AMS response: The preamble to this final rule explains that "Material differences in performance are differences that meaningfully (from the perspective of the grower) impact grower payments." AMS chose not to publish a dollar amount because a given change in performance may have disparate impacts on growers, depending on the ratio of performance pay to total pay, the overall size of the grower's operation, their level of indebtedness, or other factors pertaining to a grower's financial position.

AMS is not adopting a presumption of unfairness for differences in inputs because there are always differences in inputs in natural systems. The use of a presumption would be overinclusive and unhelpful in guiding LPDs in improving the fairness of their comparisons in relation to inputs, production practices, and related factors set out in the duty of fair comparison. Material change in pay is a more

"Effects of Breeder Age and Dietary Fat on Subsequent Broiler Performance. 1. Growth, Mortality, and Feed Conversion." *Poultry Science* 78.4 (1999): 505–511. AMS notes additionally that research in this and related areas has limitations. It is older and results are mixed. AMS is concerned that publicly available research has stagnated, despite the introduction of new breed strains in the intervening years. Because integrators now own the genetics companies, AMS has additional concerns that research has, in effect, been privatized, creating informational asymmetries. Based on regulatory experience and on public comments, growers believe these factors affect performance.

"The Food System: Concentration and Its Impacts," 3, (2020), <https://farmaction.us/concentrationreport/>, ("Globally, just two firms control 99% of turkey genetics, 94% of laying hen genetics, and 91% of broiler genetics, and just three firms control 47% of swine genetics (ETC Group 2013; Shand and Wetter 2019)").

appropriate target because the comparison affects the grower's pay.

Comment: Commenters stressed the importance of clearly outlining non-comparison methods within production contracts before they become necessary to provide growers with a clear understanding of their rights and options should tournament-based comparisons become unfair or impractical. Both industry stakeholders and advocacy groups acknowledge the need for clearer guidance on determining when fair comparison is no longer feasible and advocated for more specific criteria to guide both LPDs and growers. Commenters also expressed concern that implementation should appropriately address growers' circumstances.

AMS response: Fair comparison of growers requires that growers do not receive a distribution of inputs or assignment of production practices that causes material differences in performance from other growers to whom they are being compared. Factors outside of a grower's control should not meaningfully (from the perspective of the grower) impact grower payments. This is a facts and circumstances analysis.

Per § 201.110(a)(3), the non-comparison method must be included in the contract; therefore, growers will know what this method is before it is used. Per § 201.110(b)(1)(v), "Non-comparison," requires that an LPD's written processes explain when the LPD might remove a grower from a ranking group, and how the LPD will compensate growers removed from a ranking group to satisfy the non-comparison compensation method required under § 201.110(a)(3). There are myriad reasons why a grower may need to be removed from a ranking group. For example, there may not be enough comparable growers with which to make a reliable comparison in the current grouping and the LPD may use growers settling in previous periods to make a reliable comparison. Likewise, a specific grower may have received undesirable inputs or an assignment of production practices that materially impacted the grower's performance, necessitating the removal of the grower from the grouping and compensation under a non-comparison compensation method. Under this provision, the LPD must explain how and when the LPD removes a grower from a ranking group because the grower received unfavorable inputs or production practices and how it will fairly compensate such growers through a non-comparison compensation method.

Comment: A common theme across comments was addressing the inherent power imbalance between growers and LPDs, including the need to protect growers from retaliation. Commenters advocated for independent compliance reviews, potentially involving grower feedback, to ensure LPDs comply with the duty of fair comparison. However, some commenters contend that such requirements would create excessive paperwork burdens for LPDs, potentially hindering their ability to address grower needs effectively.

AMS response: AMS monitors and regulates power imbalances in the poultry industry in accordance with the Act and associated regulations. AMS's regulations at § 201.304 prohibit retaliation for asserting any of the rights granted under the Act or part 201 or asserting contract rights (9 CFR 201.304(b)(2)(vii)). AMS's regulations also prohibit retaliation by LPDs against poultry growers for speaking with government officials for the purposes of seeking redress for grievances brought under the Acts (9 CFR 201.304(b)(2)(i)). Moreover, this regulation aims to prevent injury from specific practices by LPDs—who possess local market power or bargaining power over growers. Out of concern that the compliance review process will divert poultry technicians from their primary responsibility to assist poultry growers with production issues, AMS has simplified the documentation requirements under § 201.110(b)(1). This new streamlined documentation requirement gives LPDs the needed flexibility to efficiently incorporate compliance with this rule into their standard business practices. Additionally, this section was streamlined in part because the Transparency Rule had similar documentation requirements.⁴⁶

Comment: To refine comparison-based payment systems, one commenter suggested using shorter rolling averages for performance comparisons; a short rolling average mitigates the impact of seasonal variations and new breeder flocks on grower pay, and therefore might create a more level playing field and prevent unfair disadvantages stemming from factors outside a grower's control. Another commenter advocated for contract provisions that would automatically adjust grower pay or provide avenues for redress when external factors, such as chick quality, veterinary care access, and feed quality negatively impact performance.

AMS response: AMS agrees that the duty of fair comparison requires integrators to use an appropriate time

period for comparing growers. Use of an inappropriate time period for the comparison-based compensation may be unfair or deceptive, and therefore constitute a violation of the Act. The final regulatory text indicates that one factor for the Secretary to consider when determining if a fair comparison has been made in the design or operation of a poultry grower ranking system is "whether the designated time period used in the live poultry dealer's comparison is appropriate, including whether the live poultry dealer uses one or more groupings, rankings, or comparisons of growers to mitigate the effects of any differences in inputs over the designated time period." Under the duty of fair comparison provision, growers will be compensated through a non-comparison method when a fair comparison-based compensation scheme is impossible.

iii. Appeal, Dispute Resolution

Comment: An industry stakeholder expressed concern that the language surrounding "reasonable efforts" was not detailed enough and that this could create uncertainty for LPDs, potentially leading to inconsistent application and legal challenges. To provide greater clarity and specificity regarding the definition of "reasonable efforts," one commenter suggested defining the term through concrete examples of both reasonable and unreasonable behavior to provide clearer expectations for both growers and LPDs. Another commenter proposed specific actions that LPDs should take to demonstrate "reasonable efforts," including (1) allowing for grower-installed feed scales to verify feed amounts, (2) permitting third-party veterinarian selection for sick flock assessments, (3) providing options for growers to independently assess LPD-controlled inputs, and (4) offering non-comparison compensation without fear of retaliation. Emphasizing grower agency, one commenter recommended empowering growers with the ability to independently verify inputs and performance factors.

An industry commenter noted that, in order to fairly address and resolve a situation, an LPD will *always* depend on the facts and circumstances of each case. The commenter noted that there are a multitude of factors for each situation, making a set policy or procedure not conducive to the dispute resolution process.

AMS response: As noted above, fairness requires a poultry ranking system that meets a reasonably reliable standard. LPDs must properly adjust the comparison-based compensation systems used in their poultry grower

⁴⁶ 88 FR 83210, November 28, 2023.

ranking systems to reasonably neutralize the impact of inequitable distribution of inputs and assignment of flock production practices on poultry grower compensation, as well as to reasonably neutralize the impact of communication and dispute resolution challenges that are not effectively and timely addressed.

Reasonableness is intended to be viewed as an objective test that accounts for standard industry practice, growers' contract expectations, basic considerations of equity, and the LPD's ability and willingness to prevent harms to growers resulting from factors outside growers' control. This objective test should also provide some flexibility to LPDs in particular facts and circumstances to achieve distinct goals in management of their operations, provided the LPD's goals are reasonably designed, appropriately documented, and not otherwise unfair or deceptive to growers.

Although "reasonable efforts" follows the typical standard applied for reasonable behavior in the law—what a reasonable person would do under similar circumstances—AMS also recognizes that enough circumstances are recurring in nature that an LPD should in many if not most cases be expected to have a regularized approach to the concern. Ultimately, what constitutes reasonable efforts will depend on the facts and circumstances of each case, with the LPD's duty focused on the fairness of the comparison(s) for the grower.

For example, if a grower raises immediate and urgent concerns about feed quality, such as the delivery of feed meant for older chicks than the grower has, the LPD should resolve this concern as soon as possible to minimize any additional undue damage to the grower's flock due to lack of proper nutrition. Or if a grower raises concerns about feed consistently being delivered late or in an insufficient quantity, the Agency would examine the LPD's effort to adjust the method of delivery. Failure to do so would likely justify placing the grower into a non-comparison method.

Without a doubt, an LPD is prohibited from retaliating against a grower in any manner for raising concerns as to whether a fair comparison method was used. Whether or not reasonable efforts specifically include LPDs allowing for grower-installed feed scales to verify feed amounts, permitting third-party veterinarian selection for sick flock assessments, or providing options for growers to independently assess LPD-controlled inputs is not something that AMS intends to determine in this rule for all circumstances. However, to the extent that LPDs face repeated grower

complaints and concerns regarding these matters and a track record of problems in resolving those complaints, reasonable efforts under particular facts and circumstances could point to the need for solutions such as those, although other less intrusive options may also be available.

Regarding the comment stating that set policies and procedures are not appropriate for how LPDs resolve issues with growers, AMS agrees that every growing operation is different, and LPDs must be careful in designing processes for resolving issues with growers that are context specific. Yet a wide range of problems are commonplace enough that LPDs should have regularized means for dealing with them. To strike an appropriate balance and enable LPD complex staff to retain focus on the important work of helping growers, AMS has changed the documentation requirements under § 201.110(b) to be less specific and, instead, simply require LPDs to describe how they account for similarities and differences in quality or quantity of inputs delivered to growers and how they account for differences in production practices across growers in a poultry grower ranking system.

iv. Benefit, Burden, and Cost

Comment: Commenters highlighted the perceived need for greater transparency and fairness in grower compensation. While grower advocates believe the rule is necessary to address systemic issues, LPDs expressed concern about potential cost increases and impacts on grower pay. Comments revealed a clear divide between grower advocates and industry representatives. Grower organizations argued that the duty of fair comparison is crucial for addressing the unfair and deceptive practice of shifting costs and risks from LPDs to growers. Advocacy groups suggested including a list of presumptive violations, such as providing unequal inputs within the same settlement group, to strengthen the rule's effectiveness. Several commenters emphasized the importance of robust anti-retaliation protections for growers who report rule violations or seek non-comparison compensation. An industry commenter expressed concern that requiring non-comparison-based pay could lead to lower overall compensation for growers.

AMS response: AMS agrees with commenters that the duty of fair comparison plays a critical role in addressing the unfair and deceptive risk-shifting of costs and risks from LPDs to growers. Regarding non-comparison-based pay, the rule clearly

states that when a fair comparison-based system is impossible, the LPD must implement a non-comparison method for calculating pay to ensure that factors outside of the growers' control do not cause harm to growers through decreased compensation for grow-out services. Even where adopted, non-comparison-based pay is not intrinsically likely to reduce average grower pay; the total amounts of pay are entirely dependent on the LPD's choices, and this rule does not ban bonuses for increased productivity or greater investment.

AMS agrees that a presumptive list of violations would assist with enforcement and has included some examples of potential violations in the appropriate section of the preamble of the final rule addressing the duty of fair comparison. Moreover, AMS agrees that growers cannot be retaliated against for reporting a violation of the duty of fair comparison and have indicated as such in this final rule. AMS included a prohibition against retaliation in the *Inclusive Competition and Market Integrity Under the Packers and Stockyards Act* final rule (89 FR 16092, March 6, 2024). LPDs cannot retaliate against growers for speaking with government officials for the purposes of seeking redresses for grievances brought under the Act.

Comment: Several commenters were concerned about the feasibility of implementing the documentation requirements for the new duty of fair comparison. Growers emphasized the need to access detailed, house-specific data on bird weights, feed consumption, and other key metrics. Some other commenters recommended additional requirements pertaining to LPD-controlled factors and assessing compliance, and one commenter recommended USDA to require LPDs to equally distribute inputs and adjust performance-based pay to account for differences in inputs and treatment. An industry commenter argued that requiring LPDs to control all variations in inputs, as implied in § 201.110(b)(1)(i), would be overly prescriptive and impractical given the scale, speed, and complexity of input delivery. The commenters argued that this could lead to inflexible systems that would ultimately harm growers. Other commenters criticized the provision for being vague, unfounded and lacking necessary explanation.

AMS response: AMS finds that comparison-based pay using factors outside growers' control constitutes an unfair practice under section 202(a) of the Act. While it is true that inputs cannot be delivered on a 100 percent

equal basis to all growers all the time, that does not mean that LPDs cannot construct payment systems that appropriately account for and mitigate the impact of input and flock production variability on grower compensation. The LPD does not need to control all variations in inputs; instead, the rule as proposed and finalized here merely requires the LPD to account for this variation in the design of a comparison-based payment system. AMS has been careful to specifically not require, nor expect, that identical inputs are delivered to all growers.

Also, the compliance reviews have been removed from the final rule because of the speed and complexity of the poultry growing process. Instead, AMS will incorporate audits of records pertaining to the duty of fair comparison into its regular audits of LPDs to lessen the compliance burden of this rule.

AMS expects the duty of fair comparison to substantially prevent unfair and deceptive practices when comparison-based pay is linked to input or flock production variation. This provision is written with sufficient specificity to tackle the problem at hand, while also allowing LPDs enough flexibility to design and operate a comparison-based compensation system that causes minimal disruption to their business operations. In fact, several LPD comments indicated they already have processes in place for addressing situations where a comparison-based pay system is not appropriate. This rule is codifying what industry stakeholders recognize as a best practice to create a level playing field and uphold the purpose of the tournament system in contract poultry growing. AMS has created new § 201.110(b)(1)(iii), “League composition,” which requires written documentation regarding how LPDs determine groupings of growers for settlement. AMS has also created new § 201.110(b)(1)(iv), “Evaluation period,” requiring LPDs to have a reasonable time period over which they shall evaluate the duty of fair comparison, and new § 201.110(b)(1)(v), “Non-comparison,” which requires LPDs to specify when they may remove growers from a ranking group and how they will compensate such growers to satisfy the non-comparison compensation method requirement under § 201.110(a)(3). This is meant to account for fluctuations across flocks while also ensuring that poultry growers do not face material harm resulting from input quality or timing variation.

Comment: Some commenters asserted that the proposed documentation requirements were burdensome and

potentially litigious. One commenter argued that AMS lacked authority to require LPDs to conduct and document self-audits to evaluate P&S Act compliance.

AMS response: As explained above in section IV., “Provisions of the Final Rule,” AMS agrees that some of the proposed documentation requirements can be streamlined. In the final rule, AMS is focused on only the most important documentation requirements that would assist AMS in reviewing LPDs’ compliance with the duty of fair comparison. Requirements for policies and procedures are not new or particularly controversial and are used widely across in the financial regulatory context to ensure firms are appropriately managing risks that cannot be entirely eliminated through regulation or otherwise. The situation is similar in the operation of broiler growing arrangements, where LPDs need to distribute inputs, production practices, and manage the needs of growers. To the extent that an LPD improves its management practices through maintaining policies and procedures, that should reduce litigation risk from unfair comparisons.

AMS is removing the provision requiring self-audits and will incorporate inspection of documentation required under § 201.110(b) into its regular compliance process. The compliance process undertaken by AMS to ensure compliance with the Act is routine, flexible, and comprehensive, thereby making it the ideal mechanism by which the provisions of this section shall be enforced. AMS regulatory staff already perform regular compliance audits of LPDs, so they are well positioned to review documentation describing the design and operation of LPDs’ poultry grower ranking systems and ensure that it complies with the duty of fair comparison.

v. Alternatives

Comment: Several stakeholders offered alternative approaches to address unfair compensation practices in the poultry industry. An advocacy group for growers proposed exploring non-comparison-based compensation models, such as contracts based on square footage, to mitigate the inherent issues of tournament systems. Another group advocated for a complete ban on tournament systems, based on the need for more stable and predictable grower income that is decoupled from relative performance within a group.

A number of commenters expressed concerns about LPDs manipulating input distribution (e.g., chick quality,

feed) as a form of retaliation against growers who challenge them or refuse to make capital investments. One commenter recommended explicitly defining unequal inputs within a settlement group as an unfair practice under the Act. Another commenter argued there are no simpler alternatives to directly addressing unfair comparisons, and that focusing on alternative compensation models or banning tournament systems wouldn’t fully address the root issue of unequal bargaining power and the potential for exploitation within the poultry industry.

AMS response: AMS is not at this time adopting the alternative approaches to address unfair compensation practices in the poultry industry because it believes that the final rule’s approaches are more effective at addressing the identified concerns around unfairness and deception given the available evidence. While AMS recognizes that non-comparison-based compensation models, such as contracts based on square footage, are popular with growers and mitigate the inherent issues of tournament systems, they have other limitations around recognizing skill, effort, and investment. AMS is not at this time, based on the available evidence, able to say that tournaments should be banned in all circumstances and replaced with those non-comparison methods, especially when AMS believes that the approaches set forth in this final rule, including prohibiting deductions and setting a presumption of 25 percent limitation on tournament magnitude, along with a clearer duty of fair comparison, offer a more narrowly tailored approach. If the approaches set forth in this final rule do not yield sufficient change in the treatment of growers, AMS will evaluate whether those facts necessitate other actions.

AMS acknowledges concerns about LPDs manipulating input distribution (e.g., chick quality, feed) as a form of retaliation against growers who challenge them or refuse to make capital investments. In a previous final rule, *Inclusive Competition and Market Integrity Under the Packers and Stockyards Act* (89 FR 16092, March 6, 2024), AMS specifically set out a range of circumstances where retaliation is prohibited (9 CFR 201.304(b)). Moreover, new § 201.110, which includes requirements for maintaining and complying with policies and procedures relating to input distribution, is designed to better protect growers against precisely those kinds of abuses. Were an LPD to adopt

policies and procedures that permitted inputs to be distributed in a retaliatory manner and compared growers on that basis, it would be in violation of the duty of fair comparison. And, if the LPD failed to comply with its policies and procedure requiring the equitable distribution of inputs and compared growers on that basis, that would also be in violation. AMS underscores that these principles (of pay not being affected by unfair input distribution) apply regardless of whether a tournament is present. Indeed, as AMS inquired in the proposed rule and affirms here, a practice (including, but not limited to, intentional, arbitrary, or punitive distribution) of unequal, dissimilar, or inappropriate inputs or flock production practices would be an unfair practice under the Act under any payment system that relies upon grower performance relative to inputs or production practices provided by the LPD (such as feed efficiency) irrespective of whether the payment system was a tournament.

C. Section 201.112

i. Additional Capital Investment Disclosure Document

Comment: Commenters including several farmers' coalitions supported the proposed additional capital investment disclosure requirements, asserting they would increase transparency and reduce deception. Several farmers' coalitions indicated the proposed transparency requirements should provide lenders with more consistent information for justifying investment viability, help prevent producers from being misled to make unviable investments, deter LPDs from making unnecessary upgrade requests, and may increase incentive pay for additional capital investments. However, industry associations and LPDs stated that it is outside USDA's statutory authority under the Act to require disclosures for additional capital investment requests. One commenter asserted that section 401 of the Act only allows AMS to require LPDs to maintain business records for AMS's benefit, not to require disclosure of records to growers, and that under section 401 AMS can only prescribe the manner and form in which regulated entities must keep transaction records if the Secretary finds that the records "do not fully and correctly disclose all transactions involved in the dealer's business." Another commenter asserted that AMS has failed to establish that disclosures are always necessary to avoid an unfair or deceptive practice or device.

AMS response: The Agency believes that the additional disclosure

information will help mitigate the information asymmetry between LPDs and poultry growers when entering into an additional capital investment agreement. When LPDs ask contract poultry growers to make additional capital investments but fail to be transparent regarding the purpose, risks, financial incentives and rates of return, those growers cannot make an informed business decision. Any failure to disclose material information essential to making critical business decisions is deceptive and also inhibits growers from identifying unfair practices in their incipency, and so violates the Act's prohibition in section 202(a) against unfair and deceptive practices. Section 407 of the Act specifically authorizes the Secretary to implement regulations to carry out the provisions of the Act. This provision is one instance of this authority. Accordingly, AMS disagrees with the notion that the Agency lacks statutory authority to promulgate the additional capital investment disclosure requirements.

In this regulation, AMS enables growers to better detect the risks in contracting because the LPDs' contracts will now show the grower the real value of the LPDs' offer, which they obscure in tournament contracts. Preventing deception and stopping unfairness in its incipency enhances competition among dealers by enabling growers to compare offers and reasonably assess entry into the business. Preventing unfairness and deception improves how markets function by forcing LPDs to compete for growers' services based on the merits of the producer's offer and prevents likely injuries to competition. Preventing deception enables growers to better assess their performance vis-à-vis other growers. Ultimately, the conduct at issue is squarely within the purposes of the Act. Where conduct "prevents an honest give and take in the market," it "deprives market participants of the benefits of competition" and "impedes . . . a well-functioning market."⁴⁷ In its report on the 1958 amendments to the Packers and Stockyards Act, the U.S. House of Representatives explained that the statute promotes both "fair competition and fair trade practices" and is designed to guard "against [producers] receiving less than the true market value of their livestock."⁴⁸

Moreover, other agencies that enforce laws prohibiting unfairness and

deception often have used disclosure to prevent deception. For example, the FTC enforces prohibitions against unfair practices, unfair methods of competition, and deceptive practices arising under the FTC Act.⁴⁹ Effective disclosure is well-established as a cure for deceptive practices that arise from information gaps in the marketplace, as exemplified by AMS's existing disclosure requirements under §§ 201.100 and 102, the FTC's franchisor-to-franchisee disclosure requirements, and a range of other mandated disclosures by Federal and State regulators. Although disclosure will not remedy an unfair practice, robust disclosure can help identify such practices, enabling remediation of unfairness at earlier stages, and so help stop harms in their incipency. AMS believes that the parallels between the FTC's section 5 authority on deceptive and unfair practices greatly outweigh any differences between the statutes because the language of both statutes is similar,⁵⁰ and it is generally recognized that Congress wrote the Act with broader application than the original FTC Act.⁵¹ It is plain from the statutory language Congress wrote—and in the floor debates and Congressional reports—that the Act empowered the Secretary to prevent unfair and deceptive practices, and not merely enforce existing antitrust law.⁵²

⁴⁸ H.R. Rep. No. 85-1048 (1957), reprinted in 1958 U.S.C.A.N. 5212, 5213.

AMS emphasizes that disclosure under new § 201.112 is not, and is not intended to be, a remedy to unfairness in and of itself; rather, disclosure provides AMS and growers with information necessary to enforce their rights under existing § 201.216, “Additional capital investments criteria,” and the P&S Act more broadly, when terms are unfair. This rule is meant to both cure deception and to identify unfairness in its incipiency to make enforcement under § 201.106 possible.

A commenter grounded opposition to the additional capital investment disclosure requirement in section 401 of the Act and argued that section 401 requires dealers to maintain records for AMS’s benefit, not for the benefit of growers. The commenter also argued that AMS is not authorized to control the content of the records required under section 401. AMS disagrees. Section 202 of the Act prohibits unfair and deceptive practices. The disclosures required in this rule seek to identify or prevent those harms. Section 401 complements these goals to the extent that disclosure is based on recordkeeping. Section 401 statutorily requires LPDs to maintain complete records of all their business transactions. Moreover, LPD obligations to retain information do not affect AMS’s ability to require the LPD to share the information to prevent unfair and deceptive practices under section 202(a) and (b) of the Act. Growers have informed the Agency that LPDs systematically withhold information that the LPDs possess concerning the design, purposes, impacts, and other aspects of the contracts the LPDs make regarding additional capital investments. This regulation targets material omissions under section 202, and the commenter’s assertions regarding section 401 ignore how additional capital investment requests fit into the business relationship between LPDs and growers. When an LPD asks a grower to make an additional capital investment, that is fundamentally a request to modify the contract that the grower must consider under circumstances where the LPD has all the information on its benefits, and the grower has none. Therefore, when the LPD requests that the grower spend money to advance the LPD’s business interests, the grower may incorrectly infer that an additional capital investment must also be in the grower’s

interest. The regulation is remedial in purpose and effect, exactly as Congress intended the Secretary to regulate when the Act passed in 1921, and when Congress amended that statute in 1987.⁵³

Regarding the comment that asserted AMS has not proven that disclosures are always necessary to avoid an unfair or deceptive act or practice, Congress did not require that regulation be “always” necessary. AMS is not required to adduce individualized evidence that the disclosure was necessary to every grower—the regulation simply must be necessary to prevent deception or identify unfairness for some growers. As a factual matter, AMS concludes that the unequal bargaining terms between growers and LPDs requires LPDs to disclose key information regarding additional capital investment requests to mitigate asymmetric information gaps that result in unfair and deceptive practices. Furthermore, transparency in the market requires disclosure of this information when LPDs request an additional capital investment in order to prevent deceptive practices.

Comment: One commenter commented on the rule explaining that AMS lacks the authority under “Section 410” to “require dealers to make a variety of “disclosures” to growers.”

AMS Response: Section 410 of the cited material, entitled “Final date for making payment to cash seller or poultry grower” deals with (a) “Delivery of full amount due,” (b) “Delay or attempt to delay collection of funds as ‘unfair practice,’ ” and (c) “Definition of cash sale.” Section 410 makes clear that Congress expected the Secretary to protect growers from receiving less than full payment. The mechanism for reducing or delaying that payment is immaterial.

The Congressional purpose of the Act was to stop unfair practices in their incipiency.⁵⁴ When an LPD fails to make available the required disclosures here, the unfair practice of reducing pay, banned by section 410, becomes undetectable because the terms surrounding payment are not clearly expressed. In other words, without having the necessary foundational terms, as per the required disclosure,

there is no way for aggrieved party or for USDA to see a reduction of pay as there has been no set baseline. Congress expected USDA to take a proactive approach to prevent this sort of harm, which hurts both the grower and the market, because it destroys the ability of growers to continue in the business and reduces the supply of growers willing to contract. Thus, among the other authorities in the Act, USDA also believes this regulation implements provisions of section 410 of the Act.

Comment: Several advocacy organizations suggested additional disclosure of cost and liability burden for environmental compliance.

AMS response: AMS appreciates these comments and understands the importance of properly allocating cost and liability burden for environmental compliance in the poultry industry. However, AMS did not consider that in the proposed rule, and P&S Act regulations in general do not impact the environment.⁵⁵ To the extent that the costs of environmental compliance are grower variable costs under particular poultry growing arrangements, they should be disclosed by the LPD under the requirement to disclose information relating to grower variable costs (9 CFR 201.102(d)(3)). Therefore, AMS made no changes to the rule as proposed based on these comments.

Comment: One commenter suggested that AMS make additional capital investment requests and disclosures public to other growers and track the frequency of additional capital investment requests and grower complaints of coercion, retaliation, or arbitrariness.

AMS response: This rule is not designed to make private business arrangements and agreements public information. Furthermore, AMS is not contemplating such a shift as the dissemination of private business arrangements and agreements would require additional regulatory provisions, justifications, and safeguards that do not fall under the purview of this rule. Rather, this rule is designed to help poultry growers understand why they are being requested to make additional capital investments, how entering into those contracts will impact their pay, how long it will take to complete additional capital investments, potential conflicts of interest with LPD personnel or their family members, required vendors/manufacturers, and expected returns from the investment. This information will help growers make

effective business decisions, and, when shared with AMS, identify circumstances that may be unfair.

With respect to AMS tracking the frequency of additional capital investment requests and grower complaints of coercion, retaliation, or arbitrariness, AMS agrees that market monitoring is important and invites growers to contact AMS at farmerfairness.gov or call 1-833-DIAL-PSD (1-833-342-5773) when they have concerns regarding additional capital investments they encounter and especially if they feel they are being subject to coercion, retaliation, or arbitrariness.

Comment: An advocacy association suggested that all additional capital investments should be subject to the same disclosures and prohibitions.

AMS response: The requirement to provide the disclosure will be triggered when the LPD requests the grower make an additional capital investment. There is no threshold below which this disclosure requirement does not apply. Nor are there any exclusions or exemptions for additional capital investment disclosures for other reasons.

Additional capital investment prohibitions, however, will be considered on a facts-and-circumstances basis under the criteria set forth in § 201.216 of AMS's regulations and generally under section 202 of the Act. AMS does not in this rule identify specific prohibitions. To the extent that AMS identified an additional capital investment practice that was unfair, AMS would seek to stop the practice through an enforcement action and communicate its intent to stop such practices in similar circumstances.

Comment: Several commenters suggested that LPDs should be required to make all additional capital investment contracts guaranteed for the duration of the loan required to pay for the additional capital investment.

AMS response: AMS acknowledges the concerns of the commenters and advocacy groups. If an LPD requests additional capital investments without guaranteeing that the grower will have a contract that is sufficient to recoup the costs of the investment or loan, such conduct could violate section 202 of the P&S Act, including by being unfair under section 202(a). AMS will monitor these practices and enforce on a case-by-case basis.

Comment: Several advocacy organizations supported the inclusion of LPDs' motives for the additional capital investment request in the Disclosure Document.

AMS response: AMS agrees that it is important for growers to know why an LPD requests an additional capital investment. As proposed, AMS included in § 201.112(b)(1) language requiring the LPD to disclose the purpose of the additional capital investment to both the LPD and the grower. Although AMS underscores that the inquiry should be focused on objective purposes and desired outcomes rather than a potentially vague concept of motives, the paragraph (b)(1) disclosures would mandate the full and complete presentation of any purposes of the additional capital investment. Partial disclosure of anything less than the LPD's full range of purposes would not be considered compliance with the provision because growers need to understand the full range of risks they are taking on, including to be able to identify potential sources of unfairness.

The provision also requires a summary of all research or other supporting material that the LPD has relied upon in justifying the additional capital investment. This requirement seeks to elicit the basis of the additional capital investment and permit the grower the ability to better understand, as well as evaluate, the reliability of that basis.

Overall, AMS has included this provision around purpose, research, and supporting material because alleviating some of the information asymmetry between LPDs and growers through the disclosure of purposes and motivations for an additional capital investment will help poultry growers make better business decisions. Furthermore, the requirement for information regarding purposes and motivations will help poultry growers know if that particular additional capital investment request is for experimental or research purposes, and thus appreciate the degree of risk the grower is taking on in the additional capital investment. AMS did not make any changes to the regulation as proposed in response to this comment.

Comment: Farmers' coalitions indicated a clear disclosure of financial incentives is essential to a grower's cashflow modeling. Advocacy associations requested further requirements for the analysis of projected returns. These suggested requirements include (1) a review of the projected returns by a disinterested third party and (2) the use of a standardized projected return form.

AMS response: The Agency agrees with the comment that clear disclosure of financial incentives is essential. Under the final rule, LPDs must disclose all financial incentives and

compensation for the grower associated with the additional capital investment (§ 201.112(b)(2)), along with any financial benefits that the LPD or any of its officers, directors, decision-making employees (as discussed above), or close family members receive from the use of an LPD-required manufacturer or vendor in connection with an additional capital investment (§ 201.112(b)(5)). AMS added the requirement regarding financial benefits accrued to an LPD or its affiliates as a result of an additional capital investment in the final rule to provide greater transparency regarding the financial components of an additional capital investment. For the time being, AMS is making no further changes to § 201.112.

Comment: Several commenters suggested AMS should require the use of plain language in disclosure documents, especially the descriptions of financial terms. Advocacy organizations stressed the importance of standardizing disclosure documents (e.g., the format for reporting projected returns and delivery expectations). Industry commenters requested that AMS clarify certain aspects of the disclosure document, including the description of "relevant" information and of the summary justifying an additional capital investment.

AMS response: Section 201.112(b) requires that the Disclosure Document present disclosures in a "clear, concise, and understandable manner." The Agency acknowledges the potential benefits of standardizing Disclosure Documents but is not requiring a specific form for this required disclosure.

AMS appreciates the commenters' interest in additional clarity. However, AMS declines to adopt more specific terms in the regulatory text because specificity reduces the LPDs' and growers' contracting flexibility. The nature and circumstances of additional capital investment varies. Some additional capital investments may be oriented on technology designed to enhance the efficient use of inputs or to deliver more uniform growout of birds. Other additional capital investments may be oriented towards delivering particular production practices that consumers seek, such as no antibiotics use. In those examples, the purpose and construction of the additional capital investments are quite different. Rigid specificity in the disclosure requirements may create confusion or even limit the disclosures' effectiveness. AMS's purposes for the disclosure of this information in § 201.112 is to help poultry growers understand how the additional capital investment is

intended to affect their operation and the risks and opportunities they may be taking on as a whole. AMS values comprehensive coverage rather than standardization.

With respect to the term “relevant,” AMS agrees that its inclusion in paragraphs (b)(1) through (3) is superfluous to meaning of the sentences as drafted. Accordingly, AMS is removing it in this final rule and is revising paragraph (b)(1) slightly from “any research or other supporting material” to “all research and other supporting material” to be consistent with the phrasing in paragraphs (b)(2) and (3). There is no change in the intended meaning.

Comment: Some commenters requested that translations of the Disclosure Document be made available in languages other than English.

AMS response: AMS appreciates this comment and acknowledges that disclosure has a basis in understanding; after all, the proposal included a requirement that the disclosure be “clear, concise, and understandable.” Language can be a barrier to effective disclosure. To mitigate the barriers to this disclosure, we have added paragraph § 201.112(c), which requires the LPD to “make reasonable efforts to ensure that growers are aware of their right to request translation assistance and to assist the grower in translating the Capital Improvement Disclosure Document.” AMS takes note of the Civil Rights Impact Analysis located in section VI.G. of this rule that highlights the disproportionate impact of the rule on Asian-Pacific Island persons. Some commenters also indicated a need to ensure growers who are not native speakers of English can understand the disclosures. As noted by multiple commenters, non-native speakers of English are engaged in poultry growing. For example, in the early 2000s, large numbers of first-generation immigrant Hmong people, many of whom had been farmers in their native Laos, moved from urban areas in California, Minnesota, and North Carolina to the Ozark region in and around southwest Missouri and started growing poultry. Pew Research Center studies show that the English proficiency of the Hmong population in the U.S. in 2019 was only 68 percent and, among foreign-born Hmong, English proficiency is just 43 percent.⁵⁶ Data supports the concerns expressed by commenters regarding

providing poultry growers information in a manner growers are able to understand. AMS agrees that providing documents in the language growers best understand ensures fairness and reduces the risk of deception. Therefore, AMS added new language to the final rule to require that LPDs must make reasonable efforts to ensure that growers are aware of their right to request translation assistance and to assist the grower in translating the Disclosure Document. Historically, many growers have been immigrants who may not be fully proficient in English; hence, this rule’s goal of preventing deception would not be fully accomplished without LPDs providing reasonable assistance to help growers understand the disclosures in their most competent language upon its delivery. Notably, the translation requirements under § 201.102(g)(4) would apply to disclosures made under § 201.112 if the latter is applicable to the LPD and incorporates what is otherwise required under § 201.102(d)(2)(i) and (ii) in a single disclosure that meets the requirements of both § 201.112 and § 201.102(d)(2)(i) and (ii).

ii. Additional Capital Investment Unfairness

Comment: Growers stated the disclosure provisions should prioritize preventing harm to growers rather than focusing on enforcement after the fact. They further asserted that full transparency from poultry companies is crucial to ensure a level playing field. Several commenters were concerned that the proposed rule did not address the power imbalances that exist when negotiating additional capital investments. This imbalance creates an inherent pressure for producers to comply with LPD requests; even “optional” or “voluntary” terms in a producer’s contract may amount to an unfair burden on producers given their fear of retaliation. Advocacy organizations and other commenters requested further provisions to protect growers from unfairness, excessive debt, and retaliation.

AMS response: AMS appreciates and agrees with the comments that preventing harm to growers is preferable to enforcement after the fact. Indeed, the purpose of this disclosure rule is to help equalize the negotiating powers between poultry growers and LPDs. There is an asymmetric power imbalance between LPDs and poultry growers when deciding to undertake an additional capital investment and the goal of the new regulation is to equalize the footing of these parties prior to agreeing to an additional capital investment. To better enable AMS and growers to protect

against unfairness and deception, the rule requires that LPDs disclose and record more information regarding the additional capital investments they request from broiler growers. The disclosures must occur before growers take on the financial burden and risks of the additional capital investment. The provision of such information is not, in and of itself, the cure for unfairness, but rather a key tool for AMS and growers to halt abusive practices by arming them with the ability to identify those challenges sooner. Indeed, disclosure has historically been one of the most powerful tools for preventing harms to growers by bringing practices to light early, and also subjecting those practices to the clarifying light of transparency.

AMS further underscores that leveling the playing field for growers is one of the main purposes of this provision. This rule is designed to reduce deception, strengthen poultry growers’ negotiating position, and aid in their ability to identify and address unfair practices. The Agency believes that this disclosure requirement for requested additional capital investments will reduce information asymmetry between LPDs and poultry growers, thus helping poultry growers make more informed business decisions about additional capital investments. Reducing information asymmetry, by definition, helps mitigate power imbalances.

However, AMS also acknowledges that this rule does not solve all challenges that growers may face arising from power imbalances between LPDs and growers, especially in concentrated local markets and in the context of hold-up risks and dependency arising from vertical contracting arrangements. To that end, AMS underscores its commitment to vigorous enforcement of § 201.216, which sets out criteria that AMS utilizes in identifying and enforcing against unfair additional capital investment practices. When the cost of the required additional capital investments cannot reasonably be expected to be recouped by the poultry grower, that failure is likely to be dispositive that the investment is unfair (§ 201.216(f)). AMS agrees with the commenter’s perspective on the importance of protecting growers from unfairness, excessive debt, and retaliation (discussed more fully below in the next comment response). Indeed, AMS is adopting this disclosure rule to enhance growers’ and AMS’s ability to identify and take swift action against unfair practices and the risk of unfair additional capital investment under existing § 201.216. That regulation sets

⁵⁶ Abby Budimen, “Hmong in the U.S. Fact Sheet,” *Pew Research Center’s Social & Demographic Trends Project* (May 24, 2022), available at <https://www.pewresearch.org/social-trends/fact-sheet/asian-americans-hmong-in-the-u-s/>.

forth criteria for whether additional capital investments would be an unfair practice or other violation of the Act. These criteria include whether the grower can decide against the additional capital investments; whether the additional capital investments were a result of coercion, retaliation, or threats by the LPD; and whether the additional capital investments can result in reasonable recoupment, or adequate compensation for the additional capital investments, among other non-exhaustive criteria. However, AMS has found that the presence of the criteria alone is insufficient to effectively address problems stemming from additional capital investments. AMS and growers lack the data necessary to analyze whether an additional capital investment violates the criteria. Moreover, if an additional capital investment is unfair, the grower has both investment and debt, and the additional capital investment is impossible to unwind. Technical specifications can make switching costly (where even possible), and alternative uses at similar compensation rates are nearly nonexistent.

Comment: Several commenters requested additional protection against retaliation for growers who refuse additional capital investment requests. Some commenters expressed concern regarding retaliation if additional capital investment requests are refused. One commenter requested AMS monitor complaints of coercion in relation to additional capital investment request refusals.

AMS response: AMS agrees that retaliation is likely to harm competition and growers. AMS's regulations at § 201.304 recognize that retaliation for asserting any of the rights granted under the Act or part 201, or asserting contract rights (9 CFR 201.304(b)(2)(vii)), violates the Act. LPDs also violate the Act if they retaliate against poultry growers for speaking with government officials for the purposes of seeking redress for grievances brought under the Acts (9 CFR 201.304(b)(2)(i)). AMS fully agrees that without those existing retaliation protections, poultry growers are in a weak position to refuse additional capital investment requests making the disclosure requirement ineffective.

AMS regularly reviews LPDs for P&S Act compliance, and AMS expects to review Disclosure Documents for compliance. Growers who experience coercion should contact AMS regarding possible violations of the Act. AMS also notes that existing § 201.216 would help address these problems. The regulation sets forth criteria for whether additional capital investments would be an unfair

practice or other violation of the Act. These criteria include whether the growers can choose to decline additional capital investments; whether the additional capital investments were a result of coercion, retaliation, or threats by the LPD; and whether the additional capital investments can result in reasonable recoupment, or adequate compensation for the additional capital investments, among other non-exhaustive criteria. AMS did not make any changes to the regulations as proposed in response to this comment.

Comment: Many commenters emphasized the need for grower protection against debt and assurance of return on investments. Advocacy organizations and others also suggested adding a requirement that LPDs shall not mandate additional capital investments unless the cost can be reasonably recouped by the grower. Advocacy organizations indicated that projected recoupment should only be evaluated based on non-performance (base) pay. Many commenters also suggested contracts should be guaranteed to match the duration of loans or ensure a reasonable rate of return to recover additional capital investment costs. Advocacy organizations suggested growers should reserve the right to renew contracts until additional capital investment debt is fully serviced.

AMS response: Under § 201.112(b)(2) and (3), LPDs would be required to disclose all relevant financial incentives and compensation associated with an additional capital investment and establish a schedule of expected grower construction for new additional capital investments. Financial incentives would include all incentives relating to the additional capital investment, including explicit incentive payment additions to base pay rates or performance compensation amounts, as well as what assumptions and risks undergird or may put at risk those incentives. Clearly disclosing financial incentives would assist the grower in assessing the relative risks of non-recoupment, as the reliability of those incentives may vary based on the duration of the contract and whether other growers are likely to incorporate the additional capital investment technology in a way that would make recoupment through performance pay less reliable. Clearly disclosing expected grower construction schedules and other repayment schedules also would assist the grower in assessing incentives and risks relating to borrowing, construction, and payment timing. Similarly, the requirement under § 201.112(b)(4) and

(5) for LPDs to clearly disclose their expectations regarding housing specifications and required or approved manufacturers or vendors will position growers to better analyze the business risk in undertaking an additional capital investment. An important goal of this rule is to give the poultry grower adequate information so that they may make an informed decision, identify risks and opportunities based on their knowledge of their own costs and earning opportunities, including as disclosed in existing regulations such as § 201.102.

AMS remains committed to protecting growers to the maximum extent possible from practices that prevent growers from fully recouping their additional capital investment. An LPD's failure to provide a reasonable opportunity for a grower to recoup the cost of a required (including ostensibly requested but in practice coerced) additional capital investments would be expected to violate § 201.216. AMS recognizes that growers cannot avoid the unfair exercise of market power and failing to sufficiently and fairly compensate growers is not a cognizable benefit to growers or to competition. Any reasonable recoupment analysis is fact-specific, but it principally relies on the following criteria: (1) the information required to be disclosed under § 201.112; (2) whether the contract term, including sufficient flock placements and density, extends at least as long as the projected timeline for returns set forth in that analysis; and (3) whether basic returns would cover the costs of the additional capital investment for the reasonable grower in the complex that performs under the contract. AMS is not adopting a requirement that projected recoupment only be evaluated based on non-performance (base) pay. The actual purpose of performance pay can vary greatly across different LPDs and even between complexes.

AMS recognizes the grower concerns that give rise to those comments, but at this time intends to take a case-by-case approach to enforcement in part because the range of grower situations require any unfairness analysis to be tailored to the particular facts and circumstances.

As noted in the paragraph above, contract term and renewals opportunities are relevant considerations in any recoupment or rate of return analysis owing to the heavy reliance interest that the grower has in the broiler growing arrangement, but AMS declines at this time to set forth a rule for all cases. AMS may revisit this determination following implementation of this rule and additional familiarity with the success

or limitations of its current case-by-case enforcement approach.

Comment: Some commenters suggested growers should be ensured leniency for delays in construction schedules due to labor and supply shortages outside their control.

AMS response: AMS acknowledges this comment regarding leniency for construction schedules, and the disclosure of the construction schedule under § 201.112(b)(3) is designed to help growers identify their risks in implementing an additional capital investment. However, as a disclosure requirement, it is intended to aid poultry growers by obligating that LPDs share relevant information regarding an additional capital investment request, so that the growers can make better decisions. It is also designed to help growers address potential unfairness relating to additional capital investment. To the extent that growers conclude that an LPD's failure to provide leniency on construction schedules caused an unavoidable harm, the grower may consider reporting the matter to AMS for investigation into whether the LPD has committed an unfair practice.

Comment: Some commenters indicated that LPDs should not be allowed to require growers to use certain equipment or vendors, especially when those LPDs hold any amount of financial interest in those equipment companies or specifically required vendors.

AMS response: AMS appreciates the concerns that this comment raises around grower freedom to operate and especially regarding conflicts of interest around additional capital investment. The Agency recognizes that growers rely on construction schedules, housing specification requirements, and approved manufacturers or vendors when implementing an additional capital investment. In this final rule, AMS is enhancing the disclosure of required equipment and vendors in § 201.112(b)(5) with an additional conflict of interest provision requiring the disclosure of "all financial benefits, if any, that the live poultry dealer or any officer, director, decision-making employee, or close family member of any such person, receives from the use of the required or approved manufacturer or vendor."

In the proposed rule, AMS asked, "Should proposed § 201.112(b)(5), which requires LPDs to disclose required or approved manufacturers or vendors, also require the disclosure of any material financial benefits that the LPD, or any officer, director, employee or family member of any such person,

receives from the use of the required or approved vendor? If so, please explain why for each party recommended to be covered, including examples and explanation where available."⁵⁷ In adopting this provision, which is similar to a disclosure that the Federal Trade Commission requires under its Franchise Rule (16 CFR 436.5(h)), AMS's goal is to help enable a grower to identify certain risks relating to the additional capital investment and potentially unfair or otherwise impermissible additional capital investment practices under § 201.116. For example, the disclosure should help growers identify conflicts of interest, favoritism, kickbacks, or financial benefits that may call into question the purposes of the additional capital investment. This should help combat the incentive problem inherent where one party has the decision-making power (LPDs) and another bears the costs (growers). LPDs are incentivized to seek out manufacturers and vendors that offer them the best incentives, not necessarily the manufacturers and vendors that offer the best deal for growers. This problem has been reported to AMS over the years to exist even at the level of complex managers who may have discretion over certain aspects of additional capital investment implementation.

Disclosure of a relationship between an LPD and its equipment or vendors does not mean that the relationship is lawful. An LPD's choice of vendor may be unfair or even anticompetitive in violation of the Act, such as contracting in bad faith or engaging in anticompetitive tying. But, at this time, AMS has designed this regulation to protect growers from unfairness and deception—for example by omissions or conflicts of interests—and not to specifically ban an LPD's choice of vendor.

iii. Benefit, Burden, and Cost

Comment: A number of stakeholders commented on the rule stating that it is similar to the Transparency Rule and that much of the information being requested in this rule is already provided to the poultry growers and that this rule is therefore frivolous. An industry commenter suggested there is sufficient regulation regarding additional capital investment issues.

AMS response: AMS recognizes the value of the Transparency Rule, including in helping growers understand financial opportunities relating to contract modifications and additional capital investment. However,

the Transparency Rule does not require the disclosure of information specific to the additional capital investment request, nor does it prohibit certain practices relating to base pay and unfair comparisons which this final rule does. LPDs possess information about the expected purposes, processes, and outcomes relating to additional capital investments that growers do not have and cannot obtain independently. Therefore, LPDs exert substantial control over growers' ability to evaluate the economic and financial feasibility of an additional capital investment while possessing the power to impose all additional capital investment costs on growers. Growers lack the bargaining power to demand the information they need to make decisions for their financial benefit. The inability to access this information frustrates growers' and AMS's ability to identify and therefore halt unfair practices in a timely manner. AMS has found transaction records around the financial incentives and the financial analysis insufficient to evaluate the compliance of additional capital investments under the Act generally. Therefore, even with the additional information that AMS and poultry dealers receive because of the Transparency Rule, this additional capital investment disclosure requirement is meant to ascertain different information than the information that results from compliance with the Transparency Rule.

AMS also disagrees with the position that there is sufficient regulation on this issue overall. Although § 201.216 sets out criteria around unfair additional capital investment, AMS has found § 201.216 challenging to implement in practice without sufficient real-time transparency into additional capital investment programs as they occur. As noted above, this is the first rule that addresses the information divide between poultry growers and LPDs regarding additional capital investment requests. Previous rules, namely the Transparency Rule, have required different kinds of information, such as settlement sheets, summaries of the LPD's litigation history with broiler growers and its bankruptcy filings over the past 5 years, whereas this rule covers only additional capital investment requests and related materials.

Comment: Some commenters were concerned about unnecessary additional capital investment requests. Farmers' coalitions proffered that transparency requirements would result in fewer unnecessary additional capital investment requests.

⁵⁷ 89 FR 49002, 49025, June 10, 2024.

AMS response: The extent to which additional transparency may reduce the amount of additional capital investment requests that are either unnecessary or that do not add clear value to farms is not a determination that AMS can make. This final rule is a transparency rule to address deceptive conduct, but it is also designed to assist growers in identifying potential unfairness in additional capital investments. An additional capital investment with a speculative purpose or one not grounded in research and reasonable estimates—a concern that growers have reported to AMS regarding additional capital investments—would be more apparent if AMS and growers are able to review an LPD's representations about the purpose of an additional capital investment, the research associated with it, and an LPD's expectation of costs, construction schedules, and approved vendors for the additional capital investment. AMS emphasizes that disclosure under new § 201.112 is not, and is not intended to be, a remedy to unfairness in and of itself; rather, disclosure provides AMS and growers with information necessary to enforce their rights under existing § 201.216, “Additional capital investments criteria,” and the P&S Act more broadly, when terms are unfair. Without sufficient, simple, and clear disclosures, growers cannot assess the benefits or risks of making the investment. Indeed, given the role of performance in determining compensation under the tournament, growers often cannot determine whether a program presented as voluntary is, for all practical purposes, mandatory without understanding the purposes, processes, and outcomes. Unfair practices, which can encompass additional capital investments, are illegal under section 202(a) of the Act, even if fully disclosed.⁵⁸ AMS did not make any changes to the rule as proposed in response to these comments.

D. Other Comments About the Proposed Rule

Comment: One processor pointed to a study prepared for the National Chicken Council that captured live chicken production statistics from 2021.⁵⁹ The survey results indicated that “current poultry grower contracting relationships are mutually beneficial, successful, and profitable for both growers and integrators.” The survey found that

among growers polled, despite options to work with different integrators, most growers have been with their current integrator for over five years and that the default rates on loans for poultry growers and integrators are low. Overall, the commenter argued that the current poultry grower compensation system works well, resulting in a highly efficient market and lower prices for consumers.

AMS response: The comment indicates that current poultry grower contracting relationships are mutually beneficial to growers and integrators and utilizes survey results showing how long current farmers have been with their company and loan default rates to demonstrate this. This rule addresses specific components of the broiler growing compensation system that AMS has received multiple complaints and comments about and that the Agency has determined constitute unfair or deceptive acts or practices. The rule does not prohibit incentive payments, which some commenters would like to retain and suggest are a beneficial part of the tournament system. The comment, however, does not necessarily measure if growers support or oppose specific provisions of this rule. Other reasons may explain the duration farmers have been with their current dealer or experience low rates of default. AMS notes that growers may not switch because of barriers to switching: even when growers have other competitor LPDs, the competitor may not be recruiting or may require LPD-specific equipment changes, among other reasons. The commenter says that, according to a survey of farmers associated with member companies of the organization submitting the comment, a small percentage of farmers depart due to contract terminations. The described methodology does not say if the survey represents all growers, including dissatisfied growers or ex-growers. This methodological consideration aside, the survey results do not address specific provisions of the rule.

The comment also cites data showing higher median incomes for broiler growers and lower loan deficiency and charge-off rates for chicken farmers compared to other types of farming operations to indicate the mutual benefits of the current poultry contracting system. While such comparisons provide some insight into the financial condition of poultry growers, they do not capture the full picture. For example, poultry growers carry the highest debt to asset ratios of

all agricultural commodity operations.⁶⁰ Additionally, the income variability for broiler growers is much higher than that for all agricultural producers or U.S. households.⁶¹

Comment: Industry associations commented on the rule, explaining that AMS only has the authority to prohibit conduct with an anticompetitive effect.

AMS response: Section 202(a) of the Act prohibits any unfair practice or device. As noted earlier, in section 407 of the Act Congress granted to the Secretary the authority to write regulations to effectuate the Act's purposes. Under the Act, this authority includes issuing regulations to, among other things, define the obligations that the Agency is charged with enforcing. AMS believes this includes the power to prevent LPDs from engaging in unfair, unjustly discriminatory or deceptive practices or devices in their contracts.

No court has held the Secretary does not have this rulemaking authority. *Been v. O.K. Indus., Inc.*, 495 F.3d 1217, 1227 (10th Cir. 2007), for example, recognized that the Secretary had the authority to promulgate rules relevant to that case, but that USDA had not done so.⁶² *Been* quoted, with approval, *Excel Corp. v. United States Department of Agriculture*, which held the Department's implementing regulation on grading prohibited a practice that was harmful to competition but the court did not require evidence of harm to competition in case itself.⁶³ Further,

⁶⁰ Giri, Anil and Subedi, Dipak, Farm Businesses Well-Positioned Financially Despite High Interest Rates, U.S. Department of Agriculture, Economic Research Service (2024), <https://www.ers.usda.gov/amber-waves/2024/july/farm-businesses-well-positioned-financially-despite-high-interest-rates/> (In 2022, poultry farms carried the highest average debt-to-asset ratio in 2022: 26.7 (6 times that for all farm businesses), 28.7 (2.6x), and 17.4 (1.3x) percent for small, midsize, and large family farm businesses, respectively; while all farm businesses carried average debt-to-asset ratios of 4.2, 10.8, and 13.1 percent, respectively).

⁶¹ Whitt, Christine, USDA Economic Research Service, Fees paid to growers for raising broiler chickens varied widely in 2020, (2022), <https://www.ers.usda.gov/data-products/chart-gallery/gallery/chart-detail/?chartId=104642> (Median income does not tell the whole story. The range of household incomes earned by contract broiler growers is wider than other groups. The bottom 20 percent of contract broiler growers earns \$170,871 less than those in the top 20 percent, compared to \$123,094 for all farm households, and \$114,084 for all U.S. households. The wider range reflects, in part, the financial risks associated with contract broiler production); MacDonald, James M. 2014, Technology, Organization, and Financial Performance in U.S. Broiler Production, EIB-126, USDA Economic Research Service, https://www.ers.usda.gov/webdocs/publications/43869/48159_eib126.pdf?v=1829.6.

the Supreme Court, in *Mahon v. Stowers*, 416 U.S. 100, 112 (1974), recognized that USDA has the authority to issue substantive regulations.

Congress designed the P&S Act to provide broader protections than existing antitrust laws, such as the Clayton and Sherman Acts, in response to specific challenges in agricultural markets. More specifically, Congress intended to regulate practices that would violate those two antitrust laws and practices that would be unfair under the FTC Act, as well as the “special mischiefs and injuries inherent in livestock and poultry traffic.”⁶⁴ AMS rejects the comments that the statute or case law limits violations of the Act to conduct that causes an anticompetitive effect, as that term is used in the antitrust laws. Such an approach would abrogate the scope of the plain meaning of section 202 of the Act.

The existence of the P&S Act is proof that existing antitrust laws were not sufficient in protecting livestock producers and ensuring fair agricultural markets. It is well established that, to meet the needs of livestock producers more effectively, the Act provides broader protections than existing antitrust laws.⁶⁵ The statutory text, case law, and legislative history make plain that the Act’s protections extend beyond antitrust laws.⁶⁶ Accordingly, it has been the Agency’s longstanding position that because the Act addresses more and different types of harmful conduct than antitrust laws, the Agency has authority over a plethora of market behaviors, and is not limited to conduct with an anticompetitive effect.⁶⁷ Additionally,

(“‘Congress and the USDA are the arbiters of what practices will impede competition.’”).

⁶⁵ See, e.g., *Bruhn’s Freezer Meats of Chicago, Inc. v. U.S. Dep’t of Agric.*, 438 F.2d 1332, 1336 (8th Cir. 1971) (citing cases); *Swift & Co. v. United States*, 393 F.2d 247, 253 (7th Cir. 1968) (“The Act is remedial legislation and is to be construed liberally in accord with its purpose to prevent economic harm to producers and consumers at the expense of middlemen.”).

⁶⁶ 61 Cong. Rec. 1801 (1921), statement of Rep. Haugen; see also *Wilson & Co. v. Benson*, 286 F.2d 891, 895 (7th Cir. 1961): “The legislative history shows Congress understood the sections of the [Act] under consideration were broader in scope than the antecedent legislation.” (citing 61 Cong. Rec. 1805 (1921)). If the antitrust laws were sufficient, then DOJ’s 1920 settlement with the major packers would have been sufficient; Congress understood the words “unfair practices” to have an obviously broader effect on regulating competition than antitrust injury.

⁶⁷ Luke Herrine, “Cutthroat Business,” U. of Alabama Legal Studies Research Paper Forthcoming, Aug. 2024, available at https://papers.ssrn.com/sol3/papers.cfm?abstract_id=4936628; Michael Kades, “Protecting livestock producers and chicken growers,” Washington Center for Equitable

as discussed elsewhere in this document, evidence of anticompetitive injury is not required under this rule to establish violations of section 202(a) and (b).

Market abuses such as unfair or deceptive business practices by regulated entities are illegal under the Act. Addressing the harmful conduct this rule aims to prevent is squarely within the authority of the Secretary and accords with Congressional intent. Moreover, the Secretary, exercising authority to define the scope of section 202(a) and (b), has determined that the prohibited practices are likely to prevent producers from earning the full value of their services and push some producers out of the market caused by coercive or deceptive practices by LPDs.

Comment: One commenter said that AMS lacks the statutory authority to promulgate rules that have significant economic or political repercussions due to the major questions doctrine. The commenter expressed the idea that, in light of the U.S. Supreme Court decision in *West Virginia v. EPA*, 597 U.S. 697 (2022), AMS may not expand its regulatory framework to change or undermine currently used poultry growing compensation systems because it lacks clear Congressional authorization.

AMS response: AMS disagrees that the major questions doctrine applies to this rule. The Supreme Court has held that, “in certain extraordinary cases, both separation of powers principles and a practical understanding of legislative intent make us ‘reluctant to read into ambiguous statutory text’ the delegation claimed to be lurking there.”⁶⁸ Under such circumstances, courts may conclude that Congress does not “typically use oblique or elliptical language to empower an agency to make a radical or fundamental change to a statutory scheme.”⁶⁹ The major questions doctrine thus applies to some “significant cases all addressing a particular and recurring problem: agencies asserting highly consequential power beyond what Congress could reasonably be understood to have

Growth (May 2022); Peter C. ⁶⁹ *Id.* at 723 (citation and quotation marks omitted).

granted.”⁷⁰ This final rule does not fall within this category for two independent reasons: USDA is not construing an ambiguous statute, but rather is applying a statute that explicitly confers upon it the power to make necessary regulations in the context of a scheme that comprehensively regulates unfair practices in certain industries; and, even if the relevant statutory authorities are ambiguous—and they are not—this final rule does not represent the type of “transformative expansion” of the Agency’s regulatory authority that animates the major question doctrine.

First, the major questions doctrine applies only when there is ambiguity over the power conferred. Here, there is none. Congress prohibited unfair, deceptive, discriminatory, and other practices in section 202 of the Act. Further, it explicitly gave power to the Secretary to comprehensively regulate unfair practices in meatpacking and broiler production. The Secretary has the power to enforce the provisions of the Act, including sections 202 and 410.⁷¹ And separately, pursuant to section 407 of the Act, the Secretary was provided broad authority to “make such rules, regulations, and orders as may be necessary to carry out the provisions of this chapter.” The broad language here reflects Congress’ effort to grant the Secretary the flexibility necessary to prevent the P&S Act from becoming obsolete.⁷² Congress was clear in the authority it had granted, and that authority includes issuing regulations and orders relating to the Act and its remedial purposes—including, as here, the power of the Agency to construe the relevant provisions of the Act so as to provide clarity in enforcement. The Secretary has extensive power to regulate, and therefore has the authority to issue regulations such as this one. So, unlike cases where there has been some heretofore unforeseen “unheralded power,” there is no reason to believe that Congress understated the breadth of the authority it granted to the Agency to issue regulations construing the Act.

Second, this final rule does not constitute the type of “transformative expansion” of Agency authorities that animates the major question doctrine. The rule codifies USDA’s interpretation

⁷⁰ *Id.* at 724.

⁷¹ See 7 U.S.C. 193(a) (“Whenever the Secretary has reason to believe that any packer or swine contractor has violated or is violating any provision of this subchapter” he may take appropriate enforcement actions as set out in the statute).

⁷² See *Massachusetts v. E.P.A.*, 549 U.S. 497, 532 (2007) (“[T]he fact that a statute can be applied in situations not expressly anticipated by Congress does not demonstrate ambiguity. It demonstrates breadth.”).

of section 202 consistent with much of the caselaw: the P&S Act is a remedial statute with a purpose that is broader than the antitrust acts.⁷³ The Agency has used its section 228 authority for the issuance of a great variety of regulations to specify obligations for bonding, registration, accounting, recordkeeping, ownership, public communications, disclosures, limitations on commissions, credit sales, weighing, payment practices and other responsibilities under the statute—so this is not a newfound substantive power; and, in any event, this is not the type of consequential rule to which the major questions doctrine would otherwise apply.

As discussed above, Congress enacted the P&S Act after many years of concern about farmers and ranchers being cheated and mistreated. Congress believed that existing antitrust and market regulatory laws, including the Sherman Act and Federal Trade Commission Act, did not sufficiently protect farmers and ranchers.

Section 407 of the Act (7 U.S.C. 228) gives the Secretary authority to “make such rules, regulations, and orders as may be necessary to carry out the provisions of this Act.” The House of Representatives’ report on the Act stated that it was the “most comprehensive measure and extends farther than any previous law in the regulation of private business, in time of peace, except possibly the interstate commerce act.”⁷⁴ The Conference Report on the Act stated that, “Congress intends to exercise, in the bill, the fullest control of the packers and stockyards which the Constitution permits. . . .”⁷⁵ Congress considered this a power beyond the authority of the FTC and the Interstate Commerce Commission. The Supreme Court said of sections 407 and 202 of the P&S Act that Congress gave: “authority [to] the Secretary of Agriculture to promulgate appropriate rules and regulations to carry out the provisions of the Act.” And, “Enforcement of [section 202 of the Act] is the responsibility of the Secretary of Agriculture, who is given authority to hold hearings and enter binding orders.”⁷⁶ The major questions doctrine is an extraordinary application of statutory interpretation, because it

has the potential to reverse an act of Congress, and, therefore, the Supreme Court has already noted that the doctrine does not apply generally. It has so far only applied in cases where the regulation would have been a questionable application of regulations with billions of dollars of effects, from regulating tobacco packaging, a nationwide moratorium on eviction, and setting limits on the carbon dioxide emissions from millions of small sources.⁷⁷ Here, however, the rule does not meet these standards. The Department has consistently interpreted unfair practices—and thus applied the Act—to protect producer welfare and advance fair-trade practices in the livestock, meat, and poultry industries in accordance with Congressional intent upon passage of the Act. The Department’s policy on unfair practices has not changed throughout the course of its enforcement of the Act.

The final rule continues this policy approach of protecting producer welfare and advancing fair trade practices in the poultry industry. This final rule advances these goals by prohibiting certain payment practices under poultry grower ranking systems, requires LPDs to adopt policies and procedures regarding their processes for operating a fair ranking system for broiler growers, and requires LPDs to provide certain information to broiler growers when the LPD requests or requires the grower to make additional capital investments. These regulations will increase transparency and address deception and unfairness in broiler grower payments, tournament operations, and capital improvement systems. The Act advances fair trade and competitive markets for the broiler industry.

Notably, commentators generally appear to assert that the 2008 Farm Bill, and the decade of rulemaking that followed, either limits the Department’s general authority to issues rules, or shows that the Department did not have that authority. This is not an accurate version of events. Starting in 1997, a series of OIG and GAO reports were highly critical of USDA’s failure to pursue unfair practices and cases of antitrust injury in meatpacking under the P&S Act. At a Senate hearing in March of 2006, Senator Chambliss noted, “[t]his act is a critical law that assures farmers and ranchers that business transactions are conducted under the principles of fair competition, open and honest trade practices, and prompt payments to producers.” These criticisms culminated in an April 2007 hearing in the House of Representatives

where advocates requested, *inter alia*, that the Secretary be required to issue rules on undue preferences and advantages, because regulation was perceived “to ensure that small and mid-sized farmers and ranchers are not forced to accepted volume-based price discrimination.” The thrust of the 2008 Farm Bill was not that the Secretary did not have the power to regulate, but that Congress demanded that power be used.

Comment: Producers were both in opposition to and in support of the tournament system. Industry associations and processors generally supported the tournament system, claiming the tournament system incentivizes and rewards high performance, resulting in market efficiency, and also removes costs and economic risk from growers by providing inputs. Industry stakeholders asserted the rule undermines the tournament system, leading to inefficiencies and potentially higher prices. Commenters cited unintended consequences including increased production costs passed on to consumers; barriers to entry for small farmers, leading to further industry consolidation; and shift in production to countries with less stringent regulations. Additionally, industry commenters claimed that capping performance-based payments might create an undesirable redistribution of income from high-performing to lower-performing growers. Lastly, the industry anticipates substantial legal and administrative costs associated with compliance, including contract amendments and legal counsel. Some producers and an industry trade organization claimed the tournament system promotes animal welfare.

Farmers’ coalitions, advocacy associations, and many individual commenters were largely opposed to the tournament system, expressing that the tournament system shifts economic risks to growers, locks them into inescapable cycles of debt, and enables retaliation. Some commenters were concerned that the tournament system appeared to pit farmers against each other, limiting knowledge sharing. Other commenters felt the tournament system is unfair due to the grower’s lack of control over production variables.

AMS response: It is important to note that AMS is not banning the tournament system. Rather, AMS is prohibiting those parts of tournament systems that are unfair practices and ensuring that those agreements serve the competitive operation of the market in a fair and non-deceptive manner. Additionally, increased transparency through this final rule should improve confidence in

⁷³ See, e.g., *Bruhn’s Freezer Meats of Chicago, Inc. v. U.S. Dep’t of Agric.*, 438 F.2d 1332, 1336 (8th Cir. 1971) (citing cases); *Swift & Co. v. United States*, 393 F.2d 247, 253 (7th Cir. 1968) (“The Act is remedial legislation and is to be construed liberally in accord with its purpose to prevent economic harm to producers and consumers at the expense of middlemen.”).

⁷⁷ *West Virginia*, 597 U.S. at 722.

the tournament system rather than undermine it.

In theory, the tournament system insulates growers from variation in the cost of feed and other inputs, encourages growers to perform to the best of their ability, and rewards better-performing growers. In practice, however, the tournament system also raises a number of fairness concerns for growers. If an LPD treats individual growers in a tournament differently, for example providing a grower with inferior inputs, the grower's skill does not determine their compensation.

Information asymmetry in contracting arrangements is another cause for concern. LPDs have information related decision-making that impacts grower compensation, including the methods for calculating grower payment. These methods are often intended to limit total grower compensation while maximizing production efficiency. LPDs also have information relating to the factors that are under their control and the influence of performance elements on grower compensation. LPDs have internal knowledge about the types of additional capital investments that they typically require, which growers may not anticipate. Moreover, without a guaranteed base pay rate, the complexity of the tournament system makes it difficult for growers to clearly understand what the minimum amount is that they could actually receive in payment. If the comparison-factor (*i.e.*, the bonus or deduction) is a large percentage of the total compensation, that variance in total could put the growers at significant financial risk. Tournament pay systems are also not an effective incentive system when factors outside of the grower's control determine the grower's performance.

Finally, LPDs have substantial bargaining power, and as a result, LPDs can require growers to make additional capital investments that will increase the grower's debt, and subsequently increase the grower's reliance on the LPD's contract. Such a dynamic can unfairly impose risk on the grower (for example by creating a difference in the term of the grower's loan and the grower's contract). Another concern is the variation in the quality of inputs (*e.g.*, feed or chicks) supplied by the LPD, which can impact the performance of the grower's flock. Similarly, LPDs determine the production practices on growers' farms (*e.g.*, density of bird placement, age at harvest, and weight at harvest), which greatly impact grower compensation. These factors can result in the grower's becoming financially dependent on LPDs, therefore losing the power to negotiate, and to move to

different LPDs if the terms of the growing contract are not ideal.

AMS is not aware of any evidence that tournament systems promote animal welfare, nor did the commenters provide specific examples explaining the connection beyond the general assertion that performance payments through a tournament encourage grower effort. The tournament systems control how poultry growers are compensated for their output, but the quality of inputs or production practices on farms, and even the quality of the housing and equipment, is determined by the LPD. These requirements may have the effect of improving animal welfare, but they may well also have the opposite effect. Moreover, AMS in this rule does not prohibit performance payments nor ban the tournament. Rather, the rule sets standards around the reasonable design of payment systems and scope of the operation of tournaments. These standards provide ample opportunity for LPDs to incentivize grower effort, while minimizing the downsides of the current payment systems and tournament operations as they have been reported to AMS by growers.

Comment: An industry representative stated that the proposed duty of fair comparison creates the untenable situation of extending P&S Act liability to a situation without determining whether the outcome was unfair, much less whether competition was harmed overall. The commenter cited an example in which a grower might receive a payment that aligns with the contract terms, meets the grower's expectations, and is entirely fair when viewed objectively, but the LPD does not follow written policy; in this case, under the proposed rule, the commenter asserts that the LPD would potentially be liable for an unfair practice.

AMS response: The comment appears to suggest that the regulation bans reasonable conduct. It does not.

The duty of fair comparison provision (§ 201.110(a)) establishes a violation of the Act for either failure to design or failure to operate the comparison system in a *fair* manner. Failing in that responsibility is not contract compliance; it is bad faith and failure to make the full payment to the grower.

In the first instance, AMS might bring an enforcement action for an LPD's failure to design the ranking system in a manner that would deliver a fair comparison; such an action would be based upon the processes set forth in the documentation required under paragraph (b) of § 201.110. In the second instance, AMS might bring an enforcement action based upon an LPD's failure to operate the ranking

system in a manner consistent with the duty of fair comparison. Such a failure could be because the LPD was not following the documented processes or because in practice the documented processes did not deliver a fair comparison.

The requirement to design the ranking system in a manner consistent with the duty of fair comparison is intended to prevent injury before it occurs, consistent with P&S precedent and the Act's remedial purpose. USDA, through the P&S Act, has broad authority to ensure fair practices prevail in the poultry industry, and AMS concludes this includes preventing LPDs from designing a poultry grower ranking system that can be expected to produce an unfair comparison of growers. AMS did not make any revisions to the rule as proposed in response to this comment.

Comment: Some commenters asserted that the proposed rule's disclosure requirements violate the First Amendment because they restrict and prescribe what LPDs can say to their contract growers through their contracts.

AMS response: The P&S Act prohibits unfairness and deception, and this final rule addresses harms caused by unfair and deceptive practices. While some commercial speech may be protected under the First Amendment, withholding material facts from a contracting party has never been protected speech. The rule does not restrict information that LPDs may provide to growers, rather it encourages full disclosure of material information to the grower. A disclosure requirement can be justified either because without the disclosure there is a risk of deception or there is another substantial government interest at issue. This rule's disclosure requirements meet both justifications; absent the disclosures there is a risk of deception by regulated entities and the government is otherwise advancing its interest in a fair marketplace for poultry. To this end, AMS has narrowly tailored the required disclosures to protect the growers from the types of deception and unfair practices that many growers themselves have commented occurs in LPD contract performance and negotiation and which the Act seeks to prevent.

With respect to compelled speech, AMS believes that the provision of additional factual information, related specifically to the growing arrangement, to growers is consistent with Congressional intent to benefit competition in the industry and provides growers with information needed to make informed business decisions. AMS concludes that

alleviating the asymmetric information problems in these contracts enables growers to identify the practices relating to additional capital investments that can lead to potential underpayment or other unfair and deceptive practices under the Act. Additionally, the Agency believes that the additional transparency and equalization of information asymmetry is critical for the longevity of the poultry business because it would allow poultry growers to accumulate a history of previous contracts, additional capital investment requests, and other information, which is good for long-term market conditions Congress designed the Act to promote. The First Amendment does not protect corporations from practices that deceive, and this final rule requires LPDs to share factual and uncontroversial information related to additional capital investments, contracts, and schedules with their growers to prevent deception and unfair practices. The information shared should achieve contracts that are both equitable and rely on facts, which is also consistent with the Act's prohibition on unfair and deceptive practices.

Comment: One commenter supported the proposal for the rule to be effective 180 days after publication in the **Federal Register**, unless it disrupts contract renewals or seasonal production pauses. One industry representative suggested that the 180-day implementation period is the minimum timeframe necessary for compliance, and another expressed concern that short effective dates create challenges for managing grower relationships and suggested AMS develop outreach and educational programs. Two advocacy groups suggested shorter effective dates, one at 60 days and one at 30 days. One trade association requested a 2-year implementation period.

AMS response: AMS agrees with commenters that the final rule should provide sufficient time to implement any changes it requires, and broadly with the comment that 180 days is sufficient time for compliance with the rule. However, out of an abundance of caution, AMS is setting the effective date for this rule at July 1, 2026, which is approximately 18 months following publication in the **Federal Register**. LPDs will need to amend contracts in some instances, create records processes, format the incorporation of new information in existing documents, and create Disclosure Documents using the new format. Eighteen months provides more than the length of five flocks to prepare for implementation of

the rule. AMS will have resources available to answer questions as appropriate. Additionally, based in part on the experience of recent settlements between DOJ and a large poultry company, AMS believes this period will provide sufficient time for LPDs to update their compliance systems and policies and procedures and comments complying with the rule. AMS's approach has been to address the regulatory needs of the poultry industry systematically and as swiftly as possible. And while the 2-year period suggested by a commenter would unnecessarily delay implementation, thus denying growers the benefit of the rule and exposing them to continued uncertainty, AMS acknowledges additional time beyond 180 days will help facilitate an effective transition. Accordingly, AMS is extending the effective date to July 1, 2026, which is approximately 18 months post publication.

AMS agrees that it should conduct outreach to growers and LPDs regarding these changes, implementation, and enforcement. Over the course of this rulemaking, AMS has published informational materials, including a fact sheet and a video webinar, to help the public understand the proposed rule. AMS intends to conduct further education and outreach following the finalization of the rule.

VI. Regulatory Analysis

A. Executive Orders 12866, 13563, and 14094

AMS is issuing this final rule in conformance with Executive Orders 12866, 13563, and 14094. Executive Order 12866, as supplemented by Executive Order 13563, directs direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Executive Order 13563 further emphasizes the importance of quantifying both costs and benefits, reducing costs, harmonizing rules, and promoting flexibility. Executive Order 14094 amended Executive Order 12866 and directs agencies to solicit and consider input from a wide range of affected and interested parties through a variety of means.

This rulemaking has been determined to be "significant" under Executive Order 12866, as supplemented by Executive Order 13563 and amended by Executive Order 14094, and, therefore, has been accordingly reviewed by the

Office of Management and Budget (OMB). As a required part of the regulatory process, Agricultural Marketing Service (AMS) prepared an economic analysis of the costs and benefits of §§ 201.106, 110, 112, and 390.

B. Regulatory Impact Analysis

AMS prepared an economic analysis of the costs and benefits of the final §§ 201.106, 110, and 112 as a required part of the regulatory process.

As described previously elsewhere in this final rule, the organization and structure of broiler production is characterized by a high degree of vertical integration, market power in regional markets, substantial investment in production capital that is specific to a single production purpose, nearly universal use of production contracts, and use of complex grower compensation systems based on relative performance. Important factors that affect grower performance, including inputs (chicks, feed, medication, etc.) and some production practices (placement density, age and weight at harvest, etc.) are controlled by the LPD. In addition, the percentage of poultry producing farms considered to be in "extreme financial stress" (defined as term debt coverage ratio less than one and a debt-to-asset ratio greater than 55 percent) is among the highest of all types of commodity production operations.⁷⁸ Market failures caused by asymmetric information, incomplete contracts, and hold-up in poultry contracting motivate specific interventions as discussed in this final rule.

Comments From the Proposed Rule and Changes to the Final Rule

After consideration of public comments, AMS decided to adopt the proposed rule as a final rule with several modifications. Live poultry dealers (LPDs) commented that the regulation would be particularly challenging if the period of time allowed for regulated entities to comply with the provisions is too short. In addition, they stated that a shortened period for implementing changes would require greater expenditures of resources to make required modifications and communicate with growers. To allow sufficient time for regulated entities to comply with the final rule and avoid excess

⁷⁸ Nigel Key, Christopher Burns, and Greg Lyons, "Financial Conditions in the U.S. Agricultural Sector: Historical Comparisons," EIB-211, U.S. Department of Agriculture, Economic Research Service (2019), <https://www.ers.usda.gov/webdocs/publications/95238/eib-211.pdf?v=4876.5>.

implementation costs, AMS is setting July 1, 2026, as the effective date for this rule, which is approximately 18 months following publication in the **Federal Register**. This extended time frame will not impact the amount or timing for estimated costs of the final rule; regulated entities are expected to incur first year costs during the 12 months preceding the effective date.

Industry trade organizations and LPDs commented that the full cost of implementing the proposed rule would be far greater than estimated by AMS. The commenters asserted that AMS greatly underestimated the costs that will be required for employing teams with highly specialized legal and technical expertise to implement the proposed rule by modifying or replacing grower contracts and communicating changes to growers. Commenters suggested that AMS did not adequately consider the total number of hours needed, but none provided quantified estimates. LPDs also commented that hourly rates paid to specialized industry professionals. Commenters also suggested that implementation of the rule would require LPDs to hire and train additional staff and pull resources away from other important activities.

AMS consulted subject matter experts who are familiar with LPDs, integrators, and broiler complex operations. These experts were auditors and supervisors with many years of experience at AMS in auditing LPDs for compliance with the Act. The final rule provides an extended period of approximately 18 months following publication in the **Federal Register** before the effective date, to permit sufficient time for implementation. Hourly rates used in cost analysis for the proposed rule were based on averages for legal, management, administrative, and information technology labor categories specifically within the agricultural sector as published and annually updated by the U.S. Bureau of Labor Statistics.⁷⁹ Although the largest corporations likely employ lawyers and other specialists at hourly rates much higher than the National average, contract development and review efforts at those companies are spread across many complexes. AMS expects that average hourly rates provide an appropriate benchmark for estimating industry average costs. AMS revisited the estimated hours to implement all provisions of the final rule based on comments that costs were

underestimated. After further discussion with subject matter experts, AMS added a modest amount of time to account for the cost of IT work in preparing § 201.112 disclosures. AMS subject matter experts who are familiar with the operations of LPDs, integrators, and broiler complexes through their experience conducting regulatory reviews of LPDs confirmed that all other costs of the proposed rule are accurate estimates and accordingly, AMS made no other changes to hourly costs or estimated numbers of hours for implementation of the rule based on this comment.

AMS received numerous comments from growers, grower groups, and advocate commenters in support of additional limitations on grower risk from excessive variability in compensation. Based on these comments, AMS has added provision § 201.106(b), which establishes a presumption that a regulated entity is in violation of the Act when aggregate gross annual payments based upon a grouping, ranking, or comparison of growers (performance pay) exceed 25 percent of total gross payments (including performance and all other types of grower pay). AMS again consulted its internal subject matter experts and added costs for LPDs to implement and monitor this new provision, which are discussed and quantified as direct costs. Other expected additional benefits and indirect costs resulting from this new provision cannot be quantified and are discussed separately.

AMS also solicited comment in the proposed rule on whether there was a need to protect growers against the risk that LPDs might unfairly reduce broiler grower total compensation during a transition period after implementation of the final rule. Comments on the proposed rule reflected support for adding such protections. Based on comments received, AMS added § 201.106(c), which will require LPDs to submit copies of the prior and modified contracts and disclosures to AMS if average gross grower payments at a complex show year-over-year decline following a contract modification in any of the three calendar years commencing with and including the effective date of the rule. AMS will review the information provided by LPDs to identify any potentially unfair practices related to broiler grower compensation. AMS consulted with its internal subject matter experts and added direct administrative costs for LPDs to provide information in compliance with this provision during the three-year period. AMS is not able to quantify the

potential benefits and the potential indirect costs to LPDs of this provision—these will also be discussed separately.

AMS received comments suggesting that some of the detailed documentation requirements under proposed § 201.110(b) were similar to existing documentation requirements and might create unnecessarily burdensome and complex paperwork that could burden service technicians at broiler complexes and keep them from other important responsibilities such as assisting growers. In response to these comments, AMS made several changes to § 201.110(b) in the final rule that included consolidating and streamlining the documentation requirements and removing some detailed requirements delineated under subparagraphs in the proposed rule.⁸⁰ AMS expects that these adjustments to final § 201.110(b) will add clarity and minimize potential confusion about the documentation requirements, thereby making them more effective, and that these changes will reduce recordkeeping requirements by some amount. However, based on consultation with its internal subject matter experts, AMS chose to attempt to avoid underestimating costs and did not reduce the total recordkeeping requirements or the time cost of the information collection for LPDs. Accordingly, these changes did not affect the estimation of costs or benefits in the final rule.

The proposed rule included § 201.110(b)(2), “Compliance review,” which required LPDs to conduct a bi-annual review of the processes set out in § 201.110(b)(1). AMS removed this requirement in response to comments that self-audits would be burdensome for LPDs, and that elimination of this requirement would not substantially diminish effective compliance with § 201.110. Compliance will be enforced through regular AMS review of the policies and procedures, as newly enhanced documentation, which LPDs are required to establish and maintain under § 201.110(b). Accordingly, removal of § 201.110(b)(2) eliminated the burden of compliance review on LPDs and reduced costs from the proposed to the final rule by the cost estimate in the proposed rule for that provision.

⁸⁰ As described in the preamble section III., “Summary of the Proposed Rule and Changes in the Final Rule,” these changes to proposed § 201.110(b) included simplifying 17 combined paragraphs and subparagraphs in proposed § 201.110(b)(1), “Policies and procedures,” into six simple paragraphs in final § 201.110(b)(1) and removing proposed § 201.110(b)(2), “Compliance review,” and redesignating § 201.110(b)(3), “Record retention,” as paragraph (b)(2).

⁷⁹ See U.S. Bureau of Labor Statistics, May 2023 National Occupational Employment and Wage Estimates, May 2023. <https://www.bls.gov/oes/special.requests/oesm23all.zip>.

Based on comments received, AMS added a provision at § 201.112(c) to require that the LPD make reasonable efforts to ensure that growers are aware of their right to request translation assistance and to assist the grower in translating the Capital Improvement Disclosure Document. Reasonable efforts include, but are not limited to, providing current contact information for professional translation service providers, trade associations with translator resources, relevant community groups, or any other person or organization that provides translation services in the poultry grower's geographic area. Reasonable efforts, depending on the facts and circumstances (such as convenience, expense, and timeliness of the translation), may also include allowing the grower access to a computer-generated translation of the Disclosure Document and additional time to review any translated Disclosure Document.

A similar requirement was established for LPDs in § 201.102(g)(4) of the "Transparency in Poultry Grower Contracting and Tournaments" final rule.⁸¹ As LPDs already have all necessary information to make reasonable efforts to assist growers in translating disclosure documents and have made it available to growers who request the information, AMS did not add any time to its cost estimates for LPDs to comply with this new requirement.

The following analysis describes the anticipated impacts of the final rule. The value of broiler production in the U.S. for 2023 was approximately \$50.6 billion.⁸² Our analysis finds that the total direct cost of final §§ 201.106, 110, and 112 will be greatest in the first year at \$26.0 million or 0.051 percent of revenues. The broiler industry is a mature industry, and margins are likely relatively low. If profit margins are 1 to 5 percent of revenues, then first-year direct costs would be 1.0 to 5.1 percent of margins. The total direct costs are low in relation to total industry size, but they do not include any potential costs from changes in supply or demand caused by final §§ 201.106, 110, and 112. The final rule is also expected to provide many benefits of importance to broiler growers that could not be quantified. These include the value to broiler growers of improved fairness, reduced income variability, and reduced risk of fraud and deception. As a result of many factors that AMS is unable to measure due to insufficient data or

which cannot be predicted with reasonable certainty, AMS is unable to quantify benefits or indirect costs and therefore cannot make a determination about the sign or magnitude of net benefits to the industry from final §§ 201.106, 110, and 112.

Regulatory Alternatives Considered

AMS expects final §§ 201.106, 110, and 112 to mitigate costs associated with asymmetric information and LPD unfairness and deception by establishing a duty of fair comparison for LPDs in poultry grower ranking system administration, requiring LPDs to establish and document processes, requiring LPDs to adopt transparent methods of presenting grower compensation in broiler grower contracts, limiting excess income variability, and requiring LPDs to provide important information to broiler growers. Final § 201.106 will prohibit the LPD from using a grower's grouping, ranking, or comparison to other growers to reduce a rate of compensation disclosed in a broiler growing arrangement, establishes a presumption of violation when performance compensation for growers at a complex exceeds 25 percent of total compensation, and implements a three-year transition pay period with additional grower protections. Final § 201.110 will require LPDs to provide a fair comparison among growers when basing compensation upon a grouping or ranking of growers delivering during a specified period of time and to document how they comply with that duty. Final § 201.112 will require LPDs to produce and distribute disclosures when they request growers to make additional capital investments.

AMS considered four alternatives to final §§ 201.106, 110, and 112, with the second and preferred alternative being the final rule. The first alternative is the "do nothing" approach or maintaining the *status quo*. All regulations under the Packers and Stockyards Act would remain unchanged. This first alternative forms the baseline against which AMS will compare the second alternative, final §§ 201.106, 110, and 112.

AMS considered a third alternative that would leave all requirements in final §§ 201.106, 110, and 112 the same, but entirely exempt LPDs that meet the criteria to be classified as small businesses by the Small Business Administration.⁸³ This third alternative

would exempt smaller LPDs. However, since larger LPDs do most of the contracting (as quantified later in this analysis), most poultry growers would still receive the benefits of new protections under final §§ 201.106, 110, and 112. AMS considered a fourth alternative, which would be to adopt proposed §§ 201.106, 110, and 112—this alternative also includes all small and large LPDs. Below, AMS provides estimates and comparisons of the costs and benefits of the alternatives and an explanation for why the Agency selected final §§ 201.106, 110, and 112 as the preferred alternative.

Benefits of Final §§ 201.106, 110, and 112

AMS expects that final §§ 201.106, 110, and 112 will provide benefits to growers by reducing the risk of potential fraud, deception, and reduced payment for grower services by LPDs during the first three years of the final rule, improving clarity in grower payment systems, limiting excess variation in grower compensation, protecting growers against unfair reductions in compensation by LPDs during implementation of the rule, establishing a duty for fair comparison in the administration of broiler grower ranking systems, and making more information available to growers. These benefits are difficult to quantify. They depend on the extent to which the interventions will mitigate some existing unfairness and deception that results from incomplete contracts, inadequate and asymmetric information, and hold-up problems in an environment where LPDs are able to exert market power or bargaining power. Some of the benefits may vary based on the extent of competitive choice for growers in local markets. For example, in more competitive markets, increased transparency might benefit growers by empowering them to negotiate better terms with LPDs. In less competitive markets, increased transparency might assist growers in identifying potential unfairness from low compensation or abusive practices and allow them to seek assistance from AMS in more quickly remedying these problems. The size of benefits will be directly related to the extent to which the final rule will mitigate or reduce these practices. AMS is unable to quantify the benefits and will present a qualitative discussion of the potential types of benefits that growers would receive from final §§ 201.106, 110, and 112. The following discussion of unquantified benefits will proceed by final rule section.

⁸¹ 88 FR 83210, 83301 (Nov. 28, 2023).

⁸² USDA–NASS. Poultry—Production and Value 2023 Summary (April 2024).

⁸³ The Small Business Administration (SBA) defines small businesses by their North American Industry Classification System Codes (NAICS). Live poultry dealers, NAICS 311615, are considered small businesses by SBA if they have fewer than 1,250 employees (13 CFR 121.201).

Benefits of Final § 201.106

Section 201.106(a) prohibits LPDs from reducing a grower's rate of compensation based upon a grouping, ranking, or comparison of growers. The practice of discounting or reducing disclosed contract "rates" creates problems for growers in assessing and comparing broiler production contracts. Growers commonly expect that based on ordinary efforts, they will be able to obtain at least the average rate of pay for growers in a settlement group, which is typically known as the "base" pay. If growers are evaluating the expected value of these contracts based upon "base" or "average" pay rates, downside risk, which affects half of the settlement pool per flock, would be ignored. These are the types of problems that create income expectations that are unlikely to be met for a large segment of broiler growers. Growers thus cannot effectively evaluate their risks on a settlement payment by settlement payment basis, through presentation of base pay rate at the mid-point. Growers are harmed when they incur costs as a result of entering a contract with an LPD and the actual revenue and the range of payment outcomes realized are below those the grower was led to believe they would receive when reviewing the contract based on reasonably expected efforts within the control of the grower. In addition, competition in the market for broiler grower services is harmed when such deception and unfairness prevent growers from comparing competing offers from LPDs for the services of growers.

Final § 201.106(a) applies to LPDs that calculate grower compensation based upon a grouping, ranking, or comparison of growers delivering poultry during a specified period. LPDs using such a system are prohibited from using that grouping, ranking, or comparison to reduce a rate of compensation disclosed in a broiler growing arrangement. Final § 201.106(a) requires that any performance or incentive payments made to broiler growers under a poultry ranking system must be in addition to a disclosed rate of compensation (*i.e.*, any adjustments to rates of pay must be non-negative). Growers will benefit from increased certainty about the lowest possible revenue outcome under the growing arrangement. Greater certainty about minimum rate for their service can lead to improved financial planning and ability to manage financial risk. More transparent methods of presenting payments and compensation systems would also facilitate comparisons between alternative LPDs and benefit

growers who may be evaluating offers or considering agreements from more than one LPD.

In accordance with final § 201.106(a), LPDs will be expected to redefine grower payment calculation systems as appropriate to express all payments in the form of bonuses added to a stated pay rate. AMS expects that existing schedules of grower payments can be recreated such that they conform to this final rule change, assuming that no additional modifications are needed to comply with final § 201.106(b). Existing LPD methods of grower payment calculation can be expressed in an alternative format that includes only bonus adjustments added to an existing minimum rate.⁸⁴ AMS is aware that several of the largest LPDs currently have existing payment systems that express all ranking bonuses as positive adjustments added to a stated pay rate and would conform to this requirement.

Changes to presentation of grower compensation rates as required by final § 201.106(a) are not expected to change the basic structure of grower compensation schedules for relative performance payments. The benefits that will accrue to growers from the changes will result from increased clarity as growers will be better informed of minimum compensation outcomes that can occur under the broiler growing arrangement. Growers in some circumstances may, therefore, be able to negotiate more appropriate compensation systems for themselves, in the form of higher base rates, for example. There is no expectation, however, that aggregate payments to growers will increase. Clearer presentation of grower compensation methods will benefit growers by improving grower understanding of potential revenue outcomes, thereby reducing problems of inadequate and asymmetric information and improving the clarity of defined terms to address incompleteness in contracting.

Final § 201.106(b) will establish a presumption that an LPD is in violation of the Act if more than 25 percent of total compensation paid to all growers in a complex on an annual basis is based on performance. If a complex is in violation of this provision, in order to comply an LPD may either raise grower base pay, reduce grower performance pay, shift some performance pay to mechanisms not covered by the provision, or a combination of all of these. Although other alternatives would be possible,

AMS expects that the most likely outcome will be for LPDs to restructure compensation systems while keeping total grower compensation at approximately the same level. In this case, a grower compensation structure that includes less comparison-based performance pay would limit the range of potential compensation outcomes that an individual grower might observe and reduce risk from income variability.

Benefits of § 201.106(b) will accrue to broiler growers in the form of reduced income variability. For a given level of total income, growers would be likely to benefit if they receive a larger percentage of expected compensation based on fixed non-performance pay—which may include minimum base pay, fixed incentive payments for equipment standards and housing, fixed bonuses for adherence to clearly defined management practices, or other fixed targets—and a smaller percentage of compensation that is variable based on a grouping, ranking, or comparison to other growers, which makes up most forms of performance pay at present in the industry.

When income is variable, growers will likely see trade-offs in the value to them of reducing income variability compared to mean incomes. Risk neutral growers will be made better off if they value any increase they receive in less variable pay not based on performance more than they value any decrease they experience in the expected value of performance-based pay. However, a risk averse grower would value a one dollar increase in less variable but more certain compensation more than they would value a one dollar decrease in the expected value of performance-based compensation that involves risk. Overall, individual growers are likely to benefit if the value to them of any increase they receive in less variable income—from compensation that is not based on performance—is greater than the value to them of any decrease they experience in the expected value of more variable performance-based compensation.

The magnitude of benefits to growers that will result from § 201.106(b) depends on several factors that cannot be predicted with any reasonable degree of confidence. These factors include uncertainty about the number of complexes that will modify grower compensation structures in response to § 201.106(b), the manner in which such modifications would be implemented, and the number of growers at affected complexes that would be impacted by any changes. AMS is unable to analyze comprehensive grower data for all

⁸⁴ All contracts that AMS has previously reviewed include provisions for a minimum grower payment that is greater than zero.

broiler complexes and cannot predict with certainty how regulated entities will respond to this provision. For this reason, potential benefits of § 201.106(b) are discussed qualitatively and not quantified.

AMS does not have sufficient data to make an industry-wide inference on the number complexes that will need to reduce performance payments relative to total payments or the magnitude of any reductions that will be required. AMS reviewed one to five years of confidential grower compensation data for four individual broiler complexes that AMS gathered in prior investigations. This sample included small, medium, and large bird sizes and some of the largest broiler LPDs that operate several other complexes across the U.S. Aggregate performance payments at these four complexes were 11.4, 17.4, 20.5, and 25.4 percent of total grower payments. AMS is not aware of any complex with performance payments that are as much as 26 percent of total payments, and it is possible that no complex will need to reduce performance payments relative to total payments by a substantial amount to comply with final § 201.106(b).

To the extent that the complexes AMS reviewed are representative of the other complexes owned by the same firms, two or possibly three of the firms would likely already be in compliance with final § 201.106(b). In addition, the terms of a 2022 consent agreement between Wayne-Sanderson Farms, USDA, and the U.S. Department of Justice informed final § 201.106(b). In the Wayne-Sanderson Farms consent, performance payments that Wayne-Sanderson Farms pays to broiler growers was limited to 25 percent of total payments. Section 201.106 establishes a presumption that poultry growing arrangements with variable pay greater than 25 percent is presumptively unfair. It is unlikely that the unfairness presumption will have any effect on these firms, which combined account for up to 35 percent of the complexes. It is possible that other firms already limit performance payments to less than 25 percent of total payments, but AMS does not have sufficient information to confirm this with a reasonable degree of confidence.

Growers will benefit directly from changes in variability of compensation as a result of § 201.106(b) only at complexes where LPDs modify existing compensation structures to comply with the 25 percent presumption of unfairness. However, growers will also benefit from ongoing protection to the extent that this provision causes LPDs to forego future changes that would increase performance-based

compensation beyond 25 percent of total compensation.

For a given level of grower performance-based compensation at a complex, the presumption of unfairness also indirectly limits reductions to grower base pay rates. A reduction in the base pay rate will reduce the total amount of grower compensation not based on performance and must be accompanied by a proportional decrease in performance-based compensation to maintain an equivalent percentage. The presumptive limitation therefore provides an incentive for LPDs to maintain or increase existing levels of base grower compensation. This provides another benefit to growers: it serves as a backstop against the potential harm to growers that would occur if LPDs were to substantially and unfairly lower base pay rates when modifying pay structures to comply with § 201.106(a).

The distributional effects of final § 201.106(b) are likely to be unequal across individual growers: not all growers will benefit or benefit equally from this provision. Current contracting practices can vary widely between complexes even of the same LPD. As previously noted, AMS expects that the most likely outcome at complexes where grower compensation structure modifications occur will be for LPDs to keep total grower compensation at approximately the same level and reduce the percentage of compensation based on performance payments. This would change the distribution of total compensation among growers at the complex. Depending heavily upon the strategy for compliance chosen by the LPD, AMS would expect these changes to result in benefits to some growers, welfare transfers between some growers, and no change in welfare for some growers. At some complexes, AMS would expect that some amount of welfare transfer from higher performing growers to lower performing growers would result from payment structure modifications implemented to comply with the 25 percent presumption of unfairness. AMS expects some complexes to shift some performance pay to non-comparison methods, such as fixed metric performance, or to other innovative systems. Another possibility is that modifications could result in LPDs terminating or not renewing some marginally performing growers. This will be most likely to occur if LPDs seek to reduce the overall variation in grower performance at a complex as a means to comply or if payment structure modifications include increases in minimum grower payments that exceed the marginal value of services provided

by some growers. Some LPDs may seek to utilize technology to more greatly standardize outcomes, thus reducing the need to utilize higher magnitudes of performance payment. AMS underscores that actual outcomes will depend upon how LPDs respond at different complexes owing to local factors on the ground.

Performance-based compensation structures based on a grouping, ranking, or comparison of growers determine individual grower compensation using relative performance metrics that typically include feed efficiency and chick livability. Some aspects of performance can be controlled or influenced by the grower through effort and management, and to some extent investment (subject to the concerns highlighted by this rule), in the broiler operation. Other determinants of grower performance depend on actions of the LPD or other factors outside the control of the grower. Section 201.110 of this rulemaking addresses factors under control of the LPD by establishing a duty of fair comparison. As discussed elsewhere, this provision is expected to benefit producers by reducing unfair impacts on growers attributable to these factors. Nonetheless, the influence of factors controlled by LPDs on grower compensation will not and cannot be eliminated without eliminating performance-based methods of compensation. Natural variation and randomness will persist for certain production factors that influence relative performance, such as breed, sex, age of breeding flock, health at placement, and the performance of other growers, even if the LPD strictly adheres to the duty of fair comparison in the distribution of them. These factors therefore will continue to be important in determining compensation in a performance-based pay system. Provision § 201.106(b) benefits growers by establishing a presumption of unfairness based on the magnitude of performance-based compensation, thereby also limiting the share of income that will be affected by risk factors out of their control.

Growers are vulnerable to hold-up in the broiler contracting relationship: once a grower makes a housing and equipment investment to grow broilers for an LPD, that capital cannot be repurposed and the grower's choices become limited. In addition, many broiler operations operate in areas where they can potentially contract with only a very small number integrators, which severely limits the grower's ability to switch integrators. Data cited in the preamble of this final rule (MacDonald 2014) shows that more than

half of broiler growers have only one or two LPDs (integrators) in their local areas. As a result, growers lack bargaining power to protect their existing level of compensation when LPDs change contract terms. In requiring LPDs to provide the prior and modified contracts and required disclosures when contract modification or renewal results in lower year over year gross annual average grower payments at a complex, § 201.106(c) facilitates AMS intervention in unfair treatment. During a three-year transition period, LPDs will report changes to existing grower payment systems that reduce average compensation for growers at a complex.

Benefits of Final § 201.110

Market power gives LPDs a considerable bargaining advantage relative to growers in poultry contracting arrangements. As a result, growers lack negotiating power to demand, among other things, transparency around, and completeness in, and reasonable performance under contracts that would likely reduce the potential for deception and unfairness. The interventions aim to reduce potential adverse impacts of market power by establishing a duty of fair comparison that would provide protections to growers that they do not have bargaining leverage to demand. Currently, most broiler production contracts are incomplete in that they fail to clearly state important terms and provisions related to input distribution and flock production practices, how grower compensation will be handled in certain variable circumstances, settlement grouping procedures, and other aspects of broiler grower ranking system administration. LPDs commonly seek to disclaim under these contracts what should be express or implied duties and warranties around the usability or appropriateness of inputs or production practices and other aspects of broiler grower ranking system administrations. LPDs frequently offer broiler contracts to growers on a take it or leave it basis, providing growers with little insight as to methods the LPD will use to compare growers for purposes of determining compensation, including whether growers will be compared to other growers provided with similar inputs and assigned similar production practices. Moreover, during performance, growers have little to no ability to demand LPDs actually perform as could be reasonably expected under the contracts, including promptly addressing problems that may emerge during ordinary operations.

Even under a reasonable level of transparency around specific input differences, growers are often unable to make sufficient modifications to their individual efforts to manage risks to how payments are affected under a poultry grower ranking system. Nor can they avoid harms from disputes that may arise under the poultry growing arrangement. Growers reasonably assume that they will be fairly compared to other growers under a broiler grower ranking system. They are deceived if LPDs do not make a good faith effort to ensure fair comparison among participating growers when operating broiler grower ranking systems. Given the extent of LPD control over grower outcomes through the distribution of inputs such as feed and chicks or production practices such as placement density, target weight, etc., growers are forced to rely heavily on LPD good faith efforts in performing fair comparisons under broiler growing arrangements.

Consistent delivery of fair comparison requires LPDs to incur monitoring costs and take corrective actions when operating poultry grower ranking systems. In fact, many LPDs implicitly acknowledge a responsibility to fairly compare growers when they use procedures to identify and correct imbalances and provide remedies when factors beyond the growers' control affect grower payments. These include, for example, provisions to remove a grower from a broiler grower ranking system pool and to pay that grower according to another metric (such as a multi-flock average) if the LPD discovers that inputs provided to the grower were inferior—such as sick chicks. Another example would be a policy of the LPD to avoid providing a grower with inferior inputs on consecutive flocks—such as chicks from excessively young layer flocks that are considered to be lower performing, at least when using the broiler grower ranking system to determine performance pay in those circumstances. Although such policies are not uncommon, they are not currently required to be universally employed or uniformly applied by LPDs. LPDs may have legitimate business interests in providing certain growers, sometimes higher skilled growers in fact, with lower performing inputs. Yet care needs to be taken to ensure that any comparison-based method for determining performance pay be established under circumstances that do not permit or enable the LPD to intentionally disadvantage one or more growers in the ranking system.

Growers also have no means by which to ensure that LPDs consistently carry

out their responsibility under the contract or to enforce it. Further, the benefits of monitoring and correcting for unfair grower outcomes accrue to growers and not to the LPD. Therefore, LPDs have insufficient incentive to uphold their end of the bargain, especially in markets where growers have few options of alternative LPDs with whom they could contract. LPDs can therefore opportunistically minimize their costs of delivering a fair comparison at the expense of growers and, as a result, fail to deliver on their obligation for good faith and fair dealing under the contract.

Final § 201.110 addresses these problems by establishing a duty for LPDs to provide a fair comparison among growers when basing compensation on a grouping or ranking of growers delivering poultry during a specified period and requiring LPDs to document how they comply with that duty. The fair comparison requirement in final § 201.110(a) ensures that LPDs will not compare growers to other growers who have been supplied with inputs or assigned production practices that result in material differences in performance metrics used in payment calculations. Duty of fair comparison also requires that LPDs compare growers over appropriate time periods and use appropriate non-comparison payment methods. Final § 201.110(b) establishes documentation requirements in the form of processes, commonly known as policies and procedures, to facilitate LPD effective broiler grower ranking system operation under that duty, effective recordkeeping of transactions, and facilitates AMS supervision and enforcement. These provisions will benefit growers by reducing deception and unfairness in the operation of poultry grower ranking systems.

Expressly requiring LPDs to implement written processes that promote fair comparison of growers, whether through more consistent allocation of inputs and production practices or adjustments to methods and formulas, will foster more transparent, accurate, and reliable broiler grower ranking systems, and hold LPDs accountable for divergences from lawful action. Growers will benefit from this regulation because they will be less vulnerable to intentional harm due to deception, retaliation, or bad faith by LPDs. An LPD, AMS, or enforcement body can more easily evaluate grower complaints of intentional harm—for example, LPD employees targeting growers by providing inferior inputs—when they are able to consider whether the LPD has complied with its own stated policies and procedures for

ensuring fair comparison. Ongoing monitoring of the broiler grower ranking system by LPDs to fulfill the duty of fair comparison required by final § 201.110(a) will also provide safeguards to prevent growers from being substantially disadvantaged by unintentional or inadvertent outcomes. For example, an LPD will be compelled to take prescribed corrective action if it discovers that a particular grower has randomly received an unusual share of inferior inputs over multiple flocks. Procedures designed to ensure fair comparison will include monitoring to prevent natural variation in input quality and LPD-determined flock production practices among growers within a single settlement group from being allowed to persist as a pattern that disadvantages a particular grower over multiple settlement groups. By establishing a basic duty for LPDs to deliver fair comparison of growers, final § 201.110 is structured to provide LPDs flexibility in fulfilling that duty within the context of individual circumstances and complex production processes.

Benefits of § 201.110 deriving from the value to growers of fairness and equity are important. AMS is unable to quantify these benefits. However, as a result of this provision, compensation for individual growers will more closely match the level of individual grower effort, skill, and investment relative to other growers under a poultry grower compensation system that guarantees fair comparison. This provision will benefit growers by removing some of the unfairness in the distribution of grower compensation within poultry ranking payment systems. When LPDs fulfill a duty to ensure fair comparisons, no individual grower will receive consistently poor inputs while other growers with whom that grower is compared receive consistently good inputs. The expected benefits of ensuring fair comparisons among growers are highlighted by the consistent widespread reports of harm to individual growers resulting from existing unfair comparisons.⁸⁵ A reduction in the occurrence of such harms could potentially lead to reduced grower turnover.

Provisions included in final § 201.110(b)(1)(vi) will also require LPDs to maintain written processes for communication and resolution of grower concerns with the design or operation of a system that is consistent with the duty of fair comparison. These

processes should address timely resolution of such disputes. Providing an effective method of dispute resolution has the potential to help resolve disagreements involving personality conflicts which can lead to avoidable inefficiencies.

Benefits of Final § 201.112

LPDs encourage and often require broiler growers to make additional capital investments in assets that are specific to producing poultry for that LPD. Growers cannot exert bargaining power to demand essential information that would inform such investments. As a result, LPDs can induce growers to make additional investment decisions that do not benefit growers when they do not supply sufficient information for evaluation of requested upgrades. Such investments can cause financial harm to growers and increase the extent of their investments in capital that is specific to poultry production for nearby LPDs (thereby also increasing grower hold-up exposure) while still benefiting those LPDs. Moreover, broiler growers bear all the costs and risks of additional capital improvement investment. LPDs do not own the farm-based production capital and therefore do not share in these risks, although they frequently dictate grower investments. Because poultry production capital is largely owned by growers, LPDs have limited incentive to carefully consider how much required additional capital investments will improve individual grower production efficiency and whether they are likely to lead to financial success or failure. This misalignment of incentives is consistent with grower complaints that LPDs sometimes require costly investments that are unnecessary or in some cases merely cosmetic.⁸⁶ When a broiler considers a new investment, the broiler grower considers gains in productivity relative to the cost of the investment. However, when LPDs do not bear investment cost, they have incentive to maximize only their benefits and encourage growers to over-invest in poultry-specific production capital to the point of negative returns for the grower.

AMS has sought to address similar concerns through prior action. Finalized in 2011, § 201.216 sets out criteria for

when the Secretary will find additional capital investment violated the Act (76 FR 76874, December 9, 2011). However, AMS's experience since has found that the rule is insufficient to help growers or the Agency to identify problematic additional capital investment in time to act. Accordingly, the Agency in this final rule has prioritized disclosure of critical information to growers in a timely manner, to enable growers and the Agency to have ready access to the necessary information to conduct analyses under § 201.216 and under the Act generally, including to stop additional capital investment that cause unavoidable harms. AMS also is adopting final § 201.112 to prevent deception of growers related to additional capital investment, as the information being required is critical to their decision-making around the additional capital investment, whether or not the additional capital investment gives rise to unavoidable harms separate and apart from the failure to disclose.

LPDs prevent growers from making fully informed decisions and understanding the true extent of over-investment when they withhold important information about additional capital improvement investments. An increase in grower investment leads to increased grower dependency on LPDs to generate returns on that investment through poultry contracting. The presence of few or no other poultry contracting options in a grower region further focuses dependence on a single LPD. The use of incentive payments by LPDs to compensate growers for additional capital investment can help to align investment incentives. For these arrangements to work properly, growers must clearly understand the parameters of the investment and the breakdown of payment components and financial incentives offered by the LPD.

Final § 201.112 will require LPDs to provide a Capital Improvement Disclosure Document when requesting an additional capital investment over the identified threshold of \$12,500 (as defined in § 201.2(n)). This disclosure will provide information to existing growers contemplating additional capital investments about the goal or purpose of the investment, grower financial incentives, construction schedules, description of changes to housing specifications, approved manufacturers or vendors, and analysis of projected returns including the assumptions, risks, and uncertainties upon which those projections are based (paragraphs (b)(1) through (6)). As such, the Capital Improvement Disclosure Document will clearly state the

⁸⁵ Section II of this final rule, "Background," documents decades of grower comments to USDA that highlight concerns of persistent unfairness resulting from unfair comparisons in broiler grower tournaments.

⁸⁶ AMS sought feedback on proposed rulemaking in a 2022 ANPR (87 FR 34814, June 8, 2022). Some commenters noted that LPDs often supply insufficient information with respect to requested or required upgrades and deceptively induce growers to make costly additional capital investments. One commenter, for example, asserted that LPDs demand costly upgrades that some growers have reported to be arbitrary and apparently untethered to any reasonable assurance of increased compensation.

intended and expected outcome of LPD additional investment requirements.

Requiring LPDs to provide this information to growers will reduce asymmetric information that contributes to inefficient investment and resource allocation decisions, where such choice exists by growers. LPDs providing this additional information related to grower requirements reduces the cost to growers of identifying and qualifying manufacturers and vendors when making capital improvements. To the extent that disclosures assist growers in understanding the purpose of additional capital investments, those growers will be more likely to realize any potential benefits from the additional capital investment. For example, growers will be able to tailor additional capital investments to their particular operation so as to be better positioned to implement the additional capital investment and produce intended production improvements. The clarity provided by additional capital investment disclosure will reduce the likelihood of costly errors caused by miscommunication and misunderstanding and increase the likelihood that growers will be able to correctly implement additional capital investments. Final § 201.112 will generate economic benefits by addressing certain limitations on market functioning arising in part from asymmetric information. Growers operating with better information are less likely to be deceived or unfairly misled by LPDs when additional capital improvement investments are required.

Even where growers may not be able to avoid or negotiate around these terms, growers may be better able to effectuate their rights under the Act, and AMS would benefit from earlier identification of potentially unfair practices. To the extent this occurs, by addressing asymmetric information this section of the final rule will help alleviate additional hold-up of growers by LPDs. Even in cases where grower refusal may still result in other adverse consequences, growers may still be better off by preventing additional financial loss and increased specific investment and dependence on the LPD. Financial projections and other analyses of additional capital improvement investments developed by LPDs along with more complete information about investment purpose, expected benefit, and grower performance will be superior to analysis based on limited grower information.

Final § 201.112(c) will benefit growers who require translation assistance by requiring LPDs to make reasonable efforts to ensure that growers are aware

of their right to request translation assistance and to assist growers in translating the Capital Improvement Disclosure Document.

Summary of Benefits of Final §§ 201.106, 110, and 112

AMS expects that the final rule would provide substantial benefits to the industry and address issues of extreme importance to broiler growers. However, these benefits are unquantified. AMS cannot measure any impact or shift in total industry supply or any corresponding indirect effects on industry supply and demand, including price and quantity effects.

Estimation of Costs of the Final Regulations

AMS estimates cost for three alternatives. The first is the final §§ 201.106, 110, and 112, which is the preferred alternative. The second alternative is the same as final §§ 201.106, 110, and 112 with a complete exemption for LPDs that are considered small businesses by the Small Business Administration.⁸⁷ All LPDs are also included in the third alternative, which is adoption of the proposed §§ 201.106, 110, and 112. All three alternatives are compared against a baseline of *status quo*, which has no costs or benefits.

The direct costs of final §§ 201.106, 110, and 112 primarily consist of the time required for LPDs to: (1) modify and monitor grower contracts to determine compensation in a manner consistent with final § 201.106; (2) develop, document, and comply with policies and procedures for ensuring that growers are fairly compared to other growers in poultry grower ranking systems; and (3) gather and document information pertaining to grower additional capital investments and distribute it among the growers. The costs of the final rules will fall on LPDs as they modify existing contracts and compensation systems, develop and comply with new policies, and collect and disseminate required information. Costs will also fall on poultry growers based on the value of the time they put into reviewing the disclosures. Though poultry growers are expected to incur costs in reviewing information, they will be the primary beneficiaries of the information, which may be reflected in their ability to make more informed decisions (where they may have more

than one or two integrators as options in certain geographic areas). Further, growers will be able to better identify additional capital investment programs that are unfair, which either AMS or growers can challenge as a violation of the Packers and Stockyards Act. This may result in a more efficient allocation of capital within the poultry growing industry.

There were 42 LPDs in the broiler chicken market that filed a fiscal year 2023 Annual Report with AMS, and their reports indicate that they had 20,014 contracts with poultry growers during fiscal year 2023.⁸⁸ Of these, 21 LPDs are considered small businesses according to SBA classification, and these have a total of 1,208 grower contracts. Small LPDs are expected to differ from large LPDs in structure and complexity, particularly with regard to the number of contract types used, management, use of legal services, and divisions of labor. Where noted below, some components of cost estimates are calculated separately for large and small LPDs to reflect these differences.⁸⁹

AMS expects the direct costs of the final rule will be small in relation to overall production costs and will not measurably alter poultry supply. AMS also expects that neither LPDs nor poultry growers will measurably change any production practices that will impact the overall supply of poultry as a result of these direct costs.

Expected direct costs are estimated as the value of the time required to develop and implement new broiler grower contracts and grower payment systems to comply with requirements of final § 201.106; develop, implement, and maintain compliance with processes reasonably designed by the LPD to deliver fair comparisons among broiler growers in the operation of broiler contract tournament systems as required by final § 201.110; and produce and distribute disclosures when LPDs request or require growers to make additional capital investments as required by final § 201.112, as well as the time required to create and maintain any necessary additional records. Grower payment systems required by final § 201.106(a) are substantively similar to many current payment systems already in use and will therefore not require large adjustments

⁸⁸ All live poultry dealers are required to annually file PSD form 3002 "Annual Report of Live Poultry Dealers," OMB control number 0581-0308. The annual report form is available to public at <https://www.ams.usda.gov/sites/default/files/media/PSF3002.pdf>.

⁸⁹ Unless otherwise noted, estimated cost or hours estimates for small and large live poultry dealers are the same.

⁸⁷ The Small Business Administration (SBA) defines small businesses by their North American Industry Classification System Codes (NAICS). Live poultry dealers, NAICS 311615, are considered small businesses by SBA if they have fewer than 1,250 employees.

for most LPDs. AMS does not have sufficient data to predict whether the presumption of unfairness based on 25 percent performance-based grower pay will cause any LPDs to make substantial changes to grower compensation structures. The policies and procedures that LPDs would be required to develop in response to final § 201.110 are expected to result in formalization, in many cases, of existing practices LPDs are currently following, albeit sporadically or inconsistently. Nearly all of the information and records required for disclosure to growers under final § 201.112 are already kept by and/or available to LPDs.

Although LPDs will need to take several actions to comply with new requirements under final §§ 201.106, 110, and 112, these provisions are not expected to require LPDs to substantially change their existing business practices. The exception to this would occur if some LPDs currently exceed the 25 percent presumption of unfairness on performance-based grower compensation set by § 201.106(b) and will be unable to comply without substantial changes. The changes to comply would result in indirect costs. Non-quantifiable potential indirect costs to LPDs who exceed the 25 percent presumption of unfairness on performance-based grower compensation will be discussed separately within this section. AMS expects total direct costs of adjustments, contract modifications, records creation, and compliance under the final rule to be small relative to the overall size of the industry.

AMS also estimates the amount of time that growers would take to review the information provided to them by LPDs. Estimates of the amount of time required by LPDs to modify existing contracts, develop and comply with new policies, and collect and distribute required information, and for growers to review the information were provided by AMS subject matter experts. These experts were supervisors and auditors with many years of experience with AMS in auditing LPDs for compliance with the Packers and Stockyards Act. Estimates for the value of time are U.S. Bureau of Labor Statistics Occupational Employment and Wage Statistics estimates released May 2023 and costs are therefore expressed in 2023 dollars.⁹⁰ Throughout the discussion that follows, “first year” costs refers to costs that are estimated to be incurred

during the 12 months immediately preceding the effective date of the rule.

Direct Costs of Final § 201.106—Preferred Alternative

Under final § 201.106(a), LPDs will be required to redefine grower payment calculation systems as appropriate to express all payments in the form of bonuses added to a stated pay rate. AMS expects that existing schedules of grower payments can be recreated such that they comply with this final rule change. Existing LPD methods of grower payment calculation can be expressed in an alternative format that includes only bonus adjustments added to from an existing minimum pay rate. AMS expects that most LPDs will be required to make one-time changes to existing grower contracts and develop new payment systems that are consistent with these provisions. This process will also include producing and filing grower documents and communicating information about the new contract and payment system to growers and staff at each complex.

AMS estimates that the aggregate one-time costs to LPDs of updating grower contracts and developing new grower payment systems, including modifying information systems to include new calculations as well as filing, and reporting to comply with final § 201.106(a), will require 17,664 legal hours,⁹¹ 57,750 management hours, 7,360 administrative hours, and 7,360 information technology hours, costing a total of \$9,106,000⁹² in the first year.⁹³

Once LPDs have incurred a one-time cost of developing, documenting, and communicating new contracts and a new system of grower payments, AMS does not expect additional ongoing costs of implementing final § 201.106(a).

⁹¹ Small live poultry dealers are estimated to require 50% as many legal hours as large live poultry dealers on a per company basis for one-time cost of developing § 201.106 one-time changes to grower contracts and payment systems.

⁹² 17,664 legal hours × \$139.96 per hour + 57,750 management hours × \$96.40 per hour + 7,360 administrative hours × \$49.36 per hour + 7,360 information technology hours × \$95.58 per hour = \$9,106,112.

⁹³ Average hourly wage rates used to estimate dealer costs include a 41.79% markup for benefits and are as follows: Management—\$96.40, Legal—\$139.96, Administrative—\$49.36, and Information Technology—\$95.58. Hourly wage rates were established using the following BLS classifications for each labor category as follows (NAICS Code—OCC code—OCC Title): Management (3116—11—1020—General and Operations Managers) for live poultry dealers’ managers, Legal (3110—23—1011—Lawyers) for attorneys for live poultry dealers and for growers, Administrative (3116—43—6011—Executive Secretaries and Executive Administrative Assistants) for live poultry dealers’ administrative assistants, and Information Technology (3116—11—3020—Computer and Information Systems Managers) for information technology managers.

Once in place, new provisions and modifications resulting from this one-time update are not expected to lead to an increase in costs associated with the ongoing maintenance and updating of grower contracts that would occur in the normal course of business.

Final § 201.106(b) establishes a presumption of unfairness when, for a given complex, aggregate payments based upon a grouping, ranking, or comparison of growers (performance pay) exceed 25 percent of gross payment to growers on an annual basis. LPDs will need to analyze grower compensation structures at the complex-level and calculate annual performance-based grower compensation as a percentage of total compensation to ensure compliance with the 25 percent presumption established by final § 201.106(b). LPDs may choose to re-design and modify existing compensation structures where greater than 25 percent of the total grower compensation is based on performance pay. These LPDs may choose to create processes for monitoring compliance on an ongoing basis. Modifications to grower compensation structures will need to be incorporated into broiler contracts and communicated to growers.

AMS estimates that the aggregate one-time costs to LPDs of examining and evaluating existing grower compensation structures and making modifications as required to ensure ongoing compliance with final § 201.106(b), will require 7,360 legal hours, 52,500 management hours, 7,306 administrative hours, and 14,720 information technology hours, costing a total of \$7,861,000 in the first year.⁹⁴

LPDs will implement and maintain processes for monitoring ongoing compliance with § 201.106(b). AMS expects these annual ongoing costs to require in aggregate 736 legal hours, 5,250 management hours, 736 administrative hours, and 1,472 information technology hours for an aggregate annual cost of \$786,000.⁹⁵

Final § 201.106(c) requires that for each of the three calendar years commencing with and including the effective date for § 201.106, LPDs must submit to USDA a copy of the prior and modified contracts and associated disclosures if any contract modification

⁹⁴ 7,360 legal hours × \$139.96 per hour + 52,500 management hours × \$96.40 per hour + 7,360 administrative hours × \$49.36 per hour + 14,720 information technology hours × \$95.58 per hour = \$7,861,333.

⁹⁵ 736 legal hours × \$139.96 per hour + 5,250 management hours × \$96.40 per hour + 736 administrative hours × \$49.36 per hour + 1,472 information technology hours × \$95.58 per hour = \$786,133.

⁹⁰ See U.S. Bureau of Labor Statistics, *May 2023 National Occupational Employment and Wage Estimates*, May 2023. <https://www.bls.gov/oes/special.requests/oesm23all.zip>.

or renewal results in less than the prior annual-calendar year's complex-wide average gross payment to the grower. LPDs will be required to monitor changes in average annual gross payments to growers at the complex and, if necessary, provide documentation.

AMS does not expect any costs to LPDs in the first year in response to § 201.106(c). For each of the three calendar years following the effective date, LPDs will monitor grower compensation and submit any necessary documentation on an annual basis. AMS expects these annual ongoing costs to require in aggregate 736 legal hours, 5,250 management hours, 736 administrative hours, and 1,472 information technology hours for an aggregate annual cost of \$786,000.⁹⁶

Final § 201.106 concerns potential changes to the method of payment calculation and compensation structure used in grower tournament settlement systems. LPDs will provide new contracts that include these updated provisions for review by broiler growers. AMS expects that the first time a grower receives a new contract containing these modifications, he or she will require about 4 hours to review and consider all new terms and provisions. At \$62.13 per hour,⁹⁷ the total one-time cost for all broiler growers to review the new contract is \$4,974,000.⁹⁸ AMS expects that the updated contract provisions and payment systems developed by LPDs pursuant to § 201.106 will not contribute to additional ongoing contract review time by growers beyond an initial one-time review. Therefore, no ongoing future costs of grower contract review have been included for § 201.106. The ten-year aggregate total costs of final § 201.106 to LPDs are estimated to be \$26,401,000, the ten-year aggregated total costs of final § 201.106 to poultry growers are estimated to be \$4,974,000, and the combined ten-year aggregate total costs of final § 201.106 to LPDs and poultry growers are estimated to be \$31,375,000.

Unquantified Indirect Costs of § 201.106—Preferred Alternative

Many factors will affect the costs to LPDs of changing existing compensation

structures to comply with a 25 percent presumption as defined in § 201.106(b). The scope of comprehensive data that would be required for AMS to accurately measure and quantify these costs makes collection of sufficient data infeasible if such exists. Further, the nature of these costs will depend on future choices made by industry participants that cannot be predicted with reasonable certainty. The potential indirect costs—other than those direct administrative costs which are quantified separately—will be discussed qualitatively in this section.

If LPDs substantively modify existing structures of grower compensation to reduce performance-based compensation to less than 25 percent of total grower compensation, additional costs must be considered. The likelihood and magnitude of these additional indirect costs will depend on the number of complexes that will modify existing compensation structures as a result of § 201.106(b), the extent of those modifications, and resulting cost increases.

As discussed in the benefits section, AMS does not have sufficient data to make an inference on the number of complexes that will reduce performance payments relative to total payments or the magnitude of any reductions that will be required. As previously discussed, at four complexes, aggregate performance payments were 11.4, 17.4, 20.5, and 25.4 percent of total grower payments. AMS is not aware of any complex with performance payments that are as much as 26 percent of total payments, and it is possible that no complex will reduce performance payments relative to total payments by a substantial amount to avoid the presumption of unfairness established in final § 201.106(b).

To the extent that the complexes AMS reviewed are representative of the other complexes owned by the same firms, two or possibly three of the firms would likely already be in compliance with final § 201.106(b). And due to the Wayne-Sanderson Farms consent agreement with U.S. Department of Justice, it is unlikely that the regulation will have an effect on Wayne-Sanderson's existing contracts. Therefore, it is unlikely that the presumption of unfairness on performance payments will have any effect on these firms, which combined account for up to 35 percent of broiler complexes. It is possible that at other firms, performance payment makes up less than 25 percent of total payments as well, but AMS does not have sufficient information to confirm this with a reasonable degree of confidence.

Conceptually, where firms modify existing grower compensation structures at a complex in response to this rule, if reductions in performance-based payments relative to total payments adversely affect grower performance incentives and cause growers to produce broilers less efficiently, that could result in increased production costs for the firms. In general, the "tournament" system of broiler grower compensation bases payments to individual growers on their performance relative to other growers. Performance payments provide an incentive for growers to optimize factors under their control, such as effort and management, and to some extent investment (subject to the concerns around investments highlighted by this rule), to improve their own relative performance efficiency and increase income. The strength of individual performance incentives is related to the size of expected (potential) grower performance payments, which will be limited by the total amount of performance-based pay distributed among all growers. The effectiveness of incentives is also limited by the extent to which the grower can control performance. Decreasing the relative size of performance payments available to all growers at a complex might, at or above a certain level, in theory, therefore weaken performance incentives of individual growers and could result in reduced overall grower efficiency in broiler production.

AMS has no reason to believe that the 25 percent presumption adopted in this final rule would significantly change incentives. As noted above, the third largest LPD is already in compliance with the provision and some LPDs do not use the tournament system. No evidence was produced by commenters regarding the level of tournament compensation needed to optimize grower performance. Other factors, including inputs and production practices, the level of prudence and professionalism of growers, their risks of termination, and non-comparison performance payments can, for example, provide incentives for growers. Additionally, LPDs already closely monitor grower performance with a range of information they already have. Finally, the concern arises only if both the 25 percent presumption would affect incentives and if an LPD could not otherwise overcome the presumption.

AMS cannot rule out the possibility that incentives may be affected, and AMS is unable to predict specific effects with certainty. Were production efficiency in some manner to be

⁹⁶ 736 legal hours × \$139.96 per hour + 5,250 management hours × \$96.40 per hour + 736 administrative hours × \$49.36 per hour + 1,472 information technology hours × \$95.58 per hour = \$786,133.

⁹⁷ The average hourly wage rate of \$62.13 per hour used to estimate costs for a poultry grower includes a 41.79% markup for benefits. The wage rate was established using BLS classification (1152—11—0000—Management Occupations).

⁹⁸ 4 hours to review each disclosure × \$62.13 per hour × 20,014 contracts = \$4,973,879.

reduced, economic principles suggest that cost of production would increase, causing an inward shift of a firm's marginal cost curve and that those costs could be passed on to consumers. Increases in cost structures could, under that same hypothetical, affect demand for broiler growing services in certain areas, for example possibly resulting in LPDs terminating some marginal growers. As noted above, based on the regulatory record and the Agency's expert judgment based on the information and data available to AMS during the rulemaking process, AMS does not view these outcomes as likely to any material degree.

Furthermore, LPDs have tools to incentivize grower effort that would partially or entirely avoid the risks outlined above. LPDs may shift some performance pay to non-comparison methods, such as fixed metric performance or to other innovative systems, which could retain the incentives where necessary and appropriate. Other LPDs, however, may believe that the performance incentive delivered by the tournament is misplaced given the particularities of their business model or the type of bird being grown at a complex (*e.g.*, growout of "no antibiotics ever" may require different incentives and management than commoditized product). Depending on the needs of the complex, LPDs may seek to utilize technology, training, or other approaches to improve outcomes, thus reducing the need to utilize higher magnitudes of performance payments.

LPDs currently use many variations of relative performance compensation systems at broiler complexes and some LPDs do not use tournament performance compensation systems. This suggests that that setting comparison pay above 25 percent is not the only way to optimize incentives for all complexes, growers, or circumstances. AMS does not have data for every payment structure currently in use. Limited data analysis from the small sample of complexes described above shows that performance compensation at a number of complexes is less than 25 percent of total pay. This suggests that regulated entities can optimize incentives without setting comparison performance pay above 25 percent. Ultimately, AMS does not expect that LPDs will choose to abandon the tournament compensation system entirely as a result of this regulation and does not expect materially adverse effects on production efficiency.

Final § 201.106(c) requires that within a three-year transition period following the effective date, LPDs must provide

the prior and modified contracts and grower disclosures if complex-wide average gross payment to growers falls below the level of the prior calendar year. AMS considered that LPDs could face additional costs if they were prevented from lowering grower compensation for a three-year period and were not able to adjust payment structures to meet challenging and unforeseen industry conditions in the broiler industry. For example, a sharp decline in broiler demand or other type of event disrupts the broiler industry could potentially create conditions in which aggregate average grower compensation at a complex temporarily falls below its level in the prior year.

In analyzing information submitted by LPDs, AMS will consider all relevant factors, including industry conditions, when investigating unfairness. As a result, AMS expects that LPDs will be constrained only from unfair reductions in grower compensation and will not be prevented from adjustments to grower compensation that reflect legitimate business operations, such as responding to a decline in broiler demand or higher feed costs. In addition, the tendency for base levels of year over year inflation to naturally erode real grower compensation will also attenuate the need for nominal decreases. Given the restructuring of how payment calculation methods and compensation structures will be presented to growers as LPDs comply with § 201.106(a), review and analysis of documentation by AMS under this provision will focus on the unfair reductions in compensation resulting from contract modification which this provision is intended to prevent. Therefore, AMS does not expect additional costs for LPDs as a result of § 201.106(c) beyond the direct administrative costs of assessing and monitoring revised payment systems for potential reductions in grower compensation and providing documentation when required as explicitly described in the previous section.

Direct Costs of Final § 201.110—Preferred Alternative

Final § 201.110 will require LPDs to develop, maintain and comply with a set of policies and procedures that ensure the operation of a poultry grower ranking system that is consistent with the duty of fair comparison among growers, including describing processes for supplying or assigning inputs and production practices, communication and cooperation, and facilitating the conduct of ongoing compliance reviews with those processes.

Final § 201.110(a) and (b)(1)(i) through (v) describe objectives and minimum requirements for written documentation of processes, including how LPDs will operate poultry grower ranking systems that are consistent with the duty of fair comparison. Information obtained during previous AMS investigations suggests that LPDs may already have some informal policies and practices or perhaps even some contract provisions in place to address and attempt to remedy situations in which growers have been inadvertently disadvantaged by such factors. For example, AMS is aware of situations where an LPD has removed a grower that received an unreasonable share of lower quality inputs from the grower pool and paid them by another method that would not penalize relative performance (*e.g.*, a five-flock average). Under final § 201.110(a) and (b)(1)(i) through (v), all LPDs will be required to develop formal written processes that meet specific criteria outlined in the regulation.

AMS estimates that the one-time aggregate cost of developing new policies and procedures in response to final § 201.110(a) and (b)(1)(i) through (v) for LPDs will require 4,128 legal hours, 28,500 management hours, 1,472 administrative hours, and 1,472 information technology hours, costing a total of \$3,539,000 in the first year.⁹⁹ Due to differences in their structure, estimates for small LPDs were calculated with the expectation that they would employ relatively fewer legal (attorney) hours that are offset by a larger share of management hours.¹⁰⁰

LPDs will implement, monitor, and comply with new written processes for the design and operation of a poultry grower ranking system that is consistent with the duty of fair comparison; they will also maintain and update these written processes. AMS expects these annual ongoing costs to require in aggregate 1,400 legal hours,¹⁰¹ 28,336 management hours which include renewing and updating written processes at the corporate level as well as monitoring activities conducted by

⁹⁹ 4,128 legal hours × \$139.96 per hour + 28,500 management hours × \$96.40 per hour + 1,472 administrative hours × \$49.36 per hour + 1,472 information technology hours × \$95.58 per hour = \$3,538,507.

¹⁰⁰ Small live poultry dealers are estimated to require 33% as many legal hours and 133% as many management hours as large live poultry dealers on a per-complex basis for one-time cost of developing § 201.110 tournament fairness policies and procedures.

¹⁰¹ Small live poultry dealers are estimated to require 50% as many legal hours as large live poultry dealers on a per-complex basis in ongoing compliance and maintenance of § 201.110 tournament fairness policies and procedures.

managers at each complex to ensure ongoing compliance, 736 administrative hours, and 736 information technology hours for an aggregate annual cost of \$3,034,000.¹⁰²

Final § 201.110(b)(1)(vi) requires that the written processes developed must include a description of how LPDs communicate and cooperate to resolve grower concerns in a timely fashion. AMS expects that the aggregate one-time cost to LPDs of setting up communications and cooperation protocol and implementing them in the first year will require 840 legal hours, 546 management hours, 168 administrative hours, and 336 information technology hours¹⁰³ for an aggregate one-time cost of \$211,000.¹⁰⁴

Final § 201.110(b)(2) states the length of time for retaining the records relevant to an LPD's compliance with final § 201.110(b)(1) and (2). AMS considered record retention when estimating costs for final § 201.110(b)(1) and final § 201.110(b)(2) does not impose any costs independently.

AMS expects the ongoing annual costs after the first year of implementing written processes regarding communication, cooperation, and dispute resolution policies and procedures described in final § 201.110(b)(1)(vi) to require, in aggregate, 336 legal hours, 168 management hours, 84 administrative hours, and 84 information technology hours for an aggregate annual cost of \$75,000.¹⁰⁵

Written processes developed by LPDs are for internal use, to be complied with and maintained, to be provided to AMS, and as part of ongoing compliance monitoring. Under final § 201.110, LPDs are not required to provide additional disclosures to contract growers. Therefore, final § 201.110 will not impose any additional one-time or ongoing costs on growers to review

additional disclosures, and total grower costs of final § 201.110 are zero.

The ten-year total costs of final § 201.110 to all 42 live broiler poultry dealers are estimated to be \$31,736,000. Since expected grower costs for this section are zero, these also represent the total aggregate costs of § 201.110.

Direct Costs of Final § 201.112—Preferred Alternative

The new provisions in final § 201.112 will require LPDs to provide a Capital Improvement Disclosure Document any time the LPD requests existing broiler chicken growers to make an additional capital investment (\$12,500 or more per structure excluding maintenance or repair). The Capital Improvement Disclosure Document must include information about the goal or purpose of the investment, financial incentives and compensation for the grower associated with the additional capital investment, all schedules and deadlines for the investment, a description of changes to housing specifications, and analysis of projected returns.

Final § 201.112 will require LPDs to create a Capital Improvement Disclosure Document when new capital investments are required of growers. Based on information provided by subject matter experts, AMS estimates that capital upgrades will be required at 5 percent of complexes each year, triggering creation of a new disclosure document for approximately 5 percent of growers annually. Therefore, AMS estimates the annual cost of creating disclosures for additional requested grower capital investment will require 74 legal hours, 368 management hours, 74 administrative hours, and 92 information technology hours to create and provide a Capital Improvement Disclosure Document for all growers requiring additional capital improvement upgrades, for an aggregate annual cost of \$58,000.¹⁰⁶

With the exception of acknowledging receipt, the final rule will not impose any requirement on poultry growers to review the information provided by LPDs, but to benefit from the Capital Improvement Disclosure Document, growers will need to review the information provided. For final § 201.112, AMS expects that growers will take about four hours to review these documents when they are disclosed as part of a capital improvement request or requirement by the LPD. LPDs will be required to

provide disclosures to growers for any of 20,014 contracts for which additional capital investment requests are made.¹⁰⁷ AMS expects that LPDs will make additional capital investment requests for an average of 5 percent of grower contracts annually. At an estimated 4 hours of grower review time per disclosure at \$62.13 per hour, growers' aggregate annual costs will be \$249,000¹⁰⁸ for reviewing documents required by § 201.112 in the first year and in each successive year.

The ten-year aggregate total costs of final § 201.112 to LPDs are estimated to be \$582,000, the ten-year aggregated total costs of final § 201.112 to poultry growers are estimated to be \$2,487,000, and the combined ten-year aggregate total costs of final § 201.112 to LPDs and poultry growers are estimated to be \$3,069,000.

Unquantified Indirect Costs of § 201.112—Preferred Alternative

If AMS enforcement of final § 201.112 has the effect of preventing broiler growers from making unprofitable additional capital investments (those for which individual grower returns do not exceed costs), then such decisions to forgo investment will likely result in fewer benefits for LPDs, and more for growers. Because LPDs benefit from any productivity gain created by grower investments, whether or not the investment is profitable for the grower in the long-run, LPDs will not receive these benefits if additional information provided under this provision causes growers to avoid additional capital investments that they deem to be unprofitable and inefficient for their operation. AMS is not able to quantify these lost benefits to LPDs. They represent costs to LPDs, but these costs are at least partly offset by gains (or avoided losses) for growers. In addition, to the degree that an additional capital investment requires over-investment, eliminating it benefits society. Over-investment occurs when the cost of the investment exceeds the total value it generates (in terms of increased grower productivity, production cost efficiency, etc.) and the investment resources would be more productively employed in other ways. The benefits to growers and society of avoiding such investments would exceed the losses to LPDs.

¹⁰² 1,400 legal hours × \$139.96 per hour + 28,336 management hours × \$96.40 per hour + 736 administrative hours × \$49.36 per hour + 736 information technology hours × \$95.58 per hour = \$3,034,210.

¹⁰³ Small live poultry dealers are estimated to require 50% as many legal hours and 125% as many management hours, and 50% as many information technology hours as large live poultry dealers on a per company basis for one-time cost of developing § 201.110 communication, cooperation, and dispute resolution policies and procedures.

¹⁰⁴ 840 legal hours × \$139.96 per hour + 546 management hours × \$96.40 per hour + 168 administrative hours × \$49.36 per hour + 336 information technology hours × \$95.58 per hour = \$210,608.

¹⁰⁵ 336 legal hours × \$139.96 per hour + 168 management hours × \$96.40 per hour + 84 administrative hours × \$49.36 per hour + 84 information technology hours × \$95.58 per hour = \$75,397.

¹⁰⁶ 74 legal hours × \$139.96 per hour + 368 management hours × \$96.40 per hour + 74 administrative hours × \$49.36 per hour + 92 information technology hours × \$95.58 per hour = \$58,203.

¹⁰⁷ Live poultry dealers reported a combined total of 20,014 contracts for their fiscal year 2023.

¹⁰⁸ 4 hours to review each disclosure × \$62.13 per hour × 20,014 contracts × 5 percent of growers that require significant housing upgrades = \$248,694.

Combined Costs of Final §§ 201.106, 110, and 112—Preferred Alternative

Combined costs to LPDs for final §§ 201.106, 110, and 112 are expected to be \$20,775,000 in the first year, \$4,740,000 in years two through four, and \$3,954,000 in subsequent years thereafter. Information collection costs are also reported in the Paperwork Reduction Act section as the combined costs to LPDs for compliance with the reporting and recordkeeping requirements of final §§ 201.106, 110, and 112. The combined costs for poultry growers are expected to be \$5,223,000 in the first year and \$249,000 in subsequent years.

The ten-year aggregate combined costs of final §§ 201.106, 110, and 112 to LPDs are estimated to be \$58,719,000 and the present value of the ten-year total costs to be \$54,230,000 discounted at a two percent rate. The annualized aggregate combined costs of the present value (PV) of ten-year costs to LPDs discounted at a two percent rate are expected to be \$6,037,000.

The ten-year aggregate combined costs of final §§ 201.106, 110, and 112 to poultry growers are estimated to be \$7,461,000 and the present value of the ten-year total costs to be \$7,110,000 discounted at a three percent rate. The annualized aggregate combined costs of

the PV of ten-year costs to poultry growers discounted at a three percent rate are expected to be \$792,000.

The ten-year aggregate combined costs of final §§ 201.106, 110, and 112 to LPDs and poultry growers are estimated to be \$66,179,000 and the present value of the ten-year aggregate combined costs to be \$61,341,000 discounted at a two percent rate. The annualized aggregate costs of the PV of ten-year costs to LPDs and poultry growers discounted at a two percent rate are expected to be \$6,829,000. The cost estimates of final §§ 201.106, 110, and 112 presented above appear in the following table.

TABLE 1—ESTIMATED COSTS OF FINAL §§ 201.106, 110, AND 112—PREFERRED ALTERNATIVE

Preferred alternative	Expected costs *		
	Live poultry dealers	Poultry growers	Industry total
§ 201.106:			
First-Year	\$16,968,000	\$4,974,000	\$21,941,000
Ten-Year Total	26,401,000	4,974,000	31,375,000
PV of Ten-Year Discounted at 2%	25,148,000	4,876,000	30,025,000
Ten-Year Annualized at 2%	2,800,000	543,000	3,343,000
§ 201.110:			
First-Year	3,749,000	0	3,749,000
Ten-Year Total	31,736,000	0	31,736,000
PV of Ten-Year Discounted at 2%	28,559,000	0	28,559,000
Ten-Year Annualized at 2%	3,179,000	0	3,179,000
§ 201.112:			
First-Year	58,000	249,000	307,000
Ten-Year Total	582,000	2,487,000	3,069,000
PV of Ten-Year Discounted at 2%	523,000	2,234,000	2,757,000
Ten-Year Annualized at 2%	58,000	249,000	307,000
§§ 201.106, 110, and 112:			
First-Year	20,775,000	5,223,000	25,997,000
Ten-Year Total	58,719,000	7,461,000	66,179,000
PV of Ten-Year Discounted at 2%	54,230,000	7,110,000	61,341,000
Ten-Year Annualized at 2%	6,037,000	792,000	6,829,000

* Rows may not sum to Total Costs due to rounding.

Estimated Costs-and Expected Benefits of Final §§ 201.106, 110, and 112—Preferred Alternative

The value of broiler production in the U.S. for 2023 was approximately \$50.6 billion.¹⁰⁹ Total direct costs of final §§ 201.106, 110, and 112 are estimated to be greatest in the first year at \$26.0 million, or 0.051 percent of revenues. A relatively small improvement in efficiency from improved allocation of capital and labor resources in the industry would more than outweigh the direct costs of this final rule. A reduction in information asymmetry (resulting in more useful information provided to growers), grower uncertainty and risk of potential adverse outcomes, and retaliatory and deceptive practices by LPDs will lead to benefits

resulting from the final rule. The size of benefits will be directly related to the extent of these reductions. AMS expects that the final rule will provide substantial benefits the industry and address issues of extreme importance to broiler growers. However, these benefits are not quantifiable. Benefits and costs are summarized below for each provision of the rule.

Final § 201.106(a) benefits broiler growers by requiring LPDs to implement payment structures that increase clarity and certainty about the lowest possible revenue outcomes under a growing arrangement. LPDs are expected to incur one-time direct costs of developing, documenting, and communicating new contracts and a new system of grower payments and no additional ongoing costs. Since most LPDs currently employ payment structures that allow for both bonuses and discounts, AMS

expects these costs to be realized by LPDs at most complexes and the corresponding benefits to be realized by the vast majority of broiler growers.

Final § 201.106(b) establishes a presumption of unfairness when the amount of total grower compensation based on relative performance exceeds 25 percent and thereby protects growers from excess income variability. Some growers at complexes where LPDs modify compensation structures to reduce the percentage of grower pay based on relative performance may benefit from reductions in the variability of their income. The distribution of benefits is likely to be unequal, such that increases in compensation for some growers may correspond with decreases in performance-based compensation for other growers.

¹⁰⁹ USDA—NASS. Poultry—Production and Value 2023 Summary (April 2024).

In addition to direct costs to LPDs of implementing the rule, § 201.106(b) could result in additional indirect costs to broiler industry stakeholders (including LPDs, consumers, and growers) if LPDs modify existing compensation structures in ways that adversely affect grower incentives and lead to increased production costs. The magnitude of benefits and costs resulting from § 201.106(b) will depend on two important factors that cannot be measured or predicted with a reasonable degree of certainty: the number of broiler complexes that will modify existing compensation structures as a result of final § 201.106(b) and the manner in which those change will be implemented by LPDs. If few or no complexes make substantial modifications to existing compensation structures as a result of § 201.106(b), the resulting benefits to growers of reduced income variability and the indirect costs to the broiler industry will be small. All broiler growers will nonetheless benefit from ongoing protection against future increases in performance-based pay variability and reductions in base pay amounts.

Growers will benefit from additional protections under § 201.106(c) that require LPDs to submit prior and modified contracts if contract modifications result in reduced average grower compensation during a three-year transition period. This requirement will facilitate AMS monitoring and intervention, when necessary, to protect growers from unfair treatment. AMS does not expect indirect costs to broiler industry stakeholders. AMS expects the benefits of § 201.106(c) will accrue to all broiler growers and the direct costs of implementation over the three-year transition period will apply to all LPDs.

By requiring that LPDs design and operate poultry grower ranking systems to provide a fair comparison among growers, final § 201.110 will benefit broiler growers through increased fairness and reduced deception. All broiler growers will benefit to the degree that this provision improves fairness and reduces deception within poultry grower ranking systems. The direct costs of implementing and maintaining compliance with § 201.110 will be incurred by all LPDs, and AMS does not expect any other indirect costs of this provision.

Disclosures concerning additional capital investments required by final § 201.112 will provide broiler growers with better information to make financial decisions and reduce the likelihood the LPDs can deceive or mislead growers. Growers will also benefit to the extent that this

requirement provides information that facilitates improved identification and enforcement of violations under § 201.116. LPDs will incur direct costs of preparing and distributing disclosures when additional capital investments are requested by the LPD. The provision could also cause some transfer of benefits from LPDs to growers if the provision causes growers to avoid making unprofitable investments that would have benefited the LPD more than the grower.

Net total costs and benefits to the industry from final §§ 201.106, 110, and 112 cannot be quantified. Thus, AMS cannot measure any impact or shift in total industry supply or any corresponding indirect effects on industry supply and demand, including price and quantity effects.

Estimated Costs and Expected Benefits of the Small Business Exemption Alternative

AMS estimated costs for an alternative to the preferred option for the final rule. It would be the same as final §§ 201.106, 110, and 112, with the exception that the alternative would exempt LPDs that fall under the SBA definition of small businesses from all provisions of the two final rules. In the preferred alternative, the requirements in final §§ 201.106, 110, and 112 would apply to all LPDs, including those classified as small businesses.

The costs associated with this alternative are similar, but smaller than the preferred option. According to PSD records, small LPDs make up 50.0 percent of all LPDs, but have only 6.0 percent of poultry growing contracts. The estimation of the costs of the small business exemption alternative will follow the same format as the preferred alternative.

Costs of Final § 201.106—Small Business Exemption Alternative

AMS estimates that the aggregate one-time costs to LPDs of updating grower contracts and developing new grower payment systems, including modifying information systems to include new calculations as well as filing, and reporting to comply with final § 201.106(a), will require 15,936 legal hours, 54,780 management hours, 6,640 administrative hours, and 6,640 information technology hours, costing a total of \$8,474,000 in the first year under the small business exemption alternative. Once LPDs have incurred a one-time cost of developing, documenting, and communicating new contracts and a new system of grower payments, AMS does not expect additional ongoing costs of

implementing final § 201.106(a) under the small business exemption alternative.

AMS estimates that the aggregate one-time costs to LPDs of examining and evaluating existing grower compensation structures and making modifications as required to ensure ongoing compliance with final § 201.106(b), will require 6,640 legal hours, 49,800 management hours, 6,640 administrative hours, and 13,280 information technology hours, costing a total of \$7,327,000 in the first year under the small business exemption alternative.

LPDs will monitor, maintain and comply with the processes for examining excessive variability. AMS expects these annual ongoing costs to require in aggregate 664 legal hours, 4,980 management hours, 664 administrative hours, and 1,328 information technology hours for an aggregate annual cost of \$733,000 under the small business exemption alternative.

AMS does not expect any cost in the first year to set up and implement a plan in response to § 201.106(c). For each of the three calendar years following the effective date for § 201.106, AMS expects these annual ongoing costs to require in aggregate 664 legal hours, 4,980 management hours, 664 administrative hours, and 1,328 information technology hours for an aggregate annual cost of \$733,000 under the small business exemption alternative.

For final § 201.106(a), AMS expects that growers will take about 4 hours to review new contract terms and provisions when they are provided in the first year. At \$62.13 per hour, the total one-time cost for all broiler growers to review the new contract under the small business exemption alternative is \$4,674,000.¹¹⁰ AMS expects that the updated contract provisions and payment systems developed by LPDs pursuant to final § 201.106 (a) would not contribute to additional ongoing contract review time by growers beyond an initial one-time review. Therefore, no ongoing future costs of grower contract review are included.

The ten-year aggregate total costs to LPDs of final § 201.106 under the small business exemption alternative are estimated to be \$24,593,000, the ten-year aggregate total costs to broiler growers of final § 201.106 for the small business exemption alternative are estimated to be \$4,674,000, and the first-

¹¹⁰ 4 hours to review each disclosure × \$62.13 per hour × 18,806 contracts = \$4,673,667.

year and ten-year aggregate total costs to LPDs and poultry growers of final § 201.106 for the small business exemption alternative are estimated to be \$29,267,000.

Unquantified Indirect Costs of § 201.106—Small Business Exemption Alternative

AMS expects that indirect costs resulting from § 201.106(b) and (c) for the small business exemption alternative will be nearly identical to those discussed for the preferred alternative, with the only difference being the number of complexes potentially affected. In particular, small LPDs would be exempt from the presumption of unfairness under § 201.106(b) and will not incur indirect costs from modifying grower compensation structures to reduce the percentage of performance-based compensation for a complex below the presumptively unfair 25 percent of total compensation. The 10 percent of complexes that would be exempted from the regulation under this alternative are small by definition. AMS does not have access to data that would suggest whether these small LPD complexes are any more or less likely to require modifications to existing grower compensation structures that result in indirect costs than other complexes. Indirect costs for the small business exemption alternative could only be equal to or less than the preferred alternative but cannot be quantified for the same reasons.

Direct Costs of Final § 201.110—Small Business Exemption Alternative

AMS estimates that the one-time aggregate cost of developing new policies and procedures in response to final § 201.110(a) and (b)(1)(i) through (v) for LPDs will require 3,984 legal hours, 24,900 management hours, 1,328 administrative hours, and 1,328 information technology hours, costing a total of \$3,150,000 in the first year for the small business exemption alternative.

After new written processes have been developed, LPDs would be required to implement, monitor, and comply and to maintain and update them. AMS expects these annual ongoing costs for the small business exemption alternative to require in aggregate 1,328 legal hours, 25,564 management hours which include renewal and updating of written processes at the corporate level as well as monitoring activities conducted by managers at each complex to ensure ongoing compliance, 664 administrative hours, and 664 information technology

hours for an aggregate annual cost of \$2,746,000.¹¹¹

Final § 201.110(b)(1)(vi) requires that the written processes developed must include a description for how the LPD would resolve a grower's concerns with the LPD's design or operation of a poultry grower ranking system that is consistent with the duty of fair comparison that is required by this section, including the timeliness of the resolution. AMS expects that the aggregate one-time cost to LPDs of setting up communications and complaint resolution processes as described in § 201.110(b)(1)(vi) for the small business exemption alternative will require 504 legal hours, 252 management hours, 84 administrative hours, and 210 information technology hours for an aggregate one-time cost of \$119,000.¹¹²

Costs associated with final § 201.110(b)(2), "Record retention," are included in cost estimates for final § 201.110(b)(1). AMS expects that this section does not incur any additional costs.

AMS expects the ongoing annual costs of implementing communications and complaint resolution processes as described in § 201.110(b)(1)(vi) to require, for the small business exemption alternative, in aggregate, 168 legal hours, 84 management hours, 42 administrative hours, and 42 information technology hours for an aggregate annual cost of \$38,000.¹¹³ Because final § 201.110 does not require LPDs to provide additional disclosures to contract growers, final § 201.110 would not impose any additional one-time or ongoing costs on growers to review additional disclosures, and total grower costs of final § 201.110 are also zero under the small business exemption alternative.

The ten-year total costs of final § 201.110 to the 50.0 percent of live broiler poultry dealers impacted under the small business exemption alternative are estimated to be \$28,327,000. Since expected grower costs for this section are zero, these also represent the total aggregate costs of final § 201.110.

¹¹¹ 1,328 legal hours × \$139.96 per hour + 25,564 management hours × \$96.40 per hour + 664 administrative hours × \$49.36 per hour + 664 information technology hours × \$95.58 per hour = \$2,746,477.

¹¹² 504 legal hours × \$139.96 per hour + 252 management hours × \$96.40 per hour + 84 administrative hours × \$49.36 per hour + 210 information technology hours × \$95.58 per hour = \$119,051.

¹¹³ 168 legal hours × \$139.96 per hour + 84 management hours × \$96.40 per hour + 42 administrative hours × \$49.36 per hour + 42 information technology hours × \$95.58 per hour = \$37,698.

Direct Costs of Final § 201.112—Small Business Exemption Alternative

Final § 201.112 would require LPDs to create a Capital Improvement Disclosure Document when new capital investments are requested of growers. Based on information provided by subject matter experts, AMS estimates a five percent annual average probability that capital improvement upgrades will be required for growers at a complex, which would trigger creation of a new Disclosure Document. Therefore, AMS estimates the annual ongoing cost of creating Capital Improvement Disclosure Documents for the small business exemption alternative will require 66 legal hours, 332 management hours, 66 administrative hours, and 83 information technology hours to create and provide Capital Improvement Disclosure Documents for all growers requiring additional capital improvement upgrades, for an aggregate annual cost of \$53,000 for the small business exemption alternative.¹¹⁴

For final § 201.112, AMS expects that growers would take about four hours to review these documents when they are disclosed as part of a capital improvement request or requirement by the LPD. For the small business exemption alternative, LPDs would be required to provide disclosures to growers for any of the 18,806 contracts for which additional capital investment requests are made.¹¹⁵ AMS expects that LPDs will make additional capital investment requests for an average of five percent of grower contracts annually. Given that growers require an estimated 4 hours at \$62.13 per hour, growers' aggregate annual costs would be \$234,000 for reviewing documents required by final § 201.112 in the first year and in each successive year for the small business exemption alternative.¹¹⁶

The ten-year aggregate total costs of final § 201.112 under the small business exemption alternative for LPDs are estimated to be \$525,000, and the ten-year aggregated total costs to poultry growers of final § 201.112 under the small business exemption alternative are estimated to be \$2,337,000. The combined first-year aggregate total costs to LPDs and poultry growers of final

¹¹⁴ 66 legal hours × \$139.96 per hour + 332 management hours × \$96.40 per hour + 66 administrative hours × \$49.36 per hour + 83 information technology hours × \$95.58 per hour = \$52,509.

¹¹⁵ Live poultry dealers that exceed SBA classification criteria for small businesses reported a combined 18,806 poultry contracts in their Annual Reports to AMS.

¹¹⁶ 4 hours to review each disclosure × \$62.13 per hour × 18,806 contracts × 5 percent of growers that require significant housing upgrades = \$233,683.

§ 201.112 under the small business exemption alternative are estimated to be \$286,000, and the ten-year aggregate total costs are estimated to be \$2,862,000.

Combined Costs of Final §§ 201.106, 110, and 112—Small Business Exemption Alternative

Aggregate combined costs to LPDs for final §§ 201.106, 110, and 112 for the small business exemption alternative are expected to be \$19,123,000 in the first year, and \$4,302,000 in subsequent years. The combined costs for poultry growers are expected to be \$4,907,000 in the first year, \$234,000 in subsequent years.

The aggregate ten-year combined quantified costs to LPDs of final §§ 201.106, 110, and 112 for the small business exemption alternative are estimated to be \$53,445,000 and the

present value of the ten-year combined costs \$49,382,000 discounted at a two percent rate. The aggregate annualized costs of the PV of ten-year costs to LPDs discounted at a two percent rate are expected to be \$5,498,000.

The aggregate ten-year combined costs to poultry growers of final §§ 201.106, 110, and 112 for the small business exemption alternative are estimated to be \$7,011,000 and the present value of the ten-year combined costs are estimated to be \$6,681,000 discounted at a two percent rate. The aggregate annualized costs of the PV of ten-year costs to poultry growers discounted at a two percent rate are expected to be \$744,000.

The aggregate combined costs of final §§ 201.106, 110, and 112 under the small business exemption alternative for LPDs and poultry growers are estimated

to be \$24,030,000 in the first year and \$4,536,000 in subsequent years. The aggregate ten-year combined costs to LPDs and poultry growers of final §§ 201.106, 110, and 112 for the small business exemption alternative are estimated to be \$60,456,000 and the present value of the ten-year combined costs are estimated to be \$56,063,000 discounted at a two percent rate. The aggregate annualized costs of the PV of ten-year costs to LPDs and poultry growers discounted at a two percent rate are expected to be \$6,241,000. The aggregate cost estimates of final §§ 201.106, 110, and 112 under the small business exemption alternative presented above appear in the following table. The quantified costs to the industry in the first year under the small business exemption alternative are \$24.030 million.

TABLE 2—ESTIMATED COSTS OF FINAL §§ 201.106, 110, AND 112—SMALL BUSINESS EXEMPTION ALTERNATIVE

SBE alternative	Expected cost *		
	Live poultry dealers	Poultry growers	Industry total
§ 201.106:			
First-Year	\$15,801,000	\$4,674,000	\$20,474,000
Ten-Year Total	24,593,000	4,674,000	29,267,000
PV of Ten-Year Discounted at 2%	23,426,000	4,582,000	28,008,000
Ten-Year Annualized at 2%	2,608,000	510,000	3,118,000
§ 201.110:			
First-Year	3,269,000	0	3,269,000
Ten-Year Total	28,327,000	0	28,327,000
PV of Ten-Year Discounted at 2%	25,485,000	0	25,485,000
Ten-Year Annualized at 2%	2,837,000	0	2,837,000
§ 201.112:			
First-Year	53,000	234,000	286,000
Ten-Year Total	525,000	2,337,000	2,862,000
PV of Ten-Year Discounted at 2%	472,000	2,099,000	2,571,000
Ten-Year Annualized at 2%	53,000	234,000	286,000
§§ 201.106, 110, and 112:			
First-Year	19,123,000	4,907,000	24,030,000
Ten-Year Total	53,445,000	7,011,000	60,456,000
PV of Ten-Year Discounted at 2%	49,382,000	6,681,000	56,063,000
Ten-Year Annualized at 2%	5,498,000	744,000	6,241,000

* Rows may not sum to Total Costs due to rounding.

Estimated Costs and Expected-Benefits of Final §§ 201.106, 110, and 112—Small Business Exemption Alternative

According to PSD records, only 6.0 percent of poultry growing contracts are between small LPDs and poultry growers. Thus, 94 percent of all poultry growers will receive the benefits of final §§ 201.106, 110, and 112 under the small business exemption alternative.

As with the preferred option, net total costs and benefits to the industry from §§ 201.106, 110, and 112 under the small business exemption alternative cannot be quantified. Thus, AMS cannot measure any impact or shift in total industry supply or any corresponding

indirect effects on industry supply and demand, including price and quantity effects.

The tables above indicate that the small business exemption alternative would cost the industry less than the preferred option. Although most growers contract with large poultry growers, AMS chose not to accept the alternative because exempting small business from complying with the regulations would also result in less benefits to growers.

Estimated Costs and Expected Benefits of Proposed Rule Alternative

AMS estimated costs for a third alternative to the “do nothing” option and the last of four total alternatives presented. This alternative considers adopting §§ 201.106, 110, and 112 for all small and large LPDs as originally proposed without including the changes in the final rule. These changes have already been described in extensively earlier in the document. The estimation of costs for the proposed rule alternative will proceed by describing differences in costs by major rule section and combined.

Costs of § 201.106—Proposed Rule Alternative

Final § 201.106(a) is unchanged from § 201.106 as it was proposed and as it is analyzed in this alternative. Final § 201.106(b), “Excessive variability,” and (c), “Transition,” were not included in proposed § 201.106. Neither estimates of direct time costs nor other potential indirect costs or associated benefits for these provisions are included for the proposed rule alternative. Estimated costs for § 201.106 under the proposed rule alternative are equal to one-time direct costs of final § 201.106(a).

Costs of § 201.110—Proposed Rule Alternative

Final § 201.110 requires LPDs to develop, maintain, and comply with a set of policies and procedures that are reasonably designed for the design and operation of a poultry grower ranking system that is consistent with the duty of fair comparison. As described in previous discussion of changes from the proposed to final rule, final § 201.110(a) is substantively unchanged from the proposed rule, text of final § 201.110(b)(1) has been simplified from the proposed rule to improve clarity of documentation requirements, and proposed § 201.110(b)(2), “Compliance review,” has been removed. Two other provisions of proposed § 201.110 relating to “Communication and cooperation” and “Record retention” have received paragraph number redesignations but are otherwise unchanged. Changes to § 201.110(b)(1) did not affect the estimation of hours or of costs and benefits to the rule. Estimated costs of § 201.110 under the proposed rule alternative are therefore equal to estimated direct costs for the final § 201.110 under the preferred alternative with costs for proposed § 201.110(b)(2) added.

Proposed § 201.110(b)(2), would require LPDs to conduct a compliance review of each complex no less than once every two years to ensure compliance with policies and procedures established under proposed § 201.110(a) and (b)(1). LPDs would need to first design a compliance review system to be used for conducting written review of compliance by complex managers, production supervisors, and field agents. Compliance reviews would then need to

be conducted every two years at each complex.

AMS estimates that the aggregate one-time costs of designing and initiating the compliance review process would require 2,208 legal hours, 14,720 management hours, 736 administrative hours, and 2,392 information technology hours costing \$1,993,000¹¹⁷ in the first year for LPDs to initially set up their review and compliance policies and procedures and initiate their ongoing compliance review processes.

The ongoing cost for LPDs to conduct compliance reviews for each complex every two years has been converted to an annual cost by dividing the total cost of conducting reviews on all complexes in half. This could be consistent with, for example, a system where each LPD reviews half of their complexes each year on a rolling basis or, alternatively, where a sinking fund deposit is made each year and used every other year. AMS estimates that total ongoing annual costs on the part of LPDs will require 736 legal hours, 7,360 management hours, 368 administrative hours, and 920 information technology hours to conduct and document written reviews of compliance of each complex no less than once every two years, for an aggregate annual cost of \$919,000.¹¹⁸

Costs of § 201.112—Proposed Rule Alternative

Text of § 201.112(a) and (b) was changed from the proposed to final rule primarily for the purpose of clarification or to add paragraph titles; these changes did not affect the estimation of hours or of costs and benefits to the rule. The addition of final § 201.112(c), “Translation,” from the proposed to final rule is also not expected to change hours or costs because LPDs already have all necessary information to make reasonable efforts to assist growers in translating disclosure documents and have made it available to growers who request the information. Accordingly, AMS did not add any time to its cost estimates for LPDs to comply with this new requirement. AMS cost estimates to

¹¹⁷ 2,208 legal hours × \$139.96 per hour + 14,720 management hours × \$96.40 per hour + 736 administrative hours × \$49.36 per hour + 2,392 information technology hours × \$95.58 per hour = \$1,992,996.

¹¹⁸ 736 legal hours × \$139.96 per hour + 7,360 management hours × \$96.40 per hour + 368 administrative hours × \$49.36 per hour + 920 information technology hours × \$95.58 per hour = \$918,613.

LPDs and growers of § 201.112 under the proposed rule alternative are identical to those described under the preferred alternative.

Combined Costs of §§ 201.106, 110, and 112—Proposed Rule Alternative

Aggregate combined costs to LPDs for §§ 201.106, 110, and 112 for the proposed rule alternative are expected to be \$14,906,000 in the first year, and \$4,086,000 in subsequent years. The combined costs for poultry growers are expected to be \$5,223,000 in the first year, \$249,000 in subsequent years.

The aggregate ten-year combined quantified costs to LPDs of §§ 201.106, 110, and 112 for the proposed rule alternative are estimated to be \$51,684,000 and the present value of the ten-year combined costs is \$47,314,000 discounted at a two percent rate. The aggregate annualized costs of the PV of ten-year costs to LPDs discounted at a two percent rate are expected to be \$5,267,000.

The aggregate ten-year combined costs to poultry growers of §§ 201.106, 110, and 112 for the proposed rule alternative are estimated to be \$7,461,000 and the present value of the ten-year combined costs are estimated to be \$7,110,000 discounted at a two percent rate. The aggregate annualized costs of the PV of ten-year costs to poultry growers discounted at a two percent rate are expected to be \$792,000.

The aggregate combined costs of final §§ 201.106, 110, and 112 under the proposed rule alternative for LPDs and poultry growers are estimated to be \$20,129,000 in the first year and \$4,335,000 in subsequent years. The aggregate ten-year combined costs to LPDs and poultry growers of §§ 201.106, 110, and 112 for the proposed rule alternative are estimated to be \$59,145,000 and the present value of the ten-year combined costs are estimated to be \$54,425,000 discounted at a two percent rate. The aggregate annualized costs of the PV of ten-year costs to LPDs and poultry growers discounted at a two percent rate are expected to be \$6,059,000. The aggregate cost estimates of final §§ 201.106, 110, and 112 under the proposed rule alternative presented above appear in the following table. The quantified costs to the industry in the first year under the proposed rule alternative are \$20.13 million.

TABLE 3—ESTIMATED COSTS OF §§ 201.106, 110, AND 112—PROPOSED RULE ALTERNATIVE

Preferred alternative	Expected cost *		
	Live poultry dealers	Poultry growers	Industry total
§ 201.106:			
First-Year	\$9,106,000	\$4,974,000	\$14,080,000
Ten-Year Total	9,106,000	4,974,000	14,080,000
PV of Ten-Year Discounted at 2%	8,928,000	4,876,000	13,804,000
Ten-Year Annualized at 2%	994,000	543,000	1,537,000
§ 201.110:			
First-Year	5,742,000	0	5,742,000
Ten-Year Total	41,996,000	0	41,996,000
PV of Ten-Year Discounted at 2%	37,864,000	0	37,864,000
Ten-Year Annualized at 2%	4,215,000	0	4,215,000
§ 201.112:			
First-Year	58,000	249,000	307,000
Ten-Year Total	582,000	2,487,000	3,069,000
PV of Ten-Year Discounted at 2%	523,000	2,234,000	2,757,000
Ten-Year Annualized at 2%	58,000	249,000	307,000
§§ 201.106, 110, and 112:			
First-Year	14,906,000	5,223,000	20,129,000
Ten-Year Total	51,684,000	7,461,000	59,145,000
PV of Ten-Year Discounted at 2%	47,314,000	7,110,000	54,425,000
Ten-Year Annualized at 2%	5,267,000	792,000	6,059,000

* Rows may not sum to Total Costs due to rounding.

Estimated Costs and Expected Benefits of §§ 201.106, 110, and 112—Proposed Rule Alternative

The expected benefits of proposed §§ 201.106, 110, and 112 as analyzed in the proposed rule alternative have been described in the discussion of benefits for the preferred option, final §§ 201.106, 110, and 112, with the exception of § 201.110(b)(2), “Compliance review,” which was removed from the proposed to final rule. Proposed § 201.110(b)(2) would require a written review of each broiler complex at least every other year to ensure compliance with the policies and procedures developed under this section. While the proposed rule would not require that LPD documentation be distributed to growers, it would be subject to USDA review to ensure ongoing maintenance and compliance. This compliance review requirement would not provide benefits separate from those generated by establishing the duty in § 201.110(a); however, documentation of regular review of LPD procedures could assist in ongoing enforcement of the proposed rule, thereby increasing the likelihood of compliance so that benefits of the proposed rule are realized by growers.

All potential non-quantifiable benefits and indirect costs of final § 201.106(b) and (c) are excluded from the proposed rule alternative. Net total costs and benefits to the industry from §§ 201.106, 110, and 112 in the proposed rule alternative cannot be quantified in relation to the total value of industry

production. Thus, AMS cannot measure any impact or shift in total industry supply or any corresponding indirect effects on industry supply and demand, including price and quantity effects.

Comments from the proposed rule have been discussed and changes to the final rule have been explained previously in this regulatory analysis. Expected benefits and costs of adopting the proposed rule are presented in this section as a third regulatory alternative to final §§ 201.106, 110, and 112. Estimated direct costs for the final rule preferred alternative are decreased by removal of proposed § 201.110(b)(2), “Compliance review” and increased by the addition of § 201.106(b) and (c). As a net result of all changes, estimated direct costs are lower for the proposed rule alternative in comparison to the final §§ 201.106, 110, and 112. The proposed rule alternative also excludes expected benefits and indirect costs of § 201.106(b) and (c). As discussed previously, commenters on the proposed rule expressed strong support for including these provisions. Under the proposed rule alternative, growers would be denied protection against excessive variation in compensation by establishing 25 percent as a presumptively unfair percentage of performance-based pay. Without protection during the transition period for implementation of these rule provisions, growers would be vulnerable to reductions in compensation by LPDs.

After considering all four regulatory alternatives, AMS determined that the

preferred alternative is the best alternative.

C. Regulatory Flexibility Act

As part of the regulatory process, a Regulatory Flexibility Analysis (RFA) is conducted in order to evaluate the effects of this final rule on small businesses.

AMS is adding final §§ 201.106, 110, and 112 to the regulations under the Packers and Stockyards Act. The regulations will establish requirements for LPDs that produce broilers with grower ranking contracts. LPDs that only produce turkeys, ducks, geese, or other fowl will not be affected. Final § 201.106 will require LPDs to develop and implement new broiler grower contracts and grower payment systems. Final § 201.110 will impose a duty on LPDs that produce broilers to establish and maintain compliance with written processes for the design and operation of poultry growing ranking systems consistent with a duty of fair comparison. Final § 201.112 would require LPDs to produce and distribute disclosures when they request growers to make additional capital investments.

Summary of the Final Rule

Final § 201.106 will prevent LPDs reducing compensation rates based on a grower's grouping, ranking, or comparison to others. All payment adjustments related to grower performance will need to be positive adjustments. LPDs are prevented from taking deductions based on relative performance rankings.

Final § 201.106 will also establish a presumptive unfairness limitation on the share of grower payments that an LPD may determine by a grower's grouping, ranking, or comparison to others. The Secretary will presume that an LPD is in violation of the Act if a payment associated with a grower's grouping, ranking, or comparison to others is more than 25 percent of the total payments to growers in a calendar year.

Final § 201.106 also creates a transition period lasting three years after the regulation becomes effective. During the transition period, if an LPD reduces the price per pound, the LPD will be required to forward to the AMS Administrator a copy of the prior and the modified contract and any LPD Disclosure Document.

Final § 201.110 will require LPDs to provide for fair comparison among growers when basing compensation on a upon a grouping or ranking of growers delivering during a specified period. Final § 201.110 also lists factors that the Secretary will consider in determining whether the system was designed to deliver a fair comparison, which include: whether growers will be compared to growers supplied with inputs or assigned production practices that result in material differences in performance metrics used in payment calculations, whether growers will be compared over appropriate time periods, whether any non-comparison payment methods applied are appropriate, whether the LPD has made reasonable efforts to timely resolve concerns a grower raises regarding the LPD's design and operation of its poultry grower ranking system, and any other factor relevant to a fair comparison.

Final § 201.110 will further require that when an LPD uses a poultry grower ranking system and cannot conduct a fair comparison for one or more growers, the LPD must compensate those growers through an appropriate non-comparison method specified in the contract that reflects reasonable compensation to the grower for its services.

Final § 201.110 will also require LPDs to establish and maintain written documentation of poultry grower ranking system policies and procedures for the design and operation of a poultry grower ranking system that is consistent with the duty of fair comparison. The written documentation must include policies and procedures regarding the manner in which LPDs will work to ensure a fair comparison among contract growers taking into account the distribution of inputs and assignment of

production variables that are controlled by the LPD, any flexibility the LPD has in performing these comparisons, and how the LPD resolves concerns regarding the design and operation of the poultry grower ranking system by the LPD.

Final § 201.112 will require LPDs to provide a Capital Improvement Disclosure Document any time the LPD requests or requires existing broiler chicken growers to make an additional capital investment that is \$12,500 or more per structure excluding maintenance or repair. The Capital Improvement Disclosure Document must include information about the goal or purpose of the investment, all schedules and deadlines for the investment, a description of changes to housing specifications, and analysis of projected returns.

Comments on the Proposed Rule and Associated Changes to the Final Rule

AMS did not receive comments from small LPDs. AMS received comments from trade associations that likely represent small LPDs, but none of their comments specifically addressed issues concerning small LPDs. After consideration of all the public comments, AMS chose to adopt the proposed rule as a final rule with several modifications. Large LPDs and trade associations commented that the regulation would be particularly challenging if the period of time allowed for regulated entities to comply with the provisions is too short.

To allow sufficient time for regulated entities to comply with the final rule and avoid excess implementation costs, AMS is setting the effective date for this rule at July 1, 2026, which is approximately 18 months following publication in the **Federal Register**. This extended time frame will not impact the amount or timing for estimated costs of the final rule because regulated entities are expected to incur costs during the year preceding the effective date.

Industry trade organizations and large LPDs commented that the full cost of implementing the proposed rule would be far greater than estimated by AMS. The commenters asserted that AMS greatly underestimated the costs that will be required for employing teams with highly specialized legal and technical expertise to implement the proposed rule by modifying or replacing grower contracts and communicating changes to growers. Commenters suggested that AMS did not adequately consider the total number of hours needed, but none provided quantified estimates. Large LPDs also commented

that hourly rates paid to specialized industry professionals such as attorneys should be much higher. Commenters also suggested that implementation of the rule would require LPDs to hire and train additional staff and pull resources away from other important activities.

For the time that small LPDs would require to comply with the rule, AMS consulted auditors and supervisors as subject matter experts who are familiar with LPDs and broiler complex operations from many years of experience employed with AMS in auditing LPDs for compliance with the Act. Small LPDs may need to hire new staff to implement the changes required by final §§ 201.106, 110, and 112, particularly in the first year. Hourly rates used in cost analysis for the proposed rule were based on averages within the agricultural sector as published and annually updated by the U.S. Bureau of Labor Statistics.¹¹⁹ AMS expects that average hourly rates provide an appropriate benchmark for estimating industry average costs. While some LPDs commented that AMS's estimates were too low, none of them recommended a different method of estimating costs.

In preparation for the final rule AMS reviewed direct costs with the subject matter experts. After doing so, AMS added modest amount of time to account for the cost of IT work in preparing disclosures in § 201.112.

AMS received comments from growers, grower groups, government agencies, and advocates in support of additional limitations on grower risk from excessive variability in compensation. Based on these comments, AMS has added provision § 201.106(b), which establishes a presumption that a regulated entity is in violation of the Act when aggregate gross annual payments based upon a grouping, ranking, or comparison of growers (performance pay) exceed of 25 percent of total gross payments (including performance and all other types of grower pay).

AMS added costs for LPDs to implement and monitor this new provision, which are discussed and quantified as direct administrative costs. Other expected additional benefits and indirect costs resulting from this new provision cannot be quantified and are discussed separately.

AMS also solicited comment in the proposed rule on whether there was a need to protect growers against the risk

¹¹⁹ See U.S. Bureau of Labor Statistics, May 2023 National Occupational Employment and Wage Estimates, May 2023. <https://www.bls.gov/oes/special.requests/oesm23all.zip>.

that LPDs might unfairly reduce broiler grower total compensation during a transition period after implementation of the final rule. Based on comments, AMS added § 201.106(c), which will require LPDs to submit copies of the prior and modified contracts and disclosures to AMS if average gross grower payments at a complex show year-over-year decline following a contract modification during the three calendar years commencing with and including the effective date of the rule. AMS will review the information provided by LPDs to identify any potentially unfair practices related to broiler grower compensation.

AMS expects that requirements in final § 201.106(c) will increase direct administrative costs for LPDs relative to the proposed rule. Final § 201.106(c) may increase indirect costs as well, but AMS does not have sufficient data to quantify the potential indirect costs or benefits associated with final § 201.106(c).

AMS received comments suggesting that some of the detailed documentation requirements under proposed § 201.110(b) were similar to existing documentation requirements and might create unnecessarily burdensome and complex paperwork. In response to these comments, AMS made several changes to § 201.110(b) in the final rule that included consolidating and streamlining the documentation requirements and removing some detailed requirements that were included in the proposed rule. AMS expects these changes to modestly reduce the total recordkeeping requirements or time cost of the information collection for LPDs, but AMS is unable to estimate these effects with certainty. To limit the potential for underestimating costs, AMS did not reduce hours and accordingly these changes did not affect the estimation of costs or benefits in the final rule relative to the proposed rule.

The proposed rule included § 201.110(b)(2), “Compliance review,” which required LPDs to conduct a required bi-annual review process. AMS removed this requirement in response to comments that self-audits would be burdensome for LPDs, and that elimination of this requirement would not substantially diminish compliance with § 201.110. Compliance will be enforced through regular AMS review of the policies and procedures poultry dealers are required to establish and maintain under § 201.110(b). Removing the compliance reviews reduced costs in the final rule relative to the proposed rule.

Based on comments received, AMS added a provision at § 201.112(c) to require that the LPD make reasonable efforts to ensure that growers are aware of their right to request translation assistance and to assist the grower in translating the Capital Improvement Disclosure Document. Reasonable efforts include, but are not limited to, providing current contact information for professional translation service providers, trade associations with translator resources, relevant community groups, or any other person or organization that provides translation services in the poultry grower’s geographic area. Reasonable efforts, depending on the facts and circumstances (such as convenience, expense, and timeliness of the translation), may also include allowing the grower access to a computer-generated translation of the Disclosure Document and additional time to review any translated Disclosure Document.

A similar requirement was established for LPDs in § 201.102 of the “Transparency in Poultry Grower Contracting and Tournaments” final rule.¹²⁰ As LPDs already have all necessary information to make reasonable efforts to assist growers in translating disclosure documents and have made it available to growers who request the information. Similarly, AMS did not increase grower review time for the addition of § 201.112 as growers who require translation assistance already should be connected with the resources from § 201.102.

Small Businesses Affected

The Small Business Administration (SBA) defines small businesses by their North American Industry Classification System Codes (NAICS).¹²¹ SBA considers broiler producers small if sales are less than \$3.5 million per year. LPDs, classified under NAICS 311615, are considered small businesses if they have fewer than 1,250 employees.

AMS maintains data on LPDs from the Annual Reports these firms file with PSD.¹²² Currently, 42 LPDs would be subject to the regulation. Of these, 21 LPDs would be small businesses according to the SBA standard. In their fiscal year 2023, LPDs reported that they had 18,806 production contracts with

broiler growers. Small LPDs accounted for 1,208 contracts (6.0 percent).

Annual Reports from LPDs indicate they had 20,014 contracts, but a poultry grower can have more than one contract. The 2022 Census of Agriculture indicated that there were 14,144 contract broiler growers in the United States.¹²³ AMS does not regulate poultry growers and has no record of the number of poultry growers that qualify as small businesses but expects that nearly all of them are small businesses.

The typical size of broiler grow-out operations has trended larger from the early 2000s—when a typical broiler farm consisted of a 80,000–100,000 square foot operation—to a typical new farm today which “may have eight or more barns of over 30,000 square feet each on one site.”¹²⁴ Projected gross revenue for a newer farm receiving relatively high performance-based pay rates is \$224,000 for two 36,000 square foot barns.¹²⁵ Extrapolating these projections on a per house basis, gross revenue for an eight barn 288,000 square foot operation would total just under \$900,000 and an operation with 30 barns could still remain within the \$3.5 million threshold for small business classification. However, this same study notes that, “still, 80,000 to 120,000 square feet of housing for most family farms is all a single farmer can successfully operate while limiting hired labor.”

Direct Costs of Final §§ 201.106, 110, and 112

Direct costs of final §§ 201.106, 110, and 112 to LPDs would primarily consist of the time required to modify existing contracts, develop and comply with new policies, and collect and distribute it among the growers. Final §§ 201.106, 110, and 112 would also cost poultry growers the value of the time they put into reviewing and acknowledging receipt of new contracts and disclosures.

Expected direct costs are estimated as the total value of the time required by LPDs to modify existing contracts, develop and comply with new policies,

¹²² All LPDs are required to annually file PSD form 3002 “Annual Report of Live Poultry Dealers,” OMB control number 0581–0308. The Annual Report form is available to the public at <https://www.ams.usda.gov/sites/default/files/media/PSP3002.pdf>.

and collect and distribute required disclosures that would be required by final §§ 201.106, 110, and 112 as well as the time to create and maintain any necessary additional records. Estimates of the amount of time required to create and distribute the disclosure documents were provided by AMS subject matter experts. These experts were auditors and supervisors with many years of experience in auditing LPDs for compliance with the Packers and Stockyards Act. Estimates for the value of the time are U.S. Bureau of Labor Statistics Occupational Employment and Wage Statistics estimate released May 2023.¹²⁶ AMS marked up the wages 41.79 percent to account for benefits.

AMS estimated one-time first-year investment to LPDs of updating grower contracts and developing new grower payment systems, including modifying information systems to include new calculations as well as filing, and reporting to comply with § 201.106 would require 2,448 legal hours at \$139.96 per hour costing \$342,000, 5,670 hours of management time at \$96.40 per hour costing \$547,000, 1,440 hours of administrative time at \$49.36 per hour costing \$71,000, and 2,160 hours of information technology staff time at \$95.58 per hour costing \$206,000. Aggregate total first-year setup costs are expected to be \$1,167,000¹²⁷ for final § 201.106.¹²⁸

AMS expects that ongoing aggregate costs of implementation, maintenance, monitoring, and compliance with final § 201.106 would annually require an additional 144 legal hours at \$139.96 per hour costing \$20,000, 540 hours of management time at \$96.40 per hour costing \$52,000, 144 hours of administrative time at \$49.36 per hour costing \$7,000, and 288 hours of information technology staff time at \$95.58 per hour costing \$28,000. Total aggregate ongoing costs to small LPDs for final § 201.110 are expected to be \$107,000 annually.¹²⁹

AMS estimated the total costs of developing new policies and procedures, communications plans, and

compliance review systems to comply with final § 201.110 would require a one-time first-year aggregate investment of 480 legal hours at \$139.96 per hour costing \$67,000, 3,894 hours of management time at \$96.40 per hour costing \$375,000, 228 hours of administrative time at \$49.36 per hour costing \$11,000, and 270 hours of information technology staff time at \$95.58 per hour costing \$26,000. Total aggregate first-year setup costs are expected to be \$480,000¹³⁰ for final § 201.110.

AMS expects that ongoing aggregate costs of implementation, maintenance, monitoring, and compliance with final § 201.110 would annually require an additional 240 legal hours at \$139.96 per hour costing \$214,000, 2,856 hours of management time at \$96.40 per hour costing \$95,000, 114 hours of administrative time at \$49.36 per hour costing \$6,000, and 114 hours of information technology staff time at \$95.58 per hour costing \$11,000. Total aggregate ongoing costs to small LPDs for final § 201.110 are expected to be \$325,000 annually.¹³¹

Proposed § 201.112 would require LPDs to provide a Capital Improvement Disclosure Document any time the LPD requests existing broiler chicken growers to make an additional capital investment.¹³² AMS estimated ongoing annual costs of final § 201.112 to small LPDs would require on average an additional 7 legal hours at \$139.96 per hour costing \$1,000, 36 hours of management time at \$96.40 per hour costing \$3,000, 7 hours of administrative time at \$49.36 per hour costing \$400, and 9 hours of information technology staff time at \$95.58 per hour costing \$900. Total aggregate ongoing costs to small LPDs for final § 201.110 are expected to be \$6,000 annually.¹³³

Expected costs of final §§ 201.106, 110, and 112 are associated with developing, maintaining, updating, and complying with policies and procedures

that will be implemented at poultry growing complexes and communicating changes, and producing and distributing disclosure documents among contract growers. AMS expects that firms with fewer contract types and those that contract with few growers will have lower costs. Larger LPDs will tend to have larger numbers and types of contracts and will likely have more costs. Final §§ 201.106 and 201.110 only concern poultry grower ranking systems. Smaller LPDs that do not have grower ranking or tournament contracts will not have any of the costs associated with final §§ 201.106 and 201.110. Some LPDs have few contracts with poultry growers and raise poultry in their own facilities. Those dealers will have relatively lower costs.

AMS does not regulate poultry growers, and, with the exception of reviewing and signing contracts that have been updated by LPDs to meet requirements of § 201.106 and acknowledging receipt of Capital Improvement Disclosure Documents at the time of capital investment requests, the final rule imposes no requirements on poultry growers. To benefit from the disclosures and to understand the updated contracts, growers would need to review the new contracts and disclosure information provided. Growers that do not expect a benefit from reviewing the disclosure information likely would not review it.

AMS estimates aggregate growers' costs for reviewing updated contracts and disclosures associated with final §§ 201.106 and 201.112 combined to be \$315,000 in the initial year. After an updated contract has been reviewed and signed in the first year, AMS expects the annual aggregate cost for reviewing disclosures by growers making additional capital investments would be \$15,000 each year. This amounts to \$400 per grower in the first year. The table below summarizes costs of final §§ 201.106, 110, and 112 to small LPDs and small poultry growers.

Indirect Costs Associated With Final §§ 201.106, 110, and 112

Final § 201.106 will require all LPDs involved in broiler production with tournament or grower ranking contracts to redesign the way they pay broiler growers. It is likely that all LPDs will be required to change their contracts to make all performance base adjustments positive adjustments to the base prices. AMS does not have sufficient data to determine how many LPDs will need to change contracts to comply with the provision capping performance payments at 25 percent of total payments at a complex. AMS is aware

¹²⁶ See U.S. Bureau of Labor Statistics, *May 2023 National Occupational Employment and Wage Estimates*, May 2023 <https://www.bls.gov/oes/special.requests/oesm23all.zip>.

¹²⁷ 2,448 legal hours × \$139.96 per hour + 5,670 management hours × \$96.40 per hour + 1,440 administrative hours × \$49.36 per hour + 2,160 information technology hours × \$95.58 per hour = \$1,166,741.

¹²⁸ Please note throughout the document that components may not sum exactly to aggregate amounts due to rounding.

¹²⁹ 144 legal hours × \$139.96 per hour + 540 management hours × \$96.40 per hour + 144 administrative hours × \$49.36 per hour + 288 information technology hours × \$95.58 per hour = \$106,845.

¹³⁰ 480 legal hours × \$139.96 per hour + 3,894 management hours × \$96.40 per hour + 228 administrative hours × \$49.36 per hour + 270 information technology hours × \$95.58 per hour = \$479,623.

¹³¹ 240 legal hours × \$139.96 per hour + 2,856 management hours × \$96.40 per hour + 114 administrative hours × \$49.36 per hour + 114 information technology hours × \$95.58 per hour = \$325,432.

¹³² Based on information provided by subject matter experts, AMS estimates that capital upgrades would be required at 5% of complexes each year, triggering creation of a new disclosure document for approximately 5% of growers annually.

¹³³ 7 legal hours × \$139.96 per hour + 36 management hours × \$96.40 per hour + 7 administrative hours × \$49.36 per hour + 9 information technology hours × \$95.58 per hour = \$5,694.

that some firms would currently be in compliance with a 25 percent cap, and at least some firms will not.

Any firms that modify existing grower compensation structures at a complex in response to this rule could experience increased production costs if reductions in performance-based payments relative to total payments adversely affect grower performance incentives and cause growers to produce broilers less efficiently. In general, the “tournament” system of broiler grower compensation bases payments to individual growers on their performance relative to other growers. Performance payments provide an incentive for growers to optimize factors under their control, such as effort and management, and to some extent investment (subject to the concerns highlighted by this rule), to improve their own relative performance efficiency and increase income.

Tournament systems have been described in economic literature as “particularly economical means to provide incentive.” The strength of individual performance incentives is directly related to the size of expected grower performance payments, which will be limited by the total amount of performance-based pay distributed among all growers. Any firms that modify existing grower compensation structures at a complex in response to this rule by decreasing the relative size of performance payments available to growers at a complex might therefore weaken performance incentives and could result in reduced grower efficiency in broiler production.

Given the range of possible outcomes, AMS is unable to predict effects with any degree of certainty. For example, if production efficiency is reduced, economic principles suggest that cost of

production would increase at the impacted broiler complex, causing an inward shift of a firm’s marginal cost curve and an associated decrease in broiler production at the impacted complex. A decrease in production for a broiler complex would also be likely to reduce demand for broiler growing services in the area and could result in LPDs lowering overall rates of grower compensation and possibly terminating some marginal growers.

AMS is not able quantify indirect costs related to capping performance payments. However, if the cap has any significant effect on grower productivity, it is likely that indirect costs of capping performance payments will be considerably larger than the direct costs that AMS has been able to estimate.

TABLE 4—ESTIMATED DIRECT COSTS TO SMALL BUSINESSES OF FINAL §§ 201.106, 110, AND 112

Type of cost	Regulated live poultry dealers	Unregulated growers	Total *
Final § 201.106:			
First-year Cost	\$1,167,000	\$300,000	\$1,467,000
First-year Cost per Firm	56,000	351	NA
PV of Ten-year Cost Discounted at 2%	1,722,000	294,000	2,017,000
Ten-year Cost Annualized at 2%	192,000	33,000	225,000
Average Ten-Year Cost per Firm Annualized at 2%	9,000	38	N/A
Final § 201.110:			
First-year Cost	480,000	0	480,000
First-year Cost per Firm	23,000	0	NA
PV of Ten-year Cost Discounted at 2%	3,074,000	0	3,074,000
Ten-year Cost Annualized at 2%	342,000	0	342,000
Average Ten-Year Cost per Firm Annualized at 2%	16,000	0	NA
Final § 201.112:			
First-year Cost	6,000	15,000	21,000
First-year Cost per Firm	271	18	NA
PV of Ten-year Cost Discounted at 2%	51,000	135,000	186,000
Ten-year Cost Annualized at 2%	6,000	15,000	21,000
Average Ten-Year Cost per Firm Annualized at 2%	286	18	NA
Proposed §§ 201.106, 110, and 112:			
First-year Cost	1,652,000	315,000	1,967,000
First-year Cost per Firm	79,000	369	NA
PV of Ten-year Cost Discounted at 2%	4,848,000	429,000	5,277,000
Ten-year Cost Annualized at 2%	540,000	48,000	587,000
Average Ten-Year Cost per Firm Annualized at 2%	26,000	56	NA

* Rows may not sum to Total Costs due to rounding.

** Totals do not include indirect costs to associated with possible changes in supply or demand. AMS was not able to estimate indirect costs, but it is possible that they are larger than the direct costs in the table.

LPDs report net sales in Annual Reports to AMS. Table 5 below groups small LPDs’ net sales into quartiles, reports the average net sales in each quartile, and compares average net sales to average expected first-year direct costs per firm for each of final §§ 201.106, 110, and 112 and total first-year direct costs.¹³⁴ Estimated first-year

direct costs are higher than 10-year annualized costs, and for the threshold analysis, first-year costs will be higher than annualized costs as a percentage of net sales. Correspondingly, the ratio of ten-year annualized direct costs to net sales is lower than their corresponding first-year cost ratios listed in Table 5. If estimated costs meet the threshold in the first year, they will in the following

years as well. AMS is able to perform a threshold analysis on based on direct costs. However, AMS was unable to estimate indirect costs associated with the final rule include indirect costs.

Estimated first-year direct costs per firm are less than 1 percent of average net sales in the three largest quartiles. Total first-year direct costs as a percent of net sales are estimated to be about 0.8 percent for the smallest quartile. However, average first-year cost per entity in Table 5 is the average cost of

¹³⁴ AMS expects that recordkeeping costs will be correlated with the size of the firms. AMS ranked

live poultry dealers by size and grouped them into quartiles.

all of the small businesses. Costs for the LPDs in smallest quartile will likely be less than the average for small businesses.

LPDs do not report to AMS whether any of their contracts are tournament-style contracts but evaluating the number contracts that LPDs listed in their Annual Reports to AMS, few of the LPDs in smallest quartile contracted with a sufficient number of growers to implement tournament contracts. It is unlikely that any of the LPDs in the

smallest quartiles had any tournament contracts. It is unlikely that several of the smaller LPDs in the second quartile had any tournament contracts either.

Since final §§ 201.106 and 201.110 only apply to tournament contracts, none of the LPDs in the smallest quartile are likely to incur any costs from final §§ 201.106 and 201.110. Their costs are likely only costs associated with final § 201.112, which, as percentage of net sales would be 0.003 percent. Because the smallest LPDs have fewer contracts

than the other small LPDs, their costs associated with final § 201.112 are also likely less than average.

Costs in the threshold analysis do not include indirect costs, which AMS was not able to quantify. The size of the indirect costs is not known, and AMS cannot state with any confidence that the total costs associated with final §§ 201.106, 110, and 112 will be insignificant for any LPD.

TABLE 5—COMPARISON OF SMALL LIVE POULTRY DEALERS' NET SALES TO EXPECTED ANNUALIZED DIRECT COSTS OF FINAL §§ 201.106, 110, AND 112 *

Quartile (%)	Average net sales	First-year costs related to § 201.106 as a percent of net sales (%)	First-year costs related to § 201.110 as a percent of net sales (%)	First-year costs related to § 201.112 as a percent of net sales (%)	Total first-year costs as a percent of net sales (%)
0 to 25%	\$10,017,311	0.559	0.230	0.003	0.789
25 to 50%	34,567,539	0.162	0.067	0.001	0.229
50 to 75%	92,380,634	0.061	0.025	0.000	0.086
75 to 100%	226,958,521	0.025	0.010	0.000	0.035

*Numbers in the table may not sum to one due to rounding.

**Costs do not include indirect costs to associated with possible changes in supply or demand. AMS was not able to estimate indirect costs, but it is possible that they are larger than the direct costs in the table.

Direct Cost Associated With an Alternative §§ 201.106, 110, and 112

AMS also estimated costs of the original proposed rule as an alternative. Section 201.106(b) and (c) in the final rule were not include in the proposed rule. AMS estimated that alternative § 201.106 would require a one-time first-year investment of 1,728 legal hours at \$139.96 per hour costing \$242,000, 2,970 hours of management time at \$96.40 per hour costing \$286,000, 720 hours of administrative time at \$49.36 per hour costing \$36,000, and 720 hours of information technology staff time at \$95.58 per hour costing \$69,000. Aggregate total first-year setup costs are expected to be \$633,000. AMS does not expect additional ongoing costs of implementing final § 201.106 under the proposed rule alternative.

Under the proposed rule alternative, § 201.110(b) includes a section dealing with compliance reviews. AMS estimated that alternative § 201.110 would require a one-time first-year aggregate investment of 696 legal hours

at \$139.96 per hour costing \$97,000, 5,334 hours of management time at \$96.40 per hour costing \$514,000, 300 hours of administrative time at \$49.36 per hour costing \$15,000, and 504 hours of information technology staff time at \$95.58 per hour costing \$48,000. Total aggregate first-year setup costs for small LPDs under the alternative are expected to be \$675,000.

AMS expects alternative § 201.110 would annually require an additional 312 legal hours at \$139.96 per hour costing \$44,000, 3,576 hours of management time at \$96.40 per hour costing \$345,000, 150 hours of administrative time at \$49.36 per hour costing \$7,000, and 204 hours of information technology staff time at \$95.58 per hour costing \$19,000. Total aggregate ongoing costs to small LPDs for final § 201.110 are expected to be \$415,000 annually.

All sections of § 201.112 were included under the proposed rule alternative. AMS estimated that first-year and ongoing annual costs of final

§ 201.112 to small LPDs would require on average an additional 7 legal hours at \$139.96 per hour costing \$1,000, 36 hours of management time at \$96.40 per hour costing \$3,000, 7 hours of administrative time at \$49.36 per hour costing \$400, and 9 hours of information technology staff time at \$95.58 per hour costing \$900. Total aggregate ongoing costs to small LPDs for final § 201.110 are expected to be \$6,000 annually.

The alternative would have a relatively small effect on costs to poultry growers on a per grower basis, and growers will only review the disclosures if they perceive that they are beneficial. AMS estimates growers' aggregate costs for reviewing updated contracts and disclosures associated with final §§ 201.106 and 201.112 combined to be \$315,000 in the initial year. AMS expects the annual aggregate cost to growers making additional capital investments to be \$15,000 each year. Table 6 below summarizes costs of alternative §§ 201.106, 110, and 112 to small LPDs and small poultry growers.

TABLE 6—ESTIMATED COSTS TO SMALL BUSINESSES OF ALTERNATIVE §§ 201.106, 110, AND 112

Type of cost	Regulated live poultry dealers	Unregulated growers	Total *
Final § 201.106:			
First-year Cost	\$633,000	\$300,000	\$933,000
First-year Cost per Firm	30,000	351	NA
PV of Ten-year Cost Discounted at 2%	620,000	294,000	914,000
Ten-year Cost Annualized at 2%	69,000	33,000	102,000
Average Ten-Year Cost per Firm Annualized at 2%	3,000	38	N/A

TABLE 6—ESTIMATED COSTS TO SMALL BUSINESSES OF ALTERNATIVE §§ 201.106, 110, AND 112—Continued

Type of cost	Regulated live poultry dealers	Unregulated growers	Total *
Final § 201.110:			
First-year Cost	675,000	0	675,000
First-year Cost per Firm	32,000	0	NA

Average Ten-Year Cost per Firm Annualized at 2%	21,000	56	NA

* Rows may not sum to Total Costs due to rounding.

Net sales for small LPDs that would be required to make disclosure under alternative §§ 201.106, 110, and 112 averaged \$91 million for their fiscal year 2023. Expected first-year cost per LPD would be well below 0.1 percent.¹³⁵

TABLE 7—COMPARISON OF SMALL LIVE POULTRY DEALERS' NET SALES TO EXPECTED ANNUALIZED COSTS OF ALTERNATIVE §§ 201.106, 110, AND 112

Quartile	Average net sales	First-year costs related to § 201.106 as a percent of net sales (%)	First-year costs related to § 201.110 as a percent of net sales (%)	First-year costs related to § 201.112 as a percent of net sales (%)	Total first-year costs as a percent of net sales (%)
0 to 25%	\$10,017,311	0.299	0.319	0.003	0.629
25 to 50%	34,567,539	0.087	0.093	0.001	0.182
50 to 75%	92,380,634	0.032	0.035	0.000	0.068
75 to 100%	226,958,521	0.013	0.014	0.000	0.028

Clearly, excluding § 201.110(b)(1)(vi) and (b)(2) would reduce cost to small LPDs. AMS prefers final §§ 201.106, 110, and 112 because it reduces the amount of variation in payments that broiler growers might receive and provides protection against lower contract prices during the transition period of the first three years following implementation of the final rule.

If direct costs were the only consideration, it is likely that final §§ 201.106, 110, and 112 would not have a significant economic impact on a substantial number of small business LPDs. AMS does not have sufficient information to make a quantified estimate of the indirect costs associated with §§ 201.106, 110, and 112, but the indirect costs have the potential to be much larger than the direct costs that AMS was able to quantify. If indirect costs are equal to direct costs, total costs would be about 1.26 percent for LPDs in

the smallest quartile. It is possible that the indirect costs are considerably larger than direct costs, in which case larger LPDs would face significant costs. It is likely that costs will be significant for a substantial number of small business LPDs.

Costs to growers will be limited to the time required to review and acknowledge receipt of updated grower contracts and disclosures. AMS expects that final §§ 201.106, 110, and 112 will have effects on a substantial number of growers. However, the costs will not be significant for any of them. Because AMS does not regulate poultry growers, AMS does not have information regarding the business sizes of poultry growers similar to the information it has concerning LPDs.

Based on the above analyses, it is unlikely that final §§ 201.106, 110, and 112 will create significant costs for a substantial number of small business

broiler growers. AMS was not able to quantify indirect costs associated with final §§ 201.106, 110, and 112 but the rulemaking could cause significant costs for a substantial number of small LPDs.

D. Paperwork Reduction Act

In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. chapter 35), AMS requested OMB approval of the new information collection and recordkeeping requirements related to this final rule when it was proposed in the **Federal Register** on June 10, 2024 (89 FR 49002). The proposed information collection was for a total of 59,182 hours for the first year, and 42,682 hours per year thereafter. The comment period was open for 60 days and closed on August 9, 2024. Below is a summary of the final rule's information collection requirements, the comments AMS received relating to the information

¹³⁵ The first-year cost per small live poultry dealer of \$63,000 divided by the average net sales

for all small live poultry dealers of \$91 million is equal to 0.069 percent.

collection requirements of the proposed rule, and any changes AMS made in response to the comments. Additional detail can be found in the Regulatory Impact Analysis (RIA).

Title: Poultry Growing Tournament Systems: Fairness and Related Concerns.

OMB Number: 0581–0346.

Expiration Date of Approval: This is a NEW collection.

Type of Request: Approval of a New Information Collection.

Abstract: The information collection requirements in this request are essential to improve transparency and forestall deception and unfairness in the use of broiler growing arrangements, in accordance with the purposes of the Packers and Stockyards Act, 1921. The revisions to the Packers and Stockyards regulations would require that live poultry dealers (LPDs) establish, maintain, and review written documentation regarding their processes for the design and operation of a poultry grower ranking system that is consistent with the LPD duty of fair comparison, provide information through disclosures to growers when requesting that growers make additional capital investments, and submit contract and disclosure documentation to USDA when contract modifications result in reduced annual grower compensation during a transition period.

Under this final rule, LPDs must develop and document policies and procedures for the design and operation of their tournament system consistent with the duty of fair grower comparison. All LPD documentation will be provided to USDA on request, maintained for no less than five years, and used for ongoing internal compliance activities. The final rulemaking requires that LPDs provide a Capital Improvement Disclosure Document to growers when LPDs request that growers make additional capital investments. In addition, for each of the three years following the effective date, LPDs will be required to provide the prior and modified contracts as well as all related LPD Disclosure Documents to USDA if any contract modification or renewal results in less than the prior annual-calendar year's complex-wide average gross payment to the grower. The estimates provided below apply only to LPDs when they are required to provide the information to growers or create documentation for internal use and review. Poultry growers would not be required to provide information but would be able to use the information provided by LPDs to analyze additional capital investment decisions.

Broiler Grower Compensation Design Under § 201.106(c)

Estimate of Burden: Public burden for this collection of information is estimated to average 0.01 hours per response (years two through four), 0 hours per year thereafter.

Respondents: Live poultry dealers.

Estimated Number of Respondents: 42.

Estimated Number of Responses: 20,014.

Estimated Number of Responses per Respondent: 477.

Estimated Total Annual Burden on Respondents: 0 hours in the first year, and 194 hours per year thereafter for years two through four.

Operation of Broiler Grower Ranking Systems Under § 201.110(a) and (b)(1)(i) Through (v)

Estimate of Burden: Public burden for this collection of information is estimated to average 193.33 hours per response (first year), 169.61 hours per year thereafter.

Respondents: Live poultry dealers.

Estimated Number of Respondents: 42.

Estimated Number of Responses: 184.

Estimated Number of Responses per Respondent: 4.

Estimated Total Annual Burden on Respondents: 35,572 hours in the first year, and 31,208 hours per year thereafter.

Communication and Cooperation Under § 201.110(b)(1)(vi)

Estimate of Burden: Public burden for this collection of information is estimated to average 45.00 hours per response (first year), 16.00 hours per year thereafter.

Respondents: Live poultry dealers.

Estimated Number of Respondents: 42.

Estimated Number of Responses: 42.

Estimated Number of Responses per Respondent: 1.

Estimated Total Annual Burden on Respondents: 1,890 hours in the first year, and 672 hours per year thereafter.

Broiler Grower Capital Improvement Disclosure Document Under § 201.112

Estimate of Burden: Public reporting burden for this collection of information is estimated to average 0.61 hours per response (first year), 0.61 hours per year thereafter.

Respondents: Live poultry dealers.

Estimated Number of Respondents: 42.

Estimated Number of Responses: 1,001.

Estimated Number of Responses per Respondent: 24.

Estimated Total Annual Burden on Respondents: 607 hours in the first year, and 607 hours per year thereafter.

AMS estimates that 42 LPDs would each submit the prior and modified contracts as well as any LPD Disclosure Documents prepared with respect to those contracts to AMS as required under final § 201.106(c). AMS arrived at its estimate that 477 responses would be produced per LPD during each of years two, three, and four following the rule effective date in complying with the new requirements during a transition period following modification and renewal of broiler growing contracts by dividing the 20,014 grower contracts with broiler growers that were reported by 42 LPDs that filed fiscal year 2023 Annual Reports with AMS. AMS does not have access to sufficient data and cannot predict the number of complexes for which the annual calendar year's complex-wide average gross payment to the grower will be less than the prior year. Based on information provided by subject matter experts, AMS estimates that LPDs would be able to submit the required documentation for all contracts to USDA electronically once per year for a fixed annual time cost per complex. As a result, the estimate that all LPDs will provide 477 responses per year in years two through four therefore likely overestimates the burden by a substantial amount given that average grower payments may not be less than the prior year at most complexes. AMS estimates the annual cost of collecting and submitting required contract documents in years two through four, including management, legal, administrative, and information technology time, will require an average 0.01 hours each. AMS arrived at the estimates of the number of hours on an annual basis to submit required contract documentation by dividing the number of hours to collect and submit the required documents (184 hours in each of years two through four) by the annual number of responses for all LPDs (20,014).

AMS estimates that 42 LPDs would each establish, maintain, and review documentation of written processes for the design and operation of a poultry grower ranking system that is consistent with a duty of fair comparison as required under final § 201.110.¹³⁶ AMS arrived at its estimate that four (4) responses would be produced per LPD in complying with new requirements for

¹³⁶ Responses and costs related to final § 201.110(b)(1)(vi), "Communication and cooperation," are discussed below separately from the other paragraphs of § 201.110. Costs associated with final § 201.110(b)(2), "Record retention," are included in cost estimates for § 201.110(b)(1).

poultry grower ranking system fairness policies and procedures by dividing the 184 broiler plants (or complexes) indicated in the fiscal year 2023 Annual Report filed by 42 LPDs with broiler production.¹³⁷ AMS estimates first-year development and production of § 201.110 policies and procedures, including legal, management, administrative, and information technology time, would require an average of 193.33 hours for each response, while ongoing annual maintenance, compliance monitoring, production, and distribution would take 169.61 hours. AMS estimates first-year development and production of § 201.110 policies and procedures, including legal, management, administrative, and information technology time, would require an average of 193.33 hours for each response, while ongoing annual maintenance, compliance monitoring, production, and distribution would take 169.61 hours. AMS arrived at the estimates of the number of hours per response on an annual basis to set up, produce, distribute, monitor, review, and maintain § 201.110 policies and procedures by dividing the total number of hours required (35,572 first-year hours and 31,208 ongoing hours) by the annual number of responses for all LPDs (184).

AMS estimates that 42 LPDs would each develop and document one set of processes that address communication and cooperation when resolving grower concerns as required under final § 201.110(b)(1)(vi). AMS estimates first-year set-up and implementation of the plan, including management, legal, administrative, and information technology time, would require approximately 45.00 hours. AMS estimates ongoing annual implementation of communication, cooperation, and dispute resolution processes would require an average of 16.00 hours.

AMS estimates each of 42 LPDs would create and distribute an average of 24 Broiler Grower Capital Improvement Disclosure Documents each year for poultry growers relating to additional capital investments, as required under final § 201.112. AMS arrived at its estimate of 24 developed disclosure documents per LPD per year from AMS records which show 42 LPDs filed fiscal year 2023 Annual Reports with AMS, and their reports indicate

that they had 20,014 growing contracts with broiler growers during fiscal year 2023. Based on information provided by subject matter experts, AMS estimates that capital upgrades would be required at 5 percent of complexes each year, triggering creation of a new disclosure document for approximately 5 percent of growers annually. AMS multiplied the 20,014 growing contracts by 5 percent and divided by the 42 LPDs to arrive at 24 disclosure documents per LPD. LPDs would only be required to provide the Broiler Grower Capital Improvement Disclosure Document to growers when requesting or requiring the grower to make an additional capital investment. AMS estimates first-year and ongoing development, production, and distribution of the disclosure documents, including management, legal, administrative, and information technology time, would require an average 0.61 hours each. AMS arrived at the estimates of the number of hours on an annual basis to set up, produce, and distribute the Broiler Grower Capital Improvement Disclosure Documents by dividing the number of hours to set up, produce, and distribute the disclosures (607 first-year and annual ongoing hours) by the annual number of responses for all LPDs (1,001).

Under § 201.106(c) LPDs are required for a period for three years following the effective date to submit to USDA copies of the prior and modified contracts and any LPD Disclosure Documents prepared under § 201.102 if the annual-calendar year's complex-wide average gross payments to growers at a complex of an LPD is less than the prior annual-calendar year's complex-wide average gross payments to growers at the complex.

Final § 201.110 would require LPDs to provide a fair comparison among growers when basing compensation on a grouping or ranking of growers delivering during a specified period of time and would also require LPDs to document how they comply with that duty of fair comparison. The policies and procedures documentation required under final § 201.110 must describe the LPD's processes for the design and operation of a poultry grower ranking system for broiler growers that is consistent with the duty of fair comparison. The documentation of processes under final § 201.110, must also include a plan for communication and cooperation between the LPD and growers. LPDs are required to document, maintain, and comply with all policies and procedures required under final § 201.110 on an ongoing basis and provide them to USDA upon request. LPDs must retain all written

records relevant to compliance with § 201.110(b) for no less than 5 years from the date of record creation.

Final § 201.112 would require LPDs to provide a Broiler Grower Capital Improvement Disclosure Document any time the LPD requests existing broiler chicken growers to make an additional capital investment (\$12,500 or more per structure excluding maintenance or repair). The Broiler Grower Capital Improvement Disclosure Document must include information about the goal or purpose of the investment, financial incentives and compensation for the grower associated with the additional capital investment, all schedules and deadlines for the investment, a description of changes to housing specifications, and analysis of projected returns.

Costs of Final §§ 201.106, 110, and 112

The combined costs to LPDs for compliance with the recordkeeping and disclosure requirements of final §§ 201.106, 110, and 112 are expected to be \$3,807,000 in the first year, \$3,181,000 in years two through four, and \$3,168,000 in subsequent years. The total hours estimated for the LPDs to create, produce, distribute, and maintain these documents are 38,069 in the first year, 32,671 in years two through four, and 32,487 in subsequent years. As stated previously, the estimates provided apply only to LPDs who would be required to provide the information to growers.

The amount of time required for recordkeeping and disclosure was estimated by AMS subject matter experts. These experts were auditors and supervisors with many years of experience in AMS's Packers and Stockyards Division (PSD) conducting investigations and compliance reviews of regulated entities.

AMS used the May 2023 U.S. Bureau of Labor Statistics (BLS) Occupational Employment and Wage Statistics for the time values in this analysis.¹³⁸ BLS estimated an average hourly wage for general and operations managers in animal slaughtering and processing to be \$67.99 per hour; \$34.81 per hour for administrative assistants; \$67.41 per hour for IT system managers; and \$98.71 per hour for lawyers in food manufacturing. In applying the cost estimates, AMS marked-up the wages by 41.79 percent to account for fringe

¹³⁷ All live poultry dealers are required to annually file PSD form 3002 "Annual Report of Live Poultry Dealers," OMB control number 0581-0308. The Annual Report form is available to the public at <https://www.ams.usda.gov/sites/default/files/media/PSP3002.pdf>.

¹³⁸ Estimates are available at U.S. Bureau of Labor Statistics, Occupational Employment and Wage Statistics, available at <https://www.bls.gov/oes/special-requests/oesm23all.zip> (accessed 9/14/2024). Featured OES Searchable Databases: U.S. Bureau of Labor Statistics (bls.gov) (accessed September 2024).

benefits. The average hourly wage rates, adjusted to include the 41.79 percent markup for benefits, are as follows: \$96.40 for managers, \$49.36 for administrative assistants; \$95.58 for IT system managers, and \$139.96 for lawyers.

Comments From the Proposed Rule and Changes to the Final Rule

After consideration of public comments, AMS determined to adopt the proposed rule as a final rule with several modifications. This section provides an overview of the comments made specifically on the costs and benefits and how the final rule differs from the proposed rule in that analysis.

Industry trade associations and LPDs commented that the full cost of implementing the proposed rule would be far greater than estimated by AMS. The commenters asserted that AMS greatly underestimated the costs that will be required for employing teams with highly specialized legal and technical expertise to implement the proposed rule by modifying or replacing grower contracts and communicating changes to growers. Commenters suggested that AMS did not adequately consider the total number of hours needed, but none provided quantified estimates. LPDs also commented that hourly rates paid to specialized industry professionals such as attorneys should be much higher. Commenters also suggested that implementation of the rule would require LPDs to hire and train additional staff and pull resources away from other important activities.

AMS consulted auditors and supervisors as subject matter experts who are familiar with LPDs, integrators, and broiler complex operations from many years of experience with AMS in auditing LPDs for compliance with the Act. The final rule provides an extended period of approximately 18 months following publication in the **Federal Register** before the effective date, to permit sufficient time for implementation. Hourly rates used in cost analysis for the proposed rule were based on averages for legal, management, administrative, and information technology labor categories specifically within the agricultural sector as published and annually updated by the U.S. Bureau of Labor Statistics. Although the largest corporations likely employ lawyers and other specialists at hourly rates much higher than the national average, contract development and review efforts at those companies are spread across many complexes. AMS expects that average hourly rates provide an appropriate benchmark for estimating

industry average costs. After further discussion with subject matter experts, AMS added a modest amount of time to account for the cost of information technology work in preparing § 201.112 disclosures. AMS subject matter experts confirmed that all other costs from the proposed rule are accurate estimates and accordingly, AMS made no other changes to the information collection requirements of the rule based on this comment.

AMS also received comments on the proposed rule in support of adding measures to protect growers against the risk that LPDs might unfairly reduce broiler grower total compensation during a transition period after implementation of the final rule. Based on comments received, AMS added § 201.106(c), which will require LPDs to submit copies of the prior and modified contracts and disclosures to AMS if average gross grower payments at a complex show year-over-year decline following a contract modification during the three calendar years commencing with and including the effective date of the rule. AMS will review the information provided by LPDs to identify any potentially unfair practices related to broiler grower compensation. AMS consulted with its internal subject matter experts and added direct information collection costs for LPDs to comply with this provision during the three-year period.

AMS also received comments suggesting that some of the detailed documentation requirements of proposed § 201.110(b) were similar to existing P&S documentation and disclosure requirements and might create unnecessarily burdensome and complex paperwork that could burden service technicians at broiler complexes and keep them from other important responsibilities such as assisting growers. In response to these comments, AMS made several changes to § 201.110(b) in the final rule that included consolidating and streamlining the documentation requirements and removing some detailed requirements delineated under subparagraphs in the proposed rule. AMS expects that these changes in final § 201.110(b) will add clarity and minimize potential confusion about the documentation requirements, thereby making them more effective. AMS expects these changes will somewhat reduce total recordkeeping requirements for LPDs. Based on consultation with internal subject matter experts, AMS determined that the precise amount of time savings is difficult to estimate. AMS therefore chose a cautious approach to avoid underestimating costs and did not

reduce the total recordkeeping requirements or the time cost of the information collection for LPDs. Accordingly, these changes did not affect the estimation of costs or benefits in the final rule.

The proposed rule included § 201.110(b)(2), “Compliance review,” which required LPDs to conduct a required bi-annual review of the processes set out in § 201.110(b)(1). AMS removed this requirement from the final rule in response to comments that self-audits would be burdensome for LPDs, and that elimination of this requirement would not substantially diminish effective compliance with § 201.110. Compliance will be enforced through regular AMS review of the policies and procedures LPDs are required to establish and maintain under § 201.110(b). Accordingly, removal of § 201.110(b)(2) eliminated the burden of compliance review on LPDs and reduced costs from the proposed to the final rule by the cost estimate in the proposed rule for that provision.

Based on comments received, AMS added a provision at § 201.112(c) to require that the LPD make reasonable efforts to ensure that growers are aware of their right to request translation assistance and to assist the grower in translating the Broiler Grower Capital Improvement Disclosure Document. Reasonable efforts include, but are not limited to, providing current contact information for professional translation service providers, trade associations with translator resources, relevant community groups, or any other person or organization that provides translation services in the poultry grower’s geographic area. Reasonable efforts, depending on the facts and circumstances (such as convenience, expense, and timeliness of the translation), may also include allowing the grower access to a computer-generated translation of the Disclosure Document and additional time to review any translated Disclosure Document. A similar requirement was established for LPDs in § 201.102(g)(4). As LPDs already have all necessary information to make reasonable efforts to assist growers in translating disclosure documents and have made it available to growers who request the information, AMS did not add any time to its information collection cost estimates for LPDs to comply with this new requirement.

E. Executive Order 12988—Civil Justice Reform

Executive Order 12988 instructs each executive agency to adhere to certain

requirements in the development of new and revised regulations to avoid unduly burdening the court system. This rule has been reviewed under Executive Order 12988 and complies with these requirements. This rule is not intended to have retroactive effect. This rule would not preempt state or local laws, regulations, or policies, unless they present an irreconcilable conflict with this rulemaking. There are no administrative procedures that must be exhausted prior to any judicial challenge to the provisions of this rule. Nothing in this rule is intended to interfere with a person's right to enforce liability against any person subject to the Act under authority granted in section 308 of the Act.

F. Executive Order 13175—Consultation and Coordination With Indian Tribal Governments

Executive Order 13175 requires Federal agencies to consult with Indian Tribes on a government-to-government basis on policies that have Tribal implications. This includes regulations, legislative comments or proposed legislation, and other policy statements or actions. Consultation is required when such policies have substantial direct effects on one or more Indian Tribes, on the relationship between the Federal Government and Indian Tribes, or the distribution of power and responsibilities between the Federal Government and Indian Tribes. The following is a summary of activity to date.

AMS engaged in a Tribal Consultation in conjunction with a previous rulemaking also under the Act (*Inclusive Competition and Market Integrity Under the Packers and Stockyards Act* (87 FR 60010, October 3, 2022)) on January 19, 2023, in person in Tulsa, Oklahoma, and virtually. AMS received multiple Tribal comments from that Consultation, many of which were specific to and considered in that rulemaking. In that consultation, Tribes raised legal concerns with respect to the jurisdiction of the AMS enforcement of the P&S Act. Tribes commented that the P&S Act does not apply to Tribes and Tribal entities. Those comments raise a legal issue of statutory interpretation, but these concerns are not directly implicated by this final rule. This final rule provides additional standards for individual LPDs or growers, and AMS does not find that this rule carries substantial direct effects on one or more Indian Tribes beyond the purely legal issue raised during consultation.

AMS recognizes and supports the Secretary's desire to incorporate Tribal and Indigenous perspectives, remove

barriers, and encourage Tribal self-determination principles in USDA programs, including hearing and understanding Tribal views on legal authorities and cost implications as facts and circumstances develop. If a Tribe requests additional consultation, AMS will work with USDA's Office of Tribal Relations to ensure meaningful consultation is provided in accordance with Executive Order 13175.

G. Civil Rights Impact Analysis Statement

AMS has considered the potential civil rights implications of this final rule on members of protected groups to ensure that no person or group would be adversely or disproportionately at risk or discriminated against on the basis of race, color, national origin, religion, sex, gender identity (including gender expression), sexual orientation, disability, age, marital status, family/parental status, income derived from a public assistance program, political beliefs, reprisal or retaliation for prior civil rights activity, in any program or activity conducted or funded by USDA. This final rule does not contain any requirements related to eligibility, benefits, or services that would have the purpose or effect of excluding, limiting, or otherwise disadvantaging any individual, group, or class of persons on one or more prohibited bases.

In its review, AMS conducted a disparate impact analysis, using the required calculations, which resulted in a finding that Asians and Native Hawaiian or Other Pacific Islanders could be disproportionately impacted by the rule, insofar as fewer farmers in those groups participate in poultry production than would be expected by their representation among U.S. farmers in general and therefore are less likely to benefit, as a whole, from the protections provided by this rule.¹³⁹ However, the regulations would provide benefits equally to all individual poultry growers across demographic characteristics, with some demographic groups being more or less represented among poultry growers. AMS will enhance efforts to notify the groups found to be more significantly impacted of the regulations and their implications. AMS will conduct mitigation and monitoring strategies and

¹³⁹ Among Asian and Native Hawaiian or Other Pacific Islander growers, a smaller percent participates in livestock or poultry agriculture (animal agriculture) than in other types of agriculture. A larger percent of American Indian or Alaskan Native growers participates in animal agriculture than in other types of agriculture. The other demographic groups' participation in animal agriculture tended to fall within 10 percentage points of their participation in agriculture overall.

reach out to several organizations that represent the interests of the impacted groups.

H. E-Government Act

USDA is committed to complying with the E-Government Act by promoting the use of the internet and other information technologies to provide increased opportunities for citizen access to Government information and services, and for other purposes.

I. Unfunded Mandates Reform Act

Title II of the Unfunded Mandates Reform Act of 1995 (UMRA, Pub. L. 104–4) requires Federal agencies to assess the effects of their regulatory actions of State, local, and Tribal governments, or the private sector. Agencies generally must prepare a written statement, including cost benefits analysis, for proposed and final rules with Federal mandates that may result in expenditures of \$100 million or more (adjusted for inflation) in any 1 year for State, local or Tribal governments, in the aggregate, or to the private sector. UMRA generally requires agencies to consider alternatives and adopt the more cost effective or least burdensome alternative that achieves the objectives of the rule. This rule will not compel the expenditure in any one year of \$100 million or more (adjusted for inflation) by State, local, and Tribal governments, in the aggregate, or by the private sector. Therefore, a statement under 2 U.S.C. 1532 is not required.

J. Congressional Review Act

Pursuant to subtitle E of the Small Business Regulatory Enforcement Fairness Act of 1996 (also known as the Congressional Review Act, 5 U.S.C. 801 *et seq.*), OMB's Office of Information and Regulatory Affairs has determined that this rule does not meet the criteria set forth in 5 U.S.C. 804(2).

List of Subjects in 9 CFR Part 201

Confidential business information, Reporting and recordkeeping requirements, Stockyards, Surety bonds, Trade practices.

For the reasons stated in the preamble, AMS amends 9 CFR part 201 as follows:

PART 201—ADMINISTERING THE PACKERS AND STOCKYARDS ACT

■ 1. The authority citation for part 201 continues to read as follows:

Authority: 7 U.S.C. 181–229c.

■ 2. Add § 201.106 to subpart N to read as follows:

§ 201.106 Broiler grower compensation design.

(a) *Rate transparency.* When a broiler growing arrangement between the live poultry dealer and the broiler grower compensates the grower based upon a grouping, ranking, or comparison of growers delivering poultry during a specified period, the live poultry dealer may not use the grower's grouping, ranking, or comparison to others to reduce any rate of compensation under the broiler growing arrangement.

(b) *Excessive variability.* The Secretary presumes that a live poultry dealer violates the Act when aggregate gross annual payments based upon a grouping, ranking, or comparison of growers exceed 25 percent of total gross payments to growers in a complex on an annual-calendar year basis.

(c) *Transition.* For modified or renewed broiler growing arrangements subject to paragraph (a) of this section, for each of the three calendar years commencing with and including the year this section becomes effective, if the annual-calendar year's complex-wide average gross payments to growers at a complex of a live poultry dealer is less than the prior annual-calendar year's complex-wide average gross payments to growers at the complex, the live poultry dealer must submit to the Secretary the following:

(1) A copy of the prior broiler growing arrangement and the modified or renewed growing arrangement; and

(2) Any Live Poultry Dealer Disclosure Document prepared under § 201.102 with respect to the prior broiler growing arrangement and the modified or renewed broiler growing arrangement for the growers at the complex.

■ 3. Add § 201.110 to subpart N to read as follows:

§ 201.110 Operation of broiler grower ranking systems.

(a) *Fair comparison.*—(1) *Duty of fair comparison.* Live poultry dealers providing compensation to broiler growers based upon a grouping, ranking, or comparison of growers delivering poultry must design and operate their poultry grower ranking system to provide a fair comparison among growers.

(2) *Fair comparison factors.* In determining whether the live poultry dealer reasonably designed or operated its poultry grower ranking system to deliver a fair comparison among growers or whether the live poultry dealer must utilize a non-comparison compensation method, the Secretary shall consider the following:

(i) Whether the distribution of inputs by the live poultry dealer causes material differences in performance, and whether appropriate adjustments to grower compensation will be made.

(ii) Whether the assignment of flock production practices by the live poultry dealer causes material differences in performance, and whether appropriate adjustments to grower compensation will be made.

(iii) Whether the designated time period used in the live poultry dealer's comparison is appropriate, including whether the live poultry dealer uses one or more groupings, rankings, or comparisons of growers to mitigate the effects of any differences in inputs over the designated time period.

(iv) Whether conditions and circumstances outside the control of the live poultry dealer render comparison impractical or inappropriate.

(v) Whether the live poultry dealer has made reasonable efforts to timely resolve concerns a grower raises regarding the live poultry dealer's design and operation of its poultry grower ranking system to deliver a fair comparison among growers.

(vi) Any other factor relevant to a fair comparison.

(3) *Non-comparison compensation method.* When a live poultry dealer uses a poultry grower ranking system and cannot conduct a fair comparison for one or more growers, the live poultry dealer must compensate those growers through a non-comparison method specified in the contract that reflects reasonable compensation to the grower for its services.

(b) *Documentation.*—(1) *Policies and procedures.* A live poultry dealer must establish and maintain written documentation of its processes for the design and operation of a poultry grower ranking system for broiler growers that is consistent with the duty of fair comparison. The written documentation must include the following:

(i) *Inputs under live poultry dealer control.* How and when the live poultry dealer assigns, adjusts, or otherwise accounts for similarities and differences of quality and quantity in the delivery of inputs to growers.

(ii) *Flock production practices.* How and when the live poultry dealer assigns, adjusts, or otherwise accounts for differences in production practices.

(iii) *League composition.* How the dealer determines groupings of growers for settlement.

(iv) *Evaluation period.* A reasonable time period over which the dealer evaluates the duty of fair comparison.

(v) *Non-comparison.* When a live poultry dealer may remove growers from a ranking group, and how the live poultry dealer compensates the growers to satisfy the non-comparison compensation method under paragraph (a)(3) of this section.

(vi) *Communication and cooperation.* How the live poultry dealer resolves a grower's concerns with the design or operation of a poultry grower ranking system for broiler growers that is consistent with the duty of fair comparison, including the timeliness of the resolution.

(2) *Record retention.* The live poultry dealer must retain all written records relevant to its compliance with this paragraph (b) for no less than 5 years from the date of record creation.

■ 4. Add § 201.112 to subpart N to read as follows:

§ 201.112 Broiler grower Capital Improvement Disclosure Document.

(a) *Disclosure requirement.* When a live poultry dealer requests that a broiler grower make an additional capital investment, the live poultry dealer must provide the broiler grower with a Capital Improvement Disclosure Document, as described in paragraph (b) of this section.

(b) *Disclosure contents.* The Capital Improvement Disclosure Document must disclose the following in a clear, concise, and understandable manner:

(1) The purpose of the additional capital investment for both the live poultry dealer and the grower, and a summary of all research and other supporting material that the live poultry dealer has relied upon in justifying the additional capital investment.

(2) All financial incentives and compensation for the grower associated with the additional capital investment.

(3) All construction schedules related to the request for additional capital investment.

(4) The housing specifications associated with the additional capital investment.

(5) Any required or approved manufacturers or vendors, and all financial benefits, if any, that the live poultry dealer or any officer, director, decision-making employee, or close family member of any such person, receives from the use of the required or approved manufacturer or vendor.

(6) An analysis of projected returns the grower can expect related to the additional capital investment, including any assumptions, risks, or uncertainties, sufficient to allow the grower to make their own projections.

(7) This statement that "USDA has not verified the information contained in

this document. If this disclosure by the live poultry dealer contains any false or misleading statement or a material omission, a violation of Federal and/or State law may have occurred. Violations of Federal and State laws may be determined to be unfair, unjustly discriminatory, or deceptive and unlawful under the Packers and Stockyards Act, as amended. You may file a complaint at *farmerfairness.gov* or call 1-833-DIAL-PSD (1-833-342-5773) if you suspect a violation of the Packers and Stockyards Act or any other Federal law governing fair and competitive marketing, including contract growing, of livestock and

poultry. Additional information on rights and responsibilities under the Packers and Stockyards Act may be found at *www.ams.usda.gov*.”

(c) *Translation*. Upon delivery to the grower, the live poultry dealer must make reasonable efforts to ensure that growers are aware of their right to request translation assistance and to assist the grower in translating the Capital Improvement Disclosure Document.

■ 5. Add § 201.290 to subpart N to read as follows:

§ 201.290 Severability.

If any provision of this subpart or any component of any provision is declared

invalid, or the applicability thereof to any person or circumstances is held invalid, it is the Agricultural Marketing Service’s intention that the validity of the remainder of this subpart or the applicability thereof to other persons or circumstances shall not be affected thereby with the remaining provision, or component of any provision, to continue in effect.

Erin Morris,

Associate Administrator, Agricultural Marketing Service.

Guidance Regarding Certain Matters Relating to Nonrecognition of Gain or Loss in Corporate Separations, Incorporations, and Reorganizations;
Proposed Rule

DEPARTMENT OF THE TREASURY**Internal Revenue Service****26 CFR Part 1**

[REG-112261-24]

RIN 1545-BR32

Guidance Regarding Certain Matters Relating to Nonrecognition of Gain or Loss in Corporate Separations, Incorporations, and Reorganizations**AGENCY:** Internal Revenue Service (IRS), Treasury.**ACTION:** Notice of proposed rulemaking.

SUMMARY: This document contains proposed regulations regarding certain matters relating to corporate separations, incorporations, and reorganizations qualifying, in whole or in part, for nonrecognition of gain or loss. These matters include distributions and retentions of controlled corporation stock, assumptions of liabilities by controlled corporations, exchanges of property between distributing corporations and controlled corporations, and distributions and transfers of consideration to distributing corporation shareholders and creditors. The proposed regulations would affect corporations and their shareholders and security holders. Proposed regulations modifying the reporting requirements for corporate separations are published elsewhere in the Proposed Rules section of this issue of the **Federal Register**.

DATES: Written or electronic comments and requests for a public hearing must be received by March 17, 2025.

ADDRESSES: Commenters are strongly encouraged to submit public comments electronically via the Federal eRulemaking Portal at <https://www.regulations.gov> (indicate IRS and REG-112261-24) by following the online instructions for submitting comments. Requests for a public hearing must be submitted as prescribed in the “Comments and Requests for a Public Hearing” section. Once submitted to the Federal eRulemaking Portal, comments cannot be edited or withdrawn. The Department of the Treasury (Treasury Department) and the IRS will publish for public availability any comments to the IRS’s public docket. Send paper submissions to CC:PA:01:PR (REG-112261-24), Room 5203, Internal Revenue Service, P.O. Box 7604, Ben Franklin Station, Washington, DC 20044.

FOR FURTHER INFORMATION CONTACT: Concerning the proposed regulations, Justin R. Du Mouchel at (202) 317-6975

(not a toll-free number); concerning submissions of comments and requests for a hearing, contact the Publications and Regulations branch at (202) 317-6901 (not a toll-free number) or by email to publichearings@irs.gov (preferred).

SUPPLEMENTARY INFORMATION:**Authority**

This document contains proposed regulations under sections 355, 357, 361, and 368 of the Internal Revenue Code (Code) that would amend 26 CFR part 1 (Income Tax Regulations) by providing guidance regarding certain matters relating to corporate separations, reorganizations, and incorporations qualifying, in whole or in part, for nonrecognition of gain or loss. The proposed additions and amendments to the Income Tax Regulations are issued pursuant to the express delegations of authority to the Secretary of the Treasury or her delegate (Secretary) provided under sections 337(d), 361(b)(3), and 7805(a) of the Code.

Section 337(d) states, in part, that “[t]he Secretary shall prescribe such regulations as may be necessary or appropriate to carry out the purposes of the amendments made by subtitle D of title VI of the Tax Reform Act of 1986,” including regulations “to ensure that such purposes may not be circumvented through the use of any provision of law or regulations (including the consolidated return regulations and part III of this subchapter).” Relating to the treatment of transfers to creditors, the second sentence of section 361(b)(3) states that “[t]he Secretary may prescribe such regulations as may be necessary to prevent avoidance of tax through abuse of the preceding sentence or [section 361](c)(3).” Finally, section 7805(a) authorizes the Secretary to “prescribe all needful rules and regulations for the enforcement of [the Code], including all rules and regulations as may be necessary by reason of any alteration of law in relation to internal revenue.”

Background**I. Overview of Section 355****A. Section 355 Transactions****1. In General**

If a transaction satisfies the requirements of section 355 (section 355 transaction) and other relevant provisions of the Code and Income Tax Regulations, the transaction may occur without recognition of any gain or loss to the distributing corporation (within the meaning of section 355(a)(1)(A)) and without recognition of any gain or loss

to, or the inclusion of any amount in the income of, the shareholders or security holders of the distributing corporation. A section 355 transaction may take one of the following forms: (i) a spin-off, which is a pro rata distribution of stock of the controlled corporation (within the meaning of section 355(a)(1)(A)) to shareholders of the distributing corporation; (ii) a split-off, which is a distribution of stock of the controlled corporation to some (but not all) shareholders of the distributing corporation in exchange for some or all of their stock of the distributing corporation; or (iii) a split-up, which is a liquidating distribution in which the distributing corporation distributes to its shareholders, either pro rata or non-pro rata, the stock of more than one controlled corporation. As discussed in parts I.A.3 and I.A.4 of this Background, a section 355 transaction may occur either as a “section 355(c) distribution” or as part of a “divisive reorganization.”

2. General Utilities Repeal

In *General Utilities & Operating Co. v. Helvering*, 296 U.S. 200 (1935), the Supreme Court of the United States (Supreme Court) held that corporations generally could distribute appreciated property to their shareholders without the recognition of any corporate-level gain (*General Utilities* doctrine). Congress repealed the *General Utilities* doctrine beginning with legislation in 1969 and culminating with the Tax Reform Act of 1986 (Public Law 99-514, 100 Stat. 2085), which, among other changes, amended sections 311, 336, and 337 of the Code (originally enacted in the Internal Revenue Code of 1954 (1954 Code) (Public Law 83-591, 68A Stat. 3) to apply gain and loss recognition to non-liquidating and liquidating distributions, respectively.

Notwithstanding the repeal of the *General Utilities* doctrine, section 355 allows a distributing corporation to distribute the stock and securities of a subsidiary (that is, a controlled corporation) to its shareholders without imposing a corporate-level tax on the distribution. Accordingly, as observed by the United States Tax Court (Tax Court), “more attention has been directed toward [s]ection 355 today than was ever the case in the past [because] it is one of the few (some might say the only) viable opportunity to escape the repeal of the *General Utilities* doctrine.” *McLaulin v. Comm’r*, 115 T.C. 255, 266 (2000).

In connection with the repeal of the *General Utilities* doctrine, Congress authorized the Treasury Department to promulgate regulations to carry out the purposes of that repeal, including by

preventing its avoidance. Specifically, section 337(d) directs the Secretary to prescribe regulations that are necessary or appropriate to carry out the purposes of *General Utilities* repeal, including “regulations to ensure that such purposes may not be circumvented through the use of any provision of law or regulations (including . . . part III of this subchapter).” Section 355, among other corporate organization and reorganization provisions, is included in part III of subchapter C of chapter 1 of the Code (subchapter C).

3. Section 355(c) Distributions

The general rule set forth in section 355(c)(1) provides that no gain or loss is recognized to a distributing corporation upon any distribution to which section 355 (or so much of section 356 of the Code as relates to section 355) applies and that is not made pursuant to a plan of reorganization (section 355(c) distribution). However, if the distributing corporation distributes any property other than stock or securities of a controlled corporation (that is, any property other than qualified property, as defined in section 355(c)(2)(B)) in a section 355(c) distribution, and if the fair market value of that property exceeds the distributing corporation’s adjusted basis in that property, then section 355(c)(2)(A) requires the distributing corporation to recognize gain as if the property were sold to the distributee at its fair market value. This Federal income tax treatment reflects the status of section 355 as a narrow exception to *General Utilities* repeal. *Compare* section 311(b).

Because a section 355(c) distribution is not made pursuant to a plan of reorganization, a section 355(c) distribution (unlike a divisive reorganization) does not permit the distributing corporation to satisfy distributing corporation debt constituting securities with property other than qualified property. In other words, because a section 355(c) distribution does not qualify as a reorganization under the definitional provisions of section 368(a)(1), the operative provision set forth in section 361(b)(3) is not applicable. Therefore, in a section 355(c) distribution, a distributing corporation cannot transfer any property other than qualified property to its creditors (including its security holders) without recognizing gain or loss on that transfer.

4. Divisive Reorganizations

A distributing corporation may carry out a section 355 transaction as part of a transaction that qualifies as a reorganization under section

368(a)(1)(D) or (G) and to which section 354 of the Code (or so much of section 356 as relates to section 354) does not apply (divisive reorganization). Section 368(a)(1)(D) provides, in part, that a reorganization includes a transfer by the distributing corporation of all or a part of its assets to a controlled corporation if, immediately after the transfer, the distributing corporation or one or more of its shareholders (including persons who were shareholders immediately before the transfer) are in control (within the meaning of section 368(c)) of the controlled corporation; but only if, pursuant to the plan of reorganization, stock or securities of the controlled corporation are distributed in a transaction that qualifies under section 355 or 356.

Under section 368(a)(1)(G), a transfer by a distributing corporation of all or a part of its assets to a controlled corporation in a case under title 11 of the United States Code or a similar case described in section 368(a)(3)(A)(ii) (title 11 or similar case) also is a divisive reorganization if, pursuant to the plan of reorganization, stock or securities of the controlled corporation are distributed in a transaction that qualifies under section 355 (or so much of section 356 as relates to section 355). Section 368(a)(3)(C) provides an ordering rule under which a transaction that would qualify both under section 368(a)(1)(G) and, among other provisions, under section 368(a)(1)(D) or section 351 of the Code, is treated as qualifying solely under section 368(a)(1)(G) for all purposes of subchapter C other than section 357(c)(1).

If a transaction satisfies the definitional requirements of section 368(a)(1)(D) or (G), the distributing corporation may qualify for nonrecognition treatment for (i) its exchange of property with the controlled corporation, (ii) its distribution of certain property to its shareholders, and (iii) its transfer of certain property to its creditors. Under section 357(a), the controlled corporation generally may assume distributing corporation liabilities without the distributing corporation recognizing gain or loss, except as provided in (i) section 357(b) (if the principal purpose for the liability assumption is to avoid Federal income tax or is not a bona fide business purpose), and (ii) section 357(c) (if the sum of the amount of liabilities assumed by the controlled corporation is greater than the total adjusted basis of assets transferred in the exchange).

Under section 361(a), the distributing corporation recognizes no gain or loss if

it exchanges property pursuant to the plan of reorganization solely for stock and securities in the controlled corporation. Under section 361(b)(1)(A), if section 361(a) would apply to an exchange but for the fact that the property received by the distributing corporation also includes money or other property, no gain will be recognized by the distributing corporation if it distributes the money or other property pursuant to the plan of reorganization. Under section 361(b)(3), the distributing corporation also generally may transfer that money or other property in connection with the reorganization to its creditors in satisfaction of distributing corporation debt held by those creditors, without recognition of gain or loss under section 361(b)(1)(A) to the extent the sum of the money and the fair market value of the other property transferred to such creditors does not exceed the adjusted bases of such assets transferred (reduced by the amount of liabilities assumed within the meaning of section 357(c)).

Under section 361(c)(1), the distributing corporation recognizes neither gain nor loss on its distribution of qualified property to its shareholders pursuant to the plan of reorganization. For this purpose, section 361(c)(2)(B) defines “qualified property” as any stock in, right to acquire stock in, or obligation of (i) the distributing corporation, or (ii) another corporation that is a party to the reorganization (for example, the controlled corporation) if such stock, stock right, or obligation is received by the distributing corporation in the exchange. In connection with the reorganization, the distributing corporation also generally may transfer that qualified property to its creditors in satisfaction of distributing corporation debt held by those creditors, without recognition of gain or loss under section 361(c).

For purposes of this preamble, the term “section 361 consideration” means, as described in section 361(a) and (b), the consideration received by a target corporation from an acquiring corporation in exchange for property transferred by the target corporation to the acquiring corporation pursuant to a plan of reorganization. Accordingly, in the context of a divisive reorganization, the term “section 361 consideration” means, for purposes of this preamble, the consideration received by the distributing corporation from the controlled corporation in exchange for property transferred by the distributing corporation to the controlled corporation pursuant to the plan of reorganization.

B. General Federal Income Tax Consequences to Distributing Corporation Shareholders

Section 355(a)(1) provides that, if a distributing corporation distributes to its shareholders with respect to its stock, or distributes to its security holders in exchange for their securities, solely stock or securities of a controlled corporation, and if certain other requirements are satisfied, then no gain or loss is recognized by, and no amount is included in the income of, the distributing corporation's shareholders or security holders upon the receipt of stock or securities of the controlled corporation. However, if any property is received that is not permitted to be received under section 355(a)(1), then section 356 (and not section 355) applies to the receipt of such property as provided in sections 355(a)(4)(A) and 356.

C. General Requirements for Qualification Under Section 355

To qualify as a section 355 transaction under section 355(a)(1), a transaction must satisfy the following requirements. First, under section 355(a)(1)(A), the distributing corporation must distribute stock or securities of a controlled corporation to a shareholder with respect to distributing corporation stock, or to a security holder in exchange for its securities. Second, under section 355(a)(1)(B), the transaction may not be used principally as a device for the distribution of the earnings and profits of the distributing corporation, the controlled corporation, or both. Third, under section 355(a)(1)(C), the distributing corporation and each controlled corporation must satisfy the active trade or business requirements of section 355(b).

With particular regard to these proposed regulations, section 355(a)(1) imposes a fourth requirement regarding distributions of controlled corporation stock and securities. Specifically, section 355(a)(1)(D) requires that, "as part of the distribution," the distributing corporation must distribute either (i) all stock and securities in the controlled corporation held by the distributing corporation immediately before the distribution, or (ii) an amount of stock in the controlled corporation constituting "control" within the meaning of section 368(c) (control distribution). In the case of distributions of less than 100 percent of stock in the controlled corporation, it must be established to the satisfaction of the Secretary that the retention by the distributing corporation of stock (or stock and securities) of the controlled

corporation was not pursuant to a plan having as one of its principal purposes the avoidance of Federal income tax. For purposes of this preamble, such a retention of controlled corporation stock (or stock and securities) by the distributing corporation is referred to as a "retention," and the requirements in section 355(a)(1)(D) are referred to collectively as the "distribution requirement."

D. The Distribution Requirement and Retentions

1. Overview

As described in part I.C of this Background, the distribution requirement consists of two alternative rules. Under section 355(a)(1)(D)(i), the distributing corporation will satisfy the distribution requirement if it distributes all stock and securities in the controlled corporation held by the distributing corporation immediately before the distribution. Alternatively, under section 355(a)(1)(D)(ii), the distributing corporation will satisfy the distribution requirement if it satisfies the following two discrete requirements: (i) the distributing corporation distributes an amount of controlled corporation stock sufficient to qualify as a control distribution; and (ii) the distributing corporation establishes to the satisfaction of the Secretary that the retention of any controlled corporation stock or securities was not pursuant to a plan having as one of its principal purposes the avoidance of Federal income tax.

2. Requirements for Control Distribution; *Commissioner v. Gordon*

Section 355(a)(1)(D) provides that, if a distributing corporation does not distribute all its stock and securities in the controlled corporation, the distributing corporation must make a control distribution as "part of the distribution." However, section 355(a)(1)(D) does not expressly impose a temporal requirement for making a control distribution. Accordingly, section 355(a)(1)(D) could be read as permitting a control distribution to occur over multiple taxable years of the distributing corporation.

In *Commissioner v. Gordon*, 391 U.S. 83 (1968), the Supreme Court considered the application of the distribution requirement to distributions by Pacific Telephone and Telegraph Company (Pacific) of stock of a newly formed, wholly owned subsidiary (Northwest) over multiple taxable years of Pacific. American Telephone and Telegraph Company (AT&T), which owned approximately 90 percent of the

stock of Pacific, decided to separate Pacific into two separate companies and, to effectuate that separation, caused Pacific to engage in the following transactions. First, pursuant to a plan of reorganization submitted to its shareholders, Pacific issued to its shareholders (including the taxpayer) transferable rights to acquire approximately 57 percent of the stock of Northwest on September 29, 1961. That plan of reorganization also provided that Pacific had an "expectation" that the remaining 43 percent of Northwest stock would be offered to Pacific's shareholders. Among other reasons for not distributing 100 percent of its Northwest stock, Pacific desired to achieve an appropriate capital structure and avoid potential State regulatory issues. On June 12, 1963, Pacific issued to its shareholders transferable rights to acquire the remaining 43 percent of Northwest stock. The taxpayer contended that the 1961 and 1963 distributions collectively qualified under section 355.

The Court concluded that neither distribution qualified under section 355, notwithstanding Pacific's "expectation" regarding the second distribution and its purposes for making multiple distributions. *Gordon*, 391 U.S. at 98. In its analysis, the Court expressed a general principle of Federal income tax that, "[a]bsent other specific directions from Congress, Code provisions must be interpreted so as to conform to the basic premise of annual tax accounting." *Id.* at 96. With regard to the distribution requirement, the Court noted that, if an initial transfer of less than a controlling interest in the controlled corporation is to be treated for Federal income tax purposes as a mere first step in the divestiture of control, "it must at least be identifiable as such at the time it is made." *Id.* The Court further stated that the requirement that the character of a transaction be determinable "does not mean that the entire divestiture must necessarily occur within a single tax year," but it does mean that, if one transaction is to be characterized as a "first step," then "there must be a binding commitment to take the later steps." *Id.* Of particular relevance to both the IRS's administrative function and the objective of these proposed regulations to provide increased certainty (see part IV of this Background), the Court expressed that it would be wholly inconsistent with the annual accounting premise to hold that the essential character of a transaction, and its Federal income tax impact, should remain "not only undeterminable but unfixed for an

indefinite and unlimited period in the future, awaiting events that might or might not happen.” *Id.*

The Court found that the facts and circumstances of Pacific’s staggered distributions of Northwest stock, as reflected in Pacific’s plan of reorganization, failed the binding-commitment standard set forth by the Court. *Id.* at 97. Although Pacific’s plan of reorganization evidenced an expectation to distribute its remaining Northwest stock within a three-year period following its initial 57-percent distribution, the Court emphasized that “there is obviously no promise to sell any particular amount of stock, at any particular time, at any particular price” set forth in that document. *Id.* Instead, Pacific’s plan of reorganization merely stated that such subsequent distributions would occur “[a]t a time or times related to its (Pacific’s) need for new capital.” *Id.* Consequently, the Court reasoned that, “[i]f the 1961 distribution played a part in what later proved to be a total divestiture of the Northwest stock, it was not, in 1961, either a total divestiture or a step in a plan of total divestiture.” *Id.* at 97–98.

3. Retentions

Section 1.355–2(e), which reiterates the distribution requirement, provides that the corporate business purpose or purposes for the distribution ordinarily will require the distribution of all stock and securities of the controlled corporation. If the distributing corporation retains any controlled corporation stock or securities, and if it is not established to the satisfaction of the Commissioner that the retention was not pursuant to a plan having as one of its principal purposes the avoidance of Federal income tax, section 355 does not apply to the entire distribution (that is, the entire distribution fails to qualify as a section 355 transaction).

In Rev. Rul. 75–321, 1975–2 C.B. 123, the IRS addressed whether the retention by a widely held and publicly traded corporation (Distributing) of stock in its banking subsidiary (Controlled) complied with section 355(a)(1)(D)(ii) (that is, whether the retention was pursuant to a plan having as one of its principal purposes the avoidance of Federal income tax). In this revenue ruling, Distributing distributed 95 percent of the stock of Controlled to Distributing’s shareholders to comply with Federal banking laws in a transaction that otherwise satisfied the requirements of section 355. Distributing retained 5 percent of Controlled’s stock to meet collateral requirements for short-term financing. The IRS concluded that the retention

was not pursuant to a plan having as one of its principal purposes the avoidance of Federal income tax, because (i) a genuine separation of the corporate entities was effectuated, (ii) retention of a 5-percent stock interest in Controlled would not enable Distributing to maintain practical control over Controlled following the distribution, and (iii) a sufficient corporate business purpose existed for Distributing’s retention of the 5-percent interest in Controlled. *See also* Rev. Rul. 75–469, 1975–2 C.B. 126 (similar ruling with respect to a distributing corporation’s retention of controlled corporation securities to serve as collateral for a bank loan to the distributing corporation).

Similarly, in G.C.M. 32136 (Oct. 23, 1961), the IRS considered whether the retention by a distributing corporation (Distributing) of stock in a newly formed controlled corporation (Controlled) was pursuant to a plan having as one of its principal purposes the avoidance of Federal income tax. Under the facts described in that memorandum, Distributing distributed 80 percent of Controlled stock to Distributing’s shareholders to comply with State banking laws in a transaction that otherwise satisfied the requirements of section 355, and Distributing retained 20 percent of Controlled stock. The avowed purpose for the retention was to permit a controlling group of Distributing’s shareholders to maintain effective control over Controlled. In concluding that Distributing had a Federal income tax avoidance purpose for the retention, the IRS determined that the requirement that a retention be specially justified “seems most likely to be intended to insure a genuine separation.” *See also* G.C.M. 32380 (Aug. 24, 1962) (reiterating that view).

II. Definitional and Operative Provisions Regarding Reorganizations

A. Overview

Subchapter C generally includes (i) definitional provisions, including under section 368, and (ii) operative provisions, including under sections 354, 356, 357, and 361. *See, for example, Microdot, Inc. v. United States*, 728 F.2d 593, 598 (2d Cir. 1984) (“Section 368(a)(1) is a definitional section, wholly distinct from [section] 354.”). As described in greater detail in part II.B of this Background, section 368(a)(1) defines the term “reorganization” as seven specifically described types of transactions under subparagraphs (A) through (G). Qualification of a transaction (or series of transactions) for a definitional

provision under section 368(a)(1) is the sole manner by which the application of an operative provision relating to a reorganization can occur. This statutory structure ensures that the tax-advantaged treatment provided by such operative provisions applies exclusively to those transactions that satisfy all statutory, regulatory, and judicial requirements for a particular definitional provision (for example, the continuity of interest and continuity of business enterprise requirements). As discussed in greater detail in part III of this Background, a primary purpose of the “plan of reorganization” requirement is to ensure that a transaction to which an operative provision is purported to apply is sufficiently connected to a reorganization defined in section 368(a)(1).

B. Section 368: Definitions Relating to Corporate Reorganizations

Section 368(a)(1) is the primary definitional provision of subchapter C with regard to reorganizations. For purposes of parts I through III of subchapter C, section 368(a)(1) defines the term “reorganization” to mean any of the seven types of transactions described in section 368(a)(1)(A) through (G), including triangular reorganizations (as defined in § 1.358–6(b)(2)) that are variants of such transactions and divisive reorganizations described in section 368(a)(1)(D) and (G). Section 368(a)(2) provides special rules that support the definitional provisions set forth in section 368(a)(1), and section 368(a)(3) similarly provides additional rules relating to title 11 or similar cases.

Section 368(b) and (c) also contains definitional provisions. For purposes of part III of subchapter C, section 368(b) generally defines the term “a party to a reorganization” to include (i) a corporation resulting from a reorganization, and (ii) both corporations, in the case of a reorganization resulting from the acquisition by one corporation of stock or properties of another. Section 368(b) defines other corporations as parties to a transaction depending on the type of transaction. *See also* § 1.368–2(f).

For purposes of subchapter C (other than sections 304 and 385 of the Code), section 368(c) defines the term “control” to mean the ownership of (i) stock possessing at least 80 percent of the total combined voting power of all classes of stock entitled to vote, and (ii) at least 80 percent of the total number of shares of all other classes of stock of the corporation. *See also* Rev. Rul. 59–259, 1959–2 C.B. 115 (requiring

ownership of (i) stock possessing at least 80 percent of the total combined voting power of all classes of voting stock, and (ii) at least 80 percent of the total number of shares of each class of outstanding non-voting stock).

C. Section 357: Assumptions of Liabilities by Transferee Corporations

1. Overview

Section 357 is an operative provision that facilitates exchanges involving the assumption of liabilities by generally preventing such assumptions from (i) being treated as the receipt of money or other property in an exchange, and (ii) disqualifying the exchange for nonrecognition treatment. *See* section 357(a); *see also* the anti-abuse rule in section 357(b) and the adjusted basis limitation in section 357(c). Section 357 reflects Congress's view that, "[i]n typical transactions changing the form or entity of a business it is not customary to liquidate the liabilities of the business and such liabilities are almost invariably assumed by the corporation which continues the business," but that nonrecognition treatment in section 357 should be limited solely to "bona fide transactions of this type." H.R. Rep. No. 76-855, at 19 (1939) (Conf. Rep.).

2. Response to *United States v. Hendler*

The original predecessor to current section 357, section 112(k) of the Internal Revenue Code of 1939 (1939 Code), was enacted by Congress as section 213(a) of the Revenue Act of 1939 (Public Law 76-155, 53 Stat. 862, 870) to address the adverse consequences of judicial and taxpayer interpretations of the Supreme Court's decision in *United States v. Hendler*, 303 U.S. 564 (1938). *See* S. Rep. No. 76-648, at 3 (1939) (referencing the *Hendler* opinion by name). In *Hendler*, the Court examined the Federal income tax consequences of a transaction that qualified as a reorganization under section 112 of the Revenue Act of 1928 (Public Law 70-562, 45 Stat. 791). As part of the reorganization, the transferee corporation (Borden Company) assumed and paid the indebtedness of the transferor (Hendler Company). The Court regarded the assumption and payment in substance as though the Borden Company had made the payment directly to the Hendler Company. *Hendler*, 303 U.S. at 566. Based on that treatment, the Court viewed the Hendler Company in substance as receiving money or other property that it failed to distribute to its shareholders (because that payment was made to a Hendler Company creditor,

albeit in form by the Borden Company). *Id.* Accordingly, the Court held that the Hendler Company recognized gain in the amount of that payment. *Id.* at 567.

Following the *Hendler* decision, Congress observed that the Court's analysis had "been broadly interpreted to require that, if a taxpayer's liabilities are assumed by another party in what is otherwise a tax-free reorganization, gain is recognized to the extent of the assumption." H.R. Rep. No. 76-855, at 19 (emphasis added). In other words, as successfully argued by the IRS in cases following *Hendler*, a transferee corporation's lack of payment of the liabilities was immaterial for the *Hendler* analysis to apply to treat the transferee corporation's assumption of a transferor's liabilities as a cash payment to the transferor. *See Haass v. Comm'r*, 37 B.T.A. 948, 955 (1938). The IRS advocated for this broad interpretation in response to an aggressive position taken by taxpayers, who relied on the *Hendler* decision to argue that the basis of stock they had received in prior exchanges should be increased by the amount of gain that *should have been recognized and taxed* by reason of the transferee corporation's assumption of liabilities, even though that gain had not actually been taxed by the IRS (and that tax had not been paid).

However, this broad interpretation jeopardized the nonrecognition treatment of bona fide assumptions carried out as part of reorganizations that Congress originally had intended to facilitate through the enactment of the reorganization provisions. *See* H.R. Rep. No. 76-855, at 19 ("Your committee therefore believes that such a broad interpretation as is indicated above will largely nullify the provisions of existing law which postpone the recognition of gain in such cases.").

3. Enactment of Section 357(a) and (b)

Congress enacted section 112(k) of the 1939 Code to balance (i) the need to facilitate the bona fide assumption of liabilities in transactions that satisfy the definitional requirements of a reorganization, with (ii) the need to minimize abusive tax planning through such assumptions (including through transitory transactions). Accordingly, section 112(k) of the 1939 Code provided for both (i) the general nonrecognition treatment adopted by section 357(a) of the 1954 Code and set forth in current section 357(a), and (ii) a supporting anti-abuse provision adopted by section 357(b) of the 1954 Code and set forth in current section 357(b).

Under section 357(b)(1), the total amount of liabilities assumed in an

assumption described in section 357(a) is treated for purposes of section 351 or 361 (as applicable) as money received by the transferor in the exchange if it *appears* that the principal purpose of the transferor with respect to the assumption was (i) to avoid Federal income tax on the exchange, or (ii) not a bona fide business purpose. In effect, section 357(b) can apply to a transaction to preserve the treatment required by *Hendler* for such abusive assumptions.

In making the determination required by section 357(b)(1), the nature of the liabilities and the circumstances under which the arrangement for the assumption was made are taken into account. In addition, section 357(b)(2) provides that, in any suit or proceeding in which the burden is on the transferor to prove that the liability assumption should not be treated as money received in the exchange, the transferor must meet that burden by a clear preponderance of the evidence.

4. Application of Section 357(b) to Divisive Reorganizations

In Rev. Rul. 79-258, 1979-2 C.B. 143, the IRS considered the application of section 357(b) to the assumption by a newly formed transferee corporation (Controlled) of a liability incurred by the transferor (Distributing) in close temporal proximity to, and in anticipation of, a transaction that qualified as a divisive reorganization under sections 355 and 368(a)(1)(D). One of the Distributing liabilities that Distributing desired Controlled to assume was a \$4,000x portion of a \$25,000x long-term debt owed to an insurance company that Distributing had incurred in connection with the business transferred to Controlled, and that had been outstanding for several years before the divisive reorganization (historical Distributing debt). However, Distributing could not apportion the historical Distributing debt between it and Controlled because the insurance company refused to relieve Distributing of its primary liability for repayment.

Therefore, in exchange for \$4,000x in loan proceeds, Distributing issued a new long-term note for which Distributing was primarily liable to a bank (new Distributing debt). Distributing then caused Controlled to assume the new Distributing debt in the divisive reorganization, and Distributing was relieved of its primary repayment liability (Controlled assumption). The proceeds of the new Distributing debt were used by Distributing to pay off \$4,000x of the historical Distributing debt. Distributing then distributed the Controlled stock to Distributing's shareholders.

From Distributing's standpoint, having Controlled assume the new Distributing debt was desirable because, absent Controlled's assumption of this debt, Distributing's assets would be reduced by the value of the Controlled stock (which was distributed to Distributing's shareholders), but Distributing's liabilities would not be reduced by the \$4,000x liability attributable to the business transferred to Controlled. As a result, Distributing's ability to borrow (and its ability to pay off the portion of the historical Distributing debt attributable to the business transferred to Controlled) could be adversely affected if Controlled did not assume the new Distributing debt.

To determine the potential application of section 357(b), the IRS engaged in a detailed analysis of the facts and circumstances relating to the issuance of the new Distributing debt and the Controlled assumption. First, the IRS observed that Distributing used the proceeds of the new Distributing debt to satisfy \$4,000x of the historical Distributing debt, thereby placing Distributing and Controlled in the same net economic position after the Controlled assumption as each corporation would have been in had Controlled been able to assume \$4,000x of the historical Distributing debt. Second, the IRS observed that the incurrence of the new Distributing debt and the Controlled assumption not only were necessary to effectuate the divisive reorganization, but also were a normal adjunct to the divisive reorganization given the non-assumable nature of part of the historical Distributing debt. Third, the IRS observed that Distributing's incurrence of the new Distributing debt and the Controlled assumption merely were in substitution for Controlled's assumption of a pro rata portion of the historical Distributing debt that Controlled could not assume. In that regard, because the divisive reorganization resulted in Controlled assuming a liability in an amount that properly related to its business operations and would be satisfied from earnings generated by those operations, the IRS viewed the incurrence of the new Distributing debt and the Controlled assumption as consistent with sound business practice. Accordingly, the IRS concluded that tax avoidance was not a principal purpose of the transaction and, therefore, that section 357(b) did not apply to the Controlled assumption.

Additionally, the IRS determined that the acquisition of the new Distributing debt and the Controlled assumption would not be viewed for Federal income

tax purposes as if Controlled had obtained the new Distributing debt and transferred the proceeds to Distributing. In this regard, the IRS found it immaterial that Distributing and Controlled may have been able to arrange their affairs in another manner, because the taxpayer satisfied its burden of proof as required under section 357(b). See *Simpson v. Comm'r*, 43 T.C. 900, 916 (1965) (stating that the application of section 357(b) is limited to transactions "arranged primarily so that the assumption of the [transferor]'s liability in the transaction itself results in tax avoidance for the transferor, or has no bona fide business purpose," and that section 357(b) was not intended to require recognition of gain on bona fide transactions designed to rearrange one's business affairs in such a manner as to minimize taxes in the future, consistent with existing provisions of the law); *ISC Industries, Inc. v. Comm'r*, T.C. Memo. 1971-283 (concluding that petitioner's principal purpose in having a new subsidiary assume liabilities placed upon the assets transferred to the subsidiary was not to avoid Federal income taxes on the transfer, but rather was to protect lines of credit for petitioner's finance business, and finding it immaterial that petitioner may have been able to arrange its affairs in another manner, or in a manner that produced more tax revenue, because section 357(b) clearly looks to the taxpayer's motives for doing what actually occurred).

5. Application of Section 357(c)

In the case of an exchange to which section 351 applies (section 351 exchange) or to which section 361 applies by reason of a divisive reorganization that qualifies under sections 355 and 368(a)(1)(D), section 357(c)(1) generally provides that, if the sum of the amount of the transferor's liabilities assumed by the transferee corporation exceeds the total adjusted basis of the assets transferred by the transferor to the transferee corporation in the exchange, then such excess is considered as a gain from the sale or exchange of a capital asset or of property that is not a capital asset, as the case may be. See also section 368(a)(3)(C) (providing that a reorganization that would qualify under both section 368(a)(1)(D) and (G) is treated as qualifying under section 368(a)(1)(D) for purposes of section 357(c)(1)).

However, section 357(c)(2) provides that the general rule in section 357(c)(1) does not apply to any exchange (i) to which section 357(b) applies, or (ii) that is pursuant to a plan of reorganization

within the meaning of section 368(a)(1)(G) in which no former shareholder of the transferor receives any consideration for its stock. Rev. Rul. 2007-8, 2007-1 C.B. 469, holds that the general rule in section 357(c)(1) does not apply to a section 351 exchange if that transaction also qualifies as a reorganization described in section 368(a)(1)(A), (C), (D) (provided the requirements of section 354(b)(1) are satisfied), or (G) (provided the requirements of section 354(b)(1) are satisfied).

Furthermore, under section 357(c)(3), if the transferor transfers in a section 351 exchange (including a divisive reorganization that overlaps with a section 351 exchange; see section 357(c)(3) (referencing an exchange to which section 357(c)(1) applies)) a liability the payment of which either would give rise to a deduction or would be described in section 736(a) of the Code (concerning payments made in liquidation of the partnership interest of a retiring or deceased partner), the amount of such liability is excluded in determining the amount of liabilities assumed under section 357(c)(1) unless the incurrence of the liability resulted in the creation of (or an increase in) the basis of any property. In addition, liabilities the payment of which would give rise to a capital expenditure are not included for purposes of section 357(c)(1) unless the incurrence of the liability resulted in the creation of (or an increase in) the basis of any property. See Rev. Rul. 95-74, 1995-2 C.B. 36.

D. Section 361: Distributions to Shareholders of Target Corporation

1. Overview

Section 361 is an operative provision applicable to certain exchanges and distributions of property in a transaction that satisfies the definitional requirements for qualification as a reorganization under section 368(a)(1). Section 361(a) and (b) provides the Federal income tax consequences to a target corporation (such as a distributing corporation in a divisive reorganization) that (i) is a party to a reorganization, and (ii) pursuant to the plan of reorganization, exchanges property with an acquiring corporation (such as a controlled corporation in a divisive reorganization) that also is a party to the reorganization. Section 361(c) provides the Federal income tax consequences to the target corporation (such as a distributing corporation in a divisive reorganization) of the distribution by the target corporation to its shareholders, or transfer to its creditors, of certain property in pursuance of or in

connection with the plan of reorganization that includes the exchange of property with an acquiring corporation (such as a controlled corporation in a divisive reorganization) that also is a party to the reorganization. See the discussion in part III.A of this Background (noting that the phrases “in pursuance of” and “in connection with” in section 361 convey the same meaning).

2. Enactment of Section 361(a): Purely Paper Transactions

The original predecessor to current section 361(a) was enacted by Congress as part of section 202(b) of the Revenue Act of 1918 (Pub. L. 65–254, 40 Stat. 1057, 1060 (1919)). The applicable part of section 202(b) of the Revenue Act of 1918 was subsequently incorporated in section 112 of the 1939 Code before being adopted as section 361(a) of the 1954 Code and thereafter as current section 361(a).

Congress enacted the applicable part of section 202(b) of the Revenue Act of 1918 “to establish the rule for determining taxable gains in the case of exchanges of property and to negate the assertion of tax in the case of certain purely paper transactions.” S. Rep. No. 65–617, at 5 (1918). As stated in the legislative history, the substance of the original predecessor to section 361(a) is that (i) when property is exchanged for other property, the property received in the exchange should be treated as the equivalent of cash in the amount of its fair market value, but (ii) when, in connection with the reorganization or consolidation of a corporation, a person receives, in place of stock or securities, new stock or securities of no greater aggregate par value, or when a person receives, in place of property, stock of a corporation formed to take over such property, no gain or loss should be deemed to occur from the exchange. See *id.* at 5–6.

More than a century after the enactment of its original predecessor, section 361(a) continues to provide generally that a corporation (that is, the target corporation) that is a party to a reorganization (such as the distributing corporation in a divisive reorganization) recognizes no gain or loss if it exchanges property pursuant to the plan of reorganization solely for stock and securities in another corporation (that is, the acquiring corporation) that is a party to the reorganization (such as a controlled corporation in a divisive reorganization).

3. Enactment of Section 361(b): Conduit for Distribution to Shareholders

The original predecessor to current section 361(b) was enacted by Congress as section 203(e) of the Revenue Act of 1924 (Pub. L. 68–176, 43 Stat. 253, 256). Section 203(e) of the Revenue Act of 1924 was subsequently incorporated in section 112 of the 1939 Code before being adopted as section 361(b) of the 1954 Code and thereafter as current section 361(b).

Congress enacted section 203(e) of the Revenue Act of 1924 to provide that (i) if the corporation that sells its assets in connection with the reorganization “acts merely as a conduit” in passing the sale proceeds on to its shareholders, no gain to the corporation is to be recognized, but (ii) if the corporation “retains the entire amount of proceeds with the result that the transaction is in substance a real sale, then the gain shall be recognized.” S. Rep. No. 68–398, at 16 (1924). This stated policy is reflected in current section 361(b)(1).

Section 361(b)(1)(A) provides that, if section 361(a) would apply to an exchange but for the fact that the property received by the target corporation also includes money or other property, no gain will be recognized by the target corporation if it distributes the money or other property pursuant to the plan of reorganization. Congress has enacted no limitation on the aggregate amount of cash and the fair market value of other property that a target corporation can distribute to its shareholders (as opposed to creditors) under section 361(b)(1)(A) (although section 368 limits the amount of money or other property that may be received in certain corporate reorganizations).

Section 361(b)(1)(B), which reflects congressional intent with respect to a target corporation’s failure to act solely as a conduit in distributing the sale proceeds (that is, money or other property) to its shareholders, provides that the target corporation (such as the distributing corporation in a divisive reorganization) recognizes gain in an amount that does not exceed the sum of the money and fair market value of the other property that the corporation fails to distribute pursuant to the plan of reorganization.

4. Section 361(c): Distributions of Appreciated Property to Target Corporation Shareholders

Section 361(c) originally was enacted by Congress as section 1804(g)(1) of the Tax Reform Act of 1986. As part of a wholesale rewrite of section 361, Congress amended section 361(c) by enacting section 1018(d)(5)(A) of the

Technical and Miscellaneous Revenue Act of 1988 (Pub. L. 100–647, 102 Stat. 3342, 3578) so that the statute “conforms the treatment of distributions of property by a corporation to its shareholders in pursuance of a plan of reorganization to the treatment of nonliquidating distributions (under section 311).” S. Rep. No. 100–445, at 393 (1988).

Section 311(a) generally provides that, except as provided in section 311(b) (concerning distributions of appreciated property), no gain or loss is recognized by a corporation on the distribution (not in complete liquidation) with respect to its stock of (i) its stock (or rights to acquire its stock), or (ii) property. Accordingly, section 361(c)(1) generally provides that, except as provided in section 361(c)(2) (concerning distributions of appreciated property), no gain or loss is recognized by a target corporation that is a party to a reorganization upon a distribution of property to its shareholders pursuant to a plan of reorganization.

Consistent with section 311(b), section 361(c)(2)(A) provides that, if the target corporation distributes property other than qualified property in a distribution described in section 361(c)(1), and if the fair market value of that other property exceeds the corporation’s adjusted basis in that other property, then gain is recognized by the target corporation as if the property were sold to the distributee at its fair market value. The term “qualified property” is defined in section 361(c)(2)(B) to mean (i) any stock, right to acquire stock, or obligation (including a security) of the corporation, and (ii) any stock, right to acquire stock, or obligation (including a security) of another corporation that is a party to the reorganization received by the target corporation in the exchange.

Therefore, although a target corporation would recognize no gain on an exchange described in section 361(a) (section 361(a) exchange) if that corporation received appreciated non-qualified property and distributed that property to its shareholders pursuant to section 361(b)(1)(A), that corporation nonetheless would recognize gain on the distribution to its shareholders under section 361(c)(2)(A). If any such property is subject to a liability, or if the shareholder assumes a liability of the target corporation in connection with the distribution, section 361(c)(2)(C) provides that the fair market value of that property is treated as not less than the amount of that liability for purposes of section 361(c)(2)(A).

5. Safe Harbors for Transfers to Creditors of the Distributing Corporation

Congress added section 361(b)(3) and (c)(3) as part of the wholesale rewrite of section 361 in the Technical and Miscellaneous Revenue Act of 1988. Section 361(b)(3) provides that, for purposes of section 361(b)(1), any transfer of the money or other property received in the exchange by the target corporation to its creditors in connection with the reorganization is treated as a distribution pursuant to the plan of reorganization. Similarly, section 361(c)(3) provides that, for purposes of section 361(c), any transfer of qualified property by the target corporation to its creditors in connection with the reorganization is treated as a distribution to its shareholders pursuant to the plan of reorganization.

6. Response to Supreme Court's Decision in *Minnesota Tea Company*

In *Minnesota Tea Co. v. Helvering*, 302 U.S. 609 (1938), the Supreme Court held that a distribution by a target corporation to its shareholders of cash received from an acquiring corporation in a reorganization was not a qualifying “distribution” for purposes of the predecessor to section 361(b)(1)(A), because the shareholders immediately used that distributed cash to pay the target corporation’s creditors as part of a prearranged plan. Citing *Gregory v. Helvering*, 293 U.S. 465, 469 (1935), as providing the “controlling principle” for its decision, the Court determined that the payment of indebtedness, and not the distribution of dividends, “was, from the beginning, the aim of the understanding with the stockholders and was the end accomplished by carrying that understanding into effect.” *Minnesota Tea*, 302 U.S. at 613–14. Because the *Minnesota Tea Company* “received the same benefit as though it had retained that amount from [the] distribution and applied it to the payment of such indebtedness,” the Court concluded that the company failed to satisfy the predecessor to section 361(b)(1)(A). *See id.* at 613 (emphasis added).

In describing the rationale for enacting section 361(b)(3) and (c)(3), the legislative history explains that each provision “overrules the holding in *Minnesota Tea Company v. Helvering*.” S. Rep. No. 100–445, at 393 n.102 (1988); *see also* H.R. Rep. 100–795, at 372 (1988). The legislative history described the substance of the safe harbor in section 361(b)(3) as providing that “transfers of property to creditors in satisfaction of the corporation’s

indebtedness in connection with the reorganization are treated as distributions pursuant to the plan of reorganization for this purpose.” S. Rep. No. 100–445, at 393 (1988) (emphasis added). Likewise, the legislative history described the corresponding safe harbor in section 361(c)(3) as providing that “the transfer of qualified property by a corporation to its creditors in satisfaction of indebtedness is treated as a distribution pursuant to the plan of reorganization.” *Id.* (emphasis added). By treating transfers of property to creditors in satisfaction of indebtedness as distributions pursuant to the plan of reorganization, Congress balanced the dual policy objectives of (i) preserving consistency with the fundamental requirement of section 361 that property be distributed, and (ii) enacting a provision to address transfers to creditors in satisfaction of indebtedness that overruled the holding in *Minnesota Tea*.

7. Adjusted Basis Limitation for Purposes of Section 361(b)(3)

In the case of a divisive reorganization described in sections 355 and 368(a)(1)(D), the third sentence in section 361(b)(3) (adjusted basis limitation) limits the extent to which a transfer of money or other property to a creditor is treated as a distribution pursuant to the plan of reorganization for the purposes of section 361. Specifically, section 361(b)(3) applies solely to the extent the sum of the money and the fair market value of the other property transferred to creditors of the distributing corporation does not exceed the aggregate adjusted bases of the assets transferred to the controlled corporation in the section 361(a) exchange, reduced by the amount of the distributing corporation’s liabilities that the controlled corporation actually assumes within the meaning of section 357(c).

Congress enacted the adjusted basis limitation in section 361(b)(3) as part of the American Jobs Creation Act of 2004 (Pub. L. 108–357, 118 Stat. 1418) based on the concern stated in the legislative history that taxpayers had developed tax-planning strategies to circumvent the adjusted basis limitation in section 357(c) on actual assumptions by controlled corporations in divisive reorganizations. *See* S. Rep. No. 108–192, at 185 (2003). Specifically, the committee report observed that a distributing corporation (i) could cause the controlled corporation to borrow money from a financial institution and transfer that money to the distributing corporation in the section 361(a) exchange, and then (ii) could use that

money to pay its creditors. *Id.* The committee report concluded that, although this series of transactions does not involve an actual assumption by the controlled corporation within the meaning of section 357, it is “economically similar to the actual assumption” because, at the end of the series of transactions, the distributing corporation has reduced its indebtedness to its creditor and the controlled corporation has become indebted to a creditor (albeit a different creditor) for an equal amount. *See id.* Accordingly, “because section 361(b) [did] not contain a limitation on the amount that can be distributed to creditors,” Congress limited the scope of the section 361(b)(3) safe harbor to “the amount of the basis of the assets contributed to a controlled corporation in a divisive reorganization.” *Id.*

8. Express Grant of Authority

As stated previously in the Authority section of this preamble, the second sentence of section 361(b)(3) provides the Secretary with an express grant of authority to prescribe such regulations as may be necessary to prevent avoidance of Federal income tax through abuse of the safe harbors in section 361(b)(3) and (c)(3). Congress included this grant of authority in section 361(b)(3) when Congress enacted both provisions as part of the Technical and Miscellaneous Revenue Act of 1988.

III. Plan of Reorganization; Party to a Reorganization

A. Overview

For more than a century, the “plan of reorganization” requirement has served to limit the application of the operative provisions in subchapter C solely to those transactions with a sufficiently proximate relationship to transactions that satisfy the definitional requirements in subchapter C for a reorganization (proximate relationship requirement). For example, *see* section 202(b) of the Revenue Act of 1918 (providing that an exchange did not qualify for nonrecognition treatment unless the transaction was “in connection with” a reorganization). In other words, Congress has long viewed the proximate relationship requirement as an integral tool for preventing the nonrecognition provisions in subchapter C from applying to transactions to which general gain or loss provisions of the Code (for example, section 1001 of the Code) should apply.

This long-standing congressional purpose is illustrated by the evolution of section 202(c)(1) of the Revenue Act

of 1921 (Pub. L. 67–98, 42 Stat. 227). That provision originally provided nonrecognition treatment for an exchange of property held for investment or for productive use in a trade or business, with no exception for stock or securities, and with no proximate relationship requirement. Tax advisors took advantage of this provision by structuring exchanges of portfolio investment securities for other securities in transactions that resulted in no recognition of Federal income tax. After receiving a request from the Treasury Department to address this abuse, Congress amended section 202(c)(1) by removing exchanges of stock and securities from nonrecognition treatment except for exchanges occurring in the context of a reorganization. *See An Act to Amend the Revenue Act of 1921 in Respect to Exchanges of Property*, Public Law 67–545, 42 Stat. 1560 (1923); J. Seidman, *Legislative History of Federal Income Tax Laws: 1938–1861*, at 798 (1938); *see also* Letter from A. W. Mellon, Secretary of the Treasury, to Congressman William R. Green, Acting Chairman of the Committee on Ways and Means (Jan. 13, 1923).

Since first establishing the proximate relationship requirement, Congress has implemented that requirement through various linguistic formulations over time. However, Congress has indicated that such variations in language were not intended to reflect substantive differences. For example, Congress replaced “in connection with” in section 202(b) of the Revenue Act of 1918 with “in the reorganization” in section 202(c) of the Revenue Act of 1921. When describing section 202(c) of the Revenue Act of 1921, a congressional committee print explicitly referred to the proximate relationship under that section as requiring an “in connection with” relationship. *See S. Comm. on Finance*, 68th Cong., *Statement of the Changes Made in the Revenue Act of 1921 by H.R. 6715 and the Reasons Therefor*, at 5–6 (Comm. Print 1924).

In section 203(c) of the Revenue Act of 1924, Congress restated the proximate relationship requirement as requiring an “in pursuance of a plan of reorganization” relationship. This requirement, like the “in connection with” requirement, exists in the current definitional and operative provisions of subchapter C. The legislative history underlying section 203 of the Revenue Act of 1924 explicitly refers to the “in pursuance of the plan of reorganization” formulation in several instances as “in connection with the reorganization.” *See H.R. Rep. No. 68–179*, at 13–16

(1924). In particular, at one point, the Committee on Ways and Means described the change in formulation of the proximate relationship requirement as a result of “minor changes in phraseology.” *See id.* at 13.

B. Definition of “Plan of Reorganization”

The term “plan of reorganization” is not defined in subchapter C. Instead, the sole authoritative guidance defining this term is set forth in the Income Tax Regulations. Specifically, § 1.368–2(g) provides that the term “plan of reorganization” refers to a “consummated transaction specifically defined as a reorganization under section 368(a),” and that “[s]ection 368(a) contemplates genuine corporate reorganizations which are designed to effect a readjustment of continuing interests under modified corporate forms.” Section 1.368–2(g) further provides that the term “plan of reorganization” “is not to be construed as broadening the definition of reorganization as set forth in section 368(a),” but rather “is to be taken as limiting the nonrecognition of gain or loss to such exchanges or distributions as are directly a part of the transaction specifically described as a reorganization in section 368(a).” Section 1.368–2(g) further provides that the transaction (or series of transactions) “embraced in a plan of reorganization must not only come within the specific language of section 368(a),” but also that “the readjustments involved in the exchanges or distributions effected in the consummation [of the plan of reorganization] must be undertaken for reasons germane to the continuance of the business of a corporation a party to the reorganization.”

However, significant uncertainty and confusion have arisen regarding the scope, purpose, and application of § 1.368–2(g). As expressed by the Tax Court in an observation often referenced by courts and commentators, “the above definition is imbued with qualities of flexibility and vagueness, with the result that it does not present precise self-executing guidelines.” *Int’l Telephone & Telegraph Corp. v. Comm’r*, 77 T.C. 60, 75 (1981); *see also J.E. Seagram Corp. v. Comm’r*, 104 T.C. 75, 96 (1995) (relying on the quote in *Int’l Telephone* in observing that § 1.368–2(g) provides “substantial elasticity”). As a result, § 1.368–2(g) (including its proximate relationship requirement) has created significant uncertainty and confusion for taxpayers and the IRS in determining the scope of transactions that properly should be taken into account for purposes of

applying the definitional and operative provisions of subchapter C.

Section 1.368–1(c) further describes the “plan of reorganization” concept and provides important context regarding the application of this concept and its embedded proximate relationship requirement. Specifically, § 1.368–1(c) provides, in part, that “[t]he provisions of [part III of subchapter C] referred to in this paragraph *are inapplicable unless there is a plan of reorganization*” (emphasis added). Section 1.368–1(c) further provides that “[a] plan of reorganization must contemplate the bona fide execution of one of the transactions specifically described as a reorganization in section 368(a) and for the bona fide consummation of each of the requisite acts under which nonrecognition of gain is claimed.” That transaction, and those acts, must be an “ordinary and necessary incident of the conduct of the enterprise and must provide for a continuation of the enterprise.” *Id.* Finally, § 1.368–1(c) provides that a scheme involving “an abrupt departure from normal reorganization procedure in connection with a transaction on which the imposition of tax is imminent, such as a mere device that puts on the form of a corporate reorganization as a disguise for concealing its real character, and the object and accomplishment of which is the consummation of a preconceived plan having no business or corporate purpose, is not a plan of reorganization.”

Consistent with the discussion in part III.A of this Background, § 1.368–1(c) reflects the function of the “plan of reorganization” concept and its embedded proximate relationship requirement—namely, to limit the application of the definitional and operative provisions of subchapter C to those transactions included in the plan of reorganization. Section 1.368–1(c) also requires all transactions properly included in the plan of reorganization to be consistent with, and to facilitate satisfaction of, a principal requirement for nonrecognition treatment under the reorganization provisions of subchapter C (that is, the continuation of an enterprise). Finally, § 1.368–1(c) reflects that devices and sham transactions cannot properly be included in a plan of reorganization.

C. Party to a Reorganization

Section 368(b) generally provides that the term “a party to a reorganization” includes (i) a corporation resulting from a reorganization, and (ii) both corporations, in the case of a reorganization resulting from the

acquisition by one corporation of stock or properties of another. Consistent with section 368(b), § 1.368–2(f) defines the term “party to a reorganization” as including “a corporation resulting from a reorganization, and both corporations in a transaction qualifying as a reorganization where one corporation acquires stock or properties of another corporation.” Section 1.368–2(f) further articulates which entities are parties to a reorganization in various types of reorganizations defined in section 368(a)(1). However, the uncertainty regarding the meaning of “plan of reorganization,” described in part III.B of this Background, has resulted in confusion regarding the proper identification of parties to a reorganization.

D. Reporting and Recordkeeping Requirements for Corporate Reorganizations

Section 1.368–3 sets forth reporting and recordkeeping requirements for corporate reorganizations. Section 1.368–3(a) requires a plan of reorganization to be adopted by each corporation that is a party to the reorganization, and it requires each such corporation to include a statement with its Federal income tax return that includes certain limited information about the reorganization. However, § 1.368–3(a) provides no additional detail on the manner in which the plan of reorganization must be adopted, and it does not require the plan of reorganization to be reflected in any documentation or records of the parties to the reorganization.

Current § 1.368–3(a) contrasts starkly with a prior version of § 1.368–3(a), which provided that the plan of reorganization “must be adopted by each of the corporations parties thereto; and the adoption must be shown by the acts of its duly constituted responsible officers, and appear upon the official records of the corporation.” See § 1.368–3(a) (effective from November 26, 1960, to May 29, 2006) (prior § 1.368–3(a)).

Prior § 1.368–3(a) also imposed additional requirements to facilitate the IRS’s administration of the reorganization provisions in part III of subchapter C. In particular, prior § 1.368–3(a) required the parties to a reorganization to file with the IRS a “copy of the plan of reorganization, together with a statement, executed under the penalties of perjury, showing in full the purposes thereof and in detail all transactions incident to, or pursuant to, the plan.” In contrast, taxpayers currently are not required by § 1.368–3 to provide as part of their Federal income tax return a plan of

reorganization that describes the transactions to which taxpayers intend to apply the nonrecognition provisions of subchapter C.

In addition, prior § 1.368–3(a) required taxpayers to file with the IRS “a complete statement of all facts pertinent to the nonrecognition of gain or loss in connection with the reorganization.” Current § 1.368–3(a) contains no such requirement. Therefore, the IRS currently does not receive as part of a taxpayer’s Federal income tax return a statement of facts necessary to determine the proper application of the nonrecognition provisions of subchapter C to the transactions comprising a corporate reorganization.

Instead, current § 1.368–3(a) merely requires each corporate party to a reorganization to include a statement, on or with its return for the taxable year of the exchange, that includes: (i) the names and employer identification numbers (if any) of all such parties; (ii) the date of the reorganization; (iii) the value and basis of the assets, stock, or securities of the target corporation transferred in the transaction, determined immediately before the transfer in the manner described in § 1.368–3(a); and (iv) the date and control number of any one or more private letter rulings issued by the IRS in connection with the reorganization. Current § 1.368–3(b) imposes similar requirements on significant holders of stock or securities of the target corporation.

Like prior § 1.368–3(c), current § 1.368–3(d) requires taxpayers to retain their permanent records with respect to a corporate reorganization.

IV. TIGTA Report To Improve Enforcement of Corporate M&A Transactions

In 2019, the Treasury Inspector General for Tax Administration (TIGTA) published a report titled “A Strategy Is Needed to Assess the Compliance of Corporate Mergers and Acquisitions With Federal Tax Requirements,” Ref. No. 2019–30–050 (Sept. 5, 2019) (TIGTA Report). In that report, TIGTA considered the scope of information required to be provided under § 1.368–3(a) and expressed that “the forms previously detailed represent only a small portion of the information that may be filed, and certain forms used to report merger and acquisition (M&A) transactions may not be providing sufficient information to identify noncompliance.” *Id.* at 14–15.

Accordingly, TIGTA recommended that, if the IRS finds that the current forms do not contain information

sufficient for identifying potential noncompliance in M&A transactions, the IRS “should consider amending the filing criteria and information required in the forms to develop useful compliance tools.” *Id.* at 14. The IRS agreed with this recommendation, stating that it will continue to consider how to use M&A transaction information in its compliance efforts.

V. Reporting Requirements for Section 355 Transactions

In a notice of proposed rulemaking (REG–116085–23) published elsewhere in the Proposed Rules section of this issue of the **Federal Register**, the Treasury Department and the IRS are issuing proposed regulations to revise current § 1.355–5 (proposed § 1.355–5) to enhance the IRS’s ability to administer and enforce the requirements of section 355. Similar to current § 1.368–3 (previously discussed in part III.D of this Background), current § 1.355–5 requires the distributing corporation and each significant distributee (as defined in current § 1.355–5(c)(1)) to include a statement with its tax return that includes certain limited information about the section 355 transaction. To implement the recommendation in the TIGTA Report described in part IV of this Background, proposed § 1.355–5 would require taxpayers to submit new IRS Form 7216, *Multi-Year Reporting Related to Section 355 Transactions* (or any successor form), to provide the IRS with additional information to help the IRS identify potential noncompliance in section 355 transactions.

VI. Revenue Procedure 2024–24 and Notice 2024–38

On May 2, 2024, the Treasury Department and the IRS released Rev. Proc. 2024–24, 2024–21 I.R.B. 1214, to provide procedures for requesting private letter rulings from the IRS regarding certain matters relating to section 355 transactions. Rev. Proc. 2024–24 superseded Rev. Proc. 2018–53, 2018–43 I.R.B. 667, and made several significant changes to the requirements of that revenue procedure and to Rev. Proc. 2017–52, 2017–41 I.R.B. 283.

Also on May 2, 2024, the Treasury Department and the IRS released Notice 2024–38, 2024–21 I.R.B. 1211, to describe their views and concerns relating to certain matters addressed in Rev. Proc. 2024–24, and to solicit feedback on the provisions set forth in Rev. Proc. 2024–24. In section 2.01 of Notice 2024–38, the Treasury Department and the IRS requested that such feedback take into account the

following three objectives for potential future guidance: (i) the guidance will be consistent with all relevant provisions of the Code (compliance objective); (ii) the guidance will provide certainty to taxpayers and the IRS regarding the application of all relevant provisions of the Code to purported section 355 transactions (increased certainty objective); and (iii) the guidance will be responsive to the manner in which section 355 transactions are engaged in by taxpayers and reflect current market practices and preferences (transaction facilitation objective), to the extent that such approach does not conflict with the first two objectives.

Explanation of Provisions

The purpose of these proposed regulations is to establish a comprehensive set of rules to implement certain core definitional and operative provisions of subchapter C that address corporate separations, incorporations, and reorganizations. The current regulatory framework underlying these provisions is incomplete, outdated, and not reflective of their importance to the Federal corporate income tax system, given the trillions of dollars of corporate transactions governed by these statutory provisions. Due to the lack of up-to-date regulatory guidance, taxpayers and the IRS must rely on a patchwork of caselaw, IRS revenue rulings and revenue procedures, and non-authoritative IRS documents to discern the current state of the law with respect to these core provisions of subchapter C.

Accordingly, providing comprehensive regulatory guidance to facilitate the implementation of these core definitional and operative provisions of subchapter C would promote taxpayer certainty and sound tax administration. Although Notice 2024–38 focused on Federal income tax issues regarding section 355 transactions, these core definitional and operative provisions also address incorporations and acquisitive reorganizations. Therefore, the proposed regulations would implement those statutory provisions for all corporate M&A transactions, in a manner that reflects the three objectives described in section 2.01 of Notice 2024–38 (that is, the compliance objective, the increased certainty objective, and the transaction facilitation objective) in accordance with their respective priorities as set forth therein.

A principal objective of the Treasury Department and the IRS in issuing these proposed regulations is to significantly improve horizontal equities among taxpayers and tax advisors. In other

words, based on feedback from tax advisors, the lack of authoritative guidance in this area effectively has transformed a taxpayer's option to request a private letter ruling on the application of certain definitional and operative provisions into a requirement. Indeed, tax advisors have directly reached out to the Treasury Department and the IRS to emphasize the mandatory nature of private letter rulings on certain topics in this area because, based on the current state of authoritative guidance, those tax advisors could not provide tax opinions at a sufficient level of comfort in the absence of a private letter ruling. Therefore, these tax advisors have stressed the importance of engaging in bar association panels and other professional speaking engagements to access the perspectives of Treasury Department and IRS officials regarding the government's current views on certain fundamental corporate tax issues.

These proposed regulations would provide, through publicly accessible authoritative guidance, core definitional and operative provisions. This guidance is intended to facilitate the ability for taxpayers to achieve increased comfort on the Federal income tax treatment of their corporate M&A transactions without the need for a private letter ruling. Just as importantly, this guidance is intended to encourage the submission of private letter ruling requests and facilitate the IRS private letter ruling process. In particular, these proposed regulations are intended to help direct the focus of tax advisors to those issues that raise significant Federal income tax compliance concerns, and consequently improve the organization and focus of their private letter ruling submissions. Similarly, these proposed regulations are intended to increase the efficiency of the private letter ruling program by allowing submission reviewers to focus primarily on such significant issues, rather than those issues that would be addressed directly by this guidance.

In explaining the provisions of these proposed regulations, this Explanation of Provisions discusses issues described in Notice 2024–38 and the feedback received in response to Notice 2024–38. Such feedback has informed the development of these proposed regulations. This Explanation of Provisions also references proposed regulations, published elsewhere in the Proposed Rules section of this issue of the **Federal Register**, that would implement enhanced reporting requirements for section 355 transactions. Those enhanced reporting requirements are integral to the

proposed substantive guidance set forth in these proposed regulations. Specifically, as described further in this Explanation of Provisions, this proposed substantive guidance reflects the long-standing reality that corporate transactions typically are carried out over multiple taxable years. The increased transactional flexibility that would be provided by these proposed regulations is conditioned on the IRS's ability to track the execution of these transactions throughout their lifecycle, and the enhanced reporting requirements for section 355 transactions would facilitate the IRS's ability to carry out its administrative function with respect to these transactions.

I. Distinction Between Delayed Distributions and Retentions; Rules for Qualifying Retentions

A. Notice 2024–38

Section 2.02(1) of Notice 2024–38 stated the view of the Treasury Department and the IRS that the Code provides separate and distinct treatment for three instances in which a distributing corporation temporarily continues to hold controlled corporation stock or securities following the date on which the distributing corporation has distributed an amount of controlled corporation stock constituting control (within the meaning of section 368(c)) (control distribution date). These three instances are: (i) a delayed distribution of controlled corporation stock or securities that is “part of the distribution” (within the meaning of section 355(a)(1)(D)); (ii) a delayed distribution of controlled corporation stock or securities that is “in pursuance of the plan of reorganization” (within the meaning of section 361); and (iii) a retention of controlled corporation stock or securities.

Section 2.02(2) of Notice 2024–38 stated the view of the Treasury Department and the IRS that section 355(a)(1)(D) effectively creates a rebuttable presumption that any retention evidences a plan to achieve a Federal income tax avoidance purpose. Section 2.02(2) of Notice 2024–38 also stated that the Treasury Department and the IRS are considering the degree to which connections between the distributing corporation and the controlled corporation (and, as appropriate, the DSAG and the CSAG) after the control distribution date would prevent a transaction from qualifying under section 355. (The terms “DSAG” and “CSAG” mean the separate affiliated group (as defined in section 355(b)(3)(B)) of which the distributing

corporation or the controlled corporation, respectively, is the common parent.)

Section 2.02(2) of Notice 2024–38 also stated the view of the Treasury Department and the IRS that overlapping directors, officers, or key employees and the existence of continuing contractual agreements between the distributing corporation (and other members of the DSAG) and the controlled corporation (and other members of the CSAG) that include provisions that are not arm’s-length weigh against a determination of qualification under section 355.

B. Stakeholder Input

1. Existence of Rebuttable Presumption Under Section 355(a)(1)(D)(ii)

As an initial matter, some stakeholders have contended that section 355(a)(1)(D)(ii) does not create a rebuttable presumption that a retention evidences a plan with a principal purpose of avoiding Federal income tax, notwithstanding the explicit statutory requirement that the Secretary must be satisfied that such a purpose does not exist. Instead, these stakeholders have asserted that Congress’s intent in including the “no tax avoidance purpose” language in section 355(a)(1)(D)(ii) is unclear, and that the legislative history of section 355 does not give further details about the meaning of this language.

Accordingly, these stakeholders have suggested that, rather than include a rebuttable presumption, the proposed regulations should place greater emphasis on (i) an examination of the corporate business purpose for the section 355 transaction, and (ii) a determination of whether the retained controlled corporation stock is disposed of as “part of the distribution” (see section 355(a)(1)(D)) or “in pursuance of the plan of reorganization” (see section 361(c)). These stakeholders contend that their view is supported by sections 354, 355, and 361, as well as by § 1.368–2(g), which requires readjustments involved in the exchanges or distributions effected in consummating a plan of reorganization to be “undertaken for reasons germane to the continuance of the business of a corporation a party to the reorganization.”

2. Application of Plan of Reorganization With Regard to Section 355(a)(1)(D)(ii)

Stakeholders also have requested clarification in the proposed regulations that all delayed distributions, whether before or after the control distribution date, are treated as part of the distribution (within the meaning of

section 355(a)(1)(D)) if they are effectuated pursuant to the plan of reorganization. Relatedly, stakeholders have recommended that the proposed regulations employ the same standard (that is, the same level of proximate relationship) in considering whether a transaction is “part of the distribution” and “in pursuance of a plan of reorganization.” Stakeholders have further requested confirmation in the proposed regulations that the “no tax avoidance purpose” requirement in section 355(a)(1)(D)(ii) applies only to the extent a delayed distribution fails to qualify under the operative provisions.

Based on their analogy to their view of the “plan of reorganization” concept, these stakeholders have contended that the “as part of the distribution” requirement in section 355(a)(1)(D) provides substantial flexibility to the distributing corporation regarding the timing and manner of dispositions of controlled corporation stock (for example, in a delayed distribution of controlled corporation stock to shareholders of the distributing corporation). In this regard, stakeholders have recommended that the phrase “as part of the distribution” be interpreted to provide section 355 qualification for situations in which the distributing corporation contemplates—but provides no further level of commitment to—a spectrum of potential dispositions of controlled corporation stock, so long as the distributing corporation eventually achieves one or more of those contemplated possibilities or related variants. As described by such stakeholders, the distributing corporation need not identify the timing of those dispositions (regardless of whether they span multiple taxable years of the distributing corporation), the potential recipients of controlled corporation stock (for example, creditors of the distributing corporation), or the method of disposing of that stock.

The stakeholder input described in the foregoing paragraphs ultimately focuses on two aspects of the IRS private letter ruling program for section 355 transactions: (i) the requirement set forth in section 3.03(3)(a)(ii) of Rev. Proc. 2024–24 (the so-called “pick a lane” requirement); and (ii) the elimination under that revenue procedure of so-called “backstop retention rulings.”

With regard to the “pick a lane” requirement, these stakeholders read section 3.03(3)(a)(ii) of Rev. Proc. 2024–24 as providing that the IRS will entertain a request for rulings that: (i) a delayed distribution of controlled corporation stock or securities will be, as applicable, “part of the distribution”

(within the meaning of section 355(a)(1)(D)) or “in pursuance of the plan of reorganization” (within the meaning of section 361); and (ii) a retention of controlled corporation stock or securities that is not included in a ruling request described in clause (i) of this sentence will not be in pursuance of a plan having as one of its principal purposes the avoidance of Federal income tax (within the meaning of section 355(a)(1)(D)(ii)). Stakeholders have further stated that, to comply with the so-called “pick a lane” requirement, a taxpayer must specify the portions of controlled corporation stock remaining after the control distribution (i) to which the taxpayer intends section 361(c) to apply, and (ii) which the taxpayer intends to retain and not dispose of under section 361(c). See section 3.03(3)(d) of Rev. Proc. 2024–24.

In practice, the “pick a lane” requirement requires a taxpayer to identify to the IRS those transactions that the taxpayer intends to carry out as part of its plan of reorganization. However, stakeholders have contended that this requirement is problematic because Rev. Proc. 2024–24 also has eliminated the availability of “backstop retention rulings,” which stakeholders have described as “protective rulings” affording taxpayers a determination by the IRS, before the first step of a divisive reorganization, that a retention at no point will have failed to satisfy the “no tax avoidance purpose” requirement in section 355(a)(1)(D)(ii).

Stakeholders have contended that these changes in private letter ruling policy, combined with the requirement that all controlled corporation stock or securities be distributed within 12 months of the date of the first distribution (first distribution date) to receive a ruling that the distribution qualifies for nonrecognition treatment under section 355 (see section 3.03(2)(b)(ii) of Rev. Proc. 2024–24), have created an unnecessary risk for taxpayers that an intended divisive reorganization could fail to qualify under section 355 (section 355(a)(1)(D)(ii) risk). For purposes of these proposed regulations, the term “first distribution” means the earliest distribution in a series of distributions made pursuant to the plan of distribution or plan of reorganization, as appropriate.

Specifically, these stakeholders have asserted that, because transactions intended to qualify for nonrecognition treatment under section 361(c) often require most of a year to complete, tax advisors now are faced with three undesirable options. First, tax advisors could recommend the premature

termination of such transactions, which otherwise would have been effectuated for bona fide business purposes for corporate taxpayers. Second, tax advisors could attempt, in an unreasonably short timeframe, to receive from the IRS a supplemental private letter ruling that the “springing retention” (that is, a retention that arises unexpectedly during the 12-month period) satisfies the “no tax avoidance purpose” requirement. Third, tax advisors could provide an opinion that the springing retention satisfies the “no tax avoidance purpose” requirement, notwithstanding the lack of authoritative guidance on that issue.

C. Proposed Regulations

Consistent with the statement in section 2.02(2) of Notice 2024–38, proposed § 1.355–10(c)(1) would reflect the presumption that a retention is pursuant to a plan having as one of its principal purposes the avoidance of Federal income tax. However, the Treasury Department and the IRS appreciate the views of stakeholders regarding delayed distributions and retentions. In particular, the Treasury Department and the IRS are sensitive to the potential negative impacts of the “pick a lane” requirement and related requirements in Rev. Proc. 2024–24 on divisive reorganizations, and to the lack of clear, authoritative guidance regarding the “no tax avoidance purpose” requirement of section 355(a)(1)(D)(ii). Therefore, and consistent with the compliance, increased certainty, and transaction facilitation objectives of these proposed regulations, the Treasury Department and the IRS have proposed rules to address the uncertainty highlighted by stakeholders in a manner that facilitates the ability of (i) taxpayers to carry out bona fide section 355 transactions, and (ii) the IRS to ensure that such transactions comply with all requirements of the Code.

1. Proposed Safe Harbor To Address Section 355(a)(1)(D)(ii) Risk

a. Overview

In response to stakeholder concerns regarding the section 355(a)(1)(D)(ii) risk, these proposed regulations would provide a safe harbor that incorporates objectively verifiable conditions for retentions not to be treated as pursuant to a plan having as one of its principal purposes the avoidance of Federal income tax (qualifying retentions). The Treasury Department and the IRS have proposed this safe harbor to enable taxpayers to satisfy the requirements of section 355(a)(1)(D)(ii) with greater

certainty even in the absence of a private letter ruling from the IRS—thereby achieving an increased certainty and transaction facilitation objectives. For taxpayers that do not satisfy the requirements of the proposed safe harbor, the proposed regulations would provide for a general facts-and-circumstances determination for whether a retention is a qualifying retention.

b. Section 355(a)(1)(D)(ii) Safe Harbor

Under the section 355(a)(1)(D)(ii) safe harbor in proposed § 1.355–10(c)(3), a distributing corporation would be treated as satisfying the general facts-and-circumstances test in proposed § 1.355–10(c)(2)(ii) for a qualifying retention if all six of the following conditions are satisfied. First, the distributing corporation must have a specific corporate business purpose for the retention as of the date of adoption of the plan of distribution or plan of reorganization, as appropriate, and at all times during the period of retention. Second, stock of the controlled corporation must be widely held during the period of retention after the first distribution date. Third, any overlap between the officers, directors, or key employees of the DSAG and of the CSAG must be limited in the manner described in proposed § 1.355–10(c)(3)(iv). Fourth, any continuing arrangements between the distributing corporation and the controlled corporation during the period of retention either (i) must be negotiated on and reflect arm’s-length terms, or (ii) within two years after the first distribution date, must be terminated or renegotiated to reflect arm’s-length terms. Fifth, the plan of distribution or plan of reorganization, as appropriate, must reflect a definite intent in the official records of the distributing corporation that the distributing corporation dispose of all retained controlled corporation stock (or securities) by the end of the five-year period beginning on the first distribution date. Sixth, the disposition of retained controlled corporation stock (or securities) must not result in less Federal income tax to the distributing corporation (determined based on the fair market value and adjusted basis of that stock (or securities) as of the first distribution date) than if that stock (or securities) had been distributed in the first distribution. The distributing corporation must include in its plan of distribution or plan of reorganization (as applicable) a description of each agreement and transaction that establishes the satisfaction of the foregoing six conditions.

c. Rationale for Section 355(a)(1)(D)(ii) Safe Harbor

The safe harbor in proposed § 1.355–10(c)(3) is intended to balance taxpayers’ need for certainty with the IRS’s need to ensure taxpayer compliance with section 355(a)(1)(D)(ii). As discussed in part IV of the Background, TIGTA recommended that the IRS consider amending the filing criteria and information required in current forms to develop useful compliance tools. The inclusion of objective requirements in the section 355(a)(1)(D)(ii) safe harbor is consistent with both TIGTA’s recommendation and the compliance, increased certainty, and transaction facilitation objectives for guidance described in section 2.01 of Notice 2024–38.

Moreover, under proposed § 1.355–5 and new IRS Form 7216 (*see* part V of the Background), and consistent with the recommendation in the TIGTA Report, a taxpayer would be required to report key information that would enable the IRS to ensure that the taxpayer, during each taxable year of the retention period, continues to comply with the requirements of the section 355(a)(1)(D)(ii) safe harbor. Thus, the section 355(a)(1)(D)(ii) safe harbor, coupled with the enhanced reporting requirements for section 355 transactions, would increase taxpayer certainty (by reducing the so-called section 355(a)(1)(D)(ii) risk) and would facilitate IRS administration of section 355(a)(1)(D)(ii). The Treasury Department and the IRS are of the view that these two proposals would significantly help achieve all three objectives of these proposed regulations.

The proposed regulations would not incorporate the stakeholders’ recommendation that the requirements of section 355(a)(1)(D)(ii) be treated as satisfied so long as the distributing corporation disposes of all controlled corporation stock pursuant to the plan of reorganization. Such an approach would conflict with long-standing § 1.355–2(e)(2), which requires the consideration of factors aside from the manner in which the distributing corporation disposes of its retained controlled corporation stock (for example, if the distribution would be treated to any extent as a distribution of “other property” under section 356). The stakeholders’ recommendation would not be consistent with section 355(a)(1)(D)(ii), because that recommendation, by itself, would not ensure a genuine separation.

In addition, the proposed regulations would not incorporate stakeholders’ recommendation that a strong corporate

business purpose for a section 355 transaction be treated as sufficient to satisfy the requirements under section 355(a)(1)(D)(ii). This suggestion is inconsistent with the plain reading of the statute, which requires a determination that the avoidance of Federal income tax was not a principal purpose of the retention. In other words, the distributing corporation could possess a strong corporate business purpose for the section 355 transaction in general and for the retention in particular, and yet also possess a principal purpose for the retention of avoiding Federal income tax.

Ultimately, the stakeholders' recommended approaches would conflict with the purpose of section 355(a)(1)(D), which is to ensure genuine separations between the distributing and controlled corporations—a policy reflected in the legislative history of section 355(a)(1)(D) and the long-standing view of the Treasury Department and the IRS regarding that purpose as fundamental to all section 355 transactions. The legislative history of section 355(a)(1)(D) indicates that Congress's initial preference was to provide no exception to the complete-distribution requirement under section 355(a)(1)(D)(i), and that the exception for retentions originated through a subsequent Senate amendment. *See* H.R. Rep. No. 83–1337, at A121 (1954); S. Rep. No. 83–1622, at 266 (1954). Indeed, Treasury regulations that predated the enactment of section 355(a)(1)(D), and that tax advisors have acknowledged as the basis for section 355(a)(1)(D), provided that the business reasons supporting a distribution of controlled corporation stock ordinarily required the distribution of *all* controlled corporation stock owned by the distributing corporation. *See* § 29.112(b)(11)–2(c) of Regulation 111 (issued under section 112(b)(11) of the 1939 Code, the predecessor to section 355 of the 1954 Code); *see also* § 1.355–2(e)(2), which continues to reflect this language). Long-standing revenue rulings and general counsel memoranda also reflect the view that, under the plain reading of section 355(a)(1)(D)(ii), Congress intended to subject retentions to heightened scrutiny to ensure that the section 355 transaction effectuates a genuine separation of the distributing corporation and the controlled corporation. *See* Rev. Rul. 75–469; Rev. Rul. 75–321; *see also* G.C.M. 32136 (Oct. 23, 1961).

2. Facts-and-Circumstances Test for Determining Compliance With Section 355(a)(1)(D)(ii)

If a taxpayer fails to satisfy the requirements of the section 355(a)(1)(D)(ii) safe harbor in proposed § 1.355–10(c)(3), the taxpayer may establish compliance with section 355(a)(1)(D)(ii) through satisfaction of the facts-and-circumstances test in proposed § 1.355–10(c)(2)(ii). As with qualification for the proposed section 355(a)(1)(D)(ii) safe harbor, satisfaction of the proposed facts-and-circumstances test would require a determination that the distributing corporation and the controlled corporation have genuinely separated, among other requirements. This proposed facts-and-circumstances approach combined with the proposed safe harbor would provide taxpayers and the IRS with increased certainty regarding the application of section 355(a)(1)(D)(ii).

Under the facts-and-circumstances approach of proposed § 1.355–10(c)(2)(ii), the distributing corporation first must establish that the distribution resulted in a genuine separation of the DSAG and the CSAG. Second, the distributing corporation must establish that the retention does not allow the DSAG to retain any practical control over the CSAG. Third, there must be a sufficient corporate business purpose for the retention as of the date the plan of distribution or the plan of reorganization (as applicable) is adopted. Fourth, there must be a sufficient corporate business purpose for the retention at all times during the period of retention. Fifth, the disposition of retained controlled corporation stock (or securities) must not result in less Federal income tax to the distributing corporation (determined based on the fair market value and adjusted basis of that stock (or securities) as of the first distribution date) than if that stock (or securities) had been distributed in the first distribution.

Consistent with the views set forth in section 2.02(2) of Notice 2024–38, the existence of (i) overlapping officers, directors, or key employees between the DSAG and the CSAG, and (ii) non-arm's-length continuing contractual agreements between the DSAG and the CSAG, would be facts and circumstances indicating that the retention fails the requirements under section 355(a)(1)(D)(ii). For purposes of proposed § 1.355–10(c)(2)(ii), the relative weight of those indicia would depend upon all facts and circumstances, including the corporate business purpose for the section 355

transaction. For example, such continuing relationships particularly would weigh against a determination that the retention satisfies the requirements under section 355(a)(1)(D)(ii) if the purported corporate business purpose for the section 355 transaction is so-called “fit and focus” (that is, a separation to enhance the success of the separated businesses by resolving management, systemic, or other problems that arise by virtue of the distributing corporation's operation of different businesses within a single corporation or affiliated group).

3. Consistent Voting Requirements

Regardless of whether a section 355 transaction qualifies for the section 355(a)(1)(D)(ii) safe harbor, if the section 355 transaction involves a retention, proposed § 1.355–10(c)(2)(iii) would require the DSAG to vote any retained controlled corporation stock in proportion to the votes cast by the controlled corporation's other shareholders (other than persons related to the distributing corporation). This proposed requirement is consistent with the long-standing position of the Treasury Department and the IRS with regard to section 355(a)(1)(D)(iii), as expressed through several revenue rulings, revenue procedures, and other sub-regulatory guidance.

4. Plan of Distribution

Consistent with long-standing guidance, the Treasury Department and the IRS continue to agree with stakeholders that the plan of reorganization is relevant for determining the applicability of the definitional and operative provisions under subchapter C to dispositions of controlled corporation stock. *Compare* Rev. Rul. 2002–85, 2002–2 C.B. 986 (concluding that an acquiring corporation's contribution of a target corporation's assets to a subsidiary corporation subsequent to a transaction otherwise qualifying as a reorganization under section 368(a)(1)(D) was “pursuant to the plan of reorganization”; therefore, the continuity of business enterprise (COBE) requirement was not violated); Rev. Rul. 69–142, 1969–1 C.B. 107 (concluding that an acquiring corporation's exchange of its debentures for those held by bondholders of the target corporation was not part of the reorganization exchange; therefore, the “solely for voting stock” requirement in section 368(a)(1)(B) was satisfied). In this regard, the “plan of reorganization” concept provides a useful analogy for distinguishing distributions to which section 355 should apply from those to

which other sections of the Code (such as section 311) should apply.

Accordingly, proposed § 1.355–4 would set forth a series of provisions pursuant to which a taxpayer would establish its plan of distribution for distributions to which section 355(c) is purported to apply. These proposed rules generally would parallel the proposed plan of reorganization provisions in proposed § 1.368–4, as discussed in more detail in part III.C of this Explanation of Provisions.

Specifically, under the proposed rules, section 355 would apply to those distributions that are properly included in the plan of distribution and, therefore, are treated as “part of the distribution” within the meaning of section 355(a)(1)(D). Thus, for example, proposed § 1.355–4(d)(2)(iii) would provide that distributions that are carried out in close temporal proximity with a section 355(c) distribution are not properly included in the plan of distribution and therefore would not qualify for nonrecognition treatment under section 355 unless Federal income tax principles (including the step transaction doctrine) would apply to determine that those distributions are in substance part of the plan of distribution for the section 355(c) distribution.

Additionally, a distribution that is merely one of several (if not more) contemplated possibilities would not be properly included in the plan of distribution. Instead, proposed § 1.355–4(d)(1) would require the distributing corporation to evidence a definite intent to carry out the distribution through a written commitment in one or more official records that substantiate the plan of distribution. As previously discussed in part I.B of this Explanation of Provisions, the Treasury Department and the IRS disagree with the stakeholders’ view that a plan of distribution should reflect mere transactional possibilities under a “wait and see” approach. Adoption of this stakeholder recommendation would conflict with the requirement of section 355(a)(1)(D)(ii) that the non-tax avoidance nature of a retention be “established to the satisfaction of the Secretary,” because it would not be possible for the Secretary to establish the actual nature of a hypothetical transaction. In addition, adopting this stakeholder recommendation would both significantly compromise the IRS’s ability to administer and enforce the requirements of section 355 and reduce certainty regarding section 355 qualification.

Under proposed § 1.355–4(a)(2)(i) and (b)(1), the term “plan of distribution”

generally would mean a plan of distribution established by a distributing corporation that satisfies all requirements set forth in proposed § 1.355–4(c) and that is filed with the IRS pursuant to proposed § 1.355–5. Proposed § 1.355–4(a)(2)(iii) and (b)(2) would provide that a plan of distribution also may be established based on corrections to the taxpayer-filed plan by the Commissioner based on all relevant facts and circumstances, all relevant provisions of the Code, and general principles of Federal income tax law (including the step transaction doctrine). If the taxpayer fails to file a plan of distribution under proposed § 1.355–5, proposed § 1.355–4(a)(2)(iv) and (b)(2) would provide that the Commissioner may identify a plan of distribution for the transaction.

Consistent with the objectives for guidance described in section 2.01 of Notice 2024–38, the proposed plan of distribution provisions are intended to facilitate taxpayer certainty in identifying distributions to which section 355 properly should be applied. *See, for example,* proposed § 1.355–4(c)(3)(i)(B) (providing a safe harbor presumption for timely prosecuting the plan of distribution) and (d) (providing rules for determining whether a distribution is properly included in the plan of distribution).

In addition, the plan of distribution would provide the IRS with a single, timely document that identifies all relevant distributions necessary to determine the appropriate Federal income tax treatment of the purported section 355(c) distribution. This proposal, combined with the enhanced reporting requirements for section 355 transactions under proposed § 1.355–5, would reestablish an appropriate line of sight for the IRS into taxpayer compliance under section 355, thereby helping to achieve the compliance and increased certainty objectives. *Compare* former § 1.355–5 (effective from November 26, 1960, to May 29, 2006) (requiring the taxpayer to “attach to its return for the year of the distribution a detailed statement setting forth such data as may be appropriate in order to show compliance with the provisions of [section 355]”).

5. Treatment of Delayed Distributions and Retentions

The Treasury Department and the IRS appreciate the feedback received from stakeholders regarding the similarities between delayed distributions and retentions. The Treasury Department and the IRS agree with stakeholders that, because a section 355 transaction requires the distribution of controlled

corporation stock by the distributing corporation, each of the following could apply to the same transaction: (i) the “part of the distribution” requirement in section 355(a)(1)(D); (ii) the “in pursuance of the plan of reorganization” requirement in section 361; and (iii) the retention requirements in section 355(a)(1)(D)(ii).

In particular, the Treasury Department and the IRS share the stakeholders’ view that, if the distributing corporation does not distribute all its controlled corporation stock in the first distribution, the “delayed distribution” and “retention” labels give rise to a distinction without a difference in determining the existence of a genuine separation between the distributing corporation and the controlled corporation. In this respect, proposed § 1.355–2(e)(2)(iii) would focus on whether a genuine separation has occurred, without regard to whether the controlled corporation stock not distributed as part of the first distribution is disposed of through a distribution or transfer under section 361(c) or a taxable sale under section 1001.

However, the Treasury Department and the IRS continue to view the “part of the distribution” requirement in section 355(a)(1)(D), the “in pursuance of the plan of reorganization” requirement in section 361, and the “no tax avoidance purpose” requirement in section 355(a)(1)(D)(ii) as discrete requirements that address discrete issues reflective of discrete policies. The “part of the distribution” requirement in section 355(a)(1)(D) serves as a scoping provision for the applicability of section 355(a)(1)(D)(i) and (ii) to distributions of controlled corporation stock. As discussed in parts I.C.4 and III.C of this Explanation of Provisions, the proposed plan of distribution and plan of reorganization rules would facilitate the determination of which distributions are “part of the distribution.”

As reflected in the legislative history of section 361, the “in pursuance of the plan of reorganization” requirement serves in large part to limit the application of the operative provisions in subchapter C to those transactions with a sufficiently proximate relationship with transactions that qualify under a definitional provision in subchapter C. *See* part II.A of the Background.

Lastly, the “no tax avoidance purpose” requirement in section 355(a)(1)(D)(ii) serves to ensure there is a genuine separation of the distributing corporation and the controlled corporation in situations in which the distributing corporation continues to

hold controlled corporation stock following the first distribution. This requirement applies regardless of whether that controlled corporation stock is disposed of pursuant to the plan of reorganization under section 361(c).

6. Timing Requirement for Control Distribution

Consistent with the Supreme Court's decision in *Gordon* (discussed in part I.D.2 of the Background), proposed § 1.355-2(e)(2) would require a distributing corporation, pursuant to a plan of distribution or plan of reorganization, as appropriate, to distribute an amount of stock of the controlled corporation constituting control (within the meaning of section 368(c)) either (i) within a single taxable year, or (ii) over two taxable years, but only if all distributions up to and including the control distribution are effectuated pursuant to a binding commitment that is described in the plan of distribution or plan of reorganization (as applicable). A two-year limitation for distributing control would provide taxpayers with additional transactional flexibility while facilitating the IRS's ability to administer and enforce the requirements of section 355. This approach would help achieve the increased certainty and transaction facilitation objectives of these proposed regulations.

7. Requirements for Nonrecognition Treatment

In accordance with the foregoing discussion in this part I.C, these proposed regulations would revise § 1.355-2(e) to provide that a distribution does not qualify for nonrecognition treatment under section 355(a)(1) unless the following requirements are satisfied. First, proposed § 1.355-2(e)(2)(i) and (ii) would provide that the distributing corporation must distribute an amount of stock of the controlled corporation constituting control (within the meaning of section 368(c)) either (i) within a single taxable year, or (ii) during two taxable years, subject to the "binding commitment" requirement described in part I.C.6 of this Explanation of Provisions. Second, proposed § 1.355-2(e)(2)(iii) would provide that any controlled corporation stock not distributed as part of the first distribution must satisfy the requirements for a qualifying retention in proposed § 1.355-10(c).

As previously discussed in parts I.C.1 through 3 of this Explanation of Provisions, to satisfy the requirements for a qualifying retention (and to thereby rebut the presumption of a tax

avoidance purpose for the retention), the distributing corporation must: (i) either qualify for the section 355(a)(1)(D)(ii) safe harbor in proposed § 1.355-10(c)(3) or satisfy the facts-and-circumstances test in proposed § 1.355-10(c)(2)(ii); and (ii) vote any retained controlled corporation stock in proportion to votes cast by the controlled corporation's other shareholders (other than distributing corporation related persons). See proposed § 1.355-10(c)(2)(iii).

II. Non-Substantive Modifications to Section 355 Regulations

These proposed regulations would make certain non-substantive revisions to current §§ 1.355-1 and 1.355-4. For example, these proposed regulations would modify current § 1.355-1 by adding general definitions that apply for purposes of the section 355 regulations, incorporating the rules in current § 1.355-4 as proposed § 1.355-1, and moving the applicability dates from current § 1.355-1(a) to proposed § 1.355-1(e). These revisions are not intended to make any substantive change.

III. Plan of Reorganization; Party to a Reorganization

A. Notice 2024-38

As stated in section 2.02(4) of Notice 2024-38, the Treasury Department and the IRS understand that confusion and disagreement exists regarding the application of the "plan of reorganization" requirement to divisive reorganizations. For example, some stakeholders view the applicability of the "plan of reorganization" requirement to be potentially obviated by the temporal requirements set forth in section 3.04(6) of Rev. Proc. 2018-53 (concerning delayed satisfaction of distributing corporation debt). It is the view of the Treasury Department and the IRS that this is incorrect.

Section 2.02(4) of Notice 2024-38 further states that, although the "plan of reorganization" requirement incorporates a degree of transactional flexibility, such flexibility is limited by current §§ 1.368-1(c) and 1.368-2(g), and the Treasury Department and the IRS view this requirement as helpful to ensure that delayed distributions are not used to avoid the repeal of the *General Utilities* doctrine (see part I.A.2 of the Background).

B. Stakeholder Input

The Treasury Department and the IRS have received a broad spectrum of feedback from stakeholders regarding the "plan of reorganization"

requirement. However, consistent with the view of the Treasury Department and the IRS set forth in Notice 2024-38, stakeholders uniformly have contended that this requirement should be applied in a flexible manner.

Certain stakeholders have described the guidance in current § 1.368-2(g) regarding the meaning and scope of the "plan of reorganization" requirement as circular and incomplete. Those stakeholders similarly have described § 1.368-1(c) as providing only conceptual guidance as to which transactions are properly included in a plan of reorganization. These stakeholders also have described § 1.368-3(a) as requiring each party to the reorganization to adopt that plan but then failing to provide any guidance on how such parties are to satisfy that requirement. Stakeholders have aptly noted that Notice 2024-38 provided little additional clarity regarding the "plan of reorganization" requirement.

Additionally, certain stakeholders have noted that few cases address the meaning and scope of the "plan of reorganization" concept, and that, even within such cases, courts often have applied the step transaction doctrine and the substance-over-form doctrine to determine the existence of a plan of reorganization. For example, one stakeholder highlighted *King Enterprises, Inc. v. United States*, 418 F.2d 511 (Ct. Cl. 1969), in which the U.S. Court of Federal Claims applied the step transaction doctrine to treat the acquisition of stock of a target corporation (Tenco), followed by the merger of the target corporation into the acquiring corporation (Minute Maid), as a reorganization qualifying under section 368(a)(1)(A). The court identified the threshold issue as "whether the transfer of Tenco stock to Minute Maid is to be treated for tax purposes as an independent transaction of sale, or as a transitory step in a transaction qualifying as a corporate reorganization," which dictated the resolution of the central issue of "whether the initial exchange of stock was a step in a unified transaction pursuant to a 'plan of reorganization'." *King Enterprises*, 418 F.2d at 514-15. Based on an analysis of the "operative facts in this case," the court applied the step transaction doctrine to conclude that the two transactions comprised a single, unified transaction. *Id.* at 515-16, 519. Even though no formal plan of reorganization existed, the court relied on those facts and that analysis to identify a plan of reorganization for that unified transaction. *Id.* at 519 n.11 (relying on *Redfield v. Commissioner*, 34 B.T.A. 967 (1936), for the proposition

that “[a] formal plan or reorganization is not necessary if the facts of the case show a plan to have existed”).

In *Seagram Corp. v. Commissioner*, 104 T.C. 75 (1995), the Tax Court considered whether to integrate (i) an acquisition of stock of a target corporation (Conoco) through a first-step tender offer made by a subsidiary of an acquiring corporation (DuPont Tenderor and DuPont, respectively), and (ii) a subsequent merger of Conoco into DuPont Tenderor. The court acknowledged that the tender offer and subsequent merger each possessed independent significance, and that the subsequent merger was subject to several contingencies. *Seagram*, 104 T.C. at 93–94. However, the court emphasized that DuPont and DuPont Tenderor “were under a binding and irrevocable commitment to complete the culminating merger—the second step—upon the successful completion of the DuPont tender offer—the first step.” *Id.* at 98. Based on all facts and circumstances of the tender offer and subsequent merger, including official records of DuPont and DuPont Tenderor, the court identified the existence of a plan of reorganization, reasoning that, “because DuPont was contractually committed to undertake and complete the second-step merger once it had undertaken and completed the first-step tender offer, these carefully integrated transactions together constituted a plan of reorganization within the contemplation of section 354(a).” *Id.* at 98–99 (relying principally on, and noting satisfaction of, the Supreme Court’s binding commitment standard in *Gordon*).

Stakeholders also have noted that the Tax Court in *Seagram* characterized the “plan of reorganization” concept expressed in § 1.368–2(g) as one of “substantial elasticity,” relying on the court’s prior observations on that concept in *Int’l Telephone*. *Seagram*, 104 T.C. at 96. (In *Int’l Telephone*, the Tax Court noted that § 1.368–2(g) “is imbued with qualities of flexibility and vagueness, with the result that it does not present precise self-executing guidelines.” 77 T.C. at 75.) The Tax Court in *Seagram* also relied on scholarly commentary for the proposition that, even though § 1.368–2(g) at that time required a plan of reorganization to be filed with the IRS, it was self-evident that the IRS and the courts could identify the existence of a plan of reorganization in the event the taxpayer either did not file one or filed one that was inaccurate. *See Seagram*, 104 T.C. at 96 (quoting Peter L. Faber, *The Use and Misuse of the Plan of*

Reorganization Concept, 38 Tax L. Rev. 515, 523 (1982–1983)).

Stakeholders also have commented on temporal considerations relating to plans of reorganization. Stakeholders have contended that the length of time between transactions effectuating a plan of reorganization should not prevent any particular transaction from being considered part of the plan. Conversely, these stakeholders have contended that the temporal proximity of one transaction to another transaction that is properly included in a plan of reorganization should not be determinative as to whether the other transaction is properly included in the plan. Stakeholders also have contended that imposing a time limitation for completing a plan of reorganization would be inappropriate.

Additionally, some stakeholders have recommended granting taxpayers the flexibility to either execute the steps identified in the plan of reorganization or change them at any time, based on each taxpayer’s judgment on how best to achieve the objectives of their transaction. However, other stakeholders have recommended clarifying that entering into a new transaction not contemplated by the plan, even in the alternative, is not treated as pursuant to the plan of reorganization.

In sum, stakeholders uniformly have described the current regulations addressing the “plan of reorganization” requirement as lacking sufficient clarity and comprehensiveness. Accordingly, some stakeholders have requested guidance regarding the metrics needed for a taxpayer to establish a plan of reorganization. Specifically, stakeholders have requested guidance regarding (i) the means by which parties to a reorganization can adopt a plan of reorganization (in particular, some stakeholders have recommended allowing actions of a corporation’s authorized representatives, and not just formal written actions of the board, to be taken into account for this purpose), (ii) transactions that may occur at a future time, are contingent, or are in the alternative, and (iii) transactions that may develop as a result of events arising after the plan of reorganization is adopted.

The stakeholder input received has highlighted not only the deficiencies in authoritative guidance regarding the meaning and scope of the “plan of reorganization” requirement, but also the importance of this requirement in determining whether the operative provisions of subchapter C apply to a particular transaction.

C. Proposed Regulations

1. Overview

The Treasury Department and the IRS agree with stakeholders that the current guidance regarding the “plan of reorganization” requirement is inadequate and creates significant confusion. Consistent with stakeholder recommendations, the proposed regulations would clarify, among other items, (i) the metrics needed for a taxpayer to establish a plan of reorganization, (ii) the manner whereby parties to a reorganization can adopt a plan of reorganization, and (iii) the requirements for prosecuting a plan of reorganization (including in the event of a change in circumstances following adoption of the plan). In proposing this guidance, the Treasury Department and the IRS have endeavored to balance the importance of providing taxpayers with transactional flexibility to effectuate bona fide business transactions with the need to facilitate IRS administration of the reorganization provisions of subchapter C. Accordingly, the Treasury Department and the IRS believe that this guidance would help achieve the compliance, increased certainty, and transaction facilitation objectives of these proposed regulations. (See the discussion of the objectives for guidance in part VI of the Background; *see also* the discussion of the TIGTA Report in part IV of the Background.)

2. Proposed Rules Regarding Plan of Reorganization

a. Purpose and Effect of Plan of Reorganization

The Treasury Department and the IRS view a plan of reorganization as serving two related purposes. First, a plan of reorganization serves to identify those transactions to which the definitional and operative provisions of subchapter C apply. Second, a plan of reorganization serves to distinguish transactions the Federal income tax treatment of which is governed by the reorganization provisions of subchapter C from transactions to which the general recognition provisions of the Code (such as section 1001) apply.

However, under the proposed regulations, a taxpayer’s failure to set forth a plan of reorganization in a single, comprehensive document neither would be determinative as to the existence or scope of a plan of reorganization for a transaction nor would govern the application of any definitional or operative provision to that transaction. *See* proposed § 1.368–4(a)(3).

b. Determination of Plan of Reorganization

The proposed regulations would permit a plan of reorganization to be determined in several different manners. Under the manner preferred by the Treasury Department and the IRS, a taxpayer would prepare a single, comprehensive document that satisfies all requirements set forth in proposed § 1.368–4(d) and file that document with the IRS as required by proposed § 1.368–3(a)(5) (taxpayer-filed plan of reorganization). See proposed § 1.368–4(b)(1). The taxpayer-filed plan of reorganization would contain the information required by prior and current § 1.368–3(a) and incorporate recommendations of the TIGTA Report.

Specifically, proposed § 1.368–4(d) would set forth the following requirements. First, the proposal would require the taxpayer-filed plan of reorganization to identify (i) all parties to the reorganization (as required by current § 1.368–3(a)), (ii) all transactions properly included in the plan of reorganization (as required by prior § 1.368–3(a)), and (iii) all liabilities (including debt) to be assumed by the acquiring corporation and the obligees (or creditors) of those liabilities, and (iv) all debt of the target corporation that will be satisfied with section 361 consideration and the creditors of that debt. Second, the proposal would require such plan to describe the intended Federal income tax treatment of those transactions (which would facilitate implementing the recommendations of the TIGTA Report). Third, the proposal would require such plan to describe the corporate business purpose for each transaction (consistent with current § 1.368–2(g)). Lastly, the proposal would require such plan to establish that each transaction facilitates the continuance of the business of a corporation a party to the reorganization (consistent with current § 1.368–2(g)). See proposed § 1.368–4(d)(1).

The proposed regulations would reflect a preference that taxpayers will timely file a complete and accurate plan of reorganization. See proposed § 1.368–4(c)(1). Accordingly, the Federal income tax consequences of the subject transactions generally would be determined in accordance with that plan. See proposed § 1.368–4(a)(2)(i). Throughout the duration of the transaction or series of transactions, which potentially could span several taxable years, the IRS would possess the ability to monitor the taxpayer's execution of that plan of reorganization (for example, through the taxpayer's annual filing of Form 7216 for divisive

transactions). The Treasury Department and the IRS intend the proposed approach (i) to increase taxpayer certainty regarding the Federal income tax treatment of transactions properly included in a plan of reorganization, and (ii) to facilitate IRS administration of the reorganization provisions of subchapter C.

However, if a taxpayer files a plan of reorganization with the IRS that fails to satisfy any requirement set forth in proposed § 1.368–4(d), or if the taxpayer fails to file a plan of reorganization with the IRS in accordance with proposed § 1.368–3(a)(5), proposed § 1.368–4(c)(2)(i) recognizes that the Commissioner may correct or identify a plan of reorganization. Under proposed § 1.368–4(c)(2)(ii), the Commissioner may determine that a transaction or series of transactions should be included in, or excluded from, a plan of reorganization based on (i) all facts and circumstances regarding the transaction or series of transactions, and (ii) all relevant provisions of the Code and general principles of Federal income tax law, including the step transaction doctrine.

The proposed approach is consistent with long-standing caselaw indicating that the existence and proper scope of a plan of reorganization can be determined in the absence of formal documentation. See, for example, *Redfield*, 34 B.T.A. at 973 (“It is not necessary, however, that such a plan of reorganization be evidenced by a formal written document, such as a contract or corporate minutes. It is sufficient if the circumstances indicate that the various steps taken were pursuant to a definite plan of reorganization.”); *Fry v. Comm’r*, 5 T.C. 1058, 1070 (1945) (similar). The proposed regulations would reflect this long-standing position because conditioning the applicability of the definitional and operative provisions of subchapter C on whether a plan of reorganization formally was prepared and filed would, in particular and contrary to law, make the reorganization regime entirely elective.

Nonetheless, the Treasury Department and the IRS are of the view that formal documentation requirements for taxpayer-filed plans of reorganization are necessary to facilitate the IRS's administration of the reorganization provisions of subchapter C. See part III of the Background. Moreover, the preference for complete and accurate taxpayer-filed plans of reorganization under proposed § 1.368–4(c)(1) requires adequate substantiation with the IRS, which would be provided by objectively verifiable, official corporate documents. Accordingly, proposed § 1.368–4(d)

would enhance the current reporting requirements for plans of reorganization.

c. Agreement by Parties to Plan of Reorganization; Beginning of Plan of Reorganization

Proposed § 1.368–4(d)(2) would provide that, prior to the first step of a reorganization, the plan of reorganization or an original plan of reorganization that becomes the amended plan of reorganization, as applicable, must be finalized and adopted by the party to the reorganization. Taxpayers would demonstrate satisfaction of this requirement through (i) the acts of duly authorized officers and directors of the corporation, and (ii) the official records of the party to the reorganization.

The Treasury Department and the IRS are of the view that the proposed approach would provide greater taxpayer certainty regarding the means by which parties to a reorganization can adopt a plan of reorganization than current § 1.368–3(a), which provides only that “[t]he plan of reorganization must be adopted by each of the corporations that are parties thereto.” As previously discussed in part III.B of this Explanation of Provisions, the current regulations have created significant uncertainty due to the lack of guidance on what constitutes an “adoption” by the parties. The proposed regulations would address this uncertainty in a manner consistent with prior § 1.368–3(a) and statutory law. See section 806(g)(3) of the Tax Reform Act of 1976 (Public Law 94–455, 90 Stat. 1520, 1606) (describing how a corporation is considered to have adopted a plan of reorganization for purposes of determining the effective date of certain modifications to sections 382 and 383).

In addition, the proposed substantiation requirements would facilitate the IRS's administrative function by marking the beginning of the taxpayer's plan of reorganization—a feature that the Tax Court also views as important. See *Seagram*, 104 T.C. at 98 (emphasizing in its plan of reorganization analysis that the DuPont/Conoco Agreement “provides a discrete start and finish”).

d. Timing Requirement for Completion of Plan of Reorganization

i. General “Expedition Completion” Requirement

Proposed § 1.368–4(d)(3)(i)(A) and (ii)(A) would require that, taking into account all facts and circumstances (including the one or more corporate

business purposes for a reorganization), all parties to the reorganization must complete the plan of reorganization as expeditiously as practicable, and in the manner described in that plan. The proposed approach takes into account taxpayers' need for transactional flexibility and reflects the long-standing principle that the passage of time is not determinative of whether a transaction is part of a plan of reorganization. *See, for example, Wilson v. Comm'r*, T.C. Memo. 1961-135 ("The mere lapse of time is not decisive. The important thing is that the steps which are taken evidence a consistent performance of the reorganization plan and purpose.").

ii. Presumption of Satisfaction if Completion Within 24 Months

However, the Treasury Department and the IRS are concerned that the lack of a time limitation for completing a plan of reorganization raises administrability concerns for the IRS. Accordingly, the Treasury Department and the IRS are (i) issuing proposed § 1.355-5, and (ii) introducing new Form 7216, to provide the IRS with information regarding divisive transactions that span multiple tax years. *See* part V of the Background.

Additionally, temporal guidelines would provide greater certainty to taxpayers. In this regard, stakeholders have requested the inclusion of safe harbors in these proposed regulations to mitigate uncertainty arising from conceptual rules and facts-and-circumstances determinations. Based on this feedback, proposed § 1.368-4(d)(3)(i)(B) would provide that the "expeditious completion" requirement is presumed to be satisfied if all parties to a reorganization complete the plan of reorganization within the 24-month period beginning on the date of the first step of the plan of reorganization. This increased certainty would help achieve the transaction facilitation objective of these proposed regulations, and providing a 24-month safe harbor would help achieve the compliance objective of these proposed regulations.

e. Requirements for Transactions To Be Treated as Properly Included in Plan of Reorganization

i. Overview

Stakeholders have recommended various standards and approaches for determining whether a transaction is properly included in a plan of reorganization. As noted by stakeholders, neither current guidance nor the caselaw regarding the "plan of reorganization" requirement adequately addresses this issue. The proposed

regulations would synthesize the overarching principles of this caselaw into rules that could be applied by taxpayers and the IRS with significantly greater certainty than under current Treasury guidance and the caselaw.

ii. Definite Intent Requirement

As a threshold requirement, proposed § 1.368-4(e)(1)(i) would require that, prior to the first step of a plan of reorganization or an original plan of reorganization that becomes the amended plan of reorganization, one or more parties to the reorganization must evidence a definite intent to carry out the transaction. This definite intent must be evidenced through a written commitment in one or more official records of the party that substantiate the plan of reorganization. Under this proposal, the existence of contingencies or conditions would not be conclusive in determining whether a party to the reorganization satisfies this requirement.

The "definite intent" standard is intended to provide sufficient transactional flexibility to encourage bona fide business transactions in a manner consistent with long-standing caselaw. The origins of the "definite intent" standard can be traced back to judicial opinions of the Board of Tax Appeals (BTA), the predecessor to the Tax Court. For example, in *Fry v. Commissioner*, the BTA relied on this standard for determining the existence of a plan of reorganization from "what appear[ed] on the minutes of the meeting of the stockholders and the meeting of the board of directors of the old bank," which had articulated the business objectives and transaction steps for the reorganization. 5 T.C. at 1070; *see also Redfield*, 34 B.T.A. at 973 (noting that, although a formal written plan of reorganization is not necessary, the circumstances evidencing that a reorganization occurred need to indicate that the various steps taken in pursuance thereof were taken "pursuant to a definite plan of reorganization") (emphasis added); *Seagram*, 104 T.C. at 97 (observing that the DuPont/Conoco Agreement "definitively states the terms for 'the acquisition of [Conoco] by [DuPont Tenderor and]' sets out . . . the series of transactions which in their totality were intended to accomplish a section 368 reorganization").

In contrast, courts have determined that transactions subject to a lesser degree of intent or predominated by uncertainty are not properly included in a plan of reorganization. For example, in *National Bank of Commerce in Memphis v. United States*, 87 F. Supp. 302 (W.D. Tenn. 1949), the court

concluded that a transaction contemplated prior to the plan of reorganization was not properly included in that plan because the transaction was uncertain and indefinite as of the time of the first step of the plan of reorganization. 87 F. Supp. at 304. The court emphasized that "[a]n element in a plan of reorganization that cannot be legally enforced and, in addition is fraught with much uncertainty, is indefinite and not necessary to the reorganization, cannot be considered as one of the steps resulting in the completed transaction." *Id.* Accordingly, if the parties did not anticipate or otherwise contemplate a transaction prior to the adoption of the plan of reorganization, that transaction cannot be included in that plan. *See Atwood Grain & Supply Co. v. Comm'r*, 60 T.C. 412, 423 (1973) (observing that "[t]here [wa]s no evidence that issuance of the preferred stock was contemplated either in the merger negotiations or in the merger agreement," and reasoning that, "[i]n order to include events occurring after a merger in the plan of merger there must be some anticipation of the event in the merger").

Stakeholders have noted that a "plan of reorganization" concept that includes every possibility considered by any taxpayer in connection with a reorganization would be overbroad and meaningless. Indeed, a commenter relied upon by the Tax Court for its analysis in *Seagram* noted that "[t]he contemplated possibility standard is too broad. . . . A more appropriate standard would be to link the later transaction to the earlier one only if there is a firm commitment to consummate it." *Faber, The Use and Misuse of the Plan of Reorganization Concept*, 38 Tax L. Rev. at 547. The Treasury Department and the IRS agree that such a standard would not be appropriate for the proposed regulations. Accordingly, proposed § 1.368-4(e)(1)(iii)(A) would provide that mere contemplation that a transaction may be carried out would not be sufficient to satisfy the "definite intent" requirement, regardless of whether that contemplated transaction is included in an official record of the party.

However, the Treasury Department and the IRS recognize that the "contemplated possibility" standard is relevant for certain plan of reorganization determinations. Accordingly, proposed § 1.368-4(e)(1)(iii)(B) would provide that a party's mere contemplation of a transaction may be relevant for purposes of the correction or identification of a plan of reorganization by the

Commissioner. As previously discussed in part III.C.2.b. of this Explanation of Provisions, the Commissioner's determination under proposed § 1.368–4(c)(2)(ii) would be based on all facts and circumstances pertaining to the transaction and the application of all relevant Code provisions and Federal income tax principles, including the step transaction doctrine.

Permitting the IRS to determine the outer reaches of the scope of transactions potentially includable in a plan of reorganization through an analysis of all facts and circumstances and Federal income tax principles would be consistent with judicial authorities that have applied a “contemplated possibility” test. For example, in *Anheuser-Busch, Inc. v. Commissioner*, 40 B.T.A. 1100 (1939), the BTA relied on substance-over-form principles to determine the scope of transactions included in a plan of reorganization, based on its determination that a first-step transfer to a parent corporation was “transitory and without real substance.” 40 B.T.A. at 1106. As part of its analysis, the court observed that the parent had “contemplated,” but was not obligated to carry out, the immediate transfer of the property received to its subsidiary, and the court expanded the scope of the plan of reorganization to include that second-step transfer. *Id.* at 1106–07 (relying on the substance-over-form analysis of *Helvering v. Bashford*, 302 U.S. 454, 458 (1938)). Other judicial opinions similarly have used the existence of a contemplated possibility in this manner. *See, for example, Avco Mfg. Corp. v. Comm’r*, 25 T.C. 975, 984–85 (1956) (noting that a “subsequent transfer of the property . . . was a contemplated possibility under the plan that actually eventuated” and was properly included within the scope of the plan of reorganization under the mutual interdependence test); *Transport Products Corp. v. Comm’r*, 25 T.C. 853, 857–58 (1956).

Once a definite intent is established, the existence of contingencies and other conditions that could affect prosecution of the plan of reorganization are not treated as diminishing that level of intent. *See, for example, Seagram*, 104 T.C. at 96 (“DuPont had an indisputable legal obligation to complete the Merger with Conoco, notwithstanding the possibility of intervening legal impediments, or contingencies, which in fact, never materialized”). Accordingly, proposed § 1.368–4(e) would provide that, for purposes of determining whether a party to a reorganization satisfies the “definite intent” requirement, the existence of

contingencies or conditions is not conclusive.

Section 355 transactions would be subject to a special definite intent requirement under proposed §§ 1.355–4(d)(1)(ii) and 1.368–4(e)(1)(ii). Specifically, if a control distribution occurs in a later taxable year than the first distribution, the distributing corporation would not be treated as establishing a definite intent unless all distributions up to and including the control distribution are effectuated pursuant to a binding commitment. This proposed special “definite intent” requirement would reflect the Supreme Court’s decision in *Gordon*. *See also* the discussion in part I.D.2 of the Background.

iii. Proximate Relationship Requirement

(a) Overview

The proposed regulations would set forth standards for determining whether a transaction shares a sufficient relationship with other transactions to which a definitional or operative provision applies. To reflect the distinct purposes for, and requirements of, the definitional provisions and the operative provisions in subchapter C, the proposed regulations would set forth two different sets of proximate relationship requirements.

(b) Necessary or Integral Test for Qualification Under Definitional Provisions

Under proposed § 1.368–4(e)(2)(i)(A), a transaction would be treated as part of the plan of reorganization for a reorganization to which a definitional provision can apply only if, on its own or as part of a series of transactions, the transaction either (i) is necessary to satisfy one or more requirements of the definitional provision, or (ii) is an integral part of a series of transactions carried out to satisfy the requirements of the definitional provision. In practice, the “integral part” test generally would be relevant for transactions that are not “necessary to satisfy” one or more requirements of a definitional provision. The proposed regulations would require satisfaction of either condition to be evidenced by a written commitment in one or more official records of the party to the reorganization. *See* proposed § 1.368–4(e)(2)(i)(A).

The “necessary to satisfy” condition is intended to convey, with more precision, a requirement set forth in current § 1.368–2(g). Section 1.368–2(g) states, in part, that “[t]he term plan of reorganization has reference to a consummated transaction specifically defined as a reorganization under

section 368(a).” In addition, current § 1.368–2(g) provides that “[t]he term is not to be construed as broadening the definition of ‘reorganization’ as set forth in section 368(a).” The Treasury Department and the IRS view the “necessary to satisfy” condition as already clear (given that the definitional provisions in section 368(a)(1) describe the steps necessary for qualification) but have rearticulated this standard to eliminate the circularity and vagueness that courts and stakeholders have identified in current § 1.368–2(g). *See Int’l Telephone*, 77 T.C. at 75 (noting such vagueness); *Seagram*, 104 T.C. at 96 (highlighting the Tax Court’s observation in *Int’l Telephone*).

The “integral part” condition also is embedded in current § 1.368–2(g), which provides that the term “plan of reorganization” is to be taken as limiting the nonrecognition of gain or loss to “such exchanges or distributions as are *directly a part of the transaction specifically described as a reorganization in section 368(a)*” (emphasis added). The Treasury Department and the IRS view this “directly a part” standard as less stringent than the “necessary to satisfy” standard but nonetheless view it as mandating that a transaction must be essential to qualifying a series of transactions as a reorganization. Accordingly, the proposed regulations would replace the phrase “directly a part of the transaction” with an “integral part” standard.

The proposed “integral part” standard is intended to reflect the structure of section 368(a)(1) and the long-standing position of the IRS and the courts. For example, a distributing corporation that retains controlled corporation stock may qualify under section 355—and therefore ultimately may satisfy a condition in section 368(a)(1)(D)—through multiple types of dispositions of controlled corporation stock. In each instance, such disposition may be viewed as integral to section 368(a)(1)(D) qualification. (*See also* the requirements for qualifying retentions previously discussed in part I.C of this Explanation of Provisions.)

The foregoing principle is reflected in Rev. Rul. 57–518, 1957–2 C.B. 253, which addressed whether a transaction satisfied a prior version of section 368(a)(1)(C) that did not yet impose a liquidation requirement. In Rev. Rul. 57–518, a target corporation transferred 70 percent of its assets to an acquiring corporation for acquiring corporation voting stock. The target corporation then disposed of all its remaining assets in recognition transactions (that is, not under the operative nonrecognition

provisions of subchapter C) and liquidated. Although the liquidation was not described in, or required by, that prior version of section 368(a)(1)(C), the IRS concluded that the liquidation was part of the plan of reorganization. Like the disposition by a distributing corporation of retained controlled corporation stock in a transaction to which section 1001 applies, the target corporation liquidation was not necessary to achieve qualification under section 368(a)(1), but it was an integral part of a series of transactions carried out to satisfy the requirements of that definitional provision.

(c) But for, or Integral to, Test for Application of Operative Provision

Under proposed § 1.368–4(e)(2)(i)(B), a transaction would be treated as part of the plan of reorganization to which an operative provision can apply only if, on its own or as part of a series of transactions, the transaction either (i) would not have occurred but for the reorganization that is covered by the plan of reorganization, or (ii) is an integral part of a series of transactions carried out to satisfy the requirements of the definitional provision intended to apply to the reorganization. The proposed regulations would require satisfaction of either condition to be evidenced by a written commitment in one or more official records of the party to the reorganization. Both of these conditions are intended to replace the “directly a part of” standard set forth in current § 1.368–2(g) with standards that are clearer and more reflective of the purpose and requirements of the operative provisions in subchapter C.

The proposed “but for” condition is embedded within the “directly a part of” requirement in current § 1.368–2(g). Among other objectives, this proposed condition is intended to help clarify the determination of whether an operative provision applies to a distribution that occurs within close temporal proximity to one or more transactions that are properly included in a plan of reorganization. For example, in determining whether section 361(b) should apply to a distribution by a distributing corporation to its shareholders in close temporal proximity to a divisive reorganization, the proposed “but for” test would clarify that section 361(b) treatment would be applicable only if that distribution would not have occurred “but for” the divisive reorganization. See the examples in proposed § 1.361–3(f)(2) through (5).

An “integral part” standard also would increase taxpayer certainty as compared to the current “directly a part

of” standard, particularly because courts historically have applied an “integral part” standard. For example, in *Sheldon v. Commissioner*, 6 T.C. 510 (1946), the Tax Court found that a transaction was integral to a merger even though the transaction was not necessary for qualification for a definitional provision under section 368(a)(1). In *Sheldon*, the Tax Court considered whether a pre-merger distribution should be included in the plan of reorganization for the merger. 6 T.C. at 517–18. The court emphasized that the pre-merger distribution was made to equalize values of the target corporation and the acquiring corporation so that the merger could be one of equals, thereby satisfying a condition for executing the merger. *Id.* In its analysis, the court provided that “[t]he purpose of this distribution, its place in the sequence of events, and the surrounding circumstances, lead to but one conclusion. They all demonstrate that it was an integral part of the reorganization transaction as a whole and must be treated in connection with it.” *Id.* at 517. See also *Int’l Telephone*, 77 T.C. at 76 (noting the absence of “a binding agreement or other factors indicating that conversion [of debentures] was an integral part of the plans of reorganization”).

Additionally, the Treasury Department and the IRS are of the view that replacing the “directly a part of” standard in current § 1.368–2(g) with the standards in proposed § 1.368–4(e)(2)(i)(B) would improve taxpayer certainty in determining the applicability of an operative provision of subchapter C. Proposed § 1.368–4(e) would provide additional certainty by requiring the “but for” standard to be applied in tandem with the “definite intent” requirement set forth in proposed § 1.368–4(e)(1). In other words, a transaction would not be properly included in a plan of reorganization if the party to the reorganization failed to evidence a definite intent to carry out that transaction, regardless of whether the transaction would not have occurred “but for” the reorganization.

This implementation of the “but for” standard would be consistent with judicial authorities, including those cited by stakeholders. For example, in *International Telephone*, the Tax Court considered exchanges involving debentures that could not have occurred but for the execution of a reorganization that qualified under section 368(a)(1)(C). 77 T.C. at 72–78. Although the court observed the existence of that “but for” relationship, the court reasoned that “[t]he fact that [the acquiring

corporation] assumed the conversion obligation as part of the plans of reorganization does not mean . . . that the subsequent conversions and retirement of the debentures were also part of the reorganizations.” *Id.* at 76. Based on the lack of indicia indicating satisfaction of the proposed “direct intent” requirement, the Tax Court concluded that such exchanges were not properly included in the plan of reorganization. See *id.* at 76–77 (noting the lack of any binding agreement, any other type of obligation, or other facts that would indicate satisfaction of the “direct intent” requirement). See also *Becher v. Comm’r*, 22 T.C. 932 (1954) (treating a distribution as not part of the plan of reorganization under the predecessor to section 368(a)(1)(D), and therefore not “boot,” based on an examination of the facts and circumstances of the distribution and the transactions comprising the reorganization).

(d) Independent Legal Significance; Temporal Proximity

Proposed § 1.368–4(e)(2)(ii) would confirm that the independent significance of a transaction (for example, the fact that the transaction has a separate business motive apart from the reorganization) does not preclude satisfaction of the proximate relationship requirements in proposed § 1.368–4(e)(2)(i)(A) and (B). The Treasury Department and the IRS view this approach as consistent with established caselaw (see *Seagram*, 104 T.C. at 91–93) and reflective of the realities of bona fide business transactions. It has long been the understanding of the Treasury Department and the IRS that a transaction could be included in the plan of reorganization even though it may have separate business motives, or separate and permanent legal, economic, and business consequences, apart from the reorganization.

Additionally, proposed § 1.368–4(e)(2)(iii) would provide that a transaction occurring in close temporal proximity to one or more other transactions is not properly included in a plan of reorganization unless Federal income tax principles (including the step transaction doctrine) would apply to determine that the transaction was, in substance, part of the plan of reorganization.

iv. Business Purpose Consistency Requirement

Lastly, in order for a transaction to be treated as properly included in a plan of reorganization, proposed § 1.368–4(e)(3) would require the transaction (on its

own, or as part of a series of transactions) to be consistent with, and directly related to, one or more corporate business purposes for the reorganization (for example, the transaction directly furthers one or more corporate business purposes for the reorganization).

The Treasury Department and the IRS view the proposed corporate business purpose consistency requirement as reflective of established caselaw. *See Seagram*, 104 T.C. at 83, 97 (noting that the tender offer and the merger shared the same corporate business purpose of enabling DuPont to acquire all the stock of Conoco). In addition, the Treasury Department and the IRS view this proposed rule as conceptually grounded in current § 1.368–2(g), which provides that “the readjustments involved in the exchanges or distributions effected in the consummation [of the reorganization] must be undertaken for reasons germane to the continuance of the business of a corporation a party to the reorganization.”

f. Amended Plan of Reorganization

The Treasury Department and the IRS recognize that, in certain circumstances, taxpayers may need to amend their plans of reorganization. Accordingly, proposed § 1.368–4(f)(1) would provide that, if a taxpayer amends a plan of reorganization after the first step of the original plan (amended plan of reorganization), those amendments do not cause the taxpayer to fail to satisfy the “plan of reorganization” requirements set forth in proposed § 1.368–4(d) only if the following requirements are satisfied. First, the amendments to the plan must be in direct response to an identifiable, unexpected, and material change in market or business conditions that occurs after the date on which the original plan of reorganization is adopted by the party to the reorganization. Second, the amendments must be necessary to effectuate the reorganization. Third, the amended plan of reorganization must satisfy all requirements set forth in proposed § 1.368–4(d) to qualify as a plan of reorganization.

If the taxpayer satisfies the requirements in proposed § 1.368–4(f)(1), proposed § 1.368–4(f)(2)(i) would provide that the definitional and operative provisions described in proposed § 1.368–1(c)(2)(i) and (ii) would apply to the transactions identified in, and carried out pursuant to, the amended plan of reorganization. In other words, the proposed regulations would confirm that the Federal income tax consequences of all transactions

properly included in the amended plan of reorganization would be determined based on that plan of reorganization (and not on the original plan of reorganization). However, proposed § 1.368–4(f)(2)(ii) would provide that, if the amended plan of reorganization fails to satisfy the requirements in proposed § 1.368–4(f)(1), the Commissioner may correct or identify the amended plan of reorganization.

3. Proposed Rules Regarding Party to a Reorganization

In addition to providing rules regarding the determination, adoption, and prosecution of a plan of reorganization, the proposed regulations would revise current § 1.368–2(f) to further clarify (i) which persons are parties to a reorganization, and (ii) the consequences of determining that a person is (or is not) a party to a reorganization.

Proposed § 1.368–2(f)(1) generally would provide that the definitional and operative provisions described in § 1.368–1(c)(2)(i) and (ii), respectively, apply solely to a transaction that is carried out by, between, or among one or more parties to a reorganization. For purposes of determining the scope of transactions to which those provisions apply, the term “party to a reorganization” would be limited under proposed § 1.368–2(f)(2) through (4) solely to a corporation that (i) engages in a transaction or series of transactions that satisfies a definitional provision set forth in section 368(a)(1), and (ii) is determined to be a party to a reorganization, as further described in the following paragraph.

In general, proposed § 1.368–2(f)(4)(i) would provide that a corporation’s status as a party to a reorganization is established solely by the inclusion and identification of the corporation as a party to the reorganization in a plan of reorganization filed with the IRS pursuant to proposed § 1.368–3(a)(5). However, proposed § 1.368–2(f)(4)(ii) would provide that the corporation’s status as a party to a reorganization may be determined by the Commissioner based on (i) all facts and circumstances regarding the transaction or series of transactions, and (ii) all relevant provisions of the Code and general principles of tax law, including the step transaction doctrine.

Proposed § 1.368–2(f)(3)(ii) would retain the rules in current § 1.368–2(f) regarding the impact of certain transfers of assets or stock in a reorganization on a person’s status as a party to the reorganization.

IV. Application of Substance-Over-Form, Agency, and Other Relevant Theories to Intermediated Exchanges and Direct Issuance Transactions

A. Notice 2024–38

In section 2.02(5) of Notice 2024–38, the Treasury Department and the IRS announced that they are continuing to study the application of the Code, as well as general principles of Federal income tax law (including substance-over-form, agency, or other relevant theories), to monetization transactions involving section 361 consideration. In particular, this study continues to focus on intermediated exchanges, which occur through (i) the acquisition by an intermediary (such as an investment bank) of historical distributing corporation debt from holders of that debt, and (ii) the subsequent satisfaction of that debt by the distributing corporation using section 361 consideration.

As capital market transactions have evolved, this study also has focused increasingly on direct issuance transactions, which typically occur through: (i) the issuance of new debt by a distributing corporation to an intermediary for cash in anticipation of a divisive reorganization; (ii) the use of that cash by the distributing corporation to satisfy historical distributing corporation debt, during a potentially indefinite period; and (iii) the satisfaction of that new debt by the distributing corporation through the transfer of section 361 consideration to the intermediary.

This study reflects the long-standing position of the Treasury Department and the IRS that general principles of Federal income tax law (including substance-over-form, agency, or other relevant theories) apply to determine the Federal income tax consequences of all transactions, including such monetization transactions. *See United States v. Fruehauf Corp.*, 577 F.2d 1038, 1068 (6th Cir. 1978) (“The incidence of federal taxation has always depended upon the substance of transactions . . .”). Indeed, this position is consistent with nearly a century of Supreme Court precedent beginning with the Court’s decision in *Gregory v. Helvering*, which established that the application of the Code to a transaction (or series of transactions) turns on the substance of the transaction. *See Gregory*, 293 U.S. at 467–70 (concluding that the “reorganization attempted was without substance and must be disregarded [and] [t]o hold otherwise would be to exalt artifice above reality and to deprive the statutory provision in question of all serious purpose”);

United States v. Iles, 906 F.2d 1122, 1127 (6th Cir. 1990) (“The Supreme Court has recognized, at least as far back as *Gregory v. Helvering* . . . that substance over form governs federal taxation.”) (citations omitted).

The application of substance-over-form and similar doctrines can affect qualification for nonrecognition treatment under section 361. Notice 2024–38 conveyed the long-standing view of the Treasury Department and the IRS that the application of agency principles to an intermediated exchange involving so-called “old and cold” distributing corporation debt could cause that transaction to be recharacterized for Federal income tax purposes such that the distributing corporation would not be treated as transferring section 361 consideration to a creditor in satisfaction of distributing corporation debt. In other words, if the intermediary were found to be acting on behalf of the distributing corporation under agency principles, transfers of section 361 consideration to the intermediary would not satisfy the requirements for nonrecognition under section 361. With respect to a direct issuance transaction in which the distributing corporation issues and redeems the new debt in close temporal proximity, the Treasury Department and the IRS are of the view that the transaction could be recast under general principles of Federal income tax law such that the nonrecognition requirements under section 361 are not satisfied.

B. Stakeholder Input

1. Intermediated Exchanges

Stakeholders have contended that intermediated exchanges should not be subject to recharacterization, provided that the distributing corporation establishes the intermediary’s status as a creditor acting for its own account under agency principles. Stakeholders have stated that this approach would be consistent with Rev. Rul. 2017–9, 2017–21 I.R.B. 1244, because intermediated exchanges (i) do not conflict with the underlying policy of section 361(c)(3), (ii) do not avoid the result intended by section 361(c)(3) (that is, the reallocation of historical distributing corporation liabilities to the controlled corporation), and (iii) do not produce results that are inconsistent with the underlying intent of section 361(c)(3). In other words, stakeholders have suggested that, in determining whether an intermediated exchange should be recharacterized, the relevant question is whether the distributing corporation debt acquired by the intermediary was

issued with a purpose of avoiding any requirement or limitation under section 361.

In this regard, one stakeholder has requested guidance providing that steps of an intermediated exchange will not be recast under Federal income tax principles if (i) the intermediary acts on its own account in acquiring distributing corporation debt from third parties (that is, the intermediary becomes the owner of such debt for Federal income tax purposes and the acquisition is not funded or guaranteed by the distributing corporation), (ii) the intermediary assumes the risk that the distributing corporation may default on its debt while such debt is held by the intermediary, and (iii) the distributing corporation debt acquired by the intermediary was not issued with a purpose of avoiding the requirements or limitations of section 361.

Another stakeholder has recommended that the Treasury Department and the IRS refrain from issuing substantive guidance given the fact-intensive nature of determining whether an intermediated exchange should be recast. The stakeholder has recommended that the IRS continue to issue private letter rulings on a case-by-case basis to taxpayers that are able to establish an intermediary’s status as a creditor acting for its own account by reference to the factors specified in a series of technical advice memoranda previously issued by the IRS. *See* T.A.M. 8815003 (Dec. 11, 1987); T.A.M. 8738003 (May 22, 1987); T.A.M. 8735007 (May 18, 1987); T.A.M. 8735006 (May 18, 1987).

2. Direct Issuances

Stakeholders have provided various recommendations to the Treasury Department and the IRS regarding the treatment of direct issuance transactions. Stakeholders uniformly have contended that the proposed regulations should recast or recharacterize a direct issuance transaction only if the transaction presents an abuse within the meaning of section 361(b)(3). In addition, stakeholders consistently have contended that the policy of section 361 confirms that direct issuance transactions satisfy the requirements for nonrecognition treatment under section 361. Although one stakeholder has acknowledged that, in some circumstances, the Treasury Department and the IRS may have a legitimate concern that a direct issuance transaction should be treated as a sale of controlled corporation stock to the intermediary, the stakeholder has noted that delineating the exact bounds of an

abusive transaction as it relates to section 361(b)(3) and (c)(3) would be difficult. Accordingly, stakeholders generally have recommended that the Treasury Department and the IRS continue to address the section 361 qualification of direct issuance transactions through the IRS’s private letter ruling program rather than through Treasury regulations.

Alternatively, stakeholders have recommended that the proposed regulations set forth specific safe harbors for direct issuance transactions that, after adequately taking into account commercial considerations (which one stakeholder has referred to as “commercially grounded carveouts”), clearly would not present evidence of abuse. One stakeholder has recommended that a direct issuance transaction be respected as a borrowing if: (i) the newly issued debt qualifies as debt for Federal income tax purposes; (ii) the new debt issuance and the exchange agreement with the intermediary (regarding satisfaction of the newly issued debt with controlled corporation stock or securities) are pursuant to two legally separate agreements; (iii) the distributing corporation is not under economic compulsion to satisfy the newly issued debt with controlled corporation stock or securities at the time of issuance because the distributing corporation has sufficient other resources to repay the debt; (iv) the newly issued debt is satisfied with controlled corporation stock or securities having a fair market value equal to the principal amount and unpaid interest on the debt; and (v) the distributing corporation retains tax ownership of the controlled corporation stock or securities until the time of repayment.

Another stakeholder has suggested additional factors to be considered, including (i) the number of days the newly issued debt is outstanding before the exchange of that debt for controlled corporation stock or securities, and (ii) whether the intermediary participating in the direct issuance transaction is a member of a syndicate of lenders that has historically provided debt financing to the distributing corporation. Additionally, a stakeholder has recommended (i) limiting permissible direct issuance transactions to situations in which the proceeds of the new debt are used to retire historical debt, and (ii) including a general anti-avoidance rule based on the distributing corporation’s business purpose for entering into the direct issuance transaction.

C. Proposed Regulations

1. Overview

The Treasury Department and the IRS continue to be of the view that, under certain circumstances, intermediated exchanges and direct issuance transactions can be recast or otherwise recharacterized under Federal income tax principles. Certain stakeholders have described the aforementioned concerns of the Treasury Department and the IRS with respect to such transactions as new or as deriving primarily from direct issuance transactions or refinancing transactions.

However, these concerns are neither new nor unique. As confirmed almost a century ago by the Supreme Court in *Gregory v. Helvering*, the application of substance over form and other general Federal income tax principles is inseparable from the application of the Code itself. *See also Newman v. Comm'r*, 894 F.2d 560, 562 (2d Cir. 1990) (emphasizing that, “in reviewing a transaction for tax consequences, the substance of the agreement takes precedence over its form”). Accordingly, one objective of these proposed regulations is to clarify that general Federal income tax principles apply with regard to the application of section 361 just as such principles would apply with regard to the application of other Code provisions.

With regard to the application of section 361 to intermediated exchanges, the Treasury Department and the IRS note that concerns regarding agency and substance over form date back decades to a series of technical advice memoranda that considered the application of a prior version of section 108 of the Code to conceptually similar intermediated exchanges of stock and securities. *See T.A.M. 8815003* (Dec. 11, 1987); *T.A.M. 8738003* (May 22, 1987); *T.A.M. 8735007* (May 18, 1987); *T.A.M. 8735006* (May 18, 1987). The so-called “5/14 standard” in corporate private letter rulings developed out of concerns similar to those discussed in those memoranda. (Under this standard, rulings generally would be issued by the IRS if: (i) the intermediary purchased distributing corporation debt; (ii) after at least five days, the intermediary and the distributing corporation entered into an agreement to exchange the purchased distributing corporation debt for section 361 consideration; and (iii) the exchange occurred at least 14 days after the intermediary purchased the distributing corporation debt.)

With regard to the application of section 361 to direct issuance transactions, the Treasury Department and the IRS have expressed similar

concerns for more than a decade. In particular, the Treasury Department and the IRS ceased considering certain private letter ruling requests under section 361 in part due to this type of section 361 monetization transaction. *See* section 5.01(10) of Rev. Proc. 2013–3, 2013–1 I.R.B. 113. As explained by Treasury Department and IRS officials at that time, these transactions raised issues concerning the application of general principles of Federal income tax, including the substance-over-form doctrine. Stakeholders also raised similar issues at that time.

In addition, certain stakeholders have mischaracterized the concerns of the Treasury Department and the IRS as focused principally on (i) whether the new debt should be respected as a debt instrument for Federal income tax purposes, or (ii) temporal proximity. With regard to the former point, certain stakeholders have provided feedback on Notice 2024–38 emphasizing debt-equity factors or have noted that, outside of Federal income tax (for example, under securities law), new debt issued by a distributing corporation in a direct issuance transaction would be treated as debt.

However, as previously discussed in this part IV.C.1, the Treasury Department and the IRS are concerned with the application of the Code and Federal income tax principles—not commercial law or other non-Federal income tax law—to intermediated exchanges and direct issuance transactions. In particular, as expressed in Notice 2024–38, the concern is not simply the status of the newly issued distributing corporation debt as debt for Federal income tax purposes, but also that the form of those debt-elimination transactions should be respected and not recharacterized under Federal income tax principles.

With regard to the latter point, the Treasury Department and the IRS replaced the 5/14 standard for private letter rulings in Rev. Proc. 2018–53 with a standard based on a facts-and-circumstances analysis. This change was made due to concerns that the 5/14 standard provided a temporal requirement that was indifferent to the particular facts and circumstances of the transaction, including the intermediary’s relationship with the distributing corporation. As a consequence, the Treasury Department and the IRS observed that the 5/14 standard created confusion for taxpayers as to whether temporal proximity is the sole consideration with regard to the application of agency or substance-over-form principles to intermediated

exchanges and direct issuance transactions.

The Treasury Department and the IRS also continue to be of the view that Rev. Rul. 2017–9 and other revenue rulings mentioned by stakeholders in their submitted feedback do not (and cannot) set forth broadly applicable principles that would dictate the positions set forth in these proposed regulations. One reason is that there are long-established limitations on the precedential value of revenue rulings. Specifically, “[r]evenue rulings published in the [Internal Revenue] Bulletin do not have the force and effect of Treasury Department regulations (including Treasury Decisions), but are published to provide precedents to be used in the disposition of other cases, and may be cited and relied upon for that purpose.” Section 601.601(d)(2)(v)(d) of the Statement of Procedural Rules (codifying section 7.01(4) of Rev. Proc. 89–14, 1989–8 I.R.B. 20). In addition, “[e]ach revenue ruling represents the conclusion of the Service as to the application of the law to the entire statement of facts involved,” as opposed to an application outside of that entire statement of relevant facts. Section 601.601(d)(2)(v)(d) (codifying section 7.01(6) of Rev. Proc. 89–14). Based on these limitations, “taxpayers, Service personnel, and others concerned are cautioned against reaching the same conclusion in other cases unless the facts and circumstances are substantially the same.” Section 601.601(d)(2)(v)(e).

Another reason is that, in almost all instances, the facts and circumstances set forth in the revenue rulings mentioned by stakeholders are not substantially the same as the transaction facts considered by the Treasury Department and the IRS in developing these proposed regulations. *See* Rev. Rul. 2017–9 (providing that “[t]his revenue ruling provides guidance regarding the federal tax treatment of certain transactions referred to as ‘north-south’ transactions,” rather than intermediated exchanges or direct issuance transactions); Rev. Rul. 59–197, 1959–1 C.B. 77 (considering the potential effect of a “cash sale to the key employee” of the distributing corporation on section 355 qualification, rather than an intermediated exchange or a direct issuance transaction). Accordingly, those revenue rulings address entirely different provisions of the Code. *See* Rev. Rul. 2017–9 (addressing the application of, and qualification under, sections 301, 351, 355, and 361(b)(1) and (2) (not section 361(b)(3) and (c)(3))); Rev. Rul. 59–197 (addressing the application of the device

and continuity of interest requirements under section 355, not section 361(b)(3) and (c)(3)).

However, the Treasury Department and the IRS are of the view that the facts and analysis set forth in Rev. Rul. 79–258 are relevant for purposes of developing proposed regulations under section 357(b). Accordingly, based on a de novo consideration of the analysis set forth in that revenue ruling, proposed § 1.357–3(d)(4)(ii)(B) would incorporate that analysis into proposed rules regarding the assumption by a controlled corporation of distributing corporation debt issued in close proximity to a divisive reorganization. See the discussion in part VIII.C.3.b of this Explanation of Provisions. For the reasons discussed in this part IV.C.1, the Treasury Department and the IRS do not view it as appropriate for these proposed regulations to extend the analysis of Rev. Rul. 79–258 to proposed rules addressing the application of section 361.

2. General Approach of Proposed Regulations

The Treasury Department and the IRS appreciate the feedback received from stakeholders on intermediated exchanges and direct issuance transactions. As emphasized in Notice 2024–38, and consistent with other aspects of these proposed regulations, the proposed rules addressing these topics are intended (i) to be consistent with all relevant provisions of the Code (that is, the compliance objective); (ii) to provide certainty to taxpayers and the IRS regarding the application of all relevant provisions of the Code to purported section 355 transactions (that is, the increased certainty objective); and (iii) to be responsive to the manner in which section 355 transactions are engaged in by taxpayers and reflect current market practices and preferences (that is, the transaction facilitation objective), to the extent that doing so does not conflict with the compliance and increased certainty objectives.

With regard to the increased certainty objective, the Treasury Department and the IRS have leveraged the expertise of IRS audit and examination personnel to develop proposed rules that, to the extent practicable, employ bright-line safe harbors, objectively verifiable conditions for qualification, and other similar architecture that can be readily reflected on Form 7216. These rules reflect the express delegation of authority to the Secretary to prevent avoidance of tax through abuse of section 361(b)(3) or (c)(3). The Treasury Department and the IRS have

endeavored to balance this increased certainty objective with the transaction facilitation objective.

3. Specific Aspects of Proposed Regulations

a. General Requirements for Deemed Distribution Treatment

Proposed § 1.361–5 would implement section 361(b)(3) and (c)(3) by setting forth requirements that, if satisfied, would cause a transfer of section 361 consideration by the distributing corporation to its creditor to be treated as a distribution by the distributing corporation to its shareholders pursuant to the plan of reorganization. First, the creditor of the distributing corporation must be a qualifying creditor, as determined under proposed § 1.361–5(b). Second, the distributing corporation debt that is satisfied with section 361 consideration must constitute eligible distributing corporation debt, as determined under proposed § 1.361–5(c)(2). Third, the amount of distributing corporation debt that can be eliminated under the safe harbors of section 361(b)(3) and (c)(3) cannot exceed a maximum amount, as determined under proposed § 1.361–5(d). Lastly, the transfer by the distributing corporation of section 361 consideration in exchange for eligible distributing corporation debt must be carried out as part of a qualifying debt elimination transaction, as determined under proposed § 1.361–5(e).

Notwithstanding the satisfaction of the foregoing requirements, proposed § 1.361–5(f)(1)(i) would provide that the amount of section 361 consideration treated as transferred by the distributing corporation to a creditor of the distributing corporation in a qualifying debt elimination transaction is reduced by the amount of distributing corporation debt that is transitorily eliminated. See the discussion in part VII.C of this Explanation of Provisions regarding transitorily eliminated distributing corporation debt.

b. Qualifying Creditors

Proposed § 1.361–5(b)(1) would require each creditor to which the distributing corporation transfers section 361 consideration in a divisive reorganization to be a creditor that holds eligible distributing corporation debt (as described in proposed § 1.361–5(c)). Additionally, proposed § 1.361–5(b)(1) and (b)(2)(i) generally would prohibit the distributing corporation from satisfying eligible distributing corporation debt held by a person related (within the meaning of section 267(b) or section 707(b)(1)) (see

proposed § 1.361–1(b)(47)) to the distributing corporation (distributing corporation related person), the controlled corporation (controlled corporation related person), or a related person with regard to a distributing corporation related person or a controlled corporation related person (collectively, non-qualifying creditors). Creditors that hold eligible distributing corporation debt, and that are not otherwise disqualified as non-qualifying creditors under proposed § 1.361–5(b)(2), are referred to as “qualifying creditors.”

Proposed § 1.361–5(b)(2)(ii) would provide an exception to the general related-creditor prohibition in proposed § 1.361–5(b)(2)(i) for a creditor that is a distributing corporation related person or a related person with regard to a distributing corporation related person if three requirements are satisfied. First, as part of the plan of reorganization, proposed § 1.361–5(b)(2)(ii)(A) would provide that the section 361 consideration must be transferred to a creditor that is neither a distributing corporation related person nor a related person with regard to a distributing corporation related person (unrelated ultimate creditor). Specifically, if the section 361 consideration is money or other property, proposed § 1.361–5(b)(2)(ii)(A)(1) would provide that it must be transferred to an unrelated ultimate creditor pursuant to the plan of reorganization no later than the end of the 12-month period beginning on the date the distributing corporation receives the money or other property (as appropriate). If the section 361 consideration is qualified property (as defined in proposed § 1.361–1(b)(43)), proposed § 1.361–5(b)(2)(ii)(A)(2) would provide that it must be transferred to an unrelated ultimate creditor in an expeditious manner pursuant to the plan of reorganization under proposed § 1.368–4(d)(3). Second, proposed § 1.361–5(b)(2)(ii)(B)(1) would provide a general provision that all debt for which section 361 consideration is exchanged must be in existence as of the earliest applicable date. Proposed § 1.361–5(b)(2)(ii)(B)(2) would provide that distributing corporation debt held directly by a distributing corporation related person or a related person with regard to a distributing corporation related person must qualify as historical distributing corporation debt described in proposed § 1.361–5(c)(2)(i). Third, proposed § 1.361–5(b)(2)(ii)(C) would provide that each transaction (including each intermediate and unrelated ultimate creditor transfer), creditor (including the unrelated ultimate

creditor), and debt satisfied with section 361 consideration must be identified and described in the plan of reorganization with regard to the divisive reorganization.

For purposes of the requirements in proposed § 1.361–5(b)(2)(ii)(A), proposed § 1.361–5(b)(2)(ii)(A)(3) would permit one or more intermediate transfers of section 361 consideration between or among distributing corporation related persons or related persons with regard to distributing corporation related persons to satisfy debts (including the initial distributing corporation debt) if those intermediate transfers culminate in a transfer of section 361 consideration to an unrelated ultimate creditor. Under proposed § 1.361–5(b)(2)(iii), a person's status as a distributing corporation related person or a controlled related person, or as a related person with regard to any distributing corporation related person or as a related person with respect to any controlled corporation related person, would be determined at the time of that person's receipt of the section 361 consideration in exchange for the satisfaction and retirement of debt in a transfer or series of transfers described in proposed § 1.361–5(b)(2)(ii)(A).

c. Eligible Distributing Corporation Debt

i. In General

Proposed § 1.361–5(c)(1) would provide that distributing corporation debt is not eligible to be satisfied with section 361 consideration under proposed § 1.361–5(a) unless that debt qualifies as eligible distributing corporation debt.

(a) Historical Distributing Corporation Debt

In general, proposed § 1.361–5(c)(2)(i) would provide that distributing corporation debt that qualifies as historical distributing corporation debt is eligible to be satisfied with section 361 consideration. In general, distributing corporation debt qualifies as historical distributing corporation debt if that debt was incurred before the “earliest applicable date,” and that debt has an original term that ends after the date of the exchange described in § 1.361–2(a) or 1.361–3(a) and is identified in the plan of reorganization or original plan of reorganization (if amended). The “earliest applicable date” is defined in proposed § 1.361–1(b)(27) as the earliest date of three specified events: (i) the date of the first public announcement (as defined in § 1.355–7(h)(10)) of the divisive reorganization or a similar transaction;

(ii) the date the distributing corporation entered into a written agreement to effectuate the divisive reorganization or a similar transaction; and (iii) the date the distributing corporation's board of directors approved the divisive reorganization or a similar transaction.

However, the Treasury Department and the IRS are of the view that a debt refinancing exception would be appropriate to help achieve the transaction facilitation objective. Specifically, proposed § 1.361–5(c)(2)(ii) would provide that distributing corporation debt incurred by the distributing corporation after the earliest applicable date is treated as historical distributing corporation debt only if the following four requirements are met. First, proposed § 1.361–5(c)(2)(ii)(A) would provide that the distributing corporation debt must be (i) a refinancing of historical distributing corporation debt, or (ii) a refinancing of refinanced historical distributing corporation debt (that is, the debt must be traced directly through one or more refinancings to debt that qualifies as historical distributing corporation debt). Second, proposed § 1.361–5(c)(2)(ii)(B) would provide that the refinanced historical distributing corporation debt must not have been incurred as part of a plan to incur debt in addition to historical distributing corporation debt determined under proposed § 1.361–5(c)(2)(i) (or an amount of debt in addition to the amount of historical distributing corporation debt determined under paragraph (d) of that section, without regard to proposed § 1.361–5(d)(2)(iv)) in anticipation of the divisive reorganization (for example, the incurrence of the refinanced historical distributing corporation debt would have occurred without regard to the divisive reorganization). Third, proposed § 1.361–5(c)(2)(ii)(C) would provide that the distributing corporation must engage in a qualifying debt elimination transaction solely under proposed § 1.361–5(e)(3) or (4) to eliminate that refinanced historical distributing corporation debt. Fourth, proposed § 1.361–5(c)(2)(ii)(D) would provide that the qualifying debt elimination transaction must be described and identified in the plan of reorganization or original plan of reorganization (if amended) for the divisive reorganization.

Proposed § 1.361–5(c)(2)(iii) would provide that a revolving credit agreement to which the distributing corporation is a debtor qualifies as historical distributing corporation debt only if the following requirements are met. First, the distributing corporation must have entered into the agreement

before the earliest applicable date. Second, the agreement does not expire until after the date of the exchange described in proposed § 1.361–2(a) or 1.361–3(a). Third, the agreement is identified in the plan of reorganization or original plan of reorganization (if amended). The Treasury Department and the IRS request comments regarding whether there are other arrangements similar to revolving credit agreements that, based on the same rationale employed by these proposed regulations, should be treated similarly.

(b) Qualifying Trade Payables

Proposed § 1.361–5(c)(2)(iv) would provide that qualifying trade payables are eligible to be satisfied with section 361 consideration. For purposes of that qualification, the following requirements must be met. First, the trade payables must be described in a plan of reorganization or original plan of reorganization (if amended). Second, the trade payables must have been incurred in the ordinary course of business of the distributing corporation. Third, the satisfaction of such trade payables is necessary (A) to ensure the allocation to the controlled corporation of all liabilities properly associated with the business assets transferred to that corporation and (B) to result in the controlled corporation being allocated liabilities in an amount that properly relates to its business operations, the earnings of which will be used to properly satisfy those liabilities.

(c) Direct Issuance Debt

These proposed regulations would also provide that direct issuance debt is eligible to be satisfied with section 361 consideration. Specifically, proposed § 1.361–5(c)(2)(v) would provide that direct issuance debt incurred as part of a direct issuance transaction (as defined in proposed § 1.361–1(b)(17)) satisfying the requirements of proposed § 1.361–5(e)(4) is eligible to be satisfied with section 361 consideration. See the discussion in part IV.C.3.d.iv regarding qualifying direct issuance transactions.

ii. Amount of Distributing Corporation Debt Repaid

Under proposed § 1.361–5(d)(1), the maximum amount of distributing corporation debt that can be satisfied with section 361 consideration under proposed § 1.361–5(a) would equal the amount obtained by subtracting the aggregate amount of distributing corporation debt that the controlled corporation assumes (in accordance with proposed §§ 1.357–2 through 1.357–4) pursuant to the plan of reorganization from the lesser of (i) the

aggregate amount of distributing corporation debt (as determined under proposed § 1.361–5(c)(3)), and (ii) the aggregate amount of distributing corporation debt determined under the eight-quarterly-average test set forth in proposed § 1.361–5(d)(2). The Treasury Department and the IRS are of the view that incorporating the IRS's long-standing, quarterly average test for advance ruling purposes (which was expanded to an eight-quarterly-average test in Rev. Proc. 2018–53 to provide a more accurate determination) into this computation would help achieve the increased certainty objective of these proposed regulations.

(a) Aggregate Amount of Distributing Corporation Debt

Under proposed § 1.361–5(c)(3)(ii), the aggregate amount of distributing corporation debt would include solely the amounts described in proposed § 1.361–5(c)(3)(ii)(A) through (E), as applicable, taking into account any reduction required by proposed proposed § 1.361–5(c)(3)(iii) (that is, offsetting debts). Specifically, proposed § 1.361–5(c)(3)(ii)(A) would provide that the aggregate amount of historical distributing corporation debt would equal the aggregate remaining principal amount, as of the earliest applicable date, of all historical distributing corporation debt other than historical distributing corporation debt that is eliminated as part of a qualifying direct issuance transaction. With regard to refinanced distributing corporation debt, proposed § 1.361–5(c)(3)(ii)(B) would provide that, if the distributing corporation relies on the refinancing exception for historical distributing corporation debt under proposed § 1.361–5(c)(2)(ii), then the amount of that debt distributing corporation debt would equal the lesser of (i) the original principal amount of the refinanced distributing corporation debt and (ii) the principal amount of the original historical distributing corporation debt (that is, the distributing corporation debt to which the refinanced distributing corporation debt is traced) as of the earliest applicable date. With regard to a revolving credit agreement that satisfies the requirements set forth in § 1.361–5(c)(2)(iii), proposed § 1.361–5(c)(3)(ii)(C) would provide that the amount of that debt would be the lesser of (i) the balance under that agreement as of the earliest applicable date (and not the maximum amount that could be incurred by the distributing corporation under that agreement), and (ii) the lowest balance under the agreement beginning on the earliest applicable date

and ending on the control distribution date.

Additionally, proposed § 1.361–5(c)(3)(ii)(D) would provide that the amount of qualifying trade payables would equal the aggregate amount of those payables on the date of the exchange described in proposed § 1.361–2(a) or 1.361–3(a). With regard to direct issuance debt, proposed § 1.361–5(c)(3)(ii)(E) would provide that the amount of that debt would equal the aggregate principal amount of that debt on the date exchange described in proposed § 1.361–2(a) or 1.361–3(a).

Lastly, proposed § 1.361–5(c)(3)(iii) would require the aggregate amount of distributing corporation debt be reduced to reflect certain offsetting debts. That is, if the distributing corporation is a creditor, and if the debtor with respect to that debt is a creditor with respect to distributing corporation debt, the distributing corporation would be required to reduce the aggregate principal amount of its distributing corporation debt by the aggregate principal amount of debt issued to that other person for purposes of the computation under proposed § 1.361–5(c)(3)(ii). This proposed rule also would include reductions to account for revolving credit agreements.

(b) Eight-Quarterly-Average Test

Proposed § 1.361–5(d)(2)(i) would provide that, under the eight-quarterly-average test, the aggregate amount of distributing corporation debt generally would equal the average of the amount of distributing corporation debt owed to persons other than distributing corporation related persons as of the close of each of the eight fiscal quarters that end immediately before the earliest applicable date. Proposed § 1.361–5(d)(2)(ii) and (iii) would provide additional rules to address (i) the calculation of distributing corporation debt at the close of each quarter, and (ii) distributing corporation debt held by distributing corporation related persons.

d. Qualifying Debt Elimination Transactions

i. Overview

The Treasury Department and the IRS are proposing bright-line rules for qualifying debt elimination transactions to achieve the transaction facilitation and increased certainty objectives for these proposed regulations. The determination of whether a debt elimination transaction qualifies under section 361(b)(3) and (c)(3), and the extent of that qualification, has created more uncertainty for taxpayers and the IRS than perhaps any other issue arising

from divisive reorganizations. With these proposed rules, the Treasury Department and the IRS are seeking to strike a balance that would facilitate intermediated exchanges and direct issuance transactions in a manner that (i) is consistent with the Code (particularly sections 355, 361, and 368) and underlying legislative history, and (ii) facilitates IRS administration and enforcement.

ii. Section 361 Transactions in Which No Intermediary is Used

Proposed § 1.361–5(e)(2) would set forth rules for qualifying original creditor exchanges. Specifically, proposed § 1.361–5(e)(2) would provide that the satisfaction of distributing corporation debt with section 361 consideration in an exchange not described in proposed § 1.361–5(e)(3) or (4) is treated as a qualifying debt elimination transaction (that is, the exchange will be treated as a nonrecognition transaction for Federal income tax purposes) if all applicable requirements set forth in proposed § 1.361–5(b) through (d) are satisfied. In particular, proposed § 1.361–5(c)(2)(ii)(C) would provide that the refinancing exception set forth in proposed § 1.361–5(c)(2)(ii) would not apply to distributing corporation debt that is refinanced and then eliminated in a qualifying original creditor exchange. In other words, for a distributing corporation to apply that refinancing exception, the distributing corporation would be required to engage in a qualifying intermediated exchange or a qualifying direct issuance transaction (as discussed in parts IV.C.3.d.iii and iv of this Explanation of Provisions).

iii. Qualifying Intermediated Exchanges

Under proposed § 1.361–5(e)(3), an intermediated exchange would not qualify as a qualifying debt elimination transaction unless certain requirements are satisfied. First, proposed § 1.361–5(e)(3)(i)(A) generally would prohibit the holder of historical distributing corporation debt that will be satisfied with section 361 consideration from holding that debt for the benefit of the distributing corporation, the controlled corporation, a distributing corporation related person, or a controlled corporation related person. However, under proposed § 1.361–5(e)(3)(i)(B) this prohibition would not apply to a collateral benefit (such as the efficient purchase by an intermediary of historical distributing debt on the open market) received by a distributing corporation or a distributing corporation related person, from the intermediary's

facilitation of the transfer of section 361 consideration in satisfaction of historical distributing corporation debt.

Second, proposed § 1.361–5(e)(3)(ii) would prohibit the intermediary from acquiring historical distributing corporation debt that is satisfied with section 361 consideration from the distributing corporation, the controlled corporation, or any distributing corporation related person or controlled corporation related person. However, under proposed § 1.361–5(c)(2)(ii)(A) the refinancing exception set forth in proposed § 1.361–5(c)(2)(ii) would be available for distributing corporations that engage in qualifying intermediated exchanges. The Treasury Department and the IRS are of the view that this exception would help achieve the transaction facilitation objective by providing distributing corporations with significant flexibility to engage in debt elimination transactions under section 361 with debt refinanced after the earliest applicable date.

Third, the proposed regulations would impose long-standing requirements consistent with the analysis in the aforementioned technical advice memoranda addressing intermediated exchanges under former section 108. Specifically, proposed § 1.361–5(e)(3)(iii) would require the intermediary and the distributing corporation to effectuate the exchange of section 361 consideration for historical distributing corporation debt based on terms and conditions arrived at by the parties bargaining at arm's length.

Fourth, proposed § 1.361–5(e)(3)(iv) would prohibit the distributing corporation, the controlled corporation, and any distributing corporation related person or controlled corporation related person from (i) participating in any profit gained by the intermediary upon the exchange of section 361 consideration, or (ii) limiting the intermediary's profit by agreement or other arrangement.

Fifth, proposed § 1.361–5(e)(3)(v)(A) and (B) would require the intermediary (i) to act for its own account with regard to all components of the intermediated exchange, and (ii) bear the risk of loss with regard to the historical distributing corporation debt and any subsequent disposition of any section 361 consideration received in the exchange. Accordingly, proposed § 1.361–5(e)(3)(v)(C) would prohibit the intermediary from entering into a variable pricing agreement or similar arrangement with the distributing corporation, the controlled corporation, or any distributing corporation related person or controlled corporation related person (for example, agreements

between the intermediary and the distributing corporation requiring “true-up” payments would be prohibited).

Finally, proposed § 1.361–5(e)(3)(vi) would require the intermediary to hold the historical distributing corporation debt for a period of not less than 30 days ending on the control distribution date. Based on feedback from stakeholders, the Treasury Department and the IRS are of the view that providing a bright-line rule would help achieve the transaction facilitation and increased certainty objectives of these proposed regulations. The proposed rule would depart from the facts-and-circumstances approach set forth in Rev. Proc. 2018–53.

iv. Qualifying Direct Issuance Transaction

Under proposed § 1.361–5(e)(4), a direct issuance transaction would not qualify as a qualifying debt elimination transaction unless certain requirements are satisfied. For this purpose, proposed § 1.361–1(b)(17) would define the term “direct issuance transaction” to mean a transaction, or a series of transactions (or similar transaction or series of transactions), in which (i) the distributing corporation incurs distributing corporation debt with a creditor after the earliest applicable date, (ii) the distributing corporation uses the proceeds of the newly incurred distributing corporation debt (directly or indirectly) to repay historical distributing corporation debt, and (iii) the new creditor exchanges that newly incurred distributing corporation debt for controlled corporation stock or securities held by the distributing corporation.

First, proposed § 1.361–5(e)(4)(i)(A) would require that a direct issuance transaction be determined to comprise a transfer by the distributing corporation of section 361 consideration to the creditor in exchange for the satisfaction of distributing corporation debt held by that creditor (direct issuance debt), and not a sale by the distributing corporation of section 361 consideration to the creditor for the proceeds of that direct issuance debt, for Federal income tax purposes. Proposed § 1.361–5(e)(4)(i)(B) would provide that that determination is made based on all relevant provisions of the Code and general principles of Federal income tax law, including the step transaction doctrine. Proposed § 1.361–5(e)(4)(i)(B) also would provide that the substance of the direct issuance transaction must be determined, pursuant to all relevant provisions of the Code and general principles of Federal income tax law,

before the requirements of section 361 can be applied.

Second, proposed § 1.361–5(e)(4)(ii)(A) would provide that, unless the transaction satisfies the safe harbor under proposed § 1.361–5(e)(4)(iii), the determination of whether a direct issuance transaction is an exchange under section 361, and not a sale, is made using a facts-and-circumstances test. For this purpose, proposed § 1.361–5(e)(4)(ii)(B) would provide a set of factors to be used in determining whether the direct issuance transaction exchange qualifies as an exchange under section 361. Proposed § 1.361–5(e)(4)(ii)(B) would provide that each of the specified factors represents either evidence of qualification or non-qualification as an exchange. The strength of evidence provided by the factors is determined based on an analysis of all relevant facts and circumstances.

(a) Prescribed Factors for Facts-and-Circumstances Test

First, proposed § 1.361–5(e)(4)(ii)(B)(1) would provide that an exchange of section 361 consideration by the distributing corporation with a creditor occurs pursuant to an arrangement that comprises part of a prearranged, integrated plan is substantial evidence of non-qualification, whereas, an exchange that does not occur pursuant to an arrangement that comprises part of a prearranged, integrated plan is evidence of qualification.

Second, proposed § 1.361–5(e)(4)(ii)(B)(2)(i) would provide that, if any one of the following requirements are not met, the failure of any one requirement is evidence of non-qualification: (1) an exchange of section 361 consideration for refinanced historical distributing corporation debt between the distributing corporation and the creditor must be effectuated based on arm's-length terms and conditions; (2) neither the distributing corporation, controlled corporation, nor any distributing controlled corporation related person or controlled corporation related person participates in any profit gained by the creditor upon the exchange of section 361 consideration, or limits by agreement or other arrangement any profit of the creditor gained upon the exchange of section 361 consideration; (3) the creditor acts for its own account with regard to all components of the direct issuance transaction; and (4) the creditor bears the risk of loss with respect to the refinanced historical distributing corporation debt and any subsequent sale or other disposition of section 361

consideration transferred to the creditor in satisfaction of the refinanced historical distributing corporation debt. However, pursuant to proposed § 1.361–5(e)(4)(ii)(B)(2)(iii), the satisfaction of all these aforementioned requirements is substantial evidence of qualification.

Third, proposed § 1.361–5(e)(4)(ii)(B)(3) would provide that, if the creditor holds the refinanced historical distribution corporation debt for a period of less than 30 days ending on the control distributing date, then that fact is evidence of non-qualification. Conversely, if the creditor holds that debt for a period of at least 30 days ending on control distribution, then that fact is evidence of qualification.

Fourth, proposed § 1.361–5(e)(4)(ii)(B)(4) would provide that if the distributing corporation has legal or practical dominion or control over any proceeds of the refinanced historical distributing corporation debt (as determined in accordance with § 1.357–(e)(2)), then that fact is substantial evidence of non-qualification. However, the distributing corporation's lack of legal or practical dominion or control over any of those proceeds is substantial evidence of qualification.

Fifth, proposed § 1.361–5(e)(4)(ii)(B)(5) provides that if the distributing corporation issued the refinanced historical distributing corporation debt with a principal purpose of avoiding any of the requirements or limitations of section 361, then that fact is evidence of non-qualification.

(b) Safe Harbor for Direct Issuance Transactions

Proposed § 1.361–5(e)(4)(iii) would provide a safe harbor for direct issuance transactions. A direct issuance transaction would qualify under the safe harbor to be treated as a qualifying debt elimination transaction only if all the following requirements are satisfied: (1) the distributing corporation does not have, at any time, legal or practical dominion or control over any proceeds of the refinanced historical distributing corporation debt, as determined in accordance with § 1.357–(e)(2); (2) the creditor holds the refinanced historical distributing corporation debt for a period of not less than 30 days ending on the control distribution date; (3) each exchange of section 361 consideration for refinanced historical distribution corporation debt between the distributing corporation and the creditor is effectuated on arm's-length terms and conditions; (4) none of the distributing corporation, controlled corporation, or any distributing controlled corporation

related person or controlled corporation related person participates in any profit gained by the creditor upon the exchange of section 361 consideration, or limits by agreement or other arrangement any profit gained by the creditor upon the exchange of section 361 consideration; (5) the creditor acts for its own account with regard to all components of the direct issuance transaction; and (6) the creditor bears the risk of loss with respect to the refinanced historical distributing corporation debt and any subsequent sale or other disposition of section 361 consideration transferred to the creditor in satisfaction of the refinanced historical distributing corporation debt. For purposes of the proceeding requirement, proposed § 1.361–5(e)(4)(iv) would provide that the creditor is not treated as bearing the risk of loss with respect to the refinanced historical distributing corporation debt if the creditor enters into a variable pricing or similar arrangement with the distributing corporation (or a controlled corporation, distributing corporation related person, or controlled corporation related person) with regard to any section 361 consideration.

V. Federal Income Tax Treatment and Consequences of Post-Distribution Payments

A. Notice 2024–38

As stated in section 2.02(6) of Notice 2024–38, the Treasury Department and the IRS are considering the application of the Code to post-distribution payments. Proposed § 1.361–1(b)(42) would define a “post-distribution payment” as a transfer of money or other property by the controlled corporation to the distributing corporation (or vice versa) after the control distribution date pursuant to the plan of reorganization.

In Notice 2024–38, the Treasury Department and the IRS expressed the view that a post-distribution payment is treated as section 361 consideration only if the taxpayer establishes that (i) the character of the payment for Federal income tax purposes is section 361 consideration, (ii) as of the first distribution date, the fair market value of the distributing corporation's right to receive the payment was not (or will not be) reasonably ascertainable (*see Burnet v. Logan*, 283 U.S. 404, 413 (1931)), and (iii) the payment will be properly accounted for when received. For the avoidance of doubt, the Treasury Department and the IRS also expressed the view in Notice 2024–38 that *Arrowsmith v. Commissioner*, 344 U.S. 6 (1952), applies solely to the

requirement described in clause (i) of the preceding sentence (that is, characterization of the post-distribution payment for Federal income tax purposes).

B. Stakeholder Input

As an initial matter, stakeholders have stated in their feedback that post-distribution payments between the distributing corporation and the controlled corporation in connection with both section 355(c) transactions and divisive reorganizations are subject to different doctrines (for example, *Arrowsmith* or the open transaction doctrine) depending on the facts and circumstances. Due to the variable fact patterns, the non-recurring nature of such payments, and the complex interplay of the legal provisions governing such payments, one stakeholder has contended that additional substantive guidance (for example, in the form of Treasury regulations) would not be appropriate, and that the Treasury Department and the IRS should continue to address this topic through the IRS's private letter ruling program.

Stakeholders also have contended that indemnification payments made under the governing transaction documents, which constitute the overwhelming majority of post-distribution payments, clearly are subject to the *Arrowsmith* doctrine and should be characterized as either (i) a contribution by the distributing corporation to the controlled corporation, or (ii) a payment of section 361 consideration by the controlled corporation to the distributing corporation, unless the transaction documents result in the assumption of a liability under section 357(d). Accordingly, other than limited guidance with respect to the treatment of so-called “indemnity purges” (that is, the distributing corporation's satisfaction of a liability with cash on hand and subsequent reimbursement by the controlled corporation), stakeholders have expressed the view that substantive guidance is unnecessary.

With regard to such indemnity purges, stakeholders have recommended different approaches for the proposed regulations. One stakeholder has recommended (i) treating the distributing corporation's receipt of the indemnity payment from the controlled corporation as section 361 consideration, and (ii) treating the distributing corporation's payment of the indemnified liability as a transfer of such section 361 consideration to a creditor in satisfaction of section 361(b)(3) (that is, a post-distribution

payment). Alternatively, other stakeholders have suggested (i) treating the liability giving rise to the indemnity payment as having been assumed by the controlled corporation under the principles of section 357(d), and (ii) treating the distributing corporation as having received payment from, and as making a payment to satisfy the liability as an agent of, the controlled corporation.

C. Proposed Regulations

1. General Treatment of Target Corporations Under Section 361(a)

Consistent with section 361(a), these proposed regulations generally would provide that a target corporation (including a distributing corporation) that is a party to a reorganization does not recognize gain or loss on its transfer of property to an acquiring corporation (including a controlled corporation) if the following three requirements are satisfied. First, proposed § 1.361–2(a)(1) would require that the acquiring corporation (or a corporation controlling the acquiring corporation) must be a party to the reorganization. Second, proposed § 1.361–2(a)(2) would require that the target corporation must receive solely stock or securities of the acquiring corporation (or the corporation controlling the acquiring corporation) in exchange for the transferred property. Third, proposed § 1.361–2(a)(3) would require that the exchange must occur pursuant to the plan of reorganization.

2. Receipt of Money or Other Property

a. In General

If proposed § 1.361–2(a) would apply to an exchange between a target corporation and an acquiring corporation but for the fact that the target corporation receives money or other property in addition to stock and securities of the acquiring corporation (or of a corporation controlling the acquiring corporation), then proposed § 1.361–3 would govern the exchange. See §§ 1.361–2(b) and 1.361–3(a)(1).

In general, proposed § 1.361–3(b)(1) and (2) would provide that, in an acquisitive reorganization, the target corporation does not recognize gain on the receipt of money or other property provided that, pursuant to the plan of reorganization, the target corporation distributes the money or other property to its shareholders or transfers that property to a creditor in satisfaction of target corporation debt.

Additional requirements would apply in the case of a divisive reorganization. In that case, proposed § 1.361–3(c)(1) would provide that the distributing

corporation does not recognize gain on the exchange if, pursuant to the plan of reorganization, (i) the distributing corporation deposits the money received in the exchange in a segregated account, and (ii) the distributing corporation distributes the money or other property received in the exchange to the distributing corporation's shareholders no later than the end of the 12-month period beginning on the date of the exchange. Under proposed § 1.361–3(c)(2)(i), similar rules would apply with respect to transfers of the money or other property received in the exchange to creditors of the distributing corporation in satisfaction of distributing corporation debt.

However, under proposed § 1.361–3(c)(2)(ii), the aggregate amount of money and the fair market value of other property transferred to creditors that is treated as distributed to shareholders would be limited to the amount by which the aggregate adjusted basis of the assets transferred by the distributing corporation to the controlled corporation exceeds the aggregate amount of distributing corporation liabilities assumed by the controlled corporation. Moreover, transfers to creditors of the distributing corporation would be subject to the requirements set forth in proposed § 1.361–5. See the prior discussion in part IV.C.3 of this Explanation of Provisions. Consistent with the Treasury Department's and the IRS's efforts to encourage taxpayers to undertake bona fide corporate reorganizations by providing sufficient transactional flexibility, the proposed regulations governing transfers of section 361 consideration to creditors would be based in part on whether such transfers occur pursuant to a target corporation's (including a distributing corporation's) plan of reorganization. See the prior discussion in part III.C of this Explanation of Provisions.

Under proposed § 1.361–3(d), the failure to distribute the money or other property received in the exchange in the manner set forth in proposed § 1.361–3(b) or (c) would result in the recognition of gain by the target corporation. The amount of gain recognized would not exceed the sum of (i) the amount of money received but not distributed, and (ii) the fair market value of the other property received but not distributed. Consistent with section 361(b)(2), proposed § 1.361–3(e) would provide that the target corporation does not recognize a loss if it receives money or other property in addition to stock or securities of the acquiring corporation.

b. Treatment of Post-Distribution Payments

i. In General

Proposed § 1.361–3(c)(3) would provide that, in a divisive reorganization in which the distributing corporation receives a post-distribution payment, the distributing corporation does not recognize any gain under proposed § 1.361–3(c)(1) or (2) only if three conditions are satisfied. First, the post-distribution payment constitutes section 361 consideration for Federal income tax purposes. Second, the distributing corporation places the post-distribution payment in a segregated account pursuant to the plan of reorganization. Third, pursuant to the plan of reorganization, the distributing corporation distributes the post-distribution payment to its shareholders or to its creditors (in satisfaction of distributing corporation debt in a transfer meeting the requirements set forth in proposed § 1.361–5) by the later of (i) 90 days after the date on which the distributing corporation receives the post-distribution payment, or (ii) the end of the 12-month period beginning on the date of the exchange described in proposed § 1.361–3(a)(1).

For purposes of proposed § 1.361–3(c)(3), a post-distribution payment would constitute section 361 consideration (and not, for example, a separate payment for goods or services) for Federal income tax purposes only if the three requirements in proposed § 1.361–3(c)(3)(i) are satisfied. First, the payment must properly be characterized for Federal income tax purposes as consideration that the distributing corporation receives in the exchange described in proposed § 1.361–3(a)(1). See generally *Arrowsmith*, 344 U.S. 6. Second, the fair market value of the distributing corporation's right to receive the post-distribution payment must not be reasonably ascertainable as of the exchange date. See generally *Burnet*, 283 U.S. 404. Third, the distributing corporation must properly account for the payment upon receipt, in accordance with the plan of reorganization.

Similar rules would apply to the receipt of a post-distribution payment by a controlled corporation. In this respect, proposed § 1.361–3(c)(4) would provide that, if a controlled corporation receives a post-distribution payment, the aggregate adjusted basis of the assets transferred by the distributing corporation to the controlled corporation is increased for purposes of proposed § 1.361–3(c)(2)(ii) only if three requirements similar to those described in the prior paragraph are satisfied.

ii. Treatment of Payments Under Indemnification Agreements

These proposed regulations would not treat payments made in respect of indemnification agreements as post-distribution payments in certain circumstances. Instead, proposed § 1.357-2(e)(2)(iii)(A) would treat (i) the underlying liability as having been assumed by the controlled corporation, and (ii) the receipt of the indemnification payment as not within the legal or practical dominion or control of the distributing corporation for purposes of proposed § 1.357-2(e)(1). *See* the discussion in part VIII.B.3.b of this Explanation of Provisions.

3. Treatment of Distributions

a. Qualified Property

Consistent with section 361(c)(1), proposed § 1.361-4(a)(1) generally would provide that a target corporation (including a distributing corporation) recognizes no gain or loss on a distribution of qualified property to its shareholders pursuant to a plan of reorganization. Proposed § 1.361-4(a)(2)(i) would provide that the target corporation in an acquisitive reorganization is treated as distributing qualified property to its shareholders for purposes of proposed § 1.361-4(a)(1) if the target corporation transfers qualified property to a creditor pursuant to the plan of reorganization and in satisfaction of target corporation debt. To obtain similar treatment in the case of a divisive reorganization, proposed § 1.361-4(a)(2)(ii) would provide that the distributing corporation's transfer of qualified property to a creditor in satisfaction of distributing corporation debt also must meet the requirements in § 1.361-5.

b. Appreciated Nonqualified Property

Under proposed § 1.361-4(b)(1) and (c), if a target corporation distributes appreciated nonqualified property to its shareholders pursuant to a plan of reorganization, the target corporation would recognize gain (but not loss) as if it sold the property to its shareholders at the property's fair market value. Proposed § 1.361-4(b)(2) would provide that, if such property is subject to a liability, or if a shareholder assumes a liability of the target corporation in connection with the distribution, the fair market value of that property for purposes of proposed § 1.361-4(b)(1) is treated as an amount not less than the amount of that liability.

For this purpose, proposed § 1.361-1(b)(4) would define "appreciated nonqualified property" as property

other than qualified property that, at the time of the distribution of that property, has a fair market value that exceeds its adjusted basis in the hands of the target corporation. For example, appreciated nonqualified property would include controlled corporation stock or securities held by the distributing corporation prior to the exchange under section 361. The definition in proposed § 1.361-1(b)(4) also would include all controlled corporation stock or securities that (i) is treated as other property under section 355(a)(3)(B), (ii) is distributed in a disqualified distribution (as defined in section 355(d)(2)), or (iii) is distributed by a distributing corporation pursuant to an acquisition described in section 355(e)(2).

VI. Effect of Transaction Related to Divisive Reorganization on Controlled Securities

A. Notice 2024-38

As stated in section 2.02(7) of Notice 2024-38, the Treasury Department and the IRS are considering the impact of the application of general Federal income tax principles (including the substance-over-form doctrine and other relevant theories) to acquisitions of a controlled corporation following the control distribution date that result in a modification of the controlled corporation's securities. For example, the Treasury Department and the IRS are considering whether general Federal income tax principles could preclude qualification under section 361(c)(3) if (i) the controlled corporation issued securities that were treated by the distributing corporation as section 361 consideration that could be used to satisfy its creditors, and (ii) the controlled corporation subsequently merged into an acquiring corporation in a transaction resulting in the modification of those securities. In response to feedback received following the publication of Rev. Proc. 2018-53, Notice 2024-38 stated the view of the Treasury Department and the IRS that Rev. Rul. 98-27, 1998-1 C.B. 1159, is not relevant for determining whether any such transaction or series of transactions should cause the divisive reorganization to be recast, because that revenue ruling addresses solely whether the controlled corporation was a "controlled corporation" under section 355(a) immediately before the distribution. *See also generally* Rev. Rul. 98-44, 1998-2 C.B. 315.

B. Stakeholder Input

Stakeholders have suggested that the focus on debt instrument modifications

in Notice 2024-38 is directed toward transactions involving a post-distribution merger of a controlled corporation into a third-party corporation and whether the purported controlled corporation debt should be treated as qualified property for purposes of section 361(c)(2)(B). Stakeholders have requested clarification that controlled corporation debt will not be treated as non-qualified property to the extent that (i) modifications of such debt are not "significant modifications" within the meaning of § 1.1001-3 (disregarded modifications), or (ii) the modifications are a "significant modification" under § 1.1001-3 as a result of which the holder of such debt is treated as receiving a new debt instrument in a nonrecognition transaction (nonrecognition modifications).

Stakeholders also have recommended that a deemed or unplanned transaction occurring after the distribution should not cause the controlled corporation's debt to be treated as something other than controlled corporation debt for purposes of section 361(c). Additionally, stakeholders have asserted that (i) step transaction principles should not be applied to the extent the result of the transaction is consistent with the policies of section 361, and (ii) a recast of the transaction would be at odds with the provisions of § 1.1001-3 applicable to nonrecognition modifications.

Stakeholders have recommended that, if guidance is issued on this topic, safe harbors should be provided with respect to both disregarded modifications and nonrecognition modifications to allow controlled corporation debt to be treated as qualified property under section 361(c).

C. Proposed Regulations

The Treasury Department and the IRS anticipate providing proposed guidance on this topic as part of a guidance package that includes the finalization of these proposed regulations. The Treasury Department and the IRS believe that additional study and stakeholder feedback would be appropriate, rather than the publication of proposed rules at this time. It is the position of the Treasury Department and the IRS that the series of transactions described in section 2.02(7) of Notice 2024-38 merit additional scrutiny but, until the completion of this study, should be addressed by the IRS on a case-by-case basis. With regard to additional stakeholder feedback on this topic, the Treasury Department and the IRS particularly would welcome suggestions on appropriate bright-line

rules or safe harbors, as well as supporting analysis that discusses how those suggestions would balance the compliance, increased certainty, and transaction facilitation objectives that guide these proposed regulations.

As set forth in section 2.02(7) of Notice 2024–38, the Treasury Department and the IRS do not view Rev. Rul. 98–27 and Rev. Rul. 98–44 as determinative for questions regarding the impact of the application of general Federal income tax principles to acquisitions of a controlled corporation following the control distribution date that result in a modification of the controlled corporation's securities. For the avoidance of doubt, and consistent with the discussion in part IV.C.1 of this Explanation of Provisions, this view of the Treasury Department and the IRS also directly extends to Rev. Rul. 2003–79, 2003–29 I.R.B. 80. None of Rev. Rul. 98–27, Rev. Rul. 98–44, or Rev. Rul. 2003–79 sets forth broadly applicable principles regarding the application of the step transaction or substance-over-form doctrines beyond the fact patterns directly addressed by those rulings.

VII. Replacement of Distributing Debt

A. Notice 2024–38

As stated in section 2.02(8) of Notice 2024–38, the Treasury Department and the IRS are considering the application of the Code to borrowings by a distributing corporation that replace distributing corporation debt satisfied with section 361 consideration in a divisive reorganization. The Treasury Department and the IRS are concerned that, in certain circumstances, the replacement of distributing corporation debt that was satisfied with section 361 consideration could be used as an artifice for increasing the aggregate debt and other liabilities of the distributing corporation and the controlled corporation.

As one example, the Treasury Department and the IRS have considered situations in which, as of the date on which assets are contributed to a controlled corporation in a divisive reorganization, the distributing corporation anticipates entering into a borrowing that effectively reverses the de-leveraging achieved through the distribution of section 361 consideration pursuant to the plan of reorganization. Such a borrowing would render the de-leveraging merely transitory and without real economic effect. As emphasized in Notice 2024–38, the Treasury Department and the IRS are concerned that this result resembles a partial sale of the controlled corporation that would not qualify for

nonrecognition treatment under section 361.

B. Stakeholder Input

Stakeholders have acknowledged the aforementioned potential for abuse and the potential treatment of such transactions as partial sales. However, stakeholders have contended that distributing corporations generally do not plan to replace historical debt satisfied in the section 355 transaction. Accordingly, stakeholders have suggested that any substantive guidance on this issue (i) should be narrowly tailored to address abusive structures that do not reflect the policies of section 361, and (ii) should take into account distributing corporations' need to borrow in the ordinary course of business and obtain funding for circumstances unrelated to the section 355 transaction. Stakeholders also have suggested that the main difficulty in issuing guidance will be identifying clear anti-abuse principles that sufficiently differentiate between artificial post-distribution re-leveraging transactions (which should be disallowed) and genuine post-distribution re-leveraging transactions with a bona fide commercial purpose unrelated to the divisive transaction (which should be allowed).

One stakeholder has recommended providing a safe harbor for transactions that do not raise debt replacement concerns, in order to increase certainty for taxpayers pursuing bona fide transactions. According to the stakeholder, the common factors in those transactions that should be included in such a safe harbor are: (i) a genuine non-tax business purpose for the re-leveraging transaction; (ii) use of the re-leveraging proceeds in a manner consistent with such business purpose; and (iii) a non-tax economic effect of the re-leveraging transaction.

The stakeholder has further recommended evaluating re-leveraging transactions that fall outside the aforementioned safe harbor based on all facts and circumstances. According to the stakeholder, factors that would support respecting the re-leveraging as a new borrowing for Federal income tax purposes include: (i) the existence of a non-tax business purpose supporting the re-leveraging transaction; (ii) the use of re-leveraging proceeds in a manner consistent with such business purpose; (iii) the absence of a plan to enter into the re-leveraging transaction at the time of the distribution; (iv) the passage of time between the distributing corporation's satisfaction of debt with section 361 consideration and the re-leveraging transaction; (v) the

occurrence of the re-leveraging transaction in the ordinary course of business and/or the consistency of the transaction with historical practices; and (vi) evidence that, as a result of the de-leveraging transaction, the distributing corporation was appropriately leveraged from a capital markets perspective.

In contrast, according to the stakeholder, the following factors would not support respecting the re-leveraging as a new borrowing. First, the lenders with regard to the re-leveraging transaction are the same as those with regard to the distributing corporation debt satisfied in the de-leveraging transaction. Second, the terms of the new distributing corporation debt are the same as (or substantially similar to) the terms of the distributing corporation debt satisfied in the de-leveraging transaction. Third, the proceeds of the re-leveraging transaction are retained (unless such retention is consistent with the business purpose for the re-leveraging). Finally, the de-leveraging transaction, when taken together with the re-leveraging transaction, has little or no economic effect.

C. Proposed Regulations

1. Overview

The Treasury Department and the IRS appreciate the feedback provided by stakeholders regarding transitory borrowings. In developing these proposed regulations, the Treasury Department and the IRS have attempted to balance the compliance and increased certainty objectives with the understanding that distributing corporations should be able to borrow in the ordinary course of business and obtain financing for circumstances demonstrably unrelated to the divisive reorganization (that is, the transaction facilitation objective).

2. General Rule

Proposed § 1.361–5(f)(1) generally would reduce the amount of section 361 consideration that the distributing corporation is treated as transferring to a creditor in a qualifying debt elimination transaction by the amount of eligible distributing corporation debt that is “transitorily eliminated.” Proposed § 1.361–5(f)(2)(i) would treat a distributing corporation as transitorily eliminating an amount of eligible distributing corporation debt equal to the amount of such debt that the distributing corporation or a distributing corporation related person replaces after the earliest applicable date, directly or indirectly, with borrowing that the distributing corporation or any

distributing corporation related person expects or is committed to, directly or indirectly, before that date. For this purpose, relatedness to the distributing corporation would be determined by examining all relevant relationships immediately after the earliest applicable date.

The proposed regulations would set forth the earliest applicable date as the relevant date for examining the issuance of distributing debt that potentially could give rise to a transitory elimination of eligible distributing corporation debt. Principally, the Treasury Department and the IRS have selected the earliest applicable date as the relevant date for purposes of these proposed rules because that date also would serve generally under these proposed regulations as the bright line for determining whether distributing corporation debt qualifies as historical distributing corporation debt. Therefore, a proposed rule that focused on distributing corporation borrowings after that date, and which the distributing corporation expected or was committed to before that date, would connect logically to the proposed earliest applicable date for determining historical distributing corporation debt. Connecting such proposed rules to a single relevant date (that is, the earliest applicable date) is intended to help achieve the increased certainty objective of these proposed regulations, and consequently the compliance and transaction facilitation objectives as well.

3. Exceptions to General Transitory Debt Elimination Rule

Based on feedback from stakeholders, proposed § 1.361–5(f)(2)(ii) and (iii) would provide exceptions to the general transitory debt elimination rule for ordinary course borrowings and borrowings resulting from unexpected events. With regard to each of these exceptions, the intent of the Treasury Department and the IRS is to provide safe harbors for borrowings that could not have had any connection to the distributing corporation's elimination of eligible distributing corporation debt because such borrowings would have occurred regardless of the occurrence of the divisive reorganization. In proposing these exceptions, the Treasury Department and the IRS are guided conceptually by existing regulations under section 355(e) (section 355(e) regulations) addressing non-plan factors for determining the existence of a plan. The intent of extending those principles to these proposed regulations is to increase certainty for taxpayers and the

IRS by providing rules based on long-standing Treasury regulations.

a. Ordinary Course Borrowings

The Treasury Department and the IRS have proposed an ordinary course borrowing exception in proposed § 1.361–5(f)(2)(iii) to help achieve the increased certainty and transaction facilitation goals of these proposed regulations. Specifically, the Treasury Department and the IRS do not intend for the safeguards against transitorily eliminated distributing corporation debt to prevent the distributing corporation from engaging in its ordinary course business activities. Although the Treasury Department and the IRS agree with stakeholders that proposed rules on this issue would be challenging to provide in bright-line form, the purpose of these proposed rules is to reduce uncertainty by removing from consideration of the general rule those borrowings that the distributing corporation readily could identify as part of its ordinary course business operations.

Consequently, the proposed regulations would provide that a replacement borrowing is not treated as transitorily eliminating eligible distributing corporation debt if the replacement borrowing (i) is incurred in the ordinary course of business of the distributing corporation or distributing corporation related person, and (ii) would have been incurred without regard to the divisive reorganization (or any transaction related to the divisive reorganization). See proposed § 1.361–5(f)(2)(iii). The Treasury Department and the IRS based this proposed rule conceptually on § 1.355–7(b)(4)(vi) (“In the case of an acquisition either before or after a distribution, the distribution would have occurred at approximately the same time and in similar form regardless of the acquisition or a similar acquisition.”).

b. Unexpected Borrowings

In addition, proposed § 1.361–5(f)(2)(ii) would provide that certain borrowings are not treated as expected (or otherwise committed) borrowings and, therefore, are not within the scope of the general rule of proposed § 1.361–5(f)(2)(i) if two conditions are met. First, proposed § 1.361–5(f)(2)(ii)(A) would require that a borrowing after the earliest applicable date must result from an event unrelated to the divisive reorganization and not in the ordinary course of business of the distributing corporation. Second, proposed § 1.361–5(f)(2)(ii)(B) would require that the borrowing must result from changed circumstances not expected prior to the

control distribution date. The Treasury Department and the IRS are proposing this exception to provide increased certainty and facilitate bona fide transactions by reinforcing that a borrowing not in the ordinary course of business also should be excepted from application of the general rule, provided that the distributing corporation establishes that such borrowing results from an event that could not have been related to the divisive reorganization.

In formulating the foregoing proposed rules, the Treasury Department and the IRS have relied on the same standard employed by the section 355(e) regulations for determining the existence of a plan. See § 1.355–7(b)(4)(ii) (“In the case of an acquisition after a distribution, there was an identifiable, unexpected change in market or business conditions occurring after the distribution that resulted in the acquisition that was otherwise unexpected at the time of the distribution.”) and (iv) (“In the case of an acquisition before a distribution, there was an identifiable, unexpected change in market or business conditions occurring after the acquisition that resulted in a distribution that was otherwise unexpected.”). It is the intent of the Treasury Department and the IRS that exceptions based on the established section 355(e) regulations would facilitate bona fide transactions in the same manner that the section 355(e) regulations facilitate such transactions while addressing the challenging issue of determining the existence of a plan.

VIII. Application of Section 357 to Assumptions of Liabilities

A. Overview of Proposed Regulations

The Treasury Department and IRS appreciate the feedback received from stakeholders addressing the interaction and separate operation of sections 357 and 361. From the perspective of the Treasury Department and the IRS, such feedback was insightful and has been helpful in the development these proposed regulations, particularly in achieving the three objectives discussed in section 2.01 of Notice 2024–38. Leveraging this feedback, the Treasury Department and IRS have attempted to balance the objectives of (i) facilitating compliance with sections 357 and 361, (ii) providing certainty to taxpayers and the IRS, and (iii) permitting bona-fide corporate readjustments with respect to the assumption of liabilities (including assuming refinanced distributing corporation debt) and the satisfaction of debt with section 361 consideration. In other words, in these proposed regulations, the Treasury Department

and IRS have attempted to provide taxpayers with an appropriate level of transactional flexibility that is consistent, and therefore compliant, with the operation of sections 357 and 361.

B. Liability Assumptions Under Section 357

1. General Rules

Consistent with section 357(a), proposed § 1.357–2(a) generally would provide that, if a transferor receives property that would be permitted to be received under section 351 or 361 without the recognition of gain to the transferor if that property were the sole consideration received by the transferor, and if, as part of the consideration, the transferee corporation assumes a liability of the transferor, then the transferee corporation's assumption of that liability (i) will not be treated as the receipt of money or other property by the transferor, and (ii) will not prevent the exchange from being within the provisions of section 351 or 361. Under proposed § 1.357–2(b), this general rule would not preclude any liability of a transferor that is assumed by a transferee corporation from being taken into account for purposes of computing the amount of gain or loss realized to the transferor under section 1001 resulting from the exchange.

2. Amount of Liability Assumed

Proposed § 1.357–2(c) would provide that, if the transferor issues a debt that converts, pursuant to its terms, into a debt of the transferee corporation (traveling note), the transferee corporation is treated as assuming that traveling note at the time at which the debtor on that debt converts from the transferor to the transferee corporation under the terms of the note. Proposed § 1.357–2(d) also would provide general rules for determining the amount of recourse and nonrecourse liabilities assumed by a transferee corporation for purposes of §§ 1.357–2, 1.357–3, 1.357–4, 1.358–3, 1.358–5, 1.358–7, 1.361–3(c)(2), and 1.368–2(d).

The Treasury Department and the IRS are considering additional rules regarding the amount of a liability a transferee corporation is treated as assuming in connection with a transfer of property and certain tax consequences that result from such an assumption. The Treasury Department and the IRS request comments regarding these issues and rules. See REG–100818–01, *Liabilities Assumed in Certain Transactions*, 68 FR 23931 (May 6, 2003).

a. Recourse Liabilities

Proposed § 1.357–2(d)(1)(i) would provide that a recourse liability (or portion thereof) of a transferor is treated as having been assumed by the transferee corporation if, as determined based on all facts and circumstances, the transferee corporation has agreed to, and is expected to, satisfy the liability (or portion thereof), whether or not the transferor has been relieved of the liability (or portion thereof).

b. Nonrecourse Liabilities

Proposed § 1.357–2(d)(1)(ii)(A) generally would provide that a nonrecourse liability of a transferor is treated as having been assumed by the transferee corporation to which any asset subject to that liability is transferred. However, proposed § 1.357–2(d)(1)(ii)(B) would provide that the amount of any nonrecourse liability of a transferor treated as assumed is reduced by the lesser of (i) the amount of that liability that an owner of other assets not transferred to the transferee corporation and also subject to that liability has agreed with the transferee corporation to, and is expected to, satisfy, or (ii) the fair market value of such other assets (determined without regard to section 7701(g) of the Code).

3. Legal or Practical Dominion or Control Over Payment of Assumed Liability

a. General Rule

Proposed § 1.357–2(e)(1) would apply if a transferee corporation (or, in the case of a divisive reorganization, a member of the CSAG) makes a payment to satisfy an assumed liability, and if the transferor (or, in the case of a divisive reorganization, a member of the DSAG) has legal or practical dominion or control over any part of the payment. If proposed § 1.357–2(e)(1) applies, then (i) that part of the payment is treated as money or other property received by the transferor, (ii) the rules in section 351(b) or 361(b) (as applicable) apply to determine the Federal income tax consequences of the receipt of that money or other property by the transferor, and (iii) the rules in proposed §§ 1.357–2 through 1.357–4 (see the discussion in part VIII.C and D of this Explanation of Provisions) do not apply (that is, the Federal income tax consequences of the payment are not determined under section 357).

Proposed § 1.357–2(e)(2)(i) would provide that the determination of whether a payment is within the transferor's legal or practical dominion or control generally is made based on all facts and circumstances. However,

proposed § 1.357–2(e)(2)(ii) would treat a payment as within a transferor's legal or practical dominion or control if that payment is made to (i) a segregated account of the transferor (or, in the case of a divisive reorganization, a member of the DSAG), or (ii) any person through which the transferor (or, in the case of a divisive reorganization, a member of the DSAG) can direct the treatment or disposition of the payment, regardless of the brevity or transitory nature of the period in which the payment is in such an account.

b. Exceptions for Indemnification Agreements and Other Payments

These proposed regulations also would except from the general facts-and-circumstances determination certain payments that otherwise would result in the transferor having legal or practical dominion or control over the payment. Under proposed § 1.357–2(e)(2)(iii)(A), payments made pursuant to an indemnification agreement would not be treated as within the transferor's legal or practical dominion or control (and, thus, would not be treated as money or other property received by the transferor) if three requirements are satisfied. First, the transferee corporation must be legally prohibited from assuming the liability. Second, the indemnification agreement must require the transferor to first satisfy the obligation that is the subject of the indemnification before seeking payment from the transferee corporation. Third, the transferor must be in the same net economic position as it would have been had the transferee corporation legally assumed the liability.

Under proposed § 1.357–2(e)(2)(iii)(B), a payment not made pursuant to an indemnification agreement would not be treated as within the transferor's legal or practical dominion or control if (i) the payment is dedicated to the satisfaction of a liability of the transferor that is identified in an agreement or the plan of reorganization, (ii) the payment is made to an independent trustee or escrow agent that is not affiliated with the transferor, (iii) the payment is not made to any account of the transferor (or, in the case of a divisive reorganization, a member of the DSAG) or any person through which the transferor (or, in the case of a divisive reorganization, a member of the DSAG) could direct the payment, (iv) the transferor and transferee corporation treat any income, gain, or loss on the payment proceeds as income, gain, or loss of the transferee corporation, and (v) any excess of the payment account (and any income or gain thereon) over

the amount paid in satisfaction of the liability reverts to the transferee corporation.

C. Tax Avoidance Purpose Under Section 357(b)

1. Principal Purpose Standard

These proposed regulations would revise and redesignate current § 1.357–1(c) (concerning tax avoidance purpose) as proposed § 1.357–3(a) through (c). Consistent with section 357(b), proposed § 1.357–3(a)(1) would provide that § 1.357–2(a) does not apply to any exchange involving the assumption of a liability if the principal purpose of the transferor with respect to the assumption is either (i) to avoid Federal income tax on the exchange, or (ii) not a bona fide business purpose. In accordance with caselaw and the long-standing view of the Treasury Department and the IRS, proposed § 1.357–3(a)(2) also would clarify that a principal purpose described in proposed § 1.357–3(a)(1) is presumed to exist if the transferee corporation assumes a liability of the transferor that was not incurred in the ordinary course of a business of the transferor. *See Bryan v. Comm’r*, 281 F.2d 238 (4th Cir. 1960); Rev. Proc. 96–30, 1996–1 C.B. 696, *superseded by* Rev. Proc. 2024–24 (continuing to require a similar representation); Rev. Proc. 83–59, 1983–2 C.B. 575.

Consistent with section 357(b)(1) and current § 1.357–1(c), proposed § 1.357–3(b) would provide that, for purposes of determining the amount of gain recognized upon an exchange described in proposed § 1.357–3(a)(1), the total amount of liabilities assumed or acquired pursuant to the exchange (and not merely a particular liability with respect to which the tax avoidance or non-business purpose existed) is treated as money or other property received by the transferor upon the exchange. Consistent with section 357(b)(2) and current § 1.357–1(c), proposed § 1.357–3(c) would provide that, if the Commissioner determines that the transferor’s principal purpose with respect to the assumption of a liability was to avoid Federal income tax on the exchange or was not a bona fide business purpose, the burden is on the transferor to prove by a clear preponderance of the evidence that the liability assumption should not be treated as the receipt of money or other property.

2. Eligible Distributing Corporation Liabilities

With respect to divisive reorganizations, the Treasury

Department and the IRS view the allocation of distributing corporation liabilities as a fundamental aspect of separating one or more businesses. These proposed regulations are intended to facilitate the assumption of a distributing corporation’s liabilities in bona-fide divisive reorganizations in a manner that balances the objectives of complying with section 357 while providing certainty to taxpayers and the IRS.

Accordingly, as a threshold matter, proposed § 1.357–3(d)(2) generally would permit solely eligible distributing corporation liabilities to be assumed. In other words, these proposed regulations would provide that a distributing corporation is presumed to have had a principal purpose described in proposed § 1.357–3(a)(1) (and, as a result, is presumed to be treated as recognizing an amount of gain determined under proposed § 1.357–3(b)) if the controlled corporation assumes a distributing corporation liability that is not eligible to be assumed under proposed § 1.357–(d)(3). Liabilities of a distributing corporation would be eligible to be assumed under proposed § 1.357–3(d)(3) if (i) the liabilities are described in a plan of reorganization or original plan of reorganization (if amended), (ii) the liabilities were incurred in the ordinary course of business of the distributing corporation, and (iii) the assumption of the liabilities is necessary (A) to ensure the transfer to the controlled corporation of all liabilities properly associated with the business assets transferred to that corporation, and (B) to result in the controlled corporation assuming liabilities in an amount that properly relates to its business operations, the earnings of which will be used to properly satisfy those liabilities.

3. Eligible Distributing Corporation Debt

a. In General

Proposed § 1.357–3(d)(4) would provide additional requirements if the distributing corporation liabilities to be assumed are debt. The general rule in proposed § 1.357–3(d)(4)(i) would provide that distributing corporation debt generally is eligible to be assumed if such debt qualifies as historical distributing corporation debt (as defined in proposed § 1.357–1(b)(13)) (certain exceptions to the general rule are provided in proposed § 1.357–3(d)(4)(ii)).

b. Exceptions to Requirement That Eligible Distributing Corporation Debt be Historical

To facilitate the bona-fide allocation of distributing corporation debt in divisive reorganizations and to provide certainty to taxpayers and the IRS, proposed § 1.357–3(d)(4)(ii) would provide several exceptions to the requirement that the distributing corporation debt must qualify as historical distributing corporation debt. First, proposed § 1.357–3(d)(4)(ii)(A) would provide that any trade payables (as defined in proposed § 1.357–1(b)(19)) of the distributing corporation that meet the requirements set forth in proposed § 1.357–3(d)(3) (that is, the general requirements for distributing corporation liabilities eligible to be assumed) are not required to qualify as historical distributing corporation debt.

Second, proposed § 1.357–3(d)(4)(ii)(B) would provide that, if a controlled corporation assumes refinanced distributing corporation debt (as defined in proposed § 1.357–1(b)(17)), that refinanced distributing corporation debt is treated as historical distributing corporation debt if all the following requirements are met: (i) the distributing corporation has a direct business purpose for the controlled corporation’s assumption of the refinanced distributing corporation debt; (ii) the distributing corporation’s refinancing of its historical distributing corporation debt is completed before the controlled corporation’s assumption of that refinanced distributing corporation debt; (iii) following the controlled corporation’s assumption of the refinanced distributing corporation debt, the distributing corporation and the controlled corporation are in the same net economic position as each corporation would have been had the controlled corporation assumed the historical distributing corporation debt; (iv) the distributing corporation’s refinancing of its historical distributing corporation debt and the subsequent assumption of that refinanced debt are included in the plan of reorganization for the divisive reorganization; (v) there is no untaxed gain or other Federal income tax benefit to the distributing corporation or the controlled corporation resulting from the distributing corporation’s refinancing of a historical distributing corporation debt and the assumption by the controlled corporation of that refinanced distributing corporation debt; (vi) the business assets transferred by the distributing corporation to the controlled corporation in the section 361(a) exchange are associated with the

refinanced distributing corporation debt assumed by the controlled corporation; and (vii) the refinancing of historical distributing corporation debt by the distributing corporation and the subsequent assumption of that refinanced distributing corporation debt by the controlled corporation result in the controlled corporation assuming liabilities in an amount that properly relates to its business operations and will be properly satisfied with earnings generated by those operations. The foregoing requirements are derived directly from Rev. Rul. 79–258, which provides long-standing IRS guidance on the treatment of an assumption of a refinanced historical distributing corporation debt.

Third, proposed § 1.357–3(d)(4)(ii)(C) would provide that a controlled corporation’s assumption of a traveling note issued to refinance a historical distributing corporation debt is treated as an assumption of historical distributing corporation debt if the requirements with respect to refinanced distributing corporation debt described in the foregoing paragraph are met. Because the issuance of a traveling note resembles the issuance and assumption of refinanced debt, the Treasury Department and IRS are of the view that traveling notes should be subject to the same degree of scrutiny as the issuance and assumption of refinanced debt.

Fourth, proposed § 1.357–3(d)(4)(ii)(D) would provide that a revolving credit agreement to which the distributing corporation is a debtor qualifies as historical distributing corporation debt only if the distributing corporation entered into the agreement before the earliest applicable date, the agreement does not expire until after the date of the exchange described in proposed § 1.361–2(a) or 1.361–3(a), and that agreement is identified in the plan of reorganization or original plan of reorganization (if amended).

D. Liabilities in Excess of Basis Under Section 357(c)

Consistent with section 357(c) and current § 1.357–2(a), proposed § 1.357–4(a)(1) generally would provide that, in an exchange described in section 351 or in section 361 (by reason of a divisive reorganization that qualifies under sections 355 and 368(a)(1)(D)), the excess of (i) the sum of the amount of liabilities of the transferor assumed by the transferee corporation, over (ii) the total adjusted basis of the property transferred by the transferor pursuant to the exchange, is treated as gain from the sale or exchange of a capital asset or of property that is not a capital asset, as applicable. The determination of

whether gain resulting from the transfer of capital assets is long-term or short-term capital gain would be made under proposed § 1.357–4(b) by reference to the transferor’s holding period for the transferred assets, based on the proportionate fair market value of the transferor’s long-term assets to its short-term assets.

Under proposed § 1.357–4(a)(2), the general rule in proposed § 1.357–4(a)(1) would not apply to any exchange (i) to which proposed § 1.357–3(a) applies, (ii) that is pursuant to a plan of reorganization for a reorganization described in section 368(a)(1)(G) in which no former shareholder of the transferor corporation receives any consideration for the shareholder’s stock, or (iii) to which section 351 applies if that exchange also (A) qualifies as part of a reorganization described in section 368(a)(1)(A), (C), or (D) or (G) (provided the requirements of section 354(b)(1) of the Code are satisfied), and (B) is described as a reorganization in a filing with the IRS under § 1.368–3.

In addition, the following liabilities generally would be excluded under proposed § 1.357–4(a)(3)(i) for purposes of applying the general rule in proposed § 1.357–4(a)(1): (i) a liability the payment of which would give rise to a deduction; (ii) a liability the payment of which would give rise to the creation of, or increase in, the basis of any property; and (iii) a liability the payment of which would be described in section 736(a) of the Code. However, such liabilities would not be excluded under proposed § 1.357–4(a)(3)(i) to the extent (i) the incurrence of the liability resulted in a deduction, (ii) the incurrence of the liability resulted in the creation of, or an increase in, the basis of any property, or (iii) the liability is not incurred in the ordinary course of business or associated with any assets transferred.

IX. Solvency and Continued Viability of Distributing Corporation and Controlled Corporation

A. Notice 2024–38

Section 2.02(3) of Notice 2024–38 stated the view of the Treasury Department and the IRS that qualification under section 355 is limited to transactions after which the distributing corporation and the controlled corporation are capable of carrying on sustained businesses. In this regard, section 355 and related Code provisions were not enacted to provide nonrecognition treatment for section 355 transactions that burden the distributing corporation or the controlled corporation with excessive

leverage, thereby jeopardizing their ability to continue as a viable going concern. *See, for example*, S. Rep. No. 82–781, at 58 (1951) (providing, in relevant part, that the predecessor statute to section 355 was drafted “so as to limit its benefits to reorganizations in which all of the new corporations as well as the parent are intended to carry on a business after the reorganization”).

B. Stakeholder Input

Stakeholders have contended that substantive guidance under section 355, 357, or 361 is not appropriate to address the foregoing solvency concern and that additional rules to address this concern are unnecessary. First, stakeholders have asserted that section 355 already provides safeguards to prevent an abusive transaction (such as a transaction involving the allocation of excess liabilities to the controlled corporation) from qualifying under sections 355 and 361. Those safeguards include the active trade or business requirement (*see* section 355(b)), the corporate business purpose requirement (*see* § 1.355–2(b)), and the device prohibition (*see* section 355(a)(1)(B) and § 1.355–2(d)). Second, stakeholders have noted that, if a taxpayer’s principal purpose with respect to a liability assumption is to avoid Federal income tax on the exchange or is not a bona fide business purpose, the total amount of liabilities assumed is treated as money received by the taxpayer in the exchange (that is, as taxable boot). *See* section 357(b)(1). Third, stakeholders have contended that, if the controlled corporation is not expected to have the capacity to repay the assumed debt, that debt would not be respected as debt for Federal income tax purposes (and would be recharacterized as non-voting equity). Finally, stakeholders have contended that non-tax safeguards, including commercial constraints on capital allocation and structuring, State law restrictions (such as voidable transfers or fraudulent transfers), bankruptcy law, and third-party evaluations (including credit agency ratings), operate as limitations on the assumption of excessive liabilities by the controlled corporation and, thus, obviate the need for a solvency requirement under section 355.

C. Proposed Regulations

The Treasury Department and the IRS disagree that the foregoing safeguards obviate the need for additional guidance to address the solvency concern. As acknowledged by stakeholders, some distributing corporations facing substantial contingent liabilities have separated those liabilities from the

corporations' primary assets through divisive reorganizations. In numerous instances, the controlled corporation has been unable to support those liabilities through operation of the transferred business and consequently became financially unviable, notwithstanding the safeguards mentioned by stakeholders. Such separations have been successfully challenged as fraudulent transfers. *See, for example, In re Tronox Inc.*, 503 B.R. 239 (Bankr. S.D.N.Y. 2013).

The Treasury Department and the IRS view the aforementioned transactions and resulting outcomes as inconsistent with Congress's intent that section 355 "limit its benefits to reorganizations in which all of the new corporations as well as the parent are intended to carry on a business after the reorganization." S. Rep. No. 82-781, at 58 (1951). For example, the Treasury Department and the IRS are of the view that so-called "spin-to-bankruptcy" transactions, in certain situations, would fail to evidence an intent for the continued conduct of the business following the divisive reorganization.

Accordingly, the Treasury Department and the IRS intend to address these issues in forthcoming guidance concerning the active trade or business requirement under section 355(b). It is the position of the Treasury Department and the IRS that, while such guidance is pending, solvency and financial viability considerations continue to be relevant for purposes of the IRS's private letter ruling program, as reflected in Rev. Proc. 2024-24. The Treasury Department and the IRS request additional comments on this issue, taking into account the views described in this part IX.C.

Proposed Applicability Dates

Each provision of the regulations contained in this notice of proposed rulemaking is proposed to apply to transactions occurring after the date of publication of final regulations in the **Federal Register** (publication date), but only if the earliest of the following dates with respect to the transaction occurs after the publication date (general applicability date): (1) the date of the first public announcement; (2) the date of entry by the taxpayer into a written agreement; (3) the date of approval by the board of directors of the taxpayer; (4) the date of a court order (or a plan confirmed, or a sale approved, by order of a court) in a title 11 or similar case, only if the taxpayer was a debtor in a case before such court; or (5) the date a ruling request is submitted to the IRS.

Proposed §§ 1.355-2(e), 1.355-4, and 1.355-10 would be applicable to section

355 transactions occurring after the general applicability date. Proposed §§ 1.357-1 through 1.357-4 would be applicable to assumptions of liabilities in transactions intended to qualify under section 351 or section 361 occurring after the general applicability date. Proposed §§ 1.361-1 through 1.361-5 would be applicable to exchanges under section 361 occurring after the general applicability date. Proposed §§ 1.368-1(c), 1.368-2(f), 1.368-3(a)(5), and 1.368-4 would be applicable to transactions occurring after the general applicability date.

Effect on Other Documents

The following revenue rulings are proposed to be obsoleted for transactions occurring after the date of publication of final regulations in the **Federal Register**: Rev. Rul. 2007-8, 2007-1 C.B. 469; Rev. Rul. 95-74, 1995-2 C.B. 36; Rev. Rul. 79-258, 1979-2 C.B. 143; Rev. Rul. 75-469, 1975-2 C.B. 126; Rev. Rul. 75-321, 1975-2 C.B. 123; Rev. Rul. 57-518, 1957-2 C.B. 253.

Special Analyses

I. Regulatory Planning and Review

Pursuant to the Memorandum of Agreement, Review of Treasury Regulations under Executive Order 12866 (June 9, 2023), tax regulatory actions issued by the IRS are not subject to the requirements of section 6 of Executive Order 12866, as amended. Therefore, a regulatory impact assessment is not required.

II. Paperwork Reduction Act

The Paperwork Reduction Act of 1995 (44 U.S.C. 3501-3520) (PRA) generally requires that a Federal agency obtain the approval of the Office of Management and Budget (OMB) before collecting information from the public, whether such collection of information is mandatory, voluntary, or required to obtain or retain a benefit. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the collection of information displays a valid control number.

The general recordkeeping requirements mentioned within these proposed regulations are considered general tax records under § 1.6001-1(e). In connection with a reorganization, these records should include information regarding the amount, basis, and fair market value of all transferred property, and relevant facts regarding any liabilities assumed or extinguished as part of such reorganization. For PRA purposes, these general tax records are already approved under OMB control number 1545-0123.

The reporting requirements set forth in proposed §§ 1.355-5(a)(2) and 1.368-3(a)(5) require parties to a section 355(c) distribution or a corporate reorganization to attach a statement to their return that includes a copy of the plan of distribution or the plan of reorganization satisfying the requirements set forth in proposed §§ 1.355-4 or 1.368-4, respectively. The burden for these requirements will be approved by OMB, in accordance with 5 CFR 1320.10, under OMB control number 1545-0123 for business entities.

III. Regulatory Flexibility Act

Pursuant to the Regulatory Flexibility Act (5 U.S.C. chapter 6), it is hereby certified that these proposed regulations would not have a significant economic impact on a substantial number of small entities. This certification is based on the fact that the situations to which these proposed regulations would apply are primarily section 355 transactions and acquisitive reorganizations. Such transactions primarily are engaged in by publicly traded corporations, which tend to be larger businesses. Specifically, the Research, Applied Analytics, and Statistics Division of the IRS estimates that, based on the most recent complete data available, fewer than one percent of small businesses with gross receipts under \$25 million would be subject to the requirements of these regulations annually. To the extent that transactions qualifying under section 351 or 368(a)(1) also are included, the percentage of small businesses impacted remains fewer than one percent of small businesses with gross receipts under \$25 million. In addition, the reporting burden in these proposed regulations is an incremental, additional obligation on small entities to a currently existing collection of information. Moreover, the economic impact of these proposed regulations will not be significant.

Therefore, these proposed regulations would not create significant additional obligations for, or impose any meaningful economic impact on, a substantial number of small entities. Accordingly, the Secretary certifies that the proposed regulations would not have a significant economic impact on a substantial number of small entities and a regulatory flexibility analysis under the Regulatory Flexibility Act is not required.

IV. Section 7805(f)

Pursuant to section 7805(f) of the Code, the proposed regulations have been submitted to the Chief Counsel for the Office of Advocacy of the Small

Business Administration for comment on its impact on small business.

V. Unfunded Mandates Reform Act

Section 202 of the Unfunded Mandates Reform Act of 1995 (UMRA) requires that agencies assess anticipated costs and benefits and take certain other actions before issuing a final rule that includes any Federal mandate that may result in expenditures in any one year by a State, local, or Tribal government, in the aggregate, or by the private sector, of \$100 million in 1995 dollars, updated annually for inflation.

These proposed regulations do not include any Federal mandate that may result in expenditures by State, local, or Tribal governments, or by the private sector, in excess of that threshold.

VI. Executive Order 13132: Federalism

Executive Order 13132 (Federalism) prohibits an agency from publishing any rule that has federalism implications if the rule either imposes substantial, direct compliance costs on State and local governments, and is not required by statute, or preempts State law, unless the agency meets the consultation and funding requirements of section 6 of the Executive order. This proposed rule does not have federalism implications and does not impose substantial direct compliance costs on State and local governments or preempt State law within the meaning of the Executive order.

Comments and Public Hearing

Before these proposed regulations are adopted as final regulations, consideration will be given to any comments that are submitted timely to the IRS as prescribed in the preamble under the **ADDRESSES** heading. The Treasury Department and the IRS request comments on all aspects of the proposed regulations. All commenters are strongly encouraged to submit comments electronically. The Treasury Department and the IRS will publish for public availability any comment submitted electronically or on paper to its public docket on <https://www.regulations.gov>.

A public hearing will be scheduled if requested in writing by any person who timely submits electronic or written comments. Requests for a public hearing also are encouraged to be made electronically. If a public hearing is scheduled, notice of the date and time for the public hearing will be published in the **Federal Register**.

Statement of Availability of IRS Documents

Guidance cited in this preamble is published in the Internal Revenue Bulletin and is available from the Superintendent of Documents, U.S. Government Publishing Office, Washington, DC 20402, or by visiting the IRS website at <https://www.irs.gov>.

Drafting Information

The principal author of these proposed regulations is Justin R. Du Mouchel of the Office of Associate Chief Counsel (Corporate). However, other personnel from the Treasury Department and the IRS participated in their development.

List of Subjects in 26 CFR Part 1

Income taxes, Reporting and recordkeeping requirements.

Proposed Amendments to the Regulations

Accordingly, the Treasury Department and the IRS propose to amend 26 CFR part 1 as follows:

PART 1—INCOME TAXES

■ **Paragraph 1.** The authority citation for part 1 is amended by adding entries in numerical order for §§ 1.355–2(e), 1.355–4, 1.355–5, 1.355–10, 1.361–1 through 1.361–5, and 1.368–1 through 1.368–4, and removing the entry for § 1.355–2T(g) and (i) to read in part as follows:

Authority: 26 U.S.C. 7805 * * *

* * * * *

Section 1.355–2(e) also issued under 26 U.S.C. 337(d).

* * * * *

Section 1.355–4 also issued under 26 U.S.C. 337(d).

Section 1.355–5 also issued under 26 U.S.C. 337(d).

* * * * *

Section 1.355–10 also issued under 26 U.S.C. 337(d).

* * * * *

Section 1.361–1 also issued under 26 U.S.C. 337(d).

Section 1.361–2 also issued under 26 U.S.C. 337(d).

Section 1.361–3 also issued under 26 U.S.C. 337(d) and 361(b)(3).

Section 1.361–4 also issued under 26 U.S.C. 337(d) and 361(b)(3).

Section 1.361–5 also issued under 26 U.S.C. 337(d) and 361(b)(3).

* * * * *

Section 1.368–1 also issued under 26 U.S.C. 337(d).

Section 1.368–2 also issued under 26 U.S.C. 337(d).

Section 1.368–3 also issued under 26 U.S.C. 337(d).

Section 1.368–4 also issued under 26 U.S.C. 337(d).

* * * * *

■ **Par. 2.** Section 1.355–1 is revised and republished to read as follows:

§ 1.355–1 Distribution of stock and securities of a controlled corporation.

(a) *Application of section 355—(1) Overview—*(i) *In general.* Section 355 of the Code provides for the separation, without recognition of gain or loss to (or the inclusion in income of) the shareholders and security holders, of one or more existing businesses formerly operated, directly or indirectly, by a single distributing corporation. Section 355 applies only to the separation of existing businesses that have been in active operation for at least five years (or to the division of a business that has been in active operation for at least five years into separate businesses), and that, in general, have been owned, directly or indirectly, for at least five years by the distributing corporation. A separation is achieved through the distribution by the distributing corporation of stock, or of stock and securities, of one or more controlled corporations (which may be pre-existing or newly created subsidiaries) to the distributing corporation's shareholders with respect to its stock or to its security holders in exchange for its securities. Section 355 contemplates the continued operation of the business or businesses existing prior to the separation.

(ii) *Scope.* Paragraph (a)(2) of this section provides general definitions that apply for purposes of the section 355 regulations. Paragraph (b) of this section describes types of distributions that may qualify under section 355, including pro rata distributions and non pro rata distributions. Paragraphs (c) and (d) of this section provide rules regarding stock rights and nonqualified preferred stock, respectively. Paragraph (e) of this section provides applicability dates for certain sections of the section 355 regulations.

(2) *Definitions.* Except as otherwise provided in the section 355 regulations, the following definitions apply for purposes of the section 355 regulations:

(i) *Code.* The term *Code* means the Internal Revenue Code of 1986, as amended.

(ii) *Commissioner.* The term *Commissioner* means the Commissioner of Internal Revenue.

(iii) *Control distribution.* The term *control distribution* means a distribution of controlled corporation stock, or of controlled corporation stock and securities, that results in the distribution by the distributing

corporation of an amount of controlled corporation stock constituting control (within the meaning of section 368(c) of the Code).

(iv) *Control distribution date*. The term *control distribution date* means the date of the control distribution.

(v) *Controlled corporation*. The term *controlled corporation* means the controlled corporation described in section 355(a)(1)(A).

(vi) *Distributing corporation*. The term *distributing corporation* means the distributing corporation described in section 355(a)(1)(A).

(vii) *Distribution*. Unless the context indicates otherwise, the term *distribution* means—

(A) With regard to a section 355(c) distribution, a single distribution or series of distributions of controlled corporation stock and securities (if any) carried out pursuant to a plan of distribution to qualify the distribution or series of distributions under section 355; or

(B) With regard to a divisive reorganization, a single distribution or series of distributions of controlled corporation stock and securities (if any) carried out pursuant to a plan of reorganization to qualify the distribution or series of distributions under section 355.

(viii) *Divisive reorganization*. The term *divisive reorganization* means a series of transactions carried out pursuant to a plan of reorganization that qualify as a reorganization described in sections 355 and 368(a)(1)(D) or (G).

(ix) *Final distribution*. The term *final distribution* means, with respect to a series of distributions, the last distribution that is made by the distributing corporation pursuant to the plan of distribution or plan of reorganization (as appropriate).

(x) *First distribution*. The term *first distribution* means, with respect to a series of distributions, the earliest distribution that is made by the distributing corporation pursuant to the plan of distribution or plan of reorganization (as appropriate).

(xi) *First distribution date*. The term *first distribution date* means the date of the first distribution.

(xii) *IRS*. The term *IRS* means the Internal Revenue Service.

(xiii) *Plan of distribution*. The term *plan of distribution* has the meaning provided in § 1.355-4.

(xiv) *Plan of reorganization*. The term *plan of reorganization* has the meaning provided in § 1.368-4.

(xv) *SEC*. The term *SEC* means the U.S. Securities and Exchange Commission.

(xvi) *Section 355 regulations*. The term *section 355 regulations* means this section and §§ 1.355-2 through 1.355-10.

(xvii) *Section 355 transaction*. The term *section 355 transaction* means either a section 355(c) distribution or a divisive reorganization.

(xviii) *Section 355(c) distribution*. The term *section 355(c) distribution* means a distribution that qualifies under section 355(a) (or so much of section 356 of the Code as relates to section 355) and section 355(c).

(b) *Non pro rata distributions*—(1) *In general*. Section 355 provides for nonrecognition of gain or loss with respect to a distribution whether or not—

(i) The distribution is pro rata with respect to all shareholders of the distributing corporation;

(ii) The distribution is pursuant to a plan of reorganization within the meaning of section 368(a)(1)(D); or

(iii) The shareholders surrender stock in the distributing corporation.

(2) *Controlled corporation stock*. Under section 355, the stock of a controlled corporation may consist of common stock or preferred stock. (See, however, section 306 of the Code and the regulations under section 306.)

(3) *Section 355 not applicable to mere exchanges of stock or securities*. Section 355 does not apply if the substance of a transaction is merely an exchange between shareholders or security holders of stock or securities in one corporation for stock or securities in another corporation. For example, if two individuals, A and B, each own directly 50 percent of the stock of corporation X and 50 percent of the stock of corporation Y, section 355 would not apply to a transaction in which A and B transfer all of their stock of X and Y to a new corporation Z for all of the stock of Z, and Z then distributes the stock of X to A and the stock of Y to B.

(c) *Stock rights*. Except as provided in § 1.356-6, for purposes of section 355, the term *securities* includes rights issued by the distributing corporation or the controlled corporation to acquire the stock of that corporation. For purposes of this section and section 356(d)(2)(B), a right to acquire stock has no principal amount. For this purpose, the term *rights to acquire stock* has the same meaning as it does under sections 305 and 317(a) of the Code. Other Code provisions governing the treatment of rights to acquire stock also may apply to certain distributions occurring in connection with a transaction described in section 355. See, for example, sections 83 and 421 through 424 of the

Code and the regulations under sections 83 and 421 through 424.

(d) *Nonqualified preferred stock*. See § 1.356-7(a) and (b) for the treatment of nonqualified preferred stock (as defined in section 351(g)(2) of the Code) received in certain exchanges for (or in certain distributions with respect to) nonqualified preferred stock or preferred stock. See § 1.356-7(c) for the treatment of the receipt of preferred stock in certain exchanges for (or in certain distributions with respect to) common or preferred stock described in section 351(g)(2)(C)(i)(II).

(e) *Applicability dates*—(1) *Section 1.355-1*—(i) *In general*. This section applies to section 355 transactions for which the earliest of the following dates occurs after [DATE OF PUBLICATION OF FINAL REGULATIONS IN THE FEDERAL REGISTER] (general applicability date):

(A) The date of the first public announcement (as defined in § 1.355-7(h)(10)) of the section 355 transaction.

(B) The date of entry by the distributing corporation into a written agreement to engage in the section 355 transaction.

(C) The date of approval of the section 355 transaction by the board of directors of the distributing corporation.

(D) The date of a court order (or a plan confirmed, or a sale approved, by order of a court) in a title 11 or similar case (as defined in section 368(a)(3)(A)), but only if the taxpayer was a debtor in a case before such court.

(E) The date a ruling request for the section 355 transaction is submitted to the IRS.

(ii) *Transactions occurring on or before general applicability date*. For section 355 transactions occurring on or before the general applicability date, see 26 CFR 1.355-1 and 1.355-4 (revised as of April 1, 2024).

(2) *Sections 1.355-2 and 1.355-3*—(i) *In general*. Except as otherwise provided in this paragraph (e)(2), §§ 1.355-2 and 1.355-3 apply to section 355 transactions occurring after February 6, 1989. For section 355 transactions occurring on or before that date, see 26 CFR 1.355-2 and 1.355-3 (revised as of April 1, 1988).

(ii) *Section 1.355-2(e)*. Section 1.355-2(e) applies to section 355 transactions for which the earliest of the dates listed in paragraphs (e)(1)(i)(A) through (E) of this section occurs after [DATE OF PUBLICATION OF FINAL REGULATIONS IN THE FEDERAL REGISTER].

(iii) *Section 1.355-2(g)*. Sections 1.355-2(g) applies to section 355 transactions occurring after October 20, 2011. For rules regarding section 355

transactions occurring on or before October 20, 2011, *see* § 1.355–2T(i), as contained in 26 CFR part 1, revised as of April 1, 2011.

(3) *Section 1.355–4*. Section 1.355–4 applies to section 355 transactions for which the earliest of the dates listed in paragraphs (e)(1)(i)(A) through (E) of this section occurs after [DATE OF PUBLICATION OF FINAL REGULATIONS IN THE **FEDERAL REGISTER**].

(4) [Reserved]

(5) *Section 1.355–10*. Section 1.355–10 applies to section 355 transactions for which the earliest of the dates listed in paragraphs (e)(1)(i)(A) through (E) of this section occurs after [DATE OF PUBLICATION OF FINAL REGULATIONS IN THE **FEDERAL REGISTER**].

■ **Par. 3.** Section 1.355–2 is amended by:

- 1. Revising paragraph (e); and
- 2. Removing paragraph (i).

The revision reads as follows:

§ 1.355–2 Limitations.

* * * * *

(e) *Stock and securities distributed—*(1) *Overview.* To qualify under section 355, a distributing corporation, as part of the distribution (within the meaning of section 355(a)(1)(D)), must distribute stock, or stock and securities, of the controlled corporation.

(2) *Requirements.* A distribution does not qualify under section 355 unless, pursuant to a plan of distribution (as described in § 1.355–4) or a plan of reorganization (within the meaning of § 1.368–4), the distributing corporation satisfies the requirements set forth in either paragraph (e)(2)(i) or (ii) of this section in addition to satisfying the requirements set forth in paragraph (e)(2)(iii) of this section.

(i) The distributing corporation distributes at least an amount of stock of the controlled corporation that constitutes a control distribution within a single taxable year of the distributing corporation.

(ii) The distributing corporation distributes stock of the controlled corporation as part of a control distribution during two taxable years of the distributing corporation, but only if all distributions up to and including the control distribution are made pursuant to a binding commitment that is described in, as appropriate—

- (A) The plan of distribution; or
- (B) The plan of reorganization.

(iii) Any stock of the controlled corporation not distributed as part of the first distribution satisfies all

requirements for a qualifying retention (as described in § 1.355–10(c)).

* * * * *

■ **Par. 4.** Section 1.355–4 is revised to read as follows:

§ 1.355–4 Plan of distribution.

(a) *Plan of distribution—*(1) *Scope and purpose.* This section sets forth requirements and procedures for the determination of a plan of distribution, including the scope of distributions properly included within that plan. This section applies solely to a section 355(c) distribution. Accordingly, this section does not apply to a reorganization described in section 368(a)(1)(D) or (G) of the Code.

(2) *Definition.* For purposes of section 355 of the Code and the section 355 regulations, the term *plan of distribution* means—

- (i) A plan of distribution of the distributing corporation that—
(A) Satisfies all requirements set forth in paragraph (c) of this section; and
(B) Is filed with the IRS pursuant to § 1.355–5(a)(2);

- (ii) A plan of distribution of the distributing corporation that results from the Commissioner correcting a plan of distribution of a distributing corporation; or

- (iii) A plan of distribution of the distributing corporation that results from the Commissioner identifying a plan of distribution for a distributing corporation (in the event of a failure to file a plan of distribution with the IRS pursuant to § 1.355–5(a)(2)).

(3) *Failure to satisfy requirements.* The failure of a distributing corporation to comply with any particular requirement or procedure set forth in this section (including the failure to file a plan of distribution with the IRS pursuant to § 1.355–5(a)(2)) does not, on its own, prevent a transaction or series of transactions from being considered part of the plan of distribution.

(b) *Determination of plan of distribution—*(1) *Status generally based on plan of distribution filed by distributing corporation.* Except as provided in paragraph (b)(2) of this section, a distributing corporation establishes the plan of distribution for a transaction or series of transactions solely by—

- (i) Satisfying all requirements set forth in paragraph (c) of this section; and
- (ii) Filing the plan of distribution with the IRS pursuant to § 1.355–5(a)(2).

(2) *Correction or identification of plan of distribution due to distributing corporation's failure to file a complete plan of distribution—*(i) *In general.* If a distributing corporation files a plan of distribution with the IRS that fails to

satisfy any requirement set forth in paragraph (c) of this section, or if the distributing corporation fails to file any plan of distribution with the IRS, the Commissioner may correct or identify a plan of distribution in accordance with paragraph (b)(2)(ii) of this section.

(ii) *Status of distributions as part of a plan of distribution.* The Commissioner may determine that a distribution or series of distributions should be included in, or excluded from, a plan of distribution described in paragraph (b)(2)(i) of this section based on—

(A) All facts and circumstances regarding the distribution or series of distributions; and

(B) All relevant provisions of the Code and general principles of Federal income tax law, including the step transaction doctrine.

(c) *Requirements for a plan of distribution.* To qualify as a plan of distribution described in paragraph (a)(2)(i) of this section, the distributing corporation must satisfy all requirements set forth in paragraphs (c)(1) through (3) of this section. For purposes of this paragraph (c) and paragraph (d) of this section, the term *official records* includes a contract or other agreement to which the distributing corporation is a party, a resolution or other document authorized by the distributing corporation's board of directors, or other document filed with the SEC or other Federal regulatory agency.

(1) *Documentation requirement.* The plan of distribution is provided in a single, comprehensive document that—

- (i) Identifies the distributing corporation and each controlled corporation;

- (ii) Identifies all distributions properly included in the plan of distribution (as determined pursuant to paragraph (d) of this section);

- (iii) Describes the intended Federal income tax treatment of the distributions described in paragraph (c)(1)(ii) of this section; and

- (iv) Describes the corporate business purpose for each distribution.

(2) *Adoption of plan of distribution.* Prior to the first distribution, the plan of distribution described in paragraph (a)(2)(i) of this section or an original plan of distribution that becomes the amended plan of distribution (within the meaning of paragraph (e) of this section), as applicable, is finalized and adopted by the distributing corporation, as established by—

- (i) The acts of the distributing corporation's duly authorized officers and directors; and

(ii) The distributing corporation's official records.

(3) *Completion of plan of distribution*—(i) *Expedition of prosecution of plan of distribution*—(A) *General rule.* In accordance with paragraph (c)(3)(ii) of this section, taking into account all facts and circumstances (including the one or more corporate business purposes for each distribution), the distributing corporation completes the plan of distribution as expeditiously as practicable.

(B) *24-month presumption.* The requirement in paragraph (c)(3)(i)(A) of this section is presumed to be satisfied if, in accordance with paragraph (c)(3)(ii) of this section, the distributing corporation completes the plan of distribution within the 24-month period beginning on the first distribution date.

(ii) *Completion of entire plan of distribution*—(A) *General rule.* All distributions included in a plan of distribution must be carried out in the manner described in the plan of distribution.

(B) *Failure to complete entire plan of distribution.* Except as provided in paragraph (e) of this section, if the requirement of paragraph (c)(3)(ii)(A) of this section is not satisfied, section 355 does not apply to any distribution unless the Commissioner determines the existence of a plan of distribution.

(d) *Requirements for distributions to be treated as properly included in plan of distribution.* The requirements set forth in this paragraph (d) must be satisfied for a distribution to be treated as properly included in a plan of distribution. The existence of contingencies or conditions is not conclusive in determining whether a requirement of this paragraph (d) is satisfied.

(1) *Definite intent requirement*—(i) *General rule.* Prior to the first step of the plan of distribution or of an original plan of distribution that becomes the amended plan of distribution (within the meaning of paragraph (e) of this section), the distributing corporation evidences a definite intent to carry out the distribution through a written commitment in one or more official records of the distributing corporation that substantiate the plan of distribution.

(ii) *Section 355 transactions.* With regard to a control distribution that occurs in the next taxable year after the first distribution, the distributing corporation does not establish a definite intent under paragraph (d)(1)(i) of this section unless all distributions up to and including the control distribution are effectuated pursuant to a binding

commitment of the distributing corporation. *See* § 1.355–2(e)(2)(ii).

(iii) *Relevancy of contemplated possibilities*—(A) *Contemplation irrelevant to distributing corporation's determination.* The contemplation by the distributing corporation that it may carry out a distribution is not sufficient for the distributing corporation to establish a definite intent to carry out that distribution, regardless of whether that contemplated distribution is included in an official record.

(B) *Contemplation relevant to Commissioner's determination.* The distributing corporation's contemplation of a distribution may be relevant for purposes of the correction or identification of a plan of distribution by the Commissioner pursuant to paragraph (b)(2) of this section.

(2) *Proximate relationship requirement*—(i) *General rule.* Taking into account paragraphs (d)(2)(ii) and (iii) of this section, a distribution is part of the plan of distribution to which the provisions of section 355 apply only if, on its own or as part of a series of distributions, the distribution is necessary to satisfy one or more requirements of section 355, or is an integral part of a series of distributions carried out to satisfy the requirements of section 355, as evidenced by a written commitment in one or more official records of the distributing corporation.

(ii) *Existence of independent significance not determinative.* The independent significance of a distribution (for example, the fact that a distribution has a separate business motive apart from one or more other distributions) does not preclude the satisfaction of the requirements under paragraph (d)(2)(i) of this section.

(iii) *Temporal proximity.* A distribution that takes place in close temporal proximity to one or more other distributions is not properly included in a plan of distribution under paragraph (d)(2)(i) of this section unless Federal income tax principles (including the step transaction doctrine) would apply to determine that the distribution was in substance part of the plan of distribution.

(3) *Corporate business purpose consistency requirement.* A distribution, on its own or as part of a series of distributions, is consistent with, and directly related to, one or more corporate business purposes for the one or more other distributions (for example, the distribution directly furthers one or more corporate business purposes for the one or more other distributions).

(e) *Amended plan of distribution*—(1) *Conditions.* If the distributing

corporation amends a plan of distribution described in paragraph (a)(2)(i) of this section (original plan of distribution) after the first step of the original plan of distribution (amended plan of distribution), those amendments will not cause the distributing corporation to fail to satisfy the requirements set forth in paragraph (c) of this section only if—

(i) Those amendments are in direct response to an identifiable, unexpected, and material change in market or business conditions that occurs after the date on which the original plan of distribution is adopted by the distributing corporation in the manner described in paragraph (c)(2) of this section;

(ii) Those amendments are necessary to achieve the one or more corporate business purposes for the distribution; and

(iii) The amended plan of distribution satisfies all requirements set forth in paragraph (c) of this section.

(2) *Consequences of plan of distribution amended due to changed circumstances*—(i) *Qualifying amended plan of distribution.* If the requirements set forth in paragraph (e)(1) of this section are satisfied, the provisions set forth in section 355 will apply to distributions identified in, and carried out pursuant to, the amended plan of distribution. That is, the Federal income tax consequences of all distributions included in the amended plan of distribution will be determined based on that plan of distribution (and not on the original plan of distribution).

(ii) *Non-qualifying amended plan of distribution.* If an amended plan of distribution fails to satisfy all requirements set forth in paragraph (e)(1) of this section, the Commissioner may correct the amended plan of distribution or may identify an amended plan of distribution.

(f) *Examples.* The following examples illustrate the application of the rules of this section. For purposes of these examples, unless otherwise provided: a distributing corporation (Distributing) owns all the stock of an existing controlled corporation (Controlled); Distributing properly files a plan of distribution with the IRS pursuant to § 1.355–5 that satisfies all requirements set forth in paragraph (c) of this section, including providing the corporate business purpose for each distribution and the intended Federal income tax treatment of those distributions (that is, a section 355(c) distribution, as defined in § 1.355–1(a)(2)(xviii)) and completing the plan of distribution as expeditiously as practicable; Distributing satisfies all requirements for qualification under

section 355; and with regard to any retained controlled corporation stock (as defined in § 1.355–10(b)(7)), the requirements set forth in § 1.355–10(c) are satisfied.

(1) *Example 1: Status of distributions as part of the plan of distribution—(i) Facts.* Official records of Distributing provide that Distributing will distribute, in a single distribution, an amount of Controlled stock constituting control (control distribution) to Distributing's shareholders during Distributing's 2025 taxable year. Such records also provide that, during Distributing's 2026 taxable year, Distributing will distribute, in a single distribution, the remaining 20 percent of Controlled stock to Distributing's shareholders (the final distribution; together with the control distribution, the separation). Official records of Distributing also provide that, during Distributing's 2026 taxable year, Distributing will distribute an appreciated asset (Asset 1) to its shareholders (Asset 1 distribution). However, the official records express only a contemplated possibility that Distributing will distribute another appreciated asset (Asset 2) to its shareholders during Distributing's 2026 taxable year (Asset 2 distribution). As reflected in official records of Distributing, the control and final distributions, and the Asset 1 and Asset 2 distributions, will enable Distributing to focus on its retained, core businesses (that is, a fit-and-focus corporate business purpose).

(ii) *Analysis—(A) Distribution of Controlled stock.* Each of the control distribution and the final distribution is properly included in the plan of distribution for the separation. First, as reflected in official records, Distributing evidences a definite intent, prior to the first step of the plan of distribution, to carry out, through a written commitment in those official records, the control distribution and the final distribution. See paragraph (d)(1)(i) of this section. Second, each of these distributions is necessary to satisfy the requirements for qualification under section 355, as evidenced by the official records of Distributing, which impose a written commitment on Distributing to make both distributions. See paragraph (d)(2)(i) of this section. Third, the control distribution and the final distribution are consistent with, and directly relate to, the fit-and-focus corporate business purpose for the distributions. See paragraph (d)(3) of this section. Accordingly, based on the correct and properly filed plan of distribution, the Federal income tax consequences of the control and final

distributions are determined under section 355.

(B) *Distribution of Asset 1.* The analysis is the same as in paragraph (f)(1)(ii)(A) of this section. Accordingly, because the Asset 1 distribution is properly included in the plan of distribution for the separation, Distributing recognizes gain on its distribution of Asset 1 under section 355(c)(2) (as opposed to section 311(b) of the Code).

(C) *Distribution of Asset 2.* The Asset 2 distribution is not properly included in the plan of distribution for the separation because not all requirements set forth in paragraph (d) of this section are satisfied. Specifically, as evidenced by official records of Distributing, Distributing treats the Asset 2 distribution as a contemplated possibility, thereby failing to evidence a definite intent to carry out the transaction. See paragraph (d)(1)(iii)(A) of this section. Accordingly, Distributing recognizes gain on its distribution of Asset 2 under section 311(b) (as opposed to section 355(c)(2)).

(2) *Example 2: Identifiable, unexpected change in market or business conditions—(i) Facts.* The facts are the same as in paragraph (f)(1)(i) of this section (*Example 1*), except for the following. Following the date of adoption of Distributing's plan of distribution for the separation, and before the intended date of the final distribution, market conditions unexpectedly deteriorate to such an extent that, in the judgment of Distributing and its advisors, the final distribution should be postponed. In response, Distributing amends its plan of distribution during its 2026 taxable year to reflect Distributing's definite intent to make the final distribution when market conditions sufficiently improve, in the judgment of Distributing and its advisors. During Distributing's 2027 taxable year, market conditions improve sufficiently to permit the final distribution, and Distributing accordingly makes the final distribution during that taxable year.

(ii) *Analysis.* The final distribution is properly included in the plan of distribution for the separation. See the analysis in paragraph (f)(1)(ii)(A) of this section (*Example 1*). Distributing's amendment of its original plan of distribution (amended plan of distribution) does not cause Distributing to fail to satisfy the requirements under paragraph (c) of this section for the following reasons. First, the amendments are in direct response to an identifiable, unexpected, and material change in market or business conditions that occurs after the date of adoption of

the original plan of reorganization. See paragraph (e)(1)(i) of this section. Second, those amendments are necessary to achieve the fit-and-focus corporate business purpose for the separation. See paragraph (e)(1)(ii) of this section. Third, Distributing's amended plan of distribution satisfies all other requirements set forth in paragraph (c) of this section. See paragraph (e)(1)(iii) of this section. Consequently, all the requirements set forth in paragraph (e)(1) of this section are satisfied and therefore the final distribution will be treated as carried out pursuant to the amended plan of distribution. That is, the Federal income tax consequences of the control distribution and final distribution, which are included in the amended plan of distribution, will be determined based on that amended plan of distribution (and not on the original plan of distribution). See paragraph (e)(2)(i) of this section.

■ **Par. 5.** Section 1.355–5 is revised to read as follows:

§ 1.355–5 Information reporting and record retention requirements.

(a) *Reporting of transaction information—(1) [Reserved]*

(2) *Plan of distribution.* With regard to a section 355(c) distribution, the distributing corporation must include, with its return for the taxable year of the first distribution, a copy of its plan of distribution for the section 355(c) distribution satisfying the requirements of § 1.355–4.

(3) *Plan of reorganization.* With regard to a divisive reorganization, see § 1.368–3(a).

(b) [Reserved]

(c) [Reserved]

(d) *Applicability date—(1) [Reserved]*

(2) *Paragraphs (a)(2) and (3).*

Paragraphs (a)(2) and (3) of this section apply to section 355 transactions for which the earliest of the following dates occurs after [date of publication of final regulations in the **Federal Register**]:

(i) The date of the first public announcement (as defined in § 1.355–7(h)(10)) of the section 355 transaction.

(ii) The date of entry by the distributing corporation into a written agreement to engage in the section 355 transaction.

(iii) The date of approval of the section 355 transaction by the board of directors of the distributing corporation.

(iv) The date of a court order (or a plan confirmed, or a sale approved, by order of a court) in a title 11 or similar case (as defined in section 368(a)(3)(A) of the Code), but only if the taxpayer was a debtor in a case before such court.

(v) The date a ruling request for the section 355 transaction is submitted to the IRS.

■ **Par. 6.** Section 1.355–10 is added to read as follows:

§ 1.355–10 Qualifying retentions of controlled corporation stock or securities.

(a) *Overview.* For a distribution to qualify as a section 355 transaction, there must be a genuine separation of the DSAG and the CSAG. In the case of a retention, the distributing corporation must establish to the satisfaction of the Commissioner that the retention was not pursuant to a plan having as one of its principal purposes the avoidance of Federal income tax.

(b) *Definitions.* The following definitions apply for purposes of this section:

(1) *CSAG*—(i) *In general.* Except as provided in paragraph (b)(1)(ii) of this section, the term *CSAG* means the separate affiliated group (as defined in section 355(b)(3)(B) of the Code) of which the controlled corporation is the common parent.

(ii) *Controlled corporation not common parent.* If the controlled corporation is not the common parent of a separate affiliated group, the term *CSAG* refers to the controlled corporation.

(2) *Distributing corporation related person.* The term *distributing corporation related person* means a person that is related to a distributing corporation within the meaning of section 267(b) or 707(b)(1) of the Code, determined immediately before the control distribution date.

(3) *DSAG*—(i) *In general.* The term *DSAG* means the separate affiliated group (as defined in section 355(b)(3)(B)) of which the distributing corporation is the common parent.

(ii) *Distributing corporation not common parent.* If the distributing corporation is not the common parent of a separate affiliated group, the term *DSAG* means the distributing corporation.

(4) *Key employee.* The term *key employee* means, with regard to a business of the DSAG or CSAG, an employee—

(i) Who possesses specialized and unique expertise with regard to that business and applies that expertise in a manner that significantly preserves or improves the strength of that business (for example, through innovation or other advancement of the business);

(ii) Whose departure would be significantly detrimental to that business; and

(iii) Who would be difficult to replace due to the attributes described in paragraph (b)(4)(i) of this section.

(5) *Option.* The term *option* means a call option, a warrant, a convertible obligation, a conversion feature of convertible stock, a put option, a redemption agreement (including the right to cause the redemption of stock), any other instrument that provides for the right or possibility to issue, redeem, or transfer stock (including an option on an option), or any other similar interest.

(6) *Qualifying retention.* The term *qualifying retention* means a retention described in paragraph (c)(2) of this section.

(7) *Retained controlled corporation stock (or securities).* The term *retained controlled corporation stock (or securities)* means the following instruments that the distributing corporation continues to hold after the first distribution date:

(i) Stock or securities in a controlled corporation or another member of the CSAG.

(ii) Options to acquire stock or securities in a controlled corporation or another member of the CSAG.

(iii) Stock or securities in a controlled corporation or another member of the CSAG acquired upon the exercise of an option.

(8) *Retention.* The term *retention* means the continued ownership of retained controlled corporation stock (or securities) by a distributing corporation after the first distribution date.

(c) *General rule*—(1) *Presumption of tax avoidance.* A retention is treated as pursuant to a plan having as one of its principal purposes the avoidance of Federal income tax unless the retention is a qualifying retention.

(2) *Qualifying retention*—(i) *In general.* A *qualifying retention* is a retention that—

(A) Satisfies all requirements set forth in paragraphs (c)(2)(ii) and (iii) of this section; or

(B) Satisfies the requirements set forth in paragraph (c)(2)(iii) of this section and meets the safe harbor set forth in paragraph (c)(3) of this section.

(ii) *Facts-and-circumstances test.* A distributing corporation establishes to the satisfaction of the Commissioner, based on all facts and circumstances (including the extent to which the safe harbor requirements described in paragraph (c)(3) of this section are satisfied), that the requirements set forth in each of paragraphs (c)(2)(ii)(A) through (E) of this section are satisfied.

(A) The distribution resulted in a genuine separation of the DSAG and the CSAG.

(B) The retention does not allow the DSAG to retain any practical control over the CSAG.

(C) There is a sufficient corporate business purpose for the retention as of the date on which the plan of distribution or the plan of reorganization (as applicable) is adopted in accordance with § 1.355–4(c)(2) or 1.368–4(d)(2), respectively.

(D) There is a sufficient corporate business purpose for the retention at all times during the period of retention.

(E) The disposition of retained controlled corporation stock (or securities) would not result in less Federal income tax to the distributing corporation (determined based on the fair market value and adjusted basis of such stock or securities on the first distribution date) than if that retained controlled corporation stock (or securities) had been distributed in the first distribution.

(iii) *Proportionate voting requirement.* The DSAG votes any retained controlled corporation stock in proportion to the votes cast by the controlled corporation's other shareholders (other than distributing corporation related persons).

(3) *Safe harbor for rebutting tax avoidance presumption*—(i) *General rule.* A distributing corporation is considered to have met the requirements of the facts-and-circumstances test set forth in paragraph (c)(2)(ii) of this section if the distributing corporation satisfies all requirements described in paragraphs (c)(3)(ii) through (vii) of this section and either—

(A) With regard to a section 355(c) distribution, includes in its plan of distribution a description of each agreement and transaction that establishes the satisfaction of the requirements described in paragraphs (c)(3)(ii) through (vii) of this section; or

(B) With regard to a divisive reorganization, includes in its plan of reorganization a description of each agreement and transaction that establishes the satisfaction of the requirements described in paragraphs (c)(3)(ii) through (vii) of this section.

(ii) *Corporate business purpose.* The distributing corporation has a specific corporate business purpose for the retention—

(A) As of the date on which the plan of distribution or the plan of reorganization (as applicable) is adopted in accordance with § 1.355–4(c)(2) or 1.368–4(d)(2), respectively; and

(B) At all times during the period of retention.

(iii) *Controlled corporation stock is widely held.* Stock of the controlled corporation (including a successor to the controlled corporation (within the meaning of § 1.355–8(c)(2))) is widely

held during the period of retention after the first distribution date. For example, stock of the controlled corporation is considered to be widely held if it is traded on an established securities market (within the meaning of § 1.7704–1(b)).

(iv) *Overlapping officers, directors, or key employees.* No officers, directors, or key employees of a member of the DSAG serve as an officer, a director, or a key employee of a member of the CSAG during the period of retention, unless—

(A) The officer, director, or key employee of a member of the DSAG serves as an officer, a director, or a key employee of a member of the CSAG solely to accommodate the CSAG's business needs;

(B) The overlapping directors do not constitute a majority of the CSAG member's board; and

(C) The duration of the overlap for officers, directors, and key employees is for an identified, limited period of time, not in excess of two years after the first distribution date.

(v) *Continuing arrangements.* Any continuing arrangement between the distributing corporation and the controlled corporation during the period of retention—

(A) Is negotiated on, and reflects, arm's-length terms; or

(B) If the arrangement is not described in paragraph (c)(3)(v)(A) of this section, is—

(1) Terminated within two years after the first distribution date; or

(2) Renegotiated within two years after the first distribution date to reflect arm's-length terms.

(vi) *Disposition of retained controlled corporation stock (or securities).* The plan of distribution or plan of reorganization, as appropriate, reflects a definite intent in the official records of the distributing corporation that the distributing corporation will dispose of all retained controlled corporation stock (or securities) by not later than the end of the five-year period beginning on the first distribution date. For purposes of this paragraph (c)(3)(vi) and paragraph (d) of this section, the term *official records* includes a contract or other agreement to which the distributing corporation is a party, a resolution or other document authorized by the distributing corporation's board of directors, or other document filed with the SEC or other Federal regulatory agency.

(vii) *Disposition of retained controlled corporation stock does not result in less Federal income tax.* The disposition of retained controlled corporation stock (or securities) would not result in less

Federal income tax to the distributing corporation (determined based on the fair market value and adjusted basis of such stock or securities on the first distribution date) than if that controlled corporation stock (or securities) had been distributed in the first distribution.

(d) *Examples.* The following examples illustrate the application of the rules of this section. For purposes of these examples: a distributing corporation (Distributing) is the common parent of a separate affiliated group of corporations (DSAG); the DSAG includes an existing, wholly owned controlled corporation (Controlled) with a single class of outstanding stock that is directly owned by Distributing; and the DSAG operates a banking business and a title insurance business, with Controlled operating the banking business, and the remaining DSAG members (including Distributing) operating the title insurance business.

(1) *Example 1: Not a qualifying retention—(i) Facts.* Distributing distributes 80 percent of Controlled's stock to Distributing's shareholders in a single distribution on a pro rata basis during Distributing's 2025 taxable year (first distribution). Distributing retains the remaining 20 percent of the Controlled stock (retention).

Distributing does not evidence any definite intent in its official records to dispose of the retained Controlled stock within the five-year period beginning on the first distribution date. The directors of Distributing will serve as half of the directors of Controlled for a four-year period after the first distribution date, after which time they can seek reelection. One of Distributing's purposes for the retention is to reduce the likelihood that new minority investors could acquire a substantial ownership interest in Controlled, thereby reducing Distributing's continued effective control over Controlled. Apart from whether the retention is a qualifying retention, the distribution satisfies all requirements to qualify under section 355.

(ii) *Analysis.* The retention is treated as pursuant to a plan having as one of its principal purposes the avoidance of Federal income tax unless the retention is a qualifying retention. See paragraph (c)(1) of this section. To be a qualifying retention, the retention must satisfy the requirements under either the facts-and-circumstances test set forth in paragraph (c)(2)(ii) of this section or the safe harbor set forth in paragraph (c)(3) of this section, among other requirements. See paragraph (c)(2)(i) of this section. Distributing does not satisfy the requirements for the safe harbor set forth in paragraph (c)(3) of this section

because directors of Distributing will serve as directors of Controlled for a period that is not limited to two years after the first distribution date, and Distributing does not evidence any definite intent in its official records to dispose of the retained Controlled stock within the five-year period beginning on the first distribution date. See paragraphs (c)(3)(iv) and (vi) of this section. Distributing also fails the facts-and-circumstances test set forth in paragraph (c)(2)(ii) of this section because the control distribution does not result in a genuine separation, Distributing retains practical control over Controlled, and there is not a sufficient corporate business purpose for the retention. See paragraphs (c)(2)(ii)(A) through (D) of this section. Accordingly, Distributing's retention is not a qualifying retention. Consequently, the first distribution (and any subsequent distribution of Controlled stock) does not qualify under section 355. See paragraphs (a) and (c)(1) of this section and § 1.355–2(e)(2)(iii).

(2) *Example 2: Safe harbor—(i) Facts.* Distributing distributes 95 percent of Controlled's stock to Distributing's shareholders in a single distribution on a pro rata basis during Distributing's 2025 taxable year (first distribution) and retains 5 percent of Controlled stock (retention). The corporate business purpose for the retention, as of the date on which the plan of distribution is adopted in accordance with § 1.355–4(c)(2) and throughout the period of retention, is to enable Distributing to have assets of sufficient value (which otherwise would not be available absent the retention) to serve as collateral for needed short-term financing for Distributing's remaining business enterprise. The stock of Controlled is traded on an established securities market (within the meaning of § 1.7704–1(b)) throughout the period of retention. The plan of distribution reflects a definite intent in the official records of Distributing that Distributing will dispose of the retained Controlled stock within five years after the first distribution date. No officers, directors, or key employees of a member of the DSAG will serve as an officer, a director, or a key employee of a member of the CSAG during the period of retention. Any continuing arrangements between Distributing and Controlled during the period of retention either are negotiated on arm's-length terms or will terminate within two years after the first distribution date. The disposition of retained Controlled stock will not result in less Federal income tax to

Distributing (determined based on the fair market value and adjusted basis of such stock on the first distribution date) than if that Controlled stock had been distributed in the first distribution. The plan of distribution describes each of the foregoing agreements and transactions. Apart from whether the retention is a qualifying retention, the distribution satisfies all requirements to qualify under section 355.

(ii) *Analysis*. Distributing satisfies all requirements for the safe harbor set forth in paragraph (c)(3) of this section. However, to have a qualifying retention, Distributing also must meet the requirement set forth in paragraph (c)(2)(iii) of this section. *See* paragraph (c)(2)(i)(B) of this section.

(3) *Example 3: Overlapping directors*—(i) *Facts*. The facts are the same as in paragraph (d)(2)(i) of this section (*Example 2*), except that directors of Distributing that are recognized as experts in the banking industry will serve as two of the six directors of Controlled after the first distribution date. Their presence on the Controlled board is intended to reassure the financial markets by providing a sense of continuity. Their terms will expire after two years, at which point they cannot seek reelection during the period of retention.

(ii) *Analysis*. The two directors of Distributing that will serve as directors of Controlled do so solely to accommodate Controlled's business needs, do not constitute a majority of Controlled's board, and will not serve as directors of Controlled's board for more than two years after the first distribution date. *See* paragraph (c)(3)(iv) of this section. Accordingly, Distributing satisfies all requirements for the safe harbor set forth in paragraph (c)(3) of this section. However, to have a qualifying retention, Distributing also must meet the requirement set forth in paragraph (c)(2)(iii) of this section. *See* paragraph (c)(2)(i)(B) of this section.

(iii) *Ability to seek reelection during retention period*. The facts are the same as in paragraph (d)(3)(i) of this section (*Example 3*), except that the two directors of Distributing that will serve as directors of Controlled after the first distribution date may seek reelection after their two-year term expires. Distributing does not satisfy all requirements for the safe harbor set forth in paragraph (c)(3) of this section. *See* paragraph (c)(3)(iv)(C) of this section.

(4) *Example 4: Safe harbor is not met but facts-and-circumstances test is met*—(i) *Facts*. The facts are the same as in paragraph (d)(2)(i) of this section (*Example 2*), except that Distributing

must retain the Controlled stock (to meet collateral requirements) for at least six years after the first distribution date, as reflected in the plan of distribution and the official records of Distributing.

(ii) *Analysis*—(A) *Safe harbor requirements not satisfied*. Distributing's retention of Controlled stock does not qualify for the safe harbor set forth in paragraph (c)(3) of this section because the plan of distribution does not reflect a definite intent in the official records of Distributing that Distributing will dispose of all retained Controlled stock within five years of the first distribution date. *See* paragraph (c)(3)(vi) of this section.

(B) *Facts-and-circumstances test satisfied*. The facts-and-circumstances test set forth in paragraph (c)(2)(ii) of this section is satisfied because the control distribution results in a genuine separation of Distributing and Controlled, the retention does not allow Distributing to retain any practical control over Controlled, there is a sufficient corporate business purpose for the retention as of the date on which the plan of distribution is adopted in accordance with § 1.355-4(c)(2), there is a sufficient corporate business purpose for the retention at all times during the period of retention, and the disposition of the retained Controlled stock will not result in less Federal income tax to Distributing than if Distributing had distributed the Controlled stock in the first distribution. Accordingly, provided Distributing also meets the requirement set forth in paragraph (c)(2)(iii) of this section, the retention is a qualifying retention under paragraph (c)(2)(i)(A) of this section.

(5) *Example 5: Not a qualifying retention*—(i) *Facts*. The facts are the same as in paragraph (d)(2)(i) of this section (*Example 2*), except that Distributing owns multiple blocks of Controlled stock and the shares of retained Controlled stock are specifically designated for retention because the adjusted basis of that stock exceeds its fair market value as of the first distribution date. Distributing subsequently sells the retained Controlled stock in a transaction in which Distributing recognizes a loss for Federal income tax purposes.

(ii) *Analysis*. The retention is treated as pursuant to a plan having as one of its principal purposes the avoidance of Federal income tax unless the retention is a qualifying retention. *See* paragraph (c)(1) of this section. Distributing does not satisfy the requirements for the safe harbor set forth in paragraph (c)(3) of this section, because the disposition of the retained Controlled stock results in less Federal income tax to Distributing

than if that Controlled stock had been distributed in the first distribution. *See* paragraph (c)(3)(vii) of this section. For the same reason, the retention does not satisfy the facts-and-circumstances test set forth in paragraph (c)(2)(ii) of this section. *See* paragraph (c)(2)(ii)(E) of this section. Accordingly, the retention is not a qualifying retention. *See* paragraph (c)(2)(i) of this section. Consequently, the distribution does not qualify under section 355. *See* paragraphs (a) and (c)(1) of this section and § 1.355-2(e)(2)(iii).

■ **Par. 7.** Section 1.357-0 is added to read as follows:

§ 1.357-0 Table of contents.

This section lists the major captions that appear in §§ 1.357-1 through 1.357-5.

§ 1.357-1 Assumption of liability.

- (a) Overview.
- (b) Definitions.
- (1) Code.
- (2) Commissioner.
- (3) Contingent liability.
- (4) Controlled corporation.
- (5) CSAG.
- (i) In general.
- (ii) Controlled corporation not a common parent.
- (6) Debt.
- (7) Distributing corporation.
- (8) Distributing corporation debt.
- (i) In general.
- (ii) Section 381(a) transactions.
- (9) Distributing corporation liability.
- (10) Divisive reorganization.
- (11) DSAG.
- (i) In general.
- (ii) Distributing corporation not a common parent.
- (12) Earliest applicable date.
- (i) In general.
- (ii) Similar transaction.
- (13) Historical distributing corporation debt.
- (14) IRS.
- (15) Liability.
- (i) In general.
- (ii) Certain obligations incurred in the ordinary course of business.
- (16) Plan of reorganization.
- (17) Refinanced distributing corporation debt.
- (18) Section 357 regulations.
- (19) Trade payable.
- (20) Transferee corporation.
- (21) Transferor.
- (22) Traveling note.

§ 1.357-2 Application of section 357(a).

- (a) In general.
- (b) Amount realized.
- (c) Treatment of traveling notes.
- (d) Determination of amount of liability assumed.
- (1) In general.
- (i) Recourse liability.
- (ii) Nonrecourse liability.
- (2) [Reserved]
- (e) Dominion or control over payment of assumed liability.

- (1) General rule.
- (2) Dominion or control.
 - (i) In general.
 - (ii) Segregated account; related person.
 - (iii) No legal or practical dominion or control.
- (f) Examples.
 - (1) Example 1: Application of general rule.
 - (2) Example 2: Dominion or control.
 - (3) Example 3: Exception to dominion or control.

§ 1.357–3 Application of section 357(b).

- (a) Principal purpose standard.
 - (1) General rule.
 - (2) Ordinary course of business requirement.
- (b) Amount of gain recognized.
- (c) Burden of proof.
- (d) Eligible distributing corporation liabilities.
 - (1) Scope.
 - (2) In general.
 - (3) Eligible assumptions of Distributing corporation liabilities.
 - (4) Distributing corporation debt.
 - (i) In general.
 - (ii) Exceptions.
 - (e) Examples.
 - (1) Example 1: Application of general rule.
 - (2) Example 2: Refinanced distributing corporation debt.
 - (3) Example 3: Traveling note.
 - (4) Example 4: Trade payables.
 - (5) Example 5: Assumption to avoid Federal income tax in a divisive reorganization.
 - (6) Example 6: Assumption to avoid Federal income tax in a section 351 exchange.

(3) Example 3: Traveling note.

(4) Example 4: Trade payables.

(5) Example 5: Assumption to avoid Federal income tax in a divisive reorganization.

(6) Example 6: Assumption to avoid Federal income tax in a section 351 exchange.

§ 1.357–4 Application of section 357(c).

- (a) Liabilities in excess of adjusted basis.
 - (1) General rule.
 - (2) Exceptions.
 - (3) Certain liabilities excluded.
 - (i) General rule.
 - (ii) Exceptions.
 - (b) Determination of character of gain of multiple capital assets.
 - (c) Examples.
 - (1) Example 1: Determination of character of gain.
 - (2) Example 2: Capital and non-capital assets.
 - (3) Example 3: Liabilities in excess of adjusted basis.

§ 1.357–5 Applicability date.

- (a) Applicability date.
- **Par. 8.** Section 1.357–1 is revised to read as follows:

§ 1.357–1 Assumption of liability.

(a) *Overview.* The section 357 regulations apply to the assumption by a transferee corporation of a liability of a transferor pursuant to an exchange between the transferor and the transferee corporation in a transaction qualifying under section 351 of the Code (relating to a transfer of property to a corporation controlled by the transferor) or section 361 of the Code (relating to the nonrecognition of gain or loss to a corporation upon the exchange of

property pursuant to a plan of reorganization).

(b) *Definitions.* The following definitions apply for purposes of the section 357 regulations:

(1) *Code.* The term *Code* means the Internal Revenue Code of 1986, as amended.

(2) *Commissioner.* The term *Commissioner* means the Commissioner of Internal Revenue.

(3) *Contingent liability.* The term *contingent liability* means a liability (other than a debt) that includes one or more contingent payments.

(4) *Controlled corporation.* The term *controlled corporation* means the controlled corporation described in section 355(a)(1)(A) of the Code.

(5) *CSAG*—(i) *In general.* Except as provided in paragraph (b)(5)(ii) of this section, the term *CSAG* means the separate affiliated group (as defined in section 355(b)(3)(B)) of which a controlled corporation is the common parent.

(ii) *Controlled corporation not a common parent.* If the controlled corporation is not the common parent of a separate affiliated group, the term *CSAG* refers to the controlled corporation.

(6) *Debt.* The term *debt* means a liability pursuant to an instrument or a contractual arrangement that constitutes debt under general principles of Federal income tax law. *See* § 1.1275–1(d).

(7) *Distributing corporation.* The term *distributing corporation* means the distributing corporation described in section 355(a)(1)(A).

(8) *Distributing corporation debt*—(i) *In general.* The term *distributing corporation debt* means debt for which the distributing corporation is the obligor.

(ii) *Section 381(a) transactions.* The term *distributing corporation debt* includes a debt that satisfies both of the following requirements:

(A) The distributing corporation assumed the debt in a transaction to which section 381(a) of the Code applies; and

(B) The debt assumed in the transaction was incurred prior to the earliest applicable date.

(9) *Distributing corporation liability.* The term *distributing corporation liability* means a liability for which the distributing corporation is the obligor.

(10) *Divisive reorganization.* The term *divisive reorganization* means a series of transactions carried out pursuant to a plan of reorganization that qualify as a reorganization described in sections 355 and 368(a)(1)(D) or (G) of the Code.

(11) *DSAG*—(i) *In general.* Except as provided in paragraph (b)(11)(ii) of this

section, the term *DSAG* means the separate affiliated group (as defined in section 355(b)(3)(B)) of which the distributing corporation is the common parent.

(ii) *Distributing corporation not a common parent.* If the distributing corporation is not the common parent of a separate affiliated group, the term *DSAG* means the distributing corporation.

(12) *Earliest applicable date*—(i) *In general.* The term *earliest applicable date* means the date that is the earliest of—

(A) The date of the first public announcement (as defined in § 1.355–7(h)(10)) of the divisive reorganization or a similar transaction;

(B) The date of entry by the distributing corporation into a written agreement to engage in the divisive reorganization or a similar transaction; and

(C) The date of approval of the divisive reorganization or a similar transaction by the board of directors of the distributing corporation.

(ii) *Similar transaction.* For purposes of paragraph (b)(12)(i) of this section, the term *similar transaction* means a similar acquisition within the meaning of § 1.355–7(h)(12) and (13).

(13) *Historical distributing corporation debt.* The term *historical distributing corporation debt* means a debt of the distributing corporation that was in existence as of the earliest applicable date, has an original term that ends after the date of the exchange described in § 1.361–2(a) or 1.361–3(a), and is identified in the plan of reorganization or original plan of reorganization (if amended).

(14) *IRS.* The term *IRS* means the Internal Revenue Service.

(15) *Liability*—(i) *In general.* The term *liability* means a debt, a contingent liability, or any other fixed or contingent obligation, without regard to whether the obligation otherwise has been taken into account for Federal income tax purposes.

(ii) *Certain obligations incurred in the ordinary course of business*—(A) *In general.* Except as provided in paragraph (b)(15)(ii)(B) of this section, an obligation incurred in the ordinary course of business pursuant to a bilateral contract is not a liability.

(B) *Exception regarding financial statements.* An obligation described in paragraph (b)(15)(ii)(A) of this section is a liability, in whole or in part, to the extent the obligation is reflected in one or more financial statements of the obligor as a liability, reserve, or similar item.

(16) *Plan of reorganization*. The term *plan of reorganization* has the meaning provided in § 1.368–4.

(17) *Refinanced distributing corporation debt*. The term *refinanced distributing corporation debt* means debt of a distributing corporation—

(i) That is incurred on or after the earliest applicable date; and

(ii) The proceeds of which are used to satisfy a historical distributing corporation debt.

(18) *Section 357 regulations*. The term *section 357 regulations* means this section and §§ 1.357–2 through 1.357–5.

(19) *Trade payable*. The term *trade payable* means debt arising in the ordinary course of a business from sales, leases, licenses, or the rendition of services provided to or for the distributing corporation.

(20) *Transferee corporation*. The term *transferee corporation* means a corporation to which property is transferred pursuant to an exchange described in section 351 or 361.

(21) *Transferor*. The term *transferor* means the person that transfers property to a transferee corporation pursuant to an exchange described in section 351 or 361.

(22) *Traveling note*. The term *traveling note* means, with regard to an exchange described in section 351 or 361, a debt of the transferor that converts, pursuant to its terms, into a debt of the transferee corporation.

■ **Par. 9.** Section 1.357–2 is revised to read as follows:

§ 1.357–2 Application of section 357(a).

(a) *In general*. Except as provided in §§ 1.357–3 and 1.357–4, and subject to the requirements set forth in paragraph (e) of this section, the assumption by a transferee corporation of a liability of a transferor will not be treated as money or other property received by the transferor, and will not prevent an exchange between the transferee corporation and the transferor from being within the provisions of section 351 or 361 of the Code, if—

(1) The transferor receives property that would be permitted to be received under section 351 or 361 without the recognition of gain to the transferor if that property were the sole consideration received by the transferor; and

(2) As part of the consideration, the transferee corporation assumes a liability of the transferor.

(b) *Amount realized*. Neither section 357(a) of the Code nor this section precludes any liability of a transferor that is assumed by a transferee corporation from being taken into account for purposes of computing the

amount of gain or loss realized to the transferor under section 1001 of the Code resulting from the exchange between the transferor and the transferee corporation.

(c) *Treatment of traveling notes*. A transferee corporation is treated as assuming a traveling note with respect to which the transferor is the debtor at the time at which the debtor on the traveling note converts from the transferor to the transferee corporation under the terms of the note.

(d) *Determination of amount of liability assumed*—(1) *In general*. For purposes of this section and §§ 1.357–3, 1.357–4, 1.358–3, 1.358–5, 1.358–7, 1.361–3(c)(2), and 1.368–2(d), the rules of this paragraph (d) apply in determining the amount of liabilities assumed by a transferee corporation.

(i) *Recourse liability*. A recourse liability (or portion thereof) of a transferor is treated as having been assumed by the transferee corporation if, as determined based on all facts and circumstances, the transferee corporation has agreed to, and is expected to, satisfy or indemnify the transferor for the liability (or portion thereof), whether or not the transferor has been relieved of the liability (or portion thereof).

(ii) *Nonrecourse liability*—(A) *In general*. A nonrecourse liability of a transferor is treated as having been assumed by the transferee corporation to which any asset subject to that liability is transferred.

(B) *Limitation on amount of nonrecourse liability treated as assumed*. The amount of any nonrecourse liability of a transferor treated as assumed under paragraph (d)(1)(ii)(A) of this section is reduced by the lesser of—

(1) The amount of that liability that an owner of other assets not transferred to the transferee corporation and also subject to that liability has agreed with the transferee corporation to, and is expected to, satisfy; or

(2) The fair market value of the assets described in paragraph (d)(1)(ii)(B)(1) of this section (determined without regard to section 7701(g) of the Code).

(2) [Reserved]

(e) *Dominion or control over payment of assumed liability*—(1) *General rule*. If the transferee corporation (or, in the case of a divisive reorganization, a member of the CSAG) makes a payment to satisfy an assumed liability that results in the transferor (or, in the case of a divisive reorganization, a member of the DSAG) having legal or practical dominion or control over any part of the payment—

(i) That part of the payment is treated as money or other property received by the transferor;

(ii) The rules in section 351(b) or 361(b) (as applicable) apply to determine the Federal income tax consequences of the receipt by the transferor of the money or other property; and

(iii) The rules in this section and §§ 1.357–3 and 1.357–4 do not apply (that is, the Federal income tax consequences of the payment are not determined under section 357).

(2) *Dominion or control*—(i) *In general*. Except as provided in paragraph (e)(2)(ii) or (iii) of this section, the determination of whether a payment is within a transferor's legal or practical dominion or control is made based on all facts and circumstances.

(ii) *Segregated account; related person*. For purposes of this paragraph (e), a payment is treated as within a transferor's legal or practical dominion or control if made to a segregated account of the transferor (or, in the case of a divisive reorganization, a member of the DSAG) or any person through which the transferor (or, in the case of a divisive reorganization, a member of the DSAG) can direct the treatment or disposition of the payment, regardless of the brevity or transitory nature of the period in which the payment is in such an account.

(iii) *No legal or practical dominion or control*. For purposes of this paragraph (e), a payment is treated as not within the legal or practical dominion or control of a transferor if all conditions set forth in paragraph (e)(2)(iii)(A) or (B) of this section (as appropriate) are satisfied.

(A) *Indemnification agreements*. For payments made pursuant to an indemnification agreement:

(1) The transferee corporation is legally prohibited from assuming the liability (for example, because the transferor is prohibited from causing any other person to assume the liability).

(2) The indemnification agreement requires the transferor to first satisfy the obligation that is the subject of the indemnification agreement before the transferor is permitted to receive payment from the transferee corporation.

(3) The transferor is in the same net economic position it would have been in if the transferee corporation legally were allowed to assume the liability.

(B) *Other payments*. For any payment not made pursuant to an indemnification agreement:

(1) The payment is dedicated to the satisfaction of a liability of the transferor

identified in an agreement or the plan of reorganization.

(2) The payment is made to an independent trustee or escrow agent that is not affiliated with the transferor.

(3) The payment is not made to any account of the transferor (or, in the case of a divisive reorganization, a member of the DSAG) or any person through which the transferor (or, in the case of a divisive reorganization, a member of the DSAG) could direct the payment.

(4) The transferor and the transferee corporation treat any income, gain, or loss on the payment proceeds as income, gain, or loss to the transferee corporation.

(5) Any excess of the payment amount (and any income or gain thereon) over the amount paid to satisfy the liability reverts to the transferee corporation.

(f) *Examples.* The following examples illustrate the application of the rules of this section. For purposes of these examples: the principal purpose of the transferor with respect to the assumption of liabilities is not to avoid Federal income tax on the exchange; there is a bona fide business purpose for the assumption of liabilities; the amount of liabilities assumed by the transferee corporation does not exceed the adjusted basis of the assets transferred to the transferee corporation in the exchange; and any liability assumption is provided for in an agreement or a plan of reorganization entered into between the transferor and the transferee corporation before the date of the exchange.

(1) *Example 1: Application of general rule—(i) Facts.* In an exchange that qualifies under section 351, Individual A transfers to a transferee corporation property with an adjusted basis of \$10,000x in exchange for stock of the corporation with a fair market value of \$8,000x, money amounting to \$3,000x, and the assumption by the corporation of a liability of Individual A amounting to \$4,000x.

(ii) *Analysis.* Individual A's realized gain is \$5,000x, computed as follows:

TABLE 1 TO PARAGRAPH (f)(1)(ii)

Stock received, fair market value	\$8,000x
Money received	3,000x
Liability assumed by transferee corporation	4,000x
Total consideration received	15,000x
Less: Adjusted basis of property transferred	10,000x
Gain realized	5,000x

The gain recognized to Individual A is limited to the \$3,000x of money received, because the assumption of the \$4,000x liability does not constitute

money or other property. *See* paragraph (a) of this section and section 351(b).

(2) *Example 2: Dominion or control—(i) Facts.* A distributing corporation (Distributing) transfers one of its businesses to a newly formed controlled corporation (Controlled) in exchange for Controlled stock (contribution). Distributing distributes all the Controlled stock to its shareholders (distribution; together with the contribution, the separation). As part of the contribution, Controlled agrees to assume a contingent liability of Distributing. The separation satisfies all requirements to qualify as a divisive reorganization. In a taxable year following the year of the distribution, the contingent liability becomes fixed and determinable. To satisfy the liability, Controlled makes a \$200x payment to a segregated account maintained by Distributing, and Distributing uses the \$200x in the segregated account to make payment to the obligee.

(ii) *Analysis.* Distributing is treated as having dominion or control over the \$200x payment despite its receipt of the payment in a segregated account. *See* paragraphs (e)(2)(i) and (ii) of this section. Accordingly, the \$200x payment is treated as money received by Distributing in the contribution, and the rules in section 361(b) apply. *See* paragraph (e)(1) of this section.

(3) *Example 3: Exception to dominion or control—(i) Facts.* The facts are the same as in paragraph (f)(2)(i) of this section (*Example 2*), except that, as part of the contribution, Distributing and Controlled enter into an indemnity agreement with respect to a contingent liability of Distributing that Controlled cannot assume in form under State law. Pursuant to the indemnity agreement, Distributing remains the primary obligor for State law purposes, but Controlled must reimburse Distributing for any payment that Distributing is required to make to satisfy the contingent liability. The indemnity agreement is treated as an assumption by Controlled of the contingent liability under paragraph (d) of this section. In a taxable year following the year of the distribution, the contingent liability becomes fixed and determinable, and Distributing makes a \$200x payment to the obligee to satisfy the liability. Pursuant to the terms of the indemnity agreement, Controlled transfers to Distributing \$200x, which Distributing retains. The \$200x payment from Controlled to Distributing places Distributing in the same net economic position it would have been in if Controlled were allowed to assume the contingent liability under State law.

(ii) *Analysis.* For purposes of paragraph (e)(1) of this section, Distributing is treated as not having dominion or control over the \$200x payment despite its receipt of the payment. *See* paragraph (e)(2)(iii)(A) of this section. Accordingly, the \$200x payment is not treated as money received by Distributing in the contribution. *See* paragraph (a) of this section.

■ **Par. 10.** Sections 1.357–3 through 1.357–5 are added to read as follows:

§ 1.357–3 Application of section 357(b).

(a) *Principal purpose standard—(1) General rule.* Section 1.357–2(a) does not apply to any exchange involving the assumption by a transferee corporation of a liability of a transferor if the principal purpose of the transferor with respect to that assumption is either—

(i) To avoid Federal income tax on the exchange; or

(ii) Not a bona fide business purpose.

(2) *Ordinary course of business requirement.* With regard to an assumption by a transferee corporation of a liability described in paragraph (a)(1) of this section, a principal purpose is presumed to exist if the liability was not incurred in the ordinary course of a business of the transferor.

(b) *Amount of gain recognized.* For purposes of determining the amount of gain recognized upon an exchange described in paragraph (a) of this section, the total amount of liabilities assumed or acquired pursuant to that exchange (and not merely a particular liability with respect to which the tax avoidance or non-business purpose existed) is treated as money or other property received by the transferor under section 351(b) or 361(b) (as applicable) of the Code upon the exchange.

(c) *Burden of proof.* If the Commissioner determines that the transferor's principal purpose with respect to the assumption of a liability by a transferee corporation was to avoid Federal income tax on the exchange or was not a bona fide business purpose, and if the transferor contests that determination, the burden is on the transferor to prove by a clear preponderance of the evidence that the liability assumption should not be treated as the receipt of money or other property. Therefore, the transferor must prove by such a clear preponderance of all the evidence that the absence of a purpose to avoid Federal income tax on the exchange, or the presence of a bona fide business purpose, is unmistakable.

(d) *Eligible distributing corporation liabilities—(1) Scope.* The rules of this

paragraph (d) apply solely to divisive reorganizations.

(2) *In general.* A distributing corporation is presumed to have the principal purpose described in paragraph (a) of this section (and, as a result, is presumed to be treated as recognizing an amount of gain determined under paragraph (b) of this section) if the controlled corporation assumes a distributing corporation liability that is not eligible to be assumed under paragraph (d)(3) of this section.

(3) *Eligible assumptions of Distributing corporation liabilities.* Distributing corporation liabilities are eligible to be assumed under § 1.357–2(a) in a divisive reorganization if—

- (i) The distributing corporation liabilities to be assumed are described in a plan of reorganization or original plan of reorganization (if amended);
- (ii) The distributing corporation liabilities were incurred in the ordinary course of business of the distributing corporation; and
- (iii) The assumption of such distributing corporation liabilities is necessary—

(A) To ensure the transfer to the controlled corporation of all liabilities properly associated with the business assets transferred to that corporation; and

(B) To result in the controlled corporation assuming liabilities in an amount that properly relates to its business operations, the earnings of which will be used to properly satisfy those liabilities.

(4) *Distributing corporation debt—(i) In general.* Except as provided in paragraph (d)(4)(ii) of this section, distributing corporation debt eligible to be assumed under paragraph (d)(3) of this section must qualify as historical distributing corporation debt.

(ii) *Exceptions.* The following exceptions apply to the general rule in paragraph (d)(4)(i) of this section:

(A) *Qualifying trade payables.* For purposes of paragraph (d)(4)(i) of this section, solely trade payables of the distributing corporation that meet the requirements set forth in paragraph (d)(3) of this section are not required to qualify as historical distributing corporation debt.

(B) *Assumptions of refinanced distributing corporation debt.* For purposes of paragraph (d)(4)(i) of this section, refinanced distributing corporation debt is treated as historical distributing corporation debt if all the following requirements are met:

(1) The distributing corporation has a direct business purpose for the controlled corporation’s assumption of

the refinanced distributing corporation debt. For purposes of this paragraph (d)(4)(ii)(B)(1), the modification of the capital structure of the distributing corporation or the controlled corporation is not a direct business purpose unless that modification directly accomplishes a corporate business purpose of the distributing corporation.

(2) The distributing corporation’s refinancing of its historical distributing corporation debt is completed before the controlled corporation’s assumption of that refinanced distributing corporation debt.

(3) Following the controlled corporation’s assumption of the refinanced distributing corporation debt, the distributing corporation and the controlled corporation are in the same net economic position as each corporation would have been had the controlled corporation assumed the historical distributing corporation debt.

(4) The distributing corporation’s refinancing of its historical distributing corporation debt and the subsequent assumption of that refinanced distributing corporation debt are included in the plan of reorganization for the divisive reorganization.

(5) There is no untaxed gain or other Federal income tax benefit resulting to the distributing corporation or the controlled corporation from the distributing corporation’s refinancing of a historical distributing corporation debt and the assumption by the controlled corporation of that refinanced distributing corporation debt.

(6) The business assets transferred by the distributing corporation to the controlled corporation in the exchange described in section 361(a) are associated with the refinanced distributing corporation debt assumed by the controlled corporation.

(7) The refinancing of a historical distributing corporation debt by the distributing corporation and the subsequent assumption of that refinanced distributing corporation debt by the controlled corporation result in the controlled corporation assuming liabilities in an amount that properly relates to its business operations and will be properly satisfied with earnings generated by those operations.

(C) *Qualifying assumption of a traveling note.* For purposes of paragraph (d)(4)(i) of this section, a controlled corporation’s assumption of a traveling note (within the meaning of § 1.357–2(c)) issued to refinance a historical distributing corporation debt will be treated as historical distributing corporation debt only if all requirements

set forth in paragraph (d)(4)(ii)(B) of this section are satisfied.

(D) *Revolving credit agreements.* For purposes of paragraph (d)(4)(i) of this section, a revolving credit agreement to which the distributing corporation is a debtor qualifies as historical distributing corporation debt only if—

(1) The distributing corporation entered into the agreement before the earliest applicable date;

(2) That agreement does not expire until after the date of the exchange described in § 1.361–2(a) or 1.361–3(a); and

(3) That agreement is identified in the plan of reorganization or original plan of reorganization (if amended).

(e) *Examples.* The following examples illustrate the application of the rules of this section. For purposes of these examples: any liability assumption is provided for in an agreement or a plan of reorganization entered into between the transferor and transferee corporation before the date of the exchange; and the amount of liabilities assumed by the transferee corporation does not exceed the adjusted basis of the assets transferred to the transferee corporation in the exchange.

(1) *Example 1: Application of general rule—(i) Facts.* In an exchange that qualifies under section 351, Individual A transfers to a transferee corporation property with an adjusted basis of \$10,000x in exchange for stock of the corporation with a fair market value of \$8,000x, money amounting to \$3,000x, and the assumption by the corporation of debt of Individual A amounting to \$4,000x. Individual A’s principal purpose for causing the transferee corporation to assume the \$4,000x liability is to avoid Federal income tax on the exchange.

(ii) *Analysis.* Individual A’s realized gain is \$5,000x, computed as follows:

TABLE 1 TO PARAGRAPH (e)(1)(ii)	
Stock received, fair market value	\$8,000x
Money received	3,000x
Liability assumed by transferee corporation	4,000x
Total consideration received	15,000x
Less: Adjusted basis of property transferred	10,000x
Gain realized	5,000x

Because Individual A’s principal purpose for the assumption of the \$4,000x liability is to avoid Federal income tax on the exchange, the amount of gain recognized is \$5,000x. See paragraphs (a) and (b) of this section and section 351(b).

(2) *Example 2: Refinanced distributing corporation debt—(i)*

Facts—(A) In general. A distributing corporation (Distributing) transfers one of its businesses to a newly formed controlled corporation (Controlled) in exchange for Controlled stock and Controlled's assumption of liabilities of Distributing (contribution). Distributing distributes all the Controlled stock to its shareholders (distribution; together with the contribution, the separation). The separation satisfies all requirements to qualify as a divisive reorganization.

(B) *Refinanced debt.* One liability that Distributing intended Controlled to assume in the contribution is a \$4,000x portion of a \$25,000x historical Distributing debt to a creditor that Distributing incurred in connection with the transferred business. However, Distributing is unable to apportion this historical debt with Controlled because the creditor refuses to relieve Distributing of its primary liability for repayment of the debt. Therefore, unless Distributing refinances that portion of its historical debt, Distributing will be unable to have Controlled assume an amount of existing historical debt that properly relates to, and to have that debt properly be satisfied with earnings from, the transferred business. Accordingly, pursuant to the plan of reorganization for the separation, Distributing obtains from a bank a new long-term \$4,000x loan on which Distributing is primarily liable (New Loan). Distributing uses the proceeds from the New Loan to repay \$4,000x of the \$25,000x historical debt. Controlled then assumes the New Loan in the contribution (Controlled refinanced debt assumption), and the bank relieves Distributing of its primary liability for repayment of the New Loan.

(ii) *Analysis.* The Controlled refinanced debt assumption satisfies all requirements set forth in paragraph (d)(4)(ii)(B) of this section and, therefore, is treated under paragraph (d)(3) of this section as an eligible assumption by Controlled to which § 1.357-2(a) applies. Distributing has a direct business purpose for Controlled's assumption of the New Loan. See paragraph (d)(4)(ii)(B)(1) of this section. Distributing's refinancing of its historical debt is completed before Controlled's assumption of the New Loan. See paragraph (d)(4)(ii)(B)(2) of this section. Following the Controlled refinanced debt assumption, Distributing and Controlled are in the same net economic position as they would have been had Controlled assumed an equivalent portion of Distributing's historical debt. See paragraph (d)(4)(ii)(B)(3) of this section. Distributing's refinancing of historical debt and the Controlled refinanced debt assumption occur pursuant to the plan

of reorganization for the separation. See paragraph (d)(4)(ii)(B)(4) of this section. No untaxed gain or other Federal income tax benefit results to Distributing or Controlled from Distributing's refinancing of historical Distributing debt and the Controlled refinanced debt assumption. See paragraph (d)(4)(ii)(B)(5) of this section. The business assets transferred by Distributing to Controlled in the section 361 exchange are associated with the New Loan. See paragraph (d)(4)(ii)(B)(6) of this section. Lastly, the Distributing refinancing of historical debt and the Controlled refinanced debt assumption result in Controlled assuming liabilities in an amount that properly relates to, and that properly will be satisfied with earnings generated by, its business operations. See paragraph (d)(4)(ii)(B)(7) of this section.

(3) *Example 3: Traveling note—(i) Facts.* The facts are the same as in paragraph (e)(2)(i) of this section (*Example 2*), except that, pursuant to the terms of the New Loan, Controlled replaces Distributing as the debtor on the New Loan upon the contribution. (ii) *Analysis.* The New Loan is treated as a traveling note. See § 1.357-1(b)(22). Therefore, Controlled is treated as assuming the New Loan at the time Controlled becomes the debtor on the New Loan (that is, upon the contribution). See § 1.357-2(c). The analysis is the same as in paragraph (e)(2)(ii) of this section (*Example 2*).

(4) *Example 4: Trade payables—(i) Facts—(A) In general.* Pursuant to a plan of reorganization, a distributing corporation (Distributing) transfers one of its two operating divisions (Business B) to a newly formed controlled corporation (Controlled) in exchange for Controlled stock and the assumption of \$20,000x of Distributing liabilities (contribution), and Distributing distributes all the Controlled stock to its shareholders on a pro rata basis (distribution; together with the contribution, the separation). The separation satisfies all requirements to qualify as a divisive reorganization.

(B) *Liabilities assumed.* The \$20,000x of liabilities assumed by Controlled arose in the ordinary course of Business B's operations from the rendition of services to or for Distributing. The liabilities were incurred after the earliest applicable date, but before the contribution date identified in the plan of reorganization for the separation. The assumption of those liabilities is necessary to ensure the transfer to Controlled of all liabilities properly associated with Business B and to result in Controlled assuming an amount of Distributing liabilities that properly

relates to, and that will be properly satisfied with earnings from, Business B.

(ii) *Analysis.* The \$20,000x of liabilities assumed by Controlled are trade payables because they constitute debt that arose in the ordinary course of Business B's operations from the rendition of services to or for Distributing. See § 1.357-1(b)(19). Accordingly, these liabilities are not required to qualify as historical distributing corporation debt to be eligible for assumption by Controlled. See paragraph (d)(4)(ii)(A) of this section. Consequently, all \$20,000x of trade payables are eligible to be assumed by Controlled under paragraph (d)(3) of this section. See paragraph (d)(4)(i) of this section. Therefore, Distributing is not treated as having the principal purpose described in paragraph (a)(1) of this section for Controlled's assumption of the \$20,000x of liabilities, and, consequently, those liabilities are not treated as money received by Distributing in the contribution. See paragraphs (a) and (d)(2) of this section.

(5) *Example 5: Assumption to avoid Federal income tax in a divisive reorganization—(i) Facts.* A distributing corporation (Distributing) transfers one of its businesses (Business A) to a newly formed controlled corporation (Controlled) in exchange for Controlled stock and Controlled's assumption of historical Distributing debt (contribution). The historical Distributing debt consists of two loans (Loan 1 and Loan 2) that were incurred by Distributing prior to the earliest applicable date and have an original term that ends after the date of the contribution. Loan 1 was incurred in the ordinary course of business and is associated with Business A. Loan 2 was not incurred in the ordinary course of business and is not associated with Business A. Distributing distributes all the Controlled stock to its shareholders (distribution; together with the contribution, the separation). The separation satisfies all requirements to qualify as a divisive reorganization.

(ii) *Analysis.* Because Loan 2 was not incurred in the ordinary course of business and the assumption of that debt is not necessary to ensure the transfer to Controlled of all liabilities properly associated with Business A, Loan 2 is presumed to have been assumed for a principal purpose described in paragraph (a) of this section. See paragraphs (d)(2) and (3) of this section. Accordingly, Controlled's assumption of the historical Distributing debt (that is, both Loan 1 and Loan 2) is presumed to be treated as money received by Distributing in the

exchange. See paragraphs (a) and (b) of this section and § 1.357–2(a). However, Distributing would recognize no gain on the exchange if, pursuant to the plan of reorganization, Distributing distributes to its shareholders an amount of money equivalent to the amount it is treated as having received in the contribution or transfers an equivalent amount of money to its creditors in satisfaction of Distributing debt in a distribution or transfer meeting the requirements set forth in § 1.361–3(b)(2).

(6) *Example 6: Assumption to avoid Federal income tax in a section 351 exchange*—(i) *Facts*. In a transaction that qualifies as a section 351 exchange, Corporation A contributes one of its two businesses to newly formed Corporation B in exchange for all of B's stock and B's assumption of liabilities of A. One of the liabilities assumed by B was not incurred in the ordinary course of A's business.

(ii) *Analysis*. Because the liability assumed by B was not incurred in the ordinary course of business, the liability is presumed to have been assumed for a principal purpose described in paragraph (a)(1) of this section. See paragraph (a)(2) of this section. Accordingly, B's assumption of liabilities is presumed to be treated as money received by A on the exchange. For purposes of determining the amount of gain A recognizes on the exchange under section 351(b), the total amount of liabilities assumed by B would be treated as money received by A. See paragraph (b) of this section.

§ 1.357–4 Application of section 357(c).

(a) *Liabilities in excess of adjusted basis*—(1) *General rule*. Except as provided in paragraph (a)(2) of this section, in an exchange to which section 351 of the Code is applicable, or to which section 361 of the Code is applicable by reason of a divisive reorganization that qualifies under sections 355 and 368(a)(1)(D) of the Code, a transferor is treated as recognizing gain from the sale or exchange of a capital asset or of property that is not a capital asset, as applicable, in an amount equal to the excess of—

(i) The sum of the amount of liabilities of the transferor assumed by the transferee corporation; over

(ii) The total adjusted basis of the property transferred by the transferor pursuant to the exchange.

(2) *Exceptions*. Paragraph (a)(1) of this section does not apply to any exchange—

(i) To which § 1.357–3(a) applies;

(ii) That is pursuant to a plan of reorganization for a transaction that

qualifies as a reorganization under section 368(a)(1)(G) in which no former shareholder of the transferor corporation receives any consideration for the shareholder's stock; or

(iii) To which section 351 applies if the exchange—

(A) Also qualifies as part of a reorganization described in section 368(a)(1)(A), (C), (D) (provided the requirements of section 354(b)(1) of the Code are satisfied), or (G) (provided the requirements of section 354(b)(1) are satisfied); and

(B) Is described as a reorganization pursuant to a filing with the IRS under § 1.368–3.

(3) *Certain liabilities excluded*—(i) *General rule*. Except as provided in paragraph (a)(3)(ii) of this section, the following liabilities are excluded for purposes of applying paragraph (a)(1) of this section:

(A) A liability the payment of which would give rise to a deduction.

(B) A liability the payment of which would give rise to the creation of, or increase in, the basis of any property.

(C) A liability the payment of which would be described in section 736(a) of the Code.

(ii) *Exceptions*. Paragraph (a)(3)(i) of this section does not apply to any liability to the extent that—

(A) The incurrence of the liability resulted in a deduction;

(B) The incurrence of the liability resulted in the creation of, or an increase in, the basis of any property; or

(C) The liability is not—

(1) Incurred in the ordinary course of business; or

(2) Associated with any assets transferred.

(b) *Determination of character of gain of multiple capital assets*. The determination of whether gain resulting from the transfer of capital assets is long-term or short-term capital gain is made by reference to the transferor's holding period for the transferred assets, based on the proportionate fair market value of the transferor's long-term assets to its short-term assets.

(c) *Examples*. The following examples illustrate the application of the rules of this section. For purposes of these examples: no exchange is described in paragraph (a)(2) of this section; any liability assumption is provided for in an agreement or a plan of reorganization entered into between the transferor and the transferee corporation before the date of the exchange; no liability is described in paragraph (a)(3)(i) of this section; all liabilities were incurred in the ordinary course of business and are associated with the assets transferred; the transferor's principal purpose with

respect to the assumption of liabilities is not to avoid Federal income tax on the exchange; and there is a bona fide business purpose for the assumption of liabilities.

(1) *Example 1: Determination of character of gain*—(i) *Facts*. In an exchange that qualifies under section 351, Individual A transfers to a transferee corporation property with an adjusted basis of \$1,000x in exchange for stock of the transferee corporation with a fair market value of \$8,000x and the assumption by the transferee corporation of Individual A debt amounting to \$4,000x. All assets transferred by Individual A to the transferee corporation are capital assets. By reference to Individual A's holding period at the time of the exchange, one half of the assets transferred (with a fair market value of \$4,000x and an adjusted basis of \$500x) have a long-term holding period, and the other half of the assets transferred (with a fair market value of \$4,000x and an adjusted basis of \$500x) have a short-term holding period.

(ii) *Analysis*. The excess of the amount of liabilities assumed over the adjusted basis of the assets transferred (\$4,000x – \$1,000x = \$3,000x) is treated as gain from the sale or exchange of a capital asset. See paragraph (a)(1) of this section. Half of Individual A's capital gain resulting from the deemed sale or exchange of a capital asset (that is, \$1,500x) is long-term capital gain, and the other half is short-term capital gain. See paragraph (b) of this section.

(2) *Example 2: Capital and non-capital assets*—(i) *Facts*. The facts are the same as in paragraph (c)(1)(i) of this section (*Example 1*), except that the long-term assets transferred are capital assets, and the short-term assets are other than capital assets.

(ii) *Analysis*. Half of the gain recognized by Individual A is treated as capital gain, and the other half of the gain recognized by Individual A is treated as gain from the sale or exchange of assets other than capital assets. See paragraph (a)(1) of this section.

(3) *Example 3: Liabilities in excess of adjusted basis*—(i) *Facts*. Pursuant to a plan of reorganization, a distributing corporation (Distributing) transfers one of its businesses (Business A) to a newly formed controlled corporation (Controlled) in exchange for Controlled stock and Controlled's assumption of a historical Distributing debt (contribution), and Distributing distributes all the Controlled stock to its shareholders (distribution; together with the contribution, the separation). The separation satisfies all requirements to qualify as a divisive reorganization. At the time of the contribution,

Distributing has an aggregate adjusted basis of \$5,000x in the Business A assets, which are the only assets subject to a nonrecourse loan of \$10,000x.

(ii) *Analysis.* Under paragraph (a) of this section, Controlled's assumption of Distributing's Business A loan causes Distributing to recognize gain on the transfer of Business A to Controlled as though Distributing had sold or exchanged the Business A assets to Controlled. Specifically, because the amount of the loan (\$10,000x) exceeds the total adjusted basis of the Business A assets (\$5,000x), Distributing recognizes gain of \$5,000x (\$10,000x – \$5,000x) on the exchange. See paragraph (a)(1) of this section. The character of that gain depends on the character of the assets transferred in the exchange. See paragraph (b) of this section.

§ 1.357–5 Applicability date.

(a) *Applicability date.* The rules of §§ 1.357–1 through 1.357–4 apply to transactions intended to qualify under section 351 or 361 of the Code for which the earliest of the following dates occurs after [DATE OF PUBLICATION OF FINAL REGULATIONS IN THE FEDERAL REGISTER]:

(1) The date of the first public announcement (as defined in § 1.355–7(h)(10)) of the transaction.

(2) The date of entry by the taxpayer into a written agreement to engage in the transaction.

(3) The date of approval of the transaction by the board of directors of the taxpayer.

(4) The date of a court order (or a plan confirmed, or a sale approved, by order of a court) in a title 11 or similar case (as defined in section 368(a)(3)(A) of the Code), but only if the taxpayer was a debtor in a case before such court.

(5) The date a ruling request for the transaction is submitted to the IRS.

■ **Par. 11.** Section 1.361–0 is added to read as follows:

§ 1.361–0 Table of contents.

This section lists the major captions that appear in §§ 1.361–1 through 1.361–6.

§ 1.361–1 Nonrecognition of gain or loss to corporations under section 361.

- (a) Overview.
 - (1) In general.
 - (2) Scope.
 - (b) Definitions.
 - (1) Acquiring corporation.
 - (2) Acquisitive reorganization.
 - (3) Amount.
 - (4) Appreciated nonqualified property.
 - (i) In general.
 - (ii) Inclusions.
 - (5) Assume; assumption.
 - (6) Code.

- (7) Contingent liability.
- (8) Control distribution.
- (9) Control distribution date.
- (10) Controlled corporation.
- (11) Controlled corporation contingent liability.
 - (12) Controlled corporation debt.
 - (13) Controlled corporation related person.
 - (14) Covered convertible debt.
 - (15) CSAG.
 - (i) In general.
 - (ii) Controlled corporation not a common parent.
 - (16) Debt.
 - (17) Direct issuance transaction.
 - (18) Distributing corporation.

 - (40) Party to a reorganization.
 - (41) Plan of reorganization.
 - (42) Post-distribution payment.
 - (43) Qualified property.
 - (44) Qualifying creditor.
 - (45) Qualifying debt elimination transaction.
 - (46) Refinanced historical distributing corporation debt.
 - (47) Related person.
 - (48) Revolving credit agreement.
 - (49) Section 361 consideration.
 - (i) In general.
 - (ii) Inclusions.
 - (iii) Exclusion.
 - (50) Section 361 regulations.
 - (51) Target corporation.
 - (i) In general.
 - (ii) Inclusions.
 - (52) Trade payable.
 - (53) True-up payment.
 - (54) Unrelated ultimate creditor.

§ 1.361–2 Exchanges solely for stock or securities under section 361(a).

- (a) General rule.
 - (b) Exchanges not solely for stock or securities.
 - (c) Example.
- § 1.361–3 Exchanges not solely for stock or securities under section 361(b).
- (a) Scope.
 - (1) In general.
 - (2) Exception.
 - (b) Money or other property distributed in acquisitive reorganizations.
 - (1) Distributions to shareholders.
 - (2) Transfers to creditors.
 - (c) Money or other property distributed in divisive reorganizations.
 - (1) Distributions to shareholders.
 - (2) Transfers to creditors.
 - (i) In general.
 - (ii) Application of adjusted basis limitation to divisive reorganizations described in sections 355 and 368(a)(1)(D).
 - (3) Post-distribution payments received by a distributing corporation.
 - (i) Treatment as section 361 consideration.
 - (ii) Segregated account requirement.
 - (iii) Disposition requirement.
 - (4) Post-distribution payments received by a controlled corporation.
 - (i) Characterization as contribution in the reorganization exchange.
 - (ii) Value not reasonably ascertainable.
 - (iii) Proper accounting.
 - (d) Money or other property not distributed.
 - (e) No recognition of loss.
 - (f) Examples.
 - (1) Example 1: Acquisitive reorganization.
 - (2) Example 2: Divisive reorganization with money or other property distributed pursuant to plan of reorganization.
 - (3) Example 3: Ordinary course distribution.
 - (4) Example 4: Special stock repurchase program.
 - (5) Example 5: Existing stock repurchase program.
 - (6) Example 6: Divisive reorganization with money or other property not distributed within the 12-month period.
 - (7) Example 7: Post-distribution payments from a distributing corporation to a controlled corporation.
 - (8) Example 8: Post-distribution payment from a controlled corporation to a distributing corporation.
- § 1.361–4 Distributions of property under section 361(c).
- (a) Distributions of qualified property.
 - (1) Distributions to shareholders.
 - (2) Treatment of certain transfers to creditors.
 - (i) Acquisitive reorganizations.
 - (ii) Divisive reorganizations.
 - (b) Distributions of appreciated nonqualified property.
 - (1) Deemed sale treatment.
 - (2) Treatment of liabilities.
 - (c) No recognition of loss.
 - (d) Coordination with other provisions; cross-references.
 - (e) Examples.
 - (1) Example 1: Distribution of qualified property.
 - (2) Example 2: Distribution timing requirement.

(3) Example 3: Distribution of nonqualified property.

§ 1.361–5 Transfers to creditors of distributing corporation in divisive reorganizations under section 361(b)(3) and (c)(3).

(a) General rule.

(b) Qualifying creditor.

(1) General status as a creditor with regard to distributing corporation debt.

(2) Related-creditor prohibition.

(i) General rule.

(ii) Exception for certain distributing corporation related persons.

(iii) Determination of related-person status.

(c) Eligible distributing corporation debt.

(1) Overview.

(2) Qualification as eligible distributing corporation debt.

(i) Historical distributing corporation debt.

(ii) Refinancing exception for historical distributing corporation debt.

(iii) Revolving credit agreements.

(iv) Qualifying trade payables.

(v) Direct issuance debt.

(3) Determination of amount of distributing corporation debt.

(i) Purpose.

(ii) Aggregate amount of distributing corporation debt.

(iii) Offsetting debts taken into account.

(d) Maximum amount of distributing corporation debt.

(1) General calculation.

(2) Eight-quarterly-average test.

(i) Determination.

(ii) Calculation of distributing corporation debt at the close of each quarter.

(iii) Distributing corporation debt held by distributing corporation related person.

(e) Qualifying debt elimination transactions.

(1) Overview.

(2) Qualifying original creditor exchanges.

(3) Qualifying intermediated exchanges.

(i) Prohibition on intermediary benefits.

(ii) Prohibition on acquiring debt from distributing corporation.

(iii) Arm's-length bargaining required.

(iv) Prohibition on profit-sharing or limitation.

(v) Independence requirement.

(vi) Minimum temporal requirement.

(4) Qualifying direct issuance transactions.

(i) Overview.

(ii) Facts-and-circumstances test.

(iii) Safe harbor for direct issuance transactions.

(iv) Prohibition regarding variable pricing and similar agreements.

(f) Transitorily eliminated distributing corporation debt.

(1) Overview.

(2) Transitory elimination.

(i) General rule.

(ii) Borrowings not in the ordinary course.

(iii) Borrowings in the ordinary course.

(g) Examples.

(1) Example 1: Transfer of money or other property to related creditor.

(2) Example 2: Refinancing of historical distributing corporation debt.

(3) Example 3: Eight-quarterly-average test.

(4) Example 4: Amount of distributing corporation debt under revolving credit agreement.

(5) Example 5: Effect of offsetting debts on amount of distributing corporation debt.

(6) Example 6: Qualifying original creditor exchange.

(7) Example 7: Not a qualifying direct issuance transaction.

(8) Example 8: Qualifying intermediated exchange.

§ 1.361–6 Applicability date.

(a) Applicability date.

■ **Par. 12.** Section 1.361–1 is revised to read as follows:

§ 1.361–1 Nonrecognition of gain or loss to corporations under section 361.

(a) *Overview*—(1) *In general.* The section 361 regulations apply—

(i) To exchanges of property by a target corporation pursuant to a plan of reorganization for property from an acquiring corporation that is a party to the reorganization; and

(ii) To distributions by the target corporation to its shareholders of property pursuant to a plan of reorganization (including transfers by the target corporation treated as such distributions).

(2) *Scope.* Paragraph (b) of this section provides definitions for purposes of the regulations under section 361 of the Code. Section 1.361–2 provides rules regarding exchanges in which a target corporation receives solely stock or securities in an acquiring corporation. Section 1.361–3 provides rules regarding exchanges in which a target corporation receives money or other property in addition to stock or securities in an acquiring corporation. Section 1.361–4 provides rules regarding distributions of property received by a target corporation in the exchange. Section 1.361–5 provides rules regarding transfers of section 361 consideration to creditors of a distributing corporation in a divisive reorganization. Section 1.361–6 provides the applicability date.

(b) *Definitions.* The following definitions apply for purposes of the section 361 regulations:

(1) *Acquiring corporation.* The term *acquiring corporation* means a corporation (including a controlled corporation) that receives property transferred by a target corporation in an exchange to which section 361(a) applies.

(2) *Acquisitive reorganization.* The term *acquisitive reorganization* means a transaction that qualifies as a reorganization under—

(i) Section 368(a)(1)(A) of the Code (including by reason of section 368(a)(2)(D) or section 368(a)(2)(E));

(ii) Section 368(a)(1)(C);

(iii) Section 368(a)(1)(D) (provided the requirements of section 354(b)(1) of the Code are satisfied);

(iv) Section 368(a)(1)(F); or

(v) Section 368(a)(1)(G) (provided the requirements of section 354(b)(1) are satisfied).

(3) *Amount.* The term *amount* means:

(i) With respect to liabilities, except as provided under paragraph (b)(3)(ii) or (iii) of this section, the amount of cash that a willing assignor would pay to a willing assignee to assume the liability in an arm's-length transaction.

(ii) With respect to debt, except as provided in paragraph (b)(3)(iii) of this section, the adjusted issue price (as defined in § 1.1275–1(b)) of the debt.

(iii) With respect to covered convertible debt, the fair market value of the covered convertible debt as of the earliest applicable date.

(4) *Appreciated nonqualified property*—(i) *In general.* The term *appreciated nonqualified property* means property distributed by a target corporation under § 1.361–4(b) that—

(A) Is property other than qualified property; and

(B) At the time of the distribution of that property under section 361(c), has a fair market value that exceeds the adjusted basis of that property in the hands of the target corporation.

(ii) *Inclusions.* The term *appreciated nonqualified property* includes all controlled corporation stock or securities—

(A) Treated as other property under section 355(a)(3)(B) of the Code;

(B) Distributed in a disqualified distribution, as defined in section 355(d)(2); or

(C) Distributed by a distributing corporation pursuant to an acquisition described in section 355(e)(2).

(5) *Assume; assumption.* With respect to a liability, the terms *assume*, *assumption*, and similar terms have the meaning of “assumed” as set forth in § 1.357–2(d).

(6) *Code.* The term *Code* means the Internal Revenue Code of 1986, as amended.

(7) *Contingent liability.* The term *contingent liability* means a liability (other than a debt) that includes one or more contingent payments.

(8) *Control distribution.* The term *control distribution* means a distribution of controlled corporation stock, or of controlled corporation stock and securities, that results in the distribution by the distributing corporation of an amount of controlled corporation stock constituting control (within the meaning of section 368(c) of the Code).

(9) *Control distribution date.* The term *control distribution date* means the date of the control distribution.

(10) *Controlled corporation.* The term *controlled corporation* means the

controlled corporation described in section 355(a)(1)(A).

(11) *Controlled corporation contingent liability*. The term *controlled corporation contingent liability* means a contingent liability for which a controlled corporation is the obligor.

(12) *Controlled corporation debt*. The term *controlled corporation debt* means debt for which a controlled corporation is the obligor.

(13) *Controlled corporation related person*. The term *controlled corporation related person* means a related person with respect to a controlled corporation.

(14) *Covered convertible debt*. The term *covered convertible debt* means debt with a conversion option described in § 1.1275-4(a)(4) that is reasonably certain to be exercised as of the earliest applicable date based on all facts and circumstances—

(i) Taking into account § 1.1504-4(g) (to the extent relevant); but

(ii) Not taking into account the safe harbors described in § 1.1504-4(g)(3).

(15) *Debt*. The term *debt* means a liability pursuant to an instrument or a contractual arrangement that constitutes debt under general principles of Federal income tax law. See § 1.1275-1(d).

(16) *Direct issuance debt*. The term *direct issuance debt* means the newly incurred debt a distributing corporation incurs with a creditor as part of a direct issuance transaction and the proceeds of which are used to repay historical distributing corporation debt.

(17) *Direct issuance transaction*. The term *direct issuance transaction* means a transaction, or a series of transactions (or similar transaction or series of transactions), in which—

(i) The distributing corporation incurs distributing corporation debt with a creditor after the earliest applicable date;

(ii) The distributing corporation uses the proceeds of the newly incurred distributing corporation debt (directly or indirectly) to repay historical distributing corporation debt; and

(iii) The new creditor exchanges that newly incurred distributing corporation debt for controlled corporation stock or securities held by the distributing corporation.

(18) *Distributing corporation*. The term *distributing corporation* means the distributing corporation described in section 355(a)(1)(A).

(19) *Distributing corporation contingent liability*. The term *distributing corporation contingent liability* means a contingent liability for which the distributing corporation is the obligor.

(20) *Distributing corporation debt*—(i) *In general*. The term *distributing*

corporation debt means debt for which the distributing corporation is the obligor.

(ii) *Section 381(a) transactions*. The term *distributing corporation debt* includes a debt that satisfies the following requirements:

(A) The distributing corporation assumed the debt in a transaction to which section 381(a) of the Code applies; and

(B) The debt assumed in the transaction was incurred prior to the earliest applicable date.

(21) *Distributing corporation liability*. The term *distributing corporation liability* means a liability for which the distributing corporation is the obligor.

(22) *Distributing corporation related person*. The term *distributing corporation related person* means a related person with respect to the distributing corporation.

(23) *Distribution*. The term *distribution* means a single distribution, or one of a series of distributions, of controlled corporation stock, or of controlled corporation stock and securities—

(i) Intended to qualify as a divisive reorganization; and

(ii) Made by the distributing corporation pursuant to the plan of reorganization.

(24) *Distribution date*. If all distributions comprising an intended divisive reorganization take place on one date—

(i) The term *distribution date* means that date; and

(ii) Each of the terms *first distribution date*, *control distribution date*, and *final distribution date* refers to the distribution date.

(25) *Distribution period*. The term *distribution period* means the period of time that—

(i) Begins at the time of the first distribution; and

(ii) Ends at the time of the final distribution.

(26) *Divisive reorganization*. The term *divisive reorganization* means a series of transactions carried out pursuant to a plan of reorganization that qualify as a reorganization under sections 355 and 368(a)(1)(D) or (G).

(27) *Earliest applicable date*—(i) *In general*. The term *earliest applicable date* means the date that is the earliest of—

(A) The date of the first public announcement (as defined in § 1.355-7(h)(10)) of the divisive reorganization or a similar transaction;

(B) The date of entry by the distributing corporation into a written agreement to engage in the divisive reorganization or a similar transaction; and

(C) The date of approval of the divisive reorganization or a similar transaction by the board of directors of the distributing corporation.

(ii) *Similar transaction*. For purposes of paragraph (b)(27)(i) of this section, the term *similar transaction* means a similar acquisition within the meaning of § 1.355-7(h)(12) and (13).

(28) *Eligible distributing corporation debt*. The term *eligible distributing corporation debt* means distributing corporation debt described in § 1.361-5(c).

(29) *Final distribution*. The term *final distribution* means, with respect to a series of distributions, the last distribution that is made by the distributing corporation pursuant to the plan of reorganization.

(30) *Final distribution date*. The term *final distribution date* means the date of the final distribution.

(31) *First distribution*. The term *first distribution* means, with respect to a series of distributions, the earliest distribution that is made by the distributing corporation pursuant to the plan of reorganization.

(32) *First distribution date*. The term *first distribution date* means the date of the first distribution.

(33) *Historical distributing corporation debt*. The term *historical distributing corporation debt* means distributing corporation debt described in § 1.361-5(c)(2).

(34) *Intermediary*—(i) *In general*. The term *intermediary* means an investment bank or other person that—

(A) Is not a distributing corporation related person or a controlled corporation related person, at any time during the period beginning on the earliest applicable date and ending on the date of completion of the plan of reorganization; and

(B) Provides capital or financial services to the distributing corporation or the controlled corporation, directly or indirectly, to facilitate the divisive reorganization.

(ii) *Inclusion*. The term *intermediary* includes a related person of the intermediary.

(35) *Intermediated exchange*. The term *intermediated exchange* means a transaction, or a series of transactions (or similar transaction or series of transactions), in which an intermediary—

(i) Acquires historical distributing corporation debt on a secondary market from the holders of that debt; and

(ii) Exchanges that historical distributing corporation debt for controlled corporation stock or securities held by the distributing corporation.

(36) *Liability*—(i) *In general*. The term *liability* means a debt, a contingent liability, or any other fixed or contingent obligation, without regard to whether the obligation otherwise has been taken into account for Federal income tax purposes.

(ii) *Certain obligations incurred in the ordinary course of business*—(A) *In general*. Except as provided in paragraph (b)(36)(ii)(B) of this section, an obligation incurred in the ordinary course of business pursuant to a bilateral contract is not a liability.

(B) *Exception regarding financial statements*. An obligation described in paragraph (b)(36)(ii)(A) of this section is a liability, in whole or in part, to the extent the obligation is reflected in one or more financial statements of the obligor as a liability, reserve, or similar item.

(37) *Non-qualifying creditor*. The term *non-qualifying creditor* has the meaning provided in § 1.361–5(b)(2)(i).

(38) *Obligor*. With regard to a liability, the term *obligor* means the person that has agreed and is expected (as determined based on all facts and circumstances) to satisfy the liability, taking into account—

(i) All relevant provisions of the Code (including the principles of section 357(d) (liability treated as assumed));

(ii) Treasury regulations (26 CFR chapter I); and

(iii) General principles of Federal income tax law, including the substance-over-form doctrine.

(39) *Other property*. The term *other property* means section 361 consideration other than money, acquiring corporation stock or securities, and stock of a corporation controlling the acquiring corporation (within the meaning of section 368(c)).

(40) *Party to a reorganization*. The term *party to a reorganization* has the meaning provided in § 1.368–2(f).

(41) *Plan of reorganization*. The term *plan of reorganization* has the meaning provided in § 1.368–4.

(42) *Post-distribution payment*. The term *post-distribution payment* means a transfer of money or other property by the controlled corporation to the distributing corporation or by the distributing corporation to the controlled corporation—

(i) Pursuant to the plan of reorganization; and

(ii) Subsequent to the control distribution date.

(43) *Qualified property*. The term *qualified property* means any stock in (or right to acquire stock in), or obligation of—

(i) The target corporation;

(ii) The acquiring corporation, if that stock (or right) or obligation is received

by the target corporation in an exchange described in § 1.361–2 or § 1.361–3; or

(iii) A corporation controlling the acquiring corporation (within the meaning of section 368(c)), if—

(A) The controlling corporation is a party to the reorganization; and

(B) That stock (or right) or obligation is received by the target corporation in an exchange described in § 1.361–2 or § 1.361–3.

(44) *Qualifying creditor*. The term *qualifying creditor* means a creditor described in § 1.361–5(b).

(45) *Qualifying debt elimination transaction*. The term *qualifying debt elimination transaction* means a transaction described in § 1.361–5(e).

(46) *Refinanced historical distributing corporation debt*. The term *refinanced historical distributing corporation debt* has the meaning provided in § 1.361–5(c)(2)(ii).

(47) *Related person*. The term *related person* means a person related within the meaning of section 267(b) or section 707(b)(1) of the Code.

(48) *Revolving credit agreement*. The term *revolving credit agreement* means a loan structure that—

(i) Permits the borrower to make multiple borrowings and re-borrowings during the term of the revolving credit facility;

(ii) Limits the aggregate borrowings to a pre-determined maximum amount that the one or more lenders agree to fund; and

(iii) May, or may not, require the borrower to pledge any of its assets as security for the loan (that is, it may be a secured or unsecured loan structure).

(49) *Section 361 consideration*—(i) *In general*. The term *section 361 consideration* means, with regard to an exchange to which § 1.361–2 or § 1.361–3 applies, the consideration received by a target corporation from an acquiring corporation in exchange for property transferred by the target corporation to the acquiring corporation pursuant to the plan of reorganization.

(ii) *Inclusions*. The term *section 361 consideration* includes—

(A) Acquiring corporation stock or stock of a corporation controlling the acquiring corporation (within the meaning of section 368(c));

(B) Acquiring corporation securities;

(C) Acquiring corporation non-security debt;

(D) Money transferred by the acquiring corporation; and

(E) Other property (other than acquiring corporation non-security debt) transferred by the acquiring corporation.

(iii) *Exclusion*. The term *section 361 consideration* does not include an assumption of a liability described in § 1.357–2(a).

(50) *Section 361 regulations*. The term *section 361 regulations* means this section and §§ 1.361–2 through 1.361–6.

(51) *Target corporation*—(i) *In general*. The term *target corporation* means the corporation that is treated under section 361(a) or (b) as exchanging its property pursuant to a plan of reorganization for section 361 consideration.

(ii) *Inclusions*. The term *target corporation* includes solely—

(A) A corporation that is acquired in an acquisitive reorganization; and

(B) A distributing corporation in a divisive reorganization.

(52) *Trade payable*. The term *trade payable* means debt arising in the ordinary course of a business from sales, leases, licenses, or the rendition of services provided to or for the distributing corporation.

(53) *True-up payment*. The term *true-up payment* means, with respect to an exchange of controlled corporation stock or securities, or controlled corporation non-security debt, for distributing corporation debt pursuant to a plan of reorganization of a divisive reorganization, a payment—

(i) Under an agreement entered into between the distributing corporation (including any distributing corporation related person) and an intermediary (including any related person with regard to the intermediary); and

(ii) Made pursuant to that agreement by—

(A) The distributing corporation to the intermediary as the result of a decrease in value of any controlled corporation stock or securities or controlled corporation non-security debt (as applicable) between an initial valuation date and a subsequent valuation date; or

(B) The intermediary to the distributing corporation as the result of an increase in value of any controlled corporation stock or securities or controlled corporation non-security debt (as applicable) between an initial valuation date and a subsequent valuation date.

(54) *Unrelated ultimate creditor*. The term *unrelated ultimate creditor* means a creditor that is not—

(i) A distributing corporation related person; or

(ii) A related person with regard to a distributing corporation related person.

■ **Par. 13.** Sections 1.361–2 through 1.361–6 are added to read as follows:

§ 1.361–2 Exchanges solely for stock or securities under section 361(a).

(a) *General rule*. A target corporation that is a party to a reorganization does not recognize any gain or loss on a transfer of property by that corporation to an acquiring corporation if—

(1) The acquiring corporation or a corporation controlling the acquiring corporation is a party to the reorganization;

(2) The target corporation receives solely stock or securities of—

(i) The acquiring corporation in exchange for the transferred property; or

(ii) The corporation controlling the acquiring corporation in exchange for the transferred property; and

(3) The exchange occurs pursuant to the plan of reorganization.

(b) *Exchanges not solely for stock or securities.* With regard to an exchange to which paragraph (a) of this section would apply but for the fact that the target corporation receives money or other property in addition to stock and securities of an acquiring corporation or a corporation controlling the acquiring corporation, *see* § 1.361–3.

(c) *Example—(1) Facts.* Pursuant to a plan of reorganization for a transaction that qualifies as a reorganization described in section 368(a)(1)(C), a target corporation (Target) transfers all its property to an acquiring corporation (Acquiring) solely in exchange for Acquiring stock, which Target distributes to its shareholders in complete liquidation of Target. Target properly files a plan of reorganization with the IRS pursuant to § 1.368–3(a)(5) that satisfies all requirements set forth in § 1.368–4, including properly including and identifying Target and Acquiring as parties to the reorganization.

(2) *Analysis.* Target recognizes no gain or loss on the transfer of its property to Acquiring solely in exchange for Acquiring stock because Target and Acquiring are parties to the reorganization, Target receives solely Acquiring stock in exchange for Target's property, and the exchange occurs pursuant to the plan of reorganization. *See* paragraph (a) of this section.

§ 1.361–3 Exchanges not solely for stock or securities under section 361(b).

(a) *Scope—(1) In general.* If § 1.361–2(a) would apply to an exchange between a target corporation and an acquiring corporation but for the fact that the target corporation receives money or other property, in addition to stock and securities of the acquiring corporation or stock of the corporation controlling the acquiring corporation, the exchange is governed by paragraphs (b) through (e) of this section.

(2) *Exception.* If the exchange is pursuant to a reorganization that qualifies under section 368(a)(1)(F) of the Code, the exchange is not governed by paragraphs (b) through (e) of this section. *See* § 1.368–2(m)(3)(iii).

(b) *Money or other property distributed in acquisitive reorganizations—(1) Distributions to shareholders.* In an acquisitive reorganization, the target corporation recognizes no gain from an exchange described in paragraph (a)(1) of this section if the target corporation distributes the money or other property received in the exchange to its shareholders pursuant to the plan of reorganization.

(2) *Transfers to creditors.* In an acquisitive reorganization, if a target corporation receives money or other property in an exchange described in paragraph (a)(1) of this section, the target corporation is treated as distributing the money or other property to its shareholders for purposes of paragraph (b)(1) of this section if the target corporation transfers that money or other property to a creditor—

(i) Pursuant to the plan of reorganization; and

(ii) In satisfaction of debt of the target corporation.

(c) *Money or other property distributed in divisive reorganizations—(1) Distributions to shareholders.* In a divisive reorganization, the distributing corporation recognizes no gain from an exchange described in paragraph (a)(1) of this section if, pursuant to the plan of reorganization, the distributing corporation—

(i) Deposits the money received in the exchange in a segregated account; and

(ii) Distributes the money or other property received in the exchange to its shareholders no later than the end of the 12-month period beginning on the date of the exchange.

(2) *Transfers to creditors—(i) In general.* Subject to the adjusted basis limitation set forth in paragraph (c)(2)(ii) of this section, in a divisive reorganization, if a distributing corporation receives money or other property in an exchange described in paragraph (a)(1) of this section, the distributing corporation is treated as distributing the money or other property to its shareholders for purposes of paragraph (c)(1) of this section if, pursuant to the plan of reorganization, the distributing corporation—

(A) Deposits the money received in the exchange in a segregated account; and

(B) Transfers that money or other property to a creditor—

(1) In satisfaction of distributing corporation debt in a transfer meeting the requirements set forth in § 1.361–5; and

(2) Within the period described in paragraph (c)(1)(ii) of this section.

(ii) *Application of adjusted basis limitation to divisive reorganizations described in sections 355 and 368(a)(1)(D).* The aggregate amount of money and the fair market value of any other property transferred to a creditor that is treated as a distribution under paragraph (c)(1) of this section is limited to the amount by which the aggregate adjusted basis of the assets transferred by a distributing corporation to a controlled corporation in a divisive reorganization described in sections 355 and 368(a)(1)(D) exceeds the aggregate amount of distributing corporation liabilities assumed by the controlled corporation.

(3) *Post-distribution payments received by a distributing corporation.* Paragraphs (c)(1) and (2) of this section (without regard to paragraph (c)(1)(ii) of this section) apply to any post-distribution payment received by a distributing corporation only if all the following requirements are satisfied:

(i) *Treatment as section 361 consideration.* The post-distribution payment constitutes section 361 consideration for Federal income tax purposes. For purposes of this paragraph (c)(3), a post-distribution payment constitutes section 361 consideration for Federal income tax purposes (and not, for example, a payment for goods or services separate from and, therefore, not pursuant to the plan of reorganization for the divisive reorganization) only if all the following requirements are satisfied:

(A) *Characterization as section 361 consideration.* The post-distribution payment properly is characterized for Federal income tax purposes as consideration that the distributing corporation receives in the exchange described in § 1.361–3(a).

(B) *Value not reasonably ascertainable.* As of the date of the exchange described in § 1.361–3(a), the fair market value of the distributing corporation's right to receive the post-distribution payment is not reasonably ascertainable.

(C) *Proper accounting.* In accordance with the plan of reorganization, the distributing corporation properly accounts for the post-distribution payment as part of the contribution when the distributing corporation receives that payment.

(ii) *Segregated account requirement.* The distributing corporation deposits the post-distribution payment in a segregated account pursuant to the plan of reorganization.

(iii) *Disposition requirement.* By the later of 90 days after the date on which the distributing corporation receives the post-distribution payment or the date

specified in paragraph (c)(1)(ii) of this section, the distributing corporation, pursuant to the plan of reorganization—

(A) Distributes that post-distribution payment to the distributing corporation's shareholders; or

(B) Transfers that post-distribution payment to the distributing corporation's creditors in satisfaction of distributing corporation debt in a transfer meeting the requirements set forth in § 1.361-5.

(4) *Post-distribution payments received by a controlled corporation.* For purposes of the adjusted basis limitation set forth in paragraph (c)(2)(ii) of this section, any post-distribution payment received by the controlled corporation from the distributing corporation will increase the aggregate adjusted basis of the assets transferred by the distributing corporation to the controlled corporation only if all the following requirements are satisfied:

(i) *Characterization as contribution in the reorganization exchange.* The post-distribution payment properly is characterized for Federal income tax purposes as consideration that the controlled corporation receives in the exchange described in § 1.361-3(a).

(ii) *Value not reasonably ascertainable.* As of the date of the exchange described in § 1.361-3(a), the fair market value of the controlled corporation's right to receive the post-distribution payment is not reasonably ascertainable.

(iii) *Proper accounting.* In accordance with the plan of reorganization, the controlled corporation properly accounts for the post-distribution payment as part of the contribution when the controlled corporation receives that payment.

(d) *Money or other property not distributed.* If a target corporation does not satisfy the requirements set forth in paragraph (b) or (c) of this section with respect to an exchange described in paragraph (a)(1) of this section, the target corporation recognizes gain (if any) from the exchange in an amount that does not exceed the sum of—

(1) The amount of money received but not distributed; and

(2) The fair market value of other property received but not distributed.

(e) *No recognition of loss.* A target corporation does not recognize any loss on an exchange described in paragraph (a)(1) of this section.

(f) *Examples.* The following examples illustrate the application of the rules of this section. For purposes of these examples: Distributing is a distributing corporation, and Controlled is a controlled corporation, in a divisive

reorganization; Target is a target corporation, and Acquiring is an acquiring corporation, in an acquisitive reorganization; all taxpayers are calendar-year taxpayers; and for each transaction, a plan of reorganization has been properly filed with the IRS pursuant to § 1.368-3(a)(5) that satisfies all requirements set forth in § 1.368-4, including identifying all parties to the reorganization, identifying all transactions included in the plan of reorganization, and describing the intended Federal income tax treatment of the transaction.

(1) *Example 1: Acquisitive reorganization—(i) Facts.* Pursuant to a plan of reorganization for a transaction that qualifies as a reorganization described in section 368(a)(1)(C), Target transfers all its property to Acquiring in exchange for Acquiring stock and money (exchange), and Target distributes the Acquiring stock and money to Target's shareholders in complete liquidation of Target.

(ii) *Analysis.* Target recognizes no gain on the exchange because Target distributes the money received in the exchange to its shareholders pursuant to the plan of reorganization. See paragraph (b)(1) of this section.

(2) *Example 2: Divisive reorganization with money or other property distributed pursuant to plan of reorganization—(i) Facts—(A) In general.* On June 1, 2025, pursuant to a plan of reorganization for a transaction that qualifies as a divisive reorganization, Distributing transfers one of its businesses (Business B) to newly formed Controlled in exchange for \$10,000x of Controlled stock and \$10,000x of cash (contribution) and distributes all the Controlled stock to Distributing's shareholders (distribution). The Business B assets have an aggregate adjusted basis of \$10,000x. Pursuant to its plan of reorganization, Distributing will deposit the \$10,000x of cash received in the contribution in a segregated account.

(B) *Special distribution.* On December 1, 2025, Distributing distributes the \$10,000x of cash received to Distributing's shareholders in a special distribution (special dividend) pursuant to the plan of reorganization. A separation and distribution agreement filed by Distributing with the U.S. Securities and Exchange Commission (SEC), a resolution by Distributing's board of directors, and other official records of Distributing collectively evidence a definite intent, prior to the first step of the transaction, to have Distributing distribute the \$10,000x of cash pursuant to the special dividend. Specifically, those documents provide

that the special dividend is in addition to any regularly occurring dividends distributed to Distributing's shareholders pursuant to Distributing's dividend payment policy (as reflected in documents filed by Distributing with the SEC).

(ii) *Analysis.* The special dividend satisfies all requirements set forth in § 1.368-4(e). Accordingly, the special dividend is properly included in the plan of reorganization for the divisive reorganization. Distributing recognizes no gain on the contribution because, pursuant to the plan of reorganization, Distributing deposits the money received in the contribution in a segregated account, and it distributes the money received in the contribution to its shareholders no later than the end of the 12-month period beginning on the date of the contribution. See paragraph (c)(1) of this section.

(3) *Example 3: Ordinary course distribution—(i) Facts.* The facts are the same as in paragraph (f)(2)(i) of this section (*Example 2*), except that Distributing provides in the separation and distribution agreement, or in Distributing's other official records, that Distributing will distribute the \$10,000x of cash received from Controlled to Distributing's shareholders through an ordinary course dividend pursuant to Distributing's dividend payment policy (as reflected in documents filed by Distributing with the SEC). Distributing distributes the cash in an ordinary course dividend on November 1, 2025.

(ii) *Analysis.* The ordinary course dividend is not properly included in the plan of reorganization for the divisive reorganization because the dividend does not satisfy the requirements set forth in § 1.368-4(e)(2)(i)(B) (that is, the dividend would have occurred regardless of the divisive reorganization). Because the \$10,000x of cash received from Controlled is not distributed to Distributing's shareholders pursuant to the plan of reorganization, Distributing recognizes gain (but not loss) on the exchange in an amount that does not exceed the amount of money received (that is, \$10,000x). See paragraphs (c)(1), (d), and (e) of this section. The Federal income tax consequences of the ordinary course dividend are determined under section 301 of the Code.

(4) *Example 4: Special stock repurchase program—(i) Facts.* The facts are the same as in paragraph (f)(2)(i) of this section (*Example 2*), except that, pursuant to the plan of reorganization, and as reflected in the official records of Distributing and Controlled, Distributing uses the \$10,000x of cash received from

Controlled to fund a special repurchase of Distributing stock (and, accordingly, is not part of an existing stock repurchase program approved by Distributing's board of directors). The redemptions occur on February 1, 2026, and March 1, 2026.

(ii) *Analysis.* The analysis is the same as in paragraph (f)(2)(ii) of this section (*Example 2*).

(5) *Example 5: Existing stock repurchase program*—(i) *Facts.* The facts are the same as in paragraph (f)(4)(i) of this section (*Example 4*), except that Distributing uses the \$10,000x of cash received from Controlled to fund a repurchase of Distributing stock pursuant to an existing stock repurchase program approved by Distributing's board of directors.

(ii) *Analysis.* The analysis is the same as in paragraph (f)(3)(ii) of this section (*Example 3*). Accordingly, the Federal income tax consequences of the ordinary course stock repurchase are determined under section 301 or 302 of the Code.

(6) *Example 6: Divisive reorganization with money or other property not distributed within the 12-month period*—(i) *Facts.* The facts are the same as in paragraph (f)(2)(i)(A) of this section (*Example 2*), except that Distributing distributes the \$10,000x of cash received from Controlled to Distributing's shareholders on July 1, 2026, and, therefore, after the end of the 12-month period beginning on June 1, 2025.

(ii) *Analysis.* Distributing recognizes gain (but not loss) on the exchange in an amount that does not exceed the amount of money received (that is, \$10,000x). See paragraphs (c)(1), (d), and (e) of this section.

(7) *Example 7: Post-distribution payments from a distributing corporation to a controlled corporation*—(i) *Facts.* The facts are the same as in paragraph (f)(2)(i)(A) of this section (*Example 2*), except that Distributing and Controlled enter into a capital contribution agreement, which is identified and properly included in the plan of reorganization, under which Distributing will make one or more transfers of working capital to Controlled after the contribution to fund Business B's post-distribution operations. Distributing's obligation to make any such transfer, and the amount of any such transfer (if required to be made), is subject to certain conditions such that, as of the date of the contribution, the fair market value of Controlled's right to receive any one or more post-distribution payments is not reasonably ascertainable. On September

30, 2025, it is determined that Distributing must transfer \$200x to Controlled under this agreement. Distributing and Controlled both treat the \$200x payment as part of the contribution.

(ii) *Analysis.* The \$200x payment is treated as increasing the aggregate adjusted basis of the assets transferred by Distributing to Controlled in the contribution. See paragraph (c)(4) of this section. First, the \$200x is a post-distribution payment because the transfer of \$200x from Distributing to Controlled occurs pursuant to the plan of reorganization and after the control distribution date. See § 1.361–1(b)(42). Based on all facts and circumstances, including because the capital contribution agreement is identified and properly included in the plan of reorganization, the \$200x properly is characterized for Federal income tax purposes as consideration that Controlled receives in an exchange described in paragraph (a)(1) of this section (that is, the contribution). See paragraph (c)(4)(i) of this section. In addition, Controlled's right to receive the post-distribution payment is not reasonably ascertainable as of the contribution date, and, in accordance with the plan of reorganization, Controlled properly accounts for the post-distribution payment as part of the contribution when Controlled receives that payment. See paragraphs (c)(4)(ii) and (iii) of this section.

(8) *Example 8: Post-distribution payment from a controlled corporation to a distributing corporation*—(i) *Facts*—(A) *In general.* The facts are the same as in paragraph (f)(7)(i) of this section (*Example 7*), except for the following. Distributing transferred \$10,000x received from Controlled in the contribution to a qualifying creditor in a transfer meeting the requirements set forth in paragraph (c)(3) of this section and § 1.361–5. Distributing and Controlled also enter into an indemnification agreement whereby Controlled agrees to satisfy a contingent liability (Liability) that is associated with Business B but that Controlled cannot assume under State law. Under the indemnification agreement, Distributing may demand payment from Controlled once the amount of the Liability becomes fixed and determinable, without regard to whether Distributing has satisfied the Liability. The fair market value of Distributing's right to receive any such payment, and the amount of any such payment (if required to be made), is not reasonably ascertainable at the time of the contribution. On November 1, 2026, the

Liability becomes fixed and determinable in the amount of \$300x.

(B) *Payment under indemnification agreement.* After November 1, 2026, Distributing seeks payment from Controlled under the indemnification agreement without first satisfying the Liability with Distributing's own funds. Upon receiving the \$300x payment from Controlled, Distributing properly accounts for the payment as section 361 consideration and deposits the \$300x in a segregated account pursuant to the plan of reorganization. Not later than 90 days after the date on which Distributing receives the \$300x from Controlled, pursuant to the plan of reorganization, Distributing transfers the \$300x to a qualifying creditor in satisfaction of Distributing debt in a manner that satisfies all requirements set forth in § 1.361–5.

(ii) *Analysis*—(A) *Post-distribution payment; section 361 consideration; treatment as distribution to shareholders.* The \$300x that Distributing receives from Controlled is a post-distribution payment because that transfer occurs pursuant to the plan of reorganization and after the control distribution date. See § 1.361–1(b)(42). Based on all facts and circumstances, including because the indemnification agreement is identified and properly included in the plan of reorganization, the \$300x payment properly is characterized for Federal income tax purposes as consideration that Distributing receives in an exchange described in paragraph (a)(1) of this section (that is, the contribution). See paragraph (c)(3)(i)(A) of this section. In addition, the fair market value of Distributing's right to receive the post-distribution payment is not reasonably ascertainable as of the contribution date, and, in accordance with the plan of reorganization, Distributing properly accounts for the post-distribution payment as part of the contribution when Distributing receives that payment. See paragraphs (c)(3)(i)(B) and (C) of this section. Paragraph (c)(2) of this section applies to Distributing's receipt and transfer of the \$300x payment because the payment constitutes section 361 consideration and, pursuant to the plan of reorganization, Distributing deposits the payment in a segregated account and transfers the \$300x to a qualifying creditor in satisfaction of Distributing debt in a transfer meeting the requirements set forth in § 1.361–5 not later than 90 days after the date on which Distributing receives the payment. See paragraph (c)(2) of this section. Accordingly, and subject to the adjusted basis limitation set forth in

paragraph (c)(2)(ii) of this section, Distributing would be treated as distributing to its shareholders for purposes of paragraph (c)(1) of this section the \$300x post-distribution payment. See paragraph (c)(2)(i) of this section.

(B) *Adjusted basis limitation.* The aggregate amount of money and the fair market value of any other property that Distributing may transfer to a creditor under paragraph (c)(2)(i) of this section that is treated as a distribution under paragraph (c)(1) of this section is limited to the amount by which the aggregate adjusted basis of the Business B assets transferred by Distributing to Controlled in the contribution (\$10,200x) exceeds the sum of the aggregate amount of Distributing liabilities assumed by Controlled (\$0), as further reduced by the \$10,000x that Distributing had transferred to a qualifying creditor. See paragraph (c)(2)(ii) of this section. Therefore, Distributing has \$200x remaining in its adjusted basis limitation (\$10,200x – \$10,000x) under paragraph (c)(2)(ii) of this section. As a result, \$100x of the post-distribution payment (\$300x – \$200x) is treated as money not distributed to Distributing's shareholders for purposes of paragraph (c)(1) of this section. See paragraph (c)(2)(i) of this section. Therefore, Distributing recognizes \$100x of gain (that is, an amount that does not exceed the sum of the money received but not distributed and the fair market value of other property received but not distributed). See paragraph (d) of this section.

§ 1.361–4 Distributions of property under section 361(c).

(a) *Distributions of qualified property*—(1) *Distributions to shareholders.* A target corporation recognizes no gain or loss on a distribution of qualified property received in an exchange described in § 1.361–2(a) or § 1.361–3(a) to the target corporation's shareholders pursuant to a plan of reorganization.

(2) *Treatment of certain transfers to creditors*—(i) *Acquisitive reorganizations.* In an acquisitive reorganization, if a target corporation receives qualified property in an exchange described in § 1.361–2(a) or § 1.361–3(a), the target corporation is treated as distributing the qualified property to its shareholders for purposes of paragraph (a)(1) of this section if the target corporation transfers that qualified property to a creditor—

(A) Pursuant to the plan of reorganization; and

(B) In satisfaction of target corporation debt.

(ii) *Divisive reorganizations.* In a divisive reorganization, if a distributing corporation receives qualified property in an exchange described in § 1.361–2(a) or § 1.361–3(a), the distributing corporation is treated as distributing the qualified property to its shareholders for purposes of paragraph (a)(1) of this section if the distributing corporation transfers that qualified property to a creditor—

(A) Pursuant to a plan of reorganization; and

(B) In satisfaction of distributing corporation debt in a transfer meeting the requirements set forth in § 1.361–5.

(b) *Distributions of appreciated nonqualified property*—(1) *Deemed sale treatment.* If a target corporation distributes appreciated nonqualified property received in an exchange described in § 1.361–3(a) to its shareholders pursuant to a plan of reorganization, the target corporation recognizes gain as if the target corporation had sold that property to its shareholders at the property's fair market value.

(2) *Treatment of liabilities.* If a target corporation distributes appreciated nonqualified property subject to a liability to its shareholders pursuant to a plan of reorganization, or if a shareholder assumes a liability of the target corporation pursuant to the plan of reorganization, the fair market value of that appreciated nonqualified property for purposes of paragraph (b)(1) of this section is treated as not less than the amount of that liability.

(c) *No recognition of loss.* If a target corporation distributes property received in an exchange described in § 1.361–2(a) or § 1.361–3(a) to its shareholders pursuant to a plan of reorganization, the target corporation does not recognize loss.

(d) *Coordination with other provisions; cross-references.* Sections 311 and 336 through 338 of the Code do not apply to a target corporation's distribution of property described in paragraph (a) or (b) of this section. See sections 355(a)(3)(B), (d), and (e) of the Code for purposes of determining whether a distributing corporation recognizes gain on a distribution of controlled corporation stock or securities.

(e) *Examples.* The following examples illustrate the application of the rules of this section.

(1) *Example 1: Distribution of qualified property*—(i) *Facts.* On June 1, 2025, a calendar-year distributing corporation (Distributing) transfers one of its businesses to a newly formed controlled corporation (Controlled) in exchange for Controlled stock

(contribution). On June 2, 2025, Distributing distributes 80 percent of the Controlled stock to Distributing's shareholders on a pro rata basis (control distribution). As reflected in the separation and distribution agreement filed by Distributing with the U.S. Securities and Exchange Commission, Distributing evidences a definite intent to distribute the Controlled stock not distributed in the control distribution (retained Controlled stock) in 2026 pursuant to, and in completion of, the plan of reorganization (final distribution; together with the contribution and the control distribution, the separation). The retention of the retained Controlled stock is a qualifying retention within the meaning of § 1.355–10(c). Distributing properly files a plan of reorganization with the IRS pursuant to § 1.368–3(a)(5) satisfying all requirements set forth in § 1.368–4, including identifying Distributing and Controlled as parties to the reorganization, determining that the contribution and each distribution are properly included in the plan of reorganization, and describing the intended Federal income tax treatment of the contribution and each distribution. The separation qualifies as a divisive reorganization.

(ii) *Analysis.* The Controlled stock Distributing receives in the contribution is qualified property. See § 1.361–1(b)(43). The contribution is an exchange described in § 1.361–2(a), because Controlled is a party to the reorganization, Distributing receives solely Controlled stock in the contribution, and the contribution and each distribution of Controlled stock occurs pursuant to the plan of reorganization. Consequently, Distributing recognizes no gain or loss on the control distribution or the final distribution. See paragraph (a)(1) of this section.

(2) *Example 2: Distribution timing requirement*—(i) *Facts.* The facts are the same as in paragraph (e)(1)(i) of this section (*Example 1*), except that the plan of reorganization evidences a definite intent to distribute the retained Controlled stock three years after the date of the first step of the plan of reorganization.

(ii) *Analysis.* The 24-month presumption for the expeditious prosecution of the plan of reorganization requirement is not satisfied. See § 1.368–4(d)(3)(i)(B). However, if Distributing demonstrates, based on all facts and circumstances, that Distributing has transferred the retained Controlled stock to its shareholders as expeditiously as

practicable in completion of the plan of reorganization, Distributing recognizes no gain or loss on the control distribution or final distribution. *See* § 1.368–4(d)(3)(i)(A) and paragraph (a)(1) of this section.

(3) *Example 3: Distribution of nonqualified property*—(i) *Facts*. Pursuant to a plan of reorganization for a transaction that qualifies as a reorganization under section 368(a)(1)(C), a target corporation (Target) transfers all its property other than an appreciated asset (Asset) to an acquiring corporation (Acquiring) solely in exchange for Acquiring voting stock, which Target distributes, along with Asset, to its shareholders in complete liquidation of Target. Asset has a fair market value of \$100x and an adjusted basis of \$50x and is subject to a \$130x nonrecourse liability. Target properly files a plan of reorganization with the IRS pursuant to § 1.368–3(a)(5) satisfying all requirements set forth in § 1.368–4, including identifying Target and Acquiring as parties to the reorganization, determining that the distribution of Asset is properly included in the plan of reorganization, and describing the intended Federal income tax treatment of the reorganization.

(ii) *Analysis*—(A) *In general*. The Acquiring stock Target receives in the exchange is qualified property. *See* § 1.361–1(b)(43). The exchange of Target assets for Acquiring stock is described in § 1.361–2(a), because the exchange occurs pursuant to a plan of reorganization, Target and Acquiring are parties to the reorganization, and Target receives solely Acquiring stock in the exchange. Accordingly, Target recognizes no gain on the distribution of Acquiring stock to Target shareholders. *See* paragraph (a)(1) of this section.

(B) *Asset distribution*. Asset is appreciated nonqualified property. *See* § 1.361–1(b)(4). Accordingly, Target recognizes gain on the distribution of Asset to its shareholders pursuant to the plan of reorganization as if Target had sold Asset to its shareholders at Asset's fair market value. *See* paragraph (b)(1) of this section. Because Target distributed Asset to its shareholders subject to the \$130 nonrecourse liability, the fair market value of Asset is treated as not less than the amount of that liability. *See* paragraph (b)(2) of this section. Accordingly, the amount of gain Target recognizes on the distribution is \$80x (\$130x fair market value – \$50x adjusted basis).

§ 1.361–5 Transfers to creditors of distributing corporation in divisive reorganizations under section 361(b)(3) and (c)(3).

(a) *General rule*. The transfer of section 361 consideration by a distributing corporation to a creditor of the distributing corporation under § 1.361–3(c)(2) or 1.361–4(a)(2)(ii) (as appropriate) in a divisive reorganization is not treated as a distribution by the distributing corporation to its shareholders pursuant to the plan of reorganization unless the transfer is—

(1) To a qualifying creditor of the distributing corporation, as determined under paragraph (b) of this section;

(2) In satisfaction of eligible distributing corporation debt, as determined under paragraph (c) of this section;

(3) In an amount not greater than the maximum amount of distributing corporation debt, as determined under paragraph (d) of this section; and

(4) Part of a qualifying debt elimination transaction, as determined under paragraph (e) of this section.

(b) *Qualifying creditor*—(1) *General status as a creditor with regard to distributing corporation debt*. Each creditor to which the distributing corporation transfers section 361 consideration must be a creditor (qualifying creditor) that—

(i) Holds historical distributing corporation debt, qualifying trade payables, or direct issuance debt; and

(ii) Satisfies the requirements set forth in paragraph (b)(2) of this section.

(2) *Related-creditor prohibition*—(i) *General rule*. Except as provided in paragraph (b)(2)(ii) of this section, the following persons are not qualifying creditors of the distributing corporation (non-qualifying creditors):

(A) A distributing corporation related person.

(B) A controlled corporation related person.

(C) A related person with respect to a distributing corporation related person.

(D) A related person with respect to a controlled corporation related person.

(ii) *Exception for certain distributing corporation related persons*. A distributing corporation related person or a related person with respect to a distributing corporation related person (each as determined in accordance with paragraph (b)(2)(iii) of this section) is a qualifying creditor of the distributing corporation only if the following requirements are satisfied:

(A) *Transfer to unrelated ultimate creditor*—(1) *Money or other property*. No later than the end of the 12-month period beginning on the date the distributing corporation receives the

money or other property, the section 361 consideration composed of money or other property is transferred to an unrelated ultimate creditor pursuant to the plan of reorganization to satisfy debt owed by the distributing corporation related person or the related person with regard to a distributing corporation related person, respectively, to the unrelated ultimate creditor.

(2) *Qualified property*. The section 361 consideration composed of qualified property is transferred pursuant to the plan of reorganization to an unrelated ultimate creditor to satisfy debt owed by the distributing corporation related person or the related person with regard to a distributing corporation related person, respectively, to the unrelated ultimate creditor. For rules regarding the expeditious completion of the plan of reorganization, *see* § 1.368–4(d)(3).

(3) *Intermediate transfers*. For purposes of paragraph (b)(2)(ii)(A)(1) and (2) of this section, one or more intermediate transfers of section 361 consideration between or among distributing corporation related persons or related persons with regard to distributing corporation related persons to satisfy debts (including the initial distributing corporation debt) are permissible if those intermediate transfers culminate in a transfer of section 361 consideration to an unrelated ultimate creditor.

(B) *Debt in existence as of earliest applicable date*—(1) *In general*. Except as provided in paragraph (b)(2)(ii)(B)(2) of this section, all debt for which section 361 consideration is exchanged pursuant to the transfers described in paragraph (b)(2)(ii)(A) of this section is in existence as of the earliest applicable date.

(2) *Distributing corporation debt directly held by internal creditor*. Distributing corporation debt held directly by a distributing corporation related person or a related person with regard to a distributing corporation related person qualifies as historical distributing corporation debt described in paragraph (c)(2)(i) of this section.

(C) *Transactions, debts, and creditors identified in plan of reorganization*. Each transaction (including each intermediate and unrelated ultimate creditor transfer), creditor (including the unrelated ultimate creditor), and debt referenced in paragraph (b)(2)(ii)(A) of this section is identified and described in the plan of reorganization with regard to the divisive reorganization.

(iii) *Determination of related-person status*. For purposes of paragraph (b)(2) of this section, the status of a person as a distributing corporation related person

or a controlled related person, or as a related person with regard to any distributing corporation related person or as a related person with respect to any controlled corporation related person, is determined as of the date on which that person receives section 361 consideration in a transfer or series or transfers described in paragraph (b)(2)(ii)(A) of this section.

(c) *Eligible distributing corporation debt*—(1) *Overview*. Distributing corporation debt is not eligible to be satisfied with section 361 consideration under paragraph (a) of this section unless that debt qualifies under paragraph (c)(2) of this section.

(2) *Qualification as eligible distributing corporation debt*—(i) *Historical distributing corporation debt*. Historical distributing corporation debt is eligible to be satisfied with section 361 consideration under paragraph (c)(1) of this section. Except as provided in paragraph (c)(2)(ii) or (iii) of this section, for a distributing corporation debt to qualify as historical distributing corporation debt—

(A) The distributing corporation must have incurred the distributing corporation debt before the earliest applicable date;

(B) That debt must have an original term that ends after the date of the exchange described in § 1.361–2(a) or 1.361–3(a); and

(C) That debt must be identified in the plan of reorganization or original plan of reorganization (if amended).

(ii) *Refinancing exception for historical distributing corporation debt*. Distributing corporation debt incurred by the distributing corporation after the earliest applicable date is treated as historical distributing corporation debt only if—

(A) The distributing corporation debt is—

(1) A refinancing of historical distributing corporation debt (refinanced historical distributing corporation debt); or

(2) A refinancing of refinanced historical distributing corporation debt (that is, the debt is traced directly through one or more refinancings to debt that qualifies as historical distributing corporation debt pursuant to this paragraph (c)(2)(ii);

(B) The incurrence of the refinanced historical distributing corporation debt described in paragraph (c)(2)(ii)(A) of this section is not part of a plan to incur debt in addition to historical distributing corporation debt determined under paragraph (c)(2)(i) of this section (or an amount of debt in addition to the amount of historical distributing corporation debt

determined under paragraph (d) of this section, without regard to paragraph (d)(2)(iv) of this section) in anticipation of the divisive reorganization (for example, the incurrence of the refinanced historical distributing corporation debt would have occurred without regard to the divisive reorganization);

(C) The distributing corporation engages in a qualifying debt elimination transaction solely under paragraph (e)(3) or (4) of this section to eliminate that refinanced historical distributing corporation debt; and

(D) The qualifying debt elimination transaction described in paragraph (c)(2)(ii)(C) of this section is described and identified in the plan of reorganization or original plan of reorganization (if amended) for the divisive reorganization.

(iii) *Revolving credit agreements*. A revolving credit agreement to which the distributing corporation is a debtor qualifies as historical distributing corporation debt only if—

(A) The distributing corporation entered into the agreement before the earliest applicable date;

(B) That agreement does not expire until after the date of the exchange described in § 1.361–2(a) or 1.361–3(a); and

(C) That agreement is identified in the plan of reorganization or original plan of reorganization (if amended).

(iv) *Qualifying trade payables*. Trade payables of the distributing corporation that meet the following requirements are eligible to be satisfied with section 361 consideration under paragraph (c)(1) of this section:

(A) The trade payables are described in a plan of reorganization or original plan of reorganization (if amended).

(B) The trade payables were incurred in the ordinary course of business of the distributing corporation.

(C) The satisfaction such trade payables is necessary—

(1) To ensure the allocation to the controlled corporation of all liabilities properly associated with the business assets transferred to that corporation; and

(2) To result in the controlled corporation being allocated liabilities in an amount that properly relates to its business operations, the earnings of which will be used to properly satisfy those liabilities.

(v) *Direct issuance debt*. Direct issuance debt incurred as part of a direct issuance transaction satisfying the requirements of paragraph (e)(4) of this section is eligible to be satisfied with section 361 consideration under paragraph (c)(1) of this section.

(3) *Determination of amount of distributing corporation debt*—(i) *Purpose*. The rules in this paragraph (c)(3) apply to determine the aggregate amount of distributing corporation debt. For rules to determine the maximum amount of distributing corporation debt that can be satisfied with section 361 consideration under paragraph (a) of this section, see paragraph (d) of this section.

(ii) *Aggregate amount of distributing corporation debt*. The aggregate amount of distributing corporation debt includes solely the amounts described in paragraphs (c)(3)(ii)(A) through (E) of this section, as applicable, taking into account any reduction required by paragraph (c)(3)(iii) of this section.

(A) *Historical distributing corporation debt*. The aggregate amount of historical distributing corporation debt equals the aggregate remaining principal amount, as of the earliest applicable date, of all historical distributing corporation debt other than historical distributing corporation debt that is eliminated as part of a qualifying direct issuance transaction under paragraph (e)(4) of this section.

(B) *Refinanced distributing corporation debt*. If the distributing corporation relies on the exception set forth in paragraph (c)(2)(ii) of this section (that is, the refinancing exception for historical distributing corporation debt) with regard to any distributing corporation debt, the amount of that distributing corporation debt equals the lesser of—

(1) The original principal amount of the refinanced distributing corporation debt; and

(2) The principal amount of the original historical distributing corporation debt (that is, the distributing corporation debt to which the refinanced distributing corporation debt is traced) as of the earliest applicable date.

(C) *Revolving credit agreements*. With regard to a revolving credit agreement that satisfies the requirements set forth in paragraph (c)(2)(iii) of this section, the amount of that revolving credit agreement equals the lesser of—

(1) The balance under that agreement as of the earliest applicable date (and not the maximum amount that could be incurred by the distributing corporation under that agreement); and

(2) The lowest balance under that agreement beginning on the earliest applicable date and ending on the control distribution date.

(D) *Qualifying trade payables*. With regard to trade payables of the distributing corporation that satisfy the requirements set forth in paragraph

(c)(2)(iv) of this section, the amount of those payables equals the aggregate amount of those payables on the date of the exchange described in § 1.361–2(a) or 1.361–3(a).

(E) *Direct issuance debt.* With regard to direct issuance debt that satisfies the requirements set forth in paragraph (c)(2)(v) of this section, the amount of that debt equals the aggregate principal amount of that debt on the date of the exchange described in § 1.361–2(a) or 1.361–3(a).

(iii) *Offsetting debts taken into account.* The aggregate amount of distributing corporation debt determined under paragraph (c)(3)(ii) of this section must be reduced by the aggregate principal amount (or the balance, in the case of a revolving credit agreement) of any debt for which—

(A) The distributing corporation is a creditor; and

(B) The debtor of that debt is a creditor with respect to distributing corporation debt described in paragraph (c)(3)(ii) of this section.

(d) *Maximum amount of distributing corporation debt—(1) General calculation.* The maximum amount of distributing corporation debt that can be satisfied with section 361 consideration under paragraph (a) of this section equals the amount obtained by subtracting the aggregate amount of distributing corporation debt that the controlled corporation assumes pursuant to the plan of reorganization from the lesser of—

(i) The aggregate amount of distributing corporation debt (as determined under paragraph (c)(3) of this section); and

(ii) The aggregate amount of distributing corporation debt determined under the eight-quarterly-average test (as set forth in paragraph (d)(2) of this section).

(2) *Eight-quarterly-average test—(i) Determination.* In accordance with paragraphs (d)(2)(ii) and (iii) of this section, the aggregate amount of distributing corporation debt under the eight-quarterly-average test, measured as of the close of each of the eight fiscal quarters that end immediately before the earliest applicable date, equals the average of the amount of distributing corporation debt owed to persons other than distributing corporation related persons.

(ii) *Calculation of distributing corporation debt at the close of each quarter.* The methodology for determining the maximum amount of distributing corporation debt under paragraph (c)(3) of this section must be used to determine the amount of distributing corporation debt at the

close of each quarter for purposes of paragraph (d)(2)(i) of this section.

(iii) *Distributing corporation debt held by distributing corporation related person.* If the distributing corporation relies on the exception set forth in paragraph (b)(2)(ii) of this section (that is, the related-creditor exception), the amount determined under paragraph (d)(2)(i) of this section includes an amount equal to the least of—

(A) The amount of distributing corporation debt directly held by distributing corporation related persons or related persons with respect to distributing corporation related persons (each, a related person);

(B) The amount of debt of a related person (related person debt) held by any other related person; and

(C) The amount of related person debt held by the unrelated ultimate creditor.

(e) *Qualifying debt elimination transactions—(1) Overview.* A transaction that satisfies the requirements set forth in this paragraph (e) qualifies as a qualifying debt elimination transaction for purposes of paragraph (a) of this section.

(2) *Qualifying original creditor exchanges.* The satisfaction of distributing corporation debt with section 361 consideration in an exchange not described in paragraph (e)(3) or (4) of this section (original creditor exchange) qualifies as a qualifying debt elimination transaction if all applicable requirements set forth in paragraphs (b) through (d) of this section (without regard to paragraph (c)(2)(ii)(A) of this section) are satisfied.

(3) *Qualifying intermediated exchanges.* An intermediated exchange qualifies as a qualifying debt elimination transaction if all applicable requirements set forth in paragraphs (b) through (d) and (e)(3)(i) through (vi) of this section are satisfied.

(i) *Prohibition on intermediary benefits—(A) In general.* Except as provided in paragraph (e)(3)(i)(B) of this section, no holder of a distributing corporation debt satisfied with section 361 consideration holds the distributing corporation debt for the benefit of—

(1) The distributing corporation;

(2) The controlled corporation;

(3) A distributing corporation related person; or

(4) A controlled corporation related person.

(B) *Exception.* The prohibition described in paragraph (e)(3)(i)(A) of this section does not apply to the collateral benefit received by a distributing corporation, or a distributing corporation related person, from the intermediary's facilitation of the transfer of section 361 consideration

in satisfaction of historical distributing corporation debt.

(ii) *Prohibition on acquiring debt from distributing corporation.* The intermediary does not acquire historical distributing corporation debt satisfied with section 361 consideration from the distributing corporation, the controlled corporation, or any distributing corporation related person or controlled corporation related person.

(iii) *Arm's-length bargaining required.* Each exchange of section 361 consideration for historical distributing corporation debt between the distributing corporation and the intermediary is effectuated based on terms and conditions arrived at by the parties bargaining at arm's length.

(iv) *Prohibition on profit-sharing or limitation.* None of the distributing corporation, the controlled corporation, or any distributing corporation related person or controlled corporation related person—

(A) Participates in any profit gained by the intermediary upon an exchange of section 361 consideration; or

(B) Limits by agreement or other arrangement any profit described in paragraph (e)(3)(iv)(A) of this section.

(v) *Independence requirement—(A) General rule.* The intermediary acts for its own account with regard to all components of the intermediated exchange.

(B) *Risk of loss.* The intermediary bears the risk of loss with respect to—

(1) The historical distributing corporation debt; and

(2) Any subsequent sale or other disposition of section 361 consideration transferred to the intermediary to satisfy the historical distributing corporation debt.

(C) *Prohibition regarding variable pricing and similar agreements.* The requirement set forth in paragraph (e)(3)(v)(B) of this section is not satisfied if the intermediary enters into a variable pricing agreement or similar arrangement with the distributing corporation (or a controlled corporation, distributing corporation related person, or controlled corporation related person) with regard to any section 361 consideration, including—

(1) True-up payments;

(2) Forward exchange agreements; and

(3) Any similar agreement or arrangement.

(vi) *Minimum temporal requirement.* The intermediary holds the historical distributing corporation debt for a period of not less than 30 days ending on the control distribution date.

(4) *Qualifying direct issuance transactions—(i) Overview—(A) In general.* To qualify as a qualifying debt

elimination transaction, a direct issuance transaction must be determined to comprise a transfer by the distributing corporation of section 361 consideration to the creditor in exchange for the satisfaction of the distributing corporation debt held by the creditor (direct issuance debt), and not a sale by the distributing corporation of section 361 consideration to the creditor for the proceeds of that direct issuance debt, for Federal income tax purposes.

(B) *Application of Code and general principles of Federal income tax law.* The determination under paragraph (e)(4)(i)(A) of this section is made based on all relevant provisions of the Code and general principles of Federal income tax law, including the step transaction doctrine. Specifically, the substance of the direct issuance transaction must be determined under all relevant provisions of the Code and general principles of Federal income tax law before the requirements under section 361 can be applied to determine whether the transaction qualifies for nonrecognition treatment under that section.

(ii) *Facts-and-circumstances test—(A) In general.* The determination of whether a direct issuance transaction qualifies as an exchange under section 361 (and not as a sale under section 1001) is made based on the factors specified in paragraph (e)(4)(ii)(B) of this section, each of which provides evidence of qualification or non-qualification as an exchange under section 361 as set forth in paragraph (e)(4)(ii)(B) of this section, unless the transaction satisfies the safe harbor under paragraph (e)(4)(iii) of this section. The strength of the evidence provided by those factors is determined based on an analysis of all relevant facts and circumstances.

(B) *Factors—(1) Exchange part of prearranged, integrated plan—(i) Substantial evidence of non-qualification.* An exchange of section 361 consideration by the distributing corporation with the creditor pursuant to an arrangement that comprises part of a prearranged, integrated plan is substantial evidence of non-qualification.

(ii) *Evidence of qualification.* An exchange of section 361 consideration by the distributing corporation with the creditor that is not pursuant to an arrangement that comprises part of a prearranged, integrated plan is evidence of qualification.

(2) *Specified agency and substance-over-form requirements—(i) Evidence of non-qualification.* The failure to satisfy one or more requirements set forth in

paragraphs (e)(4)(iii)(C) through (F) of this section is evidence of non-qualification.

(ii) *Substantial evidence of non-qualification.* Substantial failure to satisfy any of the requirements set forth in paragraphs (e)(4)(iii)(C) through (F) of this section, as determined based on all relevant facts and circumstances, or any failure to satisfy a substantial number of those requirements, is substantial evidence of non-qualification.

(iii) *Substantial evidence of qualification.* The satisfaction of all requirements set forth in paragraphs (e)(4)(iii)(C) through (F) of this section is substantial evidence of qualification.

(3) *Temporal proximity—(i) Evidence of non-qualification.* The fact that the creditor holds the refinanced historical distributing corporation debt for a period of less than 30 days ending on the control distribution date is evidence of non-qualification.

(ii) *Evidence of qualification.* The fact that the creditor holds the refinanced historical distributing corporation debt for a period of at least 30 days ending on the control distribution date is evidence of qualification.

(4) *Dominion or control of cash proceeds of refinanced distributing corporation debt—(i) Substantial evidence of non-qualification.* The distributing corporation's legal or practical dominion or control over any proceeds of the refinanced historical distributing corporation debt (as determined in accordance with § 1.357-2(e)(2)) is substantial evidence of non-qualification.

(ii) *Substantial evidence of qualification.* The distributing corporation's lack of legal or practical dominion or control over any proceeds of the refinanced historical distributing corporation debt (as determined in accordance with § 1.357-2(e)(2)) is substantial evidence of qualification.

(5) *Purpose of avoiding requirements or limitations of section 361.* The distributing corporation's issuance of the refinanced historical distributing corporation debt with a principal purpose of avoiding any of the requirements or limitations of section 361 is evidence of non-qualification.

(iii) *Safe harbor for direct issuance transactions.* A direct issuance transaction is treated as a qualifying debt elimination transaction under this paragraph (e)(4)(iii) only if all the following requirements are satisfied:

(A) The distributing corporation does not have, at any time, legal or practical dominion or control over any proceeds of the refinanced historical distributing corporation debt, as determined in accordance with § 1.357-2(e)(2).

(B) The creditor holds the refinanced historical distributing corporation debt for a period of not less than 30 days ending on the control distribution date.

(C) Each exchange of section 361 consideration for refinanced historical distributing corporation debt between the distributing corporation and the creditor is effectuated based on terms and conditions arrived at by the parties bargaining at arm's length.

(D) None of the distributing corporation, the controlled corporation, or any distributing corporation related person or controlled corporation related person—

(1) Participates in any profit gained by the creditor upon an exchange of section 361 consideration; or

(2) Limits by agreement or other arrangement any profit of the creditor described in paragraph (e)(4)(iii)(D)(1) of this section.

(E) The creditor acts for its own account with regard to all components of the direct issuance transaction.

(F) The creditor bears the risk of loss with respect to—

(1) The refinanced historical distributing corporation debt; and

(2) Any subsequent sale or other disposition of section 361 consideration transferred to the creditor to satisfy the refinanced historical distributing corporation debt.

(iv) *Prohibition regarding variable pricing and similar agreements.* The requirement set forth in paragraph (e)(4)(iii)(F) of this section is not satisfied if the creditor enters into a variable pricing agreement or similar arrangement with the distributing corporation (or a controlled corporation, distributing corporation related person, or controlled corporation related person) with regard to any section 361 consideration, including—

(A) True-up payments;

(B) Forward exchange agreements; and

(C) Any similar agreement or arrangement.

(f) *Transitorily eliminated eligible distributing corporation debt—(1) Overview.* The amount of section 361 consideration treated as transferred by a distributing corporation to a creditor of the distributing corporation in a qualifying debt elimination transaction (and, therefore, treated as distributed to shareholders pursuant to the plan of reorganization under section 361(b)(3) or (c)(3), as appropriate) is reduced by the amount of eligible distributing corporation debt that is transitorily eliminated pursuant to paragraph (f)(2)(i) of this section.

(2) *Transitory elimination—(i) General rule.* Unless the exception

described in paragraph (f)(2)(iii) of this section applies, a distributing corporation is treated as transitively eliminating an amount of eligible distributing corporation debt equal to the amount of such debt that the distributing corporation or a distributing corporation related person (determined immediately after the earliest applicable date) replaces after the earliest applicable date, directly or indirectly, with borrowing that the distributing corporation or any distributing corporation related person (determined immediately after the earliest applicable date) expects or is committed to, directly or indirectly, before that date.

(ii) *Borrowings not in the ordinary course.* For purposes of paragraph (f)(2)(i) of this section, a borrowing is not treated as expected if the borrowing results from—

(A) An event unrelated to the divisive reorganization and not in the ordinary course of business of the distributing corporation; and

(B) Changed circumstances that were not expected prior to the control distribution date (therefore, the borrowing is unrelated to, and demonstrably independent of, the divisive reorganization or any transaction related to the divisive reorganization).

(iii) *Borrowings in the ordinary course.* A borrowing described in paragraph (f)(2)(i) of this section is not treated as transitively eliminating eligible distributing corporation debt if the borrowing—

(A) Is incurred in the ordinary course of business of the distributing corporation or distributing corporation related person (as appropriate); and

(B) Would have been incurred by the distributing corporation or distributing corporation related person (as appropriate) without regard to the divisive reorganization or any transaction related to the divisive reorganization (that is, the borrowing is unrelated to, and demonstrably independent of, any such transaction).

(g) *Examples.* The following examples illustrate the application of the rules of this section. For purposes of these examples, the following facts apply: A distributing corporation (Distributing) transfers one of its businesses to a newly formed controlled corporation (Controlled) in exchange for Controlled stock and other section 361 consideration (contribution); Distributing distributes all the Controlled stock to its shareholders on a pro rata basis (distribution); Distributing transfers the other section 361 consideration to holders of Distributing debt (together with the

contribution and the distribution, the separation); Distributing properly files a plan of reorganization for the separation with the IRS pursuant to § 1.368–3(a)(5) that satisfies all requirements set forth in § 1.368–4; the separation qualifies as a divisive reorganization under sections 355 and 368(a)(1)(D); and the aggregate amount of adjusted basis of the assets transferred in the contribution exceeds the sum of the aggregate amount of liabilities assumed by Controlled plus the amount of money and the fair market value of any other property received by Distributing. Unless otherwise provided, no Distributing debt was transitively eliminated within the meaning of paragraph (f) of this section.

(1) *Example 1: Transfer of money or other property to related creditor—(i) Facts.* The section 361 consideration received by Distributing in the contribution consists of Controlled stock and \$100x of cash. Distributing has an outstanding debt of \$100x owed to a wholly owned subsidiary that is a Distributing related person (Subsidiary, and such debt, Internal Debt). Subsidiary has an outstanding debt of \$100x owed to an unrelated ultimate creditor (External Debt). The External Debt was incurred prior to the earliest applicable date. The Internal Debt qualifies as historical Distributing debt described in paragraph (c)(2)(i) of this section. The maximum amount of Distributing debt that can be satisfied with section 361 consideration, as determined under paragraph (d) of this section, is \$100x. Pursuant to the plan of reorganization, Distributing deposits the \$100x of cash received in the contribution in a segregated account. Subsequently, Distributing, pursuant to the plan of reorganization, transfers the \$100x of cash to Subsidiary in satisfaction of the Internal Debt (which Subsidiary deposits into a segregated account), and Subsidiary transfers the \$100x of cash to the unrelated ultimate creditor in satisfaction of the External Debt. The transfers from Distributing to Subsidiary, and from Subsidiary to the unrelated ultimate creditor, occur no later than the end of the 12-month period beginning on the date that Distributing receives the \$100x of cash from Controlled. Each transaction, creditor (Subsidiary and unrelated ultimate creditor), and debt (Internal Debt and External Debt) is identified and described in the plan of reorganization with regard to the separation.

(ii) *Analysis.* Distributing's transfer of the \$100x of cash to Subsidiary satisfies all requirements under this section and § 1.361–3(c)(2)(i) to be treated as a

distribution to Distributing's shareholders pursuant to the plan of reorganization for purposes of § 1.361–3(c)(1). *See* paragraph (a) of this section. First, each of Distributing and Subsidiary deposits the \$100x of cash they received into a segregated account. *See* § 1.361–3(c)(2)(i)(A). Second, Distributing's transfer of the \$100x of cash to Subsidiary is a transfer to a qualifying creditor because, pursuant to the plan of reorganization, Subsidiary transfers the \$100x of cash to an unrelated ultimate creditor by no later than the end of the 12-month period beginning on the date Distributing receives the \$100x of cash from Controlled (*see* paragraph (b)(2)(ii)(A)(1) of this section), the Internal Debt qualifies as historical distributing corporation debt and therefore is eligible distributing corporation debt, the External Debt is in existence as of the earliest applicable date (*see* paragraphs (a)(2) and (b)(2)(ii)(B) of this section), and each transfer of the \$100x provided by Controlled, each of the Internal Debt and External Debt, and each of Subsidiary and the unrelated ultimate creditor, is identified and described in the plan of reorganization (*see* paragraph (b)(2)(ii)(C) of this section). Second, the amount of historical distributing corporation debt satisfied by Distributing (that is, \$100x) does not exceed the maximum amount of distributing corporation debt determined under paragraph (d) of this section (that is, \$100x). *See* paragraph (a)(3) of this section. Lastly, the transfer of the \$100x of cash by Distributing to Subsidiary in satisfaction of the Internal Debt is a qualifying original creditor exchange under paragraph (e)(2) of this section. *See* paragraph (a)(4) of this section.

(2) *Example 2: Refinancing of historical distributing corporation debt—(i) Facts.* The section 361 consideration received by Distributing in the contribution consists of Controlled stock and \$100x of cash. Distributing has an outstanding \$100x debt owed to an unrelated creditor that is a qualifying creditor (Distributing debt). The Distributing debt was incurred before the earliest applicable date and has an original term that ends after the date of the contribution. This debt was identified in the plan of reorganization. Before the date of the contribution, but after the earliest applicable date, Distributing refinances the Distributing debt with a bank that is a qualifying creditor (refinanced Distributing debt). The incurrence of the refinanced Distributing debt is not part of a plan to incur additional debt

prohibited by paragraph (c)(2)(ii)(B) of this section, because Distributing needed to refinance the Distributing debt in response to an identifiable, material, and unexpected delay in the date of the contribution. Thereafter, Distributing satisfies the refinanced Distributing debt through an intermediated exchange that is a qualifying debt elimination transaction under paragraph (e)(3) of this section (Distributing intermediated exchange). The Distributing debt refinancing and the Distributing intermediated exchange are described and identified in the amended plan of reorganization for the separation.

(ii) *Analysis.* The refinanced Distributing debt is treated as historical distributing corporation debt because it satisfies the requirements for the refinancing exception set forth in paragraph (c)(2)(ii) of this section. First, the refinanced Distributing debt is a refinancing of historical distributing corporation debt (that is, the original Distributing debt). See paragraph (c)(2)(ii)(A)(1) of this section. Second, Distributing did not refinance the Distributing debt as part of a plan to incur additional debt prohibited by paragraph (c)(2)(ii)(B) of this section. Third, the refinanced Distributing debt was eliminated by Distributing through a qualifying debt elimination transaction under paragraph (e)(3) of this section. See paragraph (c)(2)(ii)(C) of this section. Lastly, the qualifying debt elimination transaction and the refinancing of the Distributing debt are described and identified in the amended plan of reorganization for the separation. See paragraph (c)(2)(ii)(D) of this section and proposed § 1.368–4(d)(1)(iv). Accordingly, the refinanced Distributing debt is eligible to be satisfied with section 361 consideration under paragraph (a) of this section. See paragraph (c)(1) of this section.

(3) *Example 3: Eight-quarterly-average test—(i) Facts.* The section 361 consideration received by Distributing in the contribution consists of Controlled stock and \$100x of cash. As of the earliest applicable date (July 10, 2025), Distributing has outstanding debt of \$180x owed to an unrelated creditor that is a qualifying creditor (Distributing debt). The \$180x of Distributing debt consists of three loans: a \$100x loan incurred in the eighth fiscal quarter that ended immediately before the earliest applicable date (September 30, 2023); a \$60x loan incurred in the first fiscal quarter that ended immediately before the earliest applicable date (June 30, 2025); and a \$20x loan incurred in the first fiscal quarter that ended immediately before the earliest

applicable date (June 30, 2025). The three loans that comprise the \$180x of Distributing debt have an original term that ends after the date of the contribution, as identified in the plan of reorganization. Controlled assumes the \$20x loan in the contribution.

(ii) *Analysis.* All \$180x of the Distributing debt qualifies as historical Distributing debt, and therefore eligible Distributing debt, because Distributing incurred each of the debts before the earliest applicable date and each of the debts has an original term that ends after the date of the contribution and is identified in the plan of reorganization. See paragraph (c)(2)(i) of this section. However, the maximum amount of eligible Distributing debt that Distributing can satisfy with section 361 consideration is limited under paragraphs (c)(3) and (d) of this section. The aggregate amount of Distributing debt is equal to \$180x (that is, the remaining principal amount of all historical Distributing debt as of the earliest applicable date). See paragraph (c)(3)(ii)(A) of this section. The aggregate amount of Distributing debt determined under the eight-quarterly-average test is equal to \$110x (that is, the eight quarterly average of \$880x—the \$180x of Distributing debt outstanding at the close of the first fiscal quarter ending immediately before the earliest applicable date and the \$100x of Distributing debt outstanding at the close of each of the preceding seven fiscal quarters $((\$180x \times 1) + (\$100x \times 7))/8 = \$110x$). See paragraph (d)(2) of this section. Accordingly, the maximum amount of eligible Distributing debt that Distributing can satisfy with the section 361 consideration received from Controlled is \$90x (that is, the lesser of the \$180x of eligible Distributing debt and the \$110x of Distributing debt determined under the eight-quarterly-average test, reduced by the \$20x of Distributing debt assumed by Controlled in the contribution). See paragraph (d)(1) of this section.

(4) *Example 4: Amount of distributing corporation debt under revolving credit agreement—(i) Facts.* Distributing is the debtor under a revolving credit agreement entered into before the earliest applicable date with an unrelated creditor that is a qualifying creditor. The revolving credit agreement does not expire until after the date of the contribution, and the agreement is identified in the plan of reorganization for the separation. Distributing's credit limit under the agreement is \$100x. As of the earliest applicable date, Distributing's outstanding balance under the agreement is \$50x. After that date, but prior to the control

distribution date, Distributing's outstanding balance under the agreement decreases to \$40x and then subsequently increases to \$80x.

(ii) *Analysis.* The revolving credit agreement qualifies as historical distributing corporation debt because Distributing entered into the agreement before the earliest applicable date, the agreement does not expire until after the date of the contribution, and the agreement is identified in the plan of reorganization for the separation. See paragraph (c)(2)(iii) of this section. Although Distributing's credit limit under the revolving credit agreement is \$100x, the maximum amount under the agreement that Distributing can satisfy with section 361 consideration is \$40x (that is, the lesser of the outstanding balance as of the earliest applicable date (\$50x) and the lowest balance under the agreement beginning on the earliest applicable date and ending on the control distribution date (\$40x). See paragraph (c)(3)(ii)(C) of this section.

(5) *Example 5: Effect of offsetting debts on amount of historical distributing corporation debt—(i) Facts.* As of the earliest applicable date, Distributing has an outstanding \$100x debt owed to an unrelated creditor (Creditor) that is a qualifying creditor (Distributing debt). The Distributing debt is historical Distributing debt under paragraph (c)(2)(i) of this section, and therefore qualifies as Distributing debt eligible to be satisfied with section 361 consideration under paragraph (a)(2) of this section. See paragraphs (c)(1) and (2) of this section. As of the earliest applicable date, Creditor also has an outstanding \$50x debt owed to Distributing (Creditor debt).

(ii) *Analysis.* In determining the aggregate amount of eligible Distributing debt under paragraph (c)(3) of this section, the amount of eligible Distributing debt must be reduced by the aggregate principal amount of any debt for which Distributing is a creditor and the debtor is the Creditor with respect to that Distributing debt. See paragraph (c)(3)(iii) of this section (requiring offsetting debts to be taken into account). Accordingly, the aggregate amount of eligible Distributing debt is \$50x (that is, the \$100x of Distributing debt reduced by the \$50x of Creditor debt).

(6) *Example 6: Qualifying original creditor exchange—(i) Facts.* The section 361 consideration received by Distributing in the contribution consists of Controlled stock and \$100x of Controlled securities. As of the earliest applicable date, Distributing has an outstanding \$100x debt owed to an unrelated creditor (Creditor) that is a

qualifying creditor (Distributing debt). The Distributing debt has an original term that ends after the date of the contribution and is identified in the plan of reorganization. The maximum amount of Distributing debt determined under paragraph (d) of this section that can be satisfied with section 361 consideration is \$100x. Pursuant to the plan of reorganization for the separation, Distributing transfers the \$100x of Controlled securities received from Controlled directly to Creditor in satisfaction of the Distributing debt. This transfer does not qualify as a qualifying intermediated exchange under paragraph (e)(3) of this section or as a qualifying direct issuance transaction under paragraph (e)(4) of this section.

(ii) *Analysis.* The Distributing debt qualifies as historical distributing corporation debt because Distributing incurred the debt before the earliest applicable date and that debt has an original term that ends after the date of the contribution and is identified in the plan of reorganization. *See* paragraph (c)(2)(i) of this section. Creditor is a qualifying creditor because Creditor holds historical distributing corporation debt and does not run afoul of the related-creditor prohibition under paragraph (b)(2)(i) of this section. *See* paragraph (b)(1) of this section. The amount of Distributing debt satisfied in the transaction (that is, \$100x) does not exceed the maximum amount determined under paragraph (d) of this section (that is, \$100x). Distributing's transfer of the \$100x of Controlled securities directly to Creditor in satisfaction of Distributing debt is a qualifying original creditorexchange, and therefore is a qualifying debt elimination transaction. *See* paragraph (e)(2) of this section. Accordingly, the transfer of \$100x of Controlled securities to Creditor in satisfaction of Distributing debt is treated as a distribution by Distributing to its shareholders pursuant to the plan of reorganization. *See* paragraph (a) of this section.

(7) *Example 7: Not a qualifying direct issuance transaction—(i) Facts.* The facts are the same as in paragraph (g)(6)(i) of this section (*Example 6*), except for the following. In anticipation of the divisive reorganization, Distributing intends to issue new debt to Creditor and use the proceeds to satisfy historical Distributing debt on a date following the contribution date. Accordingly, after the earliest applicable date, and as part of a prearranged, integrated plan with Creditor, Distributing carries out the following transactions. First, Distributing directly

issues new debt to Creditor (new Distributing debt) in exchange for \$100x. Distributing intends to transfer to Creditor the Controlled securities Distributing receives in the contribution to satisfy the new Distributing debt (collectively, the direct issuance transaction). On a date following the contribution, Distributing uses the \$100x of proceeds from the new Distributing debt to repay the historical Distributing debt. Also following the date of the contribution, Distributing transfers the Controlled securities to Creditor in exchange for the refinanced Distributing debt (securities-for-debt exchange).

(ii) *Analysis.* The securities-for-debt exchange is not carried out through a qualifying debt elimination transaction. Distributing incurred the refinanced Distributing debt after the earliest applicable date and does not satisfy the requirements for the refinancing exception in paragraph (c)(2)(ii) of this section. The direct issuance transaction fails to qualify for the safe harbor for qualifying direct issuance transactions under paragraph (e)(4)(iii) of this section because Distributing had dominion and control over the direct issuance proceeds. *See* paragraph (e)(4)(iii)(A) of this section. In addition, the dominion and control that Distributing had over the direct issuance proceeds provides substantial evidence that the direct issuance transaction fails to qualify as a qualifying debt elimination transaction under the facts-and-circumstances test set forth in paragraph (e)(4)(ii) of this section. *See* paragraph (e)(4)(ii)(B)(4) of this section. In addition, the securities-for-debt exchange was carried out pursuant to an arrangement that comprises part of a prearranged, integrated plan, and therefore also provides substantial evidence that the direct issuance transaction fails to qualify as a qualifying debt elimination transaction. *See* paragraph (e)(4)(ii)(B)(1) of this section. Accordingly, the exchange with Creditor is not a qualifying original creditorexchange, a qualifying intermediated exchange, or a qualifying direct issuance transaction. *See* paragraphs (e)(2), (3), and (4) of this section. As a result, Distributing's transfer of the Controlled securities to Creditor is not treated as a distribution to its shareholders pursuant to the plan of reorganization under § 1.361–4(a)(2)(ii). *See* paragraph (a) of this section.

(8) *Example 8: Qualifying intermediated exchange—(i) Facts—(A) Historical Distributing debt.* The section 361 consideration received by Distributing in the contribution consists

of Controlled stock and \$100x of Controlled securities. As of the earliest applicable date, Distributing has outstanding debt of \$100x owed to an unrelated creditor that is a qualifying creditor (Distributing debt). Furthermore, that debt has an original term that ends after the date of the contribution and is identified in the plan of reorganization.

(B) *Intermediated exchange.* Pursuant to the plan of reorganization for the separation, Distributing engages an intermediary to facilitate the transfer of the \$100x of Controlled securities in satisfaction of the Distributing debt (intermediated exchange). As described in the plan of reorganization, the intermediary will acquire the \$100x of Distributing debt directly from the creditor (and not from Distributing, Controlled, or any Distributing related person or Controlled related person). The intermediary will not hold that debt for the benefit of Distributing, Controlled, or any Distributing related person or Controlled related person. All exchanges of Controlled securities for Distributing debt between Distributing and the intermediary are effectuated based on terms and conditions arrived at by the parties bargaining at arm's length. None of Distributing, Controlled, or any Distributing related person or Controlled related person participates in any profit gained by the intermediary upon an exchange of Controlled securities or limits by agreement or other arrangement any such profit. The intermediary acts for its own account with regard to all components of the intermediated exchange, bears the risk of loss with respect to the Distributing debt and any subsequent sale or other disposition of the Controlled securities, and does not enter into a variable pricing or similar agreement with Distributing, Controlled, or any Distributing related person or Controlled related person with regard to the Controlled securities. The intermediary holds the Distributing debt for a period of not less than 30 days ending on the distribution date. All applicable requirements set forth in paragraphs (b) through (d) of this section are satisfied.

(ii) *Analysis.* The intermediated exchange satisfies all requirements set forth in paragraph (e)(3) of this section to qualify as a qualifying debt elimination transaction. *See* paragraphs (b) through (d) and (e)(3) of this section.

§ 1.361–6 Applicability date.

(a) *Applicability date.* The rules of §§ 1.361–1 through 1.361–5 apply to transactions intended to qualify under section 361 of the Code for which the

earliest of the following dates occurs after [DATE OF PUBLICATION OF FINAL REGULATIONS IN THE FEDERAL REGISTER]:

(1) The date of the first public announcement (as defined in § 1.355–7(h)(10)) of the transaction.

(2) The date of entry by the taxpayer into a written agreement to engage in the transaction.

(3) The date of approval of the transaction by the board of directors of the taxpayer.

(4) The date of a court order (or a plan confirmed, or a sale approved, by order of a court) in a title 11 or similar case (as defined in section 368(a)(3)(A) of the Code), but only if the taxpayer was a debtor in a case before such court.

(5) The date a ruling request for the transaction is submitted to the IRS.

■ **Par. 14.** Section 1.368–1 is amended by revising paragraph (c) to read as follows:

§ 1.368–1 Purpose and scope of exception of reorganization exchanges.

* * * * *

(c) *Scope of exception for reorganization exchanges*—(1)

Overview. The reorganization provisions of part III of subchapter C of chapter 1 of the Code (part III) consist of the following categories of rules:

(i) *Definitional provisions* (as described in paragraph (c)(2)(i) of this section), the satisfaction of which qualify persons for potential nonrecognition treatment under the Code. The purpose of these definitional provisions is to limit the scope of transactions, and therefore the parties to such transactions (and other relevant persons, such as shareholders of a party to a reorganization), to which certain operative provisions apply.

(ii) *Operative provisions* (certain of which are described in greater detail in paragraph (c)(2)(ii) of this section), the satisfaction of which qualify a party for partial or complete nonrecognition treatment under part III. The purpose of these operative provisions is to further limit the scope of transactions, and therefore the parties to such transactions (and other relevant persons, such as shareholders of a party to a reorganization), that qualify for nonrecognition treatment (in whole or in part) under part III.

(2) *Definitional and operative provisions.* The definitional and operative provisions referred to in paragraph (c)(1) of this section include the following:

(i) *Definitional provision.* Section 368(a)(1) limits the definition of the term *reorganization* to seven types of transactions (including triangular

reorganizations, which are variants of such transactions). All transactions and series of transactions that do not satisfy any of the definitional provisions under section 368(a)(1) are excluded from treatment as a reorganization under part III.

(ii) *Operative provisions for transactions that qualify as reorganizations*—(A) *Section 354.*

Section 354 generally provides that a shareholder or security holder of a target corporation recognizes no gain or loss if the target corporation is a party to a reorganization and the shareholder or security holder exchanges solely stock or securities of the target corporation for the stock or securities of an acquiring corporation pursuant to the plan of reorganization.

(B) *Section 355.* Section 355 generally provides that, if all requirements are satisfied, shareholders and security holders of a distributing corporation recognize no gain or loss (and do not include any amount in income) on the receipt of controlled corporation stock or securities with respect to, or in exchange for, their distributing corporation stock.

(C) *Section 356.* Section 356 of the Code generally provides that, if a shareholder of a target corporation receives stock or securities of the corporation in an exchange to which section 354 or 355 otherwise would apply, and also receives money or other property, then that shareholder recognizes gain or income (as determined pursuant to the gain calculation and characterization rules under section 356).

(D) *Section 357.* Section 357 of the Code generally provides that an assumption by an acquiring corporation of a liability of a target corporation is not treated as money received by the target corporation (and, therefore, the target corporation recognizes no gain or loss as a result of the liability assumption).

(E) *Section 361(a) and (b)—Transfers of stock or securities.* Section 361(a) and (b) of the Code generally provide that a target corporation recognizes no gain or loss if that corporation is a party to a reorganization and exchanges property, pursuant to the plan of reorganization, solely for stock or securities in an acquiring corporation that is a party to the reorganization.

(F) *Section 361(c)—Distributions of qualified property by target corporation.* Section 361(c) generally provides that a target corporation recognizes no gain or loss on the distribution to its shareholders or transfer to its creditors of qualified property (as defined in

section 361(c)(2)(B)) pursuant to the plan of reorganization.

(3) *Applicability date.* This paragraph (c) applies to transactions intended to qualify under section 368 of the Code for which the earliest of the following dates occurs after [DATE OF PUBLICATION OF FINAL REGULATIONS IN THE FEDERAL REGISTER]:

(i) The date of the first public announcement (as defined in § 1.355–7(h)(10)) of the transaction.

(ii) The date of entry by the taxpayer into a written agreement to engage in the transaction.

(iii) The date of approval of the transaction by the board of directors of the taxpayer.

(iv) The date of a court order (or a plan confirmed, or a sale approved, by order of a court) in a title 11 or similar case (as defined in section 368(a)(3)(A) of the Code), but only if the taxpayer was a debtor in a case before such court.

(v) The date a ruling request for the transaction is submitted to the IRS.

* * * * *

■ **Par. 15.** Section 1.368–2 is amended by revising paragraphs (f) and (g) to read as follows:

§ 1.368–2 Definitions of terms and operative rules.

* * * * *

(f) *Party to a reorganization*—(1)

Overview. The provisions described in § 1.368–1(c)(2)(i) and (ii) apply solely to a transaction that is carried out by, between, or among one or more parties to a reorganization.

(2) *Scope of party to a reorganization.* For purposes of determining the scope of the transaction or series of transactions to which the provisions described in § 1.368–1(c)(2)(i) and (ii) apply, the term *party to a reorganization* is limited solely to a corporation that—

(i) Is described in paragraph (f)(3) of this section; and

(ii) Is determined to be a party to a reorganization pursuant to paragraph (f)(4) of this section.

(3) *Definition*—(i) *In general.* The term *party to a reorganization* includes—

(A) A corporation resulting from a transaction that qualifies as a reorganization;

(B) Both corporations, in a transaction that qualifies as a reorganization in which one corporation acquires stock or properties of another corporation; and

(C) A corporation controlling an acquiring corporation in a transaction that qualifies as a triangular reorganization (as defined in § 1.358–6(b)(2)) if stock of the controlling corporation is used in the acquisition of stock or properties.

(ii) *Certain transfers of assets or stock in reorganizations*—(A) *In general.* If a transaction otherwise qualifies as a reorganization, a corporation remains a party to the reorganization even though stock or assets acquired by the acquiring corporation pursuant to the plan of reorganization are transferred in a transaction described in paragraph (k) of this section. For example, a corporation does not cease to be a party to the reorganization solely because part or all of the assets acquired pursuant to the plan of reorganization are transferred to a partnership in which the transferor is a partner, so long as the continuity of business enterprise requirement is satisfied. See § 1.368–1(d).

(B) *Triangular reorganizations.* If a transaction otherwise qualifies as a reorganization under section 368(a)(1)(B) or as a reverse triangular merger (as defined in § 1.358–6(b)(2)(iii)), the target corporation (in the case of a transaction that otherwise qualifies as a reorganization under section 368(a)(1)(B)) or the surviving corporation (in the case of a transaction that otherwise qualifies as a reverse triangular merger) remains a party to the reorganization even though its stock or assets acquired pursuant to the plan of reorganization are transferred in a transaction described in paragraph (k) of this section. If a transaction otherwise qualifies as a forward triangular merger (as defined in § 1.358–6(b)(2)(i)), a triangular B reorganization (as defined in § 1.358–6(b)(2)(iv)), a triangular C reorganization (as defined in § 1.358–6(b)(2)(ii)), or a reorganization under section 368(a)(1)(G) by reason of section 368(a)(2)(D), the acquiring corporation remains a party to the reorganization even though its stock is transferred in a transaction described in paragraph (k) of this section.

(4) *Determination of party to the reorganization*—(i) *Status generally based on plan of reorganization.* Subject to paragraph (f)(4)(ii) of this section, the status of a corporation as a party to a reorganization is established solely by the inclusion and identification of that corporation as a party to the reorganization in a plan of reorganization (as defined in § 1.368–4) that is filed with the IRS pursuant to § 1.368–3(a)(5).

(ii) *Status determined by Commissioner based on Federal income tax principles.* Notwithstanding the inclusion or omission of a corporation as a party to a reorganization in a plan of reorganization filed by the taxpayer with the IRS pursuant to § 1.368–3(a)(5), the status of a corporation as a party to the reorganization may be determined by the Commissioner based on the

correction of that plan of reorganization in accordance with § 1.368–4(c)(2), taking into account—

(A) All facts and circumstances regarding the transaction or series of transactions; and

(B) All relevant provisions of the Code and general principles of Federal income tax law, including the step transaction doctrine.

(5) *Examples.* The following examples illustrate the application of the rules of this paragraph (f).

(i) *Example 1: Statutory merger*—(A) *Facts.* Pursuant to State law, Corporation A merges into Corporation B in a transaction qualifying as a reorganization under section 368(a)(1)(A). A plan of reorganization is filed with the IRS pursuant to § 1.368–3(a)(5) that identifies A and B as parties to the reorganization.

(B) *Analysis.* A and B are both described in paragraph (f)(3)(i)(B) of this section. Further, the status of both A and B as parties to the reorganization is established by their identification in the plan of reorganization. See paragraph (f)(4)(i) of this section. Accordingly, each of A and B is a party to a reorganization for purposes of determining the scope of the transactions to which the definitional and operative provisions described in § 1.368–1(c)(2)(i) and (ii) apply. See paragraph (f)(2) of this section.

(ii) *Example 2: B reorganization*—(A) *Facts.* Corporation C owns all the stock of Corporation D. D acquires all the stock of Corporation E solely in exchange for voting stock of D in a transaction qualifying as a reorganization under section 368(a)(1)(B). A plan of reorganization is filed with the IRS pursuant to § 1.368–3(a)(5) that identifies D and E as parties to the reorganization.

(B) *Analysis.* With respect to D and E, the analysis is the same as in paragraph (f)(5)(i)(B) of this section (*Example 1*). C is not described in paragraph (f)(3) of this section. Accordingly, C is not a party to the reorganization.

(iii) *Example 3: Triangular C reorganization*—(A) *Facts.* The facts are the same as in paragraph (f)(5)(ii)(A) of this section (*Example 2*), except that D acquires all the assets of E solely in exchange for voting stock of C, and E distributes the stock of C received in the exchange to E's shareholders, in a transaction that qualifies as a reorganization under section 368(a)(1)(C). A plan of reorganization is filed with the IRS pursuant to § 1.368–3(a)(5) that identifies C, D, and E as parties to the reorganization.

(B) *Analysis.* With respect to D and E, the analysis is the same as in paragraph

(f)(5)(i)(B) of this section (*Example 1*). C is described in paragraph (f)(3)(i)(C) of this section and is identified as a party to the reorganization in the plan of reorganization. Accordingly, C also is a party to a reorganization for purposes of determining the scope of the transactions to which the definitional and operative provisions described in § 1.368–1(c)(2)(i) and (ii) apply. See paragraph (f)(2) of this section.

(iv) *Example 4: Transfer of assets acquired in a reorganization*—(A) *Facts.* The facts are the same as in paragraph (f)(5)(iii)(A) of this section (*Example 3*), except that, after the reorganization, D transfers all the assets of E received in the exchange to a partnership in which D owns a significant interest. The partnership continues E's historic business.

(B) *Analysis.* The continuity of business enterprise requirement continues to be satisfied after D's transfer of the E assets to the partnership. See § 1.368–1(d)(4)(iii). Consequently, none of C, D, or E ceases to be a party to the reorganization. See paragraph (f)(3)(ii)(B) of this section.

(v) *Example 5: Transfer of stock acquired in a triangular reorganization.* The facts are the same as in paragraph (f)(5)(iii)(A) of this section (*Example 3*), except that E merges into D under State law solely in exchange for C stock in a transaction qualifying as a reorganization under section 368(a)(1)(A) by reason of section 368(a)(2)(D). After the reorganization, C transfers all the stock of D to newly formed Corporation G in exchange for all the stock of G.

(B) *Analysis.* The analysis is the same as in paragraph (f)(5)(iii)(B) of this section. Additionally, the continuity of business enterprise requirement continues to be satisfied after C's transfer of the D stock to G. See § 1.368–1(d)(4)(iii). Accordingly, D does not cease to be a party to the reorganization by reason of the transfer. See paragraph (f)(3)(ii) of this section.

(vi) *Example 6: Divisive reorganization*—(A) *Facts.* Pursuant to a plan of reorganization for a transaction that qualifies as a reorganization under sections 368(a)(1)(D) and 355, Corporation F transfers one of its businesses to newly formed Corporation G in exchange for all the stock of G and then distributes all the G stock to F's shareholders. The plan of reorganization, which is filed with the IRS pursuant to § 1.368–3(a)(5), identifies F and G as parties to the reorganization.

(B) *Analysis.* The analysis is the same as in paragraph (f)(5)(i)(B) of this section (*Example 1*).

(6) *Applicability date.* The rules of this paragraph (f) apply to transactions intended to qualify under section 368 of the Code for which the earliest of the following dates occurs after [date of publication of final regulations in the **Federal Register**]:

(i) The date of the first public announcement (as defined in § 1.355–7(h)(10)) of the transaction.

(ii) The date of entry by the taxpayer into a written agreement to engage in the transaction.

(iii) The date of approval of the transaction by the board of directors of the taxpayer.

(iv) The date of a court order (or a plan confirmed, or a sale approved, by order of a court) in a title 11 or similar case (as defined in section 368(a)(3)(A) of the Code), but only if the taxpayer was a debtor in a case before such court.

(v) The date a ruling request for the transaction is submitted to the IRS.

(g) [Reserved]

* * * * *

■ **Par. 16.** Section 1.368–3 is amended by:

■ a. Revising paragraphs (a)(3)(iv) and (4);

■ b. Adding paragraph (a)(5) and

■ c. Revising paragraph (e).

The revisions and addition read as follows:

§ 1.368–3 Records to be kept and information to be filed with returns.

(a) * * *

(3) * * *

(iv) Property not described in paragraph (a)(3)(i), (ii), or (iii) of this section;

(4) The date and control number of any private letter ruling(s) issued by the Internal Revenue Service in connection with this reorganization; and

(5) A copy of the plan of reorganization satisfying the requirements set forth in § 1.368–4(d).

* * * * *

(e) *Applicability date*—(1) *In general.* This section applies to any taxable year beginning on or after May 30, 2006. However, taxpayers may apply this section to any original Federal income tax return (including any amended return filed on or before the due date (including extensions) of such original return) timely filed on or after May 30, 2006. For taxable years beginning before May 30, 2006, see § 1.368–3 as contained in 26 CFR part 1 in effect on April 1, 2006.

(2) *Paragraphs (a)(3) and (b)(3).* Paragraphs (a)(3) and (b)(3) of this section apply with respect to reorganizations occurring on or after March 28, 2016, and also with respect to reorganizations occurring before such

date as a result of an entity classification election under § 301.7701–3 of this chapter filed on or after March 28, 2016, unless such reorganization is pursuant to a binding agreement that was in effect prior to March 28, 2016 and at all times thereafter.

(3) *Paragraph (a)(5).* Paragraph (a)(5) of this section applies to transactions intended to qualify under section 368 of the Code for which the earliest of the following dates occurs after [date of publication of final regulations in the **Federal Register**]:

(i) The date of the first public announcement (as defined in § 1.355–7(h)(10)) of the transaction.

(ii) The date of entry by the taxpayer into a written agreement to engage in the transaction.

(iii) The date of approval of the transaction by the board of directors of the taxpayer.

(iv) The date of a court order (or a plan confirmed, or a sale approved, by order of a court) in a title 11 or similar case (as defined in section 368(a)(3)(A) of the Code), but only if the taxpayer was a debtor in a case before such court.

(v) The date a ruling request for the transaction is submitted to the IRS.

■ **Par. 17.** Section 1.368–4 is added to read as follows:

§ 1.368–4 Plan of reorganization.

(a) *Plan of reorganization*—(1) *Scope and purpose.* This section sets forth requirements and procedures for the determination of a plan of reorganization, including the scope of transactions properly included within that plan. The plan of reorganization serves to identify solely those transactions to which the definitional and operative provisions described in § 1.368–1(c)(2)(i) and (ii) apply. The plan of reorganization also serves to distinguish those qualifying transactions described in § 1.368–1(c)(2)(i) and (ii) from transactions to which the general recognition provisions of the Code (such as section 1001 of the Code) apply. The plan of reorganization is not to be construed as broadening the definition of a *reorganization* as set forth in section 368(a) of the Code.

(2) *Plan of reorganization to which definitional and operative provisions apply.* The provisions described in § 1.368–1(c)(2)(i) and (ii) apply solely to a transaction that is identified in, and carried out pursuant to—

(i) A plan of reorganization of a taxpayer described in paragraph (b)(1) or an amended plan of reorganization described in paragraph (f) of this section;

(ii) A plan of reorganization of a taxpayer that is corrected by the

Commissioner under paragraph (b)(2)(i) of this section; or

(iii) A plan of reorganization that is identified by the Commissioner under paragraph (b)(2)(ii) of this section.

(3) *Failure to satisfy requirements.* The failure of a taxpayer to comply with any particular requirement or procedure set forth in this section (including the failure to file a plan of reorganization with the IRS pursuant to § 1.368–3(a)(5)) does not, on its own, prevent a transaction or series of transactions from being considered part of the plan of reorganization, qualifying as a reorganization under a definitional provision, or qualifying for nonrecognition treatment (in whole or in part) under an operative provision.

(b) *Definition.* The term *plan of reorganization* means—

(1) A plan of reorganization of a taxpayer that—

(i) Satisfies all requirements set forth in paragraph (d) of this section; and

(ii) Is filed with the IRS pursuant to § 1.368–3(a)(5); or

(2) A plan of reorganization that results from—

(i) The Commissioner correcting a plan of reorganization of a taxpayer; or

(ii) The Commissioner identifying a plan of reorganization for a taxpayer (in the event of a failure to file a plan of reorganization with the IRS pursuant to § 1.355–5(a)(2)).

(c) *Determination of plan of reorganization*—(1) *Status generally based on plan of reorganization filed by taxpayer.* Except as provided in paragraph (c)(2) of this section, a taxpayer establishes the plan of reorganization for a transaction or series of transactions solely by—

(i) Satisfying all requirements set forth in paragraph (d) of this section; and

(ii) Filing the plan of reorganization with the IRS pursuant to § 1.368–3(a)(5).

(2) *Correction or identification of plan of reorganization due to taxpayer's failure to file a complete plan of reorganization*—(i) *In general.* If a taxpayer files a plan of reorganization with the IRS that fails to satisfy any requirement set forth in paragraph (d) of this section, or if the taxpayer fails to file any plan of reorganization with the IRS, the Commissioner may correct or identify a plan of reorganization in accordance with paragraph (c)(2)(ii) of this section.

(ii) *Status of transactions as part of a plan of reorganization.* The Commissioner may determine that a transaction or series of transactions should be included in, or excluded from, a plan of reorganization described in paragraph (c)(2)(i) of this section based on—

(A) All facts and circumstances regarding the transaction or series of transactions; and

(B) All relevant provisions of the Code and general principles of Federal income tax law, including the step transaction doctrine.

(d) *Requirements for a plan of reorganization.* To qualify as a plan of reorganization described in paragraph (b)(1) of this section, the taxpayer must satisfy all requirements set forth in paragraphs (d)(1) through (3) of this section. For purposes of this paragraph (d) and paragraph (e) of this section, the term *official records* includes a contract or other written agreement to which the taxpayer is a party, a resolution or other document authorized by the taxpayer's board of directors, or other document filed with the U.S. Securities and Exchange Commission (SEC) or other Federal regulatory agency.

(1) *Documentation requirement.* The plan of reorganization is provided in a single, comprehensive document that—

(i) Identifies all parties to the reorganization (as determined pursuant to § 1.368–2(f));

(ii) Identifies all transactions properly included in the plan of reorganization (as determined pursuant to paragraph (e) of this section);

(iii) Identifies all liabilities (including debt) to be assumed by the acquiring corporation and the obligees (or creditors) of those liabilities;

(iv) Identifies all debt of the target corporation that will be satisfied with section 361 consideration (as defined in § 1.361–1(b)(49)) (including all debt intended to qualify for the refinancing exception for historical distributing corporation debt under § 1.361–5(c)) and the creditors of that debt;

(v) Describes the intended Federal income tax treatment of the transactions described in paragraph (d)(1)(ii) of this section;

(vi) Describes the business purpose for each transaction described in paragraph (d)(1)(ii) of this section; and

(vii) Establishes that the readjustments involved in transactions described in paragraph (d)(1)(ii) of this section are undertaken to facilitate the continuance of the business of a corporation a party to the reorganization.

(2) *Adoption of plan of reorganization.* Prior to the first step of the reorganization, a plan of reorganization described in paragraph (b)(1)(i) of this section or an original plan of reorganization that becomes the amended plan of reorganization (within the meaning of paragraph (f) of this section), as applicable, is finalized and

adopted by the party to the reorganization, as established by—

(i) The acts of the party's respective duly authorized officers and directors; and

(ii) The official records of the party to the reorganization.

(3) *Completion of plan of reorganization—(i) Expeditious prosecution of plan of reorganization—(A) General rule.* In accordance with paragraph (d)(3)(iii) of this section, taking into account all facts and circumstances (including the one or more business purposes for the reorganization), all parties to the reorganization complete the plan of reorganization as expeditiously as practicable.

(B) *24-month presumption.* The requirement in paragraph (d)(3)(i)(A) of this section is presumed to be satisfied if, in accordance with paragraph (d)(3)(ii) of this section, all parties to the reorganization complete the plan of reorganization within the 24-month period beginning on the date of the first step of the plan of reorganization.

(ii) *Completion of entire plan of reorganization—(A) General rule.* All transactions included in a plan of reorganization must be carried out in the manner described in the plan of reorganization.

(B) *Failure to complete entire plan of reorganization.* Except as provided in paragraph (f) of this section, if the requirement of paragraph (d)(3)(ii)(A) of this section is not satisfied, the provisions described in § 1.368–1(c)(2)(i) and (ii) do not apply to the transaction (or series of transactions) unless the Commissioner determines the existence of a plan of reorganization.

(e) *Requirements for transactions to be treated as properly included in plan of reorganization.* The requirements set forth in this paragraph (e) must be satisfied for a transaction to be treated as properly included in a plan of reorganization. The existence of contingencies or conditions is not conclusive in determining whether a requirement of this paragraph (e) is satisfied.

(1) *Definite intent requirement—(i) General rule.* Prior to the first step of the plan of reorganization or an original plan of reorganization that becomes the amended plan of reorganization (within the meaning of paragraph (f) of this section), one or more parties to the reorganization evidences a definite intent to carry out the transaction through a written commitment in one or more official records of the party that substantiate the plan of reorganization.

(ii) *Section 355 transactions.* With regard to a control distribution (as

defined in § 1.355–1(a)(2)(iii)) that occurs in the next taxable year after the first distribution, the distributing corporation does not establish a definite intent under paragraph (e)(1)(i) of this section unless all distributions up to and including the control distribution are effectuated pursuant to a binding commitment of the distributing corporation. See § 1.355–2(e)(2)(ii).

(iii) *Relevancy of contemplated possibilities—(A) Contemplation irrelevant to taxpayer's determination.* The contemplation by a party that the party may carry out a transaction is not sufficient for the party to establish a definite intent to carry out that transaction, regardless of whether that contemplated transaction is included in an official record of a party.

(B) *Contemplation relevant to Commissioner's determination.* A party's contemplation of a transaction may be relevant for purposes of the correction or identification of a plan of reorganization by the Commissioner pursuant to paragraph (c)(2) of this section.

(2) *Proximate relationship requirement—(i) General rules.* Taking into account paragraphs (e)(2)(ii) and (iii) of this section:

(A) *Necessary or integral test for application of definitional provision.* A transaction is part of the plan of reorganization for a reorganization to which the provisions described in § 1.368–1(c)(2)(i) apply only if, on its own or as part of a series of transactions, the transaction is necessary to satisfy one or more requirements of a definitional provision described in § 1.368–1(c)(2)(i), or is an integral part of a series of transactions carried out to satisfy the requirements of the definitional provision intended to apply to the reorganization, as evidenced by a written commitment in one or more official records of the party to the reorganization.

(B) *But for, or integral to, test for application of operative provision.* A transaction is part of the plan of reorganization to which the provisions described in § 1.368–1(c)(2)(ii) apply only if, on its own or as part of a series of transactions, the transaction would not occur but for the reorganization that is covered by the plan of reorganization, or is an integral part of a series of transactions carried out to satisfy the requirements of the definitional provision intended to apply to the reorganization, as evidenced by a written commitment in one or more official records of the party to the reorganization.

(ii) *Existence of independent significance not determinative.* The

independent significance of a transaction (for example, the fact that the transaction has a separate business motive apart from the reorganization) does not preclude the satisfaction of the requirements under paragraph (e)(2)(i) of this section.

(iii) *Temporal proximity.* A transaction that takes place in close temporal proximity to one or more other transactions is not properly included in a plan of reorganization under paragraph (e)(2)(i) of this section unless Federal income tax principles (including the step transaction doctrine) would apply to determine that the transaction was in substance part of the plan of reorganization.

(3) *Business purpose consistency requirement.* A transaction, on its own or as part of a series of transactions is consistent with, and directly related to, one or more business purposes for the reorganization (for example, the transaction directly furthers one or more business purposes for the reorganization).

(f) *Amended plan of reorganization—*
(1) *Conditions.* If a taxpayer amends a plan of reorganization described in paragraph (b)(1) of this section (original plan of reorganization) after the first step of the original plan of reorganization (amended plan of reorganization), those amendments will not cause the taxpayer to fail to satisfy the requirements set forth in paragraph (d) of this section only if—

(i) Those amendments are in direct response to an identifiable, unexpected, and material change in market or business conditions that occurs after the date on which the original plan of reorganization is adopted by the party to the reorganization in the manner described in paragraph (d)(2) of this section;

(ii) The amendments are necessary to achieve the one or more business purposes for the reorganization; and

(iii) The amended plan of reorganization satisfies all requirements set forth in paragraph (d) of this section.

(2) *Consequences of plan of reorganization amended due to changed circumstances—*(i) *Qualifying amended plan of reorganization.* If the requirements set forth in paragraph (f)(1) of this section are satisfied, the provisions described in § 1.368–1(c)(2)(i) and (ii) will apply to transactions identified in, and carried out pursuant to, the amended plan of reorganization. That is, the Federal income tax consequences of all transactions included in the amended plan of reorganization will be determined based on that plan of

reorganization (and not on the original plan of reorganization).

(ii) *Non-qualifying amended plan of reorganization.* If an amended plan of reorganization fails to satisfy all requirements set forth in paragraph (f)(1) of this section, the Commissioner may correct or identify the amended plan of reorganization.

(g) *Examples.* The following examples illustrate the application of the rules of this section. For purposes of these examples, unless otherwise stated: terms defined in § 1.361–1(b) and used in these examples have the meaning given such terms in § 1.361–1(b); all transactions are completed within the 24-month period beginning on the date of the first transaction; all transactions qualify for the Federal income tax treatment intended by the taxpayers, as described in the facts of each example; and all corporations are calendar-year taxpayers.

(1) *Example 1: Creation of plan of reorganization—*(i) *Facts.* A target corporation (Target) transfers all its assets to an acquiring corporation (Acquiring) solely in exchange for stock of Acquiring and Acquiring's assumption of Target liabilities. Target distributes all the Acquiring stock to Target's shareholders. The transaction is intended to qualify as a reorganization under section 368(a)(1)(C). Target fails to file a plan of reorganization with the IRS pursuant to § 1.368–3(a)(5).

(ii) *Analysis.* Target's failure to file a plan of reorganization with the IRS pursuant to § 1.368–3(a)(5) does not, on its own, prevent the series of transactions from qualifying as a reorganization under section 368(a)(1)(C). See paragraph (a)(3) of this section. The Commissioner may identify a plan of reorganization for the series of transactions based on all facts and circumstances and all relevant provisions of the Code and general principles of Federal income tax law, including the step transaction doctrine. See paragraphs (b)(2)(ii) and (c)(2) of this section. The definitional and operative provisions described in § 1.368–1(c)(2)(i) and (ii) apply to the series of transactions identified in, and carried out pursuant to, the plan of reorganization identified by the Commissioner. See paragraph (a)(2)(iii) of this section.

(2) *Example 2: Correction of taxpayer's plan of reorganization—*(i) *Facts.* An acquiring corporation (Acquiring) acquires a target corporation (Target) through the following series of transactions. Acquiring first effectuates a tender offer for 51 percent of Target stock from Target shareholders solely for Acquiring voting stock (tender offer).

A subsidiary of Acquiring (Merger Sub) then merges into Target (statutory merger) in a transaction intended to qualify as a reverse subsidiary merger under section 368(a)(2)(E). In the statutory merger, Acquiring's Merger Sub stock is converted into Target stock, and each Target shareholder holding shares of the remaining 49 percent of Target stock exchanges its shares of Target stock for a combination of consideration, two-thirds of which is Acquiring stock and one-third of which is cash. Under general principles of Federal income tax law, including the step transaction doctrine, the tender offer and the statutory merger are treated as an integrated acquisition by Acquiring of all the Target stock. Target files a plan of reorganization with the IRS pursuant to § 1.368–3(a)(5) that satisfies all requirements set forth in paragraph (d) of this section, except that the plan of reorganization does not mention the tender offer.

(ii) *Analysis.* To determine whether the tender offer should be included in the plan of reorganization for the statutory merger, the Commissioner may examine all facts and circumstances regarding the series of transactions and apply all relevant provisions of the Code and general principles of Federal income tax law, including the step transaction doctrine. See paragraph (c)(2)(ii) of this section. Because the tender offer and the statutory merger are treated as an integrated series of transactions for Federal income tax purposes, the tender offer and the statutory merger are treated as an integrated acquisition for purposes of determining whether the transaction qualifies as a reverse subsidiary merger under section 368(a)(2)(E). Accordingly, the Commissioner may correct Target's plan of reorganization by including the tender offer. See paragraph (c)(2)(i) of this section. The definitional and operative provisions described in § 1.368–1(c)(2)(i) and (ii) apply to the transactions identified in, and carried out pursuant to, the plan of reorganization as corrected by the Commissioner. See paragraph (a)(2)(ii) of this section.

(3) *Example 3: Scope of plan of reorganization—distribution to equalize values—*(i) *Facts.* On June 30, 2025, Corporation X and Corporation Y decide to merge into newly formed Corporation Z. As reflected in a single, comprehensive document that satisfies the requirements set forth in paragraph (d)(1) of this section, the board of directors of each of X and Y approves the transaction pursuant to paragraph (d)(2) of this section, with the agreement that X and Y must be of equal value

when merged into Z. Consequently, to equalize the amount of its assets and Y's assets, and pursuant to a board resolution, X distributes \$100x in cash to its shareholders on September 30, 2025 (equalizing distribution). On October 31, 2025, X and Y consolidate under State law (X/Y consolidation) in a transaction intended to qualify as a reorganization described in section 368(a)(1)(A).

(ii) *Analysis.* The board resolution pursuant to which the equalizing distribution was made, and the single, comprehensive document that reflects the decision of both boards of directors that X and Y be of equal value when combined in the X/Y consolidation, evidence a definite intent, prior to the first step of the plan of reorganization, for X to make the equalizing distribution. *See* paragraph (e)(1) of this section. The equalizing distribution is an integral part of the X/Y consolidation because the equalizing distribution satisfies a condition identified by the boards of directors of X and Y for executing the X/Y consolidation (that is, to equalize the values of X and Y prior to the X/Y consolidation). *See* paragraph (e)(2)(i)(B) of this section. The equalizing distribution is consistent with, directly relates to, and therefore directly furthers the business purpose for the X/Y consolidation, because the X/Y consolidation is intended to effectuate a merger of equals. *See* paragraph (e)(3) of this section. Accordingly, the equalizing distribution is properly included in the plan of reorganization for the X/Y consolidation. *See* paragraph (e) of this section. Consequently, the Federal income tax consequences of the equalizing distribution and the X/Y consolidation are determined under the definitional and operative provisions described in § 1.368–1(c)(2)(i) and (ii). *See* paragraph (a)(2)(i) of this section.

(4) *Example 4: Scope of plan of reorganization—pre-merger stock acquisition—(i) Facts.* Two potential acquiring corporations (X and Y) engage in competing tender offers to acquire 100 percent of the stock of a target corporation (Target). X and Y carry out the tender offers through their respective subsidiary corporations. On June 30, 2025, before acquiring any shares in Target, X subsidiary signs an agreement with Target (X/Target agreement) providing that, among other conditions (including regulatory approval and approval by the shareholders of X and Target), if X subsidiary successfully acquires at least 51 percent of Target's outstanding stock through its tender offer, X will acquire all remaining Target stock by causing

Target to merge into X subsidiary in a transaction intended to qualify as a reorganization under section 368(a)(2)(D) (subsidiary merger). As of September 30, 2025, X subsidiary has been tendered 51 percent of Target's outstanding stock. On October 15, 2025, Y subsidiary tenders to X subsidiary all of Y subsidiary's Target shares received in Y subsidiary's tender offer (30 percent of Target's outstanding stock) in exchange for X stock (Y share exchange). On November 1, 2025, pursuant to the X/Target agreement, X causes Target to merge into X subsidiary (that is, the subsidiary merger). The subsidiary merger satisfies the requirements of a definitional provision described in § 1.368–1(c)(2)(i) regardless of whether X subsidiary's tender offer (including the Y share exchange) is included in the plan of reorganization for the subsidiary merger.

(ii) *Analysis.* The X/Target agreement imposes a legal obligation on X subsidiary to carry out the subsidiary merger if X subsidiary's tender offer is successful. Therefore, this agreement evidences a definite intent, prior to the first step of the plan of reorganization, for X subsidiary to carry out both of those transactions as part of a plan of reorganization. *See* paragraph (e)(1) of this section. Satisfaction of this requirement is not affected by the fact that the subsidiary merger is subject to significant conditions, including a successful X subsidiary tender offer, regulatory approval, and X and Target shareholder approvals. *See* paragraph (e) of this section. The X/Target agreement establishes that X subsidiary's tender offer is an integral part of a series of transactions carried out to satisfy the requirements of section 368(a)(2)(D). *See* paragraph (e)(2) of this section. Satisfaction of this requirement is not affected by the fact that X subsidiary's tender offer has a degree of economic significance independent of the subsidiary merger. *See* paragraph (e)(2)(ii) of this section. X's business purpose for the merger is to acquire all the remaining outstanding stock of Target, as established through the X/Target agreement. The tender offer is consistent with, directly relates to, and therefore directly furthers that business purpose. *See* paragraph (e)(3) of this section. Accordingly, X subsidiary's tender offer and the Y share exchange are properly included in the plan of reorganization for the subsidiary merger. Consequently, the Federal income tax consequences of both X subsidiary's tender offer and the subsidiary merger are determined under the definitional and operative provisions described in

§ 1.368–1(c)(2)(i) and (ii). *See* paragraph (a)(2) of this section.

(5) *Example 5: Scope of plan of reorganization—multiple distributions of controlled corporation stock to constitute a control distribution—(i) Facts.* On June 30, 2025, a distributing corporation (Distributing) contributes property to a newly formed controlled corporation (Controlled) in exchange for Controlled stock (contribution). On September 30, 2025, Distributing distributes 57 percent of the Controlled stock to Distributing's shareholders (first distribution). On January 1, 2026, Distributing distributes the remaining 43 percent of Controlled stock to Distributing's shareholders (final distribution; together with the contribution and the first distribution, the separation). The separation and distribution agreement provides that Distributing will distribute 57 percent of Controlled stock during Distributing's 2025 taxable year, but only expresses a contemplated possibility that Distributing will distribute the remaining 43 percent of Controlled stock. Distributing files a plan of reorganization with the IRS pursuant to § 1.368–3(a)(5) with its Federal income tax return for the 2025 taxable year that includes the first distribution and the final distribution as part of the plan of reorganization for the separation.

(ii) *Analysis.* If a taxpayer files a plan of reorganization with the IRS that fails to satisfy any requirement set forth in paragraph (d) of this section, the Commissioner may correct the plan of reorganization. *See* paragraph (c)(2)(i) of this section. The Commissioner may correct the plan of reorganization to exclude a transaction based on an examination of all facts and circumstances and consideration of all relevant provisions of the Code and general principles of Federal income tax law, including the step transaction doctrine. *See* paragraph (c)(2)(ii) of this section. The final distribution is properly excluded from the plan of reorganization for the separation because Distributing fails to satisfy the definite intent requirement with respect to the final distribution. *See* paragraph (e)(1)(i) and (iii) of this section. Specifically, because the distribution of control (that is, the final distribution) occurs in the next taxable year after the first distribution and is not pursuant to a binding commitment, Distributing does not establish a definite intent under paragraph (e)(1)(i) of this section. *See* paragraph (e)(1)(ii) of this section. The definitional and operative provisions described in § 1.368–1(c)(2)(i) and (ii) apply solely to the transactions identified in, and carried

out pursuant to, the plan of reorganization as corrected by the Commissioner (that is, the contribution and first distribution). *See* paragraph (a)(2) of this section. Accordingly, the transaction would fail to meet the definitional requirement under section 368(a)(1)(D) because the first distribution, by itself, does not meet the requirement set forth in § 1.355–2(e)(2)(i).

(6) *Example 6: Scope of plan of reorganization—qualifying distribution of amount of controlled corporation stock constituting section 368(c) control—(i) Facts.* The facts are the same as in paragraph (g)(5)(i) of this section (*Example 5*), except for the following. First, Distributing provides in its separation and distribution agreement with Controlled that Distributing will distribute the remaining 43 percent of Controlled stock during 2026. Second, for its Federal income tax return for the 2025 taxable year, Distributing files a plan of reorganization with the IRS pursuant to § 1.368–3(a)(5) that satisfies all requirements set forth in paragraph (d) of this section, including the establishment, by reference to the separation and distribution agreement, that Distributing will distribute to its shareholders pursuant to a binding commitment 57 percent of Controlled stock during 2025 and the remaining 43 percent of Controlled stock during 2026.

(ii) *Analysis.* The final distribution is properly included in the plan of reorganization for the separation because Distributing satisfies the definite intent requirement to make the final distribution. *See* paragraph (e)(1)(ii) of this section. Accordingly, based on the correct and properly filed plan of reorganization pursuant to § 1.368–3(a)(5), the Federal income tax consequences of the contribution and both the first distribution and the final distribution are determined under the definitional and operative provisions described in § 1.368–1(c)(2)(i) and (ii). *See* paragraph (a)(2)(i) of this section.

(7) *Example 7: Scope of plan of reorganization—contribution and distribution in divisive reorganization—(i) Facts.* On June 1, 2025, a distributing corporation (Distributing) contributes property to a newly formed controlled corporation (Controlled) in exchange for Controlled stock and Controlled's assumption of Distributing liabilities related to the contributed business (contribution). On September 1, 2025, Distributing distributes all Controlled stock to Distributing's shareholders (distribution; together with the contribution, the separation). A separation and distribution agreement between Distributing and Controlled,

filed by Distributing with the SEC, evidences a definite intent, prior to the first step of the separation, to carry out each of these transactions comprising the separation. Additional official records of Distributing provide that the separation is carried out to sharpen management focus on, and reduce competition for capital between, the retained and contributed businesses, which includes ensuring that earnings of each business are used to pay liabilities arising solely from that business. Distributing files a plan of reorganization with the IRS pursuant to § 1.368–3(a)(5) with its Federal income tax return for the 2025 taxable year.

(ii) *Analysis—(A) Contribution.* The contribution is properly included in the plan of reorganization for the separation. *See* paragraph (e) of this section. First, as substantiated by the separation and distribution agreement, Distributing and Controlled evidence a definite intent, prior to the first step of the plan of reorganization, to carry out the contribution. *See* paragraph (e)(1)(i) of this section. Second, the contribution is necessary to satisfy the requirements of section 368(a)(1)(D). *See* paragraph (e)(2)(i)(A) of this section. Lastly, the contribution is consistent with, is directly related to, and therefore directly furthers, the business purpose for the reorganization. *See* paragraph (e)(3) of this section. Accordingly, based on the correct and properly filed plan of reorganization pursuant to § 1.368–3(a)(5), the Federal income tax consequences of the contribution are determined under a definitional provision described in § 1.368–1(c)(2)(i) (that is, section 368(a)(1)(D)). *See* paragraph (a)(2) of this section.

(B) *Controlled liability assumption.* Controlled's liability assumption is properly included in the plan of reorganization for the separation. *See* paragraph (e) of this section. First, as substantiated by the separation and distribution agreement, Distributing and Controlled evidence a definite intent, prior to the first step of the plan of reorganization, for the liability assumption to occur. *See* paragraph (e)(1)(i) of this section. Second, the liability assumption would not have occurred but for, and is integral to, the separation, because the assumption ensures that the respective liabilities of the retained and contributed businesses continue to be associated with those businesses. *See* paragraph (e)(2)(i)(B) of this section. Lastly, the Controlled liability assumption is consistent with, is directly related to, and therefore directly furthers the business purpose for the reorganization by ensuring that the earnings of each business are used to

pay liabilities arising solely from that business (in other words, furthering Distributing's fit-and-focus corporate business purpose). *See* paragraph (e)(3) of this section. Accordingly, based on the correct and properly filed plan of reorganization pursuant to § 1.368–3(a)(5), the Federal income tax consequences of the liability assumption are determined under an operative provision described in § 1.368–1(c)(2)(ii) (that is, section 357). *See* paragraph (a)(2) of this section.

(C) *Distribution.* The distribution is properly included in the plan of reorganization for the separation. *See* paragraph (e) of this section. First, as substantiated by the separation and distribution agreement, Distributing and Controlled evidence a definite intent, prior to the first step of the plan of reorganization, for Distributing to make the distribution. *See* paragraph (e)(1)(i) of this section. Second, the distribution is necessary to satisfy the requirements of section 368(a)(1)(D). *See* paragraph (e)(2)(i)(A) of this section. Lastly, the distribution is consistent with, is directly related to, and therefore directly furthers, the fit-and-focus corporate business purpose for the reorganization. *See* paragraph (e)(3) of this section. Accordingly, based on the correct and properly filed plan of reorganization pursuant to § 1.368–3(a)(5), the Federal income tax consequences of the distribution are determined under the definitional and operative provisions described in § 1.368–1(c)(2)(i) and (ii) (that is, sections 355 and 368(a)(1)(D)). *See* paragraph (a)(2) of this section.

(8) *Example 8: Scope of plan of reorganization—boot purge through special dividend—(i) Facts.* The facts are the same as in paragraph (g)(7)(i) of this section (*Example 7*), except for the following. As part of the contribution, Distributing receives cash from Controlled in partial exchange for the assets contributed by Distributing to Controlled. Distributing distributes that cash to its shareholders pursuant to a special dividend declared by Distributing's board of directors (special dividend boot purge) that is intended to facilitate an appropriate post-separation capital structure for the retained and contributed businesses. The separation and distribution agreement, a resolution adopted by Distributing's board of directors, and other official records of Distributing collectively evidence a definite intent, prior to the first step of the separation, to carry out the transactions comprising the separation (including the special dividend boot purge). In particular, those documents provide that the special dividend is in addition to any regularly occurring

dividends distributed to Distributing's shareholders pursuant to Distributing's dividend payment policy (as reflected in documents filed by Distributing with the SEC).

(ii) *Analysis.* The special dividend boot purge is properly included in the plan of reorganization for the separation. See paragraph (e) of this section. First, as substantiated by the separation and distribution agreement and other official records of Distributing, Distributing and Controlled evidence a definite intent, prior to the first step of the plan of reorganization, for Distributing to make the special dividend boot purge. See paragraph (e)(1)(i) of this section. Second, the special dividend boot purge would not occur but for the separation, as evidenced by the separation and distribution agreement and other official records of Distributing, and by the fact that the special dividend is in addition to any regularly occurring dividends made pursuant to Distributing's dividend payment policy. See paragraph (e)(2)(i)(B) of this section. Lastly, the special dividend boot purge is consistent with, directly relates to, and therefore directly furthers the business purpose for the separation because the special dividend boot purge facilitates an appropriate post-separation capital structure for the retained and contributed businesses (thereby facilitating Distributing's fit-and-focus corporate business purpose). See paragraph (e)(3) of this section. Accordingly, based on the correct and properly filed plan of reorganization pursuant to § 1.368–3(a)(5), the Federal income tax consequences of the special dividend boot purge are determined under an operative provision described in § 1.368–1(c)(2)(ii) (that is, section 361). See paragraph (a)(2) of this section.

(9) *Example 9: Scope of plan of reorganization—boot purge through special stock repurchase—(i) Facts.* The facts are the same as in paragraph (g)(8)(i) of this section (*Example 8*), except that Distributing uses the Controlled cash to fund a special repurchase of Distributing stock (and, accordingly, is not part of an existing stock repurchase program approved by Distributing's board of directors).

(ii) *Analysis.* The analysis is the same as in paragraph (g)(8)(ii) of this section (*Example 8*).

(10) *Example 10: Scope of plan of reorganization—boot purge through ordinary course dividend—(i) Facts.* The facts are the same as in paragraph (g)(8)(i) of this section (*Example 8*), except for the following. Distributing provides in the separation and

distribution agreement, or other official records of Distributing, that Distributing will distribute the Controlled cash to Distributing's shareholders through an ordinary course dividend made pursuant to Distributing's dividend payment policy. After the distribution date, Distributing pays an ordinary course dividend that is funded with the cash received from Controlled in the contribution (that is, the Controlled cash).

(ii) *Analysis.* The ordinary course dividend is properly excluded from the plan of reorganization for the separation because the dividend would have occurred regardless of the separation. Therefore, the ordinary course dividend fails the “but for, or integral to, test” for application of operative provision. See paragraph (e)(2)(i)(B) of this section. Accordingly, the Federal income tax consequences of the ordinary course dividend are determined under section 301 of the Code, not an operative provision described in § 1.368–1(c)(2)(ii). See paragraph (a)(2) of this section.

(11) *Example 11: Scope of plan of reorganization—boot purge through existing stock repurchase program—(i) Facts.* The facts are the same as in paragraph (g)(10)(i) of this section (*Example 10*), except that Distributing uses the Controlled cash to fund a repurchase of Distributing stock pursuant to an existing stock repurchase program approved by Distributing's board of directors.

(ii) *Analysis.* The analysis is the same as in paragraph (g)(10)(ii) of this section (*Example 10*). Accordingly, the Federal income tax consequences of the ordinary course stock repurchase are determined under section 301 or 302 of the Code, and not an operative provision described in § 1.368–1(c)(2)(ii). See paragraph (a)(2) of this section.

(12) *Example 12: Scope of plan of reorganization—securities-for-debt exchange—(i) Facts.* The facts are the same as in paragraph (g)(7)(i) of this section (*Example 7*), except for the following. As part of the contribution, Distributing receives securities from Controlled in partial exchange for the assets contributed by Distributing to Controlled. Distributing transfers those Controlled securities to a creditor of Distributing in a series of transactions that satisfies all the requirements set forth in § 1.361–5(a) (securities-for-debt exchange). The separation and distribution agreement, a resolution adopted by Distributing's board of directors, and other official records of Distributing, collectively evidence a definite intent, prior to the first step of

the separation, to carry out each of the transactions comprising the securities-for-debt exchange. Consistent with the requirements set forth in §§ 1.361–5(a) and 1.368–3(a)(5), Distributing identifies the historical Distributing debt and the qualifying creditor with regard to that historical Distributing debt, prior to the first step of the plan of reorganization that includes the separation.

(ii) *Analysis.* The securities-for-debt exchange is properly included in the plan of reorganization for the separation because the exchange satisfies all conditions required by paragraph (e) of this section. First, as substantiated by the separation and distribution agreement and other official records of Distributing, Distributing evidences a definite intent, prior to the first step of the plan of reorganization, to carry out the securities-for-debt exchange. See paragraph (e)(1)(i) of this section. Second, the securities-for-debt exchange would not occur but for the separation, as evidenced by the separation and distribution agreement and other official records of Distributing. See paragraph (e)(2)(i)(B) of this section. Lastly, the securities-for-debt exchange is consistent with, and directly relates to, the fit-and-focus corporate business purpose for the separation, because it facilitates the elimination of competition for capital between the retained and contributed businesses through the establishment of an appropriate post-separation capital structure for each of those businesses. See paragraph (e)(3) of this section. Accordingly, based on the correct and properly filed plan of reorganization pursuant to § 1.368–3(a)(5), the Federal income tax consequences of the securities-for-debt exchange are determined under an operative provision described in § 1.368–1(c)(2)(ii). See paragraph (a)(2) of this section.

(13) *Example 13: Scope of plan of reorganization—dispositions of retained stock—(i) Facts.* The facts are the same as in paragraph (g)(7)(i) of this section (*Example 7*), except for the following. On September 30, 2025, Distributing distributes to its shareholders 80 percent of the outstanding Controlled stock, constituting a control distribution. With regard to the retained stock, the separation and distribution agreement and other official records of Distributing provide that Distributing will transfer the retained stock to a creditor of Distributing in a stock-for-debt exchange that satisfies the requirements set forth in §§ 1.361–5(a) and 1.368–3(a)(5) (stock-for-debt exchange). The separation and distribution agreement and those other

official records also provide that, to the extent the retained stock is not disposed of in the stock-for-debt exchange, Distributing will distribute that retained stock to Distributing's shareholders (follow-on spin-off). Lastly, the separation and distribution agreement provides that, to the extent the retained stock is not disposed of after Distributing succeeds or fails in completing the stock-for-debt exchange and follow-on spin-off, Distributing will sell the retained stock on the open market by not later than five years after the first distribution date (open-market sale). Distributing describes these contingent commitments in its plan of reorganization filed with the IRS pursuant to § 1.368–3(a)(5).

(ii) *Analysis*—(A) *Stock-for-debt exchange*. The stock-for-debt exchange is properly included in the plan of reorganization for the separation because the exchange satisfies all conditions required by paragraph (e) of this section. First, as substantiated in the separation and distribution agreement, in which Distributing expresses that it will carry out the stock-for-debt exchange, Distributing evidences a definite intent, prior to the first step of the plan of reorganization, to carry out the stock-for-debt exchange. *See* paragraph (e)(1) of this section. The satisfaction of this requirement is not affected by the fact that Distributing might engage in the follow-on spin-off or the open-market sale to dispose of all the retained stock in the event that the stock-for-debt exchange does not result in a total disposition of that stock, because Distributing is committed in writing in one or more of its official records to attempt to complete the exchange. *See* paragraph (e) of this section. Second, the stock-for-debt exchange would not occur but for the separation, as evidenced by the separation and distribution agreement. *See* paragraph (e)(2)(i)(B) of this section. Lastly, the stock-for-debt exchange is consistent with, and directly relates to, the fit-and-focus corporate business purpose for the separation, because it facilitates the elimination of competition for capital between the retained and contributed businesses through the establishment of an appropriate post-separation capital structure for each of those businesses. *See* paragraph (e)(3) of this section. Accordingly, based on the correct and properly filed plan of reorganization pursuant to § 1.368–3(a)(5), the Federal income tax consequences of the securities-for-debt exchange are determined under an operative provision described in § 1.368–

1(c)(2)(ii). *See* paragraph (a)(2) of this section.

(B) *Follow-on spin-off*. The follow-on spin-off is properly included in the plan of reorganization for the separation because that distribution satisfies all conditions required by paragraph (e) of this section. First, as substantiated by the separation and distribution agreement, in which Distributing expresses that it will carry out the follow-on spin-off, Distributing evidences a definite intent, prior to the first step of the plan of reorganization, to carry out the follow-on spin-off. *See* paragraph (e)(1) of this section. The satisfaction of this requirement is not affected by the contingency arising from the fact that Distributing commits to first attempt to carry out the stock-for-debt exchange, because Distributing commits in writing in one or more of its official records to carry out the follow-on spin-off in the event that the stock-for-debt exchange does not occur or does not result in the disposition by Distributing of all the retained stock. *See* paragraph (e) of this section. For the same reason, the satisfaction of this requirement is not affected by the fact that Distributing ultimately might engage in the open-market sale to dispose of all the retained stock, in the event that the follow-on spin-off does not result in a total disposition of that stock. *See* paragraph (e) of this section. In addition, the follow-on spin-off would not occur but for the separation, as evidenced by the separation and distribution agreement. *See* paragraph (e)(2)(i) of this section. Lastly, the follow-on spin-off is consistent with, and directly relates to, the fit-and-focus corporate business purpose for the separation because it would further the separation of the retained and contributed businesses. *See* paragraph (e)(3) of this section. Accordingly, based on the correct and properly filed plan of reorganization pursuant to § 1.368–3(a)(5), the Federal income tax consequences of the follow-on spin-off are determined under an operative provision described in § 1.368–1(c)(2)(ii) (that is, section 361). *See* paragraph (a)(2) of this section.

(C) *Open-market sale*. The open-market sale is properly included in the plan of reorganization for the separation because that sale satisfies all conditions required by paragraph (e) of this section. First, as evidenced by the separation and distribution agreement and other official records of Distributing, in which Distributing expresses that it will carry out the open-market sale, Distributing evidences a definite intent, prior to the first step of the plan of reorganization, to carry out the open-market sale. *See*

paragraph (e)(1) of this section. The satisfaction of this requirement is not affected by the contingency that Distributing commits to first attempt to carry out the stock-for-debt exchange and then the follow-on spin-off, because Distributing commits in writing in one or more of its official records to carry out the open-market sale in the event that the stock-for-debt exchange and the follow-on spin-off, taken together or on their own, do not occur or do not result in the disposition by Distributing of all the retained stock. *See* paragraph (e) of this section. In addition, the open-market sale is necessary to satisfy one or more of the requirements of a definitional provision described in § 1.368–1(c)(2)(i) intended to apply to the reorganization. *See* paragraph (e)(2)(i)(A) of this section. Lastly, the open-market sale is consistent with, and directly relates to, the fit-and-focus corporate business purpose for the separation because it would further the separation of the retained and contributed businesses. *See* paragraph (e)(3) of this section. Accordingly, based on the correct and properly filed plan of reorganization pursuant to § 1.368–3(a)(5), the open-market sale is taken into account along with the contribution and distribution for determining the Federal income tax consequences of the separation under sections 355 and 368(a)(1)(D) (that is, the relevant definitional and operative provisions described in § 1.368–1(c)(2)(i) and (ii)). *See* paragraph (a)(2) of this section.

(14) *Example 14: Scope of plan of reorganization—dispositions of retained stock*—(i) *Facts*. The facts are the same as in paragraph (g)(13)(i) of this section (*Example 13*), except for the following. With regard to the retained stock, the separation and distribution agreement and other official records of Distributing provide that Distributing might transfer the retained stock to a creditor of Distributing in a stock-for-debt exchange that satisfies the requirements set forth in §§ 1.361–5(a) and 1.368–3(a)(5) (stock-for-debt exchange). The separation and distribution agreement and other official records of Distributing also provide that Distributing might distribute that retained stock to Distributing's shareholders (follow-on spin-off). Lastly, those documents provide that, to the extent the retained stock is not disposed of after Distributing succeeds or fails in completing the stock-for-debt exchange and follow-on spin-off, Distributing will sell the retained stock on the open market by not later than five years after the first distribution date (open-market sale). Distributing describes these

contemplated possibilities of carrying out the stock-for-debt exchange and follow-on spin-off, as well as its written commitment to carry out the open-market sale, in its plan of reorganization filed with the IRS pursuant to § 1.368–3(a)(5).

(ii) *Analysis*—(A) *Stock-for-debt exchange*. The stock-for-debt exchange is properly excluded from the plan of reorganization for the separation because the exchange fails to satisfy all conditions required by paragraph (e) of this section. Specifically, as evidenced by the separation and distribution agreement and other official records of Distributing, Distributing treats the occurrence of the stock-for-debt exchange as a contemplated possibility, thereby failing to evidence a definite intent to carry out the transaction. See paragraph (e)(1)(iii) of this section. Accordingly, as corrected by the Commissioner, the securities-for-debt exchange is excluded from the taxpayer's plan of reorganization (and therefore section 361(c), the otherwise relevant operative provision described in § 1.368–1(c)(2)(ii), does not apply). See paragraph (a)(2)(ii) of this section.

(B) *Follow-on spin-off*. The analysis is the same as in paragraph (g)(14)(ii)(A) of this section (*Example 14*). Therefore section 361(c), the otherwise relevant operative provision described in § 1.368–1(c)(2)(ii), does not apply.

(C) *Open-market sale*. The open-market sale is properly included in the plan of reorganization for the separation because the sale satisfies all conditions required by paragraph (e) of this section. First, as substantiated by the separation and distribution agreement, in which Distributing expresses that it will carry out the open-market sale, Distributing evidences a definite intent, prior to the first step of the plan of reorganization, to carry out the open-market sale. See paragraph (e)(1) of this section. The satisfaction of this requirement is not affected by the contingency created by Distributing's contemplation of carrying

out the stock-for-debt exchange and the follow-on spin-off, because Distributing commits in writing in one or more of its official records to carry out the open-market sale in the event that the stock-for-debt exchange and the follow-on spin-off, taken together or on their own, do not occur or do not result in the disposition by Distributing of all the retained stock. See paragraph (e) of this section. In addition, the open-market sale is necessary to satisfy one or more of the requirements of a definitional provision described in § 1.368–1(c)(2)(i) intended to apply to the reorganization. See paragraph (e)(2)(i)(A) of this section. Lastly, the open-market sale is consistent with, and directly relates to, the fit-and-focus corporate business purpose for the separation because it would further the separation of the retained and contributed businesses. See paragraph (e)(3) of this section. Accordingly, based on the correct and properly filed plan of reorganization pursuant to § 1.368–3(a)(5), the open-market sale is taken into account along with the contribution and distribution for determining the Federal income tax consequences of the separation under the relevant definitional provisions described in § 1.368–1(c)(2)(i). See paragraph (a)(2) of this section.

(15) *Example 15: Scope of plan of reorganization—dispositions of retained stock*—(i) *Facts*. The facts are the same as in paragraph (g)(14)(i) of this section (*Example 14*), except for the following. With regard to the retained stock, the separation and distribution agreement and other official records of Distributing provide that the open-market sale also is a contemplated possibility, rather than subject to a written commitment by Distributing.

(ii) *Analysis*—(A) *Stock-for-debt exchange*. The analysis is the same as in paragraph (g)(14)(ii)(A) of this section (*Example 14*).

(B) *Follow-on spin-off*. The analysis is the same as in paragraph (g)(14)(ii)(B) of this section (*Example 14*).

(C) *Open-market sale*. The open-market sale is properly excluded from the plan of reorganization for the separation because the open-market sale fails to satisfy all conditions required by paragraph (e) of this section. Specifically, as evidenced by the separation and distribution agreement and other official records of Distributing, Distributing treats the occurrence of the open-market sale as a contemplated possibility, thereby failing to evidence a definite intent to carry out the transaction. See paragraph (e)(1)(iii) of this section. Accordingly, the open-market sale is not taken into account for purposes of satisfying the relevant definitional provision described in § 1.368–1(c)(2)(i), pursuant to a plan of reorganization corrected by the Commissioner. See paragraph (a)(2)(ii) of this section.

(h) *Applicability date*. This section applies to transactions intended to qualify under section 368 of the Code for which the earliest of the following dates occurs after [date of publication of final regulations in the **Federal Register**]:

(1) The date of the first public announcement (as defined in § 1.355–7(h)(10)) of the transaction.

(2) The date of entry by the taxpayer into a written agreement to engage in the transaction.

(3) The date of approval of the transaction by the board of directors of the taxpayer.

(4) The date of a court order (or a plan confirmed, or a sale approved, by order of a court) in a title 11 or similar case (as defined in section 368(a)(3)(A) of the Code), but only if the taxpayer was a debtor in a case before such court.

(5) The date a ruling request for the transaction is submitted to the IRS.

Douglas W. O'Donnell,

Deputy Commissioner.

[Docket No. 250108–0013]

RIN 0694–AJ98

Implementation of Additional Due Diligence Measures for Advanced Computing Integrated Circuits; Amendments and Clarifications; and Extension of Comment Period

AGENCY: Bureau of Industry and Security, Department of Commerce.

ACTION: Interim final rule, with request for comment.

SUMMARY: BIS is revising the Export Administration Regulations (EAR) in response to requests from the public to provide additional due diligence procedures regarding advanced computing integrated circuits (ICs). This interim final rule (IFR) will protect the national security of the United States and assist foundries and Outsourced Semiconductor Assembly and Test (“OSATs”) companies in complying with provisions of the EAR pertaining to advanced computing ICs in the supply chain. This IFR also revises the EAR to make amendments and clarifications to the EAR for changes made to the EAR in an IFR released by BIS on December 2, 2024, “Foreign-Produced Direct Product Rule Additions, and Refinements to Controls for Advanced Computing and Semiconductor Manufacturing Items,” (FDP IFR), including extending the deadline for written comments for the FDP IFR to March 14, 2025.

DATES:

- *Effective date:* The effective date of this rule is January 16, 2025.
- *Compliance date:* Although this rule is effective January 16, 2025, exporters, reexporters, and transferors (in-country) are not required to comply with the new requirements of this rule until January 31, 2025. This compliance date only applies to EAR text that this rule revises, and does not otherwise impact any provision that was in effect prior to January 16, 2025 or added to the EAR through other rules. For example, under Export Control Classification Number (ECCN) 3A090, this IFR adds new Note 1 to 3A090.a, which, as new text, is subject to this compliance date. This IFR also revises ECCN 3A090.a. Only the new changes to ECCN 3A090.a in this particular rule are eligible for this compliance date.

- *Comment date:* Comments on this IFR must be received by BIS no later than March 14, 2025.

- *Extension of comment period for FDP IFR:* The comment period for the FDP IFR published December 5, 2024, at 89 FR 96790, is extended. Comments must be received on the FDP IFR by BIS no later than March 14, 2025.

ADDRESSES: Comments on this IFR, including the amendments and clarifications made for the FDP IFR described under section III.G of this IFR, may be submitted to the Federal rulemaking portal at: www.regulations.gov. The www.regulations.gov ID for this IFR is BIS–2024–0055. Please refer to RIN 0694–AJ98 in all comments.

All filers using the portal should use the name of the person or entity submitting the comments as the name of their files, in accordance with the instructions below. Anyone submitting business confidential information should clearly identify the business confidential portion at the time of submission, file a statement justifying nondisclosure and referring to the specific legal authority claimed, and provide a non-confidential version of the submission.

For comments submitted electronically containing business confidential information, the file name of the business confidential version should begin with the characters “BC.” Any page containing business confidential information must be clearly marked “BUSINESS CONFIDENTIAL” on the top of that page. The corresponding non-confidential version of those comments must be clearly marked “PUBLIC.” The file name of the non-confidential version should begin with the character “P.” Any submissions with file names that do not begin with either a “BC” or a “P” will be assumed to be public and will be made publicly available at: <https://www.regulations.gov>. Commenters submitting business confidential information are encouraged to scan a hard copy of the non-confidential version to create an image of the file, rather than submitting a digital copy with redactions applied, to avoid inadvertent redaction errors which could enable the public to read business confidential information.

FOR FURTHER INFORMATION CONTACT:

- For general questions, contact Regulatory Policy Division, Office of Exporter Services, Bureau of Industry and Security, U.S. Department of Commerce at 202–482–2440 or by email: RPD2@bis.doc.gov.

- For Category 3 technical questions, contact Carlos Monroy at 202–482–3246 or by email: Carlos.Monroy@bis.doc.gov.

- For Category 5 technical questions, contact Aaron Amundson at 202–482–0707 or RPD2@bis.doc.gov.

SUPPLEMENTARY INFORMATION:

I. Background

On October 7, 2022, BIS issued the first of a series of rules that restricted the ability of the People’s Republic of China (PRC) and other countries of concern to obtain certain advanced computing ICs (*i.e.*, ICs exceeding specified performance thresholds) and related items (October 7 IFR). The controls in the October 7 IFR and the controls in the subsequent related rules were designed to prevent malicious state and non-state actors in the PRC and elsewhere from obtaining critical technology that they could use to threaten U.S. national security and foreign policy objectives. Today, through this IFR, BIS is updating the EAR to enhance the effectiveness of these controls. This IFR aims to address a common request from public comments on the October 7 IFR controls and subsequent related rules for more detailed guidance on how to conduct due diligence to confirm that an IC does not exceed the performance thresholds specified in EAR controls. In particular, this IFR focuses on providing “front-end fabricators” with objective, bright-line rules designed to assist in better identifying transactions with potential risk for diversion in a manner contrary to U.S. national security and foreign policy interests; enhancing due diligence procedures to ensure that new customers are appropriately vetted by “front-end fabricators” prior to providing ICs that may meet the advanced computing control levels; and improving reporting for transactions involving newer customers who may pose a heightened risk of diversion.

A. Semiconductors Are Central to the PRC’s Technological and Military Ambitions

The PRC seeks to use advanced computing ICs and supercomputing capacity in the development and deployment of advanced computing systems and artificial intelligence (AI) models to further its goal of surpassing the military capabilities of the United States and its allies. Advanced or frontier AI capabilities such as large AI foundation models can lead to improved design and execution of weapons of mass destruction (WMDs), autonomous weapons, and advanced conventional weapons. Military decision-making aided by these AI models can improve

speed, accuracy, planning, and logistics. Advanced computing ICs are necessary for the development of these capabilities, because of the high processing power needed.

The use of advanced computing ICs in development and deployment of PRC AI models would further the PRC's goals of surpassing the military capability of the United States and its allies, a goal noted in the February 6, 2023, Annual Threat Assessment of the U.S. Intelligence Community (see <https://www.dni.gov/files/ODNI/documents/assessments/ATA-2023-Unclassified-Report.pdf>). That same report indicated that the PRC "is rapidly expanding and improving its artificial intelligence (AI) and big data analytics capabilities, which could expand beyond domestic use," including to export its digital authoritarian ecosystem to assist in surveillance and to facilitate its transnational repression overseas.

Such activities by the PRC are contrary to U.S. national security and foreign policy interests as set forth in the Export Control Reform Act of 2018 (ECRA) (codified, as amended, at 50 U.S.C. 4801–4852), which directs BIS to control items subject to the jurisdiction of the United States when those items could be used in "military programs that pose a threat to the security of the United States or its allies," could lead to "the proliferation of weapons of mass destruction or of conventional weapons," or could undermine the "foreign policy of the United States, including the protection of human rights and the promotion of democracy" (50 U.S.C. 4811(2)).

B. Export Controls on Advanced Computing ICs

Accordingly, on October 7, 2022, BIS released the IFR, "Implementation of Additional Export Controls: Certain Advanced Computing and Semiconductor Manufacturing Items; Supercomputer and Semiconductor End Use; Entity List Modification" (October 7 IFR) (October 13, 2022, 87 FR 62186), which amended the EAR to implement controls on certain ICs, computer commodities that contain such ICs, and certain semiconductor manufacturing items, and to make other EAR changes to implement appropriate related controls, including on certain "U.S. person" activities. The October 7 IFR explained that these controls were aimed at limiting the PRC's ability to engage in activities that would pose significant threats to U.S. national security and foreign policy. BIS determined that advanced computing ICs and related computing items—many of which originated in the United States

or were produced with U.S. technology, software, or tools—could enable the PRC to develop certain enhanced data processing and analysis capabilities, including through AI applications because of the high processing power of the advanced computing ICs and related computing items.

Specifically, the October 7 IFR required a license for the export or reexport to the PRC of ICs and related items above a certain performance threshold (e.g., those specified in Export Control Classification Number (ECCN) 3A090) that are the "direct product" of certain technology or software that is subject to the EAR or are produced by a plant or major component of a plant that is the direct product of such technology or software. That rule also imposed a license requirement for the export to certain entities on the Entity List of any items subject to the EAR that are the "direct product" of certain technology or software that is subject to the EAR or are produced by a plant or major component of a plant that is the direct product of such technology or software. This requirement significantly limited access to "advanced-node integrated circuits (ICs)" for the PRC, as production of "advanced-node ICs" requires U.S. technology, software, and tools. Exceeding the control thresholds for advanced computing ICs that were set in the October 7 IFR is extremely challenging without the use of U.S. technology, software, and tools, so controlling these items significantly reduced the PRC's ability to indigenously produce advanced computing ICs.

On October 25, 2023, BIS updated the controls imposed by the October 7 IFR to address advances in technology and ensure the controls remained effective. In particular, BIS learned that certain additional ICs could provide nearly comparable AI model training capability as those controlled in the October 7 IFR, and so further restricted those ICs. As such, the IFR, "Implementation of Additional Export Controls: Certain Advanced Computing Items; Supercomputer and Semiconductor End Use; Updates and Corrections" (AC/S IFR) (88 FR 73458, October 25, 2023), adjusted parameters for advanced computing ICs that are critical for advanced computing and AI applications, and imposed new measures to address the risk of circumvention of the controls, including expanding the license requirement for advanced computing ICs to apply to Country Groups D:1, D:4, and D:5.

In addition to the imposition of licensing requirements for advanced computing ICs and related items (e.g.,

those specified in ECCN 3A090) to the PRC and elsewhere, BIS provided guidance through the AC/S IFR to help ensure that semiconductor foundries do not inadvertently violate the controls that are based on performance thresholds. Specifically, the AC/S IFR imposed a license requirement, including for transactions involving foreign produced items subject to the EAR pursuant to § 734.9(e)(2) (footnote 4), on 13 PRC entities involved in the development of advanced computing ICs by adding them to the Entity List. In addition, the AC/S IFR provided additional Red Flags and due diligence requirements to help "front-end fabricators" (i.e., manufacturers of ICs designed by another party) identify whether IC designs meet the specified performance thresholds and thus require a license when destined for countries of concern. These Red Flags were designed to assist "front-end fabricators" to evaluate information provided by IC designers as to IC performance capabilities and assess whether foreign parties are attempting to circumvent controls by illicitly fabricating restricted ICs. In particular, Red Flag 19 gave producers of advanced ICs specific factors to identify a potential advanced computing IC regardless of a customer's assertion of an item's technical parameters. Specifically, it explained that if the item that would be produced is an IC, or a computer, "electronic assembly," or "component" that incorporates more than 50 billion transistors and high bandwidth memory (HBM), it raises a Red Flag that there is a high degree of likelihood that a license is required under the EAR. Under standard BIS practice, when Red Flags are raised, the exporter, reexporter, or transferor (in-country) is required to investigate the circumstances and inquire about the end use, end user, or ultimate country of destination to resolve the Red Flag. If the Red Flag is not sufficiently resolved, then the exporter, reexporter, or transferor (in-country) should seek guidance from BIS by submitting an advisory opinion request to BIS or by submitting a license application to BIS.

On December 2, 2024, BIS released another IFR, "Foreign-Produced Direct Product Rule Additions, and Refinements to Controls for Advanced Computing and Semiconductor Manufacturing Items," (FDP IFR) (89 FR 96790, December 5, 2024), that made changes to the EAR controls for certain advanced computing items, supercomputers, and semiconductor manufacturing equipment, which includes adding new controls for certain

semiconductor manufacturing equipment and related items, creating new Foreign Direct Product (FDP) rules for certain commodities to impair the capability of certain destination or entities of concern to produce “advanced-node ICs”, adding new controls for certain high bandwidth memory (HBM) important for advanced computing, and clarifying controls on certain software keys that allow for the use of items such as software tools. The FDP IFR published concurrently with another BIS final rule entitled, “Additions and Modifications to the Entity List; and Removals from the Validated End-User (VEU) Program” (Entity List rule) (89 FR 96830, December 5, 2024) that added to and modified the Entity List to ensure appropriate EAR controls are in place for certain critical technologies and to minimize the risk of diversion to entities of concern.

On January 13, 2025, BIS filed for public inspection, a rule related to this IFR, the “Framework for Artificial Intelligence Diffusion” IFR (AI Diffusion IFR) which imposed a worldwide regional stability (RS) license requirement for the export, reexport, or transfer (in-country) of advanced computing ICs classified under ECCNs 3A090.a, 4A090.a, and related .z items in § 742.6(a)(6)(iii)(A), and created several exceptions and pathways to authorization to facilitate transactions that pose a low risk of diversion or would otherwise advance U.S. national security or foreign policy interests, including U.S. technological leadership. Additionally, in January 2025, BIS filed for public inspection, a final rule related to this IFR, “Additions to the Entity List” (Foundry Entity List rule) which amends the EAR by adding 16 entities to the Entity List, under the destinations of China, People’s Republic of (China) (14) and Singapore (2).

C. National Security Basis for Additional Controls Related to “Applicable Advanced Logic Integrated Circuits (ICs)”

Following the implementation of the October 7 IFR in 2022, BIS has continued to study and assess the effectiveness of its controls in protecting U.S. national security and foreign policy interests. In so doing, BIS has relied on open-source reporting, public comments, industry analysis, and other sources of information available to the U.S. Government.

Over the past year, BIS determined that modifications to existing controls are warranted. BIS assessed that relevant Entity List entries, Red Flag requirements and technical guidance

have not fully ensured that foundries producing ICs for IC designers and other related companies in the IC supply chain are able to definitively determine whether those ICs meet or exceed the ECCN 3A090 control parameters. As noted above, the EAR provides a series of Red Flag indicators that foundries can use to assess an IC’s performance level. However, BIS has assessed that entities seeking to divert ICs that meet the control parameters of ECCN 3A090 to unauthorized end uses and end users may misrepresent the performance capabilities of their ICs in a manner that would make it difficult for a foundry to adequately verify the performance of such items. As an initial matter, BIS has assessed that ICs with a transistor count below that specified in current Red Flag 19 (50 billion) can meet the performance threshold specified in ECCN 3A090. The Red Flag thus provides no guidance to foundries that receive orders for ICs with transistor counts below 50 billion in verifying their customers’ assertions that those ICs do or do not fall within ECCN 3A090.

Furthermore, these technical challenges in assessing the performance of an IC can emerge at multiple stages of the IC production process. In cases where a foundry does not control the final packaging of an IC, ICs are at risk of being diverted and later packaged into products that exceed the performance thresholds set out in ECCN 3A090. For example, a customer may request an IC with a transistor count just below the current transistor count Red Flag threshold, and contract with an OSAT company to incorporate that IC into a packaged item that exceeds the performance thresholds specified in ECCN 3A090. Such challenges in assessing the ultimate performance capabilities of an IC create a heightened risk that a foundry will fail to detect efforts by third parties to evade BIS controls.

Even in cases where a foundry retains control over a wafer through packaging and testing, BIS has identified challenges in ensuring compliance with advanced computing IC controls. BIS understands that contractual arrangements could prohibit foundries from analyzing certain business confidential information (e.g., a design file) that would give greater clarity into an IC’s ultimate usage and performance capabilities. Additionally, it can be challenging to assess the performance of an IC based on a design file. This lack of visibility into IC performance means such ICs may exceed ECCN 3A090 performance thresholds and ultimately be diverted to the PRC and other destinations of national security

concern or prohibited entities for use in advanced AI applications. BIS has therefore assessed that controls would be more effective with verifiable technical metrics such as node, which is immediately verifiable by the foundry, and transistor count, which is verifiable through communication between foundry and OSAT.

The risk that an IC designer might misrepresent the ECCN of “applicable advanced logic ICs” that meet the control parameters of ECCN 3A090 and divert these ICs to unauthorized end uses or end users is not hypothetical. BIS has observed persistent efforts to evade the controls on “advanced computing ICs,” as well as restrictions imposed through the Entity List, by the PRC and other entities through intermediaries and/or shell companies. Open-source reporting described PRC companies using foreign subsidiaries or other means to purchase ICs subject to EAR controls. To counter these efforts, as well as PRC operations inside and outside of the PRC (including the Hong Kong and Macau Special Administrative Regions as specified in the EAR) seeking to acquire advanced computing ICs through transshipment, diversion, and accessing datacenters with advanced computing ICs in destinations across the world, the AC/S IFR and the AI Diffusion IFR expanded the scope of destinations for which a license is required to export, reexport, or transfer (in-country) advanced computing ICs.

Although BIS’s controls have been effective, they have not entirely prevented the diversion of advanced computing ICs to the PRC and other destinations and entities of concern. Accordingly, BIS has determined that further restrictions on these ICs are warranted to ensure that advanced computing ICs are only exported to customers with low risk of diversion to restricted entities. While certain IC designers and/or OSATs have a long history of compliance with export controls, more safeguards are needed to ensure that the PRC and other entities cannot access advanced computing ICs through diversion from third parties.

To that end, this IFR imposes a broader license requirement for “front-end fabricators” and “OSAT” companies seeking to export, reexport, or transfer (in-country) certain “applicable advanced logic integrated circuits” under ECCN 3A090.a to or within any destination worldwide (see § 742.6(a)(6)(iii)(A) of the EAR, which works in conjunction with new Note 1 to 3A090), unless the license requirement is overcome in any of the three ways outlined in paragraphs a. through c. of Note 1 to 3A090. To

exclude the substantial number of low-risk transactions potentially captured within this expanded scope, the rule provides three ways to overcome the license requirement and creates lists of reliable sources to verify technical parameters of “applicable advanced logic ICs:”

- (i) Approved IC designers (listed in supplement no. 6 to part 740),
- (ii) Approved “OSAT” companies (listed in supplement no. 7 to part 740), as well as
- (iii) A method of identifying authorized IC designers with criteria included in Note 1 to 3A090.a.

Approved listed entities are those that submit requests to BIS to be added to a list and are approved through the End-user Review Committee (ERC) to be added to the relevant list. (see section III.D for the description of the criteria used in making such decision as specified in § 748.16(a)(4) and section III.B).

Authorized IC designers are those that meet the criteria under new Note 1 to 3A090.a. Prior to April 13, 2026, authorized IC designers include all IC designers that are headquartered in Taiwan or a destination specified in Country Group A:1 or A:5, that are neither located in nor have an ultimate parent headquartered in Macau or a destination specified in Country Group D:5 of supplement no. 1 to part 740 of the EAR; and that have agreed to submit applicable information described in § 743.9(b) to the “front-end fabricator,” which the “front-end fabricator” must then report to BIS. After April 13, 2026, authorized IC designers include any IC designer that both meets those criteria and has submitted an application to become an approved IC designer. However, any company deemed an authorized IC designer after April 13, 2026, will cease to be an authorized IC designer 180 days after the submission of its application to become an approved IC designer.

This rule also modifies License Exceptions Artificial Intelligence Authorization (AIA) and Advanced Compute Manufacturing (ACM) so that certain exceptions are only available for items designed by approved IC designers who are likely to accurately report the ECCN of the items they request advanced foundries to fabricate.

II. Overview of This Interim Final Rule

In this IFR, BIS makes changes to EAR controls in seven categories. The six categories of changes implemented by this IFR are described in section III as follows:

A. Revises License Exceptions AIA and ACM;

B. New supplement nos. 6 and 7 to part 740, including lists of approved IC designers and approved “OSAT” companies, as well as authorized IC designers in specified destinations;

C. New reporting requirements for “front-end fabricators” producing advanced computing ICs for authorized IC, as well as a new “Know Your Customer” (KYC) vetting form;

D. Application process for additions, modifications, and removals from the approved IC designer and approved “OSAT” company lists;

E. New Definitions;

F. Revisions to ECCNs to clarify scope of ECCN 3A090; and

G. Amendments and clarifications to the EAR as set forth in the FDP IFR.

III. Changes to the EAR

A. Revisions to License Exceptions Artificial Intelligence Authorization (AIA) and Advanced Compute Manufacturing (ACM)

This IFR revises the items within the scope of two license exceptions: License Exception AIA (§ 740.27) and License Exception ACM (§ 740.28). License Exception AIA authorizes the export, reexport, and transfer (in-country) of the items identified in paragraphs (a)(1) and (a)(2) to entities located within destinations listed in paragraph (a) of supplement no. 5 to part 740, unless the entity is headquartered outside of, or has an ultimate parent company headquartered outside of, a destination specified in paragraph (a) of supplement no. 5 to part 740, with an expanded authorization for certain model weights in paragraph (a)(3), subject to additional conditions. License Exception ACM authorizes the export, reexport, and transfer (in-country) of eligible items (ECCNs 3A090, 4A090, and related .z commodities, software, and technology) to a ‘private sector end user’ that is located in a destination not listed in Country Group D:5 or Macau, provided it is not headquartered in and does not have an ultimate parent company headquartered in Macau or a destination specified in Country Group D:5, if the ultimate end use is the “development,” “production” or storage (in a warehouse or other similar facility) of such eligible items.

This IFR amends License Exception AIA by adding a requirement for three of the eligible commodities for this exception: ECCNs 3A090.a; 5A002.z.1.a, z.2.a, z.3.a, z.4.a, z.5.a; and 5A992.z.1. The requirement for those three ECCNs provides that those ECCNs are eligible for this license exception only if they are designed by an approved or authorized IC designer, as described in

supplement no. 6 to part 740 and Note 1 to ECCN 3A090.a, respectively. This requirement is intended to ensure that foundries and other entities seeking to use this exception can do so only if the items have been designed by an entity that presents a low risk of diversion. As provided in Note 1 to ECCN 3A090.a, authorized IC designers are those that are (i) in Taiwan or a location specified in Country Group A:1 or A:5, that are neither headquartered nor have an ultimate parent headquartered in Macau or a location specified in Country Group D:5 of supplement no. 1 to part 740 and (ii) for whom transactions are subject to the reporting requirements in § 743.9 of the EAR.

This IFR similarly revises License Exception ACM. Paragraph (b) is revised by adding a requirement for three of the eligible commodities for this exception: ECCNs 3A090.a; 5A002.z.1.a, z.2.a, z.3.a, z.4.a, z.5.a; and 5A992.z.1. The requirement for those three ECCNs provides that those ECCNs are eligible for this license exception only if designed by an approved or authorized IC designer, as described in supplement no. 6 to part 740 and Note 1 to ECCN 3A090.a, respectively. As with the new requirement for License Exception AIA, this requirement is intended to ensure that foundries and other entities seeking to use License Exception ACM can do so only if they are working with entities that pose a low risk of diversion.

These revisions ensure License Exceptions ACM and AIA authorization for these three ECCNs are only available when designed by approved or authorized IC designers, which supports the more secure supply chain. The EAR still requires “front-end fabricators” to conduct continuous technical and KYC due diligence for authorized and approved IC designers and report their results to BIS. This ensures BIS has up-to-date information on these entities, enabling BIS to act on any concerning information reported. The factors used to designate authorized and approved IC designers are discussed in more detail below, but entities determined to have a strong history of export control compliance and that have been vetted by the U.S. government are likely to be trustworthy IC designers. Additionally, these exceptions are available for items designed by authorized IC designers headquartered in countries A:1, A:5, and Taiwan, which are destinations that are members of multilateral export control regimes (e.g., the Wassenaar Arrangement on Export Controls for Conventional Arms and Dual-use Goods and Technologies), have the authority to control key items of concern, or otherwise have incentive to ensure

compliance with these additional requirements. These destinations share the U.S. government's interest in countering diversion or misuse of advanced node ICs and promoting mutual security, and companies in such destinations will generally have a lower likelihood of misrepresenting the technical specifications of their items to advanced foundries.

Based on the changes in this IFR, these amended license exceptions will facilitate low-risk trade while allowing the U.S. government to vet prospective approved entities for such advanced ICs in the first instance, rather than relying solely on foundry due diligence to identify potential diversion risks. The reporting requirements associated with authorized IC designers will also allow the U.S. government visibility into the verification process between these entities and the advanced foundries to assure that it is operating as envisioned. It will therefore become much more difficult for entities headquartered in Macau or destinations specified in Country Group D:5 to obtain advanced computing ICs subject to the EAR by attempting to place orders through entities that might misrepresent the technical specifications of their items and then divert advanced computing ICs to restricted destinations.

B. New Supplement Nos. 6 and 7 to Part 740, Including Lists of Approved IC Designers and Approved "OSAT" Companies, as Well as Authorized IC Designers

Part 740 is amended by adding supplement nos. 6 and 7 to create two new lists of entities: approved IC designers (supplement no. 6) and approved "OSAT" companies (supplement no. 7).

In deciding which entities to initially include in these supplements, the agencies represented on the End User Review Committee (ERC) have assessed a variety of national security and foreign policy factors, including the company's record of engagement in appropriate end-use activities; the company's export licensing and related history indicating compliance with U.S. export controls and existence of other potential derogatory information related to said company (e.g., information raising questions about ownership of the company); whether the applicant has a longstanding history of advanced IC purchases; the ability of the applicant to guard against both the misuse and diversion of computing resources; the location of the company's headquarters and its principal place of operations; the volume and nature of the company's trade in ICs; and other factors as

determined by BIS to be relevant. In deciding on which entities warrant inclusion or removal from these supplements, the ERC will apply the same factors.

i. Addition of supplement no. 6 to part 740.

New supplement no. 6 to part 740, which is referenced in the Note 1 to ECCN 3A090.a, lists as approved IC designers Advanced Micro Devices, Inc., Alphabet Inc., Amazon.com, Inc., Analog Devices, Inc., Apple Inc., BAE Systems, Inc., Block, Inc., The Boeing Company, Broadcom Inc., Cerebras Systems Inc., Cisco Systems, Inc., Hewlett Packard Enterprise Company, Honeywell International, Inc., Infineon Technologies AG, Intel Corporation, International Business Machines Corporation (IBM), L3Harris Technologies, Inc., Marvell Technology, Inc., MediaTek Inc., Meta Platforms, Inc., Micron Technology, Inc., Microsoft Corporation, Mitsubishi Group, Nokia Corporation, Nvidia Corporation, NXP Semiconductors N.V., Qualcomm Incorporated, Raytheon Company, Realtek Semiconductor Corporation, Sony Group Corporation, Tesla, Inc., Texas Instruments, and Western Digital Technologies, Inc. Section 748.16 explains how to apply to be added to the list of approved IC designers. To be added to the list of approved IC designers, an IC designer with plans to produce one or more ICs classified under ECCN 3A090.a must submit to BIS a request in the form of an advisory opinion that is accompanied by certain required information, *i.e.*, the information in new supplement no. 4 to part 748. The processing of advisory opinion requests to add companies to the approved IC designer list in supplement no. 6 to part 740 will follow the interagency process for review of Validated End-User requests set forth in supplement no. 9 to part 748 of the EAR. BIS will conduct supplemental outreach to the companies initially included in supplement no. 6 to part 740 to ensure continued compliance with the EAR, including the requirements promulgated by this IFR.

ii. Addition of supplement no. 7 to part 740.

Supplement no. 7 to part 740 lists the following companies as approved "OSAT" companies, which is referenced in the Note 1 to ECCN 3A090.a: Amkor Technology, Inc., Ardentec Corporation, ASE Technology Holding Co., Ltd., Doosan Tesna Inc., Fabrinet, Giga Solution Tech. Co., Ltd., GlobalFoundries, Inc., HT Micron Semicondutores SA, Intel Corporation, International Business Machines Corporation (IBM); KESM Industries

Berhad, LB Semicon Inc. Micro Silicon Electronics Co., Ltd., Nepes Corporation, Powertech Technology Inc (PTI), QP Technologies, Raytek Semiconductor, Inc., Samsung Electronics Co. Ltd., SFA Semicon, Shinko Electric Industries Co. Ltd., Sigurd Microelectronics Corporation., Steco Co., Ltd., Taiwan Semiconductor Manufacturing Company Limited (TSMC), and United Microelectronics Corporation (UMC). To develop this list, BIS identified "OSAT" companies currently engaged in production of "applicable advanced logic ICs" headquartered outside of Macau or locations specified in Country Group D:5 in supplement no. 1 to part 740 of the EAR. BIS and the other export control agencies then vetted these entities on a case-by-case basis. Based on a review of open source and other information available to the U.S. Government, these companies have been determined to be approved. Therefore, these companies' attestations regarding the "aggregated approximated transistor count" of a final, packaged item can be used to overcome the presumption in Note 1 to ECCN 3A090.a that an "applicable advanced logic integrated circuit" is a 3A090.a item.

To apply to be added to the list of approved "OSAT" companies, § 748.16 specifies that an "OSAT" company with plans to test, assemble, or package one or more items exceeding the technical thresholds of 3A090.a designed by the approved IC designer must submit a request in the form of an advisory opinion to BIS. The processing of advisory opinion requests to add companies to the approved "OSAT" company list in supplement no. 7 to part 740 will follow the interagency process for review of Validated End-User requests set forth in supplement no. 9 to part 748 of the EAR.

BIS will conduct supplemental outreach to the companies initially included in supplement no. 7 to part 740 to ensure continued compliance with the EAR, including the requirements promulgated by this IFR.

C. Reporting Requirements for "Front-End Fabricators" Producing "Applicable Advanced Logic Integrated Circuits" for Authorized IC Designers

Section 743.9 adds new reporting requirements for "front-end fabricators" producing any IC specified in ECCN 3A090.a for authorized IC designers. Authorized IC designers are those that meet the criteria under new Note 1 to 3A090.a., including having agreed to submit applicable information described in § 743.9(b) to the "front-end fabricator," which the "front-end

fabricator” must then report to BIS and excludes these entities from some of these license requirements as described in Note 1 to 3A090.a. These new reporting requirements are designed to ensure the U.S. government has visibility into companies that are not listed on the initial approved IC designer list.

Note that BIS continuously monitors export licensing and trade data, and may take corrective action, including the imposition of reporting requirements, with respect to approved “OSAT” companies and approved IC designers should such parties present U.S. national security or foreign policy concerns.

Paragraph (a) to § 743.9 stipulates that reports must be submitted to BIS in accordance with this section by “front-end fabricators” producing ICs specified in ECCN 3A090.a for any authorized IC designers (§ 743.9(a)). Because only a small number of “front-end fabricators” are capable of producing ICs specified in ECCN 3A090.a, this allows for consolidation of reporting requirements from the smaller set of “front-end fabricators,” who can help to verify the much wider sets of IC designers and “OSAT” companies they work with. Structuring the reporting requirement for “front-end fabricators” ensures that the economic and compliance burden is minimal and placed on the companies who are best positioned to provide information that can help address potential diversion concern. Additionally, “front-end fabricators” need not provide information about exports, reexports, or transfers (in-country) to an entity that is an authorized IC designer and becomes an approved IC designer.

Paragraph (b) to § 743.9 identifies the information that must be collected by the “front-end fabricator” and included in each report to BIS regarding authorized IC designers (e.g., the name, address, and point of contact of the authorized IC designer; the end-user vetting form included in supplement no. 2 of this part; and a description of each category of IC specified or presumed to be specified under ECCN 3A090.a sold during the reporting quarter). The information in the report about the IC specified or presumed to be specified under ECCN 3A090.a should include the designer, product names, model number (if known), and quantity sold during the reporting quarter. This information provides the U.S. government visibility over the verification process.

The final three paragraphs of § 743.9 provide more information on how to submit reports, and where to submit

general information on reporting. Paragraph (c)(1) to § 743.9 establishes that reports must be submitted on a quarterly subject to the provisions of this section, and that the first report must be submitted by May 31, 2025 and the report shall cover any exports, reexports, and transfers (in-country) during the time between January 31 and April 30, 2025. Thereafter, paragraph (c)(2) states that reports for the reporting period ending April 30 must be received by BIS no later than May 31. Reports for the reporting period ending July 31 must be received by BIS no later than August 31. Reports for the reporting period ending October 31 must be received by BIS no later than November 30. Reports for the reporting period ending January 31 must be received by BIS no later than February 28. Paragraph (d) provides the email address, *EAR.Reports@bis.doc.gov*, where reports must be submitted with authorized IC designer in the subject line. Paragraph (e) notes that general information or questions about the reports can be submitted to the Office of National Security Controls, Tel. (202) 482-0092, or Email: *EAR.Reports@bis.doc.gov*.

The authorized IC designer KYC Vetting Form discussed in § 743.9 has been added through this IFR in new supplement no. 2 to part 743. This supplement contains a questionnaire that must be completed as part of the reporting requirements for authorized IC designers in § 743.9 of the EAR. Unresolved answers of “Yes” to questions in the form in supplement no. 2 to part 743 are considered a Red Flag. The “front-end fabricators” would need to conduct additional due diligence before proceeding with the transaction. The questions in the form are KYC best practices that are especially critical in this context where there is a risk of companies seeking advanced foundry services in circumvention of controls on advanced computing items. They are not an exhaustive list of due diligence requirements but provide important information that should be part of KYC screening. These questions focus on three areas: the legitimacy of the authorized IC designer; whether the authorized IC designer matches any entry on the Consolidated Screening List; and screening of any other parties to a given transaction; and general Red Flags such as whether a freight forwarding firm is listed as the final destination or whether any party appears to be overpaying for a transaction.

D. Application Process for Additions, Modifications, and Removals From the Approved IC Designer and Approved “OSAT” Company Lists

i. Changes to the advisory opinion process being used to request being added, modified, or removed from the lists of approved IC designers or approved “OSAT” companies.

In § 748.3(c) (Advisory opinions), this IFR makes revisions to account for the advisory opinion process that will be used to request a party to be added, removed, or modified from the list of approved IC designers in supplement no. 6 to part 740 or approved “OSAT” companies in supplement no. 7 to part 740. Those changes are implemented in paragraph (c)(4) of § 748.3. This IFR redesignates existing paragraph (c)(4) as paragraph (c)(5).

ii. Section 748.16: Application for additions and modification to, or removals from the list of approved IC designers and approved “OSAT” companies.

Part 748 is amended by adding new section § 748.16 for addition, removal, or modification requests for approved IC designers and approved “OSAT” companies. To be eligible to be listed in supplement no. 6 or 7 to part 740 of the EAR, § 748.16 notes that applicants must adhere to the provisions set forth in paragraphs (a) through (d) of this section. These provisions, discussed in greater detail in the paragraphs below in this section III.D.ii, establish eligibility for approved IC designer and approved “OSAT” company status, create protocols for additions, modifications, and removals from the list of approved IC designers and “OSAT” companies. Section 748.16 notes that if a request to be listed in supplement no. 6 or no. 7 to part 740 of the EAR is not granted, no new license requirement is triggered. In addition, such a result does not render the entity ineligible for license approvals from BIS, nor does it preclude the subsequent approval of a request to be listed in supplement no. 6 or 7 to part 740. These clarifications are to ensure an entity is not dissuaded from applying to be listed in this supplement.

Paragraph (a)(1) to § 748.16 states that only entities that have designed, assembled, tested, or packaged ICs, or have credible plans to do so, will be considered for addition to either list in supplement no. 6 or 7 to part 740. Entities headquartered or having an ultimate parent headquartered in Macau or a destination in Country Group D:5 are not eligible, as they are at risk of facing significant pressure to provide inaccurate information to the “front-end fabricators” in order to gain access to

advanced foundry services to make restricted advanced ICs. Meanwhile, entities that have not designed, assembled, tested, or packaged ICs and have no credible plans to do so are not eligible for inclusion on either list since they cannot attest to the performance specifications of ICs they have not designed, assembled, tested, or packaged themselves.

Paragraph (a)(2) provides a requirement to include, with a request for addition to a list, the information in supplement no. 4 to part 748. The information in this required supplement is much like the information required of Validated End User (VEU) applicants (*i.e.*, identity, ownership, methodology for recordkeeping, certification of compliance with all the provisions of § 748.16, and a statement of acknowledgement and agreement).

Paragraph (a)(3) provides an email address to send all types of requests. Requests must be submitted in the form of an advisory opinion request, as described in § 748.3(c), and requests should be marked “approved supply chain entities request” and emailed to *approved_supply_chain@bis.doc.gov*.

Paragraph (a)(4) establishes some of the factors used by the End-User Review Committee (ERC) in evaluating an applicant for eligibility to be listed as an approved IC designer or approved “OSAT” company. The factors include: (i) the applicant’s record of exclusive engagement in appropriate end-use activities; (ii) the applicant’s compliance with U.S. export controls; (iii) the need for an on-site review prior to approval; (iv) the applicant’s capability of complying with the requirements of being listed as an approved IC designer; (v) the ability of the applicant to guard against both the misuse and diversion of computing resources; and (vi) the applicant’s relationships with U.S. and foreign companies. In addition, subparagraph (a)(4) states that when evaluating the eligibility of an IC designer or “OSAT” company for approved status, the ERC will consider the status of the export controls of the country or countries where the applicant is headquartered, and these countries’ support of and adherence to multilateral export control regimes. All of these factors are relevant to assessing the risk that an applicant will adhere to all U.S. export control regulations and poses a low risk of diversion.

Next, paragraph (a)(5) notes that listings of approved IC designers, and approved “OSAT” companies are subject to revision, suspension, or revocation entirely or in part, and paragraph (a)(6) emphasizes that

information submitted in an addition or modification request is deemed to constitute continuing representations of existing facts or circumstances. Any material or substantive change relating to the authorization must be promptly reported to BIS, whether status has been granted or is still under consideration. The provisions ensure that approved IC designer status, and decision-making about whether to grant this status, is informed by the most up-to-date information.

Paragraph (b) requires the requester retain records relating to all requests submitted pursuant to § 748.16 in accordance with the recordkeeping requirements set forth in part 762 of the EAR. This is to ensure that in the event of an investigation, BIS can request access to relevant facts and representations made in the course of attaining and maintaining list status.

Paragraph (c) identifies the information that authorized IC designers are required to report to the “front-end fabricators” producing their ICs classified under ECCN 3A090.a, which the “front-end fabricators” must then report to BIS. These reporting requirements are in § 743.9 Reporting Requirements for authorized IC designers, which was discussed in section III.C.

Finally, entities listed as approved IC designers and approved “OSAT” companies may request their removal of their listing in supplement nos. 6 or 7 to part 740 of the EAR by following the instructions in paragraph (a)(2) of this section. Paragraph (d) notes that recordkeeping and reporting to the “front-end fabricator” or “front-end fabricators” must continue until the EAR has been updated to remove the entity from supplement nos. 6 or 7 to part 740 of the EAR. Any End-user Review Committee member has authority to make a proposal for an addition to, modification of, or removal of an entry from the IC Designer list and OSAT list, consistent with the authorities in supplement no. 9 to part 748 of the EAR.

E. New Definitions

Section 772.1 is amended by adding five definitions: “16/14 nanometer node,” “Aggregated approximated transistor count,” “Applicable advanced logic integrated circuits,” “Front-end fabricator,” and “Outsourced Semiconductor Assembly and Test (OSAT).” These terms are added to § 772.1 to assist the public to easily find the definition for these terms, because they are used in multiple parts of the EAR. The new definitions for “16/14 nanometer node,” “Aggregated

approximated transistor count,” and “Applicable advanced logic integrated circuits” defines these technical terms in a way that will add greater specificity under the EAR for where these terms are used. The new definitions for “Front-end fabricator,” and “Outsourced Semiconductor Assembly and Test (OSAT)” defined these types of entities for purposes of the EAR and will make it easier for exporters, reexporters, and transferors to identify these types of entities.

This IFR also revises the definition for “Advanced-node integrated circuits” by amending paragraph (3) for Dynamic Random-Access Memory (DRAM) ICs by revising the memory cell area from “less than 0.0019 μm^2 ” to read “less than 0.0026 μm^2 ” and revising the memory density from “greater than 0.288 gigabits per square millimeter” to read “greater than 0.20 gigabits per square millimeter.” In addition, this rule adds the parameter of “more than 3000 through-silicon vias per die” to ensure that all of the DRAM ICs that are intended to be captured under this definition are caught. In addition, the word “gigabytes” is changed to “gigabits” in Note 2 to the definition. See Section III.G.i.b. for more explanation about these revisions.

F. Revisions To Clarify the Scope of ECCN 3A090.a

BIS seeks to further ensure that customers of “front-end fabricators” and “OSAT” companies, including potential shell companies, cannot evade controls on advanced computing ICs by misrepresenting the performance capabilities of their IC designs. Thus, BIS has determined that it is not sufficient for “front-end fabricators” to confirm the ECCN by solely relying on the attestation of the end user or other party to the transaction. Accordingly, this IFR amends supplement no. 1 to part 774 by revising ECCN 3A090.a. This IFR adds Note 1 to ECCN 3A090.a to clarify that when a “front-end fabricator” or “OSAT” company is seeking to export, reexport, or transfer (in-country) any “applicable advanced logic integrated circuit,” there is a presumption that the item is 3A090.a and designed or marketed for datacenter. Unless this presumption is overcome, then the “front-end fabricator” or “OSAT” company must comply with all requirements applicable to items specified in 3A090.a. The presumption can be overcome in one of following three ways:

i. If the designer of the “applicable advanced logic integrated circuit” is an approved or authorized IC designer.

As discussed above, approved IC designers have been vetted by the U.S. government, while, prior to April 13, 2026, authorized IC designers include all IC designers (a) headquartered in Taiwan or a destination specified in Country Group A:1 or A:5, that are neither located in nor have an ultimate parent headquartered in Macau or a destination specified in Country Group D:5 of supplement no. 1 to part 740 of the EAR and (b) for whom transactions are subject to the reporting requirements in § 743.9 of the EAR. After April 13, 2026, a company will be considered an authorized IC designer for a period of 180 days if it both meets those criteria and submits an application to become an approved IC designer. Structuring the ECCN in this manner allows most IC designers—as the above destinations comprise the vast majority of “front-end fabricators”’ revenues—to proceed with transactions without a license but enhances the U.S. government’s visibility into this approved supply chain process. In particular, authorized IC designers headquartered in Taiwan or a destination specified in Country Group A:1 or A:5 may overcome the presumption if their “front-end fabricators” comply with reporting requirements for such customers. After April 13, 2026, the main way to be exempted is to become an approved IC designer (other than the 180-day route described here).

ii. If the IC die is packaged by the “front-end fabricator” at a location outside of Macau or a destination specified in Country Group D:5 in supplement no. 1 to part 740, then the attestation of the “front-end fabricator” that (a) the “aggregated approximated transistor count” of the final packaged IC is below 30 billion transistors, or (b) the final packaged IC does not contain high bandwidth memory (HBM) and that the “aggregated approximated transistor count” of the final packaged IC is below (i) 35 billion transistors for any exports, reexports, or transfers (in-country) completed in 2027; or (ii) 40 billion transistors for any exports, reexports, or transfers (in-country) completed in 2029 or thereafter, then this overcomes the presumption that the IC is specified in ECCN 3A090.a.

Packaging that is completed by the “front-end fabricator” itself at a location outside D:5 or Macau will enable that chipmaker to produce a credible, reliable assessment of the technical parameters of the chip. The “front-end fabricators” will know definitively whether the final, packaged item exceeds the applicable transistor threshold specified above if it conducts the packaging itself, and so the front-

end fabricator will not need to rely solely on the customer’s information.

iii. If the IC is packaged by an approved “OSAT” company listed in supplement no. 7 to part 740 of the EAR, then the attestation of the approved “OSAT” company that (a) the “aggregated approximated transistor count” of the final packaged IC is below 30 billion transistors, or (b) the final packaged IC does not contain high bandwidth memory (HBM) and that the “aggregated approximated transistor count” of the final packaged IC is below (i) 35 billion transistors for any exports, reexports, or transfers (in-country) completed in 2027; or (ii) 40 billion transistors for any exports, reexports, or transfers (in-country) completed in 2029 or thereafter, then this overcomes the presumption that the IC is specified in ECCN 3A090.a.

Because of their enhanced credibility, completion of the packaging by an approved “OSAT” company should produce a reliable assessment for the final item’s technical specifications, given that the U.S. government has assessed those entities to accurately report the ultimate performance of a final, packaged item. If an approved “OSAT” company can confirm that a final item does not contain more than the applicable number of transistors (as specified based on the year of the export, reexport, or in-country transfer), then it is very unlikely such item is an advanced AI IC. Any of these three conditions would suffice to enhance the credibility of a customer’s attestation as to an IC’s performance, thus enabling a potential customer to proceed without applying for a license. In the absence of an attestation of the ‘total processing performance’ and the ‘performance density’ by an approved IC designer listed in supplement no. 6 to part 740 of the EAR, any logic IC produced using the “16/14 nanometer node” or below, or using a non-planar transistor architecture and destined for an item with an “aggregated approximated transistor count” exceeding the applicable number of transistors (as specified for the year of the export, reexport, or in-country transfer) within the package, or where the “aggregated approximated transistor count” of the final, packaged item cannot be confirmed by the “front-end fabricator” or “OSAT” company as described above, is presumed to be a 3A090.a item designed or marketed for a datacenter.

Similarly, processing by an approved “OSAT” company, having been vetted by BIS and relevant interagency partners, overcomes the presumption that an “applicable advanced logic IC”

is a 3A090.a item and designed or marketed for a datacenter.

Importantly, the presumption in ECCN 3A090 does not apply to the extent an item is classified under ECCNs 4A003.z, 4A004.z, 4A005.z, or 4A090. As a result, the changes set forth under this IFR are primarily limited to circumstances in which a “front-end fabricator” seeks to export an IC to a chip designer or “OSAT” company.

Note 2 to 3A090.a provides a definition ‘approximated transistor count’ of a die, which is the ‘transistor density’ of the die multiplied by the area of the die measured in square millimeters. The ‘transistor density’ of the die is the number of transistors that can be fabricated per square millimeter for the process node used to manufacture the die.

G. Amendments to the Changes Made in the FDP IFR

i. Non-Commerce Control List (CCL) Amendments.

a. Revisions to § 744.11.

This rule amends § 744.11(a)(2)(v) to harmonize the product scope of the license requirements for exports from abroad or reexports from all countries by an entity headquartered in, or whose ultimate parent is headquartered in, Macau or a destination specified in Country Group D:5 with the product scope of the license requirements in § 744.11(a)(3)(i) by an entity that is headquartered or whose ultimate parent company is headquartered in a country not specified in supplement no. 4 to part 742. Specifically, this rule adds additional ECCNs to the scope of paragraph (a)(2)(v)(A)(1), which was ECCN 3B993, and with this IFR is now ECCNs 3B001 (except 3B001.a.4, c, d, f.1, f.5, f.6, g, h, k to n, p.2, p.4, or r), 3B002 (except 3B002.c), 3B611, 3B903, 3B991 (except 3B991.b.2.a through 3B991.b.2.b), 3B992, 3B993, or 3B994.

b. Revisions to the definition of DRAM “advanced-node integrated circuit.”

This rule updates the definition of “advanced-node integrated circuit” in § 772.1 for DRAM ICs to clarify that (1) the relevant cell area BIS intended to capture with its prior 18 nanometer (nm) half-pitch standard is 0.0026 square micrometers (μm^2); (2) the relevant memory density BIS intended to capture with its 18 nm half-pitch standard is 0.20 gigabits per square millimeter (Gb/mm²); and (3) the relevant number of through-silicon vias per die intended to be captured is a parameter of “more than 3000 through-silicon vias per die”. In October 2022, BIS defined advanced-node DRAM ICs for purposes of §§ 744.6(c)(2) and 744.23(a)(2) as those with an “18 nm

half pitch or below.” Based on the parameters specified for “18 nm half-pitch” DRAM in the International Roadmap for Devices and Systems (IRDS), this standard corresponds to a DRAM cell size of 0.00194 μm^2 and a memory density of 0.288 Gb/mm². In the FDP IFR, BIS replaced the 18 nm half-pitch standard by directly referencing these technical parameters.

However, based on further analysis of DRAM production information, BIS determined that the IRDS definition of “18 nm half-pitch” does not fully cover DRAM ICs equivalent to “18 nm half-pitch” due to the IRDS definition and actual parameters of DRAM produced by the relevant foundries. As such, it does not restrict exports, reexports and transfers (in-country) of items covered by § 744.23(a)(2) and the activities of U.S. persons § 744.6 (c)(2)(i) to high bandwidth memory and other advanced DRAM applications. Accordingly, this update revises the cell area and memory density parameters to be consistent with production standards in the DRAM industry for the 18 nm half-pitch node, rather than the IRDS definition of “18 nm half-pitch,” which is based on a theoretical model, rather than actual, physical characteristics of DRAM memory. This revision imposes end use and U.S. persons controls at DRAM facilities not previously controlled by the definition of DRAM in the December 5, 2024 FDP IFR.

c. Revisions to Footnote 5-related references to address support for the “production” of logic and DRAM “advanced-node integrated circuits.”

This rule expands the scope of end users covered by the new *De Minimis* and FDPs applicable to Footnote 5 entities to include any end-user facility where the “production” of logic and DRAM “advanced-node integrated circuits” occurs. As explained in the FDP IFR, BIS added 16 entities to the Entity List with a Footnote 5 designation because of specific national security and or foreign policy concerns described in the Entity List rule, including supporting, or having the potential to support, the PRC’s efforts to produce “advanced-node integrated circuits,” including for military end uses. These controls complement BIS’s existing controls on the “production” of “advanced-node integrated circuits” in §§ 744.6(c)(2) and 744.23(a)(2) of the EAR. The revisions in this IFR will ensure that controls apply to certain foreign produced items when there is “knowledge” that an item is destined for certain entities located at facilities of concern, whether or not they have already been added to the Entity List with a Footnote 5 designation. At this

time, BIS has determined to add extraterritorial controls on facilities where the “production” of logic and DRAM “advanced-node integrated circuits” occurs.

d. Revisions to § 734.4(a)(3) text and footnote.

This rule revises the term “a” to “this” in § 734.4(a)(3) to clarify that the relevant “commodity” for purposes of this section is equipment described in ECCN 3B993.f.1. This IFR also updates the Footnote 1 to § 734.4 to address questions from industry about which countries maintain controls on these items.

e. Revisions to § 734.9(a) to add is-informed authority.

This rule revises § 734.9(a) by adding paragraph (a)(3) to clarify BIS’s authority to notify persons that foreign-produced items located outside the United States are subject to the EAR when they meet the requirements of any FDP rule in § 734.9, which as of the effective date of this IFR consists of paragraphs (b) through (k), as well as notifying persons of any license requirements that apply to such items.

f. Correcting four note designations in § 734.9 to place them in sequential order.

In § 734.9 this IFR also redesignates four of the existing notes to place the notes in numerical order in the section for consistency with Office of Federal Register requirements for the sequential numbering of notes in a section. This IFR redesignates Note 3 to paragraph (g) as Note 4 to paragraph (g), Note 5 to paragraph (h)(2)(ii) as Note 6 to paragraph (h)(2)(ii), Note 3 to paragraph (k)(1)(ii)(B) as Note 6 to paragraph (k)(1)(ii)(B), and Note 7 to paragraph (l)(1) as Note 8 to paragraph (l)(1).

g. Addition of Note 4 to § 734.9(h)(1).

In the advanced computing FDP rule, this IFR adds Note 4 to § 734.9(h)(1) to alert fabrication facilities and “OSAT” companies that pursuant to Note 1 of ECCN 3A090 there is a presumption that the commodity is ECCN 3A090.a and designed or marketed for datacenters when the IC is an “applicable advanced logic integrated circuit,” *i.e.*, logic integrated circuits produced using the “16/14 nanometer node” or below, or using a non-planar transistor architecture.

h. Revision of product scope for Temporary General License (TGL)—Less restricted SME “parts,” “components,” or “equipment.”

In supplement no. 1 to part 736, this IFR revises the product scope under paragraph (d)(1)(i)(A) for the TGL—Less restricted SME “parts,” “components,” or “equipment” under paragraph (d)(1). This IFR removes the reference to ECCN

3A991 in paragraph (d)(1)(i)(A) and adds in its place 3B991 to correct the product scope.

ii. Commerce Control List Revisions.

a. Revision to add items for improving 3B001.f and 3B993.f lithography equipment.

This rule adds new paragraphs under 3B001.f, 3B993.f, 3D992, 3D993, 3E992, and 3E993 for commodities, “software,” and “technology” designed or modified to improve the minimum resolvable feature size and ‘dedicated chuck overlay’ of deep-ultraviolet lithography equipment specified in 3B001.f.1 and 3B993.f. These new controls cover items that would not otherwise be specified under 3B001.f.1 or 3B993.f as “specially designed” “components” or “accessories” for such equipment, or under related 3D and 3B ECCNs for “software” and “technology” “specially designed” for the “development” or “production” of such equipment.

This rule also amends various cross references in the EAR to include 3B001.f.6.

b. Revisions to ECCNs 3B993 and 3B994.

This rule amends the headings for ECCNs 3B993 and 3B994 to specify both equipment and “specially designed” “components” and “accessories” for commodities specified in these ECCNs. BIS is making these changes to harmonize the scope of ECCNs 3B993 and 3B994 with similar controls in ECCN 3B001 and 3B002.

c. Revisions to ECCNs 3D992, 3D993, 3D994, 3E992, 3E993, and 3E994.

Paragraphs 3D992.a, 3D993.a, 3E993.a are amended by adding “specially designed” for consistency with other 990 series software controls.

ECCNs 3D994 and 3E994 are amended by adding “specially designed” to the heading for consistency with other 990 series software and technology controls.

ECCN 3E992 is amended by adding “and “technology” as follows (see List of Items Controlled)” to the heading and adding paragraphs 3E992.a to control “technology” “specially designed” for the “development” or “production” of commodities specified in 3B001.a.4, c, d, f.1, f.5, f.6, k to n, p.2, p.4, r; or 3B002.c; and adding 3E992.b to control “technology” not specified by 3E992.a designed or modified to perform specified actions in or with deep-ultraviolet immersion photolithography equipment.

iii. Extension of comment period for FDP IFR.

This IFR extends the FDP IFR deadline for written comments to March 14, 2025. This extension is being made to allow for commenters to have additional time to review the additional

amendments and clarifications to the EAR made in the FDP IFR and to be informed by the public outreach that BIS is conducting on the FDP IFR and will be conducting for this IFR in preparing their comments. Extending the public comment period on the FDP IFR does not change that rule's effective date.

IV. Public Comments

BIS welcomes comments from the public on these additional due diligence revisions to the regulations, as well as for any of the other changes included in this IFR.

V. Savings Clauses

A. Savings Clause for the Entire IFR

For shipments of items removed from eligibility for a license exception or export, reexport, or transfer (in-country) NLR as a result of this regulatory action that were en route aboard a carrier to a port of export, reexport, or transfer (in-country), on January 31, 2025, pursuant to actual orders for export, reexport, or transfer (in-country) to or within a foreign destination, may proceed to that destination under the previous eligibility for a License Exception or export, reexport, or transfer (in-country) NLR, provided the export, reexport, or transfer (in-country) is completed no later than on until March 3, 2025.

C. Savings Clause for This IFR for Certain Transactions Previously Authorized

If, in the twelve months prior to the effective date of this regulatory action, BIS exempted exports, reexports, or transfers (in-country) of an item from a licensing requirement imposed by notice issued pursuant to §§ 744.11(c) or 744.23(b), then exports, reexports, or transfers (in-country) of that item are exempt from any licensing requirement imposed by this regulatory action absent additional action taken by BIS.

VI. Export Control Reform Act of 2018

On August 13, 2018, the President signed into law the John S. McCain National Defense Authorization Act for Fiscal Year 2019, which included ECRA (codified, as amended, at 50 U.S.C. 4801–4852). ECRA provides the legal basis for BIS's principal authorities and serves as the authority under which BIS issues this rule. In particular, and as noted elsewhere, Section 1753 of ECRA (50 U.S.C. 4812) authorizes the regulation of exports, reexports, and transfers (in-country) of items subject to U.S. jurisdiction. Further, Section 1754(a)(1)–(16) of ECRA (50 U.S.C. 4813(a)(1)–(16)) authorizes, *inter alia*, the establishment of a list of controlled

items; the prohibition of unauthorized exports, reexports, and transfers (in-country); the requirement of licenses or other authorizations for exports, reexports, and transfers (in-country) of controlled items; apprising the public of changes in policy, regulations, and procedures; and any other action necessary to carry out ECRA that is not otherwise prohibited by law. Pursuant to Section 1762(a) of ECRA (50 U.S.C. 4821(a)), these changes can be imposed in a final rule without prior notice and comment.

VII. Rulemaking Requirements

1. Executive Orders 12866, 13563, and 14094 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects and distributive impacts and equity). Executive Order 13563 emphasizes the importance of quantifying both costs and benefits and of reducing costs, harmonizing rules, and promoting flexibility. Pursuant to Executive Order 12866, as amended, this final rule has not been determined to be a “significant regulatory action.”

2. Notwithstanding any other provision of law, no person is required to respond to, nor shall any person be subject to a penalty for failure to comply with, a collection of information subject to the requirements of the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501 *et seq.*), unless that collection of information displays a currently valid Office of Management and Budget (OMB) Control Number.

This rule involves the following OMB-approved collections of information subject to the PRA:

- 0694–0088, “Multi-Purpose Application,” which carries a burden hour estimate of 29.4 minutes for a manual or electronic submission;
- 0694–0096 “Five Year Records Retention Period,” which carries a burden hour estimate of less than 1 minute;
- 0694–0122, “Licensing Responsibilities and Enforcement,” which carries a burden hour estimate of 10 minutes per electronic submission;
- 0694–0137, “License Exceptions and Exclusions,” which carries a burden hour estimate of 5 minutes per electronic submission; and
- 0607–0152 “Automated Export System (AES) Program,” which carries a burden hour estimate of 3 minutes per electronic submission.

This IFR will affect the collection under control number 0694–0088, for

the multipurpose application because of the increase of 375 more license applications. BIS estimates that the changes included in this IFR will result in a net increase of 375 multi-purpose applications (*i.e.*, an increase of 375 license applications) submitted annually to BIS. However, the increase in burden falls within the existing burden estimates currently associated with these control numbers.

This IFR also involves a collection previously approved by the OMB under control number 0694–0137, “License Exceptions and Exclusions” because this rule modifies two EAR license exceptions, which now include new notification and reporting requirements. Specifically, this IFR adds two new types of requests that can be made under the existing advisory opinion process and new reporting requirements. There are two types of entities specified in Note 1 to 3A090.a that require submissions of requests to be added, modified or removed as an approved IC designer or approved “OSAT” company. These new reporting requirements related to License Exceptions ACM and AIA are specified under §§ 743.9 and new Note 1 to 3A090.a of the EAR. These changes are expected to result in an increase of 1,704 submissions related to this use of License Exceptions AIA and ACM, submitted to BIS or to other parties involved in the transaction. BIS estimates that these changes will result in an increase in burden hours of 385 hours. This collection of information fits within the scope of this information collection.

Additional information regarding these collections of information—including all background materials—can be found at: <https://www.reginfo.gov/public/do/PRAMain> by using the search function to enter either the title of the collection or the OMB Control Number.

3. This rule does not contain policies with federalism implications as that term is defined in Executive Order 13132.

4. Pursuant to Section 1762 of ECRA (50 U.S.C. 4821), this action is exempt from the Administrative Procedure Act (APA) (5 U.S.C. 553) requirements for notice of proposed rulemaking, opportunity for public participation, and delay in effective date. While Section 1762 of ECRA on its own provides sufficient authority for such an exemption, this action is also independently exempt from the same APA requirements because it involves a military or foreign affairs function of the United States (5 U.S.C. 553(a)(1)). Nonetheless, BIS is accepting comments on this IFR.

5. Because a notice of proposed rulemaking and an opportunity for public comment are not required to be given for this rule under the APA (5 U.S.C. 553) or by any other law, the analytical requirements of the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) are not applicable. Accordingly, no regulatory flexibility analysis is required, and none has been prepared.

List of Subjects

15 CFR Part 734

Administrative practice and procedure, Exports, Inventions and patents, Research, Science and technology.

15 CFR Part 740

Administrative practice and procedure, Exports, Reporting and recordkeeping requirements.

15 CFR Part 742

Exports, Terrorism.

15 CFR Part 744

Exports, Reporting and recordkeeping requirements, Terrorism.

15 CFR Part 748

Administrative practice and procedure, Exports, Reporting and recordkeeping requirements, Terrorism.

15 CFR Parts 736 and 772

Exports.

15 CFR Part 762

Administrative practice and procedure, Business and industry, Confidential business information, Exports, Reporting and recordkeeping requirements.

15 CFR Part 774

Exports, Reporting and recordkeeping requirements.

For the reasons stated in the preamble, parts 734, 736, 740, 742, 744, 748, 762, 772, and 774 of the Export Administration Regulations (15 CFR parts 730 through 774) are amended as follows:

PART 734—SCOPE OF THE EXPORT ADMINISTRATION REGULATIONS

■ 1. The authority citation for part 734 continues to read as follows:

Authority: 50 U.S.C. 4801–4852; 50 U.S.C. 4601 *et seq.*; 50 U.S.C. 1701 *et seq.*; E.O. 12938, 59 FR 59099, 3 CFR, 1994 Comp., p. 950; E.O. 13020, 61 FR 54079, 3 CFR, 1996 Comp., p. 219; E.O. 13026, 61 FR 58767, 3 CFR, 1996 Comp., p. 228; E.O. 13222, 66 FR 44025, 3 CFR, 2001 Comp., p. 783; E.O. 13637, 78 FR 16129, 3 CFR, 2014 Comp., p. 223; Notice of November 7, 2024, 89 FR 88867 (November 8, 2024).

■ 2. Section 734.4 is amended by revising paragraphs (a)(3), (8), and (9) to read as follows:

§ 734.4 *De minimis* U.S. content.

(a) * * *

(3) There is no *de minimis* level for equipment meeting the parameters in ECCN 3B993.f.1 of the Commerce Control List in supplement no. 1 to part 774 of the EAR, when the equipment is destined for use in the “development” or “production” of “advanced-node integrated circuits” and the “advanced-node integrated circuits” meet the parameter specified in paragraph (1) of that definition in § 772.1 of the EAR, unless the country from which the foreign-made item was first exported¹ has this commodity specified on an export control list.

* * * * *

(8) There is no *de minimis* level related to the SME FDP rule for a commodity meeting the parameters in ECCNs 3B001.a.4, c, d, f.1, f.5, f.6, k to n, p.2, p.4, r, or 3B002.c of the Commerce Control List (CCL) in supplement no. 1 to part 774 of the EAR, when the commodity contains a U.S.-origin integrated circuit specified under Category 3, 4, or 5 of the CCL, and the commodity is destined for Macau or a destination specified in Country Group D:5, unless excluded from the national security license requirement in § 742.4(a)(4) or the regional stability license requirement in § 742.6(a)(6) of the EAR.

(9) For items related to the Footnote 5 FDP rule, there is no *de minimis* level for an item meeting the parameters in ECCNs specified in Category 3B (except 3B001.a.4, c, d, f.1, f.5, f.6, k to n, p.2, p.4, r, or 3B002.c) of the Commerce Control List (CCL) in supplement no. 1 to part 774 of the EAR, when the commodity contains a U.S.-origin integrated circuit specified under Category 3, 4, or 5 of the CCL, and the commodity is destined for an entity with a Footnote 5 designation in the license requirement column of the Entity List in supplement no. 4 to part 744 of the EAR, or to an end-user “facility” located in Macau or a destination specified in Country Group D:5 when there is “knowledge” that the commodities will be used in the “production” of logic or DRAM “advanced-node integrated circuits.”

* * * * *

¹ The Government of Japan added ArF-wet lithography equipment and other advanced semiconductor manufacturing equipment to its control list for all regions on July 23, 2023. The Government of the Kingdom of the Netherlands added this equipment to its

control list for all regions on September 9, 2024.

■ 3. Section 734.9 is amended by:

■ a. Revising the paragraph heading of paragraph (a) and adding paragraph (a)(3);

■ b. Revising paragraphs (e)(3) introductory text, (e)(3)(i) introductory text; and (e)(3)(ii);

■ c. Redesignating Note 3 to paragraph (g) as Note 4 to paragraph (g), Note 5 to paragraph (h)(2)(ii) as Note 6 to paragraph (h)(2)(ii), Note 3 to paragraph (k)(1)(ii)(B) as Note 7 to paragraph (k)(1)(ii)(B) and Note 7 to paragraph (l)(1) as Note 8 to paragraph (l)(1);

■ d. Adding Note 5 to paragraph (h)(1); and

■ e. Revising paragraph (k)(1) introductory text.

The additions and revisions read as follows:

§ 734.9 Foreign-Direct Product (FDP) Rules.

* * * * *

(a) Definitions, model certification, and is-informed authority—

* * * * *

(3) *Jurisdiction and license requirements for persons informed by BIS.* BIS may inform persons, either individually by specific notice or through amendment to the EAR, that foreign-produced items located outside the United States are subject to the EAR pursuant to § 734.9, and of any license requirements that apply to such items. Specific notice will be given only by, or at the direction of, the Principal Deputy Assistant Secretary for Strategic Trade and Technology Security or the Deputy Assistant Secretary for Strategic Trade. When such notice is provided orally, it will be followed by written notice within two working days signed by one of those officials or their designee. The absence of BIS notification does not excuse the exporter from compliance with other requirements of this section.

(e) * * *

(3) *Entity List FDP rule: Footnote 5 and “advanced-node integrated circuit” “production.”* A foreign-produced commodity is subject to the EAR if it meets both the product scope in paragraph (e)(3)(i) of this section and the end-user scope in paragraph (e)(3)(ii) of this section. See § 744.11(a)(2)(v) of the EAR for license requirements, exclusion from license requirements, and license review policy, applicable to foreign-produced commodities that are subject to the EAR pursuant to this paragraph (e)(3).

(i) *Product scope Entity List FDP rule: footnote 5 and “advanced-node integrated circuit” “Production.”* The product scope applies if a foreign-

produced commodity is specified in ECCN 3B001 (except 3B001.a.4, c, d, f.1, f.5, f.6, g, h, k to n, p.2, p.4, r), 3B002 (except 3B002.c), 3B903, 3B991 (except 3B991.b.2.a through 3B991.b.2.b), 3B992, 3B993, or 3B994, and meets the conditions of either paragraph (e)(3)(i)(A) or (B) of this section.

* * * * *

(ii) *End-user scope of the Entity List FDP rule: Footnote 5 and for entities located at “facilities” where “advanced-node integrated circuit” “production” occurs.* A foreign-produced commodity meets the end-user scope of this paragraph (e)(3)(ii) if there is “knowledge” that:

(A) *Activities involving Footnote 5 designated entities and for entities located at “facilities” where the “production” of “advanced-node integrated circuits” occurs.* The foreign-produced commodity will be incorporated into any “part,” “component,” or “equipment” produced, purchased, or ordered by any entity with a Footnote 5 designation in the license requirement column of the Entity List in supplement no. 4 to part 744 of the EAR or by an entity located at a “facility” in Macau or a destination specified in Country Group D:5 where the “production” of logic or DRAM “advanced-node integrated circuits” occurs; or

(B) *Footnote 5 designated entities and for “advanced-node integrated circuits” “production” “facilities” as transaction parties.* Any entity with a Footnote 5 designation in the license requirement column of the Entity List in supplement no. 4 to part 744 of the EAR or an entity located at a “facility” located in Macau or a destination specified in Country Group D:5 of supplement no. 1 to part 740 where the “production” of logic or DRAM “advanced-node integrated circuits” occurs is a party to any transaction involving the foreign-produced commodity (e.g., as a “purchaser,” “intermediate consignee,” “ultimate consignee,” or “end-user”).

* * * * *

(h) * * *

(1) * * *

Note 5 to paragraph (h)(1): See Note 1 to ECCN 3A090, because when a “front-end fabricator” or “OSAT” company is seeking to export, reexport, or transfer (in-country) an “applicable advanced logic integrated circuit,” there is a presumption that the commodity is 3A090.a and designed or marketed for datacenters.

* * * * *

(k) * * *

(1) *Product scope.* The product scope applies to a foreign-produced commodity specified in ECCN

3B001.a.4, c, d, f.1, f.5, f.6, k to n, p.2, p.4, r, or 3B002.c that meets the conditions of either paragraph (k)(1)(i) or (ii) of this section.

PART 736—GENERAL PROHIBITIONS

■ 4. The authority citation for part 736 continues to read as follows:

Authority: 50 U.S.C. 4801–4852; 50 U.S.C. 4601 *et seq.*; 50 U.S.C. 1701 *et seq.*; E.O. 12938, 59 FR 59099, 3 CFR, 1994 Comp., p. 950; E.O. 13020, 61 FR 54079, 3 CFR, 1996 Comp., p. 219; E.O. 13026, 61 FR 58767, 3 CFR, 1996 Comp., p. 228; E.O. 13222, 66 FR 44025, 3 CFR, 2001 Comp., p. 783; E.O. 13338, 69 FR 26751, 3 CFR, 2004 Comp., p. 168; Notice of May 8, 2024, 89 FR 40355 (May 9, 2024); Notice of November 7, 2024, 89 FR 88867 (November 8, 2024).

■ 5. Supplement no. 1 to part 736 is amended by revising paragraphs (d)(1)(i)(A) to read as follows:

Supplement No. 1 to Part 736—General Orders

* * * * *

(d) * * *

(1) * * *

(i) * * *

(A) ECCNs that are designated as controlled on the CCL only for AT reasons (3BA991, 3B992, and associated “software” and “technology”); or

* * * * *

PART 740—LICENSE EXCEPTIONS

■ 6. The authority citation for part 740 continues to read as follows:

Authority: 50 U.S.C. 4801–4852; 50 U.S.C. 4601 *et seq.*; 50 U.S.C. 1701 *et seq.*; 22 U.S.C. 7201 *et seq.*; E.O. 13026, 61 FR 58767, 3 CFR, 1996 Comp., p. 228; E.O. 13222, 66 FR 44025, 3 CFR, 2001 Comp., p. 783.

■ 7. Section 740.2 is amended by revising paragraph (a)(9)(i) to read as follows:

§ 740.2 Restrictions on all License Exceptions.

(a) * * *

(9) * * *

(i) The item is controlled under ECCN 3B001.a.4, c, d, f.1, f.5, f.6, k to n, p.2, p.4, r, 3B002.c, 3B993, 3B994, or associated software and technology in ECCN 3D001, 3D002, 3D003, 3D992, 3D993, 3D994, 3E001, 3E992, 3E993, or 3E994 and is being exported, exported from abroad, reexported, or transferred (in-country) to or within either Macau or a destination specified in Country Group D:5 of supplement no. 1 to this part, and the license exception is other than License Exception GOV, restricted to eligibility under the provisions of § 740.11(b).

* * * * *

■ 8. Section 740.26 is amended by revising paragraph (c)(1) to read as follows:

§ 740.26 License Exception Restricted Fabrication “Facility” (RFF)

* * * * *

(c) * * *

(1) Items may not be used for the operation, installation, maintenance, repair, overhaul, or refurbishing of items specified in ECCNs 3B001.a.4, c, d, f.1, f.5, f.6, k to n, p.2, p.4, r, 3B002.c, 3B993, or 3B994 at a ‘restricted fabrication facility’.

* * * * *

■ 9. Section 740.27 is amended by revising paragraph (a)(1) to read as follows:

§ 740.27 License Exception Artificial Intelligence Authorization (AIA).

(a) * * *

(1) Eligible commodities for this exception are those specified in ECCNs 3A001.z.1.a, z.2.a, z.3.a, z.4.a; 3A090.a, if designed by an approved or authorized integrated circuit designer, as described in Note 1 to ECCN 3A090.a; 4A003.z.1.a, z.2.a; 4A004.z.1; 4A005.z.1; 4A090.a; 5A002.z.1.a, z.2.a, z.3.a, z.4.a, z.5.a, if designed by an approved or authorized integrated circuit designer, as described in Note 1 to ECCN 3A090.a; 5A004.z.1.a, z.2.a; and 5A992.z.1, if designed by an approved or authorized integrated circuit designer, as described in Note 1 to ECCN 3A090.a.

* * * * *

■ 10. Section 740.28 is amended by revising paragraph (b) to read as follows:

§ 740.28 License Exception Advanced Compute Manufacturing (ACM).

* * * * *

(b) *Eligible commodities, software, and technology.* Commodities, “software,” and “technology” eligible for License Exception ACM are as follows: Items specified by ECCNs 3A001.z; 3A090.a, if designed by an approved or authorized integrated circuit designer, as described in Note 1 to ECCN 3A090.a; 3A090.b and c; 3D001 (for “software” for commodities controlled by 3A001.z or 3A090); 3E001 (for “technology” for commodities controlled by 3A001.z or 3A090); 4A003.z; 4A004.z; 4A005.z; 4A090; 4D001 (for “software” for commodities controlled by 4A003.z, 4A004.z, and 4A005.z); 4D090 (for “software” for commodities controlled by 4A090); 4E001 (for commodities controlled by 4A003.z, 4A004.z, 4A005.z, 4A090 or “software” specified by 4D001 (for 4A003.z, 4A004.z, or 4A005.z), or 4D090 (for “software” for commodities controlled by 4A090)); 5A002.z.1.a,

z.2.a, z.3.a, z.4.a, z.5.a, if designed by an approved or authorized integrated circuit designer, as described in Note 1 to ECCN 3A090.a; 5A002.z.2; 5A004.z.2; and 5A992.z.2; 5A004.z; 5A992.z.1, if designed by an approved or authorized integrated circuit designer, as described in Note 1 to ECCN 3A090.a 5A992.z.2; 5D002.z; 5D992.z; 5E002 (for “technology” for commodities controlled by 5A002.z or 5A004.z or “software” specified by 5D002 (for 5A002.z or 5A004.z commodities)); or 5E992 (for “technology” for commodities controlled by 5A992.z or “software” controlled by 5D992.z).

* * * * *

- 11. Supplements no. 6 and 7 are added to read as follows:

**Supplement No. 6 to Part 740—
Approved Integrated Circuit Designers**

Note: See Note 1 to ECCN 3A090.a.

Advanced Micro Devices, Inc.;
Alphabet, Inc.;
Amazon.com, Inc.;
Analog Devices, Inc.;
Apple, Inc.;
BAE Systems, Inc.;
Block, Inc.;

**PART 742—CONTROL POLICY—CCL
BASED CONTROLS**

- 12. The authority citation for part 742 continues to read as follows:

Authority: 50 U.S.C. 4801–4852; 50 U.S.C. 4601 *et seq.*; 50 U.S.C. 1701 *et seq.*; 22 U.S.C. 3201 *et seq.*; 42 U.S.C. 2139a; 22 U.S.C. 7201 *et seq.*; 22 U.S.C. 7210; Sec. 1503, Pub. L. 108–11, 117 Stat. 559; E.O. 12058, 43 FR 20947, 3 CFR, 1978 Comp., p. 179; E.O. 12851, 58 FR 33181, 3 CFR, 1993 Comp., p. 608; E.O. 12938, 59 FR 59099, 3 CFR, 1994 Comp., p. 950; E.O. 13026, 61 FR 58767, 3 CFR, 1996 Comp., p. 228; E.O. 13222, 66 FR 44025, 3 CFR, 2001 Comp., p. 783; Presidential Determination 2003–23, 68 FR 26459, 3 CFR, 2004 Comp., p. 320; Notice of November 1, 2023, 88 FR 75475 (November 3, 2023).

- 13. Section 742.4 is amended by revising paragraph (a)(4)(i) to read as follows:

§ 742.4 National Security.

(a) * * *

(4) * * *

(i) *Scope.* A license is required for exports, reexports, exports from abroad, and transfers (in-country) to or within either Macau or a destination specified in Country Group D:5 in supplement no. 1 to part 740 of the EAR of items specified in 3B001.a.4, c, d, f.1, f.5, f.6, k to n, p.2, p.4, r, 3B002.c, 3D992, or 3E992.

* * * * *

- 14. Section 742.6 is amended by revising paragraph (a)(6)(i)(A)(1) to read as follows:

§ 742.6 Regional Stability.

(a) * * *

(6) * * *

(i) * * *

(A) * * *

(1) *Scope.* A license is required for exports, reexports, and transfers (in-country) to or within either Macau or a destination specified in Country Group D:5 in supplement no. 1 to part 740 of the EAR of items specified in 3B001.a.4, c, d, f.1, f.5, f.6, k to n, p.2, p.4, r, 3B002.c, 3D992, or 3E992.

* * * * *

PART 743—SPECIAL REPORTING AND NOTIFICATION

- 15. The authority citation for part 743 continues to read as follows:

Authority: 50 U.S.C. 4801–4852; 50 U.S.C. 4601 *et seq.*; 50 U.S.C. 1701 *et seq.*; E.O. 13222, 66 FR 44025, 3 CFR, 2001 Comp., p. 783; E.O. 13637, 78 FR 16129, 3 CFR, 2014 Comp., p. 223; 78 FR 16129.

- 16. Section 743.9 is added to read as follows:

§ 743.9 Reporting requirements for “front-end fabricators” producing “applicable advanced logic integrated circuits” for authorized integrated circuit designers.

(a) *Requirement.* “Front-end fabricators” producing any integrated circuit specified under ECCN 3A090.a or presumed to be specified under ECCN 3A090.a by Note 1 to 3A090 for any authorized integrated circuit designer must submit reports to BIS in accordance with this section. Reports need not, however, include information about exports, reexports, or in-country transfers to an entity that is both an approved integrated circuit designer listed in supplement no. 6 to part 740 of the EAR and an authorized integrated circuit designer, as described in Note 1 to ECCN 3A090.a.

(b) *Information to be included in the reports.* The following information must be collected by the “front-end fabricator” and included in each report to BIS:

(1) The name, address, and point of contact of the authorized integrated circuit designer;

(2) The “front-end fabricator’s” name and address must appear at the top of each page;

(3) The end-user Know Your Customer (KYC) vetting form included in supplement no. 2 of this part;

(4) Description of each category of integrated circuit classified under ECCN 3A090.a sold by the “front-end fabricator” to the authorized integrated circuit designer during the reporting quarter, including all of the following:
(i) Designer of the integrated circuit classified under ECCN 3A090.a;
(ii) Product names associated with the integrated circuit specified or presumed to be specified under ECCN 3A090.a, including model number (if known); and
(iii) Quantity of the integrated circuits classified under ECCN 3A090.a sold by the “front-end fabricator” to the integrated circuit designer during the reporting quarter.

(c) *Quarterly reporting requirement.*
(1) You must submit the first report by May 31, 2025. The report shall cover any exports, reexports, or transfers (in-

country) of integrated circuits classified under ECCN 3A090.a during the time between January 15, 2025 and April 30, 2025. Thereafter, reports are due according to the provisions of paragraph (c)(2) of this section.

(2)(i) After May 31, 2025, you must submit a report for each reporting period. There are four reporting periods:

- (A) May 1 to July 31;
- (B) August 1 to October 31;
- (C) November 1 to January 31; and
- (D) February 1 to April 30.

(ii) The report for a given period shall cover any exports, reexports, or transfers (in-country) of integrated circuits classified under ECCN 3A090.a during

that period. Each report is due no later than 30 days after the end of the relevant reporting period.

(d) *Where to submit reports required under this section.* Reports may be emailed to *EAR.Reports@bis.doc.gov* and must specify “Authorized integrated circuit designer” in the subject line.

(e) *Contacts.* General information or questions about these reports can be directed to the Office of National Security Controls, Tel. (202) 482–0092, or Email: *EAR.Reports@bis.doc.gov*.

■ 17. Supplement no. 2 is added to read as follows:

Supplement No. 2 to Part 743 Authorized Integrated Circuit Designer Know Your Customer (KYC) Vetting Form

This supplement contains a questionnaire that must be completed as part of the reporting requirements for authorized integrated circuit designers in § 743.9 of the EAR. The questions in the form are KYC best practices that are especially critical in this context where there is a risk of companies seeking advanced foundry services in circumvention of controls on advanced computing items. They are not an exhaustive list of due diligence requirements but provide important information that should be part of KYC screening.

VETTING FOR AUTHORIZED INTEGRATED CIRCUIT DESIGNER

	Yes/no	If yes, insert how you resolved column 2
<i>Section 1: Legitimacy of the authorized integrated circuit designer:</i> 1.A. Does the entity lack a website? 1.B. Does the entity's website IP address correspond to a different geographical region than the entity's physical address? 1.C. Is the country code of the entity's phone number different than the entity's physical address? 1.D. Does the entity's email address <i>not</i> contain the company domain name? 1.E. Is the entity's physical address invalid? 1.F. Is the entity purportedly a civil end user but its address is co-located with a military “facility”? 1.G. Do publicly available corporate records contradict the entity's assertions regarding its business (e.g., entity claims to be a large enterprise, but filings show only a small number of employees)? <i>Section 2: Screening:</i> 2.A. Does the entity's name match an entry in the Consolidated Screening List? 2.B. Does the entity's address match an entry in the Consolidated Screening List? 2.C. Does the customer's senior management or technical leadership (e.g., process engineers that are team leaders or otherwise leading development or production activities) overlap with an entity on the Consolidated Screening List? <i>Section 3: Additional Party Screening:</i> 3.A. Are any companies within the entity's corporate hierarchy (i.e., parent, subsidiary, ultimate beneficial owner) headquartered in Macau or Country Group D:5 in supplement no. 1 to part 740 of the EAR? 3.B. Do any companies within the entity's corporate hierarchy (i.e., parent, subsidiary, ultimate beneficial owner) match an entry or address in the Consolidated Screening List? 3.C. Are any other parties to the transaction (e.g., parties described in § 748.5 of the EAR) located or headquartered in Macau or Country Group D:5 in supplement no. 1 to part 740 of the EAR? <i>Section 4: General Red Flags:</i> 4.A. Is the entity's stated end use inconsistent with the nature of their business? 4.B. Is the requested quantity inconsistent with the entity's size? 4.C. Is a freight forwarding firm listed as the final destination? 4.D. Does the transaction involve multiple freight forwarders located in third countries? 4.E. Has the entity refused to answer questions about the end users and end uses of the product? 4.F. Do supporting documents such as commercial invoices list parties that are not the entity? 4.G. Is the entity overpaying for a product based on known market prices? 4.H. Does the transaction involve payments from entities in third countries not otherwise involved in the transaction?		

PART 744—CONTROL POLICY: END-USER AND END-USE BASED

■ 18. The authority citation for part 744 continues to read as follows:

Authority: 50 U.S.C. 4801–4852; 50 U.S.C. 4601 *et seq.*; 50 U.S.C. 1701 *et seq.*; 22 U.S.C. 3201 *et seq.*; 42 U.S.C. 2139a; 22 U.S.C. 7201 *et seq.*; 22 U.S.C. 7210; E.O. 12058, 43 FR 20947, 3 CFR, 1978 Comp., p. 179; E.O. 12851, 58 FR 33181, 3 CFR, 1993 Comp., p. 608; E.O. 12938, 59 FR 59099, 3 CFR, 1994 Comp., p. 950; E.O. 13026, 61 FR 58767, 3

CFR, 1996 Comp., p. 228; E.O. 13099, 63 FR 45167, 3 CFR, 1998 Comp., p. 208; E.O. 13222, 66 FR 44025, 3 CFR, 2001 Comp., p. 783; E.O. 13224, 66 FR 49079, 3 CFR, 2001 Comp., p. 786; Notice of September 18, 2024, 89 FR 77011 (September 20, 2024); Notice of November 7, 2024, 89 FR 88867 (November 8, 2024).

■ 19. Section 744.6 is amended by revising paragraph (c)(2)(iii) to read as follows:

§ 744.6 Restrictions on specific activities of “U.S. Persons.”

* * * * *

(c) * * *

(2) * * *

(iii) *Semiconductor manufacturing equipment.* To or within either Macau or a destination specified in Country Group D:5, any item not subject to the EAR and meeting the parameters of ECCNs 3B001.a.4, c, d, f.1, f.5, f.6, k to

n, p.2, p.4, r, 3B002.c, 3D992, or 3E992 regardless of end use or end user.

* * * * *

■ 20. Section 744.11 is amended by revising paragraph (a)(2)(v) paragraph heading, paragraphs (a)(2)(v)(A) introductory text, and (a)(2)(v)(A)(1), to read as follows:

§ 744.11 License requirements that apply to entities acting or at significant risk of acting contrary to the national security or foreign policy interests of the United States.

* * * * *

(a) * * *

(2) * * *

(v) *Footnote 5 entities and end-user facilities where the “production” of logic or DRAM “advanced-node integrated circuits” occurs.*

(A) *License requirement.* You may not, without a license, reexport, export from abroad, or transfer (in-country) to or within any destination or to any end user or party any foreign-produced item subject to the EAR pursuant to §§ 734.4(a)(9) or 734.9(e)(3), for each of the following paragraphs (A)(1) through (A)(4):

(1) *Exports from abroad or reexports from all countries.* A license is required for commodities specified in ECCNs 3B001 (except 3B001.a.4, c, d, f.1, f.5, f.6, g, h, k to n, p.2, p.4, or r), 3B002 (except 3B002.c), 3B611, 3B903, 3B991 (except 3B991.b.2.a through 3B991.b.2.b), 3B992, 3B993, or 3B994 when exported from abroad or reexported by an entity headquartered in, or whose ultimate parent company is headquartered in, Macau or a destination specified in Country Group D:5.

* * * * *

PART 748—APPLICATIONS (CLASSIFICATION, ADVISORY, AND LICENSE) AND DOCUMENTATION

■ 21. The authority citation for part 748 continues to read as follows:

Authority: 50 U.S.C. 4801–4852; 50 U.S.C. 4601 *et seq.*; 50 U.S.C. 1701 *et seq.*; E.O. 13026, 61 FR 58767, 3 CFR, 1996 Comp., p. 228; E.O. 13222, 66 FR 44025, 3 CFR, 2001 Comp., p. 783; Notice of August 13, 2024, 8 FR 66187 (August 15, 2024).

■ 22. Section 748.3 is amended by:

■ a. Redesignating paragraph (c)(4) as paragraph (c)(5); and

■ b. Adding a new paragraph (c)(4).
The addition reads as follows:

§ 748.3 Classification requests and advisory opinions.

* * * * *

(c) * * *

(4) To request an addition or modification to or removal from the

approved integrated circuit designers list in supplement no. 6 to part 740 of the EAR or the approved “OSAT” companies list in supplement no. 7 to part 740 of the EAR, see § 748.16 of this part.

* * * * *

■ 23. Section 748.16 is added to read as follows:

§ 748.16 Approved integrated circuit designers list and approved “OSAT” companies list, addition, removal, or modification requests.

You must submit an advisory opinion, in accordance with § 748.3 of this part and the provisions in this section, to request an addition or modification to or removal from the approved integrated circuit designers list in supplement no. 6 to part 740 of the EAR, or the approved “OSAT” companies list in supplement no. 7 to part 740 of the EAR. The advisory opinion request must adhere to the provisions in paragraphs (a) through (d) of this section. Denied requests do not result in new license requirements or render the applicant ineligible for license approvals from BIS, nor does a denied request preclude a company from submitting a subsequent request.

(a)(1) *Requests to be added.* Only entities not headquartered or having an ultimate parent headquartered in Macau or a destination specified in Country Group D:5 in supplement no. 1 to part 740 will be considered for addition to either list. Only entities that have designed, assembled, tested, or packaged integrated circuits, or have credible plans to do so, will be considered for addition to either list. To ensure a thorough review, requests to be added to either list must include the information in supplement no. 4 to this part.

(2) *Requests for removal or modification.* Any listed party may request to be removed from a list or have their listing modified. If a listed entity’s legal status changes (e.g., is dissolved), then they must request to be removed from the appropriate list. If control of the listed entity changes or the name changes, then the company must submit a modification request. If the company can no longer abide by the provisions of the EAR that pertain to approved entities, then they must request removal from the relevant list.

(3) *Submission of requests.* All requests should be emailed to approved_supply_chain@bis.doc.gov with a subject line stating, “Approved supply chain entities request.”

(4) *Review of requests for addition, modification, or removal.* The End-user Review Committee (ERC) will review all

requests (additions, modifications, and removals) to both lists.

(i) The ERC will consider a range of information for requests to be added to a list, potentially including but not limited to such factors as:

(A) the applicant’s record of exclusive engagement in appropriate end-use activities;

(B) the applicant’s compliance with U.S. export controls;

(C) the need for an on-site review prior to approval;

(D) the applicant’s capability of complying with the requirements of being added to the approved integrated circuit designers list or approved “OSAT” companies list;

(E) the ability of the applicant to guard against both the misuse and diversion of computing resources; and

(F) the applicant’s relationships with U.S. and foreign companies. In addition, when evaluating the application, the ERC will consider the status of the export controls of the country or countries where the applicant is headquartered, and these countries’ support of and adherence to multilateral export control regimes.

(ii) Requests to modify a listing due to a change in ownership or other substantive change to the listed entity will be considered in light of all of the criteria listed above. Requests to modify a listing to correct clerical errors or non-substantive changes to the listed entity’s information will typically be approved.

(iii) In reviewing requests to be removed from a list, BIS will consider facts regarding the entity’s compliance with the requirements of its status and the entity’s rationale for removing its status. In general, requests to be removed from a list will be approved.

(5) *Approval status.* Approved integrated circuit designer and approved “OSAT” company status (i.e., listing) is subject to revision, suspension, or revocation entirely or in part.

(6) *Continuing representations.* Information submitted in an addition or modification request is deemed to constitute continuing representations of existing facts or circumstances. Any material or substantive change relating to the request must be promptly reported to the ERC, whether approved or still under consideration.

(b) *Recordkeeping.* Records relating to all requests must be retained by the requester in accordance with the recordkeeping requirements set forth in part 762 of the EAR.

(c) *Reporting requirements.*

Authorized integrated circuit designers, to be eligible for that status consistent with Note 1 to ECCN 3A090.a, are required to submit certain information

to the “front-end fabricator,” which the “front-end fabricator” must then report to BIS. See § 743.9 of the EAR.

(d) *Termination of reporting requirements.* Approved integrated circuit designers and approved “OSAT” companies may request to be removed from a relevant list, however, the recordkeeping requirements in paragraph (b) of this section and the reporting requirements in paragraph (c) of this section must be adhered to until the listing is removed from the relevant list.

■ 24. Supplement no. 4 is added to read as follows:

**Supplement No. 4 to Part 748—
Information Required To Be Submitted
With a § 748.16 Request**

The following information is required to be submitted with a request to be added to either supplement no. 6 to part 740—Approved Integrated Circuit Designer list or supplement no. 7 to part 740—Approved “OSAT” company list, as described in § 748.16. The prospective added integrated circuit designer and prospective approved “OSAT” company are referred to as the candidate in this supplement.

(a) *Identity.* Name of the candidate, including all names under which the candidate conducts business; complete company physical address (simply listing a post office box is insufficient); telephone number; fax number; email address; company website; and name of individual who should be contacted if BIS has any questions. If the entity submitting the request is different from the candidate identified in the request, this information must be submitted for both entities. If the candidate has multiple locations, all physical addresses must be listed.

(b) *Ownership.* Provide an overview of the structure, ownership and business of the candidate. Include a description of the entity, including type of business activity, ownership, subsidiaries, and joint-venture projects, as well as an overview of any business activity or corporate relationship that the entity has with either government or military organizations.

(c) *“Applicable advanced logic integrated circuits.”* List any “applicable advanced logic integrated circuits” the candidate expects to design, assemble, test, or package, and the end use and any known intended end uses of these commodities. Include a description of the commodities; the ECCN for all commodities, classified to the subparagraph level, as appropriate; and technical parameters for the commodities including performance specifications.

(d) *Recordkeeping.* Specify how the candidate’s record keeping system will allow compliance with the recordkeeping requirements set forth in § 748.16(b) and part 762 of the EAR.

(e) *Certification.* Include an original statement on letterhead of the candidate, signed and dated by a person who has authority to legally bind the candidate,

certifying that the candidate will comply with all the provisions of § 748.16.

(f) *Statement of acknowledgement and agreement.* The candidate must include this statement of acknowledgement and agreement with the request, that the candidate:

(1) Acknowledges that they have been informed of and understand that the item(s) to be produced by the “front-end fabricator” have been exported in accordance with the EAR and that use or diversion of such items contrary to the EAR is prohibited, particularly the license requirements of §§ 742.6(a)(6)(iii) and 744.23(a)(3) of the EAR;

(2) Agrees to comply with the recordkeeping requirements in § 748.16(b) and part 762 of the EAR; and

(3) Agrees to allow on-site reviews by U.S. Government officials to verify compliance with the EAR.

PART 762—RECORDKEEPING

■ 25. The authority citation for part 762 continues to read as follows:

Authority: 50 U.S.C. 4801–4852; 50 U.S.C. 4601 *et seq.*; 50 U.S.C. 1701 *et seq.*; E.O. 13222, 66 FR 44025, 3 CFR, 2001 Comp., p. 783.

■ 26. Section 762.2 is amended by adding paragraphs (b)(61) and (b)(62), to read as follows:

§ 762.2 Records to be retained.

* * * * *

(b) * * *

(61) § 748.16(b), all records relating to requests for addition or modifications to or deletion from supplement no. 6 or supplement no. 7 to part 740.

(62) Supplement No. 2 to Part 743 Authorized Integrated Circuit Designer Vetting Form.

* * * * *

PART 772—DEFINITIONS OF TERMS

■ 27. The authority citation for part 772 continues to read as follows:

Authority: 50 U.S.C. 4801–4852; 50 U.S.C. 4601 *et seq.*; 50 U.S.C. 1701 *et seq.*; E.O. 13222, 66 FR 44025, 3 CFR, 2001 Comp., p. 783.

■ 28. Section 772.1 is amended by:

■ a. Adding, in alphabetical order, the definitions for “16/14 nanometer node;”

■ b. Revising the definition for “Advanced-Node Integrated Circuits;”

■ c. Adding, in alphabetical order, the definitions for “Aggregated approximated transistor count”, “Applicable advanced logic integrated circuits”, “Front-end fabricator”, and “Outsourced Semiconductor Assembly and Test (OSAT)” to read as follows:

§ 772.1 Definitions of terms as used in the Export Administration Regulations (EAR).

* * * * *

16/14 nanometer node (16/14 nm node) is indicated in the Logic Industry “Node Range” figure described in the International Roadmap for Devices and Systems, 2016 edition (“More Moore” White Paper), available at: https://irds.ieee.org/images/files/pdf/2016_MM.pdf.

* * * * *

Advanced-Node Integrated Circuits (Advanced-Node IC). For parts 734 and 744 of the EAR, “advanced-node integrated circuits” include integrated circuits that meet any of the following criteria:

(1) Logic integrated circuits using a non-planar transistor architecture or with a “production” ‘technology node’ of 16/14 nanometers or less;

(2) NOT AND (NAND) memory integrated circuits with 128 layers or more; or

(3) Dynamic random-access memory (DRAM) integrated circuits having:

(i) A memory cell area of less than 0.0026 μm^2 ;

(ii) A memory density greater than 0.20 gigabits per square millimeter; or

(iii) More than 3000 through-silicon vias per die.

Note 1 to definition of “Advanced-Node Integrated Circuits”: For the purposes of paragraph (1) of this definition, the term *technology node* refers to the Logic Industry “Node Range” figure described in the International Roadmap for Devices and Systems, 2016 edition (“More Moore” White Paper), available at: https://irds.ieee.org/images/files/pdf/2016_MM.pdf.

Note 2 to definition of “Advanced-Node Integrated Circuits”: For the purposes of paragraph (3) of this definition, the term *memory density* refers to the capacity of the monolithic die, package, or stack comprising the DRAM integrated circuit measured in gigabits divided by the relevant area. For a monolithic die, the relevant area is the area of the die. For package or stack, the relevant area is the footprint of the package or stack measured in square millimeters. In the case where a stack is contained in a package, use the area of the package. Cell area is defined as Wordline*Bitline (which takes into consideration both transistor and capacitor dimensions).

* * * * *

Aggregated approximated transistor count means the sum of the ‘approximated transistor counts,’ as defined in Note 1 to 3A090.a, of each “applicable advanced logic integrated circuit” die within the final package fabricated using a “16/14 nanometer node” or below, or using a non-planar transistor architecture.

* * * * *

Applicable advanced logic integrated circuits are logic integrated circuits produced using the “16/14 nanometer

node” or below, or using a non-planar transistor architecture.

* * * * *

Front-end fabricator is the company that provides front-end fabrication services to produce an integrated circuit, creating circuits on the surface of a wafer through processes such as photolithography, etch, and deposition.

* * * * *

Outsourced Semiconductor Assembly and Test (OSAT) is a company that provides third-party manufacturing and testing services to semiconductor businesses. OSAT companies are responsible for assembling, packaging, and testing integrated circuits and other semiconductor devices.

* * * * *

PART 774—THE COMMERCE CONTROL LIST

■ 29. The authority citation for part 774 continues to read as follows:

Authority: 50 U.S.C. 4801–4852; 50 U.S.C. 4601 *et seq.*; 50 U.S.C. 1701 *et seq.*; 10 U.S.C. 8720; 10 U.S.C. 8730(e); 22 U.S.C. 287c, 22 U.S.C. 3201 *et seq.*; 22 U.S.C. 6004; 42 U.S.C. 2139a; 15 U.S.C. 1824; 50 U.S.C. 4305; 22 U.S.C. 7201 *et seq.*; 22 U.S.C. 7210; E.O. 13026, 61 FR 58767, 3 CFR, 1996 Comp., p. 228; E.O. 13222, 66 FR 44025, 3 CFR, 2001 Comp., p. 783.

■ 30. Supplement no. 1 to part 774 is amended by revising ECCN 3A090, 3B001, 3B993 and 3B994, 3D992, 3D993, 3D994, 3E992, 3E993, and 3E994, to read as follows:

Supplement No. 1 To Part 774—The Commerce Control List

* * * * *

3A090 Integrated circuits as follows (see List of Items Controlled).

License Requirements

Reason for Control: RS, AT

<i>Control(s)</i>	<i>Country chart (see Supp. No. 1 to part 738)</i>
RS applies to entire entry, except 3A090.a.	To or within any destination worldwide, see § 742.6(a)(6)(iii)(A) of the EAR.
RS applies to 3A090.b ...	To or within destinations specified in Country Groups D:1, D:4, and D:5 of supplement no. 1 to part 740 of the EAR, excluding any destination also specified in Country Groups A:5 or A:6. See § 742.6(a)(6)(iii)(B) of the EAR.
RS applies to 3A090.c ...	To or within Macau or a destination specified in Country Group D:5 of supplement no. 1 to part 740 of the EAR. See § 742.6(a)(6)(i)(B) of the EAR.

Control(s) *Country chart
(see Supp. No. 1
to part 738)*

AT applies to entire entry AT Column 1.

List Based License Exceptions (See Part 740 for a Description of All License Exceptions)

LVS: N/A

GBS: N/A

NAC/ACA: Yes, for 3A090.a, if the item is not designed or marketed for use in datacenters and has a ‘total processing performance’ of 4800 or more; yes, for 3A090.b, if the item is designed or marketed for use in datacenters. N/A for 3A090.c.

HBM: Yes, for 3A090.c. See § 740.25 of the EAR.

AIA: Yes, for 3A090.a.

ACM: Yes

LPP: Yes for 3A090.a.

List of Items Controlled

Related Controls: (1) See ECCNs 3D001, 3E001, 5D002.z, and 5D992.z for associated technology and software controls. (2) See ECCNs 3A001.z, 5A002.z, 5A004.z, and 5A992.z.

Related Definitions: N/A

Items:

a. Integrated circuits having one or more digital processing units having either of the following:

a.1. A ‘total processing performance’ of 4800 or more; or

a.2. A ‘total processing performance’ of 1600 or more and a ‘performance density’ of 5.92 or more.

Note 1 to 3A090.a: When a “front-end fabricator” or “OSAT” company is seeking to export, reexport, or transfer (in-country) an “applicable advanced logic integrated circuit,” there is a presumption that the item is 3A090.a and designed or marketed for datacenters. If the “front-end fabricator” or “OSAT” company cannot overcome this presumption, then it must comply with all license requirements applicable to items specified in 3A090.a. However, this presumption does not apply to any entity other than the “front-end fabricator” or “OSAT” company. A “front-end fabricator” or “OSAT” company can overcome this presumption in any of the following three ways outlined in paragraphs a. through c. of this Note 1.

a. If the designer of the “applicable advanced logic integrated circuit” is an approved or authorized integrated circuit designer, then a datasheet or other attestation of the ‘total processing performance’ and the ‘performance density’ from the approved or authorized integrated circuit designer indicating that the IC is not specified in 3A090.a will overcome the presumption for the “front-end fabricator” or “OSAT” company that the IC is specified in ECCN 3A090.a.

(1) Approved integrated circuit designers are listed in supplement no. 6 to this part of the EAR;

(2) Prior to April 13, 2026, authorized integrated circuit designers include all integrated circuit designers:

(i) Headquartered in Taiwan or a destination specified in Country Group A:1 or A:5, that are neither located in nor have an

ultimate parent headquartered in Macau or a destination specified in Country Group D:5 of supplement no. 1 to part 740 of the EAR; and

(ii) That have agreed to submit applicable information described in § 743.9(b) to the “front-end fabricator,” which the “front-end fabricator” must then report to BIS.

(3) After April 13, 2026, authorized integrated circuit designers include any integrated circuit designer that both meets the criteria specified in subparagraph (2) and has submitted an application to become an approved integrated circuit designer. However, any company deemed an authorized IC designer after April 13, 2026, will cease to be an authorized IC designer 180 days after the submission of its application to become an approved IC designer.

b. If the integrated circuit die is packaged by the “front-end fabricator” at a location outside of Macau or a destination specified in Country Group D:5 in supplement no. 1 to part 740, then the attestation of the “front-end fabricator” that (a) the “aggregated approximated transistor count” of the final packaged IC is below 30 billion transistors, or (b) the final packaged IC does not contain high-bandwidth memory and that the “aggregated approximated transistor count” of the final packaged IC is below (i) 35 billion transistors for any exports, reexports, or transfers (in-country) completed in 2027; or (ii) 40 billion transistors for any exports, reexports, or transfers (in-country) completed in 2029 or thereafter, then this overcomes the presumption by the “front-end fabricator” or “OSAT” company that the IC is specified in ECCN 3A090.a.

c. If the integrated circuit is packaged by an approved “OSAT” company listed in supplement no. 7 to part 740 of the EAR, then the attestation of the approved “OSAT” company that (a) the “aggregated approximated transistor count” of the final packaged IC is below 30 billion transistors, or (b) the final packaged IC does not contain high-bandwidth memory and that the “aggregated approximated transistor count” of the final packaged IC is below (i) 35 billion transistors for any exports, reexports, or transfers (in-country) completed in 2027; or (ii) 40 billion transistors for any exports, reexports, or transfers (in-country) completed in 2029 or thereafter, then this overcomes the presumption by the “front-end fabricator” or “OSAT” company that the IC is specified in ECCN 3A090.a.

d. It is not sufficient for the “front-end fabricator” or “OSAT” company to confirm the ECCN by relying on the attestation of the end user or other party to the transaction, except under one of the three ways enumerated in paragraphs a. through c. of this note. In the absence of an attestation of the ‘total processing performance’ and the ‘performance density’ by an approved integrated circuit designer listed in supplement no. 6 to part 740 of the EAR, the “front-end fabricator” or “OSAT” company must presume that any logic integrated circuit produced using the “16/14 nanometer node” or below, or using a non-planar transistor architecture and destined for a commodity with an (a) “aggregated

approximated transistor count” of the final packaged IC is below 30 billion transistors, or (b) the final packaged IC does not contain high-bandwidth memory and that the “aggregated approximated transistor count” of the final packaged IC is below (i) 35 billion transistors for any exports, reexports, or transfers (in-country) completed in 2027; or (ii) 40 billion transistors for any exports, reexports, or transfers (in-country) completed in 2029 or thereafter, or where the “aggregated approximated transistor count,” of the final, packaged integrated circuit cannot be confirmed by the “front-end fabricator,” or an approved “OSAT” company listed in supplement no. 7 to part 740 of the EAR, is specified in ECCN 3A090.a and designed or marketed for a datacenter.

Technical Note 1 to 3A090.a: The ‘approximated transistor count’ of a die is the ‘transistor density’ of the die multiplied by the area of the die measured in square millimeters. The ‘transistor density’ of the die is the number of transistors that can be fabricated per square millimeter for the process node used to manufacture the die. To calculate the number of ‘approximated transistor count’ of a die, a “front end fabricator” or “OSAT” company has two options. First, the “front end fabricator” or “OSAT” company may take the transistor density of the process node used to manufacture the die and multiply this density by the area of the die. This number may be significantly higher than the true transistor count, but if the result is below the relevant transistor threshold, then the “front end fabricator” or “OSAT” company can be confident that the die in question will not exceed that threshold. Second, to adjudicate edge cases, the “front end fabricator” or “OSAT” company may use standard design verification tools to estimate the number of (both active and passive) transistors on the die using the GDS file.

b. Integrated circuits having one or more digital processing units having either of the following:

b.1. A ‘total processing performance’ of 2400 or more and less than 4800 and a ‘performance density’ of 1.6 or more and less than 5.92, or

b.2. A ‘total processing performance’ of 1600 or more and a ‘performance density’ of 3.2 or more and less than 5.92.

Note 2 to 3A090.a and 3A090.b: 3A090.a and 3A090.b do not apply to items that are not designed or marketed for use in datacenters and do not have a ‘total processing performance’ of 4800 or more. For 3A090.a and 3A090.b items that are not designed or marketed for use in datacenters and that have a ‘total processing performance’ of 4800 or more, see license exceptions NAC and ACA.

Note 3 to 3A090.a and 3A090.b: Integrated circuits specified by 3A090 include graphical processing units (GPUs), tensor processing units (TPUs), neural processors, in-memory processors, vision processors, text processors, co-processors/accelerators, adaptive processors, field-programmable logic devices (FPLDs), and application-specific integrated circuits (ASICs). Examples of integrated circuits are in the Note to 3A001.a.

Note 4 to 3A090.a and 3A090.b: For integrated circuits that are excluded from

ECCN 3A090 under Note 2 or 3 to 3A090, those ICs are also not applicable for classifications made under ECCNs 3A001.z, 4A003.z, 4A004.z, 4A005.z, 4A090, 5A002.z, 5A004.z, 5A992.z, 5D002.z, or 5D992.z because those other CCL classifications are based on the incorporation of an integrated circuit that meets the control parameters under ECCN 3A090 or otherwise meets or exceeds the control parameters or ECCNs 3A090 or 4A090. The performance parameters under ECCN 3A090.c are not used for determining whether an item is classified in a .z ECCN. See the Related Controls paragraphs of ECCNs 3A001.z, 4A003.z, 4A004.z, 4A005.z, 4A090, 5A002.z, 5A004.z, 5A992.z, 5D002.z, or 5D992.z.

Technical Note 2 to 3A090.a and 3A090.b: 1. ‘Total processing performance’ (‘TPP’) is $2 \times \text{MacTOPS} \times \text{‘bit length of the operation’}$, aggregated over all processing units on the integrated circuit.

a. For purposes of 3A090, ‘MacTOPS’ is the theoretical peak number of Tera (10^{12}) operations per second for multiply-accumulate computation ($D = A \times B + C$).

b. The 2 in the ‘TPP’ formula is based on industry convention of counting one multiply-accumulate computation, $D = A \times B + C$, as 2 operations for purpose of datasheets. Therefore, $2 \times \text{MacTOPS}$ may correspond to the reported TOPS or FLOPS on a datasheet.

c. For purposes of 3A090, ‘bit length of the operation’ for a multiply-accumulate computation is the largest bit-length of the inputs to the multiply operation.

d. Aggregate the TPPs for each processing unit on the integrated circuit to arrive at a total. ‘TPP’ = $\text{TPP}_1 + \text{TPP}_2 + \dots + \text{TPP}_n$ (where n is the number or processing units on the integrated circuit).

2. The rate of ‘MacTOPS’ is to be calculated at its maximum value theoretically possible. The rate of ‘MacTOPS’ is assumed to be the highest value the manufacturer claims in annual or brochure for the integrated circuit. For example, the ‘TPP’ threshold of 4800 can be met with 600 tera integer operations (or 2×300 ‘MacTOPS’) at 8 bits or 300 tera FLOPS (or 2×150 ‘MacTOPS’) at 16 bits. If the integrated circuit is designed for MAC computation with multiple bit lengths that achieve different ‘TPP’ values, the highest ‘TPP’ value should be evaluated against parameters in 3A090.

3. For integrated circuits specified by 3A090 that provide processing of both sparse and dense matrices, the ‘TPP’ values are the values for processing of dense matrices (e.g., without sparsity).

4. ‘Performance density’ is ‘TPP’ divided by ‘applicable die area’. For purposes of 3A090, ‘applicable die area’ is measured in millimeters squared and includes all die area of logic dies manufactured with a process node that uses a non-planar transistor architecture.

c. High bandwidth memory (HBM) having a ‘memory bandwidth density’ greater than 2 gigabytes per second per square millimeter.

Technical Note 1 to 3A090.c: ‘Memory bandwidth density’ is the memory bandwidth measured in gigabytes per second divided by the area of the package or stack measured in

square millimeters. In the case where a stack is contained in a package, use the memory bandwidth of the packaged device and the area of the package. High bandwidth memory (HBM) includes dynamic random access memory integrated circuits, regardless of whether they conform to the JEDEC standards for high bandwidth memory (HBM), provided they have a ‘memory bandwidth density’ greater than 2 gigabytes per second per square millimeter. This control does not cover co-packaged integrated circuits with both HBM and logic integrated circuit where the dominant function of the co-packaged integrated circuit is processing. It does include HBM permanently affixed to a logic integrated circuit designed as a control interface and incorporating a physical layer (PHY) function.

3B001 Equipment for the manufacturing of semiconductor devices, materials, or related equipment, as follows (see List of Items Controlled) and “specially designed” “components” and “accessories” therefor.

License Requirements

Reason for Control: NS, RS, AT

Control(s)	Country chart (see Supp. No. 1 to part 738)
NS applies to 3B001.c.1.a, 3B001.c.1.c, and 3B001.q.	Worldwide control. See § 742.4(a)(5) and (b)(10) of the EAR.
RS applies to 3B001.c.1.a, 3B001.c.1.c, and 3B001.q.	Worldwide control. See § 742.6(a)(10) and (b)(11) of the EAR.
NS applies to 3B001.a.1 to a.3, b, e, f.2 to f.4, g to j.	NS Column 2.
NS applies to 3B001.a.4, c, d, f.1, f.5, f.6, k to n, p.2, p.4, r.	To or within Macau or a destination specified in Country Group D:5 of supplement no. 1 to part 740 of the EAR. See § 742.4(a)(4) of the EAR.
RS applies to 3B001.a.4, c, d, f.1, f.5, f.6, k to n, p.2, p.4, r.	To or within Macau or a destination specified in Country Group D:5 of supplement no. 1 to part 740 of the EAR. See § 742.6(a)(6) of the EAR.
AT applies to entire entry	AT Column 1.

List Based License Exceptions (See Part 740 for a Description of All License Exceptions)

LVS: \$500, except semiconductor manufacturing equipment specified in 3B001.a.4, c, d, f.1, f.5, f.6, k to n, p.2, p.4, r.

GBS: Yes, except a.3 (molecular beam epitaxial growth equipment using gas sources), c.1.a (Equipment designed or modified for isotropic dry etching), c.1.c (Equipment designed or modified for anisotropic dry etching), .e (automatic loading multi-chamber central wafer handling systems *only* if connected to equipment controlled by 3B001.a.3, or .f), .f (lithography equipment) and .q (“EUV” masks and reticles designed for integrated circuits, not specified by 3B001.g, and

having a mask “substrate blank” specified by 3B001.j).

IEC: Yes, for 3B001.c.1.a, c.1.c, and .j, see § 740.2(a)(22) and § 740.24 of the EAR.

Special Conditions for STA

STA: License Exception STA may not be used to ship 3B001.c.1.a, c.1.c, and .j to any of the destinations listed in Country Group A:5 or A:6 (See supplement no. 1 to part 740 of the EAR).

List of Items Controlled

Related Controls: See also 3B903 and 3B991. See ECCNs 3D001, 3D992, 3E001, and 3E992 for related “software” and “technology” controls.

Related Definitions: N/A

Items:

a. Equipment designed for epitaxial growth as follows:

a.1. Equipment designed or modified to produce a layer of any material other than silicon with a thickness uniform to less than $\pm 2.5\%$ across a distance of 75 mm or more;

Note: 3B001.a.1 includes atomic layer epitaxy (ALE) equipment.

a.2. Metal Organic Chemical Vapor Deposition (MOCVD) reactors designed for compound semiconductor epitaxial growth of material having two or more of the following elements: aluminum, gallium, indium, arsenic, phosphorus, antimony, oxygen, or nitrogen;

a.3. Molecular beam epitaxial growth equipment using gas or solid sources;

a.4. Equipment designed for epitaxial growth of silicon (Si) or silicon germanium (SiGe), and having all of the following:

a.4.a. At least one preclean chamber designed to provide a surface preparation means to clean the surface of the wafer; and

a.4.b. An epitaxial deposition chamber designed to operate at a temperature equal to or below 958 K (685 °C).

b. Semiconductor wafer fabrication equipment designed for ion implantation and having any of the following:

b.1. [Reserved]

b.2. Being designed and optimized to operate at a beam energy of 20 keV or more and a beam current of 10 mA or more for hydrogen, deuterium, or helium implant;

b.3. Direct write capability;

b.4. A beam energy of 65 keV or more and a beam current of 45 mA or more for high energy oxygen implant into a heated semiconductor material “substrate”; or

b.5. Being designed and optimized to operate at beam energy of 20 keV or more and a beam current of 10 mA or more for silicon implant into a semiconductor material “substrate” heated to 600 °C or greater;

c. Etch equipment.

c.1. Equipment designed for dry etching as follows:

c.1.a. Equipment designed or modified for isotropic dry etching, having a largest ‘silicon germanium-to-silicon (SiGe:Si) etch selectivity’ of greater than or equal to 100:1; or

c.1.b. [Reserved]

c.1.c. Equipment designed or modified for anisotropic dry etching, having all of the following:

c.1.c.1. Radio Frequency (RF) power source(s) with at least one pulsed RF output;

c.1.c.2. One or more fast gas switching valve(s) with switching time less than 300 milliseconds; and

c.1.c.3. Electrostatic chuck with twenty or more individually controllable variable temperature elements;

c.2. Equipment designed for wet chemical processing and having a largest ‘silicon germanium-to-silicon (SiGe:Si) etch selectivity’ of greater than or equal to 100:1;

c.3. Equipment designed for anisotropic dry etching having all of the following:

c.3.a Two or more RF independent sources;

c.3.b Two or more independent gas sources;

c.3.c ‘Process uniformity tuning’ for wafer thickness variation compensation; and

c.3.d Through Silicon Via (TSV) reveal Endpoint Detection (EPD);

c.4. Equipment designed for Through Silicon Via (TSV) etch having all of the following:

c.4.a. Silicon etch rate greater than 7 microns per minute;

c.4.b. Within wafer (WIW) etch depth non-uniformity of less than or equal to 2 percent; and

c.4.c. A Through Silicon Via (TSV) aspect ratio greater than or equal to 10:1.

Note 1: 3B001.c includes etching by ‘radicals’, ions, sequential reactions, or non-sequential reaction.

Note 2: 3B001.c.1.c includes etching using RF pulse excited plasma, pulsed duty cycle excited plasma, pulsed voltage on electrodes modified plasma, cyclic injection and purging of gases combined with a plasma, plasma atomic layer etching, or plasma quasi-atomic layer etching.

Technical Notes:

1. For the purposes of 3B001.c, ‘silicon germanium-to-silicon (SiGe:Si) etch selectivity’ is measured for a Ge concentration of greater than or equal to 30% ($\text{Si}_{0.70}\text{Ge}_{0.30}$).

2. For the purposes of 3B001.c Note 1 and 3B001.d.14, ‘radical’ is defined as an atom, molecule, or ion that has an unpaired electron in an open electron shell configuration.

3. For the purposes of 3B001.c.3, ‘process uniformity tuning’ is the process of compensating for incoming wafer thickness variations after grinding.

d. Semiconductor manufacturing deposition equipment, as follows:

d.1. Equipment designed for cobalt (Co) electroplating or cobalt electroless-plating deposition processes;

Note: 3B001.d.1 controls semiconductor wafer processing equipment.

d.2. Equipment designed for:

d.2.a. Chemical vapor deposition of cobalt (Co) fill metal; or

d.2.b. Selective bottom-up chemical vapor deposition of tungsten (W) fill metal;

d.3. Semiconductor manufacturing equipment designed to fabricate a metal contact by multistep processing within a single chamber by performing all of the following:

d.3.a. Deposition of a tungsten layer, using an organometallic compound, while maintaining the wafer substrate temperature greater than 100 °C and less than 500 °C; and

d.3.b. Surface treatment plasma process using hydrogen (H_2), hydrogen and nitrogen (H_2+N_2), or ammonia (NH_3).

d.4. Equipment or systems designed for multistep processing in multiple chambers or stations, as follows:

d.4.a. Equipment designed to fabricate a metal contact by performing all of the following processes:

d.4.a.1. Surface treatment plasma process using hydrogen (H_2), including hydrogen and nitrogen ($\text{H}_2 + \text{N}_2$) or ammonia (NH_3), while maintaining the wafer substrate at a temperature greater than 100 °C and less than 500 °C;

d.4.a.2. Surface treatment plasma process using oxygen (O_2) or ozone (O_3), while maintaining the wafer substrate at a temperature greater than 40 °C and less than 500 °C; and

d.4.a.3. Deposition of a tungsten (W) layer while maintaining the wafer substrate temperature greater than 100 °C and less than 500 °C;

d.4.b. Equipment designed to fabricate a metal contact by performing all of the following processes:

d.4.b.1. Surface treatment process using a remote plasma generator and an ion filter; and

d.4.b.2. Deposition of a cobalt (Co) layer selectively onto copper (Cu) using an organometallic compound;

Note: This control does not apply to equipment that is non-selective.

d.4.c. Equipment designed to fabricate a metal contact by performing all the following processes:

d.4.c.1. Deposition of a titanium nitride (TiN) or tungsten carbide (WC) layer, using an organometallic compound, while maintaining the wafer substrate at a temperature greater than 20 °C and less than 500 °C;

d.4.c.2. Deposition of a cobalt (Co) layer using a physical sputter deposition technique and having a process pressure greater than 133.3 mPa and less than 13.33 Pa, while maintaining the wafer substrate at a temperature below 500 °C; and

d.4.c.3. Deposition of a cobalt (Co) layer using an organometallic compound and having a process pressure greater than 133.3 Pa and less than 13.33 kPa, while maintaining the wafer substrate at a temperature greater than 20 °C and less than 500 °C;

d.4.d. Equipment designed to fabricate copper (Cu) interconnects by performing all of the following processes:

d.4.d.1. Deposition of a cobalt (Co) or ruthenium (Ru) layer using an organometallic compound and having a process pressure greater than 133.3 Pa and less than 13.33 kPa, while maintaining the wafer substrate at a temperature greater than 20 °C and less than 500 °C; and

d.4.d.2. Deposition of a copper layer using a physical vapor deposition technique and having a process pressure greater than 133.3 mPa and less than 13.33 Pa, while maintaining the wafer substrate at a temperature below 500 °C;

d.5. Equipment designed for plasma enhanced chemical vapor deposition of carbon hard masks more than 2 μm thick and with density of greater than 1.7g/cc;

d.6. Atomic Layer Deposition (ALD) equipment designed for area selective deposition of a barrier or liner using an organometallic compound;

Note: 3B001.d.6 includes equipment capable of area selective deposition of a barrier layer to enable fill metal contact to an underlying electrical conductor without a barrier layer at the fill metal via interface to an underlying electrical conductor.

d.7. Equipment designed for Atomic Layer Deposition (ALD) of tungsten (W) to fill an entire interconnect or in a channel less than 40 nm wide, while maintaining the wafer substrate at a temperature less than 500 °C.

d.8. Equipment designed for Atomic Layer Deposition (ALD) of 'work function metal' having all of the following:

d.8.a. More than one metal source of which one is designed for an aluminum (Al) precursor;

d.8.b. Precursor vessel designed and enabled to operate at a temperature greater than 30 °C; and

d.8.c. Designed for depositing a 'work function metal' having all of the following:

d.8.c.1. Deposition of titanium-aluminum carbide (TiAlC); and

d.8.c.2. Enabling a work function greater than 4.0 eV;

Technical Note: For the purposes of 3B001.d.8, 'work function metal' is a material that controls the threshold voltage of a transistor.

d.9. Spatial Atomic Layer Deposition (ALD) equipment having a wafer support platform that rotates around an axis having any of the following:

d.9.a. A spatial plasma enhanced atomic layer deposition mode of operation;

d.9.b. A plasma source; or

d.9.c. A plasma shield or means to confine the plasma to the plasma exposure process region;

d.10. Equipment designed for Atomic Layer Deposition (ALD) or Chemical Vapor Deposition (CVD) of plasma enhanced of low fluorine tungsten (FW) (fluorine (F) concentration less than 10^{19} atoms/cm³) films;

d.11. [Reserved]

d.12. Equipment designed for depositing a metal layer, and having any of the following:

d.12.a. Selective tungsten (W) growth without a barrier; or

d.12.b. Selective molybdenum (Mo) growth without a barrier;

d.13. Equipment designed for depositing a ruthenium layer (Ru) using an organometallic

compound, while maintaining the wafer substrate at a temperature greater than 20 °C and less than 500 °C;

d.14. Equipment designed for deposition assisted by remotely generated 'radicals', enabling the fabrication of a silicon (Si) and carbon (C) containing film, and having all of the following properties of the deposited film:

d.14.a. A dielectric constant (k) of less than 4.4;

d.14.b. In features with an aspect ratio greater than 5:1 with lateral openings of less than 35 nm; and

d.14.c. A feature-to-feature pitch of less than 45 nm;

d.15. Equipment designed for void free plasma enhanced deposition of a low-k dielectric layer in gaps between metal lines less than 25 nm and having an aspect ratio greater than or equal to 1:1 with a less than 3.3 dielectric constant;

d.16. [Reserved]

d.17. Equipment designed for plasma enhanced chemical vapor deposition (PECVD) or radical assisted chemical vapor deposition and UV curing in a single platform of a dielectric film, while maintaining a substrate temperature below 500 °C, having all of the following:

d.17.a. A thickness of more than 6 nm and less than 20 nm on metal features having less than 24 nm pitch and having an aspect ratio equal to or greater than 1:1.8; and

d.17.b. A dielectric constant less than 3.0;

d.18. Equipment designed or modified for Atomic Layer Deposition (ALD) of molybdenum (Mo), ruthenium (Ru), or combinations Mo or Ru, and having all of the following:

d.18.a. A metal precursor source designed or modified to operate at a temperature greater than 75 °C; and

d.18.b. A process chamber (module) using a reducing agent containing hydrogen (H) at a pressure greater than or equal to 30 Torr (4 kPa).

Note: For the purposes of paragraph d.18.a, the metal precursor source need not be integrated with the equipment. The metal precursor could be delivered by an on-tool source or from a sub-fab source.

d.19. Deposition equipment having direct-liquid injection of more than two metal precursors, designed or modified to deposit a conformal dielectric film with a dielectric constant (K) greater than 40 in features with aspect ratio greater than 200:1 in a single deposition chamber.

d.20. Physical vapor deposition equipment having electromagnets for ion flux guidance, and "specially designed" to deposit tungsten (W) metal into features having an aspect ratio of 3:1 or greater.

e. Automatic loading multi-chamber central wafer handling systems having all of the following:

e.1. Interfaces for wafer input and output, to which more than two functionally different 'semiconductor process tools' controlled by 3B001.a, .b., .c, and .d are designed to be connected; and

e.2. Designed to form an integrated system in a vacuum environment for 'sequential multiple wafer processing';

Note: 3B001.e does not control automatic robotic wafer handling systems "specially designed" for parallel wafer processing.

Technical Notes:

1. For the purposes of 3B001.e, 'semiconductor process tools' refers to modular tools that provide physical processes for semiconductor "production" that are functionally different, such as deposition, implant or thermal processing.

2. For the purposes of 3B001.e, 'sequential multiple wafer processing' means the capability to process each wafer in different 'semiconductor process tools', such as by transferring each wafer from one tool to a second tool and on to a third tool with the automatic loading multi-chamber central wafer handling systems.

f. Lithography commodities as follows:

f.1. Align and expose step and repeat (direct step on wafer) or step and scan (scanner) equipment for wafer processing using photo-optical or X-ray methods and having any of the following:

f.1.a. A light source wavelength shorter than 193 nm; or

f.1.b. A light source wavelength equal to or longer than 193 nm and having all of the following:

f.1.b.1. The capability to produce a pattern with a "Minimum Resolvable Feature size" (MRF) of 45 nm or less; and

f.1.b.2. A maximum 'dedicated chuck overlay' value of less than or equal to 1.50 nm;

Technical Notes: For the purposes of 3B001.f.1.b:

1. The 'Minimum Resolvable Feature size' (MRF) (i.e., resolution) is calculated by the following formula:

$$(an\ exposure\ light\ source\ wavelength\ in\ nm) \times (K\ factor)$$

MRF

maximum numerical aperture

where, for the purposes of 3B001.f.1.b, the K factor = 0.25 ‘MRF’ is also known as resolution.

2. ‘Dedicated chuck overlay’ is the alignment accuracy of a new pattern to an existing pattern printed on a wafer by the same lithographic system. ‘Dedicated chuck overlay’ is also known as single machine overlay.

f.2. Imprint lithography equipment capable of production features of 45 nm or less;

Note: 3B001.f.2 includes:

—Micro contact printing tools

—Hot embossing tools

—Nano-imprint lithography tools

—Step and flash imprint lithography (S-FIL) tools

f.3. Equipment “specially designed” for mask making having all of the following:

f.3.a. A deflected focused electron beam, ion beam or “laser” beam; and

f.3.b. Having any of the following:

f.3.b.1. A Full-Width Half-Maximum (FWHM) spot size smaller than 65 nm and an image placement less than 17 nm (mean + 3 sigma); or

f.3.b.2. [Reserved]

f.3.b.3. A second-layer overlay error of less than 23 nm (mean + 3 sigma) on the mask;

f.4. Equipment designed for device processing using direct writing methods, having all of the following:

f.4.a. A deflected focused electron beam; and

f.4.b. Having any of the following:

f.4.b.1. A minimum beam size equal to or smaller than 15 nm; or

f.4.b.2. An overlay error less than 27 nm (mean + 3 sigma);

f.5. Imprint lithography equipment having an overlay accuracy less (better) than 1.5;

f.6. Commodities not specified by 3B001.f.1, designed or modified to perform all of the following in or with deep-ultraviolet immersion photolithography equipment:

f.6.a. Decrease the minimum resolvable feature specified by 3B001.f.1.b; and

f.6.b. Decrease the maximum ‘dedicated chuck overlay’ of a deep-ultraviolet immersion lithography tool below or equal to 1.5 nm.

g. Masks and reticles, designed for integrated circuits controlled by 3A001;

h. Multi-layer masks with a phase shift layer not specified by 3B001.g and designed to be used by lithography equipment having a light source wavelength less than 245 nm;

Note: 3B001.h does not control multi-layer masks with a phase shift layer designed for the fabrication of memory devices not controlled by 3A001.

N.B.: For masks and reticles, “specially designed” for optical sensors, see 6B002.

i. Imprint lithography templates designed for integrated circuits by 3A001;

j. Mask “substrate blanks” with multilayer reflector structure consisting of molybdenum and silicon, and having all of the following:

j.1. “Specially designed” for “Extreme Ultraviolet” (“EUV”) lithography; and

j.2. Compliant with SEMI Standard P37;

k. Equipment designed for ion beam deposition or physical vapor deposition of a multi-layer reflector for “EUV” masks;

l. “EUV” pellicles;

m. Equipment for manufacturing “EUV” pellicles;

n. Equipment designed for coating, depositing, baking, or developing photoresist formulated for “EUV” lithography;

o. [Reserved]

p. Removal and cleaning equipment as follows:

p.1. [Reserved]

p.2. Single wafer wet cleaning equipment with surface modification drying; or

p.3. [Reserved]

p.4. Equipment designed for single wafer cleaning using supercritical CO₂ or sublimation drying;

q. “EUV” masks and “EUV” reticles, designed for integrated circuits, not specified by 3B001.g, and having a mask “substrate blank” specified by 3B001.j; or

Technical Notes: For the purposes of 3B001.q, masks or reticles with a mounted pellicle are considered masks and reticles.

r. Equipment designed for EUV ‘pattern shaping.’

Technical Note: For the purposes of 3B001.r, ‘pattern shaping’ is a deposition or removal process used to improve overall patterning by reshaping or trimming patterns produced using EUV lithography with non-vertical directed particles including ions, neutral particles, clusters, radicals, or light.

LVS: N/A

GBS: N/A

List of Items Controlled

Related Controls: (1) See ECCNs 3D993 and 3E993 for associated “software” and “technology” controls. (2) For additional controls that apply to this ECCN, see also § 744.11(a)(2)(v) and § 744.23(a)(4) of the EAR.

Related Definitions: N/A

Items:

a. [Reserved]

b. Semiconductor wafer fabrication equipment for 300 mm wafers designed for ion implantation and having any of the following:

b.1. Equipment designed for plasma doping, having all of the following:

b.1.a. One or more Radio Frequency (RF) power source(s);

b.1.b. One or more pulsed DC Power Source; and

b.1.c. One or more n-type or p-type dopant implants.

b.2 [Reserved]

c. Etch equipment as follows:

c.1. Equipment designed or modified for anisotropic etching of dielectric materials and enabling the fabrication of high aspect ratio features with aspect ratio greater than 30:1 and a lateral dimension on the top surface of less than 100 nm, and having all of the following:

c.1.a. Radio Frequency (RF) power source(s) with at least one pulsed RF output; and

c.1.b. One or more fast gas switching valve(s) with switching time less than 300 milliseconds.

Note: 3B993.c.1 includes etching by ‘radicals’, ions, sequential reactions, or non-sequential reaction.

Technical Note: For the purposes of the Note to 3B993.c.1, ‘radical’ is defined as an atom, molecule, or ion that has an unpaired electron in an open electron shell configuration.

c.2. Equipment, not specified by 3B993.c.1, designed for anisotropic etching of dielectric material and enabling the fabrication of high aspect ratio features having all of the following:

c.2.a. An aspect ratio greater than 30:1; and

c.2.b. A lateral dimension on the top surface of less than 40 nm.

Note: 3B993.c.2 does not apply to equipment designed for wafer diameters less than 300 mm.

c.3. Equipment, not specified by 3B001.c.1.c, designed or modified for anisotropic dry etching, having all of the following:

c.3.a. Radio Frequency (RF) power source(s) with at least one pulsed RF output;

c.3.b. One or more fast gas switching valve(s) with switching time less than 500 milliseconds; and

c.3.c. Electrostatic chuck with greater than or equal to 10 individually controllable variable temperature elements.

d. Semiconductor manufacturing deposition equipment as follows:

d.1. Equipment designed, not specified by 3B001.d.14, for deposition assisted by remotely generated ‘radicals’, enabling the fabrication of a silicon (Si) and carbon (C) containing film, and having all of the following properties of the deposited film:

d.1.a. A dielectric constant (k) of less than 5.3;

d.1.b. In features with an aspect ratio greater than 5:1 with lateral openings of less than 70 nm; and

d.1.c. A feature-to-feature pitch of less than 100 nm.

d.2. Equipment designed for deposition of a film, containing silicon and carbon, and having a dielectric constant (k) of less than 5.3, into lateral openings having widths of less than 70 nm and aspect ratios greater than 5:1 (depth: width) and a feature-to-feature pitch of less than 100 nm, while maintaining the wafer substrate at a temperature greater than 400 °C and less than 650 °C, and having all of the following:

d.2.a. Boat designed to hold multiple vertically stacked wafers;

d.2.b. Two or more vertical injectors; and

d.2.c. A silicon source and propene are introduced to a different injector than a nitrogen source or an oxygen source.

d.3. Equipment designed for chemical vapor deposition of a carbon material layer with a density more than 1.6 g/cm³.

d.4. Deposition equipment, not specified by 3B001.d.19, having direct-liquid injection of more than two metal precursors, designed or modified to deposit a conformal dielectric film with a dielectric constant (K) greater than 35 in features with aspect ratio greater than 50:1 in a single deposition chamber.

e. [Reserved]

f. Lithography commodities as follows:

f.1. Align and expose step and repeat (direct step on wafer) or step and scan (scanner) lithography equipment for wafer processing using photo-optical or X-ray methods and having all of the following:

f.1.a. [Reserved]

f.1.b. A light source wavelength equal to or longer than 193 nm and having all of the following:

f.1.b.1 The capability to produce a pattern with a 'Minimum Resolvable Feature size' ('MRF') of 45 nm or less; and

f.1.b.2. A maximum 'dedicated chuck overlay' value greater than 1.50 nm and less than or equal to 2.40 nm.

Technical Notes for paragraph 3B993.f.1:

1. The 'Minimum Resolvable Feature size' ('MRF') is calculated by the following formula:

$(\text{an exposure light source wavelength in nm}) \times (K \text{ factor})$

$'MRF' = \frac{\text{maximum numerical aperture}}{\text{maximum numerical aperture}}$

maximum numerical aperture

where, for the purposes of 3B993.f.1, the K factor = 0.25.

'MRF' is also known as resolution.

2. 'Dedicated chuck overlay' is the alignment accuracy of a new pattern to an existing pattern printed on a wafer by the same lithographic system. 'Dedicated chuck overlay' is also known as single machine overlay.

f.2. Imprint lithography equipment having an overlay accuracy above 1.5 nm and less (better) than or equal to 4.0 nm.

f.3. Commodities designed or modified to increase the number of wafers processed per hour, averaged over any time interval, by greater than 1%, of equipment specified in 3B001.f.1 or 3B993.f.1.

f.4. Commodities not specified by 3B993.f.1 designed or modified to perform all of the following in or with deep-ultraviolet immersion photolithography equipment:

f.4.a. Decrease the minimum resolvable feature specified by 3B993.f.1.b.1; and

f.4.b. Decrease the maximum 'dedicated chuck overlay' of deep-ultraviolet immersion lithography equipment above 1.5 nm and below or equal to 2.4 nm.

g. through n. [Reserved]

o. Annealing equipment designed for 300 mm wafers as follows:

o.1 Annealing equipment, operating in a vacuum (equal to or less than 0.01 Pa) environment, performing any of the following:

o.1.a Reflow of copper (Cu) to minimize or eliminate voids or seams in copper (Cu) metal interconnects; or

o.1.b Reflow of cobalt (Co) or tungsten (W) fill metal to minimize or eliminate voids or seams;

o.2. Equipment designed to heat a semiconductor wafer to a temperature greater than 1000 °C (1832 °F) for a 'duration' less than 2 ms.

Technical Note: For the purposes of 3B993.o.2, 'duration' is the period above stated temperature.

p. Removal and cleaning equipment as follows:

p.1. Equipment designed for removing polymeric residue and copper oxide (CuO) film and enabling deposition of copper (Cu) metal in a vacuum (equal to or less than 0.01 Pa) environment.

p.2. [Reserved]

p.3. Equipment designed for dry surface oxide removal preclean or dry surface decontamination.

Note to 3B993.p.1 and p.3: These controls do not apply to deposition equipment.

q. Inspection and metrology equipment as follows:

q.1. Patterned wafer defect metrology or patterned wafer defect inspection equipment, designed or modified to accept wafers greater than or equal to 300 mm in diameter, and having all of the following:

q.1.a. Designed or modified to detect defects having a size equal to or less than 21 nm; and

q.1.b. Having any of the following:

q.1.b.1. A light source with an optical wavelength less than 400 nm;

q.1.b.2. An electron-beam source with a resolution less (better) than or equal to 1.65 nm;

q.1.b.3. A Cold Field Emission (CFE) electron-beam source; or

q.1.b.4. Two or more electron-beam sources.

q.2. Metrology equipment as follows:

q.2.a. Stand-alone equipment designed to measure wafer shape parameters prior to lithography exposure and utilize measurements to improve overlay or focus of a deep ultraviolet (DUV) lithography system having an immersion lens having a numerical aperture more than 1.3 or an Extreme Ultraviolet lithography (EUV) system; or

q.2.b. Metrology equipment designed to measure focus or overlay after resist development or after etch on product wafers using image-based overlay or diffraction-based measurements techniques, with an overlay measurement accuracy less (better) than or equal to 0.5 nm having any of the following:

q.2.b.1 designed for integration to a 'track'; or

q.2.b.2 'fast wavelength switching functionality';

Technical Notes:

1. For the purposes of 3B993.q.2, a 'track' is equipment designed for coating and developing photoresist formulated for lithography.

2. For the purposes of 3B993.q.2, 'fast wavelength switching functionality' is

defined as having the ability to change the measurement wavelength and acquire a measurement in less than 25 ms.

Items:

Note for 3B994: Equipment specified in this ECCN 3B994 are limited to equipment designed for volume production, such as equipment designed to accept a SEMI standard wafer carrier such as a 200 mm or larger Front Opening Unified Pod or be connected to a multi-chamber wafer handling system.

a. [Reserved]

b. Semiconductor wafer fabrication equipment designed for ion implantation of 300mm wafers as follows:

- b.1. [Reserved]
- b.2. Ion implantation equipment as follows:
 - b.2.a. Having all of the following:
 - b.2.a.1. Beam current greater than 1uA and less than 5mA; *and*
 - b.2.a.2. Beam energy greater than 5 keV and less than 300 keV; *or*
 - b.2.b. Having all of the following:
 - b.2.b.1. Beam current greater than 5 mA; *and*
 - b.2.b.2. Beam energy less than 5 keV; *or*
 - b.2.c. Having angular accuracy equal to or less (better) than 0.1 degrees.
- c. through p. [Reserved]
- q. Inspection and metrology equipment as follows:
 - q.1. and q.2. [Reserved]
 - q.3. Optical thin film metrology equipment or optical critical dimension metrology equipment designed for 300mm wafers and containing software designed for measuring non-planar transistors.

Vol. 90

Thursday,

No. 10

January 16, 2025

Part IX

Department of Veterans Affairs

38 CFR Part 21

Post-9/11 Improvements, Fry Scholarship, and Interval Payments
Amendments; Final Rule

DEPARTMENT OF VETERANS AFFAIRS

38 CFR Part 21

RIN 2900-AQ88

Post-9/11 Improvements, Fry Scholarship, and Interval Payments Amendments

AGENCY: Department of Veterans Affairs.

ACTION: Final rule.

SUMMARY: The Department of Veterans Affairs (VA) is amending its regulations that govern VA's administration of educational assistance programs to implement the provisions of the Post-9/11 Veterans Educational Assistance Improvements Act of 2010, which modified the manner in which payments of educational assistance are determined and expanded the types of programs students may pursue under the Post-9/11 GI Bill; section 1002 of the Supplemental Appropriations Act, 2009, which authorized the "Marine Gunnery Sergeant John David Fry Scholarship;" and a select number of provisions of the Harry W. Colmery Veterans Educational Assistance Act of 2017.

DATES: This rule is effective March 17, 2025.

FOR FURTHER INFORMATION CONTACT:

Thomas Alphonso, Assistant Director, Policy and Procedures, Education Service, Department of Veterans Affairs, Veterans Benefits Administration (22), 810 Vermont Avenue NW, Washington, DC 20420. Telephone: (202) 461-9800. (This is not a toll-free telephone number.)

SUPPLEMENTARY INFORMATION: Under chapter 5 of title 38, United States Code (U.S.C.), the Secretary has the authority to prescribe rules and regulations which are appropriate and necessary to carry out the laws administered by VA. Accordingly, on May 24, 2023, VA published a proposed rule at 88 FR 33672 to amend its regulations to implement section 1002 of the Supplemental Appropriations Act, 2009 (Pub. L. 111-32), which amended 38 U.S.C. chapter 33 to allow surviving children of active duty Servicemembers who died on or after September 11, 2001, to receive educational assistance under the Post-9/11 GI Bill (chapter 33); the Post-9/11 Veterans Educational Assistance Improvements Act of 2010 (Pub. L. 111-377), which amended the Post-9/11 GI Bill; six sections of the Harry W. Colmery Veterans Educational Assistance Act of 2017, or Forever GI Bill (Pub. L. 115-48); and a policy change to address how VA manages

overpayments and discontinuance dates. VA provided a 60-day comment period, which ended on July 24, 2023, and received six comments on the proposed amendments. The comments are addressed below.

Eligibility for Post-9/11 GI Bill Benefits and Time Limit for Transfer of Entitlement

One commenter expressed the belief that all veterans—no matter the length of their service—should be entitled to Post-9/11 GI Bill benefits if they were not discharged early for disciplinary reasons. The commenter stated that individuals who served honorably but with less time in service than others are not afforded the same entitlement. The commenter also indicated that the rulemaking should expand the period individuals can transfer entitlement to their children.

Requirements for payment of benefits are explicitly set by statute in 38 U.S.C. 3311 and 3313. Payment of educational assistance is based on the length of an individual's service as prescribed in sections 3311(b) and 3313(c). Generally, the greater the length of service, the greater the payment. Additionally, the time period for transferring benefits is explicitly set by statute in 38 U.S.C. 3319. Under section 3319(f) an individual may transfer entitlement only while serving in the Armed Forces. VA does not have authority to change statutory requirements through regulatory action.

Accordingly, VA makes no changes to the rule based on these comments.

Expansion of Eligibility for Post-9/11 GI Bill Benefits for Individuals

Two commenters recommended that the final rulemaking include revisions to allow more individuals the opportunity to obtain Post-9/11 GI Bill educational assistance benefits. One commenter suggested that VA should make the process to obtain these benefits easier and another suggested that individuals should be eligible for Post-9/11 GI Bill benefits regardless of when they attend school. This rulemaking implements the Post-9/11 Veterans Educational Assistance Improvements Act of 2010, which among other things, greatly expanded the types of programs students may pursue under the Post-9/11 GI Bill and eligibility for these programs. The provisions also refine and enhance VA's administration of Post-9/11 GI Bill educational assistance, improving the efficiency to deliver these benefits to claimants. Implementation of these provisions, as reflected in this

rulemaking, will make provision of benefits easier and more efficient.

Furthermore, under current law, individuals who were discharged on or after January 1, 2013, may use Post 9/11 GI Bill benefits to attend school any time after discharge. Individuals who were discharged prior to that date have 15 years from the date of discharge to use their benefits. 38 U.S.C. 3321(a). We have been implementing this law and will incorporate it into our regulations in a future rulemaking.

As such, VA makes no changes to this rule based on these comments.

Enhancement of the Definition of "In-Residence Course" and of an Attendance and Participation Requirement

One commenter suggested strengthening the definition of what constitutes an "on-site course," stating that educational institutions offering "hybrid" programs with only one residential class are actually distance-learning courses and that individuals enrolled in these hybrid programs should not be eligible for the payment of a full housing allowance when the majority of classes would be online and not "on-site." (The commenter used the term "on-site course" to refer to what VA's regulations define as an "in-residence course.")

According to 38 U.S.C. 3313(c)(1)(B)(i)(I), an individual who "pursues a [degree] program of education on more than a half-time basis" is entitled to a monthly housing allowance based on "the campus of the institution of where the individual physically participates in a majority of classes." However, 38 U.S.C. 3313(c)(1)(B)(iii) expressly authorizes payment of a monthly housing allowance at half the national average of the monthly amount of the basic allowance for housing payable under 37 U.S.C. 403 for a member with dependents in pay grade E-5 (which we will refer to as "the national average") for "an individual pursuing a [degree] program of education *solely* through distance learning on more than a half-time basis." (Emphasis added.) Similarly, for an individual pursuing a non-degree program of education on a more than half-time basis, 38 U.S.C. 3313(g)(3)(A)(ii)(I)(aa) provides a monthly housing allowance based on "the campus of the institution of where the individual physically participates in a majority of classes." But 38 U.S.C. 3313(g)(3)(A)(ii)(I)(bb) authorizes payment of a monthly housing allowance at half that amount for "an individual pursuing a [non-degree] program of education through distance

learning” on more than a half-time basis without specifically requiring that pursuit be “*solely* through distance learning.” (Emphasis added.)

VA faces several challenges in interpreting these statutory provisions. First, aspects of the statutory language at 38 U.S.C. 3313(g)(3)(A)(ii)(I)(bb) are unworkable as literally drafted. That provision calculates the monthly housing allowance for individuals pursuing non-degree distance-learning programs by reference to 38 U.S.C. 3313(g)(3)(A)(ii)(I)(aa), which is based on a locality (“campus of the institution of where the individual physically participates in a majority of classes”). However, it would be impossible to apply 38 U.S.C. 3313(g)(3)(A)(ii)(I)(bb) according to its literal terms because, for students in distance learning programs, there is no campus where the individual “physically participates in a majority of classes.”

Second, although 38 U.S.C. 3313(c)(1)(B)(iii) refers to “an individual pursuing a program of education *solely* through distance learning” (emphasis added) and 38 U.S.C. 3313(g)(3)(A)(ii)(I)(bb) refers to “an individual pursuing a program of education through distance learning” (omitting the word “solely”), VA does not believe that Congress intended to attribute any significance to this omission because a strictly literal reading would have absurd and inequitable results. With respect to the specific scenario raised by the commenter, VA is concerned that it would be absurd and inequitable to pay the full housing allowance for an individual who is taking one on-site course as part of a degree program (and thus not “solely” through distance learning) but to pay only half the housing allowance for an individual who is taking one on-site course as part of a non-degree program (and thus also not “solely” through distance learning). To avoid this absurd and inequitable result, we have interpreted the language in section 3313(g)(3)(A)(ii)(I)(bb) as referring to an individual pursuing a non-degree program *solely* through distance learning, which is still consistent with the plain language of the statute, which refers to “an individual pursuing a [non-degree] program of education through distance learning.”

Taking into account both of these interpretive challenges, the VA has concluded that the best reading of the statute is reflected in § 21.9641(c)(4), which provides that “[a]fter September 30, 2011, an individual . . . , who is pursuing a program of education solely via distance learning at a rate of pursuit of greater than 50 percent, can receive

a monthly housing allowance . . . equal to 50 percent of the [national average].” The interpretation reflected in this regulatory language best avoids absurd and illogically inequitable results. See *Griffin v. Oceanic Contractors, Inc.*, 458 U.S. 564, 575 (1982) (“interpretations of a statute which would produce absurd results are to be avoided if alternative interpretations consistent with the legislative purpose are available”). Consequently, *all* classes an individual takes must be online or otherwise characterized as distance learning for the individual to receive a monthly housing allowance at the rate of half the national average; otherwise, the individual would receive the full monthly housing allowance. In other words, if an individual takes only one “on-site” class, that individual could still be eligible for the full monthly housing allowance. Because this regulation reflects the best reading of the statute, it would be beyond our authority to pay less than the full monthly housing allowance for programs that include as little as one online course as it would require statutory rather than regulatory action.

We recognize that § 21.9641(c)(4) provides for a monthly housing allowance based on the national average, regardless of whether an individual is pursuing a degree or non-degree program. As noted above, Congress provided elsewhere in section 3313 for payment of the monthly housing allowance for distance learning based upon the national average. Thus, we are calculating the rate for all distance-learning programs in a manner that is administratively feasible and consistent with the statutory scheme. Also, we plan to define “resident learning” in a separate rulemaking. As such, VA makes no change based on this comment.

As for the commenter’s suggestion that the school attendance and participation requirements be enhanced, this rule makes changes that would ensure that an educational institution is not unjustly enriched by receiving payments when a student fails to attend or participate in class for which he or she is certified. Under current § 21.9695(b)(3), an educational institution is liable for overpayments when an overpayment is the result of willful or negligent false certification by the educational institution, or willful or negligent failure to certify excessive absences from a course, discontinuance of a course, or interruption of a course by the eligible individual. Revised § 21.9695(b)(3) will add that an educational institution is also liable for an overpayment of educational

assistance paid on behalf of an individual when a student never attends classes for which he or she was certified (regardless of the reason for non-attendance), or completely withdraws from all courses on or before the first day of the certified period of enrollment. These added provisions will help ensure VA is not paying for education that is not provided. Thus, an “enhanced attendance and participation requirement” is not necessary. Consequently, VA makes no changes based on this comment.

Personal Claim

One commenter referenced a personal claim and proceedings unrelated to this rulemaking. This comment is outside of the scope of this rulemaking, and VA makes no changes based on this comment.

Terminology Correction

A commenter noted that, in proposed § 21.9676(d), the usage of the term “veteran-nonveteran” is not accurate for purposes of the 85 percent requirement in 38 CFR 21.4201(a) or 38 U.S.C. 3680A(d)(1), otherwise known as the “85/15 rule.” The commenter pointed out that the 85/15 rule measures the number of students using VA or institutional funds versus those students who do not receive assistance from VA or the institution; and, therefore, the correct terminology is “supported students versus unsupported students” rather than “veteran-nonveteran.” VA concurs with this comment and replaces the term “veteran-nonveteran” with “supported students versus unsupported students” in § 21.9675(d)(5) and includes the term “supported students versus unsupported students” in new § 21.9676(d)(5).

Executive Orders 12866, 13563 and 14094

Executive Order 12866 (Regulatory Planning and Review) directs agencies to assess the costs and benefits of available regulatory alternatives and, when regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, and other advantages; distributive impacts; and equity). Executive Order 13563 (Improving Regulation and Regulatory Review) emphasizes the importance of quantifying both costs and benefits, reducing costs, harmonizing rules, and promoting flexibility. Executive Order 14094 (Executive Order on Modernizing Regulatory Review) supplements and reaffirms the principles, structures, and

definitions governing contemporary regulatory review established in Executive Order 12866 and Executive Order 13563. The Office of Information and Regulatory Affairs has determined that this rulemaking is a significant regulatory action under Executive Order 12866, section 3(f)(1), as amended by Executive Order 14094. The Regulatory Impact Analysis associated with this rulemaking can be found as a supporting document at www.regulations.gov.

Regulatory Flexibility Act

The Secretary of Veterans Affairs hereby certifies that this final rule will not have a significant economic impact on a substantial number of small entities as they are defined in the Regulatory Flexibility Act, 5 U.S.C. 601–612. Although this final rule will affect some small entities, such as testing organizations or educational institutions that qualify as “small” using the most recent official revenue standards, the economic impact on them is minor. Educational institutions of all sizes voluntarily apply for approval to receive GI Bill benefits likely because tuition and fees revenue from student Veterans consists of guaranteed government funding (from U.S. taxpayer funds). However, if the cost for smaller educational institutions applying for GI Bill approval and meeting the requirements for continued approval were substantial, participating in the GI Bill program would not be financially viable. Because the policies memorialized in this final rule have been in effect for a long period of time and small institutions continue to seek and maintain GI Bill approval, likely profiting from this status, we conclude that the rules and policies in this final regulatory action do not significantly impact these entities. Furthermore, realizing that there are costs to educational institutions associated with their participation in GI Bill programs, Congress enacted Public Law 115–48, sec. 304, which increased the reporting fee payable to testing organizations and educational institutions for carrying out reporting requirements, as provided in 38 U.S.C. 3684(c)(2), consequently further minimizing the economic impact on smaller educational and testing organizations. On this basis, the Secretary certifies that this final rule will not have a significant economic impact on a substantial number of small entities as they are defined in the Regulatory Flexibility Act. Therefore, under 5 U.S.C. 605(b), the initial and final regulatory flexibility analysis requirements of 5 U.S.C. 603 and 604 do not apply.

Unfunded Mandates

The Unfunded Mandates Reform Act of 1995 requires, at 2 U.S.C. 1532, that agencies prepare an assessment of anticipated costs and benefits before issuing any rule that may result in the expenditure by State, local, and Tribal governments, in the aggregate, or by the private sector, of \$100 million or more (adjusted annually for inflation) in any given year. This final rule will have no such effect on State, local, and Tribal governments, or on the private sector.

Paperwork Reduction Act of 1995

This final rule includes provisions constituting a revision to current/valid collections of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3521). The revisions also require approval by the Office of Management and Budget (OMB). Accordingly, under 44 U.S.C. 3507(d), VA has submitted a copy of this rulemaking action to OMB for review and approval. VA received no comments on the revised collections of information.

OMB has received the revised collections of information. OMB’s receipt of the revised collections of information is not an approval to conduct or sponsor an information collection under the Paperwork Reduction Act of 1995. In accordance with 5 CFR part 1320, the revised collections of information associated with this rulemaking are not approved by OMB at this time. OMB’s approval of the revised collections of information will occur within 30 days after the Final rulemaking publishes. If OMB does not approve the new collections of information as requested, VA will immediately remove the provision containing the related new collection of information or take such other action as is directed by OMB.

The collections of information associated with this rulemaking are described immediately following this paragraph, under its respective title.

Title: Application for Approval of an Institution of Higher Learning Facility; Institution of Higher Learning—Program Submission List; Application for Approval of Org Other Than Inst of Higher Learning.

OMB Control No: 2900–0932.

CFR Provision: 38 CFR 21.4259(b).

• *Summary of collection of information:* Public Law 117–333 section 11, enacted January 5, 2023, amended 38 U.S.C. 3672, “Approval of Courses”. This law required VA to create and design two new uniform applications and any accompanying documentation for approval of courses

of educational programs, and for those forms to be available for use by October 1, 2023. These forms are completed by educational institutions, training establishments, and other organizations seeking approval of one or more programs of study for the payment of VA education benefits rendered to eligible beneficiaries. The institutions submit the forms to the State Approving Agencies (SAAs) of jurisdiction for their review. By law, each SAA has the authority to make such approvals in their respective state. VA contracts with SAAs in each state for this approval assessment work. There is some duplication of collection information found in the discontinued OMB 2900–0051 “State Approving Agency Reports and Notices” as required by 38 CFR 21.4154, 4250(b), 21.4258 and 21.4259. However, there wasn’t an official uniform application available for use by all stakeholders; educational institutions, training establishments and SAAs to ensure the information collected was the same based on the type of educational institution seeking program and course approval.

• *Description of need for information and proposed use of information:* The collection of information is necessary to ensure all entities have access to the same collection of information, thus making the approval assessment and enrollment certification process more efficient.

• *Description of likely respondents:* SAAs, educational institutions, and training establishments.

• *Estimated total number of respondents:* 8,800.

• *Estimated total number of responses:* 8,800.

• *Estimated frequency of responses:* Once.

• *Estimated average burden per response:* 8 total hours.

• *Estimated total annual reporting and recordkeeping burden:* VA estimates the total annual reporting and recordkeeping burden to be 70,400 burden hours. Using the annual number of responses 8,800, VA estimates a total annual reporting and recordkeeping burden of 70,400 for respondents.

• *Estimated cost to respondents per year:* VA estimates the annual cost to respondents to be \$2,216,192 (70,400 respondents × \$31.48 *)

* To estimate the total information collection burden cost, VA used the Bureau of Labor Statistics (BLS) median hourly wage for “all occupations” of \$31.48 per hour. This information is available at: https://www.bls.gov/oes/current/oes_nat.htm.

Title: Dependents’ Application for VA Education Benefits.

OMB Control No: 2900–0098.

CFR Provision: 38 CFR 21.9520(d), 21.9530(f), 21.9691(e), 21.9691(h).

- *Summary of collection of information:* The new collection of information in proposed 38 CFR 21.9520(d), 21.9530(f), 21.9691(e), and 21.9691(h) would require certain children to submit an application to establish eligibility for the Fry Scholarship, and certain individuals who must elect the Fry Scholarship or either Dependency and Indemnity Compensation (DIC) or Survivors' and Dependents' Educational Assistance (DEA) to submit an application to establish eligibility for the elected benefit.

- *Description of need for information and proposed use of information:* The collection of information is necessary to pay benefits. The information collected will be used by VA to determine an individual's eligibility for the Fry scholarship, DIC, or DEA.

- *Description of likely respondents:* Individuals.

- *Estimated total number of respondents:* 83,972.

- *Estimated frequency of responses:* Once.

- *Estimated average burden per response:* 45 minutes.

- *Estimated total annual reporting and recordkeeping burden:* VA estimates the total annual reporting and recordkeeping burden to be 48,983 burden hours. Using the annual number of responses 83,972, VA estimates a total annual reporting and recordkeeping burden of 48,983 hours for respondents.

- *Estimated cost to respondents per year:* VA estimates the annual cost to respondents to be \$1,982,578.92 (83,972 respondents per year $\times$ 45 minutes per application) / 60 $\times$ \$31.48 *).

* To estimate the total information collection burden cost, VA used the Bureau of Labor Statistics (BLS) median hourly wage for "all occupations" of \$31.48 per hour. This information is available at: https://www.bls.gov/oes/current/oes_nat.htm.

Title: Application for Reimbursement of a National Exam Fee.

OMB Control No: 2900–0706.

CFR Provision: 38 CFR 21.9626(a)(3), 21.9668, 21.9681(b)(5).

- *Summary of collection of information:* The new collection of information in proposed 38 CFR 21.9626(a)(3), 21.9668, 21.9681(b)(5) would require individuals to submit a claim and supporting documentation to be reimbursed for the cost of a national test for admission or a national test for credit.

- *Description of need for information and proposed use of information:* The collection of information is necessary to pay benefits. The information collected will be used by VA to determine if an individual is eligible to receive reimbursement for a claimed national test, and to determine the amount of the reimbursement.

- *Description of likely respondents:* Individuals.

- *Estimated total number of respondents:* 310.

- *Estimated frequency of responses:* Once.

- *Estimated average burden per response:* 15 minutes.

- *Estimated total annual reporting and recordkeeping burden:* VA estimates the total annual reporting and recordkeeping burden to be 78 burden hours. Using the annual number of responses 310, VA estimates a total annual reporting and recordkeeping burden of 78 hours for respondents.

- *Estimated cost to respondents per year:* VA estimates the annual cost to respondents to be \$2,440 (310 respondents per year $\times$ 15 minutes per application $\times$ \$31.48 *).

* To estimate the total information collection burden cost, VA used the Bureau of Labor Statistics (BLS) median hourly wage for "all occupations" of \$31.48 per hour. This information is available at: https://www.bls.gov/oes/current/oes_nat.htm.

Title: Application for Reimbursement of Licensing and Certification Fees.

OMB Control No: 2900–0695.

CFR Provision: 38 CFR 21.9667.

- *Summary of collection of information:* The new collection of information in proposed 38 CFR 21.9667 would require individuals to submit a claim to be reimbursed for the cost of licensing and certification tests.

- *Description of need for information and proposed use of information:* The collection of information is necessary to pay benefits. The information collected will be used by VA to determine if an individual is eligible to receive reimbursement for a licensing and certification test, and to determine the amount of the reimbursement.

- *Description of likely respondents:* Individuals.

- *Estimated total number of respondents:* 4,210.

- *Estimated total number of responses:* 12,630.

- *Estimated frequency of responses:* On occasion. (3 responses per year).

- *Estimated average burden per response:* 15 minutes.

- *Estimated total annual reporting and recordkeeping burden:* VA

estimates the total annual reporting and recordkeeping burden to be 3,158 burden hours. Using the annual number of responses 12,630, VA estimates a total annual reporting and recordkeeping burden of 3,158 hours for respondents.

- *Estimated cost to respondents per year:* VA estimates the annual cost to respondents to be \$99,398 (12,630 responses per year $\times$ 15 minutes per application $\times$ \$31.48 *).

* To estimate the total information collection burden cost, VA used the Bureau of Labor Statistics (BLS) median hourly wage for "all occupations" of \$31.48 per hour. This information is available at: https://www.bls.gov/oes/current/oes_nat.htm.

Title: Monthly Certification for Flight Training.

OMB Control No: 2900–0162.

CFR Provision: 38 CFR 21.9641(b)(5).

- *Summary of collection of information:* The new collection of information in proposed 38 CFR 21.9641(b)(5) would require students pursuing flight training programs at non-IHLs to submit monthly certifications to receive payment for such pursuit.

- *Description of need for information and proposed use of information:* The collection of information is necessary to pay benefits. The information collected will be used to determine whether the individual's educational assistance should be continued without change, amended, or terminated, and to determine the effective date of such continuance, amendment, or termination.

- *Description of likely respondents:* Individuals.

- *Estimated total number of respondents:* 3,900.

- *Estimated total number of responses:* 23,400.

- *Estimated frequency of responses:* On occasion. (6 responses annually).

- *Estimated average burden per response:* 30 minutes.

- *Estimated total annual reporting and recordkeeping burden:* VA estimates the total annual reporting and recordkeeping burden to be 11,700 burden hours. Using the annual number of responses 23,400, VA estimates a total annual reporting and recordkeeping burden of 11,700 hours for respondents.

- *Estimated cost to respondents per year:* VA estimates the annual cost to respondents to be \$368,316 (23,400 responses per year $\times$ 30 minutes per application $\times$ \$31.48 *).

* To estimate the total information collection burden cost, VA used the

Bureau of Labor Statistics (BLS) median hourly wage for “all occupations” of \$31.48 per hour. This information is available at: https://www.bls.gov/oes/current/oes_nat.htm.

Title: Certification of Lessons Completed.

OMB Control No: 2900–0353.

CFR Provision: 38 CFR 21.9641(b)(6).

• *Summary of collection of information:* The new collection of information in proposed 38 CFR 21.9641(b)(6) would require students pursuing correspondence training programs at non-IHLs to submit certification of lessons completed to receive payment for such pursuit.

• *Description of need for information and proposed use of information:* The collection of information is necessary to pay benefits, which in the case of correspondence training, are based on the number of lessons completed. The information collected will be used by VA to determine the amount of educational assistance to be paid.

• *Description of likely respondents:* Individuals.

• *Estimated total number of respondents:* 154.

• *Estimated total number of responses:* 616.

• *Estimated frequency of responses:* Quarterly.

• *Estimated average burden per response:* 10 minutes.

• *Estimated total annual reporting and recordkeeping burden:* VA estimates the total annual reporting and recordkeeping burden to be 103 burden hours. Using the annual number of responses 616, VA estimates a total annual reporting and recordkeeping burden of 103 hours for respondents.

• *Estimated cost to respondents per year:* VA estimates the annual cost to respondents to be \$3,232 (616 responses per year × 10 minutes per application × \$31.48 *).

* To estimate the total information collection burden cost, VA used the Bureau of Labor Statistics (BLS) median hourly wage for “all occupations” of \$31.48 per hour. This information is available at: https://www.bls.gov/oes/current/oes_nat.htm.

Title: Certification of Affirmation of Enrollment Agreement Correspondence Course.

OMB Control No: 2900–0576.

CFR Provision: 38 CFR 21.9641(b)(6).

• *Summary of collection of information:* The new collection of information in proposed 38 CFR 21.9641(b)(6) would require students pursuing correspondence training programs at non-IHLs to submit an affirmation of enrollment in a

correspondence course to receive payment for such pursuit.

• *Description of need for information and proposed use of information:* The collection of information is necessary to pay benefits. The information collected will be used by VA to ensure an individual is enrolled in a correspondence course following the signing of a contract.

• *Description of likely respondents:* Individuals.

• *Estimated total number of respondents:* 75.

• *Estimated frequency of responses:* Annually.

• *Estimated average burden per response:* 3 minutes.

• *Estimated total annual reporting and recordkeeping burden:* VA estimates the total annual reporting and recordkeeping burden to be 4 burden hours. Using the annual number of responses 75 VA estimates a total annual reporting and recordkeeping burden of 4 hours for respondents.

• *Estimated cost to respondents per year:* VA estimates the annual cost to respondents to be \$118 (75 responses per year × 3 minutes per application × \$31.48 *).

* To estimate the total information collection burden cost, VA used the Bureau of Labor Statistics (BLS) median hourly wage for “all occupations” of \$31.48 per hour. This information is available at: https://www.bls.gov/oes/current/oes_nat.htm.

Title: VA Enrollment Certification.

OMB Control No: 2900–0073.

CFR Provision: 38 CFR 21.9681(b)(1) and 21.9721.

• *Summary of collection of information:* The new collection of information in proposed 38 CFR 21.9681(b)(1) and 21.9721 would require an educational institution to certify a student’s enrollment in an approved program of education (other than a student seeking reimbursement for taking an approved licensure or certification test or a national test).

• *Description of need for information and proposed use of information:* The collection of information is necessary to ensure a student is properly enrolled in an approved program of education before making any payments of educational assistance benefits. VA will use the information collected on VA Form 22–1999 to determine the amount of educational benefits payable to an individual during a period of enrollment or training.

• *Description of likely respondents:* Individuals.

• *Estimated total number of respondents:* 1,266,616.

• *Estimated total number of responses:* 3,799,847.

• *Estimated frequency of responses:* On occasion. (3 responses per year).

• *Estimated average burden per response:* 10 minutes.

• *Estimated total annual reporting and recordkeeping burden:* VA estimates the total annual reporting and recordkeeping burden to be 633,307 burden hours. Using the annual number of responses 3,799,847, VA estimates a total annual reporting and recordkeeping burden of 633,307 hours for respondents.

• *Estimated cost to respondents per year:* VA estimates the annual cost to respondents to be \$19,936,530 (3,799,847 responses per year × 10 minutes per application × \$31.48 *).

* To estimate the total information collection burden cost, VA used the Bureau of Labor Statistics (BLS) median hourly wage for “all occupations” of \$31.48 per hour. This information is available at: https://www.bls.gov/oes/current/oes_nat.htm.

Title: Yellow Ribbon Program Agreement.

OMB Control No: 2900–0718.

CFR Provision: 38 CFR 21.9700(b).

• *Summary of collection of information:* The new collection of information in proposed 38 CFR 21.9700(b) would include individuals who establish eligibility for the Fry Scholarship to receive benefits under the Yellow Ribbon Program.

• *Description of need for information and proposed use of information:* The collection of information is necessary to provide IHLs with the opportunity to indicate their participation in the Yellow Ribbon Program and to allow IHLs to indicate the maximum number of students that will receive benefits under the program. VA will use the information collected to determine which IHLs will be participating in the Yellow Ribbon Program, the maximum number of individuals for whom the IHL will make contributions in any given academic year, and the maximum dollar amount of outstanding established charges that will be waived for each student based on student status (i.e., undergraduate, graduate, doctoral) or sub-element (i.e., college or professional school).

• *Description of likely respondents:* Institutions of higher learning.

• *Estimated total number of respondents:* 5,600.

• *Estimated frequency of responses:* Once.

• *Estimated average burden per response:* 14 hours.

• *Estimated total annual reporting and recordkeeping burden:* VA

estimates the total annual reporting and recordkeeping burden to be 78,400 burden hours. Using the annual number of responses 5,600, VA estimates a total annual reporting and recordkeeping burden of 78,400 hours for respondents.

- *Estimated cost to respondents per year:* VA estimates the annual cost to respondents to be \$2,468,032 (5,600 responses per year × 14 hours per application × \$31.48 *).

* To estimate the total information collection burden cost, VA used the Bureau of Labor Statistics (BLS) median hourly wage for “all occupations” of \$31.48 per hour. This information is available at: https://www.bls.gov/oes/current/oes_nat.htm.

Severability

The purpose of this section is to clarify the agencies’ intent with respect to the severability of provisions of this final rule. Each provision that the agency is promulgating is capable of operating independently. If any provision of this rule is determined by judicial review or operation of law to be invalid, that partial invalidation will not render the remainder of this rule invalid. Likewise, if the application of any portion of this rule to a particular circumstance is determined to be invalid, the agencies intend that the rule remain applicable to all other circumstances.

Congressional Review Act

Under the Congressional Review Act, this regulatory action may result in “an annual effect on the economy of \$100,000,000 or more,” 5 U.S.C. 804(2), and so is subject to the 60-day delay in effective date under 5 U.S.C. 801(a)(3). In accordance with 5 U.S.C. 801(a)(1), VA will submit to the Comptroller General and to Congress a copy of this Regulation and the Regulatory Impact Analysis (RIA) associated with the Regulation.

List of Subjects in 38 CFR Part 21

Administrative practice and procedure, Armed forces, Civil rights, Claims, Colleges and universities, Conflict of interests, Defense Department, Education, Employment, Grant programs—education, Grant programs—veterans, Health care, Loan programs—education, Loan programs—veterans, Manpower training programs, Reporting and recordkeeping requirements, Schools, Travel and transportation expenses, Veterans, Vocational education, Veteran readiness.

Signing Authority

Denis McDonough, Secretary of Veterans Affairs, signed and approved this document on December 12, 2024, and authorized the undersigned to sign and submit the document to the Office of the Federal Register for publication electronically as an official document of the Department of Veterans Affairs.

Luvenia Potts,

Regulations Development Coordinator, Office of Regulation Policy & Management, Office of General Counsel, Department of Veterans Affairs.

For the reasons stated in the preamble, the Department of Veterans Affairs amends 38 CFR part 21 as follows:

PART 21—VETERAN READINESS AND EMPLOYMENT AND EDUCATION

Subpart C—Survivors’ and Dependents’ Educational Assistance Under 38 U.S.C. Chapter 35

■ 1. The authority citation for subpart C continues to read as follows:

Authority: 38 U.S.C. 501(a), 512, 3500–3566, and as noted in specific sections.

■ 2. Amend § 21.3022 by:

- a. In paragraph (i), removing “and”;
- b. In paragraph (j), removing the period and adding “; and” in its place; and
- c. Adding paragraph (k).

The addition reads as follows:

§ 21.3022 Nonduplication—programs administered by VA.

* * * * *

(k) Effective August 1, 2011, 10 U.S.C. 510 (National Call to Service).

* * * * *

Subpart D—Administration of Educational Assistance Programs

■ 3. The authority citation for subpart D continues to read as follows:

Authority: 10 U.S.C. 2141 note, ch. 1606; 38 U.S.C. 501(a), chs. 30, 32, 33, 34, 35, 36, and as noted in specific sections.

§ 21.4002 [Amended]

■ 4. Amend § 21.4002, in paragraph (a), by removing “(See §§ 19.192 and 19.183 of this chapter.)”.

■ 5. Amend § 21.4022 by:

- a. In paragraph (d), adding a semicolon at the end of the paragraph;
- b. In paragraph (k), removing the period and adding “; and” in its place; and
- c. Adding paragraph (l).

The addition reads as follows:

§ 21.4022 Nonduplication—programs administered by VA.

* * * * *

(l) Effective August 1, 2011, 10 U.S.C. 510 (National Call to Service).

* * * * *

■ 6. Amend § 21.4138 by:

- a. Removing the parenthetical authority citation at the end of paragraphs (a), (b), and (e);
- b. Revising the heading for paragraph (f) introductory text;
- c. Removing the parenthetical authority citation at the end of paragraphs (f)(4)(ii), (f)(5)(ii), and (f)(6)(ii)(B); and
- d. Adding paragraphs (g) and (h).

The revision and additions read as follows:

§ 21.4138 Certifications and release of payments.

* * * * *

(f) *Payment for intervals and temporary school closings before August 1, 2011.* * * *

* * * * *

(g) *Payment for temporary school closings after July 31, 2011.* (1) Subject to paragraph (g)(2) of this section, VA may authorize payment for a temporary school closing that occurs during a certified period of enrollment if the closing is due to an emergency (including a strike) or established policy based on an Executive order of the President.

(2) An individual may not receive more than 4 weeks of payment for temporary school closings in any 12-month period.

(3) The decision as to whether a school closing is permanent or temporary will be made by—

(i) The director of the VA regional processing office of jurisdiction; or

(ii) The Director, Education Service, if the emergency or established policy based on an Executive Order of the President results in the closing of schools in the jurisdiction of more than one VA regional processing office.

(4) A school that disagrees with a decision made under paragraph (g)(3) of this section may request an administrative review. The review request must be submitted in writing and received by the director of the VA regional processing office of jurisdiction, or the Director, Education Service, whoever made the decision under paragraph (g)(3) of this section, within one year of the date of VA’s letter notifying the school of the decision. A review of the decision will include the evidence of record and any other pertinent evidence the school may wish to submit. The affirmation or reversal of

the initial decision based on an administrative review is final. The review will be conducted by the—

(i) Director, Education Service, if the director of the VA regional processing office of jurisdiction made the initial decision to continue or discontinue payments.

(ii) Under Secretary for Benefits, if the Director, Education Service, made the initial decision to continue or discontinue payments.

(h) *Authority.* (1) Paragraph (a) of this section issued under the authority of 10 U.S.C. 16136(b); 38 U.S.C. 3034, 3680(f);

(2) Paragraph (b) of this section issued under the authority of 38 U.S.C. 3034(c), 3680(f);

(3) Paragraph (e) of this section issued under the authority of 38 U.S.C. 5113, 3680(b), 3680(c), 3680(g);

(4) Paragraph (f) of this section issued under the authority of 38 U.S.C. 3680;

(5) Paragraph (f)(5) of this section issued under the authority of 38 U.S.C. 3680(a);

(6) Paragraph (f)(6) of this section issued under the authority of 38 U.S.C. 512, 3680(a); and

(7) Paragraph (g) of this section issued under the authority of 38 U.S.C. 512, 3680(a).

* * * * *

■ 7. Amend § 21.4150 by:

■ a. Revising paragraph (c)(2) and removing the parenthetical authority citation at the end of the paragraph;

■ b. Removing the parenthetical authority citation at the end of paragraphs (d) and (e);

■ c. Revising paragraph (f) and removing the parenthetical authority citation at the end of the paragraph;

■ d. Removing the parenthetical authority citation at the end of paragraph (g); and

■ e. Adding paragraph (h).

The revisions and addition read as follows:

§ 21.4150 Designation.

* * * * *

(c) * * *

(2) When VA has approval, disapproval, or suspension authority.

* * * * *

(f)(1) The Secretary is responsible for approving programs of education offered by any agency or instrumentality of the Federal Government.

(2)(i) Effective August 1, 2011, subject to §§ 21.4201, 21.4203, 21.4251, 21.4252, and 21.4253(d)(2) and (3), the following programs of education are deemed approved—

(A) An accredited standard college degree program offered at a public or

not-for-profit proprietary institution of higher learning that is accredited by a national or regional agency or organization recognized for that purpose by the Department of Education.

(B) A flight training course approved by the Federal Aviation Administration that is offered by a certified pilot school that possesses a valid Federal Aviation Administration pilot school certificate or provisional pilot school certificate under 14 CFR part 141.

(C) An apprenticeship program registered with the Office of Apprenticeship of the Employment Training Administration of the Department of Labor or a State apprenticeship agency recognized by the Office of Apprenticeship under 29 U.S.C. 50, *et seq.*

(D) A program of education leading to a secondary school diploma offered by a secondary school approved in the State in which it is operating.

(E) A licensure test offered by a Federal, State, or local government.

(ii) [Reserved]

(h)(1) Paragraph (c)(2) of this section issued under the authority of 38 U.S.C. 3671(b)(1);

(2) Paragraph (d) of this section issued under the authority of 38 U.S.C. 512(a), 3561(b);

(3) Paragraph (e) of this section issued under the authority of 38 U.S.C. 3672(c);

(4) Paragraph (f) of this section issued under the authority of 38 U.S.C. 3672(b); and

(5) Paragraph (g) of this section issued under the authority of 38 U.S.C. 3689.

* * * * *

■ 8. Amend § 21.4151 by:

■ a. Removing the parenthetical authority citation at the end of paragraphs (a) and (b);

■ b. In paragraph (b)(5), removing “and” at the end of the paragraph;

■ c. Redesignating paragraph (b)(6) as paragraph (b)(7);

■ d. Adding new paragraph (b)(6);

■ e. Removing the parenthetical authority citation at the end of paragraph (c); and

■ f. Adding paragraph (d).

The additions read as follows:

§ 21.4151 Cooperation.

* * * * *

(b) * * *

(6) Effective August 1, 2011, performing compliance and risk-based surveys and oversight (in accordance with the provisions in the State approving agency contract) without regard to whether the Secretary or the State approving agency approved the courses offered at the educational

institution or the courses were deemed approved; and

* * * * *

(d)(1) Paragraph (a) of this section issued under the authority of 38 U.S.C. 3673(a);

(2) Paragraph (b) of this section issued under the authority of 38 U.S.C. 3672, 3673, 3674, 3689; and

(3) Paragraph (c) of this section issued under the authority of 38 U.S.C. 3673(b).

■ 9. Amend § 21.4200 by adding paragraphs (mm) through (oo) following the parenthetical authority citation at the end of the section to read as follows:

§ 21.4200 Definitions.

* * * * *

(mm) *National test for admission.* (1) A *national test for admission* is a test used for admission to an institution of higher learning or graduate school (such as the Scholastic Aptitude Test (SAT), Law School Admission Test (LSAT), Graduate Record Exam (GRE), and Graduate Management Admission Test (GMAT)). A list of national tests approved by VA can be found at: <https://inquiry.vba.va.gov/weampub/buildSearchNE.do>.

(2) This paragraph (mm) issued under the authority of 38 U.S.C. 3452(b), 3315A, 3501(a)(5).

(nn) *National test for credit.* (1) A *national test for credit* is a test that provides an opportunity for course credit at an institution of higher learning (such as the Advanced Placement (AP) exam and College-Level Examination Program (CLEP)). A list of national tests approved by VA can be found at: <https://inquiry.vba.va.gov/weampub/buildSearchNE.do>.

(2) This paragraph (nn) issued under the authority of 38 U.S.C. 3452(b), 3315A, 3501(a)(5).

(oo) *We, us, our.* When we use the terms *we*, *us*, or *our*, we mean the United States Department of Veterans Affairs.

■ 10. Amend § 21.4206 by:

■ a. Revising the introductory text;

■ b. Removing the parenthetical authority citation at the end of paragraph (a);

■ c. Revising paragraph (b) and removing the parenthetical authority citation at the end of the paragraph;

■ d. Removing the parenthetical authority citation at the end of paragraphs (c) and (d);

■ e. Revising paragraph (e) and removing the parenthetical authority citation at the end of the paragraph; and

■ f. Adding paragraph (f).

The revisions and addition read as follows:

§ 21.4206 Reporting fee.

VA will pay annually to each educational institution furnishing education or to each joint apprenticeship training committee acting as a training facility under 10 U.S.C. 510, chapter 1606, or chapter 1607 or 38 U.S.C. 30, 32, 33, 35, or 36 a reporting fee for required reports or certifications. The reporting fee will be paid as soon as feasible after the end of the calendar year.

* * * * *

(b) In computing the reporting fee, VA will not count an eligible individual whose only receipt of educational assistance during a calendar year was tuition assistance Top-Up under 38 U.S.C. chapter 30, a rural relocation payment, or reimbursement for a national test for admission, national test for credit, or a licensing or certification test.

* * * * *

(e) Before VA will pay a reporting fee, an educational institution must certify that—

(1) It has exercised reasonable diligence in determining whether it or any courses approved for VA education benefits offered by it meet all the applicable requirements of 10 U.S.C. 510, chapter 1606, or chapter 1607 or 38 U.S.C. 30, 32, 33, 35, or 36;

(2) It will, without delay, report any failure to meet any requirement to VA; and

(3) The reporting fees received after January 4, 2011, will be used solely for the purpose of making certifications for VA educational assistance under 10 U.S.C. 510, chapter 1606, or chapter 1607 or 38 U.S.C. 30, 32, 33, 35, or 36 or for supporting programs for veterans.

(f)(1) Paragraph (a) of this section issued under the authority of 10 U.S.C. 16136(b); 38 U.S.C. 3034(a), 3241(a), 3323(a), 3684(c);

(2) Paragraph (b) of this section issued under the authority of 10 U.S.C. 16136(b); 38 U.S.C. 3034(a), 3241(a), 3323(a), 3684(c);

(3) Paragraph (c) of this section issued under the authority of 10 U.S.C. 16136(b); 38 U.S.C. 3034(a), 3241(a), 3323(a), 3684(c);

(4) Paragraph (d) of this section issued under the authority of 10 U.S.C. 16136(b); 38 U.S.C. 3034(a), 3241(a), 3323(a), 3684(c); and

(5) Paragraph (e) of this section issued under the authority of 10 U.S.C. 16136(b); 38 U.S.C. 3034(a), 3241(a), 3323(a), 3684(c).

* * * * *

■ 11. Revise § 21.4235 to read as follows:

§ 21.4235 Programs of education that include flight training.

VA will use the provisions of this section to determine whether an individual may be paid educational assistance for pursuit of flight training. See § 21.4263 for approval of flight courses for VA training.

(a) *Eligibility.* An individual who is otherwise eligible to receive educational assistance under 38 U.S.C. chapters 30, 32, or 33, or a reservist eligible for educational assistance under 10 U.S.C. chapters 1606 or 1607, may receive educational assistance for flight training in an approved program of education provided that the individual meets the requirements of this paragraph (a). Except when enrolled in a ground instructor certification course or when pursuing flight training under paragraph (e) of this section, the individual must—

(1) Possess a valid private pilot certificate or higher pilot certificate such as a commercial pilot certificate;

(2) If enrolled in a course other than an Airline Transport Pilot (ATP) course, hold a second-class medical certificate on the first day of training and, if that course began before October 1, 1998, hold that certificate continuously during training; and

(3) If enrolled in an ATP certification course, hold a first-class medical certificate on the first day of training and, if that course began before October 1, 1998, hold that certificate continuously during training.

(b) *Pursuit of flight courses.* (1) VA will pay educational assistance to an eligible individual for an enrollment in a commercial pilot certification course leading to Federal Aviation Administration certification for a particular category even if the individual has a commercial pilot certificate issued by the Federal Aviation Administration for a different category, since each category represents a different vocational objective.

(2) VA will pay educational assistance to an eligible individual for an enrollment in an instrument rating course only if the individual simultaneously enrolls in a course required for a commercial pilot certificate for the category for which the instrument rating course is pursued or if, at the time of enrollment in the instrument rating course, the individual has a commercial pilot certificate issued by the Federal Aviation Administration for such category. The enrollment in an instrument rating course alone does not establish that the individual is pursuing a vocational objective, as required for VA purposes, since that rating equally may be applied to an individual's private pilot certificate, only evidencing

an intent to pursue a non-vocational objective.

(3) VA will pay educational assistance to an eligible individual for an enrollment in a flight course other than an instrument rating course or a ground instructor course, including courses leading to an aircraft type rating, only if the individual has a commercial pilot certificate issued by the Federal Aviation Administration for the category to which the particular course applies.

(4) VA will pay educational assistance to an eligible individual for an enrollment in a ground instructor certificate course, even though the individual does not have any other flight certificate issued by the Federal Aviation Administration, since the Federal Aviation Administration does not require a flight certificate as a prerequisite to ground instructor certification and ground instructor is a recognized vocational objective.

(5) VA will not pay an eligible individual for simultaneous enrollment in more than one flight course, except as provided in paragraph (b)(2) of this section.

(c) *Some individuals are already qualified for a flight course objective.* (1) The provisions of §§ 21.5230(a)(4), 21.7110(b)(4), and 21.7610(b)(4), prohibiting payment of educational assistance for enrollment in a course for whose objective the individual is already qualified, apply to enrollments in flight courses.

(2) A former military pilot with the equivalent of a commercial pilot certificate and an instrument rating may obtain a commercial pilot certificate and instrument rating from the Federal Aviation Administration without a flight exam within 12 months of release from active duty. Therefore, VA will consider such a veteran to be already qualified for the objectives of a commercial pilot certification course and an instrument rating course if begun within 12 months of the individual's release from active duty.

(d) *Some flight courses are refresher training.* The provisions of §§ 21.5230(c), 21.7020(b)(26), 21.7122(b), 21.7520(b)(20), and 21.7610(b)(4) that provide limitations on payment for refresher training that is needed to update an individual's knowledge and skill in order to cope with technological advances while he or she was on active duty service apply to flight training.

(1) An individual who held a Federal Aviation Administration certificate before or during active duty service may have surrendered that certificate or the Federal Aviation Administration may

have canceled it. The individual may receive the equivalent of the number of months of educational assistance necessary to complete the course that will qualify him or her for the same grade certificate.

(2) A reservist is not eligible for refresher training unless he or she has had prior active duty.

(e) *Flight training at an institution of higher learning.* (1) An individual who is eligible for educational assistance under 10 U.S.C. chapter 1606 or 1607 or 38 U.S.C. chapter 30, 32, 33, or 35 is exempt from the provisions of paragraphs (a)(2) through (c) of this section when his or her courses include flight training that is part of a program of education that leads to a standard college degree.

(2) An individual described in paragraph (e)(1) of this section may pursue courses that may result in the individual eventually receiving recreational pilot certification or private pilot certification, provided that the courses also lead to a standard college degree.

(f) *Authority.* (1) Paragraph (a) of this section issued under the authority of 10 U.S.C. 16136(c); 38 U.S.C. 3034(d), 3241(b);

(2) Paragraph (b) of this section issued under the authority of 10 U.S.C. 16136(b); 38 U.S.C. 3002(3)(A), 3034(a), 3202(2)(A), 3241(a), 3241(b), 3452(b), 3680A(a)(3);

(3) Paragraph (c) of this section issued under the authority of 10 U.S.C. 16136(b); 38 U.S.C. 3034(a), 3241(a), 3241(b), 3471(4);

(4) Paragraph (d) of this section issued under the authority of 10 U.S.C. 16136(b); 38 U.S.C. 3002(3)(A), 3034(a)(3), 3202(2)(A), 3241(a), 3241(b)); and

(5) Paragraph (e) of this section issued under the authority of 10 U.S.C. 16136(b); 38 U.S.C. 3002(3)(A), 3034(a)(3), 3202(2)(A), 3241(a), 3241(b).

■ 12. Amend § 21.4253 by:

■ a. Removing the parenthetical authority citation at the end of paragraph (a); b. Revising paragraph (a) introductory text;

■ c. Removing the parenthetical authority citation at the end of paragraphs (d)(1)(iv), (d)(3), (5), and (8), (d)(10)(ii), and (e)(1); and

■ c. Adding paragraph (g).

The revision and addition read as follows:

§ 21.4253 Accredited courses.

(a) *General.* All standard college degree courses offered at proprietary for-profit institutions and non-college degree courses offered at proprietary for-profit institutions and public or

proprietary not-for-profit institutions may be approved as accredited courses if they meet one of the following criteria:

* * * * *

(g) *Authority.* (1) Paragraph (a) of this section issued under the authority of 38 U.S.C. 3675(a);

(2) Paragraphs (b) through (d)(1) of this section issued under the authority of 38 U.S.C. 3675(a), 3676(b);

(3) Paragraphs (d)(2) and (3) of this section issued under the authority of 38 U.S.C. 3675(b);

(4) Paragraphs (d)(4) and (5) of this section issued under the authority of 38 U.S.C. 3474, 3675);

(5) Paragraphs (d)(6) through (8) of this section issued under the authority of 38 U.S.C. 3675(b), 3676(c)(1), (2), (3);

(6) Paragraph (d)(9) of this section issued under the authority of 38 U.S.C. 3675(b)(3), 3676(c), (f); and

(7) Paragraph (e) of this section issued under the authority of 38 U.S.C. 3675.

* * * * *

■ 13. Amend § 21.4259 by:

■ a. Revising paragraphs (a) and (b);

■ b. Removing the parenthetical authority citation at the end of paragraph (e);

■ c. Adding paragraph (f); and

■ d. Removing the parenthetical authority citation under parenthetical “(The Office of Management and Budget has approved the information collection provisions in this section under control number 2900-0051)”.

The revision and addition read as follows:

§ 21.4259 Suspension or disapproval.

(a) The appropriate State approving agency or the Secretary (whichever entity approved the program), after approving a program of education or licensing or certification test—

(1) May suspend the approval of a program of education for new enrollments or for a licensing or certification test for a period not to exceed 60 days to allow the institution to correct any deficiencies if the evidence of record establishes that the program of education or licensing or certification test fails to meet any of the requirements for approval.

(2) Will immediately disapprove the program of education or licensing or certification test if any of the requirements for approval are not being met and the deficiency cannot be corrected within a period of 60 days.

(b)(1) Upon suspension or disapproval, the State approving agency or the Secretary, whichever suspended or disapproved the program of education, will notify the educational

institution by certified or registered letter with a return receipt secured. It is incumbent upon the State approving agency or the Secretary to determine the conduct of the program of education and to take immediate appropriate action in each case in which it is found that the conduct of the program of education in any manner fails to comply with the requirements for approval.

(2)(i) Each State approving agency will immediately notify VA of each program of education or licensing and certification test that it has suspended or disapproved.

(ii) The Secretary will immediately notify the appropriate State approving agency of each program of education or licensing and certification test that it has suspended or disapproved.

* * * * *

(f) Paragraphs (a) through (e) of this section issued under the authority of 38 U.S.C. 3679(d).

■ 14. Amend § 21.4263 by revising paragraph (a) and removing the parenthetical authority citation at the end of the paragraph to read as follows:

§ 21.4263 Approval of flight training courses.

(a)(1) A flight program may be approved if—

(i)(A) For 38 U.S.C. chapters 32 and 35 and 10 U.S.C. chapters 1606 and 1607, the flight courses that constitute the program of education meet Federal Aviation Administration standards for such courses and the Federal Aviation Administration and the State approving agency approve them; or

(B) For 38 U.S.C. chapters 30 and 33, effective August 1, 2011, the flight program is deemed approved (A flight program will be deemed approved if it

is approved by the Federal Aviation Administration and is offered by a certified pilot school that possesses a valid Federal Aviation Administration pilot school certificate or provisional pilot school certificate under 14 CFR part 141. Flight programs offered at flight schools listed in paragraphs (b)(2) and (3) of this section will not be approved for VA training under 38 U.S.C. chapters 30 and 33); and

(ii)(A) The flight training offered by a flight school is generally accepted as necessary for the attainment of a recognized vocational objective in the field of aviation; or

(B) The flight training is offered by an institution of higher learning for credit towards a standard college degree program.

(2) A State approving agency may approve a flight course only if a flight school or an institution of higher learning offers the course. A State

approving agency may not approve a flight course if an individual instructor offers it.

(3) This paragraph (a) issued under the authority of 10 U.S.C. 16136(c), 16166(c), 38 U.S.C. 3032(e), 3241(b), 3672, 3676, 3680A.

* * * * *

■ 15. Amend § 21.4268 by:

- a. Revising paragraph (a) and removing the parenthetical authority citation at the end of the paragraph;
- b. Removing the parenthetical authority citation at the end of paragraphs (b) through (e);
- c. Adding paragraph (g); and
- d. Removing the parenthetical authority citation below the parenthetical “(The Office of Management and Budget has approved the information collection provisions in this section under control number 2900–0051)”; and

The revision and addition read as follows:

§ 21.4268 Approval of licensing and certification tests.

(a) *Authority to approve licensing and certification tests*—(1) *Tests deemed approved.* Effective August 1, 2011, a licensure test offered by a Federal, State, or local government is deemed approved in accordance with § 21.4150(f).

(2) *VA approval.* The Secretary of Veterans Affairs delegates to the Under Secretary for Benefits, and to personnel the Under Secretary for Benefits may designate within the Education Service of the Veterans Benefits Administration, the authority to approve licensing and certification tests and the organizations and entities offering the tests as provided in § 21.4250(c)(2)(vi).

(3) *State approving agency approval.* Except for the licensing and certification tests and organizations or entities offering these tests that are approved under paragraphs (a)(1) and (2) of this section, the Secretary of Veterans Affairs delegates to each State approving agency the authority to approve licensing and certification tests and the organizations and entities offering these tests located within the State approving agency’s jurisdiction as provided in § 21.4250(a).

* * * * *

(g) *Authority.* (1) Paragraph (a) of this section issued under the authority of 38 U.S.C. 512(a), 3689(a)(2);

(2) Paragraph (b) of this section issued under the authority of 38 U.S.C. 3689;

(3) Paragraph (c) of this section issued under the authority of 38 U.S.C. 3689(c);

(4) Paragraph (d) of this section issued under the authority of 38 U.S.C. 3689(c);

(5) Paragraph (e) of this section issued under the authority of 38 U.S.C. 3689(d);

(6) Paragraph (f) of this section issued under the authority of 38 U.S.C. 3689.

Subpart G—Post-Vietnam Era Veterans’ Educational Assistance Under 38 U.S.C. Chapter 32

■ 16. The authority citation for subpart G continues to read as follows:

Authority: 38 U.S.C. 501(a), chs. 32, 36, and as noted in specific sections.

■ 17. Amend § 21.5022 by:

- a. Removing the parenthetical authority citation at the end of paragraph (a)(1);
- b. In paragraph (a)(1)(ix), removing “or”;
- c. In paragraph (a)(1)(x), removing the period and adding “; or” in its place;
- d. Adding paragraph (a)(1)(xi);
- e. Removing the parenthetical authority citation at the end of paragraphs (a)(2) and (b); and
- f. Adding paragraph (c).

The additions read as follows:

§ 21.5022 Eligibility under more than one program.

(a) * * *

(1) * * *

(xi) Effective August 1, 2011, 10 U.S.C. 510 (National Call to Service).

* * * * *

(c) *Authority.* (1) Paragraph (a)(1) of this section issued under the authority of 38 U.S.C. 3322(a), 3681(b), 3695;

(2) Paragraph (a)(2) of this section issued under the authority of 38 U.S.C. 3033(a), 3322(a); and

(3) Paragraph (b) of this section issued under the authority of 38 U.S.C. 3034(a), 3231, 3323(a).

Subpart K—All Volunteer Force Educational Assistance Program (Montgomery GI Bill—Active Duty)

■ 18. The authority citation for subpart K continues to read as follows:

Authority: 38 U.S.C. 501(a), chs. 30, 36, and as noted in specific sections.

■ 19. Amend § 21.7143 by:

- a. In paragraph (a)(1)(ix), removing “or”;
- b. In paragraph (a)(1)(x), removing the period and adding “; and” in its place;
- c. Adding paragraph (a)(1)(xi);
- d. Adding reserved paragraph (a)(2);
- e. Removing the parenthetical authority citation at the end of paragraphs (b) and (c); and
- f. Adding paragraph (d).

The additions read as follows:

§ 21.7143 Nonduplication of educational assistance.

(a) * * *

(1) * * *

(xi) Effective August 1, 2011, 10 U.S.C. 510 (National Call to Service).

(2) [Reserved]

* * * * *

(d) *Authority.* (1) Paragraphs (a) and (b) of this section issued under the authority of 10 U.S.C. 16136(b); 38 U.S.C. 3033(a), 3681(b); and

(2) Paragraph (c) of this section issued under the authority of 38 U.S.C. 3034, 3681.

Subpart L—Educational Assistance for Members of the Selected Reserve

■ 20. The authority citation for subpart L continues to read as follows:

Authority: 10 U.S.C. ch. 1606; 38 U.S.C. 501(a), 512, ch. 36, and as noted in specific sections.

■ 21. Amend § 21.7642 by:

- a. Removing the parenthetical authority citation at the end of paragraph (a);
- b. In paragraph (a)(9), removing “or”;
- c. In paragraph (a)(10), removing the period and adding “; and” in its place;
- d. Adding paragraph (a)(11);
- e. Removing the parenthetical authority citation at the end of paragraphs (c) through (e); and
- e. Adding paragraph (f).

The additions read as follows:

§ 21.7642 Nonduplication of educational assistance.

(a) * * *

(11) Effective August 1, 2011, 10 U.S.C. 510 (National Call to Service).

* * * * *

(f) *Authority.* (1) Paragraph (a) of this section issued under the authority of 10 U.S.C. 16136(b); 38 U.S.C. 3033(a), 3241(a), 3322(a), 3681;

(2) Paragraphs (b) and (c) of this section issued under the authority of 10 U.S.C. 16134; Pub. L. 98–525;

(3) Paragraph (d) of this section issued under the authority of 10 U.S.C. 16136(b), 38 U.S.C. 3681; Public Law 98–525; and

(4) Paragraph (e) of this section issued under the authority of Sec. 4492(a), Public Law 102–484, 106 Stat. 2765–2766.

Subpart P—Post-9/11 GI Bill

■ 22. The authority citation for subpart P continues to read as follows:

Authority: 38 U.S.C. 501(a), 512, chs. 33, 36 and as noted in specific sections.

■ 23. Amend § 21.9505 by:

- a. Revising the section heading;
- b. In the introductory text, removing “apply.” and adding in its place “apply to provisions effective before August 1, 2011, unless otherwise noted.”;

- c. Revising the definition for “Active duty” and removing the parenthetical authority citation at the end of the definition;
- d. Adding in alphabetical order the definition for “Educational institution”;
- e. Revising the definition for “Entry level and skill training” and removing the parenthetical authority citation at the end of the definition;
- f. Adding in alphabetical order the definition for “Fugitive felon”;
- g. Adding a parenthetical with the OMB control number for the approval of the information collection immediately following the parenthetical authority citation at the end of the section.

The revisions and additions read as follows:

§ 21.9505 Definitions—for provisions effective before August 1, 2011.

* * * * *

Active duty means—

(1) Full-time duty:

(i) In the regular components of the Armed Forces; or

(ii) Under a call or order to active duty under 10 U.S.C. 688, 12301(a), 12301(d), 12301(g), 12302, or 12304.

(2) In the case of a member of the Army National Guard of the United States or the Air National Guard of the United States, in addition to service described in paragraph (1)(ii) of this definition, full-time service—

(i) In the National Guard of a State for the purpose of organizing, administering, recruiting, instructing, or training the National Guard; or

(ii) In the National Guard under 32 U.S.C. 502(f) when authorized by the President or the Secretary of Defense for the purpose of responding to a national emergency declared by the President and supported by Federal funds.

(3) Active duty does not include—

(i) Any period during which the individual—

(A) Was assigned full-time by the Armed Forces to a civilian institution to pursue a program of education that was substantially the same as programs of education offered to civilians; or

(B) Served as a cadet or midshipman at one of the service academies; or

(C) Served under the provisions of 10 U.S.C. 12103(d) pursuant to an enlistment in the Army National Guard, Air National Guard, Army Reserve, Naval Reserve, Air Force Reserve, Marine Corps Reserve, or Coast Guard Reserve.

(ii) A period of service—

(A) Required by an officer pursuant to an agreement under 10 U.S.C. 2107(b); or

(B)(1) Required by an officer pursuant to an agreement under 10 U.S.C. 4348, 6959, or 9348; or

(2) Effective for individuals entering into agreements after January 3, 2011, required by an officer pursuant to an agreement under 14 U.S.C. 1925.

(C) That was terminated because the individual is considered a minor by the Armed Forces, was erroneously enlisted, or received a defective enlistment agreement; or

(D) Counted for purposes of repayment of an education loan under 10 U.S.C. chapter 109.

(iii) A period of service after July 31, 2011, used to establish eligibility under 38 U.S.C. chapter 30 or 32, or 10 U.S.C. chapter 1606 or 1607.

(3) This definition issued under the authority of 38 U.S.C. 101(21)(A), 3301(1), 3311(d), 3322(b), (c); Public Law 111–377, 124 Stat. 4107–4108.

* * * * *

Educational institution has the same meaning as the term *institution of higher learning* as defined in § 21.4200(h) for training pursued prior to August 1, 2011.

(1) This definition issued under the authority of 38 U.S.C. 3323(a).

(2) [Reserved]

* * * * *

Entry level and skill training means—

(1) Basic Combat Training, Advanced Individual Training, and, effective January 4, 2011, One Station Unit Training for members of the Army;

(2) Recruit Training (Boot Camp) and Skill Training (“A” School) for members of the Navy;

(3) Basic Military Training and Technical Training for members of the Air Force;

(4) Recruit Training and Marine Corps Training (School of Infantry Training) for members of the Marine Corps; and

(5) Basic Training and, for individuals entering service on or after January 4, 2011, Skill Training (or so-called “A” School) for members of the Coast Guard.

(6) This definition issued under the authority of 38 U.S.C. 3301(2).

* * * * *

Fugitive felon means an individual identified as such by Federal, State, or local law enforcement officials and who is a fugitive by reason of—

(1) Fleeing to avoid prosecution for an offense, or an attempt to commit an offense, which is a felony under the laws of the place from which the person flees;

(2) Fleeing to avoid custody or confinement after conviction for an offense, or an attempt to commit an offense, which is a felony under the laws of the place from which the person flees; or

(3) Violating a condition of probation or parole imposed for commission of a felony under Federal or State law.

(4) This definition issued under the authority of 38 U.S.C. 3323(c), 5313B.

* * * * *

(The Office of Management and Budget has approved the information collection provisions in this section under control number 2900–0154.)

■ 24. Add § 21.9506 to read as follows:

§ 21.9506 Definitions—for provisions effective after July 31, 2011.

(a) For the purposes of this subpart (governing the administration and payment of educational assistance under 38 U.S.C. chapter 33), effective after July 31, 2011, unless otherwise noted, the following definitions apply. (See also additional definitions in §§ 21.1029 and 21.4200.)

Academic year means the period of time beginning August 1st of each calendar year and ending July 31st of the subsequent calendar year.

Active duty means—

(i) Full-time duty:

(B) In the regular components of the Armed Forces; or

(C) Under a call or order to active duty under 10 U.S.C. 688, 12301(a), 12301(d), 12301(g), 12302, or 12304.

(ii) In the case of a member of the Army National Guard of the United States or the Air National Guard of the United States, in addition to service described in paragraph (i)(B) of this definition, full time service—

(A) In the National Guard of a State for the purpose of organizing, administering, recruiting, instructing, or training the National Guard; or

(B) In the National Guard under 32 U.S.C. 502(f) when authorized by the President or the Secretary of Defense for the purpose of responding to a national emergency declared by the President and supported by Federal funds.

(iii) Active duty does not include—

(A) Any period during which the individual—

(1) Was assigned full-time by the Armed Forces to a civilian institution to pursue a program of education that was substantially the same as programs of education offered to civilians; or

(2) Served as a cadet or midshipman at one of the service academies; or

(3) Served under the provisions of 10 U.S.C. 12103(d) pursuant to an enlistment in the Army National Guard, Air National Guard, Army Reserve, Naval Reserve, Air Force Reserve, Marine Corps Reserve, or Coast Guard Reserve.

(B) A period of service—

(1) Required by an officer pursuant to an agreement under 10 U.S.C. 2107(b); or

(2)(i) Required by an officer pursuant to an agreement under 10 U.S.C. 4348, 6959, or 9348; or

(ii) Effective for individuals entering into agreements after January 3, 2011, required by an officer pursuant to an agreement under 14 U.S.C. 1925.

(3) That was terminated because the individual is considered a minor by the Armed Forces, was erroneously enlisted, or received a defective enlistment agreement; or

(4) Counted for purposes of repayment of an education loan under 10 U.S.C. chapter 109.

Advance payment means an amount of educational assistance payable under § 21.9641(c) for the month or fraction of the month in which the individual's quarter, semester, or term will begin plus the amount for the following month.

Course means a unit of instruction required for an approved program of education that provides an individual with the knowledge and skills necessary to meet the requirements of the selected educational, professional, or vocational objective.

Distance learning means the pursuit of a program of education via distance education as defined in 20 U.S.C. 1003(7).

Educational assistance means all monetary benefits (including but not limited to tuition, fees, and monthly housing allowances) payable under 38 U.S.C. chapter 33 to, or on behalf of, individuals who meet the eligibility requirements for pursuit of an approved program of education under 38 U.S.C. chapter 33

Educational institution has the same meaning as the term institution of higher learning as defined in § 21.4200(h).

Enrollment period means a term, quarter, or semester during which the educational institution offers instruction.

Entry level and skill training means—

- (i) For members of the Army—
 - (A) Basic Combat Training,
 - (B) Advanced Individual Training,and
 - (C) Effective January 4, 2011, One Station Unit Training.
 - (ii) For members of the Navy, Recruit Training (Boot Camp) and Skill Training (“A” School).
 - (iii) For members of the Air Force, Basic Military Training and Technical Training.
 - (iv) For members of the Marine Corps, Recruit Training and Marine Corps Training (School of Infantry Training).
 - (v) For members of the Coast Guard—
 - (A) Basic Training; and
 - (B) For individuals entering service on or after January 4, 2011, Skill Training (or so-called “A” School).
- Fees* mean any mandatory charges (other than tuition, room, and board)

that are applied by the educational institution for pursuit of an approved program of education. Fees include, but are not limited to, health premiums, freshman fees, graduation fees, and lab fees. Fees do not include those charged for a study abroad course(s) unless the course(s) is a mandatory requirement for completion of the approved program of education.

Fugitive felon means an individual identified as such by Federal, State, or local law enforcement officials and who is a fugitive by reason of—

(i) Fleeing to avoid prosecution for an offense, or an attempt to commit an offense, which is a felony under the laws of the place from which the person flees;

(ii) Fleeing to avoid custody or confinement after conviction for an offense, or an attempt to commit an offense, which is a felony under the laws of the place from which the person flees; or

(iii) Violating a condition of probation or parole imposed for commission of a felony under Federal or State law.

Institution of higher learning (IHL) means a college, university, or similar institution, including a technical or business school, offering postsecondary level academic instruction that leads to an associate or higher degree if the school is empowered by the appropriate State education authority under State law to grant an associate or higher degree. When there is no State law to authorize the granting of such a degree, the school may be recognized as an institution of higher learning if it is accredited for degree programs by a recognized accrediting agency. Such term shall also include a hospital offering educational programs at the postsecondary level without regard to whether the hospital grants a postsecondary degree. Such term shall also include an educational institution that offers courses leading to a standard college degree or its equivalent, and is not located in a State but is recognized as an educational institution by the Secretary of Education (or comparable official) of the country or other jurisdiction in which the institution is located.

Lump sum payment means an amount of educational assistance paid for the entire term, quarter, or semester.

Mitigating circumstances means circumstances beyond the individual's control that prevent him or her from continuously pursuing a program of education. The following circumstances are representative of those that VA considers to be mitigating. This list is not all-inclusive.

(i) An illness or mental illness of the individual;

(ii) An illness or death in the individual's family;

(iii) An unavoidable change in the individual's conditions of employment;

(iv) An unavoidable geographical transfer resulting from the individual's employment;

(v) Immediate family or financial obligations beyond the control of the individual that require him or her to suspend pursuit of the program of education to obtain employment;

(vi) Discontinuance of the course by the educational institution;

(vii) Unanticipated active duty for training; or

(viii) Unanticipated difficulties in caring for the individual's child or children.

Net cost means the amount of in-State tuition and fees the individual enrolled in a program of education is responsible for paying after the application of any—

(i) Waiver of, or reduction in, tuition and fees; and

(ii) Scholarship, or other Federal, State, institutional, or employer-based aid or assistance (other than loans and any funds provided under section 401(b) of the Higher Education Act of 1965) that is provided directly to the institution specifically designated for the sole purpose of reducing the individual's tuition and fee charges.

Non-public institution means a proprietary institution as defined in § 21.4200(z).

Program of education means a curriculum or combination of courses pursued at an educational institution that is accepted as necessary to meet the requirements for a predetermined and identified educational, professional, or vocational objective. Such term also means any curriculum or combination of courses pursued at an educational institution that is accepted as necessary to meet the requirements for more than one predetermined and identified educational, professional, or vocational objective if all the objectives pursued are generally recognized as being reasonably related to a single career field. The curriculum or combination of courses pursued must be listed in the educational institution's catalog and included in the approval notice provided by the State approving agency to VA in accordance with § 21.4258(b)(iv).

Pursuit means to work, during a certified enrollment period, towards the objective of a program of education. This work must be in accordance with approved institutional policy and applicable criteria of title 38 of the U.S.

Code, and must be necessary to reach the program's objective.

Rate of pursuit means the measurement obtained by dividing the number of course hours (or the equivalent hours as determined in § 21.9750) that an individual is pursuing, including hours applied to refresher, remedial, and deficiency courses, by the number of hours considered to be full-time training at the educational institution. The resulting percentage (rounded to the nearest hundredth) will be the individual's rate of pursuit not to exceed 100 percent. For the purpose of this subpart, VA will consider any rate of pursuit higher than 50 percent to be more than one-half time training. *Transferor* means an individual who is entitled to educational assistance under the Post-9/11 GI Bill based on his or her own active duty service and who is approved by the military department to transfer all or a portion of his or her entitlement to one or more dependents.

(b)(1) The *Academic year* definition in this section issued under the authority of 38 U.S.C. 3034(a), 3323(a), 3680(a);

(2) The *Active Duty* definition in this section issued under the authority of 38 U.S.C. 101(21)(A), 3301(1), 3311(d), 3322(b), (c); Public Law 111-377, 124 Stat. 4107-4108;

(3) The *Advance payment* definition in this section issued under the authority of 38 U.S.C. 3034(a), 3323(a), 3680(d);

(4) The *Course* definition in this section issued under the authority of 38 U.S.C. 3323(c);

(5) The *Distance learning* definition in this section issued under the authority of 20 U.S.C. 1003(7); 38 U.S.C. 3323(c);

(6) The *Educational assistance* definition in this section issued under the authority of 38 U.S.C. 3313;

(7) The *Educational institution* definition in this section issued under the authority of 38 U.S.C. 3323(a);

(8) The *Enrollment period* definition in this section issued under the authority of 38 U.S.C. 3034(a), 3323(a), 3680(g);

(9) The *Entry level and skill training* definition in this section issued under the authority of 38 U.S.C. 3301(2);

(10) The *Fees* definition in this section issued under the authority of 38 U.S.C. 501(a), 3323(c);

(11) The *Fugitive felon* definition in this section issued under the authority of 38 U.S.C. 3323(c), 5313B;

(12) The *Institution of higher learning (IHL)* definition in this section issued under the authority of 38 U.S.C. 3034(a), 3313(b), 3323(a), 3452(f);

(13) The *Lump sum payment* definition in this section issued under the authority of 38 U.S.C. 3323(c);

(14) The *Mitigating circumstances* definition in this section issued under the authority of 38 U.S.C. 3034(a), 3323(a), 3680(a)(1);

(15) The *Net cost* definition in this section issued under the authority of 38 U.S.C. 3313, 3323(c);

(16) The *Non-public institution* definition in this section issued under the authority of 38 U.S.C. 3323(c);

(17) The *Program of education* definition in this section issued under the authority of 38 U.S.C. 3034(a), 3301, 3323(a), 3452(b);

(18) The *Pursuit* definition in this section issued under the authority of 38 U.S.C. 3034(a), 3323(a), 3680(g);

(19) The *Rate of pursuit* definition in this section issued under the authority of 38 U.S.C. 3323, 3680;

(20) The *Transferor* definition in this section issued under the authority of 38 U.S.C. 3319.

(The Office of Management and Budget has approved the information collection provisions in this section under control number 2900-0154.)

■ 25. Revise § 21.9520 to read as follows:

§ 21.9520 Basic eligibility.

An individual may establish eligibility for educational assistance under 38 U.S.C. chapter 33, if he or she—

(a) Serves on active duty after September 10, 2001, for a minimum of 90 aggregate days, excluding entry level and skill training (to determine when entry level and skill training may be included in the total creditable length of service, *see* § 21.9640(a) or § 21.9641(a), whichever is applicable) and, after completion of such service—

(1) Continues on active duty;

(2) Is discharged from service with an honorable discharge;

(3) Is released from service characterized as honorable and placed on the retired list, temporary disability retired list, or transferred to the Fleet Reserve or the Fleet Marine Corps Reserve;

(4) Is released from service characterized as honorable for further service in a reserve component; or

(5)(i) Before January 4, 2011, is discharged or released from service for:

(A) A medical condition that preexisted such service and is not determined to be service-connected;

(B) Hardship, as determined by the Secretary of the military department concerned; or

(C) A physical or mental condition that interfered with the individual's

performance of duty but was not characterized as a disability and did not result from the individual's own misconduct;

(ii) On or after January 4, 2011, is discharged or released from service with an honorable discharge for:

(A) A medical condition that preexisted such service and is not determined to be service-connected;

(B) Hardship, as determined by the Secretary of the military department concerned; or

(C) A physical or mental condition that interfered with the individual's performance of duty but was not characterized as a disability and did not result from the individual's own misconduct;

(b) Serves on active duty after September 10, 2001, for a minimum of 30 continuous days and, after completion of such service, is discharged from active duty under other than dishonorable conditions due to a service-connected disability; or

(c)(1) After meeting the minimum service requirements in paragraph (a) or (b) of this section—

(i) An individual makes an irrevocable election to receive benefits under 38 U.S.C. chapter 33 by relinquishing eligibility under either 38 U.S.C. chapter 30, or 10 U.S.C. chapter 106a, 1606, or 1607, if eligible for such benefits;

(ii) A member of the Armed Forces who is eligible for educational assistance under 38 U.S.C. chapter 30 and who is making contributions towards educational assistance under 38 U.S.C. chapter 30 in accordance with 38 U.S.C. 3011(b) or 3012(c) makes an irrevocable election to receive benefits under 38 U.S.C. chapter 33; or

(iii) A member of the Armed Forces who made an election not to receive educational assistance under 38 U.S.C. chapter 30 in accordance with 38 U.S.C. 3011(c)(1) or 3012(d)(1) makes an irrevocable election to receive benefits under 38 U.S.C. chapter 33.

(2) An individual may make an irrevocable election to receive benefits under this chapter by properly completing VA Form 22-1990, submitting a transfer-of-entitlement designation under this chapter to the Department of Defense, or submitting a written statement that includes the following—

(i) Identification information (including name, social security number, and address);

(ii) If applicable, an election to receive benefits under 38 U.S.C. chapter 33 in lieu of benefits under one of the applicable chapters listed in paragraph (c)(1)(i) of this section (e.g., "I elect to

receive benefits under the Post-9/11-GI Bill in lieu of benefits under the Montgomery GI Bill—Active Duty (chapter 30) program.”);

(iii) The date the individual wants the election to be effective (e.g., “I want this election to take effect on August 1, 2009.”). An election request for an effective date prior to August 1, 2009, will automatically be effective August 1, 2009; and

(iv) An acknowledgement that the election is irrevocable (e.g., “I understand that my election is irrevocable and may not be changed.”); or

(d) Is the child of a person who, after September 10, 2001, died in the line of duty while serving on active duty as a member of the Armed Forces. For purposes of this paragraph (d), the term “child” means an individual who meets the requirements of § 3.57 of this chapter, except as to age and marital status. With regard to age and marital status, the term includes individuals who are—

(1) Married; or

(2) Over the age of 23.

(e) Paragraphs (a) through (d) of this section issued under the authority of 38 U.S.C. 3311; Public Law 110–252, 111–32, Stat. 1859, 2375–2376.

(The Office of Management and Budget has approved the information collection provision in this section under control numbers 2900–0154 and 2900–0098.)

§ 21.9525 [Amended]

■ 26. Amend § 21.9525 by removing “under § 21.9640(b)(1)(ii) or (b)(2)(ii)” wherever it appears and adding in its place “under § 21.9640(b)(1)(ii) or (b)(2)(ii) or § 21.9641(c)”.

■ 27. Amend § 21.9530 by:

■ a. In paragraph (a), removing “through (e)” and adding in its place “through (f)”;

■ b. Removing the parenthetical authority citation at the end of paragraphs (c) through (e);

■ c. Adding paragraphs (f) and (g); and

■ d. Adding at the end of the section a parenthetical with the OMB control number for the approval of the information collection.

The additions read as follows:

§ 21.9530 Eligibility time limit.

* * * * *

(f) *Time limit for child eligible under § 21.9520(d) (Marine Gunnery Sergeant John David Fry Scholarship).* (1) In the case of a child who first becomes entitled to educational assistance under § 21.9520(d) before January 1, 2013, the period during which the child may use his or her entitlement expires the day the child turns 33; or

(2) In the case of a child who first becomes entitled to educational assistance under § 21.9520(d) on or after January 1, 2013, the period during which the child may use his or her entitlement never expires.

(g) *Authority.* (1) Paragraphs (a) through (c) of this section issued under the authority of 38 U.S.C. 3311(c), 3321;

(2) Paragraph (d) of this section issued under the authority of 38 U.S.C. 3319;

(3) Paragraph (e) of this section issued under the authority of 38 U.S.C. 3319; and

(4) Paragraph (f) of this section issued under the authority of 38 U.S.C. 3321(b).

(The Office of Management and Budget has approved the information collection provision in this section under control number 2900–0098.)

■ 28. Revise § 21.9550 to read as follows:

§ 21.9550 Entitlement.

(a) Subject to the provisions of § 21.4020 and this section, an eligible individual is entitled to a maximum of 36 months of educational assistance (or its equivalent in part-time educational assistance) under 38 U.S.C. chapter 33.

(b)(1) An individual who, as of August 1, 2009, has used entitlement under 38 U.S.C. chapter 30, but retains unused entitlement under that chapter, makes an irrevocable election to receive educational assistance under the provisions of 38 U.S.C. chapter 33 instead of educational assistance under the provisions of chapter 30, will be limited to one month (or partial month) of entitlement under chapter 33 for each month (or partial month) of unused entitlement under chapter 30 (including any months of chapter 30 entitlement previously transferred to a dependent that the individual has revoked).

(2) An individual who has not used any entitlement under 38 U.S.C. chapter 30 or has not revoked any months of chapter 30 entitlement by transferring to a dependent and who makes an irrevocable election to receive educational assistance under the provisions of 38 U.S.C. chapter 33 instead of educational assistance under the provisions of chapter 30 will be entitled to 36 months of educational assistance under chapter 33.

(c) Except as provided in §§ 21.9560(d), 21.9561(g), 21.9570(m), 21.9571(m), 21.9635(o), and 21.9636(o), no individual is entitled to more than 36 months of full-time educational assistance under 38 U.S.C. chapter 33.

(Authority: 38 U.S.C. 3034(a), 3312(a), 3323(a), 3695; Pub. L. 110–252, 122 Stat. 2377)

■ 29. Amend § 21.9560 by revising the section heading and adding introductory text to read as follows:

§ 21.9560 Entitlement charges—for provisions effective before August 1, 2011.

For training that occurs before August 1, 2011—

* * * * *

■ 30. Add § 21.9561 to read as follows:

§ 21.9561 Entitlement charges—for provisions effective after July 31, 2011.

For training that begins after July 31, 2011—

(a) *Training pursued at an IHL.* The entitlement charge for an individual pursuing training at an IHL will be one of the following:

(1) During any period for which VA pays net costs or a Yellow Ribbon Program payment to the institution of higher learning on the individual's behalf, the individual will be charged a percentage of a day equal to the individual's rate of pursuit for each day of the certified enrollment period;

(2) During any period for which VA does not pay net costs or a Yellow Ribbon Program payment to the institution of higher learning on the individual's behalf but pays a monthly housing allowance or an increase (“kicker”) to the individual, the individual will be charged a percentage of a day equal to the individual's rate of pursuit for each day of the certified enrollment period for each day the individual received a monthly housing allowance or an increase (“kicker”); and

(3) During any period for which VA does not pay net costs or Yellow Ribbon Program payment to the institution of higher learning on the individual's behalf or a monthly housing allowance or an increase (“kicker”) to the individual but makes a lump sum payment to the individual for books, supplies, equipment, and other educational costs, VA will make an entitlement charge of 1 day for every \$41.67 paid, with any remaining amount rounded to the nearest amount evenly divisible by \$41.67.

(b) *Training pursued at a non-college degree institution.* The entitlement charge for an individual pursuing a certificate or other non-college degree at a non-college degree institution will be one of the following:

(1) During any period for which VA pays tuition and fees to the non-college degree institution on the individual's behalf, the individual will be charged entitlement equal to the number of months, and fraction thereof measured in days, determined by dividing the total amount paid by the amount equal to 1/12th of the amount applicable in

the academic year in which payment is made under § 21.9641(b)(3)(ii) or (iii).

(2) During any period for which VA does not pay net costs to the non-college degree institution on the individual's behalf but pays a monthly housing allowance or an increase ("kicker") to the individual, the individual will be charged a percentage of a day equal to the individual's rate of pursuit for each day of the certified enrollment period for each day the individual received a monthly housing allowance or an increase ("kicker").

(3) During any period for which VA does not pay net costs to the non-college degree institution on the individual's behalf or a monthly housing allowance or an increase ("kicker") to the individual but makes a lump sum payment to the individual for books, supplies, equipment, and other educational costs, VA will make an entitlement charge of 1 day for every \$41.67 paid, with any remaining amount rounded to the nearest amount evenly divisible by \$41.67.

(c) *Apprenticeship or other on-the-job training.* For each month an individual is paid educational assistance while pursuing an approved apprenticeship or other on-the-job training program, VA will make a charge against entitlement of—

(1) During the first 6-month period of the program, 1 month for each month of training pursued.

(2) During the second 6-month period of the program, .80 of a month for each month of training pursued.

(3) During the third 6-month period of the program, .60 of a month for each month of training pursued.

(4) During the fourth 6-month period of the program, .40 of a month for each month of training pursued.

(5) After the first 24 months of the program, .20 of a month for each month of training pursued.

(d) *Flight training.* An individual pursuing a non-college degree program consisting of flight training will be charged entitlement equal to the number of months, and fraction thereof measured in days, determined by dividing the total amount paid by 1/12th of the amount applicable in the academic year in which payment is made under § 21.9641(b)(5)(ii) or (iii).

(e) *Correspondence training.* An individual pursuing a program of education by correspondence will be charged entitlement equal to the number of months, and fraction thereof measured in days, determined by dividing the total amount paid by 1/12th of the amount applicable in the academic year in which payment is made under § 21.9641(b)(6)(ii) or (iii).

(f) *Licensing or certification tests and national tests.* When an individual receives educational assistance for taking an approved licensing or certification test, national test for admission, or national test for credit, VA will make a charge against entitlement for each payment made to him or her. The charge will be determined by—

(1) Dividing the total amount of the payment by—

(i) For the academic year beginning August 1, 2011, \$1460; or

(ii) For the academic year beginning on any subsequent August 1, the amount for the previous academic year, as increased under 38 U.S.C. 3015(h) (but for a licensing or certification test the amount will not be greater than \$2,000); and

(2)(i) For tests taken prior to August 1, 2018, rounding the result of paragraph (f)(1) of this section to the nearest whole month. The charge must be at least one month.

(ii) For test taken on or after August 1, 2018, multiplying the result of paragraph (f)(1) of this section by 30, rounding to the nearest whole day. The charge must be at least one day.

(g) *No entitlement charge.* VA will not make a charge against an individual's entitlement—

(1) For tutorial assistance as provided under § 21.9685; or

(2) For the rural relocation benefit as provided under § 21.9660; or

(3) For receipt of a work-study allowance as provided under § 21.4145.

(4) For pursuit of a course or courses when the individual—

(i) Had to discontinue the course or courses as a result of being—

(A) Ordered to active duty service under 10 U.S.C. 688, 12301(a), 12301(d), 12301(g), 12302, or 12304; or

(B) While on active duty service, ordered to a new duty location or assignment or to perform an increased amount of work; and

(ii) Did not receive credit or lost training time for any portion of the period of enrollment in the course or courses for which the eligible individual was pursuing to complete his or her approved educational, professional, or vocational objective as a result of having to discontinue pursuit.

(h) *Interruption to conserve entitlement.* An individual may not interrupt a certified period of enrollment for the purpose of conserving entitlement. An educational institution may not certify a period of enrollment for a fractional part of the normal term, quarter, or semester if the individual is enrolled for the entire term, quarter, or semester. VA will make

a charge against entitlement for the entire period of certified enrollment, if the individual is otherwise eligible for educational assistance, except when educational assistance is interrupted for any of the following conditions:

(1) Enrollment is terminated;

(2) The individual cancels his or her enrollment for the entire certified period of enrollment; or

(3) The individual requests interruption or cancellation for any break when the school was closed during a certified period of enrollment, and VA continued payments under an established policy based upon an Executive Order of the President or an emergency situation regardless of whether or not the individual received a payment for educational assistance provided under this chapter for any part of the certified enrollment period.

(i) *Overpayment cases.* VA will make a charge against entitlement for an overpayment only if the overpayment is discharged in bankruptcy, is waived and not recovered, or is compromised.

(1) If the overpayment is discharged in bankruptcy or is waived and not recovered, the charge against entitlement will be the appropriate rate for the elapsed period covered by the overpayment (exclusive of interest, administrative costs of collection, court costs and marshal fees).

(2) If the overpayment is compromised and the compromise offer is less than the amount of interest, administrative costs of collection, court costs and marshal fees, the charge against entitlement will be at the appropriate rate for the elapsed period covered by the overpayment (exclusive of interest, administrative costs of collection, court costs and marshal fees).

(3) If the overpayment is compromised and the compromise offer is equal to or greater than the amount of interest, administrative costs of collection, court costs and marshal fees, the charge against entitlement will be determined by—

(i) Subtracting from the sum paid in the compromise offer the amount attributable to interest, administrative costs of collection, court costs and marshal fees;

(ii) Subtracting the remaining amount of the overpayment balance as determined in paragraph (i)(3)(i) of this section from the amount of the original overpayment (exclusive of interest, administrative costs of collection, course costs and marshal fees);

(iii) Dividing the result obtained in paragraph (i)(3)(ii) of this section from the amount of the original overpayment (exclusive of interest, administrative

costs of collection, court costs and marshal fees); and

(iv) Multiplying the percentage obtained in paragraph (i)(3)(iii) of this section by the amount of entitlement otherwise chargeable for the period of the original overpayment.

(j) *Authority.* (1) Paragraphs (a) through (f) of this section issued under the authority of 38 U.S.C. 3315, 3315A; (2) Paragraph (g)(1) of this section issued under the authority of 38 U.S.C. 3314;

(3) Paragraph (g)(2) of this section issued under the authority of 38 U.S.C. 3318;

(4) Paragraph (g)(3) of this section issued under the authority of 38 U.S.C. 3485;

(5) Paragraph (g)(4) of this section issued under the authority of 38 U.S.C. 3312(c);

(6) Paragraph (h) of this section issued under the authority of 38 U.S.C. 3323(c); and

(7) Paragraph (i) of this section issued under the authority of 38 U.S.C. 3034(a), 38 U.S.C. 3323(a), 3685.

■ 31. Amend § 21.9570 by:

■ a. Revising the section heading;

■ b. In the introductory text, removing “An individual” and adding in its place “For training that occurs before August 1, 2011, an individual”;

■ c. Adding a parenthetical with the OMB control number for the approval of the information collection at the end of the section.

The revision and addition read as follows:

§ 21.9570 Transfer of entitlement—for provisions effective before August 1, 2011.

* * * * *

(The Office of Management and Budget has approved the information collection provisions in this section under control number 2900-0154.)

■ 32. Add § 21.9571 to read as follows:

§ 21.9571 Transfer of Entitlement—for provisions effective after July 31, 2011.

For training that occurs after July 31, 2011, an individual entitled to educational assistance under 38 U.S.C. chapter 33 based on his or her own service as a member of the Uniformed Services, and who is approved by a service department to transfer entitlement, may transfer up to a total of 36 months of his or her entitlement to a dependent (or among dependents). A transferor may not transfer an amount of entitlement that is greater than the entitlement he or she has available at the time of transfer.

(a) *Application of sections in subpart P to individuals in receipt of transferred entitlement.* In addition to the rules in

this section, the following sections apply to a dependent using transferred entitlement in the same manner as they apply to the individual from whom entitlement was transferred.

(1) *Definitions.* Section 21.9506—Definitions—for provisions effective after July 31, 2011.

(2) *Claims and applications.* Section 21.9510—Claims, VA’s duty to assist, and time limits.

(3) *Eligibility.* (i) Section 21.9530—Eligibility time limit, paragraphs (d) and (e) of this section only; and

(ii) Section 21.9535—Extended period of eligibility, except that extensions to dependents are subject to the transferor’s right to revoke or modify transfer at any time and that VA may only extend a child’s ending date to the date the child attains age 26.

(4) *Entitlement.* (i) Section 21.9550—Entitlement;

(ii) Section 21.9561—Entitlement charges—for provisions effective after July 31, 2011.

(5) *Counseling.* (i) Section 21.9580—Counseling;

(ii) Section 21.9585—Travel expenses.

(6) *Approved programs of education and courses.* (i) Section 21.9591—Approved programs of education and courses—for provisions effective after July 31, 2011;

(ii) Section 21.9601—Overcharges—for provisions effective after July 31, 2011.

(7) *Payments—Educational assistance.* (i) Section 21.9620—Educational assistance;

(ii) Section 21.9626—Beginning dates—for provisions effective after July 31, 2011, except for paragraphs (e), (g), (h), (k), or (l) of this section;

(iii) Section 21.9630—Suspension or discontinuance of payments;

(iv) Section 21.9636—Discontinuance dates—for provisions effective after July 31, 2011, except for paragraphs (o) and (v) of this section;

(v) Section 21.9660—Rural relocation benefit;

(vi) Section 21.9667—Reimbursement for licensing or certification tests—for provisions effective after July 31, 2011;

(vii) Section 21.9668—Reimbursement for national tests;

(viii) Section 21.9670—Work-study allowance;

(ix) Section 21.9676—Conditions that result in reduced rates or no payment—for provisions effective after July 31, 2011;

(x) Section 21.9681—Certifications and release of payments—for provisions effective after July 31, 2011;

(xi) Section 21.9685—Tutorial assistance;

(xii) Section 21.9691—Nonduplication of educational

assistance—for provisions effective after July 31, 2011;

(xiii) Section 21.9695—Overpayments, except that the dependent and transferor are jointly and severally liable for any amount of overpayment of educational assistance to the dependent; and

(xiv) Section 21.9700—Yellow Ribbon Program.

(8) *Pursuit of courses.* (i) Section 21.9710—Pursuit;

(ii) Section 21.9715—Advance payment certification;

(iii) Section 21.9721—Certification of enrollment—for provisions effective after July 31, 2011;

(iv) Section 21.9725—Progress and conduct;

(v) Section 21.9735—Other required reports;

(vi) Section 21.9740—False, late, or missing reports; and

(vii) Section 21.9745—Reporting fee.

(9) *Course assessment.* Section 21.9750—Course measurement.

(10) *Administrative.* Section 21.9770—Administrative.

(b) *Eligible dependents.* (1) An individual transferring entitlement under this section may transfer entitlement to:

(i) The individual’s spouse;

(ii) One or more of the individual’s children; or

(iii) A combination of the individuals referred to in paragraphs (b)(1)(i) and (ii) of this section.

(2) A spouse must meet the definition of spouse in § 3.50(a) of this chapter at the time of transfer.

(3) A child must meet the definition of child in § 3.57 of this chapter at the time of transfer. The transferor must make the required designation shown in paragraph(d)(1) of this section before the child attains the age of 23.

(4) A stepchild, who meets VA’s definition of child in § 3.57 of this chapter at the time of transfer and who is temporarily not living with the transferor, remains a member of the transferor’s household if the actions and intentions of the stepchild and transferor establish that normal family ties have been maintained during the temporary absence.

(c) *Timeframe during which an individual may transfer entitlement.* An individual approved by his or her department to transfer entitlement may do so at any time while serving as a member of the uniformed services, subject to the transferor’s 15-year period of eligibility as provided in § 21.9530.

(d) *Designating dependents; designating the amount to transfer; and period of transfer.* (1) An individual transferring entitlement under this section must:

(i) Designate the dependent or dependents to whom such entitlement is being transferred;

(ii) Designate the number of months of entitlement to be transferred to each dependent; and

(iii) Specify the beginning date and ending date of the period for which the transfer is effective for each dependent. The designated beginning date may not be earlier than the date the individual requests approval from his or her service department.

(2) VA will accept the transferor's designations as shown on any document signed by the transferor that shows the information required in paragraphs (d)(1)(i) through (iii) of this section.

(e) *Maximum months of entitlement transferable.* (1) The maximum amount of entitlement a transferor may transfer is the lesser of:

(i) Thirty-six months of his or her entitlement; or

(ii) The maximum amount authorized by the Secretary of the department concerned; or

(iii) The amount of entitlement he or she has available at the time of transfer.

(2) The transferor may transfer up to the maximum amount of transferable entitlement:

(i) To one dependent; or

(ii) Divided among his or her designated dependents in any manner he or she chooses.

(f) *Revocation of transferred entitlement.* (1) A transferor may revoke any unused portion of transferred entitlement (transferred entitlement is "used" in the amount of the entire enrollment period on the first day of the enrollment period; therefore, a transferor cannot revoke the entitlement used for an enrollment period after the enrollment period has begun) at any time by submitting a written notice to both the Secretary of Veterans Affairs and the Secretary of the department concerned that initially approved the transfer of entitlement. VA will accept a copy of the written notice addressed to the Secretary of the department concerned as sufficient written notification to VA.

(2) The revocation will be effective the later of—

(i) The date VA receives the notice of revocation; or

(ii) The date the department concerned receives the notice of revocation.

(g) *Modifying a transfer of entitlement.* (1) A transferor may modify the designations he or she made under paragraph (d) of this section at any time, except that a modification of a beginning date under paragraph (d)(1)(iii) of this section must be

effective on or after the date the modification is submitted. Any modification made will apply only with respect to unused transferred entitlement (transferred entitlement is "used" in the amount of the entire enrollment period on the first day of the enrollment period; therefore, a transferor cannot revoke the entitlement used for an enrollment period after the enrollment period has begun). The transferor must submit a written notice to both the Secretary of Veterans Affairs and the Secretary of the department concerned that initially approved the transfer of entitlement. VA will accept a copy of the written notice addressed to the department as sufficient written notification to VA.

(2) The modification will be effective the later of—

(i) The date VA receives the notice of modification; or

(ii) The date the department concerned receives the notice of modification.

(h) *Prohibition on treatment of transferred entitlement as marital property.* Entitlement transferred under this section may not be treated as marital property, or the asset of a marital estate, subject to division in a divorce or other civil proceeding.

(i) *Entitlement charge to transferor.* VA will reduce the transferor's entitlement at the rate of 1 month of entitlement for each month of transferred entitlement used by a dependent or dependents.

(j) *Secondary school diploma (or equivalency certificate).* Children who have reached age 18 and spouses may use transferred entitlement to pursue and complete the requirements of a secondary school diploma (or equivalency certificate).

(k) *Rate of payment of educational assistance.* VA will apply the rules in § 21.9641 (and §§ 21.9650 and 21.9655 when applicable) to determine the educational assistance rate that would apply to the transferor. VA will pay the dependent and/or the dependent's institution of higher learning (or school, educational institution, or institution as defined in § 21.4200(a) if the dependent is using transferred entitlement to pursue and complete the requirements of a secondary school diploma or equivalency certificate) the amounts of educational assistance payable under 38 U.S.C. chapter 33 in the same manner and at the same rate as if the transferor were enrolled in the dependent's program of education, except that VA will—

(1) Disregard the fact that either the transferor or the dependent child is (or

both are) on active duty, and pay the veteran rate to a dependent child;

(2) Pay the veteran rate to a surviving spouse; and

(3) Proportionally adjust the payment amounts, other than the book stipend, a dependent would otherwise receive under § 21.9641 if the dependent's months of entitlement will exhaust during the certified enrollment period, by—

(i) Determining the amount of payment for the net cost of tuition and fees the dependent would otherwise be eligible to receive for the entire enrollment period, then dividing this amount by the number of days in the dependent's quarter, semester, or term, as applicable, to determine the dependent's daily rate, then determining the actual amount of payment for the net cost of tuition and fees to be paid by multiplying the dependent's daily rate by his or her remaining months and days of entitlement to educational assistance as provided under § 21.9571; and

(ii) Discontinuing the dependent's monthly housing allowance effective as of the date the dependent's months and days of entitlement exhausts.

(l) *Transferor fails to complete required service contract that afforded participation in the transferability program.* (1) Dependents are not eligible for transferred entitlement if the transferor fails to complete the amount of service he or she agreed to serve in the uniformed services in order to participate in the transferability program, unless—

(i) The transferor did not complete the service due to:

(A) His or her death;

(B) A medical condition that preexisted such service on active duty and that the Secretary of the department concerned determines is not service-connected;

(C) A hardship, as determined by the Secretary of the department concerned; or

(D) A physical or mental condition that was not characterized as a disability and did not result from the individual's own willful misconduct but interfered with the individual's performance of duty, as determined by the Secretary of the department concerned; or

(ii) The transferor is considered to have completed his or her service agreement as a result of being discharged for—

(A) A disability; or

(B) A reduction in force.

(2) VA will treat all payments of educational assistance to dependents as overpayments if the transferor does not complete the required service unless the

transferor does not complete the required service due to one of the reasons stated in paragraph (l)(1)(i) of this section or the transferor was not discharged for one of the reasons stated in paragraph (l)(1)(ii) of this section.

(m) *Dependent is eligible for educational assistance under this section and is eligible for educational assistance under 38 U.S.C. chapter 33 based on his or her own service.* Dependents who are eligible for payment of educational assistance through transferred entitlement and are eligible for payment under 38 U.S.C. chapter 33 based on their own active service are not subject to the 48-month limit on training provided for in § 21.4020 when combining transferred entitlement with their own entitlement earned under 38 U.S.C. chapter 33. If the dependent is awarded educational assistance under another program listed in § 21.4020 (other than 38 U.S.C. chapter 33), the 48-month limit on training will apply.

(n) *Authority.* (1) Paragraph (a)(1) through (a)(7)(xiii) of this section issued under the authority of 38 U.S.C. 3319;

(2) Paragraph (a)(7)(xiv) of this section issued under the authority of 38 U.S.C. 3317;

(3) Paragraph (a)(8) through (10) of this section issued under the authority of 38 U.S.C. 3319;

(4) Paragraphs (b) through (k) of this section issued under the authority of 38 U.S.C. 3319;

(5) Paragraph (l) of this section issued under the authority of 38 U.S.C. 3034(a), 3311(c)(4), 3319; and

(6) Paragraph (m) of this section issued under the authority of 38 U.S.C. 3034(a), 3319, 3322, 3323(a), 3695).

(The Office of Management and Budget has approved the information collection provisions in this section under control number 2900-0154.)

■ 33. Amend § 21.9590 by revising the section heading and adding introductory text to read as follows:

§ 21.9590 Approved programs of education and courses—for provisions effective before August 1, 2011.

For training that occurs prior to August 1, 2011—

* * * * *

■ 34. Add § 21.9591 to read as follows:

§ 21.9591 Approved programs of education and courses—for provisions effective after July 31, 2011.

For training that begins on or after August 1, 2011—

(a) *Basis for educational assistance payments.* Payments of educational assistance are based on pursuit of a program of education. In order to

receive educational assistance under 38 U.S.C. chapter 33, an eligible individual must—

(1) Be pursuing an approved *program* of education;

(2) Be pursuing refresher, remedial, or deficiency courses as these courses are defined in § 21.7020(b);

(3) Be pursuing other preparatory or special education or training courses necessary to enable the individual to pursue an approved program of education;

(4) Have taken an approved licensing or certification test, national test for admission, or national test for credit for which he or she is requesting reimbursement; or

(5) Be an individual who has taken a course for which the individual received tuition assistance provided under a program administered by the Secretary of a military department under 10 U.S.C. 2007(a) or (c), for which the individual is requesting educational assistance for the amount of tuition and fees not covered by military tuition assistance.

(b) *Approval of the selected program of education.* Subject to paragraph (a) of this section, VA will approve a program of education under 38 U.S.C. chapter 33 selected by the individual if:

(1) The program meets the definition of a program of education in § 21.9506;

(2) Except for a program consisting of a licensing or certification test, a national test for admission, or a national test for credit, the program has an educational, vocational, or professional objective as described in § 21.7020(b)(13) or (22);

(3) The courses, subjects, licensing or certification tests, national tests for admission, or national tests for credit in the program are approved for VA training; and

(4) Except for a program consisting of a licensing or certification test designed to help the individual maintain employment in a vocation or profession, or for a program consisting of a national test for admission or a national test for credit, the individual is not already qualified for the objective of the program.

(c) *Change of program.* In determining whether an individual may change his or her selected program of education, VA will apply the provisions of § 21.4234.

(d) *Authority.* (1) Paragraph (a) of this section issued under the authority of 38 U.S.C. 3313, 3315, 3315A, 3323(a), 3689; and

(2) Paragraph (b) of this section issued under the authority of 38 U.S.C. 3034(a), 3323(a), 3471, 3689.

■ 35. Amend § 21.9600 by revising the section heading and adding introductory text to read as follows:

§ 21.9600 Overcharges—for provisions effective before August 1, 2011.

The provisions of this section apply to enrollment periods that begin before August 1, 2011.

* * * * *

■ 36. Add § 21.9601 to read as follows:

§ 21.9601 Overcharges—for provisions effective after July 31, 2011.

The provisions of this section apply to enrollment periods that begin after July 31, 2011.

(a) *Overcharges by educational institutions may result in the disapproval of enrollments.* VA may disapprove an educational institution for further enrollments if the educational institution charges an individual, or receives from an individual or from VA on behalf of an individual, an amount for tuition and fees that exceeds the tuition and fees that the educational institution requires from similarly circumstanced individuals enrolled in the same course.

(b) *Overcharges by organizations or entities offering licensing or certification tests, national test for admission, or national tests for credit may result in disapproval of tests.* VA may disapprove an organization or entity offering a licensing or certification test, national test for admission, or national test for credit, when the organization or entity offering the test charges an individual, or receives from an individual, an amount for fees that exceeds the fees that the organization or entity requires from similarly circumstanced individuals taking the same test.

(c) *Authority.* (1) Paragraph (a) of this section issued under the authority of 38 U.S.C. 3034(a), 3323(a), 3690(a); and

(2) Paragraph (b) of this section issued under the authority of 38 U.S.C. 3034(a), 3323(a), 3689(d), 3690(a).

■ 37. Revise § 21.9620 to read as follows:

§ 21.9620 Educational assistance.

VA will pay educational assistance for an eligible individual's pursuit of an approved program of education. The eligible individual and/or the individual's educational institution will receive payment amounts in accordance with the formulas listed in §§ 21.9640 and 21.9641.

(Authority: 38 U.S.C. 3313, 3314, 3315, 3316, 3317)

■ 38. Amend § 21.9625 by:

■ a. Revising the section heading;

■ b. In the introductory text, removing “VA will determine” and adding in its

place “For a claim submitted during the period beginning August 1, 2009, and ending July 31, 2011, VA will determine”; and.

■ c. Adding paragraph (m).

The revision and addition read as follows:

§ 21.9625 Beginning dates—for provisions effective before August 1, 2011.

* * * * *

(m) *Fugitive felons.* An award of educational assistance to an otherwise eligible veteran, person, or dependent of a veteran will begin effective the date the individual ceases to be a fugitive felon, as shown by evidence, which may include evidence that a warrant for an offense involving flight is resolved by—

- (1) Arrest;
- (2) Surrendering to the issuing authority;
- (3) Dismissal; or
- (4) Court documents (dated after the warrant for the arrest of the felon) showing the individual is no longer a fugitive.

(5) This paragraph (m) issued under the authority of 38 U.S.C. 3323(c), 5313B.

■ 39. Add § 21.9626 to read as follows:

§ 21.9626 Beginning dates—for provisions effective after July 31, 2011.

For a claim submitted after July 31, 2011, VA will determine the beginning date of an award or increased award of educational assistance under this section. In no case will the beginning date be earlier than August 1, 2009, or for training pursued at non-degree institutions before October 1, 2011. When more than one paragraph in this section applies, VA will award educational assistance using the latest of the applicable beginning dates.

(a) *Entrance or reentrance including change of program or educational institution.* When an eligible individual enters or reenters into training (including a reentrance following a change of program or educational institution), the beginning date of his or her award of educational assistance will be determined as follows:

(1) *For other than a licensing or certification test, a national test for admission, or a national test for credit.*

(i) If the award is an award for the first period of enrollment for which the eligible individual began pursuing his or her program of education, the beginning date will be the latest of—

(A) The date the educational institution certifies under paragraph (b) or (c) of this section;

(B) One year before the date of claim as determined by § 21.1029(b);

(C) The effective date of the approval of the program of education;

(D) One year before the date VA receives approval notice for the program of education.

(ii) If the award is an award for a second or subsequent period of enrollment for which the eligible individual is pursuing a program of education, the effective date of the award will be the latest of—

(A) The date the educational institution certifies under paragraph (b) or (c) of this section;

(B) The effective date of the approval of the program of education; or

(C) One year before the date VA receives the approval notice for the program of education.

(2) *For a licensing or certification test.* VA will award educational assistance for the cost of a licensing or certification test only when the eligible individual takes such test on or after August 1, 2009—

(i) While the test is approved under 38 U.S.C. chapter 36;

(ii) While the individual is eligible for educational assistance under this subpart; and

(iii) When the claim for reimbursement for the cost of the test is submitted within 1 year of the date the test is taken.

(3) *For a national test for admission or a national test for credit.* VA will award educational assistance for the cost of a national test for admission or a national test for credit only when the eligible individual takes such test after July 31, 2011—

(i) While the test is approved under 38 U.S.C. chapter 36;

(ii) While the individual is eligible for educational assistance under this chapter; and

(iii) When claim for reimbursement for the cost of the test is submitted within 1 year of the date the test is taken.

(b) *Certification for program of education offered at an IHL.* (1) When the individual enrolls in a course offered by independent study or distance learning, the beginning date of the award or increased award of educational assistance will be the date the eligible individual begins pursuit of the course according to the regularly established practices of the educational institution.

(2) When the individual enrolls in a resident course, the beginning date of the award or increased award of educational assistance will be the first scheduled date of classes for the term, quarter, or semester in which the eligible individual is enrolled, except as provided in paragraphs (b)(3) through (5) of this section.

(3) When the individual enrolls in a resident course whose first scheduled class begins on or after the eighth calendar day when, according to the school's academic calendar, classes are scheduled to begin for the term, quarter, or semester, the beginning date of the award or increased award of educational assistance allowance will be the actual date of the first class scheduled for that particular course.

(4) When the individual enrolls in a resident course, the beginning date of the award will be the date of reporting provided that—

(i) The published standards of the school require the eligible individual to register before reporting; and

(ii) The published standards of the school require the eligible individual to report no more than 14 days before the first scheduled date of classes for the term, quarter, or semester for which the eligible individual has registered.

(5) When the eligible individual enrolls in a resident course and the first day of classes is more than 14 days after the date of registration, the beginning date of the award or increased award of educational assistance will be the first day of classes.

(c) *Certification for program of education offered by a non-college degree educational institution.* (1) Except as provided in paragraphs (c)(2) and (3) of this section, when an eligible individual enrolls at a non-college degree educational institution, the beginning date of the award of educational assistance will be the later of—

(i) The date determined in paragraph (b) of this section; or

(ii) October 1, 2011.

(2) When an eligible individual enrolls at a non-degree educational institution for a program of education that is offered by correspondence, the beginning date of the award of educational assistance will be the later of—

(i) The date the first lesson was sent;

(ii) The date of affirmation (as defined in § 21.7020(b)(36)); or

(iii) October 1, 2011.

(3) When an individual enrolls in a program of apprenticeship or other on-the-job training, the beginning date of the award of educational assistance will be the later of—

(i) The first date of employment in the training position; or

(ii) October 1, 2011.

(d) *Liberalizing laws and VA issues.* When a liberalizing law or VA issue affects the beginning date of an eligible individual's award of educational assistance, the beginning date will be adjusted in accordance with the facts

found, but not earlier than the effective date of the act or administrative issue.

(e) *Correction of military records.* As determined in § 21.9530, the eligibility of a veteran may arise because the nature of the veteran's discharge or release is changed by appropriate military authority. In these cases, the beginning date of the veteran's educational assistance will be in accordance with facts found, but not earlier than the date the nature of the discharge or release was changed.

(f) *Individuals in a penal institution.* If an eligible individual is not receiving or is receiving a reduced rate of educational assistance under § 21.9675 (based on incarceration in a Federal, State, local, or other penal institution or correctional facility due to a felony conviction), the rate will be increased or assistance will begin effective the earlier of the following:

(1) The date the tuition and fees are no longer being paid under a Federal (other than one administered by VA), State, or local program; or

(2) The date the individual is released from the penal institution or correctional facility.

(g) *Increase ("kicker") based on critical skills or specialty.* If an eligible individual is entitled to an increase ("kicker") in the monthly rate of educational assistance under 38 U.S.C. 3316, the effective date of that increase ("kicker") will be the later of—

(1) The beginning date of an eligible individual's award as determined by paragraphs (a) through (f) of this section; or

(2) The first date on which the eligible individual is entitled to the increase ("kicker") as determined by the Secretary of the military department concerned.

(h) *Increase in percentage of maximum amount payable based on length of active duty service requirements.* If an eligible individual is entitled to an increase in the percentage of the maximum amount of educational assistance payable as a result of meeting additional length of active duty service requirements, the effective date of that increase will be the later of—

(1) The beginning date of the eligible individual's award as determined by paragraphs (a) through (f) of this section; or

(2) The first day of the term, quarter, or semester following the term, quarter, or semester in which the eligible individual becomes entitled to an increase in the percentage of the maximum amount payable.

(i) *Spouse eligible for transferred entitlement.* If a spouse is eligible for transferred entitlement under § 21.9571,

the beginning date of the award of educational assistance will be no earlier than the latest of the following dates—

(1) The date the Secretary of the military department concerned approves the transferor to transfer entitlement;

(2) The date the transferor completes 6 years of service in the Armed Forces;

(3) The date the transferor specified in his or her designation of transfer; or

(4) The date the spouse first meets the definition of spouse in § 3.50(a) of this chapter.

(j) *Child eligible for transferred entitlement.* If a child is eligible for transferred entitlement under § 21.9571, the beginning date of the award of educational assistance will be no earlier than the latest of the following dates—

(1) The date the Secretary of the service department concerned approves the transferor to transfer entitlement;

(2) The date the transferor completes 10 years of service in the Armed Forces;

(3) The date the transferor specified in his or her designation of transfer;

(4) The date the child first meets the definition of child in § 3.57 of this chapter; or

(5) Either—

(i) The date the child completes the requirements of a secondary school diploma (or equivalency certificate); or

(ii) The date the child attains age 18.

(k) *Change in active duty status.* If an individual is released or discharged from active duty during a certified period of enrollment, VA will begin paying the monthly housing allowance:

(1) If released or discharged before August 1, 2018, beginning the 1st day of the month following the date the individual was discharged; or

(2) If released or discharged on or after August 1, 2018, beginning the day following the date the individual was discharged.

(l) *Election to receive benefits under 38 U.S.C. chapter 33.* (1) If an individual makes an election to receive benefits under 38 U.S.C. chapter 33 in lieu of benefits under 10 U.S.C. chapter 106a, 1606, or 1607, or 38 U.S.C. chapter 30 in accordance with § 21.9520(c), VA will begin paying benefits under 38 U.S.C. chapter 33 effective the later of the following—

(i) August 1, 2009;

(ii) The date the individual became eligible for educational assistance under 38 U.S.C. chapter 33;

(iii) One year before the date the valid election request was received; or

(iv) The effective date of the election as requested by the claimant.

(2) If an individual is in receipt of benefits under 38 U.S.C. chapter 31 during a term, quarter, or semester, and

requests to begin receiving benefits under 38 U.S.C. chapter 33 during that term, quarter, or semester, VA will begin paying—

(i) The monthly housing allowance under 38 U.S.C. chapter 33 effective the 1st of the month following the date of the request.

(ii) Net cost of tuition and fees, and the books and supplies stipend, the first day of the following term, quarter, or semester.

(m) *Fugitive felons.* An award of educational assistance to an otherwise eligible veteran, person, or dependent of a veteran will begin effective the date the individual ceases to be a fugitive felon, as shown by evidence, which may include evidence that a warrant for an offense involving flight is resolved by—

(1) Arrest;

(2) Surrendering to the issuing authority;

(3) Dismissal; or

(4) Court documents (dated after the warrant for the arrest of the felon) showing the individual is no longer a fugitive.

(n) *National Guard members' retroactive beginning dates for claims submitted through September 30, 2012.* For any claim received up until September 30, 2012, for retroactive benefits based on service in the National Guard, the beginning date of the award will be the later of either:

(1) the date the National Guard member satisfied the eligibility requirements in § 21.9520 of this title; or

(2) August 1, 2009.

(o) *Child eligible for the Marine Gunnery Sergeant John David Fry Scholarship.* If a child is eligible for entitlement under § 21.9520(d), the beginning date of the award of educational assistance will be no earlier than the earlier of the following dates—

(1) The date the child completes the requirements of a secondary school diploma (or equivalency certificate); or

(2) The date the child attains age 18.

(p) *Authority.* (1) The introductory text of this section issued under the authority of 38 U.S.C. 3313, 3316, 3323(a), 5110, 5111, 5113;

(2) Paragraphs (a) through (a)(1)(ii)(C) of this section issued under the authority of 38 U.S.C. 3034(a), 3313, 3316, 3323(a), 3672, 5103;

(3) Paragraphs (a)(2) and (a)(3) of this section issued under the authority of 38 U.S.C. 3034(a), 3315A, 3323(a), 3452(b);

(4) Paragraphs (b) and (c) of this section issued under the authority of 38 U.S.C. 3313, 3316, 3323;

(5) Paragraph (d) of this section issued under the authority of 38 U.S.C. 3323(c), 5113;

(6) Paragraph (e) of this section issued under the authority of 38 U.S.C. 3323(c);

(7) Paragraph (f) of this section issued under the authority of 38 U.S.C. 3034(a), 3323(a), 3482(g);

(8) Paragraph (g) of this section issued under the authority of 10 U.S.C. 16131(i); 38 U.S.C. 3015(d), 3316(a);

(9) Paragraph (h) of this section issued under the authority of 38 U.S.C. 3311, 3313;

(10) Paragraphs (i) and (j) of this section issued under the authority of 38 U.S.C. 3319;

(11) Paragraph (m) of this section issued under the authority of 38 U.S.C. 3323(c), 5313B; and

(12) Paragraph (o) of this section issued under the authority of Pub. L. 111–32, 123 Stat. 1859.

(The Office of Management and Budget has approved the information collection provision in paragraph (a) of this section under control number 2900–0706 and the information collection provisions in paragraphs (b) and (c) of this section under control numbers 2900–0154, 2900–0178, 2900–0162, 2900–0353, and 2900–0576.)

■ 40. Amend § 21.9635 by:

- a. Revising the section heading;
- b. In the introductory text, removing “The effective date” and adding in its place “During the period beginning August 1, 2009, and ending July 31, 2011, the effective date”;
- c. Revising paragraph (c) and removing the parenthetical authority citation at the end of the paragraph;
- d. Revising paragraph (d) and removing the parenthetical authority citation at the end of the paragraph;
- e. Revising paragraph (w) and removing the parenthetical authority citation at the end of the paragraph;
- f. Removing the parenthetical authority citation at the end of paragraph (bb);
- g. Redesignating paragraph (bb) as paragraph (cc);
- h. Adding new paragraph (bb); and
- g. Revising newly-redesignated paragraph (cc).

The revisions and addition read as follows:

§ 21.9635 Discontinuance dates—for provisions effective before August 1, 2011.

* * * * *

(c) *Withdrawal or unsatisfactory completion of all courses.* If the eligible individual, for reasons other than being called or ordered to active duty service, withdraws from all courses or receives all nonpunitive grades after the first day of the term, VA will terminate educational assistance as follows—

(1) If the eligible individual withdraws from all courses after the school’s drop/add period, and there are no mitigating circumstances, VA will terminate educational assistance

effective the first day of the term from which the eligible individual withdrew.

(2) If the eligible individual withdraws from all courses with mitigating circumstances; withdraws during the school’s drop/add period or within the first 30 days of the enrollment period, whichever is earlier; or withdraws from all courses for which a punitive grade is or will be assigned, VA will terminate educational assistance for—

(i) Residence training; effective the last date of attendance; and

(ii) Independent study or distance learning; effective on the official date of change in status under the practices of the educational institution.

(3) When an eligible individual withdraws from an approved correspondence course offered by an educational institution, VA will terminate educational assistance effective the date the last lesson was serviced.

(4) This paragraph (c) issued under the authority of 38 U.S.C. 3323, 3680(a).

(d) *Reduction in the rate of pursuit of a program of education.* If the eligible individual reduces the rate of pursuit by withdrawing from one or more courses in a program of education but continues training in one or more courses, VA will apply the provisions of this paragraph (d).

(1) If the reduction in the rate of pursuit occurs other than on the first date of the term, VA will reduce the eligible individual’s educational assistance effective the end of the month during which the reduction occurred when—

(i) The withdrawal from one or more courses occurs during the school’s drop/add period or within the first 30 days of the enrollment period, whichever is earlier; or

(ii) A nonpunitive grade is assigned for the course from which the eligible individual withdraws and the withdrawal occurs with mitigating circumstances; or

(iii) A punitive grade is assigned for the course from which the eligible individual withdraws.

(2) VA will reduce educational assistance effective the first date of the enrollment in which the reduction occurs when—

(i) The reduction occurs on the first date of the term; or

(ii) A nonpunitive grade is assigned for the course from which the eligible individual withdraws, and—

(A) The eligible individual does not withdraw because he or she is called to active duty service, or in the case of an individual serving on active duty, he or she is not ordered to a new duty

location or assignment, or is not ordered to perform an increased amount of work, and

(B) The withdrawal occurs without mitigating circumstances.

(3) This paragraph (d) issued under the authority of 38 U.S.C. 3034(a), 3323(a), 3680(a).

* * * * *

(w) *Receipt of educational assistance allowance under another educational assistance program.* (1) An individual in receipt of educational assistance under chapter 33 who is also eligible for educational assistance under 10 U.S.C. chapter 106a, 1606, or 1607; 38 U.S.C. chapter 30, 31, 32, or 35; the Hostage Relief Act of 1980; or, effective August 1, 2011, 10 U.S.C. 510, may choose to receive educational assistance under another program.

(2) This paragraph (w) issued under the authority of 38 U.S.C. 3322(a).

* * * * *

(bb) *Fugitive felons.* (1) VA will not award educational assistance to an otherwise eligible Veteran or dependent of an otherwise eligible Veteran for any period during which the Veteran is a fugitive felon. The date of discontinuance of an award of educational assistance to a Veteran who is a fugitive felon or dependent of a Veteran who is a fugitive felon is the date of the warrant establishing that the individual is a fugitive felon or the date otherwise shown by evidence to be the date the individual became a fugitive felon.

(2) This paragraph (bb) issued under the authority of 38 U.S.C. 3323(c), 5313B.

(cc) *Other reasons for discontinuance.*

(1) If an eligible individual’s educational assistance must be discontinued for any reason other than those stated in paragraphs (a) through (bb) of this section, VA will determine the ending date of educational assistance based on the facts found.

(2) This paragraph (cc) issued under the authority of 38 U.S.C. 3323(c), 5112(a), 5113.

■ 41. Add § 21.9636 to read as follows:

§ 21.9636 Discontinuance dates—for provisions effective after July 31, 2011.

The effective date of a reduction or discontinuance of educational assistance that occurs after July 31, 2011, will be as stated in this section. If more than one type of reduction or discontinuance is involved, VA will reduce or discontinue educational assistance using the earliest of the applicable dates.

(a) *Death of eligible individual.* (1) If the eligible individual receives a lump

sum payment for the books and supplies stipend under § 21.9641(d) and dies before the end of the period covered by the lump sum payment, the discontinuance date of educational assistance for the purpose of that lump sum payment will be the last date of the period covered by the lump sum payment.

(2) If the educational institution receives a lump sum payment for tuition and fees under § 21.9641(b) on behalf of an eligible individual and the individual dies before the end of the period covered by the lump sum payment, the discontinuance date for the purpose of that lump sum payment will be the last date of the period covered by the lump sum payment. The educational institution will be required to return to VA any portion of the tuition and fees paid by VA that would normally be refunded to a similarly circumstanced individual according to the regularly established practices of the educational institution.

(3) If the eligible individual receives an advance payment of the monthly housing allowance pursuant to § 21.9681(b)(2) and dies before the period covered by the advance payment ends, the discontinuance date of educational assistance shall be the last date of the period covered by the advance payment.

(4) For all other payments, *e.g.*, monthly housing allowance under § 21.9641(c), if the eligible individual dies while pursuing a program of education, the discontinuance date of educational assistance will be the date of death.

(b) *First instance of withdrawal of course.* In the first instance of a withdrawal from a course or courses for which the eligible individual received educational assistance, VA will consider mitigating circumstances to exist with respect to the withdrawal of a course or courses totaling no more than six semester hours or the equivalent. In determining whether a withdrawal is the first instance of withdrawal, VA will not consider a course or courses dropped during an educational institution's drop-add period in accordance with § 21.4200(l). If mitigating circumstances are considered to exist in accordance with this paragraph (b), VA will terminate or reduce educational assistance effective—

(1) For withdrawals occurring before March 17, 2025 the end of the month during which the withdrawal occurred;

(2) For withdrawals occurring on or after March 17, 2025, the last date of attendance.

(c) *Withdrawal or unsatisfactory completion of all courses.* If the eligible individual, for reasons other than being called or ordered to active duty service, withdraws from all courses or receives all nonpunitive grades after the first day of the term, VA will terminate educational assistance as follows—

(1) If the eligible individual withdraws from all courses after the school's drop/add period, and there are no mitigating circumstances, VA will terminate educational assistance effective the first day of the term from which the eligible individual withdrew.

(2) If the eligible individual withdraws from all courses with mitigating circumstances; withdraws during the school's drop/add period or within the first 30 days of the enrollment period, whichever is earlier; or withdraws from all courses for which a punitive grade is or will be assigned, VA will terminate educational assistance for—

(i) Residence training: effective the last date of attendance; and

(ii) Independent study or distance learning: effective on the official date of change in status under the practices of the educational institution.

(3) When an eligible individual withdraws from an approved correspondence course offered by an educational institution, VA will terminate educational assistance effective the date the last lesson was serviced.

(d) *Reduction in the rate of pursuit of a program of education.* If the eligible individual reduces the rate of pursuit by withdrawing from one or more courses in a program of education but continues training in one or more courses, VA will apply the provisions of this paragraph (d).

(1) If the reduction in the rate of pursuit occurs other than on the first date of the term, VA will reduce the eligible individual's educational assistance effective either the end of the month during which the reduction occurred (in the case of reductions occurring before March 17, 2025), or the last date of attendance (in the case of for reductions occurring on or after March 17, 2025), when—

(i) The withdrawal from one or more courses occurs during the school's drop/add period or within the first 30 days of the enrollment period, whichever is earlier; or

(ii) A nonpunitive grade is assigned for the course from which the eligible individual withdraws and the withdrawal occurs with mitigating circumstances; or

(iii) A punitive grade is assigned for the course from which the eligible individual withdraws.

(2) VA will reduce educational assistance effective the first date of the enrollment in which the reduction occurs when—

(i) The reduction occurs on the first date of the term; or

(ii) A nonpunitive grade is assigned for the course from which the eligible individual withdraws, and—

(A) The eligible individual does not withdraw because he or she is called to active duty service, or in the case of an individual serving on active duty, he or she is not ordered to a new duty location or assignment, or is not ordered to perform an increased amount of work, and

(B) The withdrawal occurs without mitigating circumstances.

(e) *End of course or period of enrollment.* If an eligible individual's course or period of enrollment ends, the effective date of reduction or discontinuance of the individual's award of educational assistance will be the ending date of the course or period of enrollment as certified by the educational institution.

(f) *Nonpunitive grade.* (1) If an eligible individual does not officially withdraw from a particular course and the individual receives a nonpunitive grade for that course, VA will reduce the individual's educational assistance effective the first date of enrollment for the term in which the grade applies unless mitigating circumstances are found.

(2) If an eligible individual does not officially withdraw from a particular course and the individual receives a nonpunitive grade for that course, VA will reduce the individual's educational assistance effective the end of the month during which the student last attended when mitigating circumstances are found.

(3) If an eligible individual receives an incomplete grade for a course or courses, VA will delay creating an overpayment for such course or courses to allow the individual an opportunity to complete the course or courses. However, if the incomplete grade is not replaced with a punitive grade, VA will reduce the individual's educational assistance in accordance with paragraph (f)(1) or (2) of this section effective the earliest of—

(i) The last date permitted by the educational institution to complete the course;

(ii) The date the educational institution permanently assigns a nonpunitive grade; or (iii) One year from

the date the incomplete grade was assigned.

(g) *Discontinued by VA.* If VA discontinues payment to an eligible individual following procedures stated in § 21.4210(d) and (g), the discontinuance date of payment of educational assistance will be—

(1) The date the Director of the VA Regional Processing Office of jurisdiction first suspended payments provided in § 21.4210, if the discontinuance was preceded by suspension; or

(2) The end of the month during which VA made the decision to discontinue payments under § 21.9630 or § 21.4210(d) and (g), if the Director of the VA Regional Processing Office of jurisdiction did not suspend payments before the discontinuance.

(h) *Disapproved by State approving agency.* If a State approving agency disapproves a program of education in which an eligible individual is enrolled, the discontinuance date of payment of educational assistance will be—

(1) For a program of education at an IHL or a non-college degree institution, the end of the course or period of enrollment, as certified by the educational institution, in which the disapproval is effective; or

(2) For an apprenticeship or other on-the-job training program, the end of the program or the end of the academic year, whichever is earlier, in which the disapproval is effective or in which VA receives notice of the disapproval, whichever is later, provided the Director of the VA Regional Processing Office of jurisdiction did not suspend payments before the disapproval.

(i) *Disapproval by VA.* If VA disapproves a program of education in which an eligible individual is enrolled, the discontinuance date of payment of educational assistance will be—

(1) For a program of education at an IHL or a non-college degree institution, the end of the course or period of enrollment, as certified by the educational institution, in which the disapproval is effective; or

(2) For an apprenticeship or other on-the-job training program, the end of the program or the end of the academic year in which the disapproval occurred, whichever is earlier, provided that the Director of the VA Regional Processing Office of jurisdiction did not suspend payments before the disapproval.

(j) *Unsatisfactory progress.* If an eligible individual's progress is unsatisfactory, his or her educational assistance will be discontinued effective the earlier of the following:

(1) The end of the month during which the educational institution

discontinues the eligible individual's enrollment; or

(2) The end of the month during which the eligible individual's progress becomes unsatisfactory according to the educational institution's regularly established standards of progress, conduct, or attendance.

(k) *False or misleading statements.* Payments may not be based on false or misleading statements, claims, or reports. If educational assistance is paid as the result of an individual submitting false or misleading statements, claims, or reports, VA will apply the provisions of §§ 21.4006 and 21.4007 in the same manner as they apply to veterans under 38 U.S.C. chapter 30.

(l) *Conflicting interests (not waived).* If a conflict of interest exists between an officer or employee of VA and an educational institution, or an officer or employee of a State approving agency and an educational institution, as provided in § 21.4005, and VA does not grant a waiver, the discontinuance date of educational assistance will be 30 days after the date of the letter notifying the eligible individual of the conflicting interests.

(m) *Incarceration in prison or other penal institution due to conviction of a felony.* (1) The provisions of this paragraph (m)(1) apply to an eligible individual whose educational assistance must be discontinued or who becomes restricted to payment of educational assistance at a reduced rate under § 21.9676(c) (based on incarceration in a Federal, State, local, or other penal institution or correctional facility due to a felony conviction).

(2) The discontinuance of any monthly payments will be the end of the month during which the eligible individual is incarcerated in a Federal, State, local, or other penal institution or correctional facility or the end date of the enrollment period as certified by the educational institution, whichever is earlier.

(n) *Change in active duty status.* (1) The discontinuance date for an eligible individual who reduces or terminates training as a result of being called or ordered to serve on active duty under section 688, 12301(a), 12301(d), 12301(g), 12302, or 12304 of title 10 of the U.S. Code, or in the case of an individual serving on active duty, being ordered to a new duty location or assignment or to perform an increased amount of work is—

(i) For tuition and fees, the last date of the certified enrollment period;

(ii) For monthly housing allowance, see paragraph (n)(2) of this section; and

(iii) For the "book stipend," the last date of the period covered by the book stipend payment.

(2) If an individual enters active duty during a certified period of enrollment, regardless of whether there is a reduction or termination of training, the discontinuance date for the monthly housing allowance will be—

(A) For entry occurring before August 1, 2018, the end of the month during which the individual entered active; and

(B) For entry occurring on or after August 1, 2018, the date of entry onto active duty.

(o) *Exhaustion of entitlement.* (1) If an individual enrolled in an educational institution that regularly operates on the quarter or semester basis exhausts his or her entitlement under 38 U.S.C. chapter 33, the discontinuance date will be the last day of the quarter or semester in which the entitlement is exhausted.

(2) The ending date for an individual enrolled in a course that is not scheduled on a quarter or semester basis, who exhausts his or her entitlement under 38 U.S.C. chapter 33 after he or she has completed more than half of the course, will be the earlier of the following—

(i) The last day of the course; or

(ii) 12 weeks from the day the entitlement is exhausted.

(3) If an individual enrolled in a course that is not scheduled on a quarter or semester basis exhausts his or her entitlement under 38 U.S.C. chapter 33 before the individual has completed more than half of the course, the effective ending date will be the date the entitlement was exhausted.

(p) *End of period of eligibility.* If an eligible individual is enrolled in an educational institution on the date of expiration of his or her period of eligibility as determined under § 21.9530, the effective ending date will be the day preceding the end of the period of eligibility.

(q) *Required verifications not received after certification of enrollment.* (1) If VA does not receive the required verification of attendance in a timely manner for an eligible individual enrolled in a course or courses at an educational institution in a program of education not leading to a standard college degree, VA will terminate payments effective the last date of the last period for which verification of the eligible individual's attendance was received. If VA later receives the verification, VA will make any adjustment on the basis of the facts found.

(2) If VA does not receive verification of enrollment within 60 days of the first

day of the term, quarter, semester, or course for which the advance payment was made, VA will determine the actual facts and make an adjustment, if required. If the eligible individual failed to enroll, VA will terminate the award of educational assistance effective the beginning date of the enrollment period.

(r) *Administrative or payee error.* (1) When an administrative error or error in judgment by VA, the Department of Defense, or the Department of Homeland Security with respect to the Coast Guard when it is not operating as a service in the Navy, is the sole cause of an erroneous award, the award will be reduced or terminated effective the date of last payment.

(2) When a payee receives an erroneous award of educational assistance as the result of providing false information or withholding information necessary to determine eligibility to the award, the effective date of the reduction or discontinuance will be the effective date of the award, or the day before the act, whichever is later. The date of the reduction or discontinuance will not be before the last date on which the individual was entitled to payment of educational assistance.

(s) *Forfeiture for fraud.* If an eligible individual must forfeit his or her educational assistance due to fraud, the ending date of payment of educational assistance will be the later of—

(1) The effective date of the award; or
(2) The day before the date of the fraudulent act.

(t) *Forfeiture for treasonable acts or subversive activities.* If an eligible individual must forfeit his or her educational assistance due to treasonable acts or subversive activities, the ending date of payment of educational assistance will be the later of—

(1) The effective date of the award; or
(2) The day before the date the individual committed the treasonable act or subversive activities for which the individual was convicted.

(u) *Change in law or VA issue or interpretation.* If there is a change in the applicable law or VA issue, or in VA's application of the law or issue, VA will use the provisions of § 3.114(b) of this chapter to determine the ending date of the eligible individual's educational assistance.

(v) *Reduction following the loss of increase ("kicker") for Selected Reserve service.* If an eligible individual is entitled to an increase ("kicker") in the monthly rate of educational assistance due to service in the Selected Reserve and loses that entitlement, the effective date for the reduction in the monthly

rate payable is the date that the Secretary of the military department concerned determines that the eligible individual is no longer eligible to the increase ("kicker").

(w) *Receipt of educational assistance allowance under another educational assistance program.* An individual in receipt of educational assistance under chapter 33 who is also eligible for educational assistance under 10 U.S.C. chapter 106a, 1606, or 1607; 10 U.S.C. 510; 38 U.S.C. chapter 30, 31, 32, or 35; or the Hostage Relief Act of 1980 may choose to receive educational assistance under another program.

(1) VA will terminate educational assistance under 38 U.S.C. chapter 33 effective the first day of the enrollment period during which the individual requested to receive educational assistance under 10 U.S.C. chapter 106a, 1606, or 1607; 10 U.S.C. 510; 38 U.S.C. chapter 30, 32, or 35; or the Hostage Relief Act of 1980.

(2) For individuals in receipt of benefits under this chapter during a term, quarter, or semester who are requesting to receive benefits under 38 U.S.C. chapter 31, VA will terminate educational assistance under this chapter effective the first day of the subsequent enrollment period.

(3) An eligible individual may only request a change in receipt of benefits from 38 U.S.C. chapter 33 to 38 U.S.C. chapter 31 once per term, quarter, or semester.

(x) *Independent study course loses accreditation.* If the eligible individual is enrolled in a course offered in whole or in part by independent study, and the course loses its accreditation (or the institution of higher learning offering the course loses its accreditation), the date of reduction or discontinuance will be the end of the course or period of enrollment, as certified by the educational institution in which the withdrawal of accreditation occurred.

(y) *Dependent exhausts transferred entitlement.* The ending date of an award of educational assistance to a dependent who exhausts the entitlement transferred to him or her is the date he or she exhausts the entitlement.

(z) *Transferor revokes transfer of entitlement.* If the transferor revokes a transfer of unused entitlement, the date of discontinuance for the dependent's entitlement is the effective date of the revocation of transfer as determined under § 21.9571.

(aa) *Transferor fails to complete additional active duty service requirement.* VA will discontinue each award of educational assistance given to

a dependent, effective the first date of each such award when—

(1) The transferor fails to complete the additional active duty service requirement that afforded him or her the opportunity to transfer entitlement of educational assistance; and

(2) The military department discharges the transferor for a reason other than one of the reasons stated in § 21.9571(l).

(bb) *Fugitive felons.* VA will not award educational assistance to an otherwise eligible Veteran or dependent of an otherwise eligible Veteran for any period during which the Veteran is a fugitive felon. The date of discontinuance of an award of educational assistance to a Veteran who is a fugitive felon or dependent of a Veteran who is a fugitive felon is the date of the warrant establishing that the individual is a fugitive felon or the date otherwise shown by evidence to be the date the individual became a fugitive felon.

(cc) *Other reasons for discontinuance.* If an eligible individual's educational assistance must be discontinued for any reason other than those stated in paragraphs (a) through (bb) of this section, VA will determine the ending date of educational assistance based on the facts found.

(dd) *Authority.* (1) Paragraph (a) of this section issued under the authority of 38 U.S.C. 3034(a), 3323(a), 3680(d), 3680(e);

(2) Paragraph (b) of this section issued under the authority of 38 U.S.C. 3034(a), 3323(a), 3680(a)(1);

(3) Paragraph (c) of this section issued under the authority of 38 U.S.C. 3323, 3680(a);

(4) Paragraphs (d) and (e) of this section issued under the authority of 38 U.S.C. 3034(a), 3323(a), 3680(a);

(5) Paragraph (f) of this section issued under the authority of 38 U.S.C. 3034(a), 3323(a), 3680;

(6) Paragraph (g) of this section issued under the authority of 38 U.S.C. 3034(a), 3323(a), 3690;

(7) Paragraph (h) of this section issued under the authority of 38 U.S.C. 3034(a), 3323(a), 3672(a), 3690;

(8) Paragraph (i) of this section issued under the authority of 38 U.S.C. 3034(a), 3323(a), 3671(b), 3672(b)(1), 3690;

(9) Paragraph (j) of this section issued under the authority of 38 U.S.C. 3034(a), 3323(a), 3474;

(10) Paragraph (k) of this section issued under the authority of 38 U.S.C. 3034(a), 3323(a), 3690;

(11) Paragraph (l) of this section issued under the authority of 38 U.S.C. 3034(a), 3323(a), 3683;

(12) Paragraph (m) of this section issued under the authority of 38 U.S.C. 3034(a), 3323(a), 3482(g);

(13) Paragraph (n) of this section issued under the authority of 38 U.S.C. 3313(j);

(14) Paragraph (o) of this section issued under the authority of 38 U.S.C. 3031(f), 3312, 3321;

(15) Paragraph (p) of this section issued under the authority of 38 U.S.C. 3321;

(16) Paragraph (q) of this section issued under the authority of 38 U.S.C. 3034(a), 3323(a), 3680;

(17) Paragraph (r) of this section issued under the authority of 38 U.S.C. 3323(c), 5112(b), 5113;

(18) Paragraph (s) of this section issued under the authority of 38 U.S.C. 3323(c), 5112, 6103;

(19) Paragraph (t) of this section issued under the authority of 38 U.S.C. 3323(c), 6104, 6105;

(20) Paragraph (u) of this section issued under the authority of 38 U.S.C. 3323(c), 5112, 5113;

(21) Paragraph (v) of this section issued under the authority of 10 U.S.C. 16131; 38 U.S.C. 3316(a);

(22) Paragraph (w) of this section issued under the authority of 38 U.S.C. 3322(a);

(23) Paragraph (x) of this section issued under the authority of 38 U.S.C. 3034(a), 3323(a), 3676, 3680A(a);

(24) Paragraphs (y) through (aa) of this section issued under the authority of 38 U.S.C. 3319;

(25) Paragraph (bb) of this section issued under the authority of 38 U.S.C. 3323(c), 5313B; and

(26) Paragraph (cc) of this section issued under the authority of 38 U.S.C. 3323(c), 5112(a), 5113.

(The Office of Management and Budget has approved the information collection provision in § 21.9636, paragraph (w) under control number 2900–0154.)

■ 42. Amend § 21.9640 by:

■ a. Revising the section heading and introductory text;

■ b. Revising paragraph (a) and removing the parenthetical authority citation at the end of the paragraph;

■ c. Revising paragraph (d) and removing the parenthetical authority citation at the end of the paragraph.

■ d. Removing the parenthetical citation at the end of paragraph (e); and

■ e. Adding paragraph (f).

The revision and addition read as follows:

§ 21.9640 Rates of payment of educational assistance—for provisions effective before August 1, 2011.

For training that occurs before August 1, 2011, unless otherwise noted, VA will determine the amount of educational assistance payable under 38 U.S.C. chapter 33 as provided in this section.

(a) *Percentage of maximum amounts payable.* (1) Except as provided in paragraphs (a)(2) and (d) of this section, VA will apply the applicable percentage of the maximum amounts payable under this section for pursuit of an approved program of education, in accordance with table 1 to paragraph (a).

TABLE 1 TO PARAGRAPH (a)

Aggregate length of creditable active duty service after 09/10/01	Number of days	Percentage of maximum amounts payable
At least 36 months ¹	If aggregate service (<i>including</i> entry training) is 1095 days or more days.	100
At least 30 continuous days		100
(Must be discharged due to service-connected disability)		
At least 30 months, but less than 36 months ¹	If aggregate service (<i>including</i> entry training) is from 910 to 1094 days.	90
At least 24 months, but less than 30 months ^{1 3}	If aggregate service (<i>including</i> entry training) is from 730 to 909 days.	³ 80
At least 18 months, but less than 24 months ^{2 3}	If aggregate service (<i>excluding</i> entry training) is from 545 to 729 days.	³ 70
At least 12 months, but less than 18 months ²	If aggregate service (<i>excluding</i> entry training) is from 365 to 544 days.	60
At least 6 months, but less than 12 months ²	If aggregate service (<i>excluding</i> entry training) is from 180 to 364 days.	50
At least 90 days, but less than 6 months ²	If aggregate service (<i>excluding</i> entry training) is from 90 to 179 days.	40

¹ Includes entry level and skill training.

² Excludes entry level and skill training.

³ The 70/80% rule: If the aggregate service including training is at least 24 months but less than 30 months (730–909 days) BUT the aggregate service excluding training is at least 18 but less than 24 months (545 to 729 days), the individual will be deemed eligible at the 70% benefit level. This limitation is explicitly mandated by 38 U.S.C. 3311(e).

(2) *Amounts payable for individuals eligible for the Marine Gunnery Sergeant John David Fry Scholarship.* VA will apply 100 percent of the maximum amounts payable for pursuit of an approved program of education by an individual who is eligible for educational assistance under § 21.9520(d).

* * * * *

(d) *Amounts payable for individuals on active duty—(1) Amounts payable for programs of education beginning on or*

after August 1, 2009, and on or before March 4, 2011. Individuals on active duty who are pursuing a program of education during a quarter, semester, or term that starts during the period beginning August 1, 2009, and ending March 4, 2011, may receive a lump sum amount for established charges paid directly to the institution of higher learning for the entire term, quarter, or semester, as applicable. The amount payable will be the lowest of—

(i) The established charges that similarly circumstanced nonveterans enrolled in the individual's program of education would be required to pay;

(ii) That portion of the established charges not covered by military tuition assistance under 10 U.S.C. 2007(a) or (b) for which the individual has stated to VA that he or she wishes to receive payment;

(iii) The lesser amount of paragraph (d)(i) or (ii) of this section, divided by the number of days in the individual's

quarter, semester, or term, as applicable, to determine the individual's daily rate which will then be multiplied by the individual's remaining months and days of entitlement to educational assistance in accordance with §§ 21.4020 and 21.9635(o);

(2) *Amounts payable for a program of education, on more than half-time basis, leading to a degree and beginning after March 4, 2011, but before August 1, 2011.* (i) VA may, on behalf of an individual on active duty who is pursuing a program of education leading to a degree on more than half-time basis at a public IHL, issue a lump sum payment for the term, quarter, or semester directly to the IHL equal to the applicable percentage (as listed in paragraph (a) of this section) of the net cost for in-State tuition and fees.

(ii) VA may, on behalf of an individual on active duty who is pursuing a program of education leading to a degree on more than half-time basis at a non-public or foreign IHL, issue a lump sum payment for the term,

quarter, or semester directly to the IHL equal to the lesser of the applicable percentage (as listed in paragraph (a) of this section) of the net cost for tuition and fees assessed by the institution or—

(A) For the academic year beginning August 1, 2011, \$17,500; or

(B) For the academic year beginning on any subsequent August 1, the amount for the previous academic year, as increased under 38 U.S.C. 3015(h).

(3) *Amounts payable for a program of education, on a half-time basis or less, leading to a degree and beginning after March 4, 2011, but before August 1, 2011.* Amounts payable for the individual will be calculated in accordance with paragraph (d)(1) of this section.

(4) *Amounts payable for a program of education not leading to a degree and beginning after March 4, 2011, but before August 1, 2011.* Amounts payable for the individual will be calculated in accordance with paragraph (d)(1) of this section.

(f) *Authority.* (1) Paragraph (a)(1) of this section issued under the authority of 38 U.S.C. 3311, 3313;

(2) Paragraph (d)(2) of this section issued under the authority of 38 U.S.C. 501(a), 3313(e); and

(3) Paragraph (e) of this section issued under the authority of 38 U.S.C. 3313, 3323(c).

■ 43. Add § 21.9641 to read as follows:

§ 21.9641 Rates of payment of educational assistance—for provisions effective after July 31, 2011.

For training that begins after July 31, 2011, unless otherwise noted, VA will determine the amount of educational assistance payable under 38 U.S.C. chapter 33 as provided in this section.

(a) *Percentage of maximum amounts payable.* (1) Except as provided in paragraph (a)(2) of this section, VA will apply the applicable percentage of the maximum amounts payable under this section for pursuit of an approved program of education, in accordance with table 1 to paragraph (a).

TABLE 1 TO PARAGRAPH (A)

Aggregate length of creditable active duty service after 09/10/01	Number of days	Percentage of maximum amounts payable
At least 36 months ¹	If aggregate service (including entry training) is 1095 days or more days.	100
At least 30 continuous days		100
(Must be discharged due to service-connected disability)		
At least 30 months, but less than 36 months ¹	If aggregate service (including entry training) is from 910 to 1094 days.	90
At least 24 months, but less than 30 months ^{1 3}	If aggregate service (including entry training) is from 730 to 909 days.	³ 80
At least 18 months, but less than 24 months ^{2 3}	If aggregate service (excluding entry training) is from 545 to 729 days.	³ 70
At least 12 months, but less than 18 months ²	If aggregate service (excluding entry training) is from 365 to 544 days.	60
At least 6 months, but less than 12 months ²	If aggregate service (excluding entry training) is from 180 to 364 days.	50
At least 90 days, but less than 6 months ²	If aggregate service (excluding entry training) is from 90 to 179 days.	40

¹ Includes entry level and skill training.

² Excludes entry level and skill training.

³ The 70/80% rule: If the aggregate service including training is at least 24 months but less than 30 months (730–909 days) BUT the aggregate service excluding training is at least 18 but less than 24 months (545 to 729 days), the individual will be deemed eligible at the 70% benefit level. This limitation is explicitly mandated by 38 U.S.C. 3311(e).

(2) *Amounts payable for individuals eligible for the Marine Gunnery Sergeant John David Fry Scholarship.* VA will apply 100 percent of the maximum amounts payable for pursuit of an approved program of education by an individual who is eligible for educational assistance under § 21.9520(d).

(b) *Tuition and fees payable.* (1) *Program of education leading to a degree at public IHLs.* After July 31, 2011, VA may, on behalf of an

individual, who may be either on active duty or not on active duty and pursuing a program of education leading to a degree at a public IHL, issue a lump sum payment for the term, quarter, or semester directly to the IHL equal to the applicable percentage (as listed in paragraph (a) of this section) of the net cost for in-State tuition and fees.

(2) *Program of education leading to a degree at non-public IHLs or foreign IHLs.* (i) After July 31, 2011, VA may, on behalf of an individual, who may be

either on active duty or not on active duty and pursuing a program of education leading to a degree at a non-public or foreign IHL, issue a lump sum payment for the term, quarter, or semester directly to the IHL equal to the applicable percentage (as listed in paragraph (a) of this section) of the lesser of—

(A) The actual net cost for tuition and fees assessed by the institution; or

(B) For the academic year beginning August 1, 2011, \$17,500; or

(C) For the academic year beginning on any subsequent August 1, the amount for the previous academic year, as increased under 38 U.S.C. 3015(h).

(3) *Program of education in pursuit of a certificate or other non-college degree at institutions other than IHLs.* On or after October 1, 2011, VA may, on behalf of an individual pursuing a program of education in pursuit of a certificate or other non-college degree at an institution other than an IHL, issue a lump sum payment for the term, quarter, or semester, directly to the educational institution equal to the applicable percentage (as listed in paragraph (a) of this section) of the lesser of—

(i) The actual net cost for in-State tuition and fees assessed by the institution; or

(ii) For the academic year beginning August 1, 2011, \$17,500; or

(iii) For the academic year beginning on any subsequent August 1, the amount for the previous academic year, as increased under 38 U.S.C. 3015(h).

(4) *Full-time program of apprenticeship or other on-the-job training at institutions other than IHLs.* No tuition and fee amount is payable for this type of training.

(5) *Program of education for flight training (regardless of the institution providing such program of education).* After September 30, 2011, upon receipt of certification for training completed by the individual and serviced by the educational institution, on behalf of an individual pursuing a program of education consisting of flight training, VA may issue a lump sum payment directly to the educational institution equal to the applicable percentage (as listed in paragraph (a) of this section) of the lesser of—

(i) The actual net cost for in-State tuition and fees; or

(ii) For the academic year beginning August 1, 2011, \$10,000; or

(iii) For the academic year beginning on any subsequent August 1, the amount for the previous academic year, as increased under 38 U.S.C. 3015(h).

(6) *Program of education pursued exclusively by correspondence at an IHL or institution other than an IHL.* After September 30, 2011, on behalf of an individual pursuing program of education by correspondence at an IHL or institution other than an IHL, VA may issue a quarterly payment on a pro rata basis for the lessons completed by the individual and serviced by the educational institution during such quarter, directly to the educational institution equal to the applicable percentage (as listed in paragraph (a) of this section) of the lesser of—

(i) The net cost for tuition and fees; or
(ii) For the academic year beginning August 1, 2011, \$8,500; or

(iii) For the academic year beginning on any subsequent August 1, the amount for the previous academic year, as increased under 38 U.S.C. 3015(h).

(7) *No reduction in tuition and fee annual cap.* VA will not make a reduction in the tuition and fee maximum amount payable during the academic year equal to the amount of tuition and fees charged for a course or courses from which the individual withdrew when the individual—

(i) Had to discontinue the course or courses as a result of being ordered to—

(A) Active duty service under 10 U.S.C. 688, 12301(a), 12301(d), 12301(g), 12302, or 12304; or

(B) A new duty location or assignment or to perform an increased amount of work; and

(ii) Did not receive credit or lost training time for any portion of the period of enrollment in the course or courses for which the eligible individual was pursuing to complete his or her approved educational, professional, or vocational objective as a result of having to discontinue pursuit.

(c) *Monthly housing allowance payable.* An individual who is pursuing a program of education leading to a degree at a domestic or foreign IHL, a program of education at a non-college degree institution, or an on-the-job or apprenticeship training can receive a monthly stipend (referred to as the “monthly housing allowance”), subject to the applicable percentage (as listed in paragraph (a) of this section), as follows—

(1) *Residence training at domestic IHLs on more than half-time basis.* An individual, other than one on active duty, who is pursuing a program of education with at least one in-residence course and who has a rate of pursuit of greater than 50 percent at an IHL located in a State, may receive a monthly housing allowance for each month (or prorated amount for a partial month) of training during each term, quarter, or semester, equal to—

(i) During the period beginning August 1, 2011, and ending July 31, 2012, the monthly amount of the basic allowance for housing payable under 37 U.S.C. 403 for a member with dependents in pay grade E-5 using the ZIP code area in which all, or a majority, of the IHL in which the individual is enrolled is located multiplied by the lesser of—

(A) 1.0; or

(B) The individual's rate of pursuit, rounded to the nearest tenth.

(ii) On or after August 1, 2012, the monthly amount of the basic allowance for housing payable under 37 U.S.C. 403 for a member with dependents in pay grade E-5 using the ZIP code or location code, whichever is applicable, in which all, or a majority, of the institution in which the individual is enrolled is located multiplied by the lesser of—

(A) 1.0; or

(B) The individual's rate of pursuit, rounded to the nearest tenth.

(2) *Residence training at foreign IHLs on more than half-time basis.* On or after August 1, 2011, an individual, other than one on active duty, who is pursuing a program of education leading to a degree at a foreign IHL with at least one in-residence course and who has a rate of pursuit of greater than 50 percent, may receive a monthly housing allowance for each month (or prorated amount for a partial month) of training during each term, quarter, or semester, equal to the national average of the monthly amount of the basic allowance for housing payable under 37 U.S.C. 403 for a member with dependents in pay grade E-5, multiplied by the lesser of—

(i) 1.0; or

(ii) The individual's rate of pursuit, rounded to the nearest tenth.

(3) *Residence training at non-college degree institutions on more than half-time basis.* After October 1, 2011, an individual, other than one on active duty, who is pursuing a program of education at a non-college degree institution (other than those listed in paragraph (c)(6) of this section) with at least one in-residence course and who has a rate of pursuit of greater than 50 percent, can receive a monthly housing allowance for each month (or a prorated amount for a partial month) of training pursued. The amount will be calculated in accordance with paragraph (c)(1) of this section.

(4) *Training pursued solely via distance learning on more than half-time basis.* After September 30, 2011, an individual, other than one on active duty, who is pursuing a program of education solely via distance learning at a rate of pursuit of greater than 50 percent, can receive a monthly housing allowance for each month (or prorated amount for a partial month) of training during each term, quarter, or semester, equal to 50 percent of the amount payable under paragraph (c)(2) of this section.

(5) *On-the-job and apprenticeship training on full-time basis.* After September 30, 2011, an individual, other than one on active duty, pursuing a full-time program of apprenticeship or other on-the-job training may receive a monthly housing allowance—

(i) During the first 6-month period of the program, the monthly amount of the basic allowance for housing payable under 37 U.S.C. 403 for a member with dependents in pay grade E-5 residing in the military housing area that encompasses all or a majority portion of the ZIP code area in which the employer is located.

(ii) During the second 6-month period of the program, 80 percent of the amount payable in paragraph (c)(5)(i) of this section.

(iii) During the third 6-month period of the program, 60 percent of the amount payable in paragraph (c)(5)(i) of this section.

(iv) During the fourth 6-month period of the program, 40 percent of the amount payable in paragraph (c)(5)(i) of this section.

(v) During any month after the first 24 months of training, 20 percent of the amount payable in paragraph (c)(5)(i) of this section.

(vi) In any month in which an individual pursuing training fails to complete 120 hours of training, the amount of the monthly housing stipend payable will be the amount determined by multiplying the applicable amount as determined by paragraphs (c)(5)(i) through (v) of this section by the figure determined as follows—

(A) The number of hours worked during the month, rounded to the nearest 8 hours; then

(B) Dividing the result by 120.

(C) Rounding the quotient to the nearest hundred.

(6) *Program of education for vocational flight training at institutions other than IHLs; Program of education pursued exclusively by correspondence; Program of education pursued on a half-time basis or less; Program of education pursued while on active duty.* No monthly housing allowance is payable for these types of training.

(7) *Rate payable during the academic year.* The monthly housing allowance payable during each academic year beginning on August 1 of a calendar year under paragraphs (c)(1) through (5) of this section will be determined using the basic allowance for housing rates payable under 37 U.S.C. 403 in effect as of January 1 of each such calendar year.

(8) *Rate protection.* The monthly housing allowance payable under paragraphs (c)(1) through (5) of this section will not decrease as long as the individual—

(i) Has not had a break in training that exceeds 6 months. An individual called to active duty (during an enrollment period or 6-month grace period) will not see a decrease as long as the individual resumes training at the educational

institution within 6 months from the release from active duty; and

(ii) Previously received the monthly housing allowance based on the same type of training (residence, distance, foreign) at the same educational institution. A change in facility (transferring to a different school or a different branch of the same school) constitutes a change in educational institution.

(9) *Concurrent eligibility for more than one monthly housing stipend rate.* In the event that an individual is concurrently eligible for more than one monthly housing stipend rate, the housing stipend will be paid at the highest rate for which the individual qualifies.

(d) *Books, supplies, and equipment stipend payable.* An individual who is pursuing a program of education at an IHL, non-college degree institution, or an individual pursuing on-the-job or apprenticeship training can receive an amount for books, supplies, equipment, and other educational costs (referred to as the “book stipend”), subject to the applicable percentage (as listed in paragraph (a) of this section), as follows—

(1) *Book stipend for training pursued at an IHL.* (i) The maximum amount payable to an individual pursuing training at an IHL is based on pursuit of twenty-four credit hours (the minimum number of credit hours generally considered to be full-time training at the undergraduate level for an academic year). The lump sum payment for each term, quarter, or semester is equal to \$41.67 (\$1,000 divided by 24 credit hours) multiplied by the number of credit hours (or the equivalent number of credit hours if enrollment is reported in clock hours) taken by the individual in the quarter, semester, or term, up to a cumulative total of twenty-four credit hours for the academic year.

(A) Before October 1, 2011, an eligible individual, other than one on active duty, may receive an amount for each credit hour pursued up to twenty-four credit hours (or the equivalent credit hours if enrollment is reported in clock hours) in a single academic year.

(B) On or after October 1, 2011, an eligible individual, including an individual on active duty, may receive an amount for each credit hour pursued up to twenty-four credit hours (or the equivalent credit hours if enrollment is reported in clock hours) in a single academic year.

(ii) In no event may the amount paid during an academic year exceed \$1,000.

(2) *Book stipend for training pursued at a non-college-degree institution and on-the-job or apprenticeship training.*

After September 30, 2011, an individual pursuing a program of education at a non-college degree institution (other than those listed in paragraph (d)(3) of this section) or full-time on-the-job or apprenticeship training can receive a lump sum payment equal to \$83 for each month (or a prorated amount for a partial month) of training pursued.

(3) *Program of education for vocational flight training at institutions other than IHLs and program of education pursued exclusively by correspondence.* No book stipend is payable for these types of training.

(e) *Publication of educational assistance rates.* VA will publish the maximum amount of tuition and fees payable each academic year in the “Notices” section of the **Federal Register** and on the GI Bill website at <https://www.GIBill.va.gov>.

(7) Paragraph (b)(6) of this section issued under the authority of 38 U.S.C. 3313(g)(3)(D);

(8) Paragraph (b)(7) of this section issued under the authority of 38 U.S.C. 501(a), 3323(c);

(9) Paragraph (c)(1) of this section issued under the authority of 38 U.S.C. 3313(c)(1)(B)(i);

(10) Paragraph (c)(2) of this section issued under the authority of 38 U.S.C. 3313(c)(1)(B)(ii);

(11) Paragraph (c)(3) of this section issued under the authority of 38 U.S.C. 3313(g)(3)(A)(ii);

(12) Paragraph (c)(4) of this section issued under the authority of 38 U.S.C. 3313(c)(1)(B)(iii);

(13) Paragraph (c)(5) of this section issued under the authority of 38 U.S.C. 3313(g)(3)(B)(i);

(14) Paragraph (c)(6) of this section issued under the authority of 38 U.S.C. 3313(e), (f), (g)(3)(C), (g)(3)(D);

(15) Paragraph (c)(7) of this section issued under the authority of 38 U.S.C. 3313(i);

(16) Paragraphs (c)(8) and (c)(9) of this section issued under the authority of 38 U.S.C. 501(a), 3323(c);

(17) Paragraphs (d)(1) and (d)(2) of this section issued under the authority of 38 U.S.C. 3313(g)(3)(A), (B);

(18) Paragraph (d)(3) of this section issued under the authority of 38 U.S.C. 3313(c),(e),(f),(g)); and

(19) Paragraph (e) of this section issued under the authority of 38 U.S.C. 3313, 3323(c).

(The Office of Management and Budget has approved the information collection provisions in paragraphs (a) through (b)(7) of this section under control numbers 2900–0154, 2900–0178, 2900–0162, 2900–0353, and 2900–0576.)

■ 44. Amend § 21.9645 by revising paragraphs (a)(1)(iii), (b)(1)(ii), and (c) to read as follows:

§ 21.9645 Refund of basic contribution to chapter 30.

(a)(1) * * *

(iii) He or she is a member of the Armed Forces who is making contributions as provided in § 21.7042(g) towards educational assistance under 38 U.S.C. chapter 30.

* * * * *

(b) * * *

(1) * * *

(ii) 36 for individuals making contributions towards educational assistance under 38 U.S.C. chapter 30 in accordance with § 21.7042(g).

* * * * *

(c) *Timing of payment.* The amount payable under this section will only be issued to the individual who made the contribution when the individual is in receipt of the monthly housing allowance payable under § 21.9640(b) or § 21.9641(c) at the time his or her entitlement exhausts. No payment will be made if the individual who made the contributions is not in receipt of a monthly housing allowance when entitlement exhausts.

* * * * *

■ 45. Amend § 21.9650 by:

■ a. Revising paragraph (a)(2) and removing the parenthetical authority citation at the end of the paragraph;

■ b. Revising paragraph (b)(2)(ii);

■ c. Revising paragraph (b)(3) and removing the parenthetical authority citation at the end of the paragraph;

■ d. Revising paragraph (c)(2)(ii);

■ e. Revision paragraph (c)(3) and removing the parenthetical authority citation at the end of the paragraph; and

■ f. Adding paragraph (d).

The revisions read as follows:

§ 21.9650 Increase in educational assistance.

* * * * *

(a) * * *

(2) The increase (“kicker”) amount payable under paragraph (a)(1) of this

section will only be paid to the individual as part of the monthly housing allowance if the individual is entitled to receive a monthly housing allowance during the term, quarter, or semester—

(i) For the period beginning August 1, 2009, and ending July 31, 2011, under § 21.9640(b)(1)(ii) or (b)(2)(ii); or

(ii) For the period after July 31, 2011, under § 21.9641(c).

(b) * * *

(2) * * *

(ii)(A) For training pursued during the period beginning August 1, 2009, and ending July 31, 2011, the full-time training amount under paragraph (b)(2)(i) of this section multiplied by the individual’s rate of pursuit.

(B) For training pursued after July 31, 2011, the full-time training amount under paragraph (b)(2)(i) of this section multiplied by the lesser of—

(1) 1.0; or

(2) The individual’s rate of pursuit, rounded to the nearest multiple of 10.

(3) The increase (“kicker”) amount payable under paragraph (b) of this section will be paid to the individual—

(i) As a lump sum for the entire quarter, semester, or term, as applicable, based on the monthly amount to which the individual was entitled at the time of the election of chapter 33, if training is pursued during the period beginning August 1, 2009, and ending July 31, 2011; or

(ii) On a monthly basis, for training pursued after July 31, 2011.

(c) * * *

(2) * * *

(ii)(A) For training pursued during the period beginning August 1, 2009, and ending July 31, 2011, the full-time training amount under paragraph (c)(2)(i) of this section multiplied by the individual’s rate of pursuit.

(B) For training pursued after July 31, 2011, the full-time training amount under paragraph (c)(2)(i) multiplied by the lesser of—

(1) 1.0; or

(2) The individual’s rate of pursuit, rounded to the nearest multiple of 10.

(3) The increase (“kicker”) amount payable under paragraph (c) of this section will be paid to the individual—

(i) As a lump sum for the entire quarter, semester, or term, as applicable, based on the monthly amount to which the individual was entitled at the time of the election of chapter 33, if training is pursued during the period beginning August 1, 2009, and ending July 31, 2011; or

(ii) On a monthly basis, for training pursued after July 31, 2011.

(d) *Authority.* (1) Paragraph (a) of this section issued under the authority of 38 U.S.C. 3015(d)(1), 3313(c), 3316(a);

(2) Paragraph (b) of this section issued under the authority of 38 U.S.C.

3015(d), 3316; Public Law 110–252, 122 Stat. 2378, Public Law 111–377, 124 Stat. 4119; and

(3) Paragraph (c) of this section issued under the authority of 10 U.S.C. 16131(i); Public Law 110–252, Stat. 2378).

§ 21.9655 [Amended]

■ 46. Amend § 21.9655, in paragraph (a)(2), by removing “or (b)(2)(ii)” and adding in its place “, (b)(2)(ii), or § 21.9641(c)”.

■ 47. Amend § 21.9665 by revising the section heading and introductory text to read as follows:

§ 21.9665 Reimbursement for licensing or certification tests—for provisions effective before August 1, 2011.

An eligible individual is entitled to receive reimbursement for taking one approved licensing or certification test during the period beginning August 1, 2009, and ending July 31, 2011. The amount of educational assistance VA will pay as reimbursement for an approved licensing or certification test is the lesser of the following:

* * * * *

■ 48. Add § 21.9667 to read as follows:

§ 21.9667 Reimbursement for licensing or certification tests—for provisions effective after July 31, 2011.

An individual eligible for benefits under the Post-9/11 GI Bill is entitled to receive reimbursement for taking any number of approved licensing or certification tests after July 31, 2011. The amount of reimbursement VA will pay for an approved licensing or certification test taken after July 31, 2011, is the least of the following:

(a) The fee that the licensing or certification organization offering the test charges for taking the test;

(b) \$2,000; or

(c) The amount equal to the number of whole months of remaining entitlement available to the individual at the time of payment for the test multiplied by the rate for one month of payment for licensing and tests, as specified in § 21.9561(f)(1)(ii).

(Authority: 38 U.S.C. 3315)

(The Office of Management and Budget has approved the information collection provision in this section under control number 2900–0695.)

■ 49. Add § 21.9668 to read as follows:

§ 21.9668 Reimbursement for national tests.

An eligible individual is entitled to receive reimbursement for taking a national test for admission or a national

test for credit after July 31, 2011. The amount of reimbursement VA will pay for an approved national test for admission or a national test for credit taken after July 31, 2011, is the lesser of the following:

(a) The fee charged for the test, not including any optional costs not required for the testing process; or

(b) The amount equal to the number of whole months of remaining entitlement available to the individual at the time of payment for the test multiplied by the rate for one month of payment for national tests, as specified in § 21.9561(f)(1)(ii).

(Authority: 38 U.S.C. 3315A)

■ 50. Amend § 21.9675 by:

■ a. Revising the section heading and introductory text;

■ b. Removing the parenthetical authority citation at the end of paragraph (a);

■ c. Revising paragraph (c)(2) and removing the parenthetical citation at the end of the paragraph;

■ d. Removing the parenthetical citation at the end of paragraph (d);

■ e. In paragraph (d)(5), removing “veteran-nonveteran” and adding in its place “supported students versus nonsupported students”; and

■ f. Adding paragraph (e).
The revisions and addition read as follows:

§ 21.9675 Conditions that result in reduced rates or no payment—for provisions effective before August 1, 2011.

During the period beginning August 1, 2009, and ending July 31, 2011, the payment rates as established in §§ 21.9640 and 21.9655 will be reduced in accordance with this section whenever the circumstances described in this section arise.

* * * * *

(c) * * *

(2) The amount of educational assistance payable for pursuit of an approved program of education by an eligible individual, as described in this paragraph (c), will be—

(i)(A) The amount equal to any portion of tuition and fees charged for the course that are not paid by a Federal (other than one administered by VA), State, or local program; plus

(B) The amount equal to any charges to the eligible individual for the cost of necessary books, supplies, and equipment not to exceed \$1,000 each academic year.

(ii) The amounts payable under paragraph (c)(2)(i) of this section will be prorated based on the individual's eligibility percentage as determined in § 21.9640(a).

* * * * *

(e) *Authority.* (1) Paragraph (a) of this section issued under the authority of (a) 38 U.S.C. 3034(a), 3323(a), 3680(a);

(2) Paragraph (c) of this section issued under the authority of 38 U.S.C. 3034(a), 3323(a), 3482(g); and

(3) Paragraph (d) of this section issued under the authority of 38 U.S.C. 501(a), 3034(a), 3323(a).

■ 51. Add § 21.9676 to read as follows:

§ 21.9676 Conditions that result in reduced rates or no payment—for provisions effective after July 31, 2011.

After July 31, 2011, the payment rates as established in §§ 21.9641 and 21.9655 will be reduced in accordance with this section whenever the circumstances described in this section arise.

(a) *Withdrawals and nonpunitive grades.* Except as provided in this paragraph (a), VA will not pay educational assistance for an eligible individual's pursuit of a course from which the eligible individual withdraws or receives a nonpunitive grade that is not used in computing the requirements for graduation. VA may pay educational assistance for a course from which the eligible individual withdraws or receives a nonpunitive grade if—

(1) The individual withdraws because he or she is ordered to active-duty service or, in the case of an individual serving on active duty, he or she is ordered to a new duty location or assignment, or ordered to perform an increased amount of work; or

(2) There are mitigating circumstances; and

(i) The eligible individual submits a description of the mitigating circumstances in writing to VA within one year from the date VA notifies the eligible individual that a description is needed, or at a later date if the eligible individual is able to show good cause why the one-year time limit should be extended to the date on which he or she submitted the description of the mitigating circumstances; and

(ii) The eligible individual submits evidence supporting the existence of mitigating circumstances within one year of the date VA requested the evidence, or at a later date if the eligible individual is able to show good cause why the one-year time limit should be extended to the date on which he or she submitted the evidence supporting the existence of mitigating circumstances.

(b) *No monthly housing allowance for some incarcerated individuals.* An individual who is incarcerated in a Federal, State, local, or other penal institution or correctional facility due to a felony conviction will not receive a monthly housing allowance.

(c) *Reduced educational assistance for some incarcerated individuals.* (1) An individual who is incarcerated in a Federal, State, local, or other penal institution or correctional facility due to a felony conviction will receive—

(i) The net costs for tuition and fees not paid by any other form of financial assistance, not to exceed the amounts specified in § 21.9641(b); and

(ii) The amount of necessary books, supplies, and equipment not paid by any other form of financial assistance, not to exceed \$1,000 each academic year.

(2) The amounts payable under paragraph (c)(1) of this section will be prorated based on the individual's eligibility percentage as determined in § 21.9641(a).

(d) *No educational assistance for certain enrollments.* VA will not pay educational assistance for—

(1) An enrollment in an audited course (see § 21.4252(i));

(2) A new enrollment in a course during a period when the approval has been suspended by a State approving agency or VA;

(3) An enrollment in a course by a nonmatriculated student except as provided in § 21.4252(l);

(4) An enrollment in a course certified to VA by the individual taking the course;

(5) A new enrollment in a course which does not meet the supported students versus nonsupported students ratio requirement as computed under § 21.4201; and

(6) An enrollment in a course offered under contract for which VA approval is prohibited by § 21.4252(m).

(e) *Authority.* (1) Paragraph (a) of this section issued under the authority of 38 U.S.C. 3034(a), 3323(a), 3680(a);

(2) Paragraph (c) of this section issued under the authority of 38 U.S.C. 3034(a), 3323(a), 3482(g); and

(3) Paragraph (d) of this section issued under the authority of 38 U.S.C. 501(a), 3034(a), 3323(a).

■ 52. Amend § 21.9680 by revising the section heading and adding introductory text to read as follows:

§ 21.9680 Certifications and release of payments—for provisions effective before August 1, 2011.

For training pursued during the period beginning August 1, 2009, and ending July 31, 2011—

* * * * *

■ 53. Add § 21.9681 to read as follows:

§ 21.9681 Certifications and release of payments—for provisions effective after July 31, 2011.

For training pursued after July 31, 2011—

(a) *Payee.* (1) VA will make payment of the appropriate amount of tuition and fees, as determined under § 21.9641, directly to the educational institution as a lump sum payment for the entire quarter, semester, or term, as applicable.

(2) VA will make all other payments to the eligible individual or a duly appointed fiduciary. VA will make direct payment to the eligible individual even if he or she is a minor.

(3) The assignment of educational assistance is prohibited. In administering this provision, VA will apply the provisions of § 21.4146 to 38 U.S.C. chapter 33.

(b) *Payments.* (1) VA will pay educational assistance for an eligible individual's enrollment in an approved program (other than one seeking tuition assistance Top-Up; one seeking reimbursement for taking an approved licensing or certification test; one seeking reimbursement for a national test for admission or a national test for credit; or one who qualifies for an advance payment of the monthly housing allowance) only after the educational institution has certified the individual's enrollment as provided in § 21.9721 and provided its Taxpayer Identifying Number (TIN) and/or Automated Clearing House (ACH) information in accordance with 31 U.S.C 7701(c)(1).

(2) VA will apply the provisions of this section in making advance payments of the monthly housing allowance to eligible individuals.

(i) VA will make payments of the monthly housing allowance in advance when:

(A) The eligible individual has specifically requested such a payment;

(B) The individual is enrolled at a rate of pursuit greater than half-time;

(C) The educational institution at which the eligible individual is accepted or enrolled has agreed to and can satisfactorily carry out the provisions of 38 U.S.C. 3680(d)(4)(B), (d)(4)(C), and (d)(5) pertaining to receipt, delivery, and return of checks, and certifications of delivery and enrollment;

(D) The Director of the VA Regional Processing Office of jurisdiction has not acted under paragraph (b)(2)(iv) of this section to prevent advance payments being made to the eligible individual's educational institution;

(E) There is no evidence in the eligible individual's claim file showing that he or she is not eligible for an advance payment;

(F) The period for which the eligible individual has requested a payment is preceded by a period of nonpayment of 30 days or more.

(G) The educational institution or the eligible individual has submitted the certification required by § 21.9715.

(ii) The amount of the advance payment to an eligible individual is the amount payable for the monthly housing allowance for the month or fraction thereof in which the term or course will begin plus the amount of the monthly housing allowance for the following month.

(iii) VA will mail advance payments to the educational institution for delivery to the eligible individual. The educational institution will not deliver the advance payment check more than 30 days in advance of the first date of the enrollment period for which VA makes the advance payment.

(iv) The Director of the VA Regional Processing Office of jurisdiction may direct that advance payments not be made to individuals attending an educational institution if:

(A) The educational institution demonstrates an inability to comply with the requirements of paragraph (b)(2)(iii) of this section;

(B) The educational institution fails to provide adequately for the safekeeping of the advance payment checks before delivery to the eligible individual or return to VA; or

(C) The Director determines, based on compelling evidence, that the educational institution has demonstrated its inability to discharge its responsibilities under the advance payment program.

(3) VA will make a lump sum payment for the entire quarter, semester, or term:

(i) To the educational institution, on behalf of an eligible individual, for the appropriate amount of tuition and fees;

(ii) To an eligible individual for the appropriate amount for books, supplies, equipment, and other educational costs; and

(iii) To an eligible individual entitled to the \$500 rural relocation benefit.

(4) [Reserved]

(5) VA will pay educational assistance to an eligible individual as reimbursement for taking an approved licensing or certification test only after the eligible individual has submitted to VA a copy of his or her official test results and, if not included in the results, a copy of another official form (such as a receipt or registration form) that together must include:

(i) The name of the test;

(ii) The name and address of the organization or entity issuing the license or certificate;

(iii) The date the eligible individual took the test; and

(iv) The cost of the test.

(6) VA will pay educational assistance to an eligible individual as reimbursement for taking an approved national test for admission or a national test for credit only after the eligible individual has submitted a claim for the test to VA that includes the following information:

(i) The name of the test;

(ii) The name of the organization offering the test;

(iii) The date the eligible individual took the test;

(iv) The cost of the test; and

(v) Such other information as the Secretary may require.

(7) VA may authorize payment of the monthly housing allowance (as increased under §§ 21.9650(a) and 21.9655(a), if applicable) for a temporary school closing in accordance with the provisions of § 21.4138(g) of this chapter.

(c) *Rural relocation benefit.* VA will make the \$500 rural relocation benefit payment after—

(1) The educational institution has certified the individual's enrollment as provided in § 21.9721;

(2) The individual has provided—

(i) *Request for benefit.* An individual must submit a request for the rural relocation benefit in writing;

(ii) *Proof of residence.* (A) An individual must provide proof of his or her place of residence by submitting any of the following documents bearing his or her name and current address:

(1) DD Form 214, Certification of Release or Discharge from Active Duty; or

(2) The most recent Federal income tax return; or

(3) The most recent State income tax return; or

(4) Rental/lease agreement; or

(5) Mortgage document; or

(6) Current real property assessment; or

(7) Voter registration card.

(B) An individual using entitlement granted under § 21.9571 who, because he or she resides with the transferor or, in the case of a child, a parent, who cannot provide any of the documents in paragraph (c)(2)(ii) of this section, may submit as proof of residence any document in paragraphs (c)(2)(ii)(A)(2) through (7) of this section bearing the name and current address of the transferor or, in the case of a child, a parent; and

(C) VA must determine that the individual resided in a county (or similar entity utilized by the Bureau of the Census) with less than seven persons per square mile based on the most recent decennial census prior to relocation.

(iii) *Proof of relocation.* An individual must provide proof that he or she either: (A) physically relocated at least 500 miles, confirmed by means of a commonly available internet search engine for mapping upon entering the individual's resident address provided in paragraph (c)(2)(ii) of this section as the beginning point and the address of the educational institution as the ending point; or

(B) traveled by air to physically attend an institution of higher learning for pursuit of such a program of education because the individual could not travel to the educational institution by land due to the absence of road or other infrastructure. An individual must provide airline receipts for travel with a departure and destination airport within reasonable distance from the home of residence and the educational institution.

(d) *Apportionments prohibited.* VA will not apportion educational assistance.

(e) *Accrued benefits.* Educational assistance remaining due and unpaid on the date of the individual's death is payable under the provisions of § 3.1000 of this chapter.

(f) *Authority.* (1) Paragraph (a) of this section issued under the authority of 38 U.S.C. 3034(a), 3313(g), 3323(a), 3680, 5301;

(2) Paragraph (b)(1) of this section issued under the authority of 38 U.S.C. 3034(a), 3323(a), 3680(g), 3689; 31 U.S.C. 7701(c);

(3) Paragraph (b)(2) of this section issued under the authority of 38 U.S.C. 3034(a), 3323(a), 3689;

(4) Paragraphs (b)(3) through (b)(5) of this section issued under the authority of 38 U.S.C. 3034(a), 3323(a), 3689;

(5) Paragraph (b)(6) of this section issued under the authority of 38 U.S.C. 3315A;

(6) Paragraph (b)(7) of this section issued under the authority of 38 U.S.C. 3680(a);

(7) Paragraph (c) of this section issued under the authority of 38 U.S.C. 3318;

(8) Paragraph (d) of this section issued under the authority of 38 U.S.C. 3034(a), 3323(a), 3680; and

(9) Paragraph (e) of this section issued under the authority of 38 U.S.C. 5121.

(The Office of Management and Budget has approved the information collection provisions in paragraphs (a) through (b)(1) of this section under control number 2900–0073, the information collection provisions in paragraphs (b)(2) through (5) of this section under control numbers 2900–0695 and 2900–0706, and the information collection provisions in paragraph (b)(6) under control numbers 2900–0695, 2900–0698, and 2900–0706.)

■ 54. Amend § 21.9690 by revising the section heading and adding introductory text to read as follows:

§ 21.9690 Nonduplication of educational assistance—for provisions effective before August 1, 2011.

For training pursued during the period beginning August 1, 2009, and ending July 31, 2011—

* * * * *

■ 55. Add § 21.9691 to read as follows:

§ 21.9691 Nonduplication of educational assistance—for provisions effective after July 31, 2011.

For training pursued after July 31, 2011—

(a) *Nonduplication—Concurrent benefits.* Except for receipt of a Montgomery GI Bill-Active Duty kicker provided under 38 U.S.C. 3015(d) or a Montgomery GI Bill-Selected Reserve kicker provided under 10 U.S.C. 16131(i),

(1) An eligible individual is barred from receiving educational assistance under 38 U.S.C. chapter 33 concurrently with educational assistance provided under—

(i) 10 U.S.C. 510 (National Call to Service);

(ii) 10 U.S.C. chapter 1606 (Montgomery GI Bill—Selected Reserve);

(iii) 10 U.S.C. chapter 1607 (Reserve Educational Assistance Program);

(iv) 10 U.S.C. chapter 106a (Section 901, Educational Assistance Test Program);

(v) 38 U.S.C. chapter 30 (Montgomery GI Bill—Active Duty);

(vi) 38 U.S.C. chapter 31 (Veteran Readiness and Employment Program);

(vii) 38 U.S.C. chapter 32 (Post-Vietnam Era Veterans' Educational Assistance);

(viii) 38 U.S.C. chapter 35 (Survivors' and Dependents' Educational Assistance); or

(ix) Hostage Relief Act of 1980.

(2) An individual who is eligible for educational assistance under more than one program listed in paragraph (a)(1) of this section must specify in writing which benefit he or she wishes to receive. The eligible individual may choose to receive payment under another educational assistance program at any time, but may not change which benefit he or she will receive more than once during a term, quarter, or semester.

(b) *Nonduplication—Federal program.* Payment of educational assistance is prohibited to an otherwise eligible reservist—

(1) For a unit course or courses that are being paid for entirely or partly by the Armed Forces during any period in

which he or she is on active duty service; or

(2) For a unit course or courses that are being paid for entirely or partly by the United States under the Government Employees Training Act.

(c) *Nonduplication—Transferred benefits and Fry Scholarship.* An individual entitled to educational assistance under § 21.9520(d) and because of a transfer of entitlement under § 21.9571—

(1) May not receive educational assistance under both provisions concurrently.

(2) Must specify in writing the provision under which he or she wishes to receive benefits. The individual may request to receive benefits under either provision at any time, but may not change the provision under which he or she will receive benefits more than once during a term, quarter, or semester. Except in cases when an individual exhausts entitlement under a provision during a term, quarter, or semester, the request will be effective the beginning date of the enrollment period following the request.

(d) *Nonduplication—Transferred benefits.* An individual who is entitled to educational assistance based on a transfer of entitlement under § 21.9571 from more than one individual—

(i) May not receive assistance based on transfers from more than one individual concurrently.

(ii) Must specify in writing whose entitlement he or she wishes to use at any one time. The individual may request to use benefits transferred to him or her by any of the transferors at any time, but may not change whose entitlement he or she wishes to use from one individual to another more than once during a term, quarter, or semester. Except in cases when an individual exhausts his or her transferred entitlement during a term, quarter, or semester, the request will be effective the beginning date of the enrollment period following the request.

(e) *Nonduplication—Fry Scholarship and compensation and pension.* The commencement of a program of education based on eligibility for educational assistance under § 21.9520(d) by an eligible individual is a bar to—

(1) Subsequent payments of dependency and indemnity compensation or pension based on the death of a parent to the eligible individual when the eligible individual attains 18 years of age.

(2) Increased rates, or additional amounts, of compensation, dependency and indemnity compensation, or

pension paid on account of the eligible individual.

(f) *Nonduplication—Fry Scholarship.*

(1) An individual who is entitled to educational assistance based on the death of more than one parent under § 21.9520(d) may not receive assistance under § 21.9520(d) for the same enrollment period based on the deaths of both parents.

(2) The individual must specify in writing on which parent's death to base his or her entitlement. The individual may request to base entitlement on either parent's death at any time, but may not change on whose death he or she chooses to base entitlement more than once during a term, quarter, or semester. Except in cases where an individual exhausts entitlement that is based on one parent's death during a term, quarter, or semester, the request will be effective the beginning date of the enrollment period following the request.

(g) *Nonduplication—Entitlement based on individual's active duty service.* (1) An individual who is entitled to educational assistance under § 21.9520(a) or (b) and who is entitled to educational assistance under § 21.9520(d) or § 21.9571 may not receive educational assistance based on his or her own period of service and educational assistance based on someone else's service concurrently.

(2) The individual must specify in writing the provision under which he or she wishes to receive benefits. The individual may request to receive benefits under either provision at any time, but may not change the provision under which he or she will receive benefits more than once during a term, quarter, or semester. Except in cases when an individual exhausts entitlement under one provision during a term, quarter, or semester, the request will be effective the beginning date of the enrollment period following the request.

(h) *Nonduplication—Eligibility based on a single event or period of service—*

(1) *Active duty service.* (i) An individual with qualifying active duty service in the Armed Forces that may be used to establish eligibility for educational assistance under 38 U.S.C. chapter 30, 32, or 33, and 10 U.S.C. chapter 1606 or 1607, must make an irrevocable election in writing specifying under which program to establish eligibility and to which program to credit service.

(ii) An individual may not request that portions of a single period of service be credited to different benefit programs. VA considers a single period of service to be one from which the individual is discharged or released,

including a discharge for immediate reenlistment.

(2) *Assistance based on parent's service.* A child eligible for educational assistance under § 21.9520(d) and 38 U.S.C. chapter 35, based on the parent's death must make an irrevocable election in writing specifying which benefit he or she wishes to receive.

(i) *Authority.* (1) Paragraph (a)(1) of this section issued under the authority of 38 U.S.C. 3034(a), 3322, 3323(a), 3681; section 901, Pub. L. 96–342;

(2) Paragraph (a)(2) of this section issued under the authority of 38 U.S.C. 3034(a), 3322, 3323(a), 3681;

(3) Paragraph (b) of this section issued under the authority of 38 U.S.C. 3034(a), 3323(a), 3681;

(4) Paragraph (c) of this section issued under the authority of 38 U.S.C. 3322(e), 3323(c);

(5) Paragraph (d) of this section issued under the authority of 38 U.S.C. 3322(g), 3323(c);

(6) Paragraph (e) of this section issued under the authority of 38 U.S.C. 3322(f);

(7) Paragraph (f) of this section issued under the authority of 38 U.S.C. 501(a), 3323(c);

(8) Paragraph (g) of this section issued under the authority of 38 U.S.C. 501(a), 3323(c); and

(9) Paragraph (h) of this section issued under the authority of 38 U.S.C. 501(a), 3322(h);

(The Office of Management and Budget has approved the information collection provisions in paragraphs (a) through (e) of this section under control number 2900–0098, and the information collection provisions in paragraphs (f) through (h) of this section under control numbers 2900–0154 and 2900–0098.)

■ 56. Amend § 21.9695 by:

■ a. Removing the parenthetical authority citation at the end of paragraph (a);

■ b. In paragraph (a), removing “institutions of higher learning” and adding in its place “educational institutions”;

■ c. In paragraph (b), removing “institution of higher learning” wherever it appears and adding in its place “educational institution”;

■ d. Revising paragraph (b)(3) and removing the parenthetical authority citation at the end of the paragraph;

■ f. In paragraph (b)(4)(ii)(A), removing “established charges” and adding in its place “tuition and fees”;

■ g. Removing the parenthetical authority citation at the end of paragraph (b)(4)(ii)(C); and

■ h. Adding paragraph (c).

The revision and addition read as follows:

§ 21.9695 Overpayments.

* * * * *

(b) * * * (3)(i) The amount of the overpayment of educational assistance paid to the eligible individual, or paid to the educational institution on behalf of the individual, constitutes a liability of the educational institution if:

(A) VA determines that the overpayment is the result of willful or negligent false certification by the educational institution, or willful or negligent failure to certify excessive absences from a course, discontinuance of a course, or interruption of a course by the eligible individual.

(B) The student never attends classes for which he or she was certified (regardless of the reason for non-attendance);

(C) The student completely withdraws from all courses on or before the first day of the certified period of enrollment;

(D) The student dies during the term (see §§ 21.9635(a)(2) and 21.9636(a)(2));

(E) The educational institution receives a payment for the wrong student;

(F) The educational institution receives a duplicate payment for a student;

(G) The educational institution receives a payment in excess of the amount certified to VA on the enrollment certification; or

(H) The educational institution submits an amended enrollment certification to correctly report a reduced amount of tuition and fee charges, reduced Yellow Ribbon Program contributions, or reduced amounts for both tuition and fees and Yellow Ribbon Program contributions.

(ii) In determining whether an overpayment resulting from the actions listed in paragraph (b)(3)(i) of this section should be recovered from an educational institution, VA will apply the provisions of § 21.4009 (except paragraph (a)(1)) to overpayments of educational assistance under 38 U.S.C. chapter 33.

* * * * *

(c) *Authority.* (1) Paragraph (a) of this section issued under the authority of 38 U.S.C. 3034(a), 3323(a), 3690(b);

(2) Paragraphs (b) through (b)(3)(ii) of this section issued under the authority of 38 U.S.C. 3034(a), 3323(a), 3685; and

(3) Paragraphs (b)(3)(iii) through (b)(4) of this section issued under the authority of 38 U.S.C. 3034(a), 3323, 3685, 5302.

■ 57. Amend § 21.9700 by:

■ a. Removing “established charges” wherever it appears and adding in its place “tuition and fees”;

- b. Removing “38 U.S.C. chapter 3313(c)(1)(A)” wherever it appears and adding in its place “paragraphs (b) and (c) of § 21.9640 and paragraphs (b)(1) and (2) of § 21.9641”;
- c. Revising paragraph (b);
- d. In paragraph (d)(6)(i), removing “undergraduate” and adding in its place “certificate, undergraduate”;
- e. In paragraph (f), removing “school” and adding in its place “IHL”;
- f. In paragraph (g), removing “school’s” and adding in its place “IHL’s”; and
- g. Adding at the end of the section a parenthetical with the OMB control number for the approval of the information collection.

The revision and addition read as follows:

§ 21.9700 Yellow Ribbon Program.

* * * * *

(b) *Eligible individuals.* This program is only available to individuals entitled to the 100-percent educational assistance rate (based on service requirements as shown in § 21.9640(a) or § 21.9641(a), whichever is applicable) or to their designated dependents using entitlement transferred under § 21.9570 or § 21.9571, whichever is applicable, or effective August 1, 2018, to individuals using Fry Scholarship entitlement under § 21.9520(d) who are pursuing training at an eligible IHL.

* * * * *

(The Office of Management and Budget has approved the information collection provisions in this section under control numbers 2900–0154 and 2900–0718.)

- 58. Revise § 21.9710 to read as follows:

§ 21.9710 Pursuit.

Except for an eligible individual seeking tuition assistance Top-Up or reimbursement for taking an approved national test for admission, a national test for credit, or a licensing or certification test, the individual’s educational assistance depends upon his or her pursuit of a program of education.

(Authority: 38 U.S.C. 3323(c))

§ 21.9715 [Amended]

- 59. Amend § 21.9715 by:
 - a. Removing “the institution of higher learning” wherever it appears and adding in its place “the educational institution”;
 - b. In the introductory text, removing “§ 21.9640(b)(1)(ii) or (b)(2)(ii)” and adding in its place “§ 21.9640(b)(1)(ii), (b)(2)(ii), or § 21.9641(c), whichever is applicable”;
 - c. In paragraph (b)(1), removing “an institution of higher learning” and

adding in its place “the educational institution”; and

- d. In paragraph (b)(2), removing “§ 21.9730” and adding in its place “§ 21.9735”.

- 60. Amend § 21.9720 by revising the section heading and the introductory text to read as follows:

§ 21.9720 Certification of enrollment—for provisions effective before August 1, 2011.

For training pursued during the period beginning August 1, 2009, and ending July 31, 2011, an IHL must certify an eligible individual’s enrollment before he or she may receive educational assistance, except as stated in § 21.9680.

* * * * *

- 61. Add § 21.9721 to read as follows:

§ 21.9721 Certification of enrollment—for provisions effective after July 31, 2011.

For training pursued after July 31, 2011, an educational institution must certify an eligible individual’s enrollment before he or she may receive educational assistance, except as stated in § 21.9681.

(a) *Educational institutions must certify most enrollments.* VA does not, as a condition of advance payment, require educational institutions to certify the enrollments of eligible individuals who are seeking an advance payment (as described in § 21.9715). VA does not require organizations or entities offering a national test for admission, a national test for credit, or a licensing or certification test to certify that the eligible individual took the test. In all other cases, the educational institution must certify the eligible individual’s enrollment before he or she may receive educational assistance. This certification must be in a form specified by the Secretary and contain such information as specified by the Secretary.

(b) *Length of the enrollment period covered by the enrollment certification.* (1) Educational institutions that offer courses on a term, quarter, or semester basis will report enrollment for the term, quarter, semester, ordinary school year, or ordinary school year plus summer term. If the certification covers two or more terms, the educational institution will report each term, quarter, or semester separately.

(2) Educational institutions organized on a year-round basis that do not offer courses on a term, quarter, or semester basis will report enrollment for the length of the course. The certification will include a report of the dates during which the educational institution closes for any intervals designated in its

approval data as breaks between school years.

(3) When an eligible individual enrolls in a distance learning program leading to a standard college degree, the institution of higher learning’s certification will include—

- (i) The enrollment date; and
- (ii) The ending date for the period being certified. If the educational institution has no prescribed maximum time for completion, the certification must include an ending date based on the educational institution’s estimate for completion.

(c) *Authority.* (1) Paragraph (a) of this section issued under the authority of 38 U.S.C. 3014(b), 3031, 3034(a), 3323(a), 3482(g), 3680, 3687, 3689, 5101(a); and (2) Paragraph (b) of this section issued under the authority of 38 U.S.C. 3034(a), 3323(a), 3684.

(The Office of Management and Budget has approved the information collection provision in this section under control number 2900–0073.)

§ 21.9725 [Amended]

- 62. Amend § 21.9725 by:

- a. Removing “institution of higher learning” wherever it appears and adding in its place “educational institution”; and
- b. In paragraph (b), removing “institution of higher learning’s” and adding in its place “educational institution’s”.

§ 21.9735 [Amended]

- 63. Amend § 21.9735 by removing “individuals and institutions of higher learning” and adding in its place “eligible individuals and educational institutions”.

§ 21.9740 [Amended]

- 64. Amend § 21.9740 by:

- a. Removing “institution of higher learning” wherever it appears and adding in its place “educational institution”; and
- b. Removing “institution of higher learning’s” wherever it appears and adding in its place “educational institution’s”.

- 65. Amend § 21.9750 by:

- a. In paragraph (a), removing “institution of higher learning” and adding in its place “educational institution”;
- b. Revising the heading to paragraph (b);
- c. Removing paragraph (b) introductory text; and
- d. Revising paragraph (b)(1).

The revisions read as follows:

§ 21.9750 Course measurement.

* * * * *

(b) *Measurement of courses reported in clock hours at IHLs.* (1) If the courses pursued at an IHL are measured in clock hours, VA will convert the clock hours to equivalent credit hours by—

- (i) Adding the total number of clock hours pursued during the term, quarter or semester;
- (ii) Dividing the sum of paragraph (b)(1) of this section by the total number of weeks in the term; and

- (iii) Multiplying the result of paragraph (b)(2) of this section rounded to the nearest 100th by—
 - (A) If the educational institution measures courses using both credit and clock hours, the decimal determined by dividing the number of credit hours considered full-time at the educational institution by the number of clock hours considered full-time at the educational institution.
 - (B) If the educational institution only measures courses using clock hours, the

decimal determined by dividing 14 credit hours by the number of clock hours considered full-time at the educational institution.
* * * * *

§ 21.9765 [Amended]
■ 66. Amend § 21.9765 by removing “institution of higher learning” and adding in its place “educational institution”.

Securing the Information and Communications Technology and Services
Supply Chain: Connected Vehicles; Final Rule

DEPARTMENT OF COMMERCE**Bureau of Industry and Security****15 CFR Part 791**

[Docket No. 250107–0005]

RIN 0694–AJ56

Securing the Information and Communications Technology and Services Supply Chain: Connected Vehicles**AGENCY:** Bureau of Industry and Security, Department of Commerce.**ACTION:** Final rule.

SUMMARY: This final rule, published by the Department of Commerce's (Department) Bureau of Industry and Security (BIS), sets forth regulations and procedures to address undue or unacceptable risks to national security and U.S. persons posed by classes of transactions involving information and communications technology and services (ICTS) that are designed, developed, manufactured, or supplied by persons owned by, controlled by, or subject to the jurisdiction or direction of certain foreign adversaries and that are integral to connected vehicles as defined herein.

DATES: This final rule goes into effect on March 17, 2025.

FOR FURTHER INFORMATION CONTACT:

Marc Coldiron, U.S. Department of Commerce, telephone: (202) 482–3678. For media inquiries: Office of Congressional and Public Affairs, Bureau of Industry and Security, U.S. Department of Commerce: *OCPA@bis.doc.gov*.

SUPPLEMENTARY INFORMATION:**I. Background**

In this final rule, BIS prohibits transactions involving Vehicle Connectivity System (VCS) hardware and covered software designed, developed, manufactured, or supplied by persons owned by, controlled by, or subject to the jurisdiction or direction of the People's Republic of China, including the Hong Kong Special Administrative Region and the Macau Special Administrative Region, (PRC); or the Russian Federation (Russia). It follows an advance notice of proposed rulemaking (ANPRM), 89 FR 15066 (March 1, 2024), and a notice of proposed rulemaking (NPRM), 89 FR 79088 (September 26, 2024). In the ANPRM, BIS sought public comment to inform a rulemaking that would address the undue or unacceptable risks, as identified in Executive Order (E.O.) 13873, "Securing the Information and

Communications Technology and Services Supply Chain," 84 FR 22689 (May 17, 2019), posed by a class of transactions that involve ICTS designed, developed, manufactured, or supplied by persons owned by, controlled by, or subject to the jurisdiction or direction of a foreign adversary and integral to connected vehicles. The NPRM proposed a rule to address the undue or unacceptable risks identified in the ANPRM and solicited public comment. BIS has considered the comments received during both rounds of public comment, and is making revisions, from the proposed rule, that address significant portions of that feedback.

In E.O. 13873, the President delegated to the Secretary of Commerce (Secretary), to the extent necessary to implement the Order, the authority granted under the International Emergency Economic Powers Act (IEEPA) (50 U.S.C. 1701, *et seq.*), "to deal with any unusual and extraordinary" foreign threat to the United States' national security, foreign policy, or economy, if the President declares a national emergency with respect to such threat. 50 U.S.C. 1701(a). In E.O. 13873, the President declared a national emergency with respect to the "unusual and extraordinary" foreign threat posed to the ICTS supply chain and has, in accordance with the National Emergencies Act (NEA), extended the declaration of this national emergency in each year since E.O. 13873's publication. *See Continuation of the National Emergency With Respect to Securing the Information and Communications Technology and Services Supply Chain*, 85 FR 29321 (May 14, 2020); *Continuation of the National Emergency With Respect to Securing the Information and Communications Technology and Services Supply Chain*, 86 FR 26339 (May 13, 2021); *Continuation of the National Emergency With Respect to Securing the Information and Communications Technology and Services Supply Chain*, 87 FR 29645 (May 13, 2022); *Continuation of the National Emergency With Respect to Securing the Information and Communications Technology and Services Supply Chain*, 88 FR 30635 (May 11, 2023); *Continuation of the National Emergency With Respect to Securing the Information and Communications Technology and Services Supply Chain*, 89 FR 40353 (May 9, 2024).

Specifically, the President identified the "unrestricted acquisition or use in the United States of ICTS designed, developed, manufactured, or supplied by persons owned by, controlled by, or

subject to the jurisdiction or direction of foreign adversaries" as "an unusual and extraordinary" foreign threat to the national security, foreign policy, and economy of the United States that "exists both in the case of individual acquisitions or uses of such technology or services, and when acquisitions or uses of such technologies are considered as a class." *See* E.O. 13873, and 50 U.S.C. 1701(a)–(b).

Once the President declares a national emergency, IEEPA empowers the President to, among other acts, investigate, regulate, prevent, or prohibit, any "acquisition, holding, withholding, use, transfer, withdrawal, transportation, importation or exportation of, or dealing in, or exercising any right, power, or privilege with respect to, or transactions involving, any property in which any foreign country or a national thereof has any interest by any person, or with respect to any property, subject to the jurisdiction of the United States." 50 U.S.C. 1702(a)(1)(B).

To address the identified risks to national security from ICTS transactions, the President in E.O. 13873 imposed a prohibition on transactions that the Secretary, in consultation with relevant agency heads, has determined involve foreign adversary ICTS and pose certain risks to U.S. national security, including U.S. technology and critical infrastructure, or the security and safety of U.S. persons. Specifically, to fall within the scope of the prohibition, the Secretary must determine that a transaction: (1) "involves [ICTS] designed, developed, manufactured, or supplied, by persons owned by, controlled by, or subject to the jurisdiction or direction of a foreign adversary," defined in E.O. 13873 as "any foreign government or foreign non-government person engaged in a long-term pattern or serious instances of conduct significantly adverse to the national security of the United States or security and safety of United States persons, which, pursuant to E.O. 13873's implementing regulations at 15 CFR 791.4 are the PRC, Republic of Cuba (Cuba), Islamic Republic of Iran (Iran), Democratic People's Republic of Korea (North Korea), Russia, and Venezuelan politician Nicolás Maduro (Maduro Regime); and (2):

A. "Poses an undue risk of sabotage to or subversion of the design, integrity, manufacturing, production, distribution, installation, operation, or maintenance of information and communications technology or services in the United States;"

B. "Poses an undue risk of catastrophic effects on the security or

resiliency of United States critical infrastructure or the digital economy of the United States;” or

C. “Otherwise poses an unacceptable risk to the national security of the United States or the security and safety of United States persons.”

Factors A through C are collectively referred to as “undue or unacceptable risks.” In addition, section 1(b) of E.O. 13873 grants the Secretary the authority to design or negotiate mitigation measures to allow an otherwise prohibited transaction.

The President also delegated to the Secretary the ability to promulgate regulations that, among other things, establish when transactions involving particular technologies may be categorically prohibited. E.O. 13873 section 2(a)–(b); *see also* 3 U.S.C. 301–02. Specifically, the Secretary may issue regulations establishing criteria, consistent with section 1 of E.O. 13873, by which particular technologies or market participants may be categorically included in or categorically excluded from prohibitions established pursuant to E.O. 13873.

II. Introduction

Today’s vehicles contain a myriad of connected components that provide greater convenience for consumers and increase road safety for both drivers and pedestrians, such as Wi-Fi, Bluetooth, cellular, and satellite connectivity. However, the incorporation of progressively more complex hardware and software systems that facilitate these features has also increased the attack surfaces through which malign actors and foreign adversaries may exploit vulnerabilities to gain access to a vehicle. As BIS outlined in its March 1, 2024, ANPRM and its September 26, 2024, NPRM, certain ICTS integral to connected vehicles present an undue or unacceptable risk to U.S. national security when those systems are designed, developed, manufactured, or supplied by persons owned by, controlled by, or subject to the jurisdiction or direction of a foreign adversary.

In the *Securing the Information and Communications Technology and Services Supply Chain* interim final rule, 86 FR 4909 (Jan. 19, 2021), the Secretary determined that certain foreign governments or foreign non-government persons—the PRC, Cuba, Iran, North Korea, Russia, and the Maduro Regime—constitute foreign adversaries for purposes of E.O. 13873 and regulations promulgated pursuant to E.O. 13873. *See* 15 CFR 791.4 (to the extent that the list of foreign adversaries identified in 15 CFR 791.4 is updated to

add or remove governments or non-government persons, this final rule intends to reflect the most up-to-date designations of foreign adversaries). Additionally, section 2(b) of E.O. 13873 provides that the Secretary may issue rules that identify particular technologies or countries with respect to transactions involving ICTS that warrant particular scrutiny. For the purposes of this final rule regarding transactions involving ICTS integral to connected vehicles, BIS is focusing its regulatory efforts on ICTS that are designed, developed, manufactured, or supplied by persons owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia. BIS has identified that, for the purposes of addressing the national security risks posed by connected vehicles, these two foreign adversaries pose particular undue and unacceptable risks to U.S. national security because of these adversaries’ legal, political, and regulatory regimes, combined with their current and anticipated growth and involvement in the connected vehicles sector.

As discussed below, the PRC and Russia are able to leverage domestic legislation and regulatory regimes to compel companies subject to their jurisdiction, including carmakers and their suppliers, to cooperate with security and intelligence services. Such control over companies and their products and services means that their equipment is easily exploitable by PRC and Russian authorities. The privileged access that the PRC and Russia may gain to connected vehicles through their components, including software and hardware, could enable those foreign adversaries to (1) exfiltrate sensitive data collected by connected vehicles and (2) allow remote access and manipulation of connected vehicles driven by U.S. persons. Pursuant to E.O. 13873, BIS has determined that certain classes of transactions that can facilitate the exfiltration of data and remote manipulation of connected vehicles by the PRC and Russia pose undue or unacceptable risks to U.S. national security and to the safety and security of U.S. persons. These risks, moreover, present an urgent national security risk to the safety and security of technology used in the United States and to U.S. persons.

The PRC has pre-positioned malware on U.S. information technology and critical infrastructure networks. The PRC has also set objectives for the completion of the People’s Liberation Army’s (PLA) modernization and other military and technology goals by 2027, which—in light of the PLA’s military-civil fusion strategy and the growing

prevalence of PRC dual-use technologies in U.S. commercial supply chains, including in the auto industry—presents additional risks to U.S. national security. Mounting evidence of threats such as these to U.S. critical infrastructure, data security, and broader national security necessitates this urgent action by the U.S. government to address the risk of foreign adversary supply chains in the connected vehicles sector.

a. Overview of the Advance Notice of Proposed Rulemaking (ANPRM)

BIS issued an ANPRM, 89 FR 15066 (Mar. 1, 2024), seeking public comment to inform a rulemaking that would address the undue or unacceptable risks posed by a class of transactions that involve ICTS designed, developed, manufactured, or supplied by persons owned by, controlled by, or subject to the jurisdiction or direction of a foreign adversary and integral to connected vehicles. In the ANPRM, BIS posed 35 questions to the public for comment and feedback. The questions related to potential definitions used in the rulemaking, the degree of foreign adversary involvement in the connected vehicle supply chain, which systems should be the focus of a potential rulemaking, and what the economic impacts of a potential rulemaking might be, among other questions. BIS identified six systems as the potential focus for a future rule: (1) vehicle operating systems (OS), (2) telematics systems, (3) advanced driver assistance systems (ADAS), (4) automated driving systems (ADS), (5) satellite or cellular telecommunications systems, and (6) battery management systems (BMS). BIS received 57 comment submissions in response to the ANPRM from a variety of parties, including original equipment manufacturers (OEMs), component suppliers, two foreign governments, nonprofit organizations, and individual respondents. Five comments contained Confidential Business Information (CBI), and one comment was retracted at the request of the commenter. The comments generally urged BIS to narrow the scope of a future regulation and to limit the systems to be regulated to only those posing significant national security risks. Commenters also urged BIS to provide industry stakeholders with sufficient lead time to comply. BIS considered each comment in developing the NPRM outlined in the next section.

b. Overview of the Notice of Proposed Rulemaking (NPRM)

BIS then issued an NPRM, 89 FR 79088 (Sept. 26, 2024), that identified a smaller subset of systems in connected

vehicles that pose the most significant undue or unacceptable risk to national security when designed, developed, manufactured, or supplied by persons owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia. Below is a summary of the proposed rule.

Regulated Systems

The proposed rule identified (1) VCS, which is composed of the hardware and software that enable a connected vehicle to communicate off-board above 450 MHz, and (2) ADS, as subject to regulation by BIS. This determination was based, in part, on public comments requesting BIS narrow the scope of the rule, as a regulation that impacted all six of the listed automotive systems would be overbroad. The NPRM listed ADS, operating systems, telematic systems, automated driving assistance systems, satellite and communication systems, and battery management systems as potential automotive systems that could be regulated in the subsequent proposed rule. Public comment as well as BIS's analysis suggested that automotive telematics functions were one of the primary means for a foreign adversary to exploit automotive data and actuation systems. BIS also determined, based on public comment as well as internal analysis, that the term "telematics" generally refers to systems that operate on cellular band protocols. As BIS intended to regulate multiple automotive connectivity systems, not just automotive cellular systems, BIS chose to use the broader term of "VCS" to encompass cellular, Wi-Fi, Bluetooth, and potentially satellite communications. The NPRM proposed to regulate both the hardware and software in VCS and solely the software in ADS.

Prohibited Transactions

The NPRM proposed to (1) prohibit VCS hardware importers from knowingly importing into the United States certain hardware for VCS; (2) prohibit connected vehicle manufacturers from knowingly importing into the United States completed connected vehicles incorporating covered software, which was defined in the NPRM as certain software that supports the function of VCS or ADS; and (3) prohibit connected vehicle manufacturers from knowingly selling within the United States completed connected vehicles that incorporate software that supports the function of VCS or ADS. These prohibitions included in the NPRM applied when such VCS hardware or

covered software was designed, developed, manufactured, or supplied by persons owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia. The NPRM also proposed to (4) prohibit connected vehicle manufacturers who are owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia from knowingly selling in the United States completed connected vehicles that incorporate VCS hardware or covered software, even when that hardware or software did not have a nexus to the PRC or Russia.

Declarations of Conformity

The NPRM proposed that VCS hardware importers and connected vehicle manufacturers would submit to BIS, once per calendar year or model year, Declarations of Conformity attesting that they had not engaged in prohibited transactions involving VCS hardware or covered software. The NPRM would have mandated that VCS hardware importers and connected vehicle manufacturers submit a substantial amount of information with their Declarations of Conformity, including a hardware bill of materials (HBOM) or software bill of materials (SBOM), and a list of external endpoints to which the VCS hardware connected. In the final rule, BIS has changed the Declarations of Conformity requirement to clarify the certification, narrow the information required to be submitted, and add recordkeeping requirements.

Authorizations

The NPRM enumerated general authorizations under which a regulated entity would be permitted to engage in an otherwise prohibited transaction without need to notify BIS. Under the NPRM, general authorizations would have been available to small business VCS hardware importers and connected vehicle manufacturers. Specifically, general authorizations applied if (1) the connected vehicle manufacturer or VCS hardware importer produced fewer than 1,000 connected vehicles or VCS hardware units; (2) the completed connected vehicle was used on public roadways for fewer than 30 calendar days in a year; (3) the completed connected vehicle or VCS hardware was used solely for purposes of display, testing, or research; or (4) the completed connected vehicle was imported solely for repair, alteration, or competition off public roads and would have been exported within one year of import. In the final rule, BIS has revised the general authorizations provision so that the above-mentioned general authorizations are not provided in the

rule text itself. Instead, BIS will issue general authorizations through its website and the **Federal Register**.

The NPRM also provided a process for specific authorizations. Following an application to and approval from BIS, a specific authorization granted VCS hardware importers and connected vehicle manufacturers the ability to engage in otherwise prohibited transactions not eligible for a general authorization, subject to certain conditions imposed by BIS.

Exemptions

The NPRM permitted VCS hardware importers to engage in otherwise prohibited transactions involving VCS hardware and exempted them from certain requirements so long as: (1) for VCS hardware not associated with a model year, the import of the VCS hardware had taken place prior to January 1, 2029; or (2) the VCS hardware unit was associated with a vehicle model year prior to 2030 or the VCS hardware was integrated into a connected vehicle (completed or incomplete) with a model year prior to 2030. In the NPRM, connected vehicle manufacturers were permitted to engage in otherwise prohibited transactions involving covered software and exempt from certain requirements so long as the completed connected vehicle that was imported, or sold within the United States, was of a model year prior to 2027. Lastly, connected vehicle manufacturers that are owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia were permitted to sell completed connected vehicles with a model year prior to 2027 that incorporated VCS hardware or covered software. The final rule includes new exemptions for parts that are imported for the purpose of warranty or repair of a completed connected vehicle with a model year prior to 2030.

Advisory Opinions, Is-Informed Notices, and Appeals

The NPRM provided an advisory opinion mechanism by which regulated entities could seek guidance from BIS as to whether specific prospective transactions were subject to the proposed rule's prohibitions. The mechanism included in the NPRM applied to actual, as opposed to hypothetical, transactions in which all parties are identified. Additionally, the NPRM permitted BIS to issue certain "Is-Informed" notices to VCS hardware importers and connected vehicle manufacturers to inform them that a specific authorization was required for an activity. The NPRM also included an

appeal process by which any person whose application for a specific authorization was denied, whose specific authorization was suspended or revoked, or who received a written notification of ineligibility for a general authorization could appeal that decision to the Under Secretary for Industry and Security (Under Secretary). In the final rule, BIS has added a 60-day timeline for BIS to respond to advisory opinion requests and clarified procedural requirements of submitting an appeal request.

Recordkeeping and Reporting

The NPRM proposed that regulated entities keep a “full and accurate record” for a period of 10 years after each transaction for which a Declaration of Conformity, general authorization, or specific authorization was required, regardless of whether the transaction was effected pursuant to such an authorization. In the NPRM, VCS hardware importers and connected vehicle manufacturers were required to furnish “complete information” relevant to any transaction involving the import of VCS hardware or covered software, irrespective of any authorization granted by BIS.

Violations

The NPRM additionally outlined the framework by which BIS determined a violation took place, the procedure by which BIS notified an affected party of such a violation (including the party’s right to respond or to settle), the specific penalties BIS was permitted to impose on violators, and the administrative collection of those penalties.

c. Overview of Final Rule

The final rule benefits from the responses received during the public comment periods for the ANPRM and the NPRM and incorporates significant portions of that feedback. For example, BIS considered public feedback to define the scope of connected vehicles, identify ICTS integral to connected vehicles, and better understand the effects of any potential prohibition. As stated in the NPRM, determining the scope of the prohibitions required a balancing of the need to address the undue or unacceptable risk posed by foreign adversary involvement in the connected vehicles supply chain with the impact on the public and industry. For a detailed discussion of how the final rule has changed from the NPRM, refer to Section V: Discussion of the Final Rule and Section VI: Revisions from the Proposed Rule and Response to Comments.

III. Comments on the Notice of Proposed Rulemaking

BIS received 101 comments on the NPRM.¹ Many commenters agreed with BIS’s risk assessment of foreign adversary connected vehicle technology as described in Section IV of the NPRM and supported the decision to address these risks through supply chain regulation. Commenters’ concerns with the NPRM centered on the broad scope of the regulation and the potentially onerous and disruptive nature of the compliance process, particularly the submission of Declarations of Conformity. Some commenters disagreed with the NPRM’s inclusion of the commercial vehicle market, arguing that definitions proposed in the NPRM did not as easily apply to this sector compared to the passenger vehicle market. Commenters also warned that the wide scope of the NPRM across the connected vehicle market may have significant economic impact and that the current implementation timeline could not easily be met by industry.

Commenters requested that BIS implement alternative methods of compliance, such as a self-certification model; provide greater detail on the HBOM and SBOM submission requirements; and describe how BIS intends to protect any submitted data. Commenters also voiced apprehension over any requirement to share proprietary information with customers and the government. For a more thorough discussion of the comment submissions and BIS’s responses, please see Section IV: Risks Associated with Vehicle Connectivity Systems and Automated Driving Systems When Designed, Developed, Manufactured, or Supplied by Persons Owned by, Controlled by, or Subject to the Jurisdiction or Direction of the PRC and Russia.

IV. Risks Associated With Vehicle Connectivity Systems and Automated Driving Systems When Designed, Developed, Manufactured, or Supplied by Persons Owned by, Controlled by, or Subject to the Jurisdiction or Direction of the PRC and Russia

BIS received multiple comments related to the risks stemming from VCS and ADS when designed, developed, manufactured, or supplied by persons owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia. Commenters agreed with the

risks posed by PRC and Russian involvement in the connected vehicle supply chain as laid out in the NPRM, and BIS reiterates those same risks in this section. For instance, one commenter acknowledged that allowing adversarial suppliers into the automotive supply chain poses direct threats to data integrity, consumer safety, and national security. In contrast, another commenter critiqued the proposed rule as overly broad and characterized the threats as hypothetical in nature, underscoring that PRC and Russian companies are incentivized to avoid exploiting vulnerabilities in connected vehicles in order to avoid conflict. BIS recognizes that many of the risks laid out in the NPRM and final rule are forward-looking, and this rulemaking is an attempt to proactively address these risks before PRC and Russian actors are able to leverage them to harm U.S. national security. Moreover, while BIS agrees that action by the PRC or Russia to leverage vulnerabilities in VCS or ADS could feasibly cause undesired conflict, the strategic benefit of exploiting vulnerabilities may outweigh other types of harm it causes and thus is unlikely to preclude such an action altogether from the perspective of the PRC and Russia. Another commenter highlighted that the rule does not apply retroactively to address any of the data already collected by connected vehicle manufacturers that may have already been legitimately transferred to the PRC or other foreign adversaries and may be informing foreign intelligence analysis. BIS recognizes that some connected vehicle and component manufacturers may already transfer vehicle data abroad, a point that is reiterated later in this final rule. However, BIS believes that retroactive application of this rule would not reduce or alleviate any of the harm that has already occurred as a result of foreign intelligence organizations gaining access to that data. Following consideration of the comments received on the NPRM, and further consideration of the risks and vulnerabilities associated with various ICTS components that are critical to the operation of connected vehicles, BIS has decided to retain the proposed rule’s focus on two integral ICTS systems—VCS and ADS—when designed, developed, manufactured, or supplied by persons owned by, controlled by, or subject to the jurisdiction or direction of two foreign adversaries—the PRC and Russia. Below, BIS provides its findings of the undue and unacceptable risks associated with these particular foreign systems, and these particular foreign

¹ This includes four written submissions received after the close of the public comment period, all of which were considered and posted on [regulations.gov](https://www.regulations.gov).

adversaries, following this latest round of public comments.

a. Vulnerabilities Associated With Vehicle Connectivity Systems and Automated Driving Systems

1. Vehicle Connectivity Systems

The term VCS encompasses hardware and software systems—such as the telematics control units (TCU), cellular modems and antennas, and other automotive components—that integrate various radio frequency (RF) communication technologies and enable connected vehicles to access external data sources, facilitate vehicle-to-vehicle communication, and provide enhanced services to users through seamless connectivity options. For example, as the primary automotive VCS component, a TCU acts as the primary interface between the internal network and external communication channels. It collects data from onboard sensors such as Global Positioning Systems (GPS), accelerometers, gyroscopes, BMS, and other Electronic Control Units via wired networks like Controller Area Network (CAN) bus, Local Interconnect Network (LIN), FlexRay, Automotive Ethernet and K-Line, as well as wireless protocols such as Bluetooth and Wi-Fi. Some systems use cameras and microphones to facilitate facial recognition of drivers or to respond to voice commands of drivers. Once gathered, the TCU converts this internal data into radio frequency signals suitable for transmission over the chosen wireless protocol. In other words, as the vast array of sensors on a connected vehicle collect information about a driver's location, speed, voice patterns, battery state of charge, or other vehicle diagnostic and operational information, the TCU converts that data into a format that can be transmitted to systems outside the vehicle and then enables that transmission. Sensing systems, such as radar, audio, video, or Light Detection and Ranging (LiDAR) hardware and software, are not VCS. Based on a number of comments to the proposed rule, BIS recognizes a national security risk posed by LiDAR, but it concludes that focusing this regulation on VCS hardware and software systems, which ultimately enable the external communication of end-point sensors, is an appropriate scope at this time. For a more thorough discussion on the exclusion of PRC or Russian LiDAR from this rule, please see Section VI below.

While the increased degree of vehicle connectivity offers benefits to both consumers and manufacturers, it also

increases risks to consumers and manufacturers due to the number of access points into the internal connected vehicle network. Each access point may present multiple new software vulnerabilities for adversaries to exploit. *See* Cabell Hodge, Konrad Hauk, Shivam Gupta, and Jess Bennett, Vehicle Cybersecurity Threats and Mitigation Approaches, *National Renewable Energy Laboratory*, at 4–5 (Aug. 2019), <https://www.nrel.gov/docs/fy19osti/74247.pdf>. Such compromise of VCS software could occur at various points of the software development lifecycle where software functionality can be accessed and altered, including tool development, source code repositories, open-source dependencies, software updates, and shipment interdiction. For instance, Upstream's 2024 Global Automotive Cybersecurity Report documented a case where security researchers installed malicious software on the VCS by performing a simulated jailbreak attack of an OEM's VCS using a voltage fault injection on the chipmaker's processor. This malicious software unlocked features to manipulate the vehicle, such as acceleration and heated seats. Upstream, *2024 Global Automotive Cybersecurity Report*, at 62 (Feb. 2024), <https://upstream.auto/reports/global-automotive-cybersecurity-report>. The software also provided access to private user data and enabled decryption of encrypted Non-Volatile Memory Express (NVMe) storage, manipulation of the car's identity, and extraction of the vehicle-unique credential used for authenticating and authorizing the OEM's internal service network. *See id.* By compromising software or its dependencies, malign actors may surveil, disrupt, damage, or otherwise exploit the data or systems of those who use the software. *See* National Counterintelligence and Security Center, *Software Supply Chain Attacks*, (Mar. 2021), https://www.dni.gov/files/NCSC/documents/supplychain/Software_Supply_Chain_Attacks.pdf.

The threat of such a cyber operation by malicious actors can grow significantly when firmware or hardware components are intentionally designed with vulnerabilities. Access to the hardware supply chain for VCS provides an avenue for threat actors to manipulate or insert, with malicious intent, hardware, or firmware modules into telematics hardware components such as modems, Systems on Chip (SoC), Printed Circuit Boards (PCB), Central Processing Units, and antennae. Manipulating or modifying hardware and associated firmware in the supply

chain could also allow foreign adversaries to insert a backdoor, granting them control over the VCS. *See* Cybersecurity & Infrastructure Security Agency, *Defending Against Software Supply Chain Attacks*, at 6 (Apr. 2021), https://www.cisa.gov/sites/default/files/publications/defending_against_software_supply_chain_attacks_508.pdf; National Counterintelligence and Security Center, *Software Supply Chain Attacks*, (Apr. 2023), <https://www.dni.gov/files/NCSC/documents/supplychain/Software-Supply-Chain-Attacks.pdf>. For instance, cellular and satellite telecommunications transceivers are pivotal connectivity components in the VCS, utilizing radio frequency (RF) energy to facilitate the transmission and reception of data between a vehicle and the external world. If these transceivers are designed, developed, manufactured, or supplied by persons owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia, such actors would have the means and capability to introduce vulnerabilities that could be exploited to intercept and/or compromise the information exchanged between the connected vehicle and the external world.

2. Automated Driving Systems

The complexity of ADS software, the large foundation of data sources, and the driving responsibilities inherent to ADS render it a valuable target for exploitation. An ADS encompasses the upper end of the spectrum of autonomy levels that dictate the vehicle's independence, and the extent of driver intervention required. The primary standard setting organization for automotive autonomy is the global mobility standard-setting body SAE International. SAE International sets standards that affect many aspects of automotive production and maintenance, often in concert with the International Standards Organization (ISO). SAE International's *Taxonomy and Definitions for Terms Related to Driving Automation Systems for On-Road Motor Vehicles* (SAE J3016) is the current industry norm for evaluating standard levels of vehicle autonomy. SAE J3016 autonomy levels range from Level 0 (no automation) where the driver controls all aspects of driving, to Level 5 (full automation) where the vehicle can operate independently under all conditions without human intervention. Levels 1 and 2 offer driver assistance through systems that control either steering or acceleration and braking, while Levels 3 through 5 (which generally comprise ADS)

progressively increase the system's responsibility for driving tasks. Level 4 requires the ability to complete all driving functions on a sustained basis within defined operational design domains (ODDs), while Level 5 requires the ability to complete all driving functions unconditionally. As the autonomy level increases, the reliability and safety of the ADS become increasingly reliant on the system's operational performance, safety protocols, and cybersecurity measures. See SAE J3016_02104, Taxonomy and Definitions for Terms Related to Driving Automation Systems for On-Road Motor Vehicles, *SAE International*, at 31–32 (Apr. 2021), https://www.sae.org/standards/content/j3016_02104/.

An ADS must be able to execute Dynamic Driving Tasks (DDTs) within specific ODDs. DDTs include critical tasks such as steering, braking, acceleration, and Object and Event Detection, Classification and Response (OEDCR). OEDCR enables an ADS to perceive and respond to surrounding objects and events, a responsibility that shifts progressively from the driver to the ADS itself as the degree of vehicle autonomy increases. See *id.* at 17; Edward Griffor, David Wollman, and Christopher Greer, Automated Driving System Safety Measures Part 1: Operating Envelope Specification, *NIST Special Publication 1900–301*, at 2 (2021), <https://nvlpubs.nist.gov/nistpubs/SpecialPublications/NIST.SP.1900-301.pdf>.

An ADS relies on a large foundation of connected information sources for decisions and outputs which, in turn, could create inherent vulnerabilities. For example, a user of a vehicle, or even an OEM purchaser of ADS likely does not know the sum total of what data the ADS was trained on, or how, specifically, the ADS makes its decisions. It is not possible to find single lines of code that dictate how an ADS responds to specific scenarios in modern ADS systems. Rather, leading ADS are controlled by complex software that can include a neural net that references training data and previous decisions to instantaneously decide on an action in a driving setting. This opacity and lack of understanding of how the system actually reacts is inherently vulnerable to poisoned data injection or specific scenario-based failures. As a result, the complex software systems that drive decisions for an ADS are valuable targets for malicious actors to exploit. Software-based threats to connected vehicles equipped with an ADS include manipulation of sensors to create phantom objects; manipulation of ADS

software to detect, capture, and retain information about specific geographic areas or other sensitive data; or other manipulation of sensor fusion processing software that could lead to faulty and dangerous vehicle decision making, to include unauthorized control over the connected vehicle. See National Counterintelligence and Security Center, *Autonomous Automotive Vehicle Supply Chain Risk*, (2022), <https://www.dni.gov/files/NCSC/documents/supplychain/autonomous-vehicles-placemat-2022-D9A54B50-.pdf>.

A compromised ADS creates opportunities for data exfiltration and unauthorized vehicle manipulation due to the direct access it has to the Internal Vehicle Network (IVN). The IVN controls the communication framework within a connected vehicle, overseeing the electronic control units (ECUs) responsible for engine control, traction control, door locks, climate control, battery management, powertrain, airbags, cameras, and radar functionalities. These ECUs also communicate via overlaid communication networking protocols such as a CAN bus, LIN, and ethernet. See Anastasios Giannaros, et al. Autonomous Vehicles: Sophisticated Attacks, Safety Issues, Challenges, Open Topics, Blockchain and Future Directions, *Journal of Cybersecurity and Privacy* 3.3, at 508–513, (2023). Because ADS interacts with ECUs through the IVN, a compromised ADS has the capability to execute functions that affect nearly all of a connected vehicle's software and hardware components. For example, an update to an ADS could alter outputs the ADS makes to a Body Control Unit, enabling the ADS to erroneously and dangerously open a vehicle's door while in motion. Moreover, because many connected vehicles maintain their own networks and actively scan their operating environment for other proximate networks, an ADS can also potentially be used to impact the IVN of other vehicles or transportation infrastructure networks through vehicle-to-vehicle communication. This could lead to disablement or compromise of other vehicles or of transportation infrastructure, affecting the movement of goods and the physical safety of drivers. See National Counterintelligence and Security Center, *Autonomous Automotive Vehicle Supply Chain Risk* (Apr. 2022), <https://www.dni.gov/files/NCSC/documents/supplychain/autonomous-vehicles-placemat-2022-D9A54B50-.pdf>; Patrick Wagner, Nikolai Puch, and David Emeis, Cybersecurity risk analysis

of an automated driving system, *Fraunhofer Institute AISEC* (Oct. 2023), <https://publica.fraunhofer.de/entities/publication/4d66e81e-3570-4c49-9f8c-8c9967a34ca6/details>.

Given the significant processing power and complex decision-making capability of an ADS, the risks arising from ADS designed, developed, manufactured, or supplied by persons owned by, controlled by, or subject to the jurisdiction or direction of a foreign adversary extend beyond the IVN itself and include risks to the fidelity and integrity of data that flows to downstream or adjacent transportation infrastructure. Foreign adversaries can corrupt ADS data by exploiting existing vulnerabilities in ADS connectivity environments. See subsection IV.b. As such, direct access to an ADS afforded to a malicious actor or foreign adversary through the design, development, manufacture, or supply of ADS software has the potential to cause severe adverse consequences to U.S. national security and U.S. persons.

b. Threats Associated With the PRC and Russia

Several commenters agreed that PRC laws compel compliance with government requests, thereby making some companies subject to the direction of the PRC government. One commenter provided additional detail about the linkages between prominent Chinese companies, the PRC military, and the global automotive industry. Two commenters noted that current investments by Chinese companies in Mexico may allow effective “backdoor” access to the American auto market. One commenter specifically pointed to the risks posed by Chinese-developed buses with connectivity features as posing a particular threat to U.S. national security. While commercial vehicles such as buses are not in the scope of this final rule, BIS intends to propose a new rule specifically tailored to the commercial vehicle sector in order to address substantial national security risks. Another commenter agreed with the Department's actions, specifically as it related to addressing the large amounts of data collected by connected vehicles already being transmitted to the PRC, regardless of the vehicle's physical location. In response to commenters' agreement with the nature of PRC and Russian legal and regulatory landscapes, BIS is reiterating its legal and risk analyses in this final rule. Moreover, BIS thanks commenters for providing additional information that clarifies the linkages between the PRC state, military, and the broader economy. In light of concerns raised by

commenters regarding PRC companies' investments in Mexico, BIS reiterates that PRC investments in Mexico's auto sector risk creating additional potential nexus points between PRC connected vehicle suppliers and U.S. automakers and consumers. Similarly, BIS agrees with commenters' concerns that the PRC-linked entities already collect large amounts of data, including from vehicles which are currently located in the United States. These concerns directly underscore the importance and necessity of this rulemaking.

The design, development, manufacture, or supply of certain VCS and ADS components by persons owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia poses undue or unacceptable risks to national security and U.S. persons. As discussed further, the PRC and Russia have adopted political, legal, and regulatory regimes that enable their governments to exercise direct and indirect ownership, control, or influence over entities in the connected vehicle supply chain. In addition, unlike other foreign adversaries, the PRC and Russia have certain current and anticipated industrial capabilities and expertise that uniquely position them within the global automotive market to pose an outsized risk, particularly when paired with the vulnerabilities present within certain connected vehicle systems.

1. PRC

The PRC's role in the U.S. connected vehicle supply chain presents undue and unacceptable risks. The PRC has a large and growing automotive sector that has become increasingly integrated into the ICTS supply chains of global automakers, providing the PRC automotive sector with potential increased access to the U.S. automotive market. Further, the PRC's automotive sector has historical and ongoing links to the PRC military and is influenced by pervasive government intervention, including through legal and regulatory structures that increase government oversight of and control over PRC-based companies and their foreign subsidiaries. See Du Xiaoying and Wang Siyi, Dongfeng plays pivotal role in supporting China's military, *China Daily* (Sept. 25, 2015), https://www.chinadaily.com.cn/cndy/2015-09/25/content_21976945.htm; Matthew Funaiolo, et al., China Accelerates Construction of 'Ro-Ro' Vessels, with Potential Military Implications, *Center for Strategic and International Studies* (Oct. 11, 2023), [https://chinapower.csis.org/analysis/china-construct-ro-ro-vessels-military-](https://chinapower.csis.org/analysis/china-construct-ro-ro-vessels-military-implications/)

[implications/](https://chinapower.csis.org/analysis/china-construct-ro-ro-vessels-military-implications/) (describing the involvement of Chinese automakers in the production of "ro-ro" vessels and the dual-use applications of ro-ro vessels, including clear evidence that the PRC military intends to utilize ro-ros to support military operations). Moreover, the PRC possesses advanced cyber espionage capacities that it exercises through both state and non-state cyber actors, exacerbating such risks. See Simon Handler, The 5x5-China's cyber operations, *The Atlantic Council* (Jan. 2023), <https://www.atlanticcouncil.org/content-series/the-5x5-the-5x5-chinas-cyber-operations/>.

First, the size and scale of state control in the PRC auto sector poses outsized risks, increasing the vectors by which the national security threats associated with connected vehicles can enter the United States. The PRC automotive sector has played an important role in its domestic industrial policy since 1986, when the sector was first named a "pillar industry" in the Seventh Five-Year Plan. The Fourteenth Five-Year Plan, the latest strategic framework for the PRC, continues to prioritize the technological innovation and sustainable development of the automobile market, including new energy vehicles and connected vehicle software and hardware systems, as key priorities. See Ben Murphy, Outline of the People's Republic of China 14th Five-Year Plan for National Economic and Social Development and Long-Range Objectives for 2035, *Center for Security and Emerging Technology*, at 22–23 (May 2021), https://cset.georgetown.edu/wp-content/uploads/t0284_14th_Five_Year_Plan_EN.pdf. For many years, the state has pursued policies and practices to further its industrial policy objectives in the automotive sector, including mandatory joint venture requirements, foreign equity restrictions, massive subsidies, and other financial support measures. The PRC automotive sector's growth is also led in part by several prominent state-owned firms, some of which began as military equipment suppliers (e.g., Dongfeng, Sichuan Auto Works, Shanxi Auto Works). See Mattias Holweg, Jianxi Luo, and Nick Oliver, The past, present and future of China's automotive industry: a value chain perspective, *International Journal of Technological Learning, Innovation and Development* 2, at 14 (Feb. 2009), <https://www.pure.ed.ac.uk/ws/portalfiles/portal/7765689/Oliver.pdf>. In recent years, this growth and development has led to a massive surge in domestic vehicle production, with Chinese

vehicle production increasing by 1.5 times over the 15-year span between 2008 and 2023. Indeed, in 2023, the PRC alone was responsible for nearly 33 percent of global passenger vehicle production. See VDA, Global passenger vehicle production in 2023, by country [Graph], (Retrieved July 23, 2024), <https://www.statista.com/statistics/277055/global-market-share-of-regions-on-auto-production/>; OICA & Statista, China's share in global vehicle production from 2008 to 2021 [Graph], (Mar. 17, 2022), <https://www.statista.com/statistics/233942/chinas-share-of-global-production-capacity-of-the-automobile-industry/>.

Amid this significant growth in the PRC's domestic auto industry, Chinese automakers, both state-owned and private firms, have leveraged their significant state-backed support, including subsidies, to fuel a global expansion that has seen Chinese automakers establishing foreign operations in countries like South Africa, the Netherlands, Thailand, Japan, and Brazil, among others, increasing the risks stemming from PRC auto manufacturing in third countries. See Daisuke Wakabayashi and Claire Fu, China E.V. Makers Rush In and Upend a Country's Entire Auto Market, *The New York Times* (Jul. 30, 2024), <https://www.nytimes.com/2024/07/30/business/chinese-electric-vehicles-thailand.html>; Daniel Leussink, BYD's Global expansion push runs into stiff Japan test, *Reuters* (Sept. 4, 2024), <https://www.reuters.com/business/autos-transportation/byds-global-expansion-push-runs-into-stiff-japan-test-2024-09-05/>; China's BYD starts construction on manufacturing complex in Brazil, *Reuters* (Mar. 5, 2024), <https://www.reuters.com/business/autos-transportation/chinas-byd-starts-construction-manufacturing-complex-brazil-2024-03-06/>.

The global expansion of the PRC auto sector's operations in foreign markets and recent foreign investment announcements indicate that Chinese automakers could attempt to enter the U.S. market via exports from third-party countries. Exports from third-party countries of vehicles with Chinese ICTS would expand the scope of the risk that Chinese ICTS poses to U.S. national security. See Paul Wiseman, Prospect of low-priced Chinese EVs reaching US from Mexico poses threat to automakers, *The Associated Press* (June 27, 2024), <https://www.ap.org/news-highlights/spotlights/2024/prospect-of-low-priced-chinese-evs-reaching-us-from-mexico-poses-threat-to-automakers/>; Daina Beth Solomon, Chinese automaker BYD looking for Mexico plant location,

executive says, *Reuters* (Feb. 28, 2024), <https://www.reuters.com/business/autos-transportation/chinese-carmaker-byd-launches-low-cost-dolphin-mini-ev-mexico-2024-02-28/>. Some PRC-based companies have announced plans to establish manufacturing facilities in Mexico, which could enable them to receive favorable trade terms contained in the U.S.-Mexico-Canada Agreement (USMCA). *See id.* Therefore, the PRC's growing presence within the global auto sector, particularly via operations in third-party countries, is expected to expand the number of potential nexus points between PRC connected vehicle suppliers and U.S. automakers and consumers, further undermining U.S. national security.

Second, the military linkage between the PRC government and the automotive sector continues to the current day with the PRC's military-civil fusion strategy, which seeks to, among other goals, exploit investment and innovation within the PRC's private sector to achieve military modernization goals. The military-civil fusion strategy prioritizes specific information and communication technologies and services that are integral to connected vehicle supply chains (e.g., telecommunications, artificial intelligence). *See* Ben Murphy, Translation for Outline of the People's Republic of China 14th Five-Year Plan for National Economic and Social Development and Long-Range Objectives for 2035, *Center for Security and Emerging Technology*, at 11 and 36 (May 2021), https://cset.georgetown.edu/wp-content/uploads/t0284_14th_Five_Year_Plan_EN.pdf. Strategies to achieve these goals include mandating collaboration between PRC-based companies and the military and establishing public and private firms as vectors to facilitate technology transfer, industrial espionage, and intellectual property (IP) theft that would be advantageous for the PRC military. *See* Office of the Dir. of Nat'l Intelligence, *Annual Threat Assessment of the U.S. Intelligence Community*, at 6–10 (Feb. 6, 2023), <https://www.odni.gov/files/ODNI/documents/assessments/ATA-2023-Unclassified-Report.pdf>.

Third, even beyond military-civil fusion, the role of the PRC government

in the auto sector has only grown as government intervention in the market increases. For example, the PRC intervenes in the auto market through direct ownership of prominent industry participants, the purchasing of so-called “golden shares” to gain significant levels of influence within otherwise private firms, embedding Chinese Communist Party (CCP) representatives within corporate boards and management, and the forceful application, or threat, of the PRC's expansive security laws, including its digital era legal structure. *See* Lingling Wei, China's New Way to Control Its Biggest Companies: Golden Shares, *Wall Street Journal* (Mar. 2023), <https://www.wsj.com/articles/xi-jinpings-subtle-strategy-to-control-chinas-biggest-companies-ad001a63>. Laws promulgated in recent years provide the PRC government increased oversight and control over PRC-based companies and their foreign subsidiaries, providing a lever for influence over corporate operations that further exacerbates the threat that the PRC poses to U.S. national security. These laws require PRC-based companies, wherever located, to comply with certain access and information requests upon demand from the PRC and therefore could be used by the PRC to obtain business or other data from PRC-based companies involved in the connected vehicle supply chain. Companies operating under these laws frequently highlight the lack of transparency, consistency, clarity, and predictability of the enforcement of these laws, publicly stating that PRC laws relating to cybersecurity, data storage, or cryptography are not subject to the same degree of judicial accountability as they might be in other jurisdictions. In particular, BIS notes the PRC may utilize a suite of national security laws (e.g., *Counter-Espionage Law of the People's Republic of China* [promulgated by the Standing Committee of the National People's Congress, Nov. 1, 2014, amended Apr. 26, 2023, effective July 1, 2023]; *National Security Law of the People's Republic of China* [promulgated by the Standing Committee of the National People's Congress, July 1, 2015, effective July 1, 2015]; *National Intelligence Law of the People's Republic of China*

[promulgated by the Standing Committee of the National People's Congress, June 27, 2017, effective June 28, 2017, amended Apr. 27, 2018]; *Anti-Terrorism Law of the People's Republic of China* [promulgated by the Standing Committee of the National People's Congress, Dec. 27, 2015, effective Jan. 1, 2016, amended Apr. 27, 2018]) to compel companies, including those in the connected vehicle supply chain, to support national security efforts—which are more broadly defined in the PRC than in the United States—or military agents upon request. The PRC pursues its broad national security and geopolitical objectives through the creation of backdoors and security vulnerabilities in products sold abroad, and, in many cases, the PRC prohibits companies from disclosing that such a request was made. *See* U.S. Department of Homeland Security, *Data Security Business Advisory: Risks and Considerations for Businesses Using Data Services and Equipment from Firms Linked to the People's Republic of China*, (Dec. 2022), https://www.dhs.gov/sites/default/files/publications/20_1222_data-security-business-advisory.pdf; Ministry of Civil Affairs of the People's Republic of China, *National Security Law of the People's Republic of China*, Arts. 25 and 77, promulgated by the 12th National People's Congress on July 1, 2015, <https://www.mca.gov.cn/zt/n2643/n2647/c1662004999979993333/content.html>. Additionally, PRC authorities have established a regulatory system that effectively allows them to stockpile cyber vulnerabilities. Entities subject to these regulations, including automotive systems manufacturers, are required to report vulnerabilities upon discovery to PRC authorities before patching them. *See* Cyberspace Administration of China, *Provisions on the Management of Security Vulnerabilities of Network Products*, (July 2021), https://www.cac.gov.cn/2021-07/13/c_1627761607640342.htm. This requirement drastically increases the ability of the PRC government and PRC-backed cyber actors to take action against the United States using connected hardware and its associated software by creating an accessible library of known and potentially unpatched vulnerabilities.

Fourth, the PRC has demonstrated a high level of competency in cyber malfeasance. For instance, PRC state-sponsored cyber group Volt Typhoon has proven capable of infiltrating the IT networks of critical U.S. infrastructure using sophisticated tactics, techniques, and procedures such as Living Off the Land Techniques to pre-position themselves across U.S. critical infrastructure and military assets to carry out advanced reconnaissance in IT systems. At a later point, once advanced reconnaissance is conducted, they are then capable of launching cyberattacks to impede U.S. decision making, induce social panic, and interfere with the deployment of U.S. military forces. See Cybersecurity & Infrastructure Security Agency, *PRC State-Sponsored Actors Compromise and Maintain Persistent Access to U.S. Critical Infrastructure*, at 1–5 (Feb. 2024), https://www.cisa.gov/sites/default/files/2024-03/aa24-038a_csa_prc_state_sponsored_actors_compromise_us_critical_infrastructure_3.pdf. A 2022 Annual Report to Congress by the U.S.-China Economic and Security Review Commission found that the PRC's ability and willingness to "weaponize" its own industries, particularly its cybersecurity industry, grants the country an asymmetric advantage over the United States. This argument is supported by public reporting detailing the methods by which known government-affiliated cyber threat groups utilize private firms to carry out their attacks. See U.S.-China Economic and Security Review Commission, *2022 Annual Report to Congress*, at 11 and 14–15 (Nov. 2022), https://www.uscc.gov/sites/default/files/2022-11/2022_Annual_Report_to_Congress.pdf; Christian Shepherd, et al., Leaked files from Chinese firms show vast international hacking efforts, *The Washington Post* (Feb. 22, 2024), <https://www.washingtonpost.com/world/2024/02/21/china-hacking-leak-documents-isoon/>. Additionally, a 2012 report from the United States Senate Permanent Select Committee on Intelligence examining the national security risks posed by the PRC-based companies Huawei and ZTE specifically argued that there are numerous opportunities for PRC-based threat actors to insert malicious hardware or software components into ICTS products throughout the product development stage. See Permanent Select Committee on Intelligence, *Investigative Report on the U.S. National Security Issues Posed by Chinese Telecommunications Companies Huawei and ZTE*, at 3 (Oct. 2012), [https://intelligence.house.gov/sites/intelligence.house.gov/files/documents/huawei-zte%20investigative%20report%20\(final\).pdf](https://intelligence.house.gov/sites/intelligence.house.gov/files/documents/huawei-zte%20investigative%20report%20(final).pdf). This risk is further demonstrated by a study of designed vulnerabilities in products conducted by the Georgetown Security Studies Review, which outlines five years of persistent insertion of malicious code by PRC-based threat actors. See Ryan Neauhard, Flawed by design electronics with pre-installed malware, *Georgetown Security Studies Review*, at 2 (May 23, 2018), <https://georgetownsecuritystudiesreview.org/2018/05/23/flawed-by-design-electronics-with-pre-installed-malware/>. Given the above, the PRC's access to the U.S. connected vehicle supply chain through its growing automotive sector, military-civil fusion and other corporate governance policies and legal institutions, paired with its development of mature cyber espionage capabilities, present a significant risk that the PRC could alter the systems in or obtain and manipulate data about market participants who use connected vehicle ICTS designed, developed, manufactured, or supplied by persons owned by, controlled by, or subject to the jurisdiction or direction of the PRC.

2. Russia

The Russian state has prioritized the growth of its automotive manufacturing industry, instituted a legal and regulatory framework to compel company data sharing with the state, and maintained a long history of malicious cyber operations against the United States. Under these circumstances, there is an increasing likelihood that Russia emerges as a supplier of connected vehicles technologies for the U.S. market, providing the Russian government a means of exploiting U.S. connected vehicles. Incorporating Russian hardware or software into the U.S. connected vehicle supply chain, therefore, poses undue and unacceptable risks to U.S. persons and critical infrastructure.

First, while Russia has historically been less active in the global automotive sector than the PRC, the Russian government has recently sought to revitalize its domestic auto manufacturing industry following the exodus of foreign automakers after the imposition of significant additional sanctions in 2022 in response to the conflict in Ukraine. In 2024 alone, the Russian auto market is projected to experience a 15 percent increase in passenger vehicle sales, marking a notable uptick since the Russian market crashed in 2022 following the imposition of sanctions, and some

Russian auto manufacturers have continued introducing new models even amid broader economic headwinds. See Russia's 2024 car sales forecast raised to 1.45mln, units, AEB says, *Reuters* (July 3, 2024), <https://www.reuters.com/business/autos-transportation/russias-2024-car-sales-forecast-raised-145-mln-units-aeb-says-2024-07-03>. Russia's domestic auto sector has begun to show signs of resilience, with at least one automaker releasing a new, primarily domestically developed model since the imposition of Western sanctions, even as other domestically sold models are manufactured in the PRC but undergo final assembly in Russia. See Gleb Stolyarov and Alexander Marrow, Focus: Made in Russia? Chinese cars drive a revival of Russia's auto factories, *Reuters* (July 20, 2023), <https://www.reuters.com/business/autos-transportation/made-russia-chinese-cars-drive-revival-russias-auto-factories-2023-07-20/>. In Russia, the revitalization of the domestic economy, particularly the domestic auto sector, has become a key focus of the Russian government since the imposition of sanctions in recent years. The Russian government has released several plans that prioritize the development of its domestic automotive market with a particular focus on research and development of new technology, including autonomous vehicles and V2X ("Vehicle to Everything") vehicle connectivity systems. See Russian Federation, *Order of the Government of the Russian Federation of December 28, 2022 No. 4261-r On Approval of the Strategy for the Development of the Automotive Industry of the Russian Federation until 2035* (Jan. 4, 2023), <https://www.garant.ru/products/ipo/prime/doc/405963861/#1000>; Russian Federation, *Order of the Government of the Russian Federation of August 23, 2021 No. 2290-r On Approval of the Concept for the Development of Electric Vehicle Production and the Transport Strategy of 2030* (2023), <http://static.government.ru/media/files/bW9wGZ2rDs3BkeZHf7ZsaxnlbJzQbJf.pdf>. The development of these interlocking national transportation and automotive industry strategies involves stakeholders from domestic automakers, technology sectors, and the Russian government, illustrating a coordinated effort across the Russian state and its domestic automotive industry. In order to extend the reach of the state into the Russian auto industry, in February 2024, Russia established a state-owned corporation named Rosavto that will act as liaison between government and industry.

Rosavto will develop production plans for vehicles and automotive spare parts, oversee the development of new models and technologies, and manage order distribution, legislative initiatives, and workforce training. See Eugene Gerden, New State Corporation to Oversee Russian Auto Industry, *Wards Auto* (Feb. 2024), <https://www.wardsauto.com/regulatory/new-state-corporation-to-oversee-russian-auto-industry>. Further, Russia has demonstrated resilience against Western sanction and export control regimes while also continuing to grow its electric vehicle market. See Carnegie Endowment, *Why Russia Has Been So Resilient to Western Export Controls*, (Mar. 2024), <https://carnegieendowment.org/research/2024/03/why-russia-has-been-so-resilient-to-western-export-controls?lang=en>. According to market reporting, the Russian electric vehicle market has had a robust performance, with double digit growth in output and sales, largely driven by a surge in the sector's exports. See Russia Automotive Market Report—Analysing EVE Trends and Car Sales Volume Data, *Global Monitor* (retrieved Nov. 2024), <https://www.globalmonitor.us/product/russia-automotive-market>. Projections suggested that with the support of the government, the electric vehicle subsector is poised for further growth. See *id.* Concerted efforts by the Russian government to develop the domestic Russian automotive industry, a growing electric vehicle market, and resilience to western sanction and export control regimes increase the likelihood that Russia-linked connected vehicle technology, such as VCS hardware or covered software, will enter the U.S. connected vehicle supply chain, which, as described below, presents an undue or unacceptable risk to U.S. national security. Given these factors, BIS is taking proactive measures to mitigate any risk posed by Russia's influence over the U.S. connected vehicle supply chain and to prevent Russia from gaining increasing influence over the U.S. connected vehicle supply chain in the future.

Second, like the PRC, the Russian government employs a suite of laws that enable it to compel domestic companies with overseas operations to provide data gleaned through foreign ventures or to surrender similar operational assets to the Russian state. These laws (e.g., Russian Law Federal Security Service No. 40–FZ, “Operational-Investigative Activity” No. 144–FZ, 2014 Amdt. to No. 97–FZ) allow the Russian government direct control over Russian corporations' activities and facilities,

including data or customer information, and mandate that companies assist with counterintelligence actions as requested by the state, including the Federal Security Service of the Russian Federation (FSB). The FSB can, in some cases, mandate that companies allow the FSB to install equipment on their infrastructure or collect data. Firms that are required to facilitate this surveillance or intrusion activity can also be required to actively obfuscate such requests and must provide the state with any information essential to the decryption of any communications captured. Together, these laws enable the Russian state to collect and exploit sensitive data on or about U.S. persons via Russian businesses and, should Russian companies become more prominent in the connected vehicle supply chain, create a pathway through which the Russian government could secure wide-ranging access to the vast amounts of data collected and processed by connected vehicles in the United States. See Internet Governance, *Report of Peter B. Maggs*, (Dec. 2017), <https://www.internetgovernance.org/wp-content/uploads/12-7-Exhibit-AR-Part-6-Maggs-report.pdf>. Public reports have consistently raised concerns about Russian government laws concerning data collection, citing a lack of appropriate safeguards to prevent misuse, including judicial or public oversight. More broadly, reports have repeatedly documented the uneven application of the rule of law, lack of judicial accountability, recurrent violations of judicial proceedings, and challenges with judicial independence. See Justin Sherman, Russia is weaponizing its data laws against foreign organizations, *Brookings* (Sept. 2022), <https://www.brookings.edu/articles/russia-is-weaponizing-its-data-laws-against-foreign-organizations/>; Evgeni Moyakine and A. Tabachnik, Struggling to strike the right balance between interests at stake: The ‘Yarovaya,’ ‘Fake news,’ and ‘Disrespect’ laws as examples of ill-conceived legislation in the age of modern technology, *Computer Law & Security Review*, at 40 (Apr. 2021), <https://www.sciencedirect.com/science/article/pii/S0267364920301175>.

Third, apart from the risks presented by the Russian government access as codified in Russia's legal framework, the country has a longstanding pattern of utilizing cyber operations to gain illicit access to systems that advance the strategic ends of Russian authorities. For example, in December 2020, the company SolarWinds announced it was the target of a two-year-long cyber

operation perpetrated by Russian hackers in the Russian Foreign Intelligence Services (SVR). See U.S. Securities and Exchange Commission, *SEC Charges SolarWinds and Chief Information Security Officer with Fraud, Internal Control Failures*, (Oct. 2023), <https://www.sec.gov/newsroom/press-releases/2023-227>. The perpetrators of the SolarWinds supply chain attack used a software update to deliver malware to the platform's users after Russian intelligence services obtained covert access to the computer systems on which the platform was installed. The attack ultimately impacted more than 18,000 users, including more than 100 companies and nine U.S. Government agencies. This attack credibly demonstrates how Russian actors can infiltrate global enterprise systems via software updates and exemplifies how they could similarly leverage software as a means to exploit connected vehicles in the United States. Additionally, a 2023 Cyber Security Advisory suggests that exploitation of information technology firms and their software will be a persistent tactic leveraged by the Russian government to collect intelligence. See Joint Cyber Security Advisory, *Russian Foreign Intelligence Service (SVR) Exploiting JetBrains TeamCity CVE Globally*, at 3 (Dec. 2023), <https://www.cisa.gov/news-events/cybersecurity-advisories/aa23-347a>. BIS has further identified Kaspersky Lab as an example of the risks imposed by Russia's ability to leverage software companies to allow Russia the ability to collect and weaponize the personal information of Americans. See Bureau of Industry and Security, *Final Determination: Case No. ICTS–2021–002, Kaspersky Lab, Inc.* (June 2024), <https://www.federalregister.gov/documents/2024/06/24/2024-13532/final-determination-case-no-icts-2021-002-kaspersky-lab-inc>.

These political, legal, and regulatory frameworks, combined with the demonstrated capabilities of Russia to exploit ICTS supply chains through malicious cyber activity, exacerbate BIS's concern that the threats posed by Russia could be directed at the U.S. connected vehicle supply chain, including integral systems such as VCS and ADS. The persistent connectivity and software-driven capabilities of VCS and ADS, combined with the vast amounts of data that traverse these systems, make them valuable and likely targets for the Russian government to compromise.

c. Consequences

Taken together, VCS and ADS designed, developed, manufactured, or supplied by persons under the ownership, control, jurisdiction, or direction of the PRC or Russia manifest undue and unacceptable risks to United States national security and to the safety and security of U.S. persons in several ways. If left unaddressed, the interaction of threats and vulnerabilities could result in the exfiltration of sensitive U.S. persons' data to foreign adversaries or the remote or automated manipulation of connected vehicles by the PRC and Russia, among other concerns.

First, the integration of compromised VCS or ADS into a completed vehicle could undermine the reliability of a connected vehicle or its underlying control systems. Compromised components in VCS or ADS could result in increased frequency and severity of connected vehicle malfunctions that could, in turn, detrimentally impact U.S. national security, including the resiliency of U.S. critical infrastructure, or the safety of U.S. persons.

Given the persistent connectivity of VCS and ADS and the essential functions that they serve in the operation of connected vehicles, these systems, if compromised and co-opted by an adversary, could serve as the nodes through which a foreign actor could probe or breach broader ICTS systems within the United States. Remote malicious cyber activities—which rely on network connectivity (e.g., Wi-Fi, Bluetooth, 3/4/5G networks)—have increased significantly in recent years and consistently outnumber malicious cyber activities carried out through physical access to devices since at least 2010, accounting for 95 percent of all malicious cyber activities in 2023. See Upstream, *Upstream's 2024 Global Automotive Cybersecurity Report* (2024), <https://upstream.auto/reports/global-automotive-cybersecurity-report/>. Considering the increasingly sophisticated methodologies employed by foreign adversaries to gain access to critical U.S. cyber infrastructure, compromised VCS and ADS, with their inherent connectivity, would easily present another attack surface for foreign adversaries to exploit. As detailed in the previous analysis of vulnerabilities inherent in VCS, adversaries with access to VCS, such as telematics systems, could inject malicious code into a vehicle's operational systems. Additionally, such malware could be developed in such a way as to exploit vehicle connectivity to

propagate itself across multiple systems as the vehicle travels and connects to those discrete systems. In this way, not only would the ICTS integral to connected vehicles be compromised, but vehicle systems could be exploited to spread malware with the intent of harming all ICTS systems to which a vehicle connects. See Anastasios Giannaros, et al., *Autonomous Vehicles: Sophisticated Attacks, Safety Issues, Challenges, Open Topics, Blockchain and Future Directions*, *Journal of Cybersecurity and Privacy* 3.3, at 505 (2023).

Second, as discussed, both VCS and ADS have significant control over and access to critical vehicle functions, including steering, braking, speed control, ignition, and almost all other mechanical functions of the vehicle. Such extensive control over vehicle operations could enable a foreign adversary to use a compromised VCS or ADS component to hamper vehicle functions or even to manipulate a connected vehicle for malicious purposes. As VCS and ADS control or link to integral vehicle functions, a foreign adversary could even exploit compromised VCS or ADS components to impair or disable a connected vehicle while in transit. Disabled, impaired, or otherwise improperly functioning vehicles could result in grave damage or impediment to critical infrastructure within the United States or could result in physical harm to U.S. persons. A disabled, impaired, or erratically functioning connected vehicle, or potentially multiple connected vehicles all experiencing problems simultaneously, could cause traffic patterns that would effectively block critical transportation arteries. This scenario could also cause collisions, ultimately damaging transportation features (e.g., roadways, bridges, tunnels), energy, telecommunications, and similar infrastructure situated near transportation systems. The potential consequences of widespread connected vehicle impairment could be particularly acute if the targets were fleet vehicles operating in support of infrastructure vital to transportation, energy, water, waste, telecommunications, and other essential services.

The risks to the resiliency of critical U.S. infrastructure posed by connected vehicle components designed, developed, manufactured, or supplied by persons that are owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia are further compounded by the potential for VCS and ADS to collect data on infrastructure. Advances in VCS

and ADS necessitate increasingly cutting-edge sensor suites incorporating radar, LiDAR, camera, sonar, and computer vision to gather information on the surrounding environment for both onboard computing and remote cloud computing to process data in informing vehicle operating decisions. See Anastasios Giannaros, et al., *Autonomous Vehicles: Sophisticated Attacks, Safety Issues, Challenges, Open Topics, Blockchain and Future Directions*, *Journal of Cybersecurity and Privacy* 3.3, at 515 (2023); Luis Hernandez, et al., *Applications of Cloud Computing in Intelligent Vehicles*, *Journal of Artificial Intelligence and Machine Learning in Management*, at 12–13 (2022). This vast wealth of data, collected over time by multiple vehicles, likely contains valuable information such as location data about critical U.S. infrastructure. For example, data gathered from GPS or global navigation satellite systems (GNSS) in a connected vehicle could be cross-referenced and collated with a multitude of other data to produce information about the location, function, and operational trends of various transportation, energy, or other critical infrastructure. See Cybersecurity & Infrastructure Security Agency, *Autonomous Ground Vehicle Security Guide: Transportation Sector*, at 1 (2021), <https://www.cisa.gov/sites/default/files/publications/Autonomous%2520Ground%2520Vehicles%2520Security%2520Guide.pdf>; Cybersecurity & Infrastructure Security Agency, *Cybersecurity and Physical Security Convergence*, at 1 (2020), https://www.cisa.gov/sites/default/files/publications/Cybersecurity%2520and%2520Physical%2520Security%2520Convergence_508_01.05.2021.pdf. A foreign adversary could extract such critical infrastructure data using its control over designers, developers, manufacturers, or suppliers of VCS and ADS components subject to the foreign adversary's ownership, control, jurisdiction, or direction, thereby increasing the risk and precision of attacks on such critical infrastructure.

Finally, given the volume of information collected by vehicles to support VCS and ADS operation, exploitation of these systems could enable an adversary to cull a tremendous amount of data on vehicle movement across the United States. This information could potentially include data generated on or from fleet vehicles used by emergency response, law enforcement, or the military. This data, and particularly all metadata and

derived data that can be drawn from the raw data, can provide considerable insight into fleet size, composition, and capabilities, as well as information on organizational response times and response procedures. Such information would prove valuable to an adversary seeking to disrupt U.S. emergency response operations. Any potential risks to U.S. national security arising from disrupting emergency response activities are further compounded by the potential for an adversary to exploit access to VCS and ADS to leverage the persistent connectivity required for malign operations, including exploits to trigger improper engine shutdown, brake activation, or electrical system deactivation. Any of these actions would have serious consequences for U.S. persons' health and safety. VCS and ADS, if corrupted by the producer at the direction of a foreign adversary, could improperly access driver mobile devices to collect, exfiltrate, and exploit personally identifiable information (PII) or even protected health information (PHI). It is also possible that a foreign adversary could use covert access to VCS and ADS to provide false or misleading operational information to a driver, causing degraded and dangerous vehicle operation conditions. Such tactics could be used either indiscriminately to sow panic and cause disruption, or to intentionally target specific drivers. Additionally, and as noted by the Office of the Director of National Intelligence in the 2024 National Counterintelligence Strategy, foreign adversaries, like the PRC and Russia, view this kind of PII and PHI as particularly valuable as it provides them "not only economic and R&D benefits, but also useful [counterintelligence] information, as hostile intelligence services can use vulnerabilities gleaned from such data to target and blackmail individuals." See The Director of Nat'l Intelligence, *2024 National Counterintelligence Strategy* (Aug. 2024), https://www.dni.gov/files/NCSC/documents/features/NCSC_CI_Strategy-pages-20240730.pdf.

Even when such systems are not subject to compromise, companies owned by, controlled by, or subject to the jurisdiction or direction of a foreign adversary, if occupying certain positions within the supply chain, may potentially legally gain access to their users' personal data. For example, one prominent Chinese auto manufacturer with operations in the United States publicly states in its U.S. privacy policy that the personal data it may collect (e.g., identifiers, customer records information, internet or other electronic

network activity information, geolocation information, professional or employment-related information) is only stored in the United States in principle, but goes on to note that personal data may be transferred to its headquarters in China for processing and storage. While the incorporation in the U.S. supply chain of VCS hardware and covered software designed, developed, manufactured, or supplied by persons owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia poses one type of risk, transactions involving VCS hardware and covered software pose a separate risk when the connected vehicle manufacturer is, itself, owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia, even when the connected vehicle manufacturer is located in the United States. Connected vehicle manufacturers have privileged and direct access to all systems in the vehicle, including the VCS hardware and covered software. Not only are VCS hardware and covered software built to the connected vehicle manufacturers' specifications but prior to the sale of a completed connected vehicle, connected vehicle manufacturers are able to exercise significant levels of control over that VCS hardware and covered software with little to no external oversight prior to the sale of the completed connected vehicle. Based on the foregoing, BIS assesses that ICTS transactions involving VCS hardware or covered software designed, developed, manufactured, or supplied by persons owned or controlled by, or subject to the jurisdiction or direction of the PRC or Russia—including transactions to supply the VCS hardware or covered software into the United States market as part of the sale of the completed connected vehicle—present undue or unacceptable risks to the national security of the United States within the meaning of E.O. 13873.

V. Discussion of the Final Rule

This final rule prohibits—absent a general or specific authorization otherwise—(1) VCS hardware importers from knowingly importing into the United States certain hardware for VCS (section 791.302, "Prohibited VCS hardware transactions"), (2) connected vehicle manufacturers from knowingly importing into the United States completed connected vehicles incorporating covered software, and (3) connected vehicle manufacturers from knowingly selling within the United States completed connected vehicles that incorporate covered software (section 791.303, "Prohibited covered

software transactions"). These prohibitions apply to transactions when such VCS hardware or covered software is designed, developed, manufactured, or supplied by persons owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia. The rule also (4) prohibits connected vehicle manufacturers who are persons owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia from knowingly selling in the United States completed connected vehicles that incorporate VCS hardware or covered software (section 791.304, "Related prohibited transactions"), regardless of whether such VCS hardware or covered software is designed, developed, manufactured, or supplied by persons owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia (collectively, "prohibited transactions").

This rule primarily impacts market participants who could be considered VCS hardware importers or connected vehicle manufacturers, such as OEMs and importers of completed connected vehicles, as well as tier one and tier two suppliers of VCS hardware. For these entities, three compliance mechanisms—Declarations of Conformity, general authorizations, and specific authorizations—are available, depending on whether the VCS hardware importer or connected vehicle manufacturer wishes to engage in an otherwise prohibited transaction. Importantly, because VCS hardware importers and connected vehicle manufacturers frequently offer many different types of products, any one of the three mechanisms may not be available for their entire business. Rather, depending on the product, VCS hardware importers and connected vehicle manufacturers could be required to use a combination of these three mechanisms to meet their obligations under the rule.

First, Declarations of Conformity are required to be submitted to BIS by VCS hardware importers and connected vehicle manufacturers prior to importing VCS hardware or importing or selling completed connected vehicles that incorporate covered software, certifying that the VCS hardware or covered software was not designed, developed, manufactured, or supplied by persons owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia (section 791.305, "Declaration of Conformity"). The Declarations of Conformity require VCS hardware importers and connected vehicle manufacturers to certify to BIS, once a year or whenever material

changes occur, that they are not engaging in prohibited transactions and provide certain information on the import of VCS hardware and/or the import or sale of completed connected vehicles as relevant.

Second, a general authorization could be available for VCS hardware importers and/or connected vehicle manufacturers seeking to engage in an otherwise prohibited transaction, depending on the circumstances (section 791.306, “General authorizations”). General authorizations are available only in a narrow set of circumstances in which the conditions of the otherwise prohibited transaction appropriately mitigate the level of risk associated with the particular type of transaction. In determining whether to issue a general authorization, BIS may consider any information or material BIS deems relevant and appropriate, classified or unclassified, from any Federal department or agency, or from any other source. BIS will publish general authorizations issued pursuant to this subpart on its website (<https://www.bis.gov/OICTS>) and will also publish them in the **Federal Register**. Those availing themselves of a general authorization are required to continuously monitor their use of the VCS hardware or completed connected vehicles covered by the general authorization to ensure the authorization still applies. If a change renders the transaction ineligible for a general authorization, such as a change in the vehicle’s use, the VCS hardware importer or connected vehicle manufacturer is required to apply for a specific authorization and cease engaging in such transaction unless and until a specific authorization is granted.

Lastly, a specific authorization may be permitted for VCS hardware importers and connected vehicle manufacturers who wish to engage in a prohibited transaction, but do not otherwise qualify for a general authorization from BIS (section 791.307, “Specific authorizations”). Such VCS hardware importers and connected vehicle manufacturers are required to pause engaging in these transactions before they may proceed with the prohibited transaction under a specific authorization. A specific authorization will only be available in circumstances where BIS determines, based on the information submitted by the applicant as well as any information or material BIS deems relevant and appropriate, classified or unclassified, from any Federal department or agency, or from any other source, that the otherwise prohibited transaction does not present an undue or unacceptable risk to U.S.

national security. However, as a condition of approving the specific authorization, BIS might impose certain requirements and mitigation measures upon the VCS hardware importers and connected vehicle manufacturers seeking to proceed with the prohibited transaction.

VCS hardware importers and connected vehicle manufacturers can appeal any of the following BIS decisions to the Under Secretary: the determination that a VCS hardware importer or connected vehicle manufacturer is ineligible for a general authorization, the denial of an application for a specific authorization, or the suspension or revocation of a previously granted specific authorization (section 791.309, “Appeals”). Further, the regulation establishes a method for VCS hardware importers and connected vehicle manufacturers to seek guidance on prospective transactions that may be prohibited through a BIS advisory opinion (section 791.310, “Advisory opinions”). BIS may also share guidance on its website for VCS hardware importers or connected vehicle manufacturers that certain activities could constitute a prohibited transaction.

In issuing this rule, BIS recognizes that Section 203(b) of IEEPA—*i.e.*, the “Berman Amendment”—limits the scope of the authority to regulate or prohibit transactions relating to “information” or “informational materials.” In relevant part, the Berman Amendment states that the “authority granted to the President by this section does not include the authority to regulate or prohibit, directly or indirectly . . . the importation from any country, or the exportation to any country, whether commercial or otherwise, regardless of format or medium of transmission, of any information or informational materials, including but not limited to, publications, films, posters, phonograph records, photographs, microfilms, microfiche, tapes, compact disks, CD ROMs, artworks, and newswire feeds.” 50 U.S.C. 1702(b)(3). Consistent with the statute’s text and purpose, as demonstrated by legislative history and context as well as judicial interpretations, BIS interprets the phrase “information or informational materials” to be limited to expressive material, consistent with the purpose of 50 U.S.C. 1702(b)(3) to protect materials involving the free exchange of ideas from regulation under IEEPA and with IEEPA’s broader purpose to limit material support to adversaries. A broader interpretation of the term would

enable adversaries and countries of concern to use non-expressive data to undermine our national security.

In the NPRM, BIS explained this regulation is consistent with the Berman Amendment. BIS sought comment on this issue, including whether and how to address the term “information or informational materials” in the final rule. One commenter claimed that the prohibitions included in the rule could extend beyond IEEPA’s intended purpose and result in litigation risk for BIS. Therefore, according to the commenter, BIS should clarify what types of information sharing will be allowed in light of the IEEPA limitations included in the Berman Amendment. One commenter requested clarification on what types of information sharing will be allowed under the rule, including documentation of technology designs. Another commenter asked about “the information/materials—including technology design documentation—that will be permitted or required when the Berman Amendment applies.” In response, BIS notes that this rule does not add any restrictions on the sharing of technology designs, technical documentation, or similar information, nor does it remove any restrictions that may exist under any other regulation (*e.g.*, export controls). Additionally, while this rule requires regulated parties to maintain documentation relevant to their compliance with this rule, it does not prescribe any specific requirements as to what that documentation must consist of. BIS did not receive any comments requesting that specific provisions relating to information or informational materials be added to the rule.

This final rule is consistent with the Berman Amendment. Its purpose is to regulate transactions involving certain hardware and software based on functional capabilities that can be exploited by foreign adversaries, not to restrict the import or export of expressive speech and communicative works and mediums that may be carrying such expressive content. As discussed in Section IV, VCS hardware and covered software process and transmit data such as geolocation information or systems diagnostics reports, which are used to monitor and control the vehicle’s safe operation, and that a foreign adversary could manipulate in ways that could impair or disable the vehicle’s function, leading to dangerous outcomes that pose a harm to U.S. national security. Similarly, the functional data collected by covered software—such as high-definition mapping data of infrastructure and

roadways—would pose serious risks to that critical infrastructure if collected and exploited by a foreign adversary. This final rule “balances IEEPA’s competing purposes” in “restricting material support for hostile regimes while encouraging the robust interchange of information.” *United States v. Amirnazmi*, 645 F.3d 564, 587 (3d Cir. 2011). Thus, BIS has determined that the prohibitions in this rule are consistent with the Berman Amendment. To the extent that any parties believe that a transaction governed by this rule qualifies as “information or informational materials” that is exempt under 50 U.S.C. 1702(b)(3), they can seek clarification using the administrative processes for seeking an advisory opinion.

VI. Revisions From the Proposed Rule and Response to Comments

Each section of the final rule is discussed below, including BIS’s consideration of comments received in response to the NPRM.

a. Definitions

BIS received a variety of comments regarding the definitions listed in the NPRM. In the following sections, BIS summarizes and responds to those comments, outlines the definitions for this final rule, and for some definitions, provides additional interpretation to assist readers in understanding the final definition (see section 791.301, “Definitions”). BIS notes that multiple commenters requested BIS include definitions for terms that are already defined within 15 CFR 791.1, such as U.S. person. In response, BIS emphasizes that definitions contained in 15 CFR 791.1 apply to this subpart, except where the same term is defined differently in this rule.

1. Automated Driving System

In the NPRM, BIS proposed *Automated Driving System (ADS)* to mean hardware and software that, collectively, are capable of performing the entire dynamic driving task for a completed connected vehicle on a sustained basis, regardless of whether it is limited to a specific ODD. After considering commenters’ feedback, BIS has chosen to retain this definition in the final rule.

Many commenters requested clarity on the definition of *ADS*, particularly urging BIS to explicitly reference SAE International’s J3016 standard in the definition. Commenters also recommended that BIS explicitly exclude Levels 1 and 2 of the SAE J3016 standard or plainly state that the

regulation does not capture ADAS in the definition. Similarly, BIS received feedback to incorporate language that excludes hardware and software that are not capable of performing the entire dynamic driving task and to provide examples of these exclusions, such as steering, braking, acceleration, and speed.

BIS declines to include a reference to the current version of SAE J3016 at this time and believes that the current definition adequately covers only those systems that would fall into SAE categorization Level 3 and above. However, this does not preclude BIS from amending this rule in the future to make explicit reference to the current version (April 2021) or any future version of J3016. BIS emphasizes that in enforcing this rule, it will only consider Automated Driving Systems that meet the full definition of this rule to be in scope, and BIS believes that the details regarding the specifics of Levels 3, 4, and 5 systems contained within J3016 are useful guidance for connected vehicle manufacturers to determine if their products fall within scope. Following the effective date of this rule, entities that seek clarification if a specific piece of software is subject to the prohibitions of this rule may submit a request for an advisory opinion from BIS. Further, in response to commenters requesting that BIS explicitly state that ADAS is out of scope, BIS believes this to be unnecessary as the definition aligns with SAE J3016, which differentiates between ADAS and ADS.

Comments contained various positions on the specific exclusion or inclusion of LiDAR and other sensing systems within the prohibitions. Several commenters advised BIS to identify examples of specific components that are outside the scope of the prohibitions, such as radar and camera technology. Others advocated for the inclusion of ADS sensor technology in the prohibitions and explained that BIS should explicitly scope the prohibitions to include cameras, radar, LiDAR, Time of Flight internal sensors, ultrasonic sensors, and microphones. Commenters pointed out that LiDAR is proliferating across critical infrastructure industries and heavily sourced by foreign adversaries, further urging that LiDAR, in particular, should fall in scope of the prohibitions, including LiDAR hardware, software for sensor control, and perception software.

BIS maintains its position from the NPRM that this rulemaking will address only ADS software and not the multiple hardware systems that support or directly enable ADS operation. BIS agrees that proliferation of LiDAR and

other sensing technologies from entities with a foreign adversary nexus throughout multiple critical infrastructure sectors may pose a threat to national security. However, within the limited scope of the automotive sector, and with this initial rulemaking, BIS assesses that a prohibition that focuses specifically on transactions that provide ADS software is appropriate at this time to mitigate the national security risks that they present while limiting the supply chain and economic impact. As stated in the NPRM, BIS is proposing to regulate ADS software rather than the hardware components of ADAS and ADS so as to reduce unnecessary economic impacts and supply disruption. The hardware that enables ADAS and ADS varies widely between different OEMs. ADAS and ADS hardware encompasses a wide variety of different sensors, distributed electronic control units (ECUs), centralized computing units, actuators, and signaling units, among others. These sensors and internal vehicle networking hardware rarely have independent connectivity. A rule that coherently and feasibly addresses these varied supply chains would have disproportionate economic and supply chain impacts relative to the reduction of national security risks. Further, focusing on the ADS software supply chain appropriately mitigates the national security risks that they present while limiting the supply chain and economic impact. Commenters should also refer to the discussion below on covered software for greater detail on BIS’s decision to omit LiDAR from this rule. BIS’s decision not to focus on sensing technologies in this rule does not preclude BIS from addressing them in a subsequent rulemaking.

Commenters recommended providing definitions for terms within the *ADS* definition, such as “operational design domain.” BIS declines to specify a definition for operational design domain as it believes this to be an industry standard term in the autonomous vehicle sector that refers to operating conditions under which an ADS or feature thereof is specifically designed to function. Additionally, BIS hopes to provide industry with additional flexibility to interpret these terms within the contexts of their own technologies, reducing the compliance burden of the rule. However, BIS emphasizes that the related definitions in J3016 are useful guidance for industry and interested entities.

One commenter also advised removing “for a completed connected vehicle” from the definition of *ADS* and adding an “ADS-equipped vehicle” to

the definition to avoid industry confusion because not all connected vehicles will have ADS. BIS maintains that the ADS-related prohibitions of the rule affect only completed connected vehicles that are equipped with ADS by the nature of how the covered software prohibition is crafted, and therefore narrowing the definition of ADS to remove “for a completed connected vehicle” is not necessary.

Commenters noted that the ADS definition includes hardware, while the prohibited transactions do not include ADS hardware. The ADS definition captures the whole of ADS, including hardware, while the regulation prohibits only ADS software and does not prohibit ADS hardware. Commenters advised removing “hardware” from the definition of ADS or providing language that clarifies that the definition of ADS generally describes what an ADS is, but not necessarily what aspects of the system are regulated by this rule. After consideration, BIS declines this suggestion. In the interest of maintaining a harmonized definition that is consistent with other Federal regulations and with industry standards such as NHTSA’s Second Amended Standing General Order 2021–01 and SAE J3016, BIS maintains that inclusion of “hardware” in the definition of ADS is appropriate, even though this does not mean that the hardware of an ADS system is regulated. The structure of the covered software definition and the covered software prohibitions are the only instances of a use of the ADS definition and make clear that ADS hardware is not prohibited when designed, developed, manufactured, or supplied by entities owned by, controlled by, or subject to the jurisdiction or direction of the PRC.

One commenter requested that BIS clarify that ADS software that carries out only a single function, such as parking, be excluded from the definition of ADS. While BIS generally believes that systems that are not capable of executing the entire dynamic driving task (as required by the definition of ADS) are not covered by this regulation, BIS declines to amend the definition in this rule as such a determination would be highly fact specific. BIS emphasizes that persons seeking greater clarity may, upon the effective date of this rule, seek an advisory opinion from BIS regarding a specific transaction involving ADS software.

2. Completed Connected Vehicle

In the NPRM, BIS proposed to define *completed connected vehicle* as follows: “a connected vehicle that requires no further manufacturing operations to

perform its intended function. For the purposes of this subpart, the integration of an ADS into a connected vehicle constitutes a manufacturing operation for a completed connected vehicle.” BIS chose to retain this definition of *completed connected vehicle* in the final rule based on comments, further research, and other changes to the regulation.

Some commenters, particularly from the commercial vehicle sector, argued that the proposed rule did not provide a clear definition of completed vehicle within the context of the commercial market. As discussed in the following section addressing the definition of connected vehicle, BIS recognizes the substantial compliance concerns associated with the complex commercial vehicle sector and has determined that the commercial vehicle sector will not be covered by this rulemaking. Recognizing there are substantial national security concerns in the commercial vehicle market, BIS intends to issue a new proposed rule specifically tailored to this sector.

One commenter urged BIS to substitute a new definition for “ADS-equipped connected vehicle” instead of “completed connected vehicle” in order to avoid implying that all connected vehicles contain ADS software. BIS recognizes that not all connected vehicles are ADS-equipped. However, BIS declines this suggestion because the prohibitions resulting from the regulation pertain to completed connected vehicles, as defined by the regulation, and BIS does not want to engender confusion or suggest that the prohibitions pertain only to products equipped with ADS. Therefore, BIS chooses not to integrate this recommendation into the final rule.

3. Connected Vehicle

In the NPRM, BIS proposed *connected vehicle* to mean a vehicle driven or drawn by mechanical power and manufactured primarily for use on public streets, roads, and highways, that integrates onboard networked hardware with automotive software systems to communicate via dedicated short-range communication, cellular telecommunications connectivity, satellite communication, or other wireless spectrum connectivity with any other network or device. Vehicles operated only on a rail line are not included in this definition. BIS modified its definition in the final rule based on comments from the public.

A few commenters requested clarifications or refinements for BIS’s definition of a “connected vehicle.” Some commenters highlighted that

other regulatory bodies, such as National Highway Traffic Safety Administration (NHTSA) and the Environmental Protection Agency (EPA), often implement separate rulemaking efforts for light/passenger vehicles and heavy/commercial vehicles. BIS has opted to exclude commercial vehicles from the final rule. As discussed elsewhere, BIS emphasizes that the national security risks associated with PRC or Russian VCS and ADS in commercial vehicles are grave, and BIS’s decision to exclude commercial vehicles from this rulemaking in no way implies that these risks are lesser than in the passenger vehicle market. Rather, BIS intends to propose a separate regulation tailored to the commercial sector in the coming months.

Specifically, BIS has amended the definition of “connected vehicle,” for the purposes of this rule, to exclude vehicles with a gross vehicle weight rating (GVWR) of over 10,000 pounds, which generally aligns with the weight delineation included in definitions used by other government agencies (including the Federal Motor Carrier Safety Administration) and by industry to delineate between passenger and commercial vehicles.

One commenter also requested that BIS clarify that recreational vehicles (RVs) are not included in the definition of a “connected vehicle.” BIS declines to amend the definition as it believes RVs will largely be excluded from the regulation. First, as amended, RVs weighing over 10,000 pounds will not be captured by this rule and will instead be subject to an intended future rule covering commercial vehicles. Second, as the commenter noted, BIS intends to issue a general authorization pertaining to vehicles used on public roads for fewer than 30 days a year, which could capture additional RVs that weigh under 10,001 pounds, if manufacturers are able to verify their RVs are eligible. Manufacturers availing themselves of any future general authorization need not notify BIS of its use nor apply for the authorization, contrary to the comment’s suggestion. In the future, BIS may consider whether a general authorization that specifically addresses RVs would be appropriate.

One commenter requested that BIS explicitly exclude agricultural equipment, construction equipment, and mining equipment from the definition of “connected vehicle.” BIS does not believe this modification necessary as it believes the existing definition of “connected vehicle,” which mandates that the vehicle must be manufactured “primarily for use on

public streets, roads, and highways,” and under 10,001 pounds, sufficiently excludes these vehicles from the provisions of the rule. Another commenter urged BIS to clarify that the rule does not apply to entities importing VCS hardware intended for integration into vehicles that are not covered by this rule. BIS believes that modifications to the definition of VCS and VCS hardware address this comment.

Commenters urged BIS to amend the definition of “connected vehicle” to clarify that Personal Delivery Devices (PDDs) and bicycles are not captured by the rule. BIS does not believe this modification is necessary as it does not believe PDDs nor bicycles meet the definition of a connected vehicle. PDDs and bicycles primarily operate in shoulders of roads, bike lanes, and sidewalks, which BIS does not believe meets the definition of “manufactured primarily for use on public streets, roads, and highways.” The exclusion of these devices from this regulation is further in line with Federal and State-level interpretations that have also excluded PDDs from the definition of motor vehicle and related policies.

Commenters asked that BIS clarify whether a “connected vehicle” includes a motorcycle. One commenter offered the definition of motorcycle from 40 CFR 205.151: “[A]ny motor vehicle, other than a tractor, that: (i) [h]as two or three wheels; (ii) [h]as a curb mass less than or equal to 680 kg (1499 lb); and (iii) [i]s capable, with an 80 kg (176 lb) driver, of achieving a maximum speed of at least 24 km/h (15 mph) over a level paved surface.” BIS understands and acknowledges that this definition of motorcycle fits into its definition of “connected vehicle” in this rule, meaning that motorcycles are subject to this regulation, and BIS believes that an additional definition is unnecessary to improve ease of administration of this rule. Further, BIS notes that vehicles such as electric scooters and e-bicycles are not “manufactured primarily for use on public streets, roads, and highways,” given that in most jurisdictions such vehicles cannot be ridden legally on public highways and many roads. Therefore, BIS assesses that the definitions provided are scoped appropriately.

One commenter asked BIS to clarify that the regulation does not apply to VCS hardware importers and connected vehicle manufacturers that import covered hardware intended for assembly into vehicles that are not covered by the definition of connected vehicle. In response, BIS confirms that transactions involving covered software and VCS hardware that are not integrated into a

connected vehicle are not subject to this regulation. VCS hardware importers and connected vehicle manufacturers executing covered software and VCS hardware transactions that are intended to be incorporated into a connected vehicle, as defined in the final rule, are subject to this regulation.

BIS has chosen to define “connected vehicle” to mean a vehicle driven or drawn by mechanical power and manufactured primarily for use on public streets, roads, and highways, that integrates onboard networked hardware with automotive software systems to communicate via dedicated short-range communication, cellular telecommunications connectivity, satellite communication, or other wireless spectrum connectivity with any other network or device. Vehicles operated only on a rail line are not included in this definition. For the purposes of this subpart, a connected vehicle with a gross vehicle weight rating of more than 4,536 kilograms or 10,000 pounds is not included in this definition.

The primary change from the definition in the proposed rule is the inclusion of a weight constraint. This final rule has been narrowed to address vehicles under 10,001 pounds (which largely apply to the passenger vehicle market). BIS intends to supplement this rulemaking with an additional rule to address vehicles over 10,000 pounds (which largely applies to the commercial vehicle market), given the national security risks.

4. Connected Vehicle Manufacturer

In the NPRM, BIS proposed “connected vehicle manufacturer” to mean a U.S. person (1) manufacturing or assembling completed connected vehicles in the United States; and/or (2) importing completed connected vehicles for sale in the United States. Based on feedback from commenters, BIS has amended its definition of “connected vehicle manufacturer” in the final rule.

Commenters advised BIS to be more specific about who is responsible for reporting to BIS under this regulation. Commenters recommended that BIS clarify that contracting with another party to manufacture or assemble a completed connected vehicle that integrates one’s own ADS or VCS for one’s own business is out of scope of the regulation. BIS declines to do so. Through modifications to the *connected vehicle manufacturer* definition, BIS specifies that a person whose sole manufacturing or assembly operation is integrating ADS into an otherwise completed connected vehicle would

qualify such a person as being a “connected vehicle manufacturer.” BIS also included changes to the definition of *sale* to ensure that these contracting operations are within scope of the regulation. As discussed further below relating to the modifications to the definition of *sale*, BIS has determined that contracting operations could, but may not necessarily, be a sale under the terms of this rule.

Commenters encouraged BIS to consider whether a person owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia, whose sole manufacturing or assembly operation is integrating ADS into an otherwise completed connected vehicle, should be subject to the prohibitions in the rule and need to obtain a specific authorization before importing or selling that completed connected vehicle in the United States. BIS determined that such integration of ADS software into a completed connected vehicle by a person owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia is an extension of the national security risk relating to covered software and intended to be restricted. In response, BIS clarifies that ADS integration into an otherwise completed connected vehicle is subject to this regulation and has updated the definition of connected vehicle manufacturer in the final rule to reflect this.

Commenters also encouraged BIS to make third-party manufacturers or assemblers operating on behalf of a U.S. entity, regardless of the origin of the ADS or VCS, exempt from this regulation. BIS rejects this request and has updated the regulation to clarify that third-party manufacturers who are persons owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia are subject to this rule. Third-party manufacturers are an integral aspect to a connected vehicle manufacturer’s overall manufacturing operations; therefore, if such third parties were persons owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia, this would continue to perpetuate the national security risks that this rule is seeking to address.

In the final rule, BIS has chosen to define a *connected vehicle manufacturer* to mean a U.S. person who:

(1) Manufactures or assembles completed connected vehicles in the United States for sale in the United States;

(2) Imports connected vehicles for sale in the United States; and/or

(3) Integrates ADS software on a completed connected vehicle for sale in the United States.

A connected vehicle manufacturer may also be a VCS hardware importer, as defined herein, if VCS hardware has already been installed in a connected vehicle when the connected vehicle manufacturer imports it.

This modified definition clarifies BIS's intention to capture entities who purchase otherwise completed (and compliant) connected vehicles from a third party and then integrate their proprietary ADS on the vehicle to enable autonomous driving. For example, a U.S. person who purchases completed connected vehicles from a U.S. connected vehicle manufacturer (even if those vehicles do not contain PRC or Russian VCS hardware or ADS software) and then integrates its own ADS software on the vehicles would be performing a manufacturing operation and would be explicitly captured as a connected vehicle manufacturer under this amended definition. If that U.S. person is an entity owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia, it would require a specific authorization to sell those vehicles in the United States, which includes transferring those vehicles for commercial operations. The modified definition also clarifies that the first paragraph of the definition, which relates to persons who manufacture or assemble completed connected vehicles in the United States, applies only if the vehicles are intended for sale in the United States (not for export and sale abroad).

5. Covered Software

In the NPRM, BIS proposed to define *covered software* as “the software-based components, in which there is a foreign interest, executed by the primary processing unit of the respective systems that are part of an item that supports the function of Vehicle Connectivity Systems or Automated Driving Systems at the vehicle level. Covered software does not include firmware, which is characterized as software specifically programmed for a hardware device with a primary purpose of controlling, configuring, and communicating with that hardware device. Covered software also does not include open-source software that can be freely used, modified, and distributed by anyone, with both access to the source code and the ability to contribute to the software's development and improvement unless that open-source software has been modified for proprietary purposes and not redistributed or shared.” Based on

comments, BIS changed its definition of *covered software* to better align with industry practices.

Commenters commonly sought more guidance on the layers of software regulated under the rule. Commenters requested examples regarding how covered software applies to the software stack for VCS and ADS. Common feedback urged BIS to define software-based components that fall in and out of scope of the regulation, such as application, firmware, middleware, and system software. Commenters also encouraged BIS to provide a definition of these layers of software, particularly emphasizing that a definition was needed for firmware. Commenters advocated for the exclusion of embedded software (e.g., middleware and system software) because the application software more directly facilitates external communications, and the embedded software is not divisible or distinguishable from hardware. Commenters also suggested that regulating embedded software would introduce more complex supply chain bottlenecks and prevent many companies from meeting the covered software prohibition within a year's time.

In response to these comments, BIS has added specificity to the *covered software* definition to explicitly include application, middleware, and system software, while continuing to exclude firmware. BIS has also included a description of firmware. BIS declined to generally exclude embedded software from the definition, because doing so would exclude certain software that could pose a national security risk. Rather, BIS has chosen to classify software along “application,” “system,” “middleware,” and “firmware” categories. To determine whether particular embedded software is excluded from the definition, parties should consider whether the embedded software leverages specific code executed by the primary processing unit or units of the system. This requirement may exclude embedded software systems that are executed on ancillary surface modules or processors, depending on the specific architecture of the VCS.

Two commenters recommended that BIS limit covered software to *only* the application layer. BIS rejects this feedback. BIS intends covered software to include application software, operating system software and a library of established functions which are generally referred to as “middleware.” BIS chose to include operating system and middleware function software in the definition of “covered software”

because if either the operating system or middleware functions are compromised, the resulting application would not execute securely. So long as the software in question is application, operating system, or middleware executed by the primary processing unit of the subject system, it would likely be covered software unless otherwise excluded.

One commenter requested that BIS define the term “primary processing unit” in the “covered software” definition. BIS declines to incorporate an explicit definition in the regulatory text because a definition is unnecessary; unlike other specialized terms defined in the final rule, “primary processing unit” is a generally widely understood term. To provide additional interpretive guidance on the term, BIS intends the term “primary processing unit” to encompass the central or graphics computing unit of a system responsible for running both the application(s) and the associated operating system that directly enable VCS or ADS on the vehicle. Commenters supported the exclusion of open-source software from the rule and requested BIS align the definition of open-source software with the definitions from the National Defense Authorization Act (NDAA) of 2019, CISA 2023 Open-Software Security Roadmap, and the Open Source Initiative. Commenters also wanted BIS to clarify if open-source software modified by Russian or Chinese entities falls under scope of the regulation. BIS accepts the recommendation of multiple commenters to align the definition of open-source software with that of the 2019 NDAA. Further, BIS added certain clarifying clauses to the 2019 NDAA definition to address advances in artificial intelligence and the evolution of the use of the term “open-source” in artificial intelligence applications by including “in its entirety” to the definition. However, BIS declines to limit the open-source software exclusion by the geographical location of specific administrators or contributors to open-source projects or libraries. BIS is not well placed to arbitrate the validity of individual open-source contributors and rather relies on the inherent structure and transparency of open-source software to identify potential security compromises by malicious actors. BIS excludes open-source software from covered software and characterizes it as software for which the human-readable source code is available in its entirety for use, study, re-use, modification, enhancement, and redistribution by the users of such software unless that open-source

software has been modified for proprietary purposes and not redistributed or shared.

In addition to BIS being more specific about the definition of *covered software*, commenters requested that BIS explicitly scope out different software components. Some commenters recommended modifying the definition to cover only component software of ADS and VCS. These commenters argued that tying the covered software to the hardware helps narrow the scope and removes the ambiguity of the term “item that supports,” which they argued was ambiguous because it is generally understood as part of a system. To this end, commenters advised BIS to define “covered software” as “software, in which there is a foreign interest, executed by the primary processing unit of the Vehicle Connectivity System or Automated Driving System item that directly enables the Vehicle Connectivity System or Automated Driving System function,” or similarly. Commenters argued that marrying the definitions of VCS and ADS to the definition of covered software provides clarity to connected vehicle developers and other automotive industry actors while retaining BIS’s stated goal of targeting “two integral ICTS systems,” of VCS and ADS, and no other vehicle equipment or technologies. Commenters also said this change removes the language “an item that support the function of VCS,” which is confusing to industry.

In response to these comments, BIS clarified the definitions of “covered software” and “VCS hardware” to include items that “directly enable” the function of those systems as opposed to “supports” those systems. BIS defined the term “item” in conformity with SAE International’s 21434 “Road Vehicles—Cybersecurity Engineering” standard of September 2021, as a term that would be commonly understood by industry. The SAE 21434 standard promotes the delineation of item definitions for different automotive systems and for assessing the cybersecurity of those systems. BIS therefore considered the SAE 21434 terms and practices in drafting its definitions so that connected vehicle manufacturers can consult existing compliance mechanisms to determine the item definition of different systems and assess what is included within the item definition of a VCS. BIS also retained “covered software” and “VCS hardware” as separate terms and separate prohibitions due to other structural and legal considerations.

Commenters also wanted to better understand the granularity of the ADS

software prohibition, seeking clarity as to whether final software is considered “designed” or “developed” by a person owned by, controlled by, or subject to the jurisdiction or direction of the PRC when a software module from the PRC is part of the larger ADS suite. If only one software subcomponent of an ADS software suite is designed, developed, manufactured, or supplied by a PRC or Russian entity, then the entire ADS software suite would be considered designed, developed, manufactured, or supplied by a foreign adversary entity. BIS modified the *covered software* definition to make clear that it applies to software components of application, middleware, and system software. BIS acknowledges the burden of determining the provenance of software subcomponents for legacy code bases and therefore added an exclusion for code that was designed, developed, manufactured, or supplied before one year from the effective date of the rule.

One commenter requested clarity about VCS software architecture, specifically regarding whether the regulation’s scope includes upstream communication transfer, downstream communications transfer, and communications processing. This commenter thought that upstream communications were within scope of the proposed rule, while the downstream communication transfer and communication processing were out of scope. Some commenters requested specific opinions about specific automotive in-vehicle network architectures. Because of the variety and diversity of automotive network designs, BIS sought to provide definitions that could be applied across the industry and declines to specifically opine on specific architectures. However, BIS intends to work with industry to answer specific questions during the implementation of the rule and through the issuance of advisory opinions.

Commenters commonly sought clarity on the degree and type of remedy necessary for the software to no longer be deemed covered software and therefore not subject to the prohibitions and compliance requirements in this rule. To this end, commenters recommended that BIS consider integrating accepted international regulatory standards to drive its guidance. For example, commenters suggested that BIS adopt the ISO/SAE 21434 Road Vehicles—Cybersecurity Engineering Threat Analysis and Risk Assessment (TARA) to assess the cybersecurity risks in automotive products. Commenters flagged that this standard provides a methodology for the

software developer to identify critical assets and privacy concerns and allows for the greatest specificity to address the critical asset(s), such as the specific lines of source code or module at issue, rather than broadly including all software packages. BIS appreciates this recommendation and acknowledges that it previously considered such a framework. BIS ultimately declines to consider compliance with SAE 21434 as a standalone security control sufficient for mitigating the national security risks identified in this rule. BIS determined that a combination of security controls could successfully mitigate the national security risk relating to connected vehicles and intends to use a multi-layered approach when issuing a specific authorization. BIS anticipates that requiring security features controls such as conformity with cybersecurity standards, audits conducted by third parties or BIS, enhanced reporting requirements, and controls on corporate governance may be effective ways to manage risk. However, BIS will consider compliance with cybersecurity standards like SAE 21434, R155, and NHTSA Cybersecurity Best Practices when evaluating applications for specific authorizations.

Many commenters requested that BIS exclude legacy code from the definition to minimize supply chain disruption and ensure warranties can be fulfilled. BIS acknowledges comments regarding the mature code bases that have been built, audited, and refined over time and the significant burden that determining the specific developers that contributed to those libraries over time would create. Based on the comments, BIS incorporated a specific exclusion within the *covered software* definition for legacy code. This addition to the covered software definition will exclude all source code that is designed, developed, manufactured, or supplied before a date that is one year from the effective date of the rule. This “legacy” code exclusion will protect products that have already gone to market. Furthermore, excluding legacy code designed, developed, manufactured, or supplied prior to March 17, 2026 will provide regulated entities time to transfer intellectual property rights as well as responsibility for development and maintenance of code to within their organizations in order to come into compliance with the covered software prohibition. BIS believes that this appropriately balances addressing the national security risks posed by software that is actively maintained in the PRC and Russia while lowering

potential burdens and disruptions to the market.

Commenters also warned that the regulation does not clearly articulate if ADS added to a completed connected vehicle falls in scope of the prohibition. Commenters advised limiting the scope of the regulation by adding language at the end of the *covered software* definition to ensure that the addition of ADS software that itself is not designed, developed, manufactured, or supplied by PRC or Russian entities to a connected vehicle is not a manufacturing operation for the purposes of this rule. BIS declines to adopt this recommendation. BIS explicitly included the sentence, “For the purposes of this subpart, the integration of an Automated Driving System into a connected vehicle constitutes a manufacturing operation for a completed connected vehicle,” to make clear that the addition of ADS to a completed connected vehicle falls within scope of this rule as it is a manufacturing operation for a completed connected vehicle. If the addition of covered ADS software to a completed connected vehicle involves software in which there is no foreign interest, then the integrating entity would not be required to submit a Declaration of Conformity. However, if there is a foreign interest in that covered software transaction, then it would require a Declaration of Conformity, or in the case the software is covered by the prohibitions of this rule, a specific authorization. BIS assesses that the addition of covered ADS software to a completed connected vehicle by an aftermarket vendor poses the same national security threat as the addition of covered ADS software at the initial point of manufacture. BIS believes such a modification or integration of ADS software could introduce the same underlying risk that the connected vehicle can be manipulated, to include unauthorized access to vehicle data.

Commenters also inquired if electronic logging devices (ELDs), insurance-related vehicle tracking devices, and after-market safety technologies are in the scope of covered software. BIS recommends that commenters review the technical specifications of these devices against the updated definition of *covered software* to confirm if they are executed by the primary processing unit or units of an item that directly enables the function of VCS or ADS at the vehicle level to determine if said devices fall within the scope of the definition of covered software. BIS believes the definitions for *covered software* and *VCS hardware* should provide clarity;

however, a person may submit a request for an advisory opinion regarding transactions involving specific technologies, along with technical information related to these technologies, so BIS may provide an opinion specific to the technology presented. BIS understands “after-market safety technologies” to be broad and can encompass a range of varying technologies. Such technologies would likely be covered as they relate to ADS software directly; however, uses outside of this scope would likely require BIS to receive additional information within a request for an advisory opinion. While the use of these technologies in the commercial vehicle market is out of scope of this regulation, under certain circumstances these technologies may be subject to this regulation (e.g., if they are used in vehicles weighing less than 10,001 pounds).

Commenters wanted BIS to define “integrated or attached hardware or software” to clarify whether software or hardware attached by a Bluetooth device or USB to a vehicle would be subject to the rule, or if the rule includes only integrated technologies. Per its definitions, this final rule is not limited to integrated technologies.

Commenters advised BIS to reconsider the zero percent threshold for software containing code from prohibited foreign entities, such as a de minimis threshold. BIS chose to not adopt a de minimis threshold approach due to the risk of circumvention that it would create. For example, entities could add additional code to make their percentage of prohibited content appear to fall below the minimum threshold. This suggestion would not adequately mitigate the risks identified. Additionally, seeking to create an implementable de minimis standard of code, wherein code could be analyzed by various metrics such as per bit, per line, per execution command, per library, etc., would be extremely complex, and the associated difficulty of assessing whether content is de minimis or not would be inefficient and ineffective. Furthermore, BIS added a significant exclusion in the “covered software” definition by excluding all code that had been designed, developed, or supplied prior one year from the effective date of this rule. This legacy code exclusion, paired with the infeasibility and ineffectiveness of a de minimis threshold led BIS to reject this suggestion.

A commenter urged BIS to require companies to implement cybersecurity requirements for edge cloud architecture and to establish domestic or allied sourcing requirements for ADS cloud

infrastructure, as well as continuous monitoring of ADS cloud and edge systems. BIS addresses its considerations for cybersecurity requirements in its discussion of Declarations of Conformity, as well as other places in this text. Cloud architecture and infrastructure are out of scope of this current regulation. However, BIS understands the concern and may consider this area for future rulemaking.

Commenters recommend that BIS consider narrowing the *covered software* definition, or the annual reporting requirement, to exclude covered software produced by companies based in trusted or allied nations. Commenters suggest that this change would both streamline connected vehicle manufacturers’ reporting obligations and reduce the burden on BIS in reviewing vast quantities of submitted information and allow BIS to focus its resources and efforts on overseeing the use of software-based components in completed connected vehicles that may present actual or heightened risks to U.S. security. One commenter was particularly concerned that not narrowing the foreign interest scope meant that all technology must be sourced from a U.S. vendor, limiting global supply chains to using only U.S. software. BIS addresses these concerns in its discussion of Declarations of Conformity more in depth. At a high level and as explained in more depth below, BIS will not exclude non-foreign adversary nations from the scope of covered software, because BIS assesses that it is necessary to address the threats posed by interconnected but opaque supply chains writ large, as opposed to finished products imported from non-foreign adversary nations.

Commenters urged BIS to establish a process that would allow an OEM to fully own software purchased from a prohibited supplier so that the purchased software would not be considered prohibited. BIS is willing to discuss such an approach through an advisory opinion request to determine whether such a software purchase may adequately mitigate the identified risk if the transaction is not otherwise excluded by the modified definition of covered software.

In this final rule, BIS has chosen to define *covered software* to mean the software-based components, including application, middleware, and system software, in which there is a foreign interest, executed by the primary processing unit or units of an item that directly enables the function of VCS or ADS at the vehicle level. Covered software does not include firmware,

which is characterized as software specifically programmed for a hardware device with a primary purpose of directly controlling, configuring, and communicating with that hardware device. Covered software also does not include open-source software, which is characterized as software for which the human-readable source code is available in its entirety for use, study, re-use, modification, enhancement, and redistribution by the users of such software, unless that open-source software has been modified for proprietary purposes and not redistributed or shared. Covered software also does not include software subcomponents that were designed, developed, manufactured, or supplied prior to March 17, 2026, as long as those software subcomponents are not maintained, augmented, or otherwise altered by an entity owned by, controlled by, or subject to the jurisdiction or direction of a foreign adversary after March 17, 2026.

With this definition of *covered software*, BIS focused on both the functional characteristics of the software that it intends to regulate as well as the common industry terminology used to refer to that software. For example, BIS acknowledges that there is not a bright line between application-level software, middleware (e.g., device drivers, database management functions), and firmware. However, by combining both industry terminology and a functional definition in its definition of *covered software*, BIS seeks to provide two levels of clarity. In making a reasonable, good faith determination of whether a software subcomponent falls within the *covered software* definition, entities should refer to the architecture of the product to assess whether the software component would be generally considered “application” level software based on industry practice using established methodologies like AUTOSAR software component definitions or ISO 26262 guidelines. When there is uncertainty, entities should consider whether the primary processor (e.g., a central processing unit, a graphics processing unit) processes the executables, or whether the software is executed by a peripheral microcontroller. If the primary processor does not execute the software, and the software would not be classified as application software by an industry standard like AUTOSAR, it is unlikely the software would qualify as application software for the purpose of this definition.

BIS has also provided examples to clarify what constitutes application, middleware, and systems software

below. If regulated parties have questions about what constitutes covered software in specific cases, they may request an advisory opinion.

Example 1: A U.S. person licenses automotive software from a vendor who is a foreign person that is owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia. The automotive software the U.S. person licenses includes a message processing application that receives a digital message from a peripheral radio device, processes that message, and uses the information within that message to issue a digital control command to a related electronic control unit. This software would be considered application software. Because the licensed software includes application software designed, developed, manufactured, or supplied by an entity owned by, controlled by or subject to the jurisdiction of a foreign adversary, the licensed software would be prohibited, unless it qualifies for a general or specific authorization granted by BIS.

Example 2: A U.S. person licenses automotive software from a vendor who is a foreign person that is owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia. The automotive software the U.S. person licenses includes a software device driver intended for use in the operating system for applications to activate and utilize specific VCS hardware. This driver would be considered middleware. Because the licensed software includes middleware designed, developed, manufactured, or supplied by an entity owned by, controlled by or subject to the jurisdiction of a foreign adversary, the licensed software would be prohibited, unless it qualifies for a general or specific authorization granted by BIS.

Example 3: A U.S. person licenses automotive software from a vendor who is a foreign person that is owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia. The automotive software the U.S. person licenses includes a software component in the operating system that coordinates communications between distributed applications and between applications and an internal reference database. This software component would be considered middleware. Because the licensed software includes middleware designed, developed, manufactured, or supplied by an entity owned by, controlled by or subject to the jurisdiction of a foreign adversary, the licensed software would be prohibited, unless it qualifies for a

general or specific authorization granted by BIS.

Example 4: A U.S. person licenses automotive system software from a vendor who is a foreign person that is owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia. The automotive system software the U.S. person licenses is a proprietary real time operating system that manages system resources as well as task scheduling, prioritization, and synchronization for an automotive system. This software component would be operating system software. Because the licensed software includes operating system software designed, developed, manufactured, or supplied by an entity owned by, controlled by or subject to the jurisdiction of a foreign adversary, the licensed software would be prohibited, unless it qualifies for a general or specific authorization granted by BIS.

Example 5: A U.S. person purchases a V850 CAN controller from a vendor who is a foreign person. The V850 CAN controller includes a software subcomponent that is embedded into the controller’s non-volatile memory and directly enables the transmission and receipt of analog electric signals by interacting with the VCS hardware system’s application software. This software component would be considered firmware. Assuming no other facts, this purchase does not involve covered software and would not be affected by the covered software prohibition (but may be affected by the VCS hardware prohibition, depending on other facts and circumstances of the transaction).

BIS determined that it was necessary to exclude firmware because firmware is often shipped with and designed in coordination with the provision of automotive hardware subcomponents. Therefore, while there are similar national security and cybersecurity risks at the firmware level, BIS determined that a firmware prohibition would be tantamount to a hardware prohibition. Finally, BIS made slight modifications to the open-source software definition from the 2019 National Defense Authorization Act when crafting the “covered software” definition. These minor modifications are to make clear that large language models or neural networks that may bill themselves as “open source” but do not openly share their source code or training data in their entirety do not meet the commonly held definition of open-source software. Furthermore, the clause appended to the end of the definition is redundant but meant to emphasize that if an open-source product is modified outside the

limits of the open-source license and not shared, the resulting product is definitionally not open source. However, modification would not include integration into an existing code base by engaging with an open-source product's application programming interface, permissible customization within the terms of the open-source license, or selection of modular sections of the open-source product while excluding others.

In light of comments the agency received, BIS emphasizes that regulated entities are not absolved of conducting due diligence on open-source software when that open-source software has been modified outside the scope of its license. Additionally, BIS declines to introduce a static list of approved or excluded open-source software libraries and tools into the text of the rule, as these libraries and tools are dynamic by nature. BIS will maintain and update compliance information on its website and will also be available to work with regulated entities through advisory opinions or compliance education and outreach programs.

BIS included the term "item" within its definition of *covered software* because industry standards define "item" as a scoping boundary when analyzing specific automotive systems for cybersecurity and functional safety requirements to ensure that assessments are targeted and comprehensive. For example, ISO 21434's threat analysis and risk assessment methodology for assessing cybersecurity relies on "item definition" boundaries. Entities seeking additional guidance on the term "item" in this context may find it helpful to refer to its use in ISO 21434 and ISO 26262, and its use by automotive cybersecurity and safety professionals when making a reasonable determination whether a component is part of a covered software system item. Comments about this term are further explained in the "item" subsection of this Definitions section. BIS has incorporated specific language to ensure that legacy parts are not subject to the covered software prohibitions of this regulation. This "legacy" code exclusion in covered software protects products that have already gone to market. By incorporating a one-year timeline, BIS allows regulated entities time to transfer intellectual property rights as well as responsibility for development and maintenance of code within their organizations to come into compliance with the covered software prohibition.

6. Declarant

In this final rule, BIS includes a new definition for "declarant" to mean the U.S. person submitting a Declaration of Conformity to BIS. BIS has included "declarant" in the final rule text to provide more clarity in the regulation since the term is used throughout.

7. FCC ID Number

In the NPRM, BIS proposed defining the term "FCC ID Number" to mean the unique alphanumeric code identifying a product subject to certification by the Federal Communications Commission composed of a: (1) grantee code; and (2) product code. Commenters provided no feedback about this particular definition. BIS retains its definition in the final rule.

While commenters did not provide feedback on the definition of "FCC ID Number," they provided input in how the regulation incorporates them. Commenters pointed out that not all VCS hardware items have FCC Numbers. Taking this point into consideration, BIS will only require an FCC ID Number if known by the submitting party. This change is reflected in 791.305 of the regulation text, which discusses Declarations of Conformity.

8. Foreign Interest

In the NPRM, BIS proposed to define "foreign interest" to mean any interest in property of any nature whatsoever, whether direct or indirect, by a non-U.S. person. Many commenters encouraged BIS to narrow its definition of foreign interest or otherwise provide greater clarity. After consideration of these comments, BIS retains this definition of *foreign interest* in the final rule.

Several commenters, for example, requested that BIS clarify this definition to mean a legally cognizable interest in property. BIS declines to limit this definition to a legally cognizable interest because "legally cognizable" may be overly narrow for purposes of this regulation. Moreover, BIS's approach retains consistency with other IEEPA-based programs, which similarly use a broad definition of "foreign interest." Some commenters suggested that requiring a legally cognizable interest would address the scenario in which the only foreign interest in software is the fact that foreign persons worked on the development of the software. In response, BIS notes that a foreign interest must be an interest in property, and the sole fact a foreign individual worked on a software development team would not meet this requirement unless additional factors

(such as ongoing financial or beneficial interests or contractual rights) are present.

Multiple commenters encouraged BIS to carve out allied persons from the definition of *foreign interest*, defined as citizens of, residents of, or corporations incorporated in nations in "Country Group A" of BIS's own Export Administration Regulations. BIS declines to amend the definition of foreign interest to exclude certain allied nations or to grant preferential status for entities in allied nations as this would inadequately mitigate the national security risk this rule seeks to address. The mere fact that a connected vehicle manufacturer is headquartered in, incorporated in, or otherwise organized under the laws of a non-foreign adversary country does not imply that the manufacturer has appropriate practices in place to address the risks identified by this rule. For example, a connected vehicle manufacturer located in a non-foreign adversary country may actually be controlled by a PRC or Russian entity, or the manufacturer sources design and development of its ADS software or VCS hardware from an entity located in or controlled by the PRC or Russia. However, the fact that a transaction has a foreign interest does not mean that the transaction is prohibited. Rather, the presence of a non-PRC and non-Russian foreign interest in a transaction without the requisite foreign adversary nexus would require the connected vehicle manufacturer or VCS hardware importer to submit a declaration of conformity, a requirement that BIS has substantially streamlined in this rule to facilitate compliance and reduce the burden on regulated entities. BIS is separately working to identify if any security standards or best practices exist, or may be developed, that will sufficiently mitigate this national security risk and allow companies, wherever located, to engage in transactions without need to notify BIS through a Declaration of Conformity.

One commenter also urged BIS to ensure that software developed in the PRC or Russia by wholly owned subsidiaries of U.S. companies would not be considered to contain a foreign interest. BIS declines to create an exemption for software developed by wholly owned subsidiaries of U.S. businesses from the definition of foreign interest. As articulated in this rule, entities operating in the PRC or Russia are subject to the jurisdiction and control of the PRC or Russian governments, even if wholly owned by a U.S. or allied entity. These types of entities, despite their ownership, are

subject to the regulations and laws of the PRC or Russia that could obligate them to comply with information or access requests resulting in undue or unacceptable risks, as discussed in Section IV of this rule.

One commenter stated that BIS's broad definition of *foreign interest* would mean that a publicly traded company with some foreign shareholders would be required to submit a Declaration of Conformity even if the company's covered software itself contained no foreign interest. In response to this comment, BIS has introduced an exemption for the submission of Declarations of Conformity for those transactions where the *only* foreign interest in the product arises from a foreign entity's equity ownership in a U.S. person. This exemption is narrowly tailored intentionally to minimize the compliance burden. BIS continues to understand equity ownership to be a form of foreign interest. However, BIS recognizes that attaching a static percentage foreign interest threshold would be particularly challenging for regulated entities and their compliance teams in practice. For example, shareholders change daily, and while there are some reporting requirements for principal shareholders according to Regulation D of the Securities Exchange Act of 1934, setting a percentage threshold based on equity ownership alone would mean there could be no reporting obligations for a transaction one day and foreign interest that required a Declaration of Conformity. To avoid this outcome, BIS clarifies through this exemption that Declarations of Conformity are not required for transactions where the *only* foreign interest arises from foreign equity ownership of one of the U.S.-based parties to a transaction. If the foreign equity ownership is paired with another foreign interest (e.g., degree of control over the U.S. entity or licensing of intellectual property), a Declaration of Conformity would be required. To provide further clarity regarding transactions involving foreign interest as a result of public shareholder ownership, BIS offers the following examples.

Example 6: Company A develops VCS. Company A is incorporated in the United States and is publicly traded on the New York Stock Exchange. No foreign entity owns more than 5% of Company A's common stock. Assuming no other facts, because no foreign entity shareholder of Company A's common stock can materially affect Company A's operations and corporate management, there is not a foreign interest in

Company A's VCS. As such, the sale of completed connected vehicles incorporating Company A's VCS does not require a Declaration of Conformity.

Example 7: Same facts as previous example, except Company A is headquartered in a foreign jurisdiction. The import of completed connected vehicles incorporating Company A's VCS software from a foreign jurisdiction would require a Declaration of Conformity because the import gives rise to a foreign interest independent of equity ownership.

Example 8: Company A develops VCS software, is incorporated in the United States, and is publicly traded on the NASDAQ Stock Exchange. Company A states that one of its shareholders is a foreign person holding 60% of Company A's outstanding shares and is not a person owned by, controlled by, or subject to the jurisdiction or direction of a foreign adversary. Assuming no other facts, because a foreign entity is a shareholder whose holding is such that the foreign entity can materially affect Company A's operations and corporate management, there is a foreign interest in Company A's VCS software other than equity ownership. As such, the sale of completed connected vehicles incorporating VCS software developed by Company A requires submission of a Declaration of Conformity.

Example 9: Company A is incorporated in the United States and is publicly traded on a U.S. stock exchange. In aggregate, foreign shareholders hold 28 percent of Company A's outstanding shares. These shareholders have an informal agreement to act in concert with respect to voting decisions for Company A. The collective 28 percent would allow such foreign shareholders to block resolutions and important decisions regarding Company A's management. The foreign shareholders have an interest in Company A's VCS software independent of their equity ownership by virtue of their control over the company. As such, the sale of completed connected vehicles incorporating VCS software developed by Company A requires submission of a Declaration of Conformity.

Example 10: Company A, a U.S. person completed connected vehicle manufacturer, purchases ADS software from Company B. Company B is a U.S. person publicly traded company that designs, develops, and manufactures its ADS software solely in the United States. A foreign entity holds 15% of Company B's outstanding public shares. The foreign investor has no board seat and exerts no management or control over Company B. Assuming no other

facts, Company A is exempt from the requirement to file a Declaration of Conformity.

Another commenter requested that BIS clarify that foreign IP claims, which may not be recognized under U.S. law, do not constitute a foreign interest. BIS declines to insert language that would require an extensive inquiry into the legal status of IP claims in multiple jurisdictions in order to determine whether a foreign interest is present. BIS notes that there may be situations, such as where a foreign IP claim is frivolous, in which the foreign IP claim would not constitute a valid interest. The commenter suggests revising the definition of *foreign interest* to add that it does not include "legal claims or other allegations, or rights that might be afforded by law even when all other rights have been assigned to another party, such as employee-inventor remuneration obligations and moral rights in works of authorship." BIS believes that many such claims would fall outside of the scope of *foreign interest*. For example, rights that cannot legally be transferred might not meet the definition of "property." BIS does not believe it necessary to amend the definition to specify this point or to provide an exhaustive list of claims that are not included under the definition of foreign interest. If regulated parties have a question about whether a foreign IP interest constitutes a foreign interest in specific cases, they may request an advisory opinion from BIS.

Multiple commenters also requested that BIS amend the provisions on the import of VCS hardware to clarify that a Declaration of Conformity is required only when the VCS hardware itself contains a foreign interest. Others suggested that BIS remove the foreign interest requirement from the definition of *covered software*. BIS declines to make these changes. As discussed in the NPRM, IEEPA requires a foreign interest in the property that BIS seeks to regulate. BIS has included a foreign interest requirement in the definition of *covered software* because some prohibited covered software transactions are sales that occur within the United States. By requiring a foreign interest in the definition of *covered software*, BIS ensures that this rule only captures those sales covered by IEEPA. By contrast, this rule prohibits imports (not sales within the United States) of VCS hardware. BIS assesses that items crossing into the United States from a foreign jurisdiction will necessarily contain a foreign interest by nature of the transaction, and therefore does not find it necessary to include a foreign interest requirement in the definition.

Additionally, the final rule does not require a Declaration of Conformity to be submitted if the only foreign interest related to covered software resides in open-source or legacy code.

After considering all comments, BIS has retained the definition of *foreign interest*, when used with respect to property, to mean any interest in property, of any nature whatsoever, whether direct or indirect, by a non-U.S. person. Under this definition, a foreign interest can include, but is not limited to, an interest through ownership of the item itself, intellectual property present in the item, a contractual right to use, update, or otherwise impact the property, (e.g., ongoing maintenance commitments, any license agreement related to the use of intellectual property), profit-sharing or fee arrangement linked to the property, as well as any other cognizable interest. This definition is consistent with the definition of “interest” used in the context of OFAC sanctions, which are, in relevant part, also established pursuant to the statutory requirements of IEEPA. See 31 CFR Chapter V, and, e.g., 31 CFR 510.313, 535.312.

With respect to VCS hardware that is designed, developed, manufactured, or supplied by a person owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia, this rule regulates the importation of VCS hardware, making VCS hardware importers responsible for compliance.

With respect to covered software, based on feedback from connected vehicle manufacturers, automotive suppliers, and other stakeholders, BIS continues to understand that typically, ADS and VCS software are designed or developed to a connected vehicle manufacturer’s specification. ADS and VCS software is frequently designed, developed, or supplied by foreign persons, and those persons frequently retain an interest in the underlying software, even after it has been integrated into the connected vehicle. For example, foreign software developers may earn profits from use of their software, retain data access and sharing rights to the software, have obligations to maintain and update the software, or participate in other ongoing contractual arrangements. Such arrangements are among the types of interests that BIS identifies as giving rise to an obligation to submit a Declaration of Conformity or, if the software designer, developer, or supplier is a person owned by, controlled by, or subject to the jurisdiction or direction of a foreign adversary, an obligation to qualify for a

general authorization or seek a specific authorization under this final rule. BIS therefore will regulate covered software by regulating the importation or sale of completed connected vehicles, making connected vehicle manufacturers responsible for compliance.

Finally, in addition to the general regulations related to VCS hardware and covered software described above, with respect to connected vehicle manufacturers who are owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia, this rule additionally regulates VCS hardware and covered software by regulating the sale of completed connected vehicles that incorporate VCS hardware or covered software. In this circumstance, BIS understands from extensive engagement with connected vehicle manufacturers and automotive suppliers that persons who own, control, or direct the operations of the connected vehicle manufacturer would maintain an interest in the vehicle transactions that the connected vehicle manufacturer carries out. For example, this could include, but is not limited to, profit sharing agreements between a parent company and its U.S. subsidiary; data sharing agreements; intellectual property rights transfers from the U.S. subsidiary to the parent company; cooperation in technological development between the parent and U.S. subsidiary; arrangements by which the parent company directly or indirectly appoints the leadership of the U.S. subsidiary; the ability of the parent company to direct some or all corporate decision making by the U.S. subsidiary; and parent company influence over procurement by the U.S. subsidiary. BIS understands many if not all of these arrangements to be standard for the automotive industry. Additionally, because the PRC and Russian legal regimes discussed in Section IV of this rule could compel a PRC or Russia-based parent company of a connected vehicle manufacturer to provide those governments with information on or access to the operations of the U.S.-based connected vehicle manufacturer, BIS understands that the foreign parent company typically retains a legal right to access the data collected by the U.S. subsidiary, representing a foreign interest in that U.S. subsidiary and its connected vehicle sales.

BIS provides the following examples to assist in interpreting whether a foreign interest is present.

Example 11: Company A is headquartered in a foreign jurisdiction and is the owner of the code, algorithms, and other design elements in a software development kit (SDK)

that is used to develop software used in certain payment systems. Company A provides its SDK to Company B, a U.S. person, who uses it to develop software that is installed in connected vehicles in the United States to provide secure communication and payment with transportation infrastructure. Even though Company A has no legal property interest in the software itself, it has an indirect beneficial interest in the use of such software because updates to the software will need to be made using Company A’s SDK. Thus, the software Company B develops with Company A’s SDK retains a continuing foreign interest.

Example 12: Company A is a wholly owned U.S.-based subsidiary of Company B, a multinational holding corporation incorporated in the British Virgin Islands. Company A imports products for sale in the United States, which generate revenue. Based on Company B’s corporate structure and governance of its subsidiary holding companies including Company A, Company B dictates how Company A’s revenue and profits are allocated across Company B’s holdings. Because Company B, a foreign person, benefits from each of Company A’s domestic transactions and because Company B directs the allocation of revenue generated by those transactions, there is a foreign interest in Company A’s domestic United States transactions.

Example 13: Company A is a U.S. based connected vehicle manufacturer. Company B is a parts manufacturer headquartered in a foreign jurisdiction. Company B manufactures systems on chip (SoC) based on customer specifications that are specifically used in VCS. Company A and Company B have entered into a multi-year agreement whereby, among other conditions, Company B will be the exclusive supplier, with rights of first refusal, for replacements and any maintenance and services repairs of SoCs to Company A for the term of the agreement. Because Company B is a foreign entity and because Company A may use no other parts supplier for its VCS SoCs during the term of the agreement, the SoCs that Company B provides to Company A under the agreement retain a continuing foreign interest once those SoCs enter the United States.

Example 14: Company A is a U.S. based connected vehicle manufacturer. Company B is a U.S. subsidiary of a foreign software company, Company C. Company B sells ADS software licenses on behalf of its foreign parent Company C, who holds the intellectual property rights to the software. Company B

licenses Company C's ADS software to Company A for system integration and further commercialization within the limits of its licensing agreement. Company C, a foreign entity, will have a continued interest in Company A's use of its software after commercialization.

9. Hardware Bill of Materials

In the NPRM, BIS defined *Hardware Bill of Materials (HBOM)* to mean a comprehensive list of parts, assemblies, documents, drawings, and components required to create a physical product, including information identifying the manufacturer, related firmware, technical information, and descriptive information. Public comment provided feedback that led BIS to change the final rule definition of *HBOM*. Commenters provided a variety of opinions on the HBOM requirements of this regulation. Several commenters expressed opposition to the inclusion of HBOMs in Declaration of Conformity submissions on the grounds that they contain highly confidential business information and intellectual property, citing security issues related to storage and transmission. Several commenters noted that the HBOM requirement is overly broad and suggested that they only include "electronic components that execute software." Several commenters recommended that BIS provide a "specific" resource as an example of an HBOM, such as the *HBOM Framework for Supply Chain Risk Management*. Commenters also suggested that BIS remove references to documents and drawings within the HBOM definition to exclude protected intellectual property from compliance submissions. Other commenters requested that BIS provide an HBOM sample model.

After considering the issues raised in these comments, BIS will no longer require the submission of HBOMs as part of Declarations of Conformity. However, BIS will require entities to maintain primary business records related to their certification that due diligence was conducted in analyzing their VCS hardware supply chains, which could include HBOMs. These primary business records must be made available to BIS upon request. BIS has also included a section in the rule dedicated to the submission of CBI, which would cover the submission of HBOMs. BIS will continue to work with industry partners to identify best practices in HBOM development, including templates and advisory documents.

To better align HBOM criteria with industry practices, BIS has modified its definition of *HBOM*. Specifically, BIS

has removed documents, drawings, technical information, and descriptive information from the HBOM definition because these elements do not strictly fall under the scope of a bill of materials. This change also addresses industry concerns about the potential exposure of intellectual property and CBI. Additionally, BIS has replaced the term "comprehensive list" with "formal record" since "record" is a more general term and "comprehensive" is difficult to define precisely.

BIS has chosen to define "Hardware Bill of Materials (HBOM)" as a formal record of the supply chain relationships of parts, assemblies, and components required to create a physical product, including information identifying the manufacturer, and related firmware.

10. Import

In the NPRM, BIS proposed to define the term "import" to mean, with respect to any article, the entry of such article into the United States Customs Territory. It does not include admission of an article from outside the United States into a foreign-trade zone for storage pending further assembly in the foreign-trade zone or shipment to a foreign country. BIS did not receive comment on its definition of "import" or how the term is used in the regulation text. Therefore, BIS retains the NPRM definition of "import" in the final rule. For clarity, BIS has added a sentence clarifying that the same definition applies to related terms such as "importing" and "imported."

While BIS did not receive any comment on the proposed meaning of "import," one commenter requested that BIS clarify that for the purposes of the regulation, "article" means VCS hardware and covered software as defined in this regulation. BIS is confirming for the purposes of this rule that "article" is referring to VCS hardware and covered software.

11. Item

In the NPRM, BIS proposed to define "item" to mean a component or set of components with a specific function at the vehicle level. A system may also be considered an item if it implements a function. BIS received a few comments on how this term is used within its regulation text but based on further research chooses to retain this definition of "item" for the final rule. Some commenters urged BIS to replace the term item with "system," both in the context of VCS hardware and covered software to clarify that the terms refer to overall systems. BIS declines this suggestion and maintains the use of the term item. This term is used both in ISO

26262 and ISO/SAE 21434 to delineate system boundaries. BIS further believes the use of the term item in both covered software and VCS will allow regulated entities to harmonize compliance with this rule with existing cybersecurity and functional security work as dictated by ISO/SAE 21434 and ISO 26262.

12. Knowingly

In the NPRM, BIS proposed to define "knowingly" to mean "having knowledge of a circumstance (the term may be a variant, such as 'know,' 'reason to know,' or 'reason to believe'), to include not only positive knowledge that the circumstance exists or is substantially certain to occur, but also an awareness of a high probability of its existence or future occurrence. Such awareness is inferred from evidence of the conscious disregard of facts known to a person and is also inferred from a person's willful avoidance of facts." BIS received no comments requesting changes to this definition and retains this definition for the final rule.

BIS did receive some public comments relating to due diligence and Declaration of Conformity requirements, which are relevant to the context in which the definition of "knowingly" would be applied. Commenters suggested that BIS consider implementing a whitelist of vendors that do not require additional due diligence. According to commenters, a whitelist would provide more clarity on the compliance requirement for regulated entities. One commenter also stated that a whitelist would preclude the need for Declarations of Conformity. BIS declines to create a whitelist at this time. Due to the complexity of connected vehicle supply chains and the multitude of factors involved in each unique transaction undertaken by manufacturers, BIS believes the creation of a whitelist would insufficiently address the national security risks present in the connected vehicle supply chain. However, BIS maintains the flexibility to grant general authorizations for certain types of transactions subject to the prohibitions at a future date.

Several commenters also requested clarity on how far into a supply chain importers are required to maintain visibility. BIS encourages entities to reference the definitions of VCS hardware and covered software when determining the depth of supply chain due diligence necessary to certify that the VCS hardware or covered software was not designed, developed, manufactured, or supplied by persons owned by, controlled by, or subject to the jurisdiction or direction of the PRC

or Russia. Based on the definitions provided in this rule, importers would need to conduct due diligence on supply chain components if these components directly enable the function of and are directly connected the VCS systems or are part of an item that directly enable the function of the VCS. Component parts that do not contribute to the communication function of VCS hardware are not considered VCS hardware per the above, and so would not have due diligence requirements.

One commenter suggested that suppliers should be prohibited from importing or selling covered software or VCS hardware linked to the PRC or Russia if they have knowledge that it will be integrated in connected vehicles built for the U.S. market. BIS declines to place the onus of this prohibition on suppliers of VCS hardware and covered software rather than on VCS hardware importers and connected vehicle manufacturers due to the numerous suppliers of the myriad components involved in the VCS hardware and covered software supply chain from which BIS would need to accept specific authorization applications in such circumstances. Instead, through requiring specific authorization applications and Declarations of Conformity from VCS hardware importers and connected vehicle manufacturers, BIS has implemented a more targeted approach, which BIS believes will still create the necessary changes to VCS hardware and covered software supply chains in the interest of national security. However, VCS hardware importers and connected vehicle manufacturers may rely on statements and documentation from suppliers in support of specific authorization applications and Declarations of Conformity so long as all necessary due diligence is documented and made available to BIS (section 791.313, “Reports to be furnished on demand”).

Another commenter asked for clarity that a “regulated entity can wholly and reasonably rely on statements of its tier 1 suppliers that a supplied part or piece of equipment does not contain a restricted component or subcomponent.” As stated above, BIS clarifies that VCS hardware importers and connected vehicle manufacturers may rely on statements and documentation from suppliers in any Declarations of Conformity or specific authorization application. For example, in certifying that regulated entities have conducted due diligence in their covered software and VCS hardware supply chains, entities must also certify that they maintain documentation

specifying their due diligence efforts and that they have made arrangements with suppliers to furnish any necessary documentation upon request by BIS (section 791.312, “Recordkeeping”). In making these certifications to BIS, entities may rely on statements from suppliers that a component is not designed, developed, manufactured, or supplied by persons owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia.

13. Model Year

In the NPRM, BIS proposed to define “model year” to mean the year used to designate a discrete vehicle model, irrespective of the calendar year in which the vehicle was actually produced, provided that the production period does not exceed 24 months. While many commenters raised issues with the specific model years selected by BIS as the implementation dates for this regulation, none addressed BIS’s definition of the term. BIS has addressed concerns over implementation dates further below, under “Exemptions.” BIS retains the NPRM definition of “model year” in the final rule.

Several commenters raised the concept of vehicle generations and highlighted that connected vehicle manufacturers do not conduct a major refresh of vehicle technologies every year. Rather, vehicle generation refreshes may only take place every four to six years. As discussed further below, BIS understands that the implementation dates for the rule may fall mid-generation for many connected vehicle manufacturers. In this situation, BIS would consider issuing a time-bound specific authorization in cases where connected vehicle manufacturers are able to demonstrate that they are moving into compliance with the rule for the next vehicle generation refresh. BIS may also contemplate allowing a phased-in implementation of the prohibitions, as advocated for by some commenters, in a specific authorization for manufacturers mid-generation during the implementation period. Please see the specific authorizations section to learn more about how a phased approach can occur under this regulation.

14. Person Owned by, Controlled by, or Subject to the Jurisdiction or Direction of a Foreign Adversary

In the NPRM, BIS proposed to define “person owned by, controlled by, or subject to the jurisdiction or direction of a foreign adversary” to mean:

(1) Any person, wherever located, who acts as an agent, representative, or employee, or any person who acts in any other capacity at the order, request, or under the direction or control, of a foreign adversary or of a person whose activities are directly or indirectly supervised, directed, controlled, financed, or subsidized in whole or in majority part by a foreign adversary;

(2) Any person, wherever located, who is a citizen or resident of a foreign adversary or a country controlled by a foreign adversary, and is not a United States citizen or permanent resident of the United States;

(3) Any corporation, partnership, association, or other organization with a principal place of business in, headquartered in, incorporated in, or otherwise organized under the laws of a foreign adversary or a country controlled by a foreign adversary; or

(4) Any corporation, partnership, association, or other organization, wherever organized or doing business, that is owned or controlled by a foreign adversary, to include circumstances in which any person identified in paragraphs (a) through (c) possesses the power, direct or indirect, whether or not exercised, through the ownership of a majority or a dominant minority of the total outstanding voting interest in an entity, board representation, proxy voting, a special share, contractual arrangements, formal or informal arrangements to act in concert, or other means, to determine, direct, or decide important matters affecting an entity.

BIS has retained this definition in its final rule. However, it has provided further examples on how to apply this definition below.

Example 15: Company A, incorporated in the United States, is a wholly owned subsidiary of Company B. Company B is a state-owned enterprise of the PRC or Russia. Because Company B is a state-owned enterprise, Company A would be considered “owned by” the PRC or Russia.

Example 16: Company A is a joint venture between Company B and Company C where Company C owns a majority share of Company A. Company B is a corporation incorporated in a third-party jurisdiction. Company C is a state-owned enterprise of the PRC or Russia. Company A would be considered “owned by” the PRC or Russia.

Example 17: Company A is majority owned in aggregate by multiple state-owned enterprises and state-owned investment funds of the PRC or Russia. Company A would be considered “owned by” the PRC or Russia.

Example 18: Company A, incorporated in the United States, is a subsidiary of Company B. Company B is a private company incorporated in the PRC or Russia with its principal place of business in the PRC or Russia. Because Company B is subject to the jurisdiction of the PRC or Russia,

Company B's subsidiary, Company A, is controlled by an entity subject to the jurisdiction of the PRC or Russia and would be considered "controlled by" and "subject to the direction of" the PRC or Russia.

Example 19: Company A is a multinational company where a majority of the voting power is held by Company B, a PRC or Russian government investment fund. Company A would be "controlled by" and "subject to the direction of" the PRC or Russia.

Example 20: Company A is a holding company organized in a tax-advantaged jurisdiction. Company A is publicly listed on a stock exchange and its corporate voting structure is characterized by Class A and Class B shares. Class B shares having 10 times the voting power of Class A shares. If the aggregate voting power of shareholders subject to the jurisdiction of the PRC or Russia holding either Class A or Class B shares constitutes a majority or a dominant minority of total voting power, then Company A would be "controlled by" and "subject to the direction of" the PRC or Russia.

Example 21: Company A, a company that is organized under the laws of the PRC or Russia, owns a minority interest in Company B, a U.S. business. Based on special voting powers vested in that minority interest, Company A maintains certain veto rights that determine important matters affecting Company B, including the right to veto the dismissal of senior executives of Company B. Company B would be considered "controlled by" and "subject to the direction of" Company A, and therefore "controlled by" and "subject to the direction of" the PRC or Russia.

Example 22: Company A is an entity incorporated in a third country and Company B is an entity incorporated in the PRC or Russia. Company A and Company B create a new joint venture, Company C, to design, develop, and manufacture a new product. Company A and Company B own minority shares of the joint venture while Company D, a holding company wholly owned by a PRC citizen, owns the largest minority share. If aggregate voting power of Company B and Company D constitutes majority or dominant minority voting share, Company C would be "controlled by" and "subject to the direction of" the PRC or Russia.

Example 23: Company A has eight members on its board of directors. Company A is characterized by a shareholder and corporate governance structure that requires a 75 percent supermajority for any significant business decision. Three of the members

of the board are citizens of, and therefore subject to the jurisdiction of, the PRC or Russia. Because these three members make up 37.5 percent of the voting power of the board, they can block any supermajority and therefore determine, direct, or decide important matters affecting Company A. Company A would be "controlled by" or "subject to the direction of" the PRC or Russia.

Example 24: The PRC or Russian government, through an investment fund, acquires a 1 percent special management share in Company A. This share grants the PRC or Russian government the right to appoint a director to the board of Company A and veto certain key business decisions, such as major strategic changes or mergers. This share allows the government to influence Company A's operations and strategy. Company A would be "controlled by" the PRC or Russia.

Example 25: Company A maintains its principal place of business in the PRC or Russia. Company A would be "subject to the jurisdiction" of the PRC or Russia.

Example 26: Company A is a publicly listed U.S. corporate entity. Company A has a wholly owned subsidiary, Company B, that is organized under the laws of the PRC or Russia and manufactures goods in the PRC or Russia. Because Company B is organized under the laws of the PRC or Russia, Company B would be subject to the jurisdiction of the PRC or Russia. However, Company A is not subject to the jurisdiction of the PRC or Russia.

Example 27: Company A is privately held and incorporated in the United States. One member of Company A's board of directors, Person X, a former chairman of the board of a large PRC corporation, has known ties to the government of the PRC, owns a large minority share of Company A, and has previously made significant investments in other companies founded by Company A's chief executive officer. Person X also facilitated a large minority investment in Company A by the large PRC corporation where they were previously chairman of the board. Person X's professional background indicates that they are directly or indirectly supervised, directed, controlled, financed, or subsidized by the PRC government. The combination of Person X's close ties to Company A's CEO, Person X's ownership interest and ability to direct investment from large, highly regulated PRC corporate entities, and Person X's close ties to the PRC government indicate that Company A would be "subject to the direction" of the PRC.

Example 28: Company A is an automobile company based in a jurisdiction that is not the PRC or Russia. Company A maintains a supervisory committee established by the company's articles of association that is responsible for supervising the management of the company and is not part of the board of directors. Each member of the committee exercises significant managerial authority over the nature, scope, and attributes of the company's business. An independent member of this committee has known ties to the government of the PRC and previously served as board director for a PRC state-owned enterprise. Since Company A's supervisory committee contains a member that can affect important matters of the company, has ties to the PRC government, Company A is subject to the direction of the PRC.

For additional clarity for determining what is and what is not designed, developed, manufactured, or supplied by the entities mentioned above, BIS offers the following examples below.

Example 29: Company A is a U.S. person. Company B is headquartered in the PRC and is a fabless semiconductor design company that produces systems on chips for vehicle telematics systems. Through a joint development agreement, Company A collaborates with Company B to design a custom cellular microcontroller for integration into a VCS hardware unit that will be imported into the United States. Assuming no other facts, Company A's VCS hardware unit contains components designed by an entity that is subject to the jurisdiction of the PRC. The import of the VCS hardware unit is a prohibited transaction, unless authorized by a general authorization or specific authorization.

Example 30: Company A is a U.S. person. Person B is a PRC citizen residing in the PRC. Company A contracts with Person B to conduct a cybersecurity review of its operating system software design for a piece of VCS hardware that is imported in the United States. Person B completes that review and recommends improvements and changes to Company A's product, which Company A is free to accept or reject. Person B's review of Company A's software does not mean Company A's covered software product was designed by an entity subject to the jurisdiction of the PRC solely on the basis of Person B being a PRC citizen.

Example 31: Company A is domiciled in the PRC and is a joint venture between Company B and Company C. Company B is headquartered in the United States. Company C is headquartered in the PRC. Company A

sources suppliers, including suppliers of VCS hardware and covered software, integrates parts into automotive systems, and conducts prototyping and testing for future model year connected vehicles that Company B will eventually import and sell into the United States. Assuming no other facts, the connected vehicles that Company A prototypes and tests contain VCS hardware and covered software supplied by an entity subject to the jurisdiction of the PRC. Company B's import or sale of the vehicles is a prohibited transaction, unless a general authorization or specific authorization applies.

Example 32: Company A is a PRC company that is an automotive contract assembler and manufacturer for connected vehicles. Company B is an automotive company headquartered in the United States. Company A assembles and manufactures completed connected vehicles, including installing the VCS hardware and covered software, in another country, that Company B will eventually import into the United States. Company B's connected vehicles contain VCS hardware and covered software supplied by an entity that is subject to the jurisdiction of the PRC. Importing the vehicles into the United States is a prohibited transaction, unless a general authorization or specific authorization applies.

Example 33: Company A is an automotive parts company that is domiciled in the PRC or Russia. Company B is a U.S. person. Company A buys VCS hardware that integrates covered software, then customizes and packages that VCS hardware for sale to and import by Company B into the United States. Assuming no other facts, the VCS hardware supplied by Company A is supplied by an entity subject to the jurisdiction of the PRC or Russia. The import of the VCS hardware into the United States is a prohibited transaction, unless a general authorization or specific authorization applies.

For additional clarity in determining whether a transaction involving VCS hardware or covered software designed, developed, manufactured, or supplied by entities described above is prohibited under the final rule, BIS offers the below examples. In offering these examples, BIS emphasizes, and has further clarified this language in the prohibitions, that VCS hardware and covered software would not be considered designed, developed, manufactured, or supplied by persons owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia based solely on the country of citizenship of one or more natural

persons who are employed by, contracted by, or otherwise similarly engaged in such actions through the entity designing, developing, manufacturing, or supplying the VCS hardware or covered software. In particular, BIS confirms that visa holders in the United States would not be considered persons controlled by the PRC or Russia solely based on their citizenship.

Example 34: A U.S. person has a contractual relationship with a foreign person to import a cellular module, and the cellular module will later be integrated into a VCS for a completed connected vehicle. The U.S. person is, under the final rule, a VCS hardware importer. The U.S. person knows the cellular module was manufactured at a facility located in the PRC or Russia and is being imported through a third country. Since the entity manufacturing the module would, at a minimum, be "subject to the jurisdiction" of the PRC or Russia, the import of the module would be a prohibited transaction under the final rule, unless it qualifies for a general authorization or a specific authorization from BIS.

Example 35: A U.S. person imports a TCU that was assembled in a third country, but that contains a microcontroller that is manufactured in the PRC or Russia and is sold to the third-country assembler of the TCU. The U.S. person knows that the microcontroller was manufactured by an entity located in the PRC or Russia. As the microcontroller is included in the definition of VCS hardware, the import of the TCU for a completed connected vehicle would be a prohibited transaction under the final rule unless it qualifies for a general authorization, or a specific authorization granted by BIS.

Example 36: A U.S. person imports a completed connected vehicle, making the U.S. person a connected vehicle manufacturer under the final rule's definition. The completed connected vehicle contains a TCU that operates software supporting off-vehicle connectivity above 450 MHz, and that software is designed, developed, or otherwise supplied (in whole or in part) by an entity located in the PRC or Russia. Under the final rule, the import of the completed connected vehicle would be prohibited unless it was authorized by a general authorization or a specific authorization.

Example 37: A U.S. person who is a connected vehicle manufacturer that manufactures or assembles completed connected vehicles in the United States sells to a dealer within the United States a completed connected vehicle in which the vehicle's ADS software for object

detection, classification, and decision making is proprietary software designed, developed, or supplied by an entity in the PRC or Russia. The sale or transfer of the completed connected vehicle would be a prohibited transaction under the final rule unless it qualifies for a general authorization or specific authorization.

Example 38: A U.S. person who is a connected vehicle manufacturer utilizes foreign VCS and ADS software development teams through various subsidiaries, joint ventures, and contract arrangements, some of which retain servicing obligations and contractual and licensing rights in the software they have developed. One of those software development teams is located in the PRC or Russia, and as such, that software team is subject to the jurisdiction of the PRC or Russia. Given the role of PRC or Russian developers in the creation of the VCS or ADS software and the existence of an ongoing foreign interest (*i.e.*, servicing obligations and contractual and licensing rights), the sale of a completed connected vehicle within the United States that integrates this proprietary covered software would be a prohibited transaction under the final rule, unless it qualifies for a general authorization or specific authorization.

Example 39: Company A, which is a wholly owned subsidiary of a foreign corporation in which a PRC or Russian entity owns a controlling interest, imports completed connected vehicles that incorporate covered software and VCS hardware, none of which was originally designed, developed, manufactured, or supplied by an entity owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia. In the rare circumstance where Company A did not participate in the design or development of the covered software or VCS hardware, Company A would submit a Declaration of Conformity for the import of the completed connected vehicles containing covered software and VCS hardware, identified by make, model, and VIN series. However, any subsequent sale by Company A of such completed connected vehicle in the United States would be prohibited. For example, Company A subsequently sells such completed connected vehicles to a dealer in the United States. Because Company A is a person controlled by the PRC or Russia and has direct privileged access to the VCS hardware and covered software prior to the sale, the knowing sale by Company A of the completed connected vehicle with VCS hardware and covered software would be a prohibited transaction under the

final rule, and a specific authorization from BIS would be required before engaging in such a transaction.

Example 40: Company A, a wholly owned subsidiary of a PRC or Russia corporation, manufactures completed connected vehicles in the United States. The completed connected vehicles that Company A manufactures incorporate covered software and VCS hardware provided by Company B, a company that is not owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia. Because Company A is owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia, Company A's sale of the completed connected vehicles is a prohibited transaction under the final rule, and a specific authorization from BIS would be required before engaging in such a transaction.

Example 41: Company A is a company that, through any of the scenarios detailed above, is deemed to be owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia. Company A purchases otherwise completed connected vehicles from Company B, a U.S. company that is not owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia. Company A transforms these vehicles into autonomous vehicles by integrating hardware and software, including ADS software, on these vehicles. Company A is thus a connected vehicle manufacturer under this rule. Company A seeks to offer a commercial robotaxi service by which customers are able to use a mobile application to hail one of Company A's vehicles incorporating ADS software. Because Company A is a connected vehicle manufacturer owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia and seeks to offer a commercial service utilizing completed connected vehicles incorporating ADS, Company A would require a specific authorization from BIS prior to engaging in such a transaction.

Many commenters recommended that BIS further clarify that, under the rule, VCS hardware or covered software would not be considered as designed, developed, manufactured, or supplied by entities with a nexus to the PRC or Russia if individual contributors holding PRC or Russian citizenship work on the hardware or software outside of the PRC or Russia. Commenters expressed similar concerns about visa holders from the PRC or Russia working in the United States. BIS agrees that participation by individual contributors holding PRC or Russian citizenship outside of the PRC or Russia

should not alone make VCS hardware or covered software subject to the prohibitions in this rule because this scenario presents a lower national security risk than other situations addressed by this rule. BIS has addressed this point in paragraph (b) of section 791.302 (prohibited VCS hardware transactions) and paragraph (c) of section 791.303 (prohibited covered software transactions). BIS further highlights in the examples below.

Example 42: A U.S. person who is a connected vehicle manufacturer utilizes VCS and ADS software development teams around the world through various subsidiaries, joint ventures, and contract arrangements. One of those software development teams is comprised of individuals who are PRC or Russian citizens working in a foreign jurisdiction other than the PRC or Russia for a company that is not owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia. Although the individuals technically meet the definition of "person owned by, controlled by, or subject to the jurisdiction or direction of a foreign adversary," assuming no other facts, paragraph (c) of the section 791.303 (Prohibited covered software transactions) makes clear that the sole fact that PRC or Russian citizens work on the connected vehicle manufacturer's software development would not make the sale of a completed connected vehicle within the United States that integrates this VCS or ADS software a prohibited transaction under the final rule.

Example 43: Company A is a European automotive company. Company B is a supply chain consultancy that is domiciled in Singapore and is majority owned by a PRC citizen. Subject to a non-disclosure agreement, Company B reviews Company A's automotive design specifications and recommends specific hardware and software suppliers to Company A. Company A considers Company B's recommendations and obtains hardware or software from the recommended suppliers directly (not through Company B). Assuming no other facts, Company B's review and recommendation of Company A's covered software and VCS hardware suppliers does not mean those products are developed by an entity subject to the jurisdiction of the PRC. The import or sale of Company A's vehicles in the United States would not be a prohibited transaction, but a VCS hardware importer or connected vehicle manufacturer that imports or sells the vehicles into the United States must

comply with any applicable Declaration of Conformity requirements.

To provide further clarification, BIS has added examples to this final rule, such as Example 30, Example 42, and Example 43, to explain that citizenship of natural persons involved in the manufacture or design of a product is not itself determinative of a product being designed, development, manufactured, or supplied by a person owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia. These examples also help explain the prohibitions described in Section VI subsection (b) *Prohibitions on Certain Transactions Related to Connected Vehicles*.

Numerous commenters urged BIS to provide greater clarity as to the criteria by which regulated entities should deem a person to be owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia. Several commenters recommended that BIS adopt the criteria described by the Department of Justice's (DOJ) NPRM, *Provisions Pertaining to Preventing Access to U.S. Sensitive Personal Data and Government-Related Data by Countries of Concern or Covered Persons* (89 FR 86116, October 29, 2024), which uses a fifty percent threshold for ownership as one criteria for an entity to be a "covered person", or adopting a more conservative ownership threshold of 25 percent, as stipulated by the Department of Energy's (DOE) Foreign Entity of Concern (FEOC) rules. BIS rejects these suggestions and retains the current definition as published in the NPRM because it retains consistency across all ICTS transactions reviewed by BIS under 15 CFR part 791 Securing the Information and Communications Technology and Services Supply Chain. By contrast, each of the other U.S. government programs identified by commenters differs and addresses national security risks unique to their mandates and missions. For instance, DOE's final guidance applies to the Battery Materials Processing and Manufacturing grant program, authorized by section 40207 of the Bipartisan Infrastructure Law, Public Law 117–58, and the 30D Clean Vehicle tax credit created under the Inflation Reduction Act, Public Law 117–169, which imposes limits on when an entity's battery supply chain includes FEOC. DOE's final guidance was issued to aid stakeholders in identifying FEOCs in their battery supply chains rather than those entities involved in supply chains related to VCS and ADS. DOJ's NPRM on *Provisions Pertaining to Preventing Access to U.S. Sensitive*

Personal Data and Government-Related Data by Countries of Concern or Covered Persons also differs in that it prohibits and restricts certain transactions that could allow persons from countries of concern access to bulk sensitive personal data or to U.S. government-related data. Additionally, BIS rejects the recommendation to define ownership thresholds. While BIS recognizes that thresholds may provide a bright line for industry, BIS maintains that connected vehicle supply chains are complex and opaque, with varying ownership structures of OEMs and connected vehicle suppliers. Bright-line thresholds alone can be limited when dealing with an entity with a PRC or Russia nexus and one who may circumvent the prohibitions by adjusting its ownership structure, while still retaining corporate control or executive management that may be subject to the direction of the PRC or Russia. Retaining the current definition of *owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia*, will allow BIS to address the evolving and unique national security risks across a variety of supply chains for distinct industries, as articulated in Section IV of this rule. Additionally, one commenter requested that BIS further clarify the meaning of *subject to the direction* in this definition. This commenter expressed concern that “direction” diverges from common industry understandings of ownership and control, and that it could be interpreted to include a one-time event. BIS retains the definition of *person owned by, controlled by, or subject to the jurisdiction or direction of a foreign adversary*, which is consistent with the scope of E.O. 13873 and reflects the possibility that a person may act at the direction of a foreign adversary in situations in which typical corporate ownership or control may not be present. BIS considers “subject to the direction” to typically entail a continuous and ongoing relationship between a regulated person and the PRC or Russian government or entities subject to the jurisdiction of the PRC or Russian government.

One commenter maintained that the ultimate ownership structure of an entity should not subject that entity to the prohibitions of the rule, and the location of covered software and VCS hardware design should instead be determinative. BIS reiterates the threat outlined in the NPRM and in this final rule that entities owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia may be compelled to provide logical access to

their VCS hardware or covered software resulting in the exfiltration of sensitive data or remote manipulation of the vehicle. While the location of covered software and VCS hardware design and development, as well as corporate structure and security practices, will play an important factor in BIS’s decision to issue specific authorizations, BIS declines to amend the rule in response to this comment.

15. Prohibited Transactions

In the NPRM, BIS proposed *prohibited transactions* to mean collectively, the transactions described in section 791.302 (Prohibited VCS hardware transactions), section 791.303 (Prohibited covered software transactions), or section 791.304 (Related prohibited transactions) of this subpart. BIS did not receive any comments directly about this definition. Feedback on prohibited transactions focused on the transactions described in the body of the regulation text. To review the comments and responses on the prohibited transactions in this rule, please review Section VI subsection (b) *Prohibitions on Certain Transactions Related to Connected Vehicles* below.

16. Sale

In the NPRM, BIS proposed *sale* to mean distributing for purchase, lease, or other commercial operations a new completed connected vehicle for a price, to include the transfer of completed connected vehicles from a connected vehicle manufacturer to a dealer or distributor, as those terms are defined in 49 U.S.C. 30102. This definition also applies to the related terms such as *sell* or *selling*. Some commenters recommended that BIS clarify and revise the definition of sale. Commenters highlighted differences between the commercial vehicle market and the passenger vehicle market and emphasized that the NPRM *sale* definition is inadequately scoped for the commercial vehicle market. BIS, after taking all comments into consideration, retained this definition in the final rule but made a related change to the definition of *connected vehicle* to focus on the passenger market by limiting the scope of this final rule to vehicles under 10,001 pounds.

One commenter recommended that BIS clarify that contracting with a third party to manufacture one’s own completed connected vehicles with one’s own VCS or ADS does not constitute a sale. In response, BIS believes that such a transaction could, but would not necessarily always, constitute a sale, and such a determination would depend on the

specifics of the arrangement, including the chain of custody or legal rights over the vehicle while with a third-party manufacturer. BIS generally believes that it is not in the national security interest of the United States to categorically exempt third-party manufacturing from the prohibitions of this rule. For example, the rule would prohibit the sale of completed connected vehicles manufactured by an entity that is owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia, even if that manufacturing is on behalf of a U.S. connected vehicle manufacturer. In this scenario, BIS believes the integration of VCS hardware or covered software by that manufacturer constitutes the “supply” of such ICTS by a prohibited entity. Whether or not the actual transfer of the vehicles from the third-party manufacturer to the U.S. connected vehicle manufacturer occurred would depend on the specifics of the transaction, but if there is a foreign interest in the software (e.g., ongoing contractual arrangements or IP rights), the ultimate sale of those vehicles in the United States would be prohibited. However, if, for example, the third-party manufacturer incorporates prohibited ADS software that is designed, developed, manufactured, or supplied by a PRC or Russian entity, the subsequent transfer of those vehicles to any entity for commercial operations would be prohibited.

One commenter claimed that the definition as written could be interpreted to impose compliance duties on dealers who sell but do not manufacture or import connected vehicles. As written, the prohibitions of the rule apply only to the sale of a completed connected vehicle by a connected vehicle manufacturer. Given that dealers do not perform manufacturing operations on vehicles to transform an incomplete connected vehicle into a completed connected vehicle (nor do they integrate ADS onto an otherwise completed connected vehicle), the sale of vehicles from a dealer to a consumer would not be captured by any of the prohibitions of this rule. BIS emphasizes that instead, given both the definition of *sale* and the prohibitions contained in this rule, it is the sale by the connected vehicle manufacturer to the dealer that would be prohibited if the VCS hardware or covered software is designed, developed, manufactured, or supplied by an entity owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia, or if the connected

vehicle manufacturer itself is such an entity. In this case, it is the connected vehicle manufacturer that is subject to the prohibition, and it is the connected vehicle manufacturer that would be subject to civil or criminal penalties should they knowingly violate these prohibitions. As such, BIS stresses that this rule places no additional compliance responsibilities on dealers.

17. Software Bill of Materials

In the NPRM, BIS proposed to define *software bills of materials (SBOM)* to mean a formal and dynamic, machine-readable inventory detailing the software supply chain relationships between software components and subcomponents, including software dependencies, hierarchical relationships, and baseline software attributes, including author's name, timestamp, supplier name, component name, version string, component hash package URL, unique identifier, and dependency relationships to other software components. Based on public comment, BIS has altered its definition of *SBOM* and modified its compliance requirements with respect to SBOMs.

Commenters provided feedback on what BIS should include in the criteria for an SBOM, suggesting how its definition should be changed in the final rule. Multiple commenters recommended that BIS align its *SBOM* definition to the National Telecommunication and Information Administration's (NTIA) "The Minimum Elements for a Software Bill of Materials" (Minimum Elements for an SBOM), a report written in collaboration with the Department of Commerce and authorized under President Biden's E.O. 14028, "Improving the Nation's Cybersecurity," 86 FR 26633 (May 12, 2021), which identifies the prevention, detection, assessment, and remediation of cyber incidents. Many commenters recommended referencing NTIA's Minimum Elements for an SBOM in BIS's SBOM definition. Another commenter specifically advised removing the "component hash" requirement in BIS's SBOM definition to match the NTIA's Minimum Elements for an SBOM. Commenters also recommended revising the definition to only require the detailed elements "if available."

Based on the numerous comments received, BIS opted to align the SBOM definition with the NTIA Minimum Elements for an SBOM requirements rather than reference them directly to avoid any confusion should the NTIA definitions change. In addition, BIS has removed several SBOM elements (e.g., version string, component hash, package

URL, and unique identifier) from the minimum documentation requirements necessary to apply for a Declaration of Conformity or specific authorization. BIS declines to add "if available" to the SBOM requirements included in the final rule with the understanding that this regulation is prospective, allowing industry the opportunity to ensure these minimum requirements are met for any covered software transaction. These changes also reflect comments arguing that the NPRM definition requires information that may be beyond the detail provided by automated scanning tools and would create burdens for manufacturers, and cautioning BIS that industry did not have sufficient time to gather SBOMs as defined in the NPRM by model year 2027. By reducing the minimum documentation requirements for an SBOM, as described above, and removing the requirement to submit an SBOM with Declarations of Conformity (see Section VI.C.1), BIS has significantly reduced the compliance burden for industry, including for small entities. BIS has significantly reduced the compliance burden for industry, including for small entities.

One auto manufacturer recommended that BIS replace "supplier's name" and "author's name" with "person's name" in the definition. While BIS has removed the required baseline software attributes from the definition of SBOM, including the requirements for author's name and supplier name, it declines to replace the term "supplier" and "author" with "person" in the context of SBOMs throughout the remaining regulatory text based on the understanding that a "supplier" or "author" may be either an entity or person. Additionally, this language is inconsistent with E.O. 14028 and NTIA's Minimum Elements for an SBOM, on which BIS bases its SBOM definition. Another commenter stated that if BIS intends for SBOM requirements to include open-source software within covered software, that this be specified in the definition by adding "including open-source software used in covered software, even if the open-source software is outside the definition of covered software." In alignment with the removal of the SBOM submission requirement, BIS will only require retention of minimal documentation related to products for which a Declaration of Conformity is submitted, including documentation or third-party assessments sufficient to identify, at minimum, the author name, timestamp, component name, and supplier name of all proprietary

additions to the development of the covered software.

Commenters provided other feedback about how to use and process SBOMs. A commenter highlighted how SBOMs could be useful to BIS in variety of ways, including: verifying if known vulnerabilities exist using the CPE (Common Platform Enumeration) in the unique identifier against the NVD (National Vulnerability Database); ensuring the supplier names listed in the SBOMs do not match any entity under foreign adversary control, as defined by the proposed rule; confirming that component hashes match those generated from package URLs to verify source code integrity; and using dependency relationships to provide specific guidance to entities on scope to address for achieving conformity when issues arise with identified components. This commenter also recommended that BIS allow a flexible SBOM update method that can be integrated into the frequent software update typical for VCS and ADS without disrupting development cycle. BIS appreciates this feedback; however, given its decision to not require SBOMs at this time, BIS will not take action on these recommendations. NBIS has chosen to define "Software Bill of Materials" or SBOM as a formal record containing the details and supply chain relationships of various components used in building software. Software developers and vendors often create products by assembling existing open-source and commercial software components. The SBOM enumerates these components in a product.

18. United States

In the NPRM, BIS proposed *United States* to mean United States of America, the States of the United States, the District of Columbia, and any commonwealth, territory, dependency, or possession of the United States, or any subdivision thereof, and the territorial sea of the United States. Commenters did not provide feedback on this definition. BIS retains this definition for its final rule.

19. Vehicle Connectivity System

In the NPRM, BIS proposed *Vehicle Connectivity System (VCS)* to mean a hardware or software item for a completed connected vehicle that has the function of enabling the transmission, receipt, conversion, or processing of radio frequency communications at a frequency over 450 megahertz. Public comments informed BIS's modification of *VCS* definition for the final rule, which includes explicit hardware and software exclusions.

Numerous commenters provided feedback on BIS's proposed definition for *Vehicle Connectivity System*. Many commenters urged BIS to narrow the definition to exclude specific radio frequency bands, functions, or devices. Comments regarding specific VCS hardware devices are discussed in the next section, "VCS Hardware."

Multiple commenters took issue with the proposed rule's threshold of 450 MHz and argued that this cutoff is overly broad. For example, some commenters recommended that BIS include an upper limit for the radio frequency band in order to scope out certain ultra-wideband automotive applications, such as some key fobs. Other commenters encouraged BIS to scope out certain convenience functions such as garage door opening or rear seat entertainment. Several commenters also encouraged BIS to explicitly scope out systems that connect internally within the vehicle, supply power to the VCS, exchange data with the VCS, authenticate a user to access or drive a vehicle, or localize a device intended to control vehicle functions.

In response to these comments, BIS has amended the definition of VCS to include a variety of function-based exclusions to exclude certain low-risk use cases and provide industry with greater flexibility. BIS declines to implement an upper bound for the radio frequency as this would unnecessarily constrain the definition of VCS as automotive technology evolves. BIS has accepted the majority of recommendations to exclude certain functions, including automotive sensing (which includes LiDAR, radar, cameras, and ultrawideband); global navigation satellite system (GNSS); and satellite, AM, and FM radio. BIS declines to exclude convenience functions given the difficulty in adequately defining this exemption to address only convenience functions rather than communications functions that present undue risk. Further, many of the "convenience" functions referenced by the commenters are simply systems that use VCS to accomplish a non-driving task, often by communicating non-expressive data with an external device. BIS added a number of VCS exclusions that may exclude certain "convenience" functions, but declines to categorically exclude them all, as the term is broad and eludes concise definition. BIS further believes that the amended definition of VCS *hardware*, particularly the replacement of "supports" to "directly enables," renders unnecessary the exclusion of internal vehicle communications or an exemption for systems that simply exchange data with

the VCS. While BIS believes that this amended definition excludes features that enable vehicle access and user authentication, BIS declines to exclude the hardware and software that enable the localization of a device intended to control vehicle functions, as the vehicle-side hardware and software of that function presents a possible threat vector that could enable the national security risks spelled out in this rule.

A commenter recommended that the definition of VCS be restricted to the electronic control unit or part of an item that supports the VCS external communications capability. Restricting the definition of VCS, and therefore VCS *hardware*, to solely the electronic control unit or "telematics control unit" would be overly narrow and would leave many other components that also support wireless communications that could enable long-range cybersecurity exploits. For example, if an infotainment module or a battery management system included a cellular module for its own wireless communication, those modules could be considered VCS but would not be covered by a regulation that only focused on an "ECU." Furthermore, major subcomponents of ECUs that are software programmable often retain connectivity with their OEMs and continue to receive software updates throughout their lifecycle. Therefore, BIS determined that addressing connectivity systems at the ECU level only would be insufficient.

Commenters urged BIS to clarify the definition of VCS by clarifying that (1) a system that may convert or process radio frequency communications at a frequency over 450 megahertz, but that does not both receive and transmit data either to or from the vehicle, is outside the scope and (2) a system that does not both receive data from external sources and transmit data to an external source is outside the scope. In response to this comment and others that raised similar issues, BIS modified the definition of VCS to add a number of functional exclusions, one of which excludes unidirectional communication systems. However, a subcomponent within an item that directly enables the function of transmission, receipt, conversion, or processing of a connectivity item would nonetheless be defined as VCS even if that subcomponent has only an internal, unidirectional communication purpose. One commenter urged BIS to modify the VCS definition to clarify that: "Items that are either for wired frequency communications (e.g., USB port, OBD port) or for the purpose of distance positioning or imaging only are exempted (e.g., Ultra-Wide Band (UWB),

cameras, and sensors including LiDAR and radar)." BIS understands that wired-frequency communications-related hardware may also pose risks, but they are not as significant as those defined in the final rule's definition of VCS. BIS accepts this recommendation in part and has modified the VCS definition to define specific function-based exclusions, including on that explicitly excludes sensor hardware.

Commenters recommended that the VCS definition align with the Federal Communication Commission (FCC) equipment authorization regulations. BIS attempted, wherever able, to conform and harmonize with preexisting standards in both the automotive and telecommunications industries. In this case, aligning the VCS definition with the scope of the FCC's equipment authorization definition would be overly broad, as the FCC requires declarations of conformity or certification for products that BIS did not intend to be VCS, including unintentional radiators, as defined by 47 CFR 15.3. To keep the definition as narrow as possible to address only those items and components necessary to mitigate the identified national security risks, BIS decided not to rely on the FCC equipment authorization program's scope.

One commenter suggested that BIS amend this term to "Vehicle Communication Device," believing that the term would provide industry with greater clarity on covered items. BIS has decided to retain the original Vehicle Connectivity System term and believes that "Vehicle Communication Device" would unnecessarily constrain covered components, including unintentionally excluding major VCS subcomponents that could directly pose a national security risk as outlined in this rule. However, BIS believes that other changes to the definitions of *Vehicle Connectivity System* and VCS *hardware* substantially address the intent behind this comment. BIS also rejects commenters recommendation to define system. Another commenter urged BIS to reconsider its prohibitions on vehicle connectivity given the U.S Department of Transportation's efforts to deploy Vehicle-to-Everything (V2X) technology. This commenter argued that the proposed rule unnecessarily risks delaying V2X deployments and undermines local, state, and federal investments into V2X infrastructure deployment. BIS appreciates this comment and has been in contact with the Department of Transportation in drafting this regulation. BIS understands that the requirements of this regulation may create new compliance burdens.

However, those requirements seek to ensure automotive supply chain security, which will help secure the future of V2X technology implementation.

BIS has chosen to define *Vehicle Connectivity System* or *VCS* as a hardware or software item installed in or on a completed connected vehicle that directly enables the function of transmission, receipt, conversion, or processing of radio frequency communications at a frequency over 450 megahertz. VCS does not include a hardware or software item that exclusively:

(1) enables the transmission, receipt, conversion, or processing of automotive sensing (e.g., LiDAR, radar, video, ultrawideband);

(2) enables the transmission, receipt, conversion, or processing of ultrawideband communications to directly enable physical vehicle access (e.g., key fobs);

(3) enables the receipt, conversion or processing of unidirectional radio frequency bands (e.g., global navigation satellite systems (GNSS), satellite radio, AM/FM radio); or

(4) supplies or manages power for the VCS.

20. VCS Hardware

In the NPRM, BIS proposed *VCS hardware* to mean the following software-enabled or programmable components and subcomponents that support the function of VCS or are part of an item that supports the function of VCS: microcontroller, microcomputers or modules, systems on a chip, networking or telematics units, cellular modem/modules, Wi-Fi microcontrollers or modules, Bluetooth microcontrollers or modules, satellite navigation systems, satellite communication systems, other wireless communication microcontrollers or modules, and external antennas. VCS hardware does not include component parts that do not contribute to the communication function of VCS hardware. BIS received a variety of comments on VCS hardware that informed the final rule definition.

One commenter encouraged BIS to adopt an entity-based approach, rather than target specific VCS hardware devices, or to introduce an exhaustive list of covered components. BIS declines these suggestions. BIS has determined that an entity-based approach would not adequately mitigate the national security risks outlined in this rule, given the ability of prohibited entities to restructure and ingrain themselves in the connected vehicle supply chain before being subject to an enforcement

action by BIS. Rather, a technology-based approach more broadly covers entities of concern and would not require individual enforcement actions against all PRC or Russian suppliers of covered software or VCS hardware. Some commenters requested that BIS clarify that the list of VCS hardware components is exhaustive, meaning any component not included in the definition would not be captured by the prohibition. BIS declines this recommendation as it believes the modifications to the definition of VCS and VCS hardware will allow industry to appropriately identify covered components, and further believes that limiting the definition to a set list of components would not adequately address the potential for changes in nomenclature in the future or address technological developments in which components that are not listed might directly enable VCS functions.

Commenters requested several changes to the *VCS hardware* definition. As with covered software, numerous commenters requested that BIS refine the definition of *VCS hardware* and replace the phrase “support the function of.” Most commenters making this point suggested that BIS replace this language with “directly enable the function of” or similar language. BIS accepts this recommendation and believes it will allow industry to more easily identify components that are captured by the *VCS hardware* definition. One commenter requested that BIS remove the word “subcomponent” from the definition. BIS rejects this recommendation because VCS hardware subcomponents with a nexus to foreign adversaries facilitate the same risk identified in this regulation.

Many commenters encouraged BIS either to explicitly exclude certain VCS hardware devices from the definition, or, in some cases, to explicitly include a set of devices not originally present in the proposed rule’s definition. As referenced above, commenters encouraged BIS to exclude automotive radar from the definition of *VCS hardware* given its safety-critical nature and its inability to communicate independently of the vehicle. As noted, BIS accepts this recommendation and has amended the definition of *Vehicle Connectivity System* accordingly where it has noted this exclusion. Radar hardware is also excluded in the definition of VCS hardware because its primary function is for sensing rather than communications.

Other commenters urged BIS to include LiDAR as a separate category of VCS hardware, contesting BIS’s decision to exclude the technology from the

proposed rule. One commenter pointed to outside research assessing that certain PRC manufacturers of LiDAR could insert vulnerabilities into the technology and that the reliance of U.S. connected vehicle manufacturers on PRC LiDAR could pose an unacceptable supply chain risk. In response, BIS reaffirms its decision to exclude LiDAR from the definition of *VCS hardware*. While recognizing that foreign adversary-sourced LiDAR may present certain cyber or supply chain risks, BIS continues to assess that the ADS software is the most appropriate avenue through which to address the potential remote manipulation of a connected vehicle at this time. In general, ADS software is responsible for overseeing the autonomous behavior of the car, processing data from sensors in the car, and executing operations based on that data. In contrast, LiDAR software is merely responsible for analyzing and processing the data collected by LiDAR. BIS recognizes that the scope of both data and control over the vehicle is greater for ADS software than LiDAR software, which is why BIS has prioritized ADS software in this regulation. However, BIS emphasizes that it may consider LiDAR separately as part of a separate rulemaking effort or investigation under 15 CFR 791.

Commenters specifically asked that components and subcomponents that do not have the ability to process or modify data be removed from the scope of VCS hardware, such as antennas and tuners. In response to these comments, BIS notes that if a tuner is a passive electronic part that is not software programmable, it may not be covered by this regulation. However, if the tuner is a software-enabled and programmable component that directly enables the function of a VCS item then it would likely be defined as *VCS hardware* and thus regulated by this rule. This also applies to one commenter, who requested that BIS clarify that RF switches and passive oscillation components not be included in the definition of VCS hardware. BIS believes that the clarification that VCS hardware must “directly enable” vehicle communication addresses this comment. Other outstanding questions may be answered on BIS’s FAQ website page or via an advisory opinion.

Commenters requested that BIS define the terms system and modules. BIS accepts this recommendation in part, as it has defined “system” to the extent it has defined *Vehicle Connectivity System* and *Automated Driving System*. Further, the definition of *item* reflects BIS’s stance on the term “system,” insofar as a system can be considered an

item if that system performs a function. Given this portion of the *item* definition, a subsequent definition of “system” would be redundant. With regard to the term “module,” BIS again determines that the definition of *item* is sufficient to provide a known industry benchmark that regulated entities may use to delimit the types of components that fall within the regulated systems. Multiple commenters, particularly in the commercial vehicle sector, urged BIS to reconsider the inclusion of aftermarket VCS devices. BIS believes that certain aftermarket devices, specifically those that fulfill VCS functions, pose a significant national security risk when designed, developed, manufactured, or supplied by PRC or Russian entities. BIS does recognize that the inclusion of aftermarket devices poses particular concerns for the commercial sector, and consequently may consider a separate rulemaking on commercial connected vehicles to address this significant threat in a tailored manner. For the passenger connected vehicle market, BIS emphasizes that aftermarket devices that directly fulfill VCS functions are captured by the VCS hardware prohibition.

Some commenters raised that under the proposed rule, a cellphone that paired with a connected vehicle could be considered aftermarket VCS hardware. BIS believes that the updated definition of *VCS hardware*, particularly the stipulation that the hardware “directly enable the function of” and be “directly connected to” VCS sufficiently clarifies BIS’s intent that cellphones not be captured by this rule. VCS hardware includes aftermarket devices not contained in a completed connected vehicle at sale but that are later integrated into the vehicle to perform VCS functions. Conversely, VCS hardware does not include aftermarket devices whose primary function is not to enable vehicle connectivity. For example, mobile phones that are paired with a connected vehicle are not considered aftermarket VCS hardware as vehicle connectivity is not the primary intended function of the device.

Additionally, just as commenters requested legacy software to be excluded from the definition of covered software, other commenters requested BIS exclude legacy hardware, or “as produced” repairs, from the scope of the regulation. BIS rejects adding a legacy hardware exclusion because of the longevity of hardware and completed connected vehicles in general. As such, excluding hardware designed prior to the effective date of the prohibition but imported after the effective date from the scope of this regulation could result

in national security risks emanating from such hardware for decades. BIS believes that setting the date in the prohibition for January 1, 2029, or model year 2030 and allowing the import of parts meant for vehicles with a model year prior to 2030 provides a reasonable middle ground.

Additionally, BIS assesses that inspecting hardware for embedded vulnerabilities is more burdensome than inspecting software for the same. Legacy hardware could contain persistent undetected vulnerabilities that would continue to enable potential access to or exploitation of vehicles or vehicle data that would be difficult or impossible to mitigate if scaled across a generation of vehicles. Conversely, regulated entities are more likely to discover such vulnerabilities in software during the continuous cycle of software development and testing, and have the means to patch those vulnerabilities across their fleets. BIS emphasizes that VCS hardware importers may engage in otherwise prohibited transactions so long as (1) the import of VCS hardware not associated with a vehicle model year prior to January 1, 2029, or (2) the import of VCS hardware is associated with a vehicle model year prior to 2030, the VCS hardware is imported as part of a connected vehicle with a model year prior to 2030, or the VCS hardware is imported for purposes of repair or warranty for a connected vehicle with a model year prior to 2030. BIS believes this is sufficient time to adjust VCS hardware supply chains, including for legacy VCS hardware.

BIS defines *VCS hardware* to mean software-enabled or programmable components if they directly enable the function of VCS, or are part of an item that directly enables the function of VCS, including but not limited to: microcontroller, microcomputers or modules, systems on a chip, networking or telematics units, cellular modem/modules, Wi-Fi microcontrollers or modules, Bluetooth microcontrollers or modules, satellite communication systems, other wireless communication microcontrollers or modules, external antennas, digital signal processors, and field-programmable gate arrays. VCS hardware does not include component parts that do not contribute to the communication function of VCS hardware (e.g., brackets, fasteners, plastics, and passive electronics, diodes, field-effect transistors, and bipolar junction transistors).

The representative list of VCS hardware included in its definition is not exhaustive but provides a bright line for certain examples where BIS would consider a component to be VCS

hardware. BIS believes this definition appropriately identifies the various components, contained within a TCU or other connected systems of a connected vehicle, that facilitate off-board data transmission, and thus are most likely to pose the risks identified in Section IV.

21. VCS Hardware Importer

In the NPRM, BIS proposed *VCS hardware importer* to mean a U.S. person importing VCS hardware for further manufacturing, integration, resale, or distribution. A connected vehicle manufacturer may be a VCS hardware importer if VCS hardware has already been installed in a connected vehicle when imported by the connected vehicle manufacturer. Commenters’ feedback led BIS to provide a more specific definition in the final rule.

Some commenters highlighted that the proposed rule’s broad definition of both *VCS hardware* and *VCS hardware importer* would capture the import of components whose primary use is not automotive and thus cause severe ancillary effects on other industries. In response, BIS has clarified the definition of *VCS hardware importer* to include only those entities who are importing VCS hardware components that are for use in completed connected vehicles, or that are already incorporated in a connected vehicle (incomplete or completed). BIS further believes that the changes to the definition of *VCS hardware* provide additional clarity on this point.

Other commenters requested that BIS codify its expectation that this definition would capture OEMs and tier one and tier two suppliers. While BIS anticipates that these will be the primary entities who are engaging in the import of VCS hardware components covered by this rule, BIS has opted not to specify this expectation in the rule text given the possibility that other entities may become involved in the import of VCS hardware. BIS emphasizes that parties may submit a request for an advisory opinion on a specific transaction if they are unsure if they qualify as a VCS hardware importer under the terms of this rule.

BIS defines *VCS hardware importer* as a U.S. person who imports:

(1) VCS hardware for further manufacturing, incorporation, or integration into a completed connected vehicle that is intended to be sold or operated in the United States; or

(2) VCS hardware that has already been installed, incorporated, or integrated into a connected vehicle, or a subassembly thereof, that is intended

to be sold as part of a completed connected vehicle in the United States.

BIS anticipates that this definition will primarily capture OEMs, tier one, and tier two suppliers importing VCS hardware into the United States. This definition also delineates that only entities importing VCS hardware with an intention of incorporating it into the U.S. automotive supply chain are subject to this regulation, rather than VCS hardware importers providing products to markets beside the auto industry.

b. Prohibitions on Certain Transactions Related to Connected Vehicles

The NPRM proposed to prohibit three categories of transactions: prohibited VCS hardware transactions, prohibited covered software transactions, and related prohibited transactions (collectively described as *prohibited transactions*). In this section, BIS summarizes the prohibitions proposed in the NPRM and examines public comments on them. This final rule largely retains these same prohibitions, but in response to comments, BIS has added additional examples to provide more clarity for the scope of transactions that fall under this regulation. Many commenters also requested that BIS provide greater clarity regarding the definitions of *VCS hardware*, *covered software*, and *foreign interest* so that auto manufacturers can better understand what constitutes a prohibited transaction. Comments on these definitions as well as BIS's efforts to clarify these definitions are discussed above and should be considered in tandem with this discussion.

In the NPRM, BIS proposed the following language identifying prohibited transactions. First, under prohibited VCS hardware transactions, the NPRM stated:

(a) "VCS hardware importers are prohibited from knowingly importing VCS hardware that is designed, developed, manufactured, or supplied by persons owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia."

(b) "In the context of this subpart, VCS hardware will not be considered to be designed, developed, manufactured, or supplied by persons owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia, solely based on the country of citizenship of natural persons who are employed, contracted, or otherwise similarly engaged to participate in the design, development, manufacture, or supply of the VCS hardware."

Second, under prohibited covered software transactions, BIS proposed the following language:

(a) "Connected vehicle manufacturers are prohibited from knowingly importing into the United States completed connected vehicles that incorporate covered software, designed, developed, manufactured, or supplied by persons owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia."

(b) "Connected vehicle manufacturers are prohibited from knowingly selling in the United States completed connected vehicles that incorporate covered software, designed, developed, manufactured, or supplied by persons owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia."

(c) "In the context of this subpart, covered software will not be considered to be designed, developed, manufactured, or supplied by persons owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia, solely based on the country of citizenship of natural persons who are employed, contracted, or otherwise similarly engaged to participate in the design, development, manufacture, or supply of the [c]overed [s]oftware."

Finally, BIS proposed the following language addressing related prohibited transactions:

"Connected vehicle manufacturers who are persons owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia, are prohibited from knowingly selling in the United States completed connected vehicles that incorporate VCS hardware or covered software."

Multiple commenters requested that BIS provide clearer guidance on what constitutes a prohibited transaction, notably (1) to demonstrate the difference between "design" and "develop" (relevant to both the VCS hardware and the covered software prohibitions) and (2) to narrow the scope of the entity responsible for the "design" or "development" of the item when multiple entities are involved in its creation. BIS acknowledges the need for clear guidance on what constitutes a prohibited transaction and has therefore in response to commenters included new examples in explaining the definitions above to clarify the scope of "design and develop" and the entities responsible.

Several commenters voiced that BIS should narrow the scope of the prohibited transactions. For example, one commenter recommended that the covered software prohibition only apply prospectively and not to software developed prior to the effective date of the rule. Another commenter stated that BIS should exclude embedded software similar to firmware, while another commenter stated that BIS should amend its prohibitions to only prohibit the import of VCS hardware if it is integrated into a VCS or a completed connected vehicle. BIS appreciates these

recommendations and has addressed them by clarifying the definitions of ADS, VCS, VCS hardware, and covered software, as described above.

One commenter proposed narrowing the scope of prohibited transactions by adding an exemption to the prohibited transactions for OEMs physically manufacturing connected vehicles in the PRC and Russia if those OEMs met certain security standards such as the independent design of covered software and VCS hardware, verifiable hardware and software integrity, secure key and certificate management, and ongoing monitoring. BIS appreciates this suggestion when issuing specific authorizations, which are discussed in Section VI.c.3 below. However, BIS believes that such mitigations are more appropriately implemented and monitored on a case-by-case basis and therefore declines the suggestion for a blanket exemption.

Other commenters recommended that BIS expand the scope of prohibited transactions to include BMS, vehicle charging equipment, connectivity apps, edge cloud architecture, and core ADS components to better protect national security. BIS regulates VCS and ADS based on feedback from the ANPRM that eliminates these other areas. For example, ANPRM comments emphasized that BMS do not have their own connectivity and require communication through a VCS, thereby making VCS a better system for mitigating the identified risks in this rule. BIS also recognizes that the traditional BMS does not have its own external wireless data link, which is why it rejects commenters' recommendation to include BMS at this time. An additional commenter stated that BIS should avoid "politicization" of technical issues and cancel all prohibitions against the PRC in the rule. BIS declines to make this change due to the national security risks discussed in Section IV above.

One commenter requested that BIS clarify with regard to the preamble's "potential regulatory statement" that the prohibition on the sale of completed connected vehicles by connected vehicle manufacturers who are themselves owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia (related prohibited transactions) applies only when the VCS hardware or covered software within the vehicle is designed, developed, manufactured, or supplied by persons owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia. BIS has amended the rule to clarify that this prohibition applies to

all vehicles (with VCS hardware or covered software) sold by these connected vehicle manufacturers given the substantial national security risk posed by the provision of these completed connected vehicles by these entities.

Some commenters asked whether ownership alone, regardless of the location of manufacturing or development, falls under this prohibition. Given the legal authorities laid out in Section IV and the threats stemming from those authorities, BIS assesses that a connected vehicle manufacturer that is owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia creates an unacceptable risk. The risk applies even if manufacturing or design operations are located in the United States or other non-foreign adversary countries, and BIS assesses that the costs of reducing the risk are justified by the reduced risk to national security.

One commenter suggested that ADS hardware should also be prohibited. This commenter suggested that the supply chain disruptions can be reduced by incorporating a phased implementation, where the prohibitions relating to ADS hardware could be modeled after the VCS hardware exemption. This commenter also emphasized that if ADS hardware is not included in the final rule, industry will have little incentive to develop and manufacture hardware in the United States, leaving the national security risk unmitigated. BIS declines to expand this regulation to prohibit ADS hardware at this time. Much of the hardware that supports or directly enables the ADS function, or that falls within the ADS item definition, are end point sensing devices or internal wired communication devices that often do not have external connectivity. For that reason, BIS maintains that regulating VCS hardware and ADS software is an appropriate means to mitigate the national security concerns at this time. BIS's decision not to include ADS hardware in this rule's prohibitions does not preclude BIS from addressing it in a subsequent rulemaking.

BIS agrees with commenters' focus on the potential impacts of foreign adversary involvement in developing technology for autonomous vehicles and the degree to which PRC and Russian legal and regulatory environments inhibit the transparency that would be necessary to adequately ensure both public safety and U.S. national security. One commenter noted that the lack of data transparency required of PRC autonomous vehicle developers makes it

particularly difficult for the public to assess their safety. BIS appreciates this feedback and notes its alignment with its own risk assessment.

After reviewing and considering all of the comments, in this final rule, BIS has adopted prohibitions consistent with the NPRM: (1) VCS hardware importers are prohibited from knowingly importing into the United States any VCS hardware that is designed, developed, manufactured, or supplied by persons owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia; (2) connected vehicle manufacturers are prohibited from knowingly selling within the United States, or importing into the United States, completed connected vehicles that incorporate covered software that is designed, developed, manufactured, or supplied by persons owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia; and (3) connected vehicle manufacturers who are owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia are also prohibited from knowingly selling in the United States completed connected vehicles that incorporate covered software or VCS hardware, regardless of whether such VCS hardware or covered software is designed, developed, manufactured, or supplied by persons owned by, controlled by, or subject to the jurisdiction or control of the PRC or Russia. These connected vehicle manufacturers are also prohibited from offering commercial services in the United States that utilize completed connected vehicles that incorporate ADS.

Because of the role connected vehicle manufacturers play in the design and development of the key components in connected vehicles, which are generally built to the manufacturers' specifications, the third prohibition will often be duplicative of the other prohibitions in this final rule. However, as BIS intended in the NPRM and has clarified in this final rule, the third prohibition applies even if connected vehicle manufacturers who are owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia were not involved in the design or development of the VCS hardware and covered software. Their sale of those completed connected vehicles constitutes the supply of VCS hardware and covered software and is thus captured by this prohibition. Additionally, in the NPRM, BIS intended to prohibit persons owned by, controlled by, or subject to the jurisdiction or direction of the PRC or

Russia from integrating ADS onto otherwise completed connected vehicles and offering them for commercial services, to include rideshare or robotaxi services. For this reason, BIS included in the NPRM's definition of sale that "distributing for . . . other commercial operations" qualifies as a sale (even if it is not for purchase or lease). In order to provide greater clarity to regulated parties, BIS has chosen to explicitly state in the related prohibited transactions provision in section 791.304, that this rule prohibits connected vehicle manufacturers who are themselves owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia from offering commercial services that utilize completed connected vehicles that incorporate ADS. BIS anticipates that this will include both robotaxi and rideshare services. BIS has added Example 41 above to provide further clarity.

As noted above, for the purposes of the final rule, BIS defines the term *person owned by, controlled by, or subject to the jurisdiction or direction of a foreign adversary* to mean (a) any person, wherever located, who acts as an agent, representative, or employee, or any person who acts in any other capacity at the order, request, or under the direction or control, of a foreign adversary or of a person whose activities are directly or indirectly supervised, directed, controlled, financed, or subsidized in whole or in majority part by a foreign adversary; (b) any person, wherever located, who is a citizen or resident of a foreign adversary or a country controlled by a foreign adversary, and is not a United States citizen or permanent resident of the United States; (c) any corporation, partnership, association, or other organization with a principal place of business in, headquartered in, incorporated in, or otherwise organized under the laws of a foreign adversary or a country controlled by a foreign adversary; or (d) any corporation, partnership, association, or other organization, wherever organized or doing business, that is owned or controlled by a foreign adversary, to include circumstances in which any person identified in paragraphs (a) through (c) possesses the power, direct or indirect, whether or not exercised, through the ownership of a majority or a dominant minority of the total outstanding voting interest in an entity, board representation, proxy voting, a special share, contractual arrangements, formal or informal arrangements to act in concert, or other means, to determine,

direct, or decide important matters affecting an entity.

To provide further clarity regarding transactions involving VCS hardware and covered software that are prohibited, BIS has offered examples of persons owned by, controlled by, or subject to the jurisdiction or direction of the PRC and Russia in Section VI subsection (a) above. BIS incorporates the examples provided in the NPRM and has added several new examples to provide further illustration.

c. Compliance

1. Declaration of Conformity

Declarations of Conformity will be a critical tool for advancing the goals of this final rule, and addressing the emergency declared in E.O. 13873 (section 791.306, “General authorizations”). Through extensive engagement with connected vehicle manufacturers and automotive suppliers, BIS has come to understand that connected vehicle supply chains are complex and often opaque, with potentially hundreds of suppliers for a single connected vehicle in a given model year. Given the complexity, the vast number of parts, and the supply-chain opacity, BIS assesses there is a significant risk that VCS hardware and covered software that is designed, developed, manufactured, or supplied by persons owned by, controlled by, or subject to the jurisdiction or direction of foreign adversaries will be incorporated into connected vehicles if connected vehicle manufacturers do not conduct adequate supply chain due diligence or fail to prioritize and prevent the risks BIS has assessed. BIS considered whether to remove the Declarations of Conformity requirement and only require the submission of specific authorization applications for connected vehicles incorporating VCS hardware and covered software imported from PRC and Russia. However, BIS does not believe that this alternative adequately mitigates the risks identified in this rule. Foreign adversaries are not limited to operations within their geographical area and may obtain access to VCS and ADS supply chains through investment and participation in operations in a variety of foreign locations. Current customs and other supply chain reporting, which is focused on country of origin, creates a layer of opacity that can be exploited by adversaries to compromise connected vehicle components that can later be used to threaten United States persons and infrastructure. In other words, current practices for reporting supply chain due diligence do not prioritize the same

national security focus required by this regulation.

As BIS stated in the NPRM and as discussed in further detail below, based on extensive engagement with connected vehicle manufacturers and automotive suppliers, BIS assesses that connected vehicle supply chains often have significant numbers of suppliers for a single connected vehicle in a given model year. Connected vehicle manufacturers typically have strong relationships with their immediate suppliers, including the development of years-long supply contracts that span entire vehicle generations; however, their understanding of the deeper supply chain, such as who is supplying their suppliers (*e.g.*, tier two, tier three) is substantially weaker. Additionally, BIS understands through industry engagement that although the COVID-19 pandemic and associated supply chain crisis forced connected vehicle manufacturers to critically evaluate their hardware supply chains, detailed knowledge of software supply chains remains largely unachieved. Even where it may exist, BIS cannot actively identify a specific supply chain compliance framework for the auto industry that requires due diligence on the national security risks in the auto market’s supply chain. Such complexity and opacity, without a requirement to conduct the necessary due diligence, could result in the incorporation of VCS hardware and covered software that is designed, developed, manufactured, or supplied by persons owned by, controlled by, or subject to the jurisdiction or direction of foreign adversaries, into connected vehicles without the full knowledge of the connected vehicle manufacturer.

Consequently, BIS believes that the requirement to submit annual Declarations of Conformity will serve as an important mechanism that will substantially reduce the risk of the current supply chain opacity by requiring enhanced due diligence into the auto market’s supply chain through a specific national security lens. BIS requires VCS hardware importers and connected vehicle manufacturers to submit Declarations of Conformity to certify their compliance with this regulation, including their completion of due diligence requirements. BIS has considered whether, as an alternative, a recordkeeping approach could adequately address the national security risk posed by connected vehicle technology with a nexus to the PRC and Russia, but recordkeeping is a retroactive activity. It does not create an adequate incentive to change supply

chain business practices to achieve the goals of this rule.

If Declarations of Conformity were entirely replaced by a recordkeeping requirement, manufacturers may have to undergo recalls on parts that have already entered the supply chain. Automotive recalls are difficult to execute, with automakers traditionally struggling to reach a 100 percent completion rate on recalls due to various complications, including customer communication failures and the preowned vehicle market. If a recall fails to remove all of the vulnerable vehicles from the road, the national security threat will continue to persist. As such, the undue risks to national security would not be sufficiently mitigated without proactive due diligence requirements that deter the threat before it enters the U.S. supply chain, rather than reactive measures such as recordkeeping, reporting requirements, or unsatisfactory recalls by VCS hardware importers and covered vehicle manufacturers to secure their supply chains. At the same time, recalls would represent a source of unpredictability for automakers and suppliers, and this cost would likely be passed on to consumers. By contrast, requiring companies to submit Declarations of Conformity to the government will motivate them to conduct supply chain due diligence in order to make the required certifications. Because companies are conducting proactive due diligence, they will be able to detect prohibited components and mitigate risks before they enter the larger connected vehicle ecosystem.

Given the national security risks posed by the ADS and VCS supply chains, BIS requires that industry actively participate in securing the supply chain. By requiring certifications in the Declaration of Conformity, BIS creates an incentive for industry to invest in supply chain review and assessment and to accelerate necessary changes to ensure each regulated entity achieves compliance. The act of requiring affirmative certification encourages the adoption of enhanced supply chain due diligence and begins the process of standardizing how industry will be required to respond to foreign adversary ICTS in the automotive supply chain. Public comments to the ANPRM and the NPRM and information conveyed in BIS’s external engagements indicate that much of the industry does not factor national security issues into their supply chain operations. Ultimately, by requiring connected vehicle manufacturers and VCS hardware

importers to submit Declarations of Conformity, BIS ensures that parties subject to this final rule implement necessary procedures to fully understand their VCS hardware and covered software supply chains. Declarations of Conformity are an important tool in ensuring that parties subject to this final rule comply with the prohibitions on the incorporation of VCS hardware or covered software that has been designed, developed, manufactured, or supplied by persons owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia.

Apart from encouraging suppliers to re-examine their supply chains, the certification process will also help the U.S. Government execute its responsibility to maintain the national security interests of the American people. Through requirements for recordkeeping and due diligence on the part of declarants, BIS will be able to obtain data which may not otherwise exist in a useable format without such requirements to verify Declarations of Conformity, such as documentation of the tiers of ICTS suppliers (section 791.312, “Recordkeeping”) (section 791.313, “Reports to be furnished on demand”). BIS will further use such information to better inform and identify risks as they evolve within ADS and VCS supply chains. For example, if, through the verification process, BIS determines that a supplier has a nexus to foreign adversary, BIS can highlight to other companies that the supplier is prohibited by using an “Is-Informed” notice. Additionally, if a company previously acting under a Declaration of Conformity must, due to their own discovery of a change in circumstance, cease acting under a Declaration of Conformity, and instead submit an application for a specific authorization, BIS may, upon receipt of said specific authorization, be able to identify supply chain issues impacting other companies acting under a Declaration of Conformity. Receipt of Declarations of Conformity will also help BIS to spot trends in the importation of covered software and VCS hardware with a foreign interest into the U.S., which will allow BIS to appropriately analyze the hardware and software with the largest risk of evasion by prohibited companies. In sum, through receipt of Declarations of Conformity, BIS will be more capable of monitoring the pervasiveness of the risk and gain insight into any additional mitigation measures which may be required to secure the continuously evolving ICTS supply chain, as authorized by E.O. 13873.

The information collected through Declarations of Conformity will be essential for BIS to effectively protect U.S. national security from the risks identified in this rule. BIS has generally found that research using publicly available data is often incapable of revealing whether a supplier has ties to the PRC or Russia. As BIS has detailed extensively in this rule, there are myriad ways in which an entity may be owned by, controlled by, or subject to the jurisdiction of a foreign adversary, and not all of these circumstances will be publicly disclosed. Additionally, regulated entities working directly in the sector will have a far more intimate understanding of the parties with whom they transact, another form of information which is often otherwise undisclosed. BIS will need access to both types of information in order to execute on the goals of this rule. As such, to ensure industry-wide compliance with this rule and maintain the understanding of the connected vehicle sector necessary to conduct enforcement, BIS will require companies to maintain such information, and submit said information in the case that it is otherwise unavailable. Without the Declaration of Conformity certifications, BIS will be unable to receive a fulsome picture of the regulated supply chain and relevant technologies, and it will be left with a needle-in-a-haystack approach when assessing companies’ compliance with this rule. Ultimately, the certification process will bring transparency to an opaque supply chain.

In the proposed rule, BIS proposed including several reporting requirements for connected vehicle manufacturers, connected vehicle importers, and VCS hardware importers that submit Declarations of Conformity. These reporting requirements included, but were not limited to, submitting SBOMs and HBOMs and a list of third-party external endpoints to which the VCS hardware connects, including the country where each endpoint is located and the identity and location of the service provider, as applicable.

After considering public comments, BIS has restructured the Declarations of Conformity requirement to clarify the certification, narrow the reporting requirements, and add recordkeeping elements. The final rule requires that Declarations of Conformity would be submitted in two instances by persons not engaged in prohibited transactions: (1) Declarations by entities engaged in VCS hardware transactions; and (2) Declarations by entities engaged in covered software transactions.

Persons required to submit a Declaration of Conformity need to do so once per model year for units associated with a vehicle model year, or once per calendar year for units not associated with a vehicle model year, and only for the categories of transactions they seek to execute during that period. Several commenters voiced confusion and requested clarification on the timeline for Declarations of Conformity. BIS has extended the timeline for submitting updates to a Declaration of Conformity from 30 to 60 days.

BIS further clarifies the certification statement that connected vehicle manufacturers and VCS hardware importers must make. BIS agrees that the use of terms like “knowingly engaged,” which is past tense, made the timing for submission of a Declaration of Conformity confusing. Therefore, BIS has adjusted the language to require a more straightforward certification: that the VCS hardware or covered software triggering the need for, and described in, the Declaration of Conformity was not designed, developed, manufactured, or supplied by persons owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia.

In the final rule, entities must submit to BIS the name and contact information of the VCS hardware importer or connected vehicle manufacturer, as well as additional information outlined in section 791.305, based on whether the entity is engaging in a covered software or VCS hardware transaction. Entities must also certify to BIS that they have conducted due diligence into their supply chain and that their VCS hardware or covered software was not designed, developed, manufactured, or supplied by persons owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia. Primary business records documenting these due diligence efforts, which may include the optional use of independent or hired third-party research (section 791.315, “Third-party verification and assessments”), must be maintained by the declarant or a third-party and made available to BIS upon request. HBOMs and SBOMs are no longer required to be submitted as part of a Declaration of Conformity but can function as a method of recordkeeping.

Several commenters expressed fundamental disagreement with BIS’s proposed regulatory approach for connected vehicle supply chains. One commenter suggested that BIS adopt a framework like the NHTSA Federal Motor Vehicle Safety Standards (FMVSS), which allows companies to import restricted components provided

they conduct their own due diligence and risk analysis. NHTSA FMVSS establishes minimum performance requirements for manufacturers and the equipment used to make vehicles, prioritizing safety standards for drivers and passengers. BIS's concern with ADS and VCS technology is broader than that of public safety of drivers and passengers, but also addresses additional concerns, including national security risks posed by adversary countries, such as data exfiltration and remote access control that may compromise critical infrastructure. BIS does not believe that the NHTSA FMVSS provides a framework that is designed to address national security concerns, however, BIS has adopted some similar characteristics of this framework. For example, BIS may allow companies to import restricted components through specific authorizations if those companies show a certain degree of due diligence, risk analysis, and risk mitigation to minimize the threat present in otherwise prohibited ICTS.

One commenter requested withdrawal of the use of the Declaration of Conformity in favor of a presumption of conformance, claiming that a presumption of conformance would reduce regulatory burden, address the national security risk, and remove potential hurdles to innovation posed by the NPRM. BIS rejects utilizing a presumption of conformance. The risks identified in this rulemaking are too great to rely solely on a presumption of conformance by commercial companies, which is only exacerbated by the opacity of the supply chain as discussed above. A presumption of conformance would also allow hardware and software to linger and remain in the U.S. ecosystem for a longer period of time as BIS would not have insight or confirmation of the existence of such hardware or software. Through receipt of declarants' certification regarding VCS hardware or covered software, that they have conducted due diligence to inform this certification, and that they, or a designated third party, maintain documentation related to this certification as part of their Declarations of Conformity, BIS will be able to more accurately and efficiently confirm and verify that no VCS hardware or covered software designed, developed, manufactured, or supplied by persons with a sufficient nexus to the PRC or Russia continues to operate in the United States.

In the final rule, BIS has largely adopted a certification and recordkeeping approach in Declarations of Conformity that significantly lessens

the burden on regulated entities. Entities can now certify to BIS that they have conducted due diligence into their covered software and VCS hardware supply chains without needing to submit such documentation to BIS. A recordkeeping requirement alone would not be sufficient to mitigate the identified risk because it would not create the incentive to change business processes to identify and address risks in their supply chains. Requiring certifications in Declarations of Conformity, on top of a recordkeeping requirement, creates an enforceable incentive for industry to invest in supply chain review and assessment thereby furthering mitigation of the risks identified in this rule.

Commenters also requested that software traceability be included in the compliance requirements of this regulation. BIS believes that in order to determine compliance, entities regulated under this rule will be required to conduct the necessary software traceability as part of their supply chain due diligence. For example, in submitting a Declaration of Conformity, declarants are required to certify both that the covered software was not designed, developed, manufactured, or supplied by persons owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia and that the declarant has conducted due diligence to inform its certification. If such due diligence determines that certain VCS hardware or covered software was designed, developed, manufactured, or supplied by a foreign adversary, such use of ICTS would be prohibited and the entity would need to apply for a specific authorization. Furthermore, an applicant for a specific authorization may be required to furnish additional information to BIS prior to the granting of a specific authorization, which may require applicants to conduct further due diligence into their software supply chain.

Some commenters criticized the NPRM for being developed in isolation from other automobile trade actions taken by the U.S. government, suggesting that this lack of coordination prevents the streamlining of existing governmental processes related to the automotive industry. BIS emphasizes that the statement in the NPRM that one commenter referenced, which stated that the proposed rule was issued irrespective of other trade policies, does not mean to imply that this action was undertaken without coordination with other government agencies regulating vehicle safety or the trade of vehicles. Rather, BIS emphasizes that this

regulation is being promulgated strictly on national security grounds that exist irrespective of specific trade policy surrounding connected vehicles, which do not adequately (or at all) address the national security risks articulated in this rule. BIS emphasizes that the ANPRM, the NPRM, and this final rule all underwent extensive interagency review and incorporated views of all other relevant Federal agencies. In addition, BIS met weekly with an interagency technical working group as part of its drafting process.

Existing trade actions do not sufficiently address the national security risks identified by BIS in the connected vehicle supply chain. In response to commenters requesting that BIS clarify the role of coordinating agencies or other regulations, such as the FCC Covered List, BIS anticipates that it will continue closely collaborating with relevant government agencies including when adjudicating applications for specific authorizations or determining if and when updates to this rule are necessary. BIS emphasizes that regulated entities will be responsible for verifying compliance with all laws and regulations applicable to the transactions in which they seek to engage but may request an advisory opinion from BIS if unsure that a specific transaction is subject to the prohibitions of this rule.

Commenters raised a series of concerns with the SBOM and HBOM requirements in the Declarations of Conformity requirement. Most of these concerns involved the ambiguity of the SBOM and HBOM requirements described in the NPRM and what should be included in these documents. Commenters argued that the NPRM's HBOM and SBOM requirements are overly burdensome, demanding both regulated entities and BIS to devote substantial resources to meet compliance. Commenters also wanted clarity on when companies would be required to submit an HBOM or SBOM, and for BIS to specify whether they would be required to do so every time an SBOM or HBOM changes. In response to comments, BIS is no longer requiring the submission of SBOMs and HBOMs in Declarations of Conformity. Entities will instead be required to certify to BIS that they have conducted due diligence in analyzing their VCS hardware and covered software supply chains and maintain documentation in support of this certification. The documentation may take the form of an SBOM or HBOM or another appropriate format. Entities must also certify that this documentation can be made available to BIS upon request.

Commenters wanted BIS to describe how it will receive, store, protect, and use SBOMs and HBOMs. Commenters repeatedly raised concerns about the protections of sensitive proprietary information in Declarations of Conformity. Commenters argued that BIS is creating a heightened risk that hostile actors may attempt to exfiltrate sensitive technical specifications, software components, or system designs, leading to significant economic damage and undermining the global competitiveness of U.S. companies if BIS fails to adopt protective measures. Commenters often sought BIS assurance that their data will be protected and secured. Commenters recommended that BIS adopt strict access controls for submitted Declarations of Conformity, particularly those containing classified or sensitive proprietary information. These controls could include encryption of submissions, limiting access to authorized personnel only, and ensuring that proprietary information is not unnecessarily shared during any public disclosure or regulatory review processes. One commenter also requested that BIS delete CBI provided in support of a submission after a period of time.

BIS acknowledges commenters' concerns related to the submission of sensitive information in the Declarations of Conformity. In response, BIS has limited the amount of sensitive information required as part of the submission by eliminating the requirement to submit SBOMs and HBOMs. BIS has also included a section in the rule (section 791.314, "Confidential Business Information") dedicated to the submission of CBI, which would cover the submission of SBOMs or HBOMs if they were ever required for third-party verification purposes. Section 791.314 outlines the confidentiality of information the same as in BIS regulation 15 CFR 791.102 including that information or documentary materials, not otherwise publicly or commercially available, submitted or filed with the Secretary under this part will not be released publicly except to the extent required by law. BIS declines the suggestion to delete CBI after a period of time, as such information may need to be referenced in future investigations due to evolving national security concerns.

Tier one and tier two suppliers often explained that providing SBOMs and HBOMs to customers, such as OEMs, can potentially undermine their business value because it is equivalent to giving their proprietary information to their client. These suppliers would rather submit this information directly

to BIS. In response to these comments, and apart from removing the mandatory submission of SBOMs and HBOMs as part of the Declaration of Conformity process, BIS has allowed connected vehicle manufacturers and VCS hardware importers to rely on third parties as part of their due diligence efforts. If BIS requires the submission of additional documentation in the verification of a Declaration of Conformity, suppliers would be allowed to submit the required documentation directly to BIS.

Commenters offered ideas on how BIS could enact different models to limit the burdens imposed on both BIS and regulated entities, as well as ensure the protection of IP. A handful of commenters suggested implementing the NHTSA self-certification model requiring VCS hardware importers and connected vehicle manufacturers to produce and retain their Declarations of Conformity and provide them to BIS on an as-needed basis. Commenters also suggested implementing other attestation or self-certification programs, including those that could be modeled by Federal agencies, such as U.S. Customs and Border Protection's Certifications of Origin template or the Food and Drug Administration's Importation of Electronic Products declarations. One commenter in particular emphasized that the adoption of these methods would create a streamlined self-certification compliance process that eases production burdens on regulated entities and allows BIS to focus on monitoring for prohibited transactions, rather than processing and maintaining a substantial amount of information through Declarations of Conformity that may not provide meaningful data. As described above, BIS determined that relying entirely on a self-certification system for Declarations of Conformity would be insufficient given the nature of the national security risk and these self-certification models. Self-certification would not give BIS the visibility that Declarations of Conformity provide to track and monitor the connected vehicle supply chain industry, specifically as it relates to the timeliness of identifying potential violations of this rule and the actions BIS would need to take to remedy a national security issue stemming from prohibited covered software or VCS hardware that has entered the U.S. supply chain.

Commenters suggested other ways of narrowing the scope of the Declaration to be less burdensome on regulated entities. For instance, some commenters recommended that BIS change the

requirement to submit a Declaration of Conformity for every model year. While it has not removed the requirement to submit a Declaration of Conformity every model year, BIS has updated the Declaration of Conformity submission requirements to be less burdensome on regulated entities by allowing declarants to submit a confirmation that a prior Declaration of Conformity remains accurate in lieu of submitting a new Declaration of Conformity. Some commenters also requested BIS allow regulated entities to rely on statements, attestations, or affirmations from suppliers regarding the origins of components and software so as to limit reporting requirements and ensure that tiered suppliers did not have to share their intellectual property with their customers. Based on comments, BIS will allow connected vehicle manufacturers to rely on their suppliers' submissions of supply chain information to BIS, if an agreement between the connected vehicle manufacturer and supplier permits such sharing of information. Commenters suggested that entities should be able to simply provide a comprehensive list of all imported VCS and ADS fleet-wide for a given model year. BIS accepts this suggestion as the Declaration of Conformity procedures would allow for connected vehicle manufacturers or VCS hardware importers to submit a single comprehensive submission. Other commenters strongly recommended that BIS abandon the universal submissions requirements of SBOM and HBOM and instead require them only in the event of an investigation or audit. BIS acknowledges commenters' feedback, and in response has adjusted SBOM and HBOM submission requirements. BIS accommodates the requests to forego the submissions of HBOMs, SBOMs, and other proprietary information, and rely more on a certification-based model as commenters suggested.

As such, for the purposes of submitting a Declaration of Conformity, BIS has clarified that a certification is a written statement or attestation, made in relation to section 791.305(a) of this rule, to the U.S. Government, signed by a duly authorized designee, certifying under the penalties provided in 18 U.S.C. 1001, that the information provided is accurate and complete in all material respects to the best knowledge of the designee on behalf of the entity filing the Declaration of Conformity. BIS further clarified that for the purposes of a Declaration of Conformity, a duly authorized designee is:

(i) In the case of a partnership, any general partner thereof;

(ii) In the case of a corporation, the chief executive officer, or any officer with the authority to bind the corporation;

(iii) An employee with authority to make certifications on behalf of the company as designated by a person in (i) or (ii); and

(iv) In the case of an entity lacking partners and officers, any individual manager, or designated agent who has been explicitly authorized by the board of directors or equivalent to sign contracts and make legally binding agreements on behalf of the entity.

BIS concluded that this approach provides the declarant with clear instructions as to who may make certifications as part of Declarations of Conformity. While the requirements for a certification have certain guidelines, BIS has still provided companies with flexibility to internally determine who may make these statements. BIS acknowledges that adopting a more certification-based model for Declarations of Conformity, as commenters suggested, requires an increased level of trust in such certifications on the part of BIS. BIS's guidelines as to who can make a certification ensures that only duly authorized individuals can attest to an entity's compliance and that supply chain security is a priority within the connected vehicle industry.

BIS has additionally allowed for connected vehicle manufacturers and VCS hardware importers to rely on third parties as part of their due diligence requirements for a Declaration of Conformity. This could include a VCS hardware importer or connected vehicle manufacturer relying on assessments from suppliers, provided that they have arranged for suppliers to furnish documentation and third-party assessments (as applicable) to BIS upon request. Further, BIS confirms that the Declaration of Conformity requirement will be satisfied by VCS hardware importers and connected vehicle manufacturers who submit a compiled Declaration of Conformity that covers the covered entity's entire fleet for the given model year, so long as it appropriately identifies the minimum required information (including, without limitation, the FCC ID Number of the hardware, if known, and the makes, models, and trims of vehicles covered by the Declaration of Conformity).

Commenters raised concerns about the efficiency of the compliance process and provided solutions to promote processing in a timely manner. Commenters suggested that Declarations of Conformity be replaced with dialogue

between BIS and entities subject to regulation. Another commenter urged BIS to consider clarifying the applicability of the Declaration of Conformity requirement for import purposes in order to avoid a huge surge in advisory opinion requests, particularly for importers. To help with expediency, one commenter recommended that BIS use best-in-class documentation and verification standards to ensure that submission of compliance materials does not hinder the pace of commerce. This commenter also suggested that BIS allow companies to digitally present import and compliance documentation proactively via their due diligence processes. BIS took these comments under consideration when re-assessing the requirements in the Declarations of Conformity. While BIS did not accept all of the commenter's suggestions, BIS believes that the updated Declaration of Conformity provisions and clarifications in the final rule will increase the rule's efficiency. BIS believes that the Declaration of Conformity requirement will be integral to the expedient administration of this rule because it will incentivize industry compliance and help BIS administer this rule when reviewing industry compliance.

Commenters advised BIS to reconsider the timeline submission requirements of Declarations of Conformity. Many commenters advised increasing the Declaration of Conformity submission deadline from 30 days to 60 days to provide manufacturers and importers adequate time to prepare, verify, and submit updates. Another commenter requested more details on the timeline required for regulated entities to submit their initial Declarations of Conformity, urging BIS to provide more time for entities to initially review their supply chains. Commenters also recommended that BIS clarify that manufacturers or importers must submit amended Declarations of Conformity within 30 days if they discover errors, omissions, or other issues in previously submitted documents. BIS acknowledges commenters' concerns and has increased the submission deadline for Declarations of Conformity to 60 days in all instances. Connected vehicle manufacturers and VCS hardware importers must submit digital documentation of their compliance at least 60 days prior to the first import or first sale of each model year of a completed connected vehicle that incorporates covered software and the first import of VCS hardware for each

model year or calendar year, as applicable.

Commenters provided feedback on the "material" change requirements of Declarations of Conformity. Comments included conflicting opinions on when industry should be responsible for providing an updated Declaration of Conformity. One commenter requested that material changes be limited to the first submission because hardware can be used for several different makes, models, and trims. Another commenter suggested that a material change submission should require an updated Declaration of Conformity within 60 days. Several commenters suggested that BIS remove the requirement for annual certification and instead only require recertification if there is a material change to the model year. Separate from this, another commenter identified that the NPRM placed no limit on how far into the future automakers will have to declare material changes, suggesting that material changes be limited to 10 years to align with the document retention limit. One commenter also advised that BIS clarify when the material change clock starts, specifying it to be when the declarant first knows of the material change. More broadly, commenters urged BIS to define "material" change and provide examples.

BIS has clarified the scope of a "material" change, which is limited to the "discovery, by the declarant, of an omission, inaccuracy, or error in the information provided to the Department in a prior Declaration of Conformity that could reasonably mislead as to the true source of VCS hardware or covered software in question." BIS accepts the suggestion that connected vehicle manufacturers and VCS hardware importers must notify BIS of any material change to the information conveyed in a previously submitted Declaration of Conformity by submitting a revised Declaration of Conformity within 60 days following the discovery of such change. BIS clarifies that covered software updates alone do not constitute a material change. BIS declines to remove the annual certification requirements for Declarations of Conformity as the information certified in an annual certification is more robust than that considered to be a "material" change. However, BIS confirms that connected vehicle manufacturers and VCS hardware importers may submit a confirmation that a prior Declaration of Conformity remains accurate by associating the relevant new model year of vehicles (if known) to an existing Declaration of Conformity. In addition,

BIS confirms that the declarant's obligation to inform BIS of material changes to the information on which a Declaration of Conformity depends ceases 10 years after submission of the original Declaration of Conformity for that model year or calendar year.

Commenters also respectfully questioned whether a 10-year retention requirement for Declarations of Conformity is reasonable, appropriate, or practicable for the connected vehicle industry given that rate of technological advancement, ultimately recommending a shorter retention period. One commenter suggested to require only keeping records that would be retained in a normal course of the business. BIS declines to adjust the 10-year recordkeeping requirement so as to maintain consistency with the statute of limitations clause of IEEPA.

Additionally, BIS understands that the connected vehicle industry generally maintains a minimum standard of 10-year spare parts availability. As such, BIS believes the 10-year recordkeeping requirement contained in this rule represents a relatively small additional burden to the industry. BIS agrees with the commenter's request to narrow the scope of recordkeeping to primary business records and has modified the final rule accordingly.

Commenters shed light on a handful of other areas of improvement for the Declarations of Conformity. For example, one commenter requested that an incorrectly submitted Declaration of Conformity in good faith should not be considered a "violation" and should be excluded from the penalties listed in the BIS proposed rule. BIS acknowledges commenters' concerns and would advise commenters to review section 791.305(k) which subjects any person who submits false information in a Declaration of Conformity, with knowledge that such information is false, and engages in a prohibited transaction, to potential penalties. Furthermore, in response to commenters, BIS has provided an opportunity for connected vehicle manufacturers and VCS hardware importers who incorrectly submit a Declaration of Conformity in good faith to submit an updated Declaration of Conformity to BIS within 60 days of discovery of an error or omission in a previously submitted Declaration of Conformity.

Other commenters highlighted a contradiction between the NPRM's discussion text and its regulation text about third-party research requirements. Commenters provided several examples of text to update this language. BIS appreciates this notification and has

adjusted the discussion and regulation text to indicate that the use of third-party research is not required but may be used by declarants to fulfill due diligence requirements as part of the submission of a Declaration of Conformity.

Commenters also pointed out that requiring importers and manufacturers to record all third-party external endpoints that VCS hardware connects is not possible because these connection points are inherently in the control of third parties, such as app providers. Further, to limit third-party external endpoints in order to create a complete list, VCS hardware manufacturers would need to develop and operate completely closed ecosystems, which is inconsistent with consumer demand. Ultimately, commenters recommend that BIS delete the requirement to record all third-party external endpoints or narrow the information requested to that which is in the possession and control of the VCS hardware manufacturer or importer. BIS agrees with these commenters and has removed reporting requirements related to external endpoints from the final rule.

Commenters urged BIS to consider how it could streamline the approach for tier one, tier two, tier three, and below suppliers. One commenter recommended that BIS provide guidance on establishing a shared responsibility framework, making tier one and tier two suppliers equally accountable for compliance of their components in order to accelerate due diligence efforts. Another commenter advised that BIS form a volunteer certification process for VCS hardware suppliers to help streamline the process of compliance at the OEM level. Another commenter suggested that BIS provide additional clarity on how OEMs should interface with tier three suppliers and below, which was not contemplated in the NPRM. In an effort to create a semi-shared responsibility framework, BIS has allowed connected vehicle manufacturers and VCS hardware importers to rely on third-party assessments (including assessments from suppliers) as a part of the due diligence requirements for the submission of a Declaration of Conformity. If declarants rely on assessments from suppliers, declarants must certify that they have taken all possible measures, either contractually or otherwise, to ensure any necessary documentation and assessments from suppliers will be furnished to BIS upon request either by the declarant, or, in cases including CBI, directly by the supplier. BIS declines to create a

volunteer certification process for VCS hardware suppliers at this time but may consider issuing a general authorization at a later date if applicable. With regard to interfacing with tier three suppliers and below, BIS declines to prescribe the nature by which OEMs conduct the required due diligence to allow each regulated entity the flexibility to align with their unique business model.

As noted above, one commenter argued that BIS's broad definition of foreign interest would mean that a publicly traded company with some foreign shareholders would be required to submit a Declaration of Conformity. As explained above, BIS does not intend for every publicly traded company with minority foreign shareholders who do not affect management or control over the company to submit Declarations of Conformity if no other foreign interest exists. Therefore, BIS has created an exemption to the Declarations of Conformity requirement in section 791.305(l) for circumstances where the only foreign interest arises when a foreign person owns equity of a public company but does not affect the company's management or control.

One commenter sought clarification on whether the NPRM requires that all OEMs must prepare and submit a Declaration of Conformity even when no foreign interest is involved. BIS clarifies that if VCS hardware or the addition of covered software to a completed connected vehicle involves components in which there is no foreign interest, then it would not fall within the scope of this rule. However, if there is a foreign interest in that VCS hardware or covered software transaction, then it would require a Declaration of Conformity or specific authorization.

1. The sections below explain in greater detail the types of Declaration of Conformity that are required under the final rule.

i. VCS Hardware

The Declarations of Conformity described in section 791.305(a)(1) require VCS hardware importers to provide information on the specific VCS hardware that the declarant plans to import into the United States for a given model year, or, for units not associated with a model year, a given calendar year. FCC regulations at 47 CFR 2.925 require any electronic device that emits RF waves, including those imported into the United States, to have an FCC ID number. The FCC ID is used to identify and certify that the device meets the necessary regulatory standards for wireless communication. BIS will require the Declaration of Conformity to contain the FCC ID

number(s) of the VCS hardware if known. BIS will also require the Declaration of Conformity to list any subcomponents in the VCS hardware that also have an FCC ID number if applicable. The final rule additionally requires VCS hardware importers to provide the make and model of the connected vehicle(s) for which the VCS hardware is intended or already integrated, if known. The VCS hardware importer submitting a Declaration of Conformity must certify that the VCS hardware was not designed, developed, manufactured, or supplied by persons owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia, has conducted due diligence (with or without the use of third-party assessments), and maintains any supporting documentation (either through an HBOM or otherwise) and third-party assessments (as applicable). Declarants must also specify who maintains the supporting documentation or assessments and certify that the declarant has arranged for suppliers to furnish any documentation or third-party assessments upon request by BIS.

ii. Covered Software

The Declarations of Conformity described in section 791.305(a)(2) applies to connected vehicle manufacturers that import or sell completed connected vehicles in the United States that incorporate covered software, including U.S.-based OEMs and foreign-headquartered OEMs with operations in the United States. Section 791.305(a)(2) requires covered entities to provide information to BIS on the make, model, trim, and Vehicle Identification Number (VIN) series applicable to the completed connected vehicles that incorporate covered software. Persons submitting a Declaration of Conformity for covered software must certify that the covered software was not designed, developed, manufactured, or supplied by persons owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia, has conducted due diligence (with or without the use of third-party assessments), and maintains any supporting documentation (either through an SBOM or otherwise) and third-party assessments (as applicable). Declarants must also specify who maintains the supporting documentation or assessments and certify that the declarant has authorized suppliers to furnish any documentation or third-party assessments upon request by BIS.

iii. Procedures To Submit Declarations of Conformity

The NPRM contemplated that VCS hardware importers and connected vehicle manufacturers submitting a Declaration of Conformity would be required to submit the Declaration of Conformity to BIS annually, 60 days prior to the first sale or first import of a VIN series of completed connected vehicles comprised of a single model year, or 60 days prior to the import of VCS hardware covered by the Declaration of Conformity. The NPRM also provided that VCS hardware importers and connected vehicle manufacturers may, at their discretion, submit a combined Declaration of Conformity, or may submit separate Declarations of Conformity (e.g., one Declaration covering import of VCS hardware and another covering import of completed connected vehicles). Declarations of Conformity covering both the import or manufacture of completed connected vehicles and the import of VCS hardware should be submitted by the earlier of the two reporting dates. Additionally, the NPRM stipulated that in the event of material changes that impact the content of the Declaration of Conformity, VCS hardware importers or connected vehicle manufacturers would be required to submit an updated Declaration of Conformity and an updated HBOM or SBOM within 30 days of such a change.

The final rule provides that connected vehicle manufacturers shall submit a Declaration of Conformity at least 60 days prior to the first import or first sale of each model year of completed connected vehicle that incorporates covered software. VCS hardware importers shall submit a Declaration of Conformity at least 60 days prior to the first import of VCS hardware for each model year for units associated with a vehicle model year, or calendar year for units not associated with a vehicle model year. BIS has chosen not to stipulate combined versus individual Declaration of Conformity submissions if an entity engages in both covered software and VCS hardware transactions at this time, but entities may do so if they choose for submission efficiency. The final rule also clarifies that connected vehicle manufacturers and VCS hardware importers must notify BIS of any material change to the information conveyed in a previously submitted Declaration of Conformity by submitting a revised Declaration of Conformity within 60 days following the discovery of such change. A declarant's obligation to inform BIS of

material changes to a Declaration of Conformity ceases 10 years after the original submission. The final rule defines "material changes" as any omissions, inaccuracies, or errors in the information provided to BIS in a prior Declaration of Conformity that could reasonably mislead as the true source of VCS hardware or connected software in question. Additionally, the final rule stipulates that, in lieu of submitting a new Declaration of Conformity, a declarant may, if applicable, submit a confirmation that an existing Declaration of Conformity remains accurate and encompasses relevant new model year of vehicles (if known). Declarants shall follow the electronic filing instructions on BIS's website.

2. General Authorizations

In the NPRM, BIS provided for four general authorizations, which would have allowed VCS hardware importers and connected vehicle manufacturers to engage in otherwise prohibited transactions in certain low risk use cases without need to notify BIS. These general authorizations would have applied if (1) the connected vehicle manufacturer or VCS hardware importer produced fewer than 1,000 connected vehicles or VCS hardware units; (2) the completed connected vehicle was used on public roadways for fewer than 30 calendar days in a year; (3) the completed connected vehicle or VCS hardware was used solely for purposes of display, testing, or research; or (4) the completed connected vehicle was imported solely for repair, alteration, or competition off public roads and would have been exported within one year of import. Persons availing themselves of a general authorization, while not required to notify BIS, would have been required to monitor their usage of the authorization for any change in use and would have been subject to audit and inspection by BIS. VCS hardware importers and connected vehicle manufacturers who were themselves owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia would have been ineligible for a general authorization.

Commenters nearly universally supported BIS's decision to include a provision for general authorizations while raising a variety of concerns or suggestions related to general authorizations, which are discussed below. However, it is important to note that in this final rule, BIS has amended the provision to allow BIS to issue general authorizations on its website and in the **Federal Register**, rather than provide for predetermined general authorizations in this rule. Several

commenters encouraged BIS to consider issuing more general authorizations, including to consider issuing general authorizations for connected vehicle manufacturers who meet a certain set of robust security standards to mitigate the national security risks described in this notice. BIS's decision to provide for the issuance of general authorizations as and when it determines, rather than enumerate four specifying categories of general authorizations in this rule, will enable BIS to more nimbly and quickly issue general authorizations as appropriate, without the need for a lengthy rulemaking process to issue or amend such general authorizations. BIS anticipates that it will issue a set of general authorizations shortly after publication of this rule that align with the general authorizations outlined in the NPRM. This will include general authorizations for small businesses; for connected vehicles used infrequently on public roads; for display, testing, or research purposes; and for repair, alteration, or competition.

The following is a summary of public comments received regarding the general authorizations provisions and BIS's response.

Commenters urged BIS to raise the cap for the small business general authorization from 1,000 vehicles or units to 5,000 vehicles or units in order to align with other regulatory authorities. BIS acknowledges that differing standards exist across regulation and legislation that define small manufacturers. BIS is continuing to consider this threshold but anticipates that it will retain the 1,000-vehicle threshold because this aligns with the high-volume manufacturer definition found in Vehicle Identification Number (VIN) requirements in 49 CFR 565. BIS emphasizes that this general authorization threshold will apply to U.S. production, not global production. BIS anticipates that it will limit this general authorization to all entities under common control so as to prevent the misuse of this general authorization by numerous subsidiaries of a single entity that are purpose-built to circumvent the prohibitions of this rule. Some commenters urged BIS to clarify that vehicles assembled in the United States for export to foreign markets qualify for a general authorization. BIS does not intend for this rule to capture vehicles manufactured exclusively for export outside of the United States and anticipates that it will issue a general authorization to this effect shortly after publication of this rule. One commenter recommended that BIS implement a general authorization for re-imported

hardware. The commenter highlighted that the prohibitions could capture hardware that is manufactured in the United States, exported abroad to locations other than the PRC or Russia for integration, and then imported back into the United States. BIS does not anticipate that it will institute a general authorization to this effect as it believes that such a transaction is already permitted under the terms of the rule. In this scenario, the supply chains in question "do not involve the PRC or Russia," as the commenter noted. In this scenario, products are not designed, developed, manufactured or supplied by persons owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia, and thus are permitted. Further, this final rule substantially reduces the burden of submitting Declarations of Conformity for imported VCS hardware, so BIS believes that BIS's decision to decline to add this general authorization will not negatively affect the manufacture of VCS hardware in the United States that is later reimported. Another commenter requested BIS add a general authorization exempting hardware "for general communications purposes" that is "not integrated into a VCS." BIS believes that modifications of the terms VCS and VCS hardware eliminate the need for this general authorization, as the revisions clarify that hardware that does not "directly enable" VCS, is not destined for VCS, or is not already incorporated in VCS is not captured by the rule.

Commenters identified challenges with the software prohibition timeline (discussed below). To remedy this challenge, commenters recommend that BIS provide time-limited general authorization for its software prohibition. Given that BIS has amended the definition of covered software to exclude software developed prior to one year following the effective date of this rule, BIS believes such a general authorization to be unnecessary at this time.

General authorizations allow certain VCS hardware importers and connected vehicle manufacturers to engage in otherwise prohibited transactions without the need to notify BIS prior to engaging in the transaction. When issuing a general authorization, BIS will publish this decision on its website (<https://www.bis.gov/OICTS>) and will also publish the decision in the **Federal Register**. Notices regarding individual general authorizations may contain specific instructions that persons must follow if they wish to avail themselves of a general authorization, which could include filing regular reports with BIS

regarding their use of the general authorization. However, BIS anticipates that most general authorizations will not require reports to BIS. Under the amended provisions for general authorizations, VCS hardware importers and connected vehicle manufacturers availing themselves of general authorizations must monitor their use of such authorizations, and, within 30 days of discovering a change in circumstance, conduct an inquiry as to if the general authorization still applies. Should the importer or manufacturer determine the general authorization no longer applies, it must, within an additional 30 days, cease all prohibited conduct and submit a report to BIS detailing the incident and proposing remediation.

BIS may, at its discretion, contact VCS hardware importers or connected vehicle manufacturers to determine if the party is availing itself of a general authorization. If the party confirms that it is indeed availing itself of one or more general authorizations, BIS reserves the right to request documentation to verify compliance with these provisions. Such documents would include the primary documentation upon which the VCS hardware importer or connected vehicle manufacturer has relied to determine that it is eligible (and has remained eligible) for the general authorization(s). For more information, see "Reports to be furnished on demand."

A connected vehicle manufacturer or VCS hardware importer that is a subsidiary, joint venture, affiliate, or other entity subject to the ownership, control, jurisdiction, or direction of the PRC or Russia would be ineligible for general authorizations and is required to apply for a specific authorization before engaging in an otherwise prohibited transaction.

3. Specific Authorizations

In the NPRM, BIS proposed a specific authorization process by which VCS hardware importers and connected vehicle manufacturers could apply to engage in an otherwise prohibited transaction. Commenters provided a variety of feedback on the specific authorization criteria. One commenter suggested that BIS specify requirements for conducting proof of concept testing in the United States with Chinese network access device technologies only available from the PRC. Multiple commenters recommended that BIS consider utilizing industry or government standards and frameworks when granting specific authorizations. These recommended standards include NIST standards, the ISO/SAE 21434 Standard, UNR155, the "Proposal for

Recommendations on Uniform Provisions Concerning Cyber Security and Software Updates” by the World Forum for Harmonization of Vehicle Regulations in April 2026, and the Multiple Independent Levels of Security (MILS) standards. Although not within the scope of the NPRM, one commenter recommended that BIS develop standards with NIST for vehicle to cloud interfaces and incorporate this as part of the specific authorizations process. BIS agrees with commenters that standards and assessments should be considered when reviewing specific authorization applications. In the final rule, BIS lists several examples of documentation that could be used to support the information contained in a specific authorization application, including the ISO/SAE 21434 Threat Analysis and Risk Assessments. However, BIS intends to leave the documentation that can be used to support the information contained in a specific authorization application broad to give applicants flexibility in how they wish to support their application.

Commenters recommended different forms of preclearance procedure to ensure auto manufacturers and suppliers have advance approval for the use of certain covered software. One commenter recommended that BIS establish a process for companies to obtain preclearance for certain covered software items, such as base code that is not specifically designed or developed for automotive applications. In addition to allowing preclearance with respect to certain covered software, BIS could require companies seeking preclearance to meet specified cybersecurity standards and risk mitigation measures specific to ensuring the integrity of the relevant code, including third-party vulnerability testing as applicable. Another commenter suggested that this preclearance could replace specific authorizations for companies that demonstrate that they meet the provided preclearance requirements. BIS appreciates these recommendations but finds conducting a case-by-case review to be a more effective method of risk management. BIS notes, however, that VCS hardware importer or connected vehicle manufacturers may request an advisory opinion that may inform a specific authorization at any time in accordance with section 791.310 and may apply for a specific authorization as early as sufficient information is known to fulfill the requirements of section 791.307. BIS also retains the right to issue a general authorization at a later date.

Multiple commenters urged BIS to establish with more clarity as to how frequently specific authorizations must be submitted. In response, specific authorizations will generally be approved for a duration of no less than one (1) model year or calendar year. At the time of issuance, BIS will advise specific authorization applicants the duration of any approved specific authorizations. BIS clarifies that in situations in which BIS may make an exception to approve a specific authorization for less than one (1) model or calendar year such as for model years that are actively being sold or imported as of the effective date of the rule, for situations in which supply chains are affected by force majeure events, or due to an unexpected change in the supply chain during model year production. BIS believes these exceptions will allow companies to continue to operate while a long-term solution is pursued. BIS anticipates that each specific authorization granted under an exception will be superseded by a more permanent and long-term specific authorization.

Commenters asked that BIS be more transparent about its specific authorization procedures, such as its approach to public disclosure and preferential status. In response to these comments BIS has indicated that it will not publicly disclose any approved specific authorizations. With regards to commenters’ request for preferential status to auto manufacturers headquartered in, incorporated in, or otherwise organized under the laws of an allied country, BIS believes that granting this preferential status will not limit the risk posed by foreign adversaries that are intertwined within supply chains. Therefore, BIS will not provide preferential treatment to companies on the sole basis of being headquartered in, incorporated in, or otherwise organized under the laws of a non-foreign adversary.

Another commenter argued that BIS should also include a mechanism for an emergency authorization such as in cases of supply chain disruption, natural disaster, or other temporary emergencies. BIS has accepted this feedback and incorporated it into the regulation text, allowing for the ability to grant exceptions to the default minimum one-year specific authorization and for durations of less than one year in response to force majeure events. BIS believes this change will allow companies to continue to operate while a long-term solution is pursued. BIS anticipates that each specific authorization granted under an exception will be superseded by a more

permanent and long-term specific authorization. In addition to force majeure events, BIS recognizes that other potential exigencies may arise causing supply chain challenges for companies, thus requiring a specific authorization to mitigate national security risk while BIS collaborates with companies to integrate them into the standard specific authorization process. BIS has included these additional scenarios which it believes cover a wide scope of exceptions so as to be flexible with companies regulated under this rule: 2027 Model Years that include covered software and are actively being sold or imported as of the effective date of this rule; as a result of a corporate merger, investment, acquisition, joint venture, or conversion of equity (such as from debt) that occurs during model year production; as a result of the closure or relocation of facilities involved in the production of covered software or VCS hardware; and other instances as determined by BIS. BIS envisions that specific authorizations granted under an exception will be shorter than one year in length and include proactive measures such as more frequent reporting requirements while BIS works with companies that are actively implementing or modifying corporate security policies or control measures for a more permanent solution and for which BIS would be more comfortable in granting a standard specific authorization.

Commenters additionally recommended that BIS adopt a portfolio phased approach for both software and hardware compliance. One commenter in particular highlighted that BIS could require OEMs to need only a portion of their portfolio to be compliant in the first year and then increasing each year after (e.g., 33 percent the first year, 66 percent the second year, 100 percent the third year). BIS appreciates this as a recommendation and will consider it as a compliance approach when issuing specific authorizations.

Based upon this review of commenters’ feedback and further consideration, BIS has modified the specific authorization process to provide more clarity to industry. VCS hardware importers and connected vehicle manufacturers wishing to engage in an otherwise prohibited transaction who are ineligible for an exemption or general authorization will have to apply for and receive a specific authorization to engage in the otherwise prohibited transaction. The purpose of specific authorizations is to allow BIS on a case-by-case basis to determine the nature and scope of the undue or unacceptable risk to U.S. national

security posed by transactions involving VCS hardware and covered software, including the extent of foreign adversary involvement in the transactions, as well as potential mitigations.

VCS hardware importers and connected vehicle manufacturers must not engage in an otherwise prohibited transaction until BIS grants the application for a specific authorization. If a party engages in a prohibited transaction prior to receiving a specific authorization from BIS, that transaction would constitute a violation of this final rule. Specific authorization requests will be reviewed on a case-by-case basis, and a decision regarding the application will be provided within 90 days unless BIS determines and notifies the applicant within the 90-day period that additional time is required. Applications for a specific authorization must contain detailed information on the proposed transaction, including each party to the transaction, an overview of the covered software and/or the VCS hardware designed, developed, manufactured, or supplied by a person owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia, information on the connected vehicles in which the VCS hardware of covered software will be integrated, the intended use of the covered software and/or VCS hardware, and documentation to support the information contained in the application. Persons seeking a specific authorization will submit an application according to instructions available on the BIS website. Applicants should take care to submit to BIS only one copy of an application pertaining to each transaction for which they seek specific authorization to avoid processing delays. BIS may request additional information from an applicant about any matter related to the specific authorization request. In rare situations, as part of its review of an application for specific authorization, BIS may, in its sole discretion, request an oral briefing by the applicant and any other relevant parties. At any point between initial submission of an application for specific authorization and a final decision issued by BIS, an applicant may submit additional information to bolster the application or provide clarity on any aspect thereof.

When reviewing applications for a specific authorization, BIS will consider factors that may pose undue or unacceptable risks, particularly as they relate to transactions that could result in the exfiltration of connected vehicle or U.S. persons' data, or the remote manipulation or operation of a connected vehicle. Examples of factors

that BIS may consider include: ISO/SAE 21434 Threat Analysis and Risk Assessments; the applicant's ability to limit PRC or Russian government access to, or influence over the design, development, manufacture, or supply of the VCS hardware or covered software; security standards used by the applicant and if such standards can be validated by BIS or a third party; and other actions or proposals the applicant offers to implement as a way to mitigate undue or unacceptable risk.

BIS's decision regarding any application for specific authorization will apply only to the actual parties and transaction outlined in the application and described in the decision notice. Additionally, the decision notice from BIS to the applicant(s) may contain any conditions that must be met by the parties for a transaction to be authorized. Such conditions, which are subject to revision by BIS, may include technical controls (*e.g.*, software validation) or operational controls (*e.g.*, physical and logical access monitoring procedures), that are either permanent or temporary. These controls will focus on the supply chain element that involves a link to a foreign adversary to mitigate any undue or unacceptable risk posed by the transaction. For connected vehicle manufacturers owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia, a specific authorization may include a requirement that all VCS hardware and covered software be assembled and integrated into the connected vehicle in the United States. In the approval letter for specific authorization, BIS will determine the effective date and duration of the authorization on a case-by-case basis. As a default, specific authorizations will be approved for a duration of no less than one (1) calendar year, except on a case-by-case basis under certain exceptions including model years that are actively being sold or imported as of the effective date of the rule, for situations in which supply chains are affected by force majeure events, or due to an unexpected change in the supply chain during model year production.

Applicants with denied authorizations would not be precluded from submitting new applications for specific authorizations for different transactions involving different parties and/or different covered software or VCS hardware. BIS will reconsider a previously denied application for a specific authorization only if the applicant demonstrates a material change in circumstances.

4. Exemptions

In the NPRM, BIS delineated several exemptions to the proposed rule. First, VCS hardware importers could engage in prohibited transactions described in section 791.302 without a general or specific authorization, and would be exempt from submitting Declarations of Conformity with respect to all other transactions, as described in section 791.305, provided that (1) the import of the VCS hardware occurred prior to January 1, 2029 for VCS hardware units not associated with a vehicle model year, or (2) the VCS hardware was associated with a vehicle model year prior to 2030 or the VCS hardware was imported as part of a connected vehicle with a model year prior to 2030. Second, connected vehicle manufacturers could engage in prohibited covered software transactions described in section 791.303 without a general or specific authorization and would be exempt from submitting Declarations of Conformity with respect to all other transactions described in section 791.305, provided that the completed connected vehicle that incorporates covered software described in section 791.303(a)(1) was manufactured prior to model year 2027. Third, it was contemplated in the NPRM that connected vehicle manufacturers who are owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia could engage in prohibited transactions without a general or specific authorization, and would be exempt from submitting Declarations of Conformity for all other transactions, provided that the completed connected vehicle that incorporated VCS hardware and/or covered software was manufactured prior to model year 2027. The final rule has maintained this existing list of exemptions while adding a specific exemption for parts that are imported for purposes of warranty or repair of a completed connected vehicle with a model year prior to 2030.

Many commenters requested that BIS extend the software and hardware prohibition timelines in the rule so that industry has sufficient time to adjust their supply chains. For example, one commenter claimed that the proposed timelines do not account for existing contracts between manufacturers and suppliers. Commenters requested compliance timeline extensions ranging from one to five years for the software prohibition to go into effect, and one to six additional years for the hardware prohibition to go into effect. Alternatively, multiple commenters

recommended incorporating a phased-in approach for both the software and hardware prohibitions. In contrast, two commenters recommend that BIS shorten the implementation timeline due to the national security, privacy, and safety risks posed by the software and hardware transactions. Due to the national security risk being addressed by this regulation as discussed in Section IV, BIS has declined to extend the proposed software and hardware implementation timelines. For situations in which connected vehicle manufacturers or VCS hardware importers anticipate this regulation will impact connected vehicles or VCS hardware currently under production, those connected vehicle manufacturers or VCS hardware importers may apply for a specific authorization. Furthermore, with the exclusion of legacy software from the definition of covered software, BIS anticipates the regulatory burden to be lessened for industry, allowing regulated entities to more easily comply with the timeline.

Regarding exemptions, commenters recommended that BIS clarify whether systems which include their own communication but are only operational during parking are covered by the regulation. BIS declines to confirm whether systems which include their own communication but are only operational during parking are covered by the regulations, as this would require a case-by-case analysis. BIS advises industry to reference the definition of Vehicle Connectivity System.

Lastly, multiple commenters urged BIS to clarify that spare, replacement, or warranty parts imported after January 1, 2029, but for integration into a vehicle with a model year prior to 2030 which are exempted from the rule. BIS understands that connected vehicle manufacturers may have warranty or repair obligations that extend years past the date of manufacture of the vehicle. BIS does not intend for this rule to interfere with those obligations, and BIS believes the rule as written adequately allows for the import of otherwise prohibited VCS hardware if it is for a vehicle with a model year prior to 2030. Some commenters envisioned a scenario in which a VCS hardware importer may wish to import a specific component after January 1, 2029, but the component is not yet “associated” with a model year and would thus be prohibited. In response, BIS has amended the exemptions to clarify that VCS hardware components imported for repair or warranty purposes for a vehicle model year prior to 2030 are exempt.

5. Appeals

In the NPRM, BIS proposed a process by which any person whose application for a specific authorization is denied, whose specific authorization is suspended or revoked, or who has received a written notification of ineligibility for a general authorization may appeal that decision to the Under Secretary. Commenters suggested that BIS expand the appeals section and create a detailed framework for navigating the process, including procedures for a software supplier to participate in a connected vehicle manufacturer’s appeal. Commenters also suggested that BIS be specific in defining a “reasonable time” for appealing decisions. In response to comments, BIS has included a provision that allows third parties to submit amicus filings in support of parties undergoing an informal appeals hearing if, for example, their technology is the subject of the appeal. BIS also specified that 45 days is the reasonable amount of time to file an appeal and is consistent with 15 CFR 756.2(c).

Based on commenters’ feedback, BIS has further clarified the appeals process. In the final rule, the appeals process remains a mechanism by which any person whose application for a specific authorization is denied, whose specific authorization is suspended or revoked, or who has received a written notification of ineligibility for a general authorization may appeal that decision to the Under Secretary. Appeals must be submitted in writing by email or mail to the Office of the Under Secretary within 45 days of the date on the notice of the adverse administrative action by BIS. The appeal must detail how the party submitting the appeal has been directly and adversely affected by BIS’s action, and the reasons BIS’s action should be reversed or otherwise modified. The Under Secretary, at his or her discretion, may delegate to the Deputy Under Secretary of Commerce for Industry and Security or another BIS official responsibility to review and decide appeals, including arranging, at the official’s discretion, informal hearings with relevant parties regarding the appeal.

On their own accord or at the request of the Under Secretary or designated reviewing official, appellants may submit supplementary information in support of their appeal. However, the Under Secretary or designated reviewing official generally will not consider additional information submitted on an appellant’s own accord more than 30 days after submission of the original appeal. Appellants may also

request an in-person informal hearing in writing at the time of submission. A hearing is not required, and the Under Secretary or designated official may, at his or her sole discretion, grant or deny a request for an informal hearing. Parties not subject to the administrative action under appeal may submit an amicus filing in support of an appellant as part of a granted informal hearing.

6. Advisory Opinions

In the NPRM, BIS proposed the inclusion of an advisory opinion provision in order to provide interested parties greater clarity about how to comply with the proposed rule on an as-needed basis. Commenters supported BIS’s inclusion of an advisory opinion mechanism in the rule. Some commenters urged BIS to set a deadline by which BIS must respond to a request for an advisory opinion. In response, BIS has implemented a 60-day deadline for advisory opinion requests unless BIS determines that additional time is needed. BIS also emphasizes the timely issuance of an advisory opinion will depend upon prompt responses by the requester in the event that BIS requests additional documents or information to inform the advisory opinion. BIS may publish on its website an advisory opinion that may be of broad interest to the public, with redactions where necessary to protect CBI. To solicit an advisory opinion from BIS, persons will be required to submit a written request to BIS by email or through a portal that will be available on the BIS website. BIS will not accept advisory opinion requests submitted by mail. A request for an advisory opinion must contain contact information for the submitter as well as all current information on the prospective transaction to assist BIS in making a determination.

In response to the NPRM’s stipulation that advisory opinion requests be only for real and not hypothetical transactions, some commenters suggested that BIS allow an initial period after the rule comes into effect during which BIS will allow advisory opinion requests for hypothetical transactions. One commenter also recommended that BIS use the advisory opinion mechanism to create a trusted supplier program for connected vehicle manufacturers and VCS hardware importers. Another commenter urged BIS to issue advisory opinions for hypothetical transactions to avoid compliance challenges and high costs. BIS declines these suggestions, as such reviews for hypothetical transactions could burden the department for transactions that may never materialize and for which the binding opinion risks

being made on incomplete facts. The intent of limiting advisory opinion requests to actual transactions is to allow BIS to provide thorough responses to each request that would ultimately bind the Department with regard to that transaction. Permitting entities to submit requests for vague, unspecified transactions would likely result in an untenable influx of requests and therefore undermine BIS's ability to provide comprehensive responses to each request. BIS emphasizes that a transaction need not have been initiated or executed in order to qualify for an advisory opinion request. Indeed, where a regulated entity believes that the transaction may be prohibited, the entity should request an advisory opinion before initiating or executing the transaction. BIS stresses that an advisory opinion request must contain real, specified parties to the transaction and real, specified VCS hardware or covered software in order for BIS to issue the opinion.

One commenter requested that BIS allow suppliers or other relevant parties to submit information in support of an advisory opinion request in order to avoid the forced transfer of IP from the supplier to the customer who is seeking the advisory opinion. In response, BIS has clarified that interested parties may submit information directly to BIS in support of an advisory opinion request.

Another commenter recommended that BIS hold compliance forums to assist regulated persons in implementing the provisions of this rule. BIS will take this suggestion under advisement and will consider holding such forums after the publication of this rule. BIS further anticipates posting guidance and responses to frequently asked questions on its website (<https://www.bis.gov/OICTS>) to assist the public in complying with the rule.

Multiple commenters addressed the concept of preclearance and urged BIS to consider implementing such a process in parallel to the advisory opinion program. While BIS declines to institute a preclearance program given the need to adequately address the national security concerns posed by otherwise prohibited transactions, BIS has emphasized in the advisory opinion stipulations that a regulated entity may rely upon an advisory opinion issued by BIS in seeking a specific authorization or submitting an appeal to BIS to the extent that the facts and assertions made in the request remain truthful and accurate. BIS also believes that the exclusion of legacy software and refinement of the open-source software exclusion further address this commenter's point. Finally, BIS

reiterates that it may publish certain advisory opinions, in accordance with the CBI section of this rule, in the case that it may be of general interest to regulated entities or relating to a supplier with which many entities wish to transact.

7. "Is-Informed" Notices

BIS received no comments on the proposed "Is-Informed" notice provision and retains the same "Is-Informed" notice provision for the final rule (section 791.311, "Is-Informed notices").

BIS may notify connected vehicle manufacturers or VCS hardware importers, either through direct letters or through a **Federal Register** notice meant to inform a broader set of persons, that a transaction involving certain covered software, VCS hardware, or entities, requires a specific authorization because it would constitute a prohibited transaction according to the terms of this final rule. Any person who engages in a transaction covered by an "Is-Informed" notice without first receiving a specific authorization from BIS would have knowledge that such transaction is prohibited and would therefore be in violation of the rule. "Is-Informed" notices may only be delivered by or at the direction of the Under Secretary or a BIS official designated by the Under Secretary.

8. Recordkeeping, Reporting Requirements, and Confidential Business Information

BIS made a few notable changes from the NPRM to the final rule. First, BIS no longer requires submission of SBOMs and HBOMs, mitigating concerns about the retention of CBI and complexity of reporting requirements. Additionally, BIS has reworked the estimates of compliance costs in response with comments. As described below in more detail, BIS estimates that the initial cost of compliance will increase, but the annual cost to conduct ongoing due diligence and resubmit Declarations of Conformity will be less due to the decreased reporting requirements. BIS declined, however, to change the timeline for the retention of business records, as it is in line with IEEPA authority.

Commenters urged BIS to provide explicit assurance for protecting CBI and limit the scope of recordkeeping requirements. Some commenters provided suggestions that delineated how BIS should protect CBI and limited recordkeeping requirements. Other commenters advised that BIS establish robust protections for CBI and sought

that BIS provide more information on how the agency will identify and redact CBI in published advisory opinions. Several commenters also expressed that recordkeeping requirements of the regulation were unduly burdensome and requested that BIS restructure the requirements. One commenter suggested narrowing the scope to "primary business records, such as contracts, import records, bills of sale, essential correspondence, and other key documents specified for compliance assessment." BIS understands the concerns surrounding CBI and burden posed by recordkeeping requirements. Accordingly, BIS has determined that the final rule will not require the submission of SBOMs and HBOMs. BIS notes that CBI still may be submitted pursuant to other provisions of the final rule, but not to the extent proposed in the NPRM.

A commenter urged BIS to adopt robust CBI protections given that requests for an advisory opinion will almost certainly contain proprietary information. BIS believes this comment is addressed by its addition of a new section of the rule detailing the submission of CBI. Furthermore, entities submitting CBI should refer to 15 CFR 791.102, which outlines the circumstances under which the Secretary of Commerce may authorize the disclosure of CBI materials submitted to BIS. BIS emphasizes that any information submitted as confidential will be handled in compliance with applicable laws and regulations, to ensure proper handling and to prevent unauthorized disclosure. The CBI will be used exclusively for investigative, enforcement, or regulatory purposes.

One commenter requested that BIS provide guidance on how suppliers should mark CBI in their submissions and implement a secure CBI portal. In response, BIS encourages the commenter to refer to section 791.314, which captures the CBI submission and procedures, including how the CBI files should be marked "CONFIDENTIAL BUSINESS INFORMATION" at the top of the page. Submission will occur as indicated on the BIS website, initially via email, and eventually through a submission portal which will be described in more detail on the BIS website once available.

Another commenter asked if all reports to be furnished on demand are covered in the 10-year recordkeeping requirement. BIS requires that primary business records be retained for 10 years and furnished to BIS upon request. Based on this feedback, BIS confirms that all reports to be furnished on

demand are covered by the 10-year requirement.

Commenters provided conflicting feedback on the time requirements of recordkeeping. One commenter suggested that recordkeeping requirements be lowered to five years. Another commenter suggested increasing it to fifteen years. Another commenter noted 10-year recordkeeping requirements but said the information collected should be limited. BIS agrees that recordkeeping should be limited solely to primary business records related to the execution of a transaction. However, BIS declines to adjust the 10-year recordkeeping requirement so as to maintain consistency with IIEPA.

One commenter suggested that suppliers should be responsible for recordkeeping. BIS underscores that the primary compliance responsibility is on the connected vehicle manufacturer and VCS hardware importer. However, when submitting a Declaration of Conformity, entities must certify that they have arranged for suppliers to furnish any documentation and third-party assessments (as applicable) upon request by BIS.

One commenter requested information on “permissible locations for data centers.” BIS declines to explicitly name permissible locations for data centers for vehicle-external data storage but may consider the location of a data center as it relates to the design, development, manufacturing, and supplying of covered software or VCS hardware for applicants of specific authorizations.

Several commenters expressed that BIS’s recordkeeping cost estimates are inaccurate. A few commenters argued that the initial range of “\$30,964 and \$38,554 per regulated entity, followed by estimated yearly costs of \$16,133 to \$80,667” to comply with the rule was underestimated. One commenter noted that two staff members managing this regulation compliance would prevent BIS from sufficiently processing all Declarations of Conformity and relevant materials. After reviewing the comments and re-analyzing the cost to entities to read the rule, understand the rule, and conduct initial due diligence, BIS re-estimates that this initial cost is between \$56,671 and \$77,055. Additionally, BIS re-estimates that the estimated yearly costs to re-conduct due diligence and potentially re-submit a Declaration of Conformity is between \$24,200 and \$48,400. While BIS agrees that its initial estimate of conducting due diligence with the rule was understated due to the complexity of automotive supply chains, BIS estimates that the annual cost to re-conduct due diligence and

potentially re-submit Declarations of Conformity is reduced due to the decreased reporting requirements. Additional information on these new estimates can be found in the *Paperwork Reduction Act* section of this final rule, and the accompanying Final Regulatory Impact Analysis.

A few commenters also noted that the estimates do not reflect BIS’s own suggestion that regulated entities provide evidence of due diligence “to include independent or hired third-party research.” BIS clarifies that third-party research and assessments is optional when submitting a Declaration of Conformity. However, BIS notes that third-party verification may be required as a condition for the approval of a specific authorization.

Commenters suggested implementing lists of trusted countries or suppliers in order to reduce the due diligence burden on connected vehicle manufacturers and VCS hardware importers. The publication of a list of trusted countries or suppliers would complicate compliance for BIS. The broad application of trusted countries or suppliers undercuts BIS’s ability to address each transaction on a case-by-case basis with proportionate mitigation measures, as may be necessary. Creating a preapproved list of countries and suppliers would also lead to a more uncertain regulatory environment as BIS may be required to update such a list from time to time as the threat environment evolves.

BIS has chosen to require connected vehicle manufacturers and VCS hardware importers to maintain complete records related to any transaction for which a Declaration of Conformity, general authorization, or specific authorization would be required by this rule, for a period of 10 years. This recordkeeping requirement applies regardless of whether the transaction is subject to a general authorization or specific authorization, or whether the connected vehicle manufacturer or VCS hardware importer has not yet sought an authorization. Records subject to the recordkeeping requirement include all information pertinent to transactions completed pursuant to a general authorization or submitted when applying for a specific authorization, as well as business records related to the execution of the transaction, such as contracts, import records, bills of sale, relevant correspondence, and all other files specified in sections 791.312 and 791.313 to assess compliance with the rule.

All connected vehicle manufacturers and VCS hardware importers are

required to submit records when requested by BIS related to any transaction for which a Declaration of Conformity, general authorization, or specific authorization would be required by this rule, whether or not said transaction was carried out under a general authorization, specific authorization, or without an authorization from BIS. As such, BIS may request business records, before, during, or after the transaction in question has taken place.

In response to numerous public comments requesting deeper commitments by BIS to protect CBI as well as greater clarity regarding how BIS will protect CBI, BIS has included a new section in this final rule detailing relevant measures BIS will take. Under these new provisions, entities submitting information that they wish to receive CBI protections should clearly mark any pages containing such CBI in their submission. Additionally, the entity requesting CBI handling should submit a statement to BIS that justifies non-disclosure by citing the specific legal authority on which the entity believes BIS should rely, such as Exemption 4 of the Freedom of Information Act (FOIA) as codified at 5 U.S.C. 552(b)(4), or other relevant authorities. As stated above, BIS will maintain confidential information in accordance with 15 CFR 791.102.

9. Third Party Verification and Assessments

In response to numerous public comments, BIS decided to further clarify the voluntary use of third-party assessments. Several comments indicated that for many of the rule’s regulated entities, companies would need to outsource to third parties to maintain compliance and assist in preparing documentation for recordkeeping and submission of Declarations of Conformity. BIS emphasized that the use of third parties to maintain compliance with this rule is generally voluntary but may be required by BIS as a condition for granting a specific authorization. While regulated entities may use a third party to assist with compliance checks, the final rule does stipulate that such third parties may not be a person owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia. Additionally, any reports produced by these third parties would be subject to the final rule’s recordkeeping requirements.

d. Enforcement

BIS notes as a threshold matter that it has reordered the enforcement sections

of this rule to flow more naturally and to provide readers with a better sense of the chronology and sequencing of enforcement actions as compared to the structure in the NPRM. The reorder of these sections in the regulatory text has no bearing on the substance of the sections nor the rule as a whole. BIS's consideration of comments related to the enforcement provisions is discussed in the sections that follow.

1. Penalties

One commenter requested that BIS provide greater clarity on how it will determine whether a civil or criminal penalty will be assessed, as well as provide means by which an entity may rectify an error before a penalty is assessed. In response, BIS emphasizes, as detailed below, that the penalties in this rule are derived from IEEPA, and the individual nature of the violation will determine both the type of penalty and the amount to be assessed. Additionally, this rule contains multiple paths through which VCS hardware importers and connected vehicle manufacturers may rectify errors. For example, BIS may issue an "Is-Informed" notice to a party informing them that a specific authorization is needed to continue with a certain transaction. As provided below, BIS may also issue a pre-penalty notice outlining BIS's intention to issue a penalty and providing the party with the opportunity to respond and present any potentially mitigating or exculpatory evidence or remediation proposals. Lastly, in response to a request from a commenter, BIS has included in this rule a clarification that it will take into account voluntary self-disclosures of potential violations when deciding to issue a penalty.

IEEPA provides the authority for this rulemaking. Thus, persons who violate, attempt to violate, conspire to violate, or knowingly cause a violation of this rule will be subject to civil and/or criminal penalties under IEEPA (50 U.S.C. 1705), depending on the circumstances of the violation. Potential violations of this final rule that would be subject to penalties include, but are not limited to, engaging in a prohibited transaction without an applicable general authorization or specific authorization, or failure to abide by the conditions enumerated in a specific authorization. Willfully providing false or fictitious information to the U.S. Government may be subject to criminal fines, imprisonment, or both. A civil penalty may be imposed on any person who violates, attempts to violate, conspires to violate, or causes a violation of any exemption, authorization, order,

regulation, directive, instruction, or prohibition issued under IEEPA and this rule.

Under the Federal Civil Penalties Inflation Adjustment Act Improvements Act of 2015, the specific maximum civil penalty will be adjusted by notice in the **Federal Register** effective each calendar year by the Office of the Secretary of the Department of Commerce. At the time of publishing of this final rule, the maximum civil penalty for violations of IEEPA is \$368,136 per violation and the maximum criminal penalty is \$1,000,000.

Under the final rule, should BIS have reason to believe that a violation has occurred and intends to issue a civil monetary penalty, it will inform the alleged violator through a written notice of the intent to impose a penalty (pre-penalty notice). BIS will generally transmit the pre-penalty notice electronically but may additionally mail notice. The recipient of a pre-penalty notice may respond in writing to BIS to provide additional information or otherwise contest the penalty. BIS must receive this response within 30 days of the transmission of the original pre-penalty notice. A response to a pre-penalty notice does not constitute a formal appeal, but it allows the recipient of the pre-penalty notice to contest facts set forth by BIS in the pre-penalty notice, provide exculpatory evidence, or otherwise respond to the violation alleged in the pre-penalty notice. BIS may seek to initiate settlement discussions in the pre-penalty notice or may conduct separate outreach following transmission of the pre-penalty notice. Recipients of a pre-penalty notice may additionally request to initiate settlement discussions in their response to BIS or may conduct separate outreach to do so.

Following the delivery of the pre-penalty notice, and after considering any responses from the alleged violator, BIS will inform the alleged violator in writing as to whether it has found that a violation in fact occurred. Should BIS find that a violation has indeed taken place and no settlement has been reached, BIS will issue a final penalty notice to the violator specifying the violation and determining the specific civil monetary penalty to be imposed. This penalty may not be appealed following the procedures in section 791.309, as it is a final agency action that the violator may contest in the appropriate U.S. District Court.

Should a violator fail to pay the penalty as specified in the final penalty notice or fail to make alternative payment arrangements approved by BIS, BIS may refer the matter to the

Department of the Treasury for administrative collection or to the Department of Justice for collection via civil suit in U.S. District Court.

2. Finding a Violation

BIS did not receive any feedback on this in the NPRM and retains its approach for "finding a violation" in its final rule.

Under the final rule, there may be cases in which BIS determines that a violation has taken place but that a civil monetary penalty is not appropriate. In such cases, BIS would issue a finding of violation that identifies the violation. The finding of violation could also contain an administrative response other than a civil monetary penalty, such as an order to cease and desist from conduct or activities that are prohibited by the final rule. Consistent with the procedures listed above regarding a pre-penalty notice, recipients of a finding of violation may file a response within 30 days contesting the facts of the finding of violation and/or providing information relevant to BIS's determination of whether a violation has occurred. BIS will consider any new information and inform the party in writing whether a violation has or has not occurred. A recipient that does not respond within 30 days of receipt of the finding of violation will be deemed to have waived the right to respond. Any action taken in a finding of violation issued by BIS constitutes a final agency action that is not subject to appeal following the procedures in section 791.309.

3. Severability

BIS did not receive any feedback on this in the NPRM and retains its approach to "Severability" in its final rule.

This rule implements, and is fully consistent with, governing law. However, in the event of legal challenge, BIS intends for the provisions of the final rule to be severable from each other. If a court holds that any provision in the final 15 CFR 791, subpart D, is invalid or unenforceable, BIS intends that the remaining provisions of the final 15 CFR 791, subpart D, as relevant, would continue in effect to the greatest extent possible. In addition, if a court holds that any such provision is invalid or unenforceable as to a particular person or circumstance (such as the recordkeeping or Declarations of Conformity requirements), BIS intends that the provision would remain in effect as to any other person or circumstance. Each provision of the final rule and application thereof serves an important, related, but distinct

purpose; provides a distinct benefit separate from, and in addition to, the benefit provided by other provisions and applications; is supported by evidence and findings that stand independent of each other; and is capable of operating independently such that the invalidity of any particular provision or application would not undermine the operability or usefulness of other aspects of the final rule. Depending on the circumstances and the scope of the court's order, BIS believes that the remaining provisions of the final rule likely could continue to function sensibly independent of any provision or application held invalid or unenforceable. For example, the prohibitions related to transactions involving VCS hardware could continue to apply as intended, even if a court finds that the prohibitions on transactions involving ADS are invalid. Similarly, the final rule could be applied with respect to relevant hardware and software designed, developed, manufactured, or supplied by persons owned by, controlled by, or subject to the jurisdiction or direction of the PRC, even if a court finds its application with respect to relevant hardware and software from Russian-linked persons is invalid.

e. Other Commentary

1. Coordination With Interagency and Industry

Commenters urged BIS to consider its overlap with other government agencies in a variety of ways. One commenter suggested that BIS conduct a conflict-of-laws analysis to ensure there is no overlap with the Committee on Foreign Investment in the United States (CFIUS) authorities. In response, BIS clarifies that its authorities are different from CFIUS authorities, the latter of which apply to certain foreign investments in the United States and are coordinated by the Department of the Treasury.

One commenter urged BIS to coordinate more closely with the NHTSA, the Federal Motor Carrier Safety Administration (FMCSA), and industry when finalizing the rule. Additional commenters advised BIS to evaluate its overlapping authorities with other government bodies. Another commenter claimed that the telecommunications supply chain is subject to overlapping authorities and regulations and therefore BIS should ensure the rule is narrowly tailored to connected vehicles. BIS acknowledges these suggestions and notes for commenters that it has robustly engaged with its interagency partners to deconflict any overlap in authorities. As

noted previously, BIS's ICTS authorities are explicitly focused on addressing unique national security risks from foreign adversary involvement in the ICTS supply chain such as those articulated in Section IV of this rule and differ from other programs in the U.S. government. BIS has coordinated with interagency partners and industry to inform the development of this final rule and has worked with them to ensure this rule does not conflict with but complements other governmental efforts.

2. Global Standards/Regulations for Consideration

Multiple commenters stated that BIS should consider adopting the United Nations regulations concerning cybersecurity and software update management, such as UN Regulation 155 and UN Regulation 156. Other commenters proposed utilizing standards and frameworks including ISO/SAE 21434, ISO 26262, CISA's Autonomous Ground Vehicle Security (TISAX), Auto-ISAC Cybersecurity Best Practices, NHTSA's Cybersecurity Best Practices for the Safety of Modern Vehicles, 2024 Technical Requirements for Vehicle Overall Information Security (GB44495), and the United Nations World Forum for Harmonization of Vehicle Regulations (WP.29). In response, BIS wants to voice its appreciation for the commenters' input and thoughts on incorporating these standards into its regulation format. However, after consideration, BIS does not assess these standards as sufficient methods to mitigate the identified risk within the connected vehicle supply chain. These standards and frameworks all have different scopes that do not accurately match BIS's goal of mitigating national security risk posed by the connected vehicle technology supply chain when containing a nexus with adversary countries.

However, some of these standards and frameworks may offer support for the compliance process. For example, when processing specific authorizations, BIS will take into consideration existing cybersecurity measures employed by the entity, such as the implementation of UN Regulation 156, which involves software update and software update management systems, or SAE Standard 21434, as they relate to the unique ICTS transaction. BIS's review for specific authorizations will be conducted on a case-by-case basis, and BIS therefore does not see it beneficial to provide blanket clearance for any one cybersecurity standard at this time. In addition to advocating for BIS to consider international standards, one

commenter asked BIS to reconsider the impact of its regulation, arguing that it will hinder the United States' ability to meet its 2030 goal under the Paris Agreement. This commenter urged BIS to prepare an environmental assessment of the rule. Given that the focus of BIS's authority is limited to national security threats from adversary countries, an environmental evaluation is neither pertinent nor required.

Commenters also sought clarification on how BIS would consider international standards to which adversary countries had input. One commenter asked BIS to clarify that vehicle technologies would not be prohibited simply because they had been developed according to international standards in which the PRC had been a party. A separate commenter stated that BIS should clarify that the participation of Chinese or Russian citizens in international technical standards-setting would not deem the VCS hardware subject to that standard as captured by the rule. BIS appreciates these comments but notes that PRC or Russia support in an international standard development process does not fall within the scope of this regulation.

3. Stakeholder Meetings

Between September 24 and December 13, 2024, BIS conducted 35 meetings with industry stakeholders to gather information, follow up on ambiguous comments, and better understand current business practices in the U.S. connected vehicle supply chain.²

In each meeting, BIS encouraged the participant(s) to submit written comments to the public docket. For the most part, commenters in these meetings offered views that they previously or subsequently submitted in written comments. BIS summarizes below additional points not addressed in written comments. In many of the meetings, participants provided BIS with confidential business information relating to their design and manufacturing of completed connected vehicles and/or components to provide context for points made in written submissions.

Across all meetings, stakeholders generally reiterated information submitted in written comments regarding specific authorizations; advisory opinions; Declarations of Conformity; definitions of terms such as *person owned by, controlled by, or*

² These meetings included 20 meetings held after the close of the comment period. BIS met with all stakeholders who requested meetings until the draft final rule was submitted to OMB for coordinated interagency review under Executive Order 12866.

subject to the jurisdiction or direction of a foreign adversary and foreign interest; a whitelist for approved components; unconventional ownership structures; and commercial trucking. As stated above, BIS has addressed each of these issues in the final rule by: clarifying the process for specific authorizations (Section VI.c.3) and advisory opinion requests (Section VI.c.6); greatly reducing the burden for Declarations of Conformity (Section VI.c.1), including exclusion of SBOMs and HBOMs; updating the definition of *covered software* (Section VI.a.5); and providing more examples regarding the definition of a *person owned by, controlled by, or subject to the jurisdiction or direction of a foreign adversary* (Section VI.a.14) and *foreign interest* (Section VI.a.8); providing more examples on unconventional ownership structures (Section VI.a.14); and scoping the rule to address only those vehicles under 10,001 pounds (Section VI.a.3). For the reasons stated above, BIS declines to implement a whitelist (Section VI.a.12).

Finally, a stakeholder expressed interest in whether like-minded countries would be encouraged to adopt similar provisions to this regulation. BIS notes that throughout the rulemaking process it has been working closely with international allies and partners and has experienced high interest. BIS also participated in a meeting with interested foreign governments convened by the Department of State and the White House on July 31, 2024, to jointly address the national security risks associated with connected vehicles.

f. Classification

1. Executive Order 12866

Executive Order 12866, as reaffirmed by Executive Order 13563 and amended by Executive Order 14094, directs agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health, and safety effects, and distributed impacts and equity). This final rule has been designated a significant regulatory action by the Office of Information and Regulatory Affairs (OIRA) under section 3(f)(1) of Executive Order 12866, as amended by Executive Order 14094.

2. Unfunded Mandates Reform Act of 1995

This final rule would not produce a Federal mandate (under the regulatory provisions of title II of the Unfunded Mandates Reform Act of 1995) for state,

local, and Tribal governments or the private sector.

3. Executive Order 13132 (Federalism)

This final rule does not contain policies having federalism implications requiring preparations of a Federalism Summary Impact Statement.

4. Executive Order 12630 (Governmental Actions and Interference With Constitutionally Protected Property Rights)

This final rule does not contain policies that have takings implications.

5. Executive Order 13175 (Consultation and Coordination With Indian Tribes)

The Department has analyzed this final rule under Executive Order 13175 and has determined that the action would not have a substantial direct effect on one or more Indian Tribes, would not impose substantial direct compliance costs on Indian Tribal governments, and would not preempt Tribal law.

6. National Environmental Policy Act

The Department has reviewed this rulemaking action for the purposes of the National Environmental Policy Act (42 U.S.C. 4321, *et seq.*). It has been determined that this final rule would not have a significant impact on the quality of the human environment.

7. Paperwork Reduction Act

There are several changes between the NPRM and the final rule regarding information collection requirements. First, BIS has significantly decreased the reporting requirements in the Declaration of Conformity provision, including eliminating the need to submit SBOMs/HBOMs or a list of third-party external endpoints to which the VCS hardware connects. These provisions have been replaced with certification and recordkeeping requirements, with specific documentation and assessments on due diligence only needing to be submitted to BIS upon request. Additionally, BIS has removed the submission of an SBOM/HBOM for advisory opinion requests. Lastly, BIS has specified in the final rule that only primary business records relating to VCS hardware and covered software need to be maintained. These changes have significantly reduced the recurring annual cost and burden hour estimates.

Several commenters noted that the initial estimation to read the rule, understand the rule, and conduct initial due diligence in preparation to comply with the rule was significantly underestimated. One commenter noted

that the approximately \$39,000 per entity estimate to initially read and understand the rule and comply with its requirements is under-representative of the scope of activity required by the new proposed restrictions, compliance activities, and certification requirements. It was also noted that one of the main compliance tasks for OEMs would be the supply chain due diligence, which is time consuming and resource intensive. After internal deliberation, BIS agrees with commenters that the initial estimations to read the rule, understand the rule, and conduct initial due diligence in preparation to comply with the rule were likely underestimated, most significantly is the initial time burden for entities.

The initial time burden hour estimate for operations managers in the Preliminary Regulatory Impact Analysis was between 50 to 70 hours. BIS now estimates that the burden hour estimate for operations managers is between 100 to 160 hours. BIS evaluates that the burden hours for operations managers is essentially doubled compared to the estimation in the proposed rule due to improved insight into the complexities surrounding mapping supply chains and the initial efforts that will need to be invested in preparing to comply with the rule. BIS assesses that this updated hour estimate more accurately reflects these activities.

The initial burden hour estimate for lawyers in the Preliminary Regulatory Impact Analysis was between 80 and 100 hours. BIS now estimates that the burden hour estimate for lawyers is between 160 and 200 hours. Similarly to operations managers, BIS evaluates that the burden hours for lawyers is doubled compared to the estimation in the proposed rule due to improved insight into the legal efforts needed to (1) ensure that complex supply chains are compliant with the requirements outlined in the rule, and to (2) establish the reporting and recordkeeping practices as prescribed in the rule. The increase in lawyer burden hours also accounts for potential outside counsel engagement if a company does not have the proper in-house legal support or expertise.

Lastly, the initial burden hour estimates in the Preliminary Regulatory Impact Analysis assumed a time burden of 50 to 70 hours for engineers. This estimation remains the same in this final rule. After internal deliberation, BIS estimates that the burden to read the rule, understand the rule, and conduct initial due diligence in preparation to comply with the rule will largely fall on operations managers and lawyers.

Therefore, BIS did not increase the engineer burden hour estimate.

In the NPRM and Preliminary Regulatory Impact Analysis, BIS estimated that the cumulative initial burden (in hours) placed on applicable entities would be 180 to 240 hours and that the initial cost burden for these entities would be between \$30,964 and \$38,554. This estimate took into account the one-time initial cost (in hours) per entity to comply with the rule, including reading and understanding the rule's provisions. Every subsequent year, BIS estimated that the total annual cost burden (in hours) for applicable entities to implement the rule would be 100 to 500 hours and that the total annual cost burden for applicable entities to implement the rule would be \$16,133 to \$80,667 a year. In the final rule and final Regulatory Impact Analysis, BIS re-estimates that the cumulative initial burden (in hours) placed on applicable entities is between 310 and 430 hours to initially read the rule, understand the rule, and conduct initial due diligence in preparation to comply. The re-estimated cost burden for these entities to read the rule, understand the rule, and conduct initial due diligence is between \$56,671 and \$77,055. Every subsequent year after the publication of the final rule, the Department anticipates that the total annual burden (in hours) for connected vehicle manufacturers and VCS hardware importers to re-conduct due diligence into their VCS hardware or covered software supply chains and potentially re-submit a Declaration of Conformity will be 150 to 300 hours. BIS estimates that the total annual cost burden for a connected vehicle manufacturer or VCS hardware importer to re-conduct due diligence into their VCS hardware or covered software supply chains and potentially re-submit a Declaration of Conformity will be \$24,200 to \$48,400 per year.

BIS has also re-calculated the expected cost to the U.S. Government. Consistent with the proposed rule, BIS estimates that it will take staff an average of 20 hours to review and, if applicable, respond to each Declaration of Conformity, specific authorization application, or advisory opinion request. However, BIS has corrected the calculation by removing the 20 percent overhead addition, as overhead is already captured in staff wages. For this final rule, BIS has increased the expected legal support personnel from one to two employees in response to comments related to staffing needs in managing compliance with the rule. The re-estimated annual cost to the U.S. Government in the final rule is

\$1,299,728, a slight decrease from the \$1,437,982 estimate in the NPRM.

Some commenters to the NPRM expressed that BIS did not provide adequate time to review the costs of the rule. BIS acknowledges the short publication timeline of this rule, but also recognizes that the national security risks the rule addresses are severe. BIS also aims to address national security risks in a way that does not unduly burden the industry, as reflected by changes in the final rule. In its efforts to reduce associated costs and compliance burden, BIS has revised the final rule to reduce information submission requirements and expand on provisions that are designed to help the industry comply with the rule. For example, BIS has dramatically reduced the information submission requirements by removing the HBOM and SBOM submission requirements, which not only meets the industry where they are but also reduces the cost of this regulation. BIS has also established a process for issuing advisory opinions to assist parties who are unsure how the requirements in this rule affect them, and a process for requesting specific authorizations if a party believes that certain transactions prohibited by this rule should be permitted to go forward. BIS also notes that the delayed implementation of this rule will provide additional time for the industry to come into compliance with its requirements and seek specific authorizations or advisory opinions, as applicable. Also, BIS emphasizes that it will continue to engage with industry following publication of this rule to educate and facilitate compliance.

One commenter also indicated concerns about "the costs of hardware compliance, particularly regarding aftermarket suppliers in the trucking industry." BIS has since chosen to exclude commercial vehicles from this regulation and intends to propose a subsequent rule to address specific national security risks tailored towards this sector.

Commenters urged BIS to re-evaluate the broader impact of the regulation and noted the potential impact the rule would have on the automotive supply chain. BIS has been working to carefully scope the rule so that it does not place an undue burden on industry or the broader automotive supply chain. One commenter expressed concern about similar actions potentially being taken by other governments. BIS notes that this rule is focused on the domestic market within the United States.

As described above, BIS agrees with commenters who indicated the initial compliance cost estimates described in

the NPRM were understated. However, BIS believes that subsequent annual costs will be lower due to the decreased reporting requirements in this final rule. BIS has revised this PRA section to account for compliance costs new to the final rule, the initial cost to comply with the rule, and lower annual cost to comply with the rule due to decreased reporting requirements.

One commenter wanted to ensure that the rule does not impair the ability for American consumers to access the data from their own vehicles. BIS notes that this concern is not implicated by this final rule. Relatedly, a few commenters shared the view that the rule will limit consumer choice and innovation, is a form of economic protectionism, and is overly broad. BIS has worked to carefully scope this rule and notes that there are numerous firms both in the United States and abroad who are leading the development of innovative products. Moreover, BIS believes that it has narrowed the scope of this rule to the extent possible by solely focusing on VCS hardware and connected software designed, developed, manufactured, or supplied by entities with a sufficient nexus to the PRC and Russia. This rule leaves the remainder of the global market out of scope.

The collections of information contained in this final rule have been submitted to the Office of Management and Budget (OMB) for review in accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. 3501, *et seq.*) (PRA) under control number 0694-0145. This final rule will create new information collection requirements, which are subject to review and approval by OMB under the PRA.

For regulated entities whose covered software or VCS hardware is not designed, developed, manufactured, or supplied by persons owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia, the entity would be responsible for attesting to BIS that due diligence has been conducted through the submission of a Declaration of Conformity. Entities must submit to BIS the name and contact information of the VCS hardware importer or connected vehicle manufacturer, and additional pieces of information, if known, based on the type of declaring entity. Entities must also certify to BIS that they have conducted due diligence into their supply chain and can attest that their covered software and VCS hardware is not designed, developed, manufactured, or supplied by persons owned by, controlled by, or subject to the jurisdiction or direction of the PRC or

Russia. A Declaration of Conformity will need to be submitted to BIS each calendar year or for every new connected vehicle model year.

Regulated entities whose covered software or VCS hardware is designed, developed, manufactured, or supplied by persons owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia can apply for a specific authorization to engage in an otherwise prohibited transaction. In the application, an entity must submit information substantial enough to demonstrate to BIS that the otherwise prohibited transaction does not pose undue and unacceptable risk to U.S. national security. For example, entities may submit ISO/SAE 21434 Threat Analysis and Risk Assessments, including an assessment on the applicant's ability to limit PRC or Russian government access to, or influence over, the design, development, manufacture, or supply of the VCS hardware or covered software; security standards used by the applicant with respect to the VCS hardware or covered software; and/or other actions or proposals such as technical controls (e.g., software validation) or operational controls (e.g., physical and logical access monitoring procedures) the applicant intends to take to mitigate undue or unacceptable risk. Because specific authorization applications can vary in the level of specificity and volume of submitted materials, BIS cannot accurately estimate the costs and burden hours associated with an entity applying for a specific authorization.

Specific authorizations are reviewed and approved by BIS on a case-by-case basis. The final rule specifies that BIS may stipulate a variety of measures as conditions for the issuance of a specific authorization based on the level of risk that needs to be mitigated. For example, BIS may require the submission of annual third-party assessments as a condition. This condition would incur annual costs for an entity that seeks to engage in an otherwise prohibited transaction. Due to the variety of mitigating factors that BIS may impose when issuing specific authorizations, BIS cannot accurately estimate the costs and burden hours associated with an entity adhering to the conditions in a specific authorization.

There are several other compliance costs that regulated entities may incur from the rule, including the submission of advisory opinion requests and recordkeeping. Advisory opinions are voluntary requests that VCS hardware importers and connected vehicle manufacturers may submit to BIS to seek guidance on whether a prospective

transaction is subject to a prohibition of the rule. BIS sought comments on the potential number of advisory opinions that regulated entities may submit and did not receive any. Additionally, all regulated entities are required to retain primary business records under the recordkeeping requirements in the rule. For instance, entities subject to a Declaration of Conformity will need to maintain primary business records related to their covered transactions, while entities subject to approved specific authorizations may need to record keep additional documentation based on the conditions of a specific authorization. Due to these varying circumstances, BIS cannot accurately estimate the costs and burden hours associated with recordkeeping or submitting voluntary advisory opinion requests.

As noted above, BIS estimates that it will take regulated entities between 310 and 430 hours to initially read the rule, understand the rule, and conduct initial due diligence in preparation to comply. Every subsequent year after the publication of the final rule, the Department anticipates that the total annual burden (in hours) for connected vehicle manufacturers and VCS hardware importers to re-conduct due diligence into their VCS hardware or covered software supply chains and potentially re-submit a Declaration of Conformity will be 150 to 300 hours.

Based on analysis conducted in the accompanying final Regulatory Impact Analysis, BIS assesses that there are 27 to 215 entities potentially impacted by the rule. This range has been updated since the proposed rule to account for the removal of the commercial market from this regulation (narrowing the scope from NAICS: 3361 Motor Vehicle Manufacturing to NAICS: 33611 Automobile and Light Duty Motor Vehicle Manufacturing). The estimated cost burden for these entities to read the rule, understand the rule, and conduct initial due diligence is between \$56,671 and \$77,055. Every subsequent year, BIS estimates that the total annual cost burden for a connected vehicle manufacturer or VCS hardware importer to re-conduct due diligence into their VCS hardware or covered software supply chains and potentially re-submit a Declaration of Conformity will be \$24,200 to \$48,400 per year (average of operations manager, engineer, and lawyer hourly salaries [\$484/hour/3 = \$161.33] * [150 and 300 hours]). This broad range accounts for the varying levels of information that entities need to update in a Declaration of Conformity per model year. For example, a material change in the covered software or VCS

hardware could lead to the entity conducting more due diligence and then submitting a new Declaration of Conformity. Alternatively, where there are no material changes to the covered software or VCS hardware for a subsequent model year or calendar year, the connected vehicle manufacturer or VCS hardware importer can submit a confirmation that the previously submitted information remains accurate.

The estimated annual Federal salary cost to the U.S. Government to review and, if applicable, respond to Declarations of Conformity, specific authorization applications, and advisory opinion requests after the rule is fully implemented is \$971,800 [an estimated total of 430 Declarations of Conformity, specific authorization applications, and advisory opinion requests per year * hourly GS-13 staff rate of \$113/hour * average of 20 hours to review each Declaration of Conformity, specific authorization application, or advisory opinion request]. The \$113 per staff member per hour cost estimate for this information collection is consistent with the GS-scale salary data for a GS-13 Step 1 (<https://www.opm.gov/policy-data-oversight/pay-leave/salaries-wages/salary-tables/pdf/2024/DCB.pdf>) multiplied by a factor of 2 to include the cost of benefits and overhead. While BIS expects the time to review and, if applicable, respond to Declarations of Conformity, specific authorization applications, and advisory opinion requests to vary, 20 hours is our best estimate of this average.

The total estimated annual cost to the U.S. Government is \$1,299,728. The calculation is as follows: Annual Federal Salary Cost [\$971,800] + Legal Support (two GS-15 Step 1 employees (multiplied by 2 to include the cost of benefits and overhead) @50% of their time) [\$327,928] = \$1,299,728.

Under the PRA, an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the agency displays a valid control number assigned by OMB. Approved information collection requests may be viewed at <https://www.reginfo.gov/public/do/PRAMain>.

8. Regulatory Flexibility Act

In compliance with Section 604 of the Regulatory Flexibility Act (RFA), 5 U.S.C. 601–612, the Department has prepared a final regulatory flexibility analysis (FRFA) for this final rule. The FRFA describes the economic impacts the action may have on small entities. Public comments to the initial regulatory flexibility analysis (IRFA) and BIS's response is captured in subsection 2 below.

1. *A statement of the need for, and objectives of, the rule.* Connected vehicles contain a growing number of connected components. While these components provide greater safety and convenience through features like Wi-Fi, Bluetooth, cellular telecommunication, and satellite connectivity, the incorporation of progressively complex hardware and software systems enabling vehicle connectivity has also increased the attack surfaces through which malign actors and foreign adversaries may exploit vulnerabilities to gain access to vehicles. ICTS integral to connected vehicles present an undue or unacceptable risk to U.S. national security when those systems are designed, developed, manufactured, or supplied by persons owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia. The PRC and Russia are able to leverage legal and regulatory regimes to compel private companies subject to their jurisdiction, including carmakers and vehicle importers, to cooperate with state security and intelligence services. Cooperation could include providing data, logical access, encryption keys, and other vital technical information, as well as installing backdoors or bugs on equipment or in software updates, ultimately making vehicle equipment exploitable by foreign adversaries. Such privileged access potentially enables the PRC and Russia to exfiltrate sensitive data collected by connected vehicles through their components and allows remote manipulation for vehicles driven by U.S. persons.

2. *A statement of the significant issues raised by the public comments in response to the IRFA, a statement of the assessment of the agency of such issues, and a statement of any changes made in the final rule as a result of such comments.* BIS received minimal comments on the IRFA. One commenter noted that BIS should allow flexibility in the rulemaking approach where minimal or negligible risk is present, citing the IRFA. BIS agrees that there should be flexibility where minimal or negligible risk is present. To accomplish this, the rule's general and specific authorization mechanisms allow VCS hardware importers and connected vehicle manufacturers to engage in otherwise prohibited transactions if they meet certain requirements or conditions as will be identified by BIS. Another commenter noted that the NPRM, Preliminary Regulatory Impact Analysis, and IRFA did not adequately take into account the disruption the rule could cause to the availability of relevant

hardware and software. BIS acknowledges this commenter's concern, and notes that although the market for component systems this rule targets has very limited publicly available data, BIS has presented its best estimates for the regulatory impact of this rule and updated its assumptions and calculations in the Regulatory Impact Analysis based on publicly available information and comments to the NPRM.

3. *The response of the agency to any comments filed by the Chief Counsel for Advocacy of the Small Business Administration in response to the proposed rule, and a detailed statement of any change made to the final rule as a result of the comments.* BIS did not receive comments from the Chief Counsel for Advocacy of the Small Business Association in response to the proposed rule.

4. *A description of and an estimate of the number of small entities to which the rule will apply or an explanation of why no such estimate is available.* BIS anticipates that the entities primarily responsible for compliance with this regulation will be connected vehicle manufacturers and VCS hardware importers. BIS assesses, based on publicly available information, that the U.S. connected vehicle supplier network is dominated by a small set of manufacturers, likely none of which would qualify as small entities. Additionally, BIS received no comments on the number of firms that engage in covered software and VCS hardware transactions in the United States. Based on information available, BIS currently estimates that there will be 27 to 215 connected vehicle manufacturers and VCS hardware importers potentially affected by this rule. This range is the U.S. Census Bureau Statistics of U.S. Businesses' estimate for the number of firms operating at least one establishment in NAICS 33611: Automobile and Light Duty Motor Vehicle Manufacturing, with the low estimate being the number of firms with 500 or more employees in total nationwide and the high estimate being all firms (this therefore includes an estimate of 188 firms with fewer than 500 employees). In comparison, the Small Business Administration's (SBA) small business size standard for NAICS 336110: Automobile and Light Duty Motor Vehicle Manufacturing (covering both manufacturer and supplier activities) uses 1,500 employees or fewer. Despite having this small entity estimate of 188, BIS does not have knowledge of which of these entities engage, or have the potential to engage, in covered software and VCS hardware

transactions. Therefore, BIS is unable to estimate how many entities captured in the 27 to 215 range are small entities and engage in covered software and VCS hardware transactions, and cannot estimate the percentage of connected vehicle manufacturers and VCS hardware importers that qualify as small entities.

We also note that it is possible that an affected entity may be considered a small entity using SBA's size standard based on employee counts for the automobile manufacturing industry, but could nevertheless have large sales or import volumes, which is BIS's primary concern because the national security risks are due to the number of connected vehicles on public roads rather than the size of the entities supplying them. For example, it is possible that a VCS hardware importer with fewer than 1,500 employees could be importing tens of thousands of VCS hardware units in a calendar year.

5. *A description of the projected reporting, recordkeeping, and other compliance requirements of the rule, including an estimate of the classes of small entities which will be subject to the requirement and the type of professional skills necessary for preparation of the report or record.* As stated above, connected vehicle manufacturers and VCS hardware importers will bear the majority of the final rule's compliance costs. However, BIS maintains the flexibility to grant general authorizations to small entities that produce or import connected vehicles or VCS hardware units below a certain threshold each calendar year. The maintenance of records in support of the general authorization would be a compliance requirement for these small entities.

This rule requires regulated entities that cannot avail themselves of a general authorization to examine their automotive supply chain and ensure that their covered software and VCS hardware is not designed, developed, manufactured, or supplied by persons owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia. Entities that do not have supply chains that contain covered software and VCS hardware designed, developed, manufactured, or supplied by persons owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia must attest to BIS that this due diligence has been conducted through the submission of a Declaration of Conformity. A Declaration of Conformity entails both reporting and recordkeeping elements. Entities must submit to BIS the name and contact information of the VCS hardware

importer or connected vehicle manufacturer, and additional information, if known, based on the type of declaring entity. Entities must also certify to BIS that they have conducted due diligence into their supply chain and can attest that their covered software and VCS hardware is not designed, developed, manufactured, or supplied by persons owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia. Primary business records documenting these due diligence efforts, including the optional use of independent or hired third-party research, must be maintained by the declarant and made available to BIS upon request.

Entities that do manufacture or import covered software and VCS hardware designed, developed, manufactured, or supplied by persons owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia have the option of applying for a specific authorization. Specific authorizations will be reviewed by BIS on a case-by-case basis and, if granted, may require greater reporting requirements depending on BIS's assessment of the national security risks posed by the transaction. For example, BIS could require annual third-party verification as a condition for the issuance of a specific authorization.

BIS is requiring the maintenance of primary business records related to any transaction subject to a specific authorization, Declaration of Conformity, or general authorization for a period of 10 years, consistent with IEEPA's statute of limitations. Primary business records include contracts, import records, commercial invoices, bills of sale, essential correspondence, and any other records requested by BIS to assess compliance with this rule.

6. *A description of the steps the agency has taken to minimize the significant economic impact on small entities consistent with the stated objectives of applicable statutes, including a statement of the factual, policy, and legal reasons for selecting the alternative adopted in the final rule and why each one of the other significant alternatives to the rule considered by the agency which affect the impact on small entities was rejected.* In the NPRM, BIS listed specific circumstances that would qualify for a general authorization, which would allow regulated entities to engage in otherwise prohibited transactions in certain lower-risk cases. Commenters suggested a variety of additional circumstances that BIS should consider qualifying for a general

authorization. In the final rule, rather than provide predetermined general authorizations in the rule itself, BIS will instead separately issue general authorizations under any circumstances that it feels presents lower risk, allowing BIS to maintain the flexibility to grant as many general authorizations as possible and appropriate. For example, BIS may issue a general authorization to further minimize the impact of this rule on small entities that produce or import connected vehicles or VCS hardware units below a certain threshold each calendar year. If small entities do not qualify for a general authorization but feel they have been adversely affected by the rule, they can apply for a specific authorization related to their specific circumstances. Additionally, the requirements associated with submitting a Declaration of Conformity have been significantly reduced from those proposed in the NPRM, minimizing the economic impact on all submitting entities. Finally, based on public comments to the NPRM, many of the reporting requirements have been converted to recordkeeping and certification provisions. These changes will make Declarations of Conformity less burdensome for all regulated entities.

List of Subjects in 15 CFR Part 791

Business and industry, Communications, Computer technology, Critical infrastructure, Executive orders, Foreign Persons, Investigations, National security, Penalties, Technology, Telecommunications.

Elizabeth L.D. Cannon,

Executive Director, Office of Information and Communications Technology and Services, Bureau of Industry and Security, United States Department of Commerce.

For the reasons set out in the preamble, 15 CFR 791, is amended as follows:

PART 791—SECURING THE INFORMATION AND COMMUNICATIONS TECHNOLOGY AND SERVICES SUPPLY CHAIN

■ 1. The authority citation for part 791 continues to read as follows:

Authority: 50 U.S.C. 1701*et seq.*; 50 U.S.C. 1601*et seq.*; E.O. 13873, 84 FR 22689; E.O. 14034, 86 FR 31.

■ 2. Amend part 791 by adding subpart D, consisting of § 791.300 through § 791.321, to read as follows:

Subpart D—ICTS Supply Chain: Connected Vehicles

Sec.

791.300 Purpose and scope.

- 791.301 Definitions.
- 791.302 Prohibited VCS hardware transactions.
- 791.303 Prohibited covered software transactions.
- 791.304 Related prohibited transactions.
- 791.305 Declaration of Conformity.
- 791.306 General authorizations.
- 791.307 Specific authorizations.
- 791.308 Exemptions.
- 791.309 Appeals.
- 791.310 Advisory opinions.
- 791.311 "Is-Informed" notices.
- 791.312 Recordkeeping.
- 791.313 Reports to be furnished on demand.
- 791.314 Confidential Business Information.
- 791.315 Third-party verification and assessments.
- 791.316 Finding of violation.
- 791.317 Pre-penalty notice; settlement.
- 791.318 Penalties.
- 791.319 Penalty imposition.
- 791.320 Administrative collection; referral to United States Department of Justice.
- 791.321 Severability.

§ 791.300 Purpose and scope.

The inclusion in connected vehicles of certain ICTS designed, developed, manufactured, or supplied by persons owned by, controlled by, or subject to the jurisdiction or direction of certain foreign adversaries poses undue or unacceptable risks to U.S. national security. To address these undue or unacceptable risks, it is the purpose of this subpart to:

(a) Prohibit ICTS transactions that involve certain software and hardware that are designed, developed, manufactured, or supplied by persons owned by, controlled by, or subject to the jurisdiction or direction of the People's Republic of China (PRC) or the Russian Federation (Russia), as defined in § 791.4, and that directly enable connected vehicle Automated Driving Systems (ADS) or Vehicle Connectivity Systems (VCS), as defined in this subpart;

(b) Implement Declarations of Conformity to provide a mechanism for connected vehicle manufacturers and VCS hardware importers to communicate to BIS that they have conducted supply chain due diligence, and to confirm that no prohibited transactions, as defined in this subpart, have knowingly occurred;

(c) Provide for the issuance of general authorizations for certain transactions that would otherwise be prohibited by this subpart, but where certain factors described in the authorizations reduce the risk to an acceptable level;

(d) Provide a mechanism to apply for specific authorizations for certain transactions that would otherwise be prohibited by this subpart, where the undue or unacceptable risks can be

reasonably mitigated, based on criteria and conditions that are specifically constructed for each applicant; and

(e) Incentivize connected vehicle manufacturers, VCS hardware importers, and related suppliers to adopt and enhance measures to help secure the U.S. ICTS supply chain for connected vehicles.

§ 791.301 Definitions.

The following definitions apply only to this subpart. For additional definitions applicable to all of part 791, see 15 CFR 791.2. If a term is defined differently in this subpart than in 15 CFR 791.2, the definition listed in this section will apply to this subpart.

Automated Driving System means hardware and software that, collectively, are capable of performing the entire dynamic driving task for a completed connected vehicle on a sustained basis, regardless of whether it is limited to a specific operational design domain (ODD).

Completed connected vehicle means a connected vehicle that requires no further manufacturing operations to perform its intended function. For the purposes of this subpart, the integration of an Automated Driving System into a connected vehicle constitutes a manufacturing operation for a completed connected vehicle.

Connected vehicle means a vehicle driven or drawn by mechanical power and manufactured primarily for use on public streets, roads, and highways, that integrates onboard networked hardware with automotive software systems to communicate via dedicated short-range communication, cellular telecommunications connectivity, satellite communication, or other wireless spectrum connectivity with any other network or device. A vehicle operated only on a rail line is not included in this definition. For the purposes of this subpart, a connected vehicle with a gross vehicle weight rating of more than 4,536 kilograms (10,000 pounds) is not included in this definition.

Connected vehicle manufacturer means a U.S. person who:

(1) Manufactures or assembles completed connected vehicles in the United States for sale in the United States;

(2) Imports completed connected vehicles for sale in the United States; and/or

(3) Integrates ADS software on a completed connected vehicle for sale in the United States. A connected vehicle manufacturer may also be a VCS hardware importer, as defined herein, if VCS hardware has already been

installed in a connected vehicle when the connected vehicle manufacturer imports it.

Covered software means the software-based components, including application, middleware, and system software, in which there is a foreign interest, executed by the primary processing unit or units of an item that directly enables the function of Vehicle Connectivity Systems or Automated Driving Systems at the vehicle level. Covered software does not include firmware, which is characterized as software specifically programmed for a hardware device with a primary purpose of directly controlling, configuring, and communicating with that hardware device. Covered software also does not include open-source software, which is characterized as software for which the human-readable source code is available in its entirety for use, study, re-use, modification, enhancement, and redistribution by the users of such software, unless that open-source software has been modified for proprietary purposes and not redistributed or shared.

Covered software also does not include software subcomponents that were designed, developed, manufactured, or supplied prior to March 17, 2026, as long as those software subcomponents are not maintained, augmented, or otherwise altered by an entity owned by, controlled by, or subject to the jurisdiction or direction of a foreign adversary after March 17, 2026.

Declarant means the U.S. person submitting a Declaration of Conformity to BIS.

FCC ID Number means the unique alphanumeric code identifying a product subject to certification by the Federal Communications Commission composed of a:

- (1) Grantee code; and
- (2) Product code.

Foreign interest, for purposes of this subpart, means any interest in property of any nature whatsoever, whether direct or indirect, by a non-U.S. person.

Hardware Bill of Materials (HBOM) means a formal record the supply chain relationships of parts, assemblies, and components required to create a physical product, including information identifying the manufacturer, and related firmware.

Import means, in the context of this subpart, with respect to any article, the entry of such article into the United States Customs Territory. It does not include admission of an article from outside the United States into a foreign-trade zone for storage pending further assembly in the foreign-trade zone or

shipment to a foreign country. This definition also applies to related terms such as *importing* or *imported*.

Item means a component or set of components with a specific function at the vehicle level. A system may also be considered an item if it implements a function.

Knowingly means having knowledge of a circumstance (the term may be a variant, such as “know,” “reason to know,” or “reason to believe”), to include not only positive knowledge that the circumstance exists or is substantially certain to occur, but also an awareness of a high probability of its existence or future occurrence. Such awareness is inferred from evidence of the conscious disregard of facts known to a person and is also inferred from a person’s willful avoidance of facts.

Model year means the year used to designate a discrete vehicle model, irrespective of the calendar year in which the vehicle was actually produced, provided that the production period does not exceed 24 months.

Person owned by, controlled by, or subject to the jurisdiction or direction of a foreign adversary means:

(1) Any person, wherever located, who acts as an agent, representative, or employee, or any person who acts in any other capacity at the order, request, or under the direction or control, of a foreign adversary or of a person whose activities are directly or indirectly supervised, directed, controlled, financed, or subsidized in whole or in majority part by a foreign adversary;

(2) Any person, wherever located, who is a citizen or resident of a foreign adversary or a country controlled by a foreign adversary, and is not a United States citizen or permanent resident of the United States;

(3) Any corporation, partnership, association, or other organization with a principal place of business in, headquartered in, incorporated in, or otherwise organized under the laws of a foreign adversary or a country controlled by a foreign adversary; or

(4) Any corporation, partnership, association, or other organization, wherever organized or doing business, that is owned or controlled by a foreign adversary, to include circumstances in which any person identified in paragraphs (1) through (3) of this definition possesses the power, direct or indirect, whether or not exercised, through the ownership of a majority or a dominant minority of the total outstanding voting interest in an entity, board representation, proxy voting, a special share, contractual arrangements, formal or informal arrangements to act in concert, or other means, to determine,

direct, or decide important matters affecting an entity.

Prohibited transactions mean, collectively, the transactions described in § 791.302 (Prohibited VCS hardware transactions), § 791.303 (Prohibited covered software transactions), or § 791.304 (Related prohibited transactions) of this subpart.

Safe means, in the context of this subpart, distributing for purchase, lease, or other commercial operations a new completed connected vehicle for a price, to include the transfer of completed connected vehicles from a connected vehicle manufacturer to a dealer or distributor, as those terms are defined in 49 U.S.C. 30102. This definition also applies to the related terms such as *sell* or *selling*.

Software Bill of Materials (SBOM) means a formal record containing the details and supply chain relationships of various components used in building software. Software developers and vendors often create products by assembling existing open source and commercial software components. The SBOM enumerates these components in a product.

United States means the United States of America, the States of the United States, the District of Columbia, and any commonwealth, territory, dependency, or possession of the United States, or any subdivision thereof, and the territorial sea of the United States.

Vehicle Connectivity System (VCS) means a hardware or software item installed in or on a completed connected vehicle that directly enables the function of transmission, receipt, conversion, or processing of radio frequency communications at a frequency over 450 megahertz. VCS does not include a hardware or software item that exclusively:

(1) enables the transmission, receipt, conversion, or processing of automotive sensing (e.g., LiDAR, radar, video, ultrawideband);

(2) enables the transmission, receipt, conversion, or processing of ultrawideband communications to directly enable physical vehicle access (e.g., key fobs);

(3) enables the receipt, conversion or processing of unidirectional radio frequency bands (e.g., global navigation satellite systems (GNSS), satellite radio, AM/FM radio); or

(4) supplies or manages power for the VCS.

VCS hardware means software-enabled or programmable components if they directly enable the function of and are directly connected to Vehicle Connectivity Systems, or are part of an item that directly enables the function

of Vehicle Connectivity Systems, including but not limited to: microcontroller, microcomputers or modules, systems on a chip, networking or telematics units, cellular modem/modules, Wi-Fi microcontrollers or modules, Bluetooth microcontrollers or modules, satellite communication systems, other wireless communication microcontrollers or modules, external antennas, digital signal processors, and field-programmable gate arrays. VCS hardware does not include component parts that do not contribute to the communication function of VCS hardware (e.g., brackets, fasteners, plastics, and passive electronics, diodes, field-effect transistors, and bipolar junction transistors).

VCS hardware importer means a U.S. person who imports:

(1) VCS hardware for further manufacturing, incorporation, or integration into a completed connected vehicle that is intended to be sold or operated in the United States; or

(2) VCS hardware that has already been installed, incorporated, or integrated into a connected vehicle, or a subassembly thereof, that is intended to be sold as part of a completed connected vehicle in the United States.

§ 791.302 Prohibited VCS hardware transactions.

(a) VCS hardware importers are prohibited from knowingly importing into the United States VCS hardware that is designed, developed, manufactured, or supplied by persons owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia.

(b) In the context of this subpart, VCS hardware will not be considered to be designed, developed, manufactured, or supplied by persons owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia, based solely on the country of citizenship of one or more natural persons who are employed by, contracted by, or otherwise similarly engaged in such actions through the entity designing, developing, manufacturing, or supplying the hardware.

§ 791.303 Prohibited covered software transactions.

(a) Connected vehicle manufacturers are prohibited from knowingly importing into the United States completed connected vehicles that incorporate covered software that is designed, developed, manufactured, or supplied by persons owned by, controlled by, or subject to the

jurisdiction or direction of the PRC or Russia.

(b) Connected vehicle manufacturers are prohibited from knowingly selling within the United States completed connected vehicles that incorporate covered software that is designed, developed, manufactured, or supplied by persons owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia.

(c) In the context of this subpart, covered software will not be considered to be designed, developed, manufactured, or supplied by persons owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia, based solely on the country of citizenship of one or more natural persons who are employed by, contracted by, or otherwise similarly engaged in such actions through the entity designing, developing, manufacturing, or supplying the software.

§ 791.304 Related prohibited transactions.

Connected vehicle manufacturers who are owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia, are prohibited from knowingly selling in the United States completed connected vehicles that incorporate VCS hardware or covered software, regardless of whether such VCS hardware or covered software is designed, developed, manufactured, or supplied by persons owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia. These connected vehicle manufacturers are also prohibited from offering commercial services in the United States that utilize completed connected vehicles that incorporate ADS.

§ 791.305 Declaration of Conformity.

(a) *Requirements*—(1) *VCS hardware*: A VCS hardware importer must submit a Declaration of Conformity to BIS prior to importing VCS hardware, unless otherwise specified by this subpart. The Declaration of Conformity for VCS hardware shall include:

(i) The name and address of the VCS hardware importer, to include identifying information for an individual point of contact (including name, email address, and phone number);

(ii) If known, the FCC ID Number associated with the VCS hardware and, if applicable, of the subcomponents contained therein;

(iii) If known, the make and model of the connected vehicle(s) for which the VCS hardware is intended, or already integrated;

(iv) A certification that the VCS hardware described in the Declaration of Conformity was not designed, developed, manufactured, or supplied by persons owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia;

(v) A certification that the declarant has conducted due diligence (with or without the use of third-party assessments) to inform the above certification, and the declarant or a delegated third party maintains documentation (either through an HBOM or otherwise) and third-party assessments (as applicable) in support of the above certification, which can be made available upon request by BIS;

(vi) Identification as to who maintains the documentation and third-party assessments (as applicable) as certified above;

(vii) A certification that the declarant has taken all possible measures, either contractually or otherwise, to ensure any necessary documentation and assessments from suppliers will be furnished to BIS upon request either by the declarant, or, in cases including confidential business information, directly by the supplier; and

(viii) If applicable, an indication as to whether the submission is an update to a prior Declaration of Conformity, and if so, the date of the last submission.

(2) *Covered software*: A connected vehicle manufacturer must submit a Declaration of Conformity to BIS prior to importing or selling in the United States completed connected vehicles that incorporate covered software, unless otherwise specified by this subpart. The Declaration of Conformity for covered software shall include:

(i) The name and address of the connected vehicle manufacturer, to include information identifying an individual point of contact (including name, email address, and phone number);

(ii) The make, model, trim, and Vehicle Identification Number (VIN) series applicable to the completed connected vehicles that incorporate the covered software;

(iii) A certification that the covered software described in the Declaration of Conformity was not designed, developed, manufactured, or supplied by persons owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia;

(iv) A certification that the declarant has conducted due diligence (with or without the use of third-party assessments) to inform the above certification, and the declarant or a delegated third party maintains documentation (either through an

SBOM or otherwise) and third-party assessments (as applicable) that are sufficient to identify, at minimum, the author name, timestamp, component name, and supplier name of all proprietary additions to the development of the covered software, which can be made available upon request by BIS;

(v) Identification as to who maintains the documentation and third-party assessments (as applicable) as certified above;

(vi) A certification that the declarant has taken all possible measures, either contractually or otherwise, to ensure any necessary documentation and assessments from suppliers will be furnished to BIS upon request either by the declarant, or, in cases including confidential business information, directly by the supplier; and

(vii) If applicable, an indication as to whether the submission is an update to a prior Declaration of Conformity and the date of the last submission.

(b) *Certification*. A certification is a written statement or attestation within a Declaration of Conformity in § 791.305(a) above to the U.S. Government, signed by a duly authorized designee, certifying under the penalties provided in 18 U.S.C. 1001, that the information provided is accurate and complete in all material respects to the best knowledge of the designee on behalf of the entity filing the Declaration of Conformity.

(1) For purposes of this section, a duly authorized designee is:

(i) In the case of a partnership, any general partner thereof;

(ii) In the case of a corporation, the chief executive officer, or any officer with the authority to bind the corporation;

(iii) An employee with authority to make certifications on behalf of the company as designated by a person in (i) or (ii); and

(iv) In the case of an entity lacking partners and officers, any individual manager, or designated agent who has been explicitly authorized by the board of directors or equivalent to sign contracts and make legally binding agreements on behalf of the entity.

(c) *Additional Information*. BIS may request additional information after receipt of a Declaration of Conformity.

(d) *Reliance on Third-Party Assessments*. Declarants are permitted to utilize assessments produced by third parties to assist and prepare a Declaration of Conformity, in addition to ensuring ongoing compliance with this rule, as long as such entities conform to § 791.315 of this subpart.

(e) *Material Changes*. The following events will require an update to a previously submitted Declaration of Conformity:

(1) The discovery, by the declarant, of an omission, inaccuracy, or error in the information provided to BIS in a prior Declaration of Conformity that could reasonably mislead as to the true source of VCS hardware or covered software in question.

(2) Covered software updates alone do not constitute a material change unless an additional condition above is true.

(f) *Change in circumstance*. If the connected vehicle manufacturer or VCS hardware importer determines that articles subject to a Declaration of Conformity are no longer eligible, it must, within 30 days, cease any prohibited conduct and submit a specific authorization application, pursuant to § 791.307(m).

(g) *Deadline to Submit Declarations of Conformity*. Connected vehicle manufacturers and VCS hardware importers shall submit Declarations of Conformity prior to the first sale of the subject connected vehicle in the United States, prior to the import of VCS hardware as specified in this section, and following discovery of a material change that makes a prior Declaration of Conformity no longer accurate.

(1) Connected vehicle manufacturers shall submit a Declaration of Conformity at least 60 days prior to the first import or first sale of each model year of completed connected vehicle that incorporates covered software. Declarants may submit a single Declaration of Conformity for all connected vehicles that use the same covered software, grouped by make, model, and VIN series.

(2) VCS hardware importers shall submit a Declaration of Conformity at least 60 days prior to the first import of VCS hardware for each model year for units associated with a vehicle model year, or calendar year for units not associated with a vehicle model year. VCS hardware importers may submit a single Declaration of Conformity detailing all VCS hardware models that will be imported in the model year or calendar year.

(3) Connected vehicle manufacturers and VCS hardware importers must notify BIS of any material change to the information conveyed in a previously submitted Declaration of Conformity by submitting a revised Declaration of Conformity within 60 days following the discovery of such change. A declarant's obligation to inform BIS of material changes to the information ceases 10 years after submission of the

original Declaration of Conformity for that model year or calendar year.

(h) *Annual updates to Declarations of Conformity.* If applicable, connected vehicle manufacturers and VCS hardware importers may, in lieu of submitting a new Declaration of Conformity, submit a confirmation that the prior Declaration of Conformity remains accurate and that associates the relevant new model year of vehicles (if known) in lieu of submitting a new Declaration of Conformity.

(1) Where there are no material changes to the covered software for a subsequent model year of completed connected vehicles, the connected vehicle manufacturer may submit a confirmation no later than one year after the previous submission, certifying that the prior information remains accurate, and that associates the new relevant model year of vehicles to an existing Declaration of Conformity.

(2) Where there are no material changes to the VCS hardware for a subsequent model year of completed connected vehicles (if known) or calendar year, the VCS hardware importer may submit a confirmation no later than one year after the previous submission, certifying that the prior information remains accurate, and that associates the new relevant model year of vehicles (if known) to an existing Declaration of Conformity.

(i) *Submission Instructions.* The declarant shall follow the electronic filing instructions on BIS's website, <https://www.bis.gov/OICTS>.

(j) *Verification.* BIS, in its sole discretion, may choose to verify Declarations of Conformity that have been submitted by VCS hardware importers and connected vehicle manufacturers.

(k) *Connected vehicle introduced by means of false information in the Declaration of Conformity.* Any person who submits false information in a Declaration of Conformity, with knowledge that such information is false, and engages in one or more prohibited transactions, may incur penalties as defined in § 791.318.

(l) *Exemptions.* No Declaration of Conformity is required if the only foreign interest in a transaction arises from a foreign person's equity ownership of a U.S. person, whether through ownership of public shares or otherwise. This exemption has no effect on transactions where a foreign interest arises from a foreign entity's design, development, manufacture, or supply of VCS hardware or covered software for a U.S. person or where equity ownership allows a foreign person to exercise control over the U.S. person. Further,

this exemption has no effect on the analysis of whether or not an entity is owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia.

§ 791.306 General authorizations.

(a) *Overview.* VCS hardware importers and connected vehicle manufacturers may rely on a general authorization to engage in an otherwise prohibited transaction if they meet the stated requirements or conditions identified in the general authorization and are not subject to the restrictions identified in this section. Records demonstrating compliance with the terms of general authorizations must be retained for a period of 10 years, as specified in § 791.312, and be made available to BIS upon request.

(b) *General course of procedure.* BIS may issue general authorizations for certain types of transactions subject to the prohibitions contained in this subpart. In determining whether to issue a general authorization, BIS may consider any information or material BIS deems relevant and appropriate, classified or unclassified, from any Federal department or agency, or from any other source. BIS will publish general authorizations it issues under this subpart on its website (<https://www.bis.gov/OICTS>), and will also publish them in the **Federal Register**.

(c) *Relationship with specific authorizations.* BIS will not grant specific authorizations for transactions in which a general authorization is applicable.

(d) *Instructions.* Persons availing themselves of certain general authorizations may be required to file reports and statements in accordance with the instructions specified by BIS in each general authorization. Failure to fulfill instructions provided in a general authorization may nullify the authorization and result in a violation of the applicable prohibitions that may be subject to BIS enforcement action.

(e) *Change in circumstance.* Unless otherwise prescribed by BIS, within 30 days of discovering a change in circumstance, the VCS hardware importer or connected vehicle manufacturer must assess if it still qualifies for the general authorization.

(1) If the connected vehicle manufacturer or VCS hardware importer determines that articles subject to a general authorization have been used outside the conditions of the general authorization, it must, within 30 days of such a determination, cease any prohibited conduct, conduct an internal inquiry, and submit to BIS a report identifying any prohibited transactions,

the number of connected vehicles or VCS hardware units implicated, and proposed remedial measures.

(f) *Verification.* BIS may, at its discretion, seek verification from VCS hardware importers and connected vehicle manufacturers as to whether they are relying on a general authorization, and if so, may request documentation to verify compliance with this subpart.

(g) *Restrictions.* VCS hardware importers and connected vehicle manufacturers may not avail themselves of any general authorization if any one or more of the following apply:

(1) BIS has notified, either directly or through an advisory opinion, the VCS hardware importer or connected vehicle manufacturer is not eligible for a general authorization; or

(2) The VCS hardware importer or connected vehicle manufacturer is owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia.

§ 791.307 Specific authorizations.

(a) *Prohibited transactions authorized.* Upon receipt of a valid and complete application, BIS may grant specific authorizations to permit a VCS hardware importer or connected vehicle manufacturer to engage in an otherwise prohibited transaction.

(b) *Policy.* It is the policy of BIS not to review applications for specific authorizations for transactions that are otherwise permitted by a general authorization.

(c) *Applications for specific authorizations.* Applications for specific authorizations shall include, at a minimum, a description of the nature of the otherwise prohibited transaction(s), including the following:

(1) The identity of the parties engaged in the transaction, including relevant corporate identifiers and information sufficient to identify the ultimate beneficial ownership of the transacting parties;

(2) An overview of the VCS hardware or covered software that is designed, developed, manufactured, or supplied by a person owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia, including persons responsible for assembling and packaging VCS hardware or covered software;

(3) If known, the make, model, and trim of the connected vehicle(s) in which the VCS hardware or covered software will be integrated;

(4) The intended function of the VCS hardware or covered software;

(5) Documentation to support the information contained in the

application, such as any ISO/SAE 21434 Threat Analysis and Risk Assessments (if available);

(6) An assessment of the applicant's ability to limit PRC or Russian government access to, or influence over the design, development, manufacture, or supply of the VCS hardware or covered software;

(7) Security standards used by the applicant with respect to the VCS hardware or covered software; and

(8) Other actions and proposals such as technical controls (e.g., software validation) or operational controls (e.g., physical and logical access monitoring procedures) the applicant intends to take to mitigate undue or unacceptable risk, if applicable.

(d) *Application submission procedures and timing.* VCS hardware importers or connected vehicle manufacturers who seeks to engage in an otherwise prohibited transaction must submit an application for a specific authorization in writing prior to engaging in the transaction, and await a decision from BIS prior to engaging in the transaction. Specific authorization submissions must be delivered to BIS as specified on its website, <https://www.bis.gov/OICTS>.

(e) *Additional conditions.* Only one application for a specific authorization should be submitted to BIS for each otherwise prohibited transaction; multiple parties submitting an application for a specific authorization for the same transaction may result in processing delays.

(f) *Information to be supplied.* An applicant may be required to furnish additional information as BIS deems necessary to assist in making a decision. BIS may request an oral briefing by the applicant and any other relevant parties. The applicant may present additional information concerning an application for a specific authorization at any time before BIS issues its decision regarding the application.

(g) *Review and decisions.*

Applications for specific authorizations will be reviewed on a case-by-case basis, and conditions to be applied to each specific authorization may vary as needed to mitigate any risk that arises as a result of the otherwise prohibited transaction. Such review will include an evaluation of the risks and potential mitigation measures proposed by the applicant for the particular transaction. The risks that BIS may consider include, but are not limited to, risks of data exfiltration from, and remote manipulation or operation of, the connected vehicle and the extent and nature of foreign adversary involvement in the design, development,

manufacture, or supply of the VCS hardware or covered software. Mitigation may include the applicant's ability to limit PRC or Russian government access to, or influence over the design, development, manufacture, or supply of the VCS hardware or covered software; security standards used by the applicant and if such standards can be validated by BIS or a third party; and other actions or proposals the applicant intends to take to mitigate undue or unacceptable risk. BIS will advise each applicant in writing of the decision respecting the filed application. Decisions regarding specific authorizations will not be made publicly available.

(h) *Processing period.* BIS will provide a decision regarding an application for a specific authorization within 90 days unless BIS determines, in its sole discretion, and notifies the applicant within that 90-day period, that additional time is required. Failure or delays by the applicant in submitting additional information requested by BIS may delay or prevent BIS's ability to issue a specific authorization.

(i) *Scope.* (1) Unless otherwise specified in the authorization, a specific authorization applies only to the transaction:

(i) Between the parties identified in the specific authorization;

(ii) With respect to the otherwise prohibited transaction(s) described in the authorization; and

(iii) If the conditions specified in the specific authorization are satisfied. The applicant must inform any other parties identified in the specific authorization of the authorization's scope and specific conditions.

(2) As a condition for the issuance of any specific authorization, BIS may require the applicant to submit third-party assessments or SBOMs/HBOMs as may be prescribed in the specific authorization or otherwise communicated to the applicant by BIS. Reports should be sent in accordance with the instructions provided in the applicable specific authorization.

(3) Any materially false or misleading representation in or otherwise associated with the application, or in any document submitted in connection with the application under this section, shall cause the specific authorization to be deemed void as of the date of issuance, and the applicant may incur penalties as specified in § 791.318.

(j) *Verification.* BIS may establish, in its sole discretion as conditions for receiving a specific authorization, any compliance, auditing, or verification requirements.

(k) *Effect of denial.* BIS's denial of a specific authorization may be appealed as described in § 791.309. BIS's denial of a prior specific authorization does not preclude parties from filing an application for a specific authorization for a separate otherwise prohibited transaction. The applicant may at any time, by written correspondence, request reconsideration of the denial of an application based on new material facts or changed circumstances.

(l) *Effect of specific authorization.* (1) No specific authorization issued under this subpart, or otherwise issued by BIS, permits or validates any prohibited transaction effectuated prior to the issuance of such specific authorization unless specifically provided for in the specific authorization.

(2) No regulation, ruling, instruction, or authorization permits any prohibited transaction under this subpart unless the regulation, ruling, instruction or authorization is issued by BIS and specifically refers to this subpart. No regulation, ruling, instruction, or authorization referring to this subpart shall be deemed to permit any prohibited transaction prohibited by any provision of this subpart unless the regulation, ruling, instruction, or authorization specifically refers to such provision. Any specific authorization permitting any otherwise prohibited transaction has the effect of removing those prohibitions from the transaction, but only to the extent specifically stated by the terms of the specific authorization. Unless the specific authorization otherwise specifies, such an authorization does not create any right, duty, obligation, claim, or interest in, or with respect to, any property that would not otherwise exist under ordinary principles of law.

(3) Nothing contained in this subpart shall be construed to supersede the requirements established under any other provision of law or to relieve a person from any requirement to obtain an authorization from another department or agency of the U.S. Government in compliance with applicable laws and regulations subject to the jurisdiction of that department or agency.

(4) Specific authorizations will be approved for a duration of no less than one (1) model year or calendar year except as provided in § 791.307(m).

(m) *Exceptions.* BIS may approve specific authorizations for a period of less than one (1) calendar year on a case-by-case basis under the following circumstances:

(1) 2027 model years that include covered software and are actively being

sold or imported as of the effective date of this rule;

(2) Covered software and VCS hardware supply chains that are affected by force majeure events;

(3) As a result of a corporate merger, investment, acquisition, joint venture, or conversion of equity (such as from debt) that occurs during model year production;

(4) As a result of the closure or relocation of facilities involved in the production of covered software or VCS hardware; and

(5) Other instances as determined by BIS.

(n) *Records.* Persons receiving a specific authorization are required to maintain records for a period of 10 years, as required in § 791.312, as well as to submit reports and statements in accordance with the instructions specified in each specific authorization.

(o) *Amendment, modification, or rescission.* Except as otherwise provided by law, any specific authorization or instructions issued thereunder may be amended, modified, or rescinded by BIS at any time.

§ 791.308 Exemptions.

(a) VCS hardware importers may engage in prohibited transactions described in § 791.302 without an authorization as required under §§ 791.306 and 791.307, and are exempt from submitting Declarations of Conformity with respect to all other transactions, as described in § 791.305 provided that:

(1) For VCS hardware units not associated with a vehicle model year, the import of the VCS hardware occurs prior to January 1, 2029; or

(2) The VCS hardware is associated with a vehicle model year prior to 2030, the VCS hardware is imported as part of a connected vehicle with a model year prior to 2030, or the VCS hardware is imported for purposes of repair or warranty for a connected vehicle with a model year prior to 2030.

(b) Connected vehicle manufacturers may engage in prohibited transactions described in § 791.303 without authorization as required under §§ 791.306 or 791.307 and are exempt from submitting Declarations of Conformity with respect to all other transactions, as described in § 791.305, provided that the completed connected vehicle that incorporates covered software described in § 791.303(a)(1) was manufactured prior to model year 2027.

(c) Connected vehicle manufacturers who are owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia may engage in

prohibited transactions described in § 791.304 without authorization as required under §§ 791.306 or 791.307, and are exempt from submitting Declarations of Conformity to all other transactions, provided that the completed connected vehicle that incorporates VCS hardware and/or covered software was manufactured prior to model year 2027.

§ 791.309 Appeals.

(a) *Scope.* Any person claiming to be directly and adversely affected by any of the listed administrative actions taken by BIS pursuant to this subpart may appeal to the Under Secretary for reconsideration of that administrative action. Only the following types of administrative actions are subject to the appeals procedures described in this subpart:

(1) Denial of an application for a specific authorization;

(2) Suspension or revocation of an issued specific authorization; or

(3) Determination of ineligibility for a general authorization.

(b) *Designated appeals reviewer and coordinator.* The Under Secretary may delegate to the Deputy Under Secretary of Commerce for Industry and Security or to another BIS official the authority to review and decide the appeal, and to exercise any other function of the Under Secretary under this section. In addition, the Under Secretary may designate any employee of BIS to be an appeals coordinator to assist in the review and processing of an appeal under this subpart. The responsibilities of an appeals coordinator may include presiding over informal hearings.

(c) *Appeals procedures—(1) Filing.* An appeal under this subpart must be submitted to the Under Secretary by email or at the following address: Bureau of Industry and Security, U.S. Department of Commerce, Room 3898, 14th Street and Pennsylvania Avenue NW, Washington, DC 20230 no later than 45 days after the date appearing on the written notice of administrative action.

(2) *Content of appeal.* The appeal must include a full written statement in support of the appellant's position. The appeal must include a precise statement of the reasons that the appellant believes that the administrative action has a direct and adverse effect and should be reversed or modified. The Under Secretary or the designated official may request additional information that would be helpful in resolving the appeal, and may accept additional submissions from the appellant. The Under Secretary or the designated official will not ordinarily

accept any submission filed voluntarily more than 30 days after the filing of the appeal.

(3) *Request for informal hearing.* In addition to the written statement submitted in support of an appeal, an appellant may request, in writing, at the time an appeal is filed, an opportunity for an informal hearing. A hearing is not required, and the Under Secretary or the designated official may grant or deny a request for an informal hearing at the Under Secretary or the designated official's sole discretion. Any hearings will be held in the District of Columbia unless the Under Secretary or the designated official determines, based upon good cause shown, that another location would be preferable.

(d) *Informal hearing procedures—(1) Presentations.* If a hearing request is granted, the Under Secretary or the designated official may provide an opportunity for the appellant to make an oral presentation at an informal hearing based on the materials previously submitted by the appellant or made available by BIS. The Under Secretary or the designated official may require that any facts in controversy be covered by an affidavit or testimony given under oath or affirmation.

(2) *Evidence.* The rules of evidence prevailing in courts of law do not apply, and all evidentiary material deemed by the Under Secretary or the designated official to be relevant and material to the proceeding, and not unduly repetitious, will be received and considered.

(3) *Procedural questions.* The Under Secretary or the designated official has the authority to limit the number of people attending the hearing, to impose any time or other limitations deemed reasonable, and to determine all procedural questions.

(4) *Transcript.* A transcript of an informal hearing shall not be made, unless the Under Secretary or the designated official determines that the national interest or other good cause warrants it, or if the appellant requests a transcript. If the appellant requests, and the Under Secretary or the designated official approves the taking of, a transcript, the appellant will be responsible for paying all expenses related to production of the transcript.

(5) *Report.* Any person designated by the Under Secretary to conduct an informal hearing shall submit a written report containing a summary of the hearing and recommended action to the Under Secretary.

(e) *Amicus filings.* At the request of the appellant, parties not subject to the administrative action under appeal may submit amicus filings in support of the appellant prior to any informal hearing.

(f) *Decisions.* In addition to the documents specifically submitted in connection with the appeal, the Under Secretary or the designated official may consider any recommendations, reports, or other relevant documents available to BIS in determining the appeal, but shall not be bound by any such information, nor prevented from considering any other relevant information, or consulting with any other person or groups, in making a decision. The Under Secretary or the designated official may adopt any other procedures deemed necessary and reasonable for considering an appeal, including by providing the appellant with an interim or proposed decision and offering the appellant an opportunity to provide comments. The Under Secretary or the designated official shall decide an appeal within a reasonable time after receipt of the appeal. The decision shall be issued to the appellant in writing and contain a statement of the reasons for the action and address any arguments contrary to the decision presented by the appellant. The decision of the Under Secretary or the designated official shall be final.

(g) *Effect of appeal.* Acceptance and consideration of an appeal shall not affect any administrative action, pending or in effect, unless the Under Secretary or the designated official, upon request by the appellant and with opportunity for a response, grants a stay.

§ 791.310 Advisory opinions.

(a) VCS hardware importers and connected vehicle manufacturers may request an advisory opinion from BIS to determine whether a prospective transaction is subject to a prohibition, or requirement under this subpart. The requestor must have a direct financial interest in the substance of the question(s) presented, and the submission must include the name of the parties to the transaction.

(b) Requests for advisory opinions must be delivered to BIS as specified on its website, <https://www.bis.gov/OICTS>.

(c) Persons submitting advisory opinion requests are encouraged to provide as much information as possible to assist BIS in making a determination, to include the following information:

(1) The name, title, telephone, and email address of the submitter;

(2) The submitter's complete address, comprised of street address, city, state, country, and postal code;

(3) All available information identifying the parties to the prospective transaction;

(4) Information regarding the VCS hardware and/or covered software and any descriptive literature, brochures,

technical specifications, or papers that provide sufficient technical detail to enable BIS to verify whether the prospective transaction would constitute a prohibited transaction as defined in this subpart;

(5) For connected vehicle manufacturers: the make, model, and trim level, or other identifying information of the completed connected vehicle;

(6) For VCS hardware importers: the identification of the system; and, if known, the make, model, and trim of the group of completed connected vehicles for which the equipment is intended; and

(7) Any other information that the submitter believes to be material to the prospective transaction.

(d) BIS may consider third-party materials on a case-by-case basis as part of its review of an advisory opinion request. Each person that submits an advisory opinion request or information in support of another party's advisory opinion request shall provide any additional information or documents that BIS may thereafter request in its review of the matter.

(e) BIS shall issue an advisory opinion within 60 days of the request unless it notifies the requester within that 60-day period that more time is required. Failure or delays by the applicant in submitting additional information requested by BIS may delay or prevent BIS's ability to issue an advisory opinion.

(f) Each advisory opinion can be relied upon by the requesting party or parties to the extent the disclosures made pursuant to this subpart were accurate and complete and to the extent the disclosures continue to reflect circumstances accurately and completely after the date of the issuance of the advisory opinion. An advisory opinion will not restrict enforcement actions by any agency other than BIS. It will not affect a requesting party's obligations to any other agency or under any statutory or regulatory provision other than those specifically discussed in the advisory opinion.

(g) BIS may publish on its website an advisory opinion that may be of broad interest to the public, with redactions where necessary to protect Confidential Business Information.

(h) BIS may, at its sole discretion, decline to issue an advisory opinion within 60 days after receipt of the request.

§ 791.311 "Is-Informed" notices.

(a) BIS may inform VCS hardware importers or connected vehicle manufacturers either individually by

specific notice or, for larger groups, through a separate notice published in the **Federal Register**, that a specific authorization is required because an activity could constitute a prohibited transaction.

(b) Specific notice that a specific authorization is required may be given only by, or at the direction of, the Under Secretary or a BIS official designated by the Under Secretary.

§ 791.312 Recordkeeping.

(a) Except as otherwise provided herein, or through subsequent communication with BIS, VCS hardware importers, connected vehicle manufacturers, and/or third-party assessors (if applicable) shall keep all primary business records related to the execution of each transaction for which a Declaration of Conformity, general authorization, or specific authorization would be required under §§ 791.305, 791.306, or 791.307. Primary business records include contracts, import records, commercial invoices, bills of sale, corporate policy documentation, and reports produced by third parties created for the purposes of compliance with this rule. Regardless of whether these transactions are effectuated pursuant to a general authorization, specific authorization, or otherwise, such records shall be available for examination for at least 10 years after the date of such transactions.

(b) Third-party assessors are required to maintain all records relating to third-party verification or assessment of a U.S. person's compliance with this rule.

§ 791.313 Reports to be furnished on demand.

(a) VCS hardware importers and connected vehicle manufacturers must furnish, under oath, in the form of reports or as otherwise specified by BIS, and at any time as may be required by BIS, complete information regarding any transaction involving the import of VCS hardware or the import or sale of completed connected vehicles incorporating covered software. This requirement applies regardless of whether such transaction is affected pursuant to a general or specific authorization or otherwise, subject to the provisions of this subpart. BIS may require that such reports include the production of any books, contracts, letters, papers, or other hard copy or electronic documents relating to any transactions, in the custody or control of the persons required to make such reports. Reports being submitted to BIS pursuant to this section must be retained for a period of 10 years, as specified in § 791.312.

(b) BIS may, through any person or agency, conduct investigations, hold hearings, administer oaths, examine witnesses, receive evidence, take depositions, and require by subpoena the attendance and testimony of witnesses and the production of any books, contracts, letters, papers, and other hard copy or electronic documents relating to any matter under investigation, regardless of whether any report has been required or filed in connection therewith.

(c) Persons providing records to BIS pursuant to this section shall follow the electronic filing instructions on BIS's website, <https://www.bis.gov/OICTS>.

§ 791.314 Confidential Business Information.

(a) *Confidential business information.* Confidential Business Information is defined in 19 CFR 201.6.

(b) *Submission procedures.* Any information or material submitted to BIS which the entity or any other party desires to submit in confidence as a part of a Declaration of Conformity, specific authorization application, advisory opinion request, record to be furnished on demand, or is otherwise Confidential Business Information should be contained within a file beginning its name with the characters "CBI." Any page containing Confidential Business Information must be clearly marked "CONFIDENTIAL BUSINESS INFORMATION" on the top of the page. Any pages not containing Confidential Business Information should not be marked. By submitting information or material identified as Confidential Business Information, the entity or other party represents that the information is exempted from public disclosure, either by the Freedom of Information Act (5 U.S.C. 552 *et seq.*) or by another specific statutory exemption. Any request for Confidential Business Information treatment must be accompanied at the time of submission by a statement justifying non-disclosure and referring to the specific legal authority claimed.

(c) *Confidentiality of information.* Confidentiality of information is subject to 15 CFR 791.102.

§ 791.315 Third-Party Verification and Assessments.

(a) *Overview.* U.S. persons subject to this subpart may hire, consult, or otherwise contract with a third-party to ensure compliance with this rule. In certain cases, the use of a third-party assessor will be mandated in the terms of an approved specific authorization.

(b) *Third-Party Assessors.* U.S. persons should determine whether a third-party assessor is qualified and

competent, such as through industry certification or standard, to examine, to verify, and attest to the U.S. person's compliance with and the effectiveness of the security requirements implemented for VCS hardware or covered software transactions.

(1) The third-party assessor cannot be a person owned by, controlled by, or subject to the jurisdiction or direction of the PRC or Russia.

(2) In determining the reasonableness of an entity's reliance on a third-party assessment, BIS will consider the independence of the third-party, including any financial incentives between the third-party and the entity.

(c) *Scope.* The use of a third-party assessor for U.S. persons submitting Declarations of Conformity is voluntary; however, if utilized, BIS recommends such third-party assessments to:

(1) identify and examine the VCS hardware importer or connected vehicle manufacturer's VCS hardware and covered software supply chains in relation to the prohibitions in this subpart;

(2) examine compliance relating to each Declaration of Conformity, general authorization, or specific authorization pursuant to which an entity is conducting transactions;

(3) use a reliable methodology to conduct the third-party verification; and

(4) acknowledge that the assessment may be used by the U.S. government to verify compliance.

(d) *Assessment.* To utilize third-party verification to fulfill the due diligence requirement for a Declaration of Conformity, the third-party assessor should prepare and submit a written report to the VCS hardware importer or connected vehicle manufacturer. The third-party assessment should at minimum:

(1) identify the suppliers of each relevant component and describe the nature of any foreign interest;

(2) describe the methodology undertaken, including the policies and other documents reviewed, personnel interviewed, and any facilities, equipment, or systems examined;

(3) describe the effectiveness of the VCS hardware importer or connected vehicle manufacturer's corporate policies related to compliance with this rule;

(4) for VCS hardware importers or connected vehicle manufacturers conducting transactions under the auspices of a general authorization or specific authorization, describe any vulnerabilities or deficiencies in the implementation of the authorization; and

(5) recommend any improvements or changes to policies, practices, or other aspects to maintain compliance with this subpart, as applicable to each transaction.

(e) *Recordkeeping.* The third-party assessor must comply with all recordkeeping requirements, pursuant to § 791.312.

§ 791.316 Finding of Violation.

(a) *When issued.* (1) BIS may issue an initial finding of violation that identifies a violation if BIS:

(i) Determines that there has occurred a violation of any provision of this subpart, or a violation of the provisions of any exemption, general authorization, specific authorization, regulation, order, directive, instruction, or prohibition issued by or pursuant to the direction or authorization of the Secretary pursuant to this subpart or otherwise under IEEPA;

(ii) Considers it important to document the occurrence of a violation; and

(iii) Concludes that an administrative response is warranted but that a civil monetary penalty is not the most appropriate response.

(2) An initial finding of violation shall be in writing and may be issued whether or not another agency has taken any action with respect to the matter.

(b) *Response—(1) Right to respond.* An alleged violator may contest an initial finding of violation by providing a written response to BIS.

(2) *Deadline for response; default determination.* A response to an initial finding of violation must be made within 30 days as set forth in paragraphs (b)(2)(i) and (ii) of this section. The failure to submit a response within 30 days shall be deemed to be a waiver of the right to respond, and the initial finding of violation will become final and will constitute final agency action. The violator may seek judicial review of that final agency action in Federal district court.

(i) *Computation of time for response.* A response to an initial finding of violation must be electronically transmitted on or before the 30th day after the date of delivery by BIS.

(ii) *Extensions of time for response.* If a due date falls on a Federal holiday or weekend, that due date is extended to include the following business day. Any other extensions of time will be granted, at the discretion of BIS, only upon specific request to BIS.

(3) *Form and method of response.* A response to an initial finding of violation need not be in any particular form, but it must be typewritten and signed by the alleged violator or a

representative thereof, contain information sufficient to indicate that it is in response to the initial finding of violation, and include the BIS identification number listed on the initial finding of violation. A digital signature is acceptable.

(4) *Information that should be included in response.* Any response should set forth in detail why the alleged violator either believes that a violation of the provisions of this subpart did not occur and/or why a finding of violation is otherwise unwarranted under the circumstances. The response should include all documentary or other evidence available to the alleged violator that supports the arguments set forth in the response. BIS will consider all relevant materials submitted in the response.

(c) *Determination*—(1) *Determination that a finding of violation is warranted.* If, after considering the response, BIS determines that a final finding of violation should be issued, BIS will issue a final finding of violation that will inform the violator of its decision and may include a responsive administrative action other than a civil monetary penalty. Any action taken in a final finding of violation shall constitute final agency action. The violator has the right to seek judicial review of that final agency action in Federal district court.

(2) *Determination that a finding of violation is not warranted.* If, after considering the response, BIS determines a finding of violation is not warranted, then BIS will inform the alleged violator of its decision not to issue a final finding of violation.

§ 791.317 Pre-penalty notice; settlement.

(a) *When required.* If BIS has reason to believe that there has occurred a violation of any provision of this subpart or a violation of the provisions of any exemption, general authorization, specific authorization, regulation, order, directive, instruction, or prohibition issued by or pursuant to the direction or authorization of the Secretary pursuant to this subpart or otherwise under IEEPA and determines that a civil monetary penalty is warranted, BIS will issue a pre-penalty notice informing the alleged violator of BIS's intent to impose a monetary penalty. A pre-penalty notice shall be in writing and issued either electronically or by mail to the alleged violator. The pre-penalty notice may be issued whether or not another agency has taken any action with respect to the matter. BIS will consider any voluntary disclosures of a violation prior to issuing such notice.

(b) *Response*—(1) *Right to respond.* An alleged violator may respond to a pre-penalty notice in writing to BIS.

(2) *Deadline for response.* A response to a pre-penalty notice must be made within 30 days as set forth below. The failure to submit a response within 30 days shall be deemed to be a waiver of the right to respond.

(i) *Computation of time for response.* A response to a pre-penalty notice must be electronically transmitted on or before the 30th day after the date of delivery by BIS.

(ii) *Extensions of time for response.* If a due date falls on a Federal holiday or weekend, that due date is extended to include the following business day. Any other extensions of time will be granted, at the discretion of BIS, only upon specific request to BIS.

(3) *Form and method of response.* A response to a pre-penalty notice need not be in any particular form, but it must be typewritten and signed by the alleged violator or a representative thereof, contain information sufficient to indicate that it is in response to the pre-penalty notice, and include the BIS identification number listed on the pre-penalty notice. A digital signature is acceptable.

(4) *Information that should be included in response.* Any response should set forth in detail why the alleged violator either believes that a violation of the provisions of this subpart did not occur and/or why a civil monetary penalty is otherwise unwarranted under the circumstances. The response should include all documentary or other evidence available to the alleged violator that supports the arguments set forth in the response. BIS will consider all relevant materials submitted in the response.

(c) *Representation.* A representative of the alleged violator may act on behalf of the alleged violator, but any oral communication with BIS prior to a written submission regarding the specific allegations contained in the pre-penalty notice must be preceded by a written letter of representation, unless the pre-penalty notice was served upon the alleged violator in care of the representative.

(d) *Settlement.* Settlement discussions may be initiated by BIS, the alleged violator, or the alleged violator's authorized representative.

§ 791.318 Penalties.

(a) Section 206 of the International Emergency Economic Powers Act (50 U.S.C. 1705) (IEEPA) is applicable to violations of the provisions of any general authorization, specific authorization, regulation, order,

directive, instruction, or prohibition issued by or pursuant to the direction or authorization of the Secretary of Commerce (Secretary) pursuant to this subpart or otherwise under IEEPA.

(1) A civil penalty not to exceed the amount set forth in section 206 of IEEPA may be imposed on any person who violates, attempts to violate, conspires to violate, or causes a violation of any exemption, general authorization, specific authorization, regulation, order, directive, instruction, or prohibition issued under this subpart.

(2) A person who willfully commits, willfully attempts to commit, willfully conspires to commit, or aids or abets in the commission of a violation of any exemption, general authorization, specific authorization, regulation, order, directive, instruction, or prohibition issued under this subpart is subject to criminal penalties and may, upon conviction, be fined not more than \$1,000,000, or if a natural person, be imprisoned for not more than 20 years, or both.

(b) The civil penalties provided in IEEPA are subject to adjustment pursuant to the Federal Civil Penalties Inflation Adjustment Act of 1990 (Pub. L. 101-410, as amended, 28 U.S.C. 2461 note).

(c) The criminal penalties provided in IEEPA are subject to adjustment pursuant to 18 U.S.C. 3571.

(d) Pursuant to 18 U.S.C. 1001, whoever, in any matter within the jurisdiction of the executive, legislative, or judicial branch of the U.S. Government, knowingly and willfully falsifies, conceals, or covers up by any trick, scheme, or device a material fact; or makes any materially false, fictitious, or fraudulent statement or representation; or makes or uses any false writing or document knowing the same to contain any materially false, fictitious, or fraudulent statement or entry shall be fined under title 18, United States Code, imprisoned, or both.

(e) Violations of this subpart may also be subject to other applicable laws and therefore may be subject to additional penalties not specified in this section.

§ 791.319 Penalty imposition.

(a) If, after considering any written response to the pre-penalty notice and any relevant facts, including voluntary disclosure of a violation, BIS determines that there was a violation by the alleged violator named in the pre-penalty notice and that a civil monetary penalty is appropriate, BIS may issue a penalty notice to the violator containing a determination of the violation and the imposition of the monetary penalty.

(b) The issuance of the penalty notice shall constitute final agency action. The violator may seek judicial review of that final agency action in Federal district court.

§ 791.320 Administrative collection; referral to United States Department of Justice.

In the event that the violator does not pay the penalty imposed pursuant to this subpart or make payment arrangements acceptable to BIS, the

matter may be referred for administrative collection measures by the United States Department of the Treasury or to the United States Department of Justice for appropriate action to recover the penalty in a civil suit in a Federal district court.

§ 791.321 Severability.

If any provision of this subpart is held to be invalid or unenforceable by its terms, or as applied to any person or

circumstance, or stayed pending further agency action or judicial review, the provision is to be construed so as to continue to give the maximum effect to the provision permitted by law, unless such holding will be one of utter invalidity or unenforceability, in which event the provision will be severable from this part and will not affect the remainder thereof.

21 CFR Part 101

Food Labeling: Front-of-Package Nutrition Information; Proposed Rule

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

21 CFR Part 101

[Docket No. FDA–2024–N–2910]

RIN 0910–AI80

Food Labeling: Front-of-Package Nutrition Information

AGENCY: Food and Drug Administration, HHS.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA or we) proposes to require front-of-package nutrition labels on most foods that must bear a Nutrition Facts label. This action, if finalized, would require the display of a compact informational box containing certain nutrient information on the principal display panel. The box would provide consumers, including those who have lower nutrition knowledge, with standardized, interpretive nutrition information that can help them quickly and easily identify how foods can be part of a healthy diet. We also propose to amend certain nutrient content claim regulations to align with current nutrition science and avoid within-label inconsistencies.

DATES: Either electronic or written comments on the proposed rule must be submitted by May 16, 2025. Submit comments (including recommendations) on the collection of information under the Paperwork Reduction Act of 1995 by May 16, 2025.

ADDRESSES: You may submit comments as follows. Please note that late, untimely filed comments will not be considered. The <https://www.regulations.gov> electronic filing system will accept comments until 11:59 p.m. Eastern Time at the end of May 16, 2025. Comments received by mail/hand delivery/courier (for written/paper submissions) will be considered timely if they are received on or before that date.

Electronic Submissions

Submit electronic comments in the following way:

- **Federal eRulemaking Portal:** <https://www.regulations.gov>. Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to <https://www.regulations.gov> will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any

confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on <https://www.regulations.gov>.

- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see “Written/Paper Submissions” and “Instructions”).

Written/Paper Submissions

Submit written/paper submissions as follows:

- **Mail/Hand Delivery/Courier (for written/paper submissions):** Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

- For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in “Instructions.”

Instructions: All submissions received must include the Docket No. FDA–2024–N–2910 for “Food Labeling: Front-of-Package Nutrition Information.” Received comments, those filed in a timely manner (see **ADDRESSES**), will be placed in the docket and, except for those submitted as “Confidential Submissions,” publicly viewable at <https://www.regulations.gov> or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday, 240–402–7500.

- **Confidential Submissions—**To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states “THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.” We will review this copy, including the claimed confidential information, in our consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on <https://www.regulations.gov>. Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly

available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as “confidential.” Any information marked as “confidential” will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: <https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf>.

Docket: For access to the docket to read background documents, the plain language summary of the proposed rule of not more than 100 words as required by the “Providing Accountability Through Transparency Act,” or the electronic and written/paper comments received, go to <https://www.regulations.gov> and insert the docket number, found in brackets in the heading of this document, into the “Search” box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, 240–402–7500.

Under the Paperwork Reduction Act (PRA), comments on the information collection provisions are best assured of consideration if your comments are received by May 16, 2025. Submit your comments on FDA's need for this information, the accuracy of the provided burden estimates, and any suggested methods for minimizing respondent burden to FDA using the docket identified at the beginning of this rulemaking. FDA will respond to any information collection-related comments in the final rule. You may also send your information collection-related comments to OMB's Office of Information and Regulatory Affairs using the interface at <https://www.reginfo.gov/public/do/PRAMain>. Find this particular information collection by selecting “Currently Under Review—Open for Public Comments” or by using the search function. The title of this proposed collection is “Food Labeling: Front-of-Package Nutrition Information.”

I. Executive Summary

A. Purpose and Coverage of the Proposed Rule

This proposed rule, if finalized, would amend our regulations by adding a requirement for certain nutrition information to appear in a compact informational box on the principal display panel or bulk food labeling (for

purposes of this document, referred to collectively as the front of the food package, principal display panel, or similar) of most foods bearing a Nutrition Facts label (by statute, “food” is defined as, among other things, articles used for food or drink for man (21 U.S.C. 321(f))). The scientific literature on nutrition labeling, including on the Nutrition Facts label, demonstrates that providing context for the levels of certain nutrients to limit that is interpretive rather than solely numeric—to communicate the relative significance in the context of a total daily diet—and requiring that interpretive information appear on the front of the package helps consumers notice and use the nutrition information presented on food packages. The box we are proposing would give consumers additional standardized context on the front of most food packages about certain nutrients that appear on the Nutrition Facts label and allow them to compare this nutrition information across foods. An example of the proposed front-of-package (FOP) nutrition information box (Nutrition Info box) that reflects all proposed requirements is as follows:

Nutrition Info		
Per serving		% Daily
5 cookies		Value
Saturated Fat	25%	High
Sodium	5%	Low
Added Sugars	10%	Med
FDA.gov		

The proposed rule would provide consumers, including those who have lower nutrition knowledge, with interpretive nutrition information that can help them quickly and easily identify how foods can be part of a healthy diet. We also propose to amend the nutrient content claim definitions for low sodium (which includes the terms “low sodium,” “low in sodium,” “little sodium,” “contains a small amount of sodium,” and “low source of sodium”) and low saturated fat (which includes the terms “low in saturated fat,” “low saturated fat,” “contains a small amount of saturated fat,” “low source of saturated fat,” and “a little saturated fat”) to align with current

nutrition science and to avoid within-label inconsistencies.

B. Summary of the Major Provisions of the Proposed Rule

This proposed rule, if finalized, would:

- Require most foods that must display a Nutrition Facts label to bear an FOP Nutrition Info box on the principal display panel that details and interprets the relative amount of certain nutrients to limit (*i.e.*, saturated fat, sodium, and added sugars) in a serving of the food;
- Detail how to determine the interpretive descriptions (*i.e.*, “Low,” “Med,” and “High”) of such nutrients for the Nutrition Info box;

• Specify the required contents of the Nutrition Info box, such as the headings and nutrients;

• Specify the required format of the Nutrition Info box, such as placement, size, and use of dividing lines to separate information;

• Detail special labeling provisions for certain foods to modify or alternatively display the Nutrition Info box;

• Specify certain foods that are exempt from the requirement to display the Nutrition Info box;

• Provide examples of Nutrition Info boxes;

• Revise the low sodium and low saturated fat nutrient content claim definitions; and

• Establish a compliance date of 3 years after the final rule's effective date for businesses with \$10 million or more in annual food sales, and a compliance date of 4 years after the final rule's effective date for businesses with less than \$10 million in annual food sales.

C. Legal Authority

We are issuing this proposed rule consistent with the Nutrition Labeling and Education Act of 1990 (NLEA) (Pub. L. 101–535, 104 Stat. 2353, Section 2(b)(1) (21 U.S.C. 343 note (1990))) and sections 403(f) and 403(q) of the Federal Food, Drug, and Cosmetic Act (FD&C Act)). We are also issuing this proposed rule consistent with our authorities in sections 701(a), 403(a)(1), and 201(n) of the FD&C Act (21 U.S.C. 371(a), 21 U.S.C. 343(a)(1), and 21 U.S.C. 321(n), respectively).

D. Costs and Benefits

The proposed rule, if finalized, would require certain nutrition information to appear in a compact informational box on the front of most foods bearing a

Nutrition Facts label. The proposed rule would also amend the low sodium and low saturated fat nutrient content claim regulations to align with current nutrition science and avoid within-label inconsistencies. The proposed rule, if finalized, may result in industry reformulating products based on the interpretive label information or to maintain nutrient content claims, if some manufacturers choose to do so.

We quantify costs to the packaged food industry from updating labeling to meet the proposed requirements. Annualized costs from relabeling over 10 years would range from \$66 million to \$154 million at a 2 percent discount rate, with a primary estimate of \$105 million per year. Although reformulation is not a requirement or goal of the proposed rule, we also quantify the costs of reformulation, as the rule may result in some food manufacturers reformulating some food products. We estimate that the annualized costs of reformulation over 10 years would range from \$125 million

to \$377 million at a 2 percent discount rate, with a primary estimate of \$227 million. Combined, we estimate the annualized costs of the proposed rule over 10 years would range from \$191 to \$530 million at a 2 percent discount rate, with a primary estimate of \$333 million. Note that, in general, this rule would impose few requirements on retailers. If a food that a retailer manufactures or packages either bears nutrition information or makes nutrition claims, and therefore is required to bear a Nutrition Facts label, the food would be subject to this rule's requirements.

Benefits of this proposed rule, if finalized, would come from the value consumers receive from the information provided by the interpretive FOP label on food packages. If some packaged food manufacturers chose to reformulate products to maintain current nutrient content claims or move into a “Low” or “Med” interpretive description, consumers whose nutritional intake changes accordingly would also benefit from a healthier food supply.

TABLE 1—SUMMARY OF THE BENEFITS, COSTS, AND DISTRIBUTIONAL EFFECTS OF THE PROPOSED RULE
[Millions of 2023 dollars]

Category	Primary estimate	Low estimate	High estimate	Dollar year	Discount rate (%)	Time horizon	Notes
Benefits: Annualized monetized benefits. Annualized quantified, but non-monetized, benefits.							
Unquantified benefits.	The benefits of this proposed rule would come from the value consumers receive from the information provided in the interpretive label on food packages.						
Costs: Annualized monetized costs. Annualized quantified, but non-monetized, costs. Unquantified costs.	\$333	\$191	\$530	2023	2	2025–2034	Although reformulation is not a requirement or goal of the proposed rule, reformulation costs are estimated to be 68% of total quantified costs. Costs may, at least partially, be passed through to consumers in the form of price increases.
Transfers: Annualized monetized Federal budgetary transfers. Other annualized monetized transfers.							
Net Benefits: Annualized monetized net benefits.							
Category	Effects			Notes			
Effects on State, local, or Tribal governments.							
Effects on small businesses	The total discounted cost of the proposed rule per entity (including large firms) is approximately \$100,253. We cannot estimate the exact cost per small entity because we do not know how many UPCs on average are owned by small entities as defined using the SBA definition.						
Effects on wages.							
Effects on growth.

PRIA	Preliminary Regulatory Impact Analysis.
RACC	Reference Amount Customarily Consumed.
RDI	Reference Daily Intake.

III. Background

The United States faces a growing prevalence of preventable diet-related chronic diseases and conditions (for purposes of this document, we use the term “diseases” to cover both diseases and conditions), which can include hypertension, cardiovascular disease, type 2 diabetes, and certain forms of cancer. These diseases are leading causes of death and disability in the United States (Ref. 1). Data show that about one in 10 Americans has diabetes, and 90 to 95 percent of those have type 2 diabetes (Ref. 2); at least one in three people will have cancer in their lifetime (Ref. 3); and nearly half of American adults have high blood pressure, which is linked to leading causes of death for Americans: heart disease and stroke (Refs. 4 and 5). While these diseases can result from a mix of risk factors, such as genetic, biological, behavioral, socioeconomic, and environmental factors, unhealthy dietary patterns increase the risk of developing chronic diseases (Ref. 6). Diet-related chronic diseases are experienced disproportionately by certain racial and ethnic populations and those with lower socioeconomic status (Refs. 7 to 12).

The *Dietary Guidelines for Americans, 2020–2025* (*Dietary Guidelines, 2020–2025*) recommends, among other things, that Americans limit their intake of saturated fat, sodium, and added sugars to achieve healthy dietary patterns (Ref. 6). Under the National Nutrition Monitoring and Related Research Act of 1990 (Pub. L. 101–445, 104 Stat. 1034), the U.S. Department of Agriculture and the U.S. Department of Health and Human Services (HHS) must publish the Dietary Guidelines for Americans

(Dietary Guidelines) at least every 5 years and must base them on the preponderance of the current scientific and medical knowledge. Development of the Dietary Guidelines entails a rigorous process and includes appointment of a federal advisory committee of external scientific experts, review of the scientific evidence by the committee, public meetings, issuance of a scientific report by the advisory committee, and a public comment process (Ref. 13). With those requirements and practices in place, the *Dietary Guidelines, 2020–2025* concludes that healthy dietary patterns are based on, among other things, “consuming foods and beverages in their nutrient-dense forms—forms with the least amounts of added sugars, saturated fat, and sodium” (Ref. 6).

FDA, as part of a whole-of-government approach, broadly seeks to help reduce the burden of diet-related chronic diseases. We are committed to accomplishing this goal by, in part, prioritizing nutrition initiatives that can help improve dietary patterns in the United States. Americans’ choice of foods is influenced by, among other things, their knowledge about and understanding of the foods available to them. As consumers make their food purchases and daily food choices, food labeling provides them with valuable information about nutrients and how a particular food fits into their daily diet. Congress recognized this and passed the NLEA, which gave the Secretary of HHS, and by delegation, FDA, authority to require certain nutrition information to be conveyed in a manner that allows the public to readily observe and comprehend such information and to

understand its relative significance in the context of a total daily diet (21 U.S.C. 343 note).

The NLEA, which added section 403(q) of the FD&C Act, specifies certain nutrients to be declared in nutrition labeling, including saturated fat and sodium, and authorizes FDA to require the declaration of other nutrients if we determine that the declaration will provide information regarding the nutritional value of such food that will assist consumers in maintaining healthy dietary practices.

We have established various requirements under the NLEA related to nutrition information on food labels, such as the declaration of nutrients (including saturated fat and sodium), the format for nutrition labeling (including the Nutrition Facts label), reference values for use in declaring a food’s nutrient content, and allowances for specified products to be exempt from nutrition labeling (§ 101.9 (21 CFR 101.9)). We first issued regulations related to the Nutrition Facts label in 1993 in a final rule entitled “Food Labeling: Mandatory Status of Nutrition Labeling and Nutrient Content Revision, Format for Nutrition Label” (58 FR 2079, January 6, 1993) (1993 Nutrition Facts label final rule) and amended them in 1995 (60 FR 67164, December 28, 1995) and in 2003 (68 FR 41434, July 11, 2003). In 2016, we again amended our regulations related to the Nutrition Facts label in a final rule entitled “Food Labeling: Revision of the Nutrition and Supplement Facts Labels” (81 FR 33742, May 27, 2016) (2016 Nutrition Facts label final rule) to, among other things, require the declaration of added sugars (codified at

§ 101.9(c)(6)(iii)). We took this action, in part, because of scientific evidence demonstrating a strong association between a healthy dietary pattern low in sugar-sweetened foods and a reduced risk of cardiovascular disease, evidence showing it is difficult to meet nutrient needs within calorie limits when added sugars consumption is high, and consumption data showing that Americans consume too many calories from added sugars (81 FR 33742 at 33759 and 33768 through 33770).

A. Need for the Regulation

In developing this proposed rule, FDA examined the scientific literature on nutrition labeling, including on the Nutrition Facts label. The Nutrition Facts label provides valuable, standardized nutrition information to consumers. Eighty-seven percent of U.S. consumers report ever looking at the Nutrition Facts label, and nearly 80 percent of U.S. consumers use it sometimes or often (Ref. 14). It focuses on numerical information: The quantitative amount per serving of each declared nutrient and the corresponding percent Daily Value (DV), when applicable, tell consumers how much a nutrient in a specified serving of food contributes to a total daily diet.

Using the Nutrition Facts label frequently is associated with healthier dietary patterns (Ref. 15). However, while many consumers use and benefit from the Nutrition Facts label, fewer people who ever look at the Nutrition Facts label look at nutrients to limit (including sodium, saturated fat, and added sugars) in that label (Ref. 14). Use of the Nutrition Facts label use also differs by sex, race/ethnicity, education level, and household income. Specifically, regular use of the Nutrition Facts label is lower among men, those with lower education levels, and those with lower incomes (Refs. 15 to 17). Additional nutrition labeling that is interpretive and prominently displayed on the front of food packaging could help improve consumer awareness of nutrients to limit by providing a more accessible description of certain information contained in the Nutrition Facts label.

The scientific literature on nutrition labeling also demonstrates that some consumers struggle to understand the numerical values used to represent the nutrient content of the food or use the information in the labeling to make their food selections (Refs. 18 and 19). Additionally, information FDA has collected shows that providing context for the levels of certain nutrients to limit that is interpretive rather than solely numeric—to communicate the relative

significance of the nutrients in the context of a total daily diet—and requiring that interpretive information appear on the front of the package helps consumers notice and use the nutrition information presented on food packages (Refs. 20 and 21). Based on this data and other information referenced in this document, we have tentatively determined that an interpretive FOP nutrition label is needed to help consumers readily observe and comprehend information about certain nutritional attributes of a food at the point of decision-making (*i.e.*, when a consumer is deciding whether to buy, use, or eat the food) that will assist them in maintaining healthy dietary practices.

B. Regulatory and Research History

FDA has considered the possible use of FOP nutrition labeling under its NLEA and FD&C Act authorities since at least 2007. In the **Federal Register** of July 20, 2007 (72 FR 39815), we issued a notice of public hearing and request for comment about symbols then in use to communicate nutrition information on food labels. In the **Federal Register** of December 1, 2009 (74 FR 62786), we announced that we had submitted two experimental studies for Office of Management and Budget (OMB) review and clearance under the Paperwork Reduction Act of 1995, with the intent to quantitatively assess consumer reactions to various FOP nutrition labeling schemes. We discussed how we completed a focus group study in April 2008 to obtain comments and information about many consumer issues related to FOP nutrition labeling schemes (*id.*). We noted that the information available to us left gaps in our understanding of the impacts of FOP nutrition labeling schemes on U.S. consumers and commented that there was a lack of publicly available quantitative consumer research on the relative effectiveness of existing and alternative nutrition labeling schemes (*id.*).

In a **Federal Register** notice entitled “Front-of-Pack and Shelf Tag Nutrition Symbols; Establishment of Docket; Request for Comments and Information” (75 FR 22602, April 29, 2010), we established a docket to ask questions and obtain data and other information about ways to enhance the usefulness of point-of-purchase nutrition information, such as through FOP nutrition labeling. We stated that we were working with interested parties to develop a voluntary FOP nutrition label that was driven by sound nutrition criteria, consumer research, and design expertise (*id.* at 22603). In 2011, we issued a letter (Ref. 22) to the Grocery Manufacturers

Association (now the Consumer Brands Association) and the Food Marketing Institute (now the Food Industry Association) announcing our intent to exercise enforcement discretion with respect to certain FDA nutrition labeling regulations so that the associations could introduce and use their Facts Up Front (FUF) FOP nutrition labeling program (Ref. 23). We recognized in the letter that the standardized, non-selective presentation of calories, saturated fat, sodium, and total sugar content on a company’s entire product line, if widely adopted by the food industry in a uniform manner, could contribute to FDA’s public health goals by fostering awareness of the nutrient content of foods in the marketplace and helping consumers in making quick, informed, and healthy food choices (Ref. 22).

Congress has also demonstrated its interest in FOP nutrition labeling. In 2009, Congress directed the Centers for Disease Control and Prevention to commission a study by the Institute of Medicine (IOM) (now the National Academies of Sciences, Engineering, and Medicine (NASEM)) to examine and provide recommendations regarding FOP nutrition symbols (Refs. 24 and 25). In 2010, the IOM released a Phase I report (Ref. 26), which found, among other things, that FOP systems had been established internationally as far back as 1989, may have the greatest potential benefit if the nutrition components included are limited to those most closely related to prominent public health conditions, and that research was needed to determine the most effective way of presenting nutrition ratings to consumers so they could make food choices that contribute to a healthy diet. In 2012, the IOM released a Phase II report (Ref. 27), which addressed the potential benefits of a single, standardized front-label food guidance system regulated by FDA, assessed which systems are most effective with consumer audiences, considered which systems best promote health, and recommended ways to maximize the use of such systems. The IOM concluded that a single, standardized system that is easily understood by most age groups and appears on all products would be the best option (*id.*).

Further, in 2011, we commissioned a literature review (Ref. 28) to look at scientific studies, including, *e.g.*, experimental and real-world studies, on FOP and Shelf Label Nutrition Systems (*i.e.*, tags set on grocery store shelves rather than directly on food packaging) and learn which types of systems were most effective at informing consumers about the relative healthfulness of foods.

This literature review found that summary systems incorporating text and color worked better than those using only numeric information in attracting consumer attention and informing them about the relative healthfulness of foods (id.).

In 2016, FDA commissioned an update to our previous literature review (Ref. 29), which captured more recent scientific literature on FOP nutrition labeling from 2010 to August 2016. Like previous reviews, the update reported that, among other things, consumers, no matter their nutrition knowledge, preferred visually simple labels that were quick and easy to read over those that have more complex numerical information.

The White House released a National Strategy (Ref. 30) at the September 2022 Conference on Hunger, Nutrition, and Health that outlined the goal of ending hunger and increasing healthy eating and physical activity by 2030, so that fewer Americans experience diet-related diseases such as type 2 diabetes, hypertension, and certain cancers. The strategy highlighted several FDA initiatives to help empower consumers with information and help create a healthier food supply. The National Strategy included FDA's work to, among other things, conduct research on and propose a standardized FOP system for food packages to help consumers, particularly those with lower nutrition literacy, quickly and easily identify foods that are part of a healthy eating pattern.

C. Citizen Petition

On August 5, 2022, the Center for Science in the Public Interest, the Association of SNAP Nutrition Education Administrators, and the Association of State Public Health Nutritionists submitted a citizen petition asking that we amend our regulations to require an easy-to-understand, standardized system of nutrition labeling on the principal display panel of foods (Citizen Petition from Peter Lurie, MD, MPH, Executive Director and President, and Eva Greenthal, Senior Science Policy Associate, Center for Science in the Public Interest, Amy Branham, Immediate Past Co-chair, ASNNA Leadership Team, Association of SNAP Nutrition Education Administrators, and Jamie Stang, Ph.D., MPH, RDN, President, Association of State Public Health Nutritionists, to Dockets Management Staff, Food and Drug Administration, dated August 5, 2022, Docket No. FDA-2022-P-1832 (petition) at page 1). The petition requested that such a system be

mandatory, nutrient-specific, inclusive of calories, and interpretive with respect to the levels of added sugars, sodium, and saturated fat per serving (id.).

The petition claimed that experimental and real-world evidence shows that policies that aim to give consumers information about the healthfulness of foods that is clear, quick, and easy to access and understand, such as interpretive FOP nutrition labeling, can improve consumer understanding and encourage healthier diets (id. at page 4). The petition provided various examples of FOP systems that would meet its criteria. We have considered this citizen petition in proposing this rule.

D. Updated FDA Literature Review and New Research Overview

We have seen rising global interest in FOP nutrition labeling schemes in recent years, and many countries have implemented, or are implementing, their own versions amid growing concern about the impact of diet-related chronic diseases, which can include cardiovascular disease, diabetes, and certain forms of cancer (Refs. 20 and 31). As of 2024, countries in North America, South America, Asia, and Africa have implemented, or are implementing, mandatory FOP nutrition label schemes, while several other countries in Africa, Europe, Asia, and Oceania have voluntary schemes (Refs. 32 to 34). The schemes in these countries represent a variety of types, such as warning-type schemes (e.g., where a triangle and exclamation point on the FOP call attention to nutrients above a certain threshold in a serving size) and nutrient summary schemes (e.g., where a letter grade is determined and displayed to represent the healthfulness of a food's nutrient profile), among other types of schemes. We examined these various schemes in the literature review we conducted, which informed our consumer research studies. We describe our literature review and consumer research in the sections that follow.

1. Literature Review

To inform our proposed Nutrition Info box, we first conducted a systematic review of the scientific literature on FOP nutrition labels, the most recent version of which we made public in April 2023 (Ref. 20). Results of the scientific literature review showed that FOP nutrition labels have been extensively studied and some large-scale literature reviews on FOP nutrition labels have been conducted. As mentioned elsewhere in this document, the IOM conducted a two-

phase literature review on FOP nutrition labels, concluding that such FOP nutrition labeling schemes benefit consumers and that consumers prefer simple, interpretive schemes, which are also rated most helpful to consumers (Refs. 26 and 27). The body of research after the IOM reviews has been consistent with the IOM findings. Specifically, certain overarching themes emerged from our updated literature review, including that an FOP nutrition label can help consumers identify and select healthy foods, consumers generally prefer simple labels, and government endorsement of logos may be related to greater confidence in the label (Ref. 20). Moreover, recent literature on FOP nutrition labeling schemes suggests that familiarity with these schemes will make them even more useful as time passes, and that these schemes are useful across all demographics and levels of nutrition knowledge, can help consumers understand the nutrition quality of food, and can positively impact consumers' intention to purchase healthful foods (id.). The scientific literature on consumers' use of FOP nutrition labels has strongly and consistently found that FOP nutrition labels attract consumer attention, and any FOP nutrition label communicates something more about the product's nutrient content to consumers than no FOP nutrition label (id.). FDA began its most recent round of consumer research exploration of FOP nutrition labeling schemes using the findings from the literature review (id.) and continued to monitor the literature throughout the research process.

2. First Focus Group Testing

In 2022, FDA conducted its first set of focus groups (OMB control number 0910-0497, "Front-of-Pack Focus Groups") to test FOP concepts and draft FOP labels, some of which we had included in the 2008 focus group testing (see Refs. 32 and 33; see also https://www.reginfo.gov/public/do/PRAViewIC?ref_nbr=202008-0910-021&icID=253321). We tested variations of four FOP nutrition labeling schemes in these focus groups, which were composed of U.S. adult food shoppers whose race/ethnicity, age, sex, and education reflected U.S. population demographics (Ref. 35). The schemes were based on those currently found in the U.S. and international marketplace: (1) Guideline Daily Amount (GDA); (2) Nutrition Tips; (3) Nutrition Tips—High In; and (4) High In (id.). The GDA scheme listed calories, quantitative amount of nutrients (sometimes including both nutrients to limit (those

that may be associated with adverse health effects and that Americans generally consume too much of—*e.g.*, saturated fat, sodium, added sugars) and nutrients to get enough of (those that Americans generally do not get the recommended amount of—*e.g.*, fiber, calcium)), and the adult proportion recommended for daily consumption represented by a serving of the food in both numerical (*i.e.*, percent DV) and interpretive (*i.e.*, “Low,” “Med,” and “High”) form. This scheme resembled the voluntary FUF scheme developed by the U.S. food industry. The Nutrition Tips scheme mimicked the design of the Nutrition Facts label and included low, medium, and high interpretive descriptions about nutrient levels for saturated fat, sodium, and added sugars (and, in certain test schemes, fiber and calcium). The Nutrition Tips—High In scheme also mimicked the Nutrition Facts label design, but it only listed a nutrient, its interpretive description, and corresponding percent DV when a serving of the product was “high in” saturated fat, sodium, or added sugars. The High In scheme showed the nutrient(s) (and, in certain test schemes, the percent DV) in the product that, per serving, were considered high. In total, we tested 41 variations of these schemes—14 GDA schemes, 12 Nutrition Tips schemes, 9 Nutrition Tips—High In schemes, and 6 High In schemes (Ref. 36). We used these varied schemes to learn more about consumer reactions to the elements depicted (*e.g.*, use of color, use of interpretive words, use of numbers) and to help us understand which FOP nutrition labeling schemes may be most useful to consumers.

Within the GDA category, we tested schemes that included both nutrients to limit (*i.e.*, saturated fat, sodium, and added sugars) and nutrients to get enough of (*i.e.*, fiber and calcium), schemes that used colors beyond black and white (*i.e.*, red, yellow, and green), schemes that included interpretive descriptions (*i.e.*, low, medium, and high) of nutrient levels, schemes that included quantitative nutrient level information (*e.g.*, how much a nutrient in a single serving of food contributes to your daily diet (*i.e.*, percent DV), quantitative declaration of grams (g) or milligrams (mg) of a nutrient), and schemes that included descriptive terms (*i.e.*, “avoid too much” or “get enough”). In the Nutrition Tips category, we tested schemes that included both nutrients to limit and nutrients to get enough of, schemes that used either black and white colors only or colors beyond black and white (*i.e.*,

red, yellow, and green), schemes that included and excluded interpretive descriptions regarding nutrient levels, schemes that included and excluded quantitative nutrient level information (*i.e.*, percent DV), and schemes that included and excluded an “*FDA.gov*” statement in the FOP nutrition label. In the Nutrition Tips—High In category, we tested schemes that included only nutrients to limit, different color variations (*i.e.*, black on white compared to white on black), and the use of an abbreviated heading for “% Daily Value.” In the High In category, we tested schemes that included only nutrients to limit and schemes that included and excluded quantitative percent DV information.

These focus groups provided FDA with qualitative feedback and insight into the varying ways that consumers react to and comprehend FOP nutrition information and helped us understand which schemes might be most helpful for U.S. consumers to quickly and easily identify how foods can be part of a healthy diet (Ref. 37). Among other things, participants reported they believed that products bearing “High In” labels without quantitative percent DV information were not healthy (*id.*). Participants were also confused by the colors red, yellow, and green when schemes contained both nutrients to limit and nutrients to get enough of (*e.g.*, they had trouble interpreting the scheme when red indicated a high amount of a nutrient to limit *and* a low amount of a nutrient to get enough of) (*id.*). These focus group participants also preferred differing amounts of information in the FOP schemes we tested and reacted positively to neutrally about the inclusion of “*FDA.gov*” in the scheme (*id.*). For example, when “*FDA.gov*” appeared in a scheme, some participants thought it made the scheme more credible or trustworthy and understood it to mean that the information on the FOP nutrition label was not marketing, but rather information provided by a government source, while others reported they would not notice the FDA attribution in a label (*id.*). We considered this information, as well as the literature review, in identifying FOP scheme types for quantitative testing.

3. Experimental Study

We used our learnings from the focus group testing and the information from the literature reviews to help inform the scheme types we chose to test in the experimental study (OMB Control Number 0910–0920, “Quantitative Research on Front of Package Labeling on Packaged Foods”) to further explore

consumer responses to various FOP nutrition labeling schemes. In the experimental study, we tested a smaller subset of FOP nutrition labeling schemes from the focus group testing, with additional variations informed by, among other things, focus group results. The study was a controlled, randomized experiment, using a 15-minute web-based questionnaire to collect information from 9,200 U.S. adult members of an online consumer panel maintained by a contractor (Ref. 38). The sample reflected U.S. Census data on sex, education, age, and race/ethnicity, in a balanced manner (*id.*). A measure of nutrition literacy was also used to balance the sample to ensure a variety of nutrition literacy levels for each condition (*id.*). The “Quantitative Research on Front of Package Labeling on Packaged Foods, Final Study Report” has been peer reviewed by independent external experts. Taking into consideration comments from this peer review, we revised the final report, which is available in the docket for this proposed rule (Ref. 38). The findings from the experimental study informed the development of this proposed rule.

We tested three FOP scheme categories with various features (*e.g.*, one scheme category, shown both with and without percent DV), for a total of eight FOP schemes, in our experimental study (*id.*). Each scheme displayed information about the three nutrients of interest (*i.e.*, saturated fat, sodium, and added sugars) in the three scheme categories: (1) GDA; (2) Nutrition Info (formerly “Nutrition Tips” but renamed in the experimental study to better align with the Nutrition Facts label and to underscore that the FOP nutrition label contains fact-based disclosures, including additional nutrient content interpretation); and (3) High In (*id.*). The “Low,” “Med,” and “High” interpretive descriptions included in the study for the three nutrients were based on our longstanding general approach for interpreting the percent DV of a nutrient (*i.e.*, 5% DV or less for “Low,” 20% DV or more for “High”) (see section V.B.3 of this document for further discussion).

The study guided participants through two independent tasks (*id.*). In the first task, participants viewed three different nutrient profiles (healthiest, middle, and least healthy, which for study purposes was based on saturated fat, sodium, and added sugars levels) of a single FOP nutrition scheme and were asked to select the most and least healthy nutrient profile, based only on the levels of saturated fat, sodium, and added sugars displayed (*id.*). If participants wanted additional nutrition information when reviewing the

nutrient profiles, instructions indicated they could click anywhere on the profiles for more detail. By doing so, the corresponding Nutrition Facts label was displayed (we note, however, that our data showed that participants rarely did this (id.)). The nutrient profiles were similarly based on our longstanding general approach for interpreting the percent DV of a nutrient as either “low” or “high” (88 FR 39257) (see section V.B.3 of this document for further discussion). Each participant viewed a total of three randomly assigned FOP nutrition schemes (Ref. 38). In the second task, participants viewed an FOP nutrition scheme that varied by nutrient profile on one of three mock food product labels (cereal, frozen meal, or canned soup). Participants answered questions about the product and the FOP nutrition scheme, including questions about perceptions of healthfulness and nutrient content, and also answered questions about their attitudes toward the scheme (id.).

a. Nutrition Info. Similar to the “Nutrition Tips” design tested in the first focus groups, the Nutrition Info scheme mimicked the design of the Nutrition Facts label and provided interpretive nutrition information by identifying the level of the three nutrients per serving as “Low,” “Med,” or “High.” The nutrient information was displayed vertically, using contrasting colors. We tested versions that:

- Included and excluded quantitative percent DV amounts;
- Used either black and white colors only or used black, white, green, yellow, and red, with the latter three colors representing low, medium, and high, respectively; and
- Included and excluded a magnifying glass icon.

The Nutrition Info schemes performed best overall in helping consumers identify healthier nutrient profiles (id.). Specifically, the Nutrition Info schemes produced more correct answers regarding the healthfulness of the product shown than the other schemes tested, and participants were generally able to correctly identify the level of saturated fat, sodium, and added sugars in products (id.). Participants viewing the Nutrition Info schemes also spent significantly less time evaluating the nutrient profile of a product than those viewing the other schemes tested (*i.e.*,

they felt confident enough to answer questions in a shorter amount of time) (id.). In the various Nutrition Info schemes described elsewhere in this document that were tested against each other, none performed better than the others across all measures, but the versions that were black and white with percent DV performed best in most instances (id.).

b. High In. The High In scheme only displayed any of the three nutrients to limit that fell into the “High” description according to our longstanding general approach for interpreting a nutrient’s percent DV per serving of a product. For example, if a test product was medium in saturated fat, high in sodium, and low in added sugars per the established criteria, the High In scheme for that product would only include “Sodium,” and, in some instances, additional information about the sodium content. Specifically, we tested High In schemes both with and without a quantitative percent DV.

While the High In schemes seemed to emphasize to participants higher levels of nutrients to limit, they performed the worst among the schemes tested when participants were asked to identify a product’s healthfulness (id.). Participants viewing the High In schemes were significantly less likely to correctly identify the healthiest and least healthy nutrient profiles and were more likely to rank the products as less healthy than those who viewed the GDA and Nutrition Info schemes (id.). Participants viewing the High In schemes also spent significantly more time evaluating the information provided before answering questions about the healthiest and least healthy nutrient profiles (*i.e.*, they were not as confident in providing an answer in the same amount of time as compared to their responses when using other schemes) (id.). Although very few participants overall clicked to see the Nutrition Facts label when responding to the study questions, those viewing the High In schemes were significantly more likely to do so than those viewing either the GDA or the Nutrition Info schemes, suggesting that participants needed or wanted additional nutrition information before providing a response (id.). Most of the ratings on the attitude and perception questions were significantly lower for the High In

schemes than they were for the GDA and Nutrition Info schemes (id.).

c. Guideline daily amounts. The GDA scheme we tested was a set of icons placed horizontally that displayed nutrition information per serving. This scheme was quantitative-only and did not include any interpretive descriptions, such as whether nutrient levels were low, medium, or high. Each icon displayed the number of grams or milligrams of a nutrient in its center and the nutrients’ corresponding percent DV at the bottom.

While participants had a positive reaction to and perception of the GDA scheme (*e.g.*, liking its look), it tested lower than the other schemes on several important factors we measured. In contrast to participants’ reactions to the Nutrition Info and High In schemes, they were significantly less likely to correctly identify the level of saturated fat, sodium, and added sugars when viewing the GDA scheme (id.). Additionally, participants viewing the GDA scheme spent more time evaluating the information provided before answering questions about the healthiest and least healthy nutrient profile as compared to the Nutrition Info schemes (id.).

4. Second Focus Group Testing

In Fall 2023, we conducted a second set of focus groups (OMB control number 0910–0497, “Front-of-Package Nutrition Labeling Focus Groups 2”) as a follow-on to the experimental study to gather additional input on our assumption that consumers would react to FOP nutrition labeling on beverage products and non-beverage products in the same way (Ref. 39). Almost all participants reported that they viewed the FOP nutrition information on beverage and non-beverage products similarly (Ref. 21).

5. Summary of FDA’s Research and How It Relates to Our Current Proposal

We are proposing the Nutrition Info box, which would be a mandatory, compact, standardized FOP nutrition label that closely aligns with the Nutrition Info scheme tested in our quantitative research. An example Nutrition Info box that reflects all proposed requirements is as follows:

Nutrition Info		
Per serving		% Daily
5 cookies		Value
Saturated Fat	25%	High
Sodium	5%	Low
Added Sugars	10%	Med
FDA.gov		

This Nutrition Info box would address our public health goal of providing consumers with interpretive nutrition information that can help them quickly and easily identify, at the point of decision-making, how foods can be part of a healthy diet—including by allowing them to compare nutrition information across foods.

Including interpretive information on the label or labeling of a food is expected to provide a more accessible description of the numerical information contained in the Nutrition Facts label, thereby helping to address the differences in use that we see with the Nutrition Facts label (Refs. 15 to 17). For example, our experimental study, which included a diverse sample of participants that varied by age, sex, geography, race/ethnicity, and education, showed that all groups tested can use interpretive FOP nutrition information equally well (Ref. 38), and the scientific literature indicates that interpretive FOP nutrition information is helpful for all consumers (Ref. 20). Moreover, in our consumer research, participants reported that using interpretive descriptions, such as “Low,” “Med,” and “High,” put the percent DV of a nutrient into context by helping consumers understand whether that number contributes a little or a lot of that nutrient to the daily diet (Ref. 21). Additionally, the scientific literature shows that making this information available on the front of food packages, so it is immediately visible at the point of decision-making, captures consumers’ attention, which could further help address these differences (Ref. 20). Thus, interpretive FOP nutrition labeling, such as the Nutrition Info box proposed here, would supplement the Nutrition Facts label by providing additional context that consumers could use to help them quickly and easily identify how foods can be part of a healthy diet.

IV. Legal Authority

We are proposing to require FOP nutrition labeling consisting of an informational FOP nutrition label that includes interpretive content regarding the levels of certain nutrients to limit, consistent with our general food labeling and nutrition labeling authorities in the NLEA and the FD&C Act. Specifically, this rule proposes a mandatory label element on the principal display panel that details and interprets—using low, medium, and high descriptions—the percent DV for saturated fat, sodium, and added sugars in a serving of food. This rule also proposes updates to the low sodium and low saturated fat nutrient content claims.

A. Statutory Framework

Congress authorized FDA to require that certain information be included on food labels or labeling and that the information presented assists consumers in maintaining healthy dietary practices. The NLEA added section 403(q) to the FD&C Act, which specifies, in part and with certain exceptions, that food is deemed misbranded unless its label or labeling bears nutrition information regarding certain nutrients. The statute lists certain information that must be included in food labeling and authorizes the Secretary, and by delegation, FDA to specify additional requirements by regulation. Under section 403(q)(1) of the FD&C Act, FDA may issue regulations to require that any required nutrition information be highlighted with larger type, bold type, or contrasting color after determining that such highlighting will help consumers in maintaining healthy dietary practices. Further, sections 403(q)(2)(A) and 403(q)(2)(B) of the FD&C Act provide a process for adding nutrition information to or removing statutorily required nutrition information from the label if FDA determines that such actions would help consumers maintain healthy dietary practices. In addition, section

403(f) of the FD&C Act specifies, in part, that a food is misbranded if any information required under the authority of the FD&C Act is not prominent on the label with such conspicuousness and in such terms as to render it likely to be read and understood by the ordinary individual under customary conditions of purchase and use. These provisions demonstrate that Congress intended that nutrition information required to be on the label be presented in a way that helps consumers use that information to maintain healthy dietary practices. To that end, Congress gave FDA authority to determine what information is required and how it is presented to achieve this aim.

Additionally, the NLEA specifically directs FDA to require nutrition information be presented in a way that makes it observable, understandable, and useful to consumers. Under the NLEA, FDA must require the information to be disclosed on the label in a way that enables consumers to readily observe and comprehend the information and to understand its relative significance in the context of a total daily diet (NLEA § 2(b)(1)(A), Pub. L. 101–535, 104 Stat. 2353, 2357; 21 U.S.C. 343 note). This provision gives us the authority to require that interpretive information about the relative amount of certain nutrients required to be included in the Nutrition Facts label be displayed in a readily observable and understandable format so that consumers can quickly and easily determine how a food fits into their daily diet, as we are proposing in this rule. Additionally, the NLEA does not specify where on the label the nutrition information must appear to enable the public to readily observe the information, and, for decades, industry has been able to place the required Nutrition Facts labels on different panels (e.g., principal display panel, information panel) and in various locations on different products throughout the food marketplace.

In enacting the NLEA, Congress “expressly delegate[d]” the authority to the Secretary (subsequently delegated to FDA) “to prescribe rules to ‘fill up the details’ of a statutory scheme” (*Loper Bright Enters. v. Raimondo*, 144 S. Ct. 2244, 2263 (2024), throughout section 403(q) of the FD&C Act, and in 21 U.S.C. 343 note). As most relevant here, section 403(q)(1) of the FD&C Act provides that “if [FDA] determines” that certain highlighting “will assist consumers in maintaining healthy dietary practices,” FDA “may by regulation require” the required nutrition information “to be highlighted” with “larger type, bold type, or contrasting color.” Section 403(q)(2)(A) of the FD&C Act provides that “if [FDA] determines” that information about an additional nutrient “will assist consumers in maintaining healthy dietary practices,” FDA “may by regulation require that information relating to such additional nutrient be included” in the food label. Section 403(q)(2)(B) of the FD&C Act provides that “if [FDA] determines” that information about a nutrient is “not necessary to assist consumers in maintaining healthy dietary practices,” “[FDA] may by regulation” remove the requirement to include such information. In 21 U.S.C. 343 note, Congress directed FDA to issue regulations “to implement section 403(q)” of the FD&C Act and specifically to “require the required information to be conveyed to the public in a manner which enables the public to readily observe and comprehend such information and to understand its relative significance in the context of a total daily diet.” Therefore, the best reading of section 403(q) of the FD&C Act is that Congress delegated discretionary authority to FDA to decide, as appropriately informed by its technical expertise and within the limits of its statutory authority, how to fill up the details regarding the presentation of nutrition information to assist consumers in comprehending the information and maintaining healthy dietary practices.

The NLEA’s legislative history affirms that Congress contemplated that FDA require labeling information to help consumers understand the nutrient levels in a food in the context of a daily diet. For example, the legislative history explicitly contemplates the use of the terms “low,” “medium,” and “high” to achieve this goal. The House report for the bill states that, in order to present nutrition information in a manner that facilitates the public’s understanding, FDA may choose among a variety of options, for example, including

information about the recommended daily intake on the label or including the use of descriptive terms such as “low,” “medium,” and “high,” or universal symbols to indicate desirable or undesirable levels of particular nutrients (Ref. 40). According to the report, while the bill would not (and the enacted provision did not) mandate that FDA adopt any particular approach, it would (and does) require FDA to specify requirements that would permit the consumer to understand the nutrition information pertaining to a particular food in relation to recommended dietary information (id.). This report language further affirms Congressional intent that FDA must issue regulations implementing the NLEA that would help consumers place the amounts of particular nutrients in a context that would help them build their daily diets (see NLEA § 2(b)(1)(A), Pub. L. 101–535, 104 Stat. 2353, 2357; 21 U.S.C. 343 note).

The NLEA also created section 403(r)(1)(A) of the FD&C Act, which provides specifications for a claim made in the label or labeling of the food which expressly or by implication characterizes the level of any nutrient which is of the type required by section 403(q)(1) or (2) of the FD&C Act to be in the label or labeling of the food. The statute permits the use of these label and labeling claims that expressly or by implication characterize the level of any nutrient in a food, but only if the claims are made in accordance with FDA’s authorizing regulations (section 403(r)(1)(A) and (r)(2)(A) of the FD&C Act).

Additional authorities for this rulemaking can be found in section 701(a) of the FD&C Act regarding efficient enforcement of the FD&C Act, as well as in sections 403(a)(1) and 201(n) of the FD&C Act regarding our general food labeling authority.

B. Current Proposal

Since the Nutrition Facts label was last updated in May 2016, FDA has tentatively determined that additional, interpretive nutrition information on the front of food packages—to provide context for certain nutrient declarations—is necessary to help consumers more easily observe and better understand and use this information when building their diets.

As mentioned elsewhere in this document, nearly 80 percent of U.S. food shoppers use the Nutrition Facts label sometimes or often (Ref. 14), and it is a valuable tool to help consumers maintain healthy dietary practices. However, the information, including scientific literature on nutrition

labeling, that FDA has received on the Nutrition Facts label after decades of use has demonstrated that certain consumers do not look at the Nutrition Facts label (Refs. 15 to 17), and some struggle to understand the numerical values used to represent the nutrient content of the food or use the information presented there to make their food selections (Refs. 18 and 19). Additionally, information FDA has collected shows that providing context for the levels of certain nutrients to limit that is interpretive rather than solely numeric—to communicate the relative significance in the context of a total daily diet—and requiring that interpretive information appear on the front of the package helps consumers notice and use the nutrition information presented on food packages (Refs. 20 and 21).

Therefore, based on this data and other information referenced in this document, we have tentatively determined that an interpretive FOP nutrition label is needed to ensure that consumers can readily observe and comprehend information about certain nutritional attributes of a food at the point of decision-making that will assist them in maintaining healthy dietary practices. We similarly relied on our authority in section 2(b)(1)(A) of the NLEA to require the declaration of percent DV of a nutrient in a food in the 1993 Nutrition Facts label final rule establishing the Nutrition Facts label, stating that percent DV is needed to help consumers understand the relative significance of nutrition information presented on the label in the context of the total daily diet (58 FR 2206 at 2213, January 6, 1993). We have additionally determined that we have the authority under the NLEA and FD&C Act, as further explained in section IV.C of this document, to specifically require that certain additional interpretive nutrition information be presented on the principal display panel that can help consumers quickly and easily identify how foods can be part of a healthy diet.

As our research study and the broader literature demonstrate, the use of an FOP scheme with interpretive nutrition information allows consumers to make quick and informed decisions about the foods they choose for themselves and their families by making these additional disclosures readily observable and understandable. In our experimental research study, people of different sexes and ages and of all races, ethnicities, education levels, and nutrition knowledge levels were able to understand the nutrients to limit for products bearing the Nutrition Info box that most closely aligns with this

proposal, which includes low, medium, and high interpretive information (displayed as “Low,” “Med,” and “High”), as well as percent DV information, and to use that box to correctly identify products with the healthiest or least healthy nutrition profile based on the displayed nutrients (Ref. 38). Further, this Nutrition Info box performed generally better than other schemes that were tested on both of these measures (id.). Additionally, participants viewing this Nutrition Info box were able to answer questions more quickly about a product’s healthfulness compared with the other schemes tested (id.). Participants also reported that the box would help them easily find nutrition information on a food package and easily compare nutrition information across foods (id.).

The proposed Nutrition Info box would consist of factual disclosures about the nutrient content of a food that provide additional context to the information currently required to be declared in the Nutrition Facts label. The three nutrients that would be required in the Nutrition Info box—saturated fat, sodium, and added sugars—are recommended to be limited by current nutrition science and Federal dietary guidance, including the *Dietary Guidelines, 2020–2025*, to achieve a nutrient-dense diet within calorie limits (Ref. 6). Current nutrition science emphasizes the consumption of healthy dietary patterns. While all foods can be incorporated into a healthy dietary pattern to some extent, current nutrition science highlights nutrient-dense foods as playing an important role in building a healthy dietary pattern, and those foods are, in part, characterized by limited amounts of saturated fat, sodium, and added sugars (id.). Findings from the 2019 Food Safety and Nutrition Survey (FSANS) found that 87 percent of U.S. consumers reported looking at the Nutrition Facts label. However, of those, fewer than half usually looked for saturated fat and added sugars, and slightly more than half usually looked for sodium, demonstrating that there is a gap in how consumers are currently noticing or using the declarations for these important nutrients (Ref. 14). As such, current dietary recommendations based on nutrition science and recent survey findings further support a need to provide consumers with additional, interpretive information about these important nutrients that can help them quickly and easily identify how the levels of these nutrients in a particular food fit in the context of a total daily diet. Further, manufacturers are able to

make claims and provide truthful and non-misleading information about the beneficial nutritional attributes of food products on food labels and labeling including on the principal display panel. Requiring the Nutrition Info box would provide consumers with standardized and factual context about important nutrients on the front of food packages that can be compared across products. To streamline the amount of information provided in, as well as the space we require manufacturers to use for, the proposed Nutrition Info box, we are focusing on the three nutrients to limit to ensure that consumers have this additional context about these three important nutrients on the front of food packages to help inform their food choices.

The descriptions of the level of the nutrients that would be required in the Nutrition Info box (“Low,” “Med,” and “High”) are similarly science-based and reflective of FDA’s long-established use of the nutrition advice regarding how to interpret percent DV declarations on products—that 5 percent or less of a nutrient in a food product is “low” and 20 percent or more of a nutrient is “high” (see section V.B.3 of this document for further discussion). They are further generally consistent with the levels in the “low” and “high” nutrient content claims. See, e.g., §§ 101.62(b)(2) (“low”) and 101.54(b) (“high”), and our discussion of updating the low sodium nutrient content claim to align with current nutrition science in section IV.E of this document. We have tentatively determined that the standardized descriptions of the level of the nutrients that would be required in the Nutrition Info box along with the percent DV would help facilitate consumer understanding of a food’s nutrient profile and help consumers in identifying foods that can help them build a healthy diet. See, e.g., 58 FR 2302 at 2334 (January 6, 1993) (1993 nutrient content claim rule) (stating FDA’s belief that the selection of a food bearing the term “low” should help consumers in assembling a prudent daily diet and in meeting overall dietary recommendations to limit the intake of certain nutrients). This is borne out by our recent research study, which found that, when shown a grouping of three distinct nutrient profiles, the vast majority of study participants were able to correctly identify the healthiest and least healthy nutrient profiles (95 percent and 92 percent, respectively) using the proposed Nutrition Info box, which includes the “Low,” “Med,” and “High” descriptions (Ref. 38).

We also note that previous research we conducted further supports the more

recent findings. In 1992, in arriving at the use of the percent DV on the current Nutrition Facts label, we tested a variety of options, including the use of adjective descriptions (e.g., “low,” “medium,” and “high”) with percent DV (Ref. 41). In the 1993 Nutrition Facts label final rule first establishing the Nutrition Facts label, we stated that the declaration of nutrient amount as percent DV or the placement of adjectival descriptors such as “high” and “low” next to the nutrient amount were both effective ways to help consumers understand the significance of product nutrition information in the context of a total daily diet (58 FR 2079 at 2118). Although we reported in 1993 that adjective formats (i.e., those featuring “low,” “medium,” and “high”) alone led consumers to miss quantitative differences between products when different nutrient levels were described using the same adjective (see, e.g., 58 FR 2079 at 2117), our current research shows that the use of the interpretive low, medium, and high descriptions together with the percent DV in the proposed Nutrition Info box would better inform consumers about where certain foods fall within the ranges of each term than a strictly quantitative label would (Ref. 38).

Further, with regard to the low sodium nutrient content claim and as discussed later in sections V.B.3 and V.G of this document, the low sodium claim may currently be used on the label or in the labeling of a food other than a meal product or main dish if it contains 140 mg or less sodium per reference amount customarily consumed (RACC) (and per 50 g if the food has a RACC of 30 g or less or 2 tablespoons or less) and on the label or labeling of a food that is a meal product or main dish if it contains 140 mg or less sodium per 100 g (see § 101.61(b)(4) and (5)). Consistent with our authority in section 403(r) of the FD&C Act, we are proposing to update the low sodium nutrient content claim so that it may be used on the label or in the labeling of a food other than a meal product or main dish if it contains 115 mg or less sodium per RACC (115 mg or less per 50 g if the food has a RACC of 30 g or less or 2 tablespoons or less) and on the label or labeling of a food that is a meal product or main dish if it contains 115 mg or less sodium per 100 g. The updated definition for the low sodium nutrient content claim is aligned with the regulation that provides a DRV for sodium of 2,300 mg, which was updated in the 2016 Nutrition Facts label final rule, based on scientific evidence and consensus recommendations (see 81 FR

33742 at 33874 and § 101.9(c)(9)). The proposed updated definition for the low sodium claim (at 115 mg or less sodium per RACC) also generally aligns with the proposed definition for the “Low” interpretive description in the Nutrition Info box (at 5% DV or less).

In addition, as outlined in section V.G, to prevent inconsistency on food labeling that could result in consumer confusion, we are relying on our authority in section 403(r) of the FD&C Act to propose to revise the definitions for the low sodium nutrient content claim and low saturated fat nutrient content claim to require that, in order to bear a low sodium nutrient content claim or low saturated fat nutrient content claim, a food must display “Low” in accordance with proposed § 101.6 for sodium or saturated fat in the Nutrition Info box, respectively. Note that we are not proposing to update the gram amount for the low saturated fat nutrient content claim, as the gram amount for the low saturated fat nutrient content claim (1 g saturated fat) already aligns with the proposed definition for the “Low” interpretive description in the Nutrition Info box (at 5% DV or less) and we have not currently identified another need to update it. See section V.B.3 of this document for a further discussion.

C. Legal Basis for the Proposal

The purpose of the Nutrition Info box and this proposed rule is to implement the congressional mandate set forth by the NLEA that FDA must implement regulations to help consumers readily observe and comprehend the nutrition information pertaining to a particular food in the context of a total daily diet. More specifically, the proposed Nutrition Info box would provide consumers with interpretive nutrition information that can help them quickly and easily identify how foods can be part of a healthy diet—which includes the consumption of foods that contain little or no saturated fat, sodium, and added sugars (Ref. 6)—and that allows them to quickly make comparisons of the levels of such nutrients across foods. As contemplated by section 2(b)(1)(A) of the NLEA, the proposed Nutrition Info box, including its interpretive descriptions of certain nutrient levels, would present nutrition information required to be placed on the label or labeling of foods under section 403(q) in a manner that allows consumers to readily observe and comprehend such information and to understand its relative significance in the context of the total daily diet (21 U.S.C. 343 note). The presentation of such interpretive information on the principal display

panel is designed to draw attention to and highlight information about certain nutrients that play an important role in the building of healthy dietary patterns, thereby assisting consumers in maintaining healthy dietary practices (see 21 U.S.C. 343(q)). Importantly, we note that the Supreme Court has considered and rejected narrow readings of the FD&C Act, instead embracing broad constructions of the FD&C Act based on the Court’s understanding of its text, congressional intent, and remedial purpose. See, e.g., *United States v. Bacto-Unidisk*, 394 U.S. 784, 798 (1969) (“Congress fully intended that the [FD&C] Act’s coverage be as broad as its literal language indicates.”); *United States v. Dotterweich*, 320 U.S. 277, 280 (1943) (“The purposes of [the FD&C Act] thus touch phases of the lives and health of people which, in the circumstances of modern industrialism, are largely beyond self-protection. Regard for these purposes should infuse construction of the legislation if it is to be treated as a working instrument of government and not merely as a collection of English words.”).

As explained in the sections elsewhere in this document, data and other information referenced that FDA has assembled and assessed supports that the proposed Nutrition Info box would be readily observable and comprehensible to consumers; allow them to understand the required information’s relative significance in the context of the total daily diet; and assist them in maintaining healthy dietary practices. As discussed, current nutrition science and Federal dietary guidance, including the *Dietary Guidelines, 2020–2025*, emphasize the role of overall healthy dietary patterns and the consumption of nutrient-dense foods containing little or no saturated fat, sodium, and added sugars. Meanwhile, 2019 FSANS findings demonstrate that, of those who look at the Nutrition Facts label, the majority do not look at saturated fat and added sugars, and slightly more than half look at sodium (Ref. 14). Furthermore, in FDA’s experimental study, the proposed Nutrition Info box performed best among all schemes tested in helping consumers identify healthier nutrient profiles and led them to correctly describe the level of such nutrients (Ref. 38). Additionally, participants spent less time correctly responding to questions about the nutrient profile of a food when viewing the proposed FOP nutrition labeling scheme and reported that the scheme would help them easily find nutrition information on a food and easily compare nutrition information

between foods (id.). Taken together, this data and other referenced information support the inclusion and interpretation of the levels of saturated fat, sodium, and added sugars in the proposed Nutrition Info box and help demonstrate that the box would allow consumers to readily observe and comprehend the information conveyed and assist them in maintaining healthy dietary practices, in line with section 2(b)(1)(A) of the NLEA and section 403(q) of the FD&C Act.

We are also issuing this rulemaking consistent with our authorities in sections 701(a), 403(a)(1), and 201(n) of the FD&C Act, respectively). Sections 403(a)(1) and 201(n) of the FD&C Act represent our general labeling authority and describe when a product label would be misbranded as misleading for failing to include material facts regarding the food. In the context of nutrition labeling, we have considered the declaration of meaningful sources of nutrients to be a material fact (see 55 FR 29487 at 29491 through 29492, July 19, 1990, and 68 FR 41434 at 41438, July 11, 2003). Similarly, here, FDA finds that the relative amounts of these nutrients to limit in food products is material information that consumers must have as they select foods as part of their daily diet. Absent this mandatory, interpretive labeling on the front of food packages to complement the existing nutrition data on the label or labeling of food, data and other referenced information we have gathered show that consumers face challenges in understanding the relative contribution that individual foods make to their total daily intake of these nutrients to limit. Further, under section 701(a) of the FD&C Act, we may issue regulations for the efficient enforcement of the FD&C Act to “effectuate a congressional objective expressed elsewhere in the [FD&C] Act” (*Association of American Physicians and Surgeons, Inc. v. FDA*, 226 F. Supp. 2d 204 (D.D.C. 2002) (citing *Pharm. Mfrs. Ass’n v. FDA*, 484 F. Supp. 1179, 1183 (D. Del. 1980))).

D. Inapplicability of Nutrient Content Claim Provisions to Proposed § 101.6

Some of the information that would appear in the Nutrition Info box would be a nutrient content claim if a manufacturer chose to voluntarily include it elsewhere on a food label. But we have determined that the proposed information in the Nutrition Info box, when it appears in the Nutrition Info box, is not a nutrient content claim and would not be subject to the requirements for nutrient content claims in section 403(r) of the FD&C Act and

its implementing regulations. Nutrient content claims are voluntary statements used by manufacturers to describe the level of nutrients in a food product. They are permitted by section 403(r) of the FD&C Act and FDA's nutrient content claim regulations. The 1993 nutrient content claim rule stated that the information about the nutrient content of a food be presented in standardized form, using uniform terms defined by FDA, so that consumers will not be misled (58 FR 2302 at 2394). Section 403(r)(1)(A) of the FD&C Act specifies that claims made in the label or labeling of the food that expressly or by implication characterize the level of any nutrient which is of the type required by section 403(q)(1) or (2) of the FD&C Act to be in the label or labeling of the food are only permitted if they are made in accordance with FDA's authorizing regulations. In brief, pursuant to section 403(r) of the FD&C Act and our nutrient content claim regulations, defined nutrient content claims (*e.g.*, "lite," "free," "low," "high") may be voluntarily used only on certain food products that meet the established criteria for such claims, as described at part 101, subpart D. However, section 403(r)(1) of the FD&C Act provides that a statement that appears as part of the nutrition information required or permitted under section 403(q) of the FD&C Act is not a nutrient content claim.

As explained elsewhere in this document, we are proposing this Nutrition Info box in line with our authorities in section 2(b)(1)(A) of the NLEA and section 403(q) of the FD&C Act, and therefore, it is not a nutrient content claim under section 403(r) of the FD&C Act. The proposed Nutrition Info box would include additional contextual information that conveys certain nutrition information required by section 403(q) of the FD&C Act in a manner that the public can readily observe and comprehend. This additional contextual information about the three nutrients to limit would appear on nearly all packaged foods, thereby providing such information to consumers about how they can place these foods into their diets. Similar to the required declaration of percent DV in the Nutrition Facts label, which must

appear on nearly all food packages and allows consumers to understand the required nutrition information's relative significance in the context of a total daily diet, the information included in the proposed Nutrition Info box, including the interpretive descriptions "Low," "Med," and "High," would be required to be displayed on all foods subject to the rule. For these reasons, we find that the proposed required information in the Nutrition Info box would not constitute a nutrient content claim and would not be subject to the requirements for nutrient content claims in section 403(r) of the FD&C Act.

Thus, we have proposed amending § 101.13(c) to specify that the information proposed to be required as part of this Nutrition Info box would not be a nutrient content claim. This is consistent with our determination that the information in the Nutrition Facts label, including percent DV, is not a nutrient content claim. As noted in more detail elsewhere in this document, other voluntary statements, such as "100 calories," that do not appear as part of the nutrition information required or permitted by section 403(q) of the FD&C Act are expressly permitted by § 101.13 as nutrient content claims. We note that any claims about the nutrient levels of a food outside of the Nutrition Facts label and proposed Nutrition Info box would be nutrient content claims, which must meet applicable statutory and regulatory requirements (see section 403(r) of the FD&C Act and the relevant nutrient content claim regulations (for example, those in § 101.13)).

E. Severability

Although we believe that each of the elements of the Nutrition Info box that would be established by this rule, when applied collectively, would best help consumers to identify how foods fit into a healthy diet, each element independently enhances the manner of presentation to increase the likelihood that consumers would be able to readily observe and comprehend the required interpretive nutrition information on the front of food packages. In the event of a stay or invalidation of certain element(s) of the box, the other elements would continue to function sensibly to

advance the statutory objectives. See, *e.g.*, *Belmont Mun. Light Dep't v. FERC*, 38 F.4th 173, 188 (D.C. Cir. 2022) (finding severability of a portion of an administrative action, applying the principle that severability is appropriate where "the agency prefers severability to overturning the entire regulation" and where the remainder of the regulation "could function sensibly without the stricken provision") (citations omitted). For example, if the proposed requirement regarding the location of the Nutrition Info box on the upper third of the principal display panel were invalidated, we have tentatively determined that the substantive elements of the box, such as the requirements to include the interpretive descriptions and percent DV of saturated fat, sodium, and added sugars, would still function sensibly and be needed to provide important context to consumers elsewhere on the principal display panel. Likewise, in the absence of the proposed type style requirement, for example, each of the other features of the Nutrition Info box would continue to function and contribute to consumers readily observing and comprehending the nutrition information provided by the box and assist them in maintaining healthy dietary practices. Overall, it is FDA's intent to preserve each of the rule's aspects to the fullest possible extent, to help advance the important interests described in section IV.A.

V. Description of the Proposed Rule

We propose to add new § 101.6 to part 101, "Food Labeling." The proposed rule would require the inclusion of the Nutrition Info box on the principal display panel of most foods that are required to display the Nutrition Facts label. The Nutrition Info box is intended to complement the Nutrition Facts label and would provide consumers with interpretive information on the front of food packages for three nutrients to limit that would allow consumers to compare the levels of these three important nutrients among foods and quickly and easily identify how foods can be part of a healthy diet.

An example Nutrition Info box that reflects all proposed requirements is as follows:

Nutrition Info		
Per serving	% Daily	
5 cookies	Value	
Saturated Fat	25%	High
Sodium	5%	Low
Added Sugars	10%	Med
FDA.gov		

We also propose two overall amendments to certain nutrient content claims: (1) revising § 101.61(b)(4) and (5) to update the limit for the low sodium nutrient content claim to 115 mg per RACC or 100 g, which aligns with current nutrition science; and (2) adding requirements to §§ 101.61 and 101.62 specifying that food subject to this rule must bear “Low” in accordance with proposed § 101.6 for sodium and saturated fat, respectively, in the Nutrition Info box for the food’s labeling to qualify to bear the related low in nutrient content claim, which would avoid within-label inconsistencies with the proposed FOP scheme.

A. Scope/Applicability (Proposed § 101.6(a)(1))

Proposed § 101.6(a)(1) would require that this rule apply to all food covered under § 101.9 (Nutrition labeling of food) that is marketed for people ages 4 and older unless a specific exemption applies. The congressional record for the NLEA indicates that mandatory nutrition labeling was intended to solve problems with voluntary disclosure—the standard at the time—including that a significant percentage of food was sold without any nutrition information (Ref. 40). Section 403(q) of the FD&C Act therefore specifies, in part and with certain exceptions, that a food is misbranded unless its label or labeling bears nutrition information for certain nutrients, and § 101.9 details these requirements. Most foods we regulate (*i.e.*, all foods not specified in § 101.9(j)) must bear a Nutrition Facts label as described in § 101.9 (see § 101.9(a)).

In addition, we relied on our authority in section 2(b)(1)(A) of the NLEA to require the percent DV declaration in the Nutrition Facts label. In the preamble to one of our first regulations related to the Nutrition Facts label, we noted that the percent DV of a nutrient present in food is declared on food labels to help consumers understand the relative significance of nutrition information in the context of

a total daily diet, compare the nutritional values of food products, and plan general diets (58 FR 2206 at 2213).

Our research shows that 87 percent of adults living in the United States look at the Nutrition Facts label, and at least 76 percent use the Nutrition Facts label when buying a food for the first time (Ref. 14). However, only 49 percent of adults report looking at the percent DV on the Nutrition Facts label (*id.*). Data also suggest that up to 40 percent of Americans ages 16 and older do not understand the meaning of percent DV (Ref. 42). Accordingly, and consistent with our statutory direction in section 2(b)(1)(A) of the NLEA to require that certain information be conveyed in a manner that consumers can readily observe and comprehend, we are proposing a mandatory labeling scheme that would complement the Nutrition Facts label by providing additional, easy-to-use, interpretive context in the form of descriptive terms for the percent DV of certain nutrients (discussed later in section V.B.4 of this document) on the principal display panel (*e.g.*, the front of the package) of most foods. We discuss exemptions to this requirement later in section V.F of this document.

We propose that the scope of this rule cover foods marketed for the general population. In the 2016 Nutrition Facts label final rule, we updated the Daily Reference Values (DRVs) and Reference Daily Intakes (RDIs) (the recommended amounts of nutrients to meet or not to exceed each day, which are often referred to collectively as the Daily Values) for adults and children ages 4 years and older to be consistent with the data on the associations between nutrients and chronic diseases, health related conditions, physiological endpoints, and maintaining a healthy dietary pattern (81 FR 33742). We have traditionally used this age category as representative of the general population for nutrition labeling purposes (*id.*). We note that the DRVs for saturated fat, sodium, and added sugars for pregnant and lactating people are the same as

those for the general population (see § 101.9(c)(9)). Therefore, for purposes of this proposed rule, we consider pregnant and lactating people to be part of the general population.

We are not including foods marketed for children under 4 years old within the scope of this proposed rule. We recognize that infants and children ages 1 to 3 years are vulnerable subpopulations and have specific nutritional needs. The 2016 Nutrition Facts label final rule established mandatory labeling requirements to include specific DRVs for children ages 1 through 3 years (81 FR 33742 at 33927–31, codified at § 101.9(c)(9)). FDA has not established DRVs or percent DVs (*i.e.*, how much a nutrient in a single serving of food contributes to the DRV) for saturated fat, sodium, or added sugars for infants through age 12 months.

Our proposed interpretive descriptions for these nutrients are based on percent DVs. Therefore, for food products marketed for infants through age 12 months (*i.e.*, jars of baby food, teething crackers), we tentatively determine that it currently would not be feasible to provide consumers with additional interpretation—the purpose of the proposed Nutrition Info box—about the relative amounts of saturated fat, sodium, or added sugars in the products.

Additionally, since publication of the 2016 Nutrition Facts label final rule, there have been changes to Federal dietary guidance for children ages 1 to 3 years. The *Dietary Guidelines, 2020–2025* established daily nutrition goals for two subpopulations of children: ages 12 to 23 months and 2 to 3 years. This included goals for sodium for children ages 12 to 23 months and goals for saturated fat, sodium, and added sugars for children ages 2 to 3 years (Ref. 6). These categorizations do not align with current FDA regulations that provide DRVs for saturated fat, sodium, and added sugars for the single category of children ages 1 to 3 years (see

§ 101.9(c)(9)). Additionally, in some cases, the *Dietary Guidelines, 2020–2025* calculated daily nutrition goals using a different methodology than FDA used when establishing DRVs. For example, the *Dietary Guidelines, 2020–2025* established recommendations for daily sodium limits based on the Chronic Disease Risk Reduction level established by NASEM (Ref. 6). However, current FDA regulations include a DRV for sodium for children ages 1 to 3 (see § 101.9(c)(9)) that we derived using the upper limit for sodium established by the IOM for this age group (81 FR 33742 at 33929). The *Dietary Guidelines, 2020–2025* indicate that saturated fat should not be restricted in children younger than 2 years (Ref. 6).

Because we continue to evaluate the information on the nutritional needs of these subpopulations, as well as our DRVs for saturated fat, sodium, and added sugars for children ages 1 to 3 years (given the daily nutrition goals included in the *Dietary Guidelines, 2020–2025*), we are not currently proposing to require FOP nutrition labeling on foods marketed for infants and children ages 1 to 3 years. We invite comment, including data and other information, related to: (1) the nutritional needs of these subpopulations; and (2) the need for or value of interpretive nutrition information that can help consumers quickly and easily identify how foods can be part of a healthy diet for these subpopulations. We expect such feedback could help inform any future FOP policy for foods marketed for infants and children ages 1 to 3 years.

We are also proposing to exempt most dietary supplements from bearing a Nutrition Info box. Dietary supplements labeled in accordance with the special nutrition labeling provisions in § 101.36 are exempt from Nutrition Facts labeling under § 101.9(j)(6) and would therefore be exempt from Nutrition Info box labeling under proposed § 101.6(c)(1), discussed elsewhere in this document. Dietary supplements are products intended for ingestion, that, among other requirements, contain at least one dietary ingredient intended to supplement the diet (21 U.S.C. 321(ff)). Dietary ingredients include vitamins and minerals; herbs and other botanicals; amino acids; dietary substances that are part of the food supply, such as enzymes and live microbials (commonly called “probiotics”); and concentrates, metabolites, constituents, extracts, or combinations of any dietary ingredient from the preceding categories (21 U.S.C. 321(ff)(1)). While dietary supplements

are considered foods, they serve a different purpose than conventional foods when it comes to building a healthy dietary pattern; they often provide individual nutrients (e.g., Vitamin C) and are intended to supplement, rather than constitute a core part or foundation of, the diet. Given the distinct role of dietary supplements in the overall diet, we propose to exempt such products from this proposed rule. Many dietary supplements do not contain saturated fat, sodium, and added sugars, and they are not required to have these nutrients declared on their nutrition label unless the supplement contains quantitative amounts by weight that exceed the amount that can be declared as zero (see 21 CFR 101.36(b)(2)). However, we are aware that some dietary supplements may contain what this proposed rule would describe as “High” levels of saturated fat, sodium, or added sugars per serving. We therefore invite comment on our proposed exemption of dietary supplements from the requirements of this rule.

B. Content (Proposed § 101.6(a)(2))

1. Headings and Subheadings (Proposed § 101.6(a)(2)(i) and (ii))

Proposed § 101.6(a)(2)(i) would require using “Nutrition Info” as the heading, or title, for the Nutrition Info box. This title describes what the box would convey and should be familiar in appearance to the “Nutrition Facts” title of the Nutrition Facts label (see § 101.9(d)(2)). We are proposing “Info” rather than “Information” to keep the title shorter and, therefore, the box smaller. This title reflects our intent to provide, in a convenient format, interpretive nutrition information to consumers that can help them quickly and easily identify how foods can be part of a healthy diet. The title would be displayed across the same distance of the box as the “Nutrition Info” header to orient the consumer and make it clear that the nutrition information that follows is part of this Nutrition Info box.

For the Nutrition Info box to be useful, consumers need to understand what nutrition information is being conveyed. Proposed § 101.6(a)(2)(ii)(A) would require using the subheading “Per serving” to help consumers understand that the Nutrition Info box, like the Nutrition Facts label, provides information about one serving of the food. We also propose including a statement of the serving size, expressed in household measures, alongside the “Per serving” subheading (e.g., “Per serving (whole package)” or “Per serving (½ cup)”) to further help

consumers understand what one serving is. The inclusion of both “Per serving” and the serving size expressed in household measures would be consistent with the information required in the Nutrition Facts label (see § 101.9(b)) and would help consumers understand whether the product is “Low,” “Med,” or “High” in the three nutrients disclosed for a specific amount of the product. Further, listing “Per serving” with a statement of the serving size expressed in household measures would help improve awareness that the information presented in the Nutrition Info box does not refer to the contents of the entire package when the package contains multiple servings.

While the Nutrition Facts label includes a statement of the serving’s gram amount (see § 101.9(b)(7)), the proposed Nutrition Info box would include only the serving’s household measure. Section 403(q)(1)(A)(i) of the FD&C Act specifies that a food is misbranded unless its nutrition labeling bears the serving size, which is an amount customarily consumed and which is expressed in a common household measure that is appropriate to the food. In our proposed rule to implement this and other labeling requirements, entitled “Food Labeling; Serving Sizes” (56 FR 60394, November 27, 1991), we proposed requiring that manufacturers provide the equivalent metric quantity, in parentheses, after the common household measure (e.g., 1 cup (28 g)), on what would become the Nutrition Facts label (id. at 60410). We finalized that requirement in the 1993 Nutrition Facts label final rule and clarified that the gram declaration was for compliance purposes (58 FR 2079 at 2163) (codified at § 101.9(g)(7) (“Compliance will be based on the metric measure specified in the label statement of serving size.”)).

This Nutrition Info box would reflect the serving size, in common household measures, declared in the Nutrition Facts label, and only the Nutrition Facts label would also declare the serving size’s metric measure. The inclusion of a metric measure would unnecessarily increase the Nutrition Info box’s size, and inclusion of a second statement of serving size measurement could increase the box’s complexity. Therefore, we are not proposing to include a second statement of the serving size’s metric measure, as its inclusion would not align with our goal of providing consumers with interpretive nutrition information that can help them quickly and easily identify how foods can be part of a healthy diet.

Proposed § 101.6(a)(2)(ii)(B) would require including the subheading “% Daily Value” in the Nutrition Info box. This heading would appear above the declaration of the quantitative percent DV and the interpretive “Low,” “Med,” and “High” descriptions for the three nutrients included. We propose using the “%” symbol instead of the word “percent” due to spacing considerations and for consistency with the Nutrition Facts label (see § 101.9(d)(6)).

2. Nutrients to Limit (Proposed § 101.6(a)(2)(iii))

Proposed § 101.6(a)(2)(iii) would require that the Nutrition Info box include information on saturated fat, sodium, and added sugars. We propose that saturated fat, sodium, and added sugars be the only nutrients in the Nutrition Info box, given their significance in building healthy dietary patterns, the scientific research on FOP nutrition labeling, and the current food labeling landscape, in which consumers report being familiar with a wide variety of industry claims (Ref. 14). This Nutrition Info box would be a continuation of our efforts to help consumers by providing information that can help them improve their dietary patterns by providing them with interpretive nutrition information presented on the front of food packages in a consistent, uniform way about the amounts of the three nutrients in covered products so they can quickly and easily understand their relative significance in the context of a total daily diet.

In the 2016 Nutrition Facts label final rule, we noted that nutrition science supports limiting intake of saturated fat, sodium, and added sugars (see 81 FR 33847). Similarly, the *Dietary Guidelines, 2020–2025* includes recommendations to choose nutrient-dense foods across and within food groups while limiting foods (including beverages) higher in saturated fat, sodium, and added sugars as a key strategy in emphasizing healthy overall dietary patterns (Ref. 6). For instance, research shows that people with diets characterized, in part, by lower intake of saturated fat, sodium, and added sugars were at 13 to 27 percent decreased risk for dying from any cause, cancer, or cardiovascular disease (Ref. 43). Still, most Americans exceed the recommended intake limits for saturated fat, sodium, and added sugars (Ref. 6).

FDA has been prioritizing nutrition initiatives that can help improve dietary patterns as part of a broader effort to help reduce the burden of diet-related chronic diseases in the United States and advance health equity, as diet-

related chronic diseases are experienced disproportionately by certain racial and ethnic populations and those with lower socioeconomic status. Our initiatives include those that support consumer understanding of nutrients to limit in the diet. For example, on December 27, 2024, FDA published a rule amending the “healthy” implied nutrient content claim (89 FR 106064). The framework for the updated “healthy” definition includes criteria for nutrients to limit. We state in the rule that these criteria are consistent with current nutrition science and the *Dietary Guidelines, 2020–2025* recommendations to limit intake of saturated fat, sodium, and added sugars, and help ensure that foods bearing the “healthy” claim do not contain excess amounts of these nutrients, which can, among other things, increase the risk of chronic disease (id. at 106091, 106093, 106104, and 106110). Additionally, in 2021, FDA published short-term (2.5-year) voluntary sodium reduction targets for the food industry, as part of a gradual, iterative approach to help reduce sodium in the food supply and support reducing sodium intakes over time (see 86 FR 57156, October 14, 2021). We published draft Phase II (3-year) goals in 2024 (see 89 FR 66727, August 16, 2024).

Regarding the scientific research on FOP nutrition labeling, our research found, and the scientific literature we considered confirms, that simpler schemes are easier for consumers to understand and that consumers often have access to information about nutrients to get enough of on the front of food packages. The *Dietary Guidelines, 2020–2025* names five nutrients of public health concern (i.e., nutrients to get enough of) (dietary fiber, vitamin D, calcium, iron, and potassium (Ref. 6)) as well as the three nutrients to limit, and the scientific research and literature on FOP nutrition labeling indicate that the inclusion of nutrients to get enough of with nutrients to limit may not lead to simple schemes that help consumers. For example, we tested FOP nutrition labeling schemes that included fiber and calcium, along with saturated fat, sodium, and added sugars, in our first focus groups (Ref. 36), given that these nutrients to get enough of may be included in certain industry-based, voluntary FOP initiatives in the United States (Ref. 20) and in certain international schemes (Ref. 32). The feedback we collected through our first focus group research indicated that participants were confused by the inclusion of both nutrients to limit and nutrients to get enough of in the same

FOP scheme (Ref. 44). This focus group testing helped inform our experimental study, which included schemes with only the three nutrients to limit.

Regarding the current food labeling landscape, we note that manufacturers have many ways to communicate information on the front of a food package about nutrients to get enough of. Use of nutrient content claims can inform consumers interested in intake of specific nutrients. Health claims (i.e., claims that have been reviewed by FDA and are authorized on food products to state that a food or food component may reduce the risk of a disease or a health-related condition) can also highlight the content of specific nutrients in a food and their relation to the risk of various diseases. Other claims can highlight nutrients and provide context to their role in the normal structure or function of the body. In addition to these claims, manufacturers may voluntarily include truthful and non-misleading information about their products on food labels or labeling.

As discussed elsewhere in this document, the proposal would provide consumers with a quick- and easy-to-use scheme immediately visible on the label or labeling that would state relative amounts of the three disclosed nutrients. We tentatively conclude that a scheme that focuses only on certain nutrients to limit would provide consumers with important information to help them build and maintain healthy dietary practices without including additional information that could lessen the effectiveness of a nutrition label designed for quick, easy use. This would also make the scheme simpler, which research shows consumers prefer (Refs. 20 and 27).

We also considered whether to include or allow a calorie disclosure in the proposed Nutrition Info box. We are aware that some interested parties would prefer the inclusion of a quantitative calorie statement in the Nutrition Info box. However, a quantitative calorie statement would not provide consumers with new, interpretive information. Regarding an interpretive description of calories, our regulations, at § 101.9(c)(9), specify the DRVs for, among other things, saturated fat, sodium, and added sugars. While these DRVs are based on the reference caloric intake of 2,000 calories, which we use for general nutrition advice, we note that there is no DRV, and therefore no percent DV, for calories. In the 2014 proposed rule to update the Nutrition Facts label, we explained that setting a DRV for calories would necessitate determining a quantitative intake recommendation for calories, but also

noted that there is no appropriate quantitative intake recommendation for calories and that we were not aware of any other data or information on which a DRV for calories could be determined (79 FR 11880 at 11892–93). We maintained this position in the 2016 Nutrition Facts label final rule. We noted that quantitative intake recommendations for calories are called estimated energy requirements (EERs), and they are based on healthy individuals of defined age, sex, weight, height, and level of physical activity (81 FR 33742 at 33782). We explained that it would be difficult to combine the EERs into a single reference calorie level

applicable to the general population because calorie needs vary based on many factors (id.). Therefore, we did not establish a DV for calories and have continued to use the reference caloric intake of 2,000 calories for general nutrition advice (id.). We are aware of no new data or other information published after the 2016 Nutrition Facts label final rule that changes our determination. Therefore, we tentatively conclude that it would not be appropriate to provide consumers with an interpretation of the quantitative calorie information currently required on the Nutrition Facts label.

We acknowledge that some food manufacturers are voluntarily providing calorie information on the front of food labels, including to help vending machine operators comply with FDA’s calorie labeling requirements for articles of food sold from certain vending machines (see § 101.8(c)(2)(ii)), and have an interest in continuing this practice. Our existing regulations allow manufacturers to voluntarily include such a statement on the principal display panel (see § 101.13(i)(3)). Our proposal would not change that. Examples of what such labeling might look like are as follows:

We invite comment on the inclusion of a mandatory or voluntary quantitative statement of calories in the Nutrition Info box. We also invite comment on any ways we could consider inclusion of an interpretation of quantitative calorie information in the Nutrition Info box, including any new data or other information on which to base such an interpretation.

3. “Low,” “Medium,” and “High” Interpretive Descriptions (Proposed § 101.6(a)(2)(iv))

Proposed § 101.6(a)(2)(iv) would require low, medium, and high (“Low,” “Med,” and “High”) descriptions for each nutrient to limit in the Nutrition

Info box. These descriptions would interpret the percent DV of saturated fat, sodium, and added sugars per product serving. We propose a range of 5% DV or less for “Low”; 6% to 19% DV for “Med”; and 20% DV or more for “High.” Because the percent DV declarations will have already been calculated and appropriately rounded for the Nutrition Facts label according to § 101.9(c)(9) and (d)(7)(ii), we do not address calculation or rounding considerations in this proposed rule.

In proposing ranges for the low, medium, and high interpretive descriptions, we considered the regulatory history related to establishment of the percent DV and

such descriptions; our longstanding consumer education activities designed to help consumers understand the percent DV in the context of the total daily diet; the nutrition education initiatives of other groups; and our existing regulatory definitions for nutrient content claims, including definitions established for “low” and “high” claims. The ranges we propose for determining interpretive descriptions for saturated fat, sodium, and added sugars—in particular, the designation of 5% DV or less to be “Low” and 20% DV or more to be “High”—align with our longstanding general approach for interpreting the percent DV.

First, percent DV declarations use a common numeric reference standard (*i.e.*, 0 through 100), and interpretive descriptions help to put those numeric values into the context of a total daily diet using easily understood terms (*e.g.*, “Low,” “Med,” “High”). As discussed elsewhere in this document, the NLEA’s legislative history explicitly mentions using the terms “low,” “medium,” and “high” to help consumers place the nutrient levels in a food into the context of a daily diet (Ref. 40). As early as 1993, we considered the addition of interpretive descriptions to the Nutrition Facts label next to the percent DV to help consumers understand a food’s nutrient profile and identify foods that could fit into healthy dietary patterns (see, *e.g.*, 58 FR 2079 at 2118). While we concluded in the 1993 Nutrition Facts label final rule that both percent DV and interpretive descriptions next to the nutrient amount information were effective in helping consumers understand the significance of nutrition information in the context of a total daily diet, we ultimately finalized contextualizing nutrient amount information as percent DV (58 FR 2079 at 2118 and 2125), stating our belief that consumers would be able to use percent DV declarations more effectively than any other format we tested. However, recent data show that up to 40 percent of American consumers misinterpret or do not understand the meaning of percent DV (Ref. 42). Additionally, our recent research found that, when shown a grouping of three distinct nutrient profiles, the vast majority of participants were able to correctly identify the healthiest and least healthy nutrient profiles (95 percent and 92 percent, respectively) using the Nutrition Info scheme, which included low, medium, and high descriptions and percent DVs (Ref. 38).

Second, for many decades, FDA has publicized a general framework designed to help consumers interpret nutrient levels in a product. This framework (5/20 principle) has informed consumers that 5% DV or less of a nutrient per serving is considered low and 20% DV or more of a nutrient per serving is considered high (Refs. 45 and 46). In 2011, as part of a “Food Label and You” campaign, we released several videos to promote consumer awareness and understanding of the 5/20 principle for interpreting percent DV on a food label (Ref. 47). We continued publicizing this general framework on our website as a component of our consumer education campaign, “The New Nutrition Facts Label: What’s in it

for You,” after the 2016 Nutrition Facts label final rule published (*id.*).

Third, diverse groups, including health agencies, academic institutions, medical and public health groups, and media outlets, have also relied on the 5/20 principle for decades. For example, the American Heart Association, American Diabetes Association, Mayo Clinic, Johns Hopkins University, The Ohio State University, National Institute on Aging, International Food Information Council, Public Broadcasting Service, New York Times, and Business Insider provide this advice in education initiatives designed to help consumers understand and interpret information on food labels (*id.*). Food retailers and industry groups have also adopted this general approach in public-facing materials when discussing nutrition information on the food label (*id.*). As such, the designation of 5% DV or less to be “Low” and 20% DV or more to be “High” for the nutrients required to be listed in the Nutrition Info box aligns with widely adopted and used definitions for low and high in nutrition-related consumer education initiatives.

Fourth, the NLEA and FD&C Act permit claims on a food label that are authorized by FDA regulations and characterize the level of a nutrient in a food (*i.e.*, nutrient content claims). Nutrient content claims can be voluntarily used by manufacturers to describe the level of a nutrient in a food using terms such as “low” and “high,” and most are applicable only to nutrients that have an established DV. When we first established the regulatory definitions for nutrient content claims, we stated that our objectives included consistency among definitions, claims that aligned with public health goals, and claims that consumers could use to maintain healthy dietary practices (58 FR 2302 at 2319).

FDA has nutrient content claims regulations for low saturated fat (§ 101.62(c)(2) and (3)) and low sodium (§ 101.61(b)(4) and (5)). These regulations provide criteria for “low” and its specified equivalent terms. Our regulatory definitions for “low” claims provide absolute amounts (*i.e.*, grams, milligrams); however, we have long applied the general principle that 5% DV or less is considered “low” in consumer education (Refs. 45 to 47), and the relevant gram amounts are generally consistent with that principle, as discussed further here.

In 1993, we established a DRV of 20 g for saturated fat, which was based on the 1990 Dietary Guidelines recommendation that consumption of saturated fat should be less than 10

percent of calories (58 FR 2206 at 2217). In the 1993 nutrient content claim final rule, we noted that using an average level of 1 g in 16 to 20 servings of food per day would supply 16 to 20 g of saturated fat daily, which is within the DRV of 20 g (58 FR 2302 at 2338 through 2340). In addition to this 1 g or less per RACC criterion, we also established a second criterion for low saturated fat of 15 percent or less of calories from saturated fat for individual foods and 10 percent or less of calories from saturated fat for meals and main dishes. This second criterion was established to limit “low” claims on foods with small serving sizes because these foods do not contain especially low levels of saturated fat (58 FR 2338 at 2339). Our analysis highlighted that saturated fat was present in more than half of 18 United States Department of Agriculture-defined food categories (58 FR 2302 at 2338). We also noted that very little saturated fat was found in most fruit, vegetables, and grains. In the 2016 Nutrition Facts label final rule, we retained the DRV of 20 g for saturated fat because consensus reports continued to recommend saturated fat intakes of no more than 10 percent of calories, based on risk of cardiovascular disease (81 FR 33786). The low saturated fat claim of 1 g or less per RACC is 5% DV or less.

We established the nutrient content claim for low sodium in a final rule entitled “Food Labeling; Declaration of Sodium Content of Foods and Label Claims for Foods on the Basis of Sodium Content” (49 FR 15510, April 18, 1984) (1984 final rule). In the proposed rule entitled “Food Labeling; Declaration of Sodium Content of Foods and Label Claims for Foods on the Basis of Sodium Content” (47 FR 26580, June 18, 1982), we estimated that the consumption of 20 low-sodium foods would contribute about 2,800 mg of sodium per day (using 20 servings per day as a reasonable average number of servings for adults and 140 mg of sodium per serving—considered to be low in sodium), which at the time fell into the National Academy of Sciences (now NASEM) and National Research Council’s range for a mildly restricted sodium diet (*id.* at 26581 through 26585) (we proposed using the term “moderately low sodium” for this nutrient content claim but finalized the term “low sodium” to characterize nutrient content claims for foods containing 140 mg or less of sodium per serving—see 49 FR 15510 at 15519). Assuming 20 servings per day, 140 mg sodium per serving equaled 5 percent of 2,800 mg sodium per day for a mildly

restricted sodium diet. In the 1984 final rule, we concluded that a significant proportion of the food supply would be eligible to bear the low sodium claim (49 FR 15510). We noted that foods that could be labeled “low sodium” included some hot and cold cereals, many cuts of fresh meat and poultry, some fish, frozen vegetables, and some desserts and snacks such as cookies, cakes, and candy (id.).

In the 1993 Nutrition Facts label final rule, we established a DRV for sodium of 2,400 mg per day (58 FR 2206 at 2217). However, in the 1993 nutrient content claim final rule, we retained the definition for the low sodium claim as 140 mg or less sodium, highlighting that comments related to the rulemaking and at public hearings did not indicate a need for change and supported the existing criteria (58 FR 2302 at 2335 through 2336). We also established weight-based criteria for low claims for products with small serving sizes—RACCs of 30 g or less or 2 tablespoons or less—stating that this would prevent misleading claims on certain nutrient-dense foods (we stated in the proposed rule entitled “Food Labeling: Nutrient Content Claims, General Principles, Petitions, Definition of Terms” (56 FR 60421, November 27, 1991) (one of two proposed rules underlying the 1993 nutrient content claim final rule) that (1) without the weight-based criterion, low claims would be allowed on certain foods that are nutrient dense on a weight basis yet still qualify for a low claim because of their small serving size, and (2) that nutrient-dense foods with small serving sizes could be consumed frequently throughout the day and ultimately make substantial contributions to the diet despite their low claims (id. at 60430)). We also established a weight-based criterion for meal products and main dishes in the 1993 nutrient content claim final rule, stating that providing for the level of a nutrient per 100 g of food is generally sufficient to prevent misleading claims on meal-type products (58 FR 2302 at 2315 through 2320 and 2379 through 2381).

In the 2016 Nutrition Facts label final rule, we updated the DRV for sodium from 2,400 mg to 2,300 mg based on consensus recommendations to reduce sodium intake because there is a direct relationship between sodium intake and increased blood pressure (81 FR 33742 at 33875 through 33880). With these updates, the low sodium threshold of 140 mg or less per serving equals 6% DV or less for low sodium nutrient content claims.

Given the updated 2,300 mg DRV for sodium in the 2016 Nutrition Facts label

final rule, and in line with FDA’s ongoing efforts to support reducing sodium intake in the United States (<https://www.fda.gov/food/food-labeling-nutrition/sodium-reduction>, accessed June 13, 2024), we propose to update the low sodium nutrient content claim limit to 115 mg sodium (20 servings at 115 mg equals 2,300 mg). With this update, the low sodium nutrient content claim could be used on the label or in the labeling of a food other than a meal product or main dish if it contains 115 mg or less sodium per RACC (115 mg or less per 50 g if the food has a RACC of 30 g or less or 2 tablespoons or less) and on the label or labeling of a food that is a meal product or main dish if it contains 115 mg or less sodium per 100 g. This updated definition for the low sodium nutrient content claim would generally align with the 5% DV or less range that we are proposing for “Low” for sodium in the proposed Nutrition Info box. Additionally, the revised definition would apply to foods that are not subject to the proposed requirement to display a Nutrition Info box.

We are aware of limited exceptions to this alignment. For example, foods with RACCs greater than 30 g that have 116 mg to 125 mg sodium per serving (e.g., certain reduced sodium canned vegetables) would fall under the “Low” categorization for sodium in the proposed Nutrition Info box but would not qualify to bear a low sodium nutrient content claim. Additionally, meal products or main dishes that contain 115 mg or less sodium per 100 g might fall into the “Med” categorization for sodium in the proposed Nutrition Info box and therefore would not be able to bear a low sodium nutrient content claim. However, in most cases, the updated definition for the low sodium nutrient content claim (115 mg sodium or less) would align with the 5% DV or less that we are proposing for “Low” for sodium in the proposed Nutrition Info box. We also note that, in all cases in which the Nutrition Info box would be required, labeling would be consistent, as we are proposing an update to the low sodium nutrient content claim that would require consistency between the Nutrition Info box and use of a low sodium nutrient content claim (see section V.G of this document).

While FDA has nutrient content claim regulations for low sodium and low saturated fat, we do not have a nutrient content claim regulation for low added sugars. However, the *Dietary Guidelines for Americans, 2020–2025* recommends limiting intake of added sugars to less than 10 percent of calories per day, or

50 g for a 2,000 calorie per day diet (which we use for general nutrition advice) (Ref. 6). In the 2016 Nutrition Facts label final rule, we established a DRV for added sugars of 50 g (see 81 FR 33742 at 33982, codified at § 101.9(c)(9)). As we stated in that final rule, small amounts of added sugars found in many different foods and ingredients can add up throughout the day and can contribute empty calories in the diet at levels that exceed what would otherwise be reasonable within recommended calorie limits (id. at 33813). With this information in mind, and consistent with our longstanding advice regarding how to interpret the percent DV, we propose using 5% DV or less as the range for “Low” for added sugars to provide consumers with interpretive nutrition information that can help them quickly and easily identify how foods can be part of a healthy diet, which includes limiting their overall intake of added sugars.

Applying a range of 20% DV or more for “High” is consistent with our nutrient content claim regulations (§ 101.54(b)(1)) for nutrients having either an RDI established in § 101.9(c)(8)(iv) or a DRV established in § 101.9(c)(9). While we are not aware that industry uses the claim for nutrients to limit, a “high” nutrient content claim for saturated fat, sodium, and added sugars is permitted under our existing regulations (see § 101.54). Moreover, under our general requirements for health claims, we use 20% DV to derive disqualifying levels (i.e., the levels of these nutrients above which the label or labeling of a food may not bear a related health claim) for saturated fat and sodium (§ 101.14(a)(4)) (58 FR 2478 at 2494). Twenty percent DV is also used to establish the disclosure levels for, among other nutrients, saturated fat and sodium when a food bears a nutrient content claim about one of the other enumerated nutrients under § 101.13(h)(1) (58 FR 2302 at 2308). For example, if a food displays a low sodium nutrient content claim and also has 4 g saturated fat (i.e., 20% DV saturated fat), the food would be required to display a disclosure such as “See nutrition information for saturated fat content.”

FDA does not have a regulation for a nutrient content claim of “medium” for any nutrient. However, we are proposing a range of 6% to 19% DV for “Med” for purposes of the Nutrition Info box. This range falls between the proposed low and high ranges for saturated fat, sodium, and added sugars and provides a categorization for such nutrients that are too high to fall into “Low” but too low to fall into “High.”

The adjective “medium” is defined as, for example, “being in the middle between an upper and lower amount, size, degree, or value” (Ref. 48) and “intermediate in quantity, quality, position, size, or degree” (Ref. 49). The common meaning of the adjective “medium,” then, aligns with the meaning of the interpretive description “Med” we are proposing. Additionally, many participants in our experimental study recognized that 15% DV of a nutrient fell somewhere in between “High” and “Low” (Ref. 38), and we provided no form of consumer education before they responded.

We recognize that some other countries use more than one value to establish their categorizations and provide different categorizations based on product type. For example, foods with smaller serving sizes, such as peanut butter, might fall under the “High” categorization at a lower percent DV than most other foods, while foods with larger serving sizes, such as prepackaged main dishes, might fall under the “High” categorization at a higher percent DV. We have established a similar tiered approach for certain nutrient content claims that would meet a “low” criterion for amount per serving but still, on a weight basis, contain a substantial amount of the nutrient. For example, to use the “low fat” claim, we require foods with small RACCs of less than 30 g or 2 tablespoons or less to be calculated at a 50 g basis (§ 101.62(b)(2)(i)(B)). Without this weight-based criterion, a dessert topping that contains 2 g fat per serving would meet the definition of “low fat” but contain as much as 25 g fat per 100 g of food. We invite comment on this serving size issue and welcome data and other information on possible different approaches.

Additionally, we request data and other information on any alternative criteria for the proposed interpretive “Low,” “Med,” and “High” descriptions that could support our goals of providing consumers with interpretive information for the levels of the three nutrients to limit in the Nutrition Info box that can help them quickly and easily identify how foods can be part of a healthy diet. We also invite comment on use of the “Low” categorization for products that declare 0% DV for any of these three nutrients, rather than a fourth categorization, such as “Zero” or “Free,” to indicate that the product is not simply “Low” for that nutrient but contributes zero percent to the DV.

In FDA’s experimental study, we tested variations of the Nutrition Info box that included the colors green, yellow, and red to help communicate to

consumers that a product was low, medium, or high, respectively, in the listed nutrients to limit. While there is some information in our literature review suggesting that color coding with text can lead to improved understanding of nutrition information, our experimental study found that colors neither significantly increased the utility of the Nutrition Info box for U.S. consumers nor increased understanding of the interpretive information provided in a statistically significant way (Ref. 38). Additionally, we have heard concerns from interested parties about potential difficulty with using color coding for consumers with red-green color blindness (which is the most common form (Ref. 50)) and that mandating colors would substantially increase the cost of complying with the rule. Given these factors, the importance of maintaining consistency for consumers, and to facilitate comparisons between products, our proposal would not require or allow such colors.

4. Inclusion of Percent Daily Value (Proposed § 101.6(a)(2)(v))

Proposed § 101.6(a)(2)(v) would require that the Nutrition Info box include the corresponding quantitative percent DV for people ages 4 and older for each nutrient listed, which will have already been calculated for the Nutrition Facts label according to § 101.9(c)(9) and (d)(7)(ii). We propose that these values be placed in a column underneath the “% Daily Value” subheading and to the left of the interpretive descriptions (see section V.B.3 of this document). As we stated in the 2016 Nutrition Facts label final rule, a percent DV declaration helps consumers understand the nutrient information on the product label in the context of the total diet (81 FR 33742 at 33748). Including the quantitative percent DV in the Nutrition Info box for each nutrient would therefore allow consumers to quickly compare the nutrient levels between products, particularly if the products have the same interpretive description (e.g., comparing two products that are “High” in added sugars, where one contains 30% DV and the other contains 60% DV). As noted elsewhere in this document, we reported in 1993 that adjective formats (*i.e.*, those featuring “low,” “medium,” and “high”) alone led consumers to miss quantitative differences between products when different nutrient levels were described using the same adjective (see, e.g., 58 FR 2079 at 2117). However, our current research shows that quantitative percent DV together with interpretive

descriptions in the Nutrition Info box may help consumers better understand why a serving of food has the interpretive description it does and would better inform consumers about where certain foods fall within the ranges of each term than a strictly interpretive label would (Ref. 38). In addition, we believe that including percent DV along with the interpretive descriptions in the Nutrition Info box could result in additional consumers understanding the meaning of percent DV when it is displayed on food labels, including in the Nutrition Facts label.

Moreover, including the quantitative percent DV in addition to the “Low,” “Med,” and “High” descriptions may help consumers better understand why a serving of a food has the interpretive descriptions it does. In our second set of focus groups, many participants said they liked seeing the percent DV next to the interpretive description because it provided some context for the interpretation (Ref. 33). In addition, of the Nutrition Info schemes we tested in our experimental study, those that included percent DV declarations performed better in measures assessing ease of use and understanding (Ref. 38). Therefore, we are proposing to require both percent DV and interpretive descriptions for the nutrients to limit in the Nutrition Info box to help consumers quickly and easily identify how foods can be part of a healthy diet.

5. Inclusion of an Attribution Banner (Proposed § 101.6(a)(2)(vi))

Proposed § 101.6(a)(2)(vi) would require the inclusion of a banner at the bottom of the Nutrition Info box that includes an “FDA.gov” attribution statement. Several studies on FOP nutrition labeling found that inclusion of an attribution for the FOP nutrition label increases consumers’ trust in and the credibility of the information. For example, in their experimental study to test variations of a “High In” FOP nutrition label, Canadian researchers found that the presence of a Health Canada attribution resulted in higher trust in and credibility of the FOP nutrition symbol (Ref. 51). Almost all participants who saw the FOP nutrition symbol with the Health Canada attribution found it helpful to include because it engendered trust in the FOP nutrition symbol, drew their attention to the FOP nutrition symbol, and made the FOP nutrition symbol look more official (*id.*). Other studies found that government attribution or endorsement by health organizations increased the believability and credibility of the label (Refs. 52 to 54). In our first set of focus groups, participants expressed mixed

reactions to the inclusion of an attribution statement (Ref. 37). However, most participants viewed “*FDA.gov*” as making the scheme credible and trustworthy (Ref. 44). Informed by the literature findings, as well as this feedback, we propose to include the attribution statement “*FDA.gov*” in the Nutrition Info box to indicate that the proposed Nutrition Info box appears as required by FDA and to signal to consumers where they can find additional information regarding the Nutrition Info box, nutrition information, and our nutrition labeling requirements.

C. Format (Proposed § 101.6(a)(3))

Proposed § 101.6(a)(3) would require nutrition information to be presented on food labels or labeling in a specific format for the standard Nutrition Info box (we discuss our proposal to allow an alternative intermediate-package Nutrition Info box in section V.E.7 of this document). The proposed Nutrition Info box’s format elements include type style (*i.e.*, a single font); size (*i.e.*, point); color; justification (*i.e.*, left, right, or centered); and use of boldface and hairlines.

We considered many factors when designing the proposed Nutrition Info box’s format, including findings from consumer research and literature reviews (Refs. 20, 21, 26, 27, 37, 38, and 44); places where we expect people would use the Nutrition Info box (*i.e.*, at the point of decision-making); and the diversity of the intended audience (*e.g.*, level of nutrition knowledge, time available to make a purchase or consumption decision). Studies consistently confirm that simple formats are easier to comprehend and require less consumer effort than complex formats (Refs. 28 and 55). In our view, a simple format is one that minimizes clutter and enables the public to readily observe and comprehend the required nutrition information (21 U.S.C. 343 note). Use of a simple format aligns with our goal for FOP nutrition labeling, which is to provide consumers, including those who have lower nutrition knowledge, with interpretive nutrition information that can help them quickly and easily identify how foods can be part of a healthy diet. Thus, our proposed Nutrition Info box is designed to serve as a visual cue to the reader that the information it contains is quickly and easily understandable interpretive nutrition information about the three nutrients to limit.

Additionally, while we are committed to the flexible application of graphic techniques to make the required

nutrition information easy to read and comprehend, we want to ensure that all Nutrition Info boxes, regardless of the products they reflect, look similar so that consumers will immediately recognize them and understand what they are. To accomplish this, our proposed rule would set requirements for certain key graphic elements of the Nutrition Info box. In the interest of uniformity of presentation, FDA strongly recommends that the Nutrition Info box mirrors the examples found throughout proposed § 101.6.

During FDA’s experimental study, we tested variations of the Nutrition Info box that included a magnifying glass icon (see Ref. 34). This icon is used in some international High In FOP schemes (*e.g.*, those in Canada and Brazil), and we tested the icon to help us determine whether a graphic image could increase consumer attention to and understanding of the information in the scheme. We are aware that current FOP nutrition schemes in U.S. and international markets use a variety of shapes and symbols to help draw attention to information included in the FOP nutrition label (Ref. 32). We are not proposing to require a graphic image in the Nutrition Info box because our experimental study did not find that the inclusion of a graphic (*i.e.*, the magnifying glass icon) in this particular scheme yielded statistically significant results (Ref. 38). Because the addition of a graphic image did not meaningfully affect U.S. consumers’ attention to or use of the Nutrition Info box, we tentatively conclude that including a graphic image, such as a magnifying glass icon, could add unnecessary complexity and clutter to the Nutrition Info box, and therefore our proposal would not require or allow the inclusion of a graphic image.

1. Location (Proposed § 101.6(a)(3)(i))

Our existing regulations include various label and labeling requirements regarding placement of information, such as the declaration of net quantity of contents, which generally must appear on the lower 30 percent of the principal display panel (see § 101.7(f)). Proposed § 101.6(a)(3)(i) would require the Nutrition Info box to appear on the upper third of the principal display panel. We reviewed four consumer research studies on FOP nutrition label placement that tested placement on the upper left, upper right, bottom left, and bottom right of the principal display panel (Refs. 51 and 56 to 58). Each study showed that FOP nutrition labels are most effective when placed in the upper left or right of the principal display panel. While study results were mixed

on the best orientation (*i.e.*, left or right placement), the studies found that consumers had improved attention, reaction time, and label understanding when the FOP nutrition label was in the upper left or right of the principal display panel compared to the lower left or right (*id.*).

However, we are aware that foods’ principal display panels often contain other informational and graphic design elements in addition to the information we require and that certain foods come in packages of different shapes. We want to balance our goal of providing consumers with interpretive nutrition information that can help them quickly and easily identify how foods can be part of a healthy diet with maintaining flexibility for industry in the design of their principal display panels. Therefore, we propose to require placement of the Nutrition Info box somewhere in the top third of the principal display panel, without specifying the exact location (*e.g.*, upper right corner, ‘x’ inches from any side or design element).

We invite comment, including studies or other research, on the location and specifically on whether to take a flexible approach rather than designating the proposed Nutrition Info box’s exact location.

2. Type Style (Proposed § 101.6(a)(3)(ii))

Proposed § 101.6(a)(3)(ii) would require use of a single, easy-to-read type style in the Nutrition Info box. Information required under the FD&C Act must be prominent, conspicuous, and in such terms as to render it likely to be read and understood by the ordinary individual under customary conditions of purchase and use (see section 403(f) of the FD&C Act). We tentatively conclude that a single, easy-to-read type style would be easier for consumers to read and understand, while not proposing to require a specific type style would maintain flexibility for industry. The proposed type style requirement aligns with the Nutrition Facts label’s type style requirements (see § 101.9(d)(1)(ii)(A)). Similarly, we use Helvetica in our example proposed Nutrition Info box (see proposed § 101.6(a)(5))—the same type style we use in our example Nutrition Facts label (Ref. 59)—which is recognized as a very readable type style (Ref. 60).

3. Type Size (Proposed § 101.6(a)(3)(iii))

Proposed § 101.6(a)(3)(iii) would require the use of a minimum type size (at least 8 point) in the Nutrition Info box that is no smaller than the size of the required net quantity of contents declaration specified in § 101.7(h) and

(i). Our existing food labeling regulations for packaged foods, at § 101.7(i), require, among other things, that the declaration of net quantity be in letters and numerals in a type size that is established in relation to the area of the principal display panel of the package. The regulation prescribes the following size specifications for net quantity declarations:

- Not less than one-sixteenth inch in height on packages the principal display panel of which has an area of 5 square inches or less;
- Not less than one-eighth inch in height on packages the principal display panel of which has an area of more than 5 but not more than 25 square inches;
- Not less than three-sixteenths inch in height on packages the principal display panel of which has an area of more than 25 but not more than 100 square inches; and
- Not less than one-fourth inch in height on packages the principal display panel of which has an area of more than 100 square inches, except not less than ½ inch in height if the area is more than 400 square inches.

If the declaration is blown, embossed, or molded on a glass or plastic surface rather than by printing, typing, or coloring, then the lettering sizes are to be increased by one-sixteenth of an inch (§ 101.7(i)).

In our proposed rule entitled “Food Labeling: Calorie Labeling of Articles of Food Sold From Certain Vending Machines; Front of Package Type Size” (83 FR 32221, July 12, 2018) (vending FOP proposed rule), we discussed industry comments noting the existence of several voluntary FOP nutrition labeling programs where nutrition information—in that case, calories—is presented in an FOP type size that ranges from 100 to 150 percent of the size of the net quantity of contents statement on the principal display panel (id. at 32223). We considered those comments when proposing the revised requirement that calorie disclosures on the principal display panel of foods sold from certain vending machines must be at least 150 percent of the size of the net quantity of contents declaration on the front of the package. We also sought comment on an alternative approach of requiring the calorie disclosure to be at least 100 percent of the size of the net quantity of contents statement.

We ultimately finalized our 150 percent proposal (see 84 FR 57603, October 28, 2019) (vending FOP final rule). In the vending FOP final rule, we noted that the area of the principal display panel (calculated in square inches or square centimeters) determines the minimum type size

permitted for the net quantity declaration (as described elsewhere in this section). As such, both the 150 percent requirement we were finalizing and the 100 percent requirement we asked for comment on would be based on the size of the principal display panel (id. at 57606). In other words, the size of both the net quantity of contents declaration and the vending FOP disclosure scale proportionately to the size of the principal display panel. We are proposing the same scaling, based on the net quantity of contents type size, for the minimum type size in the Nutrition Info box. We tentatively conclude that such scaling would help ensure that the Nutrition Info box will be prominent on the label or labeling and its contents readable, while not mandating a size that would occupy an unnecessarily large part of the principal display panel.

In the vending FOP final rule, we also explained that, when a vending machine food is in a vending machine, a prospective purchaser cannot handle the product to make it easier for the purchaser to read the nutrition information. Therefore, visible nutrition information on the front of a package must be large enough, and prominent enough, for prospective purchasers to see and use the information (id. (internal citation omitted)). We stated that the 150 percent type size requirement for FOP calorie disclosures on foods sold from glass-front vending machines, rather than the 100 percent type size alternative approach, will ensure that the declarations are visible, clear, and conspicuous and able to be easily read by a prospective purchaser (id.).

Unlike in the vending machine context, consumers would usually be able to pick up, walk up to, or otherwise closely inspect a food’s Nutrition Info box at a comfortable reading distance. Therefore, we tentatively conclude that mandating a type size no smaller than that which is used in the net quantity of contents declaration—essentially, the alternative we requested comment on in the vending FOP proposed rule—would generally allow consumers to easily read and comprehend the information in the Nutrition Info box.

We are also proposing an absolute minimum type size of 8 point, regardless of the size of the net quantity of contents statement. It is our tentative view that this is the minimum type size necessary to allow for quick and easy readability of the Nutrition Info box and for the Nutrition Info box’s information to be read and understood by the ordinary individual under customary conditions of purchase and use (see

section 403(f) of the FD&C Act). Eight point is the same minimum type size allowed for the information in the Nutrition Facts label (see § 101.9(d)(1)(iii)). We established this minimum type size requirement in the 1993 Nutrition Facts label final rule, noting that we were committed to the flexible application of graphic techniques to achieve an acceptable level of readability for the required nutrition information. However, we noted that minimum standards, including a minimum 8-point type, would ensure that the nutrition information was conveyed so that the public could readily observe and comprehend the information (58 FR 2079 at 2136). We maintained the minimum 8-point type size in the 2016 Nutrition Facts label final rule. Therefore, we propose a minimum 8-point type size for the Nutrition Info box to help ensure readability and to be consistent with the type size requirements in the Nutrition Facts label.

4. Type and Hairline Color (Proposed § 101.6(a)(3)(iv)), Background Color (Proposed § 101.6(a)(3)(v)), and Attribution Banner Color (Proposed § 101.6(a)(3)(xv))

Proposed § 101.6(a)(3)(iv) would require the use of one color (e.g., black) for all type and hairlines in the Nutrition Info box, and proposed § 101.6(a)(3)(v) would require the use of a neutral contrasting background color (e.g., white) to the print in the box. Contrast levels between text and background that exceed 70 percent, which we would expect from the use of a single type color and a neutral contrasting background color, and dark text on light backgrounds provide for optimal legibility (Ref. 61).

For the attribution banner, proposed § 101.6(a)(3)(xv) would require that the background be the same color as used for the rest of the box’s type and hairlines and that the “*FDA.gov*” statement be the same color as used for the rest of the box’s background. We tentatively conclude that the use of an opposite color scheme to the rest of the box would help visually differentiate the attribution banner from the food’s nutrition information. The attribution banner would appear effectively the same on every Nutrition Info box—it would be at the bottom of the box, in an opposite color scheme, and would always contain “*FDA.gov*” right-justified in the banner. That would provide consistency among all Nutrition Info boxes and signal that the Nutrition Info box is an FDA requirement, while

not drawing attention away from the nutrition information above it.

The proposal would allow flexibility for industry to choose background and type colors that meet the requirements in our regulations. However, we believe that some contrasting color combinations might render the proposed Nutrition Info box's text difficult to read. We would consider difficult-to-read type to be unclear, and therefore violative of proposed § 101.6(a)(3)(ii)'s requirement that type be clear and easy to read, which could potentially cause the product to be misbranded under section 403(f) of the FD&C Act. If a particular color combination makes the type unclear, there are other graphic techniques, such as increased type size, bolding, and tracking (the small space between letters) that could be used to overcome this concern.

5. Hairlines (Proposed § 101.6(a)(3)(vi), (vii), and (viii))

Consistent with the Nutrition Facts label design, proposed § 101.6(a)(3)(vi) would require the use of hairlines to delineate the outer box, and proposed paragraphs (vii) and (viii) would require the use of hairlines to distinguish information within the Nutrition Info box. We first introduced the use of hairlines to set the Nutrition Facts label off in a box in the 1993 Nutrition Facts label final rule to preserve a readily identifiable look for the label (see 58 FR 2079 at 2136). Horizontal lines are used throughout the Nutrition Facts label as a key graphic element to divide space, direct the eye, and similarly give the label a unique and identifiable look (id.).

We propose using hairlines in the same way for the Nutrition Info box. Proposed § 101.6(a)(3)(vii) would require the use of a thick, horizontal hairline, centered within the box, and of the same length across the box as the "Nutrition Info" heading to distinguish the heading and subheadings ("Nutrition Info," "Per serving," and "% Daily Value") from the nutrient information that follows them. This horizontal line would divide space and give the box an identifiable look similar to that of the Nutrition Facts label. It would also direct the reader's eye to the nutrition information that follows and help break the information into small chunks, thus making it easier to process and remember the information (Ref. 62). Proposed § 101.6(a)(3)(viii) would require the use of a horizontal hairline, centered within the box, and of the same length across the box as the "Nutrition Info" heading to distinguish each row of nutrient information. The

repeated use of horizontal lines within the box would help with the organization of the Nutrition Info box and consistency with the Nutrition Facts label (Refs. 60 and 61).

6. Bold or Extra Bold Type (Proposed § 101.6(a)(3)(ix), (xi), (xii), and (xiii))

Proposed § 101.6(a)(3)(ix), (xi), and (xiii) would require the use of extra-bold type print and proposed § 101.6(a)(3)(xii) would require the use of bold type print to highlight certain text. In our proposed rule entitled "Food Labeling: Format for Nutrition Label" (57 FR 32058, July 20, 1992), we noted that the graphic presentation of the label had the potential to improve effective communication. We stated that graphic techniques, which included bold typeface to call attention to certain information on the label, go directly to the requirements in section 2(b)(1)(A) of the NLEA that the required nutrition information be presented in a way that enables consumers to readily observe the information (id.). In the 1993 Nutrition Facts final rule, we finalized certain bolding requirements for the Nutrition Facts label, noting that graphic elements such as bolding would, among other things, benefit consumers who have difficulty reading nutrition information on food packages and might otherwise be effectively denied access to that information (58 FR 2079 at 2136). We again used bolding in the 2016 Nutrition Facts label final rule to emphasize the importance of, and draw attention to, certain information (see, e.g., 81 FR 33742 at 33942).

Bold or extra bold type print for certain Nutrition Info box elements would help consumers notice and locate the box and use the information the box contains, according to design principles of highlighting information in bold type (Ref. 62). We propose the use of bold or extra-bold type print for all type in the box other than the "Per serving" subheading, the household measurement declaration, and the quantitative percent DV. An extra-bold "Nutrition Info" heading would call attention to the box itself (see proposed § 101.6(a)(3)(ix)), and an extra-bold "% Daily Value" subheading and the interpretive descriptions underneath the subheading would call attention to the nutrition information the Nutrition Info box would provide (see proposed § 101.6(a)(3)(xi) and (xiii), respectively). Additionally, bold nutrient names would call attention to each nutrient separately (see proposed § 101.6(a)(3)(xii)). In line with our prior rulemakings, we tentatively conclude that the bolding of these elements in the Nutrition Info box would help

consumers readily observe the required nutrition information and assist them in maintaining healthy dietary practices. We note that, in our example proposed Nutrition Info box (see § 101.6(a)(5)), we use both standard bolding (for the nutrient names and "FDA.gov") and the type style Helvetica Black (for the "Nutrition Info" heading, the "% Daily Value" subheading, and the interpretive descriptions), which is an extra-bold version of Helvetica.

7. Text Justification (Proposed § 101.6(a)(3)(ix) through (xv))

Proposed § 101.6(a)(3)(ix) through (xv) would require the use of left, right, and center text justification as a design technique to help consumers read the Nutrition Info box. Proposed § 101.6(a)(3)(x) and (xi) would require left justification for the "Per serving" subheading and the nutrient names, respectively. Proposed § 101.6(a)(3)(xi) and (xiii) would require right justification for the "% Daily Value" subheading and the interpretive descriptions, respectively, and proposed § 101.6(a)(3)(xv) would require right justification for "FDA.gov" in the bottom banner. Proposed § 101.6(a)(3)(vi) would require center justification for the "Nutrition Info" heading. Proposed § 101.6(a)(3)(xiv) would require that the quantitative percent DVs be right-justified with each other, in a column to the left of the interpretive descriptions. This design would create white spaces in the box, which would help isolate elements of the Nutrition Info box and provide information pacing for the reader (Ref. 63). Left-justifying the "Per serving" subheading and right-justifying the "% Daily Value" subheading would create white space that would result in a less cluttered appearance, heightened focus and emphasis, and improved readability (id.). Similarly, left-justifying the nutrient names, right-justifying the interpretive descriptions, and right-justifying the quantitative percent DVs in each of their respective columns in their own, unbroken row would provide a logical flow of information and create a sense of unity and cohesion, which contributes to overall aesthetic and perceived stability (Ref. 62). Right-justifying "FDA.gov" in the banner at the bottom of the Nutrition Info box would similarly provide unity and cohesion (id.).

8. Other Considerations

We considered whether to set off the Nutrition Info box, e.g., by requiring blank space around it. Such a formatting technique could help ensure that the information in the box would be

prominent and conspicuous to consumers. However, we are not proposing to require such a set-off in an effort to provide flexibility for design considerations. Additionally, section 403(f) of the FD&C Act already requires prominence, conspicuousness, readability, and understandability for any information, such as the proposed Nutrition Info box, required under the authority of the FD&C Act. We similarly considered proposing leading, kerning, font weight, tracking, and other typographical requirements, and are not proposing to require any, for the same reasons. While any of these elements might help meet the prominence, conspicuousness, readability, and understandability requirements of section 403(f) of the FD&C Act, we have tentatively concluded that setting specific requirements is not necessary. Throughout this document, we provide examples of Nutrition Info boxes that would comply with the proposed requirements of this rule and also satisfy the requirements of section 403(f) of the FD&C Act. We invite comment on this approach.

D. No Other Information Allowed in the Nutrition Info Box (Proposed § 101.6(a)(4))

Proposed § 101.6(a)(4) would prohibit any information in the Nutrition Info box other than what proposed § 101.6 would require. As we discuss elsewhere in this document, our research has found that too much information can be confusing to consumers. Additionally, our focus with the Nutrition Info box is to provide consumers with standardized, interpretive nutrition information that can help them quickly and easily identify how foods can be part of a healthy diet and allow them to compare nutrition information across foods. See section V.B.2 of this document for a discussion about why we would only require—and only allow—information about saturated fat, sodium, and added sugars in the Nutrition Info box.

E. Special Labeling Provisions (Proposed § 101.6(b))

Proposed § 101.6(b) would describe ways to modify or alternatively display the Nutrition Info box for certain labels and labeling. This section of the

preamble also describes additional products for which we considered proposing to establish special labeling provisions but have tentatively concluded must display the Nutrition Info box as required in § 101.6(a)(2) through (4).

1. Packaged Foods That May Use an Aggregate Display in Accordance With § 101.9(d)(13)(i) (Proposed § 101.6(b)(1))

Our regulations, at § 101.9(d)(13)(i) and (h)(2)(ii), allow the use of an aggregate display for the Nutrition Facts label on the outer label of packages of products that contain two or more separately packaged foods that are intended to be eaten individually (e.g., variety packs of cereals or snack foods) or of packages that are used interchangeably for the same type of food (e.g., round ice cream containers). Proposed § 101.6(b)(1) would require packages that may use this aggregate display to display a Nutrition Info box for each different product the package contains or could contain. An example of what such labeling might look like is as follows (see also proposed § 101.6(b)(1)(iii)):

Wheat Squares Sweetened			
Nutrition Info			
Per serving		% Daily	
1 cup		Value	
Saturated Fat	0%	Low	
Sodium	0%	Low	
Added Sugars	22%	High	
FDA.gov			

Corn Flakes Not Sweetened			
Nutrition Info			
Per serving		% Daily	
1 1/2 cup		Value	
Saturated Fat	0%	Low	
Sodium	13%	Med	
Added Sugars	8%	Med	
FDA.gov			

Mixed Grain Flakes Sweetened			
Nutrition Info			
Per serving		% Daily	
1 cup		Value	
Saturated Fat	0%	Low	
Sodium	7%	Med	
Added Sugars	10%	Med	
FDA.gov			

For Nutrition Facts labels, the aggregate display can use less label space than multiple individual Nutrition Facts labels because the “Nutrition Facts” heading, most serving size information, and all declared nutrient, vitamin, and mineral names appear only once. While we are aware that the required display of multiple individual Nutrition Info boxes may occupy more space than an aggregate display, we reiterate that our public health goal with the Nutrition Info box is to provide consumers, including those who have lower nutrition knowledge, with interpretive nutrition information, at the point of decision-making, that can help them quickly and easily identify how foods can be part of a healthy diet. Separate, rather than aggregate, Nutrition Info boxes would better help consumers to quickly view this information since consumers would

not need to refer back to nutrient names, among other information, to understand the interpretive information in the box. We are also concerned that an aggregate Nutrition Info box would appear cluttered and unclear, because we designed the proposed box to occupy as little space on the label as possible while still giving consumers information, including the interpretive high, medium, and low categorizations that can help them quickly and easily identify how foods can be part of a healthy diet.

Proposed § 101.6(b)(1)(i) would require the Nutrition Info boxes to appear together in either horizontal or vertical lines. This would mean that all Nutrition Info boxes on packages that may use an aggregate display for the Nutrition Facts label would appear on the label in an unbroken line or set of lines that run either vertically or

horizontally. Grouping the boxes consistently and together on the package, rather than allowing them to appear in different locations on a label or labeling, would help consumers more easily find the boxes and reduce the likelihood that they might not see one of the boxes because it appeared in a different location. While we are proposing to require placement of all boxes in the upper third of the principal display panel, in accordance with and for the same reasons as proposed § 101.6(a)(3)(i), we are not proposing to require any specific location within that upper third to allow flexibility for industry in the design of their labels.

Proposed § 101.6(b)(1)(ii) would require each individual food’s name to appear right-justified at the top of the food’s Nutrition Info box, separated from the “Nutrition Info” header by a horizontal, centered hairline rule.

Inclusion of each individual food’s name at the top of its Nutrition Info box would clarify which individual food’s nutrition information is represented by which Nutrition Info box. Consistent placement of each individual food’s name at the top of its Nutrition Info box on a given package would best help consumers quickly and easily identify the interpretive nutrition information for foods at the point of decision-making because consumers would not need to search for that information. Right-justification of each individual food’s name would provide an alignment cue and create a sense of unity and cohesion, contributing to the box’s overall aesthetic and perceived stability (Ref. 62). Use of a horizontal hairline to separate the individual food’s name from the “Nutrition Info” header would divide space and give the box an identifiable look similar to that of the Nutrition Facts label.

We invite comment, particularly data and other information, on this approach.

2. Packaged Foods That Present Nutrition Facts Labeling for Two or More Population Groups Consistent With § 101.9(e) (Proposed § 101.6(b)(2))

Our regulations, at § 101.9(e), allow the display of multiple sets of nutrition information for multiple groups for which RDIs are established (e.g., both “infants” and “people ages 4 and older”). We call this type of labeling “dual-column labeling” and provide an example at § 101.9(e)(5).

Proposed § 101.6(b)(2) would require the Nutrition Info box for products that present a dual-column Nutrition Facts label for multiple age groups to reflect only the nutrition information for people ages 4 and older. As we described when discussing the scope of this rule (see section V.A of this document), we propose that this rule apply only to the foods covered under

§ 101.9 that are marketed for the general population. Therefore, the Nutrition Info box would only represent nutrition information for this population.

3. Packaged Foods That Present Nutrition Facts Labeling for Both “Per Serving” and “Per Individual Unit” Consistent With § 101.9(b)(2)(i)(D) (Proposed § 101.6(b)(3))

Our regulations, at § 101.9(b)(2)(i)(D), require the display of a dual-column Nutrition Facts label when products are packaged and sold individually and contain at least 200 percent and up to and including 300 percent of the applicable RACC. The first column is required to list the quantitative amounts and percent DVs for a serving of the food, and the second column is required to list the quantitative amounts and percent DVs for the entire package (see § 101.9(b)(2)(i)(D)). This is another example of dual-column labeling (see § 101.9(e)(5)).

Proposed § 101.6(b)(3) would require the Nutrition Info box for products that present a dual-column Nutrition Facts label for “per serving” and “per individual unit” nutrition information to reflect only the nutrition information “per serving.” This is consistent with how the standard Nutrition Info box reflects nutrition information “per serving” when the individual unit contains more than one serving. Inclusion of the required “Per serving” subheading with a statement of the serving size expressed in household measure would inform consumers that the package contains more than a single serving.

4. Packaged Foods That Present Nutrition Facts Labeling for Both “As Packaged” and “As Prepared” Forms of the Food Consistent With § 101.9(e) (Proposed § 101.6(b)(4))

Our regulations, at § 101.9(e), allow the display of multiple sets of nutrition

information for, among other things, multiple forms of the same food (e.g., both “as packaged” and “as prepared” for packaged cake mixes) and for common combinations of food as provided for in § 101.9(h)(4) (e.g., both “as packaged” and “with ½ cup of reduced-fat milk” for cereal). This is also an example of dual-column labeling (see § 101.9(e)(5)).

Proposed § 101.6(b)(4) would require that the Nutrition Info box for products that present a dual-column Nutrition Facts label for multiple forms of the same food and for common combinations of food reflect the food “as packaged.” We also propose that a statement clarifying that the box represents “as packaged” nutrition information appear right-justified at the top of the Nutrition Info box and separated from the “Nutrition Info” header by a horizontal, centered hairline rule, similar to aggregate display information as described in section V.E.1 of this document. This would help ensure that consumers know the Nutrition Info box always represents the food as it is at the point of decision-making, without any additional ingredients that would change the percent DV or interpretive descriptions. As with the information for boxes that may use an aggregate display for the Nutrition Facts label, as described in section V.E.1 of this document, right-justification of “as packaged” at the top of the box would provide a sense of unity and cohesion, contributing to the box’s overall aesthetic and perceived stability (Ref. 62). Use of a horizontal hairline to separate “as packaged” from the “Nutrition Info” header would divide space and give the box an identifiable look similar to that of the Nutrition Facts label. An example of what such labeling might look like is as follows (see also proposed § 101.6(b)(4)):

As packaged		
Nutrition Info		
Per serving	% Daily	
1/4 package mix	Value	
Saturated Fat	8%	Med
Sodium	5%	Low
Added Sugars	34%	High
FDA.gov		

Because the proposed Nutrition Info box would appear on the label of most foods—for instance, on both cereal boxes and cartons of milk, or on dry cake mixes and egg cartons—consumers would have the box’s information readily available on the principal display panel of each food that may be combined in whatever way they prefer. Additionally, each Nutrition Info box would reflect unique information (*i.e.*, there would be no overlap or duplication of information), which would help ensure that the Nutrition Info box can help consumers quickly and easily identify how individual foods can be part of a healthy diet.

5. Foods in Packages That Have a Total Surface Area Available To Bear Labeling of 40 or Fewer Square Inches (Proposed § 101.6(b)(5))

Our regulations, at § 101.9(j)(13)(ii)(A), provide that foods in packages that have a total surface area available to bear labeling of 40 or fewer square inches may present the required Nutrition Facts label in a tabular fashion (see § 101.9(j)(13)(ii)(A)(1)) or, if the product’s package shape or size cannot

accommodate a standard or tabular display, in a linear fashion (see § 101.9(j)(13)(ii)(A)(2)). We established this upper limit of 40 square inches of surface area available to bear labeling to define an intermediate-sized package in the 1993 Nutrition Facts label final rule. We noted there that we reviewed comment suggestions, examined the space requirements of the Nutrition Facts label, reviewed data on available label area for a sample of packaged foods, and considered what would make the label readily observable and easily comprehensible to arrive at 40 square inches (58 FR 2079 at 2155). In the 2016 Nutrition Facts label final rule, we declined to increase that number, stating that the promulgation of other space-saving requirements would preclude the necessity of doing so (81 FR 33742 at 33957). We propose to allow similar flexibility for such intermediate packages for the purposes of this rule.

Recognizing the increased need for flexibility for packages with 40 or fewer square inches available to bear labeling, and to help ensure the Nutrition Info

box is readily observable and easily comprehensible, proposed § 101.6(b)(5) would allow foods in packages with a total surface area available to bear labeling of 40 or fewer square inches to use an alternative Nutrition Info box (intermediate-package Nutrition Info box). This box would be smaller than our proposed Nutrition Info box and is designed to balance our public health goal of providing consumers with interpretive nutrition information that can help them quickly and easily identify how foods can be part of a healthy diet with the reduced amount of space available to bear labels on intermediate-sized packages relative to larger packages. Consumers have decades of experience with alternate Nutrition Facts label formatting for products that have 40 or fewer square inches of surface area available to bear labeling. Providing flexibility for these intermediate-sized packages to display a modified Nutrition Info box would be consistent with our Nutrition Facts label regulations. An example of an intermediate-package Nutrition Info box is as follows:

Nutrition Info	
Sat. Fat	Med
Sodium	High
Add. Sugar	Low
FDA.gov	

We considered whether to propose allowing the use of the intermediate-package Nutrition Info box only when a package uses the tabular or linear Nutrition Facts label format as specified in § 101.9(j)(13)(ii)(A). In other words, we considered proposing to require the display of a standard Nutrition Info box if an intermediate package did not use the flexibilities provided in § 101.9(j)(13)(ii)(A) and chose instead to display the standard Nutrition Facts label. However, given the labeling space constraints with packages of this size, we think it would be appropriate to extend this flexibility to all products with 40 or fewer square inches available to bear labeling that would be subject to this rule.

Proposed § 101.6(b)(5)(i) would establish the intermediate-package Nutrition Info box, which would omit the “Per serving” and “% Daily Value” subheadings and the quantitative

percent DV declarations. The “Per serving” subheading, including the statement of the serving size expressed in household measures, would be omitted because doing so would reduce the amount of space needed for the intermediate-package Nutrition Info box. Given the smaller package size, our intent is to help ensure the readability of the interpretive information provided in the Nutrition Info box.

We propose that the intermediate-package Nutrition Info box would also not include the quantitative percent DV declarations for the same space and readability considerations as with the “Per Serving” subheading. Without the quantitative percent DV declarations, the “% Daily Value” subheading would be unnecessary, and we therefore also propose to exclude it from the intermediate-package Nutrition Info box. However, as discussed in section V.B.4 of this document, we recognize

that consumers could use the percent DV declarations to, among other things, quickly compare products that have the same interpretive description for a given nutrient. For example, two products may both have “high” added sugars interpretive descriptions, but one may contain 30% DV added sugars, while the other contains 60% DV added sugars. We also recognize that the quantitative percent DV, in addition to the interpretive descriptions, may help consumers better understand why a serving of a food has the interpretive description it does. We invite comment on the exclusion of the quantitative percent DV and on other design factors or choices we could make to balance our public health mission and FOP nutrition labeling goals with the space constraints on intermediate-sized packages.

While we propose certain modifications for the intermediate-package Nutrition Info box, we are

keeping the remaining design elements the same as in the standard Nutrition Info box. This would create consistency between the box types, as well as with the Nutrition Facts label, the design of which underlays our proposed Nutrition Info box formats.

Proposed § 101.6(b)(5)(ii) would require the use of abbreviations for saturated fat (“Sat. Fat”) and added sugars (“Add. Sugar”) to help with potential overcrowding issues in the intermediate-package Nutrition Info box and to help ensure readability. The proposed abbreviation for saturated fat would be consistent with our Nutrition Facts label regulations (see § 101.9(j)(13)(ii)(B)). An abbreviation for added sugars would also help sizing considerations for the intermediate-sized packages, while still providing the information to consumers.

6. Foods Sold From Bulk Containers (Proposed § 101.6(b)(6))

Our existing regulations allow the Nutrition Facts label for foods sold from bulk containers, which do not have a principal display panel, to appear on the labeling of the bulk container plainly in view (§ 101.9(j)(16)), clearly at the point of purchase (§ 101.9(a)(2)), or available in another format consistent with § 101.9(a)(2) (such as in a booklet at the point of purchase). Proposed § 101.6(b)(6) would require that the labeling of foods sold to consumers from bulk containers display the Nutrition Info box plainly in view of the consumer at the point of purchase. This presentation is the best way to ensure that consumers would have immediate access to that information at the point of decision-making—the same way they would have that information on the principal display panel of most packaged foods (see proposed § 101.6(a)(3)(i)). While the Nutrition Facts label may be displayed elsewhere, such as in a booklet, for bulk foods, we tentatively conclude that any such display for the Nutrition Info box would not be consistent with placement on the principal display panel and would not provide consumers with interpretive nutrition information that can help them *quickly and easily* identify how foods can be part of a healthy diet. We invite comment on this approach.

7. Game Meats (Proposed § 101.6(b)(7))

Our regulations, at § 101.9(j)(11), allow the Nutrition Facts label for packaged single-ingredient products that consist of game meat (*i.e.*, animal products not covered under the Federal Meat Inspection Act or the Poultry Products Inspection Act, such as flesh products from deer, bison, rabbit, quail,

wild turkey, or ostrich) to present nutrition information either as packaged or as prepared (unless such products make claims that are based on values as packaged and therefore must provide nutrition information on an as packaged basis). Proposed § 101.6(b)(7)(i) would require game meats to display a Nutrition Info box that reflects how the nutrition information is presented under § 101.9. If the Nutrition Facts label for a game meat presents nutrition information as packaged as required under § 101.9(b)(7), then the Nutrition Info box would reflect the nutrition information as packaged. However, if the Nutrition Facts label presents nutrition information as prepared, following the special labeling provision at § 101.9(j)(11), then the Nutrition Info box also would reflect the nutrition information as prepared. We are proposing this because the percent DVs used to determine the interpretive descriptions for each nutrient in the Nutrition Info box are based on a serving’s amount, in grams, of each nutrient. The values may differ between the nutrition information presented as packaged versus as prepared. We tentatively conclude that this approach would ensure that the Nutrition Facts label and the Nutrition Info box provide consistent information.

Our existing regulations, at § 101.9(j)(12), also allow the Nutrition Facts label for game meats not in packages to appear clearly at the point of purchase (§ 101.9(a)(2)) or available in another format consistent with § 101.9(a)(2) (such as in a booklet at the point of purchase) if it does not appear on the label. Proposed § 101.6(b)(7)(ii) would require these game meats to display the Nutrition Info box plainly in view of the consumer at the point of purchase. Similar to our proposed exemption for bulk foods, providing such information clearly in view of the consumer on the labeling of game meat not in packages is the best way to ensure that consumers would have immediate access to that information at the point of decision-making—the same way they would have that information on the principal display panel of most packaged foods (see proposed § 101.6(a)(3)(i)). While the Nutrition Facts label may be displayed elsewhere, such as in a booklet, for game meats not in packages, we tentatively conclude that any such display for the Nutrition Info box would not be consistent with placement on the principal display panel and would not provide consumers with interpretive nutrition information that can help them *quickly and easily*

identify how foods can be part of a healthy diet.

8. Other Products Considered for Special Labeling Provisions

While we are proposing special labeling provisions for some products, we also considered but rejected such proposed provisions for other products. For example, our regulations, at § 101.9(h)(1), allow for foods to display a Nutrition Facts label per serving for each component or as a composite value when separately packaged ingredients (*e.g.*, a salad kit) or assortments of the same type of food (*e.g.*, a package of mixed nuts) are intended to be eaten at the same time (see § 101.9(h)(1)). We considered establishing a special labeling provision for such foods to display either a Nutrition Info box per component or composite value, consistent with the flexibility provided in § 101.9(h)(1). However, such a provision might result in the inconsistent display of Nutrition Info boxes for these products, which would not be consistent with the goal of this proposed rule. For example, consumers would not be able to easily compare a composite Nutrition Info box on one food to multiple Nutrition Info boxes for individual components on another food. Additionally, we tentatively conclude that allowing component Nutrition Info boxes instead of a single, composite box would prevent consumers from quickly and easily identifying how the food can be part of a healthy diet (*e.g.*, the salad kit as a whole). We therefore are not proposing any special labeling provisions for these foods.

F. Exemptions (Proposed § 101.6(c))

Proposed § 101.6(c) would exempt certain foods from the requirement to display a Nutrition Info box. This section of the document also describes additional products we considered proposing to exempt but have tentatively concluded would be subject to the requirements of this rule.

1. Foods Exempt From § 101.9 Under § 101.9(j), Unless Otherwise Stated in This Section (Proposed § 101.6(c)(1))

Our regulations, at § 101.9(j), exempt certain foods, such as raw fruits and vegetables, from bearing a Nutrition Facts label. Proposed § 101.6(c)(1) would similarly exempt those foods from bearing a Nutrition Info box. We are proposing to base the interpretive descriptions of the relative amount of each declared nutrient per serving on the quantitative percent DV, which foods exempt under § 101.9(j) do not have to bear (which, in turn, means that industry would not need to calculate the

percent DVs). Any proposal to change the exemptions in § 101.9(j) would be outside the scope of this rulemaking. Even if it were not, we are not aware of data indicating that we should propose changes to the exemptions.

We note that § 101.9(j) also includes foods subject to special labeling requirements. We propose that only foods *exempt* under § 101.9(j) would be exempt from bearing a Nutrition Info box, unless otherwise specified in this section.

2. Foods in Small Packages That Have a Total Surface Area Available To Bear Labeling of Less Than 12 Square Inches (Proposed § 101.6(c)(2))

Our regulations, at § 101.9(j)(13)(i), provide that foods in small packages that have a total surface area available to bear labeling of less than 12 square inches are exempt from Nutrition Facts labeling, unless nutrition information, such as a claim, is presented on the label. We first proposed this exemption in 1991 (see 56 FR 60366). At that time, we noted our belief that relatively few food packages would qualify as “small” under the proposed exemption, namely candy rolls, breath sweeteners, and a few very small individual-serving size canned foods (*id.* at 60377). We finalized this exemption in the 1993 Nutrition Facts label final rule (58 FR 2079) and kept this exemption in the 2016 Nutrition Facts label final rule (81 FR 33742).

Proposed § 101.6(c)(2) would exempt foods in small packages that have a total surface area available to bear labeling of less than 12 square inches from the requirement to display the Nutrition Info box. While such a small package must bear the appropriately sized Nutrition Facts label if its label includes any other nutrition information, we tentatively conclude that there would not also be enough room to fit a Nutrition Info box on its label that would be legible to consumers without occupying much of the available space to bear labeling. We invite comment, and particularly data and other information, on this approach.

3. Packages Marketed as Gifts That Contain a Variety or Assortment of Foods (Proposed § 101.6(c)(3))

Our regulations, at § 101.9(h)(3), provide special labeling requirements for a package that contains a variety of foods, or an assortment of foods, and is in a form intended to be used as a gift (gift package). For example, the Nutrition Facts label for foods in such a package may be presented on the label of the outer package or in labeling within or attached to the outer package

(§ 101.9(h)(3)(i)). We defined “outer package” in the 1993 Nutrition Facts final rule to mean the container directly within which component items are packed (58 FR 2079 at 2159), and we maintain that definition here.

Proposed § 101.6(c)(3) would exempt the outer packaging of gift packages from the requirement to display Nutrition Info boxes. Our purpose in proposing the Nutrition Info box is to provide consumers with interpretive nutrition information at the point of decision-making that can help them quickly and easily identify how foods can be part of a healthy diet. We tentatively conclude that the point of decision-making for gift packages is generally after the package is opened, when a consumer is considering which food from the gift package to eat. While we propose that the outer wrapping be exempt, we note that the inner food products would be subject to the requirements in this rule, unless otherwise exempted.

4. Unit Containers in a Multiunit Retail Food Package (Proposed § 101.6(c)(4))

Our regulations, at § 101.9(j)(15), provide that the unit containers in a multiunit retail food package are exempt from Nutrition Facts labeling so long as certain requirements are met (*i.e.*, the multiunit retail food package labeling contains all nutrition information in accordance with § 101.9; the unit containers are securely enclosed within and not intended to be separated from the retail package under conditions of retail sale; and each unit container is labeled with the statement “This Unit Not Labeled For Retail Sale” as described in § 101.9(j)(15)(iii)). We first proposed this exemption in the 1990 Nutrition Facts label proposed rule after receiving a comment requesting such an exemption and agreeing that it would be reasonable to exempt unit containers from Nutrition Facts labeling requirements, provided they meet certain requirements (55 FR 29487 at 29505). In the 1993 Nutrition Facts label final rule, we finalized this exemption. We did not discuss or change this exemption when updating the Nutrition Facts label regulations in 2016.

Proposed § 101.6(c)(4) would similarly exempt the unit containers in a multiunit retail food package from FOP nutrition labeling, so long as the unit containers fall under the exemption for Nutrition Facts labeling in accordance with § 101.9(j)(15); and the multiunit retail food package bears the Nutrition Info box in accordance with § 101.6. If those conditions are met, we tentatively conclude that it is unnecessary for the unit containers to

also bear the Nutrition Info box. This is consistent with our similar exemption for the Nutrition Facts label, and it is the Nutrition Info box on the outside of a multiunit retail food package that consumers would use to quickly and easily identify how foods can be part of a healthy diet.

5. Other Products Considered for Exemption

We considered whether to exempt foods that contain insignificant amounts of saturated fat, sodium, and added sugars and use the simplified format of the Nutrition Facts label from the requirement to display the Nutrition Info box. Our regulations, at § 101.9(f), allow for the use of a simplified format for the Nutrition Facts label when a food contains insignificant amounts of, among other things, saturated fat, sodium, and added sugars. We define “insignificant amount” in this context as the amount that allows a declaration of zero in nutrition labeling (§ 101.9(f)(1)). If a food contains insignificant amounts of saturated fat, sodium, and added sugars and uses the simplified Nutrition Facts label format, sodium is the only nutrient that would be required to be declared in the Nutrition Facts label—saturated fat and added sugars would not be declared (see § 101.9(f)(2)). However, a proposed exemption from the requirements of this rule would not be consistent with our goal to provide consumers with interpretive nutrition information that can help them quickly and easily identify how foods can be part of a healthy diet. An exemption would also make quick comparisons between products more difficult. We tentatively conclude that requiring these foods to bear a Nutrition Info box would provide consumers with interpretive information about the amounts of the three nutrients so they could quickly and easily identify how foods can be part of a healthy diet. Therefore, we are not proposing to exempt foods that use the simplified format of the Nutrition Facts label and that contain insignificant amounts of saturated fat, sodium, and added sugars from the requirement to display the Nutrition Info box.

We also considered whether to exempt products such as electrolyte drinks, glucose products, and nutrition shakes that are required to bear Nutrition Facts labels from the requirement to display a Nutrition Info box. These products are often conventional foods and are marketed and used for a variety of purposes, such as rehydration during or after exercise, providing energy, or general meal

replacement. When these products are conventional foods and are required to bear Nutrition Facts labels, they are often used by healthy individuals and the general population; accordingly, we are not proposing to exempt such products from bearing a Nutrition Info box.

G. Low Sodium and Low Saturated Fat Nutrient Content Claims (Revised §§ 101.61(b)(4) and (5) and 101.62(c)(2) and (3))

We are proposing to revise § 101.61(b)(4)(i)(A) and (b)(4)(i)(B) so that a food other than a meal product or main dish product may bear a low sodium nutrient content claim if a serving of the food contains 115 mg or less sodium per RACC rather than 140 mg or less sodium per RACC; and § 101.61(b)(5)(i) so that meal products and main dish products may bear a low sodium nutrient content claim if a serving of the food contains 115 mg or less sodium per 100 g rather than 140 mg or less sodium per 100 g. This revision is consistent with the updated DRV for sodium in the 2016 Nutrition Facts label final rule and with FDA's ongoing sodium reduction efforts (see section V.B.3 of this document). It also generally aligns with the 5% DV or less range that we are proposing for "Low" for sodium in the proposed Nutrition Info box.

We are also proposing to amend §§ 101.61(b)(4) and (5) and 101.62(c)(2) and (3) to specify that a food subject to this rule must display "Low" in accordance with § 101.6 for sodium or saturated fat in the Nutrition Info box to qualify for a low sodium or low saturated fat nutrient content claim, respectively. A food bearing a low sodium or low saturated fat nutrient content claim but falling into the "Med" or "High" categorization for that nutrient in the Nutrition Info box would lead to inconsistency in the labeling of such food and could result in consumer confusion (see Ref. 64). Therefore, we tentatively conclude that a food subject to this rule must display "Low" in accordance with § 101.6 for the respective nutrient in the Nutrition Info box to qualify for a low sodium or low saturated fat nutrient content claim. In addition to updating the claim to reflect current nutrition science and helping to avoid consumer confusion by aligning with the Nutrition Info box's "Low" description, this amendment would also address products that are not subject to the proposed requirement to display a Nutrition Info box.

We are not proposing to amend the definitions of the low sodium and low saturated fat nutrient content claims to

be "5% DV or less" because our regulations define other "low" nutrient content claims based on g or mg amounts of a nutrient and RACC and weight-based criteria. Proposing to change the units for the amount of sodium and saturated fat from mg or g amounts to a percent DV and proposing to change the additional criteria for nutrient content claims that are based on a per RACC (per 50 g of food if the RACC is small) or a weight-based criteria (e.g., per 100 g of food for meals and main dishes) to a per labeled serving basis for the low sodium and low saturated fat nutrient content claims in this proposed rule would make their definitions inconsistent with the definitions for other "low" nutrient content claims. We invite comment on this approach.

H. Authority Citation

The proposed rule would add the statutory authority 21 U.S.C. 343 note as a regulatory authority for part 101. Specifically, 21 U.S.C. 343 note gives FDA authority to issue regulations that require certain nutrition information to be conveyed in a manner that allows the public to readily observe and comprehend such information and to understand its relative significance in the context of a total daily diet.

I. Conforming Amendments

The proposed rule would necessitate several conforming changes to our food labeling regulations found in part 101. Because we would establish new requirements for an FOP Nutrition Info box in proposed § 101.6, we are proposing updates to the following sections to cross-reference the new nutrition labeling requirement:

- *Section 101.2:* Information panel of package form food (proposing to add § 101.6 to the list of sections the information in which must appear either on a food's principal display panel or on the information panel, unless otherwise specified by regulation) (see also section V.J of this document, where we propose a technical amendment to the title of this section).

- *Section 101.13:* Nutrient content claims—general principles (proposing that the information required by § 101.6 would not be a nutrient content claim). We recognize that our regulations, at § 101.13(c), provide that information required or permitted in the Nutrition Facts label is not a nutrient content claim and is not subject to the requirements regarding nutrient content claims. However, § 101.13(c) further states that if the information in the Nutrition Facts label appears elsewhere

on the label, it is a nutrient content claim, and any package bearing such a claim must comply with our nutrient content claim requirements. We propose amending § 101.13(c) to specify that the information in the proposed Nutrition Info box would not be a nutrient content claim, like the information in the Nutrition Facts label is not a nutrient content claim. However, we would still consider all other quantitative calorie or nutrient declarations outside of those in proposed amended § 101.13(c) to be nutrient content claims, unless an exception applies under § 101.13. For example, under § 101.13, the label or labeling of a product may contain a statement about the amount of a nutrient without any disclaimer if the statement does not in any way implicitly characterize the level of the nutrient in the food and it is not false or misleading in any respect (e.g., "150 calories") (see § 101.13(i)(3)).

- *Section 101.15:* Food; prominence of required statements (proposing to exempt the proposed Nutrition Info box from foreign language declarations due to space considerations).

- *Section 101.61:* Nutrient content claims for the sodium content of foods (proposing to add § 101.6 to § 101.61(a)(3) so that a claim about the level of sodium or salt in a food may only be made on the label or in the labeling of the food if the food is labeled in accordance with, among other things, § 101.6).

- *Section 101.62:* Nutrient content claims for fat, fatty acid, and cholesterol content of foods (proposing to add § 101.6 to § 101.62(a)(3) so that a claim about the level of fat, fatty acid, and cholesterol in a food may only be made on the label or in the labeling of the food if the food is labeled in accordance with, among other things, § 101.6).

- *Section 101.65:* Implied nutrient content claims and related label statements (proposing to add § 101.6 to § 101.65(a)(3) so that an implied nutrient content claim may only be made on the label or in the labeling of the food if the food is labeled in accordance with, among other things, § 101.6).

J. Technical Amendments

We propose certain technical amendments in §§ 101.12, 101.13, and 101.15 to make non-substantive edits for purposes of plain language. The Plain Writing Act of 2010 requires that Federal agencies use clear communication that the public can understand and use. Section 1 of Executive Order 13563, "Improving Regulation and Regulatory Review" (76 FR 3821, January 21, 2011)), sets forth

“General principles of regulation,” which include ensuring that regulations are “accessible, consistent, written in plain language, and easy to understand.” To make the requirements of part 101 easier to understand, we are proposing to make editorial changes that do not change the meaning or intent of the language in § 101.2(b), (c)(1)(ii)(B)(1), and (f); § 101.13(n); and § 101.15(c)(2). Specifically, the proposed rule would:

- Revise the title of § 101.2 and paragraph (b) of that section to read “packaged food,” instead of “package form food” or “package of food,” respectively. We propose these changes for consistency with how we refer to these products throughout our nutrition labeling regulations.

- Replace “shall” with “must” in § 101.2(b), (c)(1)(ii)(B)(1), and (f); § 101.13(n); and § 101.15(c)(2). We propose this change to align with the Federal Plain Language Guidelines, which state that Federal Agencies should use “must” and not “shall” to impose requirements, as “shall” is ambiguous and rarely occurs in everyday conversation (Ref. 65).

VI. Proposed Effective/Compliance Dates

We intend that any final rule resulting from this rulemaking become effective 60 days after the date of the final rule’s publication in the **Federal Register**. We propose staggered compliance dates:

- 3 years after the final rule’s effective date for businesses with \$10 million or more in annual food sales; and
- 4 years after the final rule’s effective date for businesses with less than \$10 million in annual food sales.

We recognize that it may take industry time to design and print new labels. A 3-year compliance date for businesses with \$10 million or more in annual food sales and a 4-year compliance date for businesses with less than \$10 million in annual food sales are intended to provide industry time to revise labeling to come into compliance with the new labeling requirements while balancing the need for consumers to timely have the proposed information in the Nutrition Info box. We invite comment on these proposed compliance dates.

VII. Preliminary Economic Analysis of Impacts

We have examined the impacts of the proposed rule under Executive Order 12866, Executive Order 13563, Executive Order 14094, the Regulatory Flexibility Act (5 U.S.C. 601–612), and the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4).

Executive Orders 12866, 13563, and 14094 direct us to assess all benefits, costs, and transfers of available regulatory alternatives and, when regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety, and other advantages; distributive impacts; and equity). Rules are “significant” under Executive Order 12866 Section 3(f)(1) (as amended by Executive Order 14094) if they “have an annual effect on the economy of \$200 million or more (adjusted every 3 years by the Administrator of the Office of Information and Regulatory Affairs (OIRA) for changes in gross domestic product); or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, territorial, or tribal governments or communities.” OIRA has determined that this proposed rule is a significant regulatory action under Executive Order 12866 Section 3(f)(1).

The Regulatory Flexibility Act requires us to analyze regulatory options that would minimize any significant impact of a rule on small entities. Because we estimate that the annual economic impact of this proposed rule is less than 3 percent of annual revenue, we propose to certify that this proposed rule will not have a significant economic impact on a substantial number of small entities.

The Unfunded Mandates Reform Act of 1995 (section 202(a)) requires us to prepare a written statement, which includes estimates of anticipated impacts, before proposing “any rule that includes any Federal mandate that may result in the expenditure by State, local, and tribal governments, in the aggregate, or by the private sector, of \$100,000,000 or more (adjusted annually for inflation) in any one year.” The current threshold after adjustment for inflation is \$183 million, using the most current (2023) Implicit Price Deflator for the Gross Domestic Product. This proposed rule would result in an expenditure in any year that meets or exceeds this amount.

The proposed rule, if finalized, would require certain nutrition information to appear in a compact informational box on the front, or principal display panel, of most foods bearing a Nutrition Facts label. The Nutrition Info box would provide consumers with interpretive nutrition information that can help them quickly and easily identify how foods can be part of a healthy diet, thereby promoting public health. The proposed rule would also amend low sodium and low saturated fat nutrient content claim regulations to align with

current nutrition science and avoid within-label inconsistencies. The proposed rule, if finalized, may result in some industry reformulating some products based on the interpretive label information or to maintain nutrient content claims, if some manufacturers choose to do so.

We quantify costs to packaged food manufacturers from updating labeling to meet the proposed requirements. Although it is not a requirement or goal of the proposed rule, we also quantify the costs of reformulation as the rule could result in some food manufacturers reformulating some food products. Over 10 years, the total undiscounted cost is \$3.2 billion. Updating labeling to meet the proposed requirements accounts for 32 percent of total costs (\$1 billion) while voluntary reformulation accounts for the other 68 percent of total costs over 10 years (\$2.2 billion). The present value of costs over 10 years would range from \$1.7 billion to \$4.9 billion at a 2 percent discount rate, with a primary estimate of \$3.1 billion. Annualized costs over 10 years would range from \$191 to \$530 million at a 2 percent discount rate, with a primary estimate of \$333 million.

The proposed Nutrition Info box would give consumers additional standardized context about certain nutrients that appear in the Nutrition Facts label and allow them to compare this nutrition information across foods. Benefits of this proposed rule would come from the value consumers receive from the information provided by the FOP label. If some packaged food manufacturers chose to reformulate products to maintain current nutrient content claims or move into a “Low” or “Med” interpretive description, consumers whose nutritional intake changes accordingly would also benefit from a healthier food supply. The proposed rule, if finalized, would provide consumers, including those who have lower nutrition knowledge, with interpretive nutrition information that can help them quickly and easily identify how foods can be part of a healthy diet, thereby promoting public health. We undertake a break-even calculation to describe the magnitude of non-quantified benefits for the benefits to equal or exceed the costs of the regulation.

This is only a summary of our preliminary analysis of the proposed rule. We have developed a Preliminary Economic Analysis of Impacts that assesses the impacts of the proposed rule. The full preliminary analysis of economic impacts is available in the docket for this proposed rule (Ref. 66) and at <https://www.fda.gov/about-fda/>

economics-staff/regulatory-impact-analyses-ria.

VIII. Analysis of Environmental Impact

We have determined under 21 CFR 25.30(k) that this action is of a type that does not individually or cumulatively have a significant effect on the human environment. Therefore, neither an environmental assessment nor an environmental impact statement is required.

IX. Paperwork Reduction Act of 1995

This proposed rule contains information collection provisions that are subject to review by OMB under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3521). A description of these provisions is given in the *Description* section below with an estimate of the annual third-party disclosure burden. Included in the estimate is the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and

reviewing each collection of information. FDA invites comments on these topics: (1) whether the proposed collection of information is necessary for the proper performance of FDA’s functions, including whether the information will have practical utility; (2) the accuracy of FDA’s estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques, when appropriate, and other forms of information technology. *Title:* Food Labeling: Front-of-Package Nutrition Information *Description:* This information collection would support statutory and regulatory requirements that govern food labeling. FDA authorities include the NLEA (21 U.S.C. 343 note (1990)) and sections 403(f) and 403(q) of the

FD&C Act. This information collection also would support sections 701(a), 403(a)(1), and 201(n) of the FD&C Act. The proposed rule, if finalized, would add § 101.6 to require the food industry to disclose certain nutrition information in a compact informational box on the principal display panel of most foods bearing a Nutrition Facts label. The Nutrition Info box would give consumers additional context on the front of most food packages about certain nutrients that appear on the Nutrition Facts label. The Nutrition Info box would provide consumers with interpretive nutrition information that can help them quickly and easily identify how foods can be part of a healthy diet, thereby promoting public health. *Description of Respondents:* The respondents to this information collection are manufacturers, packers, and distributors of food products subject to statutory and regulatory food labeling requirements. We estimate the burden of this collection of information as follows:

TABLE 2—ESTIMATED ANNUAL THIRD-PARTY DISCLOSURE BURDEN¹

Activity; 21 CFR section	Number of respondents	Number of disclosures per respondent ²	Total annual disclosures	Average burden per disclosure	Total hours	Total capital costs ³
Front of Package Labeling; 101.6	30,413	11	322,378	4	1,289,512	\$143,220,186

¹ There are no operating and maintenance costs associated with this collection of information. ² For purposes of this table, we have rounded up to use whole numbers when calculating the number of disclosures per respondent. All other figures are consistent with the Preliminary Regulatory Impact Analysis. ³ One-time capital cost to relabel.

The estimates in table 2 are consistent with the estimates found in the Preliminary Regulatory Impact Analysis (PRIA) (Ref. 66). In table 21 of the PRIA, we estimate that approximately 30,413 manufacturers will need to add the informational Nutrition Info box to the principal display panel of their food product package. In table 4 of the PRIA, we estimate that approximately 322,326 products will need to be relabeled. For the purpose of this analysis, we used the estimates for the number of manufacturers and disclosures to calculate that each manufacturer will need to relabel about 11 products (322,378 disclosures ÷ 30,413 manufacturers = 10.6). In the existing information collection for Food Labeling Requirements approved under OMB control number 0910–0381, we estimated that an establishment would spend 4 hours per label for labeling requirements for disclosure of nutrition information (21 CFR 101.9). We use the 4-hour estimate for the purpose of this analysis. Each disclosure will take an

estimated 4 hours to complete for an annual third-party disclosure burden of 1,289,512 hours (322,378 disclosures × 4 hours). Based on table 6 of the PRIA, we estimate each product that will be relabeled will cost \$1,333 assuming a 3-year compliance period. That calculates to an annual capital cost of \$143,220,186 (\$1,333 × 107,442 products) over 3 years associated with relabeling with the total capital cost being \$429,660,558. This is the cost of designing a revised label and incorporating it into the manufacturing process. We believe that this will be a one-time capital cost. To ensure that comments on this information collection are received, OMB recommends that written comments be submitted through [reginfo.gov](https://www.reginfo.gov) (see **ADDRESSES**). All comments should be identified with the title of the information collection. In compliance with the Paperwork Reduction Act of 1995 (44 U.S.C. 3407(d)), we have submitted the information collection provisions of this

proposed rule to OMB for review. These information collection requirements will not be effective until FDA publishes a final rule, OMB approves the information collection requirements, and the rule goes into effect. FDA will announce OMB approval of these requirements in the **Federal Register**. **X. Federalism** We have analyzed this proposed rule in accordance with the principles set forth in Executive Order 13132. Section 403A of the FD&C Act (21 U.S.C. 343–1) is an express preemption provision. Section 403A(a)(3) of the FD&C Act provides that no State or political subdivision of a State may directly or indirectly establish under any authority or continue in effect as to any food in interstate commerce with respect to any requirement for nutrition labeling of food that is not identical to the requirement of section 403(q) of the FD&C Act. The express preemption provision of section 403A(a) of the FD&C Act does not preempt any State or local

requirement respecting a statement in the labeling of food that provides for a warning concerning the safety of the food or component of the food (section 6(c)(2) of the NLEA). If this proposed rule is finalized, the rule would create requirements that fall within the scope of section 403A(a) of the FD&C Act to the extent that these provisions are consistent with section 403(q) of the FD&C Act.

Further, uniformity in FOP nutrition labeling is critical to achieving the goal of this proposed regulation so that consumers are provided with interpretive nutrition information that can help them quickly and easily identify how foods can be part of a healthy diet. If States were able to establish their own FOP nutrition labeling systems with different requirements, consumers would not be able to rely on a single standardized box to compare products and may be confused by conflicting or different information on a separate state FOP nutrition label. Different State or local requirements for FOP nutrition labeling would not be consistent with the NLEA, which directs FDA to require nutrition information be presented in a way that makes it observable, understandable, and useful to consumers and which established section 403A of the FD&C Act with regard to “National Uniform Nutrition Labeling.”

Section 4(c) of Executive Order 13132 instructs us to restrict any Federal preemption of State law to the minimum level necessary to achieve the objectives of the statute that provided the authority to issue the regulations. The proposed rule, if finalized, would meet the preceding requirement because it would preempt State law narrowly, only to the extent required to achieve uniform national labeling with respect to the requirements related to the contents and design of the FOP Nutrition Info box.

Section 4(d) of Executive Order 13132 states that when an agency foresees the possibility of a conflict between State law and federally protected interests within the agency’s area of regulatory responsibility, the agency must consult with appropriate State and local officials, as practicable, in an effort to avoid such a conflict. Section 4(e) of Executive Order 13132 provides that when an agency proposes to act through adjudication or rulemaking to preempt State law, the agency must provide all affected State and local officials notice and an opportunity for appropriate participation in the proceedings. FDA’s Office of Partnerships will invite the States’ participation in this rulemaking by providing notice via email to State

health commissioners, State agriculture commissioners, and State food program directors as well as FDA field personnel of the publication of the proposed rule. The notice will give the States further opportunity for input on the proposed rule, advise the States of FDA’s possible action, and invite State and local governments to provide any comments.

Consequently, we have included § 101.6(d) in the proposed regulatory text stating that a State or political subdivision of a State may not establish or continue into effect any law, rule, regulation, or other requirement that is different from the requirements in this rule. Preemption may also arise regarding other FOP nutrition labeling if a State requirement is found to obstruct the federal purpose articulated in this rule.

XI. Consultation and Coordination With Indian Tribal Governments

We have analyzed this proposed rule in accordance with the principles set forth in Executive Order 13175. We have tentatively determined that the rule does not contain policies that would have a substantial direct effect on one or more Indian Tribes, or the relationship between the Federal Government and Indian Tribes, or on the distribution of power and responsibilities between the Federal Government and Indian Tribes. FDA invites comments from tribal officials on any potential impact on Indian Tribes from this proposed action.

List of Subjects in 21 CFR Part 101

Food labeling, nutrition, reporting and record keeping requirements.

Therefore, under the Federal Food, Drug, and Cosmetic Act, FDA proposes to amend part 101 as follows:

PART 101—FOOD LABELING

■ 1. The authority citation for part 101 is revised to read as follows:

Authority: 15 U.S.C. 1453, 1454, 1455; 21 U.S.C. 321, 331, 342, 343, 343 note, 348, 371; 42 U.S.C. 243, 264, 271.

■ 2. Amend § 101.2 by:

- a. Revising paragraph (b);
- b. Revising paragraph (c)(1)(ii)(B)(1);
- c. Adding paragraph (d)(2)(iv); and
- d. Revising paragraph (f).

The revisions and addition read as follows:

§ 101.2 Information panel of packaged food.

* * * * *

(b) All information required to appear on the label of any packaged food under §§ 101.4, 101.5, 101.6, 101.8, 101.9, 101.13, 101.17, 101.36, subpart D of this part, and part 105 of this chapter must appear either on the principal display panel or on the information panel, unless otherwise specified by regulations in this chapter.

* * * * *

(c) * * *

(1) * * *

(ii) * * *

(B) * * *

(1) Neither the bottle nor the closure is required to bear nutrition labeling in compliance with § 101.9, except that any multiunit retail package in which it is contained must bear nutrition labeling if required by § 101.9 and the Nutrition Info box if required by § 101.6; and any vending machine in which it is contained must bear nutrition labeling if nutrition labeling is not present on the bottle or closure, if required by § 101.9.

* * * * *

(d) * * *

(2) * * *

(iv) The Nutrition Info box required by § 101.6 is not required on the lid if this information appears on the container body in accordance with this section.

* * * * *

(f) If the label of any package of food is too small to accommodate all of the information required by §§ 101.4, 101.5, 101.6, 101.8, 101.9, 101.13, 101.17, 101.36, subpart D of this part, and part 105 of this chapter, the Commissioner may establish by regulation an acceptable alternative method of disseminating such information to the public, *e.g.*, a type size smaller than one-sixteenth inch in height, or labeling attached to or inserted in the package or available at the point of purchase. A petition requesting such a regulation, as an amendment to this paragraph, must be submitted under part 10 of this chapter.

■ 3. Add § 101.6 to read as follows:

§ 101.6 Front-of-package Nutrition Info box.

(a) *General provisions*—(1) *Scope*. All food covered under § 101.9 that is marketed for people ages 4 and older must bear the Nutrition Info box described in paragraphs (a)(2) through (4) of this section on its label, unless the product is subject to special labeling provisions under paragraph (b) of this section or exempt under paragraph (c) of this section.

(2) *Content*. The Nutrition Info box must:

(i) Contain the heading “Nutrition Info,” which must be across the top of the Nutrition Info box and in a larger type than all other words in the Nutrition Info box;

(ii) Include two column subheadings under “Nutrition Info”:

(A) “Per serving,” which must be accompanied by a statement of the serving size expressed in household measures as described in § 101.9(b)(5) (*e.g.*, “Per serving (whole package)” or “Per serving (½ cup)"); and

(B) “% Daily Value”;

(iii) Vertically list “Saturated Fat,” “Sodium,” and “Added sugars,” in that order, under the “Per serving” subheading as described in paragraph (a)(2)(ii)(A) of this section;

(iv) Specify, under the “% Daily Value” subheading as described in paragraph (a)(2)(ii)(B) of this section and to the right of the quantitative percent Daily Value (% DV) declaration as described in paragraph (a)(2)(v) of this section, whether the amount of the nutrient per serving, expressed as % DV as established in § 101.9(c)(9) and (d)(7)(ii), is “Low,” “Med,” or “High.” The ranges corresponding to “Low,” “Med,” and “High” are as follows:

(A) Low: 5% DV or less.

(B) Med: 6% to 19% DV.

(C) High: 20% DV or more.

(v) Declare the quantitative % DV for people ages 4 and older, as established in § 101.9(c)(9) and (d)(7)(ii), in its own column immediately under the “% Daily Value” subheading as described in paragraph (a)(2)(ii)(B) of this section and to the left of the “Low,” “Med,” and “High” categorization as described in paragraph (a)(2)(iv) of this section; and

(vi) Include a banner at the bottom with an “FDA.gov” attribution.

(3) *Formatting*. The Nutrition Info box must:

(i) Appear on the upper third of the principal display panel, as defined in § 101.1;

(ii) Use a single, easy-to-read type style;

(iii) Use a minimum type size (at least 8 point) that is no smaller than the size of the required net quantity of contents declaration, as specified in § 101.7(h) and (i);

(iv) Use all black or one color type for text and hairlines;

(v) Use a white or other neutral contrasting background to the print in the box;

(vi) Use hairlines to create the outer box;

(vii) Use a thick, horizontal, centered, hairline rule the same distance across the box as the “Nutrition Info” heading as described in paragraph (a)(2)(i) of this

section to distinguish the heading and subheadings as described in paragraphs (a)(2)(i) and (ii) of this section from the information underneath them;

(viii) Use a horizontal, centered hairline rule the same distance across the box as the “Nutrition Info” heading as described in paragraph (a)(2)(i) of this section to distinguish each row of nutrient information as described in paragraph (a)(2)(iii) of this section;

(ix) Use extra-bold type and center-justify the “Nutrition Info” heading as described in paragraph (a)(2)(i) of this section;

(x) Left-justify the “Per serving” subheading as described in paragraph (a)(2)(ii)(A) of this section;

(xi) Use extra-bold type and right-justify the “% Daily Value” subheading as described in paragraph (a)(2)(ii)(B) of this section;

(xii) Use bold type and left-justify the nutrient names as described in paragraph (a)(2)(iii) of this section;

(xiii) Use extra-bold type and right-justify the “Low,” “Med,” and “High” categorizations as described in paragraph (a)(2)(iv) of this section;

(xiv) Right-justify, within its own column to the left of the “Low,” “Med,” and “High” categorizations as described in paragraph (a)(2)(iv) of this section, the quantitative percent DV declarations as described in paragraph (a)(2)(v) of this section; and

(xv) Use the same color as used for the text and hairlines as specified under paragraph (a)(3)(iv) of this section for the banner background, with “FDA.gov” right-justified, in bold or extra-bold type, and in the same color as used for the rest of the box’s background as described in paragraph (a)(3)(v) of this section.

(4) *No other information allowed in the Nutrition Info box*. No other information may be included in the Nutrition Info box.

(5) *Example*. The following example label illustrates the provisions of paragraphs (a)(2) through (a)(4) of this section.

Figure 1 to Paragraph (a)(5)—Example
Standard Nutrition Info Box

Nutrition Info		
Per serving		% Daily
1 container		Value
Saturated Fat	18%	Med
Sodium	37%	High
Added Sugars	5%	Low
FDA.gov		

(b) *Special labeling provisions.* (1) Packaged foods that may use an aggregate display under § 101.9(d)(13)(i) and (h)(2)(ii) must display a Nutrition Info box as described in paragraph (a) of this section for each different product the package contains or could contain. (i) The Nutrition Info boxes must appear together in either horizontal or

vertical lines and must appear in the upper third of the principal display panel in accordance with § 101.6(a)(3)(i). (ii) The package must specify the name of each food right-justified at the top of each food’s Nutrition Info box, separated from the “Nutrition Info”

header by a horizontal, centered hairline rule. (iii) The following example label illustrates these requirements: **Figure 2 to Paragraph (b)(1)(iii)—Example Nutrition Info Box Modified for Aggregate Display**

Wheat Squares Sweetened		
Nutrition Info		
Per serving		% Daily
1 cup		Value
Saturated Fat	0%	Low
Sodium	0%	Low
Added Sugars	22%	High
FDA.gov		

Corn Flakes Not Sweetened		
Nutrition Info		
Per serving		% Daily
1 1/2 cup		Value
Saturated Fat	0%	Low
Sodium	13%	Med
Added Sugars	8%	Med
FDA.gov		

Mixed Grain Flakes Sweetened		
Nutrition Info		
Per serving		% Daily
1 cup		Value
Saturated Fat	0%	Low
Sodium	7%	Med
Added Sugars	10%	Med
FDA.gov		

(2) Packaged foods that present Nutrition Facts labeling for two or more population groups must display a Nutrition Info box as described in paragraph (a) of this section, or Nutrition Info boxes as described in this paragraph (b)(2), that only reflect(s) the information for people ages 4 and older. (3) Packaged foods that present Nutrition Facts labeling for both “per serving” and “per individual unit” in accordance with § 101.9(b)(2)(i)(D) must

display a Nutrition Info box as described in paragraph (a) of this section that reflects the nutrition information “per serving.” (4) Packaged foods that present Nutrition Facts labeling for both “as packaged” and “as prepared” forms of the food consistent with § 101.9(e) must display a Nutrition Info box as described in paragraph (a) of this section that reflects the nutrition information for the “as packaged” form

and must include a statement right-justified at the top of the box and separated from the “Nutrition Info” header by a horizontal, centered hairline rule to clarify that the box represents “as packaged” nutrition information (e.g., “Represents product “as packaged” ” or “See Nutrition Facts for “As Prepared” information”).

Figure 3 to Paragraph (b)(4)—Example Nutrition Info Box Modified for “As Packaged”

As packaged		
Nutrition Info		
Per serving	% Daily Value	
1/4 package mix		
Saturated Fat	8%	Med
Sodium	5%	Low
Added Sugars	34%	High
FDA.gov		

(5) Foods in packages that have a total surface area available to bear labeling of 40 or fewer square inches may display an alternative (intermediate-package) Nutrition Info box as described in this paragraph.

(i) The intermediate-package Nutrition Info box omits the following content from the Nutrition Info box

described in paragraphs (a)(2) through (4) of this section:

(A) The “Per serving” and “% Daily Value” subheadings; and

(B) The quantitative percent DV declarations.

(ii) The intermediate-package Nutrition Info box uses the abbreviations “Sat. Fat” for “Saturated

Fat” and “Add. Sugar” for “Added Sugars.”

(iii) The following example label illustrates the provisions of paragraphs (b)(6)(i) and (ii) of this section.

Figure 4 to Paragraph (b)(5)(iii)—Example Intermediate-Package Nutrition Info Box

Nutrition Info	
Sat. Fat	Med
Sodium	High
Add. Sugar	Low
FDA.gov	

(6) Foods sold from bulk containers must display a Nutrition Info box as described in paragraph (a) of this section plainly visible to consumers on the bulk container’s labeling at the point of purchase.

(7) Game meats (*i.e.*, animal products not covered under the Federal Meat Inspection Act or the Poultry Products Inspection Act, such as flesh products from deer, bison, rabbit, quail, wild turkey, or ostrich) must display a Nutrition Info box as described in paragraph (a) of this section:

(i) That reflects how the nutrition information is shown under § 101.9; and

(ii) Is plainly visible to consumers at the point of purchase if the food is unpackaged.

(c) *Exemptions.* The following foods are exempt from the requirements in this section:

(1) Any food exempt from § 101.9 under § 101.9(j), unless otherwise stated in this section;

(2) Foods in small packages that have a total surface area available to bear labeling of less than 12 square inches;

(3) Packages marketed as gifts that contain a variety or assortment of foods; and

(4) The unit containers in a multiunit retail food package where:

(i) The unit containers are exempt from Nutrition Facts labeling in accordance with § 101.9(j)(15); and

(ii) The multiunit retail food package label bears the Nutrition Info box in accordance with this section.

(d) *Preemption.* A State or political subdivision of a State may not establish or continue into effect any law, rule, regulation, or other requirement that is different from the requirements in this section for the Nutrition Info box.

■ 4. Amend § 101.13 by revising paragraphs (c), (i) introductory text, and (n) to read as follows:

§ 101.13 Nutrient content claims—general principles.

* * * * *

(c) Information that is required or permitted by § 101.9 or § 101.36 as applicable, to be declared in nutrition labeling, and that appears as part of the nutrition label, or that is required by § 101.6, is not a nutrient content claim and is not subject to the requirements of this section. If such information is declared elsewhere on the label or in labeling, it is a nutrient content claim and is subject to the requirements for nutrient content claims.

* * * * *

(i) Except as provided in § 101.6, § 101.9, or § 101.36, as applicable, or in

paragraph (q)(3) of this section, the label or labeling of a product may contain a statement about the amount or percentage of a nutrient if:

* * * * *

(n) Nutrition labeling in accordance with § 101.6, § 101.9, § 101.10, or § 101.36, as applicable, must be provided for any food for which a nutrient content claim is made.

* * * * *

■ 5. Amend § 101.15 by revising paragraph (c)(2) to read as follows:

§ 101.15 Food; prominence of required statements.

* * * * *

(c) * * *

(2) If the label contains any representation in a foreign language, all words, statements, and other information required by or under authority of the act to appear on the label must appear thereon in the foreign language, except for labeling in accordance with § 101.6: *Provided, however*, That individual serving-size packages of foods containing no more than 1½ avoirdupois ounces or no more than 1½ fluid ounces served with meals in restaurants, institutions, and passenger carriers and not intended for sale at retail are exempt from the requirements of this paragraph (c)(2), if the only representation in the foreign language(s) is the name of the food.

* * * * *

■ 6. Amend § 101.61 by:

■ a. Revising paragraphs (a)(3) and (b)(4)(i);

■ b. Redesignating paragraph (b)(4)(ii) as (b)(4)(iii) and revising it;

■ c. Adding new paragraph (b)(4)(ii);

■ d. Revising paragraph (b)(5)(i);

■ e. Redesignating paragraph (b)(5)(ii) as (b)(5)(iii) and revising it; and

■ f. Adding new paragraph (b)(5)(ii).

The revisions and additions read as follows:

§ 101.61 Nutrient content claims for the sodium content of foods.

(a) * * *

(3) The food for which the claim is made is labeled in accordance with § 101.6, § 101.9, § 101.10, or § 101.36, as applicable.

(b) * * *

(4) * * *

(i)(A) The food has a reference amount customarily consumed greater than 30 g or greater than 2 tablespoons and contains 115 mg or less sodium per reference amount customarily consumed; or

(B) The food has a reference amount customarily consumed of 30 g or less or 2 tablespoons or less and contains 115 mg or less sodium per reference amount customarily consumed and per 50 g (for dehydrated foods that must be reconstituted before typical consumption with water or a diluent containing an insignificant amount, as defined in § 101.9(f)(1), of all nutrients per reference amount customarily consumed, the per 50-g criterion refers to the “as prepared” form);

(ii) The food must display “Low” in accordance with § 101.6 for sodium in the front-of-package Nutrition Info box, if the food label or labeling must comply with the requirements in § 101.6; and

(iii) If the food meets these conditions without the benefit of special processing, alteration, formulation, or reformulation to vary the sodium content, it is labeled to clearly refer to all foods of its type and not merely to the particular brand to which the label attaches (e.g., “fresh spinach, a low sodium food”).

(5) * * *

(i) The product contains 115 mg or less sodium per 100 g;

(ii) The product must display “Low” in accordance with § 101.6 for sodium in the front-of-package Nutrition Info box, if the food label or labeling must comply with the requirements in § 101.6; and

(iii) If the product meets these conditions without the benefit of special processing, alteration, formulation, or reformulation to lower the sodium content, it is labeled to clearly refer to all foods of its type and not merely to the particular brand to which the label attaches.

* * * * *

■ 7. Amend § 101.62 by:

■ a. Revising paragraphs (a)(3) and (c)(2)(i);

■ b. Redesignating paragraph (c)(2)(ii) as paragraph (c)(2)(iii) and revising it;

■ c. Adding new paragraph (c)(2)(ii);

■ d. Revising paragraph (c)(3)(i);

■ e. Redesignating paragraph (c)(3)(ii) as paragraph (c)(3)(iii); and

■ f. Adding new paragraph (c)(3)(ii).

The revisions and additions read as follows:

§ 101.62 Nutrient content claims for fat, fatty acid, and cholesterol content of foods.

(a) * * *

(3) The food for which the claim is made is labeled in accordance with

§ 101.6, § 101.9, § 101.10, or § 101.36, as applicable; and

* * * * *

(c) * * *

(2) * * *

(i) The food contains 1 g or less of saturated fatty acids per reference amount customarily consumed and not more than 15 percent of calories from saturated fatty acids;

(ii) The food must display “Low” in accordance with § 101.6 for saturated fat in the front-of-package Nutrition Info box, if the food label or labeling must comply with the requirements in § 101.6; and

(iii) If the food meets these conditions without the benefit of special processing, alteration, formulation, or reformulation to lower saturated fat content, it is labeled to clearly refer to all foods of its type and not merely to the particular brand to which the label attaches (e.g., “raspberries, a low saturated fat food”).

(3) * * *

(i) The product contains 1 g or less of saturated fatty acids per 100 g and less than 10 percent of calories from saturated fat;

(ii) The product must display “Low” in accordance with § 101.6 for saturated fat in the front-of-package Nutrition Info box, if the food label or labeling must comply with the requirements in § 101.6; and

(iii) If the product meets these conditions without the benefit of special processing, alteration, formulation, or reformulation to lower saturated fat content, it is labeled to clearly refer to all foods of its type and not merely to the particular brand to which the label attaches.

* * * * *

■ 8. Amend § 101.65 by revising paragraph (a)(3) to read as follows:

§ 101.65 Implied nutrient content claims and related label statements.

(a) * * *

(3) The food or which the claim is made is labeled in accordance with § 101.6, § 101.9, § 101.10, or § 101.36, as applicable.

* * * * *

Dated: January 10, 2025.

Robert M. Califf,

Commissioner of Food and Drugs.

January 16, 2025

Part XII

The President

Notice of January 14, 2025—Continuation of the National Emergency With Respect to the Situation in the West Bank

Presidential Documents

Title 3—

Notice of January 14, 2025

The President

Continuation of the National Emergency With Respect to the Situation in the West Bank

On February 1, 2024, by Executive Order 14115, I declared a national emergency pursuant to the International Emergency Economic Powers Act (50 U.S.C. 1701 *et seq.*) to deal with the unusual and extraordinary threat to the national security and foreign policy of the United States constituted by the situation in the West Bank.

The situation in the West Bank—in particular high levels of extremist settler violence, forced displacement of people and villages, and property destruction—has reached intolerable levels and constitutes a serious threat to the peace, security, and stability of the West Bank and Gaza, Israel, and the broader Middle East region. These actions undermine the foreign policy objectives of the United States, including the viability of a two-state solution and ensuring Israelis and Palestinians can attain equal measures of security, prosperity, and freedom. They also undermine the security of Israel and have the potential to lead to broader regional destabilization across the Middle East, threatening United States personnel and interests.

The situation in the West Bank continues to pose an unusual and extraordinary threat to the national security and foreign policy of the United States. For this reason, the national emergency declared in Executive Order 14115 of February 1, 2024, must continue in effect beyond February 1, 2025. Therefore, in accordance with section 202(d) of the National Emergencies Act (50 U.S.C. 1622(d)), I am continuing for 1 year the national emergency declared in Executive Order 14115 with respect to the situation in the West Bank.

This notice shall be published in the *Federal Register* and transmitted to the Congress.

THE WHITE HOUSE,
January 14, 2025.

LIST OF PUBLIC LAWS Note: No public bills which have become law were received by the Office of the Federal Register for inclusion	in today's List of Public Laws. Last List January 14, 2025	Public Laws Electronic Notification Service (PENS) PENS is a free email notification service of newly	enacted public laws. To subscribe, go to https://portalguard.gsa.gov/__layouts/PG/register.aspx. Note: This service is strictly for email notification of new laws. The text of laws is not available through this service. PENS cannot respond to specific inquiries sent to this address.
