AD administrative reviews, we intend to rescind the review where there are no suspended entries for a company or entity under review and/or where there are no suspended entries under the company-specific case number for that company or entity. Where there may be suspended entries, if a producer or exporter named in this notice of initiation had no exports, sales, or entries during the POR, it may notify Commerce of this fact within 30 days of publication of this notice in the **Federal Register** for Commerce to consider how to treat suspended entries under that producer’s or exporter’s company-specific case number.

Deadline for Withdrawal of Request for Administrative Review

Pursuant to 19 CFR 351.213(d)(1), a party that has requested a review may withdraw that request within 90 days of the date of publication of the notice of initiation of the requested review. The regulation provides that Commerce may extend this time if it is reasonable to do so. Determinations by Commerce to extend the 90-day deadline will be made on a case-by-case basis.

Deadline for Particular Market Situation Allegation

Section 504 of the Trade Preferences Extension Act of 2015 amended the Act by adding the concept of a particular market situation (PMS) for purposes of constructed value under section 773(e) of the Act.¹ Section 773(e) of the Act states that “if a particular market situation exists such that the cost of materials and fabrication or other processing of any kind does not accurately reflect the cost of production in the ordinary course of trade, the administering authority may use another calculation methodology under this subtitle or any other calculation methodology.” When an interested party submits a PMS allegation pursuant to section 773(e) of the Act, Commerce will respond to such a submission consistent with 19 CFR 351.301(c)(2)(v). If Commerce finds that a PMS exists under section 773(e) of the Act, then it will modify its dumping calculations appropriately.

Neither section 773(e) of the Act nor 19 CFR 351.301(c)(2)(v) set a deadline for the submission of PMS allegations and supporting factual information. However, in order to administer section 773(e) of the Act, Commerce must receive PMS allegations and supporting factual information with enough time to consider the submission. Thus, should an interested party wish to submit a PMS allegation and supporting new factual information pursuant to section 773(e) of the Act, it must do so no later than 20 days after submission of initial responses to section D of the questionnaire.

Separate Rates

In proceedings involving non-market economy (NME) countries, Commerce begins with a rebuttable presumption that all companies within the country are subject to government control and, thus, should be assigned a single AD deposit rate. It is Commerce’s policy to assign all exporters of merchandise subject to an administrative review in an NME country this single rate unless an exporter can demonstrate that it is sufficiently independent so as to be entitled to a separate rate.

¹ See Trade Preferences Extension Act of 2015, Public Law 114–27, 129 Stat. 362 (2015).

To establish whether a firm is sufficiently independent from government control of its export activities to be entitled to a separate rate, Commerce analyzes each entity exporting the subject merchandise. In accordance with the separate rates criteria, Commerce assigns separate rates to companies in NME cases only if respondents can demonstrate the absence of both *de jure* and *de facto* government control over export activities.

All firms listed below that wish to qualify for separate rate status in the administrative reviews involving NME countries must complete, as appropriate, either a Separate Rate Application or Certification, as described below. In addition, all firms that wish to qualify for separate rate status in the administrative reviews of AD orders in which a Q&V Questionnaire is issued must complete, as appropriate, either a Separate Rate Application or Certification, and respond to the Q&V Questionnaire.

For these administrative reviews, in order to demonstrate separate rate eligibility, Commerce requires entities for whom a review was requested, that were assigned a separate rate in the most recent segment of this proceeding in which they participated, to certify that they continue to meet the criteria for obtaining a separate rate. The Separate Rate Certification form will be available on Commerce's website at <https://access.trade.gov/Resources/nme/nme-sep-rate.html> on the date of publication of this **Federal Register** notice. In responding to the certification, please follow the "Instructions for Filing the Certification" in the Separate Rate Certification. Separate Rate Certifications are due to Commerce no later than 30 calendar days after publication of this **Federal Register** notice. The deadline and requirement for submitting a Separate Rate Certification applies equally to NME-owned firms, wholly foreign-owned firms, and foreign sellers who purchase

and export subject merchandise to the United States.

Entities that currently do not have a separate rate from a completed segment of the proceeding² should timely file a Separate Rate Application to demonstrate eligibility for a separate rate in this proceeding. In addition, companies that received a separate rate in a completed segment of the proceeding that have subsequently made changes, including, but not limited to, changes to corporate structure, acquisitions of new companies or facilities, or changes to their official company name,³ should timely file a Separate Rate Application to demonstrate eligibility for a separate rate in this proceeding. The Separate Rate Application will be available on Commerce's website at <https://access.trade.gov/Resources/nme/nme-sep-rate.html> on the date of publication of this **Federal Register** notice. In responding to the Separate Rate Application, refer to the instructions contained in the application. Separate Rate Applications are due to Commerce no later than 30 calendar days after publication of this **Federal Register** notice. The deadline and requirement for submitting a Separate Rate Application applies equally to NME-owned firms, wholly foreign-owned firms, and foreign sellers that purchase and export subject merchandise to the United States.

Exporters and producers must file a timely Separate Rate Application or Certification if they want to be considered for individual examination. Furthermore, exporters and producers who submit a Separate Rate Application

² Such entities include entities that have not participated in the proceeding, entities that were preliminarily granted a separate rate in any currently incomplete segment of the proceeding (e.g., an ongoing administrative review, new shipper review, etc.) and entities that lost their separate rate in the most recently completed segment of the proceeding in which they participated.

³ Only changes to the official company name, rather than trade names, need to be addressed via a Separate Rate Application. Information regarding new trade names may be submitted via a Separate Rate Certification.

or Certification and subsequently are selected as mandatory respondents will no longer be eligible for separate rate status unless they respond to all parts of the questionnaire as mandatory respondents.

Certification Eligibility

Commerce may establish a certification process for companies whose exports to the United States could contain both subject and non-subject merchandise. Companies under review that were deemed to not be eligible to participate in the certification program of that proceeding may submit a Certification Eligibility Application to establish that they maintain the necessary systems to track their sales to the United States of subject and non-subject goods.

All firms listed below that are not currently eligible to certify but wish to establish certification eligibility are required to submit a Certification Eligibility Application. The Certification Eligibility Application will be available on Commerce's website at <https://access.trade.gov/Resources/Certification-Eligibility-Application.pdf>. Certification Eligibility Applications must be filed according to Commerce's regulations and are due to Commerce no later than 30 calendar days after the publication of the **Federal Register** notice.

Exporters and producers that are not currently eligible to certify, who submit a Certification Eligibility Application, and are subsequently selected as mandatory respondents must respond to all parts of the questionnaire as mandatory respondents for Commerce to consider their Certification Eligibility Application.

Initiation of Reviews

In accordance with 19 CFR 351.221(c)(1)(i), we are initiating administrative reviews of the following AD and CVD orders and findings. We intend to issue the final results of these reviews not later than November 30, 2025.

Duty Absorption Reviews

During any administrative review covering all or part of a period falling between the first and second or third and fourth anniversary of the publication of an AD order under 19 CFR 351.211 or a determination under 19 CFR 351.218(f)(4) to continue an order or suspended investigation (after sunset review), Commerce, if requested by a domestic interested party within 30 days of the date of publication of the notice of initiation of the review, will determine whether ADs have been absorbed by an exporter or producer subject to the review if the subject merchandise is sold in the United States through an importer that is affiliated with such exporter or producer. The request must include the name(s) of the exporter or producer for which the inquiry is requested.

Gap Period Liquidation

For the first administrative review of any order, there will be no assessment of antidumping or countervailing duties on entries of subject merchandise entered, or withdrawn from warehouse, for consumption during the relevant “gap” period of the order (*i.e.*, the period following the expiry of

provisional measures and before definitive measures were put into place), if such a gap period is applicable to the POR.

Administrative Protective Orders and Letters of Appearance

Interested parties must submit applications for disclosure under administrative protective orders in accordance with the procedures outlined in Commerce’s regulations at 19 CFR 351.305. Those procedures apply to administrative reviews included in this notice of initiation. Parties wishing to participate in any of these administrative reviews should ensure that they meet the requirements of these procedures (*e.g.*, the filing of separate letters of appearance as discussed at 19 CFR 351.103(d)).

Factual Information Requirements

Commerce’s regulations identify five categories of factual information in 19 CFR 351.102(b)(21), which are summarized as follows: (i) evidence submitted in response to questionnaires; (ii) evidence submitted in support of allegations; (iii) publicly available information to value factors under 19 CFR 351.408(c) or to measure the adequacy of remuneration under 19 CFR 351.511(a)(2); (iv) evidence placed on the record by Commerce; and (v) evidence other than factual information described in (i)–(iv). These regulations require any party, when submitting factual information, to specify under which subsection of 19 CFR 351.102(b)(21) the information is being submitted and, if the information is submitted to rebut, clarify, or correct factual information already on the record, to provide an explanation identifying the information already on the record that the factual information seeks to rebut, clarify, or correct. The regulations, at 19 CFR 351.301, also provide specific time limits for such factual submissions based on the type of

factual information being submitted. Please review the *Final Rule*,⁷ available at <https://www.govinfo.gov/content/pkg/FR-2013-07-17/pdf/2013-17045.pdf>, prior to submitting factual information in this segment. Note that Commerce has amended certain of its requirements pertaining to the service of documents in 19 CFR 351.303(f).⁸

Any party submitting factual information in an AD or CVD proceeding must certify to the accuracy and completeness of that information using the formats provided at the end of the *Final Rule*.⁹ Commerce intends to reject factual submissions in any proceeding segments if the submitting party does not comply with applicable certification requirements.

Extension of Time Limits Regulation

Parties may request an extension of time limits before a time limit established under Part 351 expires, or as otherwise specified by Commerce.¹⁰ In general, an extension request will be considered untimely if it is filed after the time limit established under Part 351 expires. For submissions which are due from multiple parties simultaneously, an extension request will be considered untimely if it is filed after 10:00 a.m. on the due date. Examples include, but are not limited to: (1) case and rebuttal briefs, filed pursuant to 19 CFR 351.309; (2) factual

¹⁰ See 19 CFR 351.302.

⁴ This company was inadvertently omitted from the initiation notice that published on November 14, 2024 (89 FR 89955).

⁵ Commerce determined that Hyundai Steel Pipe Co., Ltd. is the successor-in-interest to Hyundai Steel Company. See also *Circular Welded Non-Alloy Steel Pipe from the Republic of Korea; Certain Oil Country Tubular Goods from the Republic of Korea; Welded Line Pipe from the Republic of Korea; and Large Diameter Welded Pipe from the Republic of Korea: Notice of Final Results of Antidumping Duty Changed Circumstances Reviews*, 89 FR 89962 (November 14, 2024).

⁶ Commerce previously found SeAH Steel Holding Corporation to be a cross-owned affiliate of SeAH Steel Corporation. See *Oil Country Tubular Goods from the Republic of Korea and the Russian Federation: Countervailing Duty Orders*, 87 FR 70782 (November 21, 2022). Accordingly, we are initiating this review with respect to SeAH Steel Corporation and its cross-owned entity, SeAH Steel Holding Corporation, listed in this notice.

information to value factors under 19 CFR 351.408(c), or to measure the adequacy of remuneration under 19 CFR 351.511(a)(2), filed pursuant to 19 CFR 351.301(c)(3) and rebuttal, clarification and correction filed pursuant to 19 CFR 351.301(c)(3)(iv); (3) comments concerning the selection of a surrogate country and surrogate values and rebuttal; (4) comments concerning CBP data; and (5) Q&V questionnaires. Under certain circumstances, Commerce may elect to specify a different time limit by which extension requests will be considered untimely for submissions which are due from multiple parties simultaneously. In such a case, Commerce will inform parties in the letter or memorandum setting forth the deadline (including a specified time) by which extension requests must be filed to be considered timely. This policy also requires that an extension request must be made in a separate, standalone submission, and clarifies the circumstances under which Commerce will grant untimely-filed requests for the extension of time limits. Please review the *Final Rule*, available at <https://www.gpo.gov/fdsys/pkg/FR-2013-09-20/html/2013-22853.htm>, prior to submitting factual information in these segments.

These initiations and this notice are in accordance with section 751(a) of the Act (19 U.S.C. 1675(a)) and 19 CFR 351.221(c)(1)(i).

Dated: December 12, 2024.

Scot Fullerton,

Acting Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations.

BILLING CODE 3510–DS–P

DEPARTMENT OF COMMERCE

International Trade Administration

[A–570–943, C–570–944]

Oil Country Tubular Goods From the People's Republic of China: Initiation of Circumvention Inquiry on the Antidumping and Countervailing Duty Orders

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: In response to a request from the Committee on Pipe and Tube Imports Subcommittee for OCTG (the CPTI OCTG Subcommittee) and the United Steel, Paper and Forestry, Rubber, Manufacturing, Energy, Allied Industrial and Service Workers International Union, AFL–CIO, CLC

(USW) (collectively, the requestors), the U.S. Department of Commerce (Commerce) is initiating a country-wide circumvention inquiry to determine whether imports of seamless oil country tubular goods (OCTG) from the People's Republic of China (China) which are completed in Thailand from steel billets produced in China are circumventing the antidumping (AD) and countervailing duty (CVD) orders on OCTG from China.

DATES: Applicable December 18, 2024.

FOR FURTHER INFORMATION CONTACT: Barb Rawdon, AD/CVD Office of Policy, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–0474.

SUPPLEMENTARY INFORMATION:

Background

On July 18, 2024, pursuant to section 781(b) of the Tariff Act of 1930, as amended (the Act), and 19 CFR 351.226(i), the requestors¹ filed a circumvention inquiry request alleging that OCTG completed in Thailand using steel billets manufactured in China, is circumventing the AD and CVD orders on OCTG from China² and, accordingly, should be included within the scope of the *Orders*.³ On August 20, 2024, we extended the deadline to initiate this circumvention inquiry in accordance with 19 CFR 351.226(d)(1).⁴

On September 6, 2023, we issued a supplemental (deficiency) questionnaire to the requestors, directing them to re-submit their inquiry requests and provide additional information.⁵ In our request for information, we clarified that

we issued the request because we had found that the request to conduct the circumvention inquiry was insufficient for purposes of initiation, in accordance with 19 CFR 351.226(d)(1). Additionally, we clarified that the 30-day time period for Commerce to consider whether to initiate on the requestors' circumvention inquiry will begin with the requestors' response to Commerce's September 6, 2024, letter.⁶ On September 25, 2024, the requestors filed their response.⁷ On October 23, 2024, Commerce issued a second supplemental questionnaire.⁸ In our request for information, we clarified that we issued the request because we had found that the request to conduct the circumvention inquiry was insufficient for purposes of initiation, in accordance with 19 CFR 351.226(d)(1). Additionally, we clarified that the 30-day time period for Commerce to consider whether to initiate on the requestors' circumvention inquiry will begin with the requestors' response to Commerce's October 23, 2024, letter.⁹ On November 12, 2024, the requestors responded to Commerce's request for information.¹⁰ Thus, we consider the inquiry request to have been filed on November 12, 2024.

Scope of the Orders

The merchandise covered by the scope of the *Orders* is OCTG, which are hollow steel products of circular cross-section, including oil well casing and tubing, of iron (other than cast iron) or steel (both carbon and alloy), whether seamless or welded, regardless of end finish. For a full description of the scope of the *Orders*, see the Circumvention Initiation Checklist.¹¹

Merchandise Subject to the Circumvention Inquiry

The circumvention inquiry covers seamless OCTG completed in Thailand using Chinese-produced steel billets, and subsequently exported from Thailand to the United States.

Initiation of Circumvention Inquiry

Section 351.226(d) of Commerce's regulations states that if Commerce determines that a request for a circumvention inquiry satisfies the

³ See Requestor's Letter, "Request for Circumvention Inquiry," dated July 18, 2024.

⁴ See Memorandum, "Extension of Time to Determine Whether to Initiate Circumvention Inquiry," dated August 20, 2024.

⁵ See Commerce's Letter, "Supplemental Questionnaire," dated September 6, 2024.

requirements of 19 CFR 351.226(c), then Commerce “will accept the request and initiate a circumvention inquiry.” Section 351.226(c)(1) of Commerce’s regulations, in turn, requires that each circumvention inquiry request allege “that the elements necessary for a circumvention determination under section 781 of the Act exist” and be “accompanied by information reasonably available to the interested party supporting these allegations.” The requestors alleged circumvention pursuant to section 781(b) of the Act (merchandise completed or assembled in other foreign countries).

Section 781(b)(1) of the Act provides that Commerce may find circumvention of an order when merchandise of the same class or kind subject to the order is completed or assembled in a foreign country other than the country to which the order applies. In conducting a circumvention inquiry, under section 781(b)(1) of the Act, Commerce relies on the following criteria: (A) merchandise imported into the United States is of the same class or kind as any merchandise produced in a foreign country that is the subject of an AD or CVD order; (B) before importation into the United States, such imported merchandise is completed or assembled in another foreign country from merchandise which is subject to the order or is produced in the foreign country that is subject to the order; (C) the process of assembly or completion in the foreign country referred to in section (B) is minor or insignificant; (D) the value of the merchandise produced in the foreign country to which the AD or CVD order applies is a significant portion of the total value of the merchandise exported to the United States; and (E) the administering authority determines that action is appropriate to prevent evasion of such order.

In determining whether the process of assembly or completion in a foreign country is minor or insignificant under section 781(b)(1)(C) of the Act, section 781(b)(2) of the Act directs Commerce to consider: (A) the level of investment in the foreign country; (B) the level of research and development in the foreign country; (C) the nature of the production process in the foreign country; (D) the extent of production facilities in the foreign country; and (E) whether or not the value of processing performed in the foreign country represents a small proportion of the value of the merchandise imported into the United States. However, no single factor, by itself, controls Commerce’s determination of whether the process of assembly or completion in a foreign

country is minor or insignificant.¹² Accordingly, Commerce will evaluate each of these five factors as they exist in the foreign country, depending on the particular circumvention scenario.

In addition, section 781(b)(3) of the Act sets forth additional factors to consider in determining whether to include merchandise assembled or completed in a foreign country within the scope of an AD or CVD order. Specifically, Commerce shall take into account such factors as: (A) the pattern of trade, including sourcing patterns; (B) whether the manufacturer or exporter of the merchandise that was shipped to the foreign country is affiliated with the person who, in the foreign country, uses the merchandise to complete or assemble the merchandise which is subsequently imported into the United States; and (C) whether imports of the merchandise into the foreign country have increased after the initiation of the investigation that resulted in the issuance of such order.

Analysis

Based on our analysis of the requestors’ circumvention inquiry request, we determine that they have satisfied the criteria under 19 CFR 351.226(c), and thus, pursuant to 19 CFR 351.226(d)(1)(iii), we are initiating the requested circumvention inquiry. For a full discussion of the basis for our decision to initiate this circumvention inquiry, see the Circumvention Initiation Checklist. As explained in the Circumvention Initiation Checklist, the information provided by the requestors warrants initiating this circumvention inquiry on a country-wide basis. Commerce has taken this approach in prior circumvention inquiries, where the facts warranted initiation on a country-wide basis.¹³

Consistent with the approach in the prior circumvention inquiries that we initiated on a country-wide basis, Commerce intends to issue questionnaires to solicit information from producers and exporters in Thailand concerning their shipments of OCTG made from Chinese-origin steel billets to the United States.

Respondent Selection

Commerce intends to base respondent selection on responses to quantity and value (Q&V) questionnaires. Commerce intends to identify the companies to

which it will issue the Q&V questionnaire, in part, based on U.S. Customs and Border Protection (CBP) data. Parties to which Commerce does not issue the Q&V questionnaire may also respond to the Q&V questionnaire, which will be available on Enforcement and Compliance’s Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS), before the applicable deadline. ACCESS is available to registered users at <https://access.trade.gov>.

Commerce intends to place the CBP data on the record via ACCESS within five days of the publication of this initiation notice. Comments regarding the CBP data and respondent selection should be submitted within seven days after placement of the CBP data on the record of the inquiry.

Commerce intends to establish a schedule for questionnaire responses after Commerce selects respondents. A company’s failure to completely respond to Commerce’s requests for information may result in the application of facts available, pursuant to section 776(a) of the Act, which may include adverse inferences, pursuant to section 776(b) of the Act.

Suspension of Liquidation

Pursuant to 19 CFR 351.226(l)(1), Commerce will notify CBP of this initiation and direct CBP to continue the suspension of liquidation of entries of products subject to the circumvention inquiry that were already subject to the suspension of liquidation under the *Orders* and to apply the cash deposit rates that would be applicable if the products were determined to be covered by the scope of the *Orders*. Should Commerce issue affirmative preliminary or final circumvention determinations, Commerce will follow the suspension of liquidation rules under 19 CFR 351.226(l)(2)–(4).

Notification to Interested Parties

In accordance with 19 CFR 351.226(d) and section 781(b) of the Act, Commerce determines that the requestors’ request for a circumvention inquiry satisfies the requirements of 19 CFR 351.226(c). Accordingly, Commerce is notifying all interested parties of the initiation of this circumvention inquiry to determine whether OCTG from China, which is completed in Thailand from steel billets produced in China, is circumventing the *Orders*. In addition, we have included a description of the products that are the subject to this inquiry and an explanation of Commerce’s decision to initiate this inquiry as provided in the accompanying Circumvention Initiation

¹² See Statement of Administrative Action Accompanying the Uruguay Round Agreements Act, H.R. Doc. 103–316, Vol. 1 (1994), at 893.

¹³ See, e.g., *Hydrofluorocarbon Blends from the People’s Republic of China: Initiation of Circumvention Inquiry on the Antidumping Duty Order*, 88 FR 74150 (October 30, 2023).

Checklist.¹⁴ In accordance with 19 CFR 351.226(e)(1), Commerce intends to issue its preliminary circumvention determination no later than 150 days from the date of publication of the notice of initiation of this circumvention inquiry in the **Federal Register**.

This notice is published in accordance with section 781(b) of the Act, and 19 CFR 351.226(d)(1)(iii).

Dated: December 12, 2024.

Abdelali Elouaradia,

Deputy Assistant Secretary for Enforcement and Compliance.

BILLING CODE 3510–DS–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

Request for Information; Data for Marine Spatial Planning Related to Transmission Planning in Texas, Louisiana, Mississippi, and Alabama

AGENCY: National Centers for Coastal Ocean Science, National Ocean Service, National Oceanic and Atmospheric Administration (NOAA), Department of Commerce.

ACTION: Notice; request for information.

SUMMARY: NOAA's National Ocean Service (NOS) National Centers for Coastal Ocean Science (NCCOS), hereafter NOAA, in partnership with the Bureau of Ocean Energy Management (BOEM) and the Department of Energy (DOE) Grid Deployment Office (GDO) and the National Renewable Energy Laboratory (NREL), is working to build on existing spatial planning capacity in the United States (U.S.) Gulf of Mexico region. Through this Request for Information, NOAA is seeking public input to identify coastal and marine spatial data or other critical information to inform spatial analyses for transmission planning in state and Federal waters off Texas, Louisiana, Mississippi, and Alabama. The input we receive from the data development workshop meeting, as well as the responses to the items listed in the **SUPPLEMENTARY INFORMATION** section of this document, will be used to inform potential coastal and ocean development activities in the U.S. Gulf of Mexico region, such as renewable energy development.

DATES: Interested persons are invited to provide input in response to this Request for Information through January

24, 2025. Late-filed input will be considered to the extent practicable.

Verbal input will be accepted during a public meeting to be held at the InterContinental Hotel in New Orleans, Louisiana on January 14–15, 2025.

ADDRESSES: Interested persons are invited to provide input using one of the following methods:

- **Electronic Submission:** Submit electronic written public comments via the Federal e- Rulemaking Portal. Go to <https://www.regulations.gov> and enter NOAA–NOS–2024–0138 in the Search box. Click on the “Comment” icon, complete the required fields, and enter or attach your comments. All comments received are a part of the public record and will generally be posted for public viewing on www.regulations.gov without change. All personal identifying information (e.g., name, address, etc.), confidential business information, or otherwise sensitive information submitted voluntarily by the sender will be publicly accessible. NOAA will accept anonymous comments (enter “N/A” in the required fields if you wish to remain anonymous).

- **Verbal submission:** NOAA will accept verbal input at a data development workshop. The meeting will be held at the InterContinental Hotel in New Orleans, Louisiana on Tuesday, January 14, 2025 from 8 a.m. to 5 p.m. Central Standard Time (CST) and Wednesday, January 15, 2025 from 8 a.m. to 5 p.m. CST. There will be a registration window from 8 a.m. to 9 a.m. CST each day before the start of the meeting. Advanced registration is required for the meeting by completing the registration form at <https://forms.gle/BmTDiD5zV3ZuXHUN8> or by providing an RSVP to Joshua Chastain at joshua.chastain@noaa.gov. The registration deadline is Friday, January 3, 2025.

Reports of meeting results will also be published and made available to the public in the weeks following the meeting. If you are unable to provide electronic written comments or participate in the meeting, please contact Joshua Chastain at joshua.chastain@noaa.gov or (843) 267–5641 for alternative submission methods.

FOR FURTHER INFORMATION CONTACT:

James Morris, NOAA NCCOS, at james.morris@noaa.gov or (252) 666–7433.

SUPPLEMENTARY INFORMATION:

I. Background

NOAA is an agency of the United States Federal Government that works to conserve and manage coastal and

marine ecosystems and resources. NOAA works to make fisheries sustainable and productive, provide safe seafood to consumers, conserve threatened and endangered species and other protected resources, and maintain healthy ecosystems. NOAA has jurisdiction and responsibility for its trust marine resources in the U.S. Gulf of Mexico region as well as significant interest in supporting the resilience of coastal and marine-dependent communities and promoting equity and environmental justice. For these reasons, it is important for NOAA to invest in research that informs marine spatial studies in the U.S. Gulf of Mexico region, including socioeconomic research that ensures meaningful participation of local communities and supports equitable processes for planning and siting of new and existing marine industries and conservation areas.

NOAA has been engaged with the Bureau of Ocean Energy Management (BOEM) to support siting and environmental review for offshore wind energy areas in U.S. Federal waters (<https://www.boem.gov/renewable-energy>) to ensure protection of trust resources in any offshore development activities.

II. Purpose of This Request for Information

The purpose of this Request for Information is to promote data development to inform coastal and marine spatial studies related to transmission planning in Texas, Louisiana, Mississippi, and Alabama, with an emphasis on data needs for offshore wind and transmission planning. In addition to input received from the public through the electronic and verbal submissions, NOAA aims to inform the public about its coastal and ocean planning processes and capabilities, discuss the current data available for each ocean sector (e.g., national security, fisheries, industry, metocean, natural, cultural, and social resources), and gather ideas for other data sources. NOAA hopes to come out of the meetings with a strengthened relationship with the public and a list of best available data and data gaps.

III. Specific Information Requested To Inform Marine Spatial Studies Related to Transmission Planning in Texas, Louisiana, Mississippi, and Alabama

Through this Request for Information, NOAA seeks written public input to inform coastal and marine spatial studies related to transmission planning in the U.S. Gulf of Mexico region. NOAA is particularly interested in

¹⁴ See Circumvention Initiation Checklist at 13.

receiving input concerning the items listed below. Responses to this Request for Information are voluntary, and respondents need not reply to items listed. When providing input, please specify if you are providing general feedback on marine spatial studies and/or if you are responding to one of the specific item number(s) below:

1. Specific datasets related to ocean sectors, natural resources, and/or human activities you recommend NOAA use in coastal and marine spatial studies.

Major concerns you have related to use of any specific datasets that may be used in coastal and marine spatial studies.

2. Major concerns you have related to gaps in scientific knowledge or data that could impact coastal and marine spatial planning efforts.

3. Specific data or information you recommend NOAA or other partners collect, if it is not currently available or has not been previously collected.

4. Ways in which NOAA can better engage and collaborate with the public and local communities to promote economic, social, and ecological resilience as well as protect trust resources.

5. Ways in which NOAA can build upon existing capacity and resources for regional ocean spatial planning.

Sean Corson,

Director, National Centers for Coastal Ocean Science, National Ocean Service, National Oceanic and Atmospheric Administration.

BILLING CODE 3510–JE–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

Agency Information Collection Activities; Submission to the Office of Management and Budget (OMB) for Review and Approval; Comment Request; Applications and Reports for Scientific Research and Enhancement Permits Under the Endangered Species Act

AGENCY: National Oceanic & Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of information collection, request for comment.

SUMMARY: The Department of Commerce, in accordance with the Paperwork Reduction Act of 1995 (PRA), invites the general public and other Federal agencies to comment on proposed, and continuing information

collections, which helps us assess the impact of our information collection requirements and minimize the public's reporting burden. The purpose of this notice is to allow for 60 days of public comment preceding submission of the collection to OMB.

DATES: To ensure consideration, comments regarding this proposed information collection must be received on or before February 18, 2025.

ADDRESSES: Interested persons are invited to submit written comments to Adrienne Thomas, NOAA PRA Officer, at NOAA.PRA@noaa.gov. Please reference OMB Control Number 0648–0402 in the subject line of your comments. All comments received are part of the public record and will generally be posted on <https://www.regulations.gov> without change. Do not submit Confidential Business Information or otherwise sensitive or protected information.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or specific questions related to collection activities should be directed to Rob Clapp, Section 7 Coordinator, NOAA Fisheries, 1201 NE Lloyd Blvd. Suite 1100, Portland, OR 97232, (503) 231–2314 or Robert.Clapp@NOAA.gov.

SUPPLEMENTARY INFORMATION:

I. Abstract

This is a request for renewal of an approved information collection. The Endangered Species Act of 1973 (ESA; 16 U.S.C. 1531 *et seq.*) imposes prohibitions against the taking of threatened and endangered species. Section 10 of the ESA allows permits authorizing the taking of such species for research and enhancement purposes. The corresponding regulations established procedures for persons to apply for such permits. In addition, the regulations set forth specific reporting requirements for such permit holders. The regulations thus require two sets of information collections: (1) Applications for research/enhancement permits, and (2) prescribed reports for such permits once they are issued.

The required information is used to evaluate the impacts that research and enhancement activities have on endangered species, to make the determinations required by the ESA before issuing any such permit, and to establish appropriate permit conditions. To issue permits under ESA Section 10(a)(1)(A), the National Marine Fisheries Service (NMFS) must determine that (1) such exceptions were applied for in good faith, (2) if granted and exercised, will not operate to the disadvantage of such endangered

species, and (3) will be consistent with the purposes and policy set forth in Section 2 of the ESA. This collection is not being revised in any way.

II. Method of Collection

Information may be collected through the internet, email, or paper format.

III. Data

OMB Control Number: 0648–0402.

Form Number(s): None.

Type of Review: Regular submission—extension of a current information collection.

Affected Public: Federal government; State, local, or tribal governments; academic institutions; non-profit organizations; businesses or other for-profit organizations.

Estimated Number of Respondents: 176.

Estimated Time per Response: Permit applications, 12 hours; permit modification requests, 6 hours; annual reports, 2 hours.

Estimated Total Annual Burden Hours: 850.

Estimated Total Annual Cost to Public: \$500 in recordkeeping/reporting costs.

Respondent's Obligation: Required to Obtain or Retain Benefits.

Legal Authority: The Endangered Species Act of 1973 (16 U.S.C. 1531 *et seq.*).

IV. Request for Comments

We are soliciting public comments to permit the Department/Bureau to: (a) Evaluate whether the proposed information collection is necessary for the proper functions of the Department, including whether the information will have practical utility; (b) Evaluate the accuracy of our estimate of the time and cost burden for this proposed collection, including the validity of the methodology and assumptions used; (c) Evaluate ways to enhance the quality, utility, and clarity of the information to be collected; and (d) Minimize the reporting burden on those who are to respond, including the use of automated collection techniques or other forms of information technology.

Comments that you submit in response to this notice are a matter of public record. We will include or summarize each comment in our request to OMB to approve this information collection request. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While

you may ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Sheleen Dumas,

Departmental PRA Clearance Officer, Office of the Under Secretary for Economic Affairs, Commerce Department.

[FR Doc. 2024–29864 Filed 12–17–24; 8:45 am]

BILLING CODE 3510–22–P

DEPARTMENT OF COMMERCE

Patent and Trademark Office

Agency Information Collection Activities; Submission to the Office of Management and Budget (OMB) for Review and Approval; Comment Request; Matters Related to First Inventor To File

The United States Patent and Trademark Office (USPTO) will submit the following information collection request to the Office of Management and Budget (OMB) for review and clearance in accordance with the Paperwork Reduction Act of 1995, on or after the date of publication of this notice. The USPTO invites comments on this information collection renewal, which helps the USPTO assess the impact of its information collection requirements and minimize the public's reporting burden. Public comments were previously requested via the **Federal Register** on Wednesday, October 9, 2024 during a 60-day comment period (89 FR 81894). This notice allows for an additional 30 days for public comment.

Agency: United States Patent and Trademark Office, Department of Commerce.

Title: Matters Related to First Inventor to File.

OMB Control Number: 0651–0071.

Needs and Uses: Section 3 of the Leahy-Smith America Invents Act (AIA), *inter alia*, amended 35 U.S.C. 102 and 103 consistent with the objectives of the AIA, including the conversion of the United States patent system from a “first to invent” system to a “first inventor to file” system. The changes to 35 U.S.C. 102 and 103 in section 3 of the AIA went into effect on March 16, 2013, but apply only to certain applications filed on or after March 16, 2013.

This information collection covers information required by 37 CFR 1.55(k), 1.78(a)(6), and 1.78(d)(6) to assist the USPTO in determining whether an application is subject to 35 U.S.C. 102 and 103 as amended by Section 3 of the AIA, or 35 U.S.C. 102 and 103 as in effect on March 15, 2013. The

information is only required in nonprovisional applications filed on or after March 16, 2013, that claim foreign priority to, or domestic benefit of, an application filed before March 16, 2013. Moreover, the information is not required if the nonprovisional application filed on or after March 16, 2013, claims the benefit of an earlier application in which a statement under 37 CFR 1.55(k), 1.78(a)(6), or 1.78(d)(6) has already been filed. Given the passage of time, it is increasingly rare for a newly filed nonprovisional application to claim foreign priority to, or domestic benefit of, an application filed before March 16, 2013, without also claiming benefit of an earlier application in which the statement has already been filed. Accordingly, the estimated responses for this collection continue to decrease.

For this 30-day notice, the non-hourly cost burdens have been adjusted, for an overall increase of \$1, due to an increase in the postage rate since the 60-day notice was published.

Forms: None.

Type of Review: Extension and revision of a currently approved information collection.

Affected Public: Private sector.

Respondent's Obligation: Required to obtain or retain benefits.

Frequency: On occasion.

Estimated Number of Annual Respondents: 50 respondents.

Estimated Number of Annual Responses: 50 responses.

Estimated Time per Response: The USPTO estimates that the responses in this information collection will take the public approximately 2 hours to complete. This includes the time to gather the necessary information, create the document, and submit the completed item to the USPTO.

Estimated Total Annual Respondent Burden Hours: 100 hours.

Estimated Total Annual Respondent Non-hourly Cost Burden: \$11.

This information collection request may be viewed at www.reginfo.gov. Follow the instructions to view Department of Commerce, USPTO information collections currently under review by OMB.

Written comments and recommendations for this information collection should be submitted within 30 days of the publication of this notice on the following website, www.reginfo.gov/public/do/PRAMain. Find this particular information collection by selecting “Currently under 30-day Review—Open for Public Comments” or by using the search function and entering either the title of

the information collection or the OMB Control Number, 0651–0071.

BILLING CODE 3510–16–P

DEPARTMENT OF DEFENSE

Office of the Secretary

Notice of Removal of Designated Chinese Military Companies

AGENCY: Office of the Under Secretary of Defense (Acquisition and Sustainment), Department of Defense.

ACTION: Notice of removal of two companies from the Section 1260H List of Chinese Military Companies Operating in the United States.

SUMMARY: The Deputy Secretary of Defense has determined that the entities listed in the **SUPPLEMENTARY INFORMATION** section of this notice should be removed from the list of “Chinese military companies.”

FOR FURTHER INFORMATION CONTACT: Mr. Devante Brown (GIES), (703) 695–8545.

SUPPLEMENTARY INFORMATION: Section 1260H of the William M. (Mac) Thornberry National Defense Authorization Act (NDAA) for Fiscal Year (FY) 2021 (Pub. L. 116–283) requires the Secretary of Defense to continue to list “Chinese military companies” annually until December 31, 2030. Paragraph (b)(2) of this section requires the Secretary of Defense to publish the unclassified portion of such list in the **Federal Register** (FR).

The Deputy Secretary of Defense has determined that the following entities should be removed from the list of “Chinese military companies,” as set out in 89 FR 22698 (April 2, 2024), in accordance with Section 1260H of the William M. (Mac) Thornberry NDAA for FY 2021 (Pub. L. 116–283) based on current information:

IDG Capital Partners Co., Ltd.,
Advanced Micro-Fabrication
Equipment Inc. China.

Dated: December 13, 2024.

Aaron T. Siegel,

Alternate OSD Federal Register Liaison
Officer, Department of Defense.

BILLING CODE 6001-FR-P

DEPARTMENT OF DEFENSE

Department of the Army

U.S. Army Corps of Engineers

DEPARTMENT OF THE INTERIOR

Bureau of Reclamation

Notice of Intent To Prepare a Supplemental Environmental Impact Statement (SEIS) for the Columbia River System Operations

AGENCY: U.S. Army Corps of Engineers, Department of the Army, DoD; Bureau of Reclamation, U.S. Department of the Interior.

ACTION: Notice of intent.

SUMMARY: In 2020, the U.S. Army Corps of Engineers (Corps), Bureau of Reclamation (Reclamation), and Bonneville Power Administration (Bonneville) issued the 2020 Columbia River System Operations Final Environmental Impact Statement (CRSO EIS; DOE/EIS-0529), which addressed the ongoing operations, maintenance, and configuration of fourteen Federal Columbia River System (CRS) multiple purpose dams and related facilities located throughout the Columbia River basin. The Corps and Reclamation (Co-Lead Agencies) intend to prepare a supplemental EIS to address environmental effects from proposed changes to the selected alternative in the CRSO EIS and new circumstances and information about the significance of adverse effects that arose or became available after completion of the CRSO EIS. Bonneville has not elected to serve as a co-lead agency for this SEIS and has instead expressed interest in participating as a cooperating agency.

DATES: The Co-Lead Agencies invite Federal and State agencies, Native American Tribes, local governments, and the public to submit scoping comments relevant to the supplemental National Environmental Policy Act (NEPA) process no later than March 20, 2025. Information will also be provided at public meetings. Information on the public meetings is provided under the **SUPPLEMENTARY INFORMATION** section of this Notice of Intent.

ADDRESSES: Written comments, requests to be placed on the project mailing list,

and requests for information may be mailed by letter to U.S. Army Corps of Engineers Northwestern Division Attn: CRSO SEIS, P.O. Box 2870, Portland, OR 97208-2870; or by email to columbiariver@usace.army.mil. All comment letters will be available via the project website at <https://www.nwd.usace.army.mil/CRSO/>. All comments and materials received, including names and addresses, will become part of the administrative record, and may be released to the public. Interested parties should not submit confidential business or otherwise sensitive or protected information.

FOR FURTHER INFORMATION CONTACT: Tim Fleeger, Columbia River Basin Policy and Environmental Coordinator, Northwestern Division, U.S. Army Corps of Engineers 1 (800) 290-5033 or email columbiariver@usace.army.mil. Additional information can be found at the project website: <https://www.nwd.usace.army.mil/CRSO/Final-EIS>.

SUPPLEMENTARY INFORMATION:

1. *Background:* The fourteen Federal multiple purpose dams and related facilities of the Columbia River System (CRS) are operated as a coordinated system within the interior Columbia River basin in Idaho, Montana, Oregon, and Washington. The Corps was authorized by Congress to construct, operate, and maintain twelve of these projects for multiple purposes (project purposes vary by project), including flood risk management, power generation, navigation, fish and wildlife conservation, recreation, and municipal and industrial water supply: namely, Libby, Albeni Falls, Dworshak, Chief Joseph, Lower Granite, Little Goose, Lower Monumental, Ice Harbor, McNary, John Day, The Dalles, and Bonneville. Reclamation was authorized by Congress to construct, operate, and maintain two of these projects for purposes of flood risk management, power generation, navigation, and irrigation: Hungry Horse and Grand Coulee. Bonneville is responsible for marketing and transmitting power the dams generate. Together, the Corps, Reclamation, and Bonneville are responsible for managing the system for these various purposes.

In 2020, the Corps, Reclamation, and Bonneville completed the CRSO EIS and signed a Record of Decision (ROD) selecting their preferred alternative identified in the CRSO EIS. Multiple parties filed legal challenges to the CRSO EIS and ROD, as well as to the associated biological opinions the National Marine Fisheries Service (NMFS) and U.S. Fish and Wildlife

Service (FWS) issued in conjunction with the CRSO EIS.

Since 2021, the litigation challenging the CRSO EIS ROD and biological opinions has been stayed or administratively terminated, allowing the U.S. government, including the Corps, Reclamation, Bonneville, FWS, and NMFS and other departments and agencies to engage in mediated discussions with the Confederated Tribes of the Colville Reservation, the Coeur d'Alene Tribe, and the Spokane Tribe of Indians as well as Oregon, Washington, the Confederated Tribes and Bands of the Yakama Nation, the Confederated Tribes of the Umatilla Indian Reservation, the Confederated Tribes of the Warm Springs Reservation of Oregon, the Nez Perce Tribe, local governments, stakeholder groups, and nongovernmental organizations.

In December 2023, the United States Government (USG) signed a Memorandum of Understanding (now called the Resilient Columbia Basin Agreement (RCBA)) with Oregon, Washington, the Confederated Tribes and Bands of the Yakama Nation, the Confederated Tribes of the Umatilla Indian Reservation, the Confederated Tribes of the Warm Springs Reservation of Oregon, the Nez Perce Tribe, and the National Wildlife Federation Plaintiffs. The RCBA provides for a stay of litigation on the CRSO EIS ROD and related biological opinions for up to 10 years and includes agreed upon CRS operations. The RCBA also includes USG commitments to carry out certain analyses related to regional energy needs, Tribal circumstances, water supply replacement, transportation infrastructure, and recreation and public access, as well as commitments on a series of actions to improve conditions for native fish species. As part of the RCBA, and consistent with Corps', Reclamation's, and Bonneville's ongoing responsibilities under NEPA, the USG committed to reviewing existing environmental compliance documents and initiating any supplemental or additional environmental compliance determined to be necessary in fall of 2024.

The Co-Lead Agencies are evaluating triggers for supplementation under NEPA. In determining the scope of supplemental compliance, the Co-Lead Agencies will evaluate new information and circumstances, including any: changes to operations, maintenance, and configuration of the fourteen projects that make up the Columbia River System; new species listed or proposed for listing under the Endangered Species Act (ESA) (e.g., Wolverine); certain USG Commitments associated with the

RCBA; relevant reports, studies, or other information published since the CRSO EIS was completed (including, but not limited to, the Department of the Interior's report, *Historic and Ongoing Impacts of Federal Dams on the Columbia River Basin Tribes*, and other information sources referenced in Attachment 2 of the RCBA); and anticipated changes in Columbia River inflows to the United States from Canada and operational effects in the U.S. related to the modernization of the Columbia River Treaty.

With respect to the latter, the Columbia River's flow at the U.S.-Canada border is affected by how Canada operates storage reservoirs in its portion of the basin. Canada's reservoir operations are affected in part by how the Columbia River Treaty operations are managed for flood risk management, hydropower generation, and ecosystem purposes in coordination with the United States. The CRSO EIS applied 2016 Columbia River Treaty operations as the best-available information. Certain terms of the Columbia River Treaty regarding preplanned flood risk management changed on September 16, 2024, and the countries have been negotiating modernized provisions of the Treaty to address these changes, along with updates to hydropower coordination, the inclusion of ecosystem purposes, and increased Canadian flexibility. The existing Treaty's changes in flood risk management along with expected updates from the modernization process may lead to changed flows across the border from Canada that vary from the assumptions and effects contemplated in the 2020 CRSO EIS under certain hydrological conditions.

2. Purpose and Need for the Proposed Action: The ongoing action under evaluation in this supplemental NEPA process is the long-term coordinated operations, maintenance, and configuration of the Columbia River System. The purpose of this action is to operate the Columbia River System to meet multiple responsibilities including resource, legal, and institutional purposes of the action. The underlying need to which the Co-Lead Agencies are responding in this supplemental NEPA process is the need to evaluate the selected alternative in light of changes to the action and potentially substantial new circumstances and information that arose or became available after completion of the CRSO EIS ROD and are relevant to environmental effects. The Federal decision in this process is to determine whether to modify the selected alternative from the CRSO EIS based on potentially substantial changes

to measures included in the selected alternative, or substantial new information or changed circumstances and conditions about the significance of adverse effects that bear on the analysis.

3. Description of Proposed Action and Alternatives: The CRSO EIS evaluated a range of alternatives developed to meet the Purpose and Need Statement and eight study objectives developed for the EIS. The eight objectives, in tandem with the Purpose and Need Statement, established the framework for evaluating the ability of an alternative to satisfy the Corps', Reclamation's, and Bonneville's numerous legal, institutional, and resource obligations. The agencies used an iterative process to develop a range of alternatives for the future physical configuration, operation, and maintenance of the 14 projects of the CRS. The alternatives were developed to achieve a reasonable balance of competing resource demands for the available water and for the multiple authorized purposes, including evaluating measures to avoid, offset, or minimize impacts to resources affected by managing the CRS in the context of new information and changed conditions in the Columbia River Basin since the System Operation Review EIS in 1997. During the preparation of the CRSO EIS, the agencies developed a reasonable range of four Multiple Objective Action Alternatives (MOs) suitable for analysis in addition to the No Action Alternative. Following analysis and identification of effects for the No Action Alternative and the four MO alternatives, the Corps, Reclamation, and Bonneville used these findings to develop a fifth action alternative, which was described as the agencies' Preferred Alternative in the CRSO Draft and Final EIS. This selected alternative was ultimately chosen in the CRSO EIS ROD (Selected Alternative). This supplemental NEPA process is focused on addressing potentially substantial changes to the Selected Alternative, reviewing potentially substantial new circumstances and information that arose or became available after completion of the CRSO EIS, and preparing a SEIS. The SEIS will evaluate potential benefits and impacts of changes made to the Selected Alternative including direct, indirect, and cumulative effects to the human and natural environments.

4. Summary of Potential Effects: The Corps, Reclamation, and Bonneville issued the CRSO EIS ROD in 2020. Since then, a variety of new circumstances and information about the significance of effects that bear on the NEPA analysis previously conducted have arisen. The Co-Lead

Agencies will use this information to assess and update, as appropriate, the analyses presented in the CRSO EIS. The Co-Lead Agencies will analyze any substantial changes in effects relating to changes in the Proposed Action such as any changes to operations, maintenance, and configuration of the fourteen projects that make up the Columbia River System; new species listed or proposed for listing under the Endangered Species Act (ESA); anticipated changes in Columbia River inflows to the United States from Canada and operational effects in the U.S. related to the modernization of the Columbia River Treaty; and relevant reports, studies, or other information published since the CRSO EIS. This will include an assessment of existing effects analyses and additional effects analyses as necessary to ensure compliance with applicable environmental laws and regulations, including the ESA and the National Historic Preservation Act (NHPA). The Co-Lead Agencies will issue a decision following publication of the final SEIS and completion of consultation, if necessary, under the ESA.

At this early stage, it is unknown the full extent to which effects analyses results may differ from those presented in the CRSO EIS. Because changes and new information involve Columbia River System conditions, a broad range of resources may be affected. Accordingly, the full range of resources that were analyzed in the CRSO EIS will be assessed for potential effects due to proposed changes or changed conditions and circumstances. These resources include: river hydrology and hydraulics; water quality; aquatic habitat, invertebrates, and fish; vegetation, wetlands, wildlife, and floodplains; power generation and transmission; air quality and greenhouse gases; flood risk management; navigation and transportation; recreation; water supply; visual and noise resources; fisheries and passive use; cultural resources; Indian trust assets, tribal perspectives, and tribal interests; environmental justice; and implementation and system costs.

5. Anticipated Permits, Other Authorizations, and Other Directives: For reasons identified above, the Corps, Reclamation, and Bonneville have reinitiated ESA consultation with FWS and are evaluating whether reinitiation of ESA consultation with NMFS is necessary under section 7 of the ESA. During the pendency of the ESA consultation and NEPA processes, Corps, Reclamation, and Bonneville will operate the CRS consistent with the current biological opinions and the

operations identified in the RCBA. Corps, Reclamation, and Bonneville also will work with NMFS and FWS to ensure compliance with the ESA, coordinate environmental reviews, and maintain protections afforded to ESA-listed species and critical habitat under existing environmental compliance documentation.

The Co-lead agencies (and Bonneville when appropriate) will comply with all applicable statutory and regulatory requirements in evaluating the Proposed Action, including but not limited to the ESA, Clean Water Act, Section 106 of the NHPA, and Executive Orders, including E.O. 12898 Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations and E.O. 14096 on Revitalizing Our Nation's Commitment to Environmental Justice For All, and the recent Presidential Memorandum, *Restoring Healthy and Abundant Salmon, Steelhead, and Other Native Fish Populations in the Columbia River Basin*, 88 FR 67617 (October 2, 2023).

The Co-Lead Agencies will also ensure government-to-government consultation with Tribes that honors the U.S. Government's longstanding commitments to Tribal Nations.

6. Schedule for the Decision-Making Process. To the extent feasible, the Co-Lead Agencies will complete the SEIS in compliance with the deadlines and schedules set forth in 40 Code of Federal Regulations (CFR) 1501.10(b). The draft SEIS will be available for public review and comment. A 45-day public review period will be provided for interested parties and agencies to review and comment on this draft document. All interested parties are encouraged to respond to this Notice of Intent and provide a current address if they wish to be notified of the Draft SEIS circulation. The Co-Lead Agencies would issue a decision at the conclusion of the NEPA process, in accordance with 40 CFR 1506.10. Corps, Reclamation, and Bonneville would also determine how to proceed consistent with their Section 7 obligations under the ESA and any resulting biological opinions in accordance with 50 CFR 402.15.

7. Scoping Process/Public Involvement. The Co-Lead Agencies invite all affected Federal, State, and local agencies, affected Tribes, other interested parties, and the general public to participate in the NEPA process during development of the SEIS. Three (3) virtual public scoping meetings will be held the week of February 10, 2025. The specific dates, times, and meeting information will be published on the project website:

<https://www.nwd.usace.army.mil/CRSO/>. Additional public meetings will be scheduled after release of the draft SEIS.

The Co-Lead Agencies are issuing this Notice of Intent to: (1) Advise other Federal and State agencies, Tribes, and the public of their plan to analyze effects related to system operations, maintenance and configuration; (2) obtain suggestions and information that may inform the scope of issues to evaluate in the SEIS; and (3) provide notice and request public input on potential effects on historic properties from system operations, maintenance and configuration due to potential modification of the undertaking in accordance with section 106 of the NHPA (36 CFR 800.2(d)(3) and 800.8(c)(5)). The Co-Lead agencies will also identify any cooperating and participating agencies that the Co-Lead agencies may require information from to facilitate their future decision after completion of the Notice of Intent scoping period.

William C. Hannan,
Brigadier General, US Army, Division Commander.

Jennifer Carrington,
Regional Director, Columbia-Pacific Northwest Region, Bureau of Reclamation.
[FR Doc. 2024-29936 Filed 12-17-24; 8:45 am]

BILLING CODE 3720-58-P

DEPARTMENT OF ENERGY

Environmental Management Site-Specific Advisory Board, Paducah

AGENCY: Office of Environmental Management, Department of Energy.

ACTION: Notice of open meeting.

SUMMARY: This notice announces a meeting of the Environmental Management Site-Specific Advisory Board (EM SSAB), Paducah. The Federal Advisory Committee Act requires that public notice of this meeting be announced in the **Federal Register**.

DATES: Thursday, January 16, 2025; 5:30–7 p.m. CST.

ADDRESSES: West Kentucky Community and Technical College, Emerging Technology Center, Room 215, 5100 Alben Barkley Drive, Paducah, Kentucky 42001.

FOR FURTHER INFORMATION CONTACT: Robert “Buz” Smith, Federal Coordinator, by Phone: (270) 441-6821 or Email: Robert.Smith@pppo.gov.

SUPPLEMENTARY INFORMATION:

Purpose of the Board: The purpose of the Board is to provide advice and

recommendations concerning the following EM site-specific issues: clean-up activities and environmental restoration; waste and nuclear materials management and disposition; excess facilities; future land use and long-term stewardship. The Board may also be asked to provide advice and recommendations on any EM program components.

Tentative Agenda:

- Administrative Activities
- Public Comment Period

Public Participation: The meeting is open to the public. The EM SSAB, Paducah will make every effort to accommodate persons with physical disabilities or special needs. If you require special accommodations due to a disability, please contact Robert “Buz” Smith in advance of the meeting. The Department of Energy will hear oral public comments during the meeting. A 15-minute public comment period will take place at the end of the agenda. Individual oral comments are to be limited to two minutes per speaker to ensure time for all who wish to speak. Written statements may be filed either before or after the meeting. Written comments submitted by 5 p.m. CST on Friday, January 24, 2025, will be included in the minutes. Please submit written comments to Zachary Boyarski at Zachary.Boyarski@pppo.gov with “Public Comment” in the subject line. The Deputy Designated Federal Officer is empowered to conduct the meeting in a fashion that will facilitate the orderly conduct of business.

Minutes: Minutes will be available by writing or calling Eric Roberts, Board Support Manager, Emerging Technology Center, Room 221, 4810 Alben Barkley Drive, Paducah, KY 42001; Phone: (270) 554-3004. Minutes will also be available at the following website: <https://www.energy.gov/pppo/pgdp-cab/listings/meeting-materials>.

Signing Authority: This document of the Department of Energy was signed on December 12, 2024, by Alyssa Petit, Deputy Committee Management Officer, pursuant to delegated authority from the Secretary of Energy. That document with the original signature and date is maintained by DOE. For administrative purposes only, and in compliance with requirements of the Office of the Federal Register, the undersigned DOE Federal Register Liaison Officer has been authorized to sign and submit the document in electronic format for publication, as an official document of the Department of Energy. This administrative process in no way alters the legal effect of this document upon publication in the **Federal Register**.

Signed in Washington, DC, on December 12, 2024.

Jennifer Hartzell,

Alternate Federal Register Liaison Officer,
U.S. Department of Energy.

[FR Doc. 2024–29868 Filed 12–17–24; 8:45 am]

BILLING CODE 6450–01–P

DEPARTMENT OF ENERGY

Notice of Intent to Prepare an Environmental Impact Statement for the Appalachian Hydrogen Hub (ARCH2), (DOE/EIS–0569)

AGENCY: Office of Clean Energy Demonstrations, U.S. Department of Energy.

ACTION: Notice of intent to prepare an environmental impact statement, notice of scoping meetings, request for comments.

SUMMARY: The U.S. Department of Energy (DOE) announces its intent to prepare an Environmental Impact Statement (EIS) pursuant to the National Environmental Policy Act (NEPA) and applicable NEPA implementing regulations to assess the potential environmental impacts of the proposed action of providing financial assistance to Battelle Memorial Institute (Battelle) to facilitate the design, construction, operation, and maintenance of the Appalachian Hydrogen Hub (also referred to as the Appalachian Regional Clean Hydrogen Hub or ARCH2) in the Appalachian Region including Ohio, Pennsylvania, and West Virginia. DOE is issuing this Notice of Intent to inform the public about the proposed action; announce plans to conduct public scoping meetings; invite public participation in the scoping process; and solicit public comments for consideration in establishing the scope of the EIS, including the range of reasonable alternatives and the potential environmental impacts to be analyzed.

DATES: The public scoping period for the EIS starts with the publication of this notice of intent (NOI) and ends on March 3, 2025. DOE will hold one virtual public scoping meeting at the following date and time (eastern time):

- Thursday, January 16, 2025 at 6 p.m.–8 p.m.

DOE will hold three in-person public scoping meetings. Dates, times, and locations are to be determined and will be shared on the DOE's web page for this EIS no less than 15 days before the meetings.

All meetings are open to the public and free to attend. Details on how to participate in the virtual and in-person public scoping meetings are available on

the DOE's web page for this EIS: <https://www.energy.gov/nepa/doeeis-0569-appalachian-hydrogen-hub-multiple-locations>. In defining the scope of the EIS, DOE will consider all scoping comments received or postmarked by March 3, 2025. Comments received or postmarked after the scoping period end date will be considered to the extent practicable.

ADDRESSES: Oral or written comments may be provided at the public scoping meetings or submitted in any of the following ways:

- Through the *regulations.gov* web portal: Navigate to *www.regulations.gov* and search for Docket No. DOE–HQ–2024–0082 and follow the instructions for submitting comments.

- *Mail or Hand Delivery Service:* Send comments in an envelope labeled “DOE/EIS–0569” and addressed to TRC APPALACHIAN HYDROGEN HUB Coordinator, Teays Corporate Centre, 135 Corporate Center Drive, Suite 540, Scott Depot, West Virginia 25560

FOR FURTHER INFORMATION CONTACT: Sarah Moore, Project Manager, Office of Clean Energy Demonstrations, U.S. Department of Energy, 1000 Independence Ave SW, Washington, DC 20585, email OCED_ARCH2_EIS@hq.doe.gov, or telephone (202) 309–2037.

SUPPLEMENTARY INFORMATION:

Background

In the Infrastructure Investment and Jobs Act, commonly known as the Bipartisan Infrastructure Law (BIL), Congress directed DOE to establish a Regional Clean Hydrogen Hubs (H2Hubs) program to create regional networks of hydrogen producers, consumers, and local connective infrastructure to accelerate the use of hydrogen as a clean energy carrier. The Office of Clean Energy Demonstrations (OCED) within DOE is implementing the Regional Clean Hydrogen Hubs program and will use the NEPA process to help it decide whether to provide financial assistance for the H2Hubs.

Congress directed DOE to select H2Hubs using certain criteria. Specifically, Congress directed DOE to select H2Hubs that will use a diversity of feedstocks to produce clean hydrogen, including at least one H2Hub that will demonstrate the production of clean hydrogen from fossil fuels, one H2Hub that will demonstrate the production of clean hydrogen from renewables, and one H2Hub that will demonstrate the production of clean hydrogen from nuclear energy. Congress also directed DOE to select H2Hubs that will use clean hydrogen in a diversity of

end uses, including at least one H2Hub that will demonstrate the use of clean hydrogen in the following sectors: electric power generation, industrial, residential and commercial heating, and transportation. Congress required that DOE give priority to H2Hubs that are likely to create opportunities for skilled training and long-term employment to the greatest number of residents of the region. Congress also directed DOE to include geographic diversity, directing that DOE locate H2Hubs in different regions of the United States, and that the H2Hubs are to use the energy resources that are abundant in their respective regions. Congress further required DOE to select, to the maximum extent practicable, at least two H2Hubs in the regions of the United States with the greatest natural gas resources.

DOE issued a Funding Opportunity Announcement (FOA–0002779) to solicit applications for H2Hubs. DOE selected the Appalachian Hydrogen Hub for award negotiations following a rigorous Merit Review process to identify meritorious applications to the Regional Clean Hydrogen Hubs Program based on the criteria listed in FOA–0002779. DOE has provided limited funding in support of preliminary Appalachian Hydrogen Hub planning activities.

The Appalachian Hydrogen Hub, as proposed, satisfies certain criteria Congress required in the BIL for the Regional Clean Hydrogen Hubs program. The Appalachian Hydrogen Hub has the potential to demonstrate the production of clean hydrogen from fossil fuels. The Appalachian Hydrogen Hub proposes to use clean hydrogen in a diversity of end uses, including but not limited to industry, power generation, and transportation. Further, the Appalachian Hydrogen Hub would create opportunities for skilled training and long-term employment for residents of the region. In addition, the location of the Appalachian Hydrogen Hub in the Appalachian Region that includes Ohio, Pennsylvania, and West Virginia meets the criterion requiring geographic diversity within the Regional Clean Hydrogen Hubs program. The Appalachian Hydrogen Hub also satisfies the criterion that DOE select a Hub in a region of the United States with the greatest natural gas resources.

The Appalachian Hydrogen Hub is proposed to consist of a suite of demonstration projects involving clean hydrogen production, transportation, and end uses located within the Appalachian Region that includes Ohio, Pennsylvania, and West Virginia. Battelle is the primary funding recipient and lead Appalachian Hydrogen Hub

manager. As currently structured, the Appalachian Hydrogen Hub encompasses 12 proposed projects, including hydrogen production facilities that could produce at least 1,700 metric tons per day of clean hydrogen (autothermal reformation facilities with carbon capture, biomass pyrolysis facilities, electrolysis facilities, and facilities for recovering hydrogen from waste gases), hydrogen liquefiers, and a range of end uses including residential fuel cells, materials handling equipment, mobility, and industrial uses, including production of ammonia, urea, and low-carbon aviation fuel.

Purpose and Scope of the EIS

DOE will prepare an EIS (DOE/EIS-0569) to evaluate the potential impacts to the human environment associated with funding the Appalachian Hydrogen Hub. The EIS will evaluate the potential impacts associated with the types of hydrogen infrastructure and technologies proposed in the Appalachian Hydrogen Hub, such as impacts from electricity and water usage and rates of emissions, that are inherent to the technologies and infrastructure regardless of where they may be deployed. The EIS will help inform DOE's decision as to whether to carry the Appalachian Hydrogen Hub forward for project-specific funding decisions but will not directly authorize funding for specific Appalachian Hydrogen Hub projects.

If DOE decides to provide funding for the construction and operation of the Appalachian Hydrogen Hub, DOE will complete additional NEPA reviews to evaluate the potential site-specific impacts of individual proposed projects to make site-specific funding decisions. In addition to being subject to DOE's NEPA review, with associated public scoping and comment periods as appropriate, individual projects will be required to adhere to the requirements of all applicable Federal, State, and local laws and regulations.

Purpose and Need for the Proposed Action

The purpose and need for DOE's action is to comply with its statutory mandate in BIL to catalyze investment in the production, processing, delivery, storage, and end-use of clean hydrogen; and contribute to the development of a national clean hydrogen network. The proposed action of funding the Appalachian Hydrogen Hub would fulfill this mandate by accelerating the deployment of clean hydrogen technologies and enabling infrastructure to attract greater investments from the private sector and promote substantial

U.S. manufacturing of numerous hydrogen technologies.

DOE's purpose and need in funding the Appalachian Hydrogen Hub also includes funding a clean hydrogen hub that meets certain BIL criteria for the H2Hubs. The proposed Appalachian Hydrogen Hub meets these criteria by:

- Demonstrating feedstock diversity by including the production of clean hydrogen from fossil fuels.
- Demonstrating end use diversity by including the use of clean hydrogen in the electric power generation, industry, and transportation sectors.
- Enabling DOE to meet the geographic diversity criterion by being located in the Appalachian Region and using energy resources that are abundant in that region.
- Being one of at least two H2Hubs located in regions of the United States with the greatest natural gas resources.
- Creating opportunities for skilled training and long-term employment for residents in the region.

Proposed Action, No Action, and Preliminary Alternatives

Proposed Action

DOE's proposed action is to provide funding to support the construction and operation of the Appalachian Hydrogen Hub, as proposed by Battelle, in the Appalachian region that includes Ohio, Pennsylvania, and West Virginia. The proposed Appalachian Hydrogen Hub would include the production, storage, delivery, and end-use of clean hydrogen using a variety of technologies. Hydrogen production technologies being considered include autothermal reforming with carbon capture, electrolysis, pyrolysis, and capture and purification of hydrogen byproduct from chlor-alkali processes. Methods of hydrogen storage may include above-ground tanks, tube trailers, and/or underground storage. Delivery options may include refueling stations, liquefaction, and trucking, as well as the delivery of hydrogen derivatives such as ammonia, urea, or low-carbon aviation fuel which could include delivery via rail, barge, truck, or pipeline. The Appalachian Hydrogen Hub is considering a broad variety of end-use applications, including vehicles (buses, medium and heavy-duty trucks), materials handling equipment, industrial heat, blending to natural gas distribution systems, power generation, stationary fuel cells, and production of hydrogen derivatives, including ammonia, urea, and low-carbon aviation fuel. Appalachian Hydrogen Hub projects and site locations are in development. DOE will evaluate

specific projects and site locations in subsequent tiered NEPA reviews.

No Action Alternative

Under the No Action Alternative, DOE would not provide funding to Battelle for the construction and operation of the Appalachian Hydrogen Hub, with the assumption that the H2Hub would not be developed. The no action alternative provides a benchmark for comparison with environmental impacts of the other alternatives.

Preliminary Action Alternatives

The EIS will evaluate reasonable alternatives that are technically and economically feasible and meet the purpose and need for the proposed action. Preliminarily, DOE has identified three alternatives that potentially address the purpose and need stated above:

(1) DOE funding for the proposed Appalachian Hydrogen Hub: The proposed action alternative as described above.

(2) DOE funding for an expanded Appalachian Hydrogen Hub: An action alternative that considers the hydrogen technologies and infrastructure in the proposed action plus reasonably foreseeable clean hydrogen technologies and infrastructure that, while not currently considered in the proposed action, could be proposed for DOE funding.

(3) DOE funding for a reduced Appalachian Hydrogen Hub: An action alternative that is smaller in scope wherein DOE would fund only a portion of the proposed action.

Summary of Potential Impacts

DOE's analysis in the EIS will focus on potentially significant environmental impacts from construction and operation of the Appalachian Hydrogen Hub's proposed types of hydrogen technologies and infrastructure, as well as the potential cumulative impacts resulting from reasonably foreseeable past, present, and future projects in the same region. Accordingly, in the EIS, DOE anticipates evaluating potential non-site-specific impacts related to: (1) land use and infrastructure, (2) atmospheric conditions and air quality, (3) climate change and greenhouse gasses, (4) hydrologic conditions and water quality, (5) geology, seismicity and soils, (6) socioeconomic conditions, (7) environmental justice, (8) energy resources, (9) noise and vibration, (10) transportation and accidents, (11) intentional destructive acts, and (12) human health and safety. This list is not intended to be all-inclusive or to imply a predetermination of potential

significant impacts. DOE invites interested stakeholders to suggest specific issues, including possible mitigation measures, within these general categories or others, to be considered in the EIS.

Anticipated Permits and Authorizations

DOE does not anticipate that permits and authorizations will be needed for agency action because the EIS would not authorize the construction and operation of any project in the Appalachian Hydrogen Hub. The permits and authorizations required for the Appalachian Hydrogen Hub projects would be identified in subsequent site-specific NEPA analyses for those projects.

Schedule for Decision-Making Process

After the draft EIS is completed, DOE will publish a notice of availability (NOA) and request public comments on the draft EIS. DOE currently expects to issue the NOA in October 2025. After the public comment period ends, DOE will review and respond to comments received and will develop the final EIS. DOE currently expects to make the final EIS available to the public in April 2026. A record of decision will be completed no sooner than 30 days after the final EIS is released, in accordance with applicable laws and regulations.

Scoping Process

This NOI commences the public scoping process to identify issues and potential alternatives for consideration in the EIS. Throughout the scoping process, Federal agencies, Tribes, State and local governments, and the public have the opportunity to help DOE identify significant resources and issues, reasonable alternatives, mitigation measures, and other pertinent information that DOE should consider in the EIS. DOE will hold public scoping meetings at the times and dates described above under the **DATES** section. DOE will post information on how to participate in the virtual and in-person public meetings on the EIS website listed previously, in advance of the meetings. The public will have the opportunity to comment on the scope of the EIS. DOE representatives will be available to answer questions and provide additional information on the NEPA process to meeting attendees. In addition to providing comments at the public scoping meetings, stakeholders may submit written comments as described in the **ADDRESSES** section.

Comments may be broad in nature or restricted to specific areas of concern, but they should be directly relevant to the NEPA process, or potential

environmental impacts. The scoping process allows the public and interested parties to shape the EIS impact analysis, focusing on the areas of greatest importance and identifying areas requiring less attention. DOE will consider the comments received on the scope of the EIS during the 75-day scoping period as it prepares the draft EIS.

OCED does not consider anonymous scoping comments. Please include your name and address as part of your scoping comment. All scoping comments, including the names, addresses, and other personally identifiable information included in the comment, will be part of the administrative record. DOE will protect privileged or confidential information that you submit when required by Exemption 4 of the Freedom of Information Act (FOIA), which applies to trade secrets and commercial or financial information that is privileged or confidential. Please label privileged or confidential information “Contains Confidential Information” and consider submitting such information as a separate attachment. Information that is not labeled as privileged or confidential may be regarded by DOE as suitable for public release. DOE will invite Tribal government-to-government consultations.

Request for Comment on Alternatives and Effects, as Well as on Relevant Information, Studies, or Analyses With Respect to the Proposed Action

Federal, State, and local agencies, along with Indian Tribal Nations and other stakeholders that may be interested in or affected by the proposed action, are invited to participate in the scoping process and, if eligible, may request or be requested by the DOE to participate in the development of the environmental analysis as a cooperating agency. DOE requests data, comments, views, information, analysis, alternatives, or suggestions relevant to the proposed action from the public; affected Federal, Tribal, State, and local governments, agencies, and offices; the scientific community; industry; or any other interested party.

Specifically, DOE requests information on the following topics:

(1) Potential effects that the proposed action could have on biological, physical, socioeconomic, cultural, or other resources.

(2) Other potential reasonable alternatives to the proposed action that DOE should consider, including additional or alternative avoidance, minimization, and mitigation measures.

(3) Information on other current or planned activities in, or in the vicinity of, the proposed action, that could impact one another or contribute to cumulative impacts.

(4) Other information, studies, or analyses relevant to the proposed action and its impacts on the human environment.

To promote informed decision-making, comments should be as specific as possible and should provide as much detail as necessary to meaningfully and fully inform DOE of why the issues raised are important to the agency's review of the proposed action.

The draft EIS will include as an appendix a summary of issues raised in public scoping comments that DOE considered in preparing the EIS and comments outside the scope of the analysis.

Signing Authority

This document of the Department of Energy was signed on December 11, 2024, by Kelly Cummins, Acting Director, Office of Clean Energy Demonstrations, pursuant to delegated authority from the Secretary of Energy. That document with the original signature and date is maintained by DOE. For administrative purposes only, and in compliance with requirements of the Office of the Federal Register, the undersigned DOE Federal Register Liaison Officer has been authorized to sign and submit the document in electronic format for publication, as an official document of the Department of Energy. This administrative process in no way alters the legal effect of this document upon publication in the **Federal Register**.

Signed in Washington, DC, on December 13, 2024.

Treena V. Garrett,

Federal Register Liaison Officer, U.S. Department of Energy.

[FR Doc. 2024-29976 Filed 12-17-24; 8:45 am]

BILLING CODE 6450-01-P

DEPARTMENT OF ENERGY

Privacy Act of 1974; System of Records

AGENCY: U.S. Department of Energy.

ACTION: Notice of a modified system of records.

SUMMARY: As required by the Privacy Act of 1974 and the Office of Management and Budget (OMB) Circulars A-108 and A-130, the Department of Energy (DOE or the Department) is publishing notice of a modification to an existing Privacy Act

System of Records. DOE proposes to amend System of Records DOE-28 General Training Records. This System of Records Notice (SORN) is being modified to align with new formatting requirements, published by OMB, and to ensure appropriate Privacy Act coverage of business processes and Privacy Act information.

DATES: This modified SORN will become applicable following the end of the public comment period on January 17, 2025 unless comments are received that result in a contrary determination.

ADDRESSES: Written comments should be sent to Ken Hunt, Chief Privacy Officer, U.S. Department of Energy, 1000 Independence Avenue SW, Rm 8H-085, Washington, DC 20585, by facsimile at (202) 586-8151, or by email at privacy@hq.doe.gov.

FOR FURTHER INFORMATION CONTACT: Ken Hunt, Chief Privacy Officer, U.S. Department of Energy, 1000 Independence Avenue SW, Rm 8H-085, Washington, DC 20585, by facsimile at (202) 586-8151, by email at privacy@hq.doe.gov, or by telephone at (240) 686-9485.

SUPPLEMENTARY INFORMATION: On January 9, 2009, DOE published a Compilation of its Privacy Act Systems of Records, which included System of Records DOE-28 General Training Records. This notice proposes amendments to the system locations section of that system of records by removing the following system locations where DOE-28 is no longer applicable: four (4) Bonneville Power Administration locations (Lower Columbia Area, Puget Sound Area, Snake River Area, Upper Columbia Area), two (2) Office of Science locations (Chicago and Oak Ridge), two (2) Office of Energy Efficiency and Renewable Energy locations (Boston and Philadelphia Support Offices), Alaska Power Administration, Office of Amarillo Site Operations, Atlanta Support Office, Continuous Electron Beam Accelerator Facility, Dayton Area Office, Kansas City Site Office, Kansas City Support Office, National Nuclear Security Administration (NNSA) Sandia Site Office, NNSA Los Alamos Site Office, NNSA Los Alamos National Laboratory, Strategic Petroleum Reserve Project Management Office, New York Support Office, NNSA Nevada Site Office, and the Office of Scientific and Technical Information (OSTI). The following addresses have been updated: Golden Field Office, John A. Gordon Albuquerque Complex, Office of River Protection, and the Southwestern Power Administration. The following addresses have been added: two (2)

National Energy Technology Laboratory locations (Morgantown and Albany). In the "Routine Uses" section, this modified notice deletes a previous routine use concerning efforts responding to a suspected or confirmed loss of confidentiality of information as it appears in DOE's compilation of its Privacy Act systems of records (January 9, 2009) and replaces it with one to assist DOE with responding to a suspected or confirmed breach of its records of Personally Identifiable Information (PII), modeled with language from OMB's Memorandum M-17-12, "Preparing for and Responding to a Breach of Personally Identifiable Information" (January 3, 2017). Further, this notice adds one new routine use to ensure that DOE may assist another agency or entity in responding to the other agency's or entity's confirmed or suspected breach of PII, as appropriate, as aligned with OMB's Memorandum M-17-12. In addition to these routine uses, this notice adds three other routine uses (eight, nine, and ten). These routine uses permit the disclosure of information to union officials acting in their official capacity, for the purpose of an investigation, settlement of claims, or the preparation and conduct of litigation, and to a contractor of the Department, or a subcontractor to a Department contractor, who is authorized to disclose the record. The "System Manager" section has been revised to clarify that the system manager is the "Office of the Chief Human Capital Officer." In the "Purpose(s) of the System" section, "employee" has been struck from the phrase "employee training and development." The "Categories of Individuals Covered by the System" section now includes "detailees and assignees to DOE, including NNSA, and individuals seeking access to DOE/NNSA information, resources, or facilities." The "Categories of Records in the System" section now includes "employer identification number, office location/room number, business phone, business cell phone, and business email address." Additionally, "quarterly" has been struck from "quarterly training." "Record Source Categories" now includes "training instructors or vendors." "Policies and Practices for Retrieval of Records" now includes "other unique identifier, such as employee ID." An administrative change required by the FOIA Improvement Act of 2016 extends the length of time a requestor is permitted to file an appeal under the Privacy Act from 30 to 90 days. Both the "System Locations" and "Administrative,

Technical and Physical Safeguards" sections have been modified to reflect the Department's usage of cloud-based services for records storage. Language throughout the SORN has been updated to align with applicable Federal privacy laws, policies, procedures, and best practices.

SYSTEM NAME AND NUMBER:

DOE-28 General Training Records.

SECURITY CLASSIFICATION:

Unclassified.

SYSTEM LOCATION:

Systems leveraging this SORN may exist in multiple locations. All systems storing records in a cloud-based server are required to use government-approved cloud services and follow National Institute of Standards and Technology (NIST) security and privacy standards for access and data retention. Records maintained in a government-approved cloud server are accessed through secure data centers in the continental United States.

U.S. Department of Energy, Headquarters, Forrestal Building, Office of the Chief Human Capital Officer, 1000 Independence Avenue SW, Washington, DC 20585.

U.S. Department of Energy, Headquarters, Germantown, 19901 Germantown Road, Germantown, MD 20585.

SYSTEM MANAGER(S):

Headquarters: Director, Training and Human Resource Development, Office of the Chief Human Capital Officer, U.S. Department of Energy, 1000 Independence Avenue SW, Washington, DC 20585-0702.

Field Offices: The Directors, Training and Human Resource Development of the "System Locations" listed above are the system managers for their respective portions of this system.

AUTHORITY FOR MAINTENANCE OF THE SYSTEM:

42 U.S.C. 7101 *et seq.*; 50 U.S.C. 2401 *et seq.*; Nuclear Waste Policy Act of 1982 (Pub. L. 97-425); Nuclear Waste Policy Amendment Act of 1987 (Pub. L. 100-203); Government Employees Training Act of 1958; and title 5 CFR parts 410 and 412.

PURPOSE(S) OF THE SYSTEM:

Records in this system are maintained and used by the Department to document planning, completion,

funding and effectiveness of training and development. Appropriate local, State, and Federal agencies use certain records maintained in this system to ensure Departmental compliance with other regulatory requirements.

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

All DOE employees, including NNSA employees and contractor employees, detailees, and assignees to DOE, including NNSA, and individuals seeking access to DOE/NNSA information, resources, or facilities.

CATEGORIES OF RECORDS IN THE SYSTEM:

Name, resume, assigned number, occupational series, training requests and authorizations, grade, organization, date of birth, Social Security or employer identification number, office location/room number, business phone, business cell phone, and business email address, home address and telephone number, special interest area, education completed, course name, justification for attending the course, direct and indirect costs of training, coded information dealing with purpose, type, source of training, training evaluations, course evaluation forms, training examinations, training attendance records, lesson plans, training assignment sheets, reading assignment sheets, position qualification statement, self-study sheet, position descriptions, accounting records, and training reports.

RECORD SOURCE CATEGORIES:

The subject individuals, their supervisors, training instructors or vendors.

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND PURPOSES OF SUCH USES:

1. A record from this system may be disclosed as a routine use to Federal agencies, including the Office of Personnel Management, for purposes of determining eligibility or suitability for training and as source documents for training reports; to training institutions that personnel have requested to attend; and to other Federal agencies as necessary for verification of completion or payment of training costs.

2. A record from this system may be disclosed as a routine use to State and local governments, the Nuclear Regulatory Commission (NRC), and other Federal agencies that conduct research, investigations, or audits to determine whether DOE or contractor personnel satisfy quality assurance requirements for activities necessary to obtain a license from the NRC for the construction, operation and closing of a nuclear waste repository or a Monitored

Retrievable Storage facility. These activities also include research and development, site characterization, transportation, waste packaging, handling, design, maintenance, performance confirmation, inspection, fabrication, and development and production of repository waste forms.

3. A record from this system may be disclosed as a routine use to Federal, State, Tribal, or local government officials where the regulatory program being implemented is applicable to the DOE or contractor program and requires that such access be provided for the conduct of the regulatory agencies' activities. Those provided information under this routine use are subject to the same limitations applicable to DOE officers and employees under the Privacy Act.

4. A record from this system may be disclosed as a routine use to the appropriate local, Tribal, State, or Federal agency when records, alone or in conjunction with other information, indicate a violation or potential violation of law whether civil, criminal, or regulatory in nature, and whether arising by general statute or particular program pursuant thereto.

5. A record from this system may be disclosed as a routine use to a member of Congress submitting a request involving a constituent when the constituent has requested assistance from the member concerning the subject matter of the record. The member of Congress must provide a copy of the constituent's signed request for assistance.

6. A record from this system may be disclosed as a routine use to appropriate agencies, entities, and persons when (1) the Department suspects or has confirmed that there has been a breach of the system of records; (2) the Department has determined that as a result of the suspected or confirmed breach there is a risk of harm to individuals, DOE (including its information systems, programs, and operations), the Federal Government, or national security; and (3) the disclosure made to such agencies, entities, and persons is reasonably necessary to assist in connection with the Department's efforts to respond to the suspected or confirmed breach or to prevent, minimize, or remedy such harm.

7. A record from this system may be disclosed as a routine use to another Federal agency or Federal entity, when the Department determines that information from this system of records is reasonably necessary to assist the recipient agency or entity in (1) responding to a suspected or confirmed breach or (2) preventing, minimizing, or

remedying the risk of harm to individuals, the recipient agency or entity (including its information systems, programs, and operations), the Federal Government, or national security, resulting from a suspected or confirmed breach.

8. A record from this system may be disclosed as a routine use to union officials acting in their official capacity as a representative of the grievant or affected employees.

9. A record from this system may be disclosed as a routine use for the purpose of an investigation, settlement of claims, or the preparation and conduct of litigation to (1) a person representing the Department, Contractor, or assisting in such representation; (2) others involved in the matter, their representatives, and persons assisting such persons; and (3) witnesses, potential witnesses, their representatives and assistants, and any other persons possessing information pertaining to the matter when it is necessary to obtain information or testimony relevant to the matter.

10. A record from this system may be disclosed as a routine use to a contractor of the Department, or a subcontractor to a Department contractor. Those provided information under this routine use are subject to the same limitations applicable to Department officers and employees under the Privacy Act.

POLICIES AND PRACTICES FOR STORAGE OF RECORDS:

Records may be stored as paper records or electronic media.

POLICIES AND PRACTICES FOR RETRIEVAL OF RECORDS:

Records are retrieved by name, Social Security number, or other unique identifier, such as employee ID.

POLICIES AND PRACTICES FOR RETENTION AND DISPOSAL OF RECORDS:

Retention and disposition of these records is in accordance with the National Archives and Records Administration-approved records disposition schedule with retentions of 10 years to 250 years.

ADMINISTRATIVE, TECHNICAL, AND PHYSICAL SAFEGUARDS:

Electronic records may be secured and maintained on a cloud-based software server and operating system that resides in Federal Risk and Authorization Management Program (FedRAMP) and Federal Information Security Modernization Act (FISMA) hosting environment. Data located in the cloud-based server is firewalled and encrypted at rest and in transit. The security mechanisms for handling data

at rest and in transit are in accordance with DOE encryption standards. Records are protected from unauthorized access through the following appropriate safeguards:

- *Administrative:* Access to all records is limited to lawful government purposes only, with access to electronic records based on role and either two-factor authentication or password protection. The system requires passwords to be complex and to be changed frequently. Users accessing system records undergo frequent training in Privacy Act and information security requirements. Security and privacy controls are reviewed on an ongoing basis.

- *Technical:* Computerized records systems are safeguarded on Departmental networks configured for role-based access based on job responsibilities and organizational affiliation. Privacy and security controls are in place for this system and are updated in accordance with applicable requirements as determined by NIST and DOE directives and guidance.

- *Physical:* Computer servers on which electronic records are stored are located in secured Department facilities, which are protected by security guards, identification badges, and cameras. Paper copies of all records are locked in file cabinets, file rooms, or offices and are under the control of authorized personnel. Access to these facilities is granted only to authorized personnel and each person granted access to the system must be an individual authorized to use or administer the system.

RECORD ACCESS PROCEDURES:

The Department follows the procedures outlined in 10 CFR 1008.4. Valid identification of the individual making the request is required before information will be processed, given, access granted, or a correction considered, to ensure that information is processed, given, corrected, or records disclosed or corrected only at the request of the proper person.

CONTESTING RECORD PROCEDURES:

Any individual may submit a request to the System Manager and request a copy of any records relating to them. In accordance with 10 CFR 1008.11, any individual may appeal the denial of a request made by him or her for information about or for access to or correction or amendment of records. An appeal shall be filed within 90 calendar days after receipt of the denial. When an appeal is filed by mail, the postmark is conclusive as to timeliness. The appeal shall be in writing and must be signed

by the individual. The words "PRIVACY ACT APPEAL" should appear in capital letters on the envelope and the letter. Appeals relating to DOE records shall be directed to the Director, Office of Hearings and Appeals (OHA), 1000 Independence Avenue SW, Washington, DC 20585.

NOTIFICATION PROCEDURES:

In accordance with the DOE regulation implementing the Privacy Act, 10 CFR part 1008, a request by an individual to determine if a system of records contains information about themselves should be directed to the U.S. Department of Energy, Headquarters, Privacy Act Officer. The request should include the requester's complete name and the time period for which records are sought.

EXEMPTIONS PROMULGATED FOR THE SYSTEM:
None.

HISTORY:

This SORN was last published in the **Federal Register**, 74 FR 1029–1030, on January 9, 2009.

Signing Authority

This document of the Department of Energy was signed on December 12, 2024, by Ann Dunkin, Senior Agency Official for Privacy, pursuant to delegated authority from the Secretary of Energy. That document with the original signature and date is maintained by DOE. For administrative purposes only, and in compliance with requirements of the Office of the Federal Register, the undersigned DOE Federal Register Liaison Officer has been authorized to sign and submit the document in electronic format for publication, as an official document of the Department of Energy. This administrative process in no way alters the legal effect of this document upon publication in the **Federal Register**.

Signed in Washington, DC, December 13, 2024.

DEPARTMENT OF ENERGY

Environmental Management Site-Specific Advisory Board, Nevada

AGENCY: Office of Environmental Management, Department of Energy.

ACTION: Notice of open meeting.

SUMMARY: This notice announces an in-person/virtual hybrid meeting of the

Environmental Management Site-Specific Advisory Board (EM SSAB), Nevada. The Federal Advisory Committee Act requires that public notice of this meeting be announced in the **Federal Register**.

DATES: Wednesday, January 15, 2025; 4–8:45 p.m. PST. The opportunity for public comment is at 4:10 p.m. PST. This time is subject to change; please contact the Nevada Site Specific Advisory Board (NSSAB) Administrator at nssab@emcbc.doe.gov for confirmation of time prior to the meeting.

ADDRESSES: Valley Electric Association's Valley Conference Center, 800 E Highway 372, Pahrump, Nevada 89048. This meeting will be open to the public in-person at the Valley Conference Center or virtually via Microsoft Teams. To attend virtually, please contact Barbara Ulmer, NSSAB Administrator, by email nssab@emcbc.doe.gov or phone (702) 523–0894, no later than 4 p.m. PST on Monday, January 13, 2025.

FOR FURTHER INFORMATION CONTACT: Barbara Ulmer, NSSAB Administrator, by phone: (702) 523–0894 or email: nssab@emcbc.doe.gov or visit the Board's internet homepage at www.nnss.gov/NSSAB/.

SUPPLEMENTARY INFORMATION:

Purpose of the Board: The purpose of the Board is to provide advice and recommendations concerning the following EM site-specific issues: clean-up activities and environmental restoration; waste and nuclear materials management and disposition; excess facilities; future land use and long-term stewardship. The Board may also be asked to provide advice and recommendations on any EM program components.

Tentative Agenda:

- Public Comment Period
- Update from Deputy Designated Federal Officer
- Update from National Nuclear Security Administration/Nevada Field Office
- Updates from NSSAB Liaisons
- Presentations

Public Participation: The in-person/online virtual hybrid meeting is open to the public either in-person at the Valley Conference Center or via Microsoft Teams. To sign-up for public comment, please contact the NSSAB Administrator (above) no later than 4 p.m. PST on Monday, January 13, 2025. In addition to participation in the live public comment session identified above, written statements may be filed with the Board either before or within

seven days after the meeting by sending them to the NSSAB Administrator at the aforementioned email address. Written public comment received prior to the meeting will be read into the record. The Deputy Designated Federal Officer is empowered to conduct the meeting in a fashion that will facilitate the orderly conduct of business. Individuals wishing to make public comments can do so in 2-minute segments for the 15 minutes allotted for public comments.

Minutes: Minutes will be available by writing or calling Barbara Ulmer, NSSAB Administrator, U.S. Department of Energy, EM Nevada Program, 100 North City Parkway, Suite 1750, Las Vegas, NV 89106; Phone: (702) 523–0894. Minutes will also be available at the following website: <https://www.nnss.gov/nssab/nssab-meetings/>.

Signing Authority: This document of the Department of Energy was signed on December 12, 2024, by Alyssa Petit, Deputy Committee Management Officer, pursuant to delegated authority from the Secretary of Energy. That document with the original signature and date is maintained by DOE. For administrative purposes only, and in compliance with requirements of the Office of the Federal Register, the undersigned DOE Federal Register Liaison Officer has been authorized to sign and submit the document in electronic format for publication, as an official document of the Department of Energy. This administrative process in no way alters the legal effect of this document upon publication in the **Federal Register**.

Signed in Washington, DC, on December 12, 2024.

Jennifer Hartzell,

*Alternate Federal Register Liaison Officer,
U.S. Department of Energy.*

BILLING CODE 6450–01–P

DEPARTMENT OF ENERGY

Notice of Intent To Prepare an Environmental Impact Statement for the Pacific Northwest Hydrogen Hub (PNWH2), (DOE/EIS–0571)

AGENCY: Office of Clean Energy Demonstrations, U.S. Department of Energy.

ACTION: Notice of intent to prepare an environmental impact statement, notice of scoping meetings, request for comments.

SUMMARY: The U.S. Department of Energy (DOE) announces its intent to prepare an Environmental Impact Statement (EIS) pursuant to the National Environmental Policy Act (NEPA) and

applicable NEPA implementing regulations to assess the potential environmental impacts of the proposed action of providing financial assistance to the Pacific Northwest Hydrogen Association (also referred to as the PNWH2 Association) to facilitate the design, construction, operation and maintenance of the Pacific Northwest Regional Hydrogen Hub including in the states of Washington, Oregon and Montana. DOE is issuing this Notice of Intent to inform the public about the proposed action; announce plans to conduct public scoping meetings; invite public participation in the scoping process; and solicit public comments for consideration in establishing the scope of the EIS, including the range of reasonable alternatives and the potential environmental impacts to be analyzed.

DATES: The public scoping period for the EIS starts with the publication of this Notice of Intent (NOI) and ends on March 3, 2025. DOE will hold one virtual public scoping meeting at the following date and time (pacific time):

- Wednesday, January 22, 2024 at 6 p.m.–8 p.m.

DOE will hold two in-person public scoping meetings. Dates, times, and locations are to be determined and will be shared on the DOE's web page for this EIS no less than 15 days before the meetings.

All meetings are open to the public and free to attend. Details on how to participate in the virtual and in-person public scoping meetings are available on the DOE's web page for this EIS: <https://www.energy.gov/nepa/doeeis-0571-pacific-northwest-hydrogen-hub-multiple-locations>. In defining the scope of the EIS, DOE will consider all scoping comments received or postmarked by March 3, 2025. Comments received or postmarked after the scoping period end date will be considered to the extent practicable.

ADDRESSES: Oral or written comments may be provided at the public scoping meetings or submitted in any of the following ways:

- Through the *regulations.gov* web portal: Navigate to www.regulations.gov and search for Docket No. DOE–HQ–2024–0094 and follow the instructions for submitting comments.

- *Mail or Hand Delivery Service:* Send comments in an envelope labeled “DOE/EIS–0571” and addressed to c/o AECOM, 3005 Center Green Drive, Ste 250, Boulder, CO 80301.

FOR FURTHER INFORMATION CONTACT: Katie O'Shea, Project Manager, Office of Clean Energy Demonstrations, U.S. Department of Energy, 1000 Independence Ave. SW, Washington,

DC 20585, email: OCED_PNWH2_EIS@hq.doe.gov or telephone (240) 477-0431.

SUPPLEMENTARY INFORMATION:

Background

In the Infrastructure Investment and Jobs Act, commonly known as the Bipartisan Infrastructure Law (BIL), Congress established and funded a Regional Clean Hydrogen Hubs (H2Hubs) program to create regional networks of hydrogen producers, consumers, and local connective infrastructure to accelerate the use of hydrogen as a clean energy carrier. The Office of Clean Energy Demonstrations (OCED) within DOE is implementing the Regional Clean Hydrogen Hubs program and will use the NEPA process to help it decide whether to provide financial assistance for the H2Hubs.

Congress directed DOE to select H2Hubs using certain criteria. Specifically, Congress directed DOE to select H2Hubs that will use a diversity of feedstocks to produce clean hydrogen, including at least one H2Hub that will demonstrate the production of clean hydrogen from fossil fuels, one H2Hub that will demonstrate the production of clean hydrogen from renewables, and one H2Hub that will demonstrate the production of clean hydrogen from nuclear energy.

Congress also directed DOE to select H2Hubs that will use clean hydrogen in a diversity of end uses, including at least one H2Hub that will demonstrate the use of clean hydrogen in the following sectors: electric power generation, industrial, residential and commercial heating, and transportation. Congress required that DOE give priority to regional clean hydrogen hubs that are likely to create opportunities for skilled training and long-term employment to the greatest number of residents of the region. Congress also directed DOE to include geographic diversity, directing that DOE locate H2Hubs in different regions of the United States, and that the H2Hubs are to use the energy resources that are abundant in their respective regions. Congress further required DOE to select, to the maximum extent practicable, at least two H2Hubs in the regions of the United States with the greatest natural gas resources.

DOE issued a Funding Opportunity Announcement (FOA-0002779) to solicit applications for H2Hubs. DOE selected the Pacific Northwest Hub for award negotiations following a rigorous Merit Review process to identify meritorious applications to the Regional Clean Hydrogen Hubs Program based on the criteria listed in FOA-0002779. DOE has provided limited funding in support

of preliminary Pacific Northwest Hub planning activities.

The Pacific Northwest Hub as proposed satisfies certain criteria Congress required in the BIL for the Regional Clean Hydrogen Hubs program. The Pacific Northwest Hub has the potential to demonstrate the production of clean hydrogen from renewable energy resources. The Pacific Northwest Hub will use clean hydrogen in a diversity of end uses, including but not limited to industry, power generation, and transportation. Further, the Pacific Northwest Hub would create opportunities for skilled training and long-term employment for residents of the region. In addition, the location of the Hub in the Pacific Northwest region meets the criterion requiring geographic diversity within the Regional Clean Hydrogen Hubs program. The Pacific Northwest Hub also satisfies the criterion that DOE select hubs that use the energy resources that are abundant in their respective regions.

The Pacific Northwest Hub is proposed to consist of a suite of demonstration projects involving clean hydrogen production, transportation, and end uses located within the Pacific Northwest. The Pacific Northwest Association is the primary funding recipient and lead Pacific Northwest Hub manager. As currently structured, the Hub encompasses approximately 10 projects, including clean hydrogen production facilities that could produce 300–400 metric tons per day of clean hydrogen, hydrogen liquefiers, connective infrastructure including refueling stations and pipelines, and a range of end uses including fuel cell electric trucks, fuel cell electric buses, cargo handling equipment, and stationary fuel cells.

Purpose and Scope of the EIS

DOE will prepare an EIS (DOE/EIS-0571) to evaluate the potential impacts to the human environment associated with funding the Pacific Northwest Hub. The EIS will evaluate the potential impacts associated with the types of hydrogen infrastructure and technologies proposed in the Pacific Northwest Hub, such as impacts from electricity and water usage and rates of emissions, that are inherent to the technologies and infrastructure regardless of where they may be deployed. The EIS will help inform DOE's decision as to whether to carry the Pacific Northwest Hub forward for project-specific funding decisions but will not directly authorize funding for specific Pacific Northwest Hub projects.

If DOE decides to provide funding for the construction and operation of the

Pacific Northwest Hub, DOE will analyze the potential site-specific environmental effects of individual proposed projects and make site-specific funding decisions. In addition to being subject to DOE's NEPA review, with associated public scoping and comment periods as appropriate, individual projects will be required to adhere to the requirements of all applicable Federal, State, and local laws and regulations.

Purpose and Need for the Proposed Action

The purpose and need for DOE's action is to comply with its statutory mandate in BIL to catalyze investment in the production, processing, delivery, storage, and end-use of clean hydrogen; and contribute to the development of a national clean hydrogen network. The proposed action of funding the Pacific Northwest Hub would fulfill this mandate by accelerating the deployment of clean hydrogen technologies and enabling infrastructure to attract greater investments from the private sector and promote substantial U.S. manufacturing of numerous hydrogen technologies.

DOE's purpose and need in funding the Pacific Northwest Hub also includes funding a clean hydrogen hub that meets certain BIL criteria for the regional hubs program. The proposed Pacific Northwest Hub meets these criteria by:

- Demonstrating feedstock diversity by including the production of clean hydrogen from renewable energy sources.
- Demonstrating end use diversity by including the use of clean hydrogen in the electric power generation, industry, and transportation sectors.
- Enabling DOE to meet the geographic diversity criterion by being located in the Pacific Northwest region and using energy resources that are abundant in that region.
- Creating opportunities for skilled training and long-term employment for residents in the region.

Proposed Action, No Action, and Preliminary Alternatives

Proposed Action

DOE's proposed action is to provide funding to support the development of the Pacific Northwest Hub, as proposed by PNWH2 Association. The Pacific Northwest Hub intends to produce clean hydrogen through a variety of hydrogen production technologies, storage, delivery, and end-use applications, all within the Pacific Northwest region. Hydrogen production technologies being considered include various forms of electrolysis, the application of

electrical energy to water to generate pure oxygen and hydrogen. Methods of hydrogen storage may include above-ground tanks, tube trailers, and/or storage using “line pack”, in which a pipeline holds hydrogen when the pipeline is not in use for transporting hydrogen. Delivery options being considered include pipelines, refueling stations, liquefaction, and trucking. A broad variety of end-use applications are being considered, including fuel cell electric trucks, fuel cell electric buses, cargo handling equipment, industrial heat, blending to natural gas distribution systems, power generation, data centers, stationary fuel cells, and production of hydrogen derivatives, including ammonia.

Specific Pacific Northwest Hub project details and site locations are in development. DOE will evaluate specific projects and site locations in subsequent tiered NEPA reviews.

No Action Alternative

Under the No Action Alternative, DOE would not provide funding to the PNWH2 Association for the construction and operation of the Pacific Northwest Hub, with the assumption that the H2Hub would not be developed. The no action alternative provides a benchmark for comparison with environmental impacts of the other alternatives.

Preliminary Action Alternatives

The EIS will evaluate reasonable alternatives that are technically and economically feasible and meet the purpose and need for the proposed action. Preliminarily, DOE has identified three alternatives that potentially address the purpose and need stated above:

1. DOE funding for the proposed Pacific Northwest Hub: The proposed action alternative as described above.

2. DOE funding for an expanded Pacific Northwest Hub: An action alternative that considers the hydrogen technologies and infrastructure in the proposed action plus reasonably foreseeable clean hydrogen technologies and infrastructure that, while not currently considered in the proposed action, could be proposed for DOE funding.

3. DOE funding for a reduced Pacific Northwest Hub: An action alternative that is smaller in scope wherein DOE would fund only a portion of the proposed action.

Summary of Potential Impacts

DOE’s analysis in the EIS will focus on potentially significant environmental impacts from construction and

operation of the Pacific Northwest Hub’s proposed types of hydrogen technologies and infrastructure, as well as the potential cumulative impacts resulting from reasonably foreseeable past, present, and future projects in the same region. Accordingly, in the EIS, DOE anticipates evaluating potential non-site-specific impacts related to: (1) land use and infrastructure, (2) atmospheric conditions and air quality, (3) climate change and greenhouse gasses, (4) hydrologic conditions and water quality, (5) geology, seismicity and soils, (6) socioeconomic conditions, (7) environmental justice, (8) energy resources, (9) noise and vibration, (10) transportation and accidents, (11) intentional destructive acts, and (12) human health and safety. This list is not intended to be all-inclusive or to imply a predetermination of potential impacts. DOE invites interested stakeholders to suggest specific issues, including possible mitigation measures, within these general categories or others, to be considered in the EIS.

Anticipated Permits and Authorizations

DOE does not anticipate that permits and authorizations will be needed for agency action because it will not authorize the construction and operation of any project to be included in the Pacific Northwest Hub. The permits and authorizations required for those projects will be identified in subsequent site-specific NEPA analyses for those projects.

Schedule for Decision-Making Process

After the draft EIS is completed, DOE will publish a notice of availability (NOA) and request public comments on the draft EIS. DOE currently expects to issue the NOA in August 2025. After the public comment period ends, DOE will review and respond to comments received and will develop the final EIS. DOE currently expects to make the final EIS available to the public in April 2026. A record of decision will be completed no sooner than 30 days after the final EIS is released, in accordance with applicable laws and regulations.

Scoping Process

This NOI commences the public scoping process to identify issues and potential alternatives for consideration in the EIS. Throughout the scoping process, Federal agencies, Tribes, State and local governments, and the public have the opportunity to help DOE identify significant resources and issues, reasonable alternatives, mitigation measures, and other pertinent information that DOE should consider in the EIS. DOE will hold public

scoping meetings at the times and dates described above under the **DATES** section. DOE will post information on how to participate in the virtual and in-person public meetings on the EIS website listed previously, in advance of the meetings. The public will have the opportunity to comment on the scope of the EIS. DOE representatives will be available to answer questions and provide additional information on the NEPA process to meeting attendees. In addition to providing comments at the public scoping meetings, stakeholders may submit written comments as described in the **ADDRESSES** section.

Comments may be broad in nature or restricted to specific areas of concern, but they should be directly relevant to the NEPA process, or potential environmental impacts. The scoping process allows the public and interested parties to shape the EIS impact analysis, focusing on the areas of greatest importance and identifying areas requiring less attention. DOE will consider the comments received on the scope of the EIS during the 75-day scoping period as it prepares the draft EIS.

OCED does not consider anonymous scoping comments. Please include your name and address as part of your scoping comment. All scoping comments, including the names, addresses, and other personally identifiable information included in the comment, will be part of the administrative record. DOE will protect privileged or confidential information that you submit when required by Exemption 4 of the Freedom of Information Act (FOIA), which applies to trade secrets and commercial or financial information that is privileged or confidential. Please label privileged or confidential information “Contains Confidential Information” and consider submitting such information as a separate attachment. Information that is not labeled as privileged or confidential may be regarded by DOE as suitable for public release. DOE will invite Tribal government-to-government consultations.

Request for Comment on Alternatives and Effects, as Well as on Relevant Information, Studies, or Analyses With Respect to the Proposed Action

Federal, State, and local agencies, along with Indian Tribal Nations and other stakeholders that may be interested in or affected by the proposed action, are invited to participate in the scoping process and, if eligible, may request or be requested by DOE to participate in the development of the environmental analysis as a cooperating

agency. DOE requests data, comments, views, information, analysis, alternatives, or suggestions relevant to the proposed action from the public; affected Federal, Tribal, State, and local governments, agencies, and offices; the scientific community; industry; or any other interested party.

Specifically, DOE requests information on the following topics:

1. Potential effects that the proposed action could have on biological, physical, socioeconomic, cultural, or other resources.
2. Other potential reasonable alternatives to the proposed action that DOE should consider, including additional or alternative avoidance, minimization, and mitigation measures.
3. Information on other current or planned activities in, or in the vicinity of, the proposed action, that could impact one another or contribute to cumulative impacts.
4. Other information, studies, or analyses relevant to the proposed action and its impacts on the human environment.

To promote informed decision-making, comments should be as specific as possible and should provide as much detail as necessary to meaningfully and fully inform DOE of why the issues raised are important to the agency's review of the proposed action.

The draft EIS will include as an appendix a summary of issues raised in public scoping comments that DOE considered in preparing the EIS and comments outside the scope of the analysis.

Signing Authority

This document of the Department of Energy was signed on December 13, 2024, by Kelly Cummins, Acting Director, Office of Clean Energy Demonstrations, pursuant to delegated authority from the Secretary of Energy. That document with the original signature and date is maintained by DOE. For administrative purposes only, and in compliance with requirements of the Office of the Federal Register, the undersigned DOE Federal Register Liaison Officer has been authorized to sign and submit the document in electronic format for publication, as an official document of the Department of Energy. This administrative process in no way alters the legal effect of this document upon publication in the **Federal Register**.

Signed in Washington, DC, on December 13, 2024.

Treena V. Garrett,

Federal Register Liaison Officer, U.S. Department of Energy.

[FR Doc. 2024–29994 Filed 12–17–24; 8:45 am]

BILLING CODE 6450–01–P

DEPARTMENT OF ENERGY

Notice of Intent To Prepare an Environmental Impact Statement for the California Hydrogen Hub (ARCHES), (DOE/EIS–0570)

AGENCY: Office of Clean Energy Demonstrations, U.S. Department of Energy.

ACTION: Notice of intent to prepare an environmental impact statement, notice of scoping meetings, request for comments.

SUMMARY: The U.S. Department of Energy (DOE) announces its intent to prepare an Environmental Impact Statement (EIS) pursuant to the National Environmental Policy Act (NEPA) and applicable NEPA implementing regulations to assess the potential environmental impacts of the proposed action of providing financial assistance to the Alliance for Renewable Clean Hydrogen Energy Systems (also referred to as ARCHES) to facilitate the design, construction, operation and maintenance of the California Hydrogen Hub in the state of California. DOE is issuing this Notice of Intent to inform the public about the proposed action; announce plans to conduct public scoping meetings; invite public participation in the scoping process; and solicit public comments for consideration in establishing the scope of the EIS, including the range of reasonable alternatives and the potential environmental impacts to be analyzed.

DATES: The public scoping period for the EIS starts with the publication of this notice of intent (NOI) and ends on March 3, 2025. DOE will hold one virtual public scoping meeting at the following date and time (pacific time):

- Tuesday, January 28, 2025 from 4:30–7:30 p.m. Pacific Time.

DOE will hold three in-person public scoping meetings. Dates, times, and locations are to be determined and will be shared on the DOE's web page for this EIS no less than 15 days before the meetings.

In addition, DOE will have an open virtual public meeting space available for the public. This public meeting space will open on Monday January 20, 2025, at [acedarcheseis.com](https://www.acedarcheseis.com) and stay

open through the duration of the scoping period.

All meetings are open to the public and free to attend. Details on how to participate in the virtual and in-person public scoping meetings are available on the DOE's web page for this EIS: <https://www.energy.gov/nepa/doeeis-0570-california-hydrogen-hub-multiple-locations>. In defining the scope of the EIS, DOE will consider all scoping comments received or postmarked by March 3, 2025. Comments received or postmarked after the scoping period end date will be considered to the extent practicable.

ADDRESSES: Oral or written comments may be provided at the public scoping meetings or submitted in any of the following ways:

- Through the *regulations.gov* web portal: Navigate to www.regulations.gov and search for Docket No. DOE–HQ–2024–0087 and follow the instructions for submitting comments; or
- *Mail or Hand Delivery Service:* Send comments in an envelope labeled “DOE/EIS–0570” and addressed to Jacobs, Attention: Rosa Esquivel, 2600 Michelson Drive, Suite 500, Irvine, CA 92612–6506.

FOR FURTHER INFORMATION CONTACT: Kristin Welch, Project Manager, Office of Clean Energy Demonstrations, U.S. Department of Energy, 1000 Independence Ave. SW, Washington, DC 20585, email OCED_ARCHES_EIS@hq.doe.gov, or telephone (240) 981–0461.

SUPPLEMENTARY INFORMATION:

Background

In the Infrastructure Investment and Jobs Act, commonly known as the Bipartisan Infrastructure Law (BIL), Congress established and funded a Regional Clean Hydrogen Hubs (H2Hubs) program to create regional networks of hydrogen producers, consumers, and local connective infrastructure to accelerate the use of hydrogen as a clean energy carrier. The Office of Clean Energy Demonstrations (OCED) within DOE is implementing the Regional Clean Hydrogen Hubs program and will use the NEPA process to help it decide whether to provide financial assistance for the H2Hubs.

Congress directed DOE to select H2Hubs using certain criteria. Specifically, Congress directed DOE to select H2Hubs that will use a diversity of feedstocks to produce clean hydrogen, including at least one H2Hub that will demonstrate the production of clean hydrogen from fossil fuels, one H2Hub that will demonstrate the production of clean hydrogen from

renewables, and one H2Hub that will demonstrate the production of clean hydrogen from nuclear energy. Congress also directed DOE to select H2Hubs that will use clean hydrogen in a diversity of end uses, including at least one H2Hub that will demonstrate the use of clean hydrogen in the following sectors: electric power generation, industrial, residential and commercial heating, and transportation. Congress required that DOE give priority to regional clean hydrogen hubs that are likely to create opportunities for skilled training and long-term employment to the greatest number of residents of the region. Congress also directed DOE to include geographic diversity, directing that DOE locate H2Hubs in different regions of the United States, and that the H2Hubs are to use the energy resources that are abundant in their respective regions. Congress further required DOE to select, to the maximum extent practicable, at least two H2Hubs in the regions of the United States with the greatest natural gas resources.

DOE issued a Funding Opportunity Announcement (FOA-0002779) to solicit applications for H2Hubs. DOE selected the California Hydrogen Hub for award negotiations following a rigorous Merit Review process to identify meritorious applications to the Regional Clean Hydrogen Hubs Program based on the criteria listed in FOA-0002779. DOE has provided limited funding in support of preliminary California Hydrogen Hub planning activities.

The California Hydrogen Hub, as proposed, satisfies certain criteria Congress required in the BIL for the Regional Clean Hydrogen Hubs program. The California Hydrogen Hub has the potential to demonstrate the production of clean hydrogen from renewable energy resources. The California Hydrogen Hub proposes to use clean hydrogen in a diversity of end uses including but not limited to electric power generation and transportation. Further, the California Hydrogen Hub would create opportunities for skilled training and long-term employment for residents of the region. In addition, the location of the California Hydrogen Hub in the state of California meets the criterion requiring geographic diversity within the Regional Clean Hydrogen Hubs program. The California Hydrogen Hub also satisfies the criterion that DOE select hubs that use the energy resources that are abundant in their respective regions.

The California Hydrogen Hub is proposed to consist of a suite of demonstration projects involving clean

hydrogen production, transportation, and end uses located within California. ARCHES is the primary funding recipient and lead California Hydrogen Hub manager. As currently structured, the California Hydrogen Hub encompasses approximately 35 projects including clean hydrogen production facilities that could produce 450–500 metric tonnes per day of clean hydrogen from renewable electricity and biogenic sources, connective infrastructure including refueling stations and pipelines, and a range of end uses including fuel-cell electric trucks, fuel-cell electric buses, a marine vessel, cargo handling equipment, power generation via turbines, and stationary fuel cells.

Purpose and Scope of the EIS

DOE will prepare an EIS (DOE/EIS-0570) to evaluate the potential impacts to the human environment associated with funding the California Hydrogen Hub. The EIS will evaluate the potential impacts associated with the types of hydrogen infrastructure and technologies proposed in the California Hydrogen Hub, such as impacts from electricity and water usage and rates of emissions, that are inherent to the technologies and infrastructure regardless of where they may be deployed. The EIS will help inform DOE's decision as to whether to carry the California Hydrogen Hub forward for project-specific funding decisions but will not directly authorize funding for specific California Hydrogen Hub projects.

If DOE decides to provide funding for the construction and operation of the California Hydrogen Hub, DOE will analyze the potential site-specific environmental effects of individual proposed projects and make site-specific funding decisions. In addition to being subject to DOE's NEPA review, with associated public scoping and comment periods as appropriate, individual projects will be required to adhere to the requirements of all applicable Federal, State, and local laws and regulations.

Purpose and Need for the Proposed Action

The purpose and need for DOE's action is to comply with its statutory mandate in BIL to catalyze investment in the production, processing, delivery, storage, and end-use of clean hydrogen, and contribute to the development of a national clean hydrogen network. The proposed action of funding the California Hydrogen Hub would fulfill this mandate by accelerating the deployment of clean hydrogen technologies and enabling infrastructure

to attract greater investments from the private sector and promote substantial U.S. manufacturing of numerous hydrogen technologies.

DOE's purpose and need in funding the California Hydrogen Hub also includes funding a clean hydrogen hub that meets certain BIL criteria for the Regional Clean Hydrogen Hubs program. The proposed California Hydrogen Hub meets these criteria by:

- Demonstrating feedstock diversity by including the production of clean hydrogen from renewable energy sources.
- Demonstrating end use diversity by including the use of clean hydrogen in the electric power generation and transportation sectors.
- Enabling DOE to meet the geographic diversity criterion by being located in the California region and using energy resources that are abundant in that region.
- Creating opportunities for skilled training and long-term employment for residents in the region.

Proposed Action, No Action, and Preliminary Alternatives

Proposed Action

DOE's proposed action is to provide funding to support the development of the California Hydrogen Hub, as proposed by ARCHES. The proposed California Hydrogen Hub would include a variety of hydrogen production technologies, storage, delivery, and end-use applications. Hydrogen production technologies being considered include electrolysis utilizing renewable energy sources, and generation from biogenic sources (with possible carbon-dioxide capture). Methods of hydrogen storage may include above-ground tanks and/or tube trailers. Delivery options may include pipelines, trucking, and refueling stations, as well as the delivery of hydrogen derivatives such as ammonia. A broad variety of end-use applications are being considered including fuel-cell electric trucks, fuel-cell electric buses, a marine vessel, cargo handling equipment, power generation via turbines, stationary fuel cells, aviation, trains, other fuel-cell electric vehicles, and ammonia synthesis.

California Hydrogen Hub projects and site locations are in development. DOE will evaluate specific projects and site locations in subsequent tiered NEPA reviews.

No Action Alternative

Under the No Action Alternative, DOE would not provide funding to ARCHES for the construction and

operation of the California Hydrogen Hub, with the assumption that the H2Hub would not be developed. The no action alternative provides a benchmark for comparison with environmental impacts of the other alternatives.

Preliminary Action Alternatives

The EIS will evaluate reasonable alternatives that are technically and economically feasible and meet the purpose and need for the proposed action. Preliminarily, DOE has identified three alternatives that potentially address the purpose and need stated previously:

(1) DOE funding for the proposed California Hydrogen Hub: The proposed action alternative as described above.

(2) DOE funding for an expanded California Hydrogen Hub: An action alternative that considers the hydrogen technologies and infrastructure in the proposed action plus reasonably foreseeable clean hydrogen technologies and infrastructure that, while not currently considered in the proposed action, could be proposed for DOE funding.

(3) DOE funding for a reduced California Hydrogen Hub: An action alternative that is smaller in scope wherein DOE would fund only a portion of the proposed action.

Summary of Potential Impacts

DOE's analysis in the EIS will focus on potentially significant environmental impacts from construction and operation of the California Hydrogen Hub's proposed types of hydrogen technologies and infrastructure, as well as the potential cumulative impacts resulting from reasonably foreseeable past, present, and future projects in the same region. Accordingly, in the EIS, DOE anticipates evaluating potential non-site-specific impacts related to: (1) land use and infrastructure, (2) atmospheric conditions and air quality, (3) climate change and greenhouse gasses, (4) hydrologic conditions and water quality, (5) geology, seismicity and soils, (6) socioeconomic conditions, (7) environmental justice, (8) energy resources, (9) noise and vibration, (10) transportation and accidents, (11) intentional destructive acts, and (12) human health and safety. This list is not intended to be all-inclusive or to imply a predetermination of potential impacts. DOE invites interested stakeholders to suggest specific issues, including possible mitigation measures, within these general categories or others, to be considered in the EIS.

Anticipated Permits and Authorizations

DOE does not anticipate that permits and authorizations will be needed for agency action because it will not authorize the construction and operation of any project to be included in the California Hydrogen Hub. The permits and authorizations required for the California Hydrogen Hub projects will be identified in subsequent site-specific NEPA analyses for those projects.

Schedule for Decision-Making Process

After the draft EIS is completed, DOE will publish a notice of availability (NOA) and request public comments on the draft EIS. DOE currently expects to issue the NOA in October 2025. After the public comment period ends, DOE will review and respond to comments received and will develop the final EIS. DOE currently expects to make the final EIS available to the public in April 2026. A record of decision will be completed no sooner than 30 days after the final EIS is released, in accordance with applicable laws and regulations.

Scoping Process

This NOI commences the public scoping process to identify issues and potential alternatives for consideration in the EIS. Throughout the scoping process, Federal agencies, Tribes, State and local governments, and the public have the opportunity to help DOE identify significant resources and issues, reasonable alternatives, mitigation measures, and other pertinent information that DOE should consider in the EIS. DOE will hold public scoping meetings at the times and dates described above under the **DATES** section. DOE will post information on how to participate in the virtual and in-person public meetings on the EIS website listed previously, in advance of the meetings. The public will have the opportunity to comment on the scope of the EIS. DOE representatives will be available to answer questions and provide additional information on the NEPA process to meeting attendees. In addition to providing comments at the public scoping meetings, stakeholders may submit written comments as described in the **ADDRESSES** section.

Comments may be broad in nature or restricted to specific areas of concern, but they should be directly relevant to the NEPA process, or potential environmental impacts. The scoping process allows the public and interested parties to shape the EIS impact analysis, focusing on the areas of greatest importance and identifying areas requiring less attention. DOE will

consider the comments received on the scope of the EIS during the 75-day scoping period as it prepares the draft EIS.

OCED does not consider anonymous scoping comments. Please include your name and address as part of your scoping comment. All scoping comments, including the names, addresses, and other personally identifiable information included in the comment, will be part of the administrative record. DOE will protect privileged or confidential information that you submit when required by Exemption 4 of the Freedom of Information Act (FOIA), which applies to trade secrets and commercial or financial information that is privileged or confidential. Please label privileged or confidential information "Contains Confidential Information" and consider submitting such information as a separate attachment. Information that is not labeled as privileged or confidential may be regarded by DOE as suitable for public release.

DOE will invite Tribal government-to-government consultations.

Request for Comment on Alternatives and Effects, as Well as on Relevant Information, Studies, or Analyses With Respect to the Proposed Action

Federal, State, and local agencies, along with Indian Tribal Nations and other stakeholders that may be interested in or affected by the proposed action, are invited to participate in the scoping process and, if eligible, may request or be requested by DOE to participate in the development of the environmental analysis as a cooperating agency. DOE requests data, comments, views, information, analysis, alternatives, or suggestions relevant to the proposed action from the public; affected Federal, Tribal, State, and local governments, agencies, and offices; the scientific community; industry; or any other interested party.

Specifically, DOE requests information on the following topics:

(1) Potential effects that the proposed action could have on biological, physical, socioeconomic, cultural, or other resources.

(2) Other potential reasonable alternatives to the proposed action that DOE should consider, including additional or alternative avoidance, minimization, and mitigation measures.

(3) Information on other current or planned activities in, or in the vicinity of, the proposed action, that could impact one another or contribute to cumulative impacts.

(4) Other information, studies, or analyses relevant to the proposed action

and its impacts on the human environment.

To promote informed decision-making, comments should be as specific as possible and should provide as much detail as necessary to meaningfully and fully inform DOE of why the issues raised are important to the agency's review of the proposed action.

The draft EIS will include as an appendix a summary of issues raised in public scoping comments that DOE considered in preparing the EIS and comments outside the scope of the analysis.

Signing Authority

This document of the Department of Energy was signed on December 11, 2024, by Kelly Cummins, Acting Director, Office of Clean Energy Demonstrations, pursuant to delegated authority from the Secretary of Energy. That document with the original signature and date is maintained by DOE. For administrative purposes only, and in compliance with requirements of the Office of the Federal Register, the undersigned DOE Federal Register Liaison Officer has been authorized to sign and submit the document in electronic format for publication, as an official document of the Department of Energy. This administrative process in no way alters the legal effect of this document upon publication in the **Federal Register**.

Signed in Washington, DC, on December 13, 2024.

Treena V. Garrett,

Federal Register Liaison Officer, U.S. Department of Energy.

[FR Doc. 2024–30020 Filed 12–17–24; 8:45 am]

BILLING CODE 6450–01–P

DEPARTMENT OF ENERGY

Energy Information Administration

Agency Information Collection Extension

AGENCY: U.S. Energy Information Administration (EIA), U.S. Department of Energy (DOE).

ACTION: Notice of requests for comments.

SUMMARY: DOE submitted an information collection request for extension as required by the Paperwork Reduction Act of 1995. The information collection requests a three-year extension, with changes, to the Form NWP-830G “Appendix G—Standard Remittance Advice for Payment of Fees”, including annex A to appendix G, under OMB Control Number 1901–

0260. Form NWP-830G is part of the Standard Contract for Disposal of Spent Nuclear Fuel and/or High-Level Radioactive Waste. Generators and owners of spent nuclear fuel and high-level radioactive waste of domestic origin paid fees into the Nuclear Waste Fund based on net electricity generated and sold as defined in the Standard Contract.

DATES: Comments regarding this proposed information collection must be received on or before January 17, 2025. If you anticipate that you will be submitting comments but find it difficult to do so within the period of time allowed by this notice, please advise the DOE Desk Officer at OMB of your intention to make a submission as soon as possible. The Desk Officer may be telephoned at (202) 395–4718.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to www.reginfo.gov/public/do/PRAMain. Find this particular information collection by selecting “Currently under 30-day Review—Open for Public Comments” or by using the search function.

FOR FURTHER INFORMATION CONTACT: If you need additional information, contact Guang Wei, Office of Standard Contract Management, U.S. Department of Energy, telephone (240) 388–5685, or by email at standardcontracts@hq.doe.gov. The forms and instructions are available on DOE's website at <https://www.energy.gov/gc/office-standard-contract-management> and at EIA's website at www.eia.gov/survey/.

SUPPLEMENTARY INFORMATION: This information collection request contains:

- (1) OMB No.: 1901–0260;
- (2) *Information Collection Request Title:* Form NWP-830G, *Standard Contract for Disposal of Spent Nuclear Fuel and/or High-Level Radioactive Waste, Appendix G*;
- (3) *Type of Request:* Three-year extension with changes;
- (4) *Purpose:* The Form NWP-830G survey included in the *Standard Contract for Disposal of Spent Nuclear Fuel and/or High-Level Radioactive Waste, Appendix G*, collects information on energy resource reserves, production, demand, technology, and related economic and statistical information.

The Federal Energy Administration Act of 1974 (15 U.S.C. 761 *et seq.*) and the DOE Organization Act (42 U.S.C. 7101 *et seq.*) require EIA to carry out a centralized, comprehensive, and unified energy information program. This program collects, evaluates, assembles, analyzes, and disseminates information

on energy resource reserves, production, demand, technology, and related economic and statistical information. This information is used to assess the adequacy of energy resources to meet near and longer-term domestic demands.

As part of its effort to comply with the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*), EIA provides the general public and other federal agencies with opportunities to comment on collections of energy information conducted by or in conjunction with EIA. Also, EIA will later seek approval for this collection by OMB under Section 3507(a) of the Paperwork Reduction Act of 1995.

The Nuclear Waste Policy Act of 1982 (42 U.S.C. 10101 *et seq.*) required that DOE enter into Standard Contracts with all generators or owners of spent nuclear fuel and high-level radioactive waste of domestic origin. Form NWP-830G *Appendix G—Standard Remittance Advice for Payment of Fees*, including annex A to appendix G, is an Appendix to this Standard Contract. Appendix G and annex A to appendix G are commonly referred to as Remittance Advice (RA) forms. RA forms must be submitted quarterly by generators and owners of spent nuclear fuel and high-level radioactive waste of domestic origin who signed the Standard Contract. Appendix G is designed to serve as the source document for entries into DOE accounting records to transmit data to DOE concerning payment of fees into the Nuclear Waste Fund for spent nuclear fuel and high-level waste disposal. Annex A to appendix G is used to provide data on the amount of net electricity generated and sold, upon which these fees are based.

(4a) *Changes to Information Collection:* The reduction of 20 annual burden hours for Form NWP-830G results from the reduction of the number of total respondents representing reactors that decreased from 95 to 94. One reactor permanently shut down since the last clearance cycle and no longer is required to pay fees into the Nuclear Waste Fund nor respond to this survey.

(5) *Annual Estimated Number of Respondents:* 94.

(6) *Annual Estimated Number of Total Responses:* 376.

(7) *Annual Estimated Number of Burden Hours:* 1,880.

(8) *Annual Estimated Reporting and Recordkeeping Cost Burden:* \$171,381 (1,880 estimated number of burden hours times \$91.16 per hour current average loaded wage rate). DOE estimates that respondents will have no additional costs associated with the

surveys other than the burden hours and the maintenance of the information during the normal course of business.

Statutory Authority: 15 U.S.C. 772(b), 42 U.S.C. 7101, and 42 U.S.C. 10101 *et seq.*

Signed in Washington, DC, on December 12, 2024.

Samson A. Adeshiyan,

Director, Office of Statistical Methods and Research, U.S. Energy Information Administration.

Federal Energy Regulatory Commission

Combined Notice of Filings

Take notice that the Commission has received the following Natural Gas Pipeline Rate and Refund Report filings:

Filings Instituting Proceedings

Docket Numbers: RP25–277–000.

Applicants: Bear Creek Storage Company, L.L.C.

Description: Compliance filing: Annual Fuel Summary 2024 to be effective N/A.

Filed Date: 12/11/24.

Accession Number: 20241211–5053.

Comment Date: 5 p.m. ET 12/23/24.

Docket Numbers: RP25–278–000.

Applicants: Columbia Gas Transmission, LLC.

Description: Compliance filing: Penalty Revenue Crediting Report 2024 to be effective N/A.

Filed Date: 12/12/24.

Accession Number: 20241212–5128.

Comment Date: 5 p.m. ET 12/24/24.

Docket Numbers: RP25–279–000.

Applicants: Columbia Gulf Transmission, LLC.

Description: Compliance filing: Penalty Revenue Crediting Report 2024 to be effective N/A.

Filed Date: 12/12/24.

Accession Number: 20241212–5147.

Comment Date: 5 p.m. ET 12/24/24.

Any person desiring to intervene, to protest, or to answer a complaint in any of the above proceedings must file in accordance with Rules 211, 214, or 206 of the Commission's Regulations (18 CFR 385.211, 385.214, or 385.206) on or before 5:00 p.m. Eastern time on the specified comment date. Protests may be considered, but intervention is necessary to become a party to the proceeding.

Filings in Existing Proceedings

Docket Numbers: RP24–744–000

Applicants: Southern Natural Gas Company, L.L.C.

Description: Report Filing: SNG Rate Case 45-Day Update Filing to correct filing type to be effective N/A.

Filed Date: 12/12/24

Accession Number: 20241212–5094

Comment Date: 5 p.m. ET 12/24/24

Any person desiring to protest in any of the above proceedings must file in accordance with Rule 211 of the Commission's Regulations (18 CFR 385.211) on or before 5:00 p.m. Eastern time on the specified comment date.

The filings are accessible in the Commission's eLibrary system (<https://elibrary.ferc.gov/idmws/search/fercensearch.asp>) by querying the docket number.

eFiling is encouraged. More detailed information relating to filing requirements, interventions, protests, service, and qualifying facilities filings can be found at: <https://www.ferc.gov/docs-filing/efiling/filing-req.pdf>. For other information, call (866) 208–3676 (toll free). For TTY, call (202) 502–8659.

The Commission's Office of Public Participation (OPP) supports meaningful public engagement and participation in Commission proceedings. OPP can help members of the public, including landowners, environmental justice communities, Tribal members and others, access publicly available information and navigate Commission processes. For public inquiries and assistance with making filings such as interventions, comments, or requests for rehearing, the public is encouraged to contact OPP at (202) 502–6595 or OPP@ferc.gov.

Dated: December 12, 2024.

BILLING CODE 6717-01-P

ENVIRONMENTAL PROTECTION AGENCY

[EPA-HQ-OAR-2020-0505; FRL-12496-01-OMS]

Agency Information Collection Activities; Submission to the Office of Management and Budget for Review and Approval; Comment Request; NESHAP for Carbon Black Production (Renewal)

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: The Environmental Protection Agency has submitted an information collection request (ICR), NESHAP for Carbon Black Production (EPA ICR Number 2677.03, OMB Control Number 2060-0738) to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act. This is a proposed extension of the ICR, which is currently approved through December 31, 2024. Public comments were previously requested via the **Federal Register** on August 6, 2024 during a 60-day comment period. This notice allows for an additional 30 days for public comments.

DATES: Comments may be submitted on or before January 17, 2025.

ADDRESSES: Submit your comments, referencing Docket ID Number EPA-HQ-OAR-2020-0505, to EPA online using <https://www.regulations.gov/> (our preferred method), by email to a-and-r-docket@epa.gov, or by mail to: EPA Docket Center, Environmental Protection Agency, Mail Code 28221T, 1200 Pennsylvania Ave. NW, Washington, DC 20460.

The EPA's policy is that all comments received will be included in the public docket without change including any personal information provided, unless the comment includes profanity, threats, information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Do not submit electronically to www.regulations.gov any information you consider to be CBI, proprietary business information (PBI), or other information whose disclosure is restricted by statute.

Submit written comments and recommendations to OMB for the proposed information collection within 30 days of publication of this notice to www.reginfo.gov/public/do/PRAMain. Find this particular information collection by selecting "Currently under 30-day Review—Open for Public Comments" or by using the search function.

FOR FURTHER INFORMATION CONTACT:

Muntasir Ali, Sector Policies and Program Division (D243-05), Office of Air Quality Planning and Standards, U.S. Environmental Protection Agency, Research Triangle Park, North Carolina 27711; telephone number: (919) 541-0833; email address: ali.muntasir@epa.gov.

SUPPLEMENTARY INFORMATION: This is a proposed extension of the ICR, which is currently approved through December 31, 2024. An agency may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

Public comments were previously requested via the **Federal Register** on April 23, 2024, during a 60-day comment period (89 FR 30358). This notice allows for an additional 30 days for public comments. Supporting documents which explain in detail the information that the EPA will be collecting are available in the public docket for this ICR. The docket can be viewed online at <https://www.regulations.gov> or in person at the EPA Docket Center, WJC West Building, Room 3334, 1301 Constitution Ave. NW, Washington, DC. The telephone number for the Docket Center is 202-566-1744. For additional information about EPA's public docket, visit <http://www.epa.gov/dockets>.

Abstract: The National Emission Standards for Hazardous Air Pollutants (NESHAP) for the Generic Maximum Achievable Control Technology (GMACT) Standards published at (40 CFR part 63, subpart YY) were promulgated on July 12, 2002 (67 FR 46257), and amended on April 13, 2005

(70 FR 19266). These regulations apply to existing and new carbon black (CB), cyanide (CY), ethylene (ET), and spandex (SP) facilities that would be subject to the major source provisions specified under the GMACT NESHAP. New facilities include those that commenced construction or reconstruction after the date of proposal. This information is being collected to assure compliance with 40 CFR part 63, subpart YY. In general, all NESHAP standards require initial notifications, performance tests, and periodic reports by the owners/operators of the affected facilities. They are also required to maintain records of the occurrence and duration of any startup, shutdown, or malfunction in the operation of an affected facility, or any period during which the monitoring system is inoperative. These notifications, reports, and records are essential in determining compliance, and are required of all affected facilities subject to NESHAP.

Form Numbers: 5900–484.

Respondents/affected entities:

Owners and operators of carbon black production facilities.

Respondent's obligation to respond: Mandatory (40 CFR part 63, subpart YY).

Estimated number of respondents: 15 (total).

Frequency of response: Annually, semiannually.

Total estimated burden: 240 hours (per year). Burden is defined at 5 CFR 1320.3(b).

Total estimated cost: \$84,300 (per year), includes \$51,500 annualized capital or operation & maintenance costs.

Changes in the Estimates: The increase in burden from the most recently approved ICR is due to a revised application of costs when compared to the final RTR ICR. In the previous ICR renewal, semiannual reports were incorrectly labeled as occurring once per year. This line item is now adjusted to occur twice per year. Additionally, there is an increase in costs, which is due to the use of updated labor rates. This ICR uses labor rates from the most recent Bureau of Labor Statistics report (December 2023) to calculate respondent burden costs. Capital/Startup and O&M costs also increased due to a revised application of costs when compared to the final RTR ICR. The Capital/Startup and O&M costs were increased from 2021 \$ to 2023 \$ using the CEPCI Index.

Courtney Kerwin,

Director, Information Engagement Division.

Agency Information Collection Activities; Submission to the Office of Management and Budget for Review and Approval; Comment Request National Volatile Organic Compound Emission Standards for Architectural Coatings (Renewal)

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: The Environmental Protection Agency (EPA) has submitted an information collection request (ICR), National Volatile Organic Compound Emission Standards for Architectural Coatings (EPA ICR Number 1750.10, OMB Control Number 2060–0393) to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act. This is a proposed extension of the ICR, which is currently approved through December 31, 2024. Public comments were previously requested via the **Federal Register** on May 18, 2023 during a 60-day comment period. This notice allows for an additional 30 days for public comments.

DATES: Comments may be submitted on or before January 17, 2025.

ADDRESSES: Submit your comments, referencing Docket ID Number EPA–HQ–OAR–2011–0371 to EPA online using <https://www.regulations.gov/> (our preferred method), by email to a-and-r-docket@epa.gov, or by mail to: EPA Docket Center, Environmental Protection Agency, Mail Code 28221T, 1200 Pennsylvania Ave. NW, Washington, DC 20460.

The EPA's policy is that all comments received will be included in the public docket without change including any personal information provided, unless the comment includes profanity, threats, information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute.

Submit written comments and recommendations to OMB for the proposed information collection within 30 days of publication of this notice to www.reginfo.gov/public/do/PRAMain. Find this particular information collection by selecting "Currently under 30-day Review—Open for Public Comments" or by using the search function.

FOR FURTHER INFORMATION CONTACT: Muntasir Ali, Sector Policies and

Program Division (D243–05), Office of Air Quality Planning and Standards, U.S. Environmental Protection Agency, Research Triangle Park, North Carolina, 27711; telephone number: (919) 541–0833; email address: ali.muntasir@epa.gov.

SUPPLEMENTARY INFORMATION: This is a proposed extension of the ICR, which is currently approved through December 31, 2024. An agency may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

Public comments were previously requested via the **Federal Register** on April 23, 2024, during a 60-day comment period (89 FR 30358). This notice allows for an additional 30 days for public comments. Supporting documents, which explain in detail the information that the EPA will be collecting, are available in the public docket for this ICR. The docket can be viewed online at www.regulations.gov or in person at the EPA Docket Center, WJC West, Room 3334, 1301 Constitution Ave. NW, Washington, DC. The telephone number for the Docket Center is 202–566–1744. For additional information about EPA's public docket, visit <http://www.epa.gov/dockets>.

Abstract: The EPA is required under section 183(e) of the Clean Air Act (CAA) to regulate volatile organic compound (VOC) emissions from the use of consumer and commercial products. Pursuant to CAA section 183(e)(3), the EPA published a list of consumer and commercial products and a schedule for their regulation (60 FR 15264). Architectural and industrial maintenance coatings are included on the list, and the standards for such coatings are codified at 40 CFR part 59, subpart D. The information collection includes initial reports and periodic recordkeeping necessary for the EPA to ensure compliance with federal standards for VOC in architectural coatings. Respondents are manufacturers, distributors, and importers of architectural coatings. Responses to the collection are mandatory under 40 CFR part 59, subpart D—National Volatile Organic Compound Emission Standards for Architectural Coatings. All information submitted to the EPA for which a claim of confidentiality is made will be safeguarded according to the agency policies set forth in 40 CFR part 2, subpart B—Confidentiality of Business Information.

Form Numbers: None.

Respondents/affected entities: Manufacturers and importers of architectural coatings.

Respondent's obligation to respond: Mandatory (40 CFR part 59, subpart D)

Estimated number of respondents: 520 (total).

Frequency of response: Initially, annually.

Total estimated burden: 24,500 hours (per year). Burden is defined at 5 CFR 1320.3(b).

Total estimated cost: \$1,550,000 (per year), includes \$0 annualized capital or operation & maintenance costs.

Changes in the Estimates: The increase in burden from the most recently approved ICR is due to an adjustment(s). The adjustment increase in burden from the most recently approved ICR is due to an increase in the number of respondents due to growth in the industry. There is an increase in costs from the most recently approved ICR due to the increased respondent count and the use of updated labor rates. This ICR uses labor rates from the most recent Bureau of Labor Statistics report (September 2022) to calculate respondent burden costs.

Courtney Kerwin,

Director, Information Engagement Division.

ENVIRONMENTAL PROTECTION AGENCY

[EPA-HQ-OPP-2024-0093; FRL-12084-01-OCSPP]

Notice of Receipt of Requests to Voluntarily Cancel Certain Pesticide Registrations and/or Amend Registrations To Terminate Certain Uses

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: In accordance with the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA), EPA is issuing

a notice of receipt of requests by the registrants to voluntarily cancel certain pesticide products and/or to amend certain pesticide product registrations to terminate one or more uses. EPA intends to grant these requests at the close of the comment period for this announcement unless the Agency receives substantive comments within the comment period that would merit its further review of the requests, or unless the registrants withdraw its requests. If these requests are granted, any sale, distribution, or use of products listed in this notice will be permitted after the registration has been cancelled and/or use terminated only if such sale, distribution, or use is consistent with the terms as described in the final order.

DATES: Comments must be received on or before January 17, 2025.

ADDRESSES: Submit your comments, identified by docket identification (ID) number EPA-HQ-OPP-2024-0093, through the *Federal eRulemaking Portal* at <https://www.regulations.gov>. Follow the online instructions for submitting comments. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Additional instructions on commenting and visiting the docket, along with more information about dockets generally, is available at <https://www.epa.gov/dockets>.

FOR FURTHER INFORMATION CONTACT:

Christopher Green, Registration Division (7505T), Office of Pesticide Programs, Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460-0001; telephone number: (202) 566-2707; email address: green.christopher@epa.gov.

SUPPLEMENTARY INFORMATION:

I. General Information

A. Does this action apply to me?

This action is directed to the public in general and may be of interest to a wide range of stakeholders including environmental, human health, and agricultural advocates; the chemical

industry; pesticide users; and members of the public interested in the sale, distribution, or use of pesticides. Since others also may be interested, the Agency has not attempted to describe all the specific entities that may be affected by this action.

B. What should I consider as I prepare my comments for EPA?

1. *Submitting CBI.* Do not submit this information to EPA through <https://www.regulations.gov> or email. Clearly mark the part or all of the information that you claim to be CBI. For CBI information in a disk or CD-ROM that you mail to EPA, mark the outside of the disk or CD-ROM as CBI and then identify electronically within the disk or CD-ROM the specific information that is claimed as CBI. In addition to one complete version of the comment that includes information claimed as CBI, a copy of the comment that does not contain the information claimed as CBI must be submitted for inclusion in the public docket. Information so marked will not be disclosed except in accordance with procedures set forth in 40 CFR part 2.

2. *Tips for preparing your comments.* When preparing and submitting your comments, see the commenting tips at <https://www.epa.gov/dockets/commenting-epa-dockets>.

II. What action is the Agency taking?

This notice announces receipt by EPA of requests from registrants to cancel certain pesticide product registrations and/or terminate certain uses of pesticide product registrations. The affected products and the registrants making the requests are identified in tables 1–3 of this unit.

Unless a request is withdrawn by the registrant or if the Agency determines that there are substantive comments that warrant further review of this request, EPA intends to issue an order canceling and/or amending the affected registrations.

87811	Willowood Tebuconazole, LLC, Division Name: C/O Generic Crop Science, LLC, 1887 Whitney Mesa Drive, #9740, Henderson, NV 89014–2069.
94278	Oasis Chemicals, LLC, 4511 11th Street, Lubbock, TX 79416.
101563	Environmental Science U.S., LLC, 5000 Centregreen Way, Suite 400, Cary, NC 27513.

III. What is the Agency's authority for taking this action?

Section 6(f)(1) of FIFRA (7 U.S.C. 136d(f)(1)) provides that a registrant of a pesticide product may at any time request that any of its pesticide

registrations be canceled or amended to terminate one or more uses. FIFRA further provides that, before acting on the request, EPA must publish a notice of receipt of any such request in the **Federal Register**.

Section 6(f)(1)(B) of FIFRA (7 U.S.C. 136d(f)(1)(B)) requires that before acting on a request for voluntary cancellation, EPA must provide a 30-day public comment period on the request for voluntary cancellation or use termination. In addition, FIFRA section

6(f)(1)(C) (7 U.S.C. 136d(f)(1)(C)) requires that EPA provide a 180-day comment period on a request for voluntary cancellation or termination of any minor agricultural use before granting the request, unless:

1. The registrants request a waiver of the comment period, or
2. The EPA Administrator determines that continued use of the pesticide would pose an unreasonable adverse effect on the environment.

The registrants have requested that EPA waive the 180-day comment period. Accordingly, EPA will provide a 30-day comment period on the proposed requests.

IV. Procedures for Withdrawal of Requests

Registrants who choose to withdraw a request for product cancellation or use termination should submit the withdrawal in writing to the person listed under **FOR FURTHER INFORMATION CONTACT**. If the products have been subject to a previous cancellation action, the effective date of cancellation and all other provisions of any earlier cancellation action are controlling.

V. Provisions for Disposition of Existing Stocks

Existing stocks are those stocks of registered pesticide products that are currently in the United States and that were packaged, labeled, and released for shipment prior to the effective date of the action. If the requests for voluntary cancellation and/or amendments to terminate uses are granted, the Agency intends to publish the cancellation order in the **Federal Register**.

In any order issued in response to these requests for cancellation of product registrations and/or for amendments to terminate uses, EPA proposes to include the following provisions for the treatment of any existing stocks of the products listed in tables 1 and 2 of unit II.

For voluntary product cancellations, registrants will be permitted to sell and distribute existing stocks of voluntarily canceled products for 1 year after the effective date of the cancellation, which will be the date of publication of the cancellation order in the **Federal Register**. Thereafter, registrants will be prohibited from selling or distributing the products identified in table 1 of unit II, except for export consistent with FIFRA section 17 (7 U.S.C. 136o) or for proper disposal.

Once EPA has approved product labels reflecting the requested amendments to terminate uses, registrants will be permitted to sell or distribute products under the previously

approved labeling for a period of 18 months after the date of **Federal Register** publication of the cancellation order, unless other restrictions have been imposed. Thereafter, registrants will be prohibited from selling or distributing the products whose labels include the terminated uses identified in table 2 of unit II, except for export consistent with FIFRA section 17 or for proper disposal.

Persons other than the registrant may sell, distribute, or use existing stocks of canceled products and/or products whose labels include the terminated uses until supplies are exhausted, provided that such sale, distribution, or use is consistent with the terms of the previously approved labeling on, or that accompanied, the canceled products and/or terminated uses.

Authority: 7 U.S.C. 136 *et seq.*

Dated: December 11, 2024.

Daniel Rosenblatt,

Acting Director, Registration Division, Office of Pesticide Programs.

Agency Information Collection Activities; Submission to the Office of Management and Budget for Review and Approval; Comment Request; Comment Request; NSPS for Small Industrial-Commercial-Institutional Steam Generating Units (Renewal)

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: The Environmental Protection Agency (EPA) has submitted an information collection request (ICR), NSPS for Small Industrial-Commercial-Institutional Steam Generating Units (EPA ICR Number 1564.12, OMB Control Number 2060–0202) to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act. This is a proposed extension of the ICR, which is currently approved through December 31, 2024. Public comments were previously requested via the **Federal Register** (88 FR 31748) on May 18, 2023 during a 60-day comment period. This notice allows for an additional 30 days for public comments.

DATES: Additional comments may be submitted on or before January 17, 2025.

ADDRESSES: Submit your comments, referencing Docket ID Number EPA–HQ–OAR–2023–0121, to EPA online using <https://www.regulations.gov/> (our preferred method), by email to a-and-r-docket@epa.gov, or by mail to: EPA Docket Center, Environmental Protection Agency, Mail Code 28221T, 1200 Pennsylvania Ave. NW, Washington, DC 20460.

The EPA's policy is that all comments received will be included in the public docket without change including any personal information provided, unless the comment includes profanity, threats, information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute.

Submit written comments and recommendations to OMB for the proposed information collection within 30 days of publication of this notice to www.reginfo.gov/public/do/PRAMain. Find this particular information collection by selecting “Currently under 30-day Review—Open for Public Comments” or by using the search function.

FOR FURTHER INFORMATION CONTACT:

Muntasir Ali, Sector Policies and Program Division (D243–05), Office of Air Quality Planning and Standards, U.S. Environmental Protection Agency, Research Triangle Park, North Carolina, 27711; telephone number: (919) 541–0833; email address: ali.muntasir@epa.gov.

SUPPLEMENTARY INFORMATION: This is a proposed extension of the ICR, which is currently approved through December 31, 2024. An agency may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

Public comments were previously requested via the **Federal Register** on April 23, 2024, during a 60-day comment period (89 FR 30358). This notice allows for an additional 30 days for public comments. Supporting documents, which explain in detail the information that the EPA will be collecting, are available in the public docket for this ICR. The docket can be viewed online at www.regulations.gov or in person at the EPA Docket Center, WJC West, Room 3334, 1301 Constitution Ave. NW, Washington, DC. The telephone number for the Docket Center is 202–566–1744. For additional information about EPA's public docket, visit <http://www.epa.gov/dockets>.

Abstract: The New Source Performance Standards (NSPS) for Small Industrial-Commercial-Institutional Steam Generation Units (40

CFR part 60, subpart Dc) were proposed on June 9, 1989; promulgated on September 12, 1990; and amended last on February 16, 2012. These regulations apply to existing facilities and new industrial-commercial-institutional steam generating units with a maximum design heat input capacity of 29 megawatts (MW) (100 MMBtu/hr) or less, but greater than or equal to 2.9 MW (10 MMBtu/hr), commencing construction, modification, or reconstruction after June 9, 1989. New facilities include those that commenced construction, modification or reconstruction after the date of the proposal. This information is being collected to assure compliance with 40 CFR part 60, subpart Dc.

Form Numbers: None.

Respondents/affected entities: Small industrial-commercial-institutional steam generators.

Respondent's obligation to respond: Mandatory (40 CFR part 60, subpart Dc).

Estimated number of respondents: 356 (total).

Frequency of response: Semiannually.

Total estimated burden: 241,000 hours (per year). Burden is defined at 5 CFR 1320.3(b).

Total estimated cost: \$51,700,000 (per year), includes \$21,300,000 annualized capital or operation & maintenance costs.

Changes in the Estimates: There is an adjustment increase in the respondent burden, and capital and O&M costs from the most-recently approved ICR. This increase is not due to any program changes. The change in burden and costs is due to an increase in the number of respondents. This ICR assumes an industry growth rate of 11 respondents per year, or an increase of 33 respondents, since the last ICR renewal period, which results in an increase in burden and the number of responses submitted. The industry growth also results in an increase in capital O&M costs. There is also an increase in costs, due to the use of updated labor rates. This ICR uses labor rates from the most recent Bureau of Labor Statistics report (September 2022) to calculate respondent burden costs. There is an additional increase in capital and O&M costs due to an adjustment to increase from 2007 to 2022 \$ using the CEPCI Equipment Cost Index.

Courtney Kerwin,

Director, Information Engagement Division.

BILLING CODE 6560-50-P

ENVIRONMENTAL PROTECTION AGENCY

[EPA-HQ-ORD-2017-0497; FRL-12395-01-ORD]

Availability of the Draft IRIS Toxicological Review of Chloroform (Inhalation)

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of public comment period.

SUMMARY: The Environmental Protection Agency (EPA) is announcing a 60-day public comment period associated with release of the draft Integrated Risk Information System (IRIS) Toxicological Review of Chloroform (Inhalation). The draft document was prepared by the Center for Public Health and Environmental Assessment (CPHEA) within EPA's Office of Research and Development (ORD).

EPA is releasing this draft IRIS assessment for public comment in advance of a Science Advisory Board (SAB) managed peer review. SAB will convene a public meeting to discuss the draft assessment with the public during Step 4 of the IRIS Process. The external peer reviewers will consider public comments submitted to the EPA docket in response to this notice and any others provided during external peer review. EPA will consider all comments submitted to the docket when revising the document post-peer review. This draft assessment is not final as described in EPA's information quality guidelines, and it does not represent, and should not be construed to represent Agency policy or views.

DATES: The 60-day public comment period begins December 18, 2024 and ends February 18, 2025. Comments must be received on or before February 18, 2025.

ADDRESSES: The IRIS Toxicological Review of Chloroform (Inhalation) will be available via the internet on the IRIS website at <https://www.epa.gov/iris> and in the public docket at <http://www.regulations.gov>, Docket ID No. EPA-HQ-ORD-2017-0497.

FOR FURTHER INFORMATION CONTACT:

For information on the public comment period, contact the ORD Docket at the EPA Headquarters Docket Center; telephone: 202-566-1752; facsimile: 202-566-9744; or email: Docket_ORD@epa.gov.

For technical information on the IRIS Toxicological Review of Chloroform (Inhalation) contact Mr. Dahnish Shams; email: shams.dahnish@epa.gov. The IRIS Program will provide updates

through the IRIS website (<https://www.epa.gov/iris>) and via EPA's IRIS listserv. To register for the IRIS listserv, visit the IRIS website (<https://www.epa.gov/iris>) or <https://www.epa.gov/iris/forms/staying-connected-integrated-risk-information-system#connect>.

For information about the peer review, please visit the EPA SAB website: https://sab.epa.gov/ords/sab/r/sab_apex/sab/advisoryactivitydetail?p18_id=2651&clear=18&session=309037997993.

SUPPLEMENTARY INFORMATION:

I. *How to Submit Technical Comments to the Docket* at <https://www.regulations.gov>. Submit your comments, identified by Docket ID No. EPA-HQ-ORD-2017-0497 for the Chloroform IRIS Assessment, by one of the following methods:

- www.regulations.gov: Follow the on-line instructions for submitting comments.

- *Email:* Docket_ORD@epa.gov.

- *Fax:* 202-566-9744.

- *Mail:* U.S. Environmental Protection Agency, EPA Docket Center (ORD Docket), Mail Code: 28221T, 1200 Pennsylvania Avenue NW, Washington, DC 20460. The phone number is 202-566-1752.

For information on visiting the EPA Docket Center Public Reading Room, visit <https://www.epa.gov/dockets>. The telephone number for the Public Reading Room is 202-566-1744. The public can submit comments via www.regulations.gov or email.

Instructions: Direct your comments to docket number EPA-HQ-ORD-2017-0497 for IRIS Toxicological Review of Chloroform (Inhalation). Please ensure that your comments are submitted within the specified comment period. It is EPA's policy to include all comments it receives in the public docket within the specified comment period without change and to make the comments available online www.regulations.gov, including any personal information provided, unless a comment includes information claimed to be Confidential Business Information (CBI) or other information for which disclosure is restricted by statute. Do not submit information through

www.regulations.gov or email that you consider to be CBI or otherwise protected. The www.regulations.gov website is an "anonymous access" system, which means EPA will not know your identity or contact information unless you provide it in the body of your comment. If you send an email comment directly to EPA without going through www.regulations.gov,

your email address will be automatically captured and included as part of the comment that is placed in the public docket and made available on the internet. If you submit an electronic comment, EPA recommends that you include your name and other contact information in the body of your comment and with any disk or CD-ROM you submit. If EPA cannot read your comment due to technical difficulties and cannot contact you for clarification, EPA may not be able to consider your comment. Electronic files should avoid the use of special characters, any form of encryption, and be free of any defects or viruses. For additional information about EPA's public docket visit the EPA Docket Center homepage at www.epa.gov/epahome/dockets.htm.

Docket: Documents in the docket are listed in the www.regulations.gov index. Although listed in the index, some information is not publicly available, e.g., CBI or other information whose disclosure is restricted by statute. Certain other materials, such as copyrighted material, are publicly available only in hard copy. Publicly available docket materials are available either electronically in www.regulations.gov or in hard copy at the ORD Docket in the EPA Headquarters Docket Center.

Wayne Cascio,

Director, Center for Public Health & Environmental Assessment.

RIN 2040-ZA43

Preliminary Effluent Guidelines Program Plan 16

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of availability.

SUMMARY: This notice announces the availability of the U.S. Environmental Protection Agency's (EPA) Preliminary Effluent Guidelines Program Plan 16 (Preliminary Plan 16) and solicits public comment. The Clean Water Act (CWA) requires the EPA to biennially publish a plan for new and revised effluent limitations guidelines and pretreatment standards, after public review and comment. Preliminary Plan 16 discusses the EPA's 2022 and 2023 annual reviews of effluent guidelines and pretreatment standards, presents its

preliminary review of specific industrial categories, and provides an update on the analyses and tools that the EPA is continuing to enhance to further improve its annual review and biennial planning process.

DATES: Comments must be received on or before January 17, 2025.

ADDRESSES: You may send comments, identified by Docket ID No. EPA-HQ-OW-2024-0158, by any of the following methods:

- **Federal eRulemaking Portal:** <https://www.regulations.gov> (our preferred method). Follow the online instructions for submitting comments.
- **Mail:** U.S. Environmental Protection Agency, EPA Docket Center, Office of Water Docket, Mail Code 28221T, 1200 Pennsylvania Avenue NW, Washington, DC 20460.
- **Hand Delivery or Courier:** EPA Docket Center, WJC West Building, Room 3334, 1301 Constitution Avenue NW, Washington, DC 20004. The Docket Center's hours of operations are 8:30 a.m.—4:30 p.m., Monday—Friday (except Federal Holidays).

Instructions: All submissions received must include the Docket ID No. for this action. Comments received may be posted without change to <https://www.regulations.gov>, including any personal information provided. For detailed instructions on sending comments and additional information on the process for this action, see the "Public Participation" heading of the **SUPPLEMENTARY INFORMATION** section of this document.

FOR FURTHER INFORMATION CONTACT: Doruntinë Rexhepi, Engineering and Analysis Division, Office of Water, 4303T, Environmental Protection Agency, 1200 Pennsylvania Avenue NW, Washington, DC 20460; telephone number: (202) 566-2532; email address: rexhepi.doruntine@epa.gov.

SUPPLEMENTARY INFORMATION:

I. Public Participation

Submit your comments, identified by Docket ID No. EPA-HQ-OW-2024-0158, at <https://www.regulations.gov> (our preferred method), or the other methods identified in the **ADDRESSES** section. Once submitted, comments cannot be edited or removed from the docket. The EPA may publish any comment received to its public docket. Do not submit to EPA's docket at <https://www.regulations.gov> any information you consider to be Confidential Business Information (CBI), Proprietary Business Information (PBI), or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be

accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. The EPA will generally not consider comments or comment contents located outside of the primary submission (i.e., on the web, cloud, or other file sharing system). Please visit <https://www.epa.gov/dockets/commenting-epa-dockets> for additional submission methods; the full EPA public comment policy; information about CBI, PBI, or multimedia submissions; and general guidance on making effective comments.

II. General Information

A. Supporting Documents

A key document providing additional information is the *Preliminary Effluent Guidelines Program Plan 16* document. Supporting documents providing further details are also available for review.

B. How can I get copies of these documents and other related information?

1. **Docket.** The EPA has established an official public docket for this action under Docket ID No. EPA-HQ-OW-2024-0158. The official public docket is the collection of materials that are available for public viewing at the Water Docket in the EPA Docket Center, (EPA/DC) EPA West, Room 3334, 1301 Constitution Ave. NW, Washington, DC 20004.

2. **Electronic Access.** You can access this **Federal Register** document electronically through the United States Government online source for Federal regulations at <https://www.regulations.gov>.

3. **Internet access.** Copies of the supporting documents are available at <https://www.epa.gov/eg/effluent-guidelines-plan>.

III. How Is This Document Organized

The outline of this document follows.

- A. Legal Authority.
- B. Request for Public Comments and Information.

A. Legal Authority

This notice is published under the authority of the CWA, 33 U.S.C. 1251, *et seq.*, and in particular sections 301(d), 304(b), 304(g), 304(m), 306, 307(b), and 308 of the Act, 33 U.S.C. 1311(d), 1314(b), 1314(g), 1314(m), 1316, 1317(b), and 1318.

B. Request for Public Comments and Information

The EPA invites comment on the entirety of Preliminary Plan 16. In

particular, the EPA invites comment on the following topics (see Preliminary Plan 16 for more information on these topics):

1. The order weighted average analysis including: the metrics used in the analysis to evaluate the industrial category rankings, the inclusion/exclusion of pollutant toxicity in annual review rankings, and results of the 2022 and 2023 annual rankings.

2. The findings of the preliminary category reviews, specifically the findings for Battery Manufacturing, Centralized Waste Treatment, and Oil and Gas Extraction Categories.

3. The preliminary category review schedule and tools described to support the EPA's review of effluent guidelines.

4. The capabilities, performance, and costs of treatment technologies for industrial wastewater to support the Agency's technology reviews.

5. The announcement made within Preliminary Plan 16 of the EPA's intent to prepare a generic ICR to support effluent guidelines planning and rulemakings.

6. The announcement made within Preliminary Plan 16 of an online form on the CWA methods website to request new analytical methods for wastewater and surface waters.

7. The announcements made within Preliminary Plan 16 regarding new studies.

Bruno Pigott,

Principal Deputy Assistant Administrator.

BILLING CODE 6560-50-P

ENVIRONMENTAL PROTECTION AGENCY

[EPA-HQ-OPP-2024-0092; FRL-12319-01-OCSPP]

Notice of Receipt of Requests to Voluntarily Cancel Certain Pesticide Registrations

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: In accordance with the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA), EPA is issuing a notice of receipt of requests by the registrants to voluntarily cancel certain pesticide registrations. EPA intends to grant these requests at the close of the comment period for this announcement unless the Agency receives substantive comments within the comment period that would merit its further review of the requests, or unless the registrants withdraw their requests. If these requests are granted, any sale, distribution, or use of the products listed in this notice will be permitted after the registrations have been cancelled only if such sale, distribution, or use is consistent with the terms as described in the final order.

DATES: Comments must be received on or before June 16, 2025.

ADDRESSES: Submit your comments, identified by docket identification (ID) number EPA-HQ-OPP-2024-0092, through the *Federal eRulemaking Portal* at <https://www.regulations.gov>. Follow the online instructions for submitting comments. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Additional instructions on commenting and visiting the docket, along with more information about dockets generally, is available at <https://www.epa.gov/dockets>.

FOR FURTHER INFORMATION CONTACT: Christopher Green, Registration Division (7505T), Office of Pesticide Programs, Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460-0001; telephone number: (202) 566-2707; email address: green.christopher@epa.gov.

SUPPLEMENTARY INFORMATION:

I. General Information

A. Does this action apply to me?

This action is directed to the public in general and may be of interest to a

wide range of stakeholders including environmental, human health, and agricultural advocates; the chemical industry; pesticide users; and members of the public interested in the sale, distribution, or use of pesticides.

B. What should I consider as I prepare my comments for EPA?

1. *Submitting CBI.* Do not submit this information to EPA through [regulations.gov](https://www.regulations.gov) or email. Clearly mark the part or all of the information that you claim to be CBI. For CBI information in a disk or CD-ROM that you mail to EPA, mark the outside of the disk or CD-ROM as CBI and then identify electronically within the disk or CD-ROM the specific information that is claimed as CBI. In addition to one complete version of the comment that includes information claimed as CBI, a copy of the comment that does not contain the information claimed as CBI must be submitted for inclusion in the public docket. Information so marked will not be disclosed except in accordance with procedures set forth in 40 CFR part 2.

2. *Tips for preparing your comments.* When preparing and submitting your comments, see the commenting tips at <https://www.epa.gov/dockets/comments.html>.

II. What action is the Agency taking?

This notice announces receipt by the Agency of requests from registrants to cancel certain pesticide products registered under FIFRA section 3 (7 U.S.C. 136a) or 24(c) (7 U.S.C. 136v(c)). The registrations are listed in sequence by registration number (or company number and 24(c) number) in Table 1 of this unit.

Unless the Agency determines that there are substantive comments that warrant further review of the requests or the registrants withdraw their requests, EPA intends to issue an order in the **Federal Register** canceling the affected registrations.

TABLE 1—REGISTRATIONS WITH PENDING REQUESTS FOR CANCELLATION

Registration No.	Company No.	Product name	Active ingredients
10163-195	10163	Botran Technical	Dicloran (031301/99-30-9)—(95%).
69117-2	69117	Greyhound Insecticide	Abamectin (122804/71751-41-2)—(2%).

The registrant of 10163-195, has requested to sell and distribute existing stocks for 18-months after the effective date of cancellation.

Table 2 of this unit includes the name and address of record for the registrants of the products in Table 1 of this unit, in sequence by EPA company number.

This number corresponds to the first part of the EPA registration number of the products listed in this unit.

TABLE 2—REGISTRANTS REQUESTING VOLUNTARY CANCELLATION

EPA company No.	Company name and address
10163	Gowan Company, LLC, 370 S Main St., Yuma, AZ 85366.
69117	ArborSystems, Inc. D/B/A ArborSystems, Agent Name: RegWest Company, LLC, 9017 18th Street, Greeley, CO 80634–4756.

III. What is the Agency's authority for taking this action?

Section 6(f)(1) of FIFRA (7 U.S.C. 136d(f)(1)) provides that a registrant of a pesticide product may at any time request that any of its pesticide registrations be canceled. FIFRA further provides that, before acting on the request, EPA must publish a notice of receipt of any such request in the **Federal Register**.

Section 6(f)(1)(B) of FIFRA (7 U.S.C. 136d(f)(1)(B)) requires that before acting on a request for voluntary cancellation, EPA must provide a 30-day public comment period on the request for voluntary cancellation or use termination. In addition, FIFRA section 6(f)(1)(C) (7 U.S.C. 136d(f)(1)(C)) requires that EPA provide a 180-day comment period on a request for voluntary cancellation or termination of any minor agricultural use before granting the request, unless:

1. The registrants request a waiver of the comment period, or
2. The EPA Administrator determines that continued use of the pesticide would pose an unreasonable adverse effect on the environment.

The registrants in Table 2 of Unit II have not requested that EPA waive the 180-day comment period. Accordingly, EPA will provide a 180-day comment period on the proposed requests.

IV. Procedures for Withdrawal of Request

Registrants who choose to withdraw a request for cancellation should submit such withdrawal in writing to the person listed under **FOR FURTHER INFORMATION CONTACT**. If the product has been subject to a previous cancellation action, the effective date of cancellation and all other provisions of any earlier cancellation action are controlling.

V. Provisions for Disposition of Existing Stocks

Existing stocks are those stocks of registered pesticide products that are currently in the United States and that were packaged, labeled, and released for shipment prior to the effective date of the cancellation action. Because the Agency has identified no significant potential risk concerns associated with the pesticide product 69117–2, upon cancellation of the product 69117–2

identified in Table 1 of Unit II, EPA anticipates allowing the registrant to sell and distribute existing stocks of this product for 1 year after publication of the Cancellation Order in the **Federal Register**.

Thereafter, the registrant will be prohibited from selling or distributing the pesticide 69117–2, identified in Table 1 of Unit II, except for export consistent with FIFRA section 17 (7 U.S.C. 136o) or for proper disposal. Persons other than the registrant will generally be allowed to sell, distribute, or use existing stocks until such stocks are exhausted, provided that such sale, distribution, or use is consistent with the terms of the previously approved labeling on, or that accompanied, the canceled product.

For 10163–195

The registrant of 10163–195, has requested to sell and distribute existing stocks for 18-months after publication of the Cancellation Order in the **Federal Register**. Persons other than the registrant will generally be allowed to sell, distribute, or use existing stocks until such stocks are exhausted, provided that such sale, distribution, or use is consistent with the terms of the previously approved labeling on, or that accompanied, the canceled product.

Authority: 7 U.S.C. 136 *et seq.*

Dated: December 11, 2024.

Daniel Rosenblatt,

Acting Director, Registration Division, Office of Pesticide Programs.

[FR Doc. 2024–29828 Filed 12–17–24; 8:45 am]

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

[EPA–HQ–OPPT–2024–0057; FRL–11683–11–OCSPP]

Certain New Chemicals; Receipt and Status Information for November 2024

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: EPA is required under the Toxic Substances Control Act (TSCA), as amended by the Frank R. Lautenberg Chemical Safety for the 21st Century Act, to make information publicly

available and to publish information in the **Federal Register** pertaining to submissions under TSCA Section 5, including notice of receipt of a Premanufacture notice (PMN), Significant New Use Notice (SNUN) or Microbial Commercial Activity Notice (MCAN), including an amended notice or test information; an exemption application (Biotech exemption); an application for a test marketing exemption (TME), both pending and/or concluded; a notice of commencement (NOC) of manufacture (including import) for new chemical substances; and a periodic status report on new chemical substances that are currently under EPA review or have recently concluded review. This document covers the period from 11/01/2024 to 11/30/2024.

DATES: Comments identified by the specific case number provided in this document must be received on or before January 17, 2025.

ADDRESSES: Submit your comments, identified by docket identification (ID) number EPA–HQ–OPPT–2024–0057, through the *Federal eRulemaking Portal* at <https://www.regulations.gov>. Follow the online instructions for submitting comments. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Additional instructions on commenting and visiting the docket, along with more information about dockets generally, is available at <https://www.epa.gov/dockets>.

FOR FURTHER INFORMATION CONTACT:

For technical information contact: Jim Rahai, Project Management and Operations Division (MC 7407M), Office of Pollution Prevention and Toxics, Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460–0001; telephone number: (202) 564–8593; email address: rahai.jim@epa.gov.

For general information contact: The TSCA–Hotline, ABVI–Goodwill, 422 South Clinton Ave., Rochester, NY 14620; telephone number: (202) 554–1404; email address: TSCA-Hotline@epa.gov.

SUPPLEMENTARY INFORMATION:

I. Executive Summary

A. What action is the Agency taking?

This document provides the receipt and status reports for the period from 11/01/2024 to 11/30/2024. The Agency is providing notice of receipt of PMNs, SNUNs, and MCANs (including amended notices and test information); an exemption application under 40 CFR part 725 (Biotech exemption); TMEs, both pending and/or concluded; NOCs to manufacture a new chemical substance; and a periodic status report on new chemical substances that are currently under EPA review or have recently concluded review.

EPA is also providing information on its website about cases reviewed under the amended TSCA, including the section 5 PMN/SNUN/MCAN and exemption notices received, the date of receipt, the final EPA determination on the notice, and the effective date of EPA's determination for PMN/SNUN/MCAN notices on its website at: <https://www.epa.gov/reviewing-new-chemicals-under-toxic-substances-control-act-tsca/status-pre-manufacture-notices>. This information is updated on a weekly basis.

B. What is the Agency's authority for taking this action?

Under the Toxic Substances Control Act (TSCA), 15 U.S.C. 2601 *et seq.*, a chemical substance may be either an "existing" chemical substance or a "new" chemical substance. Any chemical substance that is not on EPA's TSCA Inventory of Chemical Substances (TSCA Inventory) is classified as a "new chemical substance," while a chemical substance that is listed on the TSCA Inventory is classified as an "existing chemical substance." (See TSCA section 3(11).) For more information about the TSCA Inventory please go to: <https://www.epa.gov/tsca-inventory>.

Any person who intends to manufacture (including import) a new chemical substance for a non-exempt commercial purpose, or to manufacture or process a chemical substance in a non-exempt manner for a use that EPA has determined is a significant new use, is required by TSCA section 5 to provide EPA with a PMN, MCAN, or SNUN, as appropriate, before initiating the activity. EPA will review the notice, make a risk determination on the chemical substance or significant new use, and take appropriate action as described in TSCA section 5(a)(3).

TSCA section 5(h)(1) authorizes EPA to allow persons, upon application and under appropriate restrictions, to manufacture or process a new chemical substance, or a chemical substance

subject to a significant new use rule (SNUR) issued under TSCA section 5(a)(2), for "test marketing" purposes, upon a showing that the manufacture, processing, distribution in commerce, use, and disposal of the chemical will not present an unreasonable risk of injury to health or the environment. This is referred to as a test marketing exemption, or TME. For more information about the requirements applicable to a new chemical go to: <https://www.epa.gov/chemicals-under-tsca>.

Under TSCA sections 5 and 8 and EPA regulations, EPA is required to publish in the **Federal Register** certain information, including notice of receipt of a PMN/SNUN/MCAN (including amended notices and test information); an exemption application under 40 CFR part 725 (biotech exemption); an application for a TME, both pending and concluded; NOCs to manufacture a new chemical substance; and a periodic status report on the new chemical substances that are currently under EPA review or have recently concluded review.

C. Does this action apply to me?

This action provides information that is directed to the public in general.

D. Does this action have any incremental economic impacts or paperwork burdens?

No.

E. What should I consider as I prepare my comments for EPA?

1. *Submitting confidential business information (CBI).* Do not submit this information to EPA through [regulations.gov](https://www.regulations.gov) or email. Clearly mark the part or all of the information that you claim to be CBI. For CBI information in a disk or CD-ROM that you mail to EPA, mark the outside of the disk or CD-ROM as CBI and then identify electronically within the disk or CD-ROM the specific information that is claimed as CBI. In addition to one complete version of the comment that includes information claimed as CBI, a copy of the comment that does not contain the information claimed as CBI must be submitted for inclusion in the public docket. Information so marked will not be disclosed except in accordance with procedures set forth in 40 CFR part 2.

2. *Tips for preparing your comments.* When preparing and submitting your comments, see the commenting tips at <https://www.epa.gov/dockets/commenting-epa-dockets>.

II. Status Reports

In the past, EPA has published individual notices reflecting the status of TSCA section 5 filings received, pending or concluded. In 1995, the Agency modified its approach and streamlined the information published in the **Federal Register** after providing notice of such changes to the public and an opportunity to comment (see the **Federal Register** of May 12, 1995 (60 FR 25798) (FRL-4942-7)). Since the passage of the Lautenberg amendments to TSCA in 2016, public interest in information on the status of section 5 cases under EPA review, and particularly the final determination of such cases, has increased. In an effort to be responsive to the regulated community, the users of this information, and the general public, to comply with the requirements of TSCA, to conserve EPA resources and to streamline the process and make it more timely, EPA is providing information on its website about cases reviewed under the amended TSCA, including the section 5 PMN/SNUN/MCAN and exemption notices received, the date of receipt, the final EPA determination on the notice, and the effective date of EPA's determination for PMN/SNUN/MCAN notices on its website at: <https://www.epa.gov/reviewing-new-chemicals-under-toxic-substances-control-act-tsca/status-pre-manufacture-notices>. This information is updated on a weekly basis.

III. Receipt Reports

For the PMN/SNUN/MCANs that have passed an initial screening by EPA during this period, Table I provides the following information (to the extent that such information is not subject to a CBI claim) on the notices screened by EPA during this period: The EPA case number assigned to the notice that indicates whether the submission is an initial submission, or an amendment, a notation of which version was received, the date the notice was received by EPA, the submitting manufacturer (*i.e.*, domestic producer or importer), the potential uses identified by the manufacturer in the notice, and the chemical substance identity.

As used in each of the tables in this unit, (S) indicates that the information in the table is the specific information provided by the submitter, and (G) indicates that this information in the table is generic information because the specific information provided by the submitter was claimed as CBI. Submissions which are initial submissions will not have a letter following the case number. Submissions

which are amendments to previous submissions will have a case number followed by the letter “A” (e.g. P-18-1234A). The version column designates submissions in sequence as “1”, “2”,

“3”, etc. Note that in some cases, an initial submission is not numbered as version 1; this is because earlier version(s) were rejected as incomplete or invalid submissions. Note also that

future versions of the following tables may adjust slightly as the Agency works to automate population of the data in the tables.

TABLE I—PMN/SNUN/MCANS APPROVED* FROM 11/01/2024 TO 11/30/2024

Case No.	Version	Received date	Manufacturer	Use	Chemical substance
J-25-0001	1	11/13/2024	CBI	(G) Ethanol production	(G) Biofuel producing <i>Saccharomyces cerevisiae</i> modified, genetically stable.

In Table II. of this unit, EPA provides the following information (to the extent that such information is not subject to a CBI claim) on the TMEs and/or Biotech Exemptions received by EPA during this period: The EPA case

number assigned to the TME and/or Biotech Exemption, the submission document type (initial or amended), the version number, the date the TME and/or Biotech Exemption was received by EPA, the submitting manufacturer (*i.e.*,

domestic producer or importer), the potential uses identified by the manufacturer in the TME and/or Biotech Exemption, and the chemical substance identity.

TABLE II—TMES AND BIOTECH EXEMPTIONS RECEIVED FROM 11/01/2024 TO 11/30/2024

Case No.	Submission type	Version	Received date	Manufacturer	Use	Chemical substance
T-24-0001A	Test Marketing Exemption Application (TMEA) Test Marketing Exemption Application (TMEA).	4	11/18/2024	Zschimmer & Schwarz	(S) Raw material in ester manufacturing, to be fully consumed.	(G) Isomerized alkane derivs.

In Table III of this unit, EPA provides the following information (to the extent that such information is not claimed as CBI) on the NOCs that have passed an initial screening by EPA during this period: The EPA case number assigned

to the NOC including whether the submission was an initial or amended submission, the date the NOC was received by EPA, the date of commencement provided by the submitter in the NOC, a notation of the

type of amendment (*e.g.*, amendment to generic name, specific name, technical contact information, etc.) and chemical substance identity.

TABLE III—NOCs APPROVED* FROM 11/01/2024 TO 11/30/2024

Case No.	Received date	Commencement date	If amendment, type of amendment	Chemical substance
J-20-0013	11/08/2024	12/21/2023	N	(G) Strain of <i>Escherichia coli</i> modified with genetically stable, plasmid-borne DNA to produce enzymes.

BILLING CODE 6560-50-P

ENVIRONMENTAL PROTECTION AGENCY

[EPA-HQ-OPPT-2023-0601; FRL-11581-07-OCSPP]

High-Priority Substance Designations Under the Toxic Substances Control Act (TSCA) and Initiation of Risk Evaluation on High-Priority Substances; Notice of Availability

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: Under the Toxic Substances Control Act (TSCA) and related implementing regulations, EPA is designating five chemicals as High-Priority Substances for risk evaluation. This document provides the identity of five chemical substances for final designation as High-Priority Substances for risk evaluation, EPA's rationale for final designation as High-Priority Substances, and instructions on how to access the chemical-specific information, analysis, and basis EPA used to support final designations for the chemical substances. A designation of a substance as a High-Priority Substance is not a finding of unreasonable risk. Rather, the designation of these chemical substances as high priority constitutes the initiation of evaluation of associated risk.

DATES: The designations of High-Priority Substances for risk evaluation in this notice are effective December 18, 2024.

ADDRESSES: The docket for this action, identified by docket identification (ID) number EPA-HQ-OPPT-2023-0601, is available online at <https://www.regulations.gov>. In addition, the docket ID numbers for the individual chemical substances designated in Unit IV. are as follows: Acetaldehyde (EPA-HQ-OPPT-2018-0497); Acrylonitrile (EPA-HQ-OPPT-2018-0449);

Benzenamine (EPA-HQ-OPPT-2018-0474); Vinyl Chloride (EPA-HQ-OPPT-2018-0448); and 4,4'-Methylene bis (2-chloroaniline) (MBOCA) (EPA-HQ-OPPT-2018-0464). Additional information about dockets generally, along with instructions for visiting the docket in-person, is available at <https://www.epa.gov/dockets>.

FOR FURTHER INFORMATION CONTACT:

For technical information: Sarah Au, Data Gathering, Management and Policy Division (7406M), Office of Pollution Prevention and Toxics, Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460-0001; telephone number: (202) 564-0398; email address: au.sarah@epa.gov.

For general information: The TSCA-Hotline, ABVI-Goodwill, 422 South Clinton Ave., Rochester, NY 14620; telephone number: (202) 554-1404; email address: TSCA-Hotline@epa.gov.

SUPPLEMENTARY INFORMATION:

I. Executive Summary

A. Does this action apply to me?

This action is directed to the public in general and may be of interest to entities that currently or may manufacture (including import) a chemical substance regulated under TSCA (e.g., entities identified under North American Industrial Classification System (NAICS) codes 325 and 324110). The action may also be of interest to chemical processors, distributors in commerce, and users, non-governmental organizations in the environmental and public health sectors, state and local government agencies, Tribes, and members of the public. Since other entities may also be interested, EPA has not attempted to describe all the specific entities and corresponding NAICS codes for entities that may be interested in or affected by this action.

B. What action is the Agency taking?

EPA is finalizing the designation of five chemical substances as High-Priority Substances for risk evaluation pursuant to section 6(b) of TSCA, 15 U.S.C. 2605(b). This document includes a high-level summary of comments received during the two 90-day comment periods during which the public submitted comments on EPA's initiation of prioritization (Ref. 1) and the proposed designations of those five chemicals as High-Priority Substances for risk evaluation (Ref. 2), as well as a high-level summary of Agency responses to those comments received during both 90-day public comment periods. The comments and EPA's responses are discussed in more depth

in the response to comments document (Ref. 3). EPA also considered comments received during and following the prioritization public webinar that occurred in February 2024, during which EPA explained the prioritization process and provided an overview of information that may be used to inform the considerations that ultimately support a High- or Low-Priority Substance designation, such as information on conditions of use and health effects resulting from exposure to the chemicals of interest.

C. Why is the Agency taking this action?

TSCA section 6(b) and implementing regulations at 40 CFR part 702, subpart A require EPA to carry out a prioritization process for chemical substances that may be designated as high priority for risk evaluation. EPA generally expects to complete five risk evaluations per year over the next several years, and TSCA section 6(b)(3)(C) requires EPA to designate at least one High-Priority Substance upon completion of each risk evaluation for a High-Priority Substance. Pursuant to TSCA section 6(b)(2)(B), EPA is finalizing the designation of the five chemical substances as High-Priority Substances for risk evaluation identified as candidates for High-Priority Substance designation when EPA initiated the prioritization process on December 18, 2023 (Ref. 1). As required under TSCA section 6(b)(3)(C), EPA is specifying the designation of: MBOCA to replace the final risk evaluation for 1,1-dichloroethane; acetaldehyde to replace the final risk evaluation for 1,3-butadiene; acrylonitrile to replace the final risk evaluation for dicyclohexyl phthalate; benzenamine to replace the final risk evaluation for formaldehyde; and vinyl chloride to replace the final risk evaluation for tris(2-chloroethyl) phosphate.

D. What is the Agency's authority for taking this action?

This document is issued pursuant to TSCA section 6(b)(1) and 6(b)(3)(C).

E. What are the estimated incremental impacts of this action?

This document identifies the five chemical substances for which EPA is initiating the risk evaluation process and the five chemical substances that have already or will have risk evaluations completed which they will replace. This document does not establish any requirements on persons or entities outside of the Agency. No incremental impacts are therefore anticipated, and consequently EPA did

not estimate potential incremental impacts for this action.

II. Background

TSCA section 6(b)(1) requires EPA to prioritize chemical substances for risk evaluation. In accordance with TSCA section 6(b) and 40 CFR 702.7, on December 18, 2023 (Ref. 1) EPA initiated the prioritization process for five chemical substances identified as candidates for High-Priority Substance designation. On July 25, 2024, EPA proposed to designate the same five chemical substances as High-Priority Substances for risk evaluation (Ref. 2). That notice included a summary of the approach used by EPA to support the proposed designations, links to the proposed designation document for each of the chemical substances, and instructions on how to access the chemical-specific information, analysis, and basis EPA used to make the proposed designation for each chemical substance.

Under TSCA section 6(b)(1)(B) and implementing regulations (40 CFR 702.3), a High-Priority Substance is defined as “a chemical substance that EPA concludes, without consideration of costs or other non-risk factors, may present an unreasonable risk of injury to health or the environment because of a potential hazard and a potential route of exposure under the conditions of use, including an unreasonable risk to a potentially exposed or susceptible subpopulation identified as relevant by EPA.”

A designation of a substance as a High-Priority Substance is not a finding of unreasonable risk. Rather, when prioritization is complete, for those chemicals designated as High-Priority Substances, the Agency will have evidence on hazards and exposures that supports a finding that the substances may present an unreasonable risk of injury to health or the environment under the conditions of use. Final designation of a High-Priority Substance initiates the risk evaluation process (40 CFR 702.17), which culminates in a finding of whether the chemical substance presents an unreasonable risk of injury to health or the environment under the conditions of use.

As described in the notice proposing to designate the five chemical substances as High-Priority Substances for risk evaluation (Ref. 2), “EPA will generally use reasonably available information to screen the candidate chemical substance[s] against the following criteria and considerations:

- The chemical substance’s hazard and exposure potential;

- The chemical substance’s persistence and bioaccumulation;
- Potentially exposed or susceptible subpopulations;
- Storage of the chemical substance near significant sources of drinking water;
- The chemical substance’s conditions of use or significant changes in conditions of use;
- The chemical substance’s production volume or significant changes in production volume; and
- Other risk-based criteria that EPA determines to be relevant to the designation of the chemical substance’s priority” (40 CFR 702.9(a)).

When selecting candidates for prioritization, the Agency also generally intends to consider (1) Agency priorities (with consideration of the priorities of other Federal agencies), (2) Quantity and quality of information (to ensure that information necessary to prioritize the substance is reasonably available), and (3) Overall workload (the Agency will be mindful of the complexity associated with the assessment of the chemical substance to ensure timely completion of prioritization and risk evaluation of each substance) (Ref. 5).

A more detailed discussion of the information, analysis, and basis used to support the proposed High-Priority Substance designation can be found in Unit IV.A of the July 25, 2024, notice (Ref. 2).

As described in 40 CFR 702.9(b), in conducting the screening review during the prioritization process, EPA considered sources of reasonably available information relevant to the review criteria as outlined in the statute (TSCA section 6(b)(1)(A)) and implementing regulations (40 CFR 702.9(a)) and consistent with the scientific standards of TSCA section 26(h), including, as appropriate, sources for hazard and exposure data listed in Appendices A and B of the “TSCA Work Plan Chemicals: Methods Document” (February 2012), and did not consider costs or other non-risk factors in making a proposed High-Priority Substance designation (see TSCA Section 6(b) and 40 CFR 702.9).

After considering additional information collected from the proposed designation process, described in Unit III., EPA is finalizing the High-Priority Substance designations of the same five chemical substances proposed for High-Priority Substance designations, consistent with the scientific standards of TSCA section 26(h) and (i). EPA did not consider costs or other non-risk factors in making the final priority designations. Instructions on how to access the chemical-specific

information, analysis, and basis used by EPA to support the final designation for each chemical substance can be found in Unit IV. A general statement of the condition(s) of use that were the primary basis for each designation is contained in Unit IV. Pursuant to TSCA section 6(b)(3)(A) and 40 CFR 702.17, the designation of these chemical substances as High-Priority Substances constitutes the initiation of the risk evaluations on the substances.

III. Information and Comments Received

A. Overview of Public Comments

EPA provided a 90-day comment period for the public to submit comments on the list of candidate High-Priority Substances immediately following the initiation of prioritization (Ref. 1) and provided a second 90-day comment period for the public to submit comments on the documents supporting the proposed designations of High-Priority Substances for risk evaluation (Ref. 2). The two comment periods are required by TSCA section 6(b)(1)(C) and implementing regulations (40 CFR 702.7(d) and 702.9(g)).

Under TSCA section 6(b)(1)(C)(i), EPA must “request interested persons to submit relevant information on a chemical substance that EPA has initiated the prioritization process on, before proposing a priority designation for the chemical substance, and provide 90 days for such information to be provided” (Ref. 1). At initiation of the prioritization process, EPA published a **Federal Register** notice identifying five chemical substances and provided a general explanation for why the Agency chose to initiate prioritization on those chemical substances. During this comment period, the public was invited to submit relevant information on the chemical substances undergoing prioritization, including, but not limited to, any information that may inform the screening review conducted pursuant to 40 CFR 702.9(a). The information received was considered when developing the proposed designations for the High-Priority Substances. The required 90-day comment period was extended for an additional 30 days to receive chemical-specific comments and information for MBOCA (docket ID No. EPA-HQ-OPPT-2018-0464). The second 90-day comment period following the proposed High-Priority Substance designations of the same five chemical substances identified as candidates for High-Priority Substance designation. Under TSCA section 6(b)(1)(C)(ii), EPA must “publish each proposed designation of a chemical

substance as a High- or Low-Priority Substance, along with an identification of the information, analysis, and basis used to make the proposed designations, and provide 90 days for public comment on each such proposed designation” (Ref. 2). The **Federal Register** notice proposing the designations of these substances as High-Priority for risk evaluation identified how to access the chemical-specific information, analysis, and basis used to support the proposed designations and announced the availability of a proposed designation document for each of the chemical substances undergoing prioritization. Interested persons were invited to submit comments, including additional information relevant to the chemical substances that were proposed as high priority for risk evaluations.

To the extent that comments from the first comment period provided information on additional conditions of use for the candidate High-Priority Substances, those conditions of use were discussed in the proposed designation documents for each chemical substance. Other information received specific to High-Priority Substances (e.g., relevant studies and assessments) was considered when making the final priority designations and will be considered as reasonably available information in the subsequent risk evaluation for each High-Priority Substance.

Following a public webinar on February 20, 2024, EPA also received comments on the prioritization process and data considered up until that date for the five chemical substances for which EPA initiated prioritization in December 2023. The comments received were considered when developing the proposed and final designations for the High-Priority Substances.

EPA created one general docket to receive comments regarding the prioritization process (docket ID No. EPA-HQ-OPPT-2023-0601) and additional dockets to receive chemical-specific information (as identified under **ADDRESSES**). During the first public comment period, EPA also opened the pre-prioritization docket (docket ID No. EPA-HQ-OPPT-2023-0606) to welcome potentially relevant information and comments on the candidate chemical substances that were not selected for prioritization.

EPA received 96,011 comment submissions to inform prioritization; several of these comments were mass mailing campaigns with identical submissions. There were also many comments that could not be posted publicly due to inappropriate language, copyright violations, and empty

submissions. Upon review, EPA received 977 unique submissions across both public comment periods. Some commenters included comments for multiple chemical substances in one submission and submitted the same comment to multiple dockets while other commenters chose to submit different sets of comments to each chemical-specific docket. EPA received submissions from individuals, Tribes, potentially affected businesses or trade associations, environmental and public health advocacy groups, academia, and other organizations. Comments addressed the overall prioritization process (e.g., the collection and consideration of relevant information, basis for designation, etc.), the review process (e.g., the use of data and approaches for screening review), information specific to the candidate chemical substances (e.g., relevant studies, previous assessments, and conditions of use information), as well as topics beyond the scope of this prioritization action or not related to the prioritization process in general (e.g., scheduling future chemicals for prioritization, risk evaluation, and risk management). EPA also received a few comments which were not related to TSCA. All comments received are identified by their respective docket ID number and are available at <https://www.regulations.gov>.

EPA responded to comments related to the High-Priority Substance designations in two general categories: (1) General comments, including overarching and cross-cutting policy and process comments, received for the candidate High-Priority Substance designations; and (2) Chemical-specific comments received on each proposed High-Priority Substance designation (Ref. 3). A high-level summary of the comments received related to the prioritization process and Agency responses follows in this unit. The comments and the Agency’s responses are discussed in more depth in the response to comments document (Ref. 3), a copy of which is included in docket ID No. EPA-HQ-OPPT-2023-0601.

B. Comments on Candidate High-Priority Designations

EPA received 748 unique comments during the first public comment period between December 18, 2023, and March 18, 2024, and 229 unique comments during the second comment period from July 25, 2024, to October 23, 2024, resulting in a total of 977 unique comment submissions. An additional two comment submissions were received for MBOCA during the 30-day

extension of the first public comment period for Docket ID number: EPA-HQ-OPPT-2018-0464.

EPA received several mass-mailing campaigns, totaling over 13,000 signatures. All mass-mailing campaigns expressed their support for the prioritization process and encouraged EPA to prioritize one or all of the chemicals. Specifically, many of the mass mailing campaigns encouraged EPA to designate vinyl chloride as a High-Priority Substance under TSCA. In addition to the mass-mailing campaigns and 17 commenters who attended the prioritization public webinars in February 2024, EPA received over 100 comments expressing support for EPA’s prioritization actions.

Commenters expressed their concern regarding human health hazards and exposure potential of all five of the High-Priority Substances and asked that EPA consider specific potential health outcomes and exposure scenarios. Several commenters urged EPA to identify relevant potentially exposed or susceptible subpopulations (PESS), including infants, children, pregnant women, workers, the elderly, and people living in proximity to sources of contamination, as well as consider environmental justice concerns in the prioritization process. In addition, several commenters, including some of the mass-mailing campaigns, urged the Agency to consider all potential exposures and risks, including those from accidents, spills, and leaks, specifically potential exposure resulting from transportation incidents such as derailments and collisions, which may pose significant risk to fence line communities.

Over 600 commenters asked EPA to ban vinyl chloride and emphasized the availability of hazard and exposure data demonstrating harm posed by vinyl chloride releases. Many commenters also cited the February 3, 2023, train derailment that resulted in the release of and potential exposure to vinyl chloride by residents in East Palestine, Ohio.

Each data submission and potentially relevant data source was screened using systematic review approaches for applicability and considered for the final designation of these chemical substances as High-Priority Substances and will be considered as reasonably available information.

The Agency appreciates all comments and information submitted by the public for this action. For additional information regarding specific topics and EPA’s responses to these comments, please see the Agency’s full response to comments received (Ref. 3).

IV. Designation as High-Priority Substances for Risk Evaluation

Based on the information provided in the proposed designation documents, as referenced in the document that appeared in the **Federal Register** of July 25, 2024 (Ref. 2), and public comments received, including information pertaining to individual chemical substances, EPA is designating the same five chemicals as High-Priority Substances for risk evaluation under TSCA. Pursuant to 40 CFR 702.11, which states: “For High-Priority Substances, EPA generally expects to indicate which condition(s) of use were the primary basis for such designations.” For all five High-Priority Substances the conditions of use which formed the primary basis for the designation were included in the proposed designation documents. The final High-Priority Substance designations are as follows:

- Acetaldehyde, CASRN 75–07–0, Docket ID number: EPA–HQ–OPPT–2018–0497;
- Acrylonitrile, CASRN 107–13–1, Docket ID number: EPA–HQ–OPPT–2018–0449;
- Benzenamine, CASRN 62–53–3, Docket ID number: EPA–HQ–OPPT–2018–0474;
- Vinyl chloride, CASRN 75–01–4, Docket ID number: EPA–HQ–OPPT–2018–0448; and
- 4,4'-Methylene bis(2-chloroaniline) (MBOCA), CASRN 101–14–4, Docket ID number: EPA–HQ–OPPT–2018–0464.

The final designations are based on the conclusion that each chemical substance satisfies the definition of High-Priority Substance in TSCA section 6(b)(1)(B) and 40 CFR 702.3. EPA developed a document for each substance to identify the information, analysis and basis used to support the proposed designations as a High-Priority Substance for risk evaluation. These documents are available in the docket of each of the chemical substances. Also included in each document is an explanation of the approach used by EPA to conduct the review. Each document includes an overview of the requirements in TSCA section 6(b)(1)(A) and a regulatory section addressing the review criteria and considerations (40 CFR 702.9).

These designated High-Priority Substances will fulfill the statutory requirement to designate at least one high-priority substance upon completion of each risk evaluation for a High-Priority Substance, under TSCA section 6(b)(3)(C). Pursuant to TSCA section 6(b)(3)(A) and 40 CFR 702.17, the designation of these chemical

substances as High-Priority Substances constitutes the initiation of the risk evaluations on the substances.

A designation of a chemical substance as a High-Priority Substance is not a finding of unreasonable risk; rather, a final designation as a High-Priority Substance initiates the risk evaluation for the chemical substance. This is a three-year process that will culminate in a finding of whether or not the chemical substance presents an unreasonable risk of injury to health or the environment under the conditions of use. The chemical-specific designation documents containing the information, analysis and basis used to support the proposed designations are located in the docket for each chemical substance. As previously discussed, to the extent that comments provided information on additional conditions of use for the candidate High-Priority Substances for risk evaluation, those conditions of use were noted in the proposed designation documents for each chemical substance and may be reflected in the draft scope of the risk evaluation for each chemical substance, which will include the conceptual model and analysis plan for carrying out the evaluation. As such, EPA will not amend the proposed designation documents. Instead, additional submitted potentially relevant information specific to High-Priority Substances (e.g., relevant studies and assessments) will be considered in subsequent phases of risk evaluation, including draft scope documents and draft risk evaluation documents, both of which will be subject to public comment opportunities.

V. References

The following is a listing of the documents that are specifically referenced in this document. The docket for this action includes these documents and other information considered by EPA, including documents that are referenced within the documents that are included in the docket. ENVIRONMENTAL PROTECTION AGENCY

[EPA–HQ–OPPT–2023–0601; FRL–11581–06–OCSPP]

Initiation of Prioritization Under the Toxic Substances Control Act (TSCA); Notice of Availability

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: Under the Toxic Substances Control Act (TSCA) and related implementing regulations, EPA is initiating the prioritization process for five chemical substances as candidates for designation as High-Priority Substances for risk evaluation. This action provides the identity of the chemical substances being initiated for prioritization, a general explanation of why the Agency chose these chemical substances, and information on the data sources EPA plans to use to support the designation. EPA is providing a 90-day comment period, during which interested persons may submit relevant information on these chemical substances.

DATES: Comments must be received on or before March 18, 2025.

ADDRESSES: Submit your comments, identified by docket identification (ID) number, through <https://www.regulations.gov>. Follow the online instructions for submitting comments. For comments not related to a specific chemical, including general comments on Unit IV.A., use docket ID number EPA–HQ–OPPT–2023–0601; submit information on the candidates for which EPA is initiating the prioritization process to the applicable chemical-specific docket ID number identified in Unit III.B.; submit information on the potential candidates for which EPA is not currently initiating the prioritization

process to the docket ID number identified in Unit IV.B. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Additional instructions on commenting or visiting the docket, along with more information about dockets generally, is available at <https://www.epa.gov/dockets>.

FOR FURTHER INFORMATION CONTACT:

For technical information: Sarah Au, Data Gathering, Management, and Policy Division (7406M), Office of Pollution Prevention and Toxics, Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460-0001; telephone number: (202) 564-0398; email address: au.sarah@epa.gov.

For general information: The TSCA-Hotline, ABVI-Goodwill, 422 South Clinton Ave., Rochester, NY 14620; telephone number: (202) 554-1404; email address: TSCA-Hotline@epa.gov.

SUPPLEMENTARY INFORMATION:**I. Executive Summary****A. Does this action apply to me?**

This action is directed to the public in general and may be of interest to entities that currently or may manufacture (including import) a chemical substance regulated under TSCA (e.g., entities identified under North American Industrial Classification System (NAICS) codes 325 and 324110). The action may also be of interest to chemical processors, distributors in commerce, users, non-profit organizations in the environmental and public health sectors, state and local government agencies, Tribes, and members of the public. Because other entities may also be interested, the Agency has not attempted to describe all the specific entities and corresponding NAICS codes for entities that may be interested in or affected by this action.

B. What action is the Agency taking?

EPA is initiating the prioritization process under TSCA, 15 U.S.C. 2601 *et seq.*, for five chemical substances as candidates for designation as High-Priority Substances for risk evaluation. This document includes the identity of the chemical substances entering the prioritization process before designation and a general explanation of why the Agency chose to initiate prioritization on these chemical substances. In addition, EPA is providing a 90-day comment period during which interested persons may submit relevant information on these chemical

substances. Relevant information might include, but is not limited to, any information that may inform the prioritization screening review conducted pursuant to 40 CFR 702.9(a).

C. Why is the Agency taking this action?

TSCA section 6(b) requires that EPA initiate the prioritization process for chemical substances that may be designated as high priority or low priority for risk evaluation. Because EPA generally expects to complete five risk evaluations per year over the next several years, EPA is initiating the prioritization process for five chemical substances per TSCA section 6(b)(3)(C), which requires EPA to designate at least one High-Priority Substance upon completion of each risk evaluation for a High-Priority Substance. In the **Federal Register** on December 18, 2023 (88 FR 87423) (FRL-11581-01-OCSP), EPA initiated prioritization for five chemical substances that have undergone consideration as High-Priority Substances pursuant to TSCA section 6(b)(2)(B). By initiating prioritization another five chemical substances pursuant to TSCA section 6(b)(2)(B), EPA intends to maintain a sustainable pipeline of existing chemical risk evaluations under TSCA section 6(b). The request for interested persons to submit relevant information on a chemical substance for which EPA has initiated the prioritization process is required by TSCA section 6(b)(1)(C)(i).

D. What is the Agency's authority for taking this action?

This document is issued pursuant to the authority in TSCA section 6(b)(1) and (3)(C).

E. What are the estimated incremental impacts of this action?

This document does not establish requirements on persons or entities outside of the Agency. No incremental impacts are therefore anticipated, and consequently EPA did not estimate potential incremental impacts for this action.

F. What should I consider as I prepare my comments for EPA?**1. Submitting CBI**

Do not submit CBI to EPA through <https://www.regulations.gov> or email. If you wish to include CBI in your comment, please follow the applicable instructions at <https://www.epa.gov/dockets/commenting-epa-dockets#rules> and clearly mark the part or all the information you claim to be CBI. In addition to one complete version of the comment including information claimed as CBI, a copy of the comment that does

not contain the information claimed as CBI must be submitted for inclusion in the public docket. Information so marked will not be disclosed except in accordance with procedures set forth in 40 CFR part 2 and/or 40 CFR part 703, as applicable.

2. Tips for Preparing Your Comments

When preparing and submitting your comments, see the commenting tips at <https://www.epa.gov/dockets/commenting-epa-dockets.html>.

II. Background

TSCA section 6(b)(1) requires EPA to prioritize chemical substances for risk evaluation and to establish a process for prioritizing chemical substances. Under TSCA section 6(b) and as described in 40 CFR 702.7, EPA is initiating the prioritization process for five chemical substances as candidates for High-Priority Substances for risk evaluation.

Under TSCA section 6(b)(1)(B) and its implementing regulations (40 CFR 702.3), a High-Priority Substance is defined as a chemical substance that EPA determines, without consideration of costs or other non-risk factors, may present an unreasonable risk of injury to health or the environment because of a potential hazard and a potential route of exposure under the conditions of use, including an unreasonable risk to potentially exposed or susceptible subpopulations identified as relevant by EPA.

Initiation of prioritization for chemical substances as High-Priority Substance candidates is not a finding of risk. Rather, when prioritization is complete, for those chemicals designated as High-Priority Substances, EPA will have evidence that this substance may present an unreasonable risk of injury to health or the environment because of a potential hazard and a potential route of exposure under the conditions of use. Final designation of a High-Priority Substance initiates the risk evaluation process (40 CFR 702.17), which culminates in a finding of whether the chemical substance presents an unreasonable risk under the conditions of use.

This document is intended to fulfill the TSCA section 6(b)(1)(C)(i) requirement that the Administrator request interested persons to submit relevant information on chemical substances for which the Administrator has initiated the prioritization process. As described in 40 CFR 702.7, this document initiates the prioritization process and provides 90 days during which interested persons may submit relevant information.

As described in 40 CFR 702.9(b), in conducting the screening review during the prioritization process, EPA will consider sources of information relevant to the screening review criteria as outlined in the statute (TSCA section 6(b)(1)(A)) and implementing regulations (40 CFR 702.9(a)) and consistent with the scientific standards of TSCA section 26(h), including, as appropriate, sources for hazard and exposure data listed in Appendices A and B of the TSCA Work Plan Chemicals: Methods Document (February 2012).

Consistent with the approach described in 40 CFR 702.7, and the “A Working Approach for Identifying Potential Candidate Chemicals for Prioritization” document (September 27, 2018), available at https://www.epa.gov/sites/default/files/2018-09/documents/preprioritization_white_paper_9272018.pdf, EPA consulted with other federal agencies and intends to continue to collaborate with them to identify information that is useful throughout the prioritization process.

III. High Priority Candidate Chemical Substances for Which EPA Is Initiating Prioritization

A. How did EPA select these candidates for prioritization for potential designation as High-Priority Substances for risk evaluation?

In general, EPA’s working approach to select candidates for designation as High-Priority Substances for risk evaluation is outlined in the document, titled “A Working Approach for Identifying Potential Candidate Chemicals for Prioritization,” released to the public on September 27, 2018, available at https://www.epa.gov/sites/default/files/2018-09/documents/preprioritization_white_paper_9272018.pdf. To identify candidates for designation as High-Priority Substances, EPA primarily reviewed the “TSCA Work Plan for Chemical Assessments: 2014 Update (2014 TSCA Work Plan),” available at <https://www.epa.gov/assessing-and-managing-chemicals-under-tsca/tsca-work-plan-chemical-assessments-2014-update>. TSCA requires EPA to preferentially consider chemicals on the 2014 TSCA Work Plan that are persistent and bioaccumulative and those that are known human carcinogens and highly toxic, based on scores and criteria documented in the Work Plan, as these chemicals were selected for inclusion on the Work Plan due to their potential risk to human health and the environment. Aside from this statutory requirement, TSCA gives EPA discretion in how the Agency

ultimately selects a chemical substance for prioritization. EPA strives to designate as High-Priority Substances those chemicals with the greatest hazard and exposure potential first, consistent with the policy objectives codified in 40 CFR 702.5(a) in the **Federal Register** on July 20, 2017 (82 FR 33753) (FRL–9964–24)).

The number of chemical substances remaining on the 2014 TSCA Work Plan with persistence and bioaccumulation scores of 3 has been significantly reduced over time as EPA has expedited rulemaking under TSCA section 6(h) for five persistent, bioaccumulative, and toxic (PBT) chemical substances and as the Agency has conducted risk evaluations and promulgated risk management for rules for other chemical substances from the 2014 TSCA Work Plan. TSCA section 6(b)(2)(B) further requires that at least 50 percent of all ongoing risk evaluations be drawn from the 2014 TSCA Work Plan for Chemical Assessments. Given EPA’s statutory deadlines and the timing of prioritization actions needed to offset the completion of risk evaluations for chemical substances designated as High-Priority Substances in 2019, EPA heavily weighed data availability in deciding which chemical substances to include in this action. Chemical substances remaining on the 2014 TSCA Work Plan that have persistence and bioaccumulation scores of 3 have significant data gaps, were submitted as potential manufacturer-requested risk evaluation candidates or are categories for which EPA is in the process of determining specific chemical structures that may be considered for inclusion in those categories.

EPA consulted with other EPA program offices and partner federal agencies to inform the Agency’s prioritization efforts. With these considerations, the chemicals for which prioritization is initiated in this action were selected based on a variety of factors and reflect Agency priorities. While data availability was a significant driver of the Agency’s selections, EPA also considered the complexity of evaluating broad chemical categories such as metal compounds. For EPA to build a sustainable TSCA prioritization, evaluation, and (when appropriate) risk management pipeline, chemicals ultimately designated as High-Priority Substances for risk evaluation should have a robust data landscape. In future rounds of prioritization, EPA intends to use its data gathering authorities earlier and commits to regular stakeholder engagement to ensure the Agency has the information needed to meet its statutory mandates.

Using data sources such as those described in the document titled, “A Working Approach for Identifying Potential Candidate Chemicals for Prioritization,” EPA considered various types of information and data from existing resources such as EPA’s National Center for Computational Toxicology’s Chemistry Dashboard (CompTox Chemicals Dashboard), available at <https://comptox.epa.gov/dashboard>. EPA also conducted initial searches of additional sources of public and gray literature (e.g., PubMed, Web of Science, other U.S. government and international websites).

EPA also considered existing information from public and non-public (i.e., confidential business information) sources maintained by authoritative sources, such as other EPA program offices, state and federal agencies, and various U.S. and international organizations (including but not limited to EPA’s Office of Water, EPA’s Office of Air and Radiation, EPA’s Office of Research and Development, California Environmental Protection Agency, National Institute for Occupational Safety and Health, Agency for Toxic Substances and Disease Registry, European Chemicals Agency, Health Canada, International Agency for Research on Cancer, and Organisation for Economic Co-operation and Development).

After identifying information from reasonably available sources, the information was screened across several data elements including physical and chemical properties, environmental fate and transport properties, hazard, exposure, and use information to determine the breadth of data availability for a chemical substance. Using experience gained from TSCA implementation activities to date, EPA considered previous and planned Agency activities related to a given chemical substance, including how to better leverage experience gained from previously conducted or ongoing risk evaluations. EPA also considered whether analyses from previous risk assessments could be used to better understand each chemical substance’s potential exposure and/or hazard characteristics.

In the absence of measured empirical data on chemicals being evaluated, EPA may use alternative means or new approach methods (NAMs) to obtain relevant data. NAMs can reduce vertebrate testing, consistent with TSCA section 4(h)(1)(A). EPA intends to use this approach to the extent practicable and scientifically justified.

EPA also considered information such as data submitted to EPA in 2020 under

the Chemical Data Reporting (CDR) rule under TSCA regarding reported uses and products to inform prioritization and risk evaluation. EPA considered the use information for these chemicals and screened them according to the types of industrial uses and types of products for which the chemicals were used as reported in the 2020 CDR. Information reported to the Toxics Release Inventory Program was also considered to identify reported uses and releases of chemical substances.

EPA intends to update and refine its initial review based on data sources identified by the public during the comment period (see EPA's request for data in Unit IV.) and, as permitted by TSCA section 14 and subject to EPA confidentiality regulations at 40 CFR part 2, subpart B and 40 CFR part 703, intends to make this information publicly available for the initiated chemicals when EPA publishes the proposed priority designation.

Between December 18, 2023, and October 31, 2024, EPA received information regarding candidate chemical substances being considered for prioritization actions during two periods. During September and October 2023, EPA hosted a series of pre-prioritization meetings with various stakeholders, Tribes, state and local governments, and other federal agencies to explain the prioritization process and provide an overview of information that may be used to inform the considerations that ultimately support a High- or Low-Priority Substance designation. A list of 15 candidate chemical substances being considered for future prioritization actions, including those undergoing initiation in this prioritization action, was presented to provide an opportunity for partners, stakeholders, and any interested persons to comment on the data and scientific literature available that may be used to help EPA determine which chemical substances may undergo prioritization in the near term. EPA also opened docket ID No. EPA-HQ-OPPT-2023-0606 for 90 days to receive any potentially relevant information on the 10 chemical substances communicated as candidates for prioritization but not selected for initiation on December 18, 2023, which included the chemical substances for which prioritization is being initiated with this action.

As a part of EPA's commitment to greater transparency and to maintain engagement with partners, stakeholders or any interested persons about upcoming prioritization actions, EPA hosted public webinars on September 30 and October 1, 2024, that explained the prioritization process, provided an

overview of information that may be used to inform the considerations that ultimately support a High- or Low-Priority Substance designation, and shared an expanded list of 27 candidate chemical substances being considered for prioritization actions. This expanded list included the 10 chemical substances previously communicated in 2023 as being potential candidates for prioritization but not yet selected for initiation. Following the public webinars, EPA opened docket ID No. EPA-HQ-OPPT-2023-0606 for 30 days to receive any potentially relevant information on the 27 chemical substances communicated as being candidates for prioritization. EPA also engaged with Tribes, state and local governments, and other federal agencies and presented the same information that was provided during the public webinars.

EPA considered all comments and information received during the various meetings and webinars, as well as those submitted to docket ID no. EPA-HQ-OPPT-2023-0606 on all candidate chemical substances considered for prioritization actions communicated between September 2023 and October 2024 to identify the five chemical substances being initiated for prioritization. During the first 90-day public comment period accompanying the initiation action that began in December 2023, EPA received comments pertaining to six chemical substances communicated as potential candidates for prioritization during the pre-prioritization presentations in September and October 2023 and September and October 2024: 4-tert-octylphenol, N-(1,3-Dimethylbutyl)-N'-phenyl-p-phenylenediamine (6PPD), benzene, ethylbenzene, naphthalene, and styrene.

One commentator (EPA-HQ-OPPT-2018-0448-0027) wrote in general support of the consideration of benzene, ethylbenzene, naphthalene, and styrene for upcoming prioritization actions and the consideration of submitted information on natural disasters and environmental impacts on potential exposure.

Some commentators (EPA-HQ-OPPT-2023-0606-0005; EPA-HQ-OPPT-2023-0606-0006; EPA-HQ-OPPT-2023-0606-0007) included information on 6PPD and/or 6PPD-quinone (a degradation product of 6PPD) for consideration in upcoming prioritization actions and in support of the petition submitted under TSCA section 21 requesting the promulgation of risk management regulations under TSCA section 6(a) to prohibit the manufacturing, processing, use and

distribution of 6PPD for and in tires to eliminate unreasonable risk to the environment.

Another commenter (EPA-HQ-OPPT-2023-0606-0005) requested that docket ID. No. EPA-HQ-OPPT-2023-0606 remain open to allow for continuous submission of potentially relevant information regarding the characterization of 6PPD risk. EPA intends to re-open docket ID No. EPA-HQ-OPPT-2023-0606 during specific timeframes during pre-prioritization to allow for submission of information using regulations.gov.

As described in Unit IV.B., EPA is also re-opening docket ID No. EPA-HQ-OPPT-2023-0606 to solicit comments and information on 22 chemical substances that are candidates for future prioritization actions. Regarding the TSCA section 21 petition from Earthjustice on behalf of the Yurok Tribe, the Port Gamble S'Klallam Tribe, and the Puyallup Tribe of Indians, EPA issued an Advance Notice of Proposed Rulemaking in the **Federal Register** on November 18, 2024 (89 FR 91299) (FRL-11682-01-OCSPP) for 6PPD and 6PPD-quinone under TSCA section 6(a), and is committed to finalizing a TSCA section 8(d) rulemaking by the end of 2024 that would require persons who manufacture (including import) 6PPD to submit lists or copies of unpublished health and safety studies to EPA.

One commentator (EPA-HQ-OPPT-2023-0606-0003) stated that the information presented in the 2014 TSCA Work Plan was incorrect for 4-tert-octylphenol and that EPA should not include 4-tert-octylphenol on the fourth Candidate Chemical List under SDWA. Under TSCA, EPA is required to consider chemical substances identified in the 2014 TSCA Work Plan and does not plan to revise the Work Plan as part of this action. Additional information received regarding the potential hazard, potential exposure, and bioaccumulation and persistence of 4-tert-octylphenol may be considered during prioritization.

For more information on the comments and EPA's responses regarding the candidate chemical substances, see Section 1.7 and 7.1 of the "EPA Response to Public Comments Received on the "Initiation of Prioritization Under the Toxic Substances Control Act" and "Proposed High-Priority Substance Designations Under the Toxic Substances Control Act" document published in docket ID no. EPA-HQ-OPPT-2023-0601 and EPA-HQ-OPPT-2023-0606.

B. What chemicals are being initiated?

EPA is initiating the prioritization process for the following five chemicals as candidates for designation as High-Priority Substances:

1. 4-Tert-Octylphenol, CASRN 140–66–9, Docket ID No.: EPA–HQ–OPPT–2018–0496

This chemical was listed in the 2014 TSCA Work Plan with a hazard score of 3; an exposure score of 3; and a persistence and bioaccumulation score of 2. Exposure to 4-tert-octylphenol (4-(1,1,3,3-tetramethylbutyl)-phenol may result in a range of human health effects such as kidney inflammation and impaired fertility (*i.e.*, lowered sperm count). Data related to human carcinogenicity have not been identified. Data regarding the use of this chemical was reported to EPA in the 2020 CDR. EPA also receives information annually on this chemical through the Toxics Release Inventory (TRI). Information is available from assessments conducted by international organizations, and other countries.

2. Benzene, CASRN 71–43–2, Docket ID No.: EPA–HQ–OPPT–2018–0475

This chemical was listed in the 2014 TSCA Work Plan with a hazard score of 3; an exposure score of 3; and a persistence and bioaccumulation score of 1. Data regarding the use of this chemical was reported to EPA in the 2020 CDR. Benzene is a known human carcinogen. Exposure to benzene may also result in a range of health effects such as immune function (*e.g.*, decreased immune lymphocyte count) and developmental abnormalities (*i.e.*, fetal malformations). EPA also receives information annually on this chemical through the TRI. Information is available from assessments conducted by other federal agencies, the state of California, international organizations, and other countries.

3. Ethylbenzene, CAS RN 100–41–4, Docket ID No.: EPA–HQ–OPPT–2018–0487

This chemical was listed in the 2014 TSCA Work Plan with a hazard score of 3; an exposure score of 3; and a persistence and bioaccumulation score of 1. Ethylbenzene is a probable human carcinogen. Exposure to ethylbenzene may also result in a range of health effects such as changes to liver and kidney tissue, hearing loss, and developmental abnormalities (*i.e.*, fetal malformations). Data regarding the use of this chemical was reported to EPA in the 2020 CDR. EPA also receives information annually on this chemical through the TRI. Information is

available from assessments conducted by other federal agencies, the state of California, international organizations, and other countries.

4. Naphthalene, CASRN 91–20–3, Docket ID No.: EPA–HQ–OPPT–2018–0454

This chemical was listed in the 2014 TSCA Work Plan with a hazard score of 3; an exposure score of 3; and a persistence and bioaccumulation score of 2. Naphthalene is a probable human carcinogen. Exposure to naphthalene may also result in a range of health effects such as destruction of red blood cells resulting in lower blood oxygen, damage to eyesight, and changes to liver, lung, and nasal tissue. Data regarding the use of this chemical was reported to EPA in the 2020 CDR. EPA also receives information annually on this chemical through the TRI. Information is available from assessments conducted by other federal agencies, the state of California, international organizations, and other countries.

5. Styrene, CASRN 100–42–5, Docket ID No.: EPA–HQ–OPPT–2018–0461

This chemical was listed in the 2014 TSCA Work Plan with a hazard score of 3; an exposure score of 3; and a persistence and bioaccumulation score of 1. Styrene is a probable human carcinogen. Exposure to styrene may also result in a range of health effects such as hearing loss, memory loss, fetal death, and tissue changes in the lungs and nasal passages. Data regarding the use of this chemical was reported to EPA in the 2020 CDR. EPA also receives information annually on this chemical through the TRI. Information is available from assessments conducted by other federal agencies, the state of California, international organizations, and other countries.

IV. Relevant Information

A. What additional information is EPA seeking for the five candidate chemical substances for which EPA is initiating prioritization?

Through this initiation of prioritization for chemical substances, EPA is providing a 90-day comment period as required by the statute (TSCA section 6(b)(1)(C)(i)) and implementing regulations (40 CFR 702.7(d)) and requesting that interested persons voluntarily submit relevant information. Relevant information might include, but is not limited to, information that may inform the screening review conducted pursuant to 40 CFR 702.9(a), consistent with the scientific standard of TSCA

section 26(h), about the following criteria and considerations:

- The chemical substance's hazard and exposure potential;
- The chemical substance's persistence and bioaccumulation;
- Potentially exposed or susceptible subpopulations which the submitter believes are relevant to the prioritization;
- Whether there is any storage of the chemical substance near significant sources of drinking water, including the storage facility location and the nearby drinking water source(s);
- The chemical substance's conditions of use or significant changes in conditions of use, including information regarding trade names;
- The chemical substance's production volume or significant changes in production volume; and
- Any other information relevant to the potential risks of the chemical substance that might be relevant to the designation of the chemical substance's priority for risk evaluation.

If the information is publicly available, citations are sufficient (including, but not limited to: Title, author, date of publication, publication source), and the submission does not need to include copies of the information.

B. What information is the Agency seeking for the 22 additional chemical substances that EPA considered, but did not select, for the current round of prioritization?

During the pre-prioritization process, EPA hosted public webinars and met with federal partners, industry, environmental organizations, labor organizations, state and local governments, and Tribes to discuss the prioritization process and presented a list of 27 chemical substances EPA was considering for prioritization. EPA took feedback from these discussions into consideration when selecting the five chemicals for prioritization listed in Unit III.B. Interested persons may submit relevant information on the chemical substances listed in this unit that are not currently undergoing prioritization by using docket ID number EPA–HQ–OPPT–2023–0606.

EPA has not yet determined which specific chemical structures are being considered for the chemical substances designated as a category in the 2014 TSCA Work Plan (*i.e.*, do not have CASRN listed). Therefore, EPA welcomes comments and information on specific chemical structures that may be relevant for addressing the various prioritization criteria and considerations on the chemical categories listed in this

unit. Information submitted on the substances within a category should be reported for each individual chemical structure, to the extent possible (*i.e.*, known or reasonably ascertainable). If the chemical identity of some of the individual chemical structures are not known or reasonably ascertainable by the commenter, the information associated with those chemical substances may be reported as a group of chemical structures (*i.e.*, isomeric mixture) or as the chemical category:

- 1-Hexadecanol, CASRN 36653–82–4;
- 2-Ethylhexyl 2,3,4,5-tetrabromobenzoate (TBB), CASRN 183658–27–7;
- Bis(2-Ethylhexyl)-3,4,5,6-Tetrabromophthalate (TBPH), CASRN 26040–51–7;
- Bisphenol A, CASRN 80–05–7;
- Creosote, CASRN 8001–58–9;
- Di-n-octyl phthalate (DnOP), CASRN 117–84–0;
- N-Nitroso-diphenylamine, CASRN 86–30–6;
- *P,P'*-Oxybis(benzenesulfonylhydrazide), CASRN 80–51–3;
- Tribromomethane, CASRN 75–25–2;
- Triglycidyl isocyanurate, CASRN 2451–62–9;
- M-Xylene, CASRN 108–38–3;
- O-Xylene, CASRN 95–47–6;
- P-Xylene, CASRN 106–42–3;
- Antimony and Antimony Compounds, Category;
- Arsenic and Arsenic Compounds, Category;
- Cobalt and Cobalt Compounds, Category;
- Lead and Lead Compounds, Category;
- Long-chain chlorinated paraffins (C18–20), Category;
- Medium-chain chlorinated paraffins (C14–17), Category;
- Bisphenol S, CASRN 80–09–1;
- Hydrogen Fluoride, CASRN 7664–39–3;
- *N*-(1,3-Dimethylbutyl)-*N'*-phenyl-*p*-phenylenediamine (6PPD), CASRN 793–24–8.

C. How will confidential business information be protected?

A person seeking to protect from disclosure as “confidential business information” any information that person submits under TSCA must assert and substantiate a claim for protection from disclosure concurrent with submission of the information in accordance with the requirements of TSCA section 14 and 40 CFR 703, with limited exceptions provided in the statute. TSCA section 14(b) limits

confidentiality protections for health and safety studies and information from such studies, however, and while EPA considers confidential business information when conducting its review under 40 CFR 702.9(a), the Agency encourages submitters to minimize claims for protection from disclosure wherever possible to maximize transparency in EPA’s screening review. More information on asserting and submitting confidential business information claims under TSCA can be found at 40 CFR 703 and <https://www.epa.gov/tscabi>.

FEDERAL RESERVE SYSTEM

[Docket No. OP–1863]

Regulation Q; Regulatory Capital Rule: Risk-Based Capital Surcharges for Global Systemically Important Bank Holding Companies

AGENCY: Board of Governors of the Federal Reserve System (Board).

ACTION: Notice.

SUMMARY: The Board is providing notice of the 2024 aggregate global indicator amounts, as required under the Board’s rule regarding risk-based capital surcharges for global systemically important bank holding companies.

DATES: December 18, 2024.

FOR FURTHER INFORMATION CONTACT:

Anna Lee Hewko, Associate Director, (202) 250–1577, Brian Chernoff, Manager, (202) 731–8914, Alexander Jiron, Senior Financial Institution Policy Analyst II, (202) 450–7350, or Aakash Jani, Senior Financial Institution Policy Analyst I, (202) 941–8305, Division of Supervision and Regulation; or Jay Schwarz, Deputy Associate General Counsel, (202) 452–2970, Mark Buresh, Senior Special Counsel, (202) 499–0261, Jonah Kind, Senior Counsel, (202) 309–5287, or David Imhoff, Senior Attorney (202) 834–3222, Legal Division. Board of Governors of the Federal Reserve System, 20th and C NW, Washington, DC 20551. For the hearing impaired and users of Telecommunications Device for the Deaf (TDD) and TTY–TRS, please call 711 from any telephone, anywhere in the United States.

SUPPLEMENTARY INFORMATION: The Board’s framework for determining risk-based capital surcharges for global systemically important bank holding companies (GSIB surcharge rule) establishes a methodology to identify global systemically important bank holding companies (GSIBs) in the United States based on indicators that are correlated with systemic importance.¹ Under the GSIB surcharge rule, a firm must calculate its GSIB score using a specific formula (method 1). Method 1 uses five equally weighted categories that are correlated with systemic importance—size, interconnectedness, cross-jurisdictional activity, substitutability, and complexity—and subdivided into twelve systemic indicators.

A firm divides its own measure of each systemic indicator by an aggregate global indicator amount. A firm’s method 1 score is the sum of its weighted systemic indicator scores expressed in basis points. A firm that calculates a method 1 score of 130 basis points or more is identified as a GSIB under the GSIB surcharge rule. The GSIB surcharge for a firm is the higher of the GSIB surcharge determined under method 1 and a second method, method 2, which is calculated based on measures of size, interconnectedness, cross-jurisdictional activity, complexity, and the firm’s reliance on short-term wholesale funding.²

The aggregate global indicator amounts used in the score calculation

¹ See 12 CFR 217.402, 217.404.

² Method 2 uses similar inputs to those used in method 1 but replaces the substitutability category with a measure of a firm’s use of short-term wholesale funding. In addition, method 2 is calibrated differently from method 1. See 12 CFR 217.405.

under method 1 are based on data collected by the Basel Committee on Banking Supervision (BCBS). The BCBS amounts are determined based on the sum of the systemic indicator amounts as reported by the 75 largest U.S. and foreign banking organizations as measured by the BCBS, and any other banking organization that the BCBS includes in its sample total for that year. The BCBS publicly releases these

amounts, denominated in euros, each year.³ Pursuant to the GSIB surcharge rule, the Board publishes the aggregate global indicator amounts each year as denominated in U.S. dollars using the euro-dollar exchange rate provided by the BCBS.⁴ Specifically, to determine the 2024 aggregate global indicator amounts, the Board uses the year-end 2023 euro-denominated indicator amounts published by the BCBS and

multiplies each of the euro-denominated indicator amounts by 1.105, the euro to U.S. dollar spot exchange rate on December 31, 2023.⁵

The aggregate global indicator amounts expressed in U.S. dollars for purposes of the 2024 method 1 score calculation under § 217.404(b)(1)(i)(B) of the GSIB surcharge rule are:

AGGREGATE GLOBAL INDICATOR AMOUNTS IN U.S. DOLLARS (USD) FOR 2024

Category	Systemic indicator	Aggregate global indicator amount (in USD)
Size	Total exposures	\$115,205,051,188,518

BILLING CODE 6210–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Agency for Healthcare Research and Quality

Notice of Meetings

AGENCY: Agency for Healthcare Research and Quality (AHRQ), Department of Health and Human Services (HHS).

ACTION: Notice of five AHRQ subcommittee meetings.

SUMMARY: The subcommittees listed below are part of AHRQ's Health Services Research Initial Review Group (IRG) Committee. Grant applications are

to be reviewed and discussed at these meetings. Each subcommittee meeting will be closed to the public.

DATES: See below for dates of meetings:

1. *Healthcare Safety and Quality Improvement Research (HSQR).*

Date: February 5–6, 2025.

2. *Healthcare Effectiveness and Outcomes Research (HEOR).*

Date: February 5–6, 2025.

3. *Health System and Value Research (HSVR).*

Date: February 13–14, 2025.

4. *Healthcare Research Training (HCRT).*

Date: February 27–28, 2025.

5. *Healthcare Information Technology Research (HITR).*

Date: February 27–28, 2025.

ADDRESSES: Agency for Healthcare Research and Quality (Virtual Review), 5600 Fishers Lane, Rockville, Maryland 20857.

FOR FURTHER INFORMATION CONTACT: (to obtain a roster of members, agenda or minutes of the non-confidential portions of the meetings.) Jenny Griffith, Committee Management Officer, Division of Policy, Coordination and Analysis, Office of Extramural Research Education and Priority Populations, Agency for Healthcare Research and Quality (AHRQ), 5600 Fishers Lane,

Rockville, Maryland 20857, telephone (301) 427–1557.

SUPPLEMENTARY INFORMATION: In accordance with the Federal Advisory Committee Act, 5 U.S.C. 1009(a)(2), AHRQ announces meetings of the above-listed scientific peer review groups, which are subcommittees of AHRQ's Health Services Research Initial Review Group Committee. The subcommittee meetings will be closed to the public in accordance with the provisions set forth in 5 U.S.C. 1009(d), 5 U.S.C. 552b(c)(4), and 5 U.S.C. 552b(c)(6). The grant applications and the discussions could disclose confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the grant applications, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Agenda items for these meetings are subject to change as priorities dictate.

Dated: December 12, 2024.

Marquita Cullom,

Associate Director.

DEPARTMENT OF HEALTH AND HUMAN SERVICES**Centers for Disease Control and Prevention****Notice of Closed Meeting**

Pursuant to 5 U.S.C. 1009(d), notice is hereby given of the following meeting.

The meeting will be closed to the public in accordance with the provisions set forth in sections 552b(c)(4) and 552b(c)(6), title 5 U.S.C., as amended, and the Determination of the Director, Office of Strategic Business Initiatives, Office of the Chief Operating Officer, Centers for Disease Control and Prevention, pursuant to Public Law 92–463. The grant applications and the discussions could disclose confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the grant applications, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Name of Committee: Disease, Disability, and Injury Prevention and Control Special Emphasis Panel (SEP)—RFA–OH–25–003, Occupational Safety and Health Training Project Grants (TPG).

Date: March 4, 2025.

Time: 12:00 p.m.–5:00 p.m., EST.

Place: Video-Assisted Meeting.

Agenda: To review and evaluate grant applications.

For Further Information Contact: Marilyn Ridenour, B.S.N., M.P.H., Scientific Review Officer, Office of Extramural Programs, National Institute for Occupational Safety and Health, Centers for Disease Control and Prevention, 1095 Willowdale Road, Morgantown, West Virginia 26505. Telephone: (304) 285–5879; Email: MRidenour@cdc.gov.

The Director, Office of Strategic Business Initiatives, Office of the Chief Operating Officer, Centers for Disease Control and Prevention, has been delegated the authority to sign **Federal Register** notices pertaining to announcements of meetings and other committee management activities, for both the Centers for Disease Control and Prevention and the Agency for Toxic Substances and Disease Registry.

Kalwant Smagh,

Director, Office of Strategic Business Initiatives, Office of the Chief Operating Officer, Centers for Disease Control and Prevention.

BILLING CODE 4163–18–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES**Food and Drug Administration**

[Docket No. FDA–2024–N–2844]

Agency Information Collection Activities; Submission for Office of Management and Budget Review; Comment Request; Reclassification Petitions for Medical Devices

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing that a proposed collection of information has been submitted to the Office of Management and Budget (OMB) for review and clearance under the Paperwork Reduction Act of 1995.

DATES: Submit written comments (including recommendations) on the collection of information by January 17, 2025.

ADDRESSES: To ensure that comments on the information collection are received, OMB recommends that written comments be submitted to <https://www.reginfo.gov/public/do/PRAMain>. Find this particular information collection by selecting “Currently under Review—Open for Public Comments” or by using the search function. The OMB control number for this information collection is 0910–0138. Also include the FDA docket number found in brackets in the heading of this document.

FOR FURTHER INFORMATION CONTACT:

JonnaLynn Capezzuto, Office of Operations, Food and Drug Administration, Three White Flint North, 10A–12M, 11601 Landsdown St., North Bethesda, MD 20852, 301–796–3794, PRAStaff@fda.hhs.gov.

SUPPLEMENTARY INFORMATION: In compliance with 44 U.S.C. 3507, FDA has submitted the following proposed collection of information to OMB for review and clearance.

Reclassification Petitions for Medical Devices

OMB Control Number 0910–0138—Extension

This information collection helps support implementation of statutory provisions found in sections 513(e) and (f), 514(b), 515(b), and 520(l) of the Federal Food, Drug, and Cosmetic Act (FD&C Act) (21 U.S.C. 360c(e) and (f), 21 U.S.C. 360d(b), 21 U.S.C. 360e(b), and 21 U.S.C. 360j(l)) pertaining to the reclassification of medical devices.

Specifically, the FD&C Act establishes three tiers of regulatory control for medical devices, by establishing three classes of medical devices, and requiring that all devices be classified into one of these three classes. The classification of a device depends upon the degree of regulatory control necessary to provide a reasonable assurance of the safety and effectiveness of the device. The three tiers of regulatory control are: (1) Class I—general controls, subject to sections 501 adulteration, 502 misbranding, 510 registration, 516 banned devices, 518 notification and other remedies, 519 records and reports, and 520 general provisions of the FD&C Act; (2) Class II—performance standards; and (3) Class III—premarket approval.

Implementing regulations in 21 CFR part 860, subpart C (parts 860.120 through 860.136) provide that any person may petition for reclassification of a device from any class to any other class and prescribe requisite format and content elements for reclassification petitions submitted to the Agency. We also provide information on our website at <https://www.fda.gov/about-fda/cdrh-transparency/reclassification> regarding medical device reclassification, which may serve as a helpful resource to respondents.

FDA is responsible for reviewing petitions for reclassification and determining whether the subject device will be reclassified. In some instances, FDA also submits such petitions to one of its medical device advisory panels for review and recommendations. FDA's

decision regarding the reclassification of a device is based primarily upon the information contained in the petition. Respondents to the information collection are private sector, for-profit businesses. We have not identified reclassification petitions as a type of submission we are currently prepared to accept electronically. Submission instructions, including addresses, are provided in § 860.123(b).

In the **Federal Register** of July 9, 2024 (89 FR 56390), FDA published a 60-day notice requesting public comment on the proposed collection of information. One comment was received, but it was not related to this information collection.

FDA estimates the burden of this collection of information as follows:

TABLE 1—ESTIMATED ANNUAL REPORTING BURDEN ¹

21 CFR part; activity	Number of respondents	Number of responses per respondent	Total annual responses	Average burden per response	Total hours
§ 860.123; supporting data for reclassification petitions	12	1	12	497	5,964

¹ There are no capital costs or operating and maintenance costs associated with this collection of information.

Reclassification petitions must be submitted as set forth in the applicable regulations, which provide for the submission of an original and two copies (§ 860.123(b)(4)). Each petition must include supporting data to show why reclassification of the device type will provide reasonable assurance of the safety and effectiveness of the device type. The principal data in such a petition will typically be reports of clinical trials.

Our estimated burden for the information collection reflects an increase of 6 responses and a corresponding increase of 2,982 hours. We attribute this adjustment to an increase in the number of submissions we received over the last few years.

Dated: December 11, 2024.

P. Ritu Nalubola,

Associate Commissioner for Policy.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2023–D–4974]

Agency Information Collection Activities; Submission for Office of Management and Budget Review; Comment Request; Advanced Manufacturing Technologies Designation Program

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA, Agency, or we) is announcing that a proposed collection of information has been submitted to the Office of Management and Budget (OMB) for review and clearance under the Paperwork Reduction Act of 1995 (PRA).

DATES: Submit written comments (including recommendations) on the collection of information by January 17, 2025.

ADDRESSES: To ensure that comments on the information collection are received, OMB recommends that written comments be submitted to <https://www.reginfo.gov/public/do/PRAMain>. Find this particular information collection by selecting “Currently under Review—Open for Public Comments” or

by using the search function. The OMB control number for this information collection is 0910–0139. Also include the FDA docket number found in brackets in the heading of this document.

FOR FURTHER INFORMATION CONTACT: Domini Bean, Office of Operations, Food and Drug Administration, Three White Flint North, 10A–12M, 11601 Landsdown St., North Bethesda, MD 20852, 301–796–5733, PRASStaff@fda.hhs.gov.

SUPPLEMENTARY INFORMATION: In compliance with 44 U.S.C. 3507, FDA has submitted the following proposed collection of information to OMB for review and clearance.

Advanced Manufacturing Technologies Designation Program

OMB Control Number 0910–0139—Revision

This information collection supports the establishment of an FDA Advanced Manufacturing Technologies (AMT) Designation Program, as provided for in section 506L of the Federal Food, Drug, and Cosmetic Act (FD&C Act) (21 U.S.C. 356l). Intending to enhance the development of and combat the shortage of critical medical products, the AMT Designation Program encourages early adoption of new technological advances in manufacturing processes by the pharmaceutical industry or other drug/

biologic developers. FDA regulations in 21 CFR parts 210 and 211 govern current good manufacturing practice in the manufacturing, processing, packing, or holding of drugs and finished pharmaceuticals (including medical gases and active pharmaceutical ingredients), respectively. Applicable information collection and attendant burden are currently discussed, accounted for, and approved in OMB control number 0910–0139.

We are revising the information collection to include the AMT Designation Program within the scope of activity, as authorized by section 506L of the FD&C Act, and account for attendant burden. Requests for AMT designation are reviewed by FDA to evaluate whether the data and information submitted meets the criteria established in section 506L of the FD&C Act. If a request for AMT designation is granted, then future new drug application (NDA), abbreviated new drug application (ANDA), or biologics

license application (BLA) applicants may use or reference the designated AMT, noting specific application of the designated AMT to specific product development and inclusion in NDA, ANDA, or BLA submissions describing development and manufacturing processes. Also required by section 506L of the FD&C Act, we engaged with our stakeholders in a public meeting on June 8, 2023 (April 24, 2023, 88 FR 24807), to discuss innovative manufacturing technologies for drug and biological products and included a discussion of the AMT Designation Program. For more information regarding AMT, we invite readers to visit our website at <https://www.fda.gov/emergency-preparedness-and-response/mcm-issues/advanced-manufacturing>, which includes regular updates on Agency implementation of its AMT Designation Program.

Finally, section 506L of the FD&C Act also provides for the issuance of guidance. In the **Federal Register** of

December 13, 2023 (88 FR 86333), we issued the draft guidance document entitled “Advanced Manufacturing Technologies Designation Program,” to communicate the goals, scope, and framework of the new program. We invited public comment under both our good guidance practices regulation in 21 CFR 10.115, and applicable PRA regulations in 5 CFR part 1320 and received a few comments. The comments included some requests for procedural clarification but focused mostly on requests for clarification of technical specifications and technologies that might qualify for AMT designation. Although we have updated the guidance document to address a number of public comments, we continue to implement the program and refine Agency processes.

FDA estimates the burden of the information collection as follows:

TABLE 1—ESTIMATED ANNUAL REPORTING BURDEN¹

Section 506L(c) FD&C Act	Number of respondents	Number of responses per respondents	Total annual responses	Average burden per response	Total hours
Submitting AMT designation requests; FDA Guidance for Industry, section III.B	20	1	20	10	200

¹ There are no capital or operating and maintenance costs associated with the information collection.

Based on our experience with similar information collection activities that involve requests for FDA determinations, along with related preliminary and followup communications, we assume 10 hours is needed to complete the activities provided for in section 506L of the FD&C Act and discussed in the referenced guidance document. Although we have received fewer than 10 requests for AMT designation thus far, we are hopeful that 20 respondents will submit requests for AMT designation under the program.

Dated: December 11, 2024.
P. Ritu Nalubola,
Associate Commissioner for Policy.
[FR Doc. 2024–29954 Filed 12–17–24; 8:45 am]
BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES
Food and Drug Administration
[Docket Nos. FDA–2024–E–0195; FDA–2024–E–0196; FDA–2024–E–0197; FDA–2024–E–0198]
Determination of Regulatory Review Period for Purposes of Patent Extension; SOHONOS
AGENCY: Food and Drug Administration, HHS.
ACTION: Notice.
SUMMARY: The Food and Drug Administration (FDA or the Agency) has determined the regulatory review period for SOHONOS and is publishing this notice of that determination as required by law. FDA has made the determination because of the submission of applications to the Director of the U.S. Patent and Trademark Office (USPTO), Department of Commerce, for the extension of a patent which claims that human drug product.
DATES: Anyone with knowledge that any of the dates as published (see **SUPPLEMENTARY INFORMATION**) are

incorrect may submit either electronic or written comments and ask for a redetermination by February 18, 2025. Furthermore, any interested person may petition FDA for a determination regarding whether the applicant for extension acted with due diligence during the regulatory review period by June 16, 2025. See “Petitions” in the **SUPPLEMENTARY INFORMATION** section for more information.
ADDRESSES: You may submit comments as follows. Please note that late, untimely filed comments will not be considered. The <https://www.regulations.gov> electronic filing system will accept comments until 11:59 p.m. Eastern Time at the end of February 18, 2025. Comments received by mail/hand delivery/courier (for written/paper submissions) will be considered timely if they are received on or before that date.
Electronic Submissions
Submit electronic comments in the following way:
• *Federal eRulemaking Portal:* <https://www.regulations.gov>. Follow the instructions for submitting comments. Comments submitted electronically,

including attachments, to <https://www.regulations.gov> will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on <https://www.regulations.gov>.

- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see "Written/Paper Submissions" and "Instructions").

Written/Paper Submissions

Submit written/paper submissions as follows:

- *Mail/Hand delivery/Courier (for written/paper submissions):* Dockets Management Staff (HFA-305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

- For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked, and identified, as confidential, if submitted as detailed in "Instructions."

Instructions: All submissions received must include the Docket Nos. FDA-2024-E-0195, FDA-2024-E-0196, FDA-2024-E-0197, and FDA-2024-E-0198 for "Determination of Regulatory Review Period for Purposes of Patent Extension; SOHONOS." Received comments, those filed in a timely manner (see **ADDRESSES**), will be placed in the docket and, except for those submitted as "Confidential Submissions," publicly viewable at <https://www.regulations.gov> or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday, 240-402-7500.

- **Confidential Submissions**—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states "THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION." The Agency will review this copy, including the claimed confidential information, in

its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on <https://www.regulations.gov>. Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as "confidential." Any information marked as "confidential" will not be disclosed except in accordance with § 10.20 (21 CFR 10.20) and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: <https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf>.

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to <https://www.regulations.gov> and insert the docket number, found in brackets in the heading of this document, into the "Search" box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, 240-402-7500.

FOR FURTHER INFORMATION CONTACT:

Beverly Friedman, Office of Regulatory Policy, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 51, Rm. 6200, Silver Spring, MD 20993, 301-796-3600.

SUPPLEMENTARY INFORMATION:

I. Background

The Drug Price Competition and Patent Term Restoration Act of 1984 (Pub. L. 98-417) and the Generic Animal Drug and Patent Term Restoration Act (Pub. L. 100-670) generally provide that a patent may be extended for a period of up to 5 years so long as the patented item (human drug or biological product, animal drug product, medical device, food additive, or color additive) was subject to regulatory review by FDA before the item was marketed. Under these acts, a product's regulatory review period forms the basis for determining the amount of extension an applicant may receive.

A regulatory review period consists of two periods of time: a testing phase and an approval phase. For human drug products, the testing phase begins when the exemption to permit the clinical investigations of the drug becomes effective and runs until the approval

phase begins. The approval phase starts with the initial submission of an application to market the human drug product and continues until FDA grants permission to market the drug product. Although only a portion of a regulatory review period may count toward the actual amount of extension that the Director of USPTO may award (for example, half the testing phase must be subtracted as well as any time that may have occurred before the patent was issued), FDA's determination of the length of a regulatory review period for a human drug product will include all of the testing phase and approval phase as specified in 35 U.S.C. 156(g)(1)(B).

FDA has approved for marketing the human drug product, SOHONOS (palovarotene) indicated for reduction in the volume of new heterotopic ossification in adults and children aged 8 years and older for females and 10 years and older for males with fibrodysplasia ossificans progressiva. Subsequent to this approval, the USPTO received patent term restoration applications for SOHONOS (U.S. Patent Nos. 9,314,439 and 10,292,954 filed by Ipsen Biopharmaceuticals, Inc. (agent of Thomas Jefferson University), and U.S. Patent Nos. 10,864,194 and 11,622,959, filed by Ipsen Biopharmaceuticals, Inc. (agent of Clementia Pharmaceuticals Inc.)), and the USPTO requested FDA's assistance in determining the patents' eligibility for patent term restoration. In a letter dated February 16, 2024, FDA advised the USPTO that this human drug product had undergone a regulatory review period and that the approval of SOHONOS represented the first permitted commercial marketing or use of the product. Thereafter, the USPTO requested that FDA determine the product's regulatory review period.

II. Determination of Regulatory Review Period

FDA has determined that the applicable regulatory review period for SOHONOS is 7,526 days. Of this time, 6,657 days occurred during the testing phase of the regulatory review period, while 869 days occurred during the approval phase. These periods of time were derived from the following dates:

1. *The date an exemption under section 505(i) of the Federal Food, Drug, and Cosmetic Act (FD&C Act) (21 U.S.C. 355(i)) became effective:* January 9, 2003. The applicant claims April 27, 2014, as the date the investigational new drug application (IND) became effective. However, FDA records indicate that the IND effective date was January 9, 2003, which was 30 days after FDA receipt of an earlier IND.

2. *The date the application was initially submitted with respect to the human drug product under section 505 of the FD&C Act:* March 31, 2021. FDA has verified the applicant's claim that the new drug application (NDA) for SOHONOS (NDA 215559) was initially submitted on March 31, 2021.

3. *The date the application was approved:* August 16, 2023. FDA has verified the applicant's claim that NDA 215559 was approved on August 16, 2023.

This determination of the regulatory review period establishes the maximum potential length of a patent extension. However, the USPTO applies several statutory limitations in its calculations of the actual period for patent extension. In its applications for patent extension, this applicant seeks 69 days, 1,209 days or 1,773 days of patent term extension.

III. Petitions

Anyone with knowledge that any of the dates as published are incorrect may submit either electronic or written comments and, under 21 CFR 60.24, ask for a redetermination (see **DATES**). Furthermore, as specified in § 60.30 (21 CFR 60.30), any interested person may petition FDA for a determination regarding whether the applicant for extension acted with due diligence during the regulatory review period. To meet its burden, the petition must comply with all the requirements of § 60.30, including but not limited to: must be timely (see **DATES**), must be filed in accordance with § 10.20, must contain sufficient facts to merit an FDA investigation, and must certify that a true and complete copy of the petition has been served upon the patent applicant. (See H. Rept. 857, part 1, 98th Cong., 2d sess., pp. 41–42, 1984.) Petitions should be in the format specified in 21 CFR 10.30.

Submit petitions electronically to <https://www.regulations.gov> at Docket No. FDA–2013–S–0610. Submit written petitions (two copies are required) to the Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

Dated: December 11, 2024.

P. Ritu Nalubola,

Associate Commissioner for Policy.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2023–N–0119]

Fiscal Year 2025 Generic Drug Science and Research Initiatives Workshop; Public Workshop; Request for Comments

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice of public workshop; request for comments.

SUMMARY: The Food and Drug Administration (FDA or the Agency) is announcing the following public workshop entitled “FY 2025 Generic Drug Science and Research Initiatives Workshop.” The purpose of the public workshop is to provide an overview of the status of science and research initiatives for generic drugs and an opportunity for public input on these initiatives. FDA is seeking this input from a variety of interested parties—industry, academia, patient advocates, professional societies, and other interested parties—as it fulfills its commitment under the Generic Drug User Fee Amendments of 2022 (GDUFA III) to develop an annual list of science and research initiatives specific to generic drugs. FDA will take the information it obtains from the public workshop into account in developing its fiscal year (FY) 2026 Generic Drug User Fee Amendments (GDUFA) science and research initiatives.

DATES: The public workshop will be held on June 3 and 4, 2025. Either electronic or written comments on this public workshop must be submitted by July 7, 2025. See the **SUPPLEMENTARY INFORMATION** section for registration date and information.

ADDRESSES: The public workshop will be held in person and will be accessible virtually. Registrants will have an opportunity to indicate their interest in attending the public workshop in person. If there are restrictions imposed by applicable health guidelines for in-person gatherings, or seating capacity limitations, registrants interested in attending the public workshop in person will be contacted. The public workshop will be held at the FDA White Oak Campus, 10903 New Hampshire Ave., Bldg. 31 Conference Center, the Great Room (Rm. 1503, sections B and C), Silver Spring, MD 20993–0002. Entrance for the public workshop participants (non-FDA employees) is through Building 1 where routine security check procedures will be

performed. For parking and security information, please refer to <https://www.fda.gov/about-fda/visitor-information>.

You may submit comments as follows. Please note that late, untimely filed comments will not be considered. The <https://www.regulations.gov> electronic filing system will accept comments until 11:59 p.m. Eastern Time at the end of July 7, 2025. Comments received by mail/hand delivery/courier (for written/paper submissions) will be considered timely if they are received on or before that date.

Electronic Submissions

Submit electronic comments in the following way:

- **Federal eRulemaking Portal:** <https://www.regulations.gov>. Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to <https://www.regulations.gov> will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on <https://www.regulations.gov>.

- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see “Written/Paper Submissions” and “Instructions”).

Written/Paper Submissions

Submit written/paper submissions as follows:

- **Mail/Hand delivery/Courier (for written/paper submissions):** Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

- For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in “Instructions.”

Instructions: All submissions received must include the Docket No. FDA–2023–N–0119 for “FY 2025 Generic Drug Science and Research Initiatives Workshop; Public Workshop; Request for Comments.” Received comments,

those filed in a timely manner (see **ADDRESSES**), will be placed in the docket and, except for those submitted as “Confidential Submissions,” publicly viewable at <https://www.regulations.gov> or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday, 240–402–7500.

• **Confidential Submissions**—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states “THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.” The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on <https://www.regulations.gov>. Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as “confidential.” Any information marked as “confidential” will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA’s posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: <https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf>.

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to <https://www.regulations.gov> and insert the docket number, found in brackets in the heading of this document, into the “Search” box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, 240–402–7500.

FOR FURTHER INFORMATION CONTACT: Sam Raney, Center for Drug Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 75, Rm. 4732, Silver Spring, MD 20993, 240–402–7967, Sameersingh.Raney@fda.hhs.gov; or Robert Lionberger, Center for Drug Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 75, Rm. 4722, Silver Spring, MD 20993, 240–402–7957, Robert.Lionberger@fda.hhs.gov.

SUPPLEMENTARY INFORMATION:

I. Background

In July 2012, Congress passed the Generic Drug User Fee Amendments of 2012 (GDUFA I) (Pub. L. 112–144). GDUFA I was designed to enhance public access to safe, high-quality generic drugs and to modernize the generic drug program. To support this goal, FDA agreed in the Generic Drug User Fee Act Program Performance Goals and Procedures (GDUFA I commitment letter) to work with industry and interested parties on identifying science and research initiatives specific to generic drugs for each fiscal year covered by GDUFA I.

In August 2017, GDUFA was reauthorized until September 2022 through the Generic Drug User Fee Amendments of 2017 (GDUFA II) (Public Law 115–52), and in September 2022, GDUFA was reauthorized until September 2027 through GDUFA III (Pub. L. 117–180, 136 Stat. 2155). In the GDUFA Reauthorization Performance Goals and Program Enhancements Fiscal Years 2023–2027 (GDUFA III commitment letter),¹ FDA agreed to conduct annual public workshops to solicit input from industry and interested parties for inclusion in an annual list of GDUFA III regulatory science initiatives. This public workshop scheduled for June 3 and 4, 2025, seeks to fulfill this agreement.

II. Topics for Discussion at the Public Workshop

The purpose of this public workshop is to obtain input from industry and other interested parties on identifying generic drug science and research initiatives for FY 2026. FDA is interested in receiving input about regulatory science initiatives for the ongoing years of the GDUFA III science and research program, and particularly for FY 2026.

Topics discussed during the workshop will focus on research that is needed to address scientific knowledge gaps and associated challenges impacting the development and regulatory assessment of generic products, including complex generics. As examples, topics discussed will likely focus on identifying what research is needed to clarify technical details related to implementing bioequivalence approaches recommended in FDA guidances for generic products with complex active ingredients and associated challenges (e.g., related to immunogenicity), or for

¹ The GDUFA III commitment letter is available at <https://www.fda.gov/media/153631/download>.

those that are complex products (e.g., drug-device combination products), or for other generic products where research could address scientific uncertainties and, thereby, facilitate a more efficient approval pathway (e.g., a waiver of in vivo bioequivalence studies for solid oral dosage forms that currently do not have proper alternative methods to support such waivers). Additional topics that can enhance public access to high-quality, safe, and effective generic products may also be discussed. Specific presentations and discussions at this workshop will be announced at a later date and may differ from the topics above. Input about the topics above will help the Agency identify and expand its scientific focus for the next fiscal year.

FDA will consider all comments made at this workshop or received through the docket (see **ADDRESSES**) as it develops its FY 2026 science and research initiatives. Information concerning the science and research initiatives for generic drugs can be found on the Science & Research website at <https://www.fda.gov/drugs/generic-drugs/science-research>.

III. Participating in the Public Workshop

Registration: Persons interested in attending this public workshop must register online at https://fda.zoomgov.com/webinar/register/WN_wxxGxb5HSgKMAa2Q_sJLEw#/registration. Registration may be performed at any time before or during the workshop. Please provide complete contact information for each attendee, including name, title, affiliation, address, email, and telephone number.

Registration is free and based on space availability, with priority given to early registrants. Early registration is recommended because seating is limited; therefore, FDA may limit the number of participants from each organization. Registrants will receive confirmation when they have been accepted.

If you need special accommodations due to a disability, please contact FDA via email at GDUFARegulatoryScience@fda.hhs.gov no later than 11:59 p.m. Eastern Time on May 20, 2025.

Requests for Oral Presentations: During online registration you may indicate if you wish to present your public comments and which topic(s) you wish to address. Requests to provide public comments via a prerecorded presentation or a live presentation, including in-person or virtual presentations, should be submitted via email to GDUFARegulatoryScience@fda.hhs.gov

by 11:59 p.m. Eastern Time on April 3, 2025. FDA will do its best to accommodate requests to make public comments that are within the scope of this public workshop; *i.e.*, those that identify what research is needed to address specific challenges for generic product development or regulatory assessment. Individuals and organizations with common interests are urged to consolidate or coordinate their presentations, and request time for a joint presentation, or submit requests for designated representatives to participate in the workshop. Based on the public comment presentation requests received by April 3, 2025, at 11:59 p.m. Eastern Time, FDA will determine the amount of time allotted to each presenter and the approximate time each oral presentation is to begin; FDA will select and notify participants by April 30, 2025. If selected for presentation, any presentation materials must be emailed to GDUFARegulatoryScience@fda.hhs.gov no later than May 20, 2025, 11:59 p.m. Eastern Time. No commercial or promotional material will be permitted to be presented or distributed at the public workshop.

Streaming Webcast of the Public Workshop: This public workshop will also be webcast. Please register online (as described above) to attend the workshop remotely (virtually). Registrants will receive a hyperlink that provides access to the webcast on both days. Although FDA verified the website addresses in this document, please note that websites are subject to change over time.

Transcripts: Please be advised that as soon as a video recording and audio transcript of the public workshop are available, they will be accessible at <https://www.regulations.gov> or via the Science & Research FDA website accessible at <https://www.fda.gov/drugs/generic-drugs/science-research>. They may also be available for viewing at the Dockets Management Staff (see **ADDRESSES**).

Dated: December 12, 2024.

P. Ritu Nalubola,

Associate Commissioner for Policy.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket Nos. FDA–2022–E–0681; FDA–2022–E–0682; FDA–2022–E–0683]

Determination of Regulatory Review Period for Purposes of Patent Extension; BYLVAY

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA or the Agency) has determined the regulatory review period for BYLVAY and is publishing this notice of that determination as required by law. FDA has made the determination because of the submission of applications to the Director of the U.S. Patent and Trademark Office (USPTO), Department of Commerce, for the extension of a patent which claims that human drug product.

DATES: Anyone with knowledge that any of the dates as published (see **SUPPLEMENTARY INFORMATION**) are incorrect may submit either electronic or written comments and ask for a redetermination by February 18, 2025. Furthermore, any interested person may petition FDA for a determination regarding whether the applicant for extension acted with due diligence during the regulatory review period by June 16, 2025. See “Petitions” in the **SUPPLEMENTARY INFORMATION** section for more information.

ADDRESSES: You may submit comments as follows. Please note that late, untimely filed comments will not be considered. The <https://www.regulations.gov> electronic filing system will accept comments until 11:59 p.m. Eastern Time at the end of February 18, 2025. Comments received by mail/hand delivery/courier (for written/paper submissions) will be considered timely if they are received on or before that date.

Electronic Submissions

Submit electronic comments in the following way:

- **Federal eRulemaking Portal:** <https://www.regulations.gov>. Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to <https://www.regulations.gov> will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any

confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else’s Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on <https://www.regulations.gov>.

- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see “Written/Paper Submissions” and “Instructions”).

Written/Paper Submissions

Submit written/paper submissions as follows:

- **Mail/Hand delivery/Courier (for written/paper submissions):** Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

- For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked, and identified, as confidential, if submitted as detailed in “Instructions.”

Instructions: All submissions received must include the Docket Nos. FDA–2022–E–0681, FDA–2022–E–0682, and FDA–2022–E–0683 for “Determination of Regulatory Review Period for Purposes of Patent Extension; BYLVAY.” Received comments, those filed in a timely manner (see **ADDRESSES**), will be placed in the docket and, except for those submitted as “Confidential Submissions,” publicly viewable at <https://www.regulations.gov> or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday, 240–402–7500.

- **Confidential Submissions—**To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states “THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.” The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on <https://www.regulations.gov>. Submit both copies to the Dockets Management

Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as “confidential.” Any information marked as “confidential” will not be disclosed except in accordance with § 10.20 (21 CFR 10.20) and other applicable disclosure law. For more information about FDA’s posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: <https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf>.

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to <https://www.regulations.gov> and insert the docket number, found in brackets in the heading of this document, into the “Search” box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, 240–402–7500.

FOR FURTHER INFORMATION CONTACT: Beverly Friedman, Office of Regulatory Policy, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 51, Rm. 6200, Silver Spring, MD 20993, 301–796–3600.

SUPPLEMENTARY INFORMATION:

I. Background

The Drug Price Competition and Patent Term Restoration Act of 1984 (Pub. L. 98–417) and the Generic Animal Drug and Patent Term Restoration Act (Pub. L. 100–670) generally provide that a patent may be extended for a period of up to 5 years so long as the patented item (human drug or biological product, animal drug product, medical device, food additive, or color additive) was subject to regulatory review by FDA before the item was marketed. Under these acts, a product’s regulatory review period forms the basis for determining the amount of extension an applicant may receive.

A regulatory review period consists of two periods of time: a testing phase and an approval phase. For human drug products, the testing phase begins when the exemption to permit the clinical investigations of the drug becomes effective and runs until the approval phase begins. The approval phase starts with the initial submission of an application to market the human drug product and continues until FDA grants permission to market the drug product. Although only a portion of a regulatory review period may count toward the

actual amount of extension that the Director of USPTO may award (for example, half the testing phase must be subtracted as well as any time that may have occurred before the patent was issued), FDA’s determination of the length of a regulatory review period for a human drug product will include all of the testing phase and approval phase as specified in 35 U.S.C. 156(g)(1)(B).

FDA has approved for marketing the human drug product, BYLVAY (odevixibat) indicated for the treatment of pruritis in patients 3 months of age and older with progressive familial intrahepatic cholestasis. Subsequent to this approval, the USPTO received patent term restoration applications for BYLVAY (U.S. Patent Nos. 9,694,018, 10,011,633, and 10,093,697) from Albireo Pharma, Inc. (agent for Albireo AB) and the USPTO requested FDA’s assistance in determining the patents’ eligibility for patent term restoration. In a letter dated January 18, 2024, FDA advised the USPTO that this human drug product had undergone a regulatory review period and that the approval of BYLVAY represented the first permitted commercial marketing or use of the product. Thereafter, the USPTO requested that FDA determine the product’s regulatory review period.

II. Determination of Regulatory Review Period

FDA has determined that the applicable regulatory review period for BYLVAY is 1,868 days. Of this time, 1,625 days occurred during the testing phase of the regulatory review period, while 243 days occurred during the approval phase. These periods of time were derived from the following dates:

1. *The date an exemption under section 505(i) of the Federal Food, Drug, and Cosmetic Act (FD&C Act) (21 U.S.C. 355(i)) became effective:* June 10, 2016. FDA has verified the applicant’s claim that the date the investigational new drug application became effective was on June 10, 2016.

2. *The date the application was initially submitted with respect to the human drug product under section 505 of the FD&C Act:* November 20, 2020. FDA has verified the applicant’s claim that the new drug application (NDA) for BYLVAY (NDA 215498) was initially submitted on November 20, 2020.

3. *The date the application was approved:* July 20, 2021. FDA has verified the applicant’s claim that NDA 215498 was approved on July 20, 2021.

This determination of the regulatory review period establishes the maximum potential length of a patent extension. However, the USPTO applies several statutory limitations in its calculations

of the actual period for patent extension. In its applications for patent extension, this applicant seeks 630 days, 679 days, or 861 days of patent term extension.

III. Petitions

Anyone with knowledge that any of the dates as published are incorrect may submit either electronic or written comments and, under 21 CFR 60.24, ask for a redetermination (see **DATES**). Furthermore, as specified in § 60.30 (21 CFR 60.30), any interested person may petition FDA for a determination regarding whether the applicant for extension acted with due diligence during the regulatory review period. To meet its burden, the petition must comply with all the requirements of § 60.30, including but not limited to: must be timely (see **DATES**), must be filed in accordance with § 10.20, must contain sufficient facts to merit an FDA investigation, and must certify that a true and complete copy of the petition has been served upon the patent applicant. (See H. Rept. 857, part 1, 98th Cong., 2d sess., pp. 41–42, 1984.) Petitions should be in the format specified in 21 CFR 10.30.

Submit petitions electronically to <https://www.regulations.gov> at Docket No. FDA–2013–S–0610. Submit written petitions (two copies are required) to the Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

Dated: December 11, 2024.

P. Ritu Nalubola,

Associate Commissioner for Policy.

National Institute on Drug Abuse; Notice of Closed Meetings

Pursuant to section 1009 of the Federal Advisory Committee Act, as amended, notice is hereby given of the following meetings.

The meetings will be closed to the public in accordance with the provisions set forth in sections 552b(c)(4) and 552b(c)(6), Title 5 U.S.C., as amended. The grant applications and the discussions could disclose confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the grant applications, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Name of Committee: National Institute on Drug Abuse Special Emphasis Panel; HEAL Initiative: Translating Research to Practice to End the Overdose Crisis.

Date: January 23–24, 2025.

Time: 10:30 a.m. to 6:00 p.m.

Agenda: To review and evaluate grant applications.

Address: National Institute of Health
National Institute on Drug Abuse, 301 North
Stonestreet Avenue, Bethesda, MD 20892.

Meeting Format: Virtual Meeting.

Contact Person: Sheila Pirooznia, Ph.D.,
Scientific Review Officer, Scientific Review
Branch, Division of Extramural Review,
National Institute on Drug Abuse, NIH, 301
North Stonestreet Avenue, MSC 6021,
Bethesda, MD 20892, (301) 496–9350,
sheila.pirooznia@nih.gov.

Name of Committee: National Institute on
Drug Abuse Special Emphasis Panel; NIDA
REI: Research at Minority Serving
Institutions on Neurocognitive Mechanisms
Underlying the Impact of Structural Racism
on the Substance Use Trajectory.

Date: February 3, 2025.

Time: 3:00 p.m. to 4:30 p.m.

Agenda: To review and evaluate grant
applications.

Address: National Institute of Health
National Institute on Drug Abuse, 301 North
Stonestreet Avenue, Bethesda, MD 20892.

Meeting Format: Virtual Meeting.

Contact Person: Shareen Amina Iqbal,
Ph.D., Scientific Review Officer, Scientific
Review Branch, Division of Extramural
Research, National Institute on Drug Abuse,
NIH, 301 North Stonestreet Avenue, MSC
6021, Bethesda, MD 20892, (301) 443–4577,
shareen.iqbal@nih.gov.

Name of Committee: National Institute on
Drug Abuse Special Emphasis Panel;
Developing Digital Therapeutics for
Substance Use Disorders.

Date: February 5, 2025.

Time: 1:00 p.m. to 2:30 p.m.

Agenda: To review and evaluate grant
applications.

Address: National Institute of Health
National Institute on Drug Abuse, 301 North
Stonestreet Avenue, Bethesda, MD 20892.

Meeting Format: Virtual Meeting.

Contact Person: Shareen Amina Iqbal,
Ph.D., Scientific Review Officer, Scientific
Review Branch, Division of Extramural
Research, National Institute on Drug Abuse,
NIH, 301 North Stonestreet Avenue, MSC
6021, Bethesda, MD 20892, (301) 443–4577,
shareen.iqbal@nih.gov.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

The National Institutes of Health Public Access Policy

AGENCY: National Institutes of Health,
HHS.

ACTION: Notice.

SUMMARY: The 2024 National Institutes
of Health (NIH) Public Access Policy
implements additional steps to
accelerate free public access to scholarly
publications resulting from the research
that NIH supports, building upon NIH's
long history of providing public access
to research results.

FOR FURTHER INFORMATION CONTACT:

Hilary Leeds, J.D., Senior Policy Analyst
for Public Access, Office of Science
Policy, at (301) 496–9838 or
SciencePolicy@od.nih.gov.

SUPPLEMENTARY INFORMATION:

Background

Increasing access to publications
resulting from the National Institutes of
Health (NIH) funding offers many
benefits to the scientific community and
the public who funded the underlying
research. When patients, families, and
healthcare providers can access
published findings resulting from NIH
funding, they are able to better
understand and address the most
critical health concerns facing their
communities. It also allows researchers,
students, and members of the public in
all communities to have equitable
access to such content. This access can
accelerate future research, lead to
collaboration, and allow interested
readers and patients to follow the latest
advances more closely. Importantly,
these goals reflect NIH's commitment to
the responsible stewardship of the
Nation's investment in biomedical
research by improving transparency and
accessibility of taxpayer-funded
research, an essential component of
fostering trust in research. NIH is
issuing this updated Public Access
Policy to further advance these goals by
accelerating free public access to
research results.

NIH has a long history of providing
access to research products resulting
from its funded research. The NIH
Public Access Policy [https://
sharing.nih.gov/public-access-policy/
public-access-policy-overview](https://sharing.nih.gov/public-access-policy/public-access-policy-overview) in effect
since 2008, requires that NIH-supported
researchers submit their final peer-
reviewed manuscripts to the National
Library of Medicine's PubMed Central®
digital archive of full-text biomedical

and life sciences journal literature upon
acceptance for publication, to be made
freely available to the public after an
allowable embargo period of not more
than 12 months after the official date of
publication. The 2008 Policy
implements Public Law 110–161
[https://www.congress.gov/110/statute/
STATUTE-121/STATUTE-121-
Pg1844.pdf](https://www.congress.gov/110/statute/STATUTE-121/STATUTE-121-Pg1844.pdf), which was made a
legislative mandate for FY 2009 and
beyond by Public Law 111–8 [https://
www.govinfo.gov/content/pkg/PLAW-
111publ8/pdf/PLAW-111publ8.pdf](https://www.govinfo.gov/content/pkg/PLAW-111publ8/pdf/PLAW-111publ8.pdf). The
Policy has, to date, resulted in more
than 1.5 million articles reporting on
NIH-supported research being freely
available to the public in PubMed
Central.

On August 25, 2022, the White House
Office of Science and Technology Policy
(OSTP) released updated policy
guidance (2022 OSTP Memorandum
[https://www.whitehouse.gov/wp-
content/uploads/2022/08/08-2022-
OSTP-Public-Access-Memo.pdf](https://www.whitehouse.gov/wp-content/uploads/2022/08/08-2022-OSTP-Public-Access-Memo.pdf)) to all
federal agencies with research and
development expenditures to further
promote equity, advance trust in
science, and continue to advance
American scientific leadership.
Following the 2022 OSTP
Memorandum, NIH released its Plan to
Enhance Public Access to the Results of
NIH-Supported Research [https://
grants.nih.gov/grants/guide/notice-files/
NOT-OD-23-091.html](https://grants.nih.gov/grants/guide/notice-files/NOT-OD-23-091.html) in February 2023
(hereafter, the NIH Public Access Plan)
and its Draft Public Access Policy
[https://www.federalregister.gov/
documents/2024/06/18/2024-13373/
request-for-information-on-the-national-
institutes-of-health-draft-public-access-
policy](https://www.federalregister.gov/documents/2024/06/18/2024-13373/request-for-information-on-the-national-institutes-of-health-draft-public-access-policy) in June 2024 (NIH Draft Public
Access Policy). The NIH Public Access
Plan and Draft Public Access Policy
provided a roadmap for how NIH
proposed to accelerate access to
scholarly publications, consistent with
the government-wide expectation to
remove the 12-month embargo period
before public availability. This 2024
NIH Public Access Policy is consistent
with the expectations of the 2022 OSTP
Memorandum regarding scholarly
publications and is informed by all
public feedback, including comments
submitted in response to the NIH Draft
Public Access Policy.

Overview of Public Comments

A total of 144 written public
comments [https://osp.od.nih.gov/wp-
content/uploads/2024/10/Compiled-
Public-Comments-on-RFI-on-the-NIH-
Draft-Public-Access-Policy-508C.pdf](https://osp.od.nih.gov/wp-content/uploads/2024/10/Compiled-Public-Comments-on-RFI-on-the-NIH-Draft-Public-Access-Policy-508C.pdf)
were received in response to the NIH
Draft Public Access Policy. Written
comments were received from a variety

of constituencies, including those from universities, professional associations, nonprofit organizations, and publishers. In addition, NIH hosted a public listening session <https://osp.od.nih.gov/events/virtual-listening-session-on-the-nih-public-access-plan/> on the NIH Public Access Plan in April 2023, and in November 2023, NIH sponsored a workshop <https://www.nationalacademies.org/our-work/enhancing-public-access-to-the-results-of-research-supported-by-the-department-of-health-and-human-services-a-workshop> held by the National Academies of Sciences, Engineering and Medicine (NASEM) on Enhancing Public Access to the Results of Research Supported by the U.S. Department of Health and Human Services (HHS). Commenters and attendees included academic institutional officials, researchers at various career stages, patient advocates, publishers, and officials from professional associations, many of whom also publish academic journals.

NIH reviewed and considered all feedback to inform and develop the 2024 NIH Public Access Policy. Upon the listed effective date, the new Policy replaces the 2008 NIH Public Access Policy.

Discussion of Public Comments

A discussion of the public comments on the NIH Draft Public Access Policy, organized by general topic or theme, is provided below. Each section outlines the 2008 NIH Public Access Policy's approach on each issue, proposals in the NIH Draft Public Access Policy, public comments on the NIH Draft Public Access Policy, and the approach in the 2024 NIH Public Access Policy (also referred to as the Policy).

Definitions of Article, Manuscript, and Final Published Article

2008 NIH Public Access Policy: The 2008 NIH Public Access Policy did not have a general term or definition to describe the versions produced in the various stages of writing and publishing. Frequently Asked Questions (FAQs) associated with the 2008 NIH Public Access Policy expanded on some useful terms, such as Final Peer-Reviewed Manuscript and Final Published Article.

NIH Draft Public Access Policy: The NIH Draft Public Access Policy included a definition of Article to describe, in general, the versions from the creation of the draft through the Final Published Article. It also included definitions of Manuscript, Final Published Article, Journal, and Official Date of Publication (described further in its own section).

Public Comments: Although some comments supported the Draft Public Access Policy definitions of Article and Manuscript, other comments suggested that these terms were used inconsistently. There were many suggestions to define terms more clearly. Some suggestions included using other sources for definitions, such as the NISO Journal Article Version recommendations and the National Science Foundation's Public Access Plan's terms. Some comments suggested other replacement definitions. Some comments suggested that articles should not be considered Final Published Articles until the compilation of a volume or issue.

2024 NIH Public Access Policy: To communicate clearly and transparently, the Policy includes the definitions of two precise terms: Author Accepted Manuscript and Final Published Article. Each term is uniquely and consistently used throughout the Policy. In the Policy, the term Final Published Article represents the journal's authoritative copy, even prior to the compilation of a volume or issue or the assignment of associated metadata.

Because PubMed Central accepts submissions of the article from both the author (Author Accepted Manuscript) and journal (Final Published Article), the term "article" is still generally used here in this preamble to the Policy to refer to both Author Accepted Manuscripts and the Final Published Articles that are submitted to PubMed Central. However, it has been removed from the Policy itself. In addition, the Guidance on Government Use License and Rights includes the term Submitted Manuscript, as this Guidance discusses the process of submitting articles to be considered for publication in journals.

Definition of Official Date of Publication

2008 NIH Public Access Policy: When determining the timing of public release of a manuscript, NIH based the official date of publication on the later of the electronic or print publication date.

NIH Draft Public Access Policy: The NIH Draft Public Access Policy defined Official Date of Publication as "the date on which the article is first made available in final, edited form, whether in print or electronic (*i.e.*, online) format."

Public Comments: It was unclear to some if the NIH Draft Public Access Policy applied to an article upon its acceptance in a journal or upon its publication. Some comments suggested that the Official Date of Publication should refer to the point when an article has been issued pagination or an online

article number if that journal does not issue pagination.

2024 NIH Public Access Policy: The 2024 NIH Public Access Policy applies to Author Accepted Manuscripts. When determining the release of an Author Accepted Manuscript for public availability, the definition of Official Date of Publication is applicable. NIH has revised the definition of Official Date of Publication to be "the date on which the Final Published Article is first made available in final, edited form, whether in print or electronic (*i.e.*, online) format." This clarifies how NIH determines when an Author Accepted Manuscript should be made publicly available, which is not dependent on the compilation of a volume or issue or the assignment of associated metadata, as reflected in the revised definition of Final Published Article.

In addition, the definition of the Official Date of Publication is consistent with expectations under the NIH Policy for Data Management and Sharing (DMS Policy <https://grants.nih.gov/grants/guide/notice-files/NOT-OD-21-013.html>). Aligning definitions across the NIH DMS Policy and the updated NIH Public Access Policy provides consistency and clarity to those researchers who are subject to both policies. These modifications and clarifications are aligned with current practice in scholarly communications.

Scope of the Public Access Policy

2008 NIH Public Access Policy: The 2008 NIH Public Access Policy's scope included the concept of "direct" funding by NIH. The scope of the 2008 NIH Public Access Policy was not limited to articles reporting research findings. Rather, the 2008 Policy's requirements applied to any peer-reviewed article that arose from direct NIH funding and was accepted for publication in a journal on or after April 7, 2008. For example, a peer-reviewed article that arose from NIH funding that described an infrastructure project may have been subject to the 2008 Policy, even if not reporting research findings.

NIH Draft Public Access Policy: The NIH Draft Public Access Policy adopted the 2008 NIH Public Access Policy's scope. Accordingly, the NIH Draft Public Access Policy applied to any Manuscript accepted for publication in a journal that results from funding by NIH in whole or in part. The applicability of the NIH Draft Public Access Policy depended upon whether the Manuscript was the result of NIH funding in whole or in part and was not dependent on whether non-NIH funds contributed to developing or writing the Manuscript itself. In addition, the NIH

Draft Public Access Policy's applicability was based on the Manuscript's acceptance date, regardless of when the award from which the article resulted was funded.

Finally, the NIH Draft Public Access Policy, like the 2008 NIH Public Access Policy, did not limit its scope to Manuscripts reporting only on research (it included, for example, a peer-reviewed article that resulted from NIH funding and described an infrastructure project).

Public Comments: Some comments requested clarification of the scope or suggested that the scope of the Policy be limited to original research articles. In addition, some comments suggested that the Policy should apply to the Version of Record rather than the Manuscript. Comments suggested that the Version of Record is more reliable as it contains post-publication corrections, for example. Some also suggested that the Policy should only apply to grants with a minimal funding threshold. Others suggested that NIH create a fund to help pay for publication costs for articles related to ongoing and closed awards.

Some comments asked for additional clarification on what is encompassed in the term "Supplemental Material" and if non-peer-reviewed written products, such as reviews, perspectives, commentaries, and editorials, were within scope of the Policy.

2024 NIH Public Access Policy: The Policy maintains the scope of the NIH Draft Public Access Policy. Specifically, the Policy applies to final, peer-reviewed articles (*i.e.*, Author Accepted Manuscripts) accepted for publication in a journal on or after the Effective Date (December 31, 2025) that result from NIH funding in whole or in part. Supplemental Material are widely understood to be material included with the publication that support the publication (*e.g.*, detailed methods, additional figures).

Importantly, NIH has a long history of ensuring the accuracy and integrity of the scholarly communication record maintained in its biomedical literature services over time by including post-publication updates made through correction, retraction, and/or an expression of concern. NIH creates links in PubMed Central between citations for original articles and citations for post-publication updates based on information published by the journal. All updated or retracted articles in PubMed Central are clearly identified as such by a prominent banner and watermark. PubMed Central also links to the Final Published Article on the journal website whenever possible.

Duration of Public Access Policy Applicability

2008 NIH Public Access Policy: Neither the 2008 NIH Public Access Policy nor the law that made the 2008 Policy a requirement for FY 2009 and beyond <https://www.govinfo.gov/content/pkg/PLAW-111publ8/pdf/PLAW-111publ8.pdf> specifies an end date to the 2008 Policy's applicability. This approach is consistent with publishing timelines, in which publication often happens after the end of an award.

NIH Draft Public Access Policy: NIH did not propose an end date for applicability to Manuscripts resulting from awards.

Public Comments: Some comments asked for clarification and guidance on how publication costs may be supported after closeout of an award. Some suggested that NIH find a way to allow awardees to use NIH funds to pay publication costs for articles subject to the Policy after closeout.

2024 NIH Public Access Policy: The law that made the 2008 Policy a requirement for FY 2009 and beyond does not have an end date for the Policy's applicability. The 2024 NIH Public Access Policy, when effective, replaces the 2008 NIH Public Access Policy, which already applies to final, peer-reviewed accepted articles resulting from NIH funding for ongoing and closed awards. Therefore, the requirement of continued applicability is not new, and, consistent with the law and the 2008 NIH Public Access Policy, the 2024 NIH Public Access Policy does not include an end date for applicability of the Policy to Author Accepted Manuscripts within scope. Costs are discussed below in a separate section.

Policy Effective Date

2008 NIH Public Access Policy: The 2008 NIH Public Access Policy became effective for manuscripts accepted for publication on or after April 7, 2008, and which arose from direct funding from an award active in FY 2008 or beyond, a contract signed on or after April 7, 2008, or from intramural research or an NIH employee.

NIH Draft Public Access Policy: The NIH Draft Public Access Policy was proposed to become effective for Manuscripts accepted for publication on or after October 1, 2025.

Public Comments: Several comments expressed preference for an Effective Date on the latest date such policies should be effective as outlined in the 2022 OSTP Memorandum, December 31, 2025. These comments suggested that the additional time would allow for

better planning, communication, and additional opportunities for training for Policy compliance. It was suggested that this would also allow more time to renegotiate submission agreements between journal publishers and the National Library of Medicine. Other comments supported an Effective Date of October 1, 2025.

Some comments suggested that the Policy should apply only to articles resulting from awards made after the Effective Date.

Comments requested clear communications around how the Policy would be initially implemented. Specific comments sought clarification on whether the Policy would apply retroactively and whether it would apply to draft or peer-reviewed articles that were not yet published as of the Policy's Effective Date. Additionally, some comments asked NIH to publish a clear implementation plan and provide opportunity for public comment on the implementation plan.

2024 NIH Public Access Policy: The Policy adopts an Effective Date of December 31, 2025. This approach is responsive to public comments and allows for additional time for affected groups and institutions to plan and prepare for the implementation of the Policy, while still being consistent with the 2022 OSTP Memorandum.

The Policy applies to Author Accepted Manuscripts accepted on or after December 31, 2025, regardless of when the award was made that resulted in the Author Accepted Manuscript. This approach avoids a situation where the 2008 NIH Public Access Policy is in effect at the same time as the 2024 Policy. Such a situation could have led to administrative burden in tracking which policies apply to publications produced under different awards and confusion for readers, with some articles being made public without an embargo while other newly published articles would have an embargo applied.

NIH recognizes that some implementation questions might arise around the Effective Date. NIH anticipates that such issues are time-limited, and NIH is committed to working with the research community to prepare for implementation of the updated Policy.

Rights in Author Accepted Manuscripts, Including Creating Derivative Works

2008 NIH Public Access Policy: The FAQs for the 2008 NIH Public Access Policy described how and when rights in articles accrue and what rights may be transferred. NIH provided sample language an author or institution may have added to a copyright agreement

with a journal. In addition, authors depositing Manuscripts in PubMed Central must agree to the NIH Manuscript Submission (NIHMS) Statement that, in part, allows the Manuscript to be appropriately tagged and made available on PubMed Central. This ensures that all PubMed Central articles are available in machine-readable formats that support accessibility <https://www.ncbi.nlm.nih.gov/pmc/about/accessibility/> and facilitate text mining <https://pmc.ncbi.nlm.nih.gov/tools/amdataset/#use>.

NIH Draft Public Access Policy: NIH focused on achieving the NIH Draft Public Access Policy's goals regarding rights for Manuscripts through minimally burdensome pathways. First, the NIH Draft Public Access Policy clarified that, upon the acceptance of funding, government use rights are granted to NIH. NIH proposed incorporating a statement granting NIH the right to make Manuscripts publicly available in PubMed Central upon the Official Date of Publication into Notices of Award and applicable contracts. This would help clarify that NIH's rights would be automatically established at the acceptance of funding, without requiring funded recipients to take additional steps.

Secondly, the NIH Draft Public Access Policy proposed that authors depositing Manuscripts in PubMed Central would provide a license to NIH that mirrored the Government Use License as part of a revised Manuscript Submission Statement, granting NIH the rights to 1) make Manuscripts publicly available in PubMed Central upon the Official Date of Publication and 2) create derivative works in order to make Manuscripts available in machine-readable formats to support accessibility and facilitate text mining, consistent with current practice.

Beyond these measures, NIH did not propose requiring authors to apply a particular license to their Manuscripts.

In the Draft Guidance on Government Use License and Rights, NIH encouraged authors to clearly communicate NIH's rights through a statement in the Manuscript itself. In this Guidance, NIH proposed sample language for authors to place in their Manuscripts if desired.

Public Comments: NIH received many comments on rights. Many comments were broadly supportive of the draft language of the license that would be provided to NIH upon acceptance of award, while many others were broadly opposed. Some comments supported including NIH's rights in award conditions as being fully consistent with the government use rights. Others

questioned the legal bases for NIH's proposal and suggested it could restrict an author's ability to determine how their works will be reused. Others requested clarification around the scope of NIH's rights, such as whether the license could prevent authors from depositing their articles in institutional repositories.

Regarding the proposed language for the standard license when depositing Manuscripts in PubMed Central, comments were similarly split between support and opposition. Some suggested that the standard language added consistency and minimized confusion for those who are depositing, while others suggested that the language did not help authors understand their rights. Some were also confused as to how this language differed from the suggested language that was provided for authors to include in the article.

Comments were divided on the inclusion of the proposed license to allow for creating derivative works. Many supported the proposed language and indicated that it helped ensure accessibility, make critical information more widely available, and allow for machine readability. Many further suggested edits to the license and use statements that would grant rights to the full public reuse of the Manuscripts, with appropriate attribution. Those in opposition asserted that the proposal was not in alignment with the Government Use License and could undermine existing copyright agreements and the safeguards that publishers provide. Some also stated that the ability to create derivative works could undermine the integrity of the scientific record. Others suggested that if NIH were to include the ability to create derivative works in the license, there should be additional clarifications around specific use cases and limitations, providing adequate attribution to authors, and a way to enforce only appropriate uses.

2024 NIH Public Access Policy: The Policy includes relevant language about NIH's rights to make Author Accepted Manuscripts available in PubMed Central without embargo upon the Official Date of Publication. NIH reiterates that this does not mean that NIH has rights to the Final Published Article, as defined in the Policy, but only to the Author Accepted Manuscript, as defined in the Policy.

The Policy also requires that those depositing Author Accepted Manuscripts in PubMed Central agree to a revised Manuscript Submission Statement reiterating NIH's right to post such Author Accepted Manuscripts without embargo upon the Official Date

of Publication. The language for this statement, as included in the Guidance on Government Use License and Rights, has been modified from the Draft Public Access Policy to remove the phrase "create derivative works." Because NIH had not intended the language to convey what comments suggested regarding the potential to compromise scientific integrity, NIH has removed the phrase. NIH will, however, continue using features, existing or to-be-developed, that ensure accessibility and usability. NIH also reserves the right to, in the future, reasonably interpret statutory and/or regulatory language to permit uses of content that are consistent with copyright law, that provide value to users, and that are considered to be in line with practices of the time.

Regarding comments that proposed NIH should provide the public with full reuse rights through explicit language about reuse of the work for any purpose with attribution, NIH notes that such language is akin to authors providing NIH with a particular license. As stated in the NIH Draft Public Access Policy, NIH does not believe that a particular license is needed to achieve the Policy's goals.

Finally, NIH clarifies that the Policy does not prevent authors from depositing their Author Accepted Manuscripts into institutional repositories, as long as Author Accepted Manuscripts are also deposited in PubMed Central per the Policy.

Publication Costs

2008 NIH Public Access Policy: According to the 2008 NIH Public Access Policy FAQs, "Publication costs, including author fees, may be charged to NIH grants and contracts on three conditions: (1) such costs incurred are actual, allowable, and reasonable to advance the objectives of the award; (2) costs are charged consistently regardless of the source of support; (3) all other applicable rules on allowability of costs are met." Importantly, even if such costs were not incurred during a specific period of performance of an award, an award may still be charged for publication costs before its closeout.

NIH Draft Public Access Policy: In the NIH Draft Public Access Policy, NIH clarified that compliance with the Draft Policy is free. NIH proposed maintaining a free pathway for compliance through depositing the Manuscript in PubMed Central.

The NIH Draft Public Access Policy noted that if authors were asked to pay a third-party fee for the submission of Manuscripts to PubMed Central, the NIH Draft Public Access Policy would not permit this fee to be paid from NIH

funds because it is not a legitimate publication expense. The NIH Draft Public Access Policy indicated reasonable costs associated with publication that were allowable may be requested in the budget for the project as direct or indirect costs.

The Draft Guidance on Publication Costs contained examples of unallowable costs, based on cost principles and the NIH Grants Policy Statement (GPS). Regarding the ability to pay publication costs after an award has ended, the Draft Guidance stated that NIH cannot pay publication costs after closeout of an award (as affirmed in revisions to 2 CFR 200.461 <https://www.federalregister.gov/documents/2024/04/22/2024-07496/guidance-for-federal-financial-assistance#sectno-reference-200.461>). Points to Consider for Authors and Institutions in Assessing Reasonable Costs were included in the Draft Guidance on Publication Costs.

Public Comments: NIH received many comments on costs. There were comments that supported the free pathway to compliance, while other comments suggested that framing it as such undermines the efforts of publishers and could disrupt revenue streams. Some of these comments suggested that the Policy could impact publication quality, cause shifts in journal models (e.g., subscription- or article processing charge (APC)-based), or broadly increase APCs. Some suggested that smaller publishers, such as those supported by professional societies, will be particularly impacted by the Policy. Comments also expressed uncertainty about whether compliance with the Policy would require authors to pay journals to make their articles available immediately upon publication.

Comments both supported and opposed the information in the Draft Guidance on Publication Costs. Those supporting NIH's approach suggested that the Guidance would allow for the best use of funds and increase access to scientific research overall. Others proposed that NIH also cover fees related to other aspects of publishing, such as the peer review process and copyediting, as well as fees associated with novel ways of making the results of NIH funding publicly available.

Many requested clarification on allowable costs and provided some specific suggestions and comments about circumstances that could warrant the use of NIH funds. Some suggested that NIH should add factors about why authors might choose to pay a fee to the Points to Consider for Authors and Institutions in Assessing Reasonable

Costs (in the Draft Guidance on Publication Costs).

Other comments proposed that NIH pay for publication costs after closeout of the award and that this approach should be consistent across federal agencies. Comments also suggested that NIH should provide additional resources and guidance to underserved populations, such as researchers from historically excluded backgrounds, early-stage investigators, and researchers from lower-resourced institutions.

2024 NIH Public Access Policy: First, NIH reiterates that compliance with the Policy does not require the payment of an open access fee to a journal.

NIH also reiterates that the free pathway to compliance can be achieved by depositing the Author Accepted Manuscript into PubMed Central for public availability upon the Official Date of Publication without embargo.

NIH recognizes and understands that publishing itself is not free. NIH has developed Guidance on Publication Costs to guide institutions and authors when budgeting for and paying allowable and reasonable publication costs. The available compliance pathways of both the free deposition of the Author Accepted Manuscript to PubMed Central and also the journal deposition of the Final Published Article to PubMed Central support equity in publishing opportunity and, in particular, author choice. Importantly, through this Policy, NIH does not prevent authors from publishing findings resulting from NIH funding in journals that do not make their content immediately, publicly available, as long as the Author Accepted Manuscript is deposited in PubMed Central for public availability upon the Official Date of Publication. In this way, NIH promotes author choice in journal selection.

Regarding APCs and potential impacts, NIH recognizes that it is unclear how and to what extent publishing costs will be affected by NIH's and the government-wide policies that ensure taxpayer access to the results of the research they funded without embargo. NIH will continue to consider appropriate methods to monitor costs for potential impacts on relevant communities once the Policy has been implemented and any downstream effects are more readily apparent.

The Guidance on Publication Costs outlines key factors for allowability and Points to Consider for Authors and Institutions in Assessing Reasonable Costs. NIH has clarified some areas of the Draft Guidance on Publication Costs in response to comments received.

The GPS does not limit allowable costs only to articles that are subject to the Policy. NIH acknowledges that the public dissemination of results from NIH funding does not occur only through peer-reviewed publications. Models for sharing research findings are evolving and allowable costs may be requested for publicly disseminating works reporting on the results of NIH funding that are not subject to the NIH Public Access Policy. NIH notes, however, that the unallowable costs listed in the Guidance on Publication Costs continue to apply, and works must be made publicly available to qualify for costs.

NIH also makes clear that institutions, through their policies, may choose how to allot benefits under agreements with publishers and use NIH funds for publishing in ways that are otherwise allowable and ensure direct and indirect costs are charged consistently, regardless of the source of funds.

NIH notes that the use of institutional resources, such as library services, to aid in Policy compliance is not only permitted but encouraged.

NIH cannot allow costs to be paid from an award after its closeout or from a contract after it is expired. However, costs for publication may be charged after the period of performance and prior to closeout (*i.e.*, during the 120-day liquidation period). These costs must only be for the originally approved activities and must not be associated with any new work performed outside of the period of performance.

Finally, NIH has added some additional considerations to the Points to Consider for Authors and Institutions in Assessing Reasonable Costs that address concerns that the points were only outlining reasons not to pay a fee. NIH promotes consideration of all relevant factors when authors and institutions are deciding whether costs are reasonable in particular circumstances.

Compliance and Enforcement

2008 NIH Public Access Policy: The 2008 NIH Public Access Policy noted that the awardee institution is responsible for complying with the terms and conditions of the award. Compliance could be achieved through submission of the article by the author or journal to PubMed Central. NIH could take one or more enforcement actions depending on the severity and duration of the noncompliance, in accordance with applicable statutes, regulations, and policies.

NIH Draft Public Access Policy: The NIH Draft Public Access Policy adopted the same pathways to compliance as the

2008 NIH Public Access Policy. It also reinforced the requirement to properly communicate and acknowledge federal funding in articles. Importantly, the NIH Draft Public Access Policy stated that noncompliance with the requirement to properly communicate and acknowledge federal funding is itself a violation of the terms and conditions of award and also could result in noncompliance with the NIH Public Access Policy. It noted that non-competing continuation grant awards are subject to a delay in award processing and that noncompliance may affect future funding for the institution.

Public Comments: Some comments asked whether submission to PubMed Central would be the responsibility of the journal or the author and how compliance with the Policy would be monitored. Others asked for clarification around the flexibility of depositing Manuscripts immediately upon acceptance in PubMed Central, given processing times and other unforeseeable delays.

2024 NIH Public Access Policy: Compliance with the Policy is the responsibility of the institution, but, as noted in the Policy, compliance may be achieved through the pathway of the journal's submission of the Final Published Article to PubMed Central. NIH intends to continue monitoring compliance through existing processes. The 2024 NIH Public Access Policy outlines additional information on compliance and enforcement for awards, contracts, Other Transaction agreements, and NIH employees.

Regarding processing times, as noted in the NIH Draft Public Access Policy, implementation accounts for processing time that may be needed before public availability in PubMed Central. When Author Accepted Manuscripts are deposited into PubMed Central, an NIH Manuscript Submission Identifier (NIHMSID) may be used temporarily until the submission process is complete and a PubMed Central Identifier (PMCID) is assigned.

Accessibility and Understandability

2008 NIH Public Access Policy: NIH currently makes content in PubMed Central available in accessible and machine-readable formats. In addition, NIH has multiple ways to make research results available to the public, including through press releases and the Public Health Relevance Statement and the Outcomes section in RePORTER.

NIH Draft Public Access Policy: The Draft Policy noted that, as supporting technologies continue to develop, NIH would consider additional approaches

to increase understanding of NIH-funded scientific research.

Public Comments: Some comments suggested that the Draft Public Access Policy would increase accessibility of NIH research. Others noted that plain language summaries could enhance understandability.

2024 NIH Public Access Policy: Accessibility of PubMed Central content is paramount, and NIH will continue to make content accessible for those using assistive technologies. PubMed Central continues to improve the user experience and make its content more perceivable, operable, understandable, and robust, guided in part by feedback from those who use assistive technologies. NIH appreciates comments noting that, to make discoveries truly accessible to the public, information should be disseminated in ways that are meaningful and digestible. NIH is regularly looking for ways to promote the sharing of the results of its funded research, whether through press releases, websites, summary information on awards in RePORTER, or other means.

NIH Public Access Policy

Purpose

Increasing access to publications resulting from National Institutes of Health (NIH) funding offers many benefits to the scientific community and the public who funded the underlying research. When patients, families, and healthcare providers can access published findings resulting from NIH funding, they are able to better understand and address the most critical health concerns facing their communities. It also allows researchers, students, and members of the public in all communities to have equitable access to such content. This access can accelerate future research, lead to collaboration, and allow interested readers and patients to follow the latest advances more closely. Importantly, these goals also reflect NIH's commitment to the responsible stewardship of the Nation's investment in biomedical research by improving transparency and accessibility of taxpayer-funded research, an essential component of fostering trust in research.

To achieve these goals, the NIH Public Access Policy requires Author Accepted Manuscripts accepted for publication in a journal, on or after December 31, 2025, to be submitted to PubMed Central upon acceptance for publication, for public availability without embargo upon the Official Date of Publication.

Definitions

Author Accepted Manuscript: The author's final version that has been accepted for journal publication and includes all revisions resulting from the peer review process, including all associated tables, graphics, and supplemental material.

Final Published Article: The journal's authoritative copy, including journal or publisher copyediting and stylistic edits, and formatting changes, even prior to the compilation of a volume or issue or the assignment of associated metadata.

Journal: A periodical publication that is either (1) included in the "journal" section of the National Library of Medicine (NLM) Catalog <https://www.ncbi.nlm.nih.gov/nlmcatalog/journals> or (2) meets all of the following criteria:

- Requirements for ISSN assignment;
- Content is issued over time under a common title;
- Is a collection of articles by different authors; and
- Is intended to be published indefinitely.

Official Date of Publication: The date on which the Final Published Article is first made available in final, edited form, whether in print or electronic (*i.e.*, online) format.

Scope and Effective Date

The NIH Public Access Policy applies to any Author Accepted Manuscript accepted for publication in a journal, on or after December 31, 2025, that is the result of funding by NIH in whole or in part through:

- A grant or cooperative agreement, including training grants,
- A contract,
- An Other Transaction,
- NIH intramural research, or
- The official work of an NIH employee.

The NIH Public Access Policy applies regardless of whether the NIH-funded principal investigator or project director is an author and regardless of whether non-NIH funds contributed to developing or writing the Author Accepted Manuscript. Upon the Effective Date, this Policy replaces the 2008 NIH Public Access Policy.

Requirements

The NIH Public Access Policy requires:

- Submission of an electronic version of the Author Accepted Manuscript to PubMed Central upon its acceptance for publication for public availability without embargo upon the Official Date of Publication;

- An acknowledgment in the Author Accepted Manuscript and Final Published Article that satisfies the requirements in the NIH Grants Policy Statement (GPS) regarding communicating and acknowledging federal funding (GPS 4.2.1 https://grants.nih.gov/grants/policy/nihgps/HTML5/section_4/4.2.1_acknowledgement_of_federal_funding.htm and GPS 8.2.1 https://grants.nih.gov/grants/policy/nihgps/HTML5/section_8/8.2.1_rights_in_data_publication_and_copywriting.htm), as well as analogous requirements for acknowledging federal funding as incorporated into the terms of Other Transaction agreements and applicable contracts; and

- When an Author Accepted Manuscript is submitted to NIH,¹ agreeing to a standard license that mirrors that of the Government Use License at 2 CFR 200.315 <https://www.ecfr.gov/current/title-2/subtitle-A/chapter-II/part-200/subpart-D/subject-group-ECFR8feb98c2e3e5ad2/section-200.315>, or its successor regulation, explicitly granting NIH the right to make the Author Accepted Manuscript publicly available through PubMed Central without embargo upon the Official Date of Publication.

Government Use License and Rights

- By accepting NIH funding, the recipient grants to NIH, as the funding agency, a royalty-free, nonexclusive, and irrevocable right to reproduce, publish, or otherwise use the work for federal purposes and to authorize others to do so, which includes making Author Accepted Manuscripts publicly available in PubMed Central upon the Official Date of Publication. A statement that conveys this point is incorporated into Notices of Award, the terms of Other Transaction agreements, and applicable contracts.

- NIH encourages authors to include a statement that indicates the Author Accepted Manuscript is subject to the NIH Public Access Policy and that this means that NIH, as the funding agency, has the right to make the Author Accepted Manuscript publicly available in PubMed Central upon the Official Date of Publication. NIH provides sample language in the Guidance on Government Use License and Rights that authors may choose to include in Author Accepted Manuscripts. Such a statement ensures transparency and ensures awareness that NIH has the right to make the Author Accepted Manuscript available in PubMed Central

without embargo upon the Official Date of Publication.

- Authors are not expected to provide rights to NIH to the Final Published Article, and the rights that accrue to NIH upon the acceptance of funding are to the Author Accepted Manuscript. However, as noted in the section on Compliance and Enforcement, NIH will accept submission of the Final Published Article to PubMed Central from journals or publishers with formal agreements with NLM as compliant with the Policy when it may be made publicly available without embargo upon the Official Date of Publication.

NIH Funding of Publication Costs

Reasonable costs associated with publication that are allowable costs of the project budget may be requested as direct or indirect costs, as specified in the GPS 7.9 https://grants.nih.gov/grants/policy/nihgps/html5/section_7/7.9_allowability_of_costs_activities.htm and as incorporated into the terms of Other Transaction agreements and applicable contracts (see the Guidance on Publication Costs for more information). Submission of Author Accepted Manuscripts to PubMed Central remains free for authors under the NIH Public Access Policy. If, during the course of the publication process, an author is asked to pay a fee for submission of the Author Accepted Manuscript to PubMed Central, such costs are not allowable.

Compliance and Enforcement

Regarding submission to PubMed Central, compliance with the Policy may be achieved through either:

- Submission of the electronic version of the Author Accepted Manuscript to PubMed Central upon its acceptance for publication, for public availability without embargo upon the Official Date of Publication, or
- Submission of the Final Published Article to PubMed Central from journals or publishers with formal agreements with NLM, upon the Official Date of Publication, for public availability without embargo.

Additional details on compliance and enforcement can be found below:

- *Grants*: Noncompliance with the NIH Public Access Policy may be considered by NIH regarding future funding decisions for the recipient institution (e.g., as authorized in the NIH GPS 8.5, Specific Award Conditions and Remedies for Noncompliance (Specific Award Conditions and Enforcement Actions https://grants.nih.gov/grants/policy/nihgps/HTML5/section_8/8.5_special_award_conditions_and_remedies_for_

[noncompliance_special_award_conditions_and_enforcement_actions_.htm](#))). Non-competing continuation grant awards are subject to a delay in award processing for noncompliance with the NIH Public Access Policy.

- *Contracts*: Compliance with and enforcement of the Policy will be consistent with the contract and the Federal Acquisition Regulations, as applicable.

- *Other Transaction Agreements*: Compliance with and enforcement of the Policy will be consistent with applicable NIH policies and the terms of the agreement.

- *Intramural Research and the Official Work of NIH Employees*: Compliance with and enforcement of the Policy will be consistent with applicable NIH policies and procedures.

Communicating and acknowledging federal funding enables a clear, public-facing indication of NIH funding in Author Accepted Manuscripts and Final Published Articles. Failure to include required acknowledgments may result in noncompliance with the NIH Public Access Policy, in addition to resulting in noncompliance with terms and conditions of funding regarding communicating and acknowledging federal funding.

Guidance on Government Use License and Rights

Purpose

Federal agencies have, by law, certain rights to products resulting from federal funding. For works (e.g., Author Accepted Manuscripts) under the Government Use License (2 CFR 200.315 <https://www.ecfr.gov/current/title-2/subtitle-A/chapter-II/part-200/subpart-D/subject-group-ECFR8feb98c2e3e5ad2/section-200.315>), or its successor regulation, the National Institutes of Health (NIH) “reserves a royalty-free, nonexclusive, and irrevocable right to reproduce, publish, or otherwise use the work for Federal purposes and to authorize others to do so.” These rights also apply as incorporated into the terms of Other Transaction agreements and applicable contracts (e.g., the rights in data clause within the contract).

This Guidance assists authors in navigating compliance with the NIH Public Access Policy with minimal burden. NIH also encourages authors to be clear with journals and publishers to ensure journals and publishers understand that NIH has a right to make Author Accepted Manuscripts publicly available upon the Official Date of Publication.

¹ This happens typically through the NIH Manuscript Submission (NIHMS) System.

Public Access Policy Requirements Related to Rights

Upon accepting NIH funding, recipients grant to NIH the right to make Author Accepted Manuscripts resulting from the funding publicly available in PubMed Central upon the Official Date of Publication, and this is affirmed via a statement in Notices of Award, in the terms of Other Transaction agreements, and in applicable contracts.

Authors submitting Author Accepted Manuscripts to PubMed Central must agree to a submission statement as part of the standard PubMed Central manuscript submission process. Under the NIH Public Access Policy, authors submitting an Author Accepted Manuscript to PubMed Central must provide NIH with a standard license that mirrors the Government Use License. This language, included as part of this submission statement to PubMed Central, states:

I hereby grant to NIH, a royalty-free, nonexclusive, and irrevocable right to reproduce, publish, or otherwise use this work for Federal purposes and to authorize others to do so. This grant of rights includes the right to make the final, peer-reviewed manuscript publicly available in PubMed Central upon the Official Date of Publication.

The language in this statement may evolve, but it includes a grant of rights to NIH to make the Author Accepted Manuscript publicly available in PubMed Central without an embargo, upon the Official Date of Publication.

Guidance for Communicating Rights in Author Accepted Manuscripts

NIH highly encourages authors to be transparent during the journal submission process by indicating to the journal or publisher that the Author Accepted Manuscript, should the Submitted Manuscript² be accepted, is subject to the NIH Public Access Policy, and that this means that NIH, as the funding agency, has the right to make the Author Accepted Manuscript publicly available in PubMed Central upon the Official Date of Publication. NIH does not require that authors demonstrate to NIH what was communicated to publishers.

NIH suggests that authors include the points above as a statement in the Submitted Manuscript. Such a statement may accompany the required funding acknowledgment. NIH provides the following sample language that may be included in the Submitted Manuscript and then, should it be

accepted, the Author Accepted Manuscript:

This manuscript is the result of funding in whole or in part by the National Institutes of Health (NIH). It is subject to the NIH Public Access Policy. Through acceptance of this federal funding, NIH has been given a right to make this manuscript publicly available in PubMed Central upon the Official Date of Publication, as defined by NIH.

Guidance on Publication Costs

Purpose

The National Institutes of Health (NIH) reiterates that compliance with the Public Access Policy is free. However, NIH recognizes that some peer-reviewed publishing routes may result in publication costs, including, but not limited to, article processing charges (APCs). Publication costs are allowable when they comport with the existing NIH cost principles (Grants Policy Statement (GPS) 7.2 https://grants.nih.gov/grants/policy/nihgps/HTML5/section_7/7.2_the_cost_principles.htm and GPS 7.9.1 https://grants.nih.gov/grants/policy/nihgps/html5/section_7/7.9_allowability_of_costs_activities.htm#Selected (Publication and Printing Costs). Cost principles clarify when costs should be allocated as direct versus indirect costs, and they clarify charges and fees that are allowable under the outlined conditions.

This Guidance clarifies publication costs that are not allowable based on existing cost principles. It also outlines Points to Consider for Authors and Institutions in Assessing Reasonable Costs. This Guidance is intended to help funded authors and institutions understand what costs are allowable and reasonable under the NIH Public Access Policy. The NIH GPS also permits allowable and reasonable costs to be used to make public other works resulting from NIH funding that are not subject to the NIH Public Access Policy. This Guidance includes a brief section describing these kinds of works. The factors for what make costs unallowable are broadly applicable, regardless of whether the publication or other work is subject to the NIH Public Access Policy.

Public Access Policy Requirements Related to Costs

All costs must comport with 2 CFR 200 subpart E <https://www.ecfr.gov/current/title-2/subtitle-A/chapter-II/part-200/subpart-E>, or its successor regulation, as implemented in NIH GPS 7.2 and GPS 7.9 https://grants.nih.gov/grants/policy/nihgps/HTML5/section_7/7.9_allowability_of_costs_activities.htm. These principles also apply as analogous requirements in the terms of

Other Transaction agreements. For applicable contracts, all publication costs must comport with 2 CFR 200 subpart E, or its successor regulation, and the terms and conditions of the contract.

The NIH Public Access Policy clarifies that reasonable costs that are allowable may be requested in the budget for the project as direct or indirect costs, as specified in the NIH GPS and as incorporated into the terms of Other Transaction agreements and applicable contracts. Importantly, the NIH Public Access Policy also states that submission of Author Accepted Manuscripts to PubMed Central remains free for authors. Journal or publisher fees that arise during the course of the publication process for the sole purpose of submitting the Author Accepted Manuscript to PubMed Central are not allowable costs. Compliance with the Policy does not require the payment of an open access fee to a journal.

Other Unallowable Costs

In addition to not allowing the payment of fees to submit Author Accepted Manuscripts to PubMed Central, examples of other unallowable costs are listed below in the context of the corresponding rules that can be found in the NIH GPS. This list may be updated as needed.

- Costs for services (e.g., peer review) for which there is no resulting, publicly available product are unallowable because costs must be chargeable or assignable in accordance with the relative benefits received (GPS 7.2).
- Costs for which the institution already pays a fee that would cover all publication costs (e.g., an agreement the institution has with a publisher whereby all authors from that institution may publish for free in exchange for subscription services) are unallowable because costs may not be double charged or inconsistently charged as both direct and indirect costs (GPS 7.4 https://grants.nih.gov/grants/policy/nihgps/HTML5/section_7/7.4_reimbursement_of_facilities_and_administrative_costs.htm). Note that institutions have discretion in apportioning publication costs among agreements and NIH funds, as long as when NIH funds are used, such costs are otherwise allowable and consistently charged, regardless of the source of funds, per institutional policy.

- Costs for publishing services that are charged differentially because an Author Accepted Manuscript is subject to the NIH Public Access Policy or the work is the result of NIH funding are unallowable because charges must be levied impartially on all items

² The author's pre-accepted version of the manuscript that is submitted to a journal or publisher.

published by the journal, whether or not under a federal award (GPS 7.9.1).

- Costs for services incurred after closeout of the award, even for an Author Accepted Manuscript subject to the NIH Public Access Policy, are unallowable because the costs of publications must be incurred before closeout (GPS 7.9.1). Note that this means that costs for publication may be charged after the period of performance and prior to closeout (*i.e.*, during the 120-day liquidation period). However, these costs must only be for the originally approved activities and must not be associated with any new work performed outside of the period of performance.

Points To Consider for Authors and Institutions in Assessing Reasonable Costs

As stated in Section 7.2 of the NIH GPS, a cost may be considered reasonable if the nature of the goods or services acquired or applied and the associated dollar amount reflect the action that a prudent person would have taken under the circumstances prevailing when the decision to incur the cost was made. NIH promotes *reasonable* publication costs to ensure an equitable system for publishing opportunities. However, establishing a particular threshold for what is reasonable may lead to inequitable outcomes in specific circumstances, so NIH is instead providing these Points to Consider in assessing reasonable costs to guide authors and institutions. While NIH may modify this approach in the future, NIH encourages researchers and institutions to consider, when determining whether costs are reasonable:

- Amount of publication cost in relation to NIH award
- Other works researchers may wish to produce during an award period
- Professional and institutional priorities
- Sustainability in terms of the library budget, laboratory budget, and other relevant budgets, if such costs were to be consistently paid
- Relevance of the journal in communicating findings to advance science and/or improve health outcomes
- Suitability of the journal's target readership for the dissemination of the content

Other Public Works for Which Allowable Costs May Be Requested

This Guidance is primarily to help funded authors and institutions understand what costs are allowable under the NIH Public Access Policy.

NIH acknowledges that the public dissemination of results from NIH funding does not occur only through peer-reviewed publications. Models for sharing research findings are evolving and allowable costs may be requested for publicly disseminating works reporting on the results of NIH funding that are not subject to the NIH Public Access Policy.

As a reminder, the unallowable costs listed above continue to apply, and works must be made publicly available to qualify for costs.

Reputable Journals and Responsible Conduct of Research

In addition, NIH reiterates its Statement on Article Publication Resulting from NIH Funded Research <https://grants.nih.gov/grants/guide/notice-files/NOT-OD-18-011.html>, a 2017 NIH Guide Notice that encourages authors to publish papers resulting from NIH-funded research in reputable journals. Fees paid to journals that have characteristics described in the Statement may be considered unreasonable.

Finally, NIH also reiterates the importance of maintaining integrity in science in its Guidance on the requirement for Instruction in the Responsible Conduct of Research <https://grants.nih.gov/grants/guide/notice-files/NOT-OD-22-055.html>, which includes responsible authorship and publication.

Dated: December 12, 2024.

Lawrence A. Tabak,

Principal Deputy Director, National Institutes of Health.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

National Institute of Allergy and Infectious Diseases; Notice of Closed Meeting

Pursuant to section 1009 of the Federal Advisory Committee Act, as amended, notice is hereby given of the following meeting.

The meeting will be closed to the public in accordance with the provisions set forth in sections 552b(c)(4) and 552b(c)(6), Title 5 U.S.C., as amended. The contract proposals and the discussions could disclose confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the contract

proposals, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Name of Committee: National Institute of Allergy and Infectious Diseases Special Emphasis Panel; HHS-NIH-CDC-SBIR PHS 2025-1 Discovery and Development of Oral Small-molecule Direct-acting Antivirals Targeting Viruses of Pandemic Potential (Topic 146).

Date: January 15, 2025.

Time: 11:00 a.m. to 5:00 p.m.

Agenda: To review and evaluate contract proposals.

Place: National Institute of Allergy and Infectious Diseases, National Institutes of Health, 5601 Fishers Lane, Room 3F52A, Rockville, MD 20892 (Video Assisted Meeting).

Contact Person: Shilpakala Ketha, Ph.D., Scientific Review Officer, Scientific Review Program, Division of Extramural Activities, National Institute of Allergy and Infectious Diseases, National Institutes of Health, 5601 Fishers Lane, Room 3F52A, Rockville, MD 20892, (301) 761-6821, shilpa.ketha@nih.gov.

BILLING CODE 4140-01-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Substance Abuse and Mental Health Services Administration

Agency Information Collection Activities: Submission for OMB Review; Comment Request

Periodically, the Substance Abuse and Mental Health Services Administration (SAMHSA) will publish a summary of information collection requests under OMB review, in compliance with the Paperwork Reduction Act (44 U.S.C. Chapter 35). To request a copy of these documents, call the SAMHSA Reports Clearance Officer at (240) 276-0361.

Project: Substance Abuse Prevention and Treatment Block Grant Synar Report Format, FFY 2024-2026—(OMB No. 0930-0222)—Extension

Section 1926 of the Public Health Service Act [42 U.S.C. 300x-26] stipulates that Substance Use Prevention, Treatment, and Recovery Services Block Grant (SUPTRS) funding agreements for alcohol and drug abuse programs for fiscal year 1994 and

subsequent fiscal years require states to have in effect a law providing that it is unlawful for any manufacturer, retailer, or distributor of tobacco products to sell or distribute any such product to any individual under the age of 21. This section further requires that states conduct annual, random, unannounced inspections to ensure compliance with the law; that the state submit annually a report describing the results of the inspections, the activities carried out by the state to enforce the required law, the success the state has achieved in reducing the availability of tobacco products to individuals under the age of 21, and the strategies to be utilized by the state for enforcing such law during the fiscal year for which the grant is sought.

Before making an award to a state under the Block Grant, the Secretary must make a determination that the state has maintained compliance with the regulations. If a determination is made that the state is not in compliance, penalties shall be applied. There are three (3) penalty options for failure to comply with the Synar requirements: (1)

States may be fined a penalty up to 10 percent of the SUPTRS). (2) States may elect to submit a corrective action plan to the Assistant Secretary for Mental Health and Substance Use within 90 days of receipt of notice that they are not in compliance with the Synar regulations, which outlines strategies they will take to reduce the Retail Violation Rate to 20 percent or less. (3) States certify to the Secretary by May 1 of the fiscal year for which the funds are appropriated, consistent with subparagraph (B), that the State will commit additional State funds, in accordance with paragraph (1), to ensure that retailers do not sell tobacco products to individuals under 21 years of age; (Pub. L. 116–94 Statute, section 604 pg. 593). Respondents include the 50 states, the District of Columbia, the Commonwealth of Puerto Rico, the U.S. Virgin Islands, Guam, American Samoa, the Commonwealth of the Northern Mariana Islands, Palau, Micronesia, and the Marshall Islands. Red Lake Indian Tribe is not subject to tobacco requirements.

Regulations that implement this legislation are at 45 CFR 96.130, are approved by OMB under control number 0930–0163, and require that each state submit an annual Synar report to the Secretary describing their progress in complying with section 1926 of the PHS Act. The Synar report, due December 31 following the fiscal year for which the state is reporting, describes the results of the inspections and the activities carried out by the state to enforce the required law; the success the state has achieved in reducing the availability of tobacco products to individuals under the age of 21; and the strategies to be utilized by the state for enforcing such law during the fiscal year for which the grant is sought. SAMHSA is requesting an extension of OMB approval of the current report format associated with section 1926 (42 U.S.C. 300x–26) to 2026. Extending OMB approval of the current report format will continue to facilitate consistent, credible, and efficient monitoring of Synar compliance across the states.

ANNUAL REPORTING BURDEN					
45 CFR citation	Number of respondents ¹	Responses per respondents	Total number of responses	Hours per response	Total hour burden
Annual Report (Section 1—States and Territories) 96.130(e)(1–3)	59	1	59	15	885
State Plan (Section II—States and Territories) 96.130(e)(4,5)96.130(g)	59	1	59	3	177
Total	59		118		1,062

¹ Red Lake Indian Tribe is not subject to tobacco requirements.

Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to www.reginfo.gov/public/do/PRAMain. Find this particular information collection by selecting “Currently under 30-day Review—Open for Public Comments” or by using the search function.

Alicia Broadus,
Public Health Advisor.

BILLING CODE 4162–20–P

DEPARTMENT OF HOMELAND SECURITY

Federal Emergency Management Agency

[Docket ID FEMA–2024–0002]

Changes in Flood Hazard Determinations

AGENCY: Federal Emergency Management Agency, Department of Homeland Security.

ACTION: Notice.

SUMMARY: New or modified Base (1-percent annual chance) Flood Elevations (BFEs), base flood depths, Special Flood Hazard Area (SFHA) boundaries or zone designations, and/or regulatory floodways (hereinafter referred to as flood hazard determinations) as shown on the indicated Letter of Map Revision (LOMR) for each of the communities

listed in the table below are finalized. Each LOMR revises the Flood Insurance Rate Maps (FIRMs), and in some cases the Flood Insurance Study (FIS) reports, currently in effect for the listed communities.

DATES: Each LOMR was finalized as in the table below.

ADDRESSES: Each LOMR is available for inspection at both the respective Community Map Repository address listed in the table below and online through the FEMA Map Service Center at <https://msc.fema.gov>.

FOR FURTHER INFORMATION CONTACT: Rick Sacbibit, Chief, Engineering Services Branch, Federal Insurance and Mitigation Administration, FEMA, 400 C Street SW, Washington, DC 20472, (202) 646–7659, or (email) patrick.sacbibit@fema.dhs.gov; or visit the FEMA Mapping and Insurance eXchange (FMIX) online at <https://>

www.floodmaps.fema.gov/fhm/fmx_main.html.

SUPPLEMENTARY INFORMATION: The Federal Emergency Management Agency (FEMA) makes the final flood hazard determinations as shown in the LOMRs for each community listed in the table below. Notice of these modified flood hazard determinations has been published in newspapers of local circulation and 90 days have elapsed since that publication. The Deputy Associate Administrator for Insurance and Mitigation has resolved any appeals resulting from this notification.

The modified flood hazard determinations are made pursuant to section 206 of the Flood Disaster Protection Act of 1973, 42 U.S.C. 4105, and are in accordance with the National Flood Insurance Act of 1968, 42 U.S.C. 4001 *et seq.*, and with 44 CFR part 65.

The currently effective community number is shown and must be used for all new policies and renewals.

The new or modified flood hazard information is the basis for the floodplain management measures that the community is required either to adopt or to show evidence of being already in effect in order to remain qualified for participation in the National Flood Insurance Program (NFIP).

This new or modified flood hazard information, together with the floodplain management criteria required by 44 CFR 60.3, are the minimum that are required. They should not be construed to mean that the community must change any existing ordinances that are more stringent in their floodplain management requirements. The community may at any time enact stricter requirements of its own or

pursuant to policies established by other Federal, State, or regional entities.

This new or modified flood hazard determinations are used to meet the floodplain management requirements of the NFIP. The changes in flood hazard determinations are in accordance with 44 CFR 65.4.

Interested lessees and owners of real property are encouraged to review the final flood hazard information available at the address cited below for each community or online through the FEMA Map Service Center at <https://msc.fema.gov>.

BILLING CODE 9110-12-P

DEPARTMENT OF HOMELAND SECURITY

Federal Emergency Management Agency

[Docket ID FEMA-2024-0002]

Changes in Flood Hazard Determinations

AGENCY: Federal Emergency Management Agency, Department of Homeland Security.

ACTION: Notice.

SUMMARY: New or modified Base (1-percent annual chance) Flood Elevations (BFEs), base flood depths, Special Flood Hazard Area (SFHA) boundaries or zone designations, and/or regulatory floodways (hereinafter referred to as flood hazard determinations) as shown on the indicated Letter of Map Revision (LOMR) for each of the communities listed in the table below are finalized. Each LOMR revises the Flood Insurance Rate Maps (FIRMs), and in some cases the Flood Insurance Study (FIS) reports, currently in effect for the listed communities.

DATES: Each LOMR was finalized as in the table below.

ADDRESSES: Each LOMR is available for inspection at both the respective Community Map Repository address listed in the table below and online through the FEMA Map Service Center at <https://msc.fema.gov>.

FOR FURTHER INFORMATION CONTACT: Rick Sacibit, Chief, Engineering Services Branch, Federal Insurance and Mitigation Administration, FEMA, 400 C Street SW, Washington, DC 20472, (202) 646-7659, or (email) patrick.sacibit@fema.dhs.gov; or visit the FEMA Mapping and Insurance eXchange (FMIX) online at https://www.floodmaps.fema.gov/fhm/fmx_main.html.

SUPPLEMENTARY INFORMATION: The Federal Emergency Management Agency (FEMA) makes the final flood hazard determinations as shown in the LOMRs for each community listed in the table below. Notice of these modified flood hazard determinations has been published in newspapers of local circulation and 90 days have elapsed since that publication. The Deputy Associate Administrator for Insurance and Mitigation has resolved any appeals resulting from this notification.

The modified flood hazard determinations are made pursuant to section 206 of the Flood Disaster Protection Act of 1973, 42 U.S.C. 4105, and are in accordance with the National Flood Insurance Act of 1968, 42 U.S.C.

4001 *et seq.*, and with 44 CFR part 65. The currently effective community number is shown and must be used for all new policies and renewals.

The new or modified flood hazard information is the basis for the floodplain management measures that the community is required either to adopt or to show evidence of being already in effect in order to remain qualified for participation in the National Flood Insurance Program (NFIP).

This new or modified flood hazard information, together with the floodplain management criteria required by 44 CFR 60.3, are the minimum that are required. They should not be construed to mean that the community must change any existing ordinances that are more stringent in their floodplain management requirements. The community may at any time enact stricter requirements of its own or pursuant to policies established by other Federal, State, or regional entities.

This new or modified flood hazard determinations are used to meet the floodplain management requirements of the NFIP. The changes in flood hazard determinations are in accordance with 44 CFR 65.4.

Interested lessees and owners of real property are encouraged to review the final flood hazard information available at the address cited below for each

community or online through the FEMA Map Service Center at <https://msc.fema.gov>. (Catalog of Federal Domestic Assistance No. 97.022, "Flood Insurance.")

Nicholas A. Shufro,
Assistant Administrator (Acting) for Risk
Management, Federal Emergency
Management Agency, Department of
Homeland Security.

DEPARTMENT OF HOMELAND SECURITY**Federal Emergency Management Agency**

[Docket ID: FEMA-2024-0036; OMB No. 1660-0112]

Agency Information Collection Activities: Proposed Collection; Comment Request; FEMA Preparedness Grants: Transit Security Grant Program (TSGP) and Intercity Bus Security Grant Program (IBSGP)**AGENCY:** Federal Emergency Management Agency, Department of Homeland Security.**ACTION:** 60-Day notice of revision and request for comments.**SUMMARY:** The Federal Emergency Management Agency (FEMA), as part of its continuing effort to reduce paperwork and respondent burden,

invites the general public to take this opportunity to comment on a revision of a currently approved information collection. In accordance with the Paperwork Reduction Act of 1995, this notice seeks comments concerning the Transit Security Grant Program (TSGP) and the Intercity Bus Security Grant Program (IBSGP), which are FEMA grant programs that focus on transportation infrastructure protection activities.

DATES: Comments must be submitted on or before February 18, 2025.**ADDRESSES:** To avoid duplicate submissions to the docket, please submit comments at www.regulations.gov under Docket ID FEMA-2024-0036. Follow the instructions for submitting comments.

All submissions received must include the agency name and Docket ID. Regardless of the method used for submitting comments or material, all submissions will be posted, without change, to the Federal Rulemaking Portal at <http://www.regulations.gov>, and will include any personal information you provide. Therefore,

submitting this information makes it public. You may wish to read the Privacy and Security Notice that is available via a link on the homepage of www.regulations.gov.

FOR FURTHER INFORMATION CONTACT: Kevin Groves, Supervisory Program Analyst, FEMA, 202-330-3836, and kevin.groves@fema.dhs.gov. You may contact the Information Management Division for copies of the proposed collection of information at email address: FEMA-Information-Collections-Management@fema.dhs.gov.

SUPPLEMENTARY INFORMATION: The Transit Security Grant Program (TSGP) is a Federal Emergency Management Agency (FEMA) grant program that focuses on transportation infrastructure protection activities. The collection of information for TSGP is mandated by Section 1406, Title XIV of the *Implementing Recommendations of the 9/11 Commission Act of 2007* (Pub. L. 110-53) (codified at 6 U.S.C. 1135), which directs the Secretary to establish a program for making grants to eligible public transportation agencies for

security improvements. Additionally, information is collected in accordance with Section 1406(c) of the *Implementing Recommendations of the 9/11 Commission Act of 2007* (6 U.S.C. 1135(c)) which authorizes the Secretary to determine the requirements for grant recipients, including application requirements.

The Intercity Bus Security Grant Program (IBSGP) is a FEMA grant program that focuses on transportation infrastructure protection activities. The collection of information for IBSGP is mandated by Section 1532 of the *Implementing Recommendations of the 9/11 Commission Act of 2007* (Pub. L. 110–53) (codified at 6 U.S.C. 1182), which directs the Secretary to establish a program for making grants to eligible public transportation agencies for security improvements. Additionally, information is collected in accordance with Section 1532(d) of the *Implementing Recommendations of the 9/11 Commission Act of 2007* (6 U.S.C. 1182(d)) which authorizes the Secretary to determine the requirements for grant recipients, including application requirements. With this revision, FEMA adds the instruments for the IBSGP to this collection for easier management and transparency.

Collection of Information

Title: FEMA Preparedness Grants: Transit Security Grant Program (TSGP) and Intercity Bus Security Grant Program (IBSGP).

Type of Information Collection: Revision of a currently approved information collection.

OMB Number: 1660–0112.

FEMA Forms: TSGP Five Year Security Capital and Operational Sustainment Plan, FEMA Form FF–207–FY–21–101; TSGP Investment Justification Background Document, FEMA Form FF–207–FY–21–102; TSGP Investment Justification, FEMA Form FF–207–FY–21–103; TSGP Public Transit Risk Assessment Methodology (PT–RAM) Gap Analysis, FEMA Form FF–207–FY–21–104; TSGP PT–RAM Implementation Plan, FEMA Form FF–207–FY–21–105; TSGP PT–RAM, FEMA Form FF–207–FY–21–106; ISBGP Investment Justification Form, FEMA Form FF–207–FY–23–102; IBSGP Detailed Budget Worksheet, FEMA Form FF–207–FY–23–103; and IBSGP Vulnerability Assessment and Security Plan, FEMA Form FF–207–FY–23–104.

Abstract: The TSGP and IBSGP are important components of the Department's effort to enhance the security of the Nation's critical infrastructure. The programs provide funds to owners and operators of transit

systems (TSGP) and private bus operators (IBSGP) to protect critical surface transportation infrastructure and the traveling public from acts of terrorism, major disasters, and other emergencies.

Affected Public: Business or other for-profit entities, State and local governments.

Estimated Number of Respondents: 906.

Estimated Number of Responses: 906.

Estimated Total Annual Burden Hours: 15,940.

Estimated Total Annual Respondent Cost: \$1,537,792.

Estimated Respondents' Operation and Maintenance Costs: \$0.

Estimated Respondents' Capital and Start-Up Costs: \$0.

Estimated Total Annual Cost to the Federal Government: \$1,163,120.

Comments

Comments may be submitted as indicated in the **ADDRESSES** caption above. Comments are solicited to (a) evaluate whether the proposed data collection is necessary for the proper performance of the Agency, including whether the information shall have practical utility; (b) evaluate the accuracy of the Agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (c) enhance the quality, utility, and clarity of the information to be collected; and (d) minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

Maile Arthur,

Acting Records Management Branch Chief, Office of the Chief Administrative Officer, Mission Support, Federal Emergency Management Agency, Department of Homeland Security.

BILLING CODE 9111–78–P

DEPARTMENT OF HOMELAND SECURITY

Federal Emergency Management Agency

[Docket ID FEMA–2024–0002; Internal Agency Docket No. FEMA–B–2482]

Proposed Flood Hazard Determinations

AGENCY: Federal Emergency Management Agency, Department of Homeland Security.

ACTION: Notice.

SUMMARY: Comments are requested on proposed flood hazard determinations, which may include additions or modifications of any Base Flood Elevation (BFE), base flood depth, Special Flood Hazard Area (SFHA) boundary or zone designation, or regulatory floodway on the Flood Insurance Rate Maps (FIRMs), and where applicable, in the supporting Flood Insurance Study (FIS) reports for the communities listed in the table below. The purpose of this notice is to seek general information and comment regarding the preliminary FIRM, and where applicable, the FIS report that the Federal Emergency Management Agency (FEMA) has provided to the affected communities. The FIRM and FIS report are the basis of the floodplain management measures that the community is required either to adopt or to show evidence of having in effect in order to qualify or remain qualified for participation in the National Flood Insurance Program (NFIP).

DATES: Comments are to be submitted on or before March 18, 2025.

ADDRESSES: The Preliminary FIRM, and where applicable, the FIS report for each community are available for inspection at both the online location <https://hazards.fema.gov/femaportal/prelimdownload> and the respective Community Map Repository address listed in the tables below. Additionally, the current effective FIRM and FIS report for each community are accessible online through the FEMA Map Service Center at <https://msc.fema.gov> for comparison.

You may submit comments, identified by Docket No. FEMA–B–2482, to Rick Sacbibit, Chief, Engineering Services Branch, Federal Insurance and Mitigation Administration, FEMA, 400 C Street SW, Washington, DC 20472, (202) 646–7659, or (email) patrick.sacbibit@fema.dhs.gov.

FOR FURTHER INFORMATION CONTACT: Rick Sacbibit, Chief, Engineering Services Branch, Federal Insurance and

Mitigation Administration, FEMA, 400 C Street SW, Washington, DC 20472, (202) 646-7659, or (email) patrick.sacibit@fema.dhs.gov; or visit the FEMA Mapping and Insurance eXchange (FMIX) online at https://www.floodmaps.fema.gov/fhm/fmx_main.html.

SUPPLEMENTARY INFORMATION: FEMA proposes to make flood hazard determinations for each community listed below, in accordance with section 110 of the Flood Disaster Protection Act of 1973, 42 U.S.C. 4104, and 44 CFR 67.4(a).

These proposed flood hazard determinations, together with the floodplain management criteria required by 44 CFR 60.3, are the minimum that are required. They should not be construed to mean that the community must change any existing ordinances that are more stringent in their floodplain management requirements. The community may at any time enact stricter requirements of its own or pursuant to policies established by other Federal, State, or regional entities. These flood hazard determinations are

used to meet the floodplain management requirements of the NFIP.

The communities affected by the flood hazard determinations are provided in the tables below. Any request for reconsideration of the revised flood hazard information shown on the Preliminary FIRM and FIS report that satisfies the data requirements outlined in 44 CFR 67.6(b) is considered an appeal. Comments unrelated to the flood hazard determinations also will be considered before the FIRM and FIS report become effective.

Use of a Scientific Resolution Panel (SRP) is available to communities in support of the appeal resolution process. SRPs are independent panels of experts in hydrology, hydraulics, and other pertinent sciences established to review conflicting scientific and technical data and provide recommendations for resolution. Use of the SRP only may be exercised after FEMA and local communities have been engaged in a collaborative consultation process for at least 60 days without a mutually acceptable resolution of an appeal. Additional information

regarding the SRP process can be found online at https://www.floodsrp.org/pdfs/srp_overview.pdf.

The watersheds and/or communities affected are listed in the tables below. The Preliminary FIRM, and where applicable, FIS report for each community are available for inspection at both the online location <https://hazards.fema.gov/femaportal/prelimdownload> and the respective Community Map Repository address listed in the tables. For communities with multiple ongoing Preliminary studies, the studies can be identified by the unique project number and Preliminary FIRM date listed in the tables. Additionally, the current effective FIRM and FIS report for each community are accessible online through the FEMA Map Service Center at <https://msc.fema.gov> for comparison.

BILLING CODE 9110-12-P

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR-7080-N-59]

30-Day Notice of Proposed Information Collection: Public Housing—Contracting With Resident-Owned Businesses; OMB Control No.: 2577-0161

AGENCY: Office of Policy Development and Research, Chief Data Officer, HUD.

ACTION: Notice.

SUMMARY: HUD is seeking approval from the Office of Management and Budget (OMB) for the information collection described below. In accordance with the Paperwork Reduction Act, HUD is requesting comment from all interested parties on the proposed collection of information. The purpose of this notice is to allow for an additional 30 days of public comment.

DATES: *Comments Due Date:* January 17, 2025.

ADDRESSES: Interested persons are invited to submit comments regarding

this proposal. Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to www.reginfo.gov/public/do/PRAMain. Find this particular information collection by selecting “Currently under 30-day Review—Open for Public Comments” or by using the search function. Interested persons are also invited to submit comments regarding this proposal by name and/or OMB Control Number and should be sent to: Colette Pollard, Reports Management Officer, REE, Department of Housing and Urban Development, 451 7th Street SW, Room 8210, Washington, DC 20410–5000; telephone 202–402–3577 (this is not a toll-free number) or email: PaperworkReductionActOffice@hud.gov.

FOR FURTHER INFORMATION CONTACT: Colette Pollard, Reports Management Officer, REE, Department of Housing and Urban Development, 451 7th Street SW, Washington, DC 20410; email: Colette.Pollard@hud.gov, telephone (202) 402–3400. This is not a toll-free number. HUD welcomes and is prepared to receive calls from individuals who are deaf or hard of hearing, as well as individuals with speech or communication disabilities. To learn more about how to make an accessible telephone call, please visit <https://www.fcc.gov/consumers/guides/telecommunications-relay-service-trs>. Copies of available documents submitted to OMB may be obtained from Ms. Pollard.

SUPPLEMENTARY INFORMATION: This notice informs the public that HUD is

seeking approval from OMB for the information collection described in Section A.

The **Federal Register** notice that solicited public comment on the information collection for a period of 60 days was published on September 18, 2024 at 89 FR 76500.

A. Overview of Information Collection

Title of Information Collection: Public Housing—Contracting with Resident-Owned Businesses.

OMB Control Number: 2577–0161.

Type of Request: Extension of previously approved collection.

Form Number: N/A.

Description of the need for the information and proposed use: PHAs that entered into contracts with resident-owned businesses prior to December 26, 2014, must comply with the requirements/procedures set forth in, 24 CFR 85.36(h), and 24 CFR 85.36(i). Contracts with resident-owned businesses entered into after December 26, 2014, must comply with 24 CFR part 963, 2 CFR 200.325, and 2 CFR 200.326 and other such contract terms that may be applicable to the procurement under the Department’s regulations. These requirements include:

- Certified copies of any State, county, or municipal licenses that may be required of the business to engage in the type of business activity for which it was formed. Where applicable, the PHA must obtain a certified copy of its corporate charter or other organizational document that verifies that the business was properly formed in accordance with State law;
- Certification that shows the business is owned by residents,

disclosure documents that indicate all owners of the business and each owner’s percentage of the business along with sufficient evidence sufficient that demonstrates to the satisfaction of the PHA that the business has the ability to perform successfully under the terms and conditions of the proposed contract;

- Certification as to the number of contracts awarded, and the dollar amount of each contract award received, under the alternative procurement process; and

- Contract award documents, proof of bonding documents, independent cost estimates and comparable price analyses.

Members of affected public: Public Housing Agencies, and Applicable Resident Entrepreneurs *Estimation of the total number of hours needed to prepare the information collection including number of respondents, frequency of response, and hours of response:* Estimated number of respondents: 75. The calculation for burden hours is as follows: Calculation for number of respondents: 75 (estimated number of PHAs contracting with resident owned businesses) × 24 (number of hours for procurement process) = 1,800 total hours. The Department estimates that out of a total of 3,763 PHAs only 2 percent or 75 PHAs contract with resident owned business. This number is less than the previous request due to several PHAs choosing to leave the program, but the Department anticipates there may have been more business or contracting opportunities particularly during the pandemic.

Information collection	Number of respondents	Average number of reponses per respondent	Total annual responses	Burden hours per response	Total hours	Hourly cost	Total annual cost
OMB Control No. 2577–0161	75	1	75	24	1,800	\$30.95	\$55,710

The national average of PHA staff salary used is \$64,590 per year obtained from <https://www.ziprecruiter.com/Salaries/Public-Housing-Authority-Salary>, or \$30.95 per hour as computed using the 2,087-Hour Divisor. The calculation for costs is as follows: 75 PHAs × 24 hours = 1,800 hours × \$30.95 = \$55,710.

Status of the Proposed Information Collection: Meeting HUD Regulation requirements.

B. Solicitation of Public Comment

This notice is soliciting comments from members of the public and affected parties concerning the collection of

information described in Section A on the following:

- (1) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- (2) The accuracy of the agency’s estimate of the burden of the proposed collection of information;
- (3) Ways to enhance the quality, utility, and clarity of the information to be collected; and
- (4) Ways to minimize the burden of the collection of information on those who are to respond; including through the use of appropriate automated

collection techniques or other forms of information technology, *e.g.*, permitting electronic submission of responses.

(5) ways to minimize the burden of the collection of information on those who are to respond, including the use of automated collection techniques or other forms of information technology.

HUD encourages interested parties to submit comments in response to these questions.

C. Authority

Section 3507 of the Paperwork Reduction Act of 1995, 44 U.S.C.

Colette Pollard,

*Department Reports Management Officer,
Office of Policy Development and Research,
Chief Data Officer.*

BILLING CODE 4210–67–P

DEPARTMENT OF THE INTERIOR**Bureau of Land Management**

[PO4820000251]

Agency Information Collection Activities; Submission to the Office of Management and Budget for Review and Approval; Bureau of Land Management Resource Advisory Council Application

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of information collection; request for comment.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995 (PRA), the Bureau of Land Management (BLM) proposes to renew with revisions a currently approved information collection.

DATES: Interested persons are invited to submit comments on or before January 17, 2025.

ADDRESSES: Written comments and recommendations for the proposed information collection revision should be sent within 30 days of publication of this notice to www.reginfo.gov/public/do/PRAMain. Find this particular information collection by selecting “Currently under 30-day Review—Open for Public Comments” or by using the search function.

FOR FURTHER INFORMATION CONTACT:

Carrie Richardson, BLM National Advisory Council Coordinator, by email at crichardson@blm.gov or by phone at (202) 501–2634. Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States. You may also view the ICR at <http://www.reginfo.gov/public/do/PRAMain>.

SUPPLEMENTARY INFORMATION: In accordance with the Paperwork Reduction Act of 1995 (PRA, 44 U.S.C.

3501 *et seq.*, and 5 CFR 1320.8(d)(1), we provide the general public and other Federal agencies with an opportunity to comment on new, proposed, revised, and continuing collections of information. This helps us assess the impact of our information collection requirements and minimize the public’s reporting burden. It also helps the public understand our information collection requirements and provide the requested data in the desired format.

A **Federal Register** notice with a 60-day public comment period soliciting comments on this collection of information was published on June 11, 2024 (89 FR 49183).

As part of our continuing effort to reduce paperwork and respondent burdens, we are again soliciting comments from the public and other Federal agencies on the proposed ICR that is described below. We are especially interested in public comment addressing the following:

- (1) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- (2) The accuracy of our estimate of the burden for this collection of information, including the validity of the methodology and assumptions used;
- (3) Ways to enhance the quality, utility, and clarity of the information to be collected; and
- (4) How the agency could minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.*, permitting electronic submission of response.

Comments that you submit in response to this notice are a matter of public record. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Abstract: The BLM collects the information on the Resource Advisory Council Application (Form No. 1120–19) to determine education, training, and experience related to possible service on advisory committees established under the authority of Section 309 of the Federal Land Policy

and Management Act (43 U.S.C. 1739) and the Federal Advisory Committee Act, 5 U.S.C. App. 2. This information is necessary to ensure that each advisory council is structured to provide fair membership balance, both geographic and interest-specific, in terms of the functions to be performed and points of view to be represented, as prescribed by its charter. The BLM is requesting minor changes to Form 1120–19. The changes include removing some of the previously collected information that is not needed and, in response to user feedback, clarifying certain portions of the form. A complete description of the changes is provided in the ICR that has been submitted to OMB. This OMB control number is scheduled to expire on April 30, 2025. This request is for OMB to renew with revisions this OMB control number for an additional three (3) years.

Title of Collection: Bureau of Land Management Resource Advisory Council Application (43 CFR Subpart 1784).

OMB Control Number: 1004–0204.

Form Number: 1120–19.

Type of Review: Extension with revision of a currently approved collection.

Respondents/Affected Public: Persons who apply for positions on Resource Advisory Councils.

Total Estimated Number of Annual Respondents: 200.

Total Estimated Number of Annual Responses: 200.

Estimated Completion Time per Response: 4 hours.

Total Estimated Number of Annual Burden Hours: 800.

Respondent’s Obligation: Required to obtain or retain a benefit.

Frequency of Collection: On occasion.

Total Estimated Annual Nonhour Burden Cost: None.

Reason for Change: Some of the previously collected information is not needed.

An agency may not conduct or sponsor and, notwithstanding any other provision of law, a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

The authority for this action is the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*).

Darrin King,

Information Collection Clearance Officer.

[FR Doc. 2024–29983 Filed 12–17–24; 8:45 am]

DEPARTMENT OF THE INTERIOR**Bureau of Land Management**

[BLM_CO_FRN_MO4500182759]

Notice of Joint and Individual Colorado Resource Advisory Council Meetings**AGENCY:** Bureau of Land Management, Interior.**ACTION:** Notice of public meetings.**SUMMARY:** In accordance with the Federal Land Policy and Management Act of 1976 and the Federal Advisory Committee Act of 1972, the U.S. Department of the Interior, Bureau of Land Management (BLM) Colorado’s Northwest Resource Advisory Council (RAC), Southwest RAC, and Rocky Mountain RAC will meet as indicated below.

DATES: The Northwest, Southwest, and Rocky Mountain RACs will participate in a joint meeting on April 2, 2025, from 8:30 a.m. to 4:30 p.m. mountain time (MT). The Northwest and Southwest RACs will participate in a joint meeting from 9 a.m. to noon MT on April 3, 2025. The Rocky Mountain RAC will also meet April 3, 2025, from 9 a.m. to 2:45 p.m. MT. The meetings will be held in-person with a virtual participation option available. All meeting are open to the public.

ADDRESSES: The April 2 and April 3, 2025, meetings will be held at the Morgridge Commons, 815 Cooper Avenue, Glenwood Springs, Colorado 81601.

FOR FURTHER INFORMATION CONTACT: Northwest RAC—Jim Michels, BLM Northwest District Office, 455 Emerson St. Craig, CO 81625; jmichels@blm.gov; (970) 749–7399. Southwest RAC—D. Maggie Magee, BLM Southwest District Office, 2465 S Townsend Ave.,

Montrose, CO 81401; dmagee@blm.gov; (970) 318–9495. Rocky Mountain RAC—Levi Spellman, BLM Rocky Mountain District Office, 3028 E Main St., Canon City, CO 71212; lsPELLMAN@blm.gov; (719) 269–8553. For information about the joint April 2, 2025, meeting, contact Kirby-Lynn Shedlowski, BLM Colorado State Office; kshedlowski@blm.gov; (303) 239–3671.

Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States.

SUPPLEMENTARY INFORMATION: The Colorado RACs advise the Secretary of the Interior, through the BLM, on a variety of public land issues in Colorado. Agenda items for the April 2, 2025, joint RAC meetings include presentations on range management and recreation management. Agenda items for the Northwest and Southwest April 3, 2025, joint meeting include an update on the Escalante Ranch acquisition. Agenda items for the Rocky Mountain April 3, 2025, meeting include a district update, and discussions on recreation, land use planning, and energy and minerals management. A public comment period will be offered during each meeting. Depending on the number of people who wish to comment during the public comment period, individual comments may be limited. Written comments may be submitted in advance of the RAC meetings via email to the individuals listed in the **FOR FURTHER INFORMATION CONTACT** section of this notice. Please include “RAC Comment” in your submission. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment, including your personal identifying information, may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Final agendas and virtual participation instructions will be available online two weeks prior to the meetings at <https://www.blm.gov/get-involved/resource-advisory-council/near-you/colorado>.

Requests for Accommodations: Please make requests in advance for sign language interpreter services, assistive

listening devices, language translation services, or other reasonable accommodations. We ask that you contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section of this notice at least 14 business days prior to the meeting to give the Department of the Interior sufficient time to process your request. All reasonable accommodation requests are managed on a case-by-case basis.

Summary minutes for the RAC meetings will be made available within 90 days following the meetings online at <https://www.blm.gov/get-involved/resource-advisory-council/near-you/colorado>.

(Authority: 43 CFR 1784.4–2)

Douglas J. Vilsack,
BLM Colorado State Director.

BILLING CODE 4331–16–P

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[**PO4820000251**]

Agency Information Collection Activities; Submission to the Office of Management and Budget for Review and Approval; Application for Land for Recreation or Public Purposes

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of information collection; request for comment.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995 (PRA), the Bureau of Land Management (BLM) proposes to renew an information collection.

DATES: Interested persons are invited to submit comments on or before January 17, 2025.

ADDRESSES: Written comments and recommendations for this information collection request (ICR) should be sent within 30 days of publication of this notice to www.reginfo.gov/public/do/PRAMain. Find this information collection by selecting “Currently under 30-day Review—Open for Public Comments” or by using the search function.

FOR FURTHER INFORMATION CONTACT: To request additional information about this ICR, contact Jeff Holdren by email at jholdren@blm.gov, or by telephone at (703) 472–2399. Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access

telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States. You may also view the ICR at <http://www.reginfo.gov/public/do/PRAMain>.

SUPPLEMENTARY INFORMATION: In accordance with the PRA (44 U.S.C. 3501 *et seq.*) and 5 CFR 1320.8(d)(1), we invite the public and other Federal agencies to comment on new, proposed, revised, and continuing collections of information. This helps the BLM assess the impacts of its information collection requirements and minimize the public’s reporting burden. It also helps the public understand BLM information collection requirements and ensure requested data are provided in the desired format.

A **Federal Register** notice with a 60-day public comment period soliciting comments on this collection of information was published on July 15, 2024 (89 FR 57429).

As part of our continuing effort to reduce paperwork and respondent burdens, we are again inviting the public and other Federal agencies to comment on the proposed ICR described below. The BLM is especially interested in public comment addressing the following:

- (1) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility.
- (2) The accuracy of our estimate of the burden for this collection of information, including the validity of the methodology and assumptions used.
- (3) Ways to enhance the quality, utility, and clarity of the information to be collected; and
- (4) How the agency could minimize the burden of the collection of information on those who are to respond, including the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.*, permitting electronic submission of response.

Comments submitted in response to this notice are a matter of public record. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we

cannot guarantee that we will be able to do so.

Abstract: The BLM uses the information collection to decide whether or not to lease or sell certain public lands to applicants under the Recreation and Public Purposes Act, 43 U.S.C. 869 to 869–4. OMB Control Number 1004–0012 is scheduled to expire on April 30, 2025. This request is for OMB to renew this OMB Control Number for an additional three (3) years.

Title of Collection: Application for Land for Recreation or Public Purposes (43 CFR 2740 and 2912).

OMB Control Number: 1004–0012.

Form Number: 2740–01.

Type of Review: Extension of a currently approved collection.

Respondents/Affected Public: State, Territory, County, and Local governments; nonprofit corporations; and nonprofit associations.

Total Estimated Number of Annual Respondents: 23.

Total Estimated Number of Annual Responses: 23.

Estimated Completion Time per Response: 40 hours.

Total Estimated Number of Annual Burden Hours: 920.

Respondent's Obligation: Required to obtain or retain a benefit.

Frequency of Collection: On occasion.

Total Estimated Annual Non-hour Burden Cost: \$2,300.

An agency may not conduct or sponsor and, notwithstanding any other provision of law, a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

The authority for this action is the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*).

Darrin King,

Information Collection Clearance Officer.

Notice of Inventory Completion: Los Angeles County Museum of Natural History, Los Angeles, CA

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), the Los

Angeles County Museum of Natural History (LACMNH) has completed an inventory of human remains and has determined that there is a cultural affiliation between the human remains and Indian Tribes or Native Hawaiian organizations in this notice.

DATES: Repatriation of the human remains in this notice may occur on or after January 17, 2025.

ADDRESSES: Amy E. Gusick, NAGPRA Officer, Los Angeles County Museum of Natural History, 900 Exposition Boulevard, Los Angeles, CA 90007, telephone (213) 763–3370, email agusick@nhm.org.

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of the LACMNH, and additional information on the determinations in this notice, including the results of consultation, can be found in its inventory or related records. The National Park Service is not responsible for the determinations in this notice.

Abstract of Information Available

Human remains representing, at least, one individual have been identified. No associated funerary objects are present. The individual was removed from Elizabeth Lake, Deadman's Cave, Los Angeles County, CA. A nearly complete skeleton was found unnumbered in the LACMNH collections with no accession records (HSRA–46). In 1995, LACMNH conducted an inventory of human remains in its collections and identified these remains to be female with an age range at the time of death to be between 40–60. “Elizabeth Lake” is written on one of the bones and “Elizabeth Lake, Deadman's Cave” is written on the mandible. There are no known individuals.

Since this initial assessment, in consultation with representatives of the Yuhaaviatam of San Manuel Nation (*previously* listed as San Manuel Band of Mission Indians, California), Morongo Band of Mission Indians, California and non-federally recognized California Indian groups including the Fernandeano Tataviam Band of Mission Indians, the LACMNH has investigated the collection history of these human remains but have not been able to identify further information.

Based on biological and geographical information, the human remains are determined to be Native American. Archaeologists have asserted that Serrano and Tataviam peoples have continuously occupied the Antelope Valley, the San Gabriel Mountains, and

the surrounding areas for up to 5,000–6,000 years BP. Ethnographer, John Peabody Harrington recorded several Serrano place names throughout the Antelope Valley during his interviews with Yuhaaviatam leader, Santos Manuel in 1918. Manuel's testimony and Serrano Traditional Knowledge identify Elizabeth Lake as home to Serrano peoples since time immemorial.

Human remains representing, at least, 22 individuals have been identified. No associated funerary objects are present. The individuals were removed from the Vasquez Rocks (CA–LAN–361) site in northern Los Angeles County, CA. Owners of the land on which the site now rests, Dr. Ascher and family, spent many years digging at the site in the mid-1900s. In 1966, the location was bulldozed by vandals. Between 1967–1970, LACMNH curator Dr. Charles Rozaire, as part of the California State University, Northridge Archaeological School, held field schools at the site, where students and supervisors excavated the bulldozed site and recovered artifacts and bone originally identified as faunal (non-human) bone. As a result of the looting and bulldozing, the artifacts and bones recovered from the site were not in original context and were highly fragmented.

In consultation with representatives of the Yuhaaviatam of San Manuel Nation (*previously* listed as San Manuel Band of Mission Indians, California) and non-federally recognized California Indian groups including the Fernandeano Tataviam Band of Mission Indians, in 2021, LACMNH conducted a detailed bioarcheological assessment of the bone recovered from CA–LAN–361 resulting in identification of human remains. The report identified 14 children with an age range between 37–39 weeks gestation/perinate and 10–12 years old. It is likely that some of the children whose specific age ranges could not be assessed were older than 12 years. There are at least eight adults represented. Among them, two are likely males (represented by a mandible and a temporal bone fragment) and one older adult. Most of the remains are extremely fragmented and there are some non-human skeletal remains in the assemblages. Most of the remains were impacted by the history of vandalism and heat from cremation with varying temperatures and exposure. There are no known humans.

Based on archaeological context and information learned from consultations, these individuals are Native American. Based on UFO artifact assemblage typologies, obsidian hydration readings and one radiocarbon date, archaeological evidence demonstrates

that Vasquez Rocks (CA-LAN-361) was used as a cemetery between 2315 BCE—79 BCE (Caruso 1988, Garza 2012, King et al. 1974), the Middle Holocene Period. Archaeologists have asserted that Serrano and Tataviam peoples have continuously occupied the San Gabriel Mountains and the surrounding areas for up to 5,000–6,000 years BP.

Linguistic sources demonstrate a strong continuous shared group identity between those people using Vasquez Rocks roughly 3000 years ago and modern Native Americans of Serrano and Tataviam descent. Ethnographic evidence and Traditional Knowledge document the Agua Dulce and Sierra Pelona regions as home to Serrano and Tataviam peoples since time immemorial.

Cultural Affiliation

Based on the information available and the results of consultation, cultural affiliation is reasonably identified by the geographical location or acquisition history of the human remains described in this notice.

Determinations

The LACMNH has determined that:

- The human remains described in this notice represent the physical remains of 23 individuals of Native American ancestry.
- There is a connection between the human remains described in this notice and the Yuhaaviatam of San Manuel Nation (*previously* listed as San Manuel Band of Mission Indians, California) and the Morongo Band of Mission Indians, California.

Requests for Repatriation

Written requests for repatriation of the human remains in this notice must be sent to the authorized representative identified in this notice under

ADDRESSES. Requests for repatriation may be submitted by:

1. Any one or more of the Indian Tribes or Native Hawaiian organizations identified in this notice.
2. Any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or an Indian Tribe or Native Hawaiian organization with cultural affiliation.

Repatriation of the human remains described in this notice to a requestor may occur on or after January 17, 2025. If competing requests for repatriation are received, the LACMNH must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the human remains are considered a single request

and not competing requests. The LACMNH is responsible for sending a copy of this notice to the Indian Tribes and Native Hawaiian organizations identified in this notice.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3003, and the implementing regulations, 43 CFR 10.10.

Dated: December 11, 2024.

Melanie O'Brien,

Manager, National NAGPRA Program.

Notice of Inventory Completion: Western Washington University, Department of Anthropology, Bellingham, WA

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), the Western Washington University, Department of Anthropology (WWU), has completed an inventory of human remains and associated funerary objects and has determined that there is a cultural affiliation between the human remains and associated funerary objects and Indian Tribes or Native Hawaiian organizations in this notice. The human remains and associated funerary objects were removed from 45-WH-10 and 45-WH-11, Birch Bay, Whatcom County, WA.

DATES: Repatriation of the human remains and associated funerary objects in this notice may occur on or after January 17, 2025.

ADDRESSES: Dr. Judith Pine, Western Washington University, Department of Anthropology, Arntzen Hall 340, 516 High Street, Bellingham, WA 98225, telephone (360) 650-4783, email pinej@www.edu.

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of the WWU, and additional information on the determinations in this notice, including the results of consultation, can be found in its inventory or related records. The National Park Service is not responsible for the determinations in this notice.

Abstract of Information Available

Human remains representing, at least, three individuals have been identified. The 18 associated funerary objects are bone, stone and antler tools, red ochre, dentalium, a whale rib, and a bone medallion.

Three separate projects completed over the course of 45 years contributed to the 45-WH-10 and 45-WH-11 collections housed at WWU. In 1970–71, WWU field school students worked at both sites under the direction of Dr. Garland Grabert. Brief notes indicate that surface collection and a small-scale excavation occurred, but no report was completed. The original 1995 WWU NAGPRA Inventory listed one human premolar from 45-WH-10. This ancestral remain was repatriated to the Lummi Nation in 2001, upon their request (Rollins, 2001 “Inventory of Remains in Preparation for Reinterment”). During the WWU 2018–2020 Repatriation and Rehousing Project described above, previously unknown associated funerary objects were identified from 45-WH-10 by Lummi Cultural Specialist R. Tom.

Three human burials were unearthed from 45-WH-11 during this work. One was found in a test unit while the remains of two other individuals were surface collected from a ditch. The three individuals from 1970–71 excavations were reported in the original 1995 WWU NAGPRA Inventory and repatriated to the Lummi Nation upon their request in 2001.

In 1975, WWU signed a contract with Arcomm Construction Company, Inc. of Seattle to conduct “salvage archaeology” during the development of the Birch Bay sewage treatment facility. Jeannette Gaston and Garland Grabert (WWU) led the project. Most of the work consisted of monitoring and salvage archaeology during construction activities throughout the summer of 1975. During this project, twenty-six test cuts were excavated within the pipeline right-of-way (Gaston and Grabert, 1975) within the boundaries of 45-WH-11. Human remains were also encountered during this project and reported in the original 1995 WWU NAGPRA Inventory. All of the known human remains from the 1970–71 and 1975 projects were repatriated to the Lummi Nation in 2001, upon their request.

The third project, completed between May and August of 2015 by Drayton Archaeology (DA), consisted of data recovery excavations, construction monitoring and mitigation data recovery under Department of Archaeology and Historic Preservation (DAHP) archaeological site excavation and

disturbance permit #2015–06 at 45–WH–11. During this work, several units were excavated for data collection purposes.

During the WWU 2018–2020 Repatriation and Rehousing Project described above, additional ancestral remains were found in the “faunal” bags from 1970–71, Test Cut 2. These newly identified remains were reported in a revised inventory and in published federal notice N5472. Subsequent work in the collections and consultation between WWU and the Lummi Nation has resulted in the identification of additional human remains and associated funerary objects from 45–WH–11.

Cultural Affiliation

Based on the information available and the results of consultation, cultural affiliation is clearly identified by the information available about the human remains and associated funerary objects described in this notice.

Determinations

The WWU has determined that:

- The human remains described in this notice represent the physical remains of three individuals of Native American ancestry.
- The 18 objects described in this notice are reasonably believed to have been placed intentionally with or near individual human remains at the time of death or later as part of the death rite or ceremony.
- There is a connection between the human remains and associated funerary objects described in this notice and the Lummi Tribe of the Lummi Reservation and the Nooksack Indian Tribe.

Requests for Repatriation

Written requests for repatriation of the human remains and associated funerary objects in this notice must be sent to the authorized representative identified in this notice under **ADDRESSES**. Requests for repatriation may be submitted by:

1. Any one or more of the Indian Tribes or Native Hawaiian organizations identified in this notice.
2. Any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or an Indian Tribe or Native Hawaiian organization with cultural affiliation.

Repatriation of the human remains and associated funerary objects described in this notice to a requestor may occur on or after January 17, 2025. If competing requests for repatriation are received, the WWU must determine the most appropriate requestor prior to

repatriation. Requests for joint repatriation of the human remains and associated funerary objects are considered a single request and not competing requests. The WWU is responsible for sending a copy of this notice to the Indian Tribes and Native Hawaiian organizations identified in this notice.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3003, and the implementing regulations, 43 CFR 10.10.

Dated: December 11, 2024.

Melanie O'Brien,

Manager, National NAGPRA Program.

BILLING CODE 4312–52–P

DEPARTMENT OF THE INTERIOR

National Park Service

**[NPS–WASO–NAGPRA–NPS0039217;
PPWOCRADNO–PCU00RP14.R50000]**

Notice of Inventory Completion: University of California, Davis, Davis, CA

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), University of California, Davis has completed an inventory of associated funerary objects and has determined that there is a cultural affiliation between the associated funerary objects and Indian Tribes or Native Hawaiian organizations in this notice.

DATES: Repatriation of the associated funerary objects in this notice may occur on or after January 17, 2025.

ADDRESSES: Megon Noble, Repatriation Coordinator, University of California, Davis, 412 Mrak Hall, One Shields Avenue, Davis, CA 95616, telephone (530) 752–8501, email mnoble@ucdavis.edu.

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service’s administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of the University of California, Davis and additional information on the determinations in this notice, including the results of consultation, can be found in its inventory or related records. The National Park Service is not responsible for the determinations in this notice.

Abstract of Information Available

The two lots of associated funerary objects are one lot of clamshell disc beads and one lot of *Olivella* beads. The associated funerary objects were anonymously mailed to the University of California, Davis Repatriation Coordinator with a return address of a mail depot in Tucson, Arizona. Enclosed with the associated funerary objects was a tag describing the items as “burial beads” found “in Wintun Indian graves located on Gordon sight[sic] in California west of Sacramento River.” The tag also indicates that Jack and Vera Mills, amateur archaeologists from Arizona, purchased the beads in 1974. Based on search of records, UC Davis believes the Gordon site most likely refers to CA–NAP–448 (also known as CA–NAP–997, P–28–001171) or to another site in the Gordon Valley, Napa County.

Cultural Affiliation

Based on the information available and the results of consultation, cultural affiliation is reasonably identified by the geographical location or acquisition history of the associated funerary objects described in this notice.

Determinations

The University of California, Davis has determined that:

- The two objects described in this notice are reasonably believed to have been placed intentionally with or near individual human remains at the time of death or later as part of the death rite or ceremony.
- There is a connection between the associated funerary objects described in this notice and the Cachil DeHe Band of Wintun Indians of the Colusa Indian Community of the Colusa Rancheria, California; Kletsel Dehe Wintun Nation of the Cortina Rancheria (*previously* listed as Kletsel Dehe Band of Wintun Indians); and the Yocha Dehe Wintun Nation, California.

Requests for Repatriation

Written requests for repatriation of the associated funerary objects in this notice must be sent to the authorized representative identified in this notice under **ADDRESSES**. Requests for repatriation may be submitted by:

1. Any one or more of the Indian Tribes or Native Hawaiian organizations identified in this notice.
2. Any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or an Indian Tribe or Native Hawaiian organization with cultural affiliation.

Repatriation of the associated funerary objects described in this notice to a requestor may occur on or after January 17, 2025. If competing requests for repatriation are received, the University of California, Davis must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the associated funerary objects are considered a single request and not competing requests. The University of California, Davis is responsible for sending a copy of this notice to the Indian Tribes and Native Hawaiian organizations identified in this notice.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3003, and the implementing regulations, 43 CFR 10.10.

Dated: December 11, 2024.

Notice of Inventory Completion: Peabody Museum of Archaeology and Ethnology, Harvard University, Cambridge, MA

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), the Peabody Museum of Archaeology and Ethnology, Harvard University (PMAE) has completed an inventory of human remains and has determined that there is a cultural affiliation between the human remains and Indian Tribes or Native Hawaiian organizations in this notice. The human remains were collected at the Fort Mohave Indian School, Mohave County, AZ, the Hopi Agency, Navajo County, AZ, the Sherman Institute, Riverside County, CA, Crownpoint, McKinley County, NM, the U.S. Indian Vocational School, Bernalillo County, NM, and the Laboratory of Anthropology, Santa Fe County, NM.

DATES: Repatriation of the human remains in this notice may occur on or after January 17, 2025.

ADDRESSES: Jane Pickering, Peabody Museum of Archaeology and Ethnology, Harvard University, 11 Divinity Avenue, Cambridge, MA 02138, telephone (617)

496–2374, email jpickering@fas.harvard.edu.

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of the PMAE, and additional information on the determinations in this notice, including the results of consultation, can be found in the inventory or related records. The National Park Service is not responsible for the determinations in this notice.

Abstract of Information Available

Based on the information available, human remains representing, at minimum, one individual was collected at the Fort Mohave Indian School, Mohave County, AZ. The human remains are hair clippings collected from one individual who was recorded as being 19 years old and identified as “Navajo.” Timothy G. Mackey took the hair clippings at the Fort Mohave Indian School between 1930 and 1933. Mackey sent the hair clippings to George Woodbury, who donated the hair clippings to the PMAE in 1935. No associated funerary objects are present.

Based on the information available, human remains representing, at minimum, 16 individuals were collected at the Hopi Agency, Navajo County, AZ. The human remains are hair clippings collected from one individual who was recorded as being 20 years old, two individuals who were recorded as being 19 years old, three individuals who were recorded as being 18 years old, one individual who was recorded as being 17 years old, three individuals who were recorded as being 16 years old, one individual who was recorded as being 15 years old, one individual who was recorded as being 14 years old, one individual who was recorded as being 13 years old, one individual who was recorded as being 12 years old, one individual who was recorded as being 8 years old, and one individual who was recorded as being “Adult” and all identified as “Navajo.” Edgar K. Miller took the hair clippings at the Hopi Agency between 1930 and 1933. Miller sent the hair clippings to George Woodbury, who donated the hair clippings to the PMAE in 1935. No associated funerary objects are present.

Based on the information available, human remains representing, at minimum, nine individuals were collected at the Sherman Institute, Riverside County, CA. The human remains are hair clippings collected from one individual who was recorded as being 23 years old, four individuals

who were recorded as being 20 years old, two individuals who were recorded as being 19 years old, one individual who was recorded as being 18 years old, and one individual who was recorded as being 17 years old and all identified as “Navajo.” Samuel H. Gilliam took the hair clippings at the Sherman Institute between 1930 and 1933. Gilliam sent the hair clippings to George Woodbury, who donated the hair clippings to the PMAE in 1935. No associated funerary objects are present.

Based on the information available, human remains representing, at minimum, 27 individuals were collected at Crownpoint, McKinley County, NM. The human remains are hair clippings collected from one individual who was recorded as being 70 years old, one individual who was recorded as being 57 years old, one individual who was recorded as being 54 years old, one individual who was recorded as being 50 years old, one individual who was recorded as being 45 years old, one individual who was recorded as being 38 years old, one individual who was recorded as being 35 years old, one individual who was recorded as being 17 years old, one individual who was recorded as being 16 years old, two individuals who were recorded as being 15 years old, four individuals who were recorded as being 14 years old, and 12 individuals who were recorded as being “Adult” and all identified as “Navajo.” E. Stacher took the hair clippings at Crownpoint between 1930 and 1933. Stacher sent the hair clippings to George Woodbury, who donated the hair clippings to the PMAE in 1935. No associated funerary objects are present.

Based on the information available, human remains representing, at minimum, 21 individuals were collected at the U.S. Indian Vocational School, Bernalillo County, NM. The human remains are hair clippings collected from one individual who was recorded as being 18 years old, three individuals who were recorded as being 17 years old, five individuals who were recorded as being 16 years old, three individuals who were recorded as being 15 years old, six individuals who were recorded as being 14 years old, one individual who was recorded as being 13 years old, and two individuals with no age recorded and all identified as “Navajo.” Reuben Perry took the hair clippings at the U.S. Indian Vocational School between 1930 and 1933. Perry sent the hair clippings to George Woodbury, who donated the hair clippings to the PMAE in 1935. No associated funerary objects are present.

Based on the information available, human remains representing, at minimum, three individuals were collected at the Laboratory of Anthropology, Santa Fe County, NM. The human remains are hair clippings collected from one individual who was recorded as being 18 years old, one individual who was recorded as being 17 years old, and one individual who was recorded as being 16 years old and all identified as "Navajo." An unknown collector took the hair clippings at the Laboratory of Anthropology between 1930 and 1933. They sent the hair clippings to George Woodbury, who donated the hair clippings to the PMAE in 1935. No associated funerary objects are present.

Cultural Affiliation

Based on the available information and the results of consultation, cultural affiliation is clearly identified by the information available about the human remains described in this notice.

Determinations

The PMAE has determined that:

- The human remains described in this notice represent the physical remains of 77 individuals of Native American ancestry.
- There is a reasonable connection between the human remains described in this notice and the Navajo Nation, Arizona, New Mexico, & Utah.

Requests for Repatriation

Written requests for repatriation of the human remains in this notice must be sent to the Responsible Official identified in **ADDRESSES**. Requests for repatriation may be submitted by:

1. Any one or more of the Indian Tribes or Native Hawaiian organizations identified in this notice.
2. Any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or a culturally affiliated Indian Tribe or Native Hawaiian organization.

Repatriation of the human remains in this notice to a requestor may occur on or after January 17, 2025. If competing requests for repatriation are received, the PMAE must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the human remains are considered a single request and not competing requests. The PMAE is responsible for sending a copy of this notice to the Indian Tribe identified in this notice.

Authority: Native American Graves Protection and Repatriation Act, 25

U.S.C. 3003, and the implementing regulations, 43 CFR 10.10.

Dated: December 11, 2024.

PPWOCRADNO-PCU00RP14.R50000]

Notice of Intended Repatriation: Peabody Museum of Archaeology and Ethnology, Harvard University, Cambridge, MA

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), the Peabody Museum of Archaeology and Ethnology, Harvard University (PMAE) intends to repatriate certain cultural items that meet the definition of sacred objects and that have a cultural affiliation with the Indian Tribes or Native Hawaiian organizations in this notice.

DATES: Repatriation of the cultural items in this notice may occur on or after January 17, 2025.

ADDRESSES: Deanna Byrd, Peabody Museum of Archaeology and Ethnology, Harvard University, 11 Divinity Avenue, Cambridge, MA 02138, telephone (617) 384-0672, email deannabyrd@fas.harvard.edu.

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of the PMAE, and additional information on the determinations in this notice, including the results of consultation, can be found in the summary or related records. The National Park Service is not responsible for the determinations in this notice.

Abstract of Information Available

A total of two cultural items have been requested for repatriation. The two sacred objects are one shield and one cover. According to PMAE records, Mr. Sprigellburg, of Santa Fe, New Mexico, purchased the shield and cover, at an unknown date, from a member of the Santa Ana Pueblo community, after "trying to buy it for 20 years and from 3 generations." Dr. Samuel Kirkland Lothrop purchased the shield and cover

from Mr. Sprigellburg in 1915, and subsequently donated both the shield and cover to PMAE in 1916.

Determinations

The PMAE has determined that:

- The two sacred objects described in this notice are specific ceremonial objects needed by a traditional Native American religious leader for present-day adherents to practice traditional Native American religion, according to the Native American traditional knowledge of a lineal descendant, Indian Tribe, or Native Hawaiian organization.

- There is a reasonable connection between the cultural items described in this notice and the Pueblo of Santa Ana, New Mexico.

Requests for Repatriation

Additional, written requests for repatriation of the cultural items in this notice must be sent to the authorized representative identified in this notice under **ADDRESSES**. Requests for repatriation may be submitted by any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or a culturally affiliated Indian Tribe or Native Hawaiian organization.

Repatriation of the cultural items in this notice to a requestor may occur on or after January 17, 2025. If competing requests for repatriation are received, the PMAE must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the cultural items are considered a single request and not competing requests. The PMAE is responsible for sending a copy of this notice to the Indian Tribes and Native Hawaiian organizations identified in this notice and to any other consulting parties.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3004 and the implementing regulations, 43 CFR 10.9.

Dated: December 11, 2024.

**Notice of Inventory Completion:
Louisiana State University, Museum of
Natural Science, Baton Rouge, LA**

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), the Louisiana State University, Museum of Natural Science (LSUMNS) has completed an inventory of an associated funerary object and has determined that there is a cultural affiliation between the associated funerary object and Indian Tribes or Native Hawaiian organizations in this notice.

DATES: Repatriation of the associated funerary object in this notice may occur on or after January 17, 2025.

ADDRESSES: Dr. Irene Martí Gil, LSU Museum of Natural Science, 119 Foster Hall, LSU, Baton Rouge, LA 70803, telephone (225) 578–2855, email imart23@lsu.edu.

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of the LSUMNS, and additional information on the determinations in this notice, including the results of consultation, can be found in its inventory or related records. The National Park Service is not responsible for the determinations in this notice.

Abstract of Information Available

One associated funerary object has been identified after re-inventorying the LSUMNS archaeological collections. The associated funerary object is a small, anthropomorphic, pottery figurine. This figurine was recovered from the Morton Shell Mound site (16IB3) (also known as Weeks Island or LMS 33–I–3), located on the Weeks Island salt dome in Iberia Parish, LA, by a local individual and donated to the LSU Museum of Natural Science when Mr. Robert Neuman was the Curator. The LSUMNS never formally accessioned this object and we do not possess any further information.

This notice supplements the original 2022 Notice of Inventory Completion published in the **Federal Register** (87 FR 69307–69313, November 18, 2022), which identified only human remains representing 275 individuals removed

from the site as part of an intensive research program under the direction of then-LSUMNS Curator of Anthropology Robert Neuman between 1969 and 1971.

Cultural Affiliation

Based on the information available and the results of consultation, cultural affiliation is reasonably identified by the geographical location or acquisition history of the associated funerary objects described in this notice.

Determinations

The LSUMNS has determined that:

- The one object described in this notice is reasonably believed to have been placed intentionally with or near individual human remains at the time of death or later as part of the death rite or ceremony.
- There is a connection between the associated funerary object described in this notice and the Chitimacha Tribe of Louisiana.

Requests for Repatriation

Written requests for repatriation of the associated funerary object in this notice must be sent to the authorized representative identified in this notice under **ADDRESSES**. Requests for repatriation may be submitted by:

1. Any one or more of the Indian Tribes or Native Hawaiian organizations identified in this notice.
2. Any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or an Indian Tribe or Native Hawaiian organization with cultural affiliation.

Repatriation of the associated funerary object described in this notice to a requestor may occur on or after January 17, 2025. If competing requests for repatriation are received, the LSUMNS must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the associated funerary object are considered a single request and not competing requests. The LSUMNS is responsible for sending a copy of this notice to the Indian Tribes and Native Hawaiian organizations identified in this notice.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3003, and the implementing regulations, 43 CFR 10.10.

Dated: December 11, 2024.

**Notice of Inventory Completion: U.S.
Department of the Interior, Bureau of
Reclamation, Boise, ID**

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), the U.S. Department of the Interior, Bureau of Reclamation, Interior Region 9: Columbia-Pacific Northwest Region (Reclamation Region 9) has completed an inventory of associated funerary objects and has determined that there is a cultural affiliation between the associated funerary objects and Indian Tribes or Native Hawaiian organizations in this notice.

DATES: Repatriation of the associated funerary objects in this notice may occur on or after January 17, 2025.

ADDRESSES: Dr. Sean Hess, Supervisory Regional Archaeologist, Columbia-Pacific Northwest Regional Office, Bureau of Reclamation, 1150 N Curtis Road, Boise, ID 83706, telephone (208) 378–5316, email shess@usbr.gov.

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of the Reclamation Region 9, and additional information on the determinations in this notice, including the results of consultation, can be found in its inventory or related records. The National Park Service is not responsible for the determinations in this notice.

Abstract of Information Available

Site 45ST118 is on Federal lands associated with operation and maintenance of Grand Coulee Dam within the exterior boundary of the Spokane Indian Reservation. The collection from 45ST118 that has not been repatriated consists of two associated funerary objects (AFOs): a cedar wood stake and a vial of wood fibers. There are no associated human remains. The AFOs are currently housed at Washington State University in Pullman, Washington.

Cultural Affiliation

Based on the information available and the results of consultation, cultural affiliation is reasonably identified by the geographical location or acquisition

history of the associated funerary objects described in this notice.

Determinations

The Reclamation Region 9 has determined that:

- The two objects described in this notice are reasonably believed to have been placed intentionally with or near individual human remains at the time of death or later as part of the death rite or ceremony.

- There is a connection between the associated funerary objects described in this notice and the Spokane Tribe of the Spokane Reservation.

Requests for Repatriation

Written requests for repatriation of the associated funerary objects in this notice must be sent to the authorized representative identified in this notice under **ADDRESSES**. Requests for repatriation may be submitted by:

1. Any one or more of the Indian Tribes or Native Hawaiian organizations identified in this notice.
2. Any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or an Indian Tribe or Native Hawaiian organization with cultural affiliation.

Repatriation of the associated funerary objects described in this notice to a requestor may occur on or after January 17, 2025. If competing requests for repatriation are received, the Reclamation Region 9 must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the associated funerary objects are considered a single request and not competing requests. The Reclamation Region 9 is responsible for sending a copy of this notice to the Indian Tribes and Native Hawaiian organizations identified in this notice.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3003, and the implementing regulations, 43 CFR 10.10.

Dated: December 11, 2024.

Notice of Intended Repatriation: History Colorado (formerly the Colorado Historical Society), Denver, CO

AGENCY: National Park Service, Interior.
ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), History Colorado intends to repatriate a certain cultural item that meets the definition of a sacred object and that has a known lineal descendant.

DATES: Repatriation of the cultural item in this notice may occur on or after January 17, 2025.

ADDRESSES: Chance Ward, NAGPRA Collections Specialist, History Colorado, 1200 N Broadway, Denver CO 80203, telephone (303) 866–5751, email chance.ward@state.co.us.

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of History Colorado, and additional information on the determinations in this notice, including the results of consultation, can be found in the summary or related records. The National Park Service is not responsible for the determinations in this notice.

Abstract of Information Available

A total of one cultural item has been requested for repatriation. The one item is a headdress (E.1993.2) that belonged to Sapiyah, or Buckskin Charley. Through consultation with authorized tribal representatives and known lineal descendants, this item has been determined to belong to an individual who performed religious ceremonies and the headdress is a sacred object. The headdress was removed from La Plata County, Colorado at an unknown date, and later donated to History Colorado (then the Colorado Historical Society) in 1961.

Determinations

History Colorado has determined that:

- The one sacred object described in this notice is a specific ceremonial object needed by a traditional Native American religious leader for present-day adherents to practice traditional Native American religion, according to the Native American traditional knowledge of a lineal descendant,

Indian Tribe, or Native Hawaiian organization.

- A known lineal descendant (name withheld per request) is connected to the cultural item described in this notice.

Requests for Repatriation

Additional, written requests for repatriation of the cultural item in this notice must be sent to the authorized representative identified in this notice under **ADDRESSES**. Requests for repatriation may be submitted by any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or a culturally affiliated Indian Tribe or Native Hawaiian organization.

Repatriation of the cultural item in this notice to a requestor may occur on or after January 17, 2025. If competing requests for repatriation are received, History Colorado must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the cultural item are considered a single request and not competing requests. History Colorado is responsible for sending a copy of this notice to the Indian Tribes and Native Hawaiian organizations identified in this notice and to any other consulting parties.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3004 and the implementing regulations, 43 CFR 10.9.

Dated: December 11, 2024.

Notice of Inventory Completion: Peabody Museum of Archaeology and Ethnology, Harvard University, Cambridge, MA

AGENCY: National Park Service, Interior.
ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), the Peabody Museum of Archaeology and Ethnology, Harvard University (PMAE) has completed an inventory of human remains and has determined that there is a cultural affiliation between the

human remains and Indian Tribes or Native Hawaiian organizations in this notice. The human remains were collected at the Chemawa (Salem) Indian School, Marion County, OR.

DATES: Repatriation of the human remains in this notice may occur on or after January 17, 2025.

ADDRESSES: Jane Pickering, Peabody Museum of Archaeology and Ethnology, Harvard University, 11 Divinity Avenue, Cambridge, MA 02138, telephone (617) 496-2374, email jpickering@fas.harvard.edu.

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of the PMAE. The National Park Service is not responsible for the determinations in this notice. Additional information on the determinations in this notice, including the results of consultation, can be found in the inventory or related records held by the PMAE.

Abstract of Information Available

Based on the information available, human remains representing, at minimum, two individuals were collected at the Chemawa (Salem) Indian School, Marion County, OR. The human remains are hair clippings collected from two individuals who were recorded as being 15 years old and identified as "Blackfoot." James T. Ryan took the hair clippings at the Chemawa (Salem) Indian School between 1930 and 1933. Ryan sent the hair clippings to George Woodbury, who donated the hair clippings to the PMAE in 1935. No associated funerary objects are present.

Cultural Affiliation

Based on the available information and the results of consultation, cultural affiliation is clearly identified by the information available about the human remains described in this notice.

Determinations

The PMAE has determined that:

- The human remains described in this notice represent the physical remains of two individuals of Native American ancestry.
- There is a reasonable connection between the human remains described in this notice and the Blackfeet Tribe of the Blackfeet Indian Reservation of Montana.

Requests for Repatriation

Written requests for repatriation of the human remains in this notice must be sent to the Responsible Official

identified in **ADDRESSES**. Requests for repatriation may be submitted by:

1. Any one or more of the Indian Tribes or Native Hawaiian organizations identified in this notice.

2. Any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or a culturally affiliated Indian Tribe or Native Hawaiian organization.

Repatriation of the human remains in this notice to a requestor may occur on or after January 17, 2025. If competing requests for repatriation are received, the PMAE must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the human remains are considered a single request and not competing requests. The PMAE is responsible for sending a copy of this notice to the Indian Tribe identified in this notice.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3003, and the implementing regulations, 43 CFR 10.10.

Dated: December 11, 2024.

Notice of Inventory Completion: Peabody Museum of Archaeology and Ethnology, Harvard University, Cambridge, MA

AGENCY: National Park Service, Interior.
ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), the Peabody Museum of Archaeology and Ethnology, Harvard University (PMAE) has completed an inventory of human remains and has determined that there is a cultural affiliation between the human remains and Indian Tribes or Native Hawaiian organizations in this notice. The human remains were collected at the Chilocco Indian Agricultural School, Kay County, OK.

DATES: Repatriation of the human remains in this notice may occur on or after January 17, 2025.

ADDRESSES: Jane Pickering, Peabody Museum of Archaeology and Ethnology,

Harvard University, 11 Divinity Avenue, Cambridge, MA 02138, telephone (617) 496-2374, email jpickering@fas.harvard.edu.

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of the PMAE, and additional information on the determinations in this notice, including the results of consultation, can be found in the inventory or related records. The National Park Service is not responsible for the determinations in this notice.

Abstract of Information Available

Based on the information available, human remains representing, at minimum, two individuals were collected at the Chilocco Indian Agricultural School, Kay County, OK. The human remains are hair clippings collected from one individual who was recorded as being 17 years old and one individual who was recorded as being 14 years old and identified as "Wichita." Lawrence C. Correll took the hair clippings at the Chilocco Indian Agricultural School between 1930 and 1933. Correll sent the hair clippings to George Woodbury, who donated the hair clippings to the PMAE in 1935. No associated funerary objects are present.

Cultural Affiliation

Based on the available information and the results of consultation, cultural affiliation is clearly identified by the information available about the human remains described in this notice.

Determinations

The PMAE has determined that:

- The human remains described in this notice represent the physical remains of two individuals of Native American ancestry.
- There is a reasonable connection between the human remains described in this notice and the Wichita and Affiliated Tribes (Wichita, Keechi, Waco, & Tawakonie), Oklahoma.

Requests for Repatriation

Written requests for repatriation of the human remains in this notice must be sent to the Responsible Official identified in **ADDRESSES**. Requests for repatriation may be submitted by:

1. Any one or more of the Indian Tribes or Native Hawaiian organizations identified in this notice.
2. Any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or

a culturally affiliated Indian Tribe or Native Hawaiian organization.

Repatriation of the human remains in this notice to a requestor may occur on or after January 17, 2025. If competing requests for repatriation are received, the PMAE must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the human remains are considered a single request and not competing requests. The PMAE is responsible for sending a copy of this notice to the Indian Tribe identified in this notice.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3003, and the implementing regulations, 43 CFR 10.10.

BILLING CODE 4312-52-P

DEPARTMENT OF THE INTERIOR

National Park Service

[DOI-2024-0015; PPWOWMADH8
PPMPSAS1Y.YH0000]

Privacy Act of 1974; System of Records

AGENCY: National Park Service, Interior.

ACTION: Rescinding of a system of records notice.

SUMMARY: The Department of the Interior (DOI) is issuing a public notice of its intent to rescind the National Park Service (NPS) Privacy Act system of records, INTERIOR/NPS-5, Retirement Record, from its existing inventory.

DATES: These changes take effect on December 18, 2024.

ADDRESSES: You may send comments identified by docket number [DOI-2024-0015] by any of the following methods:

- *Federal eRulemaking Portal:* <https://www.regulations.gov>. Follow the instructions for sending comments.

- *Email:* DOI_Privacy@ios.doi.gov. Include docket number [DOI-2024-0015] in the subject line of the message.

- *U.S. mail or hand-delivery:* Teri Barnett, Departmental Privacy Officer, U.S. Department of the Interior, 1849 C Street NW, Room 7112, Washington, DC 20240.

Instructions: All submissions received must include the agency name and docket number [DOI-2024-0015]. All comments received will be posted without change to <https://www.regulations.gov>, including any personal information provided.

Docket: For access to the docket to read background documents or comments received, go to <https://www.regulations.gov>.

You should be aware your entire comment including your personally identifiable information, such as your address, phone number, email address, or any other personal information in your comment, may be made publicly available at any time. While you may request to withhold your personally identifiable information from public review, we cannot guarantee we will be able to do so.

FOR FURTHER INFORMATION CONTACT: (1) Monica E. Holguin, Chief, Retirement & Benefits Branch, National Park Service, 7175 West Jefferson Avenue, Lakewood CO 80235, mholguingutierrez@nps.gov or 720-417-3154 or (2) Felix Uribe, Associate Privacy Officer, National Park Service, 12201 Sunrise Valley Drive, Reston, VA 20192, nps_privacy@nps.gov or 202-354-6925.

SUPPLEMENTARY INFORMATION: Pursuant to the provisions of the Privacy Act of 1974, as amended, 5 U.S.C. 552a, the DOI is rescinding the INTERIOR/NPS-5, Retirement Record, system of records notice (SORN) and removing it from its system of records inventory. The primary purpose of the system of records was to maintain employees' Federal employment history and retirement contributions. During a review of NPS SORNs, it was determined that this notice is no longer necessary as the records in the system are covered under the Department-wide SORN, INTERIOR/DOI-85, Payroll, Attendance, Retirement, and Leave Records, 83 FR 34156 (July 19, 2018). Therefore, DOI is rescinding the INTERIOR/NPS-5, Retirement Record, SORN to eliminate an unnecessary duplicate notice and ensure compliance with the Privacy Act of 1974 and Office of Management and Budget Circular A-108, *Federal Agency Responsibilities for Review, Reporting, and Publication under the Privacy Act*. Rescinding the INTERIOR/NPS-5, Retirement Record, SORN will have no adverse impact on individuals as the records are covered under the INTERIOR/DOI-85, Payroll, Attendance, Retirement, and Leave Records, SORN. This rescinding will also promote the overall streamlining and management of DOI Privacy Act systems of records.

SYSTEM NAME AND NUMBER:

INTERIOR/NPS-5, Retirement Record.

HISTORY:

48 FR 51699 (November 10, 1983); modification published at 73 FR 63992 (October 28, 2008).

Notice of Inventory Completion: Vanderbilt University, Nashville, TN

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), Vanderbilt University has completed an inventory of human remains and has determined that there is no lineal descendant and no Indian Tribe or Native Hawaiian organization with cultural affiliation.

DATES: Upon request, repatriation of the human remains in this notice may occur on or after January 17, 2025.

ADDRESSES: Steve Wernke, Professor and Chair, Department of Anthropology, Vanderbilt University, VU Station B #356050, 2301 Vanderbilt Place, Nashville, TN 37235, telephone (615) 343-2518, email s.wernke@vanderbilt.edu.

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of Vanderbilt University, and additional information on the determinations in this notice, including the results of consultation, can be found in its inventory or related records. The National Park Service is not responsible for the determinations in this notice.

Abstract of Information Available

Human remains representing, at least, 86 individuals have been identified. No associated funerary objects are present. In approximately the 1960s, human remains representing, at minimum, 86 individuals were removed from the Ganier site in a location near Bells Bend, Nashville (Davidson County), Tennessee. Vanderbilt University believes that the then-owner of the private property contacted Ronald Spores, Professor of Anthropology at

Vanderbilt University, to excavate the human remains after they became visible following erosion affecting the riverbank where they had been buried. The human remains include those of individuals both male and female, ranging in age from infant to adult. No known individuals were identified.

Consultation

Vanderbilt University, through faculty member Tiffany Tung, initiated consultation on October 7, 2021 with the following Indian Tribes: Alabama-Coushatta Tribe of Texas; Cherokee Nation; Coushatta Tribe of Louisiana; Eastern Band of Cherokee Indians; The Chickasaw Nation; The Muscogee (Creek) Nation; and the United Keetoowah Band of Cherokee Indians in Oklahoma.

Representatives from the Eastern Band of Cherokee Indians and The Chickasaw Nation responded to the invitation and participated in consultation with Vanderbilt University.

Cultural Affiliation

The following types of information about the cultural affiliation of the human remains in this notice are available: geographical. Specifically, the representative from The Chickasaw Nation noted that the location along the Cumberland River where the human remains were located could be linked to several federally recognized Indian Tribes. The representative for the Eastern Band of Cherokee Indians advised that the site falls within the traditional Cherokee aboriginal territory. The information, including the results of consultation, identified:

1. No earlier group connected to the human remains.
2. No Indian Tribe or Native Hawaiian organization connected to the human remains.
3. No relationship of shared group identity between the earlier group and the Indian Tribe or Native Hawaiian organization that can be reasonably traced through time.

Determinations

Officials of Vanderbilt University have determined that:

- The human remains described in this notice represent the physical remains of 86 individuals of Native American ancestry.
- No known lineal descendant who can trace ancestry to the human remains in this notice has been identified.
- No Indian Tribe or Native Hawaiian organization with cultural affiliation to the human remains in this notice has been clearly or reasonably identified.

Requests for Repatriation

Written requests for repatriation of the human remains in this notice must be sent to the authorized representative identified in this notice under

ADDRESSES. Requests for repatriation may be submitted by any lineal descendant, Indian Tribe, or Native Hawaiian organization who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or an Indian Tribe or Native Hawaiian organization with cultural affiliation.

Upon request, repatriation of the human remains described in this notice may occur on or after January 17, 2025. If competing requests for repatriation are received, Vanderbilt University must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the human remains are considered a single request and not competing requests. Vanderbilt University is responsible for sending a copy of this notice to any consulting lineal descendant, Indian Tribe, or Native Hawaiian organization.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3003, and the implementing regulations, 43 CFR 10.10.

Dated: December 11, 2024.

National Park Service

[NPS-WASO-NAGPRA-NPS0039223; PPWOCRADNO-PCU00RP14.R50000]

Notice of Inventory Completion: Harvard University Archives, Pusey Library, Cambridge, MA

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), the Harvard University Archives, Pusey Library (HUA), has completed an inventory of human remains and has determined that there is a cultural affiliation between the human remains and Indian Tribes or Native Hawaiian organizations in this notice.

DATES: Repatriation of the human remains in this notice may occur on or after January 17, 2025.

ADDRESSES: Virginia Hunt, Harvard University Archives, Pusey Library, 1 Harvard Yard, Cambridge, MA 02138,

telephone (617) 495-3240, email virginia_hunt@harvard.edu.

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of the HUA, and additional information on the determinations in this notice, including the results of consultation, can be found in the inventory or related records. The National Park Service is not responsible for the determinations in this notice.

Abstract of Information Available

Human remains representing, at least, one individual have been identified. No associated funerary objects are present. The human remains were removed by Edward Eggleston from "an Indian grave" at Lake George, Warren County, NY in 1883 and sent by him to Frederic Ward Putnam, Director of the Peabody Museum of Archaeology and Ethnology, Harvard University, the same year. In 1971, the human remains were transferred to HUA with the correspondence files of the Director of the Peabody Museum.

Cultural Affiliation

Based on the information available and the results of consultation, cultural affiliation is clearly identified by the information available about the human remains described in this notice.

Determinations

The HUA has determined that:

- The human remains described in this notice represent the physical remains of one individual of Native American ancestry.
- There is a connection between the human remains described in this notice and the Stockbridge Munsee Community, Wisconsin.

Requests for Repatriation

Written requests for repatriation of the human remains in this notice must be sent to the authorized representative identified in this notice under **ADDRESSES.** Requests for repatriation may be submitted by:

1. Any one or more of the Indian Tribes or Native Hawaiian organizations identified in this notice.
2. Any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or a culturally affiliated Indian Tribe or Native Hawaiian organization.

Repatriation of the human remains in this notice to a requestor may occur on or after January 17, 2025. If competing

requests for repatriation are received, the HUA must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the human remains are considered a single request and not competing requests. The HUA is responsible for sending a copy of this notice to the Indian Tribes and Native Hawaiian organizations identified in this notice.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3003, and the implementing regulations, 43 CFR 10.10.

Dated: December 11, 2024.

[NPS–WASO–NAGPRA–NPS0039216;
PPWOCRADN0–PCU00RP14.R50000]

Notice of Intended Repatriation: The Children's Museum of Indianapolis, Indianapolis, IN

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), The Children's Museum of Indianapolis intends to repatriate a certain cultural item that meets the definition of an unassociated funerary object and that has a cultural affiliation with the Indian Tribes or Native Hawaiian organizations in this notice.

DATES: Repatriation of the cultural item in this notice may occur on or after January 17, 2025.

ADDRESSES: Jennifer Noffze, The Children's Museum of Indianapolis, 3000 N Meridian Street, Indianapolis, IN 46208, telephone (317) 334–3722, email jenn@childrensmuseum.org.

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of The Children's Museum of Indianapolis, and additional information on the determinations in this notice, including the results of consultation, can be found in the summary or related records. The National Park Service is not responsible for the determinations in this notice.

Abstract of Information Available

A total of one cultural item has been requested for repatriation. The one unassociated funerary object is a red and brown stone animal effigy pipe. It was found in a mound near Marietta, Ohio, prior to 1900, and it was formerly a part of the Judge Claude U. Stone Collection at Peoria, Illinois. It was donated to the museum in 1968 by Earl Townsend, Jr. Marietta, Ohio is part of the ancestral homelands of the Shawnee Nation, which includes the Eastern Shawnee Tribe of Oklahoma and the Absentee-Shawnee Tribe of Indians of Oklahoma.

Determinations

The Children's Museum of Indianapolis has determined that:

- The one unassociated funerary object described in this notice is reasonably believed to have been placed intentionally with or near human remains, and are connected, either at the time of death or later as part of the death rite or ceremony of a Native American culture according to the Native American traditional knowledge of a lineal descendant, Indian Tribe, or Native Hawaiian organization. The unassociated funerary object has been identified by a preponderance of the evidence as related to human remains, specific individuals, or families, or removed from a specific burial site or burial area of an individual or individuals with cultural affiliation to an Indian Tribe or Native Hawaiian organization.

- There is a reasonable connection between the cultural item described in this notice and the Absentee-Shawnee Tribe of Indians of Oklahoma and the Eastern Shawnee Tribe of Oklahoma.

Requests for Repatriation

Additional, written requests for repatriation of the cultural item in this notice must be sent to the authorized representative identified in this notice under **ADDRESSES**. Requests for repatriation may be submitted by any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or a culturally affiliated Indian Tribe or Native Hawaiian organization.

Repatriation of the cultural item in this notice to a requestor may occur on or after January 17, 2025. If competing requests for repatriation are received, The Children's Museum of Indianapolis must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the cultural item

are considered a single request and not competing requests. The Children's Museum of Indianapolis is responsible for sending a copy of this notice to the Indian Tribes and Native Hawaiian organizations identified in this notice and to any other consulting parties.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3004 and the implementing regulations, 43 CFR 10.9.

Dated: December 11, 2024.

Notice of Inventory Completion: Fowler Museum at UCLA, Los Angeles, CA

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), the Fowler Museum at UCLA has completed an inventory of human remains and associated funerary objects and has determined that there is a cultural affiliation between the human remains and associated funerary objects and Indian Tribes or Native Hawaiian organizations in this notice.

DATES: Repatriation of the human remains and associated funerary objects in this notice may occur on or after January 17, 2025.

ADDRESSES: Allison Fischer-Olson, Fowler Museum at UCLA, Box 951549, Los Angeles, CA 90095–1549, telephone (310) 825–1864, email afischerolson@arts.ucla.edu.

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of the Fowler Museum at UCLA, and additional information on the determinations in this notice, including the results of consultation, can be found in its inventory or related records. The National Park Service is not responsible for the determinations in this notice.

Abstract of Information Available

Three bags and 2,125 individual associated funerary objects are flake tools, flakes, cores, hammerstones, an

ash/clay chunk, groundstone fragments, utilized flakes, post fragments, manos and mano fragments, shell beads, pestles and pestle fragments, battered rock, projectile points, core tools, bone awls and awl fragments, worked bone, polished bone, chipping debitage, stone fragments, faunal bone, gorges, arrow shaft straightener, burned and unburned acorns, bone whistle parts, a dirt root cast, charcoal beam fragments, scrapers, mortars, pounders, baked clay, cobbles, charcoal, boiling stones, and shell fragments. Of the total associated funerary objects, three bags and 62 individual items are present. The associated funerary objects were recovered from the Case Site (4-TEH-S246), which is located in southern Tehama County near Vina, California. In 1965, UCLA Archaeological Survey excavated the site under the direction of Donald S. Miller and Phil Burnham. The collection was recorded as never having been received until a small portion was found mixed with another accession/ collection. The remainder may have been retained by the property owner. Human remains were found at the site by the property owner but are not present. During consultations, the Tribal Representative from Paskenta Band of Nomlaki Indians identified this as a Wintun site that is within the ancestral territory of the Tribe. Due to the presence of human remains, the representative identified the entire site, and any material found there, as culturally sensitive. There is no known use of potentially hazardous substances for treatment of the associated funerary objects.

Human remains representing, at least, two individuals have been identified. The 169 bags and 516 individual associated funerary objects are flakes, cores, core tools, faunal bone, bone awls and awl fragments, cobbles, fire stones, manos and mano fragments, choppers, pounding stones, acorns, projectile points and point fragments, hammerstones, nodules, bone whistle parts, flake tools, scrapers, clay fragments, metal fragments, shell pendants, fishhooks, modified bone, fire fractured stone, pestles and pestle fragments, beads, groundstone fragments, stone fragments/samples, digging stones, stone rings, shell fragments, worked flakes, boiling stones, sharpening tools, organics, charcoal, and soil samples. The human remains and associated funerary objects were recovered from the Bambauer Site (4-TEH-S247), which is located in southern Tehama County near Hamilton City, California. In 1965, UCLA Archaeological Survey excavated the

site under the direction of Donald S. Miller and Thomas Durbin. The collection is noted as initially going to California State University, Chico under the care of Keith Johnson until 2003, when it was received at UCLA. During 2024 consultations, human remains were located mixed in with faunal bone. Human remains were also recovered in 1974 excavations of the same site, which were repatriated to the Paskenta Band of Nomlaki Indians in 2023. In a 1965 site report, excavation director Thomas Durbin states that 4-TEH-S247 is known to be a Wintun site. During consultations, the Tribal Representative from Paskenta Band of Nomlaki Indians also identified this as a Wintun site that is within the ancestral territory of the Tribe. Due to the presence of human remains, the representative identified the entire site, and any material found there, as culturally sensitive. There is no known use of potentially hazardous substances for treatment of the human remains or associated funerary objects. No lineal descendant can be determined.

Cultural Affiliation

Based on the information available and the results of consultation, cultural affiliation is clearly identified by the information available about the human remains and associated funerary objects described in this notice.

Determinations

The Fowler Museum at UCLA has determined that:

- The human remains described in this notice represent the physical remains of two individuals of Native American ancestry.
- The 172 bags and 2,641 individual objects described in this notice are reasonably believed to have been placed intentionally with or near individual human remains at the time of death or later as part of the death rite or ceremony.
- There is a connection between the human remains and associated funerary objects described in this notice and the Paskenta Band of Nomlaki Indians of California.

Requests for Repatriation

Written requests for repatriation of the human remains and associated funerary objects in this notice must be sent to the authorized representative identified in this notice under **ADDRESSES**. Requests for repatriation may be submitted by:

1. Any one or more of the Indian Tribes or Native Hawaiian organizations identified in this notice.
2. Any lineal descendant, Indian Tribe, or Native Hawaiian organization

not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or an Indian Tribe or Native Hawaiian organization with cultural affiliation.

Repatriation of the human remains and associated funerary objects described in this notice to a requestor may occur on or after January 17, 2025. If competing requests for repatriation are received, the Fowler Museum at UCLA must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the human remains and associated funerary objects are considered a single request and not competing requests. The Fowler Museum at UCLA is responsible for sending a copy of this notice to the Indian Tribes and Native Hawaiian organizations identified in this notice.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3003, and the implementing regulations, 43 CFR 10.10.

Dated: December 11, 2024.

BILLING CODE 4312-52-P

INTERNATIONAL TRADE COMMISSION

[Investigation No. 337-TA-1428]

Certain Women's Flats With Colored Outsoles Thereof; Notice of Institution of Investigation

AGENCY: U.S. International Trade Commission.

ACTION: Notice.

SUMMARY: Notice is hereby given that a complaint was filed with the U.S. International Trade Commission on November 13, 2024, under section 337 of the Tariff Act of 1930, as amended, on behalf of Gavrieli Brands LLC of Culver City, California. An amended complaint was filed on November 20, 2024. A supplement to the amended complaint was filed on December 2, 2024. The complaint, as amended and supplemented, alleges violations of section 337 based upon the importation into the United States, the sale for importation, and the sale within the United States after importation of certain women's flats with colored outsoles thereof by reason of infringement of the claim of one or more of U.S. Design Patent No. D681,928 (the "'928 patent"), U.S. Design Patent No. D844,950 (the "'950 patent"), U.S. Design Patent No. D844,951 (the "'951

patent”), U.S. Design Patent No. D681,927 (the “’927 patent”), U.S. Design Patent No. D781,035 (the “’035 patent”), U.S. Design Patent No. D781,032 (the “’032 patent”), U.S. Design Patent No. D686,812 (the “’812 patent”), and U.S. Design Patent No. D688,853 (the “’853 patent”). The complaint further alleges that an industry in the United States exists as required by the applicable Federal Statute. The complaint also alleges violations of section 337 based upon the importation into the United States, or in the sale of certain flats with colored outsoles thereof by reason of trade dress infringement, the threat or effect of which is to destroy or substantially injure an industry in the United States. The complainant requests that the Commission institute an investigation and, after the investigation, issue a general exclusion order, or in the alternative a limited exclusion, and cease and desist orders.

ADDRESSES: The complaint, as amended and supplemented, except for any confidential information contained therein, may be viewed on the Commission’s electronic docket (EDIS) at <https://edis.usitc.gov>. For help accessing EDIS, please email EDIS3Help@usitc.gov. Hearing impaired individuals are advised that information on this matter can be obtained by contacting the Commission’s TDD terminal on (202) 205–1810. Persons with mobility impairments who will need special assistance in gaining access to the Commission should contact the Office of the Secretary at (202) 205–2000. General information concerning the Commission may also be obtained by accessing its internet server at <https://www.usitc.gov>.

FOR FURTHER INFORMATION CONTACT: Pathenia M. Proctor, The Office of Unfair Import Investigations (202) 205–2560.

SUPPLEMENTARY INFORMATION:

Authority: The authority for institution of this investigation is contained in section 337 of the Tariff Act of 1930, as amended, 19 U.S.C. 1337, and in section 210.10 of the Commission’s Rules of Practice and Procedure, 19 CFR 210.10 (2024).

Scope of Investigation: Having considered the complaint, the U.S. International Trade Commission, on December 12, 2024, *ordered that*—

(1) Pursuant to subsection (b) of section 337 of the Tariff Act of 1930, as amended,

(a) an investigation be instituted to determine whether there is a violation of subsection (a)(1)(A) of section 337 in the importation or sale of certain

products identified in paragraph (2) by reason of trade dress infringement, the threat of which is to destroy or substantially injure an industry in the United States;

(b) an investigation be instituted to determine whether there is a violation of subsection (a)(1)(B) of section 337 in the importation into the United States, the sale for importation, or the sale within the United States after importation of certain products identified in paragraph (2) by reason of infringement of the claim of the ’928 patent; the claim of the ’950 patent; the claim of the ’951 patent; the claim of the ’927 patent; the claim of the ’035 patent; the claim of the ’032 patent; the claim of the ’812 patent; and the claim of the ’853 patent, and whether an industry in the United States exists as required by subsection (a)(2) of section 337;

(2) Pursuant to section 210.10(b)(1) of the Commission’s Rules of Practice and Procedure, 19 CFR 210.10(b)(1), the plain language description of the accused products or category of accused products, which defines the scope of the investigation, is “women’s ballet flats with colored outsoles thereof”;

(3) For the purpose of the investigation so instituted, the following are hereby named as parties upon which this notice of investigation shall be served:

(a) *The complainant is:* Gavrieli Brands LLC, 5731 Buckingham Parkway, Culver City, California 90230.

(b) The respondents are the following entities alleged to be in violation of section 337, and are the parties upon which the complaint is to be served:

(c) The Office of Unfair Import Investigations, U.S. International Trade Commission, 500 E Street SW, Suite 401, Washington, DC 20436; and

(4) For the investigation so instituted, the Chief Administrative Law Judge, U.S. International Trade Commission, shall designate the presiding Administrative Law Judge.

Responses to the complaint and the notice of investigation must be submitted by the named respondents in accordance with section 210.13 of the Commission’s Rules of Practice and Procedure, 19 CFR 210.13. Pursuant to 19 CFR 201.16(e) and 210.13(a), as amended in 85 FR 15798 (March 19, 2020), such responses will be considered by the Commission if received not later than 20 days after the date of service by the complainant of the complaint and the notice of investigation. Extensions of time for submitting responses to the complaint and the notice of investigation will not be granted unless good cause therefor is shown.

Failure of a respondent to file a timely response to each allegation in the complaint and in this notice may be deemed to constitute a waiver of the right to appear and contest the allegations of the complaint and this notice, and to authorize the administrative law judge and the Commission, without further notice to the respondent, to find the facts to be as alleged in the complaint and this notice and to enter an initial determination

and a final determination containing such findings, and may result in the issuance of an exclusion order or a cease and desist order or both directed against the respondent.

By order of the Commission.

Issued: December 13, 2024.

BILLING CODE 7020-02-P

INTERNATIONAL TRADE COMMISSION

[Investigation Nos. 701-TA-750 and 731-TA-1728 (Preliminary)]

Sol Gel Alumina-Based Ceramic Abrasive Grains From China; Revised Schedule for the Subject Investigations

AGENCY: United States International Trade Commission.

ACTION: Notice.

DATES: December 13, 2024.

FOR FURTHER INFORMATION CONTACT:

Keysha Martinez (202-205-2136), Office of Investigations, U.S. International Trade Commission, 500 E Street SW, Washington, DC 20436. Hearing-impaired persons can obtain information on this matter by contacting the Commission's TDD terminal on 202-205-1810. Persons with mobility impairments who will need special assistance in gaining access to the Commission should contact the Office of the Secretary at 202-205-2000. General information concerning the Commission may also be obtained by accessing its internet server (<https://www.usitc.gov>). The public record for these investigations may be viewed on the Commission's electronic docket (EDIS) at <https://edis.usitc.gov>.

SUPPLEMENTARY INFORMATION: On November 25, 2024, the Commission established a schedule for the conduct of the preliminary phase of the subject investigations (89 FR 95235, December 2, 2024). Subsequently, the Department of Commerce ("Commerce") extended the deadline for its initiation determination from December 16, 2024 to January 6, 2025 (89 FR 100465, December 12, 2024). The Commission, therefore, is revising its schedule to conform with Commerce's new schedule.

The Commission must reach preliminary determinations within 25 days after the date on which the Commission receives notice from Commerce of initiation of the investigations, and the Commission's

views must be transmitted to Commerce within five business days thereafter.

For further information concerning this proceeding, see the Commission's notice cited above and the Commission's Rules of Practice and Procedure, part 201, subparts A and B (19 CFR part 201), and part 207, subparts A and B (19 CFR part 207).

Authority: These investigations are being conducted under authority of title VII of the Tariff Act of 1930; this notice is published pursuant to § 207.12 of the Commission's rules.

By order of the Commission.

Issued: December 13, 2024.

Lisa Barton,

Secretary to the Commission.

INTERNATIONAL TRADE COMMISSION

[Investigation No. 337-TA-1427]

Certain Components for Injection Molding Machines, and Products Containing the Same; Notice of Institution of Investigation

AGENCY: U.S. International Trade Commission.

ACTION: Notice.

SUMMARY: Notice is hereby given that a complaint was filed with the U.S. International Trade Commission on November 12, 2024, under section 337 of the Tariff Act of 1930, as amended, on behalf of Husky Injection Molding Systems LTD. of Canada and Husky Injection Molding Systems, Inc. of Milton, Vermont. Husky filed a supplemental complaint on November 29, 2024, and subsequently refiled the same "supplemental" complaint as an amended complaint on December 2, 2024. The amended complaint, alleges violations of section 337 based upon the importation into the United States, the sale for importation, and the sale within the United States after importation of certain components for injection molding machines, and products containing the same by reason of the infringement of certain claims of U.S. Patent No. 9,713,891 ("the '891 patent"); U.S. Patent No. 11,794,375 ("the '375 patent"); U.S. Patent No. 10,093,053 ("the '053 patent"); U.S. Patent No. 8,834,149 ("the '149 patent"); and U.S. Patent No. 7,645,132 ("the '132 patent"). The amended complaint further alleges that an industry in the United States exists as required by the applicable Federal Statute. The complainant requests that the Commission institute

an investigation and, after the investigation, issue a limited exclusion order and cease and desist orders.

ADDRESSES: The complaint, except for any confidential information contained therein, may be viewed on the Commission's electronic docket (EDIS) at <https://edis.usitc.gov>. For help accessing EDIS, please email EDIS3Help@usitc.gov. Hearing impaired individuals are advised that information on this matter can be obtained by contacting the Commission's TDD terminal on (202) 205-1810. Persons with mobility impairments who will need special assistance in gaining access to the Commission should contact the Office of the Secretary at (202) 205-2000. General information concerning the Commission may also be obtained by accessing its internet server at <https://www.usitc.gov>.

FOR FURTHER INFORMATION CONTACT: Susan Orndoff, The Office of Docket Services, U.S. International Trade Commission, telephone (202) 205-1802.

SUPPLEMENTARY INFORMATION:

Authority: The authority for institution of this investigation is contained in section 337 of the Tariff Act of 1930, as amended, 19 U.S.C. 1337, and in section 210.10 of the Commission's Rules of Practice and Procedure, 19 CFR 210.10 (2024).

Scope of Investigation: Having considered the complaint, the U.S. International Trade Commission, on December 12, 2024, *ordered that*—

(1) Pursuant to subsection (b) of section 337 of the Tariff Act of 1930, as amended, an investigation be instituted to determine whether there is a violation of subsection (a)(1)(B) of section 337 in the importation into the United States, the sale for importation, or the sale within the United States after importation of certain products identified in paragraph (2) by reason of infringement of one or more of claims 1-2, 4, and 6-8 of the '891 patent; 1-3, 5-15, and 17-21 of the '375 patent; claims 1-4, 6, and 8-10 of the '053 patent; claims 1-9 and 18 of the '149 patent; and claims 1-4, 7, 10-12, 14-19, 21-24, and 26 of the '132 patent, and whether an industry in the United States exists as required by subsection (a)(2) of section 337;

(2) Pursuant to section 210.10(b)(1) of the Commission's Rules of Practice and Procedure, 19 CFR 210.10(b)(1), the plain language description of the accused products or category of accused products, which defines the scope of the investigation, is "mold products, cavity insert products, and molding apparatus products for injection molding machines, components for injection

molding machines and products containing the same”;

(3) For the purpose of the investigation so instituted, the following are hereby named as parties upon which this notice of investigation shall be served:

(a) The complainants are:

Husky Injection Molding Systems LTD.,
500 Queen Street South, Bolton,
Ontario, Canada L7E 5S5

Husky Injection Molding Systems, Inc.,
288 North Road, Milton, VT, USA,
05468

(b) The respondent is the following entity alleged to be in violation of section 337, and is the party upon which the complaint is to be served:

NINGBO AO SHENG MOLD CO., LTD.,
d/b/a AOSIMI, No. 8 Xingde Rd.
Ditang Ave. YuYao, Zhejiang 315480,
China

(4) For the investigation so instituted, the Chief Administrative Law Judge, U.S. International Trade Commission, shall designate the presiding Administrative Law Judge.

Responses to the complaint and the notice of investigation must be submitted by the named respondent in accordance with section 210.13 of the Commission’s Rules of Practice and Procedure, 19 CFR 210.13. Pursuant to 19 CFR 201.16(e) and 210.13(a), as amended in 85 FR 15798 (March 19, 2020), such responses will be considered by the Commission if received not later than 20 days after the date of service by the complainants of the complaint and the notice of investigation. Extensions of time for submitting responses to the complaint and the notice of investigation will not be granted unless good cause therefor is shown.

Failure of the respondent to file a timely response to each allegation in the complaint and in this notice may be deemed to constitute a waiver of the right to appear and contest the allegations of the complaint and this notice, and to authorize the administrative law judge and the Commission, without further notice to the respondent, to find the facts to be as alleged in the complaint and this notice and to enter an initial determination and a final determination containing such findings, and may result in the issuance of an exclusion order or a cease and desist order or both directed against the respondent.

By order of the Commission.

Issued: December 12, 2024.

Lisa Barton,
Secretary to the Commission.

BILLING CODE 7020–02–P

DEPARTMENT OF JUSTICE

Drug Enforcement Administration

[Docket No. DEA–1444]

Importer of Controlled Substances Application: Leading Pharma LLC

AGENCY: Drug Enforcement Administration, Justice.

ACTION: Notice of application.

SUMMARY: Leading Pharma LLC to be registered as an importer of basic class(es) of controlled substance(s). Refer to Supplementary Information listed below for further drug information.

DATES: Registered bulk manufacturers of the affected basic class(es), and applicants, therefore, may submit electronic comments on or objections to the issuance of the proposed registration on or before January 17, 2025. Such persons may also file a written request for a hearing on the application on or before January 17, 2025.

ADDRESSES: The Drug Enforcement Administration requires that all comments be submitted electronically through the Federal eRulemaking Portal, which provides the ability to type short comments directly into the comment field on the web page or attach a file for lengthier comments. Please go to <https://www.regulations.gov> and follow the online instructions at that site for submitting comments. Upon submission of your comment, you will receive a Comment Tracking Number. Please be aware that submitted comments are not instantaneously available for public view on <https://www.regulations.gov>. If you have received a Comment Tracking Number, your comment has been successfully submitted and there is no need to resubmit the same comment. All requests for a hearing must be sent to: (1) Drug Enforcement Administration, Attn: Hearing Clerk/OALJ, 8701 Morrisette Drive, Springfield, Virginia 22152; and (2) Drug Enforcement Administration, Attn: DEA Federal Register Representative/DPW, 8701 Morrisette Drive, Springfield, Virginia 22152. All requests for a hearing should also be sent to: Drug Enforcement Administration, Attn: Administrator, 8701 Morrisette Drive, Springfield, Virginia 22152.

SUPPLEMENTARY INFORMATION: In accordance with 21 CFR 1301.34(a), this is notice that on September 27, 2024, Leading Pharma LLC, 3 Oak Road, Fairfield, New Jersey 07004, applied to be registered as an importer of the following basic class(es) of controlled substance(s):

Controlled substance	Drug code	Schedule
Diphenoxylate ...	9170	II

The company plans to import the listed controlled substance as an importer active pharmaceutical ingredient for research and development toward manufacturing a finished dosage product for Food and Drug Administration approval. No other activity for this drug code is authorized for this registration.

Approval of permit applications will occur only when the registrant’s business activity is consistent with what is authorized under 21 U.S.C. 952(a)(2). Authorization will not extend to the import of Food and Drug Administration-approved or non-approved finished dosage forms for commercial sale.

Matthew Strait,
Deputy Assistant Administrator.

BILLING CODE

DEPARTMENT OF JUSTICE

[OMB Number 1117–0053]

Agency Information Collection Activities; Proposed eCollection eComments Requested; Leadership Engagement Survey (LES)

AGENCY: Drug Enforcement Administration, Department of Justice.

ACTION: 30-Day notice.

SUMMARY: The Drug Enforcement Administration, Department of Justice (DOJ), will be submitting the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995.

DATES: Comments are encouraged and will be accepted for 30 days until January 10, 2025.

FOR FURTHER INFORMATION CONTACT: If you have comments especially on the estimated public burden or associated response time, suggestions, or need a copy of the proposed information collection instrument with instructions or additional information, please

contact: Tammie Pugh, Section Chief, Research and Analysis Staff, Human Resources Division, DEA, Tammie.S.Pugh@dea.gov, 571-776-2496, 600 Army Navy Dr., Arlington, VA 22202.

SUPPLEMENTARY INFORMATION: The proposed information collection was previously published in the **Federal Register** on 89 FR 81113, October 7, 2024, allowing a 60-day comment period. Written comments and suggestions from the public and affected agencies concerning the proposed collection of information are encouraged. Your comments should address one or more of the following four points:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- Enhance the quality, utility, and clarity of the information to be collected; and/or
- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

Written comments and recommendations for this information collection should be submitted within 30 days of the publication of this notice on the following website www.reginfo.gov/public/do/PRAMain. Find this particular information collection by selecting "Currently under 30-day Review—Open for Public Comments" or by using the search function and entering either the title of the information collection or the OMB Control Number [1117-0053]. This information collection request may be viewed at www.reginfo.gov. Follow the instructions to view Department of Justice, information collections currently under review by OMB.

DOJ seeks PRA authorization for this information collection for three (3) years. OMB authorization for an ICR cannot be for more than three (3) years without renewal. The DOJ notes that information collection requirements submitted to the OMB for existing ICRs receive a month-to-month extension while they undergo review.

Overview of This Information Collection

1. *Type of Information Collection:* Extension of a previously approved collection.

2. *The Title of the Form/Collection:* Leadership Engagement Survey.

3. *The agency form number, if any, and the applicable component of the Department sponsoring the collection:* N/A.

4. *Affected public who will be asked or required to respond, as well as the obligation to respond:* Federal Government/DEA employees, contractors, and TFOs working at the DEA are encouraged to respond.

5. *Obligation to Respond:* The obligation to respond is voluntary.

6. *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond:* The maximum numbers of potential respondents is 15000, although the expected responses are estimated to be 5000.

7. *Estimated Time per Respondent:* The time per response is 20 minutes to complete the Leadership Engagement Survey.

8. *Frequency:* The LES is administered annually.

9. *An estimate of the total annual burden (in hours) associated with the collection:* The total annual burden hours for this collection is approximately 1650 hours, assuming 5000 respondents at 20 minutes for each response.

10. *An estimate of the total annual cost burden associated with the collection, if applicable:* There is no cost to continue the survey since it is already fully developed and runs on an internal platform accessible only to DEA employees.

If additional information is required, contact: Darwin Arceo, Department Clearance Officer, Policy and Planning Staff, Justice Management Division, United States Department of Justice, Two Constitution Square, 145 N Street NE, 4W-218, Washington, DC 20530.

Dated: December 12, 2024.

Darwin Arceo,

Department Clearance Officer for PRA, U.S. Department of Justice.

BILLING CODE 4410-09-P9

DEPARTMENT OF JUSTICE

Notice of Lodging of Proposed Consent Decree Under the Toxic Substances Control Act

On December 13, 2024, the Department of Justice lodged a proposed

consent decree with the United States District Court for the Southern District of New York in the lawsuit entitled *United States, et al. v. Lilmor Management LLC, et al.*, Civil Action No. 24 Civ. 9520.

In this action, the United States seeks injunctive relief pursuant to the Toxic Substances Control Act ("TSCA") and the Residential Lead-Based Paint Hazard Reduction Act of 1992 ("RLBPHRA") against Lilmor Management LLC ("Lilmor"), Morris Lieberman, and 49 limited liability companies for failure to make required disclosures to prospective tenants about lead-based paint in their apartments as required by the Lead Disclosure Rule (24 CFR part 35, subpart A, and 40 CFR part 745, subpart F). As to Lilmor and Lieberman, the United States also seeks injunctive relief under TSCA for failing to comply with safe work practices and related requirements during renovations as required by the Renovation, Repair, and Painting Rule, 40 CFR part 745. The United States seeks further relief on a theory of public nuisance. The State of New York has joined in the suit to assert claims under state law.

The consent decree requires the Defendants to pay a \$3.25 million administrative penalty to the United States under TSCA and the RLBPHRA and to perform injunctive relief set forth in the consent decree, including the abatement of lead-based paint and the remediation of substandard living conditions. In settlement of its claims, New York State has agreed to payment of \$325,000 to a New York City agency and creation of a restitution fund of \$2.925 million. The settlement also provides for the hiring of a third-party housing expert to oversee settlement implementation.

The publication of this notice opens a period for public comment on the consent decree. Comments should be addressed to the Assistant Attorney General, Environment and Natural Resources Division, and should refer to *United States, et al. v. Lilmor Management LLC, et al.*, D.J. Ref. No. 90-5-1-1-13022. All comments must be submitted no later than thirty (30) days after the publication date of this notice. Comments may be submitted either by email or by mail:

<i>To submit comments:</i>	<i>Send them to:</i>
By email	pubcomment-ees.enrd@usdoj.gov
By mail	Assistant Attorney General, U.S. DOJ—ENRD, P.O. Box 7611, Washington, DC 20044-7611.

Any comments submitted in writing may be filed by the United States in whole or in part on the public court docket without notice to the commenter.

During the public comment period, the consent decree may be examined and downloaded at this Justice Department website: <http://www.justice.gov/enrd/consent-decrees>. If you require assistance accessing the consent decree, you may request assistance by email or by mail to the addresses provided above for submitting comments.

Eric D. Albert,

Assistant Section Chief, Environmental Enforcement Section, Environment and Natural Resources Division.

[FR Doc. 2024-29978 Filed 12-17-24; 8:45 am]

BILLING CODE 4410-15-P

DEPARTMENT OF LABOR

Agency Information Collection Activities; Submission for OMB Review; Comment Request; Roof Control Plans for Underground Coal Mines

ACTION: Notice of availability; request for comments.

SUMMARY: The Department of Labor (DOL) is submitting this Mine Safety and Health Administration (MSHA)-sponsored information collection request (ICR) to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995 (PRA). Public comments on the ICR are invited.

DATES: The OMB will consider all written comments that the agency receives on or before January 17, 2025.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to www.reginfo.gov/public/do/PRAMain. Find this particular information collection by selecting "Currently under 30-day Review—Open for Public Comments" or by using the search function.

FOR FURTHER INFORMATION CONTACT: Michael Howell by telephone at 202-693-6782, or by email at DOL_PRA_PUBLIC@dol.gov.

SUPPLEMENTARY INFORMATION: In order to prevent occupational injuries resulting from falls of roofs, faces, and ribs, which are a leading cause of injuries and death in underground coal mines, all underground coal mine operators are required to develop and submit roof control plans to MSHA for evaluation

and approval. These plans are evaluated to determine if they are adequate for prevailing mining conditions. For additional substantive information about this ICR, see the related notice published in the **Federal Register** on August 26, 2024 (89 FR 68469).

Comments are invited on: (1) whether the collection of information is necessary for the proper performance of the functions of the Department, including whether the information will have practical utility; (2) the accuracy of the agency's estimates of the burden and cost of the collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility and clarity of the information collection; and (4) ways to minimize the burden of the collection of information on those who are to respond, including the use of automated collection techniques or other forms of information technology.

This information collection is subject to the PRA. A Federal agency generally cannot conduct or sponsor a collection of information, and the public is generally not required to respond to an information collection, unless the OMB approves it and displays a currently valid OMB Control Number. In addition, notwithstanding any other provisions of law, no person shall generally be subject to penalty for failing to comply with a collection of information that does not display a valid OMB Control Number. See 5 CFR 1320.5(a) and 1320.6.

Agency: DOL-MSHA.

Title of Collection: Roof Control Plans for Underground Coal Mines.

OMB Control Number: 1219-0004.

Affected Public: Businesses or other for-profits.

Number of Respondents: 167.

Frequency: On occasion.

Number of Responses: 1,019.

Annual Burden Hours: 2,974 hours.

Total Estimated Annual Other Costs Burden: \$3,396.

(Authority: 44 U.S.C. 3507(a)(1)(D))

Michael Howell,

Senior Paperwork Reduction Act Analyst.

[FR Doc. 2024-29832 Filed 12-17-24; 8:45 am]

BILLING CODE 4510-43-P

DEPARTMENT OF LABOR

Agency Information Collection Activities; Submission for OMB Review; Comment Request; Underground Retorts

ACTION: Notice of availability; request for comments.

SUMMARY: The Department of Labor (DOL) is submitting this Mine Safety

and Health Administration (MSHA)-sponsored information collection request (ICR) to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995 (PRA). Public comments on the ICR are invited.

DATES: The OMB will consider all written comments that the agency receives on or before January 17, 2025.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to www.reginfo.gov/public/do/PRAMain. Find this particular information collection by selecting "Currently under 30-day Review—Open for Public Comments" or by using the search function.

FOR FURTHER INFORMATION CONTACT: Michael Howell by telephone at 202-693-6782, or by email at DOL_PRA_PUBLIC@dol.gov.

SUPPLEMENTARY INFORMATION: Section 103(h) of the Federal Mine Safety and Health Act of 1977 (Mine Act), 30 U.S.C. 813, authorizes MSHA to collect information necessary to carry out its duty in protecting the safety and health of miners. Title 30 CFR 57.22401 sets forth the safety requirements for using a retort to extract oil from shale in underground metal and nonmetal I-A and I-B mines (those that operate in a combustible ore and either liberate methane or have the potential to liberate methane based on the history of the mine or the geological area in which the mine is located). At present, this applies only to underground oil shale mines. The standard requires that prior to ignition of underground retorts; mine operators must submit a written ignition operation plan to the appropriate Mine Safety and Health Administration (MSHA) District Manager which contains site-specific safeguards and safety procedures for the underground areas of the mine which are affected by the retorts. For additional substantive information about this ICR, see the related notice published in the **Federal Register** on August 15, 2024 (89 FR 66453).

Comments are invited on: (1) whether the collection of information is necessary for the proper performance of the functions of the Department, including whether the information will have practical utility; (2) the accuracy of the agency's estimates of the burden and cost of the collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility and clarity of the information collection; and

(4) ways to minimize the burden of the collection of information on those who are to respond, including the use of automated collection techniques or other forms of information technology.

This information collection is subject to the PRA. A Federal agency generally cannot conduct or sponsor a collection of information, and the public is generally not required to respond to an information collection, unless the OMB approves it and displays a currently valid OMB Control Number. In addition, notwithstanding any other provisions of law, no person shall generally be subject to penalty for failing to comply with a collection of information that does not display a valid OMB Control Number. See 5 CFR 1320.5(a) and 1320.6.

BILLING CODE 4510–43–P

DEPARTMENT OF LABOR

Office of Workers' Compensation Programs

Proposed Extension of Information Collection; Attorney Acknowledgement/Instructions Relating to Representative Fee Applications; OMB Control No. 1240–0049

AGENCY: Office of Workers' Compensation Programs, Division of Federal Employees' Compensation, (OWCP/DFEC) Labor.

ACTION: Request for public comments.

SUMMARY: The Department of Labor, as part of its continuing effort to reduce paperwork and respondent burden, conducts a pre-clearance request for comment to provide the general public and Federal agencies with an opportunity to comment on proposed collections of information in accordance with the Paperwork Reduction Act of 1995. This request helps to ensure that: requested data can be provided in the desired format; reporting burden (time and financial resources) is minimized;

collection instruments are clearly understood; and the impact of collection requirements on respondents can be properly assessed. Currently, the Office of Workers' Compensation Programs, Division of Federal Employees' Compensation, (OWCP/DFEC) is soliciting comments on the information collection for Attorney Acknowledgement/Instructions Relating to Representative Fee Applications, CA–143/CA–155.

DATES: All comments must be received on or before February 18, 2025.

ADDRESSES: You may submit comment as follows. Please note that late, untimely filed comments will not be considered.

Electronic Submissions: Submit electronic comments in the following way:

- *Federal eRulemaking Portal:* <https://www.regulations.gov>. Follow the instructions for submitting comments for WCPO–2024–0021–0001. Comments submitted electronically, including attachments, to <https://www.regulations.gov> will be posted to the docket, with no changes. Because your comment will be made public, you are responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as your or anyone else's Social Security number or confidential business information.

- If your comment includes confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission.

Written/Paper Submissions: Submit written/paper submissions in the following way:

- *Mail/Hand Delivery:* Mail or visit DOL–OWCP/DFEC, Office of Workers' Compensation Programs, Division of Federal Employees' Compensation, U.S. Department of Labor, 200 Constitution Ave. NW, Room S–3323, Washington, DC 20210.

- OWCP/DFEC will post your comment as well as any attachments, except for information submitted and marked as confidential, in the docket at <https://www.regulations.gov>.

FOR FURTHER INFORMATION CONTACT: Anjanette Suggs, Office of Workers' Compensation Programs, Division of Federal Employees' Longshore, and Harbor Workers' Compensation, OWCP/DFELHWC, at suggs.anjanette@dol.gov (email); (202) 354–9660.

SUPPLEMENTARY INFORMATION:

I. Background

The Division of Federal Employees' Compensation (DFEC) administers the Federal Employees' Compensation Act (FECA). A Federal employee who sustains a work-related injury is entitled to receive compensation under the FECA. Under 5 U.S.C. 8127(a) and in accordance with 20 CFR 10.700 and 702.131, a claimant may authorize an attorney or other individual to represent his or her interests in any proceeding before the Office of Workers' Compensation Programs (OWCP). Under 5 U.S.C. 8127(b) and in accordance with 20 CFR 10.702 and 702.132, fees for representatives' services must first be approved by the Secretary. The representative is entitled to request a fee for services under 20 CFR 10.700–703 (Federal Employees' Compensation Act (FECA)). The fee must be approved by the OWCP before any demand for payment can be made by the representative.

See: <https://www.dol.gov/owcp/dfec/regs/statutes/feca.htm>.

eCFR: 20 CFR part 10—Claims for Compensation Under the Federal Employees' Compensation Act, as Amended.

II. Desired Focus of Comments

OWCP/DFEC is soliciting comments concerning the proposed information collection related to the Attorney Acknowledgement/Instructions Relating to Representative Fee Applications. OWCP/DFEC is particularly interested in comments that:

- Evaluate whether the collection of information is necessary for the proper performance of the functions of the Agency, including whether the information has practical utility;
- Evaluate the accuracy of OWCP/DFEC's estimate of the burden related to the information collection, including the validity of the methodology and assumptions used in the estimate;
- Suggest methods to enhance the quality, utility, and clarity of the information to be collected; and
- Minimize the burden of the information collection on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.*, permitting electronic submission of responses.

Background documents related to this information collection request are available at <https://www.regulations.gov> and at DOL–OWCP/DFEC located at 200 Constitution Ave. NW, Room S–3323, Washington, DC 20210. Questions about the information collection requirements

may be directed to the person listed in the **FOR FURTHER INFORMATION** section of this notice.

III. Current Actions

This information collection request concerns the Attorney Acknowledgement/Instructions Relating to Representative Fee Applications, CA-143/CA-155. OWCP/DFEC has updated the data with respect to the number of respondents, responses, burden hours, and burden costs supporting this information collection request from the previous information collection request.

Type of Review: Extension, with change, of a currently approved collection.

Agency: Office of Workers' Compensation Programs, Division of Federal Employees' Compensation, OWCP/DFEC.

OMB Number: 1240-0049.

Affected Public: Private Sector—Business or other For-profits.

Number of Respondents: 6,328.

Frequency: On occasion.

Number of Responses: 6,328.

Annual Burden Hours: 3,164 hours.

Annual Respondent or Recordkeeper Cost: \$1,107,400.00.

OWCP/DFEC 1240-0049: OWCP/DFEC Attorney Acknowledgement/Instructions Relating to Representative Fee Applications.

Comments submitted in response to this notice will be summarized in the request for Office of Management and Budget approval of the proposed information collection request; they will become a matter of public record and will be available at <https://www.reginfo.gov>.

Anjanette Suggs,
Certifying Officer.

New Postal Products

AGENCY: Postal Regulatory Commission.

ACTION: Notice.

SUMMARY: The Commission is noticing a recent Postal Service filing for the Commission's consideration concerning a negotiated service agreement. This notice informs the public of the filing, invites public comment, and takes other administrative steps.

DATES: *Comments are due:* December 20, 2024.

ADDRESSES: Submit comments electronically via the Commission's Filing Online system at <https://www.prc.gov>. Those who cannot submit comments electronically should contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section by telephone for advice on filing alternatives.

FOR FURTHER INFORMATION CONTACT: David A. Trissell, General Counsel, at 202-789-6820.

SUPPLEMENTARY INFORMATION:

Table of Contents

- I. Introduction
- II. Public Proceeding(s)
- III. Summary Proceeding(s)

I. Introduction

Pursuant to 39 CFR 3041.405, the Commission gives notice that the Postal Service filed request(s) for the Commission to consider matters related to Competitive negotiated service agreement(s). The request(s) may propose the addition of a negotiated service agreement from the Competitive product list or the modification of an existing product currently appearing on the Competitive product list.

The public portions of the Postal Service's request(s) can be accessed via the Commission's website (<https://www.prc.gov>).

www.prc.gov). Non-public portions of the Postal Service's request(s), if any, can be accessed through compliance with the requirements of 39 CFR 3011.301.¹

Section II identifies the docket number(s) associated with each Postal Service request, if any, that will be reviewed in a public proceeding as defined by 39 CFR 3010.101(p), the title of each such request, the request's acceptance date, and the authority cited by the Postal Service for each request. For each such request, the Commission appoints an officer of the Commission to represent the interests of the general public in the proceeding, pursuant to 39 U.S.C. 505 and 39 CFR 3000.114 (Public Representative). Section II also establishes comment deadline(s) pertaining to each such request.

The Commission invites comments on whether the Postal Service's request(s) identified in Section II, if any, are consistent with the policies of title 39. Applicable statutory and regulatory requirements include 39 U.S.C. 3632, 39 U.S.C. 3633, 39 U.S.C. 3642, 39 CFR part 3035, and 39 CFR part 3041. Comment deadline(s) for each such request, if any, appear in Section II.

Section III identifies the docket number(s) associated with each Postal Service request, if any, to add a standardized distinct product to the Competitive product list or to amend a standardized distinct product, the title of each such request, the request's acceptance date, and the authority cited by the Postal Service for each request. Standardized distinct products are negotiated service agreements that are variations of one or more Competitive products, and for which financial models, minimum rates, and classification criteria have undergone advance Commission review. See 39 CFR 3041.110(n); 39 CFR 3041.205(a). Such requests are reviewed in summary proceedings pursuant to 39 CFR 3041.325(c)(2) and 39 CFR 3041.505(f)(1). Pursuant to 39 CFR 3041.405(c)-(d), the Commission does not appoint a Public Representative or request public comment in proceedings to review such requests.

II. Public Proceeding(s)

1. *Docket No(s):* K2025-814; *Filing Title:* Request of the United States Postal Service Concerning Functionally Equivalent Inbound Competitive Multi-Service Agreement with Foreign Postal Operator—FY25-2; *Filing Acceptance*
